In 880 Landolfo, a sone of the imperial vicar, Boniso, became the archbishop of Milan; his father, however, being driven from the city on account of his abuse of power, but was taken back by the emperor Otto II, and repaired the evil that he had done. He was succeeded by Arnolfo II (998) and Ariberto d’Intimiano (1018), mentioned above. The latter was succeeded by Guido (1045), also a simoniac. At this time the morals of the clergy were deplorable: simony and concubinage were common, and out of these conditions developed the famous patoria, a popular movement for social and ecclesiastical reform, headed by the priest Anselmo da Biaggio, later Bishop of Lucca, and by the cleric Ariald, both of whom used force to compel the clergy to observe continence, and to drive its members from the churches where they never entered, and to replace the communion. In 1059 Nicholas II sent to Milan St. Peter Damian and the same Anselmo, at which the people murmured, demanding that the church of Milan be not subject to that of Rome. Archbishop Guido, however, promised amendment, and accepted the conditions imposed upon him, but soon relapsed and Ariald, with whom the noble warrior Erlembaldo was associated, being aware of the real state of things, the consequence of which he was brutally assassinated 2d June, 1066. Erlembaldo then gave a military organisation to the patoria, and Guido, who was excommunicated, was compelled to leave the city. While the election of his successor was being discussed, Guido sold the archiepiscopal dignity to his secretary. Until 1085 there were several pretended to the see;
CATHEDRAL, MILAN

BEGUN UNDER GIAN GALEAZZO VISCONTI IN 1386, FINISHED UNDER NAPOLEON IN 1805
and in one of the many tumults caused by this condition of affairs Erlembaldo was killed (1074). Under Anselm III order was re-established.

Unfortunately, the patauria had created an anti-clerical sentiment in the people, and had prepared them to accept the doctrines of Manicheism. In fact, the Cathari of Italy were more frequently called Patari, and in Milan, one of their chief centres, they maintained a kind of university. Archbishop Oberto was exiled by Barbarossa in 1162; and though his successor, St. Galduino, was elected at Rome by the emigrated Milanese, he was able to take possession of his see in 1167; he reorganized the hospital del Brogo. Archbishop Ubarto Crivelli became Pope Urban III in 1185. At an archiepiscopal election, in 1283, not less than five candidates, Raimondo della Torre, and the nobles a member of the family of Seltala; therefore Urban IV appointed Ottone Visconti, who was prevented by the Milanese from taking possession of his see until 1277, when he entered Milan, both as archbishop and as lord. Roberto Visconti, who succeeded John in 1354, was old enough to have made no doubt about the property of the Church, which they regarded as the personal property of their uncle. Among other archbishops of Milan were Pietro Filargo (1402), who became Alexander V; Fra Gabriele Sforza (1454), an Augustinian, brother of Duke Francesco and founder of the Ospedale Maggiore; and the cardinals Stefano Naldini (1459), of the Saluzzo family; Filippo d'Este (1497), also the latter's nephew in Bolognola (1520). During the incumbency of this prelate, always absent from his diocese, great abuses grew up which Giovanni Angelo Arcimboldo (1550) and St. Charles Borromeo (q. v.) sought to remedy (3561).

Here is enough to mention the latter's seal for the reformation of morals, his enthusiasm in preserving the Franciscan Rite and extending it in Milan, and the archdiocese (Monza alone retaining the Roman rite), and his foundation of the Oblates for diocesan missions. His work was continued by Gaspare Visconti (1584) and by a nephew of St. Charles, Federigo (1594–1631), who was a cardinal, as were all of his successors, to Filippo Visconti (1784–1801), whose nominal title to the see rested on the possession of the Holy See, nearly brought on a schism. He was followed by Cardinal Capra, well-known as Apostolic legate to the court of Napoleon. After the death of this prelate in 1811 the See of Milan remained vacant for six years; the next archbishop, Cardinal Carlo Giacinto Gaisruck, was appointed in 1818, and governed the see with great prudence. Its character as a "monastic" see was not yet lost, and he wrote the "monastic prelate." He was especially opposed to the re-establishment of the religious orders. Archbishop Paolo Angelo Ballerini (1859–67) was never able to take possession of his see, because the Italian Government denied him the exequatur; and his auxiliary bishop Dominioni was also persecuted.

The Milanese in 343 and 347, against Photinus; 355, in the cause of St. Athanasius, at which the Emperor Constans menaced the bishops; 390, against Jovinian; 451, against the Robber Council of Ephesus; 680, against the Monothelites; 1060, 1098, 1117, 1287, for ecclesiastical reforms. The diocesan synods of St. Charles Borromeo and those of 1636 and of 1869 were also reform synods. Diocesan synods were held in 1600 and 1850 respectively. The suffragan bishops of Milan were wont to meet each year at Rò; their sees are Bergamo, Brescia, Como, Crema, Cremona, Lodi, Mantua, and Pavia. The archdiocese has 788 parishes, with 1,828,000 inhabitants, 27 religious houses of men, and of women nearly 80 in the city. The archdiocese is a centre of religious educational establishments for boys and 176 for girls, 2 Catholic daily papers, and many important periodicals. In the Middle Ages there was a monastery at Milan, St. Cosmas, for Armenian monks of the Rule of St. Basil; they depended, however, on a similar monastery in Genoa, and had no relation with Armenia. This order, which used the so-called Aquinian rite, was suppressed in 1650.

RELIGIOUS EDIFICES.—The wonderful Italian Gothic cathedral is built of white marble, has five naves, and is 486 feet in length; it is surmounted by 98 slender turrets, on the principal one of which is a bronze statue of the Magdeburg saint, 2000 of which are on the exterior. The cathedral is situated on the site of the ancient basilica of Santa Maria Maggiore (fourth or fifth century), and was begun in 1386 by Giovanni Galeazzo Visconti. The tomb of St. Charles is under the cupola. The treasury of the cathedral contains, among other valuable objects, the precious statuette of Santa Charles and of St. Ambrose, made of silver and set with precious stones, a gift of the city. The high altar is a gift of Pius IV. The church of St. Ambrose, built by its patron saint in 386, and often restored, especially in the twelfth century, contains the tomb of the Emperor Louis II; in the chapel of St. Saturn is a mosaic that dates, probably, from the fifth century, while the central altar with its woodcarvings representing the life of David, is held, on seemingly good grounds, to be of the time of St. Ambrose; the church possesses also a golden altar-front (palliotto) of Angilbert (835). The monastery annexed to this church had a fine library, and belonged at first to the Benedictines, later to the Canons, finally to the military order of the church of St. Eustorgius contains the mausoleums of Stefano Visconti, Martino della Torre, and others. The church of St. Stefano Maggiore is of the fifth century; that of San Vittore al corso is the Basilica Portiana, dating from before the time of St. Ambrose; it contains the body of the martyr St. Victor, and also valuable paintings; San Nazaro Maggiore (382?) has some interesting frescoes; S. Gemma Galgani (1281–1345) is the founder of the Trivulzio family. In the church of St. Aquilinus there is a beautiful mosaic and the sarcophagus of a lady of the family of the Emperor Theodosius. Santa Maria delle Grazie is a church in the style of the Renaissance (1465), with a cupola by Bramante; it has valuable frescoes, beautiful carvings, and inlaid work in the choir; in the ancient monastery, which formerly belonged to the Dominicans, is the famous Last Supper of Leonardo da Vinci. On the site of the principal hall of the baths of Maximian, the premises of which remain, is built the church of San Lorenzo, containing ancient mosaics. The church of San Marco (1294) has a beautiful high altar, and valuable paintings; that of San Maurizio, far better than either, but also by the hands of Theodelinda, is covered with frescoes by Luini between 1503 and 1509. San Satiro, a church that dates from 1503 and 1509. San Satiro, a church that dates from 1503 and 1509.

SECTARIES.—Among these are the Palazzo di Corte (1228), restored several times; whose garden contains the Royal Villa (1790); the Broletto Nuovo, from 1228 to 1788 the palace of the commune; the Palazzo della Ragione (1223); the Broletto (1413–24), at present containing public offices; the Collegio Elvetico, founded by St. Charles Borromeo, and now the seat of the Court of Assizes; the Vittorio Emanuele gallery and the Castello Sforzesco. There are several schools, which have several due to the Bank of Lombardy, is an important Romanesque structure, the Lombard Seminary for foreign missions; the Academy of Sciences and Letters; the Technical Institute; the Superior Institute of Commerce; 3 royal and 6 private gymnasia; many other schools, 17 of which are under religious direction; the Verdi Conservatory of Music; the Lombard Institute for Sciences and Letters; the Royal Library, with many important works of art; the Jesuit college, rich in paintings of the old Lombard school, and possessing a valuable numismatic collection. In the Castello Sforzesco is a museum of ancient and medieval art, while many of the private
palaces, such as those of the Borromeos and of the Trivulzio, contain valuable collections of paintings. The National Library in the Brera (1770) and the Ambrosian Library are famous. The latter was founded by Cardinal Federigo Borromeo (1600) and contains 200,000 manuscripts, of which 830 are illuminated with miniatures. The State and the municipal archives are important; so, also, in their sphere, are the astronomical and the meteorological observatories. Milan has 14 theatres, of which the Scala is world-famous. There are 17 historical and 6 polycolyces, also asylums for the insane, the blind, the deaf, etc. Besides, there are nearly 500 industrial establishments, with 150,000 workmen; the textile, typographic, and pharmaceutical industries are especially well represented.

Cappelletti, Le Chiesa d’Italia, XI (Venice, 1856); Eustachio di Milano, Una cabala romantica (Milan, 1856); Eusebio, Storia di giorni trascorsi in Milano (4 vols., Milan, 1820); Castro, 2 (vols., 1855); Bonfido, Gianetti, 4 (vols., 1883–1934); Asti, Milano all’aperto (London, 1907); Sartorio, Archipe- coporum Mediolanensis series (Milan, 1755); the periodical Milano Benefico (1905 sqq.).

U. BENIGNI.

Milde, VINZENZ EUGEN, Prince-Archbishop of Vienna, b. at Brunn, in Moravia, in 1777; d. at Vienna in 1855. The adulatory monument erected to him in the Cathedral of St. Stephen in Vienna portrays a catechist bending over two children, inscribed 'Charity', to the left, a priest in the act of elevating the Blessed Sacrament, attended by a young priest and a clerk, inscribed 'and Prayer'. Under these two inscriptions, and extending across the whole length of the monument are the words 'link together the inhabitants of this world and those of the next'. The monument thus bears witness to Milde’s distinction as a catechist and as the founder of a seminary for priests and teachers. Towards the close of his preparatory studies, Milde left called to the ecclesiastical state which his stepfather was very much opposed to his entering. His mother favored his purpose, however, and poor and without acquaintances, he entered the ‘Alumnat’ or little seminary at Vienna in 1794. Here he formed an intimate friendship with Vinzenz Darnaut, the future professor of church history, and with Jakob Frint, later Bishop of St. Pölten. The three distinguished men were again united by a court chaplain and the firm friendship for the remainder of their lives. Meanwhile, Milde became catechist in the Normal High School and successor of the famous Augustin Gruber, and occupied also the chair of pedagogics at the university. Later, as court chaplain at Schönbrunn, Milde spoke so comforting to the Emperor Francis I, inurable after a battle lost to Napoleon, that the emperor replied: ‘I shall never forget this hour, dear Milde’. Not content with words, the emperor named Milde Bishop of Leitmeritz in 1823, and in 1831 Prince-Archbishop of Vienna. Milde being the first archbishop named from the ranks of the people to this see, which had hitherto been always filled by a nobleman, his nomination was thoroughly characteristic: ‘The bond of the sacred ministry is broken, but the bond of the heart will never be severed. Those whom I have loved, I shall love to the end, and, though separated from you, I shall remain united with you in charity and prayer. Pray our heavenly father not that I may live long, but that I may live for the salvation of the faithful and for my own salvation’. Milde thus greeted the people of Vienna: ‘Not only do I wish to be united with you in the bonds of the sacred ministry, but I wish to be united with you in the bonds of charity. Not for myself, but for you do I wish to live.’ He kept the promise which he made to his flock, and was to them a faithful and loving father.

Nevertheless, the year of the Revolution (1848) brought him his bitterest enmities and his most severe illnesses. He was between two fires. On 13 March the storm broke, and four days later he warned his clergy, in a circular letter, not to overstep the bounds of their calling: ‘Priests are not intended to advise regarding the earthly affairs of men, nor to regulate them, but to administer the Church, to expound the exterior matters pertaining to the salvation of souls.’ But the revolution soon menaced the archbishop. Mock serenades were held repeatedly outside his palace and its windows were broken. On the other hand, a portion of the clergy clamoured that he should be declared incapable of managing the affairs of the diocese and expressed the hope of being led to victory by a stronger personality. A deputation of the clergy represented this to Milde, who compiled as far as possible by retiring to his castle of Kranichberg. When the draft of the fundamental laws of the Austrian constitution was discussed by the assembly of the States of the Empire at Kremser, the archbishop drew up an address to the assembly: ‘The undersigned bishops declare solemnly that they, as true citizens, promote the welfare and hold sacred the rights of the state, but it is the duty of their office and of their conscience to look after the freedom and the rights of the Catholic Church, to oppose encroachment and restriction on the part of the state, and to beg for the support which would make the true prosperity of the state and the successful activity of the Church.’ At the great assembly of bishops in Vienna (1849), Milde was chosen one of a committee of five to continue the negotiations with the state. When finally in 1850 the imperial decisions were promulgated, which attempt does a blow, to the existing Josephist system, Milde published a pastoral for the purpose of stilling the tumult: ‘The uneasiness is indeed in great part the result of misunderstanding, but often also the result of malicious misrepresentation, since, through some newspapers and through speeches made by certain men inimical to the Church, the words of the August decree were distorted and erroneous representations spread abroad.’ The words of Milde in ‘My last will’ are strikingly beautiful. ‘Hope softens the separation. Those who did me evil I do not think wicked, but gladly persuade myself that I by my sensitiveness have in many cases been more deeply wounded than the occasion warranted. During the last ten years, however, many bitter misunderstandings and shameful calumnies. I have kept silence through it all, not through apathy, but partly that the malice might not be excited further, and partly in imitation of my Redeemer.’

Milde’s ‘Lehrbuch der allgemeinen Erziehungs- kunde’ is famous, and even yet much used (Vol I: Von der Kultur der physischen und der intellektuellen Anlagen; Vol II: Von der Kultur des Gefühls- und des Begehungsvermögens, Vienna, 1811–13, 3rd ed., 1843). A compendium of the Erziehungskunde was published in 1821. J. Ginsel edited Milde’s ‘Reli- quien’ (2nd ed., Vienna, 1859), which contained his addresses and which he dedicated to the emperor.

C. WOLFGRUNER.

Miles, GEORGE HENRY, dramatist and man of letters, b. in Baltimore, Maryland, 31 July, 1824; d. near Emmitsburg, 23 July, 1871. He graduated from St. Mary’s College, in 1836, and then took up the study of law, commencing to prac- tice later in his native city. But the profession of
law was ill-suited to his temper of thought and to his literary talents, which had early evinced themselves in a facility in turn-making and versification. His first appearance in print was with an historical tale, "The Truce of God," which appeared serially in the "United States Catholic Magazine," followed shortly by "The Governess," and in 1849, by "Lorletto," which won a $50 prize offered by the "Catholic Mirror." The following year, when but twenty-six years of age, his "History of Missions" won the $1000 prize offered by Edwin Forrest. The law was now definitely abandoned for the drama. In 1859 he scored his first success with the tragedy of "De Soto," produced at the Broadway Theatre, New York City, and during the same season his comedy, "Mary's Birthday," was performed. In 1849 "Senior Vice," a work of distinction, was given a long presentation at New York, Boston, and Baltimore on the same night. During the season 1860-61 the "Seven Sisters," based on the theme of Secession, was produced at Laura Keen's Theatre, New York City. Other dramatic ventures were not so successful, and his most pretentious effort, "Cromwell, a Tragedy," remains unfinished. In 1851 he was dispatched to Spain by President Fillmore as official bureau. He was again in Europe in 1864 and, on his return, published in the "Catholic World" a series of charming sketches, "Glimpses of Tuscany," and, in 1866, "Christine: a Troubadour's Song," and a volume of verse, "Christen Poems." In 1859 he had been appointed professor of English literature at Mount St. Mary's, in which year he married Adaline Tier of New York, and moved from Baltimore to Thornbrook, a cottage near Emmitsburg, where he lived until his death.

In addition to works of creative fancy, Miles delivered in 1847 a "Discourse in Commemoration of the Landing of the Pilgrims of Maryland," and, shortly before his death, contemplated a series of critical estimates on Shakespeare's characters. Only one, that upon "Hamlet," was published (in the "Southern Review"), which won no mean measure of appreciation from contemporary scholars in England.

---

Miletus, a titular see of Asia Minor, suffragan of Aphrodisias, in Caria. Situated on the western coast of Caria near the Latmic Gulf at the mouth of the Meander and the terminus of several of the great roads of Asia Minor, Miletus was for a long period one of the most prosperous of the cities of Asia Minor. It was first inhabited by the Leleges and called Legegia or Pitussa, it was rebuilt under the name of Miletus by the Cretans (Strabo, XIV, i, 3). It is mentioned by Homer (Iliad, II, 868). About the tenth century n. c. the Ionians occupied it, and made it a maritime and commercial power of the first rank. From it numerous colonies were founded along the Hellepont, the Propontis, and the Black Sea, among others Cysicus and Sinope. Miletus also had its period of literary glory with the philosophers Thales, Anaximander, and Anaximenes, the historians Hecateus and Cadmus, the rhetorician Semonides, and the writer of tales, Ariosto. After the sixth century n. c., it passed successively under the domination of the Persians, Alexander, the Seleucids, and the Romans, and finally lost its splendour to such an extent as to become for the Greeks and Romans the symbol of vanished prosperity. It is, nevertheless, often mentioned by Strabo (XII, viii, 16; XIV, i, 3, 6) and by Pliny (Hist. nat., IV; vi; XXXVI etc.). St. Paul landed there from Samos, and made farewell to the ancients at the Port of Ephesus. On another occasion, doubtless after his first captivity, he left here his companion Trophimus, who was ill (II Tim., iv, 20). In the Acts of St. Thyrus and his companions, martyred at Miletus under Declus, mention is made of a Bishop Cresarius who gave them burial (Acts SS., III, January, 422). Eusebius, Bishop of Miletus, stationed at the Council of Nicea (325). For the list of the other known bishops see Le Quien (I, 917-20) and Gams (448). Mention may be here made of St. Nicephorus in the tenth century (Anal. Bolland., XIV, 129-66). At first a suffragan of Aphrodisias, Miletus afterwards became an autocephalous archdiocese and even a metropolis. Among those who brought fame to the city during Byzantine times must be mentioned the architect Isidore, who, with Anthemius of Tralles, built St. Sophia at Constantinople. The ancient city is now buried under the alluvium of the Meander, which has also filled up the Latmic Gulf. Near its site, about four and a half miles from the sea, is the village which sits on the medieval town named Palatscha. Recent excavations have brought to light other ruins, the remains of a temple of Apollo Didymus. Greek Christian inscriptions have also been found there, among others one mentioning the

---

Miletus, a Diocese of (Miletensis), in Calabria, in the province of Reggio, southern Italy. According to tradition, this city was not far from the site of the ancient Medmata, by fugitives from Miletus in Asia Minor, destroyed by Darius. It suffered much from earthquakes, especially from those of 1905 and 1906, and, although in a less degree, from that of 28 December, 1908, which destroyed Reggio and Messina. Miletus was made an episcopal see by Gregory VII in 1073. The earthquake of 1783 destroyed the cathedral, built by Count Roger, who also built the monastery of the Most Holy Trinity and St. Michael for Greek Basilian monks. Callistus II united this diocese with those of Tauriana and Vibona, the latter destroyed by the Saracens. The first bishop was Arnolf; after him were Godfrey (1084), under whom the city was under the Roman Emperor Corrado Caracciolo (1402); Cardinal Astorgio Agnensi (1411); Antonio Sorbili (1435), who founded the seminary in 1440; Felice Centini (1611), afterwards a cardinal; Gregorio Ponziani (1640), charged with a mission to England by Urban VIII. The present incumbent (since 1898), Mgr. Morabito, has been a chargeable sufferer from the recent quakes. The diocese has 124 parishes, containing 220,000 souls; 2 convents of men, and 12 houses of nuns, 2 schools for boys, and 7 for girls.

martyr Onesippus, and another, probably of the fourth century, containing an invitation to the seven archangels, guardians of the city (Corp. inscr. gr., 2892, 8847).

S. Salaville.

Miletus (originally MULLER), VITUS, Catholic theologian, b. at Gmbd, Swabia, 1549; d. at Mains, 11 Sept., 1615. He studied at the German College, Rome, from 1567 to 1575; on 28 Oct., 1573, as dean of the students of the philosophic faculty, he gave a short address before Pope Gregory XIII, when he visited the newly organized academy. He was ordained in St. John Lateran on Easter Saturday, 1575, and returned to Germany in the summer of that year; on his journey he was the doctor of theology at Bologna (11 June, 1575). He was summoned to Mains by the Elector Daniel Brandenburg, where he was active in the reform of the clergy. From there he was sent by the elector to Erfurt, to assist the suffragan bishop Nicolaus Elard in his efforts for the restoration of Catholicism. In 1575 he renounced the doctrine of the Eucharist, preached at Erfurt in Lent, 1575, involved him in sharp controversy with the Protestant preachers. He was sent to Rome in 1582 to bring the pallium for the new archbishop, Wolfgang von Dalberg. The latter brought him back again to Mains, and employed him on important affairs, notably on the visitation of monasteries. At Erfurt he benefited from the conference with the Jesuits, and the confirmation and the pallium for the succeeding archbishops, Adam von Bicken, and Schweikart von Cronenburg. Under all these archbishops, the last of whom appointed him his spiritual counsellor, he was tirelessly engaged in defending the Catholic Faith, both by preaching and writing, until his death. He was profoundly influenced by the ideas of Erasmus, of St. Victor’s and St. Peter’s, all in Mains; and canon of St. Severus’ at Erfurt. After 1575 he also had a canony in the cathedral chapter at Breslau. He did not visit Breslau until 1599, and then only for a short time, while taking part in the election of a bishop; he then went to Rome to bring the confirmation of the election, and SIGNA OF THE BLESSINGS ARE:

- De festo Corporis Christi in honorem Jesu Christi"

(Mains, 1580): “Augenschein des Jesuiten Spiegels, so neuwlich su Erfurt ud in trau gekürgen” (Cologne, 1582); “De sacramentis, mille secenti errores, vaniloquias et cavillaciones eorum, qui hoc tempore ab Ecclesia secessus catholici, cum brevi explanatione, perierer in eorum errores, quos duobus predicans Saxonic Thielmannus Heusibusii et Joannes Olearius Pontificiis hic est Christianae Catholicae vanissime haecentus attribuit” (Mains, 1594).

Michael Ott.

Military Orders, The.—Including under this term every kind of brotherhood of knights, secular as well as religious, historians of the military orders have enumerated as many as a hundred, even after eliminating the apocryphal and stillborn. This great number is explained by the vogue with which in the Middle Ages welcomed an institution so thoroughly corresponding to the two occupations of that period, war and religion. Royalty afterwards utilised this new idea to strengthen its own position or to reward faithful nobles, creating secular orders of knighthood until there was no country without its royal or princely order. Even private individuals entered into the business; adventurers attempted to exploit the vanity of the noblesse by sham insignia of knighthood with which they decked themselves, and which they distributed among their dupes lavishly—though not gratuitously. Hence came a whole category of orders justly considered apocryphal. In the seventeenth century Marino Caraccioli (1624), a Neapolitan nobleman, succeeded in
passing himself off as Grand Master of the Order of Knights of St. George, which he pretended to trace to Constantine the Great. In 1632, Baltazar Giron, who called himself an Arab, was made chief of the European branch of the order, and the Star of Our Lady of the Nile was bestowed on his brother. In 1646, at the court of Louis XIV, a negro, brought from the Gold Coast, was received as a prince, even receiving the crown of being baptized by Bossuet (1668), and instituted the order of the Star of Our Lady before returning to his alleged dominions.

A regular order of knighthood means a brotherhood or confraternity which combines with the insignia of knighthood the privileges of monks. This supposes recognition on the part of both Church and State; to belong to the regular clergy, they needed the pope's confirmation; they could not wear the sword of knighthood without the authorization of the prince. Orders of knighthood lacking this official recognition should be expunged from history, even though they figure in the pages of all the old historians of the military orders. As a matter of fact, more than one rule of this kind, scarcely passing beyond the initial stages, has existed, and such are the orders which may be designated stillborn. No trace is to be found in the "bullarium romanum" of the order called the "Order of St. Michael, attributed to King Alfonso I of Portugal (1176), nor of the Order of the Ship, which St. Louis was supposed to have founded on the eve of the crusade to Tunis where he died (1270), nor of that of the Angers, as of St. Nicholas, attributed to Charles III, King of Naples, 1382. Philippe de Mesieres, chancellor of the King of Cyprus, drew up the statutes of an Order of the Passion of Christ (1360), the text of which has recently been published, but which were never enforced. After the conquest of Lemnos from the Turks, Pope Pius II founded an order of Our Lady of the Lilies, intending to transfer the islands to the possession of orders of older orders which no longer fulfilled their purpose (1459), but the loss of the island prevented its institution. The same fate befell the German Order of the Christian Militia, projected (1615) under Paul V; of the French order of The Magdalen for the suppression of duelling (1614); of the Order of Our Lady of the Tower, intended to transfer the Tower of London to the Order of St. John of Jerusalem (1631), and of the Order of St. George of Cyprus (1658), which was dissolved by the Duke of Mantua and approved by Urban VIII (1623), have remained a dead letter. The age of the crusades had passed. The orders of any historical existence may be reduced to three categories: I. The Greater Regular Orders; II. The Lesser Regular Orders; III. The Secular Orders.

The military orders. The great military orders had their origin in the crusades, from which they retain the common badge of every order of knighthood, the cross worn on the breast. Of all these, the Knights Templars (q. v.), has served as a model for all the others. After barely a century of existence, they were suppressed by Clement V; but after the fall of Acre and the foundation, by the same pope, of the Order of Christ (q. v.) in Portugal, and the Order of Montesa (q. v.) in Spain. In the twelfth century Portugal had borrowed their rule from the Templars and founded the Portuguese Order of Avis (q. v.). Almost at the same time there arose in Castile the Order of Calatrava (q. v.) and in Leon the Order of Alcántara (q. v.), contemporaries with the purely military orders, others were founded, at once military and hospitalier, the most famous of which were the Hospitalers of St. John of Jerusalem and the Teutonic Knights, modelled on the former, both still in existence. In the same category should be included the Order of Santiago (q. v.) which spread throughout the Iberian Peninsula, and Portugal. Lastly, to give the purely hospitalier orders rank and command, however, claiming the rank of knights though they had never been in battle, such as the Orders of St. Lazarus of Jerusalem (q. v.) and of the Holy Spirit of Montpellier (q. v.). With these may be connected the Order of Our Lady of Ransom (Nuestra Señora de Merced, also called Mercedarians), founded (1218) in Aragon by St. Peter Nolasco for the redemption of captives. Including religious knights as well as religious clerics, it was originally considered a military order, but dissensions arose and each rank chose its own grand master. John XXII (1317) reserved the grand-mastership to clerics, with the result of a general exodus of knights into the newly founded military Order of Montesa.

II. THE LESSER REGULAR ORDERS.—There is mention in the twelfth century, in Castile, of an Order of Montjoie, confirmed by Alexander III (1180), but difficult to distinguish from the Order of Calatrava, with which it was soon amalgamated. In 1191, after the siege of Acre, Richard I of England founded there in fulfillment of a vow, the Order of St. Thomas of Canterbury, an order of hospitaliers for the service of English pilgrims. It seems to have been made dependent on the Hospitaliers of St. John, whom it followed to Cyprus after the evacuation of Palestine. Its existence is attested by the Bullarium of Alexander IV and John XXII; beyond this it has left but little trace except a church of remarkable architecture, St. Nicholas, at Nicosia in Cyprus. Better known is the history of the Schwäbische Orden (Ensfers, or Sword-bearers of Livonia), founded by Albert, first Bishop of Riga (1197), to propagate the Faith in the Baltic Provinces and to protect the new Christianity there against the pagan nations still numerous in that part of Europe. Against these pagans a crusade had been preached; but, the temporary crusaders having made haste to withdraw, it became necessary, as in Palestine, to supply their place with a permanent order. This order adopted the statutes, the white mantle and the red cross of the Templars, with a red sword as their distinctive badge, whence their name of Ensfers. The order was approved in 1202 by a Bull of Innocent III. Thrown open to all sorts of persons without distinction of birth, overrun by aimless adventurers whose expenses were calculated rather to exasperate the pagans than to convert them, it endured but a short time, having only two grand maes.
Knights, exclusive of princes of the blood and foreign princes, with St. George as its patron and with its chapel in Windsor Castle for the holding of chapters. This, the Order of the Garter, takes its name from the characteristic badge, worn on the left knee. The choice of this badge has given rise to various anecdotes of doubtful authenticity. Nothing is now known of the original badge of the Bath, the creation of which dates from the coronation of Henry IV (1399). A third order, Scottish by origin, is that of the Order of the Thistle, dating from the reign of James V of Scotland (1534). These orders still exist, though they have been protestantized. In France, the royal orders of the Star, dating from John the Good (1632), of St. Michael, founded by Louis XI (1469), of the Holy Ghost, founded by Henry III (1570), of Our Lady of Carmel, amalgamated by Henry IV with that of St. Lazarus (q.v.), were absolutely suppressed by the Revolution. Austria and Spain now dispute the inheritance from the House of Burgundy of the right to confer the Order of the Golden Fleece, founded by Duke Philip the Good, approved by Eugene IV in 1433, and extended by Leo X in 1516.

In Piedmont, the Order of the Annunziata, under its later form, dates only from Charles III, Duke of Savoy, in 1518, but its first dedication to the Blessed Virgin goes back to Amadeus VIII, first Duke of Savoy, antipope under the name of Felix V (1144). There had, previously to this dedication, existed in Savoy an Order of the Collar, which held its chapters in the Charterhouse (founded in 1392) of Pierre-Châtel in Bugey. Here also the Knights of the Annunziata kept their feast of the Annunciation, so that they have considered themselves as successors of the Order of the Collar. After the cession of Bugey to France, they transferred their chapters to the newly founded Camaldolese monastery on the Mountain of Turin (1627). In the Duchy of Mantua, Duke Vincent Gonzaga, on the marriage of his son Francis II, instituted, with the approbation of Paul V, the Knights of the Precious Blood, a relic of which is venerated in that capital. Lastly there are a number of pontifical secular orders, the oldest of which is the Order of Christ, contemporary with the institution of the same name in Portugal in 1319. In approving the latter institution, John XXII reserved the right of creating a certain number of knights by patent, and it is now used to reward services rendered by any person, whatever his rank or profession, provided he is of good moral character and his name is to be said of the Orders of St. Peter, instituted by Leo X in 1520, of St. Paul, founded by Paul III in 1534, of Our Lady of Loretto, charged by Sixtus V in 1558, to watch over and preserve that sanctuary. These distinctions were mostly granted to functionaries of the pontifical chancellor. There has been some question as to the Order of the Holy Sepulchre (q.v.), formerly dependent on the Patriarch of Jerusalem, and quite recently reorganized by the reigning pope (Pius X). The Knights of St. Catherine of Sinai (q.v.) are not an order, either secular or regular. The respective particular histories of the great military orders have been traced in the various Volumes devoted to them; it is necessary here only to explain their general organization, religious, military, and economic.

(1) Religious State.—The knights of the great orders were regarded in the Church as analogous to monks, whose three vows they professed and whose immunities they shared. They were answerable to the Pope alone; they had their own chapels in Rome and their cemeteries, all exempted from the jurisdiction of the secular clergy. Their landed property was free from tithes. They were not subject to the interdicts which the bishops in those days employed so freely. They did not all follow the same monastic rule. The Templars and orders derived from their

Knights Templars

in 1589, were not so much a military order as an association of gentlemen who undertook to maintain the public peace in those turbulent times. An order of St. George of Alfaia, in Aragon, approved in 1363 by Urban V, was merged in the Order of Montesa in 1399. The Knights of St. George, in Austria, founded by the Emperor Frederick III, and approved by Paul II in 1468, failing to perpetuate their existence, owing to the lack of territorial possessions, gave place to a purely secular confraternity. The Order of St. Stephen Pope was founded in Tuscany by the Grand Duke Cosmo I and approved in 1581 by Pius IV, being placed under the Benedictine Rule. It had its principal house at Pisa, and was obliged to equip a certain number of galleys to fight the Turks in the Mediterranean after the manner of, and in concert with, the "caravans" of the Knights of Malta.

III. The Secular Orders.— Dating from the fourteenth century, fraternities of lay knights were formed modelled on the great regular orders; as in the latter, we find in these secular orders a patron, a vow to serve the Church and the sovereign, statutes, a grand master (usually the reigning prince), and the practice of certain devotions. Most of them also asked for the approbation of the Holy See, which, on the other hand, granted them favours, indulgences, the privilege of private oratories, dispensation from certain fasts, etc. The chief of these orders, classified by countries, are as follows:— In England, Edward III, in memory of the legendary Knights of the Round Table, established in 1349 a brotherhood of twenty-five
followed the Cistercian Reform. The Hospitallers followed the Rule of St. Augustine. Nevertheless, in consequence of the relaxation which manifested itself among them after the period of the crusades, the Holy See introduced mitigations in favour of the non-clerical brethren. For this it was difficult to maintain the rule of celibacy in all its rigour; they were permitted, in certain orders, to marry once, and that only with a maiden. Even where second marriages were tolerated, they had to vow conjugal fidelity, so that if they violated this obligation of the natural law they sinned doubly, against the law and against their vow. Besides the three vows, the rule bound the brethren to the exercises of the monastic life such as the recitation of the commander and subordinate, these orders surpassed, in that cohesiveness which is the ideal of every military organization, the most famous bodies of picked soldiery known to history, from the Macedonian phalanx to the Ottoman Janissaries.

3) Economic Organization.—The importance acquired by the military orders during the course of the Middle Ages may be measured by the extent of their territorial possessions instituted throughout Europe. In the thirteenth century nine thousand manors formed the portion of the Templars; thirteen thousand that of the Hospitallers. These temporalities were an integral part of the ecclesiastical domain, and as such had a sacred character which placed them beyond liability to profane uses or to secular imposts. They differed from the temporalities of other monastic institutions only in the centralized system of their administration. While within each of the other religious institutes every abbey was autonomous, all the houses of a military order were bound to contribute their revenues, after deducting expenses, to a central treasury. As a result of this enormous circulation of capital controlled by the orders, their wealth could be applied to financial operations which made them veritable credit and deposit banks. Their perfect good faith earned for them the implicit confidence of the Church and of temporal rulers. The papacy employed them to collect contributions for the crusades; princes did not hesitate to entrust to them their personal property. In this respect, again, the military orders were most similar to the sovereign states.

MILLENNIUM.—Origine des chevaliers et ordres militaires (Antwerp, 1609); FAYN, Histoire des ordres de chevalerie (2 vols., Paris, 1852); RIEHLENSFELD, Geschichte und Verfassung aller Ritterorden (Weimar, 1841); CAPPELLETTI, Storia degli ordini cavallereschi (Leghorn, 1904); CLARKE, Concise History of Knighthood, II (London, 1884); DIXON, The Broad Story of Honour (London, 1876); LAWRENCE-ARCHER, The Orders of Chivalry (London, 1887); see also bibliographies attached to special articles on the several great orders.

CH. MOELLER.

Millennium and Millenarianism.—The fundamental idea of millenarianism, as understood by Christian writers, may be set forth as follows: At the end of time Christ will return in all His splendour and glory; He will judge the world and give the just to eternal life, and the wicked to eternal damnation. The duration of this glorious reign of Christ and His saints on earth, is frequently given as one thousand years. Hence it is commonly known as the "millennium", while the belief in the future realization of the kingdom is called "millenarianism" (chiliasm, from the Greek χίλια, one thousand).

This term of one thousand years, however, is by no means an essential element of the millennium as conceived by its adherents. The extent, details of the realization, conditions, the place, of the millennium were variously described. Essential are the following points: The early return of Christ in all His power and glory, the establishment of an earthly kingdom with the just, the resurrection of the deceased saints and their participation in the glorious reign, the destruction of the powers hostile to God, and, at the end of the kingdom, the universal resurrection with the final judgment, after which the just will enter heaven, while the wicked will be consigned to the eternal fire of hell.

The roots of the belief in a glorious kingdom, partly natural, partly supernatural, are found in the hopes of the Jews for a temporal Messiah and in the Jewish apocalyptic. Under the galling pressure of their polit-
Theological circumstances, the expectation of a Messiah who would free the people of God had, in the Jewish mind, assumed a character that was to a great extent earthly; the Jews longed above all for a saviour who would free them from their oppressors and restore the former splendour of Israel. These expectations generally included the belief that Jehovah would conquer all powers hostile to Himself and to His chosen people, and that He would set up a final, glorious kingdom of Israel. The apocalyptic books, principally the book of Henoch and the fourth book of Esdras, indicate various details of the arrival of the Messiah, the defeat of the nations hostile to Israel, and the union of all the Israelites in the Messianic kingdom followed by the rejection of the Gentiles, and the world and the Heavens on the last day.

The natural and the supernatural are mingled in this conception of a Messianic kingdom as the closing act of the world's history. The Jewish hopes of a Messiah, and the descriptions of apocalyptic writers were blended; it was between the close of the present world-order and the commencement of the new that this sublime kingdom of the chosen people was to find its place. That many details of these conceptions should remain indistinct and confused was but natural, but the Messianic kingdom is always pictured as something miraculous, though the colours are at times earthly and sensuous. The evangelical accounts clearly prove how fervently the Jews at the time of Christ longed, partly by hope, partly by need, for a Saviour to proclaim the spiritual kingdom of God for the deliverance of man from his sins and for his sanctification, a kingdom which actually began with His birth. There is no trace of chiliasm to be found in the Gospels or in the Epistles of St. Paul; everything moves in the spiritual and religious sphere; even the description of the end of the world and of the last judgment bear this stamp. The victory over the symbolical beast (the enemy of God and of the saints) and over Antichrist, as well as the triumph of Christ and His saints, are described in the Apocalypse of St. John (Apoc., 20-21), in pictures that resemble those of the Jewish apocalyptic writers, especially of Daniel and Henoch. Satan is chained in the abyss for a thousand years, the martyrs and the just rise from the dead and share in the priesthood and kingship of Christ. Though it is difficult to focus sharply the pictures used in the Apocalypse and the things expressed by them, yet there can be no doubt that the whole description refers to the spiritual conflict between the Good and the Bad within the Church on the one hand and the malignant powers of hell and the world on the other. Nevertheless, a large number of Christians of the post-Apostolic era, particularly in Asia Minor, yielded so far to Jewish apocalyptic as to put a literal meaning into these descriptions of St. John's Apocalypse; the result was that millenarianism spread and gained staunch advocates not only among the heretics but among the Catholic Christians as well.

One of the heretics, the Gnostic Cerinthus, who flourished towards the end of the first century, proclaimed a splendid kingdom of Christ on earth which He would establish with the risen saints upon His second advent, and pictured the pleasures of the one thousand years in gross, sensual colours (Caus in Eusebius, "Hist. Eccl.", III, 28; Dionysius Alex. in Eusebius, ibid., VII, 25). Later among Catholics, Bishop Papias of Hierapolis, a disciple of St. John, appeared as an advocate of millenarianism. He claimed to have received his doctrine from contemporaries of the Apostles, and Irenæus narrates that other "Presbyters", whom he called "synagogues", learned from him the belief in millenarianism as part of the Lord's doctrine. According to Eusebius (Hist. Eccl., III, 39) Papias in his book asserted that the resurrection of the dead would be followed by one thousand years of a visible, glorious earthly kingdom of Christ, and according to Irenæus (Adv. Haereses, V, 33), he taught that the saints too would enjoy a superabundance of earthly pleasures. There will be days in which vines will grow, each with 10,000 branches, and on each branch 10,000 twigs, and on each twig 10,000 shoots, and on each shoot 10,000 clusters, and on each cluster 10,000 grapes, and each grape will produce 216 gallons of wine, etc.

Millenarian ideas are found by most commentators in the Epistle of St. Barnabas, in the passage treating of the Jewish sabbath; for the resting of God on the seventh day after the creation is explained in the following manner. After the Son of God has come and put an end to the era of the wicked and judged them, and after the sun, the moon, and the stars have been changed, then He rested on the seventh day. The author had premised, if it is said that God created all things in six days, this means that God will complete all things in six millenniums, for one day represents one thousand years. It is certain that the writer advocates the tenet of a re-formation of the world through the second advent of Christ, but it is not clear from the indications whether the author of the letter was a millenarian in the strict sense of the word. St. Irenæus of Lyons, a native of Asia Minor, influenced by the companions of St. Polycarp, adopted millenarian ideas, discussing and defending them in his work against the Gnostics (Adv. Haereses, V, 32). He developed this doctrine more fully in his "Against the Gnostics", in which he preached that all the Christians in a happy future life, and discerned in the glorious kingdom of Christ on earth principally the prelude to the final, spiritual kingdom of God, the realm of eternal bliss. St. Justin of Rome, the martyr, opposes to the Jews in his Dialogue with Tryphon (ch. 80-81) the tenet of a millennium and asserts that he and the Christians whose belief is correct in every point know that there will be a resurrection of the body and that the newly built and enlarged Jerusalem will last for the space of a thousand years, but he adds that there are many who, though adhering to the pure and pious teachings of Christ, do not believe in it. A witness for the continued belief in millenarianism in the province of Asia is St. Melito. Bishop of Sardes in the second century. He develops the same train of thought as did St. Irenæus.

The Montanistic movement had its origin in Asia Minor. The expectation of an early advent of the celestial Jerusalem upon earth, which it was thought, would appear in Phrygia, and appeared in the minds of the Montanists with the idea of the millennium. Tertullian, the protagonist of Montanism, expounds the doctrine (in his work now lost, "De Sp Fidelium" and in "Adv. Marcionem", IV) that at the end of time the great kingdom of promise, the new Jerusalem, would be established and last for the space of one thousand years. All these millenarian authors appeal to various passages in the prophetic books of the Old Testament, to a few passages in the Letters of St. Paul, and to the Apocalypse of St. John. Though millenarianism had found numerous adherents among the Christians and had been upheld by several ecclesiastical theologians, neither in the post-Apostolic period nor in the course of the centuries, does it appear as a universal doctrine of the Church or as a part of the Apostolic tradition. The primitive Apostolic symbol mentions indeed the resurrection of the body and the return of Christ to judge the living and the dead, but it says not a word of the millennium. It was the second century that produced not only defenders of the millennium but proponents of chiliasm and gnostic ideas. Gnosticism rejected millenarianism. In Asia Minor, the principal seat of millenarian teachings, the so-called Alois up against millenarianism as well as against Montanism, but they went too far in their opposition, rejecting not only the Apocalypse of St. John, alleging Cerinthus as its author, but his Gospel also. The opposition to millenarianism
became more general towards the end of the second century, going hand in hand with the struggle against Montanism. The Roman presbyter Caius (end of the second and beginning of the third century) attacked the millenarians. On the other hand, Hippolytus of Rome defended them and attempted a proof, basing his arguments on the allegorical explanation of six days of creation as six thousand years, which he had been taught by tradition. The most powerful adversary of millenarianism was Origen of Alexandria. In view of the Neo-Platonism on which his doctrines were founded and of his spiritual-allegorical method of explaining the Holy Scriptures, he could not side with the millenarians. He committed them expressly, and openly, to the greatest confusion which his writings exerted on ecclesiastical theology especially in Oriental countries, millenarianism gradually disappeared from the ideas of Oriental Christians.

Only a few later advocates are known to us, principally theological adversaries of Origen. About the middle of the third century Nepos, bishop in Egypt, who entered the lists against the allegorism of Origen, also propounded millenarian ideas and gained some adherents in the vicinity of Arsinoe. A schism threatened; but the prudent and moderate policy of Dionysius, Bishop of Alexandria, preserved unity; the chiliasts abandoned their views (Eusebius, "Hist. Eccl.", VII, 14). Egypt seems to have harbored them longer than the other lands. The Methodius, Bishop of Olympus, one of the principal opponents of Origen at the beginning of the fourth century, upheld chiliastic in his Symposion (IX, 1, 5, in Migne, "Patr. Grœc.", XVIII, 178 sqq.). In the second half of the fourth century, these doctrines found their last defender in Apollinaris, Bishop of Laodicea and founder of Apollinarianism (A.D. 265). His writings on this subject have been lost; but St. Basil of Cesarea (Epist. CCLXIII, 4, in Migne, "Patr. Grœc.", XXXI, 980), Epiphanius (Haeres. LXX, 36, in Migne loc. cit., XLII, 696) and Jerome (In Isai. XVIII, in Migne, "Patr. Lat." XXIV, 627) testify to his having been a chiliast. Jerome also adds that many Christians of that time shared the same beliefs; but after that millenarianism found no outspoke champion among the theologians of the Greek Church.

In the West, the millenarian expectations of a glorious kingdom of Christ and His just, found adherents for a long time. The poet Commodian (Instructiones, 41, 42, 44, in Migne, "Patr. Lat." V, 283 sqq.) and Firmicus Maternus, (Instit. Hist. Mart., "Patr. Lat." VI, 739 sqq.) proclaimed the millennial kingdom and described its splendour, partly drawing on the earlier chiliasts and the Sybilline prophecies, partly borrowing their colours from the "golden age" of the pagan poets; but the idea of the six thousand years for the duration of the world is ever conspicuous. Victorinus of Pettau also was a millenarian though in the extant copy of his commentary on the Apocalypse no allusions to it can be detected. St. Jerome, himself a decided opponent of the millenial ideas, brands Sulpicius Severus as adhering to them, but in the writings of this author in their present form nothing can be found to support this charge. St. Ambrose indeed teaches a two fold resurrection: a new apotheosis of the blessed and a universal resurrection and a final judgment immediately following, he could no longer cling to the principal tenet of early chiliism. St. Augustine finally held to the conviction that there will be no millennium. The struggle between Christ and His saints on the one hand and the wicked world and Satan on the other, is waged in the Church on earth; so the great Doctor

describes it in his work De Civitate Dei. In the same book he gives us an allegorical explanation of Chap. 20 of the Apocalypse. The first resurrection, of which this chapter treats, he tells us, refers to the spiritual rebirth in baptism; the sabbath of one thousand years after the six thousand years of history, is the whole of eternal life; or, in other words, the number seven, reduced to figures and years, is not to be taken literally, but as a symbol or a number.

And the last space of one thousand years must be understood as referring to the end of the world; at all events, the kingdom of Christ, of which the Apocalypse speaks, can only be applied to the Church (De Civitate Dei, XX, 5–7, in Migne, "Patr. Lat.", XLI, 607 sqq.).

The chiliastic understanding of the Apocalypse, imparted by succeeding Western theologians, and millenarianism in its earlier shape no longer received support. Cerinthus and the Ebionites are mentioned in later writings against the heretics as defenders of the millennium, it is true, but as cut-off from the Church. Moreover, the attitude of the Church towards the secular power had undergone a change with closer connexion between her and the Roman empire. There is no doubt that this turn of events did much towards weaning the Christians from the old millenarianism, which during the time of persecution had been the expression of their hopes that Christ would soon reappear and overthrow the foes of His elect. Chiliastic views disappeared, but the millenarianism was still marked, above all, in spite of their wide diffusion even among sincere Christians, and in spite of their defence by prominent Fathers of the early Church, millenarianism was never held in the universal Church as an article of faith based on Apostolic traditions.

The Middle Ages were never tainted with millenarianism; it was foreign both to the theorey of that period and to the religious ideas of the people. The fantastic views of the apocalyptic writers (Joachim of Floris, the Franciscan-Spirituals, the Apostolic), referred only to a particular form of spiritual renovation of the Church, but did not include a second advent of Christ. The "emperor myths", which prophesied the establishment of a happy, universal kingdom by the great emperor of the future, contain indeed descriptions that remind one of the ancient Sybilline and millenarian writings, but an essential trait is again missing, the return of Christ and the connexion of the blissful reign with the resurrection of the just. Hence the millennium proper is unknown to this epoch. The Protocols of the 19th century, who expected the millennium in one form or another: in Germany, the Bohemian and Moravian Brethren (Comenius); in France, Pierre Jurien (L'Accomplissement des Prophéties, 1680); in England at the time of Cromwell, the Independents and Jane Lead. A new phase in the development of millenarian views among the Protestant sects commonly known as "Pietists", the chief champions of the millennium in Germany was I. A. Bengel and his disciple Crusius, who were afterwards joined by Rothe, Volck, Thiersch, Lange and others. Protestants from Wurttemberg emigrated to Palestine (Temple Communities) in order to be closer to Christ at His second advent. Certain fantastical sects of England and North America,
as the Irvingites, Mormons, Adventists, adopted both apocalyptic and millenarian views, expecting the return of Christ and the establishment of His kingdom at an early date. Some Catholic theologians of the nineteenth century championed a moderate, modified millenarianism, especially in connexion with their emphasis on pietistic and apocalyptic elements of the New Testament (of the World, 1856), Schneider (Die chilalistische Doktrin, 1859), Rohling (Erkärung der Apokalypse des hl. Johannes, 1895; Auf nach Sion, 1901), Rougeyron Chabauty (Avenir de l'Eglise catholique selon le Plan Divin, 1890).

G. GIEßMANN.

Miller, William J. See Transvaal, Vicerariats APOSTOLIC OF.

Millet, Jean-François, French painter; b. at Gruchy, near Cherbourg, 4 October, 1814; d. at Barbizon, 20 January, 1875. This great painter of peasants was a son of peasants: he himself began life as a tiller of the soil, and he never lost touch with it. But though a family of rusticity, the Millets were far removed from rusticity of manners: they were serious folks, profoundly pious, a strange stock of Catholic Puritans whose stern sentiments of religion, handed down from generation to generation, gave them something like an aristocratic character; they were incapable of mean ideas. The grandmother of that house was a daughter of Pascal, Bossuet, Nicole, and Charron. Young Jean-François was reared by the parish priest in the cult of Vergil and the Bible; the "Georgics" and the Psalms, which he read in Latin, were his favourites. Later on he became acquainted with Burns and Theocritus, whom he preferred even to Vergil. His imagination, nourished on these two powers, Nature and poetry, the open country and Holy Scripture, shared equally in the shaping of his genius.

Of that genius the young ploughman gave the first signs at the age of eighteen. He studied at Cherbourg under Languois, a pupil of Baron Gros, and the Municipal Council gave him a pension of 600 francs a year, and he began to finish his studies in Paris. There he entered the atelier of Delaroche in 1837; but he spent most of his time in the Louvre, with the masters of bygone ages.

The primitives of Italy rapturized him by their fervour: Fra Angelico filled him with visions. The colourists were little to his taste; he remained unmoved in the presence of their gilded visions. He liked Rubens's vigour and Murillo's homely grace. Among the Frenchmen, the beauty of Le Sueur's sentiment touched him, Le Brun and Jouvent thought "strong men". But his favourite masters were the masters of "style"—Mantegna, Michelangelo, and Poussin: they haunted him all his life. Poussin's "Letters" were his everyday food, and "I would look at Poussin's pictures forever and ever", he writes, "and always learn something". His contemporaries, Delacroix excepted, moved him but little and for the most part to indignation. Millet's early works—those of his Paris period (1837-50)—are extremely different from those which made him famous. They are now very rare, but at the point of view of art, they are probably his most pleasing and felicitous productions; in them the painter's temperament voices itself most naturally before his "conversion", without method, without ulterior purpose. They are generally idylls—eclogues—thoroughly rural in feeling, with a fresh, noble sensibility, as though Vergil's Vergilia were finding expression in little pagan scenes, antique bas-reliefs, and neutral subjects, such as "Women bathing", "Nymphs", "Offerings to Pan", and so on—thoughts but slightly defined in forms as definite as sculpture.

Some of these pieces are the most Poussinesque things in modern art. In them the young painter already appears as an accomplished stylist, with a
Correggian feeling for grace that was to be almost entirely lacking in his latest works. Here he has powerfully expressed the joy of living as it might be known to a soul like his—serious and robust, and always veiled in melancholy. His palette is brighter and less embarrassed than it afterwards became; indeed, the colour is sometimes even a little florid, as in the graceful portrait of Mlle Feuillardet. On the other hand, the severity of the modelling always saves his work from anything like carelessness or lack of dignity. Some—like the charming pastel of "Daphnis and Chloe" in the Boston Museum—are frankly reminiscent of Puvis de Chavannes. But the beauty of these pastorals had not been very well appreciated. To make a living, Millet was obliged to undertake base and ill-paid work, painting signs for mountebanks and midwives. His "Edipus taken down from the tree", a study of the nude which excels as a piece of virtuosity and an impression of savage wildness, rather shocked and astonished the public than won admiration.

His difficulties increased more and more: having lost his first wife, he married again in 1845, and with children came want. Matters were precipitated by the Revolution of 1848. At first the Republican Government took an interest in the artist, and he received some help from it; but the events of the month of June and the disorders of the following year frightened Millet and inspired him with an unquenchable dislike of Paris. He was beginning at last to understand his own nature; he turned his back forever on the frivolous, worldly public. Without disowning his earlier works, he addressed himself to another, newer and more human path, that of the contemplation of the things of the earth and the life of the rustic. In the summer of 1849 he went to Barbizon, a little village about one league from Chailly, on the borders of the Forest of Fontainebleau. He only meant to spend a few weeks there; but remained for the rest of his life—twenty-seven years. From that time Millet was at last Millet, the painter of peasants. It is impossible to recount in detail all his life during the ten or fifteen years following his exodus into the country, until his final triumph—to trace the long course of effort and of heroic sacrifice, through which the name of a little obscure hamlet of the Ile-de-France by the tenacity of a small group of painters was made one of the most important of our time. The only peasants then known to painting were comic-opeas peasants—the rude buffoons of Ostade and Teniers, or the beribboned minnies of Watteau and Greuze. They were always travestied in the interests of romance or of caricature, burlesque or preciosity. No one had ever ventured to show them in the true character of their ordinary lives—the rough beauty of the labour from which they derive their dignity.

The whole of Millet's work is a paraphrase or an illustration of the Divine Sentence: "In the sweat of thy brow shalt thou eat bread". Every man, he writes, "is doomed to bodily pain". And again, "It is not always the joy to be myself that makes me identical with myself. The greatest happiness I know is calm and silence". But at the same time, this harsh law of labour, because it is God's law, is the condition of our nobility and our dignity. Millet is quite the opposite of a Utopian or an insurgent. To him the chimeras of Socialism and the wholesale regulation of the good things of life are immature, childish, and disgraceful. "I have no wish to suppress sorrow," he proudly exclaims: "it is sorrow that gives most strength to an artist's utterance". In his subsequent work, moreover, as if challenging the world, he accentuated still further the ruggedness of his painting and the harshness of his sentiment. The year 1865 marks the lowest point of this descending scale, of his last creative mood. Nothing ever exceeded his "Winter" in
desolateness, or his "Man with the Hoe" and "Vine-dresser resting" in sense of utter exhaustion. The introspection of why his characterization is the point of stupefaction and insensibility. The figures seem so thoroughly emptied of their vital energy as to be petrified. The hard look is congealed into a grimace. Nowhere has his effort, the forcing of his individual style to its utmost limit, brought the great artist to results more harsh, more grandiose, or more barbarous.

But things were getting quieter and easier for him. His extraordinary personality, his eloquence, the strong conviction of this "Danubian peasant", were all making themselves felt. The world was beginning to appreciate the loftiness of view and the moral grandeur of this man of the fields with the lion's mane and the head of a Jupiter in wooden shoes. A relaxation came over his spirit and his ideas. He travelled, rested, revisited his own part of the country, made short trips to Auvergne, to Alsace, and to Switzerland. In 1868 he was made a chevalier of the Legion of Honour—at fifty years of age. In 1870 he was elected a member of the jury. But the great work of his sister Louise and his dear friend Rousseau, finally wrecked a constitution already injured by hard work and privation. During the German invasion he and his family took refuge at Cherbourg near his native home. After that time he almost ceased to paint. His latest pictures, the tragic "November" (1870), the Church of Gréville (1871), the "Spring" (1874), are mere landscapes, with the human figure entirely absent. Thenceforward he preferred simpler, more direct processes to that of painting, using the pencil or pastel—like the great idealists, who always ended by simplifying or minimizing the material medium and contenting themselves with etching, as did Rembrandt, as Dürer, as Millet, or a Delaroche, or a Chopin, or a Beethoven. These last works of Millet's are among his finest and most precious. His colouring, formerly heavy and dark, often rusty and unpleasing, or sticky and muddy, is here more delicate than ever before. Nowhere does one feel the touching beauty of this artistic soul, and its masculine but tender eloquence, more perfectly than in his studies and sketches. The finest collections of them are in the possession of M. A. Rouart, in Paris, and of Mr. Shaw, in Boston. Millet passed away at the age of sixty years and four months.

He was one of the noblest figures in contemporary art, one of those men who in our day have done most credit to France. As a painter he was not without his faults—somewhat clumsy in technique, not pleasing in colour, while emotion, with him, does not always keep clear of declamation. These faults are most palpable in his most famous works, such as "The Sower" and "The Angelus". But on the other hand, so many others are perfect gems—marvels of execution and poetic sentimentality, like "The Morot in the Zartuk" (La Becque), "Maternal solicitude", and "The Shepherdess". Other painters have had more influence than Millet. Courbet, for example, surpassed him in scope and in prodigious sense of life; Corot, with just as much poetry, has in a higher degree the grace, the charm, the exquisite gift of harmony. But who shall say that Millet's rugged gravity was not the condition, the outward sign, of the deep import of his message? No one has done more than he to make us feel the sanctity of life and the mystic grandeur of man's mission upon the earth. His peasants, rooted to the soil and as if fixed there for eternity, seem to be performing the rites of a sacred mystery. One is conscious of the permanence, the constancy, of the bonds by which intimately they are united with the great whole of their fraternal solidarity with the rest of mankind and with the cosmic ends. Though he never handled professedly religious subjects, Millet succeeded in being the most religious painter of our times. His "Return to the Farm" irresistibly suggests the Flight into Egypt, and his "Scene of Baptism" or of the Cleaners, evokes the Biblical pictures of Ruth and Boaz. On the river where his "Washerwomen" come and beat their linen, one would think the cradle of Moses was floating. The greatness of his soul has set in relief before our eyes the dignity of our nature; he has shown us how the trivial can be made to serve as the expression of the sublime, and how the Infinite and the Divine can be discovered in the humblest existence.

LOUIS GILLET.

Millet (or Millet). PIERRE, a celebrated early Jesuit missionary in New York State, b. at Bourges, Fr., 19 November 1633; d. at Boulogne, 31 December, 1708. Having graduated Master of Arts, he entered the Society of Jesus at Paris on 3 October, 1655, studied philosophy at La Fête (1657–8), taught various classes there (1658–61) and at Compiègne (1661–3), and then returned to La Fête for a second year of philosophy (1663–4). After a four years' course in the College of Louis-le-Grand in Paris (1664–8), he was sent to Canada, and had already been chosen to help Father Allouez in the west, when, quite unexpectedly, his destination was changed. The Onondaga ambassadors had received the answer to their address, on 27 August, 1668, and Fathers Millet and de Carabé were ordered them as missionaries. At this time Millet picked up enough of the language to enable him to preside at public prayers and to his still greater satisfaction, to teach catechism. This joy, however, was soon turned to sadness and pity at the sight, new to him, of some captive Anadustes, brought in by a war party to be burnt at the stake. His feelings may be gathered from the following occasion: "I am at a loss to know how to interpret this presage. Would to God that it might betoken that I was to make of these tribes captives of Jesus Christ and prevent their burning throughout eternity. What happiness for me if it foreshadowed that one day I also might be a captive to be burnt for Jesus Christ."

His method of evangelizing the Onondagas may be judged from a letter written from the mission of St. Jean Baptiste, 15 June, 1670 (Rel. 1670, vii). In 1671 he made his solemn profession of the four vows, and received from the Onondaga nation the name of Tekroahgon, that is The Looker-up to Heaven. In 1672 he was appointed missionary of the Oneidas (q. v.), "the most arrogant and least tractable of all the Iroquois" (Rel. 1672, iii), and laboured among them until 1685 with marvellous success. He was then recalled to act as interpreter at the Grand Council of Peace to be held at Caatarakouy (now Kingston, Ontario). Both he and the other missionaries were shamefully duped by the governor and used to lure the Iroquois into the pitfall prepared for them (see MISSIONS, INDIAN; Charlevoix, I, 510). Late in 1687 or early in 1688 Millet was sent as chaplain at Fort Niagara. Here, as at Caatarakouy, scurvy was decimating the troops, affording ample scope for Millet's charity and skill. To invoke God's mercy in behalf of the afflicted, a fourteen feet high was erected in the fort by the officers and blessed by Father Millet on Good Friday, 16 April, 1688. On 15 September, however, the
remnants of the garrison were informed the fort was to be evacuated, and all were to embark for Cataraquoy. Millet was still engaged at Cataraquoy in the ordinary routine of a military chaplain, when about 30 July, 1689, a party of Iroquois presented themselves at Fort Frontenac. The story looked suspicious, but as there was question of a soul to save, Millet undertook the risk, and St. Armand, a surgeon, accompanied him. Both were immediately set upon and bound; his captors first took Millet's breviary, and were diverting him of all he carried, when Manchot, an Oneida chief, interposed on his behalf, and recommended him to the care of the other chiefs. But, when Manchot left to join the three hundred Iroquois who were lying in wait to attack Fort Frontenac, the maltreatment recommenced. Having stripped him almost naked, the Indians bitterly reproached him for all that their counsels had suffered from the French; they then threw him into the water, but he saved him. After the other Indians returned after their failure to surprise Fort Frontenac, he was escorted to an island two leagues below the fort, where the main body of 1400 Iroquois warriors were encamped. Derisive shouts and yells went up at his approach. According to custom, he was made sing his death-song, the words of which came to me and asked forms in surventure, choria (I have been made a prisoner by my children). For all thanks a Seneca Indian struck him a brutal blow in the face with his fist in such a way that the nails cut him to the bone. He was then led to the cabin of the Oneidas where he was protected from further insult. That same evening the whole force moved down the river eight leagues from the fort, and there halted three days.

On a hilltop on what is now Grenadier Island a great council was held, the war-kettle swung, and all that remained was to choose a fitting victim to cast into it. The final decision was left to the Onondagas, and no doubt the lot would have fallen on Millet, but not being given on short notice the Iroquois would have set the seal to an undying enmity and an unrelenting war, such as they seemed to desire with the French, but for an apparently insignificant detail which had been overlooked. To make the proceedings legal according to their code, all the prisoners should have been present, whereas only the surgeon and Father Millet stood before the council (ibid., 73). The captors of the other prisoners had scattered in hunting parties and had taken them along. An elderly Cayuga sachem blocked all proceedings with the simple announcement: “All are not present at this assembly!” and then bade Millet to pray to God. Informed that it was not in preparation for death, he rose and prayed aloud, especially for all those assembled. He was then told to resume his seat, one of his hands was unbound, and he was sent to the camp of the Oneidas. There he was acclaimed with joy by several of their leading men, who, to forestall further molestation, determined to send him to Oneida. The next day (about 2 August, 1689) three Indians were told off under an escort, of whom one was the friendly Manchot, to conduct him thither; from one of Millet’s letters (ibid., 87, 91), it is certain that the main body of Indians they were leaving was the identical band of Iroquois who, about 4 August, crossed during the night to the north side of Lake St. Louis, fired the houses for several leagues along the lake shore from St. Anne’s to Lachine, and butchered men, women, and children as they fled from their burning homes. Two hundred in all were massacred, and ninety carried off to be burnt at the stake. Charlevoix’s statement (Hist., I, 549) that this occurrence took place on 25 August is erroneous; the contemporaneous reports of de Denonville (de Champigny and de L’Isle, Rec. Colon. Paris. Cor. Gen. Can. X) give the correct date as 4 and 5 August, 1689. The surgeon St. Amand, whom the Iroquois had brought with them to Lachine, there made his escape (Collec. MSS. Quebec, I, 671).

On the journey to Oneida, Father Millet was not badly treated; he was unencumbered by any burden until they were nearing their last night’s sleeping place, ten leagues from their destination, when one of the friendly chiefs, probably to keep up appearances, gave him a light sack to carry. On 9 August, two leagues from their destination, they met Manchot’s wife and daughter, belonging to the first nobility of Oneida, both of whom Father Millet had formerly baptized on the same day as Manchot himself. Manchot had left the army at Otoniassa for the sole purpose of protecting Millet on the way to Oneida, and had gone ahead two days before to notify his wife of his approach. These good Christians brought with them an abundance of provisions and refreshments; they took the rope from Millet’s neck, unbound his arms, gave him clean clothes, and in general showed kindness and scarcely realizing what he saw, Millet asked if their intention was to deck out the victim, and, if on his arrival, he was to die. The Christian matron answered that nothing had yet been settled, and that the Council of Oneida would decide. Clothed with what he had just received and in a close-fitting shirt which is symbolic of simplicity, Father Millet proceeded to Otoniassa. Millet made his approach to the town, wearing the livery of the two most important families of the tribe, that of the Bear and that of the Tortoise. Warned of his near arrival the aged sachems marched out to meet him, and kindled a fire in readiness for what might occur; for they did not all entertain the same benevolent feeling toward him. He was made to sit down near the elders, and Manchot presented him to this preliminary council, declaring that he had come, not as a captive, but as a missionary returning to visit his flock; that it was the will of the other chiefs and himself that the father should be placed at the disposal of those who decided the affairs of the nation, and that he should be subjected to their will. A sachem of the Bear Clan, a great friend of the English, then proceeded to denominate Millet as a partisan of the Governor of Canada, who was bent on overthrowing the great Iroquois lodge (i.e. the Iroquois Confederacy), and had burned the Seneca towns. The orator was so violent at the beginning of his speech, that it looked as if Millet would be condemned; but towards the close he grew milder, and admitted that since such was the will of the chiefs, the prisoner should be led to the council lodge which was a privileged cabin.

Crowds of drunken Indian braves and squaws, shouting and yelling, followed him to the council lodge, where he was confined by the Mammaway. He (ibid., 81). He had, however, to be hidden from the mob of drunken Indians, who stoned the cabin, threatened to batter it down or set it on fire, heaped abuse on those who were sheltering him, and vowed that, since war had begun, they would not be cheated out of its first fruits. Two days after, when the fury of the drunken rabble had somewhat abated, the friends of the captive missionary thought it wiser to have his case adjudicated without further delay, as the popular feeling might be embittered should the army returning from Montreal have to deplore the loss of some of its braves. But once again he was placed in a state of suspense as to his fate, the assembled chiefs deciding that they must wait the return of the warriors and learn what their intentions were.
Three more weeks dragged on, but, apart from the importunities and threats of the drunkards, Millet was left in comparative quiet. That he was walking in the shadow of death, is shown by the fact that he was given the name of Genzerontzé, i.e. "The Dead (or Dying) Man." He said that as pastor served to console him, the faithful flocking to him in their spiritual necessities, even to the remote lurking places where he had frequently to be hidden, and his bodily wants were amply supplied. When the Iroquois returned after their bloody foray against Lachine and other settlements near Montreal, it was found that the Oneidas had left three dead warriors behind in the enemy’s country, including a leading war-chief. The exasperated braves considered the death and torture of the number of prisoners they had brought back insufficient to atone for this loss, and demanded that Millet should be added to the number. Fearing lest this bloodthirsty faction should, by cutting off a finger or by some similar mutilation, set the mark of death upon their missionary, the Christian Indians were more careful than ever to keep him out of sight (ibid., 87). He was made pass the night sometimes in one cabin, sometimes in another, and more than once under the starlight, anywhere in fact where a drunken Indian was not likely to find him. His people, however, had secured the support of her relatives, the most influential warriors of the tribe, towards saving Millet.

The day when the final sentence was to be pronounced arrived at last. Millet had time to hear the confessions of his fellow-prisoners, two of whom eventually died by fire. As for himself, he could only beg leave of his own accord to go into the arms of the mercy of God. His case was a knotty one for the assembled chiefs to decide: on the one hand, he was regarded by the Iroquois as a great criminal and deceiver, being held responsible for the seizure of their fellow-countrymen at Catarakouy (ibid., 89); but, on the other, he was protected by the Christians, among the most distinguished members of the nation, and thus could not be put to death without incurring their displeasure. The result was that he was sent to and fro from one special tribunal to another, his face smeared with black and red to brand him as a victim of the god of war and of the wrath of the Iroquois. At this critical juncture the Iroquois calmed and subdued anew, and ingeniously turned the difficulty in Millet’s favour by offering him as a substitute—not for one of the bravest killed by the French at Lachine, nor for any made prisoner at Fort Frontenac, but—for a captain named Otasseté, who had died long since a natural death, and whose name was famous as that of one of the founders of the Iroquois Confederation. By this presentation Chief Gannaseatonin became the sole arbiter of Millet’s life or death. He consulted only the warriors of his family, and, those having without hesitation pronounced in favour of life, he approached the father and in the set formula addressed him: "Sakonhneton Skaksi" (My elder brother, you are released). A few days later the representatives of Oneida were invited to a grand banquet, and at the ceremony the name of Otasseté was given Millet to make it manifest to all that the Oneidas had adopted him into their nation and naturalized him an Iroquois. Everything that had been taken from him was restored.

Father Millet turned his long captivity among the Oneidas to good account. Father Buryas writes to the General on 21 October, 1693: “We have received letters from Father Millet, a captive among the Iroquois for the last six years... He performs with happy results all the offices of a missionary. He stands in need of one thing only, an altar outfit (a chalice, vestments, etc., so as to say Mass); but he thinks that the time to send him this has not yet come on account of the hostility of the drunkards among the tribe and of the English who have done their best to have this saintly missionary handed over to their keeping. They cannot brook the presence of a Jesuit there.” Dablé had already in the same month and year, written to Hovey that a captive among the Iroquois, was most assiduous in opening the way to heaven for many little children by baptism, and for dying adults and old men by a careful preparation and the administration of the sacraments (Letters to the Gen., MS. copy 45, 48). Father Jean de Lamberville writing from Paris on 3 Jan., 1695, says: They [his friends among the Oneidas, a captive among the Iroquois, was most assiduous in opening the way to heaven for many little children by baptism, and for dying adults and old men by a careful preparation and the administration of the sacraments (Letters to the Gen., MS. copy 45, 48). Father Jean de Lamberville writing from Paris on 3 Jan., 1695, says: They [his friends among the Oneidas, a captive among the Iroquois, was most assiduous in opening the way to heaven for many little children by baptism, and for dying adults and old men by a careful preparation and the administration of the sacraments (Letters to the Gen., MS. copy 45, 48). the defect of unceasing asperity of language, so that he continued to emit the strife. The committee of Catholic laymen, elected first in 1782, and re-elected five years later, were the centre of such opinions, and towards the end three ecclesiastics were added, two of whom (James Talbot and Charles Berington) were bishops. The object of the committee was to help to bring about Catholic emancipation. With this end in view, in 1789 they issued a "Protestation," disclaiming some of the more objectionable doctrines with which they were popularly credited, including the deposing power and papal infallibility. Despite the Cisalpine tone of the document, it was signed by nearly 1500 Catholics, including all the vicars Apostolic, though the signatures of two were afterwards withdrawn. Pitt who was then Prime Minister promised to introduce a bill of Catholic relief; but when it was drafted, it was found to contain an oath which all Catholics were to be called upon to take, based on the "protestation," but in stronger language, and containing a doctrine to which no good Catholic could set his name; while the Catholics throughout were called by the absurd title of "Protesting Catholic Dissenters".

The four vicars Apostolic met at Hammersmith, in October, 1789, Milner attending as theological adviser. They unanimously condemned the oath and the new appellation. During the following year the Bishops of the Northern and London Districts died. A great effort was made by the committees to secure the transfer of Bishop Charles Berington to the London District. This would have been a triumph for the Cisalpines; but fortunately it did not succeed. Rome, being warned, appointed Dr. Douglass, a Yorkshireman, who had been outside the late disputes.

The committee now suggested some modification of the oath; but it was not sufficient to free it from objection, and three out of the four vicars Apostolic joined in condemning it a second time. When the Relief Bill was brought forward in February, 1791, the bishops called Milner to their assistance. By means of his vigorous action an impression was made on the Government and the oath was further modified; but the situation was really saved after his return to Winchester, when the House of Lords, at the instigation of the Protestant Bishop of St. David's, substituted a totally different oath for the one objected to; and in this form the Bill was passed. It abolished the penal laws properly so-called and legalized the celebration of Mass; but Catholics continued liable to numerous disabilities for many years afterwards. After this the Catholic Committee dissolved; but the chief members re-formed themselves into an association to which they gave the name of the Cisalpine Club and which lasted for many years. Milner continued to write and speak in opposition to them. The clergy who were supporters of the Cisalpine spirit were numerous; for example, in the Midland District, one group who had acted together being known as the Staffordshire Clergy. By a strange fate it was this very district over which Milner was called to rule in 1803, when he was consecrated Bishop of Castabala, and appointed Vicar Apostolic of the Midland District. It is credit-
able both to them and to Milner himself that the resulting state of tension was of short duration. The clergy learned to value the great qualities of their new bishop, and conceived an admiration of him, the tradition of which has lasted to the present day.

Milner, however, was not satisfied with his position in the Midlands. He had formed an alliance with the Irish bishops, and with their co-operation, a determined attempt was made to have him transferred to London as coadjutor with right of succession. This scheme was opposed by Bishop Douglass, and ultimately defeated, though the pope consented that Milner should become parliamentary agent to the Irish bishops in their struggle to procure Catholic emancipation, and that for this purpose he should be permitted to remain in the country. The result was that Milner, after an uneasy and uncomfortable stay of some years, returned to Ireland. This was a great blow to the cause of Catholic emancipation in England, and it was a subject of great regret to his friends. Milner, however, was not afraid to say so publicly, in numerous pamphlets and other publications, and even in his pastoral letters. The subjects of contention were several; but two especially may be mentioned. One was the well-known "Veto" question, which first came into prominence in the year 1808. By this it was intended to concede to the Crown a negative voice in the election of Catholic bishops, by conferring a right to veto any candidate whose loyalty was open to question. The chief Irish bishops had agreed to the measure in 1799; but as nothing was done to improve the state of Catholic emancipation, the scheme had dropped. Milner revived it, and was for a time the warm advocate of the veto. He found himself in opposition to most of the Irish bishops. He visited Ireland, and afterwards wrote his "Letter to a Parish Priest" (who was really an Irish bishop) in defence of his policy. The Irish bishops, however, continued to oppose the veto in 1808. A year later Milner was converted to their way of thinking, and became as vigorous in opposition to it as he had been before in its favour. About this time the English Catholics, in presenting a petition to Parliament, embodied what was known as their "Fifth Resolution," offering a "grateful concurrence" to a Bill which would give them emancipation, accompanied by any "arrangements" for the safe-guarding of the Established Church which should not be inconsistent with their religion. Milner declared—contrary to the assertions of the framers of the Resolution—that the "arrangements" intended, included the Veto, and he denounced those who signed the Resolution as "the spokesmen of the Apostolic of England. In this he received the support of the Irish bishops. Another source of criticism was the want of vigour which he alleged against the London Vicar in combating the Blanchardist schism among the French emigrant clergy, especially the restoration of one of them, Abbé de Trevoux, to spiritual faculties without a public retraction. In this matter also he was supported by the Irish bishops.

A crisis occurred in 1813, Dr. Poynter being then Vicar Apostolic of the London District. A Bill for the full emancipation of Catholics was introduced into the House of Commons by Grattan; but Lord Castlereagh and Mr. Canning introduced amending clauses giving the Crown a veto on the appointment of bishops, to be exercised only on the recommendation of a committee consisting chiefly of Catholic Peers. Milner and the Irish bishops maintained that no Catholic could assent to this without incurring schism. The othervicars Apostolic did not go so far as this, though they opposed the clauses giving the Crown a veto on the appointment of bishops, on the recommendation of the Catholic Board, consisting chiefly of laymen, were in favour of accepting them as the necessary price to pay for emancipation. Milner, however, used all his influence to procure the rejection of the Bill. He printed a "Brief Memorial" in this sense, and distributed it among members of Parliament. The Bill passed its second reading, but in committees the clause admitting Catholics to Parliament was defeated by a small majority of four votes, and the Bill was abandoned. Milner took to himself the credit of having been the cause of its defeat, and the laymen were so angry with him that, to their permanent disgrace, they publicly expelled him from the committee of the Catholic Board. In the meantime Dr. Poynter approached Rome for guidance in the expected event of the re-introduction of the Bill. The pope was at that time the prisoner of Bonaparte, and the cardinals were dispersed. In their absence Mgr. Quarantotti, Secretary of Propaganda, using the powers with which he had been provisionally invested, issued a Rescript, dated February 14, 1814, approving of the Bill as it stood. Milner desired: that a decree of this kind would follow this and decided immediately to appeal to the pope, who having been liberated from captivity, was on his way back to Rome. His journey was so far successful that the Quarantotti Rescript was recalled, and the pope ordered the whole matter to be examined afresh. In the end a decision was promulgated in the shape of a letter from Cardinal Litta, Prefect of Propaganda, to Dr. Poynter, who had also come to Rome. The provisions of the late Bill were condemned; but on the general question of the veto, apart from the Lay Committees, the decision was against Milner; subject to certain safeguards, Catholics were empowered to elect bishops who, provided this negative power was so limited as not to be allowed to grow into a positive nomination. This led to further agitation in Ireland, and another deputation was sent to Rome; but the English Catholics, including Milner himself, accepted the decision without question. The English vicars Apostolic were, however, naturally opposed to the veto, and in the event it never became necessary to utilise the permission granted.

On his return from Rome Milner continued to write controversially, the new "Orthodox Journal" being a frequent medium for his communications. His language was as harsh as ever, and unbecoming in a bishop, until at length an appeal was made to Rome, and Cardinal Fonzana, who was then Prefect of Propaganda, forbade him to write in it any more. During the last years of his life Milner withdrew to a great extent from public politics. He ceased to act on behalf of the Irish bishops, and though he did not hold any intercourse with the other vicars Apostolic, he was still a man of influence in his own right. He devoted himself to literary work. In 1818 his "End of Controversy," perhaps the best known of all his books, at length appeared, and it was followed by a war of pamphlets and replies which went on for several years. Feeling his health failing, he applied for a coadjutor, and Rev. Thomas Walsh, President of Oscott College, was appointed. He was consecrated in 1825 when all the bishops of England met, and a reconciliation was effected. Milner survived less than a year, his death taking place at his house at Wolverhampton on 19 April, 1826. He left behind him a record of a life marked by whole-hearted devotion to religion, and of eminent services rendered to the cause, both as a man of two capacities his work was marred by the asperity of his language, and his intolerance of any views differing from his own. This made him many enemies through life, and cut him off from his brother bishops during the greater part of his episcopate. But his lot was cast at a difficult time, and he succeeded in combating difficulties which had assailed the cause. He had the advantage of a strong constitution; his vigour and activity were phenomenal, and, added to his devotion to the Holy See, earned him the title of the English Athenæus.

There are many portraits of Milner: (1) sketch, age about 25; (2) miniature, as a bishop about 1803; (3) miniature by Kerman (1806—considered the best
ilkness); (4) painting by Barber, drawing master at Oscott, 1817; (5) painting by Herbert, R.A.—said to be the most like, but it is in Gothic vestments and mitre, having been painted long after Milner’s death. (These are all at Oscott.) (6) Painting of Mr. Crawford, his son of the Crawford family, at Brook Street, Bergholt. (7) Painting at the presbytery, Norwich, very similar to (5). (8) Engraving in ‘Laitcy’s Directory’, 1827, from a painting by Radcliffe (Orth. Jorn., I, 173). (9) Bust, by Clarke sen. of Birmingham: many copies to be met with. (1), (2), and (6) reproduced in the ‘Dawn of the Catholic Revival’; (6) in Milner’s ‘Memoirs’; (7) in ‘Furnival’s Life of Milner’; (4) in the penny ‘Life of Milner’, by Rev. E. Burton (Catholic Truth Society). His chief works are: ‘Funeral Discourse at Consecration of Bishop Gibson’ (1791); ‘Discourse at Consecration of Bishop Challoner’ (1781); ‘The Clergyman’s Answer to the Layman’s Letter’ (1790); ‘Pastoral of the Bishop of Léon’ (translated, 1791); ‘Divine Rights of Episcopacy’ (1791); ‘Audi Altemar Partem’ (1792); ‘Ecclesiastical Democracy detected’ (1793); ‘Reply to Cisalpine Club’ (1795); ‘Serious Expostulation with Rev. Joseph Berington’ (1797); ‘History of Winchester’ (1798); ‘Brief Life of Challoner’ (1798); ‘Letters to a Prebendary’ (1799), and ‘On the Authenticity of the Consecration and Foundation of the Conduct of Pius VII’ (1802); ‘Arguments against Catholic Petition’ (1805); ‘Cure of Winefridc White’ (1805); ‘Letter to a Parish Priest’ (1808); ‘Letters from Ireland’ (1808); ‘Pastoral Letter on Blanchard’s ‘Sequel’, ‘Supplement’, and ‘Appendix’ (1808); ‘Appeal to the Catholics of Ireland’ (1808); ‘Discourse at Funeral of Sir William Jerningham’ (1810); ‘Treatise on Ecclesiastical Architecture’ (1810); ‘Instructions for Catholics of Midland Counties’ (1811); ‘Letter to Prelate of Ireland’ (1811); ‘Explanations with Bishop Poynter’ (1812); ‘Pastoral on Jurisdiction of Church’ (1812–13); ‘Brief Memorials of Catholic Laymen in Pravo Vindication’ (1813); ‘Encyclical Letter’ (1813); ‘Inquisition. A letter to Sir John Cox Hippislay’ (1816); ‘Humble Remonstrance to House of Commons’ (1816); ‘End of Bishop Hornyold’ (1816); ‘End of Religious 1819; ‘Memorials of English Catholics’ (1820); and ‘Additions Nos. I and II’ (1821); ‘Discourse on the Sacraments’ (1821); ‘Vindication of the End of Controversy’ (1822); ‘Exposer exposed’ (1824); ‘Parting Word to Dr. Grier’ (1825). (For a complete list, see Husketh, infra, 572.)

BERNARD WARD.

Milner, RALPH, VENERABLE, layman and martyr, b. at Flasestad, Hants, England, early in the sixteenth century; suffered at Winchester, 7 July, 1591. The greater part of his life was probably passed in his native village, where, being practically illiterate, he supported his wife and eight children by manual labour. He was brought up in an Anglican Family, and the contrast between the lives of Catholics and Protestants of his acquaintance, he determined to embrace the old religion, and, after the usual course of instruction, was received into the Church. On the very day of his first Communion, however, he was arrested for changing his religion and committed to Winchester jail. Here his good behaviour during the years of his imprisonment won him the jailer’s confidence to such a degree that he was frequently allowed out on parole, and was even trusted with the keys of the prison. This leniency enabled him to render valuable service to the other Catholic prisoners and to introduce priests to administer the sacraments. Soon, extending the scope of the priest’s activities, Milner laboured first to Father Thomas Stanney, and latter to his successor, at Winchester, Father Roger Deacon, conducting them to the different villages to minister to the spiritual needs of the scattered and persecuted flock. Finally seized with Father Deacon, Milner was with him placed under close confinement in Winchester jail; and, after four years, when he had apparently moved with compassion for the aged man, the judge urged Milner to attend even once the Protestant church and thus escape the gallows. The latter refused, however, to embrace a counsel so disagreeable to the maxims of the Gospel, and began immediately to prepare for death. Every effort was made to persuade him to change his purpose and renounce the Faith, and, when he was approaching the gallows with Father Deacon, his children were conducted to him in the hope that he might even then relent. Unshaken in his resolution, Milner gave his children his last blessing, declaring that he could wish them no greater happiness than to die for the sake cause, and then met his death in the manner of a true Christian. CHALLONER, Memoirs, I (1741), 290, 425; RIBANDERER, ANDER, De Schiam. Angli. (1810), appendix, p. 36; DODD, Church History, II, 149. THOMAS KENNEDY.

Milo. See Sira, DIACONE OF.

Milo Crispin, monk, and cantor of the Benedictine Abbey of Bec, wrote the lives of five of its abbots: Lanfranc, Archbishop of Canterbury, Guliemus de Bellomonte, Bose, Theobaldus, and Letardus. His life of Lanfranc is printed in the ‘Acta Sanctorum’ of the Bollandists (May 28). The other four (those of Theobaldus and Letardus being mere summaries) are included in P. L. (Vol. CL.). Milo Crispin was an old man when he wrote them, for in the last chapter of his life of Lanfranc he relates something which he himself heard St. Anselm say. As St. Anselm died in 1109, and Letardus did not die till 1114, Milo Crispin shows here incidentally that his own religious life had lasted more than forty years. He was one of the noblest of the monks of Bec, a disciple of Lanfranc, and the first of the order to send to the East for the formation of the monks of Clairvaux. He himself founded a monastery at Berghen, for the religious life of the other order, where he lived out his life. The name Crispin, according to the custom of the monks of Bec, bears its most sacred meaning, in which Milo Crispin is shown to be a saint. The name milk, the familiar and brotherly salutation, is a mark of friendship, and the monk at his entrance into the monastery received as a token of his friendliness. EDWIN BURTON.

Milopotamos, a titular see of Crete, suffragan of Candia. Certain historians and geographers identify this locality with the ancient Pantomotium mentioned by Stephano by Byzantium, by Ptolemy (III, xv, 5), who places it between Rhethymnos and the promontory of Diom, and by Pliny (IV, xx, 3), who places it on the opposite shore. If Milopotamos, this Greek see is alluded to for the first time towards 1170 (Parthey, “Hieroclia Synecudemus,” 118); it is spoken of again in another undated “Notitia episcopatum” (Gelzer, “Ungedruckte . . . Texte der Notitiae episcop.,” 627). As to the Latin residential see, its first titular, Matthew, is mentioned about 1212, shortly after the conquest of the island by the Venetians. From 1533 to 1549 the Diocese of Cher-
Miltiades, Saint, Pope.—The year of his birth is not known; he was elected pope in either 310 or 311; died 10 or 11 January, 314. After the banishment of Pope Eusebius (q. v.) the Roman See was vacant for some time, probably because of the complications which had arisen on account of the apostates (lapsi), and which were not cleared up by the banishment of Eusebius and Hermicius. On 2 July, 310 or 311, Miltiades (the name is also written Melchiades), a native of Africa, was elevated to the papacy. There is some uncertainty as to the exact year, as the "Liberian Catalogue" (Venice, 1755), 173; 180; GEMA, 40; GRO, 403; EUSEB, Hierarchia catholica mediæ aevi, I, 337; II, 312; III, 261.

S. VAILHÉ.

Miltiades was joined to it; on the other hand, in 1641, the Diocese of Milopotamos was united with Rhethymno and after the conquest of the island by the Turks in 1670, became merely titular. We know the names of about twenty residential Latin bishops. Among the schismatic Greeks, the See of Aulopotamos is united with that of Rhethymno. The ruins of the city may be seen along the sea-shore at Castel Mylopotamo, about twelve miles from Rhethymno.

Le Quin, Orients christiani, III, 935-938; CORNELLUS, Chronicorum, cap. 189; GAMA, 82; GEMA, 403; EUSEB, Hierarchia catholica mediæ aevi, I, 337; II, 312; III, 261.

Miltiades was given a bearing in Rome, to Cecilian and his opponent, and to decide the case. On 2 October, 313, there assembled in the Lateran Palace, under the presidency of Miltiades, a synod of eighteen bishops from Gaul and Italy, which, after thoroughly considering the Donatist controversy for three days, decided in favour of Cecilian, whose election and consecration as Bishop of Carthage was declared to be legitimate. In the biography of Miltiades, in the "Libri Pontifici" (libr. II) it is stated that at that time Manicheans were found in Rome; this was quite possible as Manicheans began to spread in the West in the fourth century. The same source attributes to this pope a decree which absolutely forbade the Christians to fast on Sundays or on Thursdays, "because these days were observed by the heathen as a holy fast". This reason is remarkable; it comes most likely from the author of the "Libri Pontifici" who with this alleged decree traces back a Roman custom of his own time to an ordinance of Miltiades. The "Libri Pontifici" is probably no less arbitrary in crediting this pope with a decree to the effect that the Oblation consecrated at the Solemn Mass of the pope (by which is meant the Eucharistic Bread) should be taken to the different churches of Rome. Such a custom actually existed in the later Middle Ages (Duchesne, Études [...], London, 1903, 185); but there is nothing definite to show that it was introduced by Miltiades, as the "Libri Pontifici" asserts.

After his death, on 10 or 11 January (the "Liberian Catalogue" gives it as III. id. jan.; the "Depoisses Episcoporum" as III. id. jan.), 314, Miltiades was laid to rest in the Catacomb of St. Callistus, and here he was venerated as a saint. De Rossi regards it as highly probable his location of this pope's burial-chamber (Roma Sotterranea, II, 188 sq.). His feast was celebrated in the fourth century, on 10 January, according to the "Martyrologium Hieronymianum". In the present "Roman Martyrology" it occurs on 10 December.

Miltiades, Saint, Pope, Minor—His feast is celebrated on 10 December. "Liber Pontificalis", De sanctis, 3; DE LAIE, Historia ecclesiastica, 27; DUCHESNE, Histoire ancienne de l'Eglise, II, 96, 97, 110-112.

J. P. KRUSCH.

Militia, Karl von, papal chamberlain and nuncio, b. about 1480, the son of Sigismund von Militia, "Landvogt" of Meissen, drowned in the Main near Steinheim, 20 November, 1529. He received his humanistic and theological education at Mainz, Trier, and Meissen and went to Rome in 1514 or 1515, where he made papal chamberlain and notary, and acted as agent of Frederic, Elector of Saxony, and of Duke Kasimir of Bavaria, obtaining, for the latter the permission to transport the reliquary of the earth of the Campo Santo in Rome, which originally had been brought from Jerusalem, to Annaberg, Saxony, where it was used in the cemetery. After the endeavours of Cardinal Cajetan to silence Luther had failed, Militia appeared to be the person suited to remain silent for the present, and to let the learned Archbishop Richard of Trier preside over the examination. Luther even promised to write an humble letter to the pope. Militia then journeyed to Leipzig and covered Tetzl with mortifying, wholly unnecessary reproaches. But the movement started and fanned by Luther, had progressed too far to be extinguished by such conversations, and for this reason two further meetings between Luther and Militia at Liebenwerda (9 Oct., 1519) and Lichtenburg
MILWAUKEE

(Oct., 1520) were without success. After a short stay in Rome he returned to Germany in 1522, where he died. He was buried in the cathedral of Mainz.

PATRICK SCHLARGER.

Milwaukee, Archdiocese of (Milwaukeens), established as a diocese, 28 Nov., 1843; became an archbishopric, 12 February, 1876, comprises seventeen counties of the state of Wisconsin: Columbia, Dane, Dodge, Fond du Lac, Green, Green Lake, Jefferson, Kenosha, Marquette, Milwaukee, Osceola, Racine, Rock, Sheboygan, Walworth, Washington, Waukesha, and 16,921 square miles. The metropolitan city of Milwaukee is picturesquely situated on Milwaukee Bay, on the eastern shore of Lake Michigan. Its name is derived from the Algonquin family of Indian dialects and means Good Land. In the history of Catholicism it is first mentioned in the "Catholic Almanac" of 1840: "Milwaukee, Rev. Mr. Kelly who visits alternately Racine, Rochester, Burlington, Southport (Kenoeha), etc." The first Mass, however, was celebrated in Milwaukee as early as 1837 by Rev. J. D. Bondel, a missionary from Green Bay, in the home of the "founder of Milwaukee", Solomon Juneau. In the same year Rev. Patrick Kelly came to the city and held services in the court-house which he built for the first Catholic church, dedicated to St. Peter, for several years the bishop's cathedral. It was afterwards removed to its present site near St. Peter and Paul's Church by Mgr. Leonard Bats, V. G. North-west territory, of which the present State of Wisconsin forming a part, belonged to the Diocese of Quebec and afterwards to the Archdiocese of Baltimore, Ky., till it was separated from the newly created See of Cincinnati in 1821. In 1833, when Detroit was made a see, it became a dependency of that see. It was in 1841 that the first bishop visited Milwaukee in the person of Rt. Rev. P. Lefevre of Detroit, accompanied by one of his zealous priests, Rev. Martin Kundig, later vicar-general, whose name is inseparably linked with the early history and subsequent growth of the diocese. In 1843, the Fathers of the Fifth Provincial Council of Baltimore petitioned the Holy See to make Milwaukee a see and to appoint the Rev. John Martin Henni as its first bishop.

Episcopal Succession.—John Martin Henni, first Bishop of Milwaukee, was born at Obersaxen, Switzerland, in 1823. He was ordained a priest at Louisville, Ky., in 1847, and received his diocesan consecration in Rome, where he met the Very Rev. Frederic Reés, Vicar-General of Cincinnati (later Bishop of Detroit), who had come there in quest of priests for the American missions. Together with his fellow-student M. Kundig, he landed in New York, in 1828. Having been ordained priest at Cincinnati, 2 Feb., 1829, he laboured with zeal and enthusiasm in the Catholic Church in Ohio. On 19 March, 1844, Henni was consecrated Bishop of Milwaukee by Bishop Purcell of Cincinnati, and soon after started for his new field of labour. He came accompanied by the Rev. Michael Heiss, who for some time acted as his secretary. The prospects of the new diocese were far from encouraging. He found only four parishes. The whole diocese was frittered over the territory, and a small frame church encumbered with a heavy debt. But unaided by these difficulties the youthful bishop set to work with apostolic zeal, and, thanks to his untiring efforts, the number of Catholics, mostly immigrants from Germany and Ireland, increased from year to year, so that after three years the number of priests had risen from four to thirty. But a rich share of this phenomenal progress is due to the arduous labours and sacrificing spirit of his priests, the pioneers of the North-west, men like Maximelli, the founder of Sinisawa, Morrissey, C. Rehr, Wisbauer, Beitler, Inama, Gaertner, Gernbauer, Holshauer, Conrad, and others. In 1847 there arrived from the Koenigsmarck seminarium, founded by St. Francis Seminary (Salesianum), in the same year Henni laid the foundation of his new cathedral, dedicated to St. John the Evangelist. To raise funds for the building, he made extensive journeys to Cuba and Mexico. The cathedral was consecrated by Archbishop (afterwards Cardinal) Bedini, 31 July, 1853. Owing to the death of Henni at that time, St. Mary's church, for the spiritual needs of the German Catholics, was erected in 1846. In the same year the first hospital was opened under Catholic auspices in charge of the Sisters of Charity of St. Vincent de Paul. In 1856 the Seminary of St. Francis of Sales, destined to become the fertile nursery of priests for the North-west, was erected and in the course of years became one of the most flourishing institutions of the country. Its first rector was the Rev. Michael Heiss, while its founder, the Rev. Dr. Salzmann, acted as procurator. On the elevation of Father Heiss to the episcopal dignity, Salzmann was appointed his successor, a position which he held to the time of his death in 1869. In the same year Henni was also the founder of the first Catholic normal school in the United States and of the Pio Nono College. Both institutions were opened in 1871, and have to this day faithfully carried out the intentions of their founder. In 1866 two new dioceses were established in Wisconsin with episcopal sees in La Crosse and Green Bay. In 1874, Milwaukee was made an archdiocese, with episcopal see, with Mgr. Henni as first archbishop.

During the last years of his administration his burden was considerably lightened by the appointment of Rt. Rev. M. Heiss as coadjutor, with the right of succession, and titular Archbishop of Adrianople. Archbishop Henni who is rightly called the Patriarch of the North-west, was called to his reward 7 Sept., 1881. Michael Heiss was born at Pfalldorf, Bavaria, 12 April, 1818. Having finished his theological studies at the famous University of Munich, he spent the first two years of his priesthood in his home diocese of Eichstätt, and then offered his services to the American mission. He first had charge of St. Mary's church in the new town of La Crosse, in 1838. On the death of Archbishop Henni, in 1881, he succeeded him as archbishop. Archbishop Heiss was known and esteemed as one of the most learned theologians of the country, a reputation which secured to him a place among the members of the dogmatic commission at the Vatican Council. His works "De Matrimonio" (Munich, 1861) and "De canonico jure in Matrimonio" (Milwaukee, 1863), held a prominent place in theological literature. In 1883 he was invited to Rome to take part in the deliberations preparatory to the Third Plenary Council of Baltimore, which he also attended in 1884. In 1886 he convoked the First Provincial Council of Milwaukee, which opened its sessions on 23 May, in St. John's Cathedral. Bishops Bishop of La Crescent, Ireland of St. Paul, His Excellency Archbishop De L'Islet, Apostolic Delegate to the United States, His Excellency Archbishop De L'Islet, Apostolic Delegate to the United States, and other bishops and priests, arrived from Germany and Ireland, increased from year to year, so that after three years the number of priests

had risen from four to thirty. But a rich share of this phenomenal progress is due to the arduous labours and sacrificing spirit of his priests, the pioneers of the North-west, men like Maximelli, the founder of Sinisawa, Morrissey, C. Rehr, Wisbauer, Beitler, Inama, Gaertner, Gernbauer, Holshauer, Conrad, and others. In 1847 there arrived from the Koenigsmarck seminarium, founded by St. Francis Seminary (Salesianum), in the same year Henni laid the foundation of his new cathedral, dedicated to St. John the Evangelist. To raise funds for the building, he made extensive journeys to Cuba and Mexico. The cathedral was consecrated by Archbishop (afterwards Cardinal) Bedini, 31 July, 1853. Owing to the death of Henni at that time, St. Mary's church, for the spiritual needs of the German Catholics, was erected in 1846. In the same year the first hospital was opened under Catholic auspices in charge of the Sisters of Charity of St. Vincent de Paul. In 1856 the Seminary of St. Francis of Sales, destined to become the fertile nursery of priests for the North-west, was erected and in the course of years became one of the most flourishing institutions of the country. Its first rector was the Rev. Michael Heiss, while its founder, the Rev. Dr. Salzmann, acted as procurator. On the elevation of Father Heiss to the episcopal dignity, Salzmann was appointed his successor, a position which he held to the time of his death in 1869. In the same year Henni was also the founder of the first Catholic normal school in the United States and of the Pio Nono College. Both institutions were opened in 1871, and have to this day faithfully carried out the intentions of their founder. In 1866 two new dioceses were established in Wisconsin with episcopal sees in La Crosse and Green Bay. In 1874, Milwaukee was made an archdiocese, with episcopal see, with Mgr. Henni as first archbishop.

During the last years of his administration his burden was considerably lightened by the appointment of Rt. Rev. M. Heiss as coadjutor, with the right of succession, and titular Archbishop of Adrianople. Archbishop Henni who is rightly called the Patriarch of the North-west, was called to his reward 7 Sept., 1881. Michael Heiss was born at Pfalldorf, Bavaria, 12 April, 1818. Having finished his theological studies at the famous University of Munich, he spent the first two years of his priesthood in his home diocese of Eichstätt, and then offered his services to the American mission. He first had charge of St. Mary's church in the new town of La Crosse, in 1838. On the death of Archbishop Henni, in 1881, he succeeded him as archbishop. Archbishop Heiss was known and esteemed as one of the most learned theologians of the country, a reputation which secured to him a place among the members of the dogmatic commission at the Vatican Council. His works "De Matrimonio" (Munich, 1861) and "De canonico jure in Matrimonio" (Milwaukee, 1863), held a prominent place in theological literature. In 1883 he was invited to Rome to take part in the deliberations preparatory to the Third Plenary Council of Baltimore, which he also attended in 1884. In 1886 he convoked the First Provincial Council of Milwaukee, which opened its sessions on 23 May, in St. John's Cathedral. Bishops Bishop of La Crescent, Ireland of St. Paul, His Excellency Archbishop De L'Islet, Apostolic Delegate to the United States, His Excellency Archbishop De L'Islet, Apostolic Delegate to the United States, and other bishops and priests, arrived from Germany and Ireland, increased from year to year, so that after three years the number of priests
nothingism (q. v.). In their bigotry and hatred of everything Catholic, they aimed their first blow at the Church which had always been interfered with the rights of Catholic parents. But the timely and united action of the bishops of Wisconsin, and their vigorous protest, by which they branded the bill as "unnecessary, offensive, and unjust," effectually defeated the iniquitous scheme. In 1888 the Diocese of St. Paul was separated from Milwaukee and made an archdiocese, at the side of which the suffragan sees were thenceforth subject to Milwaukee: La Crosse and Green Bay in the State of Wisconsin and Marquette in Upper Michigan. The Diocese of Superior was added in 1905. Archbishop Heins died at St. Francis Hospital, La Crosse, 26 March, 1890. His mortal remains rest beneath the sanctuary of the seminary chapel at St. Francis, in the side of his faithful friend and co-labourer, Joseph Salmann.

Frederic Xavier Katzer was born at Ebensee, Upper Austria, 7 February, 1844. His preparatory studies he completed at Lins, the capital of Upper Austria, under the direction of the Jesuit Fathers. He came to America in 1864. Having finished his theological studies in Wisconsin, he was ordained in the Roman Church, December, 1866. After his ordination he remained at the seminary where he taught mathematics and, later on, philosophy and dogmatic theology. In 1875 he followed Fr. Krautbauer, the newly appointed Bishop of Green Bay, to his see, where he acted as secretary, and afterwards as vicar-general. Upon the death of Bishop Henni, in 1883, he was appointed administrator of the diocese; and on 31 May, 1886, he was chosen Bishop of Green Bay and consecrated in St. Francis Xavier's cathedral, 21 September of the same year. After the death of Archbishop Heins he was promoted to the archiepiscopal dignity as third Archbishop of Milwaukee in December, 1890. Archbishop Katzer represented the Board of Missions and a very zealous theologian. His pastoral talent is evidenced by an allegorical drama, entitled "Der Kampf der Gegenwart" (The Combat of the Present Age). His administration was marked by a uniform regard for justice and strict adherence to the laws of the Church. He died at Fond du Lac, 4 August, 1903, on the same day on which the great pontiff Leo XIII breathed his last. His earthly remains found their last resting place in the little cemetery near the "chapel in the woods" at St. Francis.

Sebastian Gebhard Messmer was born at Goldach, Switzerland, 29 August, 1847. Having finished his theological studies at the University of Innsbruck he was ordained priest in the same city, 23 July, 1871. In the same year he entered the seminary of Milwaukee and joined the Diocese of Newark. For several years he taught canon law, Scripture, and dogmatic theology in Seton Hall. For a short time he also had charge of St. Peter's, Newark, N. J. In 1889 he was called to the chair of canon law in the Catholic University at Washington, but first went to Rome to study Roman civil law. After his return he entered upon his duties as professor and kept this position till his elevation to the episcopal dignity. On 27 March, 1892, he was consecrated Bishop of Green Bay in St. Peter's Church, Newark, by his former classmate, Bishop Zardetti of St. Cloud. On the death of Archbishop Katzer he succeeded him as archbishop, 23 November, 1903. Archbishop Messmer is honourably known as a very able and prolific contributor to Catholic literature, and his name is intimately linked with the principal religious movements in the country. Together with Bishop McFaul of Trenton he has been chiefly instrumental in inaugurating the American Federation of Catholic Societies.

Sisters Orders in the Diocese.—Orders of Men.—The rapid, almost miraculous growth of Catholicism in the State of Wisconsin is chiefly due to the apostolic zeal of the pioneer priests of the secular priesthood; but the labours and trials of the early missionaries belonging to religious orders ought not to be forgotten. In 1857 the first Capuchin convent was erected at St. Mary of the Woods, near Galva, in Wisconsin. It has been asserted, not without reason, that the foundation of the Wisconsin Province is a fact unprecedented in the history of the Catholic Church in this country, in as far as the order of Capuchins was introduced into Wisconsin, not by religious, but by two secular priests, Rev. Francis Hass and Rev. Bonaventure Frey. The opposition they met was not only on all sides, the main of which they had to endure, and the old religious communities they had to see them, on the miraculous. To-day, the order possesses a flourishing community with convent and college at Calvary, a convent and two parishes in Milwaukee, not to speak of the numerous religious houses and communities in other dioceses. The Society of Jesus was established in Milwaukee, in 1874, and St. Gall's church, erected in 1849, was placed in charge of the Society. In 1880 the Jesuit college known as Marquette College was opened, and has lately developed into the flourishing Marquette University. The Jesuits also have charge of the Gesu church, one of the oldest and best religious edifices in the Northern States, also the Gesu College, the School of the People of the Sacred Heart at Watertown; the Servite Fathers, a monastery and novitiate at Grandville Center; and the Discalced Carmelites, lately arrived from Ratisbon, Bavaria, attend to the chapel on "Holy Hill", a well-known place of pilgrimage.

Orders of Women.—The School Sisters of Notre Dame, in 1854, came to Milwaukee, at the invitation of Bishop Henni, who showed himself their generous friend and protector, especially during the first years when they had to struggle with poverty and violent opposition. To Mother Caroline, who brought the first band of sisters from Munich to Milwaukee, and who for forty-two years stood at the helm, is principally due the firmness of the Order and its spreading influence. The sisters have their mother-house and novitiate in Milwaukee. In 1876 the community was divided into two provinces, with the second mother-house in Baltimore; and in 1895 a third province was formed with a mother-house at St. Louis, Mo. The Sisters of St. Francis have two mother-houses in the diocese, one at St. Francis, where they built their first convent in 1847, near the present site of St. Francis Seminary, the other in Milwaukee (St. Joseph's Convent and the Sacred Heart Sanatorium). The Sisters of St. Agnes have their mother-house at Fond du Lac, where they also have charge of a hospital, a home for the aged, and an academy. The Sisters of St. Dominic have their mother-house at Racine. The Sisters of the Good Shepherd have their mother-house at Milwaukee. The sisters of these communities teach in the numerous parochial schools of Wisconsin and other states. The Sisters of Mercy, too, have a mother-house in Milwaukee. Other communities which have no mother-house in the diocese, but are in charge of some charitable or educational establishment are: the Sisters of Charity of St. Vincent de Paul, Sisters of Charity of the Blessed Virgin Mary, Franciscan Sisters of St. Louis, Mo., Polish Sisters of St. Joseph, Hospital Sisters of St. Francis, Little Sisters of the Poor, Society of the Divine Saviour, Dominican Sisters of the Perpetual Rosary, Sisters of the Third Order of St. Dominic (Sinsinawa), Sisters of the Good Shepherd, Felician Sisters, and Sisters de Misericorde.

Statistics.—The official reports for 1910 give the following figures: There are in the archdiocese 377 priests (303 secular and 74 regulars). The city of Milwaukee counts 38 churches; outside of Milwaukee there are 189. Besides there are 65 mission churches without a resident priest and 41 chapels. In the seminaries of St. Francis de Sales there are 50 students of philosophy and theology studying for the different dioceses of the province and other dioceses. There is one university, one Catholic normal school, and five colleges with 770 students; six academies for young
MIND

ladies; 142 parish schools with 33,279 pupils, four orphan asylums with 401 orphans, one infant asylum, one industrial school for girls, one deaf-mute asylum, one home for boys, one school for feeble-minded, nine hospitals and sanatoriums, two homes for aged poor, and one home for girls. The Catholic population of the archdiocese is estimated at about 238,000.

J. RAINER.

Mind (Gk. νοῦς; Lat. mens; Ger. Geist, Seele; Fr. âme, esprit).—The word mind has been used in a variety of meanings in English, and we find a similar want of fixity in the connotation of the corresponding terms in other languages. Aristotle tells us that Anaxagoras, as compared with other early Greek philosophers, appeared like one sober among drunken men in that he introduced νοῦς, mind, as efficient cause of the general order in the universe. In treating of the soul, Aristotle himself identifies νοῦς with the intellectual faculty, which he conceives as partly active, partly passive (see Intellect). It is the third essential principle, the reiterative or dynamic energy of the soul, separable from the body, and immortal. The Latin word, mens, was employed in much the same sense. St. Thomas, who represents the general scholastic usage, derives mens from metier (to measure). He identifies mens with the human soul viewed as intellectual and abstracting from lower organic faculties. Angels, or pure spirits, mentally are called minds (De Veritate, X. 1). For Descartes the human soul is simply mens, res cogitans, mind. It

stands in complete opposition to the body and to matter in general. The vegetative faculties alloted to the soul by Aristotle and the Schoolmen are rejected by him, and those vital functions are explained by him mechanically. The lower animals do not possess minds in any sense; they are for him mere machines. An early usage in English connects the word mind closely with memory, as in the sense "to bear in mind". Again it has been associated with the volitional side of our nature, as in the phrases "to mind" and "to have a mind to effect something". Still when restricted to a certain faculty, or power, it is intended to identify mind with the cognitive and more especially with the intellectual powers. In this usage it more closely corresponds to the primary meaning of the Latin mens, understood as the thinking or judging principle. Mind is also conceived as a substantial being, equivalent to the scholastic mens, partly identified with, partly distinguished from the soul. If we define the soul as the principle within me, by which I feel, think, will, and by which my body is animated, we may provide a definition of mind of fairly wide acceptability by merely omitting the last clause. That

is, in this usage mind designates the soul as the source of consciousness, of feeling, thought, and volition, abstraction being made from the vegetative functions. On the other hand the term soul emphasizes the note of substantiality and the property of animating principle.

In the English psychological literature of the last century there has indeed been exhibited a most remarkable scepticism as to the reality of our ordinary sensations arise out of an aggregate of impressions individually too faint to be separately perceivable, the fact that attention may reveal to us experiences previously unnoticed, the fact that unobserved trains of thought may result in sudden reminiscences, and that in abnormal mental conditions hypnotized, somnambulistic, and hysterical patients often accomplish difficult intellectual feats.

X.—21
whilst remaining utterly unaware of the rational intermediate steps leading up to the final results. On the other side it is urged that most of those phenomena can be accounted for by merely subconscious processes which escape attention and are forgotten; or, at all events, by unconscious (as the world) the materialist, mind, feelings, thoughts, and volitions are just "functions" or "aspects" of matter; mental life is an epiphenomenon, a by-product in the working of the Universe, which can in no way interfere with the course of physical changes or modify the movement of any particle of matter in the world; indeed, in strict consistency it should be held that successive mental acts do not influence or condition each other, but that thoughts and volitions are mere incidental appendages of certain nerve processes in the brain; and these latter are determined exclusively and completely by antecedent material processes. In other words, the materialistic theory, when consistently thought out, leads invariably to the startling conclusion that the human mind has had no real influence on the history of the human race.

On the other hand, the idealistic monist denies altogether the existence of any extra-mental, independent material world. So far from mind being a mere aspect or epiphenomenon attached to matter, the material world is a fact of mind, and mind is independent on it. Its esse is percipi. It exists only in and for the mind. Our ideas are the only things of which we can be truly certain. And, indeed, if we were compelled to embrace monism, it seems to us there can be little doubt as to the logical superiority of the idealistic position. But there is no philosophical or logical reason to adopt as either materialistic or an idealistic monism. The conviction of the common sense of mankind, and the assumption of physical science that there are two orders of being in the universe, mind and matter, distinct from each other yet interacting and influencing each other, and the assurance that the human mind can obtain a limited yet true knowledge of the material world which really exists outside and independently of it occupying a space of three dimensions, this view, which is the common teaching of the Scholastic philosophy and Catholic thinkers, can be abundantly justified (see DUALISM; ENERGY, CONSERVATION OF).

MIND AND MATTER.—The opposition of mind and matter brings us face to face with the great controversy between the Monists and Monism, of being in the universe ultimately and radically distinct? or are they merely diverse phases or aspects of one common underlying substratum? Our experience at all events appears to reveal to us two fundamentally contrasted forms of reality. On the one side, there is facing us matter occupying space, subject to motion, possessed of inertia and resistance, permanent, indestructible, and seemingly independent of our observation. On the other, there is our own mind, immediately revealing itself to us in simple unextended acts of consciousness, which seem to be born and then annihilated. Through these conscious acts we apprehend the material world. All our knowledge of the universe is founded on these immediate and limited by them. By analogy we ascribe to other human organisms minds like our own. A craving to find unity in the seeming multiplicity of experience has led many thinkers to accept a monistic explanation, in which the apparent duality of mind and matter is reduced to a single underlying principle or substratum. Materialism considers matter itself, body, mental substance without mind. For the materialist, mind, feelings, thoughts, and volitions are just "functions" or "aspects" of matter; mental life is an epiphenomenon, a by-product in the working of the Universe, which can in no way interfere with the course of physical changes or modify the movement of any particle of matter in the world; indeed, in strict consistency it should be held that successive mental acts do not influence or condition each other, but that thoughts and volitions are mere incidental appendages of certain nerve processes in the brain; and these latter are determined exclusively and completely by antecedent material processes. In other words, the materialistic theory, when consistently thought out, leads invariably to the startling conclusion that the human mind has had no real influence on the history of the human race.

On the other hand, the idealistic monist denies altogether the existence of any extra-mental, independent material world. So far from mind being a mere aspect or epiphenomenon attached to matter, the material world is a fact of mind, and mind is independent on it. Its esse is percipi. It exists only in and for the mind. Our ideas are the only things of which we can be truly certain. And, indeed, if we were compelled to embrace monism, it seems to us there can be little doubt as to the logical superiority of the idealistic position. But there is no philosophical or logical reason to adopt as either materialistic or an idealistic monism. The conviction of the common sense of mankind, and the assumption of physical science that there are two orders of being in the universe, mind and matter, distinct from each other yet interacting and influencing each other, and the assurance that the human mind can obtain a limited yet true knowledge of the material world which really exists outside and independently of it occupying a space of three dimensions, this view, which is the common teaching of the Scholastic philosophy and Catholic thinkers, can be abundantly justified (see DUALISM; ENERGY, CONSERVATION OF).

MIND AND MATTER.—The opposition of mind and matter brings us face to face with the great controversy between the Monists and Monism, of being in the universe ultimately and radically distinct? or are they merely diverse phases or aspects of one common underlying substratum? Our experience at all events appears to reveal to us two fundamentally contrasted forms of reality. On the one side, there is facing us matter occupying space, subject to motion, possessed of inertia and resistance, permanent, indestructible, and seemingly independent of our observation. On the other, there is our own mind, immediately revealing itself to us in simple unextended acts of consciousness, which seem to be born and then annihilated. Through these conscious acts we apprehend the material world. All our knowledge of the universe is founded on these immediate and limited by them. By analogy we ascribe to other human organisms minds like our own. A craving to find unity in the seeming multiplicity of experience has led many thinkers to accept a monistic explanation, in which the apparent duality of mind and matter is reduced to a single underlying principle or substratum. Materialism considers matter itself, body, mental substance without mind. For the materialist, mind, feelings, thoughts, and volitions are just "functions" or "aspects" of matter; mental life is an epiphenomenon, a by-product in the working of the Universe, which can in no way interfere with the course of physical changes or modify the movement of any particle of matter in the world; indeed, in strict consistency it should be held that successive mental acts do not influence or condition each other, but that thoughts and volitions are mere incidental appendages of certain nerve processes in the brain; and these latter are determined exclusively and completely by antecedent material processes. still compelled to ask how the particular arrangement of the types came about, and we are certain that the subject of the question ultimately rests in the action of mind or intelligent being.

MICHAEL MAHER.

Minden, Diocese of, a former see of Westphalia.

Minden on the Weser is first heard of in 788, and in 803 in the Treaty of Salz, made with the Saxons, it is spoken of as a see. The first bishop was Erkambert (Hermambert), probably a Saxon, who was appointed in 780 and died in 813. The third bishop, Dietrich I (853-80), fell in battle against the Northmen; the fifth, Drogo (887-902), founded a convent at Möllenbeck. The diocese gradually developed until it extended on the east across the Aller to Celle, on the west to Hunte, embracing the districts of Lidbeckegow, Enterigowe, Loingo, Merstem, Buck, and Tilitthi. From the beginning the bishops of Minden were suffragans of Cologne. The later estates of the bishopric comprised a fourth of the diocese; it extended from Porta Westfalica, on both sides of the river, to Schlüsselburg, and on the north-west across to Hunte. The most important places were Minden, Löbecke, Petershagen, Schlüsselburg, Reineberg, and Rades. The see suffered in the tenth century from the Hungarians, but began to flourish under the Saxon dynasty.

Bishop Landward (856-69) obtained from Otto I immunity from all foreign jurisdiction, and also obtained the revenues derived from the administration of justice; Milo (969-96) on account of his loyalty to Otto II received important privileges, among others the right to elect the bailiff who represented the bishop in the imperial court, in 977 penal jurisdiction, the Weser toll, the right of coinage and of conducting a mint. The bishop became so important that he was almost an independent prince. The cathedral canons obtained in 961 the right to choose the bishop, provided a worthy man was chosen. Bishops Dietrich II (1002-22), Sigebert (1022-36), and Bruno (1037-55) were in the emperor’s favour and consequently added to their church property. During the reign of Henry IV the bishops were caught in the Investitūres conflict, and more than once papal and imperial sympathizers contended for the see. After the Concordat of Worms the bishopric under Sigward (1120-40) and Heinrich I (1140-53) made great strides. Werner (1153-70) and Anno (1170-85) guided the see safely through the struggle between Frederick Barbarossa and the Saxon Duke Henry the Lion. The overthrow of the duke removed the last remnant of episcopal dependence on the ducal power, and the prelates of Minden were henceforth subject to the emperor.

Continuous conflicts with encroaching nobles brought a load of debt and forced many bishops to pledge or sell the diocesan estates. The town of Minden was ruined by the financial embarrassment of its episcopal lords, gradually acquired more rights, and partially freed itself from the overlordship of the bishops on the other hand, the authority of the bishop was restricted by the cathedral chapter which, in Minden as in other dioceses, acquired the right of choosing the provost and dean, and made all important matters of administration subject to its consent. Bishop Gottfried von Waldeck (1304-24), to evade the oppression of the burgesses, moved his residence to the castle of Petershagen. With the papal nomination of Louis of Brunswick (1324-46) began the unedifying and detrimental series of conflicts between pope and chapter as to the nomination to the see. Louis involved the see in the feuds of neighbouring nobles. The town acquired the administration of justice, the right to levy customs duties, and the right of coinage. Some energetic bishops followed: Gerhard I (1346-53); Gerhard II von Schauenburg (1361-66); Werdekind von Berge (1369-83); Otto III (1384-97).

In the fifteenth century more than one double election took place. Wulbrand, Count of Hallermund (1406-36), endeavoured to bring order out of confusion; his successor, Albert II von Hoya, as coadjutor and as bishop (1436-73), was involved in a dispute with Osnabrück and the Duke of Brunswick. His successor, Heinrich III von Schauenburg (1473-1508), sought better relations with his neighbours, but episcopal authority was so weakened that a return to
former conditions was impossible. The power of the bishop was now so restricted by the chapter and the town council that it was unable to take any important step without their consent; indeed, a complete co-regency of the chapter was set up. Almost all the castles were in the hands of the aristocratic canons, and the revenues of the bishop were extremely limited. The lives of the clergy did not in many cases conform to the canonical rules; consecration was quite general; monastic discipline had relaxed, and the faith of the laity had grown cold. For these reasons the Reformation spread rapidly in the town and the diocese under Bishop Franz I of Brunswick-Wolfenbüttel (1508–29), who involved the see in the Hildesheim chapter feuds, and died as the result of his excesses. His successor, Franz II von Waldeck, also Bishop of Münster and Osnabrück from 1532, led a dissolute life, and was an adherent of the new religious teachings, which he privately furthered with all his power. In 1533 he was forced to resign in favour of Julius of Brunswick-Wolfenbüttel (1553–54), who soon resigned in favour of his uncle, Georg (1554–66).

Under his successor, Hermann von Schauenberg (1567–82), Protestantism spread rapidly; Hermann accepted the Council of Trent and received indulgences, which it is true, but governed as a Protestant prince. Heinrich Julius of Brunswick-Wolfenbüttel (1582–85) declared the Confession of Augsburg the only authorized creed in his diocese. Otto von Schauenberg (1587–99) was a devoted Catholic, but, owing to disputes with the cathedral chapter and the estates, accomplished little for Catholicism. The last bishop but one, Christian of Brunswick (1599–1633), a Protestant, troubled himself little with theology, and ruled it from his paternal estates. By the terms of his election he had to allow the free exercise of both creeds. The attempt of the cathedral chapter to turn over the church of St. John at Minden to the Jesuits (1604) was frustrated by the opposition of the citizens. By the Edict of Restitution (1629) the Catholics of Minden obtained the churches of St. Martin and St. Simeon; the Franciscans in 1630 established themselves in the cathedral until 1651, and even the Jesuits, though for only a short time, were welcomed to the city. Franz von Wartenberg (1633–48), last Bishop of Minden, endeavoured to restore the Catholic faith in his Sees of Minden, Osnabrück, and Verden; but in 1633 had to flee before the Swedes, and after the Treaty of Prague (1635) was unable to return.

By the Peace of Westphalia the diocese was suppressed, Frans Wilhelm retained the title of Bishop of Engelburg, Switzerland, and entered the German Jesuit novitiate in 1836. He studied philosophy at Aachen (1861–64), and theology at Maria-Laach (1865–69). After a year’s tertianship in Westphalia he was sent to Kreuzberg, near Bonn, as a preacher, and in 1871 became lecturer in theology at Görs, Austria. In 1872 he came to the United States, where, after two years devoted to pastoral ministry, he professed theology at Milwaukee. He was transferred two years later to Spring Hill, Alabama, where he taught philosophy, in which work he was afterwards engaged for twenty-one years, mainly at Buffalo, Prairie du Chien, and St. Louis. When once he had acquired English, Father Ming began to write for the leading Catholic magazines, especially the “Messenger” and the “American Catholic Quarterly Review”, in which his first article appeared in 1879. His contributions deal mainly with evolution and socialism, the two most important questions confronting Catholics in the United States in his day. After the publication of a short but instructive
treatise on the "Temporal Power of the Pope", he undertook a more ambitious work in his "Data of Modern Ethics Examined". The prominence of the labour question led him to engage in a thorough study of that problem. To this we owe "The Characteristics and the Religion of Modern Socialism", and "The Morality of Modern Socialism". These two works supply Catholic students with not only an unprejudiced exposition of the Socialist movement as propounded by its leading advocates, but a critical refutation of the erroneous theories on which it is based.

A. A. MACERLAN.

**MINIMI**

**MINIMI** (or *Minims*) are the members of the religious order founded by St. Francis of Paula. The name is an allusion to Friar Minor, or to Matt., xxv, 40: "Quemadmodum fecisti ut ex his fratribus me minimi mihi fecisti", and suggests, as Leo X in the Bull of canonisation of the holy founder says, the great humility which should characterize the religious of this order, and by reason of which, they ought to consider themselves as the least of all religious. With the first Order of the Minims are connected a second and a third order. In this article we are concerned principally with the first.

I. **ORIGIN AND RULE.**—St. Francis of Paula, having in his youth lived one year in a Franciscan convent at S. Marco (Calabria), dedicated himself to solitary life in a hermitage near Paula. In 1435 some disciples joined him, and after a few years he founded convents at Paternopoli and Flaszar in Sicily, 1469. The new society was called "Hermits of St. Francis of Assisi". The Archbishop of Cosenza granted them of his own accord, in 1471, exemption from his jurisdiction (Lanovius, "Bullarium", 9), which privilege was confirmed by Sixtus IV, 1473 (Lanovius, "Bull.", 11). The same pontiff gave them the privileges of mendicant friars (ibidem, 1473-83) and the new foundation had no written rule, but in 1493 the first rule containing 13 chapters, which was almost a faithful copy of that of St. Francis of Assisi, was confirmed by Alexander VI. (See text Lanovius, ad ann. 1493, and Bull. Rom., V, 352.) A second version of the rule in 10 chapters, which showed more independence of the St. Francis, was approved by Alexander VI in 1501. Here the fourth solemn vow of vita quadragesimatis appears, which forms the distinctive character of the Minims. In the same Bull of confirmation is inserted the rule of the third order in 7 chapters, for seculars of both sexes. (Text Lanovius ad ann. 1501; Bull. Rom., V, 388.) Hardly different from the preceding one is the rule of 1502 (Lanovius, ad ann. 1502.) Finally a third definite text of the rule of the first order, which is still observed by the Minims, was confirmed by Julius II, "Dudum ad sacram ordinem", 28 July, 1506. (Bull. Rom., V, 421.) The rule of the second order, which is for sisters and which originated in Spain, appears for the first time in 1508. The nuns, who have a liturgical adoption of the rule of the first order, while the rule of the third order here inserted is the same as that confirmed in 1501. The spirit which permeates these rules, especially those of the first and second orders, is that of great penance and abnegation. The fourth vow imposes perpetual abstinence from all flesh and white meats, and only in case of grave sickness. The order of the physician may it be dispensed with. The Order of Minims is founded on the same principle of organisation as that of all mendicants. The superiors are called correctors. At the head is the corrector general, who formerly was elected every three years, but since 1605 every six years. The corrector post is elective, while the general superior is elected by each convent for only one year. The habit of the Minims is made of coarse black wool, has broad sleeves, and is girded by a thin black cord. The mozzetta of the capuce reaches below the cord, almost in the form of a scapular. To ensure the stricter observance of the rules of the first and second orders, Francis of Paula drew up a "Correctorium", consisting of ten chapters corresponding to the number of chapters in the rule, which determines the penance to be inflicted on those who transgress its precepts. This "Correctorium" was approved by Julius II in 1506 and by Leo X in 1517 (Digestum, see below, I, 55).

II. **PROPA GATION AND ACTIVITIES.**—The Order of the Minims, propagated at first in Italy was introduced by special royal favour into France, whether the holy founder was called in 1482. There the earliest convents were at Plessis-les-Tours, Amboise, and Nogent, near Paris. On account of their great simplicity the Minims in France received the appellation of bons hommes. In 1493 Charles VIII of France founded in Rome the convent of Trinità dei Monti, which, by Bull of Innocent X (1643), was exclusively reserved to the French fathers. From France the Minims spread to Spain, where they were once excommunicated as "Fathers of the Victory" owing to the victory of King Ferdinand over the Moors of Malaga. In 1497 the Emperor Maximilian introduced the new order into Germany (Bohemia). At the death of St. Francis of Paula, 1507, there existed five provinces spread over Italy, France, Spain, and Germany.

A little later the order counted 450 convents. In 1623 Dony d'Attichi gives the number of members as 6430, convents 359, and provinces 30, distributed in the principal Catholic countries of Europe. Lanovius in 1635 adds to the number of provinces three com- munities, the missaries of whom one was in the West Indies. In 1646 the Propaganda approved the foundation of a mission in Canada, but it is not known if this plan was ever carried out (Roberti, I, 488). In England the Minims seem not to have had any convents, still some illustrious English members are recorded, as Thomas Felton, martyred in 1588, Henry More, nephew of the chancellor, Blessed Thomas More, d. at Reims, 1587; Andrew Polere, d. at Soissons, 1594. The second order was never very widely propagated. In 1623 there existed 11 convents with 360 sisters. The third order, on the contrary, found many adherents among the faithful in the countries where convents of the first order existed.

To give some indication of its activity we mention some of its most distinguished members. The first to be named is Bernard Boil (see Bull. Bernardo), the first vicar Apostolic in America, appointed 1493, who, as
the documents published by Fita certainly indicate, belonged at that time to the Minims, although the passage in Fita's treatment of the Franciscans in Enzyklopädie, I, 414) used the words ordinis Minimorum. See Roberti, op. cit. below, I, 89-102. Distinguished theologians were: Lalemandet, d. 1647; Salier, d. 1707; Boucat, d. 1718; Falange, d. 1720; Perrimez, d. 1740; historians (see bibliography), Giry, d. 1763; Schmir, d. 1764; Richard, d. 1767; d'Abrav, d. 1768; Mercereau, d. 1769; philosophers, Saguena, d. about 1718, and some of the previously mentioned theological authors. For the bishops chosen from this order see Roberti (op. cit. below, I, 377, II, 681). The cause for beatification of two Minims has been introduced.

MINISTER.—Since the French Revolution the Minims are greatly reduced in number. At present there are 19 convents with about 330 friars. There are 15 convents in Italy, 2 in Sicily, 1 in Sardinia, and 1 in Spain. The corrector general resides at St. Andrea delle Fratte, Rome. There are two other convents at Rome, S. Francesco di Paola and S. Maria della Luce. The second order is spread especially in Spain, where it has 10 convents. There are single convents at Marseilles, Rome, and Todi. The third order is spread in Latin countries and also in South America, where secular priests are delegated and authorized to receive members.

Minister.—The term minister has long been appropriated in a distinctive way to the clergy. The language of I Cor., iv, 1-2; Heb., viii, 2; Matt., xx, 26, etc. must have helped to familiarize the thought that those charged with spiritual functions in the Christian Church were called upon to be the servants (ministri) of their brethren. Even before the Reformation the word minister was occasionally used in English to describe those of the clergy actually taking part in a function, or the celebrant as distinguished from the assistants, but it was not then used sine addito to designate an ecclesiastic. This employment of the term dates from Calvin, who objected to the name priest etc. as involving an erroneous conception of the nature of the sacred office. These Calvinistic views had some influence in England. In the Book of Common Prayer the word minister occurs frequently in the sense of the officiant at a service, and in the thirty-second of the Canons Ecclesiastical (1603) we read "no bishop shall make a person deacon and minister both upon one day" where clearly minister stands as the equivalent of priest. As regards modern usage the Hist. Eng. Dictionary says: "The use of minister as the designation of an Anglican clergyman (formerly extensively current, sometimes with more specific application to a beneficed clergyman) has latterly become rare, and is now chiefly associated with Low Church views; but it is still the ordinary appellation of one appointed to spiritual office in any non-Episcopal communion, especially one holding a pastoral charge."

As regards Catholic use, minister is the title of certain superiors in various religious orders. The head of the Franciscan Order is known as the minister general, and the superior of the different provinces of the various branches is called minister provincial. The same name is true of the Various: the Master of the Trinitarians, the Redemption of Captives and of some other orders. In the Society of Jesus the second in command in each house, who is usually charged with the internal discipline, the commissariat, etc., is called minister. The statement made in Addis and Arnold's "Catholic Dictionary" and thence incorporated into the great Dictionary says that each of the five assistants of the General of the Jesuits is called minister without foundation.

HERBERT THURSTON.

Minkelers, Jean-Pierre, inventor of illuminating gas; b. at Maastricht, Holland, 1748; d. there 4 July, 1824. At the age of sixteen, in 1764, he went to Louvain, where he studied theology and philosophy at the Collège du Faoucon, in which he became professor of natural philosophy in 1772. At this time the question of aerostats and Montgolfieres was occupying the mind of scientists, and the Due d'Arenberg, a Mecenas of learned men and art, engaged Minkelers in the question of the best gas for balloon purposes. Minkelers was on this committee, and published in 1784, after many experiments, a work entitled "Mémoire sur l'air inflammable tiré de différentes substances, rédigé par M. Minkelers, professeur de philosophie au collège du Faoucon, université de Louvain." (Louvain, 1784). As an appendix to this memoir there was a 'Table de gravité spécifiques des différentes espèces d'air', by T.F. Thyssen, a member of the committee. In his memoir Minkelers tells us how he made his precious discovery: from the very beginning of his experiments he had had the idea of enclosing oil in the barrel of a gun and heating it in a forge. Under action of the heat the oil dissolved and gave place to a remarkably light gas, having other advantageous qualities. Having proved that oil gas was the best for balloons, Minkelers used it for many balloons which rose rapidly and travelled great distances in the neighbourhood of Louvain. As we learn from his pupil von Hulstein, who was in his class in 1785, Minkelers intended to use this same gas to light his workshop. Moreover, the drift of his memoir proves clearly that in its inventor's eyes the great combustibility of the gas was one of its leading qualities. When Joseph II, in 1788, transferred the University of Louvain to Brussels, Minkelers continued as professor, but when it was re-embarked back to Louvain he refused to return. He resigned in 1794 and was appointed professor of physics and chemistry at the Central School of Maastricht, 4 July, 1824.

MINKELER, Mémoire sur l'air inflammable tiré de différentes substances (Louvain, 1784); D'AMBOISE, Verzeg. over d. P. Minkelers (Maastricht, 1867); VERHAGEN, Les cinquante dernières années de l'université de Louvain (Lille, 1894); DE BUCK, De vermaatiging van de luchtgas uit scheiden (Alkmaar, 1883).

D. Nra.

MINNESOTA, one of the North Central States of the American Union, lies about midway between the eastern and western shores of the continent, and about midway between the Gulf of Mexico and Hudson's Bay.

PHYSIOGRAPHY.—Minnesota extends from 43° 30' to 49° N. lat. and from 89° 39' to 97° 5' W. long. Its length from north to south is about 400 miles, and its greatest breadth about 354 miles. Of its total area of 84,287 sq. miles, no less than 5637 are water surface, owing to the great number of inland lakes (numbering about ten thousand) and watercourses, large and
small. Minnesota is bounded on the north by Canada, on the east by Lake Superior and Wisconsin, on the south by Iowa, and on the western by North and South Dakota. Within the wide domain of the State originate the three principal water systems of North America: those of the Mississippi and the Red River of the North, and the St. Lawrence system beginning with the St. Louis River, which rises in the north-eastern part of Minnesota and flows into the western end of Lake Superior. The northern part of the state was formerly covered with a dense growth of pine, and has supplied a large portion of the white pine utilized throughout the United States in various industries. Aside from the districts originally covered by pine and the rocky ridges near Lake Superior, the state possesses a warm, dark soil of great fertility. Its geologic formations are for the most part ancient limestone, sandstone, sand, shale, slate, trap-rock, granite, and basalt along the shore of Lake Superior and the banks of the St. Croix, with outcrops of similar formations in various other portions of the state, to the soft limestone of a later period. The granite is of various colours, ranging from dark brown to light grey, and is highly valued for building purposes, being the building material of the Kasota limestone, which has been largely used in the construction of the new and magnificent state capitol.

In the north-eastern, and to a considerable extent throughout the entire northern part of the state, are found extensive beds of iron ore of excellent quality. Shipments of this ore have been great during recent years, and the iron found in the state is of the same quality as the famous black ironstone of Clifton, N. J., which has been used to supply the iron for the American Navy. The state has also copper, lead, zinc, and silver deposits.

The climate of Minnesota is mild, enjoying correspondingly longer days in summer than any other region in which they have lived.

**NAME.**—The name of the state is derived from the Dakota language. Before the white men came to the hunting grounds, the Dakotas called the river which rises on the western border of the state and flows into the Mississippi near the site of St. Paul the Minisotah (mini, water; sodak, sky-coloured), and, when the region between the western border of Wisconsin and the Missouri River was organized by Congress into a territory, it was given the name of this river in a slightly modified form — the name which the state bears at present.

**HISTORY.**—At the time when the explorations of white men began, the region now known as Minnesota was inhabited by people of two great divisions of the American race. From the southern boundary of the state, as far north as lat. 46° 30’, the land was inhabited by the Dakotas, while the shore of Lake Superior and the northern portion of the state were occupied by the Ojibways. Many places in Minnesota bear Indian names, and those derived from the respective languages of these two aboriginal nations show very clearly at the present time the areas which they respectively occupied.

The French came into contact with the Ojibways and other kindred Indian nations of the Algonquin family, who in their language designated the Dakotas the Naudessioux (for “enemy”), and abbreviated the word to Nau. The English translated this long word into its final syllable, and called the Dakotas the Sioux, under which title they have been commonly known since the days of Marquette and Allouez.

The real history of the state may be said to begin in 1820, with the visit to the Falls of St. Anthony and adjacent regions made by Rev. Louis Hennepin and his companions, Accault and Auguelle. During the same year Sieur Daniel Greyson Du Lhut explored the northern part of the state, and, in July, joined Father Hennepin at or near the lake now known as Mille Lacs. Late in the autumn Du Lhut and Hennepin departed from the land of the Dakotas and returned to Eastern Canada. From the time of these explorations to the English conquest of Canada in 1760, France held sway over the Upper Mississippi region. Formal assertion of sovereignty was made in 1689, as appears from a document drawn up at Green Bay on the western shore of Lake Michigan, in which Nicholas Perrot, commanding for the time at that post and holding a commission from Marquis Denonville, Governor of New France, issued a declaration in these words:

"We this day, the 8th day of May, 1689, do in the presence of Reverend Father Marest, of the Society of Jesus, Missionary among the Naudoessiouxs; of Monsieur le Boreigual, commanding the French in the neighbourhood of the Ouiskochanje on the Mississippi; Augustine Legardeur, Sieur de Caumont, and of Messieurs Le Sueur, Hebert Lemire, and Blein:

Declare to all whom it may concern, that, being come to the Bay des Puants (Green Bay), and to the Lake of Ouiskochanje, and to the River Mississippi, we did transport ourselves to the country of the Naudoessiouxs, and on the borders of the River St. Croix, and to the mouth of the River St. Pierre, on the bank of which were the Nortans; and further up to the interior to the north-east of the Mississippi, as far as the Menchokatonx, with whom dwell the majority of the Songesekitos, and other Naudoessiouxs, who are to the
north-east of the Mississippi, to take possession for, and in the name of, the King, of the countries and rivers inhabited by the said tribes, and of which they are the proprietors. The present act done in our presence, and signed with our hand and subscribed."

Without delay, practical measures were taken to ensure the rights of France. A map of the year 1700 shows on the west side of the Mississippi a second post was established by Le Sueur on an island above the lake. Thus, in the beginning of the eighteenth century what was officially termed "Le Baye Department", consisting of a line of military and trading posts, was organized to command the waterway from Green Bay to the Falls of St. Anthony. Nevertheless, however, the systematic effort made to establish permanent military garrisons north of the mouth of the Wisconsin River.

In the spring of 1685 Governor De La Barre of New France sent from Quebec to the west twenty men under the command of Nicholas Perrot to establish friendly alliances with the Dakotas. Proceeding to the Mississippi, he established a post near the outlet of Lake Pepin, which was known as Fort Perrot. War having been declared in 1687 between the French and the Indians, Perrot and his followers left the Mississippi River and repaired to Mackinac. Early in 1689, however, he returned with a party of forty men to his post on Lake Pepin, and re-established trade with the Dakotas, thus publicizing the newly denominated Fort Bon Secours; three years later it was marked Fort Le Sueur, but was in that year abandoned. In a much later map it is correctly called Fort Perrot. In 1700, acting upon the recommendation of the Governor of Louisiana, Pierre Le Sueur, a native of Artois, France, came to the region now known as Minnesota. He was an intrepid, energetic, and shrewd man, and about twenty others, in search of copper which, according to earlier explorers, existed in the Sioux country. Le Sueur and his party spent the winter of that year in the neighbourhood of the Great bend of the Minisotah, and there gathered a large quantity of green earth which was supposed to contain copper in the crude state. From the circumstance that this earth is sometimes described by Le Sueur and his contemporaries as "blue earth", that name has been given to the tributary of the Minnesota River at the mouth of which Le Sueur spent a winter and built a fort, and also to the country within which the site of this old fort is situated. The Dakota word Mankato, which means "the place where the corn is corrupted in the course of time", became the name of the county seat of Blue Earth County.

A trading company, formed in Montreal to carry on traffic in furs with the Indians of the Lake Baye Department, dispatched on 16 June, 1727, an expedition under René Boucher to the land of the Sioux. The expedition arrived at a site on the shore of Lake Pepin on 17 September. Two Jesuit missionaries, Michel Guignas and Nicholas de Gonnor, accompanied Boucher and his small command. Before the end of October a small fort, called Beauharnois as a compliment to the Governor of New France, was built on the low lands opposite the towering cliff which now bears the name of Maiden Rock. A chapel was erected within the enclosure of Fort Beauharnois, and was dedicated to St. Michael the Archangel. This was the first Christian temple to cast its beneficent shadow upon the soil of Minnesota. The first ceremony of note in the new chapel was the celebration of the feast of St. Charles of which Father Guignas writes: "The ceremony was beautiful, with the Govt. and the Inhabitants in attendance. The [November] was the saint's day of the general. Holy Mass was said for him in the morning, and we were well prepared to celebrate the event in the evening, but the slowness of the pyrotechnists and the variability of the weather led to the postponement of the celebration to the 14th of the same month, when some very beautiful rockets were shot off and the air was made to resound with a hundred shouts of 'Vive le Roy' and 'Vive Charles de Beauharnois'. What contributed very much to the merry-making was the fright of some Indians. When these poor people saw fireworks in the air and the stars falling from the sky, the women and children fled and the more courageous of the men even went away. But they begged that we should stop the astonishing play of the terrible medicine." It may be stated in explanation that, among all the American Indians, any phenomenon which exerted a powerful influence upon the physical and nervous system was designated by a term corresponding to the word medicine in their languages.

In a report made in October, 1728, by the Governor of Canada to the Government of France, Fort Beauharnois was said to be badly situated on account of freshets "and, therefore," as the report says, "this fort could be removed four or five arpents from the lake shore without prejudice to the views entertained in building it on its present site." The report declares that the interests of religion, of the service, and of the colony demand that the fort on the bank of Lake Pepin be permanently maintained. In September, 1730, Fort Beauharnois was rebuilt on a plot of higher ground near the old establishment. Upon this lofty site, surrounded by some of the most beautiful scenery in North America, in 1731 the small town of St. Mary was founded. The convent chapel very properly bears the same name as its historic predecessor, St. Michael the Archangel. Sieur Linctot was made commandant of the new fort in June, 1731, and in 1735 was succeeded by St. Pierre. The Dakotas having shown a very hostile spirit, St. Pierre decided to abandon Fort Beauharnois; in March, 1737, the fort was burned. In 1743, and again in 1746, representatives of the Dakota nation made a journey to Quebec and presented to the Government of New France a petition for the re-establishment of the fort and for the restoration of trade relations. Their request was not granted until 1750, when Pierre Marin was commissioned to rebuild the little fortress. Fort Beauharnois was retained until the outbreak of the war between the English and French, but it was never occupied after the surrender which followed the defeat of Montcalm in the famous battle of Quebec (1759).

About one-third of the state, comprising its north-eastern part to the east of the Mississippi, was included in the territory ceded to the United States by France under the treaty of 1783, at the end of the War of Independence; the greater portion (about two-thirds) of the territory embraced within the boundaries of Minnesota, however, was included in the Louisiana Purchase, ceded to the United States by France in 1803. In 1805 a grant of land nine miles square, at the confluence of the Mississippi and St. Peter (now Minnesota) Rivers, was obtained from the Sioux Indians. A military post was established on the grant in 1819, and in 1820 arrangements were made for the erection of a fort, which was completed in 1822 and named, at first Fort St. Anthony, but later Fort Snelling after the commanding officer. The grant has ever since been known as the Fort Snelling Reservation. In 1823 the first steamboat ascended the Mississippi as far as Fort Snelling, and annually thereafter one or two trips were made by steamboats to this isolated post for a number of years.

From the date of the English victory over the French until the establishment of Fort St. Anthony on the Mississippi and the Union State of Minnesota, it was unfavourable for the maintenance of Catholic missions in the Upper Mississippi country. However, some colonists from Switzerland, who possessed the true Faith and spoke the French language, having migrated from their original settlements near Fort Garry in Canada to a place seven or eight miles below
the Falls of St. Anthony, Bishop Mathias Loras of Dubuque, whose diocese included the entire region now called Minnesota, visited Fort Snelling and the adjacent Swiss settlement in 1839, and in the following year sent a missionary to Minnesota, Father Lucien Galtier. This latter established himself upon the present site of the metropolitan city of St. Paul, and in the following year built a log chapel which he called by the name of the great Apostle of the Gentiles. The gradual increase of population about the chapel, the development of the community into a village, and finally into a large city under the name of St. Paul, constitute an imposing monument to the missionary zeal of Father Galtier, and for ever associate the name and fame of the capital city of Minnesota with the glories of the Catholic Faith. Minnesota was organized as a Federal territory by Act of Congress of 1849, and, on 11 May, 1858, its territorial existence terminated and it became a state.

Population.—The population of the state has shown a rapid increase. According to the successive census returns the population was: 172,023 in 1860; 250,099 in 1865; 439,706 in 1870; 780,773 in 1880; 1,117,798 in 1885; 1,301,826 in 1890; 1,997,912 in 1905. In that year, the population of the five largest cities was: Minneapolis, 261,874; St. Paul, 197,023; Duluth, 79,053; Winona, 20,304; Stillwater, 13,788. The population of Minnesota according to nationalities was thus classified by the census of the year 1905:

</table>

This makes a total foreign born population of 537,041. The inmates of state institutions, and the 10,225 Indians in the state at the time of taking the census, are not included in the above figures.

The progress of the Catholic Faith in Minnesota has been marvellous. In 1841 the mission of Father Galtier included some twenty families, and in 1851, when Father Joseph Crépin (q. v.) was named first Bishop of St. Paul, the number of Catholics in Minnesota is estimated to have been about 1000. In 1888 the See of St. Paul was raised to archiepiscopal rank, the dioceses of St. Cloud, Winona, Duluth, Fargo, Sioux Falls, and Lead becoming later its suffragans. As each of these dioceses is treated in a special article, it will be sufficient to quote here some general statistics for the State of Minnesota, which includes the Archdiocese of St. Paul and the first three of the above named suffragans: 1 archbishop; 4 bishops; 602 priests (476 secular); 406 churches with resident priests; 168 missions with churches; 67 missions without churches; 67 churches over twenty years; 6 churches over forty years; 32,426 children in parochial schools; 427,627 Catholics. The recently established Diocese of Crookston, separated from Duluth, will constitute an additional suffragan of St. Paul.

Liberty of Conscience.—The Constitution provides expressly for religious liberty by declaring that "the right of every man to worship God according to the dictates of his own conscience shall never be infringed nor shall any man be compelled to attend, erect or support any place of worship, or to maintain any religious or ecclesiastical ministry, against his consent, nor shall any control of or interference with the rights of conscience be permitted or any preference be given by law to any religious establishment of worship." It further provides: "No religious test or amount of property shall ever be required as a qualification for any office of public trust under the State. No religious test or amount of property shall ever be required as a qualification for any voter at any election in this state; nor shall any person be rendered incompetent to give evidence in any court of law or equity in consequence of his opinion upon the subject of religion." This Constitution has been interpreted by the legislature in the most liberal manner, and Minnesota has led all of the other states in the Union in providing liberty of conscience and the free exercise of religion in favour of the inmates of penal, correctional, and eleemosynary institutions. The general statutes now in force contain these provisions: "Religious Instruction.—Said Board [The State Board of Control] shall provide at least one hour, on the first day of each week, between nine o'clock a.m. and five o'clock p.m., for religious instruction to inmates of all prisons and reformatories under its control, during which clergymen prescribed shall (subject to the rules and regulations of the institution) may freely administer and impart religious rites and instruction to those desiring the same. It shall provide a private room where such instruction can be given by clergymen of the denomination desired by the inmate, or in case of minors, by the parents or guardian, and, in case of sickness, some other day or hour may be designated; but all sectaries, including atheists, shall be eligible to the office, and no officer or employee of the institution shall attempt to influence the religious belief of any inmate, and none shall be required to attend religious services against his will" (Revised Laws, 1905, chap. 25, sec. 1903). As to the state prison, the laws provide:

Visitors.—Fees.—The members of the state board of control, the governor, lieutenants of the legislature, state officers, and regularly authorized ministers of the Gospel may visit the prisoners at pleasure, but no other persons, without special permission of the warden, under rules prescribed by said board. A moderate fee may be required of visitors, other than those allowed to visit at pleasure. Such fees shall be used to defray the expenses of conducting such visitors, for the maintenance of the prison library, the prison band, and other entertainments of the inmates." (Chap. 105, sec. 5434).

Regulations Concerning Property.—The Constitution of Minnesota provides security for private rights in the declaration that "every person is entitled to a certain remedy in the laws for all injuries or wrongs which he may receive in his person, property or character; he ought to obtain justice freely and without purchase; completely and without denial; promptly and without delay; conformably to the laws", and by the further provision that, "private property shall not be taken, destroyed or damaged for public use without just compensation paid or secured". To prevent any revival of abuses and monopolies such as grew up under the feudal system, the Constitution contained this provision: "All lands within this State are declared to be alodial, and feudal tenures of every description, with all their incidents, are prohibited. Leases and grants of agricultural lands for a longer term than two years, or for services paid in money, and any estate so created, in which shall be reserved any rent or service of any kind, shall be void."

The statutes of Minnesota provide for the free and untrammeled acquisition of real property, and also for abundant security to its possessor. Estates in lands are divided by statute into estates of inheritance, estates for life, estates for years, and estates as by sufferance. The decisions of the Supreme
establish the principle that tenancies from year to year are estates at will. The laws further provide that every estate of inheritance shall continue to be termed a fee simple, or fee; and every such estate when not defeasible or conditional, shall be a fee simple absolute. All estates which would at common law be considered as estates tail are deemed and adjudged to be fee simple estates in the person who would, otherwise, be seized thereof in fee tail. Every future estate is void in its creation, which suspends the absolute power of alienation by any limitation for a longer period than during the continuance of two lives in being at the creation of the estate, except that a contingent remainder in fee may be created on a prior remainder in fee, to take effect in the event that the persons, to whom the first remainder is limited, die under the age of twenty-one years, or upon any other contingency by which the estate of such persons may be determined before they attain their full age. The rule in Shelley's case has been abolished. With a few express exceptions, no corporation, unless organised for the construction or operation of a railway, canal, or turnpike, may acquire more than five thousand (5000) acres of land. Uses and trusts, with a few exceptions, have been abolished.

Religious Corporations.—In furtherance of the liberal policy regarding the exercise of religion contained in the state Constitution, the laws of Minnesota provide for the creation of religious corporations and special statutory provisions enable a bishop of the Catholic Church, in association with the vicar-general and the chancellor of his diocese, to create such a corporation. The bishop and vicar-general, and the corporation of the parish, are likewise authorized to create parochial corporations. These corporations have the right to acquire and to hold land to the same extent as have individuals. Every person (and the term includes married women) may dispose of his estate, real and personal, or any part thereof, or right or interest therein, by a last will and testament, in writing. There is no limitation on religious bequests, and full force and effect have been given thereto by the decisions of the courts.

Charitable Societies and Institutions.—The laws of Minnesota contain the most liberal provisions for the founding and incorporation of charitable and educational societies, hospitals, orphanages, refuges, and reformatory houses. The public charitable institutions of the state are various and manifold. Provision is made for the care and treatment of all insane persons, not only in great general hospitals, but also in various institutions equipped with buildings on the "cottage plan" for the custody of the harmless and incurable insane. The state prison is situated at Stillwater and is a most admirably conducted penitentiary. The state reformatory is at St. Cloud and receives for correction, rather than for punishment, offenders whose ages range from sixteen to thirty years. This institution is managed upon the benevolent plan of instruction of the mind and the rehabilitation of the offender. For boys of wayward tendencies who have repeatedly violated the laws of the state, is provided the state training school, at Red Wing, which is not only a school of moral and mental discipline, but also a manual training school. Wayward girls are accommodated and placed under moral restraint at a similar institution for girls. Institution for paupers and a county alms-house, and also distributes out-door relief to the poor. All public charitable institutions and agencies are under the watchful care of the state board of control, consisting of three members appointed by the governor. The board of control not only has visatorial powers, but is also invested with administrative functions. It has proved highly efficient. The public charities of Minnesota are famous throughout the world for their advanced humanitarianism and general excellence.

Marriage and Divorce.—The statutes of Minnesota declare that marriage, so far as its validity in law is concerned, is a civil contract, to which the consent of the parties capable to make such a contract is essential. Every male person who has attained the full age of eighteen years, and every female person who has attained the full age of fifteen years, is capable in law of contracting marriage, if otherwise competent. No marriage may be contracted while either of the parties has a husband or wife living; nor within six months after either has been divorced from a former spouse; nor between parties who are nearer of kin than first cousin, whether of the half or full blood, computed by the rules of the civil law; nor between persons either of whom is epileptic, imbecile, feeble-minded, or insane. Marriage may be solemnized by any justice of the peace in the county in which he is elected, and throughout the state by any judge of a court of record, the superintendent of the department for the deaf and dumb (in the state school for the deaf and dumb), or by any licensed or ordained minister of the gospel in regular communion with a religious society. Before any persons are joined in marriage, a license must be obtained from the clerk of the district court of the county in which the residence of either marriage is required, or if either is a resident of the state, from such clerk in the county where the marriage is to take place.

The statutes of Minnesota are liberal in regard to divorce. A divorce from the bonds of matrimony may be adjudged by the district court for any of the following causes: (1) adultery; (2) impotency; (3) cruel and inhuman treatment; (4) imprisonment in any prison or state reformatory subsequent to the marriage, and in such case a pardon will not restore conjugal rights; (5) wilful desertion for one year next preceding the filing of the complaint; (6) habitual drunkenness for one year immediately preceding the filing of the complaint. Limited divorces, extending to a separation a mensa et terra permanently or for a limited time, may be adjudged by the district court, on the complaint of a married woman, between any husband and wife who are inhabitants of the state, or in cases where the marriage has taken place within the state and the wife is an actual resident at the time of filing her complaint; or in cases where the marriage has taken place outside the state, and the husband or wife or any other person is an actual inhabitant of the state at least one year, and the wife shall be an actual resident at the time of the filing of her complaint. The grounds upon which limited divorces may be granted are: (1) cruel and inhuman treatment by the husband; (2) such conduct on the part of a husband toward his wife as may render it unsafe and improper for her to continue with him; (3) the abandonment of the wife by the husband and his refusal or neglect to provide for her.

Public Education.—The public property of the state consists of realty used in connection with the various public institutions, and also of a large public domain consisting of land granted to the State Government of the United States at the time when the State of Minnesota was admitted into the Union; such grants having been made for the benefit of the State university, for the support of the common school system, and for the purpose of making internal improvements. The title to such lands is vested in the State of Minnesota, and the care and control of such lands is vested in the auditor of the state, who is eo occicio Land Commissioner of Minnesota. The portion of the grant assigned to the support of public education has been estimated by competent authority to be sufficient to yield ultimately a fund of $250,000,000. The educational system of the state is organized as follows: School districts of various kinds and sizes are distributed throughout the state, and are under the care of boards of education elected by the people of each district.
MINOR (Lat. minor), that which is less, or inferior in comparison with another, the term being employed, as well as the word majores, with the corresponding restriction to application to things, we may mention causa minores, matters of lesser importance, as opposed to causa majores, those more important; minor benefices as opposed to the major benefices, which imply jurisdiction and are confirmed in papal consistory; minor churches or those of inferior rank; the minor excommunication (now out of use), as opposed to the major excommunication. In reference to persons, certain uses of the word minor may also be mentioned which depend upon usage rather than upon law: the younger of two persons of the same name is sometimes called minor (or "the less") as St. James the Less. Through humility St. Francis Assisi gave his religious the monastic habit which the mendicants wore; that is, a tunic and a mule. But in its most frequent and most strictly judicial acceptation, the word designates a person who, having passed his infancy, has not yet reached the age required by law for the performance of certain acts or the exercise of certain rights; in practice the utmost limit is considered, and beyond it there exists no restriction; these are called minors who have not yet reached the age at which the law makes them capable of performing all civil acts whatever, especially the administration of their property. This age being fixed by most modern laws at twenty-one years, everyone is a minor until the age of twenty-one, or whatever may be the legal age of majority. As the matter is primarily one of civil rights, the Church leaves distinctions to the civil law. What concerns canon law and Christian acts, no uniform limit of minority has ever been established; for given acts and rights the canon law and ecclesiastical usage have established the necessary and sufficient age. In the first place children are not considered as minors; it is presumed that until the age of reason, legally fixed at seven years, a child possesses neither the intelligence nor the experience to commit sin or to exercise any rights whatsoever. When no longer a child a person becomes a minor. Minors are either under or over the age of puberty, which is fixed by the Roman law at fourteen full years for boys and twelve full years for girls; between the age of seven years and that of puberty they are said to be nearer, or less possible to innocence than any other case may be. For those under puberty, there begins with the age of reason the obligation of observing the moral law and those precepts of the Church from which they are not exempt by their age, notably the obligation to receive the Sacraments; such minors therefore are capable of sinning although their responsibility is less in proportion as they are near to childhood; for this reason they are not liable to the penalties of the forum externum, except where this is specially provided. It is presumed that with puberty the Christian begins to enjoy the plenitude of his intelligence and liberty in spiritual matters and purely moral rights: he is capable of entering into a contract marriage, he can receive minor orders, and be nominated to and administrate a benefice (Conc. Trid., sees. XXIII, c. vi, "De ref."); c. iii, "De judic.", in 6). There are, however, acts binding his future which he cannot perform until at a more advanced age; he cannot make a religious profession until the age of sixteen is attained (Conc. Trid., c. VI, "De instit."); he cannot receive the sub-diocesan before his twenty-first year (sees. XXXII, c. vii). At the age of twenty-one, too, he begins to subject to the law of fasting. (For more ample developments see Age, CANONTICAL.)

A leading characteristic in all legislation on minors is the protection afforded them in regard to the administration of property and the obligations which they can assume in reference to third parties. As a general rule the liberty of minors is unrestrained as to contracts which are to their advantage, but they cannot make any contracts which are burdensome to themselves except under certain determined formalities and according to the regulations which they consider themselves as suffering by such contracts they may, by the terms of the Roman Law ("De minorib., xxv., ann." ff., IV, iv), for four years after their majority of twenty-five years, obtain the "restituto in integrum", i.e. a judicial decree restored the condition of things which existed before the contract by which the minor suffered. These provisions have been or more or less completely embodied in the modern laws of various countries, the discussion of which would be out of place here. It is enough to say that the canon law has accepted them (Decret., lib. I, tit. xii, "De in integrum restitutione"), and applied them to churches and other juridical entities which it was desired to protect similarly. When it is said that churches are assimilated to minors (c. vii, 3, 8, "De in integrum restit.".) the meaning is that, in respect to burdensome contracts,
churches and other ecclesiastical establishments are subject to the same protective measures, and enjoy the same privileges, as minors.

MINORCA. The bishop of Minorca resided in a palace of the name of the cathedral, in the city of Mahon, the capital of the island. The bishopric of Minorca is a suffragan of the see of Mallorca. The diocese of Minorca is divided into four vicariates: Mahon, Ferreries, Port Mahon, and Iles. The cathedral of the diocese is the Catedral de Santa María, which was begun in the 13th century and completed in the 15th. The cathedral is famous for its beautiful stained glass windows, which are considered some of the finest in Spain.

MINORCA, DIOCESE OF (MINORCA), suffragan of Valencia, comprises the Island of Minorca, the second in size in the Balearic Islands, which are possessions of Spain. The civil capital is Port Mahon; the ecclesiastical, Ciutadella. The origin of the Diocese of Minorca is not known, but it certainly existed in the fifth century, as its bishop, Macarius, together with Elia and Opilio, Bishops of Majorca and Ibiza, came to Carthage in 484 to make profession of his faith. Baroni, published from a Vatican MS., a letter of Severus, Bishop of Minorca in the fifth century. De meto translates and inserts it. The learned Antonio Roig, a native of Minorca, rector of Felanitx, published in 1787 a Latin treatise commenting upon it and defending its authenticity. But the account of the expedition undertaken, under the direction of a certain Theodore, to convert the Jews who were in possession of Minorca, and the events therein related, are of uncertain authenticity.

The Vandals took possession of Minorca, as well as of Corsica, Sardinia, and Sicily, and during their dominion the Diocese of Minorca was under the jurisdiction of the metropolitan See of Sardinia. The Bull of Pope Adrian II, dated 897, in which among other territories assigned to the Bishop of Gerona we find the island of Minorca, is attributed by some to the conquest of Spain by the Mohammedans brought the existence of the Diocese of Minorca to an end. It was not re-established until the eighteenth century. When Minorca was recovered, in 1783, from the English, who obtained possession of it in the War of the Spanish Succession (1701-14), the rector, in the first place of the diocese was considered Pius VI by the Bull of 23 July, 1795, erected the new Diocese of Minorca. Its first bishop, Antonio Vila, a native of Minorca, took possession of the see on 2 September, 1798. He was a man of learning, and the author of "El noble bien educado" (Madrid, 1770), "Viaj de Virtudes del infante, mas no de la gente" (Madrid, 1777), and "El Valsalvo instruido" (Madrid, 1792). The last-named work for his author his canonry in the cathedral of Minorca. He also worked on an encyclopedic dictionary of which twenty volumes in folio are still preserved in the cathedral of Alarcon. On 25 July, 1802, Bishop Vila was transferred to the Diocese of Gerona, where he died on 12 December, 1803. D. Pedro Antonio Juano was appointed to succeed him in 1814, and was followed by the famous D. Jaime Creus y Martí, canon of Urgell, president of the Junta Suprema of Catalonia during the War of Independence, deputy in the Cortes of Cadiz, and a member of the Royal Council. Having been raised to the dignity of Archbishop, he was succeeded in succession by D. Antonio de Cervelo and the Dominican Fray Antonio Díaz Merino, who, since 1825, had been an active collaborator in the "Biblioteca de Religión". In 1837 Fray Antonio was exiled first to Cadiz and then to France, and died at Marseilles in 1844. His successor, D. Mateo Jaume was present at the Vatican Council. Since then the see has been filled in succession by D. Manuel Mercador (1874-90), D. Juan Comes y Vidal, founder of the Academia de la Juventud Católica (26 July, 1906), D. Salvador Castellote y Pinao (1901-6), and D. Juan Torres y Ribas, the present bishop.

Port Mahon, which has a population of about 15,445, is on the east coast and has the best port in the Mediterranean. The town is a pleasant place to visit, with its narrow streets, colorful houses, and beautiful harbor. It is also the site of the famous Andrea Doria. At the entrance stand the fortresses of San Felipe, built by Philip II, la Mola, and Isabel II. The Isla del Rey (Island of the King), so called from the fact that Alfonso III landed there when he invaded Minorca in 1297, is in the centre. In the thirteenth century the famous military hospital was built on this island. Port Mahon has a school for secondary instruction and a custom-house of the first order.

Among the public buildings the most noteworthy are the court-house and the parish church built by order of Alfonso III. The latter has a magnificent organ. A handsome façade ornaments the entrance to the cemetery. Ciutadella, the episcopal city, is believed to be the Jamona of the Carthaginians, founded by their captain Janna, or Iama. Many traces of an earlier Celtic civilization are to be found here, among which may be mentioned the talayots (Cyclopean constructions of huge blocks of stone in the shape of a tower with a high entrance), obelisks, dolmens, covered galleries, and cornellons, or Celtic cemeteries. Many Roman inscriptions, vases, and coins are also to be found. The city is fairly well laid out and well kept, and has a population of about 8,000. It has a fortress and other defensive works. On the Paseo del Borne there is an obelisk about 22 feet in height, erected to the memory of the heroes that fell in 1909 when the Turks attacked Ciutadella. The defenders of the city on this occasion were commanded by Negrete y Arquimbau, and the monument was erected on the initiative of the Franciscan, José Niu, who died caring for the victims of the cholera epidemic of 1865.

The cathedral of Minorca had, from the time of its foundation in 1297, all the characteristics requisite for the only parish church of Ciutadella, then the capital of the island. A memorial tablet of the year 1302 says that Juan Corca held a benefice in this church. Constructed in the Gothic style of architecture, with a single nave, it presents an imposing appearance. The belfry is square, finished with a octagonal spire.

In the beginning of the second century the territory was enriched with a mass of Greco-Roman architecture, but the original Gothic portal is still preserved beneath this. When the Turks attacked the city they fired the church. Bishop Comes y Vidal restored it, adding numerous small windows, and restoring the main altar. Other church buildings of interest are the chapel of the Poor Clares (aigival style), and the church of San Agustín, very spacious and elegant. The latter has two towers on each side of the portico, colossal frescoes, now in a bad state of preservation, and rich gildings; it is used at present for the chapel of the diocesan seminary which was installed by Bishop Jaume in 1301. On 30 October, 1568, the cathedral of San Ildelfonso was founded by the learned Francisco Niu, in 1588. Lastly, there may be mentioned the church of San Francisco, in the Gothic style.

Minor Orders (Lat. Ordines Minores).—The lower degrees of the hierarchy are designated by the name of minor orders, in opposition to the "major" or "sacred" orders. At the present time the ranks of the clergy are entered by the tonsure (q. v.), after which all the orders without omission are received in succession. In some cases, e.g., the Benedictines, these are a general rule, no longer remain in the lower orders, the liturgical functions which are discharged either by the clergy in the higher orders, as in exorcism, or by the
laiety, as in singing and serving at the altar. Formerly one entered the clergy by being appointed to discharge any of the functions reserved to ecclesiastics. Such functions were of two kinds. The liturgical ones consisted of orders, though of a lower rank; by ordination the recipients of the minor orders received official authority to perform these functions. The other ecclesiastical functions were rather offices entrusted to clerics, whether ordained or not. Thus in the first centuries there figured in the ranks of the clergy notaries, defensores ecclesie, acacomi, catechists, cantors, fossores (for the cemeteries), etc., to say nothing of deaconesses. But these various offices did not constitute orders, and those who filled them formed part of the clergy without having been ordained, like today the brothers of the Order of Malta. As to the liturgical functions attached to the various minor orders, they are really but a participation, originally rather indefinite, in the liturgical ministry formerly confined entirely to the deacons. This explains why minor orders differ in the Latin Church and in the various Eastern Churches.

In the East, though most at an early date we hear of porters and exorcists (ne'er of acolytes), after the Trullan Synod in 692, in accordance with its sixth canon, only lectors and cantors are known, and often even these orders coalesced, or are conferred at the same time; the three other minor orders of the Latin Church (porter, exorcist, acolyte) are held to be included in the subdiaconate. However, the subdiaconate has remained a minor order; in the West it was gradually detached from the minor orders, on account of its higher liturgical functions and also because of the vow of celibacy it called for. Finally, Innocent III definitively included it in the major orders, and made the subdeacon, as well as the deacon and priest, eligible for the admitance to them. "De die et tempore" (Trit. tit. 14, an. 1207). There are, then, in the Western Church four minor orders: porter, lector, exorcist, and acolyte; the cantors merely exercise an office and are not an order. These four orders are all mentioned about the year 252 in the famous letter of Pope Cornelius to Fabius of Antioch (Euseb., "Hist. Ecc.", 1, vi, 43): "Novanian knew that there were in this Church (of Rome) 46 priests, 7 deacons, 7 subdeacons, 42 acolytes, and 52 exorcists, lectors, and porters." This quotation shows that besides the acolytes, who were enumerated separately and were at Rome almost assimilated with the subdeacons, there was a kind of indefinite class formed by the clerics of the three latter orders. It is seen that all clerics, even the subdeacons, necessarily pass through the four lower orders; as a matter of fact the Council of Sardica (can. xiii) mentions only the lectorate as obligatory before receiving the diaconate. Pope Siricius (Ad Himerium, nn. 9–10) and Pope Zosimus (Ad Hesychium, nn. 1 and 3) describe for us the ordinary career of Roman clerics: from boyhood or youth they are lectors; about the age of twenty, acolytes or subdeacons; those who enter the clergy when already grown up are first exorcists or lectors, after a certain time acolytes or subdeacons. Briefly, it appears that the obligation of receiving all the minor orders without exception is a law dating from the time when the minor orders ceased to be exercised in the original way. Moreover, there is no longer any fixed age at which the minor orders may be received. Canon law is silent on the subject. Canonists, including Benedict XIV (Constitution, "Eo quamvis", 4 May, 1745), admit that minor orders may be conferred not only on those who have reached the age of puberty, but on boys over seven years of age, the see remitting the expenses of the ecclesiastical students during their seminary studies. The Council of Trent requires merely that the candidates understand Latin (Sess. XXXIII, c. xii).

Although several medieval theologians regarded minor orders as sacramental, this opinion is no longer held, for the fundamental reason that minor orders, also the subdiaconate, are not of Divine or Apostolic origin. The rites by which they are conferred are quite different from ordination to holy orders. Minor orders are conferred by the presentation to the candidate of the appropriate instruments, in accordance with the ritual given in the "Statuta Ecclesiae antiqua", a document which originated in Gaul about the year 500. We do not know how even in Rome the porters and exorcists were ordained in former times. Lectors received a simple benediction; acolytes were created by handing them the linen bag in which they carried the Eucharist; subdeacons by the reception of the chalice. Moreover, while deacons and priests could be ordained only on the four Ember Saturdays of the year or two Saturdays in Lent, minor orders could be conferred on any day. Even at the present time the latter may be conferred, apart from general ordinations, on all Sundays and on Holy Days of obligation, not necessarily at Mass. The usual minister of these orders, as of the others, is a bishop; but regular abbots who have received episcopal benediction may give the tonsure and minor orders to their subjects in religion. By papal privilege several prelates Nullius (i.e., exempt) can confer these orders. It is an almost universal custom now to confer the four minor orders at one time, and the Council of Trent (loc. cit.) leaves the bishop quite free to dispense with the interstices (q.v.) with which clerics in minor orders enjoy all ecclesiastical privileges. They may be nominated to all benefits not major, but must receive within a year the major orders necessary for certain benefices. On the other hand, they are not bound to celibacy, and may lawfully marry. Marriage, however, causes them at once to forfeit every benefice. Formerly it did not exclude them from the ranks of the clergy, but at present, all clerical privileges, provided they contracted only one marriage and that with a virgin, and wore clerical costume and the tonsure (c. unie, "de cler. conjug. in VI"); they might even be appointed to the service of a church by the bishop (Conc. Trid., Sess XXIII, c. vi). This earlier discipline, however, is no longer in accordance with modern custom and law. A minor cleric who marries is regarded as having forfeited his clerical privileges. (See Orders; Acolyte; Exorcist; Lector; Porter; Subdeacon; Abbot; Tonsure.)

A. Boudinon.

Minskin Diocese of Miniscensin, suffragan of Mohilef, in Western Russia. The city of Minsk is situated on the Svishlach, a tributary of the Beresina, which again flows into the Dvina. In 1893 it numbered 91,500 inhabitants, of whom 27,280 were Catholics. It is the nominal see of a Roman Catholic, a Greco-Ruthenian Uniat, and a Russian Orthodox bishop. After the suppression of the See of Smolensk and Livland, Catherine II sought and obtained from the pope the establishment of the metropolitan See of Mohilef, at the same time arbitrarily abolishing the See of Kieff. To make amends for this suppression, Paul I, with the concurrence of Pius VI, established, 17 Nov., 1798, the Latin See of Minsk, and placed it under the Metropolitan of Mohilef. The first bishop was Jacob Ignatius Dederko, formerly a canon of Wilna (d. 1829). After his resignation (1812), the see remained vacant until 1826, when Pope Gregory XVI appointed Mathias Lipski, after whose death the see again remained for some time without an occupant, the pope and the Russian Government being unable to agree as to a successor. Like the other dioceses of Western Russia and of Poland,
Minsk suffered much from the violent attempts at proselytism on the part of Emperor Nicholas I and Alexander II, by which the Uniate Lithuanians and Ruthenians were driven out. After the death of Bishop Hermann Woitkiewicz (1852–69) no successor was appointed, owing to governmental opposition, and since then the diocese has been administered by the Archbishop of Mohileff. According to the census of the Archdiocese of Mohileff for 1910, the Diocese of Minsk had 51,571 parishes and 296,374 faithful. The Uniat Ruthenian See of Minsk was erected by Pius VI, 9 August, 1798, but has been left vacant on account of the opposition of the Russian Government. (See Russia.)

JOSEPH LINS.

MINT, Papal.—The right to coin money being a sovereign prerogative, there can be no papal coins of earlier date than that of the temporal power of the popes. Nevertheless, there are coins of Pope Zacharias (741–52), of Gregory III (Ficoroni, “Museo Kircheriano”), and, possibly, of Gregory II (715–741). There is no doubt that these pieces, two of which are of silver, are true coins, and not merely a species of medals, like those which were distributed as “presbyterium” at the coronation of the popes since the time of Valentine (827). Their stamp resembles that of the Byzantine and Merovingian coins of the seventh and eighth centuries, and their square shape is also found in Byzantine pieces. Those that bear the inscription “SACRAMENTUM” (Sancti Petri) cannot be attributed to Pope Gregory IV (827–44), because of the peculiarity of minting. The existence of these coins, while the popes yet recognised the Byzantine domination, is explained by Hartmann (Das Königreich Italien, Vol. III), who believes that, in the eighth century, the popes received from the Byzantine emperors the right to mint coins. Under the empire, coins that were struck in the provinces bore the name of some local magistrate, and those coins of Gregory and of Zacharias are simply imperial Byzantine pieces, bearing the name of the first civil magistrate of the City of Rome. There are no coins of Stephen III or of Paul I, who reigned when the Duchy of Rome was already independent of the Eastern Empire; the first true papal coins are those of Adrian I, from whose time until the reign of John XIV (984) the popes coined money at Rome.

There is no pontifical money of a date between the last-named year and 1305; this is explained, in part, by the fact that the Senate of Rome, which sought to be the papal master, was the sovereign of the city, took over the mint in 1143. On the other hand, Prince Alberic had already coined money in his own name. The coins of the Senate of Rome usually bear the inscription “ROMA CAPUT MUNDI”, or, S. P. Q. R., or both, with or without emblems. In 1188 the mint was restored to the pope (Clement III), with the agreement, however, that half of its profits would be devoted to the Senado, or Senate. The Senate, meanwhile, continued to coin money, and there is no reference, on the coins of that time, to the papal authority. In the thirteenth century the Senado caused his own name to be stamped upon the coins, and, consequently, we have coins of Brancaleon, of Charles I of Anjou, of Francesco Anguillara, von der Reina, of Napolitano, of Jean Ladislas. Cola di Rienzi, during his brief tribunitate, likewise struck coins, with the inscription: N. TRIBUN. AUGUST. ROMA CAPU. MUR. Papal coins reappeared with the removal of the pontifical Court to Avignon, although there exists a single coin that is referred to Benedict XI (1303–4), with the legend CORT. VENAE. SIS. Here, however, this pope is not named in Venaisin, which had belonged to the Holy See since 1274, the coin should be referred to Benedict XII. There are coins of all the popes from John XXII to Pius IX.

The popes, and also the Senate when it coined money, appear to have used the imperial mint of the Capitoline, which was the Campanidoglio, not far from the Arch of Septimius Severus, but, in the fifteenth century, the mint was near the bank of Santo Spirito. Finally, in 1665, Alexander VII moved it to the rear of the apse of St. Peter’s, where it is at present. Bernini invented for it a machine to do the work more rapidly, and Francesco Girardini furnished a bomb for the machine, so that the mint of Rome was technically the most perfect one of those times. In 1845 Pius IX equipped it with the most modern appliances. The administration of the mint was at first entrusted to the cardinal camerlengo; direct supervision, however, was exercised by the senate, from the time at least when that body took the direction of the mint. But the real regent was the Senado. The sindacato and the conservatorio of the Camera Capitolina appointed the masters of the mint, while the minting was witnessed by the heads of the guild of goldsmiths and silversmiths. In 1322 John XXII created the office of treasurer for the mint of Avignon, and its incumbent, little by little, made himself independent of the camerlengo. Later, the office of prelate president of the mint was created. According to Lunadori (Relaz. della Corte di Roma, 1646), the establishments for the coining of money were in charge of a congregation of cardinals.

Rome was not the only city of the Pontifical States that had a mint: prior to the year 1000, there existed a mint at Ravenna where Gregory I (Gregorius Magnus) in 996 to Archbishop Gerberto by Gregory V; there were mints also at Spoletto and at Benevento, former residences of Lombard dukes. The Archbishop of Ravenna, who was a feudatory of the emperor rather than of the pope, coined money as long as his temporal power over that city and its territory lasted. The Venetian Senate took over the mint in 1264. Venice acquired Bologna in 1194, and nearly all of the coins struck there bear the motto BONONIA DOCET, or BONONIA MATER STUDIORUM. The boiocioti of Bologna were called bologinni, while the gold bolognino was equivalent to a gold sequin. The fior, also a Bolognese coin, was worth 20 bologinni. These coins were struck in the name of the commune; it is only from the time when Bologna was recovered by the Holy See, under Clement VI, that Bolognese coins may be regarded as papal.

Other cities had mints because they were the capitals of principalities subject to the Holy See, or in virtue of a privilege granted them by some prince; sometimes, when those princes government was over, they retained the mints as papal establishments. This was so in the case of Camerino (from Leo X to Paul III), Urbino, Pessaro and Gubbio (under Julius II, Leo X, and Clement XI), Ferrara (from Clement VIII), Parma and Piacenza (from Julius II to Paul III). There were other cities to which the popes granted a mint for limited periods of time, as Ancôna (from Sixtus IV to Pius VI), Aquila (1486, when that city rebelled against Ferdinand I of Naples and gave its allegiance to Innocent VIII; its coins, which are very rare, bear the inscription AQUILANA LIBERTAS), Ascoli (from Martin V to Pius VI), Avignon (from Clement V on), Carpentras (under Clement VIII), Venaisin (from Boniface VIII), Fabriano (under Leo X), Fano (from Innocent VIII to Clement VII), Ferrara (from Boniface IX to Leo X), The Marches (from Boniface IX to Gregory XIII), Macerata (from Boniface IX to Gregory XII), Modena (under Leo X and Clement VII), Montalto (under Sixtus V), Orvieto (under Julius II), the Patrimony (from Benedict XII), Pesaro (from Julius II to Julius III), Ravenna (from Leo X to Paul II, and under Benedict XIV), Recanati (under Nicholas V), Reggio (from Julius II to Adrian VI), Spoletto (under Paul II), Duchi of
Spoleto, Provincie ducatus (under Paul V), Viterbo (under Urban VI and Sixtus IV). Pius VI, being obliged to coin a great deal of copper money, gave the minting of it to a great many cities of the Patrimony, of Urbino, and of the Marches, which, together with the towns already named, continued to strike these coins, among them were Civitavecchia, Gubbio, Matelica, Ronciglione (the coins of 1799 showing the burning of this city are famous), Terni, and Tivoli. Pius VII suppressed all the mints except those of Rome and of Bologna.

Far back as 1370 there were coins struck during the vacancies of the Holy See, by authority of the cardinal camerlengo, who, after the fifteenth century at least, caused his name and his coat of arms to be stamped on the reverse of the coin, the obverse bearing the words "Sebe vacante" and the date, surrounding the crossed keys surmounted by the pavilion. All papal coins, with rare exceptions, bear the name of the pope, preceded (until the time of Paul II) by a Greek cross, and nearly all of the more ancient ones bear, either on the obverse or on the reverse, the words s. petrus, and some of them, the words s. paulus also. From Leo III to the Ottos, the coins bear the name of the emperor as well as that of the pope, but in the coinage of the pope alone frequently appears on pontifical coins.

There are also found images of the Saviour, or of saints, symbolic figures of men or of animals, the keys (which appear for the first time on the coins of Benevento), etc. From the sixteenth century to the eighteenth, Biblical or moral phrases are added, in the coinage of the same pope, that is stamped upon the coin, as, for example, monstra te esse matrem, spe nostro, sub tuum praesidium, tota pulchra, supra firmam petram, da recta sapere (during the Conclave), ubi thesaurus ibi cor, crescentem sequitur cura pecuniam, hilarem datorem dilecti propter munificentiam aedibus in sudore vultus, conservate perseverant, tolle et proinde, etc. Sometimes allusion is made to an historical event, as the acquisition of Ferrara, or the deliverance of Vienna (1683), or to some concession of the pope to his subjects, or to a jubilee. From the time of Clement X the coins struck with his portrait were minted, and the gold coinage of the counterfeit of arms of the prelate in charge of the mint, a custom that obtained until 1817. The only instance of a cardinal camerlengo stamping his coat of arms on the coins during the lifetime of the pope is that of Cardinal Armellini, under Adrian VI, in the case of four gross.

The coinage of Rome stamped the coins with the arms of their respective cities, or with those of the cardinal legate, of the vice-legate, or of the governor; thus, Cardinal Scipione Borghese in 1612 struck coins at Avignon with his own name and arms, omitting the name of the pope, an example that was followed a year later by the pro-legate Cardinal Liborio Scipione Borghese, who also stamped the patron saint on its coins. The date came to be stamped on coins that were struck during the vacancies of the Holy See, occasionally at first, and later as a rule; it rarely appears on other coins before 1550; the practice became general in the seventeenth century, the year of the Christian era or that of the pontificate being used; and Gregory XVI established it by law, as also the requirement that each coin should bear upon it an expression of its value. At Bologna as early as the seventeenth century, the value of gold or silver coins was usually indicated with the figures 20, 40, 80, etc., i. e. so many bolognini or baiocchi; at Rome, in the eighteenth century, nearly all the copper coinage, established by Pius VI, bore the denomination of the papal coins rarely bore an inscription; at most, the monogram of the city in which the coin was struck was stamped upon it. From the sixteenth century, the engravers, also, put their ciphers on the coins; among these engravers may be named Benvenuto Cellini, Francesco Raibolini, called il Francia (Bologna), the four Hammerini, Giulio Romano (trident), Cavaliere Lucenti, Andrea Per Bentelli, etc. Until the time of Pius VI, the dies for the mint remained the property of the engravers.

The Byzantine monetary system is followed in the papal coinage until the reign of Leo III, after which the system of the Frankish Empire obtains. John XIII adopted the Florentine system, and coined gold florins; the weight of this coin, however, varied from 22 carats to 30, until Gregory XI reduced it to the original 24 carats; but deterioration came again, and then there were two kinds of florins, the papal florin, which maintained the old weight, and the florin di Camera, the two being in the ratio of 69 papal florins = 100 florins di Camera = 1 gold pound of 410 carlini. The ducat was coined in the papal mint from the year 1432; it was a coin of Venetian origin that circulated with the florin, which, in 1531, was succeeded by the scudo, a piece of French origin that remained the monetary unit of the Pontifical States. At the same time, there appeared the zecchino. The papal florin florin was equal to 2 scudi and 11 baiocchi (1 baiocco = 901 scudi); the zecchino was equal to one scudo and 9 baiocchi. The scudo also underwent fluctuations, in the market and in its weight: the so-called scudo delle stampe (1695) was worth 184:2 baiocchi, that is, a little less than 2 scudi. Benedict XIII re-established the good quality of the florin, but under Pius VII it came to deteriorate. In 1835 Gregory XVI regulated the monetary system of the Pontifical States, establishing the scudo as the unit, and dividing it into 100 baiocchi, while the baiocco was divided into 5 quadrinarii (the quadrinario, until 1591, had been equal to ¼ of a baiocco). The scudo was coined both in gold and in silver; there were no coins of silver; instead, there were 5 scudi, and of 2 scudi were also coined. The scudo of the eighteenth century was equal to 1-65 scudi of Pius VII, which last was adopted by Gregory XVI; the zecchino was worth 2:2 scudi. The scudo is equal to 5-3 lire in the monetary system of the Latin Union. The fractional silver coins were the half scudi, were also the mezzo scudo, and the testone = 30 giulli. The copper coins were the baiocco or soldo (which was called bolognino, at Bologna) and the 2 baiocchi piece. The name baiocco is derived from that of the city of Baeux.

Other coins that were used at various times in the Pontifical States were the baiocchella = 1 baiocco, a copper piece with a silver surface, and therefore smaller than the copper baiocco; there were coins made of the two metals of the values, respectively, of 2, 4, 6, 8, 12, and 16 baiocchi; the copper madonnina (Bologna) = 5 baiocchi; the sampietrino (Pius VI) = 2 baiocchi; the paludella was a soldo, made of an alloy of copper and silver, established by Pius VI as a more easily portable specie with which to pay the workmen of the Pontine Marshes; the sessino = 0:4 of a baiocco = 2 quadrinarii; the leonina (Leo XIII) = 4:4 Gregorian scudi; the dobloone = 2 old scudi = 3:3 scudi of the nineteenth century; there were dobloni of the relative values of 4, 8, and 16 scudi; the roppio was worth a little less than the 12 scudi, that is, 3:21 scudi of the nineteenth century; at Bologna there were also coined scudi of 80 baiocchi, and half-scudi of 40 baiocchi; the gabella was a Bolo-
Minucius Felix, Christian apologist, flourished between 160 and 300; the exact date is not known. His "Octavius" has numerous points of agreement with Tertullian. The similarities that have been explained by the theory of a common source—an apology written in Latin, and which is supposed to have disappeared without leaving any trace, not even in the name of its author. This hypothesis is now generally abandoned. It seems improbable that such a work, from which Minucius or Tertullian might have drawn, could have so thoroughly disappeared. Lactantius (Diu. Inst., V, i, 21) enumerates the apologists who preceded him and does not even suspect the existence of such a writer. The most natural supposition is that one of the two writers, Minucius or Tertullian, is directly dependent on the other. Formerly, Menepages, and others, had advanced such a view. The first doubts in this respect were expressed in France by Blondel in 1641, by Dalleu in 1660, and in England by Dodwell. The theory of the priority of Minucius was defended by van Hoven in the second edition of Lindner in 1773. In modern times it was most ably defended by Ebert. The priority of Tertullian is firmly defended by Ilmardt and has been refuted by A. Krueger. M. Waltzing, the scholar best acquainted with Minucius Felix and what has been written about him, is inclined to think him anterior to Tertullian. The arguments in favour of one or the other of these theories are not decisive. However, it may be said that in the passages taken from the ancient authors, such as Seneque, Varro, and especially Cicero, Minucius seems to be more exact and closer to the original; consequently he seems to be intermediary between them and Tertullian. The ecclesiastical authors were probably not better informed than we are with regard to Minucius. Lactantius puts him before Tertullian (Diu. Inst., I, xi, 55; V, i, 21). This was refuted and he has been put by him after St. Cyprian (Ep. lxx, (lxxxii); v; lx: xlvii; "In Isaïam"; VIII, prf.), and elsewhere putting him between Tertullian and St. Cyprian (De Viris, lviii). Fronto (d. about 170) is mentioned by Minucius. If the treatise "Quod idola non dixi sint" is by St. Cyprian (d. about 258) there is no need of a second treatise; in this case the treatise is based on the "Octavius". It is true that the attribution of the aforesaid treatise to St. Cyprian has been contested, but without serious reason. If this he rejected there is no period ante quem before Lactantius.

The birthplace of the author is believed to be Africa. This is not proved by Minucius's imitation of African authors, any more than it is by the resemblance between Minucius and Tertullian. At this period the principal writers were Africans, and it was natural that a Latin, of whatever province he might be, would read and imitate them. The allusions to the customs and belief of Africa are numerous, but this may be explained by the African origin of the champion of paganism. The "Octavius" is a dialogue of which Ostia is the scene. Cæcilius Natalis upholds the cause of paganism, Octavius Januarius that of Christianity; the author himself is the judge of the debate. Cæcilius Natalis was a native of Cirta; he lived at Rome and attentively followed Minucius Felix. He had just arrived from a foreign country where he had left his family. Minucius lived at Rome. All three were advocates. The name Minucius Felix has been found on inscriptions at Tebessa and Carthage (Cor. Inscr. Lat. VIII, 1964 and 12499); that of Octavius Januarius at Saldae (Bougie; ib., 8962); that of Cæcilius at Carthage (Cor. Inscr. Lat. VIII, 2066). The M. Cæcilius Natalis of the inscriptions discharged important municipal duties and gave pagan festivals with memorable prodigality. He may have belonged to the same family as the interlocutor of the dialogue. Attempts have been made to make them identical or to establish family relationship between them. There are purely theoretical and opinion entertained regarding the date of the dialogue.

The persons are real. The dialogue may likewise be so, despite the fact that Minucius has transformed into an almost judicial debate what must have been a mere conversation or series of conversations. Owing to the adjournment of the court during the vintage time, the two protagonists lived together. At one time, they walked on the sea-shore, and when they passed before a statue of Serapis, Cæcilius saluted it with the customary kiss. Octavius thereupon expressed his indignation that Minucius should allow his daily companion to fall into idolatry. They resume their walk while Octavius gives an account of his voyage; they go to Tertullian, and then to Tertullian's wife, and watch children jumping about in the sea. This beginning is charming; it is the most perfect portion of the work. During the walk Cæcilius, silenced by the words of Octavius, has not spoken. He now explains himself and it is agreed to settle the debate. They seat themselves on a lonely pier; Minucius seated in the centre, and Tertullian, with his back to Cæcilius. The dialogue begins by attacking Christianity; Minucius says a few words, and then Octavius replies. At the end Minucius and Cæcilius express their admiration and the latter declares that he surrenders. Fuller explanations of the new religion are postponed until the next day. The dialogue therefore consists of two discourses, the attack of Cæcilius and the refutation of Octavius.

The discussion bears on a small number of points: the possibility of man arriving at the truth, creation, Providence, the unity of God, the necessity of keeping the religion of one's ancestors and especially the advantage to the Romans of the worship of the gods. The new character of Christians, their tendency to conceal themselves, their crimes (incest, worship of an animal's head), the adoration of the generative organs of the priest, prayers addressed to a criminal, sacrifice of
children) their impious and absurd conception of the Divinity, their doctrine of the end of the world and the resurrection of the dead, the hardships of their life, threatened, and expelled without remedy to escape dangers, cut off from the joys of life. In this debate the conception of Christianity is very limited, and is reduced almost solely to the unity of God, Providence, the resurrection, and reward after death. The name of Christ does not appear; among the apostles, the second century Aristides, St. Justin, and Tertullian are the only ones who pronounced that the Crucified One was neither a man nor guilty (xxix, 2) and he is silent with regard to the mysteries of the Trinity, the Incarnation, and the Redemption which would have made clear his reply. He merely repels the accusation of incest and infanticide without describing the ape or the Eucharist (xxx and xxx). He refuses to answer (xlii), and he does not mention the fulfillment of the prophecies. On the other hand he makes only a brief allusion to the manner of proceeding against the Christians (xxiii, 3). He does not speak of the loyalty of the Christians towards the state and the emperors. Political and judicial considerations, which are given space to in Tertullian, are almost entirely absent here. These omissions are explained by a voluntary limitation of the subject. Minucius wished only to remove the prejudices of the pagans, to possess his readers by a pleasant discussion, and to show them the possibility of Christianity. He himself indicated this intention by putting off until the next chapter the profound discussion (xI, 2). He addressed himself chiefly to the learned, to sceptics, and to the cultured; and wished to prove to them that there was nothing in the new religion that was incompatible with the resources of dialectics and the ornaments of rhetoric. In a word his work is an introduction to Christianity, a Protoscriptum.

The modes of imitations, especially of Cicero, Seneca, and Virgil. The plan itself is that of the "De natura deorum" of Cicero, and Celsus here plays the role of Cotta. However the personages have their peculiar characteristics. Celsus is a young man, presumptuous, somewhat vain, sensitive, yielding to his first impression. Octavius is more sedate, but persistent. He seems to mimic his model without being appreciable; his pleading is hot and emotional. Minucius is more indulgent and calm. These learned men are charming friends. The dialogue itself is a monument of friendship. Minucius wrote it in memory of his dear Octavius, recently deceased. In reading it one thinks of Plato, the Younger and his friends. These monologues of the conversations and the culture. The style is composite, being a harmonious combination of the Ciceronian period with the brilliant and short sentences of the new school. It sometimes assumes poetic tints, but the dominating colour is that of Cicero. By the choice of subjects treated, his ease in reconciling very different ideas and styles, the art of constructing his work in language, Minucius Felix belongs to the first rank of Latin writers whose talent consisted in blending heterogeneous elements and in proving themselves individual and original in imitation.

MINUCIUS FELIX, Octavius, ed. WALTZING (LOUVAIN, 1903); WALTZING, Studio minucianum, I and II (LOUVAIN, 1906); IDLE, Octavius de Minucius Felix, introduction, texte, commentaire, redaction; GONZALEZ, opuscules, vol. I and II (LIEGE, 1896). A complete bibliography will be found in the first three works, with analyses and discussion. Recently ELTER in his Prolegomena zu Minucius Felix (BONN, 1900), has attempted to show the Octavius to be a "moralization," exclusively for Christian readers; this theory is without probability.

PAUL LEJAY.

Mirabilia Urbis Romae, the title of a medieval Latin description of the city of Rome, dating from about 1150. Unhampered by any very accurate knowledge of the historical continuity of the city, the unknown author has described the monuments of Rome, displaying a composite view of both history and faculty. From the pontificate of Boniface VIII (1294-1303) to that of John XXXII (1316-34) it was revised and attained unquestioned authority, despite the increase in the already large number of misconceptions and errors. Attention was first called to these different recensions by de Rossis in the first volume of his "Roma figurata," 1880, where two most simultaneously appeared two editions of the text, by Parthey ("Mirabilia Romae et codicibus Vaticinis emendata", Berlin, 1869) and by Jordan ("Topographie der Stadt Rom im Altertum", II, Berlin, 1871, 605-43), respectively. In the third section Jordan discusses at some length the Mirabilia and its recensions (385 sqq.), and at least vouches for the authenticity of the work (401 sqq.), and in the fifth, the topography of the Mirabilia (421 sqq.), presenting the most valuable information, the result of much research on all the questions involved. The latest edition is that of Duchesne in the "Liber Censuum de l'Eglise Romaine" (I, Paris, 1905, 262-70), being the text of the Codex Cuxiensis C 28, the earliest of the extant, in four other manuscripts. Especially valuable for a proper conception of the Mirabilia are the 125 notes appended by Duchesne on pp. 273-83, many of them of considerable length. (The concordance with the text in the "Excursus politici a presbitero Benedicto compositi de ordinibus ecclesiae et ecclesiasticis Urbis et Sacri Palatii" may be found in the "Liber Censuum", vol. II, 91, 92, n. 5.) A critical edition of the "Mirabilia Urbina" is still lacking. The contents of the Mirabilia fall into the following sections, the titles being taken from the "Liber Censuum": (1) De muro urbis (concerning the wall of the city); (2) De portis urbis (the gates of the city); (3) De milliaribus (the milestones); (4) Nomina portorum (the names of the gates); (5) Quot portae sunt Tiberisim (how many gates are beyond the Tiber); (6) De arcubus (the arches); (7) De montibus (the hills); (8) De termis (the baths); (9) De palatii (the palaces); (10) De theatris (the theatres); (11) De locis qui inveniuntur in ecclesiis passiones et sanctae (the "passions" of the saints); (12) De pontibus (the bridges); (13) De cimiteris (the cemeteries); (14) De insule Octavitani imperatoris et responsione Sibille (the demand of the Emperor Octavian and the Sibyl's response); (15) Quare facti sunt caballi marmorei (why the marble horses were made); (16) De nominiibus judicium et eorum instructionibus (the names of the judges and their instructions); (17) De columna Antonii et Trajani (the column of Antony and Trajan); (18) Quare factus sit equus qui dicitur Constantinus (why the horse was made, which is called of Constantine); (19) Quare factum sit Pantheon et postmodum oratio B. (why the pantheon was built and later oration B.); (20) Quare Octavianus vocatus sit Augustus et quare dictur ecclesia Sancti Petri ad vincula (Why Octavianus was called Augustus, and why the church of St. Peter ad Vincula was so called); (21) De vaticano et Agullo; (22) Quot sunt tempula trans Tiberim (how many temples are beyond the Tiber); (23) Predicatio sanctorum (the preaching of the saints).

The reader may consult in addition to the above-mentioned authors, the Monatshberichte of the Berlin Academy (1899), redaction in the text in the "Annali di Roma" (1851, 228 sqq.), of the "History of Rome" (1852) of NISSAY, Ephemerae literariae di Roma (1830), 63 sqq. part of this was reprinted without alteration under the title of Mirabilia annua le cose meravigliose di Roma (Rome, 1884). In editing the second of the two recensions mentioned above
Miracle (Lat. miraculum, from mirari, "to wonder").—In general, a wonderful thing, the word being so used in classical Latin; in a specific sense, the Latin Vulgate designates by miracula wonders of a peculiar kind, expressed more clearly in the Greek texts as τέρατα (II Cor., xii, 12). Wonders performed by supernatural power as signs of some special mission or gift and explicitly ascribed to God. These terms are used habitually in the New Testament and express the meaning of miraclum of the Vulgate. Thus St. Peter in his first sermon speaks of Christ as approved of God, διά τέρατος, καὶ ἔργων δυνάμεως, καὶ ἔργων ἐκ ταχέων αἰτίας (Acts, iii, 22). Paul says that the signs of his Apostleship were wrought, σημαίνει τα καὶ τέρατα καὶ δυνάμεις (II Cor., xii, 12). Their united meaning is found in the term ἔργα i. e., works, the word constantly employed in the Gospels to designate the miracles of Christ. The analysis of these terms therefore gives the nature and scope of the mirabile. 

I. Nature. A. The word τέρατα literally means "wonders", in reference to feelings of amazement excited by their occurrence; hence effects produced in the material creation appealing to, and grasped by, the senses, usually by the sense of sight, at times by hearing, e. g., the baptism of Jesus, the conversion of St. Paul. Thus, though the works of Divine grace, such as the Sacramental Presence, are above the power of nature, and due to God alone, they may be called miraculous only in the wide meaning of the term, i. e., as supernatural effects, but they are not miracles in the sense here understood, for miracles in the strict sense are apparent. The miracles fail under the graver terrors inherent in the sacred oracles (e.g., raising the dead to life) or in its effects (e.g., the result of infused knowledge with the Apostles). In like manner the justification of a soul in itself is miraculous, but is not a miracle properly so called, unless it takes place in a sensible manner, as, e. g., in the case of St. Paul. The wonder of the miracle is due to the fact that the effect can be seen, hidden as it is from us, and an effect is expected other than what actually takes place. Hence, by comparison with the ordinary course of things, the miracle is called extraordinary. In analysing the difference between the extraordinary character of the miracle and the ordinary course of nature, the Fathers of the Church and theologians employ the terms above, contrary to, and outside nature. These terms express the matter in which the miracle is extraordinary. 

A miracle is said to be above nature when the effect produced is above the native powers and forces in creatures of which the known laws of nature are the expression, as raising a dead man to life, e. g., Lazarus (John, xi), the widow's son (III Kings, xvii). A miracle is said to be outside, or beside, nature when nature forces have not produced the effect, at least in part, but could not of themselves alone have produced it in the way it was actually brought about. Thus the effect in abundance far exceeds the power of natural forces, or it takes place instantaneously without the means or processes which nature employs. In these respects, human multiplication of loaves by Jesus (John vi), the changing of water into wine at Cana (John, ii)—for the moiture of the air by natural and artificial processes is changed into wine—or the sudden healing of a large extent of diseased tissue by a draught of water. A miracle is said to be contrary to nature, when the effect produced is contrary to the natural course of things. 

The term miracle here implies the direct opposition of the effect actually produced to the natural causes at work, and its imperfect understanding has given rise to much confusion in modern thought. Thus Spinoza calls a miracle a violation of the order of nature (properti, "Tract. Theol. Polit., viii"). Hume says it is a "violation" or an "infraction" and many writers—e. g., Martensen, Hodge, Baden-Powell, Theodore Parker—use the term for miracles as a whole. But every miracle is not of necessity contrary to nature; for there are miracles above or outside nature. Again, the term contrary to nature does not imply a total or absolute untrammel of the forces and discords and confusion. The forces of nature differ in power and are in constant interaction. This produces interferences and counteractions of forces. This is true of mechanical, chemical, and biological forces. So, also, at every moment of the day I interfere with and counteract natural forces about me. I study the forces and forces of nature and view with conscious control by intelligent counteractions of one force against another. Intelligent counteraction marks progress in chemistry, in physics—e. g., steam locomotion, aviation—and in the prescriptions of the physician. Man controls nature, nay, can live only by the counteraction of natural forces. Though all this goes on acondus us, the natural forces violated. These forces are still working after their kind, and no force is destroyed, nor is any law broken, nor does confusion result. The introduction of human will may bring about a displacement of the physical forces, but no infraction of physical processes. Now in a miracle God's action relative to the bearing on natural forces is analogous to the action of human personality. Thus, e. g., it is against the nature of iron to float, but the action of Eliseus in raising the axe-head to the surface of the water (IV Kings, vi) is no more a violation, or a transgression, or an infraction, of natural laws than if he raised it with his hand. Again, it is of the nature of fire to burn, but when the Virgin Mary, e. g., returned a burned and untouched in the fiery furnace (Dan., iii), there was nothing unnatural in the act, as these writers use the word, any more than there would be in erecting a dwelling absolutely fire-proof. In the one case, as in the other, there was no paralysis of natural forces and no consequent disorder. 

The extraordinary element in the miracle—i. e., an event apart from the ordinary course of things—enables us to understand the teaching of theologians that events which ordinarily take place in the natural or supernatural course of Divine Providence are not miracles, although they are beyond the efficiency of natural forces. Thus, e. g., the creation of the soul is not a miracle, for it takes place in the ordinary course of nature. Again, the justification of the sinner, the Eucharistic Presence, the sacramental effects, are not miracles for two reasons: they are beyond the grasp of the senses and they have place in the ordinary course of God's supernatural Providence. 

B. The word δυνάμεις, "power" is used in the New Testament to signify: (a) the power of God in healing (Acts ii, 43; Acts iv, 30; Acts v, 19); (b) mighty works as the effects of this power, i. e., miracles themselves (Acts iv, 30; Acts v, 19; Matt., xi, 20) and expresses the efficient cause of the miracle, i. e.
Divine power. Hence the miracle is called supernatural, because the effect is beyond the productive powers of nature and human providence. Thus St. Thomas teaches: "Those effects are rightly to be termed miracles which are wrought by Divine power apart from the order usually observed in nature" (Contra Gent., III, ciii), and they are apart from the natural order because they are "beyond the order or laws of the whole created nature." (Summa Theol., I, Q. ciii, a. 4). Hence, natural, i.e., an uncaused event without meaning or place in nature. With God as the cause, the miracle has a place in the designs of God's Providence (Contra Gent., III, xcvii). In this sense—i.e., relatively to God—St. Augustine speaks of the miracle as natural (De Civit. Dei, XXI, viii, n. 2).

The miracles we can trace in the course of nature and beyond its productive powers: (a) with regard to its substantial nature, i.e., when the effect is of such a kind that no natural power could bring it to pass in any manner or form whatsoever, as, e.g., the raising to life of the widow's son (Luke, vii), or the cure of the man born blind (John, ix). These miracles are called miracles of the nature of (qua natura). (b) With regard to the manner in which the effect is produced, i.e., where there may be forces in nature fitted and capable of producing the effect considered in itself, yet the effect is produced in a manner wholly different from the manner in which it should naturally be performed, i.e., instantaneously, by a word, e.g., the cure of the centurion's servant (Matthew, viii, 5). These are called miracles as to the manner of their production (qua modum operationis).

God's power is shown in the miracle: (a) directly through His own immediate action or (b) mediatey, through creatures as means or instruments. In this case the effects must be ascribed to God, for He works in and through the instruments. "Ipse Deo in illis operante" (Augustine, "De Civit. Dei", X, xii). Hence God works miracles through the instrumentality of angels, e.g., the Three Children in the fiery furnace (Dan., iii), the deliverance of St. Peter from prison (Acts, xii); (2) of men, e.g., Moses and Aaron (Exod., vii), Elias (III Kings, vii), Eileisus (IV Kings, v), the Apostles (Acts, ii, 43), St. Peter (Acts, iii, 38), Eileisus (Galat., iii, 5). (3) In the Bible also, as in history, we learn that inanimate things are instruments of Divine power, not because they have any excellence in themselves, but through a special relation to God. Thus we distinguish holy relics, e.g., the mantle of Eileisus (IV Kings, ii), the body of Eileisus (II Kings, iii), the arm of Christ (Matthew, ix), the Mandersheifs of St. Paul (Acts, xii, 12); holy images, e.g., the brazen serpent (Num., xxii); holy things, e.g., the Ark of the Covenant, the sacred vessels of the Temple (Dan., vi); holy places, e.g., the Temple of Jerusalem (II Par., vi, vii), the waters of the Jordan (IV Kings, v), the Pool of Bethesda (John, v). Hence the contention of some modern writers that the miracle requires an immediate Divine power, is not true. It is sufficient that the miracle be due to the intervention of God, and its nature is revealed by the utter lack of proportion between the effect and what are called means or instruments.

The word ἑξωτερικὸς means "sign", an appeal to intelligence, and expresses the purpose or final cause of the miracle—a factor in the evidence of God over men. Hence the glory of God and the good of men are the primary or supreme ends of every miracle. This is clearly expressed by Christ in the raising of Lazarus (John, xi), and the Evangelist says that Jesus, in working His first miracle at Cana, manifested His glory" (John, ii, 2). Therefore the miracle must be worthy the holiness, goodness, and justice of God, and conducive to the true good of men. Hence they are not performed by God to repair physical defects in His creation; nor are they intended to produce, nor do they produce, disorder or discord; nor do they contain any element which is wicked, ridiculous, useless, or vulgar; and Eileisus they are not on the same plane with mere wonders, tricks, works of ingenuity, or magic. The efficacy, usefulness, purpose of the work and the manner of performing it clearly show that it must be ascribed to Divine power. This high standing and dignity of the miracle is shown, e.g., in the miracles of Moses (Exod., vii-x), Eileisus (III Kings, vii-xvi), and those of Eileisus (IV Kings, v). The multitude glorified God at the cure of the paralytic (Matt., ix, 8), of the blind man (Luke, xviii, 43), at the miracles of Christ in general (Matt., xv, 31; Luke, xix, 37), as at the cure of the lame man by St. Peter (Acts, iv, 21). Hence miracles are signs of the supernatural world and our connexion with it. Thus they point to distant, remote, ultimate ends, subordinate, however, to the primary ends. Thus (1) they are evidences attesting and confirming the truth of a Divine mission, or of a doctrine of faith or morals, e.g., Moses (Exod., iv), Eileisus (III Kings, xvii, 24). For this reason the Jews see in Christ "the prophet" (John, vi, 14), in whom "God wrought His miracles" (John, xiv, 10). These miracles proved the disciples believed in Him (John, ii, 11) and Nicodemus (John, iii, 2) and the man born blind (John, ix, 38), and the many who had seen the raising of Lazarus (John, xi, 45). Jesus constantly appealed to His "works" to prove that He was sent by God and that He is the Son of God, e.g., to the Disciples of John, vi, 27 and vii, 31. Thus He claims that His miracles are a greater testimony than the testimony of John, v, 30, condemns those who will not believe (John, xv, 24), as He praises those who do (John, xvii, 8), and exhibits miracles as the signs of the True Faith (Mark, xvi, 17). The Apostles appeal to miracles as the confirmation of Christ's Divinity and mission (John, xx, 31; Acts, x, 38), and St. Paul counts them as the foundation of his Apostleship (II Cor., xii, 12). (2) Miracles are wrought to attest true sanctity. Thus, e.g., God defends Moses (Num., xii), Eileisus (IV Kings, i), Eileisus (IV Kings, viii). Hence the testimony of the man born blind (John, ix, 30 sqq.) and the official recognition of the Ephesians in the temple (Acts, xix, 34). As St. Paul writes, "As St. Paul also testifies, either spiritual or temporal. Thus temporal favours are always subordinate to spiritual ends, for they are a reward or a pledge of virtue, e.g., the widow of Sarepta (III Kings, xvii), the Three Children in the fiery furnace (Dan., iii), the preservation of Daniel (Dan., v), the deliverance of St. Peter from prison (Acts, xii), the conversion of St. Paul from showmanship (Acts, xxvi). Thus ἐνασκίαν, i.e., "sign", completes the meaning of ἀγάμος, i.e., "[Divine] power". It reveals the miracle as an act of God's supernatural Providence over men. It gives a positive content to ἑξωτερικός, i.e., "wonder", for, whereas the wonder shows the miracle as a deviation from the ordinary course of nature, the sign gives the purpose of the deviation. This analysis shows that (1) the miracle is essentially an appeal to knowledge. Therefore miracles can be distinguished from purely natural occurrences. A miracle is a fact in material creation, and falls under the observation of the senses or comes to us through testimony, like any natural fact. Its miraculous character is proved from the positive knowledge of natural forces, e.g., the law of gravity, the law that fire burns. To say that we do not know all the laws of nature, and therefore cannot know a miracle (Rousseau, "Lett. de
MIRACLE 340  MIRACLE

Is Mont.”, let. iii), is beside the question, for it would make the miracle an appeal to ignorance. I may not know all the laws of the penal code, but I can know with certainty that in a particular instance a person violates one definite law. (b) From our positive knowledge of the limits of natural forces. Thus, e. g., we may not know the strength of a man, but we do know that he cannot by himself move a mountain. In enlarging our knowledge of natural forces, the progress of science has curtailed their sphere and defined their limits, as in the law of abiogenesis. Hence, as soon as we have reason to suspect that any event, however uncommon or rare it appear, may arise from natural causes or be conformable to the usual course of nature, we immediately lose the conviction of having a miracle. A miracle is a manifestation of God’s power; so long as this is not clear, we should reject it as such.

(2) Miracles are signs of God’s Providence over men; hence they are of high moral character, simple and obvious in the forces at work, in the circumstances of their working, and in their aim and purpose. Now philosophy indicates the possibility, also revelation teaches the fact, that spiritual beings, both good and bad, exist, and possess greater power than man possesses. Apart from the speculative question as to the native power of these beings, we are certain (a) that God alone can perform those effects which are called substantial miracles, e. g., raising the dead to life; (b) that miracles performed by the angels as recorded in the Bible, and always ascribed to God, and Holy Scripture gives Divine authority to no miracles less than these; (c) that Holy Scripture shows the power of evil spirits as strictly conditioned, e. g., testimony of the Egyptian magicians (see, viii, 19), the story of Job, evil spirits acknowledging the power of God (Matt., viii, 23); the testimony of Christ himself (Matt., xxiv, 24) and of the Apocalypse (Apoc., ix, 14). Granting that these spirits may perform prodigies—i.e., works of skill and ingenuity which, relatively to our powers, may seem to be miraculous—yet these works lack the meaning and purpose which would stamp them as the language of God to men.

4. Examples.—Deists reject miracles, for they deny the Providence of God. Aposeutics, also, and Positivists reject them: Comte regarded miracles as the fruit of the theological imagination. Modern Pantheism has no place for miracles. Thus Spinoza held creation to be the aspect of the one substance, i.e., God, and, as he taught that miracles were a violation of nature, they would therefore be a violation of God. The Pantheistic Spinoza believed that the power of God and nature is false and, secondly, that in fact miracles are not a violation of nature. To Hegel creation is the evolutive manifestation of the one Absolute Idea, i.e., God, and to the neo-Hegelians (e. g., Thos. Green) consciousness is identified with God; therefore to both a miracle has no meaning. Erroneous definitions of the supernatural lead to a false definition of a miracle. Thus (a) Bushnell defines the natural to be what is necessary, the supernatural to be what is free; therefore the material world is what we call nature, the world of man’s life is supernatural. So also Dr. Strong (“Baptist Rev.”, vol. I, 1879), Rev. C. A. Row (“Supranat. in the New Test.”, London, 1875). In this sense Spinoza’s denial of a miracle is a supernaturally act and a miracle. (b) The natural supernaturalism proposed by Carlyle, Theodore Parker, Prof. Pfeiderer, and, more recently, Prof. Everett (“The Psychologi Ele. of Relig. Faith”, London and New York, 1902), Prof. Bowman (“Immanence of God”, Boston and New York, 1895), Hastings (“Dictionary of Christ and His Goerds”, New York, 1902). In this sense the natural and the supernatural are in reality one: the natural is its aspect to man, the supernatural is its aspect to God. (c) The “immediate theory” that God acts immediately without second causes, or that second causes, or laws of nature, must be defined as the regular methods of God’s acting. This teaching is combined with the doctrine of evolution. (d) The “relative” theory of miracles is by far the most popular with non-Catholic writers. This view was originally proposed to hold Christian miracles and at the same time hold belief in the uniformity of nature. Its main forms are: (1) the mechanical view of miracles, e.g., the mechanical explanation of the Duke of Argyll (Reign of Law). Thus nature is presented as a vast mechanism wound up in the beginning and containing in itself the capacity to deviate at stated times from its ordinary course. The theory is ingenious, but it makes the miracle a natural event. It admits the assumption of opponents of miracles, viz., that physical effects are physical causes, but this assumption is contradicted in the confirmation of facts of experience, e. g., will acts on matter. (2) The “unknown” law of Spinoza, who taught that the term miracle should be understood with reference to the opinions of men, and that it means simply an event which we are unable to explain by other events familiar to our experience. Locke, Kant, Eichhorn, Paulus, hold the same view. Prof. Conant states, “The miracle of one age becomes the ordinary working of nature in the next” (“Ref. Ch. R.”, July, 1900). Hence a miracle never happened in fact, and is only a name to cover our ignorance. Thus Matthew Arnold could claim that all Biblical miracles will disappear with the progress of science (Lit. and Bib.) and that “the miracles are the miracle of a more mellowed and more seeming” (n. Rel., pref., p. 10). The advocates of this theory assume that miracles are an appeal to ignorance. (3) The “higher-law” theory of Argyll of “Unseen Universe”, Trench, Lane (on Matt., p. 153), Gore (Bampton Lect., p. 36) proposed to refute Spinoza’s theory that miracles exist only in a prescriptive of disorder. Thus with them the miracle is quite natural because it takes place in accordance with laws of a higher nature. Others—e. g., Schleiermacher and Ritschl—mean by higher law, subjective religious feeling. Thus, to them a miracle is not different from any other natural event; it becomes a miracle by relation to the religious feeling. A writer in “The Biblical World” (Oct., 1908) holds that the miracle consists in the religious significance of the natural event in its relation to the religious appreciation as a sign of Divine favour. Others explain higher law as a moral law, or law of the spirit. Thus the miracles of Christ are understood as illustrations of a higher, graver, moral condition, which is the process of the interiorization of a new life, of higher forces acting according to higher laws as manifestations of the spirit in the higher stages of its development. The criticism of this theory is that miracles would cease to be miracles: they would not be extraordinary, for they would take place under the same conditions as other natural events. To Hegel the existence to deny their existence. Thus, when Trench defines a miracle as “an extraordinary event which beholders can reduce to no law with which they are acquainted”, the definition includes hypnotism and clairvoyance. If by higher law we mean the high law of God’s holiness, then a miracle can be referred to this law, but the higher law in this case is God Himself and the use of the term is apt to create confusion.

III. ANTECEDENT IMPROROBABILITY.—The great problem of modern theology is the place and value of miracles. In the opinion of certain writers, their antecedent improbability, based on the universal reign of law, is so great that they are no law in this case is God Himself and the use of the term is apt to create confusion.

1. The fundamental principle is that whatever happens is
natural, and what is not natural does not happen. On belief in the uniformity of nature is based the profound conviction of the organic unity of the universe, a characteristic trait of nineteenth-century thought. It has dominated a certain school of literature, and it is the basis of the philosophy of nature, as Mill has himself shown (Logic, IV, xxii). The latter is an induction based upon a long and careful observation of facts: it is not a self-evident truth, nor is it a universal and necessary principle, as Mill himself has shown (Logic, IV, xxii). In fact uniformity of nature is the result of the principle of causation.

(4) The main contention, that the uniformity of nature rules miracles out of consideration, because they would imply a break in the uniformity and a violation of natural law, is not true. The laws of nature are the observed modes or processes in which natural forces act. These forces are the properties or potencies of the essences of natural things. Our experience of causation is not the experience of a mere sequence but of a sequence due to the necessary operation of essences viewed as principles or sources of action. Now essences are necessarily what they are and unchangeable; therefore their properties, or potencies, or forces, under given circumstances, act in the same way. On this, Scholastic philosophy bases the truth that nature is uniform in its action, yet holds that constancy of succession is not an absolute law, for the succession is only constant so long as the nomenal relations remain the same. Thus Scholastic philosophy, in its defense of essences, the ordinary reign of law in this sense, and its teaching is in absolute accord with the methods actually pursued by modern science in scientific investigations. Hence it teaches the order of nature and the reign of law, and openly declares that, if there were no order, there would be no miracle. It is significant that the Bible, in its innumerable miracle narratives, while it attests the actual occurrence of miracles, now human will, in acting on material forces, interferes with the regular sequences, but does not paralyze the natural forces or destroy their innate tendency to act in a uniform manner. Thus a boy, by throwing a stone into the air, does not disarrange the order of nature or do away with the law of gravity. A new force only is brought in and counteracts the tendencies of the natural forces, just as the natural forces interact and counteract among themselves, as is shown in the well-known truths of the parallelogram of forces and the distinction between kinetic and potential energy. The analogy from man's act to God's act is not a violation of the uniformity of nature or a violation of its laws. The extent of the power exerted does not affect the point at issue. Hence physical nature is presented as a system of physical causes producing uniform results, and yet permits the intersection of personal agency without affecting its stability.

(5) The truth of this position is so manifest that Mill admits Hume's argument against miracles to be valid only on the supposition that God does not exist, for, he says, "a miracle is a new effect supposed to be produced by the introduction of a new cause . . . of the adequacy of that cause, if present, there can be no doubt" (Logic, III, xxvi). Hence, admitting the existence of God, Hume's "uniform succession" holds for the phenomena. But Huxley also denies that physicists withhold belief in miracles because miracles are in violation of natural laws, and he rejects the whole of this line of argument ("Some Controversial questions", 209; "Life of Hume", 132), and holds that a miracle is a question of evidence pure and simple. That the real meaning of the word nature includes both the phenomenon and the noumenon. Huxley has also concluded that physicists withhold belief in miracles because miracles are in violation of natural laws, and he rejects the whole of this line of argument ("Some Controversial questions", 209; "Life of Hume", 132), and holds that a miracle is a question of evidence pure and simple. Hence the objection to miracles on the ground of their consequent improbability has been abandoned. "The Biblical World" (Oct., 1908) says "The old rigid system of 'Laws of Nature' is being broken up by modern science. There are many events which scientists recognise to be inexplicable by any known law. But this inability to furnish a scientific explanation is no reason for denying the existence of the event, if it is adequately attested. Thus the old a priori argument against miracles is gone." Thus in modern thought
the question of the miracle is simply a question of fact.

IV. Place and Value of Miracles in the Christian View of the World.—As the great objection to miracles rests mainly on natural views of the universe, so the true world-view is necessary to grasp their place and value. Christianity teaches that God created and governs the world. This government is His Providence. It is shown in the delicate adjustment and subordination of the tendencies proper to material things, resulting in the marvelous stability and harmony which prevail throughout the physical creation, and in the moral order, which through conscience, is to guide and control the tendencies of man's nature to a complete harmony in human life. Man is a personal being, with intelligence and free-will, capable of knowing and serving God, and created for that purpose. To Him nature is the book of God's work revealing the Creator through the design visible in the material order and through conscience, the voice of the moral order based in the very constitution of his own being. Hence the relation of man to God is a personal one. God's Providence is not confined to the revelation of Himself through His works. He has manifested Himself in a supernatural manner. Few floods of light have been given in spiritual beings and departed souls. Both spheres, the natural and the supernatural, are under the overruling Providence of God. Thus God and man are two great facts. The relation of the soul to its Maker is religion.

Religion is the knowledge, love, and service of God; its expression is called worship, and the essence of worship is prayer. Thus between man and God there is constant intercourse, and in God's Providence the appointed means of this intercourse is prayer. By prayer man speaks to God in acts of faith, hope, love, and contrition, and implores His aid. In answer to prayer God acts on the soul by His grace, confirming the miracles, by working miracles. Hence the great fact of prayer, as the connecting link of man to God, implies a constant interference of God in the life of man. Therefore, in the Christian view of the world, miracles have a place and a meaning. They arise out of the personal relation between God and man. The conviction that the pure of heart are pleasing to God, in some mysterious way, is world-wide; even among the heathens pure offerings only are prepared for the sacrifice. This intimate sense of God's presence may account for the universal tendency to refer all striking phenomena to supernatural causes. Error and exaggeration do not change the nature of the belief founded in the abiding conviction of supernatural Providence. To think, St. Paul appealed in his discourse to the Athenians (Acts, xvii). In the miracle, therefore, God subordinates physical nature to a higher purpose, and this higher purpose is identical with the highest moral aims of existence. The mechanical view of the world is in harmony with the teleological, and when purpose exists, no event is isolated or nothing. Man created for God, and a miracle is the proof and pledge of His supernatural Providence. Hence we can understand how, in devout minds, there is even a presumption for and an expectation of miracles. They show the subordination of the lower world to them; they are the breaking in of the higher world on the lower. (C. G. Herford, xlvii, xcvii; Benedict XIV, 1, c 1, 1 IV, p. 1, c 1.)

Some writers—e.g., Paley, Mansel, Mosley, Dr. George Fisher—push the Christian view to the extreme, and say that miracles are necessary to attest revelation. Catholic theologians, however, take a broader view. They hold (1) that the great primary end of miracles is to effect the faith of God and the good of men; that the particular or secondary ends, subordinate to the former, are to confirm the truth of a mission or a doctrine of faith or morals, to attest the sanctity of God's servants, to confer benefits and vindicate Divine justice. (2) Hence they teach that the attestation of Revelation is not the primary end of the miracles, but its main secondary end, though not the only one. (3) They say that the miracles of Christ were not necessary but "most fitting and altogether in accord with His mission" (decentissimum et maximopere convenienti)—Bened. XIV, IV, p. 1, c. 2, n. 3; Summa, III, Q. xliii as a means to attest its truth. At the same time they place miracles among the strongest and most certain evidences of Divine revelation. (4) Yet they teach that, as evidences, miracles have not a physical force, i.e., absolutely compelling assent, but only a moral force, i.e., they do no violence to free will, though their appeal to the assent is of the strongest kind. (5) That, as evidences, they are not wont to show the primary truth of the doctrine, but the secondary and more fitting reasons why we should accept the doctrines. Hence the distinction: not evidenter vera, but evidenter credibilia. For the Revelation, which miracles attest, contains supernatural doctrines above the comprehension of the mind and positive institutions in God's supernatural Providence over men. Their opinion of God's Providence, therefore, must be that of St. Thomas, i.e., that the doctrine proves the miracle, not the miracle the doctrine, is not true. (6) Finally, they maintain that the miracles of Scripture and the power in the Church of working miracles are of Divine faith, not, however, the miracles of church history themselves. Hence they teach that the former are both evidences of faith and objects of faith; that the latter are evidences of the purpose for which they are wrought, not, however, objects of Divine faith. Hence this teaching guards against the other exaggerated view recently proposed by non-Catholic writers, who hold that miracles are now considered not as evidences, but as objects of faith.

V. Testimony.—A miracle, like any natural event, is known either from personal observation or from the testimony of others. In the miracle we have the fact itself as an external occurrence and its miraculous character. The miraculous character of the fact consists in this: that its nature and the surrounding circumstances are of such a kind that even natural forces alone could not have produced it, and the only rational explanation is to be had in the interference of Divine agency. The perception of its miraculous character is a rational act of the mind, and is simply the application of the principle of causality with the methods of induction. The general rules governing the acceptance of miracles is that they are not to be attributed to other facts of history. If we have certain evidence for the fact, we are bound to accept it. The evidence for miracles, as for historical facts in general, depends on the knowledge and veracity of the narrators, i.e., who testify to the occurrence of the events must know what they tell and tell the truth. The extraordinary nature of the miracle requires more complete and accurate investigation. Such testimony we are not free to reject; otherwise we must deny all history whatsoever. We have no rational warrant for rejecting miracles than for rejecting accounts of stellar eclipses. Hence, they who deny miracles have concentrated their efforts with the purpose of destroying the historical evidence of miracles whatsoever and especially the evidence for the miracles of the Gospel.

Hume held that no testimony could prove miracles,
for it is more probable that the testimony is false than that the miracles are true. But (1) his contention that "a uniform experience," which is "a direct and full proof," is against miracles, is denied by Mill, provided that in studying the Gospel narratives we must distinguish between the facts as they actually took place and the subjective emotions of those who witnessed them, their strong excitement, tendency to exaggeration, and vivid imagination. Thus they appeal not to the "fallacies of testimony" so much as to the "fallacies of the senses". But this attempt to transform the Apostles into nervous visionaries cannot be held by an unbiased mind. St. Peter clearly distinguished between a vision (Acts, x, 17) and a reality (Acts, xii), and St. Paul mentions two cases of visions (Acts, xxii, 17; II Cor., xii), the latter by way of contrast with his ordinary missionary life of labours and sufferings (II Cor., xi). Renan even goes so far as to present the glaring inconsistency of a Christ remarkable, as he says, for moral beauty of life and doctrine, who nevertheless is guilty of conscious deception, as, e. g., in the make-believe raising of Lazarus. This teaching is in reality a denial of testimony. The miracles of Christ must be taken as a whole, and in the Gospel setting where they are presented as a part of His mission. The argument rests upon the rejected philosophical principle that external experience is the sole source of knowledge, rests upon the discredited basis that miracles are opposed to the uniformity of nature as violations of natural laws, and was advanced through prejudice against Christianity. Hence later sceptics are not entitled to express their experience, e. g., that miracles cannot be proved, but that as a matter of fact they are not proved. The attack by Hume on miracles in general has been applied to the miracles of the Bible, and has received added weight from the denial of Divine inspiration. Varying in form, its basic principle is the same, viz., that miracles are contrary to experience and testimony not conformable to experience, and holds that the latter may be accepted—e. g., testimony of ice to the Indian prince. But this admission is fatal to his position.

(4) Hume proceeds on the supposition that, for practical purposes, all the laws of nature are known, yet experience is part of this experience, and this supernatural part Hume prejudices, arbitrarily declares it untrue, which is the point to be proved, and assumes that miraculous is synonymous with absurd. The past, so expurgated, is made the test of the future, and should prevent the consistent advocates of Hume from accepting the discoveries of science. (3) Hard-pressed, Hume is forced to make the distinction between testimony contrary to experience and testimony not conformable to experience, and holds that the latter may be accepted—e. g., testimony of ice to the Indian prince. But this admission is fatal to his position.

The theory of the Taoist. The fundamental idea of Hegel's metaphysics (viz., that existing things are the progressive manifestation of the idea, i. e., the absolute) gave a philosophical basis for the organic conception of the universe, i. e., the Divine as organic to the human. Thus revelation is presented as a human process, and history—e. g., the New Testament—creates a human life. This philosophy of history was applied to explain the miraculous in the Gospels and appears under two forms: (a) the Tubingen School. Baur regards the Hegelian process in its objective aspect, i. e., the facts as things. He held the books of the New Testament to be states through which the human life and thought of early Christianity had passed. He attempted to do with reference to the origin what Gibbon tried with reference to the spread of Christianity—i. e., get rid of the supernatural by the tacit assumption that there were no miracles and by the enumeration of natural causes, chief of which was the Messianic idea to which Jesus accommodated Himself. The Tubingen School constrained Him to deny that we possess contemporaneous documents of our Lord's life, to hold that the New Testament literature was the result of warring factions among the early Christians, and therefore of a much later date than tradition ascribes to it, and that Christ was only the occasional cause of Christianity. He accepted as genuine only the Epistles to the Galatians, Romans, I and II Corinthians, and the Apocalypse. But the Epistles addressed by Baur show that St. Paul believed in miracles and asserted the actual occurrence of them as well-known facts both in regard to Christ and in regard to himself and the other Apostles (e. g., Rom., xv. 18; I Cor., i. 22; 9; II Cor., xi. 5). He attempted to do with reference to the Resurrection of Christ, I Cor., xv). The basis on which the Tubingen School
rests, viz., that we possess no contemporaneous records of Christ's life, and that the New Testament writings begin to be known many years after his death and are so false by the higher criticsm. Hence Huxley admits that this position is no longer tenable (The Nineteenth Century, Feb., 1889), and in fact there is no longer a Tubingen School at Tubingen. Harnack says: "As regards the criticisms of the sources of Christianity, we stand unquestionably in a movement of return to tradition. The chronological framework in which tradition set the earliest documents is to be henceforth accepted in its main outlines" (The Nineteenth Cent., Oct., 1899). Hence Romanes said that the outcome of the battle on the Bible documents is a signal victory for Christianity (Thoughts on Religion, p. 165). Dr. Emil Reich speaks of the bankruptcy of the higher criticism ("Contemp. Rev.", April, 1905).

(b) The "Mythical" School.—Strauss regarded the Hegelian process in its subjective aspect. The facts as matters of consciousness with the early Christians concerned him exclusively. Hence he regarded Christ within the Christian consciousness of the time, and he put aside the question of the New Testament as the origin of this consciousness. He did not deny a relatively small nucleus of historical reality, but contended that the Gospels, as we possess them, are mythical inventions or fabulous and fanciful embellishments and are to be regarded only as symbols for spiritual ideas, e.g., the Messianic idea. Strauss attempted to expunge the miraculous in the unconsidered the unhistorical matter—from the text. But this view was too fanciful to hold currency after a careful study of the truthful, matter-of-fact character of the New-Testament writings, and a comparison of them with the Apocrypha. Hence it has been rejected, and Strauss himself confessed to disappointment at the results (The Critical Agnostic School.—Pp. 50-51). The Critical Agnostic School.—Its basis is the organic idea of the universe, but it views the world-process apart from God, because reason cannot prove the existence of God, and therefore, to the Agnostic, He does not exist (e.g., Huxley); or to the Christian Agnostic, His existence is accepted on Faith (e.g., Baden-Powell). To both there is no miracle, for we have no way of knowing it. Thus Huxley admits the facts of miracles in the New Testament, but says that the testimony as to their miraculous character may be worthless, and strives to explain it by the subjective mental conditions of the writers ("The Nineteenth Cent.", Mar., 1889). Baden-Powell in "Essays and Reviews" (May, 1889) and Harnack (The Essence of Christianity) admit the miracles as recorded in the Gospels, but hold that their miraculous character is beyond the scope of historical proof, and depends on the mental assumptions of the readers.—Criticism: The real problem of the historian is to state well-authenticated facts as are an explanation of the testimony. He should show how such events must have taken place and how such a theory only can explain them. He takes cognizance of all that is said about these events by competent witnesses, and from their testimony he draws the conclusion. To admit the facts and to deny an explanation is to furnish very great evidence for their historical truth, and to show qualities not consistent with the scientific historian.

(4) The theory of liberal Protestantism.—(a) In its older form, this was advocated by Carlyle (Froude's "Life of Carlyle"), Martineau (Seal of Authority in Religion), Rathbone Grev (Creek of Christendom), Prof. Wm. H. Green (Works, Ill, pp. 230, 253), professors and pupils of the "new Reformation" ("The Nineteenth Cent.", Mar., 1889) and popularized by Mrs. Humphry Ward in "Robert Elsmere". As the old Reformation was a movement to destroy the Divine authority of the Church by ex-
of His will. (1) The miracles of the Old Testament reveal the Providence of God over His chosen people. They are convincing proof for the commission of Moses (Exod., iii, iv), manifest to the people that Jehovah is Sovereign Lord (Exod., x, 2; Deut., v, 25), and are represented as the “finger of God” and “the hand of God.” God punishes Pharaoh for refusing to obey His commands given by Moses and attested by miracles, and is displeased with the infidelity of the Jews for whom He worked many miracles (Num., xiv). Miracles convinced the widow of Sarepta that Elias was “a man of God” (III Kings, xvii, 24), made the people cry out in the dispute between Elias and the prophets of Baal, “the Lord he is God” (II Kings, xviii, 21), caused Naaman to confess that “there is no other God” (II Kings, v, 11), and Nebuchadnezzar to issue a public decree in honour of God upon the escape of the Three Children from the fiery furnace (Dan., iii), and Darius to issue a like decree on the escape of Daniel (Dan., v). The ethical element is conspicuous in the miracles and is in consonance with the exalted ethical character of Jehovah, “a king of absolute justice, whose love for his people was conditioned by a law of absolute righteousness, as foreign to Semitic as to Aryan tradition,” writes Dr. Robertson Smith (“Religion of the Semites”, p. 74; cf. Kuenen, Hibbert Lect., p. 124). Hence the tendency among recent writers on the history of religion to postulate the direct intervention of God, in contrast with the interpretation for the exalted conception of the Deity set forth by Moses and the prophets (R. Kettel, “Geschichte der Hebräer,” 1889-92).

(2) The Old Testament reveals a high ethical conception of God who works miracles for high ethical purposes, and unfolds a dispensation of prophecy leading up to the fact that Christ works miracles. His answer to the messengers of John the Baptist was that they should go and tell John what they had seen (Luke, vii, 22; cf., Isa., xxxv, 5). Thus the Fathers of the Church, in proving the truth of the Christian religion from the miracles of Christ, join them with prophecy (Origen, “C. Celsum”, I, ii; Ireneaus, Adv. her. I, ii, 32; St. Augustine, “C. Faustum”, XII). Jesus openly professed to work miracles. He appeals repeatedly to His “works” as most authentic and decisive proof of His Divine Sonship (John, v, 18-36; x, 24-37) and of His mission (John, xiv, 12), and for this reason concerns the obstinacy of the Jews as inexcusable (John, xv, 22, 24). His miracles are connected with the Church (Matt., xi, 5; Luke, ii, 49), and they are delivered to the Apostles (Matt., x, 8) and disciples (Luke, x, 19) the power of working miracles, thereby instructing them to follow the same method, and promised that the gift of miracles would persist in the Church (Mark, xvi, 17). At the sight of His marvellous works, the Jews (Matt., ix, 8), Nicodemus (John, iii, 2) and Jesus His own blind man (John, x, 33) confess that they must be ascribed to Divine power. Pfeiderer accepts the second Gospel as the authentic work of St. Mark, and this Gospel is a compact account of miracles wrought by Christ. Ewald and Weiss speak of the miracles of Christ as a daily task. Miracles are not accidental or external to the Christ of the Gospels; they are inseparably bound up with His supernatural doctrine and supernatural life—a life and doctrine which is the fulfillment of prophecy and the source of Christian civilization. Miracles form the very substance of the Gospel narratives, so that, if removed, there would remain no recognizable plan of work and no intelligent portrait of the worker. We cannot even think at all of the life of Christ for Dr. Holtmann says that the very traits whose astonishing combination in one person presents the highest kind of historical evidence for His existence are indissolubly connected with miracles. Unless we accept miracles, we have no Gospel history. Admit that Christ wrought many miracles, or confess that we do not know Him at all—in fact, that He never existed. The historical Christ of the Gospels stands before us remarkable in the charm of personality, extraordinary in the elevation of life and beauty of doctrine, strikingly consistent in tenor of life, exercising Divine power in varied ways and at every turn. He rises supreme over, and apart from, His surroundings and cannot be regarded as the fruit of individual invention or as the product of the age. The simplest, clearest, only explanation is that the testimony is true. They who deny have yet to offer an explanation strong enough to withstand the criticism of the sceptics themselves.

(3) The testimony of the Apostles to miracles is twofold: (a) They preached the miracles of Christ, especially the Resurrection. Thus St. Peter speaks of the “miracles, and wonders, and signs” which Jesus did as a fact well-known to the Jews (Acts, ii, 22), and as published through Galilee and Judea (Acts, x, 37). The Apostles profess themselves witnesses of the Resurrection (Acts, ii, 32), they say that the characteristic of an Apostle is that he be a witness of the Resurrection (Acts, i, 22), and upon the Resurrection base their preaching in Jerusalem (Acts, iii, 15; iv, 10; v, 30; x, 40), at Antioch (Acts, xii, 30 sq.), at Athens (Acts, xvii, 31), at Corinth (I Cor., xv), at Rome (Rom., vi, 4), and in Thessalonica (I Thess., i, 10). (b) They worked miracles themselves, wondrous signs and mighty deeds (Acts, x, 38). For the healing of lame (Acts, iii, xiv), heal the sick, and drive out demons (Acts, viii, 7, 8), raise the dead (Acts, xx, 10 sq.). St. Paul calls the attention of the Christians at Rome to his own miracles (Rom., xv, 18, 19), refers to the well-known miracles performed in Galatia (Gal., iii, 5), calls the Christians of Corinth to witness to the tokens of his apostleship (II Cor., xii, 12), and gives to the working of miracles a place in the economy of the Christian Faith (I Cor., xiii). Thus the Apostles worked miracles in their missionary journeys in virtue of the power given them by Christ (Mark, iii, 15) and confirmed after His Resurrection (Mark, xvi, 17).

(4) Dr. Middleton holds that all miracles ceased with the Apostles. Mozley and Milman ascribe later miracles to pious myths, fraud, and forgery. Trench admits that few points present greater difficulty than the attempt to determine the exact period when the power of working miracles was withdrawn from the Church. This period is one of polemical bias against the Church and its teaching as against pagan cults. All kinds of objections are levelled against the miracles; and behind all attacks on the miracles of scripture. Now we are not obliged to accept every miracle alleged as such. The evidence of testimony is our warrant, and for miracles of church history we have testimony of the most complete kind. If it should happen that, after careful investigation, a supposed miracle should turn out to be no miracle at all, a distinct service to truth would be rendered. Throughout the course of church history there are miracles so well authenticated that their truth cannot be denied. Thus St. Clement of Rome and St. Ignatius of Antioch speak of the miracles wrought in their time. Origen says he has seen examples of demons expelled, many cures effected, and prophecies fulfilled (“C. Celsum”, I, ii, III, VII). Ireneaus taunts the magic-workers of his day that “they cannot give sight to the blind nor hearing to the deaf, nor put to flight demons; and they are so far from raising the dead, as Our Lord did, and the Apostles, by prayer, and as is most frequently done among the brethren, that there is no instance of it.” (Act, ii, 28). Ac- St. Athanasius writes the life of St. Anthony from what he himself saw and heard from one who had long been in attendance on the saint. St. Justin in his second apology to the Roman Senate appeals to miracles wrought in Rome and well attested. Tertullian
challenges the heathen magistrates to work the miracles which the Christians perform (Apol., xxiii); St. Paulinus, in the life of St. Ambrose, narrates what he has seen. St. Augustine gives a long list of extraordinary miracles wrought before his own eyes, mentions names and particulars, describes them as well known, and says they happened within two years before he published the written account (De civit. Dei, XXII, vili; Retract. I, viii). St. Jerome wrote a book to confute Vigilantius and prove that relics should be venerated, by citing miracles wrought through them. Theodoret published the life of St. Simon Stylites while the saint was living, and thousands were alive who had been eye-witnesses of what had happened. St. Victor, Bishop of Viterbo, wrote the history of the Miracles of St. Agnes. The descriptions of these miracles have all been cut out by command of Hunneric, and who yet retained the power of speech, and challenges the reader to go to Reparatus, one of them then living at the palace of the Emperor Zeno. From his own experience Sulpician Severus wrote the life of St. Martin of Tours. St. Gregory the Great writes to St. Augustine of Canterbury not to be elated by the many miracles God was pleased to work through his hands for the conversion of the people of Britain. Hence Gibbon says, "The Christian Church, from the time of the Apostles and their disciples, has claimed an uninterrupted succession of miraculous powers, the gift of tongues, of visions and of prophecy, the power of exorcising evil spirits, the power of healing the sick and of the dead" (Decline and Fall, I, pp. 264, 288); thus miracles are so interwoven with our religion, so connected with its origin, its promulgation, its progress and whole history, that it is impossible to separate them from it. The existence of the Church, the kingdom of God on earth, in which Christ and His Holy Church is to be reconciled, is the only way of salvation. The history of the miracles of the Divine life of saints of all countries and all times, is a perpetual standing witness for the reality of miracles (Bellar., "De notis eccl.", LIV, xiv). The well-attested records are to be found in the official processes for the canonization of saints. Mosley held that an enormous distinction exists between the miracles of the Gospel and those of church history, through the false notion that the sole purpose of miracles was the attestation of revealed truth: Newman denies the contention and shows that both are of the same type and as well-authenticated by historical evidence.

VII. PLACE AND VALUE OF THE GOSPEL MIRACLES.

In studying the Gospel miracles we are impressed by the fact that only a very small proportion of them is related by the Evangelists in detail; the Gospels speak only in the most general terms of the miracles Christ performed in the great missionary journeys through Galilee and Judea. We read that the people, seeing the things which He did, followed Him in crowds (Matt., iv, 25) to the sea of Galilee. The multitude of people so great that He could not enter the cities, and His fame spread from Jerusalem through Syria (Matt., iv, 24). His reputation was so great that the priests of Jerusalem sent word to the people (Luke, ix, 1, 2) to the sea of Galilee that He could enter the cities, and His fame spread from Jerusalem through Syria (Matt., iv, 24). The Book of the Dead (Resurrection of Lazarus (John, xi, 15), Christ's last prayer for the, Apocalypse, ii, 9), and the Transfiguration (Matt., xviii), the Transfiguration of the Lord (Luke, viii), and the Resurrection of Lazarus (John, xi, 15) and the Incarnation of the Word, and adds, "We saw His glory" (John, i, 14). Hence Ireneus (Adv. haer. V) and Athanasius (Incar.) teach that the works of Christ were the manifestations of the Divine Word who in the beginning made all things and who in the Incarnation displayed His power over nature and man, as a manifestation of the new life imparted to man and a revelation of the character and purposes of God. The repeated references in the Acts and in the Epistles to the "glory of Christ" have relation to His miracles. The source and purpose of the miracles of Christ is the reason for their intimate connexion with His life and work. They were not only a means of testing the faith of the people, but the purpose of the miracles, as it was of the doctrine and life of the eternal Son of God. (c) Their motive was mercy. Most of Christ's miracles were works of mercy. They were performed not with a view to awe men by the feeling of omnipotence, but to show compassion for sinful and suffering humanity. They are described by the Gospel writers as acts of sympathy, but as prompted by a deep and abiding mercy which characterizes the office of Saviour. The Redemption is a work of mercy, and the miracles reveal the mercy of God in the works of His Incarnate Son (Acts, x, 38).

(d) Hence we can see in them a symbolical character. They were signs, and in a special sense they signified by the typical language of external facts, the inward renewal of the soul. Thus, in commenting on the miracle of the widow's son at Naim, St. Augustine says that Christ raised three from the death of the body, but thousands from the death of sin to the life of Divine grace (Serm. de verbis Dom., xviii, xi). The miracle of the loaves and fishes is the religious, and by the fact that only a very small proportion of them is related by the Evangelists in detail; the Gospels speak only in the most general terms of the miracles Christ performed in the great missionary journeys through Galilee and Judea. We read that the people, seeing the things which He did, followed Him in crowds (Matt., iv, 25) to the sea of Galilee. The multitude of people so great that He could not enter the cities, and His fame spread from Jerusalem through Syria (Matt., iv, 24). His reputation was so great that the priests of Jerusalem sent word to the people (Luke, ix, 1, 2) to the sea of Galilee that He could enter the cities, and His fame spread from Jerusalem through Syria (Matt., iv, 24). The Book of the Dead (Resurrection of Lazarus (John, xi, 15), Christ's last prayer for the, Apocalypse, ii, 9), and the Transfiguration (Matt., xviii), the Transfiguration of the Lord (Luke, viii), and the Resurrection of Lazarus (John, xi, 15) and the Incarnation of the Word, and adds, "We saw His glory" (John, i, 14). Hence Ireneus (Adv. haer. V) and Athanasius (Incar.) teach that the works of Christ were the manifestations of the Divine Word who in the beginning made all things and who in the Incarnation displayed His power over nature and man, as a manifestation of the new life imparted to man and a revelation of the character and purposes of God. The repeated references in the Acts and in the Epistles to the "glory of Christ" have relation to His miracles. The source and purpose of the miracles of Christ is the reason for their intimate connexion with His life and work. They were not only a means of testing the faith of the people, but the purpose of the miracles, as it was of the doctrine and life of the eternal Son of God. (c) Their motive was mercy. Most of Christ's miracles were works of mercy. They were performed not with a view to awe men by the feeling of omnipotence, but to show compassion for sinful and suffering humanity. They are described by the Gospel writers as acts of sympathy, but as prompted by a deep and abiding mercy which characterizes the office of Saviour. The Redemption is a work of mercy, and the miracles reveal the mercy of God in the works of His Incarnate Son (Acts, x, 38).

(d) Hence we can see in them a symbolical character. They were signs, and in a special sense they signified by the typical language of external facts, the inward renewal of the soul. Thus, in commenting on the miracle of the widow's son at Naim, St. Augustine says that Christ raised three from the death of the body, but thousands from the death of sin to the life of Divine grace (Serm. de verbis Dom., xviii, xi). The miracle of the loaves and fishes is the religious, and by
finally set the great seal upon His mission by rising from death, and He had explicitly foretold. Thus Roman Catholic theology, "the miracle of miracles, "the powers of nature and purpose of His kingdom, and show a connexion with some of the greatest doctrines and principles of His Church. Its catholicity is shown in the miracles of the centurion's servant (Matt., viii) and the Syro-phenician woman (Mark, vii). The Sabbatical miracles reveal its purpose, i.e., the salvation of men, and it was that Christ's kingdom is to be the Old Dispensation. His miracles teach the power of faith and the answer given to prayer. The central truth of His teaching was life. He came to give life to men, and His teaching is emphasized by raising the dead to life, especially in the case of Lazarus and His own Resurrection. The sacramental teaching of the miracles is manifested in the multiplication of loaves (John, vi), the raising of the paralytic, to show he had the power to forgive sins (and he used this power (Matt., ix) and gave it to the Apostles (John, xxi. 23)), in the multiplication of the loaves (John, vi) and in raising the dead. Finally, the prophetic element of the fortunes of the individual and of the Church is shown in the miracles of stilling the storm and walking on the water, the part of the part of nature, of fishes, of the drachma and the barren fig-tree. Jesus makes the miracle of Lazarus the type of the General Resurrection, just as the Apostles take the Resurrection of Christ to signify the raising of the soul from the death of sin to the life of grace, and to be a pledge of the power of the resurrection and deification of the final resurrection (I Thess., iv, 14).

(2) The miracles of Christ have an evidential value. This aspect naturally follows from the above considerations. In the first miracle at Cana He "manifested His glory", therefore the disciples "believed in Him" (John, ii, 11); Jesus constantly appealed to His "wonders" as evidences of His mission and His divinity. He declares that His miracles have greater evidential value than the testimony of John the Baptistist (John, v, 36); their logical and theological force as evidences is expressed by Nicodemus (John, iii, 2). And to the miracles Jesus adds the evidence of prophecy (John, v, 31). Now their value as evidences for the people that were not his own is in constant conflict with the presence and power of the Church. The last word in the divine solution of the mystery of His mission but also in the multitude of His works. Thus the unrecorded miracles had an evidential bearing on His mission. So we can see an evidential reason for the selection of the miracles as narrated in the Gospels.

(a) This selection was guided by a purpose to make clear the main events in Christ's leading up to the Crucifixion and to show that certain definite miracles (e.g., the cure of the lepers, the casting out of demons in a manner marvellously superior to the exorcisms of the Jews, the Sabbath, miracles, the raising of Lazarus) caused the rulers of the Synagogue to conspire and put Him to death. (b) A second reason for the selection was the expressed purpose to prove that Jesus was the Son of God (John, xx, 31). Thus, for us, who depend on the Gospel narratives, the evidential value of Christ's miracles comes from a comparatively small number related in detail, though of a most stupendous and clearly supernatural kind, some of which were performed almost in private and followed by no immediate success. In considering them as evidences in relation to us now living, we may add to them the constant reference to the multitude of miracles unrecorded in detail, their intimate connexion with our Lord's teaching and life, their relation to the prophecies of the Old Testament, their own prophetic character, as fulfilled in the development of His kingdom on earth. VIII. SPECIAL PRAYER. Prayer is a great fact, which finds expression in a persistent manner, and enters intimately into the life of humanity. So universal is the act of prayer that it seems an instinct and part of our being. It is the fundamental fact of religion, and religion is a universal phenomenon of the human race. Christian philosophy teaches that in his spiritual nature man is made to the image and likeness of God, therefore his soul instinctively turns to his Maker in aspirations of worship, of hope, and of intercession. The real value of prayer has been a vital subject for discussion in modern times. Some, like O. B. Frothingham (Recollections and Impressions, p. 296), Dr. M. W. Herber (Pfeiffer, "Phil. of Religion", II, p. 296), hold that its value lies only in its being a factor in the culture of the moral life, by giving tone and strength to character. Thus Professor Tyndall, in his famous Belfast address, proposed this view, maintaining that modern science has proved the physical value of prayer to be unbelievable (Fragments of Science). He based its contention on the uniformity of nature. But this basis is no longer held as an obstacle to prayer for physical benefits. Others, like Baden-Powell (Order of Nature), admit that God answers prayer for spiritual favours, but denies its value for physical effects. But his basis is the same as that of Tyndall, and besides an answer for spiritual benefits is in fact an interference with the operation of nature. Christian philosophy teaches that God, in answer to prayer, confers not only spiritual favours but at times interferes with the ordinary course of physical phenomena, so that, as a result, particular events happen otherwise than they should. This interference takes place in miracles and spiritual providence.

When we kneel to pray we do not always beg God to work miracles or that our lives shall be constant prodigies of His power. The sense of our littleness gives an humble and reverential spirit to our prayer. We trust that God, through His Infinite knowledge and power, will in some way best known to Him bring about what we ask. Hence, by special providences we mean events which happen in the course of nature and of life through the instrumentality of natural laws. We cannot discern either in the event itself or in the manner of its happening any deviation from the known course of things. What we do know, however, is that events shape themselves in response to our prayer. The last word in the divine solution of the mystery of His mission but also in the multitude of His works. Thus the unrecorded miracles had an evidential bearing on His mission. So we can see an evidential reason for the selection of the miracles as narrated in the Gospels.
his play in the East, and mingles with heroic episodes of the crusades realistic pictures taken from taverns. His drama concludes with a general conversion of the Mussulmans secured through a miracle of St. Nicholas. Rutebeuf, who flourished in the second half of the thirteenth century, was born in Champagne, but lived in Paris. Though at first a gambler and glutton, he seems to have had a new experience. His miracle depicts the legend, so famous in the Middle Ages, of Theophilus, the "Economus of the Church of Adana in Cilicia, who on losing his office bartered his soul to the devil for its recovery, but, having repented, obtained from the Blessed Virgin the miraculous return of the nefarious contract.

MIRACLES OF OUR LADY.—Save for the play of Griselisa, whose heroine, a poor shepherdess, married to the Marquis de Saluces, is subjected to cruel trials by her husband, and through the protection of St. Agnes triumphs over all obstacles, the entire dramatic activity of the fourteenth century was devoted to the miracles of Our Lady. Forty-two specimens of this style of drama are extant. Herein the Blessed Virgin saves or consoles through marvellous intervention those who are guiltless and unfortunate and sometimes great sinners who have confidence in her. The author or authors of these works are unknown.

MIRACLE PLAYS AND MYSTERIES.—These two names are used to designate the religious drama which developed among Christian nations at the end of the Middle Ages. It should be noted that the word "mystery" has often been applied to all Christian dramas prior to the sixteenth century, whereas it should be confined to those of the fifteenth century, which represent the great dramatic effort anterior to the Renaissance. Before this period dramatic pieces were called "plays" or "miracles". The embryonic representations, at first given in the interior of the churches, have been designated as liturgical dramas.

The mystic origin of the medieval drama was in religion. It is true that the Church forbade the faithful during the early centuries to attend the licentious representations of decadent paganism. But once this immoral theatre had disappeared, the Church allowed and itself contributed to the gradual development of a new drama, which was not merely educational for the devout but a fitting accompaniment of solemn feasts, such as Easter and Christmas, the Office was interrupted, and the priests repeated, in the presence of those assisting, the religious event which was being celebrated. At first the text of this liturgical drama was very brief, and was taken solely from the Gospel or the Office of the day. It was in prose and in Latin. But by degrees versification crept in. The earliest of such dramatic "tropes" (q.v.) of the Easter service are from England and date from the tenth century. Soon verse pervaded the entire drama, prose became the exception, and the vernacular appeared beside Latin. Thus, in the French drama of the "Wise Virgin" (first half of the twelfth century), in which a little maidservant, parable of the wise and foolish virgins, the chorus employs Latin, while Christ and the virgins use both Latin and French, and the angel speaks only in French. When the vernacular had completely supplanted the Latin, and individual inventiveness had at the same time asserted itself, the drama left the precincts of the Church. It is written to be listened to in the theatre, without, however, losing its religious character. This evolution seems to have been accomplished in the twelfth century. With the appearance of the vernacular a development of the drama along national lines became possible. Let us first trace this development in France.

PLAYS AND MIRACLES OF THE TWELFTH AND THIRTEENTH CENTURIES.—The first French drama offered by the twelfth century is called "Adam", and was written by an Anglo-Norman author whose name is unknown. The subject extends from the Fall in the terrestrial Paradise to the time of the Prophets who foretell the Redeemer, relating in passing the history of the Jews. It is written to be listened to in the theatre, the directions to the actors are in Latin. It was played before the gate of the church. From the thirteenth century we have the "Play of St. Nicholas" by Jean Bodel, and the "Miracle of Theophilus" by Rutebeuf. Jean Bodel was a native of Arras, and followed St. Louis on the crusade to Egypt. He lays the scene of
contemporaries would care to submit. In some "passions" the actor who represented Christ had to recite nearly 4000 lines. Moreover, the scene of the crucifixion had to last as long as it did in reality. It is related that in 1437 the curé Nicolle, who was playing the part of Christ at Metz, was on the point of dying on the cross, and had to be revived in haste. During the same representation another priest, Jehan de Missey, who was playing the part of Judas, remained hanging for so long that his heart failed and he had to be cut down and borne away.

As regards the aesthetic side of this drama, modern standards should not be applied. This theatre does not even offer unity of action, for the scenes are not derived from one another; they succeed one another without any other unity than the interest which attaches to the chief personages and the general idea of eternal salvation, whether of a single man or of humanity, which constitutes the common foundation of the picture. Moreover, side by side with pathetic and exalted scenes are found others which savour of buffoonery. The plays used as many as one, two, and even five hundred characters, not counting the chorus, and until 1548, 1549, they were performed on one occasion. This is true at least of the mysteries dating from the middle of the fifteenth century; on the other hand, the oldest of them and the miracles were rather short. Two faults have at every period characterized this dramatic style, viz. weakness and wordiness. The poets said things as they occurred to them, with references to the Bible for historical information. The miracles, generally speaking, were written by the Confrères de la Passion to play henceforth "the Sacred mysteries". The prohibition was due to the opposition of the Protestants against the mixing of comedy and fabulous traditions with Biblical teachings. These attacks aroused the scruples of some Catholics, and the judiciary considered it time to intervene. The mystery-games were forbidden by decree of the Paris, where they were forbidden to be played, was by degrees followed by the provinces. Thus the religious drama of the Middle Ages disappeared in France at the height of its success.

GEORGES BERKIN.

ENGLAND.—There is no record of any religious drama in England previous to the Norman Conquest. About the beginning of the twelfth century we hear of a play of St. Catharine performed at Dunstable by Geoffroy, later abbot of St. Albans, and a passage in Fitzstephen's "Life of Becket" shows that such plays were common in London about 1170. These were evidently "miracle plays", though for England the distinction between miracles and mysteries is of no importance, all religious plays being called "miracles". Of miracle plays in the strict sense of the word nothing is preserved in English literature. The earliest religious plays were undoubtedly in Latin and French. The oldest extant miracle in English is the "Harrowing of Hell" (thirteenth century), an apocryphal descent of Christ to the hell of the damned, and it belongs to the cycle of Easter-plays. From the fourteenth century dates the play of "Abraham and Isaac", A great impetus was again given to the religious drama in England as elsewhere by the institution of the festival of Corpus Christi (1264); generally observed since 1312, it was used for the recital of the Passion. Presently the Eastern and Christmas cycles were joined into one great cycle representing the whole course of sacred history from the Creation to the Last Judgment. Thus arose the four great cycles still extant and known as the Towneley, Chester, York, and Coventry plays, the last three designated from the place of their performance. The Towneley mysteries owe their name to the fact that the single MS, in which they are preserved was long in the possession of the Towneley family. They were performed, it seems, at Woodkirk, near Wakefield. These cycles are very heterogeneous in character, the plays being by different authors. In their present form the number of plays varies from 44 to 48, according to the source, York 48, Coventry 42. Four other plays are also preserved in the Digby codex at Cambridge. The so-called "morality" (q. v.) are a later offshoot of the "miracles". These aim at the incitement of ethical
truths and the dramatic personas are abstract personifications, such as Virtue, Justice, the Seven Deadly Sins, etc. The character called "the Vice" is especially interesting as being the precursor of Shakespeare's fool. After the Reformation the miracle plays declined, though performances in some places are on record as late as the seventeenth century.

GERMANY.—In Germany the religious drama does not show a development on as grand a scale as in France or England. The oldest extant plays hail from Freisingen and date from the eleventh century. They are in Latin and belong to the Christmas cycle. Religious dramas were early taken up by the schools and performed by travelling scholars, and this tended to secularise them. The great Tegernseer play of "Antiochus and Stratonice" was composed in Latin, but is pervaded by strong national feeling and devoted to the glorification of the German imperial power. German songs interspersed in the Latin text are found in a Passion play preserved in a MS. of the thirteenth century from Benedictbeuren. The oldest Easter-play wholly in German dates from the beginning of the thirteenth century and hails from Muri, Switzerland. Unfortunately, it is preserved only in fragmentary form. During the fourteenth and fifteenth centuries the religious drama flourished greatly, and specimens are extant from all parts of German territory, in High as well as Low German dialects. We also meet with attempts at a comprehension of the religious drama in the manner of the great English cycles—e.g., in the Corpus Christi plays of Eger and Künzelsau in Swabia (both from fifteenth century). Subjects taken from Old Testament history are not frequently met with. Of dramatic versions of New Testament parables the "Play of the Wise and Foolish Virgins", performed in the Low German, is particularly noted on account of its tragic outcome. Landgrave Frederick of Thuringia, who was a spectator, was plunged into despair over the failure of the Blessed Virgin to save the foolish virgins, and brooding over this is said to have brought on a stroke of apoplexy, to which he succumbed in 1324. Of German miracles dealing with legendary figures are preserved. Of miracles in praise of Our Blessed Lady we have a Low German play of Theophilus and the well-known play of "Frau Jutten" (1480) by a cleric of Mühlhausen named TheodERIC Schernberg. It is the story of an ambitious woman who assumes man's disguise and attains to high ecclesiastical office, finally to the papacy itself; but her aims are disappointed, her devoted suitor, in the most rigorous penance and is ultimately saved through the intercession of the Blessed Virgin. In Germany, as in England and France, the Reformation sapped the life of the medieval religious drama. Plays continued to be produced, but the drama was often used for polemical purposes. In Catholic parts of the country the traditional performances of miracle plays have been kept up even to the present. (See article on PASSION PLAYS.)

Netherlands.—Of miracle plays and mysteries in the Netherlands few have been preserved. One of the best-known is the miracle "Van Sinte Trudo", written about 1550 by Christian Fastraets. The performance of such plays in the Netherlands was undertaken by associations formed for that purpose, especially the Rederijkerskamer (Roterijker corrupted from Rhoterico), which sprang into existence at the end of the fourteenth century. Besides the mysteries and miracles, the Netherlands also have "Spelen van Sinne"; symbolic plays corresponding to the morality plays. (See PARABLE.)

Arthur F. J. REY.

Miracles, Gift of.—The gift of miracles is one of those mentioned by St. Paul in his First Epistle to the Corinthians particularly. The gift is a manifestation of the graces of the Holy Ghost. These have to be distinguished from the seven gifts of the Holy Ghost enumerated by the Prophet Isaiah (xi, 2 sqq.) and from the fruits of the Spirit given by St. Paul in his Epistle to the Galatians (v. 22). The seven gifts and the twelve fruits of the Holy Ghost are always infused with sanctifying grace in the souls of the just. They belong to ordinary sanctity and are within the reach of every Christian. The gifts mentioned in the Epistle to the Corinthians are not necessarily connected with sanctity of life. They are special and extraordinary powers vouchsafed by God only to a few, and primarily for the spiritual good of others. The gifts mentioned in I Cor. vii, 7: "I have given..." is the description of those "gifts of grace" which are known as the Charisv an, the name given by Latin authors; they are also designated in theological technical language as gracia gratia data (graces gratuitously given) to distinguish them from gratia grattam facientes, which means sanctifying grace or any actual grace granted for the salvation of the recipient.

The gift of miracles, as one of these charismata, was expressly promised by Christ to His disciples (John, xiv, 12; Mark, xvi, 17, 18), and St. Paul mentions it as abiding in the Church: "To another [is given] the grace of healing... To another, the working of miracles..." (I Cor., xii, 9, 10). Christ imparts this gift to chosen servants as He did to the Apostles and disciples, that His doctrine may become credible and that Christians may be confirmed in their faith, and this the Vatican Council has declared in chapter iii, "De Fide." This gift is not given to any created being as a permanent habit or quality of the soul. The power of effecting supernatural works such as miracles is not of the Omnipotence, but of God's good pleasure, which is given to either men or angels. The greatest thaumaturgus that ever appeared in this world could not work miracles at will, neither had he any permanent gift of the kind abiding in his soul. The Apostles once asked concerning a cure of demoniacal possession: "Why
could we not cast him out?" Christ replied, "this kind is not cast out but by prayer and fasting." (Matt., xvii, 18 sqq.). Elseus could not raise to life the son of the Sununmites with his staff.

The grace of miracles is therefore only a transient gift by which God moves a person to do something without his own will. Sometimes it makes use instrumentally of contact with the relics of the saints, or visits to sacred shrines for this purpose. The miraculous work is always the effect of Omnipotence; nevertheless, men and angels may be said to work miracles in a thirdfold way (1) by their prayers invoking a miraculous effect; (2) by disposing of the material, so that it is said of angels that they will in the resurrection collect the dust of the dead bodies that these may be re-animated by the Divine power; (3) by performing some other act in co-operation with the Divine agency, as in the case of the application of relics, or of visits to holy places which God has marked out for special and extraordinary favours of this kind. To Christ as a man, or to His humanity, was granted a perpetual and constant power of miracles. He was able of His free will to work them as often as He judged it expedient. For this He had the ever-ready concurrence of His Divinity, although there was in His Humanity no permanent quality which could be the immediate cause of miracles.

Benedict XIV tells us sufficient with regard to miracles in their relation to sanctity of life when explaining their estimate in the cause of the beatification and canonization of the saints. He says: "It is the common opinion of theologians that the grace of miracles is a grace gratia data, and therefore that it is given only to the just but also to sinners (though only rarely). Christ says that He knows not those who have done evil, though they may have prophesied in His name, cast out devils in His name, and done many wonderful works. And the Apostle said that without charity He was nothing, though he might have faith to remove mountains. On this passage of the Apostle, Eutius remarks: "For as it offers no contradiction to the Apostle that a man should have the gift of tongues or prophecy, or knowledge of mysteries, and excel in knowledge, which are first spoken of; or be liberal to the poor, or give his body to be burned for the name of Christ, which are afterwards spoken of and yet not have charity; so also there is no contradiction in a man having faith to remove mountains, and being without charity." (Treatise on Heroic Virtue, III, 130).

These graces manifest themselves in two ways: one way as dwelling in the Church, teaching and sanctifying her, as, for example, when even a sinner in whom the Holy Ghost does not abide works miracles to show that the faith of the Church which he preaches is true. Hence the Apostle writes: "God also bearing them witness by signs, and wonders, and divers miracles, and distributions of the Holy Ghost, according to his own will" (Heb., ii, 4). In another way, the manifestation is made by the graces of the Holy Ghost as belonging to him who performs the works. Hence the Apostle says that St. Stephen, "full of grace and fortitude, did great wonders and signs among the people" (Acts, vi, 8). Here we have a distinction clearly drawn out as to the manner in which gratia gratia data may be to the advantage of the person receiving them as well as to the utility of others, and how it is that by these graces persons without the graces of the Holy Spirit, yet with the signs and wonders for the good of others. But these are rare and exceptional cases, and real miracles cannot be performed by a sinner in proof of his own personal sanctity or in proof of error, because that would be a deception and derogatory to the sanctity of God Who alone can perform miracles.

Basilian CXLIV. Heroic Virtue (London Oratorian Series.

MIRANDOLA, Giovanni Francesco Pico della, Italian philosopher, nephew of Mirandola, Giovanni Pico della (see next article), b. about 1469; d. 1533. Though very gentle and pious he was drawn into the bitter feud of his family and fell at the foot of the crucifix with his son Albert, killed by his nephew Galeotto II, who had just seized the Castle of Mirandola. His wife and the children of his other son were shut up in dreadful dungeons. At Rome he defended the eclectic Latin style against the Ciceronian style of his nephew. Like his uncle he devoted himself chiefly to philosophy, but made it his object to the theologic, that he is maturity of his, he wrote a detailed biography of his uncle and another of Savonarola. Having observed the dangers
to which Italian society was exposed at the time, he sounded a warning on the occasion of the Lateran Council: “Joannis Francisci Pici oratio ad Leomem X et concilium Lateranense de reformatione Ecclesiae Monasterii (1512)." He was created cardinal on January 1, 1512, and was made a peer of Ferrara.

He was dispatched on missions to Lillio Giraldino when the catastrophe occurred which carried him off. Giraldino commemorated the tragic event in a touching postscript to the "De secularia"

(Ins works, Basle, 1580, I, 640)."

Mirandola, Giovanni Pico della, Italian philosopher and scholar, b. 24 February, 1463; d. 17 November, 1494. He belonged to a family that had long lived in the Castles of Mirandola (Duchy of Modena), which had become independent in the fourteenth century and had received in 1414 from the Emperor Sigismund the sief of Concordia. To devote himself wholly to study, he left his share of the ancestral principality to his two brothers, and in his fourteenth year went to Bologna to study canon law and fit himself for the ecclesiastical career. Repelled, however, by the purely purely religious vocation, he devoted himself to the study of philosophy and theology, and spent seven years wandering through the chief universities of Italy and France, studying also Greek, Latin, Hebrew, Syriac, and Arabic. An impostor sold him sixty Hebrew manuscripts, asserting positively that they were written by order of Eadras, and contained the secrets of nature and religion. For many years he believed in the Kabballah and interpolated its fancies in his philosophical theories. His aim was to reconcile religion and philosophy. Like his teacher, Marsilius Ficinus, he based his views chiefly on Plato, in opposition to Aristotle the doctor of scholasticism at its decline. But Pico was constitutionally a freethinker, and represented a reaction against the exaggerations of pure humanism. According to him, we should study the Hebrew and Talmudic sources, while the best products of scholasticism should be retained. His "Heptaplus," a mystico-allegorical exposition of the creation according to the seven Biblical senses, follows this idea (1512); the book was received as a book of secrets. "De ente uno," with its explanations of several passages in Moses, Plato, and Aristotle; also an oration on the Dignity of Man (published among the "Commentationes").

With bewildering attainments due to his brilliant and tenacious memory, he returned to Rome in 1486 and undertook to maintain 900 theses on all possible subjects ("Conclusiones philosophiae, cabalistica et theologicae"); Rome, 1486, in fol.). He offered to pay the expenses of those who came from a distance to engage with him in public discussion. Innocent VIII was made to believe that at least thirteen of these theses were heretical, though in reality they merely revolved around each of the seven senses of the word. Even such a mind as Pico's showed too much credulity in nonsensical beliefs, and too great a liking for childish and unsolvable problems. The proposed disputation was prohibited and the book containing the theses was interdicted, notwithstanding the author's defence in "Apologia J. Pici Mirandolani, Concordiae comitiis" (1489). One of his detractors had maintained that Kabbala was the name of an impious writer against Jesus Christ. Despite all efforts Pico was condemned, and he decided to travel, visiting France first, but he afterwards returned to Florence. He destroyed his poetical works, gave up profane science, and determined to devote his old age to a defence of Christianity against Jews, Mohammedans, and astrologers. A collection of this work was published after his death ("Disputaciones adversus astrologiam divinatricem," Bologna, 1495). Because of this book and his controversy against astrology, Pico marks an era and a decisive progressive movement in ideas. He died two months after his intimate friend Bitiani, on the day Charles VIII of France entered Florence. He was interred at San Marco, and Savonarola delivered the funeral oration.

Besides the writings already mentioned, see his complete works (Bologna, 1496; Venice, 1498; Strasburg, 1504; Basle, 1557, 1573, 1601). He wrote in Italian an imitation of Plato's "De Republica" and "Laws" ("Aurea familiae epistola"); Paris, 1490) an important study of the history of contemporary thought. The many editions of his entire works in the sixteenth century sufficiently prove his influence.

Nicchos, Mémoires, XXXIV; Straboni, Bibliotheca Moder- na, IV, 9; biography by F. Bocchi in "Storia della letteratura Italiana, VI, part I, 397; Sandusy, A History of Classical Scholarship, II (Cambridge, 1908), 113. His works are appended to those of his uncle in the ed. of Basle, 1601.)

Paul Lejay.

Miridit, Abbey of (Minditariam, or Sancti Alexandri de Orobius), the name of an abbate nullius in Albania, where there formerly stood a Benedictine abbey, now destroyed, dedicated to St. Alexander, martyr. By decree of the Council of Tours the name of its two affiliated parishes, together with five other parishes in the Diocese of Ljes (Alessio, or Alise), were removed from the jurisdiction of the Bishop of Ljes. In 1893 three parishes from the Diocese of Sappa were added, and in 1894 five from Ljes. The country forms part of the Turkish dominions in Europe and is inhabited by Mohammedans and Christians. The Muslims. The Catholics number 16,650, and are under the care of secular and regular clergy. The abbot is chosen from among the secular clergy. The present abbot, Mgr. Primus Docchi, who resides at Orobi, was born at Bulgari, 7 Feb., 1846, and studied at the Propaganda College, Rome. The Franciscans have a parish and a hospital at Gomazza.

Roukin, Ethnographische und statistische Mittheilungen uber Albanien in Petermann' s Mittheilungen (1884), 367 seq.; Miserere Catholicae; Miserereve, Serafinski Periodo, XXXIII (Lavro, 1909), 126. A. L. Gancacvici.

Miserere, the first word of the Vulgate text of Psalm I (Hebrew, II). Two other Psalms (iv and ivi) begin with the same word, and all three continue with the same meaning. Psalms iv and ivi are not included in the Mishnaic or Talmudic compendia, and are not found in any of the old Septuagintic and Latin alphabetic indexes to the (Latin) Psalms they are interdistinguished by the fourth word, which in Ps. i is secundum; Ps. iv, quoniam; in Ps. ivi, mizerere: so that Ps. i will appear as "Miserere... secundum." So liturgically and musically pre-eminent is Ps. i, however, that it is commonly referred to as the Miserere, without further qualification. The psalm has a title which is one of the best authenticated of all, as it is found in the Hebrew, the Greek, and the Latin, and which in the Vulgate reads: "In finem, Psalmus David, Cum venit ad eum Nathan propheta, quando intravit ad Balthabae." This title forms vv. 1 and 2 of the psalm, and refers to the sin of David (II Kings, xi) and the rejoicing of the people when Nathan appeared with the word of God to the father of the prophets, Nathan (II Kings, xii). Some commentators think that the last two verses of the psalm were added in the time of the Captivity. Delitzsch nevertheless considers them quite admissible in the mouth of David, arguing that the Hebrew word for "building" means not only "to rebuild," but "to complete what is being built," and that Solomon's "building" (II Kings, iii, 1) can be regarded as a fulfilment of David's prayer "that the walls of Jerusalem may be built up." (The appended bibliography, which gives the suffrages of some recent Catholic commentators to the traditional ascription, in addition to the opinions of several of the more recent non-Catholic commentators.)

The Miserere has a most prominent place in the Di-
vire Office and in various ceremonies. It is the first psalm at Lauds in all the ferial (week-day) Offices throughout the year, outside of Paschal Time, and in the Stations Office from Septuagint to Palm Sunday inclusive. It holds the same place in the Office of the Dead. It is the psalm chosen for the preces feriales at Vespers for all the weekdays in Lent with the exception of the triduum of Holy Week, for those in Advent, for the ember-days except those of the Pentecost season, and for the vigils, except those of Christmas, Epiphany, the Ascension, and Pentecost. In addition it is said just before the oratio, or prayer, in all the Canonical Hours in the triduum of Holy Week, except the Vespers and Compline of Holy Saturday. As it is also the fourth in order of the seven penitential psalms (q.v.), its times of recitation will be governed by the appropriate rubrics in the Breviary. Its (or an alternative Ps. cxvi, "Te laudate omnes") is said daily in the prayers after dinner (post prandium), except on days when only one meal is taken (in which case the prayers are those styled post cernam, "after supper") and also except the times from Christmas to the Octave of the Epiphany, from Holy Saturday until Low Sunday exclusively, and from Low Sunday until Pentecost exclusively. It is very prominent in the ceremony of the Asperges (q.v.), during which the choir sings the antiphon "Asperges me, Domine, hyssopo," etc. (i.e. Ps. I, verse 8; Vulg., 9), then the verse "Miserere mei, Deus," etc. (i.e. Ps. l, 1; Vulg., 3), then the Gloria Patri, and finally the antiphon "Asperges me," the selection is repeated a number of times, generally with the sacred ministers, the entire Miserere. On Passion and Palm Sundays the Gloria Patri is omitted, and during Paschal Time the antiphon and psalm are "Vidi aquam" and "Confitemini" (Ps. cxvii) respectively.

The Miserere is found in many other ceremonial functions: at the Burial of the Dead, with the antiphon "Exultabunt Domino ossa humiliata," taken from the 9th (Vulg., 10th) verse of the psalm; at the episcopal visitation of parishes; the blessing of a bell; the consecration of an altar-stone; the laying of the corner-stone of a church; the blessing of a church, of a cemetery, of a house, of congregations, and fields; the recitation of the psalm in脑子 or of a profaned cemetery. It is especially prominent in the consecration of a church, when it is first said like other psalms, and afterwards in a more solemn manner, with the antiphon "Asperges" repeated after each group of three verses, during the sprinkling of the altar with holy water. It is a psalm which is absolutely free from excommunication (in foro externo), and by the absolving priest in the case of a deceased excommunicate who had given some sign of contrition before death, the ceremony entitling to ecclesiastical burial. At the Visitation of the Sick the priest may say the Miserere or any other of the first three penitential psalms. When the last three penitential psalms are said by the priest the same verse is repeated after each three verses, unless the priest is said the Miserere ("which is the best suited for obtaining divine mercy for the sick"—de Herdt, "Praxis") and other psalms and prayers. In monasteries it is said during the customary "discipline." It figured prominently in the ancient ceremony of the reconciliation of Penitents on Maundy Thursday, both as one of the seven penitential psalms recited by the bishop in the sanctuary, and as one of the three psalms commencing with Miserere during the prostration of clergy and laity (including the penitents). For an interesting description of this ancient function, cf. the volume entitled "Passiontide and Holy Week," of Gudranger's "Liturgical Year."

The Miserere at the Miserere is recited on the Day of Atonement. It is also found in the Anglican Communion Service. In a fragmentary form it is also prominent, in the selection of some of its most searching verses, for the preces of Prime in the Divine Office; in the verse "Domine labia mea aperiatur," etc. (i.e. Ps. cxvii, 11), in the Office commonly called Prime, in the use of the antiphon "Asperges," and the verse "Miserere" in the Communion of the Sick, and of the antiphon alone at Extreme Unction (de Herdt, "Praxis"); in the selection of various verses for use as antiphons in the Office, and for an Offertory, a Communion, and an Alleluia—verse at Mass. The partial use made of it at Mass and Office has been minutely described in Bishop Mynheer's "Essays on Divine Office work," "Carmina Scripturamur" (Strasburg, 1907), 134-36.

As remarked above, the Miserere is not only the first psalm at Lauds in the ferial Office, but is also repeated just before the oratio at the end of Lauds in the triduum of Holy Week. The thought of giving to this psalm a more traditional name than the ordinary plain-song used for the psalms in general, and of making it serve as a climax to the dramatic ceremonial of the Tenebrae, is probably due to Leo X. In 1514 the Miserere was sung to a falsobordone. The oldest example extant is that of Costanzo Festa (1517), which alternated verses in three- and four-part counterpoint with the voices singing in unison. This interestingly contrasted setting or method of treatment formed the type for imitation ever since.

The musical settings of the Miserere vary very much. Three of them (Bain's on Wednesday, Bais's on Thursday, and Allegri's on Friday afternoons) are especially famous because on one year only they are permitted to be repeated in the Chapel during the Tenebrae. Among the numerous estimates recorded by musicians and travellers on these three settings, mention may be made of Mendelssohn's, Cardinal Wiseman's, Madame de Staël's (in "Corinne"), Mr. Rockstro's (in Grove, Dictionary of Music), and especially of the young Mozart's sincerest tribute in the famous copy of the new Holy Week Music at one hearing of Allegri's Miserere with corrections made at a subsequent hearing). In the second of his "Four Lectures on the Offices and Ceremonies of Holy Week," Cardinal Wiseman gives a comparative estimate of these settings and, in accord with all who have heard them, awards the palm of supremacy to Allegri. His description is glowing and enthusiastic, but that of Mr. Rockstro is both more judicious and more precise and detailed in respect of Allegri's Miserere, of which he gives many illustrations, and which he defends against certain criticisms. (Cf. in the same dictionary articles on Bais, Baim.)

P. Maria, Translation of the Psalms and Canticles with Commentary (St. Louis, 1901), 158-90, gives a bi-columnar translation from the Vulgate and the Hebrew Masoretic text, 158-90: With the exception of the last two verses, probably added to the Psalm during the Babylonian captivity, there is no valid reason for assigning this Psalm to a poet of a later age, who undertook to set forth the thoughts and emotions of David, on the occasion mentioned in the title." D'EtRAGUES, Les Psalms traduits de l'Hebreu (Paris, 1904), 146-51, describes it to David: "Verses 20-21 were undoubtedly added after the return from captivity in the time of Ezechias when he again raised the walls of the temple. The congressional acclamation praises the work of Ps. 92 in irreproachable learning. Against the Davidic authorship: CHEVRE, The Book of Psalms (New York, 1892), 144-149; BONNER, A Study of Psalms (Cambridge, 1901), bks. II, III, 294-95, briefly disposed of some objections to the Davidic authorship and allows weight to others; LECLERCQ, Le Livre de Psalms, 150-54; KENNER, The Psalms, etc. (Baltimore, 1861), very condensed, but satisfactory; WOLGER, Psallit Sapienter (Leipzig, 1903); FREIBURG, Psalme 102 (Freiburg, 1903). For an extensive account of the mystical and liturgical uses of the Miserere—Metrical translations into English: BASHWAHR, The Psalms and Canticles in English, Proposes the use of metrical versions of the Psalms by Catholics, prescribes the use of 105 (to 108) metrics of the Psalms of David in English Metre (London, 1898), 105-9, gives two translations into English verse: THE PEALE, A revised metrical version of the Scottish, The Metrical Psalter of the Scots of the Psalms of David in English metre (Dublin, 1880), 68.—Latin metrical versions: GROSSU
CRANFORD, Paraphrasis Psalmorum Davidis Poetica (Edin- burgh, 1736), a version of nineteen Psalms in the Stile of the Sapphic and Pindaric Odes, and a Mass Sacro (Edinburgh, 1739), 44, a version into thirty-nine elegiac couplets.—MATHEW, The Psalms of David. (London, New York, 1889-98, 2 vols.) argues that the text is a representation of the Psalms' view of sin as being "infrastural." A life of disorder existing in the midst of order. TAYLOR, David, King of Israel (New York, 1874), 252-73, argues for the sincerity of the Psalmist and includes the anecdote of Voltaire's attempt to parody the Messiaens. SCHULTE, Conspectus, Benedicite (New York, 1907), 2 vols., gives an overview of the ceremonial and rubrical details of many functions in which the Psalms are included. GUGGENBERGER, Guide to Catholic Music (St. Francis, Wis., 1905), gives (202) author, voices, and grade of twenty-four settings for Burials of the Dead, and (200-01) of twenty-eight settings for Lauds of Holy Week.

H. T. HENRY.

MISERICORDE

Misericorde, Congregation of the Sisters of, a congregation of women founded 16 January, 1848, for the purpose of procuring spiritual and corporal assistance for poor matrons and unfortunate girls. The foundress, Madame Rosalie Jetté, in religion Mother Mary of the Nativity, declining to serve as superior, Sister St. Jane de Chantal held that office. The institution was approved by Pius IX, 7 June, 1867, and the constitutions, revised according to the latest rules of the Roman Congregations, received the approbation of Pius X, 21 March, 1905. The community is governed by a superior general, assisted by four councilors, a secretary, and a bursar, who reside at the mother-house, Montreal, Canada. All branch houses are under the control of the general administration. Each house is governed by a local superior and two assistants forming her council; in each a bursar has charge of property, and a chaplain is appointed by the council. There is one novitiate at Montreal, although the rules authorize more if necessary. Candidates are received from all parts of the world. The novitiate lasts a year, during which the novice is instructed in the constitutions of the order and other matters of the religious life; a supplementary noviciate of six months, in which the novice becomes familiar with the work of the order, is given before taking the vows, renewed annually during a period of five years and then made perpetual. The sisters also conduct Magdalen asylums. In receiving patients no discrimination is made in regard to religion, colour, or nationality. After their convalescence, those who desire to remain under a special religious direction are accepted and are known as "Daughters of St. Margaret." They follow a certain rule of life but contract no religious obligations. Should they desire to remain in the convent, after a period of probation, they are allowed to become Magdalen and eventually to make the vows of the Magdalen order. The congregation celebrated its five hundredth anniversary 16 January, 1953.

At present the congregation numbers professed sisters, 189; novices, 23; candidates, 10. Branch houses have been established throughout Canada and the United States. The mother-house contains 60 sisters; with this is associated an Orphan Asylum with 7 sisters, 3 infants, 525; also a hospital with 5 sisters, 25 patients. A modulation of 15 patients at the Sault-au-Recollet, P. Q., the sisters conduct a home for aged and retired priests and an Orphan Asylum with 15 sisters, 10; attendants, 15; priests, 5; orphans, 40. The hospital at Ottawa, founded in 1879, was destroyed by fire in 1900. The new building, completed in 1904, accommodates sisters, 10; nurses, 5; patients, 100. A house was established at Winnipeg, Manitoba, in 1898, of which a branch was founded at St. Norbert, Man., in 1904. The two houses have sisters, 19; trained nurses, 15; attendants, 25; average number of patients and children during the year, 700. In 1900 a house was opened at Edmonton, Alberta, with sisters, 12; trained nurses, 6; average number of patients and children during the year, 520. In 1905 the sisters have a large hospital in New York City, containing sisters, 19; average number of patients during the year, 496. From this, in 1901, was established the Orphan Asylum and Kindergarten of St. Mary's of the Angels, at Hartdale with sisters, 10; attendants, 20; average number of children during the year, 150. In Green Bay, Wis., a house was established in 1900 with sisters, 13; nurses, 13; average number of patients and children during the year, 450. In Oak Park, III., a hospital was founded in 1905 with sisters, 15; patients, 712. The establishment at Milwaukee contains accommodations for sisters, 9; patients, 112.

Missisco and Calanca, Prefecture Apostolic of (Mesauincu et Calancu), in the canton of Grisons, Switzerland, comprises the valley of the Moesa, which starts at the pass of San Bernardino and flows into the Ticino, and also the valley of Calanca, through which the Calasanca flows. The population is 6027, of whom 6011 are Catholic (5945 Italians). For administrative purposes the prefecture is divided into two chapters, both of which are subject to an episcopal Vicar of the See of Chur. In the chapter of Missisco, which embraces the valley of Moesa, there are 8 parishes, 5 Capuchins and 4 secular priests. In the chapter of Calanca there are 11 parishes, with 5 Capuchins and 3 secular priests. At Maloja (Missisco) there is a canonic with a prior and six canons of whom three reside in Missisco and three in San Vittore. At Roveredo there is a Catholic Institute of St. Anna, under the Fathers of the "Piccola Cassa della Providenza". The prefecture was established in 1635 at the suggestion of Bishop Joseph Mohr of Chur, at whose instance the Propaganda sent Capuchin missionaries to the Italian-speaking inhabitants of Grisons valleys of Missisco and Calanca. Capuchins from Milan were the first missionaries; from 1790-1802 Novara and then until 1850 Pavia Capuchins had charge; since then the mission has been administered by the Capuchins of Ticino. The vice-prefect, Father Hilariu Odelino, resides at Canale.

JOSEPH LINZ.

Missal (Latin Missale from Misca, Mass), the book which contains the prayers said by the priest at the altar as well as all that is officially read or sung in connexion with the offering of the holy Sacrifice of the Mass throughout the ecclesiastical year.

The present Roman Missal, now almost universally used in the Catholic Church wherever the Latin Rite prevails, consists essentially of two parts of very unequal length. The smaller of these divisions containing that portion of the liturgy which is said in every Mass, the "Ordo Missae" with the prefaces and the Canon, is placed, probably with a view to the more convenient arrangement of the offices of the Mass, in the volume immediately before the proper Mass for Easter Sunday. The remainder of the book is devoted to those portions of the liturgy which vary from day to day according to feast and season. Each Mass consists usually of Introit, Collect, Epis- tle, Gradual and Alleluia or Tract, Gospel, Offertory, Secret, Communion, and Post-Communion, the passages or prayers corresponding to each of these titles being commonly printed in full. The beginning of the volume to the "Ordo Missae" is devoted to the Masses of the season (Proprium de Tempore) from Advent to the end of Lent, including the Christmas cycle. After the "Ordo Missae" and Canon follow immediately the Masses of the Easter season. The Missal for the day after Pentecost. Then come the proper Masses of the separate festivals (Proprium Sanctorum) for the ecclesiastical year; while these are often printed in full,
it may also happen that only a reference is given, indicating that the larger portion of each Mass (sometimes everything except the collect) is to be sought in the Common of Saints (Commune Sanctorum), printed at the conclusion of the Proprium Sanctorum (Proper of Saints). This is supplemented by a certain number of votive Masses, among the rest Masses for the dead, and a collection of sets of collects, secrets, and post-communions for special occasions. Here also are inserted certain benedictions and other miscellaneous matter, while appendixes of varying bulk supply a number of Masses conceded for use in certain present day, reproducing in substance the manuscript forms of the latter part of the Middle Ages, has resulted from the amalgamation of a number of separate service books. In the early centuries, owing to the lack of competent scribes, the scarcity of writing materials, and various other causes, economy had greatly to be studied in the production of books. The book used by the priest at the altar for the prayers of the Mass usually contained no more than it belonged to him to say. It was known commonly as a "Sacramentary" (Sacramentarium), because all its contents centred round the great act of the conserra-

localities or in certain religious orders, and arranged according to the order of the calendar. To the whole book is prefixed an elaborate calendar and a systematized collection of rubrics for the guidance of priests in high and low Mass, as also prayers for the private use of the celebrant in making his preparation and thanksgiving. It may be mentioned here once for all that the collection of rubrics now printed under the respective headings "Rubricae generales Missalis", "Ritus celebrandi Missam", and "De Defectibus circa Missam occurritibus" are founded upon a tractate entitled "Ordo Missae" by John Burchard, master of ceremonies to Innocent VIII and Alexander VI, at the close of the fifteenth century. They are consequently absent from the first printed edition of the "Missale Romanum" (1474).

**Origin of the Missal.**—The printed Missal of the
step in this evolution seems to have been furnished by the introduction of certain smaller volumes called "Libelli Missae" intended for the private celebration of Masses of devotion on ordinary days. In these only one, or at most two or three Masses, were written; but in those of the curious and small red booklets that the monks carried with them when going on their pilgrimages, all the service had to be said by the priest and all was consequently included in the one small booklet. A typical example of such a volume is probably furnished by the famous "Stowe Missal". This little book of Irish origin of which the leaves measure only five and a half by four inches, is nevertheless one of our most priceless liturgical treasures. The greater part is devoted to a single Mass of the Blessed Sacrament, in which the Epistle and Gospel are inserted entire as well as a number of communion anthems, the private preparation of the priest, and the other matter including rubrical directions in Irish. Thus, so far as Mass was concerned, it was in itself a complete book and is probably the type of numberless others—fragments of similar Irish "libelli Missae" are preserved among the manuscripts of St. Gall—which were used by missionaries in their journeys among peoples as yet only half christianized.

The convenience of such books for the private celebration of Mass where sacred ministers and choir were wanting, must soon have made itself felt. When one thinks that a single monk could supply the liturgical needs of Masses which in the eighth and ninth centuries every large monastery was called upon to say for deceased brethren in virtue of its compacts with other abbeys (see details in Ebner, "Gebeta-Verbrüderung", Ratisbon, 1890), it appears obvious that there must have been great need of private Mass-books. Consequently the custom soon became common to adapt in the larger sacramentaries to the use of priests celebrating privately by inserting in some of the "misae quotidiane votive et diverse", or sometimes again in the "commune sanctorum" such extracts from the "Graduale", "Epistolare", and "Evangelarium" as made these particular Masses complete in themselves. Examples of Sacramentaries thus adapted may be found as early as the ninth century. Ebner for instance, appeals to a manuscript of this date in the capitolar library of Verona (No. 86) where in the "Misae votiva et diverse" the choral passages are written as well as the prayers. Whether the word Missale liber was specially employed for service books for private use at that time we are not in a position to determine. Aecul in writing in 801 certainly seems to contrast the term "Missalis libellus" with what he calls "libelli sacratorii" and with "sacramentaria maiora" (see Mon. Germ. Hist. Epist., IV, 370); but the phrase was older than Aecul, for Archbishop Egbert of York in his "Dialogus" speaks of the dispositions made by him for the observance of the ember-days in "Antiphonarum cum missalisibus suis" which he had consulted at Rome (Haddan and Stubbs, "Councils", III, 421), where certainly the language used seems to suggest that the "Missalia" and "Antiphonaria" were companion volumes separately incomplete. Certainly it may be affirmed with confidence that what we now know as the "Missale plenum", a book like our present Missal, containing all the Epistles, Gospels, and the choral antiphons as well as the Mass prayers, did not come into existence before the year 900. Dr. Adalbert Ebner, who spent immense labour in examining the liturgical manuscripts of the libraries of Italy, reports that the oldest example he has known of this tenth century in the Ambrosian Library at Milan; but although such books are of more frequent occurrence from the eleventh century onwards, the majority of the Mass-books met with at this period have still only an imperfect claim to be regarded as "Missalia plena".

We find instead a great variety of transition forms belonging to the eleventh, twelfth, and thirteenth centuries which may be referred in particular to two distinct types. In the first place the sacramentary, lectionary, and antiphonary were sometimes simply tied up together in one volume as a matter of convenience. Codex 101 in the library of Monza offers an example: the three component elements are all of the ninth or tenth but even earlier than this in an extant notice of the visitation of the Church of Vicus (Vie-St-Remy) in 859 by Bishop Hinemar of Reims we find mention of a "Missale cum evangelis et lectionibus seu antiphonario volumen 1". As a rule, however, the fusion between the original sacramentary and the books used by the readers and the choir was of a more tentative nature and the process of amalgamation was a very gradual one. Sometimes we find sacramentaries in which a later hand has added in the margin, or on any available blank space, the bare indication, consisting of a few initial words, of the Antiphons, the Epistles, and the Gospels belonging to the particular Mass. Sometimes the "Commune Sanctorum" and the votive Masses have from the beginning included the passages to be sung and read written out in full, though the "Proprium de Tempore" and "de Sanctis" show nothing but the Mass prayers. Sometimes again, as in the case of the celebrated Leodric Missal in the Bodleian, the original sacramentary has had extensive additions in the form of Masses which include the parts to be read and sung. In one remarkable example, the Canterbury Missal (MS. 270 of Corpus Christi, Cambridge), a number of the old prefaces of the Gregorian type have been erased throughout the volume and upon the blank spaces thus created the proper Antiphons from the Graduale, as sometimes also the Breviary lessons for each Mass, have been written entire. In not a few instances the Gospels may be found included in the Mass-book but not the Epistles, the reason probably being that the latter could be read by any clerk, whereas a properly ordained deacon was not always available, in which case the priest at the altar had himself to read the Gospel. Regarding however this development as a whole it may be said that nearly all the Mass-books written from the latter half of the thirteenth century onwards were in the strict sense Missal plenum conforming to our modern type. The determining influence which established the arrangement of parts, the selection of Masses, etc., with which we are familiar to-day, seems to have been the book produced during the latter half of the thirteenth century under Franciscan auspices and soon made popular in Italy under the name "Missale secundum conuuestudinum Romanse curis" (see Radulphus de Rivo, "De Canonum Observatione", in La Bigne, "Bib. Max. Pp.", XI, 455). The "ARIESSES OF MISSAL BOOKS through the "Missale secundum conuuestudinum Romanse curis" obtained great vogue and was destined eventually to be officially adopted and to supplant all others, throughout the Middle Ages every province, indeed almost every diocese, had its local use, and while the Canon of the Mass was everywhere the same, the prayers in the "Missale Romanse" and the "Commune Sanctorum" and the "Proprium de Tempore", were apt to differ widely in the service books. In England especially the Uses of Sarum and York showed many distinctive characteristics, and the Ordinary of the Mass in its external features resembled more the rites at present followed by the Dominicans than that of Rome. After the Reformation many of the rubric alterations introduced were produced both in England itself and especially at Paris and other French cities for use in England. Of the Sarum Missal alone nearly seventy different editions were issued between that of 1487 (printed for Caxton in Paris), and that of 1557 (London). After Elizabeth's accession no more Missals were published, but a little book entitled Missale parvum pro Sacerdoti-
FRAGMENTS OF AN EGYPTIAN LITURGY OF THE SEVENTH OR EIGHTH CENTURY
AFTER A COPY BY WALTER CRUM, WHO RECOGNIZED THEIR LITURGICAL CHARACTER
bus in Anglia, Scotia, et Ibernia itinerantibus" was printed two or three times towards the beginning of the seventeenth century for the use of missioners. Its size allowed it to be carried about easily without attracting observation, and as it contained relatively few Masses, only those for the Sundays and the principal feasts, it recalled in a measure the "libelli Missae" of the Anglo-Saxon and Irish missionaries nine centuries earlier. Even at this date the peculiarities of the Sarum Rite were not retained in the Canon and Missale of this "Missale parvum" were all Roman with the exception of one special Mass of the Holy Name of Jesus which is described in the 1616 edition as "taken from the Missal according to the Use of Sarum". Moreover, just as the Roman liturgy came in this way to prevail in England, so in France and throughout the rest of Europe the local use has for a century and more been superceded by degrees, two of the principal influences at work being no doubt the advantage of uniformity and the authority and relative purity of the Roman Missal, as authoritatively revised and improved after the Council of Trent.

The first printed edition of the "Missale Romanum" was republished by the Henry Bradshaw Society in two volumes (1899 and 1907), and was produced at Milan in 1474. Numerous editions followed, but nothing authoritative appeared until the Council of Trent left in the hands of the pope the charge of seeing to the revision of a Catechism, Breviary, and Missal. This first committed to the care of Cardinals Sede Vacante and Sede Vacante, respectively, the work of this revision was carried out by the sixteenth-century Bishops of St. Asaph, deprived of his see upon the accession of Elizabeth, and Julius Poggio, who was published in 1870. St. Pius V published a Bull on the occasion, still printed at the beginning of the Missal, in which he enjoined that all diocesan and religious orders of the Latin Rite should use the new revision and no other; especially in the view of the Council of Trent, made in the session of two hundred years. In this way the older orders like the Carthusians and the Dominicans were enabled to retain their ancient liturgical usages, but the new book was accepted throughout the greater part of Europe. A revised edition of the "Missale Romanum" appeared in 1694 accompanied by a brief of the same date on the constitution of the Society of Jesus and the use of the Missale Romanum, which were published in the antiphonal passages of the Pian Missal had been replaced, through the unauthorized action of certain printers, by the text of the newly edited Vulgate. Another revision bearing even more upon the rubrics followed, with the result that the text was rendered more understandable in the nineteenth century, owing largely to the exertions of Dom Guéranger, the Benedictine liturgist, a number of the dioceses of France which had up to this time persistently adhered to their own distinctive use upon a more or less valid plea of immemorial antiquity, made a sacrifice to uniformity and accepted the "Missale Romanum" ordered by the suffering Pope Clement X. The Archbishop of Paris gave his official approval a year later, 24 April, 1626, to the contract of foundation, and on 4 Sept., 1626, before two notaries of Châtelet in Paris, Vincent and his first companions declared that they had joined together "to live in a community or confraternity and to devote themselves to the salvation of the poor country people". Only three priests signed this declaration with Vincent de Paul: Du Coudray, Portail, and de la Salle. Very soon afterwards four other priests joined the little company: John Bégu, of the Diocese of Amiens; Anthony Lucas, of Paris; John Brunet, of the Diocese of Clermont; and John d'Hargny, of the Diocese of Noyon. The King of France, Louis XIII, added his seal on 11 July, and the act of foundation already approved by ecclesiastical authority the preceding year. In May, 1627, he issued letters patent, allowing the missionaries to form

---

**Mission, Congregation of Priests of the.** — A congregation of secular priests with religious vows founded by St. Vincent de Paul. The members add the letters C.M. to their name. As with many other communities, an appellation from the founder or the place they dwell in has superseded the original title. Thus in France and in almost all countries they are called Lazarists, because it was in the Priory of St. Lazare in Paris that St. Vincent de Paul dwelt and that he established his principal works. In the Irish province, which includes practically all English speaking countries except the United States, they are called Vincentians, and this name is gradually replacing that of Lazarists in the United States. In countries whose language is Spanish they are called Paules. This appellation, like the preceding, is obviously derived from the name of the founder. The name Congregation of the Mission indicates their first and chief object of activity.

**Origin of the Congregation.** — In the beginning of the year 1617, Vincent de Paul was at the Château de Folleville in Picardy with the family of M. de Gondy, Count de Joigny, General of the Galleys of France, and had charge of the education of M. de Gondy's sons, one of whom became the celebrated Cardinal de Retz, Coadjutor of Paris. Vincent had visited the families of objects for the building of the presbytery of the parish church of the locality in the neighbourhood. As the result of a sermon which he preached on the 25 Jan., 1617, in the church of Folleville, Vincent, with two Jesuit Fathers, began, at Mme de Gondy's request, to preach to and instruct the people of the neighbouring villages on her estates. Thus began the work which was to occupy Vincent de Paul for the next eight years. In 1624, the King of France, Louis XIII, gave his approval of the "Mise de Mme de Gondy wished to make a foundation that would secure a mission every five years for the rural population of her extensive estates. The Oratorians and Jesuits being unable to undertake this work, she urged Vincent to gather together some zealous priests and organise missions for the scattered country people. Only three priests signed this document: Vincent de Paul: Du Coudray, Portail, and de la Salle. Very soon afterwards four other priests joined the little company: John Bégu, of the Diocese of Amiens; Anthony Lucas, of Paris; John Brunet, of the Diocese of Clermont; and John d'Hargny, of the Diocese of Noyon. The King of France, Louis XIII, added his seal on 11 July, and the act of foundation already approved by ecclesiastical authority the preceding year. In May, 1627, he issued letters patent, allowing the missionaries to form
a congregation, to live in community, and to devote themselves with the consent of the bishops to works of charity. Community life being established, St. Vincent could no longer hold as his own property the Collège des Bons Enfants, which was annexed to the mission by a decree of the Archbishop of Paris granted 8 January, 1632. The court of Parishes ordered the registration of the letters patent of 1627 which the opposition of certain pastors of Paris had delayed, and pontifical authorization was granted by the Bull "Salvatoris Nostri" of Urban VIII, 12 Jan., 1632. In 1632 an important change took place in the installation of the new community. On 8 January, Vincent de Paul took the court of the house of St. Lazare, then in the outskirts of Paris. It was an immense priory where only eight regular canons of St. Victor remained and which Prior Adrian Le Bon, seeing the great good that Vincent de Paul and his missionaries were accomplishing, had resolved in concert with his religious to transfer to him. An agreement was entered into between Adrian Le Bon and his religious on one side, and Vincent de Paul acting in the name of his community on the other, on 7 Jan., 1632, and the next day the Archbishop of Paris granted the transfer of the house of St. Lazare, and came himself to introduce Vincent. Vincent left some of his priests at the Collège des Bons Enfants, which was destined to become the novitiate under the name of St. Vincent at Paris. The house of St. Lazare became the headquarters of the Congregation of the Mission.

The Congregation of the Mission, according to the desire of its founder and from a canonical standpoint, is a "congregation of secular clergymen"; this is the term the Sovereign Pontiffs use; for instance, Benedict X, in the Bull of the Beatification of St. Vincent de Paul calls him "Congregationis presbyterorum secularium Missionis fundator" (13 August, 1729). To ensure its permanency St. Vincent surrounded his work with safeguards including vows, but on the other hand, for many reasons, was careful to prevent its becoming a religious order: Meanwhile the missionaries extended their labours over France and in foreign lands. They undertook labours of various kinds. But the exact form of the congregation had not yet been determined. Vincent saw communities around him, which he used to say, people entered and left like a well conducted hotel. In 1642 and 1651 he held two assemblies of the priests who had been long engaged in the mission. The decision for the establishment of the Congregation of the Mission was made at the second assembly on 22 Sept., by the Brief "Ex commissio Nobis", the constitution of the community. The Brief declares that at the end of two years of probation, simple vows are to be taken, but that nevertheless the community belongs to the secular clergy. That there might be no question of changing the nature of his institute, Vincent did not establish a novitiate for the aspirants to his community, but a seminary, which is known as internal, to distinguish it from the diocesan or external seminaries. He also made it a rule that his missionaries wear the dress of secular priests; in a word that they should be distinguished, in the exercise of the apostolic functions, only by their organized effort to serve God (ed. Maurice, "St. Vincent", I, p. 253, ed. 1886). Such is the canonical status of the Congregation of the Mission.

II. Rule and Government.—There was, moreover, need of rules according to which the society he had just constituted should perform its functions. Vincent de Paul wished to test first, by experience, what circumstances might gradually require among the missionaries as to their manner of life and their work. Thus he was 82 years old when, 17 May, 1668, he distributed to the community the little book of "Common Rules or Constitutions". From these rules can be seen the elements of which the congregation is made up, the life it leads, its spirit, and the means it employs in its work with the poor. The constitutions of the congregation contain the constitutions of the British Congregation of the Mission, and also of all other congregations presented of the same name. The constitutions are divided into three parts: the general constitutions, those relative to the religious, and others relative to the laymen, the clergy, and the young people. The constitutions of the Congregation of the Mission are the expression of the "rule of life" of the life of the bishop and of the entire congregation. Each one shall be employed in preaching the Gospel to the poor, especially to poor country people, in helping ecclesiastics to the knowledge and virtues requisite for their state.

During the life of the founder, establishments were made not only in France but also in Poland and in Italy. The congregation undertook mission work in the North, in the Hebrides, in the Tropics, in Barbary and Madagascar. It was under Vincent (in 1642) that the houses of the congregation were grouped in provinces, each having at its head a provincial superior called viscount. The same year a rule was introduced for the holding of general assemblies, for the election of the superior general, for the nomination of his advisers under the name of assistants, and for other matters of importance. The following establishments were founded in St. Vincent's lifetime: in Paris: Bons Enfants (1625) and St. Lazare (1632); Toul: seminary and mission centre (1835); Notre
Dame de la Rose: missions (1637); Richelieu: parish and missions (1638); Annecy: seminary and mission (1639); Crécy: missions (1641); Cahors: seminary, parish, and missions (1643); Marseilles: mission (1643); Sédan: parish and mission (1643); Saumur: mission (1644); Toul: seminary and missions (1644); Le Mans: seminary and missions (1645); Saint-Méen: missions (1645); Paris: St. Charles Seminary (1645); Treguer: seminary and missions (1648); Montauban: seminary and missions (1652); also foundations in Rome (1642), Genoa (1645), Turin (1646), and Alger, Tlemcen (1646), Madagascar (1648). At the death of its founder the congregation numbered 500 members.

The government of the congregation is very simple. It consists of the superior general, and four assistants, aided by the procurator general and secretary general. Although these officials are chosen by a majority vote of a general assembly, which is composed of the superiors of the several provinces and two delegates from each province, elected by secret ballot in the provincial assemblies. Each house in domestic assembly selects also by secret ballot, a delegate to accompany the superior to the provincial assembly. The provincial government is made up of a visitor appointed by the superior general and of consultors approved by him. In the provinces the assistant superiors are selected by the provincial council, and presented to the superior general who chooses one to govern the province. Local superiors also are appointed by the superior general, with the advice of the visitor and his council. A general assembly is held every twelve years to legislate for the congregation. This is the only legal body in the congregation.

An assembly is held every six years made up of the general officers of the congregation, and of one delegate from each province. This body may elect to vacancies among the superior general's assistants and may also decide minor matters of discipline. Decrees of general assemblies are binding on the entire congregation. Their interpretation rests with the superior general and his council. The office of superior general is held for life, or until his resignation. Provision is however, made in the "Constitutions" for his removal from office for crime, or perpetual inability to govern. Visitors remain in office at the discretion of the superior general. In like manner local superiors are removable by the superior general, but however, must be approved by the superior general, who alone has the right to appoint and remove superiors.

III. HISTORY.—From St. Vincent until the Revolution.—From St. Vincent's death until the Revolution there were nine superiors general, whose part was to complete the organization of the new society and to forward the various works for which it was instituted. These superiors general were: René Alméras (1661), Edmund Jolly (1673), Nicolas Pierron (1697), Francis Watel (1703), John Bonnet (1711), John Couty (1726), Louis Debras (1747), Antoine Jacquier (1768-1789).

Félix Cayla was at the head of the congregation during the French Revolution. It was during the general assembly of 1786 that a "Constitution of Rules" was drawn up. They were discussed and accepted by the general assembly held that year from 15 July to 1 Sept., and were approved in October following by the Archbishops of Paris, Harduin de Pérez, with authority granted him by the Bull of Urban VIII, in 1693. The constitution of 1786, the "superior general and the government of the whole Congregation of the Mission," these are the general constitutions in force at the present day. Alméras is responsible for the compilation of an abridgment of these constitutions which has a still greater authority in the sense that this condensed edition under the name of "Summary," or, in Latin "Constitutiones selectae," discussed in the general assembly of 1668 and approved by it, has been submitted to the authority of the Holy See. The text was examined and changed in some points by the examiners appointed by the pope. In this form it has been cited in its entirety in the Bull of Urban VIII, 17 January, X of 2 June, 1670. This is the chief act of internal legislation for the Lazarists. It has been published in the "Acta apostolicae in gratiam Congregationis Missionis" (Paris, 1876). Alméras secured the drawing up of the rules for the offices, which were sent to all the houses in 1670. Edmund Jolly completed this work.

Bonnet, elected in 1711, had the longest and fullest generalship of all the superiors general before the Revolution. He had keen intelligence and great capacity for work. A brief sketch of his life and character is given in the preface to a collection of meditations which he composed and Collet published. He had to pass over his community through the difficult period of Jansenism. His congregation in charge of a great number of seminaries, and hence in close contact with a great number of bishops whose tendencies were very doubtful, was indeed in a delicate position. Rome condemned Jansenism, and Bonnet, regardless of the inconveniences his community might suffer, here and there, as a consequence, he firmly the congregation and expelled from the congregation men otherwise most distinguished such as Humbert and Philopold. After him, Couty and Debras showed themselves equally faithful and courageous in the doctrinal difficulties which still continued. The Congregation of the Lazarists had sometimes to suffer for this fidelity: for instance at Auxerre all the directors of the seminaries were placed under interdict by de Caylus, an imperious bishop, a friend of the Jansenists, but they were reinstated by de Condorcet, his successor (see Migne, "Dictionnaire des Ordres Religieux," II, 796). The Lazarists held firmly to the side of Rome. One of them, Saurdi, superior of the seminary of Avignon, published an important work "De Suprema Romani Pontificis auctoritate" (1747), which passed almost in its entirety into the work of Abbé, afterwards Cardinal, Vellécourt, on "The Rights of the Holy See." Another Lazarist, Peter Collet, produced among other works, a theology of merit, which made him the butt of various attacks. In 1764 appeared a "Denunciation" of the author's title. Collet addressed to the Bishop of Troyes by a great number of ecclesiastics of his diocese (120 pp. duodecimo, 1764). The clergymen who signed it numbered one hundred and nine says an anonymous note. They accuse Collet of inclining scandalously towards a lax morality. The period of the French Revolution was approaching. The superior general since 1788 was Félix Cayla, a man of great ability. Elected as the first alternate for the deputation of the clergy of the National Assembly, he had in fact to take part in it because of the departure of one of the ecclesiastical deputies, and he refused at the tribunal of the assembly the oath for the civil constitution in 1791.

When St. Vincent de Paul died in 1660 the secular clergy of Paris had a solemn service at which the preacher, Henry de Maupas du Tour, Bishop of Puy, who had been for many years in very close intimacy with Vincent did not hesitate to take as his text; "Whose praise is through all the churches" (II Cor., viii, 18). Abbe, in the history of Religion, four years later, declared that the work founded by this humble priest had already extended most widely and through his congregation would spread still more.

(1) Missions.—The end of the sixteenth and the beginning of the seventeenth century was for France a half century of political and religious anarchy. The clergy of the large cities, where there were universities,
were cultured, but the rural clergy were ignorant and neglected their flocks, who, in face of the disorders created by the conflict between the Protestant Reformation and the Catholic Church, were losing their faith. Vincent de Paul, deeply concerned about this situation, launched a campaign to train priests and religious to serve in the countryside. His goal was to restore faith and ensure the spiritual welfare of the people. He was supported by his brother, Louis de Paul, who became a priest and helped him in his mission.

The first mission of the Lazarists was in the suburbs of Paris and in Picardy and Champagne. The method and rule given by St. Vincent de Paul has been preserved for us by Abelly, a contemporary biographer, "and which he wished his spiritual sons to observe most faithfully; to give all the instructions and render all services gratuitously without being in any way subject to charges," and this the priests of the Mission have inviolably observed. It was for this reason that Vincent de Paul would not agree to the establishment of a mission house unless it had a sufficient foundation to allow the missions to be given gratuitously. In the missions, indeed, where there are no stipends it has been the custom of St. Vincent's missionaries to accept whatever offering might be made them, but this usage is confined to English speaking countries, elsewhere this most disinterested custom is in full vigour. The fruits of these missions were very marked and many bishops desired to procure this beneficial religious service for their dioceses. St. Vincent, therefore, was appointed Bishop of the Congregation, and, while he was at the Collège des Bons Enfants, that is to say from 1625 to 1632, St. Vincent himself gave one hundred and forty missions.

In 1638 Louis XIII wished Vincent to have his missionaries give a mission at St. Germain-en-Laye and Pau. St. Vincent, however, refused the request, and the following year offered many excuses but to no avail. He recommended his missionaries to preach as simply as at court as they did in the rural districts, having nothing in view but the good of souls. The mission was a complete success and Anne of Austria, a few years later, 1641, asked for another in the same place, and under the same conditions. At this time, every third year, a visitation of the Congregation of the Mission was made by St. Vincent himself.

"A mission was given among the banditti and these wretched people were converted by the grace of God." Elsewhere he generalizes: "Of all the means which the Almighty has left to mankind for the correcting of their lives there is none that has produced effects more striking, more multiplied and more marvelous than the establishment of missions. The missions founded by St. Vincent and his missionaries and the spiritual exercises of the Lazarists have done for religious and the clergy and for individuals among the laity, the missions as organized by the Lazarists have done for the people at large. Vincent fully appreciated the value of retreats and his house and the houses of his sons have always been open to laymen and clergy for retreats. From their foundation to the present time insurmountable obstacles have been given throughout the Catholic world and the pioneers in the field have done a goodly share of the work. It has been, however, earnestly pursued by almost all the active orders and, especially in recent years, by zealous members of the diocesan priesthood. St. Vincent always insisted that this is the chief work of his community and should be his only task and his only members.

From 1652 to 1660 more than seven hundred missions were given from the house of St. Lazare alone. The number of those given by the missionaries in various dioceses of France cannot be reckoned. (2) Parishes and Chapels.—It is only with regret that the reader is obliged to omit the mention of the chapels and parishes. For they wish to be free to go here and there on missions to give the help peculiar to their ministry, and by preaching and hearing confessions to revive if need be or maintain the good effects of the work of the parish priests. They accepted the charge of parishes and chapels only in two circumstances: when they could make of these parishes a residence for other missionaries who would go out preaching missions, or when circumstances made it impossible to refuse. An example of these circumstances is the parish of Richelieu founded by the Cardinal of that name, minister of Louis XIII, and the parish of Sedan. In 1638 Cardinal Richelieu wished to establish the Lazarists not only in the city of his cardinal title but also in the Diocese of Luçon of which he had been bishop. By an act of 4 Jan., passed at Ruel, he obtained of Vincent seven priests who were to be sent to Richelieu in the following February, and to whom three others should be added within two years. Four of these the act declares "shall remain at Richelieu to perform the ministrations of the faith dictated by the law of the Church, and shall attend every five years for the same purpose, to every town and village of the duchy, and while awaiting the time to begin their rounds again they shall give missions in the Diocese of Poitiers, or other places in the adjacent country as it shall please His Eminence to arrange. The three remaining priests shall be sent to the ordinaries of the said duchy for the execution of the same work in the country four times a year at the period most suited for this work, and labour there for six weeks each time. One of the four priests living at Richelieu shall act as pastor with as many assistants as shall be deemed expedient. In the house of Richelieu shall be received gratuitously and for twelve days those who wish to come to be instructed, who shall be assigned to the care of the said ordinaries for the four seasons of the year, and for fifteen days such priests of the diocese as the Bishop of Poitiers shall send to make the exercises of the spiritual retreat." On his part the cardinal agrees to have erected and to furnish a suitable house and to obtain the annexation of the parish to the Congregation of the Mission and to procure the necessary support and protection for the said priests.

Sometimes special spiritual needs have caused the Lazarists to accept a parish. Hardly was Louis XIII in possession of Sedan when he desired Vincent to send his priests there. The needs of religion were very pressing for, through their continual intercourse with the Huguenots, the number of Catholics was diminishing. St. Vincent's diocese was particularly exposed to this decay. The parish of Sedan was at first transferred to the Mission by the Archbishop with the consent of the Abbot Mouzon and the religious of the abbey, and Louis XIII gave an annual income of 2,500 livres for the administration of the parish and the support of the missions. Besides a priest to officiate at Baion, St. Vincent gave four to the Sedan diocese. The Lazarists have continued to be established there to the present time.
to the districts surrounding Sedan almost depopulated by war and they helped the people by exhortations and aims. Their charity thus helped their preaching and gained the hearts of those that were least disposed to listen for it. Protesting as well as the Catholics as Brother Sirven testifies whose eulogium Vincent wrote in a letter to Laudin in Mans, 7 Aug., 1660: "The whole city and surrounding country regret him, even the heretics who were edified by his modesty and aided by his charity."

(3) The Seminaries.—The Congregation of the Mission founded by St. Vincent has always as its chief object together with the missions devotion to the service of ecclesiastics. In France in his day there were in the cities a certain number of well educated and distinguished clergymen, but the great majority especially in the country places had no practical means of formation. Many zealous priests of this period, Coudren and Berulle of the Oratory, Bourdoise of St. Nicholas, above all Olier of St. Sulpice were preoccupied with the matter. Vincent used to say, as it is of the utmost importance for a military commander after he has conquered a country to leave behind him garrisons to maintain his conquest, so when apostolic men have led the people to God, or brought them to a knowledge of our religion, Vincent's time and labors had to preserve this conquest, by procuring worthy and zealous priests to labour among them. He arranged with the Bishop of Beauvais as early as 1628 for a retreat for those to be ordained in that city. During the days preceding ordination they were assembled for exercises of piety and for immediate preparations for the work for which they had been ordained. Then he placed at the house des Bons Enfants, afterwards dust it Lazare for the Diocese of Paris. The archbishop made them obligatory for all who received orders in Paris. At Rome, enjoined by the pope, they have been held at the house of the Lazarists at Montecitorio up to the present day. At Paris in the house des Bons Enfants, the Vincentians used to hold, under the direction of the Superior, an ecclesiastical seminary and gave it a rule for the exercise of piety and for the order of studies. It is no doubt the same that was put in practice by the Lazarists when they began the theological seminary at Annecy in 1641, and in the seminary at Alet. It was in substance which is in the vogue of the seminars of the Jesuits as director by Prieur (op. cit., II, 211), exhibits an excellent compromise between the secular and the cloistered life and a wise mingling of study, piety, and discipline. The object is to fit the cleric for his sacred functions. In the seminary as conceived and actually established by St. Vincent's students of classics were separated from students of theology. He withdrew the former pupils at Bons Enfants and placed them in a separate establishment at St. Lazare, in what constituted the preparatory seminary of St. Charles. The beneficial effect was immediately apparent.

As early as 1647, Vincent de Paul could write what he afterward embodied in his "Constitutions": "Our institute is, therefore, in the service of the poor country people and the seminaries." After the first successes of Vincent and Olier there was a rivalry among the bishops to endow their dioceses with these most useful establishments. In 1643 the Lazarists were entrusted by Alain de Solminiac, Bishop of Cahors, with a mission house and the direction of the seminary of that city. In 1644 the Bishop of Saintes placed them in charge of his seminary; in 1645 those of Mans, of St. Malo and St. Méné were confided to them; that of Agen in 1650, and of Montaubon in 1660. After the death of the saint until the time of the Revolution the following seminaries were directed by the Lazarists: Narbonne and Metz (1662); Vannes (1663; Nancy (1675); Lille (1684); Angoulême (1704); Avignon (1705); Nîmes (1706); Toulouse (1707); Poitiers (1710); Saint-Servan (1712); Pamiers and Tours (1715); Mornant (1717); Chartres (1719); Villefranche (1723); Figesac (1735); Ales (1762); Lurs (1763); La Rochelle and Metz (1763), Rodez (1767); Luçon (1771); Cambrai (1772); Albi (1789); most were visited, finally, in the years 1778, the last seminary that was given to the Congregation before the Revolution. In all 43 theological and 9 preparatory seminaries (Maynard, II, p. 234). The Lazarists soon spread outside of France. In Italy, in 1641, a papal Bull authorized an establishment in Rome, and the Duchesse of Aguirillon gave them a donation to devote their time to missions for the rural population, to labour for the clergy, the spiritual retreats for those to be ordained, etc. In 1697 the pope gave them the house and church of Sts. John and Paul on the Celian Hill, but this has been exchanged for St. Sylvestre's on the Quirinal. In 1645 they were called to Genoa, to Turin in 1655, to Naples in 1668. The Lazarists preached in Ireland and in the Hebrides; later Charles II called them to London for his chapel as Louis XIV had done in France for his chapel at Versailles. In Poland, in the time of John Casimir and his queen Louise Marie de Gonzaga, they were called to Warsaw in 1651, to Krakow in 1656, to Culm in 1677, to Vilna in 1687, to Warsaw in 1700, and so on. As before the Revolution Poland was one of the most fruitful fields in Spain they were established in Barcelona and from there settled in several other cities. They reached Portugal in 1718 though not recognized by the king, John V, who up to this time was opposed to their dependence upon the superior general in Paris, but the pope afterwards favored them and built them the magnificent house of Ribafolle in the suburbs of Lisbon, a house which was confiscated by the Revolution. At the Revolution of 1834 there were six establishments of the Portuguese tongue.

(4) Foreign Missions among the Infidels.—Foreign missions had a place in the schedule of apostolic works from the time of Vincent de Paul, and although this sort of labour did not develop among the Lazarists it was for the Revolution to so great an extent as it did in the nineteenth century, yet from the beginning they gave themselves to this work. In 1645 the missionaries set out for Barbary, as they then called it. The regencies of Tunis and Algiers in the power of the Turks were a den of pirates where a great number of Christians taken prisoners by Turkish Corsairs were held captives. The Lazarists did mission work there, and from time to time they even fulfilled the duties of consul, when it was too difficult to find a layman for this office. Some were imprisoned by the Deys of Algiers, some were put to death at the cannon's mouth at Meknes. William Le Vacher, of the Lazarists, kept the ships till, finally, in 1830, France disarmed that stronghold of pirates. The Lazarists of the seventeenth century also preached the Gospel in the Island of Madagascar, and in the eighteenth century in Bourbon Island and the Isle de France. They passed over into China, at first one by one, like Appiani and Pedrini during the nunciature of Cardinal de Tournon, and like Mullener who became Vicar Apostolic of Szechuan. They were called to Macao, a possession of the Portuguese, by the Portuguese Government in 1784, and directed many houses of education there. After the suppression of the Society of Jesus and despite the refusal of the superior general because of the inadequate number and because of a decision by the Congregation of Propaganda, Cardinal de Tournon, in the name of the Congregation of Propaganda, in the name of the Congregation of Propaganda, the Pope, with the agreement between the King of France and the Propaganda at Rome, the Lazarists were charged with the duty of
taking the places, so far as they could, which had been held by the Jesuits in the Levant and in China (1782–1789). Father Viguer, a Lazarist, took possession of Constantine and itsDependencies in 1788. Father Raux, another Lazarist, took possession of the mission of Pekin. At the outbreak of the French Revolution there were in France, Spain, Portugal, and the Palatinate along with the missions outside Europe about one hundred and fifty Lazarist establishments.

Under the Revolution.—Even before the Revolution in France many nations had been the prey of internal dissensions. In the first place must be mentioned Poland whose discords were leading it to dismemberment and ruin. In 1772, in the first partition of Poland, twelve houses of the Lazarists passed under foreign dominion, Austrian, Prussian, or Russian. The Polish houses which became Austrian disappeared before the exactions of Joseph II of Austria. The King of Prussia, who when taking his share of Poland had promised to respect religious institutions, soon began confiscating ecclesiastical property. Nevertheless, in 1789 the Polish province of the Lazarists still numbered twenty-two houses. A second and a third division took place in 1793 and in 1795, among Austria, Russia, and Prussia. In these threescore and ten things happened to the Polish and Polish establishments in Poland. In the part that fell to Russia the Polish Lazarists constituted a new province called the Lithuanian, remaining as far as possible in communication with the superior general in Paris. The Polish uprisings of 1830 and 1863 drew down upon the Catholics the rigours of the Russian and Austrian Governments. The houses in Russia, now much more numerous, were destroyed by the Government in 1842 and 1864. It was only later, under the Austrian dominion, that the Polish Lazarists could reorganise. They have establishments on Austrian territory in Galicia and Bukowina. In the dominions of Italy, where three princes of the house of Bourbon reigned, life was no longer an easy matter for religious communities. In the Kingdom of Naples they were forced under penalty of suppression to stop all intercourse with the houses of the community in foreign states and especially with the superior general. This state of affairs continued from 1790 till 1815. About 1816 the houses of the congregation were divided into two provinces: the province of Rome with twelve houses and the province of Lombardy with fifteen houses which included the foundations at Barcelona, Palma, and Barbastro in Spain. In Paris on the day after the taking of the Bastille the mob made an attack upon the house of St. Lazare which had been the refuge of the chief religious of the five houses of the Paris Congregation. The furniture was broken and thrown out of the windows, the priests and students were obliged to disperse. The missionaries returned and banded together there some days afterwards, but they had to separate again in 1792, and to abandon this house in which St. Vincent had lived and died, and which was the last house of the 18 houses of the Lazarists in Paris, the old Collège des Bons Enfants, became the scene of still more dramatic events in 1792. On the second and third of September of this year massacres occurred in different establishments in Paris in which the Revolutionists had locked in the priests. The Abbey, Carmel, and St. Firmin served as prisons. In the last house more than seventy were cruelly murdered, among others the Lazarist superior of the establishment, Father Louis Joseph Francois and his confère, Henry Gruyer. The superior general of St. Lazare, Cayla, at the Assembly, refused the oath of the Civil Constitution of the clergy. Among the members of his congregation several published learned protests against it and all were sent to France where they afterwards became Constitutional bishops. A goodly number died martyrs to their fidelity to the Church of Rome. Some of these martyrs were Francois and Gruyer, massacred at St. Firmin in Paris, Matthew Caron, John Colin and John Gallico at Versailles. They werefathered by the scaffold. Father Beugnon, Cahors, John Guibaud at Mans, Louis Haeyer at Niort, Francis Martlet at Besançon. In addition, several succumbed in prison: Nicholas Bailly, Paul Brochois, Victor Juliennne, and Angelus Bernard Lamourette, nephew of the Constitutional bishop, or on the prison-ships of Rochefort and at the Isle Madame, where John Janet and Nicholas Parisot; or at Simonari, as Claude Cunin.

Such is the tribute which the Congregation of the Mission paid during the bloody Revolution. As a result of the legislation concerning the Constitutional Church and the decrees of suppression of religious orders, all the establishments of the Lazarists in France were destroyed. At that time they had in France provinces comprising 78 houses with 624 members. Obliged to flee, the superior general, Cayla, took refuge in Rome, where he died 12 February, 1800. His death at a period when the scattered members of the congregation could not come together to elect his successor, began an interregnum which was full of calamities. With vicars-general governed simultaneously, one for the Lazarists in France and the foreign missions and as superior of the Daughters of Charity, the other had authority over the Lazarists of other countries. This provisional organisation lasted until 1827, when a superior general was finally named. During these long years of cession and restoration, Cayla and Parisot remained in Rome. On the death of the superior general, Felix Cayla, in 1800, Francis Brunet, his companion in exile at Rome and his assistant, was appointed vicar-general. Returning to France in 1804 Brunet lodged at the house of the Daughters of Charity and died there in 1806. Claude Placciard, his successor, who seemed destined to succeed to the see of the ecclesiastical centre, died of a violent illness of three days. He was succeeded by Dominique Launay. The zeal with which the latter strove to maintain the authority which the superior general used to exercise over the Daughters of Charity drew upon him the animosity of the imperial power and he was imprisoned in the fortress of Fenestrellle. He did not regain his liberty before the unification of the kingdom of Italy. The vicar general of the House in Rome was sent to Paris where he died in 1816. The next year he had an opportunity to visit his country. Charles Verbert, who lived till 1819. On his death Charles Boujard was invested with the vicar-generalship, like his four predecessors, and it was under his government, lasting about eight years, that the congregation succeeded in reorganizing, and noticeably improved. The various establishments in foreign countries were French, and resided in Paris. The Italian vicar general residing in Rome were Dominic Sicardi from 1804 to 1818 and Antony Baccari from 1819 to 1827. Even under the provisional régime of the vicars-general, the work of preaching, of the seminaries, and of the foreign mission was gradually re-established. In 1816 the house of Brussels was restored to Paris where it had been before the Revolution. There were six houses in Spain, six also in Portugal, containing the college at Madrid and the Jesuits of Portuguese possession. The province of Poland or of Warsaw numbered twelve houses. The Lithuanian province because of political circumstances had but little intercourse with the superior of the congregation. The foreign missions had to suffer too from the critical conditions brought about by the Revolution in those countries, the very existence of which was menaced by the disintegration of the empire. This period of expectation was followed by a period of expansion.
After the French Revolution.—After the sanguinary crisis of the Revolution, the way was gradually paved for the restoration of the congregation. It was not until 1827, however, that its abnormal situation ceased when the two vicars-general Bonjard in France and Bocchi in Rome having resigned, Pope Leo XII, by a Brief of 16 Jan., 1827, nominated Peter Dewavresse superior general. In 1834 an imperial decree dated 27 May re-established the congregation of the Lazarists; in 1816, under the Government of the Restoration a royal ordinance recognized it in the condition in which it had been placed by the Act of 1804. It was especially on the basis of these two decrees that the Council of State of 16 Jan., 1901, considered the Congregation of St. Lazare as legally recognized. The old house of St. Lazare, having been transferred by the State to the public service, the Government handed over to the use of the congregation a piece of property situated at Rue de Sèvres 95, the Hôtel des Lorges, and here Verbert, the vicar-general, entered with his community still small in number, 19 Nov., 1817. Some adjoining ground on the left bank of the Seine was purchased in 1841 by Charles X for the building of a chapel, which was blessed by Mgr. de Quènec, Archbishop of Paris, 1 Nov., 1827. The following is a list of the superiors general who have been elected by the general assemblies held in Paris down to 1910. After Peter Dewavresse died, 23 Oct., 1828, the general assembly of 15 May, 1835, elected as his successor John Baptist Nosco who was succeeded in 1835 by John Baptist Etienne. The general assembly of 1836 elected its successful generalship continued until his death in 1874. Then Eugene Boré was elected, a man well known in the world of literature and science. Death claimed him after four years, and in 1878 the general assembly made Anthony Flat his successor, and he is now, 1910, at the head of the congregation.

The work of the congregation has remained unchanged save for adaptations to new circumstances. Missions at home are no less necessary than formerly. A special consideration makes them more than ever the objects of solicitude. It is that the people of our democratic age have acquired an influence and an authority which they never exercised before. Besides mission work in cities, the Lazarists have their churches in parishes and in the colleges of the chief cities; clerics who did not study there unfortunately too but often did not study at all. In this state of affairs it sufficed to provide seminarians at least three courses for clerics who went out to follow the courses in the universities and colleges of the city. In the seminary there was a course in liturgy; the students were helped to make for themselves a practical abridgment of moral theology and when the time came they were aided by the exercises of the retreat to prepare for ordinations. Two or three priests at most sufficed for such establishments. To-day all is changed in this regard. Seminarians ordinarily spend all their time within the walls of the seminary. The seminary gives them ecclesiastical instruction in philosophy, history, exegesis, canon law, and theology, teaching that they could not find outside save in a few universities. Seminarians of this century are as it usually did in the seventeenth and eighteenth centuries, but for several years, so that the faculty required for a seminary, whether it be composed of members of a community or of the secular clergy, must be much more numerous and specially equipped for scientific training. The Congregation of the Mission had then to adapt itself to the new order of things. Finally, as to the foreign missions, new facilities of travel and communication, and new means of influence and of intercourse with pagan or savage peoples have given a new character to the work of evangelization, requiring missionary bodies to change their methods to meet these changed conditions.

IV. LITTERARY AND SCIENTIFIC ACTIVITY.—Teaching.

The method of teaching which prevails in Lazarist colleges and seminaries, is that of explaining a well chosen text of some approved author from whose opinions even the professor is not allowed to depart, except by the express permission of his superiors. Such a text is placed in the hands of the pupils, who learn a portion of it, and receive explanations from the comments from the professor. Individual research is encouraged but within limits suggested by the practical character of Lazarist college and seminary training. Conformably to the commands and recommendations of Leo XIII and Pius X, philosophy and theology are taught in accord with the doctrines of these popes. Novelties in doctrine are distinctly discouraged, while professors are bidden to make themselves acquainted with modern errors, for refutation. Writings.—The life of Lazarists is above all, an active life, in college, in the seminary, and on the missions, hence their writings have been called forth for some practical utility, or as a result of their journeys as missionaries. The following are noteworthy as writers: (1) Theology.—Collet, Peter, a Frenchman (b. 1693; d. 1770), professed theology with success in Paris. When Tournel died (1729) leaving unfinished a course of theology which the university and the seminaries held in high esteem, Cardinal Fleury, gave the task to Collet, whose talents he knew, to continue and complete the work, which Collet did with much success, publishing “Continuatio Praelectionum Theologicarum Horatii Tournely” in 8 volumes (Paris, 1733–1790). He made an abridgment of this work as a class book of theology for seminaries. “Institutiones theologice quas a fuisboebus suis editae et ineditae ad usum Seminariorum contraxit Petrus Collet” (Paris, 1744, 5 vols.). Whilst engaged in this great work, Collet composed more than forty volumes on different theological, canonical, liturgical, and devotional subjects. Brunet, Francis Florentin (b. in France, 1751; d. 1806), wrote a “Parallèle des Religions” in 5 volumes (Paris, 1782), which paved the way for the comparative histories of religion now so much in vogue. Morino, John, visitor of the Neapolitan province, issued in 1910 the seventh edition of his Moral Theology. MacGuiness, John, a native of Ireland and professor in the Irish College in Paris, has recently published a second edition of a complete course of the moral theology, a pioneer Irish Vincentian, published many books of great utility to the clergy, the best known of these is “Programme de Sermons et Instructions”, which is still much used. (2) Works on Canon Law and Liturgy.—De Martinis (b. in Italy, 1829; d. 1900), Archbishop of Laodicea, published “Juris Pontificii de Propaganda Fide, Pars Prima continens Bullas, Brevia, Acta S.S. a Congregationis institutione ad presens, juxta temporis serio disposita” (Rome, 1888–1897, 7 vols., in quarto), a collection of documents emanating from the Propaganda in every respect superior to any preceding collection. Baldeschi, Joseph (b. in Italy, 1849; d. 1900), published “Esposizione delle Sacre Cerimonie” (Rome, 1830, 4 vols., 24mto.), which has been translated into various tongues. Mancini, Calcedonio (d. 1910) began at the Lazarist house of Montecitorio, Rome, in 1887, the publication of a monthly review,
"Ephemeredes Liturgicae", which is still issued. Buroni, Joseph (b. in Piedmont, 1821), besides theological and liturgical writings, has published several sermons in or concerning the languages. Cauil-Non, Philip Albert (b. in France, 1723; d. 1793), composed an abridged catechism in the language of Madagascar, and wrote a Malagasy grammar for the Antanony dialect. Gonsalves, Joachim Alphonson, published among other works in the Chinese language, "Lexicon Magnum Latino-Sinicum ostendens eundem nomenclaturam," the "Ostitutionem vocabulorum" (Macao, 1841, in folio). Viguier, Peter Francis (b. France, 1745; d. 1821), published "Elements of the Turkish Language, or Analytical Tables of the ordinary Turkish Language with developments" (Constantinople, Printing Press of the Palais de France, 1790, 4v). Couleau, John Baptist (b. in France, 1785), translated the Ethiopian language or primitive Ethiopian tongue, the "Missal of the Ethiopian Rite" (Kerew, Printing Press of the Catholic Mission, 1890) and other works. He also published other books in Armarigna, the present kiom of Abyssinia, for example "Dialogues on the Things of Faith" (Kerew, Printing Press of the Catholic Mission, 1893). Buergi, Johann, the manual of the Tiglri language spoken in Central and Northern Abyssinia (Vienna, 1887) and Gren, John (b. in Germany, 1842; d. 1907), "La Lengua Quichua," a dialect of the Republic of Ecuador (Freiburg, 1896, in 12mo). More than half a million Indians in Ecuador, says the author, understand no language but their own and the majority of the priests in the mission districts are unable to understand the language of this Indian. Bivdeng, John, a Persian Lazarist, has written and published many works for the use of his fellow countrymen. During twenty years he printed more than forty volumes in the Syriac and Neo-Aramaic, reproducing almost all the ancient MSS. hitherto unpublished in the various MSS. of the Syriac and Neo-Aramaic. The latest is the most curious and important, the hitherto unpublished autobiography of Nestorius, "Nestorius, Le Livre d'Heracleide de Damas edite par Paul Bedjan, Lazariste" (Leipzig, 1910, in 8v).

(4) Travels and Scientific Explorations.—Huc, (q. v.) Evariste-Régis (b. in France, 1813; d. 1844), the missionary in China, wrote "Notes sur la mission en Chine" (Paris, 1850, 2 vols. in 8v), which was immediately translated into many languages. Later he published a sequel, "The Chinese Empire" (Paris, 1854, 2 vols. 8vo), and finally "Christianity in Tibet, Tartary, and China." (Paris, 1854, 4 vols. 18mo). David, Armand (b. in France, 1826; d. 1900), corresponded for many years with the French scholars in the East and Far East. Commissioned by the Museum of Natural History of Paris to make explorations, he enriched the collection by numerous discoveries. He wrote "Journal of Travel in Central China and in Eastern Tibet" which appeared in "Nouvelles Archives du Muséum," VII, IX, and XI. "Journal of my Third Tour of Exploration in the Chinese Empire." (Paris, 1875, 2 vols. 8v). Besides numerous studies edited by him, there are several works published at the expense of the French Government describing the scientific discoveries of David: "The Birds of China with Atlas of 124 plates" (Paris, 1877). "Plaute Davidiexane Sinarum Imperii prope Memel" (Paris, 1881). Bordaci, John Baptist, has published astronomical studies of observations made at the Vatican Observatory and at Catania. He is the director of the Royal Observatory of Turin (1910). Many of his studies have appeared in the "Bulletin Astronomique de l'Observatoire de Paris," 1898, 1899. See Notices from "Collaboration de la Mission" (Angoulême, 1878, 8v). The English edition of the "Annales of the Cong. of the Miss.," Nos. 38 and 39 (1903), contains in thirty closely printed pages a list of books published by the Lazarists in various languages.

V. PRESENT STATUS.—The Lazarists in Europe.—The mother-house, the residence of the superior general of the whole congregation, is at Paris, 95 Rue de Sèvres. This central residence is also a house of formation with its internal seminary, or it is often less accurately called, its novitiate and scholasticate. A second house of formation is established at Dax, a city a little south of Bordeaux. In 1900 there were about fifty establishments in France, missions, seminaries, and colleges. Since 1902 and 1903 the greater number of these establishments had to be abandoned when a large number of the establishments of communities were closed, and when congregations not authorized by the State were suppressed. France has hitherto supplied almost exclusively subjects for the Lazarists. There are communities in Russia, China, and Japan, and the different countries of South America. In Germany, where the Lazarists had been established since 1832, they were expelled by the Kulturkampf (1873), and since then they have establishments on the frontier of their country in Belgium and Holland. There are establishments in Syria, and in Central America at Ica, Casma, Lima, and other centres of activity for the Lazarists, one at Grata for the houses of Austria and Hungary, the other, Polish in language, at Krakow for the establishments of Galicia and Bukowina, and for the colonies of Polish emigrants to America. Spain, where the works of the Lazarists are in a flourishing condition, has two centers of activity, one at Barcelona. The Spanish Lazarists furnish to a great extent labourers for several of the old Spanish colonies, Cuba and Porto Rico, Mexico, and the Philippine Islands. They were twice expelled from their country by the revolutions of 1835 and 1868. They have been recognized by the Governments since the Concordat of 1851. In France and Britain the Congregation has been established since the political and religious revolution of 1835, they have gradually been restored both on the mainland and in the Madeira Islands, where they are engaged in their former works. The Congregation of the Mission in Italy has felt the political vicissitudes of that country in the nineteenth century, the Napoleonic wars terminated their activity. Thibault, a French missionary obtained the confirmation of ecclesiastical property by the Italian princes in 1848, 1860, and 1873. At the present time there are 38 houses divided into three provinces, Turin, Rome, and Naples. As to Belgium and Holland, it is chiefly since the difficulties in France that the Lazarists have secured in these countries houses for the reception of their young men. The congregation has taken up again work in Northern Africa, in Algiers. There is a vicariate Apostolic in southern Madagascar and another in Abyssinia, and there are establishments at Alexandria in Egypt. They have also founded schools in the Levant, Turkey in Europe, and Turkey in Asia. There are prominent colleges in Constantinople, Smyrna, and Antouma near Beirut. They have also founded schools in the Levant, Turkey in Europe, and Turkey in Asia. There are prominent colleges in Constantinople, Smyrna, and Antouma near Beirut. They have also founded schools in the Levant, Turkey in Europe, and Turkey in Asia. There are prominent colleges in Constantinople, Smyrna, and Antouma near Beirut.
the Holy See selected from their number the prefects Apostolic and the Apostolic delegate for that country, the missions then were under the care of the Prefect of charity. One of the Lazarist missionaries in Persia said forty years ago: "No mission is so militant and perhaps also so difficult as this."

In China, which is one of the widest fields for apostolic labour, the Lazarists are in charge of the important missions of Peking and of several vicariates Apostolic. Sent to China towards the close of the eighteenth century, during the early part of the nineteenth century they passed through most trying times. Persecutions burst forth sometimes in certain localities, sometimes everywhere. In 1820 Francis Régis Clét (q.v.), a Lazarist, died a martyr, and in 1840 Jean-Gabriel Perboyre (q.v.) had a like fate and like honour. But the missionary work had advanced, and the spreading the Gospel was not interrupted, however. Apostolic work has been prosperous. Instead of the old residence of Petang at Peking a new and much more commodious residence has been erected on a large tract of land given by the Chinese Government and a new cathedral was begun in December 1888. This immense cathedral, with its towers and its spires, is the work of Mgr Tagliahue, and Rev. A. Favier who after becoming Bishop of Peking. Around the cathedral of Peking are grouped the theological and preparatory seminaries, a printing office, schools, and charitable institutions. Apostolic zeal has not grown lax. In 1908 the Lazarists of the Vicariate of Peking had the joy of numbers, and other Chinese-Lazarists were being formed. The total for the last five years was fully, if not beyond, one hundred thousand conversions. The Lazarists in China have six other vicariates Apostolic with their centres at Young-Ping-Fou and Ching-Ting-Fou in Tche-Ly; Ning-Po in the Province of Tche-Kiang; Kiu-Kiang, Fou-Tseou-Fou and Chi-Ning in the South, Shensi. Many large evangelising missions entrusted to the Lazarists in China there are at present one hundred and forty-five European Lazarists and thirty-five Chinese Lazarists, eleven secular priests from Europe and eighty-nine native secular clergy. The Lazarists in China have two internal seminaries or novitiates. The procurator of these missions resides at Shanghai.

Such are the works of the Congregation of the Mission carried on by its 3249 members (1909), priests, students, lay brothers, and novices. It may be added that wherever they are, there is commonly to be found the other congregation founded by St. Vincent, the Daughters of Charity (Cornettes). Such is the result of the apostolic zeal of the Congregation of the Mission, which has sent out more than thirty-two foreign missions as in Madagascar, Persia, Syria, China. They number (1910) more than 30,000 and labour also in places where the Congregation of the Mission is not established.

The English Speaking Lazarists.—(1) The Irish Province.—During St. Vincent’s lifetime his priests were instructed by the Prefect of the Congregation to help the persecuted Catholics. Eight priests went to Limerick and Cashel. In Cashel and the surrounding towns they gave missions and heard eighty thousand general confessions. In Limerick too their success was most marked and its memory is not yet dead. But new and terrible persecutions under Cromwell, forced the missionaries to go into hiding and ultimately to fly the country. A lay brother who had accompanied them died a martyr’s death. When Maynooth College was founded in 1798, Father Edward Ferris, an assistant of the superior general, was allowed by his superiors to come to the aid of the new college. Archbishop Troy of Dublin had asked for him and made him a lay brother. Later he took the chair of moral theology which he held until his death, 26 November, 1809. There is a tradition that his copy of the “Rules” of the congregation, found at Maynooth after his death, gave the first impulse to what resulted in the establishment of the community in Ireland. Early in the last century, on account of the lack of Catechists, the demand for them partially supplied, the desire of establishing Lazarists or some kindred institute for missions in Ireland was expressed by Dr. Doyle who had known them in Coimbra, by Dr. Maher who had been with them at Montecitorio and by Father Fitzgerald, O.P., of Carlow College, but nothing was done. In 1832 four young men at Maynooth approached the Congregation, impressed by the dangers surrounding the ministry, and the importance of working for God and the salvation of souls, agreed that a community life was desirable for them. They were James Lynch, Peter Richard Kenrick, Anthony Reynolds, and Michael Burke, all of the Diocese of Dublin. On consulting with the Congregation, they were received into the Order. They had been ordained into the Order of the Mission. The dean, Father Philip Dowley, soon after became their leader. He had just been made vice-president of the college but resigned. About this time they were joined by Father Thomas McNamara, a valuable recruit, as his powers of organization contributed greatly to the success of the Order. An apostolic life was established in Ireland. With the approval of Archbishop Murray a small college was opened in Dublin to serve as a preparatory seminary. Another newly-ordained priest, Rev. John McCann, supplied the funds for the purchase of Castleknock. In 1838 the little church in Phibsborough, a suburb of Dublin, was placed in the hands of Dr. Maher of the Lazarists, who had added a foundation for two annual missions. It was for missions they had banded together, but though they gave three in their neighbourhood, other works took up all their energies. By this time they had lost Father Anthony Reynolds by death. Father Peter Richard Kenrick joined his brother, then Bishop of Philadelphia and subsequently became Archbishop of St. Louis. Overtures were made to the congregation in Paris for the aggregation of the Irish community and this was soon accomplished; two of the Fathers beginning their internal seminary course or novitiate in Paris and finishing it in Ireland under Father Girard were delegated by the superior to form these postulants.

Father Hand who had early joined the community left before this time to found All Hallows College at Drumcondra for the foreign missions. The first mission of these Lazarists was given in Athy in Dublin Diocese. It was the introduction of the modern mission into Ireland. At this and the following missions the people attended in thousands and the confessors were more than thirty. The congregation at Phibsborough has given place to a fine Gothic structure. Here the devotion to the Sacred Heart was promoted most vigorously after the consecration of Ireland to the Sacred Heart by the bishops in 1873. Here too the care of the poor led Father John Gowan, C.M., to found a flourishing community of sisters called Sisters of the Holy Heart (q.v.), recently approved by Rome. The beginnings in Cork were similar to those of Dublin. A priest of high standing desired to open a house for missionaries, on the model of the congregation but with some modifications. He began by opening a day college. He was the Rev. Michael O’Sullivan, vicar-general of the diocese. For some years the college succeeded; but afterwards did not get on so well. He then offered the college to the superior at Castletown and entered as a member of the community. Two who as superiors had a large share in the development of the Cork foundation afterwards became bishops, Dr. Lawrence Gillooly (1819–1895), Bishop of Elphin, and Dr. Neil McSweeney, Bishop of Lismore. In 1845 a new college was opened. There was plenty of work among the poor was confided to the congregation.

St. Vincent himself had sent a member of his community to the French consul in London in the hope of
getting some foothold for his community in England where they might aid the persecuted Catholics, but in vain. Sheffield was the first foundation in England and it was a purely private one partly supported by the Duke of Norfolk. A house was established in Mill Hill, London, in 1889, and it is now a parish, and has the direction of the provincial house of the Sisters of Charity. A normal college at Hammersmith was entrusted to the Lazarists in 1899. In Scotland, Fathers Duggan and White laboured in St. Vincent's time, sent thither by him. Father Duggan worked zealously in the Hebrides travelling from place to place until his labours were cut short by death. Father White's busy life of missionary travel on the mainland of Scotland was interrupted by his imprisonment in Cromwell's time; on his release with the condition that if he be caught preaching or baptising he would be hanged without trial, he resumed his work undaunted in the mountain districts. But it was not until 1859 that the first Scotch house was established at Lanark. The magnificent church destroyed by fire in 1907 has been rebuilt and the work of giving missions has gone on uninterruptedly.

In 1840, the houses of Ireland were formed into a Province, with Père Dufet (1798-1854) as appointed visitor. He was succeeded in 1864 by Father Thomas MacNamara (1809-1892), a man of great zeal and learning, who did much for the spiritual welfare of the deaf-mutes in Ireland and was head of the Irish College from 1888 to 1889. Father Duff (1818-1890) became visitor in 1867. He was followed, in 1868, by Father O'Reilly who resided in Dublin after a most successful career and was succeeded by Rev. Joseph Walsh. The novitiate was started in 1844 at Castleknock. Prior to that, and even to some extent afterwards, the novices were 'trained at the mother-house in Paris. In 1873, a new site was secured and the novitiate transferred thither. It is known as the Jesuit Novitiate, Mount St. Michael, a lovely spot on the hill by the same name as that by Dr. Dixon in 1861. About 1888, the Irish Lazarists were made spiritual fathers at Maynooth, then according to Cardinal Newman the most important ecclesiastical seminary in Catholic Christendom. In 1875, a training school was begun at Drumcondra, Dublin, of which it was the policy of the provincial, and founded normal college entrusted to the Irish Lazarists by the Government. In the space of twenty-six years it has sent out over 2300 Catholic teachers. All Hallows College (q.v.) was placed under the care of the Lazarists in 1892. The Australian mission of the Irish Province was begun in 1855 with a most successful series of missions from their new mission house in New South Wales. At the urgent request of Bishop Patrick Joseph Byrne they assumed charge of St. Stanislaus College, Bathurst, New South Wales, which had been founded some years previously. A mission centre and parish were established at Malvern near Melbourne in 1892. The Irish Province numbers (1910) 125 priests, 30 brothers, and 20 scholastics. (3) The United States Province. The Congregation of the Mission was brought to the United States in 1816 by Bishop Dubourg (q.v.) of New Orleans. His diocese comprised both upper and lower Louisiana as it was then called. Upper Louisiana to which he sent the Lazarists included what became afterwards the States of Texas, Missouri and Illinois. He also sent the territory north and west of these states. There were but four priests there at this time and three of them died soon afterwards. He succeeded after some difficulty

in getting three Lazarist priests, with a brother, to head a band of twelve apostolic workers for his vast territory. They were Rev. Felix de Andreis (q.v.), Rev. Rosati, Rev. V. Alzani, and Father Blanko. Bishop Ryan of Buffalo wrote of them as coming "to do for religion and the Church in the distant and still undeveloped West what a Carroll, a Cheverus, a Flaget, and other great and holy men had done and were doing in other parts of the country" (Early Lazarist Missions and Missionaries, 1857).

In 1816, on an American brig bound for Baltimore, reaching there 26 July, they were welcomed at St. Mary's Seminary by Father Bruté. On their way to St. Louis, they stopped all winter at Bardstown, where Father de Andreis taught theology in St. Thomas's Seminary. He had already taught it with great success at the College of the Propaganda in Rome. He was, however, eager to go and preach the Gospel to the poor savages and studied the Indian language with this design. On 8 Jan., 1818, Father de Andreis settled down as pastor of St. Louis and vicar-general of the diocese; an appointment he had received on leaving Rome. He writes: "It will not be easy to establish our missionaries on the American footing as in Italy. Here we must be like a regiment of cavalry orflying about killing the restrictions of the Indians and the salvation of souls may require our presence." Several of those who came from Europe at Bishop Dubourg's invitation joined the little community. Father Joseph Cosetti died on the eve of his reception into the internal seminary. Father Andrew Ferrari, P. X. Dahmen, a subdeacon, and Joseph Tschitti, a subdeacon, were admitted to the novitiate on 3 Dec., 1818, in St. Louis.

Early in 1818 the beginnings of an establishment were made at the Barrens, Perry Co., Missouri, and thither the novitiate was transferred and placed under Father Rosati. In 1820, a small log house twenty-five by eighteen feet was occupied by three priests, seminarians, and brothers. After writing to Father Rosati of his joy at the near prospect of going to work among the Indians, Father de Andreis died in the odour of sanctity. The process of his beatification has been begun (1910). In a few years a large brick building arose and gradually the splendid group of buildings, church, mother-house of the Lazarists, and the semi-collegiate seminary were added. The early days were full of missionary activity for the new community. They gave the first real impetus to the progress of the Church in Illinois, Missouri, Arkansas, Indiana, Mississippi, and Texas were the scenes of missionary journeys. Here and there the churches established but these were generally relinquished, as too many priests were sent there to take them. Father Rosati, who had been appointed superior by Father de Andreis, wrote in 1822: "We are, 19 March, ten priests, three clerics, and six brothers." He refused the post of Vicar Apostolic of Florida and only the peremptory command of the pope made him accept the conyclicdorship of New Orleans. Though over men, he continued still to hold the office of superior of the Lazarists until 1830 when Father Tornatore arrived from Rome.

In the year 1835 the province of the United States was formed. Rev. John Timon, born at Connaway, Penn., in 1707, was appointed visitor. He became first Bishop of Buffalo, dying in 1828. He was followed by Rev. Father Orin (q.v.), afterwards Archbishop of New Orleans, who had done great work in Texas where the Lazarists succeeded in having the State restore to the Church the property it had taken when Texas separated from Mexico. The parish of La Salle, Illinois, a centre for the missionary work of the Lazarists, was established in 1838 and they still minister to the faithful there. The same year, 1838, a school was begun at Cape Girardeau, Missouri, by Father Odin who
a church had been opened two years before. This was the commencement of St. Vincent's College, Cape Girardeau. In 1893, the theological department of the Cape was transferred to the Kenrick Seminary in St. Louis, directed by the L.A. of St. Louis, but the fewness of the candidates for the priesthood did not justify a separate institution and it was closed again in 1907. Since 1849 St. Stephen's Church in New Orleans with its schools, hospitals, and orphan asylum has been cared for by the Lazarists. They also have charge of St. Joseph's, established in 1858 and St. Catherine's, for the coloured people of the whole city.

Between the years 1842 and 1847 the Bishops of Cincinnati, Louisville, Philadelphia, and New York urged the visitor to take charge of their respective seminaries, to which by the advice of his council he consented. These seminaries remained in the charge of the Lazarists for a few years, but most of the dioceses soon owned them. The European Lazarists to their own land where religious disturbances had ceased, and the promotion of members to the episcopacy. The New York seminary, after its removal from La Fargeville to Fordham was accepted by the Lazarists at the request of Bishop Hughes. Father Anthony Fenco, who was made superior, did not approve of the seminarians teaching in the college, so the community retired from the work. For eleven years the Lazarists had charge of the diocesan seminary at Philadelphia. They had been invited there by Bishop Francis Patrick Kenrick. His former professor at the Propaganda, Father Tornatore, presided for a time over the seminary. The community was then invited to the Sisters of Charity in the care of Father Thaddeus Amat (q. v.) the superior was made Bishop of Monterey, Cal. The College or Seminary of Our Lady of the Angels was founded in 1856 by Rev. John Joseph Lynch, who left it when called to become Bishop and Archbishop of Toronto. It became the Niagara University in 1883. Its deceased presidents have been: Rev. J. J. Reilly (b. 1802; d. 1850); Rev. Thomas J. Smith, afterwards visitor, Rev. Rev. R. E. V. Rice (b. 1837; d. 1878), and Rev. P. V. Kavanaugh (b. 1842; d. 1899). The Immaculate Conception parish in Baltimore was founded by the Rev. Mark Anthony in 1859. He was succeeded by the saintly Father Joseph Giustiniani (b. 1811; d. 1866) who built the church and the school. The parish at Emmittsburg, Md., was placed in charge of the Lazarists and there resided the Rev. Mariano Maller, first director from St. Vincent's priests of the Sisters of Charity when Mother Seton's Sisters were affiliated to the central house in Paris. Father Maller's successors in the office of director of the Daughters of Charity were Rev. Francis Burlando (b. 1814; d. 1873), 1853-1873; Rev. Felix Guery (b. 1833; d. 1893), 1873-1877; Rev. Alexis Mandine (b. 1832; d. 1892), 1877-1892; Rev. Sylvester V. Haire, 1892-1894; Rev. Robert A. Lennon, 1894-1907; Rev. James J. Sullivan, 1907. This province was divided in 1910, Rev. JJ. Sullivan becoming director of the eastern with headquarters at St. Louis, Mo., and the Rev. John P. Cribbins director of the eastern and residing at Emmittsburg, Md. St. Vincent's Church, Germantown, was established in 1851 by Father Domenec, who was consecrated Bishop of Pittsburg in 1880. The first church for the United States was transferred for St. Louis to Germantown in 1858. Three magnificent buildings on Chelten Avenue have been erected, including a house of studies, an internal seminary, and an apostolic school, as well as a beautiful church.

Father Philip Borgna laboured in Brooklyn at St. Mary's Church, Williamsburg, during the years 1881-44. A later day: 1875. The Bishop of St. Vincent's College, now De Paul University. In 1888 the province of the United States was divided; the western, with the mother-house at the old St. Mary's Seminary, Perryville, Missouri; the eastern retaining as the newer mother-house, St. Vincent's Seminary, Germantown. In 1903 Holy Trinity College, with an especially fine equipment for engineering, was built at Dallas, Texas, and St. Thomas's Seminary at Denver, Col., in 1907. A mission house was opened at Springfield, Mass., in 1903 and another at Opelika, Alabama, 1910. Mission bands are also stationed at Germantown, Pa., and at Niagara, N. Y., in the East, and at St. Louis and Perryville, Mo., in the West.

Since Father Philip Borgna's successors have been Rev. Mariano Maller (b. 1817; d. 1892), 1847-1850; Rev. Anthony Fenco (b. 1813; d. 1875), 1850-1855; Rev. John Mannau [pro-visitor] (b. 1813; d. 1893), 1855-1856, recalled to Spain and made visitor there; Rev. Stephen V. Ryan (b. 1825; d. 1896), 1857-1867, when he was made Bishop of Buffalo; Rev. John Hayden (b. 1831; d. 1884), 1867-1872; Rev. John O'Sullivan (b. 1816; d. 1883), 1872-1879; Rev. Thomas J. Smith (b. 1832; d. 1905), 1879-1905. In 1888 the Rev. James McMillan became head of the eastern province; at his resignation (1909), the Rev. P. McIvor became visitor. In the West Father Smith's successors have been Rev. William Barnwell (b. 1839; d. 1906) in 1872. At the present moment and the present visitor the Rev. Thomas Finney. The two provinces number over two hundred priests who have charge of sixty colleges, one preparatory seminary, two apostolic schools for students aspiring to become Lazarists, four theological seminaries, about fifteen churches, and about eighty schools. In eight of these states the Polish province have churches for their fellow countrymen, at Consobinck and Philadelphia, Penn., at Derby and New Haven, Conn., whence also they go to preach Polish missions. The Polish Lazarists are also preparing to build a college at Erie, Penn., 1910. Two Lazarists from Barcelona province in 1908 began work for the faithful in the Philippines, and they have a church and conduct night classes, and an employment agency. The establishments of the Lazarists at Ponce and San Juan, Porto Rico, as well as those at Manila, Calbayog, Cebu, Jaro, and Nueva Caceres in the Philippine Islands may also be mentioned in connexion with the Lazarists of the United States.

B. RANDOLPH.
MISSIONARIES of St. Charles Borromeo, Congregation of, founded by John Baptist Scalabrini, Bishop of Piacenza, Italy (d. 1 June, 1805); approved in principle by Leo XIII in a Brief dated 25 November, 1887; constitution definitively approved by a decree of the Sacred Congregation of Propaganda, 3 October, 1892. The expediency of providing for the spiritual needs of a number of such immigrants waiting in the great railway station of Milan, acting upon this inspiration, and encouraged by Cardinal Simeoni, then Cardinal Prefect of the Sacred Congregation, the Bishop purchased a residence which he converted into "The Christopher Columbus Apostolic Institution", forming there a community of priests which was to be the nucleus of a new congregation.

This congregation, which was henceforth to be known as the "Missionaries of St. Charles Borromeo", was to be governed by a superior-general, dependent upon the Congregation of Propaganda: its aim was to maintain Catholic faith and practice among Italian emigrants in the New World, and "to ensure as far as possible their moral, civil, and economical welfare". It was to provide priests for the emigrants, as well as committees of persons who should give the good advice and direction needed by poor immigrants newly arrived in foreign ports; to establish churches, schools, and missionary homes in the various Italian colonies in North and South America, and to train youths for the priesthood. The members of the congregation promise obedience to their superiors in the congregation and the ecclesiastical hierarchy.

Seven priests and three lay brothers of Bishop Scalabrini's institute left Italy, on 12 July, 1888, of whom two priests and one lay brother were bound for New York, five priests and two lay brothers for various parts of Brazil. On this occasion, Cesare Cantù, the famous Italian historian, addressed to the Bishop of Piacenza some memorable words of congratulation, asking leave to add to the bishop's blessing on the departing missionaries, "the prayers of an old man who admires a courage and an abnegation so full of humility". A welcome had already been assured these first missionaries of the congregation by a commendatory letter (1 June, 1888) of Leo XIII addressed to the American bishops.

The first arrivals in New York the new missionaries were enabled to secure a favourable site in Centre Street, where there was a colony of Italians, and in a short time a chapel was opened; soon after this the church of the Resurrection was opened in Mulberry Street; lastly, a building in Roosevelt Street, which had been a Protestant place of worship, became the church of the mission fathers who transformed it into the church of St. Joachim, the first specially Italian church in the Diocese of New York. The society was established on Ellis Island. The good work thereafter spread rapidly through the continent. The United States and Canada now contain 21 parish churches, besides several chapels, served by the congregation; in Brazil the fathers have charge of 13 parish churches, mostly with schools attached, and 2 important orphanages. The two provinces (Eastern and Western) of the congregation in the United States number 45 priests and 3 lay brothers, while the single province of Brazil numbers 35 priests and 5 lay brothers.

VICTOR CANGIANO.

MISSIONARIES of St. Francis de Sales of Annecy. —Amid the many activities to which St. Francis devoted himself, he long had the desire to found a society of missionary priests. This wish, however, was not to find its realization until nearly two centuries after his death. At that time Monseigneur Riele, a successor of the Saint in the See of Annecy, broached the subject of such a society to Father Mermier, who had been considering the same idea. Accordingly, Father Mermier put the design into execution. In 1830 the institute was formed with La Feuillette as the site for the mission. It was solemnly blessed by the bishop on 8 August, 1837, and the congregation canonically instituted by him on 8 October, 1838. The society was not to be a mere association of priests, but a new religious congregation, bound by simple vows. Hence Father Mermier, the first superior-general, offered himself and his companion to the sister of the mission. In 1835 his offer was accepted by the Propaganda, and the first missionaries of St. Francis de Sales set out for India. The work has prospered and since that time more than 100 priests and seminarians have been sent out by the congregation, besides many lay brothers. More than 200 nuns of different orders have gone out at the call of the missionaries to help them. The dioceses of Nagpur and Visagapatam have always been governed by prelates belonging to this institute. At Visagapatam the first vicar Apostolic was Mgr Neyret (1850); he was succeeded by Mgr Tissot, first bishop of the diocese. The present occupant of the see is Mgr Clerc. The first Bishop of Nagpur was Mgr Aubertin, the first Bishop of Berar was Mgr Carpentier, and of Ceylon, Mgr Vayson. In England the fathers have three missions in the Diocese of Clifton. Since the persecution of 1903, the congregation has been obliged to leave Savoy for England, where the novitiate, and the house of studies are successfully carried on. The superior-general since the foundation are: the Very Rev. Fathers Mermier, Gaidon, Clavel, Tissot, Gojon, and Bouvard.

LOUIS VULLIET.

MISSIONARY RECTOR. See RECTOR.

MISSIONARY Society of St. Paul the Apostle, otherwise known as the PAULIST FATHERS, a community of priests for giving missions and doing other Apostolic works, especially for making converts to the Catholic Faith. It was founded, in Rome and in New York, in 1858, by Father Isaac Thomas Hecker, with whom were associated Augustine F. Hewitt, George Deshon, Francis A. Baker, and Clarence A. Walworth. All of these had been missionaries to Japan. Hecker was named the first superior-general, the Most Holy Redeemer, and owing to certain misunderstandings had been subjected to disloyalty to their order and accused of disobedience.

In order to set matters right and to explain their case to the superior general, Father Hecker went to Rome, and on 29 August, 1857, three days after his arrival, was expelled from the Romanist priests. This action was appealed to the Holy See and was not approved. Father Hecker and the Holy See named priests were then at their own request dispensed from their vows, and proceeded to form the new community. Hecker received letters from Propaganda, strongly recommending him and his associates to the bishops of the United States. This is the official origin of the Paulists.

But long before this, however, the Holy Spirit gave Father Hecker distinct and unmistakable intimations—to use his own words—that he was "set apart to undertake in some leading and conspicuous way the conversion of this country". He added that he "made an explicit statement of these supernatural visitations, to various persons, singly and in common, always under compulsion of obedience or necessity". These advisers included Cardinal Barnabo, the Prefect of Propaganda at this time, and several of the most approved directors of souls in Rome. They unanimously decided that he acted wisely in following this interior supernatural guidance.
During the summer of 1858 a practical beginning of their apostolate was made by the Paulists in New York, to which diocese they were then hearty welcome. John H. Hughes, then Bishop of New York, was the parish in what was then a suburb and is now the heart of the city. As they had given missions as Redemptorists in all parts of the country, they were well and favourably known to the bishops and clergy and were very popular with the people. They were all men of ability, quite above the ordinary intellectual standard, powerful preachers, and of mature spirituality. Father Hecker especially was known as a remarkable man, a leader in Catholic thought, of profoundly interior spirit of prayer, joined to such a zeal for souls as characterizes only the saints. They were all Americans and all converts, and under their founder's inspiration, they soon developed their high gifts of preaching, of writing, and of the guidance of souls. To provide a home and church the new community, having but a handful of parishioners, appealed to their friends everywhere for financial help. The response was generous, and they built in West 59th Street, a convent and church combined, which in later years, when the present church was erected, was used wholly for their dwelling. Thus the Apostolic Missions in California and the Pacific Mission House were founded. Missions were made in San Francisco and Berkeley, California; Chicago, Illinois; Winchester, Tennessee; and Austin, Texas. The novitiate and house of studies is in Washington, D.C., the scholastic training being affiliated to the courses of the Catholic University. 

A programme of rule was drawn up at the time of the foundation of the institution and approved by Archbishop Hughes. This served all needful purposes for twenty years, when it was much enlarged. It is still in process of experiment before being presented to the Holy See for canonical approbation. Its spiritual features are substantially the same routine of devout exercises, in private and in common, observed by the priests of the Congregation. Though the Paulists do not make vows of religion, they undertake to observe the evangelical counsels as fervently as if canonically bound to do so. This is expressed in the formula of profession as a "whole-hearted determination to obey the rules, to aspire after Christian and religious perfection, to devote oneself to the service of Christ and the Church, and to persevere in the same vocation to the end of life". The training of the members is provided for in the exercises of the novitiate and house of studies. Permanency in the community is secured by this original training, and the act of profession witnesses to a well-matured purpose of striving after perfection and to a determination to persevere in it. The mission union is that of seal for souls actuating the members of the institute individually and in common. Father Hecker's estimate of the fundamental principle of the Paulist life is as follows: "The desire for personal perfection is the foundation stone of a religious community when this fails, it crumbles to pieces. And the desire for personal perfection can exist only in the attainment of personal perfection by the practice of those virtues without which it cannot be secured—interior fidelity to grace, prayer, detachment and the like."

In the external order, the Paulist vocation is primarily, as was the original vocation of Father Hecker, the conversion of non-Catholics. It embraces all branches of the Catholic apostolate, lecturing and preaching, printing and distribution of missionary literature, and private conference with earnest inquirers. The spread of Catholicism holds the first place both in their prayers and in their active life; it outranks in importance all other external labours. It is said that Paulists are most largely known both in and out of the Church as convert makers. Missions for non-Catholics are systematically given, being very often joined to Catholic missions, though not seldom given separately. The effects of this apostolate have justified Father Hecker's lifelong contention that America is a ripe field for the seal of Catholic missioners. Many thousands of converts have been made, some immediately, more after prolonged examination of the claims of the Church, and multitudes of half-hearted and indifferent Catholics have been restored to the practice of their religion, a result which so invariably follows these lectures as to give them a very high place in the work of "stopping the leaks".

In the year 1894, the Paulists introduced missions to non-Catholics among the diocesan clergy, beginning with the Diocese of Cleveland. This work has now been extended into over twenty-five American dioceses, and also into England and Australia. The number of secular priests actively engaged in these mission apostolates is very considerable. For the training, and in many cases for the support, of these bands of convert-makers, members of the Paulist community brought about the establishment of the Catholic Missionary Union, a corporation whose board of directors is controlled by members of the hierarchy. Under its direction, but administered wholly by Paulists, the Catholic Mission House was opened on the Catholic University grounds, Washington, D.C., in 1903, and from its classes most of the diocesan missionaries have been recruited. The present sovereign pontiff wrote to Cardinal Gibbons a letter of approval of this institution in September, 1908.

With the same end in view the Paulists have vigorously engaged in the apostolate of missions, the first fathers printed and circulated their sermons in the earliest years of the community, and in 1865 Father Hecker started the "Catholic World Magazine", then the only Catholic monthly in the country; and this was immediately followed by an organized propaganda of missionary books, pamphlets, and periodicals, most of which were given to Protestants gratis or disposed of at nominal prices. A work highly praised by the Second Plenary Council of Baltimore, and still energetically carried on. The Paulist Fathers also consider it part of their vocation to influence the secular press in the interests of Catholic truth. The preaching of missions to Catholics also has engaged much attention of the Paulists. The first fathers printed and circulated their sermons in the earliest years of the community, and in 1865 Father Hecker started the "Catholic World Magazine", then the only Catholic monthly in the country; and this was immediately followed by an organized propaganda of missionary books, pamphlets, and periodicals, most of which were given to Protestants gratis or disposed of at nominal prices.

No innovation on traditional Catholic methods, least of all on the Catholic spirit, has ever been observed in their public utterances or ministrations, though the personal tone and character of the Paulists has imparted to their discourses and writings a peculiar zest. Parish work has occupied many members of the institute, characterised by speaking and preaching sermons, the training of children, the relief of the poor, the beauty and dignity of ceremonial, and the proper rendering of the official music of the Church. The making of converts is a prominent feature of their parish activities. Constant endeavours are made to attract non-Catholics to the missions and the public exercises of the Church, as well as to private conferences, and converts are always under instruction.

The number of Paulists is now 67, of those not yet ordained, 23. The increase, though not numerically great, has been continuous, the largest number of the novices being attracted by the non-Catholic missions.

WALTER ELLIOTT.

Mission Helpers of the Sacred Heart. See Institute of the Mission Helpers of the Sacred Heart.

Mission Indians (of California).—A name of no real ethnic significance, but used as a convenient popular and official term to designate the modern descendants of those tribes of California, of various stocks and languages, evangelized by the Franciscans.

X.—24
in the latter part of the eighteenth and early part of the nineteenth centuries, beginning in 1769. The historic California missions were twenty-one in number, excluding branch foundations, extending along the coast or at a short distance inland from San Diego in the south, to Sonoma, beyond San Francisco Bay, in the north. Besides these, two others, established in 1780 in the extreme south-eastern corner of the present state, had a brief existence of less than a year when they were destroyed by the Indians. As their period was so short, and as they had no connexion with the coast missions, they will be treated in another place (see YUMA INDIANS).

I. MISSION SITES.—The following are the twenty-one missions in order from south to north, with name of founder, location, and date of founding. In several cases the mission was removed from the original site to another more suitable at no great distance. It will be noticed that the northward advance does not entirely accord with the chronological succession:

II. TRIBES AND LANGUAGES.—Nowhere in North or South America was there a greater diversity of languages and dialects than in California. Of forty-six native linguistic stocks recognized within the limits of the United States by philologists, twenty-two, or practically one-half, were represented in California, of which only six extended beyond its borders. Seven distinct linguistic stocks were found within the territory of actual mission colonisation, from San Diego to Sonoma, while in the border territory north and east from which recruits were later drawn, at least four more were represented. As most of the dialects have perished without record, it is impossible to say how many there may have been originally, or to differentiate or locate them closely. As tribal organization such as existed among the Eastern Indians was almost unknown in California, where the ranchoeria, or village hamlet, was usually the largest political unit, the tribes can conveniently be regarded as groups which are generally merely arbitrary terms of convenience. For the linguistic classification the principal authorities are Kroeber, Barrett, and other experts of the University of California.

1. Pomo, or Kulapanok, Stock.—The Indians of this stock bordered on the northern frontier of the mission area, and although no missions were established in their territory in the earlier period, numbers of them were brought into the missions of San Rafael and San Francisco Solano. Broadly speaking, the Pomo territory included the Russian River and adjacent coast region with all but a small portion of the Clear Lake basin. Barrett has classified their numerically largest and most linguistically distinct divisions, but all probably mutually intelligible. Of their southern bands, some of the Gallinomero (or Kainomero), of lower Russian River, were brought into San Rafael mission and the Gualala also were represented either there or at Sonoma. The so-called "Diggers" of the present mission schools at Ukiah and Kelseyville also chieftains.

2. Yukian Stock.—The Yuki tribes were in four divisions, two of which were north of the Pomo territory and therefore beyond the sphere of mission influence. The two southern bodies, originally one, speaking one language with slight dialectic variations, and commonly known as Wappo (from Spanish wuppo), occupied much of the region west of a line from the present Kelseyville; (b) a larger territory including upper Napa River and a portion of Russian River, and extending approximately from Geyserville to Napa. They were probably represented at Sonoma mission, as they probably are also under the name of "Diggers" in the present mission school at Kelseyville.
4. Moquelumna, or Miwok, Stock.—The numerous bands of this stock occupied three distinct areas, viz.,
(a) Northern: A very small territory south-east of Clear Lake and about the heads of Putah Creek, in
Lake Co., occupied by a band known as Oleomi, or Guenock (?), speaking a language apparently distinct
from the others of the stock. They seem mostly to have been gathered into Sonoma mission. (b) Western: A larger territory lying north of San Francisco
Bay to beyond Bodega Bay, and extending from the coast eastwards to beyond Sonoma, included within the
present Marin and lower Sonoma Counties. The various bands of this area spoke the same language in two
slightly different dialects (three, according to Merriam) and were gathered into the two missions of San
Rafael and Sonoma, both of which were established within their territory. In 1824 nearly 500 Indians of
this group were brought back from San Francisco and San José to reside in the new mission of Sonoma.
The whole group was known as Olamentke by the Russians. Among the principal bands or villages
were Bolina, Tamal, Chokuyem, Licatuit, Petaluma, Sonoma, Soclan, Olompali, Cotati, Guymen, with
others of less note. The celebrated fighting chief, Marin, was of the Licatuit band. (c) Eastern: The
main area, occupying nearly the whole region east of San Joaquin River to the heads of the tributary
streams, from Coosumee River on the north to Fresno River on the south. Their numerous bands, collect-
ively known usually as Miwok, spoke four different

---

**CALIFORNIA INDIAN MISSIONS WITH THE INDIAN LINGUISTIC STOCKS**

**BY JAMES MOONEY**

**MISSION**
dialects, of which that of the north-western plains section may be considered a distinct language. Although no missions were established in the territory of the Miwok, large numbers of them were brought into San Juan Bautista, Santa Clara, and San José.

5. Costanoan Stock.—The territory of this linguistic division extended from the San Joaquin River, and from San Francisco and Suisun Bays on the north southwards to about the line of Point Sur, including the seven missions of San Francisco (Dolores), San José, Santa Clara, Santa Cruz, San Juan Bautista, San Carlos, and Soledad. Although there was no true tribal organization, a number of divisions are recognized, probably corresponding approximately to dialectic distinctions. On the peninsula, and later gathered into San Francisco mission were the Romonan (at present San Francisco), Awhaste, Altahmo, Tulomo, and Olhorne, or Costano proper, all apparently of one language in different dialects. The Saclan, about Oakland, were in the same mission. The Karkin along Carquinez strait, and the Polye further south were gathered into San José. Santa Clara had two native dialects, while Santa Cruz apparently had another. About San Juan Bautista was spoken the Mutsun dialect, known through a grammar and phrase book written by the resident missionary, Father Arroyo de la Cuesta, in 1815, and published by the American Antiquarian Society in 1834. Eastward were the Ansaima and about the mouth of the Salinas were the Kalindaruk. At San Carlos the principal band was the Runsen, of which a remnant still exists, and at Soledad were Chalone, besides others of Esselen, Salinan, and Yokuts lineage.

6. Esselen Stock.—The Esselen, or Eccemach, constituting a stock in the coastal region or small territory on Carmel and Sur rivers, south of Monterey Bay, until gathered into San Carlos, and perhaps into Soledad mission.

7. Salinan Stock.—This stock centred upon the waters of the Salinas, chiefly in Monterey and San Luis Obispo Counties, from the seacoast to the Coast Range divide, and from the head streams of the Salinas south (north) nearly to Soledad. San Antonio and San Miguel missions were within their territory. Nothing definite is known of their divisions, excepting that there seem to have been at least three principal dialects or languages, viz., of San Miguel, of San Antonio, and of the Playanos, or coast people. Besides their principal tongue, the Salinan, they spoke at least two other, one from the east and Chumash from the south in the same missions.

8. Yokuts, or Mariposan, Stock.—The Indians of this stock had true tribal divisions, numbering about forty tribes, and holding a compact territory from the Coast Range divide to the foothills of the Sierras, including the upper San Joaquin, Kings River Tulare Lake, and most of Kern River, besides a detached tribe, the Cholo, about the present Stockton. Together with the Miwok and eastern Costanoan tribes, they were known to the Spaniards under the collective name of Tuleefnos, from their habitat about Tulare lake and along San Joaquin River, formerly Rio de los Tulares. Their numerous dialects have been all mutually intelligible, the principal difference being between those of the river plains and of the Sierra foothills. Although outside of the mission territory proper, the Yokuts area was a principal recruiting ground for the missions in the later period, hundreds of Indians, and even whole tribes, being carried as neophytes and as prisoners of war, to San José, San Juan Bautista, Soledad, San Antonio, San Miguel, San Luis Obispo (?), and probably other neighbouring missions. One Spanish expedition, about 1820, carried off three hundred men, women, and children from a single ranchería to San Juan Bautista, where their language was afterwards recorded by Father La Cuesta. The Tachi and Telamini from Tulare lake and eastward were brought into San Antonio. A few are now gathered upon Tule River reservation, while a few others still remain in their old homes.

9. Chumashan Stock.—The Indians of this stock held approximately the territory from San Luis Obispo Bay south to Point Reyes, including the Gualda Maria, Santa Inés, and Santa Clara Rivers, the adjacent eastern slope of the Coast Range divide and the islands of Santa Cruz, Santa Rosa, and San Miguel. The missions San Luis Obispo, Purisima, Santa Inés, Santa Barbara, and San Buenaventura were all within this area. They seem to have been represented also at San Miguel, San Diego, and San Antonio, at each mission, on Santa Cruz, and on Santa Rosa. That of San Luis Obispo was sufficiently distinct to be considered a language by itself.

10. Shoshonean Stock.—This is the first stock within the mission area which extended beyond the limits of California, the cognate tribes within the state being an outpost of the same great linguistic group which includes the Piute, Ute, Comanche, and Pima of the United States, the Yaqui, Tarumari, and famous Apache of Mexico. The five missions of San Fernando, San Gabriel, San Juan Capistrano, San Luis Rey, and its branch mission of San Antonio de Pala, were all in Shoshonean territory, and the great majority of the Indian inhabitants of the area, excepting only those within the mission sphere were of five languages, each with minor dialectic differences, nearly equivalent to as many tribes, as follows:—(a) Gabrielleno: from about Santa Monica southward nearly to San Juan Capistrano, and from the coast back to the foothills of the San Bernardino range, together with Santa Catalina island, it was spoken in slightly different dialects at San Fernando (Femandeto) and San Gabriel. The names Kij, Kish, and Topibcar have been used to designate the same group. (b) Luiseño: from the Gabriellenos border about Alisos creek southwards along the coast to the Yuman frontier beyond Escondido, including lower San Luis Rey River, Temecula, Santa Rosa, San Jacinto, and probably the islands of San Nicolas and San Clemente. Spoken in slightly different dialects at missions of San Luis Rey (Luiseño, Kechi) and San Juan Capistrano (Juaneno, Gaitichem, Netela, Acagehemem). (c) Panakhil, or Agua Caliante, occupied a limited territory on the heads of San Luis Rey River, and now at Pala and Los Coyotes reserve. They were also spoken probably from the San Jacinto Range from about Salton northwards to Banning, together with the head waters of Santa Margarita River. First visited by Father Francisco Garcés in 1776. (e) Serranos: in San Bernardino mountains and valley on Mohave River and northwards to Tejon and Paso Creeks of San Joaquin Valley; the Belenme of Father Garces in 1770 and the Takan of Gatchet. Some of them were gathered into San Gabriel. Three dialects.

11. Yuman Stock.—This stock also has its main home beyond the eastern boundaries of the state, and includes the Mohave, Walapai, and others. San Diego mission was within its territory, as also the two short-lives slightly varied in the Colorado. Nearly all the present Mission Indians not of Shoshonean stock are Yuman. Those within the mission sphere were of two languages, viz., Yuma in the east, about the junction of the Gila and Colorado rivers; and Diegueño in the west, in two main dialect groups: (a) Diegueno proper, along the coast, including San Diego, and (b) Coyote, or as others call it Chumash.

Very little is in print concerning the languages of the mission territory. For vocabularies and grammatical analysis the reader may consult Bancroft's volume on "Myths and Languages," Power's "Tribes of California," Gatesch in "Wheeler's Rept.," and above, all Barrett and Kroeber in the University of California publications (see bibliography), with other works
and collections therein noted. Among the important single studies are a "Grammar of the Mutsun Language" by Fr. Arroyo de la Cuesta, published in Shea's "American Linguistics", IV (1861); a Chumashan (?) catechism and prayer manual by Fr. Mariano Payner of Púrsima, about 1810, noted by Bancroft; and a MS. grammar of the Luiseno language, by Sparkman, now awaiting publication by the University of California. The missionaries were more than once urged in prefectoral letters to acquire the native languages in order better to reach the Indians, and in 1815 the official report states that religious instruction was given both in Indian and Spanish.

The Indians of California constituted a culture body essentially distinct from all the tribes east of the Sierras. The most obvious characteristic of this culture was its negative quality, the absence of those features which dominated tribal life elsewhere. There was practically no tribal organization and in most cases not even a tribal name, the rancheria, or village settlement, usually merely a larger family group, being the ordinary social and governmental unit, whose people had no common designation for themselves, and none for their neighbours excepting directional names having no reference to linguistic or other affiliation. Chiefs were almost without authority, except as messengers of the will of the god of war, and their living was held by most investigators to have been entirely wanting, although Merriam claims to have found evidence of it among the Miwok and Yokuts. Excepting basketry, all their arts were of the cruder development, pottery being found only in the extreme south, while agriculture was entirely unknown. Both men- tally and physically they represented the lowest types on the continent. The ordinary house structure throughout the mission area was a conical framework of poles thatched with rushes and covered with earth, built over a circular excavation of about two feet deep. The fire was built in the centre, and the occupants sat or lay about it, upon skins or sage bushes, without beds or other furniture. The Gallinómero, north of San Francisco Bay, built a communal house of L shape, with a row of fires down the centre, one for each family. The "sweat-house", for hot baths and winter ceremonies, was like the circular lodge, but much larger. The dance place or medicine lodge was a simple circular inclosure of brushwood covered over with the sacrifice poles and other ceremonial objects.

Agriculture being unknown, the food supply was obtained in part by hunting and fishing, but mostly by the gathering of wild seeds, nuts, and berries. The islanders lived almost entirely by sea-fishing, while about San Francisco they depended mainly on the salmon. The Chumash coast tribes fished from large dugout canoes. Hunting was usually confined to small game, particularly rabbits and jackrabbits, the larger animals being generally protected by some religious taboo. On account of a prevalent ritual idea which forbade the hunter to eat game of his own killing, men generally hunted in pairs and exchanged the results. Crabs and abalone were driven into nets and baked as a dainty. Among vegetable foods the acorn was first in importance, being gathered and stored in large quantities, pounded into meal in stone mortars or ground on metates, leached with water to remove the bitterness, and cooked as mush (porridge) or bread. Wild rice was also a staple in places, while in the blooming season whole communities roasted flour to use as bread. The men went nearly or entirely naked, excepting for a skin robe over the shoulders in cold weather. Women usually wore a short skirt with fringes of woven or twisted bark fibre. Both sexes commonly kept their hair at full length, but bunched up behind. Some bands shaved one side of the head. Tattooing was practised by both sexes to some extent. Shell beads were used for necklace purposes, and eagle and other feathers for head adornments. Dance-leaders and priests at ceremonial functions wore feather crowns and short skirts trimmed with feathers. Light sandals were sometimes worn. Musical instruments were the rattle, flute, and bone whistle. The dance was unknown, excepting the ceremonial round dance of the Pueblo Indians; the bow and arrow, wooden club, stone knife, and a curved throwing stick for hunting rabbits. Cremonation was universal, excepting in the Chumashan. Marriage and divorce were simple, and polygamy was frequent.

Of the mythology and ceremonial of the coast tribes of the mission area northwards from Los Angeles we know almost nothing. The Indians of California, without investigation, but the indications are that they resembled those of the known interior and southern tribes. For these our best authorities are the missionary Boscana, Powers, Merriam, and especially the ethnologists of the University of California. The southern tribes—Juanito, Luiseno, Diegueno, etc.—base their ritual and ceremonial upon a creation myth in which Ouiot, or Wiyot, figures as the culture hero of an earlier creation in which mankind is not yet entirely differentiated from the animals, while Chungichinich (Chinigchinich of Boscana) appears as the lord and ruler of the second and perfected creation, which, however, is a direct evolution from the first. The original creators are Eepee and Eepee, the brother and sister. The rattlesnake, the tarantula, and more particularly the lightning and the eagle, are the messengers and avengers of Chungichinich. In the Diegueno myth the whole living creation issues from the body of a great serpent.

The principal ceremonies, still enacted within recent memory, were the boys' puberty ceremony, the boys' initiation, and the annual mourning rite. In the puberty ceremony the several girls of the village who had attained the menstrual age at about the same time were stretched upon a bed of fresh and fragrant herbs in a pit previously heated by means of a large fire, and, after being covered with blankets and other herbs, were subjected to a sweating and starving process for several days and nights while the elders of the band danced around the pit singing the songs for the occasion. The ordeal ended with a procession, or a race, to a prominent cliff, while each girl inscribed symbolic painted designs upon the rock. The boys' initiation ceremony was a preliminary to admission to the alleged secret society, which was perhaps the priesthood. A principal feature was the drinking of a decoction of the root of the poisonous *toloache*, or jimson-weed (*datura meteloides*), to produce unconsciousness, in which the initiate was supposed to have communication with his future protecting spirit. Rigid food taboos were prescribed for a long period, and a common ordeal test was the lowering of the naked initiate into a pit of vicious stinging ants. A symbolic "sand painting", with figures in vari-coloured sand, was a part of the ritual.

The corpse was burned upon a funeral pile immediately after death, together with the personal property, by a man specially appointed to that duty, the bones being afterwards gathered up and buried or otherwise preserved. Once a year a great tribal mourning ceremony was held, to which the people of all the neighbouring rancherías were invited. On this occasion large quantities of property were burned as sacrifice to the spirits of the dead, or given away to the visitors, an effigy of the deceased was burned upon the pyre, and the performance went on for several days and nights, concluded with a weird night dance around the blazing pile, during which an eagle or other great bird, passed from one to another of the circling dance priests, was slowly pressed to death in their arms, while in songs they implored its spirit to carry their messages to their friends in the other world. The souls of priests and chiefs were supposed to ascend
to the sky as stars, while those of the common people went to an underworld, where there was continual feasting and dancing, the idea of future punishment or reward being foreign to the Indian mind. The dead were never named, and the sum of insult to another was to say "Your father is dead." In connexion with childbirth most of the tribes practised the couvade, the father keeping his bed for some days, subjected to rigid diet and other taboos, until released by a ceremonial exorcism. Besides the great ceremonies already noted, they had numerous other dances, including some of dramatic or sleight-of-hand character, and, among the southern tribes, a grossly obscene dance which gave the missionaries much trouble to suppress. Among the Galinomero, and perhaps others, aged parents were sometimes choked to death by their own children by crushing the neck with a stick. Ordinary morality could hardly be said to exist even in theory. Infanticide and abortion were so prevalent that even the most strenuous efforts of the missionaries hardly succeeded in checking the evil. In this and certain other detestable customs the coast tribes were like the California Indians generally, whom Powers characterizes, in their heathen condition, as perhaps the most licentious race existing. Even before the arrival of the missionaries, their blood, like that of all the coast tribes as far north as Alaska, had been so poisoned by direct or transmitted contact with dissolute sealing and trading crews, that the race was already in swift decline. The confiscation of the missions and the subsequent influx of the gold-hunters doomed the race to extinction.

IV. VITAL STATISTICS.—By the confiscation of the missions (1834-38) the Indians lost their protectors together with their stock and other movable property, and by the transfer of California to the United States in 1848 they were left without legal title to their lands, and sank into a condition of homeless misery under which they died by thousands and were fast approaching extinction. With the exception of occasional ministrations by secular priests or some of the few remaining missionaries, they were left entirely without spiritual or educational attention, notwithstanding which the Christian Indians continued to keep the Faith and transmitted the tradition to their children.

At last, as the result of a governmental investigation in 1873, a number of village reservations were assigned by executive proclamation in 1875 to the southern remnant, the northern bands being already extinct. By subsequent legislation there are now established some thirty small "Mission Indian" reservations, all in western and central San Diego and Imperial Counties, California, with a total population, in 1909, of 2775 souls, representing five tribes and languages, viz., Luiseño, Serrano, Cahuilla, Agua Caliente, and Diegueno. The largest groupings are at Morongo adjoining Banning (chiefly Cahuilla) 238; Pala (Luiseño and Agua Caliente) 226; Pechanga (Luiseño) 170; and Santa Ysabel No. 3 (Diegueno) 185. They are practically all Catholics and besides twelve government day-schools with a total enrolment of 286 there are 17 Catholic schools served by secular priests under the diocese of Los Angeles, with a total enrolment in 1909 of 1894 pupils. Of these the largest are at Pala (280), La Jolla (195), Pauma (180), Soboba, San Jacinto (163), Canyon Pecos (126), and San Felipe (125). All are day-schools, excepting St. Boniface boarding-school at Banning with 100 pupils. About the same time Catholic mission work was begun among the remnant tribes on the northern border of the original mission territory. In 1870 the mission of St. Turibius was founded by Father Luciano Oceas, north of Kelseyville in Lake County. In 1873 Father Labadie established the mission of Ukiah in Mendocino County. The Indians of both stations are locally called "Diggers," but are properly Pomo and Yuki, and some of the older ones still have recollection of the early mission fathers. They are in charge of the Friars Minor and Capuchins. All these northern missions are in the Archdiocese of San Francisco.

According to a careful estimate made by Merriam, the original Indian population of the mission territory, eastwards to the San Joaquin and lower Sacramento rivers, was approximately 50,000 souls. About 30,000 were domiciled in the missions at the time of confiscation. Following the ruin of the missions and the invasion of the Americans, they died in such thousands and that of all those California Indians, comprising perhaps four-fifths of the whole, not 300 are believed to survive to-day. The southern tribes, being of manlier stock and in some degree protected by their desert environment, have held themselves better, and number to-day on the "Mission Indian" reservations, as already stated, 2,775 souls, a decrease, however, of 152 in nine years. The Mission Indians of California have dwindled to fewer than one-sixteenth of their original number, and indications point to their extinction. (See California.)
MISSIONS

Missions, Catholic.—The history of Catholic missions would necessarily begin with the missionary labours of Christ, and would cover a very considerable portion of the history of the Catholic Church. The principal chapters of missions will be found elsewhere in the Catholic Encyclopedia, in the articles devoted to the various countries, provinces, dioceses, vicariates, religious orders, and congregations, notable missionaries, etc. The present article will be confined to a short general survey of the missionary activity of the Catholic Church at the present day. The subject, as thus limited, is conveniently be considered under the following heads: I. Organization of Catholic Missions; II. Receipts and Expenditure; III. Utility and Object of Mission Statistics; IV. Statistics.

I. Organization.—The main direction of the Catholic missions is vested in the Sacred Congregation of Propaganda Fide, which contributed to the development of the missions of the Catholic world (see Propaganda, Congregation of). This congregation determines the ecclesiastical rank of each mission (prefecture, vicariate, diocese), assigning to it a superior according to this rank, and undertakes the duty of supplying missionaries wherever their services are necessary. For the training of Catholic missionaries numerous secular seminaries have been instituted; the most important are: the Urban (so called after its founder, Urban VIII), English, Irish, Scotch, American, and Canadian Colleges at Rome; Pontifical Seminary of Kandy; Leonine Seminary of Athens; the seminaries at Milan, Lyons, and Paris (the nascent states of the Catholic Association of Foreign Missions); Josephinum College, Columbus, Ohio, U. S. A.; American College, Louvain; English Colleges at Valladolid and Lisbon; Scotch College at Valladolid; Irish College, Paris; All Hallows, Dublin; St. Joseph's Seminary, Mill Hill, London; St. Joseph's, Rosendal, Holland; St. Joseph's, Brixin, Tyrol; Generalate of the Propaganda, Rome; the religious orders — Benedictines, Discalced Carmelites, Franciscans, Jesuits, Augustinians, etc.—which continue with unceasing zeal to labour for the propagation of the Gospel, are assisted by a series of new orders and congregations. It will be sufficient to cite here the names of the societies most widely engaged in foreign missions, and to refer the reader to the special articles for particulars. Congregations of the holy Ghost, Congregation of the Immaculate Heart of Mary; Congregation of the Mission (Lazarists); Oblates of Mary Immaculate; Society of Mary; Oratorians and Oblates of St. Francis de Sales; Redemptorists; Paulists; Congregation of the Sacred Hearts of Jesus and Mary; Priests of the Foreign Missions (Missions Etrangéres). For further information see Missionaries, Foreign, missions, etc.

Among the colleges of the regular orders specially devoted to the training of missionaries may be mentioned: the College of St. Fidelia (Capuchin), College of St. Anthony (Franciscan), College of St. Isidore (Irish Franciscan), and the College of the Irish Augustinians, at Rome; Seminary of Schent, near Brussels (Congregation of the Missions of the Immaculate Heart of Mary); colleges of the Society of African Missions (White Fathers); the Veronese Institute and the colleges of the Society of the Divine Word.

II. Receipts and Expenditure.—Of late years the support formerly lent by various European states to missionary enterprises has been considerably diminished, and the Church has had to rely more and more on the voluntary contributions of the faithful. For the collection of these offerings mission-
aries themselves. A report of comparative failure does not prejudice their cause: the more numerous the difficulties with which they have to contend, the more conspicuous is their self-sacrifice. As, however, statistics now receive the attention of all denominations, words of explanation should be added concerning local difficulties, and in cases where a non-Catholic might be misled. Thus, e.g., a non-Catholic might not know that a Catholic priest may not, in general, baptize a pagan child without its parents’ consent, nor an adult without proper instruction.

The object of mission statistics is to supply the reader with such information as will enable him to judge how far the work of the mission has been successful. The special points on which exact information is most desirable may be grouped under four heads: (1) Number of Christians; (2) Personnel of the Mission; (3) Mission Establishments; (4) Administrative Statistics.

The Number of Christians.—In recording the number of Christians, a distinction should always be drawn between converted heathens and Christian settlers. While, in most missionary countries, the latter class may constitute so small a proportion of the totals as to be negligible, there are many countries in which the number is sufficiently large to create a false idea of the progress of the mission, if this distinction be not observed in the statistics. A distinction between Christians and catechumens is equally necessary, and under the former head none but the baptized should ever be included. By catechumens are to be understood only such heathens as are actually being instructed for baptism: as they constitute the harvest of the mission, they should never be excluded (as is now too often the case) from the statistics.

(2) Personnel of the Mission.—The statistics concerning the personnel of the mission should state how many are priests, the term missionary being used exclusively of such. How many of the missionaries are natives should also be indicated, since this information reveals the progress made towards the ideal of all missionary work, the establishment of a native priesthood. Besides the number of missionaries, exact information should be given concerning the male and female auxiliaries, who are engaged as catechists, as teachers, or to care for the sick; likewise concerning all the lay brothers and sisters (not, however, mere servants) who are employed directly or indirectly in the work of evangelization.

(3) Mission Establishments.—In this category may be classified the mission-stations, churches, chapels, schools of every kind, hospitals, and charitable establishments. Chief stations are most simply distinguished from sub-stations by confining the former term to stations which have at least one resident missionary, and the latter to stations where Divine service is periodically or constantly held by a non-resident missionary. To attempt to restrict the term chief station to centres of unusual missionary activity must lead to great uncertainty, as it would be hopeless to expect that any uniform dividing-line could be universally observed. Again, the name sub-station should never be applied to places where instruction alone is given: the number of such might easily assume proportions which would almost necessarily lead to misapprehension of the exact position of Christianity in the country. Outposts, such as those here indicated, should (if given) be kept separate from the stations. The schools and educational establishments possess a peculiar interest, since in many lands the task of reclaiming adults of a low cultural level, whose minds are obsessed with superstitions and brutalized by crime, is a well-nigh impossible one. The statistics should always distinguish between male and female, elementary and secondary, Catholic and non-Catholic pupils, and also between ordinary pupils
and orphans. It is also advisable to specify the teaching staff (European and native) and the number of pupils receiving instruction in handicrafts and agriculture. A seminary, if such exists, should receive special mention, since it has an important bearing on the formation of a native priesthood. Other institutions may be given under one head, as in many cases one building serves for various purposes.

(4) Administrative Statistics.—The figures dealing with the actual ministry of the missionaries are of course the surest indication of the progress of Christianity. In giving the number of baptisms, adults should always be distinguished from children, the ever, the word mission is confined to the work of bringing pagans into the Church. In view of this difference in the use of the term mission, our statistics do not contain a statement of the present condition of (1) the Catholic missions in lands prevalently or exclusively pagan, and (2) the Catholic missions in lands which have been won to Christianity since the Reformation. As the negroes of the United States are admitted into the statistics of Protestant missions, the inclusion of this second class is necessary to supply a uniform basis of comparison between Catholic and non-Catholic missionary activity.

With reference to the accompanying table it may be

number baptized in articulo mortis being given in both cases. The number of Easter and of devotional communications (given separately) are of special importance as indicating approximately the number of Christians who have reached the use of reason and the fervour of religious life. Such concrete figures give a better idea of the spirituality of the newly-converted than long dissertations on their zeal. Naturally, explanations of local conditions are attached to the figures, which might otherwise lead to misconception.

IV. Statistics of the Catholic Missions.—In dealing with mission statistics, it is a matter of the utmost importance to make clear from the first in what precise sense the word mission is to be understood. In canon law the term signifies all districts which are subject to the Congregation of Propaganda, and it might thus include territories (e. g., until November, 1908, England and the United States) with which the idea of mission is never associated in ordinary speech. We also find two clearly defined meanings commonly assigned to the word by popular usage. By missionary activity is often understood all efforts directed towards the propagation of the Faith, whether among heathens or among non-Catholics; more usually, how stated that the imperfect state of the figures available and considerations of space render it impossible to include all the particulars above advocated. An asterisk denotes that the returns are incomplete. No figures have been given where returns for a very small percentage of the missions are available. For fuller information the reader is referred to the works cited in the bibliography and to the articles on the various countries in the Catholic Encyclopedia.

The missions continued to flourish, and the Church's influence grew.

Yet the results of the Recollects' labours were but indifferent. So these religious generously yielded their places to the Jesuits, who reached Quebec on 19 June, 1625, the first to arrive being Fathers Jérôme LeLemant, E. Massé, and Jean de Brébeuf. Father Massé had already laboured among the Micmacs of what is now Nova Scotia. He renewed his exertions in their midst, while Brébeuf succeeded. Le Caron at the head of the Huron mission, whither he was accompanied by three other priests from France (1626). One of these, a zealous Franciscan, Father de la Roche Dallion, directed his steps towards the Neutral nation, on which he could make no impression. He finally left (1627), while Brébeuf's Jesuit companion also returned to Canada. Brébeuf, who had laboured heroically amidst the most discouraging apathy, if not hostility, of the Hurons. In 1633, after a temporary absence from his post, he returned West with Fathers Antoine Daniel and Ambroise Devoet. Incredible hardships led them to the village of Ixonatiria, where they met a pleasant reception. Then the two fathers set to work to teach and exhort the Indians, at first with no very great success. In the East Fathers Dolbeau and Jamay, with Brother Dupplessis, were displaying their zeal on behalf of the roving Montagnais and Algonquins of the Saguenay, Ottawa, and Lower St. Lawrence. In 1636 Father Dolbeau had even established his residence among the Labrador Eskimos. Thus were missions established at Tadoussac for the Montagnais; at Gaspé for that tribe and the Micmacs; for the latter alone at Miscou, New Brunswick, and at Three Rivers for the Montagnais and the Algonquins. As a rule, those Indians, though lower than the Hurons in the social scale, appeared to be more in earnest in their attentions to the teachings of the missionaries. To the west of these, missionary operations were thenceforth to be concentrated chiefly with a view towards the conversion of tribes of the Huron confederacy. By the end of 1635 Fathers Daniel and Devost, going to Quebec, met two priests proceeding to the north, and at Three Rivers Father Jean Jacques, nearest to the Neutral nation, heard the Jesuit's mission soon after left with a party of Hurons with whom he was to make his apprenticeship of the hardships in store for him. From the central mission of St. Joseph, or Ixonatiria, some twenty-eight towns were visited, the inhabitants of which proved as fickle as they were superstitious. Hence continual dangers forced the missionaries to remain always at the hands of those for whose salvation they were devoting themselves. In 1638 there were nine priests working zealously in thirty-two towns of some twelve thousand souls. Gradually they established the residences of the Conception, St. Mary's, and St. Joseph's, named after the one at Ixonatiria. Then they visited the Petuns (1639), and in 1641 Fathers Charles Raymbault and Isaac Jogues went among the Ottawas. Then, smallpox having made its appearance among the Hurons, fresh dangers ensued for the missionaries, ever considered the cause of such visitations. They now turned their attention to the Neutrals, a powerful nation settled on the peninsula between the Lakes Ontario and Erie; many of them experienced new insults, and met with few consolations (1640-41). Though they thus visited eighteen villages, trying to win over the people by
theirs gentleness and their devotion to their interests, they were everywhere greeted with maledictions and ran the risk of death. It seemed as if their patience and fortitude must have at length taught those uncouth savages, for in 1645 they invited them to their country, promising a better reception for the tireless apostles. The days of the Neutrals, however, were numbered; the Iroquois were to be the unconscious executors of the justice of God upon them.

To the north of the Huronians lay the territory of the Algonquins who counted at that time no less than one hundred and four distinct groups. One of these, the Nipissings, was visited by Fathers Claude Pijart and Raymbault (1640), who were cordially received. Though they soon made a number of baptisms, their success was scarcely commensurate with their exertions. The latter lost the Nipissings, tired of the missionaries, and, as if by way of punishment, they were in 1650 exterminated by the Iroquois. Unfortunately good and bad alike had too often to suffer by the invasions of these warlike aborigines.

In the summer of 1652 Father Jogues and Brother René Goupil were surprised by a party of that nation near a small mission on the Grand Huron. The former was murdered, the latter tortured, and put the latter to death (see GOUFIL and JOUGUES). In common with practically all the missionaries of the time, Father Jogues was a native of France; an Italian, Father Francis Joseph Bressani, was soon to walk in his footsteps (see BRESSANI). Nothing daunted by torments which, however, would have broken a weaker spirit, in 1653 Bressani returned to Canada (1645) and consecrated his unflagging energies to the welfare of the Hurons, who could not help regarding him as a hero. Meantime, constantly harassed by the Iroquois, who had burnt several of their villages, the Hurons were rapidly marching to their doom. Father Bressani, who had given to the Hurons a series of unusual guides, mission work grew apace among them. Indeed about 1648 Father Bressani felt warranted to write that "whereas at the date of their arrival they found not a single soul possessing a knowledge of the true God, at the present day, in spite of persecution, want, famine, war, and pestilence, there is not a single family which does not count some Christians." Better still, the converts were living up to the Christian standard of morality, and the general tone of the nation's society was gradually undergoing a decided change for the better. But the imitable Iroquois would not allow them to profit peacefully by the missions of their priests. One by one their villages were burned, and the missionaries were replaced by the Iroquois. In 1648 St. Joseph's was annihilated and its missionary, Father Daniel, killed while comforting his flock. Next came the turn of the fortified town of St. Louis where the lion-hearted Brébeuf and his companion, Father Lallemant, were martyred (see BREBEUF). St. Ignatius village suffered a similar attack, and most of the inhabitants were butchered. Then St. Mary's was assailed by the enemy; but, warned in time, it succeeded in repulsing the attack. Numerous Huron villages were successively razed, and many of their people massacred, while others were led off to the land of the invaders, there to undergo torture, perpetual captivity, or death.

No wonder, then, if the Hurons lost heart and sought safety in flight and dispersion. Their devoted pastors followed them in their exile. They at first gathered remnants of their once powerful nation on an island in Lake Huron, called to-day Christian Island, while the Petun village of Echiveria succumbed under the blows of the southern aborigines, and with it Father Charles Garnier. Though in the grasp of death, dragged himself to minister to the spiritual needs of his afflicted flock. His companion, Father Noel Chabanell, was at the same time the victim of an apostate Huron who flung his body into the river. The one consolation in the midst of these ruins was the constancy with which the converts stuck to their faith, even when in the land of their executioners. Some of the Iroquois, in the fortitude of their pastors, that many of them not only confessed their faith in Christ at the peril of their lives but even exhorted their persecutors to embrace it themselves. Some of the fugitives went west, while others found a temporary refuge on the desert shores of Lake Huron, or among the Neutrals who had soon themselves to flee for their lives. Meanwhile the exiles of Christian Island, after untold sufferings, retired in the spring of 1650 to the neighbourhood of Quebec, finally settling at the Lorette Mission (see HURON INDIANS). Their chief occupation having ceased with the practical extinction of the Hurons as a people, the Jesuit missionaries now turned their attention to the series of paupers among the prodigies of self-denial with which their victims had been favoured. Against their tenacious perseverance and devotion to duty no bigotry can stand. To Protestants as well as to Catholics they are nothing short of heroes of Christian fortitude. To the west of the Huron nation, the mission of the Petuns who boasted nine or ten villages with a population perhaps ten thousand in 1646. Two missions, that of St. John's and that of St. Mathias, had been established among them. These Indians were commencing to yield to the influence of grace when they, too, had to retire before the victorious march of the ruthless Iroquois. They found them at Michilimackinac, whence they set out on a series of paupers which landed them among tribes of the United States, by whom they were ultimately absorbed. The other remnant of the Huron nation fared better. About 1665 they enjoyed the ministrations of an able and pious priest, Father Joseph M. Chaumontot, a pioneer-missionary who had given to the Hurons more than three years of his life to the ill-fated Hurons (d. 1692).

Considered as a nation, the Hurons had been wiped off the face of the earth. Such of the priests as were not required for missionary work within what is now the American Union then turned their attention toward the more peaceful tribes nearer home. The Micmacs had from the first accepted Christianity (see MICMACS). On 29 July, 1657, Gabriel De Queylus, Gabriel Souaret, and Dominique Galinier, members of a newly founded ecclesiastical society, the Sulpicians, accompanied by M. d'Allet, a dean of the same institute, arriving at Quebec, immediately proceeded to the village of Ville-Marie, now Montreal, where the new fathers were replaced by the spiritual guide of the parish. Though more especially destined for work among the whites, the Sulpicians did not overlook the salvation of the native tribes. Thus, ten years after their arrival in Canada (1667), they ministered to the Ottawas and other Algonquin groups. Bishop De Montmorency-Leval, the first prelate in the colony, entrusted to them the care of a mission established at Quinté Bay on Lake Ontario, for the benefit of the Cayugas, an Iroquois tribe, and many adopted Hurons settled in their midst. Their success with the adult population was not complete; but their very presence paved the way towards establishing missionary stations all along the western shore of Lake Ontario (1669). Soon after, the Sulpicians were succeeded in that field by the Recollects who had just returned to Canada. Father Louis Hennepin and others laboured with energy, but harvested only tares, and the natives gradually returned south; all traces of a mission on the Canadian side of the lake disappeared.

It was then that, quite a number of Iroquois of the American Union bethought themselves of the Faith, a step was taken by their spiritual advisers of which the results were to last to our day. To withdraw them from the dangers of their pagan environment, the Jesuits induced them (1668) to settle at La Prairie.
near Montreal, whence they moved (1678) to Sault-St. Louis, and thence to Caughnawaga. One of the chief reasons for this migration was the prevailing exaction, principally owing to the intoxicants dealt out by the Dutch. The French colony itself was not free from that greatest of curses for the American aborigine. But, in addition to the solemn promise to abstain therefrom which was exacted of all the newcomers into the model settlement, the stopping of the evil was more easy to home than the Los Angeles (as it was then, English) soil. As a matter of fact, the missionaries of New France, and especially their valiant head, Bishop Laval, fought it with unflagging perseverance, appealing to the French authorities whenever their representatives on the St. Lawrence proved unwilling to stay the spread of this scourge. In time, the home of the Sault of the American (or, as it was then, French) Christians gave great consolations. Thus one of the former torturers of Father de Brevé, Garonhiagué by name, became one of the most zealous catechists of the new mission, and the war-chief Kryn shone by his virtues as much as by his courage. But the best known example of Christian efflorescence in that sector of the Lateran Province was the former surnamed the "Lily of the Mohawks", who died in 1678 after a short life passed in the practice of heroic virtues. About that time events shaped themselves in such a way as to further increase the extent of the missionary field in the East. The Abenakis, an Algonquin nation, over a staunch ally of the French, the Iroquois of the Mohawk Valley, who were known to the English, were attracting the attention of Father Gabriel Druillettes, who visited them repeatedly in their original homes. These natives were soon to swell the ranks of the Canadian Indians under the care of the Jesuits. After a series of hostilities in the course of which the English had at one time gained a foothold, the French were defeated on 3 Dec., 1679. Rather than remain neighbours to the victors, most of them immediately made their way to Canada and Acadia, where they have since remained.

The following year (1680) two Jesuits, the brothers Vincent and Jacques Bigot, were appointed to watch over the spiritual interests of the newcomers. They first gathered at the village of Sillery, joined St. Joseph's Mission which in 1681 counted already some five or six hundred inhabitants, as yet unbaptized, but animated by excellent dispositions. Their congers in Acadia, having heard of the welcome extended to them, asked for, and were granted, 150 more. On their way to the Iroquois, they were defeated on 3 Dec., 1679. Rather than remain neighbours to the victors, most of them immediately made their way to Canada and Acadia, where they have since remained.

had preceded him in that distant region. Then Thibault journeyed even farther west, and founded the mission of St. Ann at Finn Slough, which priests therebefore attended, with some measure of success, to the spiritual wants of the surrounding tribes. He next went (1844) as far as Cold Lake, Lac la Biche and even Île à la Crosse, where the Déné Indians received him with open arms.

A short time before (1842) another Canadian missionary, Father Moriée, from the Missionary Oblates of the Foreign Missions of British Columbia, or New Caledonia, as that country was then called, going as far as Stuart Lake, where he accomplished wonders. As early as 1838, after having crossed the entire continent from Quebec, Father Demers had reached the Columbia valley, where he was everywhere received as the special envoy of the Almighty, and produced among the populous tribes of the Pacific an impression which he fully worked for unity when, later on, the ministers of various sects made their appearance. In the spring of the following year, Father Jean Baptiste Z. Bolduc reintroduced Christianity on Vancouver Island, where it had been planted at the time of the occupation of Nootka by the Spaniards (1789-95). In 1842-47 Father John Nobili, assisted by Father Demers' itinerary, and finally went even so far as Babine Lake in the course of his missionary excursion. Meantime a new worker, Father Jean É. Darveau, was in a fair way towards materially improving the spiritual condition of the hardened Saulteaux of what is to-day Northern Manitoba, whose land was warded, 1844 by Jean Baptiste Lavigerie, with a Protestant catechist stationed at Le Pas, Lower Saskatchewan, where the priest intended to start a permanent mission. East of the Manitoban lakes, Father Dominique Du Ranquet, S.J., inaugurated in April of the same year the missionary station of Waspole Island, on Lake Superior, where he visited various posts, and in the following July another Jesuit, Father Choné, took up his residence at Wikwemikong, on Manitoulin Island, where a secular priest had preceded him. No less than twenty-one posts on the island, Georgian Bay from Mississaugu to Owen Sound, as well as Lake Nipissing and Beausoleil Island, were attended from that mission. Great was the opposition of the Protestants, but thanks to James Evans, the inventor of the Cree syllabics; but the Jesuits held their own, and managed to organize the flourishing Christian settlements of Garden River and Pigeon River (1848). The latter station was transferred in 1849 to Fort William by Fathers Choné and Frémiot. There the missionaries remained devoted to the Indians of Fort Arthur, Prince of Wales, Royal Island, and Lake Nepigon. Still further east, in the very land of the Abenakis, less consoling events had taken place some time previously. An Indian known by the name of Masta had been educated in the United States, where he returned in 1835 to St. Francis Mission with the title and attributes of a Protestant minister. After much opposition at the hands of his fellow Abenaki he succeeded, by dint of skilful intrigue and with the connivance of the Canadian authorities, in putting up a Protestant chapel in the very midst of the Indian village (1837). Three years later Father J. A. Maurault was sent thither by Bishop Signay to learn the language of the natives, and in 1847 he actually became their missionary. Thenceforth the Abenaki preacher saw whatever influence he had gained wane until he had to leave the scene of his exploits. At the same time a still better known priest was commencing his apostolic career at Oka, Father J. A. Cucq, an able Sylvester, who was in his youth an attendant at the chapel for over half a century to the welfare of the Mohawks and Algonquins, whose languages he eventually mastered.

A new era dawned for the Indian missions of
Canada. At the request of Mgr Bourget, Bishop of Montreal, four Oblates of Mary Immaculate reached the St. Lawrence from France (1841) and immediately began preaching missions, not only to the whites, but also to the Indians of Lower Canada. Several missionaries of the new order, Fathers Louis Deléage, Flavien Durocher, and Jean-N. Lavrelouchère, soon distinguished themselves. Bishop Provancher begged for the cooperation of their brethren in religion. On 25 Aug., 1845, Father Pierre Aubert and Brother Antonin-Alexandre Taché arrived at St. Boniface, and, while the older missionary was sent to Wabassimong, Brother Taché left after his ordination (22 Oct., 1845) for the distant post of the Mobile, where he had for a time been Father Louis Lafleche, who had established that mission in the course of the preceding year. Both priests did a vast amount of good to the native population.

In 1846 two other Oblates, Father Henri Faraud and a companion, reached the Canadian West. In the north Father Taché gradually extended his field of action. He visited (1847), first of all missionaries, the shores of Lake Athabasca, where Father Faraud was to inaugurate the Nativity Mission on 8 September, 1849. On 24 June of the following year Father Taché was appointed coadjutor to Bishop Provancher, and temporarily left the Ile à la Crosse mission in the hands of newcomers, Fathers Maisonnave and Taché, and the experience was of great service to the Indians. Hence Bishop Taché had to return to them after his consecration (23 Nov., 1851), and for several years the young prelate continued among them the labours which pertain more to the province of a simple priest than to that of a bishop. Father Henri Grollier, a young Oblate who was to become the Apostle of the Arctic Circle, came to support the ranks of the missionaries (June, 1852), while Father Albert Lacombe started on his long career as an itinerant missionary over the Saskatchewan plains. Father Grollier soon went to Lake Athabasca, where he was for some time Father Faraud's companion. Then he founded the mission of Fond du Lac, on the same body of water (1852), while Father René Rémés established that of Lac la Biche. The principal event of 1854 was the arrival in the Canadian Northwest of Father Vital J. Grandin, a young Oblate who was to do yeoman service in the cause of the missions there. The new recruit was sent to Lake Athabasca, to relieve Father Faraud, who established (1856) St. Joseph's Mission on Great Slave Lake. In the result of the Oblates' exertions in the north, we may say that, by the end of 1856, there remained of the seven hundred and thirty-five natives who formed the population of Ile à la Crosse, only one hundred and forty-eight heathens.

In the far East other Oblates were emulating those of the Canadian Northwest; in addition to those already mentioned there were Fathers André Garin and Charles Arnaud, then Fathers Louis Babel and Jean-Pierre Guéguen. These missionaries repeatedly visited in succession Tadousac, Les Escoumins, Maskawu, Mingan, Portneuf, and Les Ilets. As a rule their efforts were crowned with success. Not only did they teach their neophytes the rudiments of the Christian doctrine, but they even imparted to them some knowledge of the secular sciences, and enhanced the attractiveness of the Catholic worship by solemn processions and other pious devices. As early as 30 Sept., 1850, one of them, Father Arnaud, at this writing (1910) still actively engaged in the eastern field, tells us that: 'we have in the native of Jeanne d'Arc the best instructed on the coast; they all know how to read and write. It is inspiring to see them in the church, the men on one side and the women on the other, prayer-book in hand, vying with each other, as it were, in modesty and fervour. Another spectacle scarcely less striking is that of the little children in prayer after the evening service, when every mother teaches the members of her family how to pray to the Great Spirit' (Rapport sur les Missions de Québec, March, 1851, p. 36).

A regular house of the Oblates was established (1851) at Rivière au Désert, now Maniwaki, and later on (1862) others were erected at Bethammita and Ville-Marie (Pontiac), whence, as well as from the Hearing of the St. Lawrence, not only the laity, but the bands of the interior, Montagnais, Naskapi, and Nascapé, but even such as resorted to the trading-posts of Abitibi, Albany, and Moose Factory, on Hudson Bay, were visited by the "Black-Robes". In spite of their precarious circumstances, those aborigines often enough repaid by a faithful discharge of religious duties. The missionaries could not keep their spiritual guides. The same may be said of the Inuits of the inhospitable steppe of the Far North, where the Tachés, Farauds, Grandins, Grolliers, and a host of others were glad to undergo the pangs of hunger, and setting at defiance the rigours of Arctic winters and the fatigues of endless marches on snowshoes, for the sake of the souls entrusted to their care. Their courage and devotion to duty were so great, and their successes so striking, that they often elicited flattering encomiums from Protestant traders and explorers. On 30 November, 1859, Father Grandin was consecrated Bishop of Satala and coadjutor to Bishop Taché; yet he remained in the north, spending most of his episcopal time among the natives. Hence the presence there was all the more necessary as the preceding years had witnessed the arrival in the Mackenzie district of the first Protestant clergyman, the forerunner of numerous Anglican missionaries in the north. Father Grollier was immediately dispatched to Fort Simpson, the headquarters of the enemy, where, in spite of the inherent danger, he continued to work as a constant trader. He had the consolation of seeing the great natural boundary of the natives side with the representative of Catholicism. He then founded (1858) the missionary post of Our Lady of Good Hope, likewise on the Mackenzie and just within the Arctic Circle. Then he even went down as far as the first Eskimo village (Sept., 1860), while Father Gascon, a new recruit, was protecting the savages of the Liard River against the wiles of the preacher. Simultaneously the difficult station of Lake Caribou, just southwest of the Barren Grounds, was established under Father Véorgville.

The year 1862 saw the beginning of what was to become a most important establishment under the sign of Our Lady of the Divine Shepherdess, where Fathers Gascon and Petitot made the very first clearings. That same year a Protestant minister, Mr. Kirkby, despairing of success east of the Rocky Mountains, crossed that range into the Yukon. Hearing of this, an intrepid missionary, Father Séguin, immediately followed, but the conflict was unequal; the preacher having the powerful influence of the traders, had resources of which the priest could not dispose. Above all, he had the advantage of priority, and, despite two other visits of the Catholic missionaries, that of Father Petitot (1870) and that of Bishop Clout with Father Lecoré (1872), the Loucheux of the Far Northwest were, to a great extent, lost to the Church. Things were brighter on the Saskatchewan and in the adjoining region, where new posts, denoting constant progress, were being established on all sides. Even martyred Darveau's old mission of Duck Bay had been in a sense revived, though transferred to the northern extremity of Lake Manitoba under the name of St.-Laurent. A still more important event was the division of the entire Mackenzie districts into a separate vicarate Apostolic, with Father Faraud (consecrated 30 Nov., 1861) as first titular. The new prelate was (1866) given a coadjutor in the person of Bishop Isidore Clout. With this perfected organization the northern missions, served by such sterling missionaries as Fathers
Séguin, Grouard, and the learned explorer, linguist, and ethnographer, Father Petitot, managed, in the teeth of opposition and extreme poverty, not only to hold their own, but to increase the number of their stations and converts. In the course of 1866 Father Petitot continued his visits to the Indians north of the visit of the first minister of the Gospel they had ever seen in their dreary wastes. In the south Fathers Lacombe, Gasté, Leduc, Fourmond, Bonnal, and others were neither less active nor less successful. While in the far East secular priests were looking after the spiritual interests of the Abenakis, the Oblates continued their visits to the Indians north of the St. Lawrence, and the Jesuits to the natives of the Lake Superior basin.

On the Pacific Coast, the work of evangelization inaugurated by Father Demers likewise advanced. That missionary, having been made Bishop of Vancouver Island (1847), called to his aid the Oblates lately established in Oregon. The stations of Esquimalt, Sanish, and Cowichan, and the conversion of hosts of aborigines were the immediate results. From the island missionary work spread to the adjacent mainland. On 8 Oct., 1859, Father Charles M. Pandosy founded the Okanagan mission, and Fathers Casimir Chirouze, Léon Fouquet, Poulin, and others, but even then under their superior, Father Louis-Joseph D’Herbomez, in regenerating the Indians of the Lower Fraser. Most consoling were the results of their zeal, and it is doubtful if a more thorough change from habitual intemperance and other vices was ever effected in North America than that which rejoiced the hearts of the Oblates in British Columbia.

On 20 Dec., 1863, Father d’Herbomez became the first bishop of the mainland, and this circumstance gave a new impetus to the evangelization of that immense country. Shuswap and Chilcotins were then granted the same spiritual advantages as had been so for some time enjoyed by the natives of the Lower Fraser. It was the beginning of the mission of St. Mary’s that had been established (1861). In the course of 1868 Bishop d’Herbomez himself visited the whole of the northern interior of British Columbia, as far as Babine Lake, doing much good to the Dénes and other Indians he met. Fathers Le Jaoq and McQuicken walked in his footsteps until the former founded the mission of Athabasca and the latter went as far as the present site of Fort Providence, which was to become the great centre of missionary activities in the north of the Pacific province. In June, 1875, Father Pierre-P. Durieu was named coadjutor to Bishop d’Herbomez. On Vancouver Island a devoted secular priest, Father August Brabant, had long been battling at his own personal risk against the apathy of the less religiously inclined Indians of the west coast. He was finally successful, while secular priests, Fathers J. N. Lemmens, Joseph Nicolaye, and others, were gradually taking the places of the Oblates who had been the pioneers of the island diocese. In 1871 the Holy See formed the Province of St. Boniface with Archbishop MacDonald as its first Bishop. Bishop Grdin, now titular of St. Albert, and the vicars Apostolic of Athabasca-Mackenzie (Mgr. Farquh) and of British Columbia (Mgr. d’Herbomez). The archdiocese lost importance as a missionary country in proportion as it saw the wave of white immigration roll over the soil tilled by so many devoted workers. The districts of the Saskatchewan, the Mackenzie, and the Mackenzie were long to remain rich fields for apostolic men zealous for the lowest in the social scale. That the difficulties and even dangers attending the evangelization of the Indians had not disappeared from those territories was made evident by the drowning in Lake Athabasca (1873) of a veteran of the northern missions, Father Emile Eynard, an ex-official of the French government, the freezing (1874) of Louis Dasté, a lay missionary of the St. Albert diocese, and the fate which befell Brother Alexis (July, 1875), killed and eaten by an Iroquois companion.

Yet there is no denying that local conditions were, by little undergoing some alterations. On the plains of what is now southern Alberta and southern Saskatchewan white immigration had commenced. At that time treaties were made with the Indians, entailing the establishment of new missionary posts and of industrial schools. While some of these were assigned to Protestant sects, the Church could not be content with a second place in a country where she had done most of the pioneer work. In spite of occasional ill-will on the part of those in power, she readily adapted herself to the new circumstances. Thus were founded the important Indian schools of (1) Dunbow, Alberta (1864); (2) Qu’Appelle, Saskatchewan (1864); (3) St. Boniface (1890); (4) Duck Lake, in Saskatchewan (1897), and other similar institutions for the benefit of the Indian youth. British Columbia already possessed the Indian industrial schools of St. Mary’s, William’s Lake, Kamloops, and Kootenay, all in the hands of the Catholic missionaries and nuns. Then came the Saskatchewan Rebellion (1885), which resulted not only in the destruction of seven Catholic missions but in large numbers of deaths at the hands of the Cree (2 April) of Fathers Fafard and Marchand, young Oblates then in charge of the posts of Frog Lake and Onion Lake respectively. Quite a few of the misguided Indians, however, eventually profited by these troubles, since their condemnation to death or confinement led them to join the Church they had so grievously injured.

Thereupon the roving life of the pioneers became more or less a thing of the past for the missionaries of the western prairies, who, penned up with their charge in well-defined reservations, continued their ministrations without that element of romance which breaks the monotony of the daily round and contributes to the making of history. It may now suffice for us to mention the labours of Fathers Gasté at Lake Caribou; Bonnal at Cumberland; Grouard (who replaced Bishop Fafard, d. Oct., 1892), at Lac la Biche and Athabasca; of Father Pascal (appointed vicar Apostolic of the newly created district of the Saskatchewan, 19 April, 1891), as well as those of Fathers Laviolette and Delisle of the Lower Mackenzie, and of many other equally deserving missionaries. Even the lonely missions of the great northern stream and tributaries have had a share in the material progress so noticeable in the south. Thanks to the initiative of Bishop Grouard, a steamer has been built which annually saves to those poor missions large sums of money formerly paid to the Hudson Bay Company for their periodical outfitting. In the far East a new impetus was imparted to the missions of the faithful Miames by the arrival of the Capuchin Fathers in October, 1894, at Ste-Anne de Restigouche. In British Columbia material circumstances were never so quite so precarious as those of the Paraguayans. The spirit and zeal of Fathers Le Jacq, Fouquet, Chirouze junior, and others, the wonders of the Paraguayan Reductions have been reproduced, if not surpassed, among the Indians of the Peace. Other working there were Rev. A. G. Morice, who directed Stuart’s Lake mission during nineteen years and invented an Indian syllabary now widely known in the North; N. Coccola, who did wonders in the Kootenay; Fr. Thomas, and V. Rohr.

Of a native population of 111,043, Canada officially counts to-day 40,820 Catholic Indians thus distributed: Prince Edward Island, 274; New Brunswick.
was celebrated by the noted Dominican Antonio de Montesinos, the earliest opponent of Indian slavery, at Aylion’s temporary colony of San Miguel de Guadalupe in 1526, eighty years before the founding of Jamestown.

I. SOUTH-EASTERN STATES (VIRGINIA TO ALABAMA, INCLUSIVE).—The whole south-eastern portion of the United States, extending westwards to or beyond the Mississippi, was known in the early Spanish period under the general name of Florida. Although at least fifteen priests had lost their lives in this region with the expeditions of Narváez and De Soto in 1528–29 and 1539–42, an attempt to evangelize the native tribes was made in 1549 by the Dominican Luis Cancer, the apostle of Guatemala, under a royal commission granted at his own request for the conversion of Florida. Forced by the obstinacy of the ship-captain to land at Tampa Bay among the fierce Calusa, instead of being given an opportunity to search out a friendly tribe, Father Cancer and his two companions had hardly touched the shore when they were killed by the assembled savages in sight of the ship, being thus the first missionary martyrs of the eastern United States. St. Augustine, Florida, the first permanent settlement in the eastern United States, was founded by Menéndez in 1565. In the next year, at the request of the King of Spain, three Jesuits were sent out, one of whom, Father Pedro Martínez, having landed with a small party on Cumberland Island on the Georgia coast, was attacked and murdered by the savages. The other two Jesuits, Father Juan Rogel and Father Francisco de Escalante, after spending a winter studying the language, proceeded to work among the Calusa tribe in southern Florida. Reinforced by ten more Jesuits in 1568, they went over to Havana to establish there a school for Indian boys from Florida. Father Juan Bautista Segura, as Jesuit vice-provincial, then took charge of the Florida missions, establishing missions at Yucatán, Teogaste, and Tocoába tribes of the south and west coasts, while Father Antonio Sedeño and Brother Domingo Báez began the first Georgia mission on the Island of Yamacoo, in whose language Brother Báez prepared a grammar and a catechism. In 1569 Father Rogel with several Jesuits began work among the Orista or Edisto and others in the neighbourhood of the Spanish post of Santa Elena. After about a year, the results proving unsatisfactory, both the Orista and the Guale missions were abandoned, the missionaries returning to Havana with a number of boys for the Indian school. In 1572 Father Segura, accompanied by Father Luis de Quiros and seven (? ) novices and lay brothers, all Jesuits, together with four instructed Indian youths, undertook a mission among the Powhatan Indians in what is now Virginia. The guide and interpreter on whom they depended to bring them into touch with the natives was a young Indian of the region. That is what religion and civilisation Goya, brought off by a Spanish expedition nine years before, educated under the Dominicans in Mexico and Spain, and baptised under the name and title of Don Luis de Velasco. Their destination was Azacán (Oshacon)—supposed by Shea to have been on the Rappahannock—but more probably situated farther south. They met with friendly reception, and a log chapel was erected (September, 1570), but, before the winter was over, Don Luis proved treacherous, and under his leadership the Indians attacked the mission (February, 1571) and massacred the entire party with the exception of one Indian boy, who was spared, and finally escaped to tell the tale. The massacre cast a gloom on the previously promising mission, and the log chapel was later pulled down. In consequence of the small result in Florida the Jesuits were shortly afterwards transferred to the more promising field of Mexico. Years afterward;
the establishment of the Catholic colony of Maryland, some attention was given to the neighbouring Indians of Virginia (see below). In 1577 several Franciscans, from Carolina and converted the Timucua Indians near the city, of whom a number were soon regular attendants at the parish church. Fifteen years later four Franciscan priests and two lay brothers were at work in the towns of the Timucua and Yamasee from St. Augustine northwards into Georgia. In 1605 twelve more were sent out in charge of Father Juan de Silva, including the noted Father Francisco Pareja, to whom we are indebted for our most complete account of the Timucua people and language and for several devotional works, the first books printed in any Indian language of the United States. In 1597 a chief of the Yamasee organized a conspiracy which seems to have included also a part of the Timucua tribe about St. Augustine. Five missions, stretching from St. Augustine to Ossabaw island in Georgia, were attacked and five of the six missionaries murdered, Father De Avila (or Dávila), although badly wounded, being rescued. The advanced party was killed, and the Spanish troops, after all the Yamasee missions had been destroyed. The missions among the more peaceful Timucua about the lower Saint John's River, Florida, continued to flourish, being in 1602 four in number, besides temporary stations, with 1200 Christian Indians. Other Franciscans arriving, the Yamasee missions were re-established in 1605, the Potana tribe on the Suwanee river almost entirely Christianized two years later, and a beginning made among the lower Creek bands. In 1633 missionaries were sent to the powerful Apalachee of western Florida in response to repeated requests from that tribe. In 1655 there were 35 Franciscan missions in Florida and Georgia, and the Jesuits of Father Angélico de Rey, a convert of Bishop Calderón, the Apalachee mission was restored, and several new foundations established. In 1684 the Diocesan Synod of Havana promulgated regulations for the government and protection of the mission Indians. In the same year the Governor of Florida, alarmed at the growing strength of the English on the other side of the continent, all the native locations of the northern missions to more southern settlements with the result that the Yamasee again revolted and, being supplied with guns by the English, attacked and destroyed the mission on Saint Catherine island, Georgia, and carried off a troop of Christian Indians prisoners to sell as slaves in Carolina. In 1686 an attempt was made by the rival Spanish city of Saint Augustine to force the Indians to the missions. This resulted in the killing of a religious and six companions, a like attempt in the next year among the fierce Calusa south of Tampa Bay also proved abortive.

For years the English slave-traders of Carolina had made a business of arming certain tribes with guns and sending them out to make raids upon other tribes to procure slaves for Carolina and the Barbadoes. The Spanish Government, on the contrary, refused guns even to the Christian Indians. The War of the Spanish Succession gave an opportunity for an attack upon the Florida missions. In May, 1702, the heathen Lower Creeks, armed and instigated by Governor Moore of Carolina, attacked Santa Fé, occupied by the Jesuits, the only Indian town in the colony. The same year a combined English and Indian land expedition, co-operating with a naval force, attacked the mission towns north of St. Augustine, burned three of them with their churches, made prisoner the missionaries, and then, proceeding farther southward, burned the town of St. Augustine with the Franciscan convent and the Red Indians in retribution for the attack in America. The fortress held out until relieved by a Spanish fleet. In January, 1704, Moore, at the head of about fifty Carolina men and a thousand or more well-armed Creek, Catawba, and other savages, ravaged the Apalachee country, destroyed ten of the eleven missions towns, slaughtered hundreds of the people, including a number of warriors who made a stand under the Spanish lieutenant Mexía, and carried off nearly 1400 Christian Indians to be sold as slaves in Carolina or distributed for torture or adoption among the savages. The missions, with their churches, gardens, and orange groves, were utterly demolished, the vestments and sacred vessels destroyed or carried off, and numbers of the neophytes burned at the stake. Four of the mission fathers were also killed (two being tortured and burned at the stake), and their bodies hacked to pieces by deliberate permission of Moore himself, who gave up Lieutenant Mexía and four Spanish soldiers to the same fate.

This was practically the end of the Florida missions, and although a temporary expedition was made, with some temporary success, to gather together again the remnants of the Apalachee, Timucua, and other Christian tribes, and in 1726 there were still counted more than 1000 Christian Indians. With the establishment of the English Georgia colony and the ensuing war of 1740 the attempt was abandoned, and the mission towns were left in a condition of pestilence. In 1753 only 136 Indians remained in four mission stations close to St. Augustine. In 1743 the Jesuit Fathers José María Monaco and José Xavier de Alana began a mission near Cape Florida among the utterly savage Ais and Jogó with such success that a community of Christian Indians was built up, which continued until the abandonment of Florida in 1762.

II. MARYLAND.—The English Catholic colony of Maryland, founded in 1634, was served in its first years by the Jesuits, who made the Indians their special care. Under the superior, Father Andrew White, and his companions, several missions were established among the Piscataway (Conoy) and Patuxent of lower Maryland. The diocese established in 1789 was also given to the Potomac tribe in Virginia. The principal mission was begun in 1639 at Kittamaqundi, or Piscataway, near the mouth of the creek of that name. Other stations were Mattapony on the Patuxent, Annason on (Anacostia) adjoining the present Washington, and Potopac (Port Tobacco), where Father Gola, in 1656, remained for four years giving an extended visit among the Potomac, on the Virginia side, Father White baptized the chief and principal men, with a number of others. The work was much hampered by the inroads of the hostile Susquehanna from the head of the bay, and was brought to a sudden and premature close in 1645 by the Indians and their Protestant brethren and with the advantage of the Civil War in England, repaid the generosity which had given them asylum in Maryland by seizing the Government, plundering the churches and missions and the houses of the principal Catholics, and sending Fathers White and Copley to England to be tried for their lives, while Father Martwell, the new superior, and two other missionaries escaped to Virginia. Later efforts to revive the mission had only temporary success owing to the hostility of the Protestant Government and the rapid wasting of the native tribes. Before 1700 the remnant of the Piscataway removed bodily from Maryland and sought refuge in the north with the Delawares and Iroquois, where they were received with hospitable kindness. To Father White's anonymous "Relatio itineris ad Marylandiam" (translation published in 1833 and again in 1874) we are indebted for the best account.
of the western Maryland tribes. He also composed an Indian catechism, still extant, and a manuscript grammar of the Piscataway language, now unfortunately lost, the first attempt at an Indian grammar by an Englishman and anedating Eliot's Bible by at least a dozen years. (See Piscataway Indians.)

New England.—The earliest Christian mission on the soil of New England was that of Saint-Sauveur begun among the Abenakis in connexion with a French post on Mount Desert Island, Maine, by Father Pierre Biard and three other Jesuits in 1613. Both post and mission were destroyed a few months later by the English captain Argall, Brother Du Thet being killed in the attack and Father Biard and Quentien carried prisoners to Virginia. In 1619 the Recollects arrived to make a second mission. In 1623, Father Biard, returning to the coast, and gave attention also to the Indians, chiefly in New Brunswick and Nova Scotia. In 1633 they were succeeded by the Capuchins, who made their headquarters at Fort Royal (Annapolis), Nova Scotia, and had stations as far south as the Kennebec, the principal one being among the Penobscot near the French Fort Pentagouet (Castine), at the mouth of the Penobscot. In 1655 the post was seized by the English, and the resident missionary, Father Despresy, carried off. Although restored to France by treaty in 1667, the mission languished, and in 1693 was consigned to the Jesuits, who made the new mission of Sainte Anne (established by Father Louis Thibault) near the mouth of the Penobscot river. Father Despresy, near the French fort at Oldtown) their chief residence among the Penobscot. The Capuchins had laboured also among the Etchemin (see Maliseet Indians) on the northern frontier of Maine, their chief station being at Medoctee on the Saint John, established by Father Simeon in 1688 and revived by the Jesuits in 1701. In 1646 the noted Jesuit Father Jacques Bigot, whose mission was established at Norridgewock (Indian Old Point) on the Kennebec the Assumption mission, which for nearly eighty years thereafter held its place as the principal of the Abenaki missions. The most noted worker at this post was Sebastian Rasle (Rile, Rasler), who laboured with the utmost zeal from 1695 until his heroic death in 1724 at the age of sixty-six.

The chronic warfare throughout all this period between the rival French and English colonies, in which the native tribes almost solidly took the side of the French, exposed the Indian missions to the constant attacks of the English and made the missionaries marked men, both as Catholic priests and as supposed agents of their Government. They had many fugitives from the Abenaki bands retired to Canada, where they were joined by refugees from the Pennacook and other southern New England tribes, driven out by King Philip's War of 1675- 76. In 1683 these were gathered by the Jesuit Father Jacques Bigot, into the new mission of Saint Francois de Sales (St. Francis) on the Chemagenip (Fenelon) near Quebec. In 1700 the mission was removed to its present location. In spite of repeated demands by the New England Government (1698, 1701, 1712), the Abenaki refused either to send their missionaries away or to accept Protestant teachers. Realizing the danger, the Jesuits urged that the Abenaki Indians and missions be removed to a safer location in Canada, but the project was not favourably by the Canadian Government. In 1704-5 two New England expeditions ravaged the Abenaki, burning Norridgewock, with its church, and looting the sacred vessels. In 1713 some Indians removed to the St. Lawrence and settled at Bécanour, where their descendants still remain. Norridgewock was given up in 1722 and was another New England men. As part of the plunder the raiders carried off the manuscript Abenaki dictionary (preserved at Harvard and published in 1833), to which Father Rasle had devoted thirty years of labour, and which ranks as one of the greatest monuments of our aborigi- nal languages. Earlier in the year the mission village and fine church on the Penobscot, placed under Father Lauverjet, had been destroyed by another party, following which event Massachusetts had summoned the Indians to deliver up every priest among them and had set a price on Rasle's head. Although repeatedly urged to seek safety in Canada, he refused to desert his flock. At last the blow fell. On 23 August, 1724, the New England men men with a party of Mohawk Indians surprised Norridgewock while most of the warriors were away, killed several of the defenders, plundered and burned the church and village. The devoted missionary, now old and crippled, was shot down at the foot of the cross, scalped, his skull crushed and his body almost hacked in pieces. A monument was erected on the spot in 1833, the year in which the greater monument, his Abenaki dictionary, was published.

Mission work was continued in some measure, although under difficulties, among the Indians of the Penobscot and the St. John, but most of the Norridgewock band retired to Saint Francis, which thus became one of the most flourishing missions in Canada. In 1759 it was attacked by a strong New England force under Colonel Rogers and completely destroyed, with its church and records, two hundred Indians being killed. The mission was re-established near the present Pineville, Quebec, and still exists, numbering about 350 mixed bloods, while Bécanour has about 50. In 1763 Father Rasle entered into a treaty with the Abenaki of Maine espoused the cause of the Americans in the Revolution, and in 1775 made application to the new Government for the return of their French priests. The Massachusetts commissioners, although willing, were unable to supply them, but a later application to Bishop Carroll resulted in the appointment of the Sulphur Pater from Quebec as missionary at Oldtown about 1785. For nearly ten years he ministered to them and the Passamaquoddy, when he was transferred to the Maliseet on the Saint John. After various changes the Maine missions reverted again to the Jesuits in the person of Father John Bapst, who arrived at Oldtown in 1848. The most distinguished of the later missionaries is Eugene Vetromile, S. J. (d. 1881), author of several works on the Abenaki tribe and language. The two tribes are entirely Catholic.

III. NEW YORK AND PENNSYLVANIA.—A large part of what is now New York State was held by the five confederated tribes of the fierce and powerful Iroquois (7 of 16), numerically the strongest. Throughout the unfortunate circumstances of Champlain's plea, they formed a party of their enemies in 1640, they conceived a bitter hostility to the French which they gratified with deadly effect after procuring guns from the Dutch thirty years later. For this reason, and from the additional fact that their territory was within the sphere of English influence, the permanent Catholic mission was ever established within their limits, although several attempts were made, and large numbers were drawn off from the confederacy and formed into mission settlements under French control. So far as is known, the first missionary to enter this region was the Recollect father, Joseph de la Roche de Dalion, of the Huron mission in Ontario, who in 1629 made a perilous exploration of the country of the Neutr Nation, adjoining the Iroquois in western New York. In 1642 the heroic Jesuit, Isaac Jogues, was captured with two white companions and several Hurons by an Iroquois war party and taken to the Mohawk town of Caughnawaga (alias Ossernenon). Here they were driven out of the settlement, which had been laid waste by the Iroquois. Jogues was then burned at the stake, and the three Frenchmen cruelly tortured and mutilated, though not put to death. Father Jogues had his nails torn out, two fingers crushed by the teeth of the savages, and one thumb sawn off. One of his companions, the novice Répe
Coupil, was killed shortly afterwards for making the sign of the cross over a sick child. The third Frenchman, Couture, was finally adopted. After a terrible capture at the grave of La Prade the dyeing of the Mohawks, besides acquiring a knowledge of the language, Father Jogues was rescued by the Dutch and finally found his way to France. In the meantime another Huron missionary, Father Joseph Bressani, had been captured by the same Mohawks, tortured in even more terrible fashion at the same town, and likewise ransomed through the kindness of the Dutch (1644). In the summer of 1644 Father Jogues was back again in Canada, assisting in negotiating an uncertain peace with the Mohawks. In May, 1646, he was sent with a single white companion to the Mohawk country to consummate the agreement. This done, he returned to Canada to make his report, and then, with another Frenchman and a Huron guide, set out once more for the Mohawk to establish a mission. They were intercepted on the way by a war party of the same perfidious Mohawks, and carried to Caughnawaga, where, after various cruelties, all three were put to death on 18 October, 1646, the head of Father Jogues being sent up the river, and then thrown into the Mohawk River. The site of the Indian town is now the property of the Society of Jesus, and a memorial chapel marks the spot of their martyrdom.

In August, 1653, Father Joseph Ponet, S.J., was captured near Montreal by a Mohawk war party, carried to their towns, and there terribly tortured, but finally released. It was not until 1654 that the confederated Iroquois tribes, the Onondaga, Oneida, and Cayuga were now for peace with the French, and only the Seneca (who, however, nearly equalled all the others together) held back. Father Ponet reached Montreal late in the year, and peace was made. Father Simon Le Moyne, S.J., volunteered to go to the Iroquois, and Father Francis Xavier arrived in the summer of 1654 at Onondaga, their capital, where he successfully effected his purpose and was invited to select a spot for a French settlement. As a result the Jesuit Fathers Joseph Chaumonot and Claude Dabolon established the first Iroquois mission at Onondaga in November, 1654. In all the Iroquois tribes were numbered about 6,000, of whom 3,000 were Onondaga and 1,500 Cayuga, and it was thought proper to have a mission at each of them (see Huron Indians), who gave the missionaries a warm welcome. In 1656 Father Le Moyne was again with the Mohawks. In July, 1655, a party of fifty French colonists with several more Jesuits arrived at Onondaga to found a settlement there, as requested by the Iroquois, although it was strongly felt that the latter had been led into the enterprise by the specious promises of those who remaining joining with others from the Caughnawaga mission (Canada) in 1756 to establish a new settlement under Jesuit auspices at Aquasnne, alias St. François Régis, which still exists under the name of St. Regis, on both sides of the New York—Canadian boundary where it strikes the St. Lawrence. The mission at Oswegatchie lasted about 200 years, until 1807. The Catholic Iroquois now number about 40,000 out of a total 18,725, Caughnawaga itself with 2,175 souls being the largest Indian settlement north of Mexico.

About 1755 the first mission in western Pennsylvania was started among the Delawares at Sawunk, on Beaver River, where also were some Shawnee and other Iroquois...
response to urgent requests from the Chippewas and Ottawas. The next year a call came from some fugitive Hurons, who had fled to Green Bay in Wisconsin, to escape the Iroquois. To the remonstrance of those who knew the change of the times, the"God calls me, I must go, if it cost me my life." In making a danger portage he became separated from his guides and was never seen again, but as the searchers came upon a hostile trail, and their Breviation and casko were afterwards found with the Sioux, it is believed that he was killed by a lurking enemy. His place was filled by Father Claude Allouez, who, as vicar-general in the West, established the second Chippewa mission in 1665, under the name of Saint-Esprit at La Pointe Chegoimennon, now Bayfield, Wisconsin, on the south shore of Lake Superior. Other missions soon followed at Sault Sainte Marie (Sainte Marie) and Mackinaw (St. Ignace) in Upper Michigan; Green Bay (St. Francois Xavier), St. Mary, and St. Jacques in Wisconsin, among the Chippewas, Ottawas, Hurons, Mascoutens, Kickapoos, Foxes, and Miami. Among the noted Jesuit workers were Fathers Claude Dablon, Gabriel Drul-Jettes, and the explorer Jacques Marquette. In 1668 the mission of St. Joseph was founded by Allouez among the Potawatomis in northern Indiana. The mission at the mouth of the present Mississippi river was abandoned almost hostile Siouxs, but most of the others continued, with interruption, down to the expulsion of the Jesuits in 1764. In 1727 the Jesuit-father, Louis Guignez, founded the mission of St. Michael among the Siouxs, on Lake Pepin in Minnesota, which continued until some time after 1730, being abandoned probably on account of the disasters of the preacher.

The first mission among the Illinois was that of the Incramulate Conformation, founded by Marquette in 1674 near the present Rockford, Illinois, and known later as the Raskaaskia mission. Others were established later at Peoria Lake and at Cahokia, opposite St. Louis, until by 1725 the entire Illinois nation was evangelized or at least nominally connected with the Illinois missions are those of Marquette, Rasle, and Jacques Gravier, author of the great manuscript Illinois dictionary.

Missions were also established later among the various branches of the Miami in Indiana as well as among the Potawatomis, which continued to flourish under the care of the missions. The property was confiscated, although the Jesuits generally remained as secular priests until their death. Their successors continued to minister to Indians and whites alike till the removal of the tribes, 1820–40.

The majority of the Indians of Michigan and Wisconsin remained in their own homes, with missions maintained either as regular establishments or as visiting stations served by secular priests. Of the later missionaries one of the distinguished names is that of the author and philologist Bishop Frederick Baraga (d. 1865), best known for his grammar and dictionary of the Chippewa language. (See for more recent work, CHIPPEWA INDIANS; CHEROKEE INDIANS; ILLINOIS INDIANS; MASCOUTEN INDIANS; MENOMINEE INDIANS; MIAMI INDIANS; OTTAWA INDIANS; POTAWATOMI INDIANS; SIOUX INDIANS; WINNEBAGO INDIANS; BARAGA; GRAVIER; MARQUETTE, DIOSCESE OF; MARQUETTE, JACQUES.)

V. Lower Mississippi Region: THE LOUISIANA Mission. The "Louisiana Mission" of the French colonial period included the present states of Missouri, Arkansas, Louisiana, Mississippi, and Alabama, with the Tamaro foundation near Cahokia in Illinois, but excluding the Caddo establishments on the disputed Spanish frontier of Texas. For several reasons, rivalries and changes among the religious orders, intrigues of English traders, and general neglect or open hostility toward the Jesuits, the southern missions never attained any large measure of prosperity or permanent success. In 1673 the Jesuit Marquette had descended the Mississippi as far as the villages of the Arkansas, later known as Quapaw, at the mouth of the river of the same name, making the earliest map of the region and indicating the position of various tribes, but without undertaking a foundation.

In 1682 the Recollect Franciscan Father Zenon Membré, with the party of the commander La Salle, descended the Mississippi to its mouth and returned, planting a cross among the Arkansas, and preaching to them and to the Taensa, Natches, and others farther down. In 1686 a French fort was built at the Arkansas, and the commander Tonty set apart a mission site and made formal request for a Jesuit missionary, but apparently without result.

In 1698, under authority of the Bishop of Quebec, the priests of the seminary of Quebec, an offshoot of the Paris Congregation of Foreign Missions, undertook the lower Mississippi field despite the protests of the Jesuits, who considered it partly at least, within their own sphere. Early in 1699, three missionary priests having arrived, as many missions were established, viz., among the Tamaroa (Tamaroa), a tribe of the Illinois confederacy, at Cahokia, Illinois, by Father Jean-François de St-Côme; among the Taensa, above the Mississippi rapids, by Father Louis-Benoît de Montigny; and among the Toncas, at the present Fort Adams, Mississippi, by Father Antoine Davion. Father de Montigny shortly afterwards transferred his mission to the kindred and more important Natches tribe, about the present city of that name, ministering thus to both tribes. Father Davion laboured also with the Taensa and minor tribes, as well as the same society arrived later. In the meantime Iberville, the father of the Louisiana colony, had brought out from France (1700) the Jesuit father, Paul du Ru, who, first at Biloxi, Mississippi, and later at Mobile, Alabama, ministered to the small tribes gathered about the French post, including a band of fugitive Chickasaws from the Carolina. In the same year another Jesuit, Father Joseph de Limoges, from Canada, planted a mission among the Huma and Bayagula, Choctaw bands about the mouth of Red River, Louisiana.

In 1702 Father Nicholas Foucault, of the Seminaries, who had established a mission among the Arkansas, was expelled, and two years later the mission property was confiscated, although the Jesuits generally remained as secular priests until their death. Their successors continued to minister to Indians and whites alike till the removal of the tribes, 1820–40.

The Toncas station was abandoned in 1708, being threatened by the Chickasaw in the English interest. The whole southern work languished, the Indians themselves being either indifferent or openly hostile to Christianity, and when Father Charlevoix made his western tour in 1721 he found but one priest on the lower Mississippi, Father Joff, among the Yassou. Father Fargues founded a mission at the present site of the Louisiana Company, which had taken over control of the colony, gave permission to the Jesuits to undertake the Indian work, while the French posts and settlements were assigned to other priests. In 1726, therefore, Father Paul du Poisson restored the Arkansas mission, which had been vacant since 1702; Father Alexis de Guyenne undertook the Alabam, a tribe of the Creek nation, above Mobile, and Father Mathurin le Petit began work among the Choctaw in southern Mississippi. The Ursuline convent foundation at New Orleans in 1727 is due to Jesuit labour. In the next year the Jesuit father, Michel Baudouin, undertook a mission among the warlike Chickasaw.
these, successful mission schools have been established within the past thirty years, and are now in operation, among the Northern Cheyenne (secular), Assiniboine (Jesuit), Crow (Jesuit), Grosventre (Jesuit), and Piegan Blackfeet (Jesuit) in Montana; the Arapaho and Shoshoni (Jesuit) in Wyoming; and the Southern Ute (Theatine) in Colorado (see Ute Indians).

VII. TERRITORY AND CLIMATE. - Texas, etc. - Texas as a Spanish colony was connected with Mexico, and was ruled in missionary affairs from Querétaro and Zacatecas, instead of from Havana, as was Florida. Its immense area, four times as great as that of all New England, contained hundreds of petty tribes or bands — so many, in fact, that they have never been counted — speaking scores of languages or dialects, belonging to no known confederacies, based upon linguistic affiliation, of which the principal within the mission sphere may be designated as the Caddo, Hasinai, Karankawa, Tonkawa, Wichita, and Pakawá. Of these, the Caddo group extended into western Louisiana, while the tribes of the Wichita connection ranged north into Kansas. The total Indian population within the present state limits was probably originally close to 40,000. The beginning of mission work in Texas was made by the Franciscan Father Andrés de Olmos, who in 1544 crossed the Rio Grande and, after gathering a large body of converts, led them back into Tamaulipas, where they were organized into a migration town, Olives. In 1565 the French Frontière erected a fort on Matagorda Bay, and two years later, after a succession of misfortunes, started to make his way overland to Illinois, leaving behind about twenty men, including the Recollect missionaries, Fathers Zenobius Membré and Maximus Le Cercq, and the Sulpician Father Chevedelle. A Spanish expedition which arrived later found the French Frontière and his converts dead and unburied bones. All but two men had been killed by the Indians, among whom the chalices and Breviaries of the murdered priests were afterwards recovered.

In 1890 a company of Spanish Franciscans from the Querétaro College, headed by Father Damian Mazzaretz, established a mission among the friendly Hasinai (Ainaias, Cenis), in north-east Texas, and projected others, but the work was abandoned three years later. In 1899 the Franciscans of the Zacatecas College began a series of missions along the south bank of the Rio Grande, to which they gathered in a number of Indians of the Pakawá group in southern Texas. These were kept up until 1718, when the chief mission was transferred to San Antonio.

In 1715 the two colleges combined to restore the Texas missions, urged by the zeal of the venerable founder of the Zacatecas college, Father Antonio Margil. The Hasinai mission (San Francisco) was restored and another, La Purisima, established among the cognate Hainai (Aynaias) in the neighbourhood of the present Nacogdoches band (N. S. de Guadalupe) was founded by Margil himself among the Ncogdoches band of the Caddo in 1716, and others in 1717 among the Ais (N. S. de Dolores) and Adai or Adayes (San Miguel de Linares), the last being within the limits of Louisiana. In 1719, war having been declared between France and Spain, a French expedition under St. Denis plundered the mission at the Adai. In consequence the missions were abandoned until peace was declared two years later.

In 1718 the mission of San Francisco Solano was transferred to San Antonio de Valero. Other missions were established in the vicinity, making a total of four in 1731, including San Antonio de Fadus, the celebration of the Dedication of the missions of Caddo and Hasinai from the East; Xarame from the Rio Grande; Pakawá (Pacoa) and a few Tofkawá of the immediate neighbourhood. In the meantime a lay brother had perished in a prairie fire, and another, Brother Jose Pita, in 1721, with a small party, had been massacred by the Lipan while on his way to his
station. In 1722 the mission of Guadalupe was established at Bahia, on Lavaca (Matagorda) Bay among the Karankawa. Nine years later it was moved to the Guadalupe River. In 1752 the Candelaria mission was attacked by the Caco, a Karankawa band, and Father José Guadalupe, its director, was killed. In 1757 the mission of San Sábal was established by Father Alonso Terreros for the conversion of the wild and nomadic Lipan Apache, but they refused to settle in it; the following year the tribes destroyed the mission, killing Father Terreros and two other priests. Another attempted Lipan mission, in 1761, was broken up in 1769 by the Comanche. At this period the Texas missions had reached their highest point, with an Indian population of about 15,000. In 1760 Father Bartolomé García published his religious manual for the use of the San Antonio missions, which remains almost our only linguistic monument of the Paháwa tribes of central Texas. In 1791 another mission was established among the Karankawa.

Although constantly hampered by the Spanish authorities, the missions continued to exist until 1812, when they were suppressed by the revolutionary Government, and the Indians scattered (see PAPÁWA INDIANS; TONKAWA INDIANS; WICHITA).

VIII. New Mexico and Arizona. The earliest European occupation of New Mexico was by the Franciscan Marco de Niza (Marcos de Nixna) in 1539, and the first missions were undertaken in 1542 by the Franciscans who accompanied Coronado. (For the missions among the Pueblo and Hopi see PUEBLO INDIANS.) The most important event in this connexion is the great Pueblo revolt of 1680 in which twenty-one missionaries and 400 others were massacred.

The missions among the Pima and Papago of Arizona are of later foundation, beginning about 1732, and originated with the Jesuit, with whom they continued until the expulsion of the order in 1767, when they were taken over by the Franciscans (see PAPAGO INDIANS; PIMA INDIANS).

To secure the powerful tribe of the Navajo in northern Arizona and New Mexico were made by the Franciscans as early as 1746, but without result. Lately the work has been again taken up successfully by German Franciscans. To their scholarship and scientific interest we owe also a monumental "Ethnological Dictionary of the Navaho Language." (See NAVAJO INDIANS.) Some mission work is also now conducted in the Mescalero tribe of about 450 souls at Tularosa, New Mexico.

IX. The Columbia Region. The first knowledge of Christianity among the tribes of this region came through the Catholic Iroquois and Canadien French employees of the Hudson Bay Company, by whose influence and teaching many of the Indians, particularly among the Flatheads and Nez Perce, were induced to embrace the principles and practices of Catholicism as early as 1820, leading some years later to a request for missionaries, in response to which the Flathead mission in Montana was founded by the Jesuit Father Peter de Smet in 1841, followed shortly afterwards by another among the Nez Perce in Idaho, established by the Jesuit Father Nicholas Point. In 1839 Father Francis Blanchet, secular, who had come out to attend the Indian residents, established St. Francis Xavier mission on the Cowlitz, in western Washington, and another on the lower Willamet at Champoeq, Oregon, while about the same time Father J. B. Bolyue began work among the tribes of Puget Sound. In 1844 three Jesuit missions were established among the Pend d'Oreille and Colville tribes of the Upper Columbia, besides three others across the British line. In 1847 the Oblates arrived, and missions were established by Father Pandoey among the Yakima and by Father Ricardo near the present Olympia. In 1848 the secular Fathers Rousseau and Mesplef founded a station among the Wasco, at the Dalles of the Columbia, in Oregon. Work was also attempted among the degenerate Chinooks, with little result. The noted Oblate missionary, Father Casimir Chirouze (d. 1892), best known for his later work at Tulalip, reached Oregon in 1847 and began his labours among the tribes of Puget Sound and the lower Columbia about the same period. With the exception of the Wasco and the Chinooks, these missions or their successors are still in successful operation, numbering among their adherents the majority of the Christian Indians of Washington and southern Idaho. To Fathers Saintonge and Pandosy we are indebted for important contributions to Yakima linguistics. (See CHINOOKANS; KALLEPSCH INDIANS; KUTENN INDIANS; LAKE INDIANS; LUMMI INDIANS; PUYALLUP INDIANS; SPOKAN INDIANS; TULALIP INDIANS; YAKIMA INDIANS.)

Besides these there are Jesuit missions of more recent establishment among the Nez Percés of Idaho; and among the Umatlans, Klamath, Warspring, and Siletz Indians in Oregon, besides another among the remnant tribes of Grand Ronde reservation, Oregon, served by a priest of the Society of the Divine Saviour. (See SILETZ INDIANS; UMATILLA INDIANS; WARSPRING INDIANS; YAMHILL INDIANS.)

X. California. For the mission history see CALIFORNIA; and Mission Indians.

For a statement of the present organisation of Indian mission work and the sources and methods of financial support, see article Indian Missions, Bureau of Catholic.

XI. The Missionary Martyrs. The following incomplete and tentative list of missionaries who died by violence or other untimely death in direct connexion with their work will show that even before the establishment of the republic the soil of the United States had been baptized in the blood of Catholic missionaries from ocean to ocean. A few other names are included for special reasons. Those who perished with the exploring expeditions under Narváez, De Soto, and others are not noted.

1542 Padilla, Juan de, Franciscan, killed in Kansas(?).

1543 Escalona, Brother Luis de, Franciscan, killed by Pecos, New Mexico.

1549 La Cruz, Juan de, Franciscan, killed by Tiguas, New Mexico.

1549(?) Tolosa, Diego de, Dominican, killed by Calusa, Florida.

1556 Fuentes, Brother, killed by Calusa, Florida.

1566 Martínez, Pedro, Jesuit, killed by Yamasee, Georgia.

1569(?) Béz, Brother Domingo, Agustín, Jesuit, died of fever, with Yamasee, Florida.

1571 Segura, Juan Bautista Quiros, Luis de Gómez, Brother Gabriel (novice) de (novice) Jesús, killed by Solís, Brother Powhatan, Virginia.

1571 Zerallos, Brother Sancho Redondo, Brother Linares, Brother (novice)

1581 López, Francisco, Franciscan, killed at Tiguas, New Mexico.

1581 Santa María, Juan de Rodríguez (or Ruiz), Brother Agustín (novice) Francisco, Franciscans, killed at Tiguas, New Mexico.

1597 Corpa, Pedro de Rodriguez (or Ruiz), Brother Agustín Francisca, Francisca, Francisca, killed at Tiguas, New Mexico.

1613 Du Thet, Brother Gilbert, Jesuit, killed by the English, Maine.
1631 Miranda de Ávila, Pedro, Franciscan, killed by Taos, New Mexico.

1632 Lebrado, Francisco, Franciscans, killed by Arville, Martin de, "Ziaquis", New Mexico.

1633 Torres, Francisco, Franciscan, poisoned by Hopi, Arizona.

1642 Goupil, René (novice), Jesuit, killed by Mohawks, New York.

1644 Bressani, Joseph, Jesuit, tortured by Mohawks, but rescued, New York.

1646 Joques, Isaac, Jesuit, killed by Mohawks, New York.

1653 Poncelet, Joseph, Jesuit, tortured by Mohawks, but rescued, New York.

1657 Eight Franciscans drowned, en route Florida missions to Havana.

1661 Menard, René, Jesuit, lost, supposed killed by Sioux, Wisconsin.

1675 "Several missionaries", Franciscans (record incomplete), killed by Pueblo, New Mexico.

1675 Marquette, Jacques, Jesuit, died in woods, Michigan.

1680 La Ribourde, Gabriel de, Recollect, killed by Kickapoos, Illinois.

1680 Twenty-two Franciscans killed in general massacre, and revolted Pueblo, New Mexico, and Arizona, viz.

- Talaban, Juan Lorezana, Francisco Antonio de Montes de Oca, (Juan?) Santo Domingo Pueblo, New Mexico.
- José de Pio, Juan Bautista de, Tesuque Pueblo, New Mexico.
- Torres, Tomas, Nambe Pueblo, New Mexico.
- Morales, Luis de Pro, Antonio Sánchez de Baeza, Luis de Rendon, Matías de, Picuris Pueblo, New Mexico.
- Mora, Antonio Pedraza, Juan de, Taos Pueblo, New Mexico.
- Maldonado, Lucas, Acoma Pueblo, New Mexico.
- Bal, Juan de, Alona (Zufi) Pueblo, New Mexico.
- Figuera, José de Trujillo, José Espeleta, José de Santa María, Agustín de Bernal, Juan (cuzco) Galisteo (Tano) Pueblo Vera, Juan Domingo, San Ildefonso Pueblo, New Mexico.
- Velasco, Francisco (Fernando), de, Pecos Pueblo, New Mexico.
- Tinoco, Manuel, San Marcos Pueblo, New Mexico.
- Jesus, Simon (Juan?) de, Jemes Pueblo, New Mexico.

1683 (circa) Beltran, Manuel, Franciscan, killed by Tanos (?), New Mexico.

1687 Membré, Zenobius, Recollect, Le Clerc, Maximus, Recollect, Chetdeville, —, Sulpician, killed by Karankawa (?), Texas.

1696 —, Franciscan, by Ais (?), (Tororo), Florida.

1696 Arbizu, José de Franciscans, killed by Taos, Carbonel, Antonio New Mexico.

1697 Corvera, Francisco Franciscans, killed by Tejano, Antonio hua, New Mexico.

1698 Casañes, Francisco, Franciscan, killed by Jemes, New Mexico.

1702 Foucault, Nicholas, Sem. For. Missions, killed, by Kora, Mississippi.

1704 Farge, Juan de Menendez, Manuel de Delgado, Marcos Miranda, Angel Franciscans, tortured and killed by English and Indian allies, Florida.

1706 Delhalle, Nicholas, B.C., Recollect (parish priest, Detroit), killed by Ottawa, Michigan.

1708 Gravier, Jacques, Franciscan, died of wound inflicted by Illinois (1705), Illinois.

1715 (circa) Vatier, Léonard, Recollect, killed by Foxes, Wisconsin.

1718 Mantedocia (Mantes de Oca), Brother Luis de, Franciscan, killed in prairie fire, Texas.

1720 (circa) Mingüés, Juan, Franciscan, killed in massacre by Missouri, Missouri (?).

1721 Pita, Brother José, Franciscan, killed in massacre by Lipan, Texas.

1729 du Poisson, Paul, Jesuit, killed by Natches, Mississippi.

1730 Souel, Jean, Jesuit, killed by Yaozo, Mississippi.

1736 Senat, Antoninus, Jesuit, tortured and burned with whole party by Chickasaw, Mississippi.

Aulneau (Arnaud), Jean-Pierre, Jesuit, killed with twenty others in massacre by Sioux, on Massacre Island, Lake Pepin, about two miles beyond the Minnesota-Canada line.

1752 Ganzabal, José Francisco, Franciscan, held by Coco (Karankawa), Texas.

1758 (circa) Silva, —, Franciscan, killed by Yuma, California.

1760 Terreros, Alonso G.de, killed in massacre at San Gaspar, by missionary Indians, Texas.

1775 Jayme, Luis, Franciscan, killed by Diegueno, California.

1780 Díaz, Juan Morena, Matías Queses, Francisco Yuma, California.

1812 Quintana, Andrés, Franciscan, killed by Mission Indians, California.

1833 Díaz, —, killed by Caddo (?), Texas.

James Mooney.

**MISSIONS**

**MISSIONS, CATHOLIC PAROCHIAL.**—This term is used to designate certain special exertions of the Church's pastoral agencies, made for the most part, among Catholics, to instruct them more fully in the truths of their religion, to convert sinners, rouse the torpid and indifferent, and lift the good to a still higher plane of spiritual effort. To distinguish them from those missions which represent the apostolic activity of the Church among pagans and heathens, these home missions are known in some communities of English-speaking Catholics as "parochial missions". Such missions usually consist of a systematic course of preaching and instruction, extending over a stated number of days, performed by authorized missionaries. The present article treats of: I. The Necessity and Utility of Popular Missions; II. Origin of History; III. Method.

**I. Necessity and Utility.**—From the above definition it is evident that the primary object of a popular mission is not the making of converts to the Faith. However, owing to the familiar relations between Catholics and non-Catholics in the United States, this is so common a result that it may be regarded as normally a part of the work in that country, and from the last decade of the nineteenth century, as
organized missionary movement for the conversion of non-Catholics has been carried on throughout that country. (See Missionary Society of St. Paul the Apostle.) But the converts whom a pastor most of all seeks during a regular parish visit are his own people. And it cannot be denied that the clear, forcible, and consecutive exposition of the most important truths of salvation, together with a course of instructions to prepare the people for the worthy reception of the sacraments and enlighten them on the duties of their daily lives, affords a powerful means to renovate a parish spiritually. Everyone finds in these sermons and instructions something that appeals peculiarly to him, and is likely to bear fruit in the future. These missions are for the laity what retreats are for the clergy and religious communities. In fact they are an adaptation to the needs and capacities of the faithful of the spiritual exercises long traditional in the Church, and made use of especially during the Ages of Faith when people were in the habit of retiring to monasteries to devote themselves for a certain period of time to that renewal in the spirit of their mind, which the Apostle recommends: “And be renewed in the spirit of your mind: and put on the new man, who according to God is created in justice and holiness of truth” (Eph., iv, 22-24). Moreover, from a retreat, it is no exaggeration to say that, in the ordinary course of Divine Providence, a mission is the greatest grace that God can confer upon any parish. “There is nothing”, says St. Alphonsus, “that is better adapted than missions or retreats to enlighten the minds of men, to purify corrupt hearts and to make them new creations in Christ.”

The usefulness of missions, moreover, for the sanctification and salvation of souls has received not a little recognition from various popes during the last two centuries. Paul III recommended the Spiritual Exercises of St. Ignatius as “full of piety and sanctity and very useful and salutary for the edification and spiritual life”, and Leo XIV, after comparing missionaries to those whom the Apostles Peter and Andrew called to assist them in landing their nets, says that for “purifying corrupt morals... nothing is more effective than to solicit the aid of others, namely to establish everywhere (that is in every diocese) sacred missions. Nor can there be too many, nor too few, and they should be proposed for purifying the morals of the people. It is an old one and indeed the only one suitably adapted to cure existing evils, one which many bishops have employed in their dioceses with extraordinary results” (“Gravissimum”, 8 Sept., 1745). Pius VI condemned the proposition of those who called missions an empty noise with at most a transient effect (Auct. Fid., prop. 65). Leo XII granted a plenary indulgence to the missions given by the Fathers of the Society of Jesus. Gregory XVI extended this indulgence to the sick who could not attend the missions, but complied with the required conditions at their homes; and in 1834 the same pontiff extended it to all missions of the latter type. His life was a missionary life, “teaching daily in the temple”, “preaching to the multitude from the ship”, and, at the close of His life’s work, entrusting its continuation to His Apostles—“Going therefore, teach ye all nations... Teaching them to observe all things whatsoever I have commanded you” (Matt., xxviii, 19, 20). Obedient to this injunction, the Church has become a history of missionary activity, whether by it be understood the prolonged missionary labour among heathen tribes, or the exercise of regular mission work among the faithful.

It is true that until the beginning of the seventeenth century there existed no organised form of popular missionary work in the Church. But even in the early ages of the Church we find such eminent saints and doctors as the two Gregories (of Nazi...
The apostolic labours of these missionaries were everywhere blessed with remarkable success. In France, the birthplace of popular missions, the Lazarists and the Jesuits were the pioneers of a missionary activity which stirred up the faithful to greater zeal and dedication. Missionaries in every part of the country. Other congregations gradually came to their assistance, and, though there was a slight falling off in this respect during the period of the French Revolution, yet, in the reign of Napoleon I, the emperor himself arranged for missions in the dioceses of Troyes, Poitiers, La Rochelle, and Metz, to be conducted at the expense of the Government. After the Restoration in 1815, a new impetus was given to missionary work by the Abbé Forbin-Janson, who, with his friend the Abbé de Rauzan, founded the Missionaries of France, and by Charles de Mazenod, who founded the Oblates of Mary Immaculate, at Marseilles, in 1815. In Germany parochial missions had been given sporadically, chiefly by the Jesuits and the Redemptorists, before 1848; after that date they became more general. The bishops everywhere encouraged and urged them. The Cardinal Archbishop of Meechin, in 1843, maintained that the people of every parish are entitled, at least ex caritate, to have the benefit of a mission. During this period the German Church could pride itself on many eminent missionaries: Redemptorists, Dominican, Franciscans—devoted themselves entirely to popular mission work: the names of Fathers Roh, Klinkhofström, Pottgeser, and others are still held in benediction. On the expulsion of the Jesuits, Redemptorists and other orders from the German Empire, in 1872, there was a short interruption, but the work was soon taken up and carried on in the richest by the congregations which had been permitted to remain. The Redemptorists, on their return in 1894, entered the field with renewed vigour.

In Italy systematic mission work was introduced by the Lazarists during the lifetime of their founder. With the rise of the Redemptorists, the Passionists, the Fathers of the Precious Blood, and several other congregations, the work spread rapidly over the entire peninsula, and, in spite of the disturbances of the nineteenth century, popular missions have flourished there. In Austria they developed during the reign of Maria Theresa, but under her successor, Joseph II, missions were to a great extent prohibited, and missionaries banished. But could labour only on condition of submitting to official persecution. It was only after the Revolution of 1848 had spent itself that the Redemptorists, Jesuits, Capuchins, and Franciscans could carry on the work of missions un molested, especially in Bohemia and the Tyrol, in Westphalia, Bavaria, and Württemberg. On the expulsion of the Jesuits and Redemptorists, missions were again prohibited. Later, however, Capuchins and Franciscans took up the work, and diocesan priests also entered the field as missionaries and directors of retreats. In 1786, St. Clement Mary Hofbauer, second founder of the Redemptorists, with his friend Thadäus Hübl, founded a house of the Redemptorist Congregation in Würzburg. In 1844, a German Knight of St. Januarius, Dr. Poniatowski placed the German national church of St. Benno at their disposal. The labours of St. Clement and his companions at Warsaw from 1786 to 1808 were crowned with extraordinary success.

After the death of St. Alphonso, his missionaries evangelized the desert. Catholics in the Russian Province, of Courland, and Livonia, on the invitation of Monsignor Saluzzo, Apostolic Nuncio in Poland. In Belgium and in Holland the missionary spirit has, with one or two slight interruptions, always been active. The Lazarists laboured in Great Britain as early as 1840, and until the penal laws made organized mission work impossible. It was not until 1865 that the work was effectively begun in that country. In Ireland, missions were recommended by national and
MISSISSIPPI provincial synods—e.g., by the Plenary Synod of Thurles, in 1850; by the Synod of Cashel, 1853, and of Tuam, 1854, and the Plenary Synod of Maynooth, 1875. In England they were recommended by the Provincial Council of Westminster in 1852, and again in 1859; in Scotland by the Plenary Council of 1886. The Plenary Council of Australia, held at Sydney in 1885, and, in Canada, the Provincial Council of Quebec, in 1863, strongly urged parochial missions.

In the United States there was no systematic popular missionary work until about 1860, though missions had been given earlier. The Lazarist Fathers arrived in 1816, the Redemptorists in 1832, and the Passionists in 1852; but, although missions and spiritual retreats are the special work of these congregations, the scarcity of priests in this country compelled them at first to postpone such work to the ordinary spiritual wants of a scattered population. In 1839 Gregory XVI sent the Abbé Forbin-Janson on a missionary tour through the United States, where, for two years, he gave missions to the people and retreats to the clergy, bringing the faithful to the sacraments in numbers which since then have scarcely been equalled. In the Second Provincial Council of Cincinnati (1858), the Baltimore (1860), and the Tenth Provincial Council of Baltimore (1869), parochial missions are strongly recommended. Among the more active missionaries of this period, Fathers Smarius, Weniger, Damen, D. Young, O.F., and Hewit are still gratefully remembered.

With the increase in the number of priests, the parish boundaries as follows: "inhis case usually on the Mississippi River at a point where the southern boundary of the State of Tennessee strikes the same, thence east along the said boundary line to the Tennessee River, thence up the same to the mouth of Bear Creek, thence by a direct line to the north-west corner of the County of Washington, thence due south to the Gulf of Mexico, and thence westward within six leagues of the shore, to the most eastern junction of Pearl River with Lake Borgne, thence up said River to the thirty-first degree of North latitude, thence west along said degree of latitude to the Mississippi River, thence up the same to the beginning." The state in its extreme length is 330 miles; its greatest breadth is 199 miles. It has a coast-line on the Gulf of Mexico of about 75 miles. By government surveys begun in 1803, the state is divided into sections and townships.

Topography.—It contains no mountains, but there is a decided difference of levels between the alluvial lands lying between the Mississippi and Yazoo Rivers and the other sections of the state, which may be generally characterized as the uplands of the state. The latter comprise approximately five-sixths of the entire area of the state, constituting a plateau of an undulating character, the level of which gently descends in a general southerly direction to the coast. Its general elevation above the level of the Gulf of Mexico near Plaquemines Point is about 50 feet. The western and north-eastern portions are from about 150 to 500 and 600 feet above the level of the Gulf of Mexico. The drainage on the west is the Mississippi River and its principal tributaries the Yazoo, Tallahatchie, Coldwater, Sunflower, Big Black, and Womochitto Rivers; in the middle part the Pearl, which empties into Lake Pontchartrain, and, as a third chief tributary, the Chickasawha River, and the Escatawpa River, and in the south the Wolf, Pascagoula, Biloxie, Aboloitchi, and Catahoula Rivers. The upland sections of the state are undulating, and successive ridges divide the area between the water courses. The north-eastern portion contains a large area of prairie formation on the alluvial lands, known also as the Cherty Clay. The middle comprises a

MISSISSIPPI

sively and the second for men. If it is to continue four weeks, the first week is for married women, the second for unmarried women, the third for married men, and the fourth for unmarried men. As far as time will permit, the sermons are usually dealt with the following general subjects, which are varied to some extent according to circumstances: Salvation, Sin, Repentance, Hell, Death, Judgment, Heaven—with special instructions on matrimony, temperance, Christian education, etc. The instructions deal also with the essentials of the sacraments, of penance, certain commandments of God, of the Church, Holy Communion, the Mass, devotion to the Blessed Virgin, prayer, duties of parents and children, etc. The style of these instructions is simple and didactic.

JOSEPH SCHROEDER.

Mississippi, one of the United States of America, takes its name from the Mississippi River that forms its western boundary from 35° to 31° N. lat. The Act of Congress of 1 March, 1817, creating the state, fixed its boundaries as follows: "Beginning at the point where the Mississippi River at a point where the southern boundary of the State of Tennessee strikes the same, thence east along the said boundary line to the Tennessee River, thence up the same to the mouth of Bear Creek, thence by a direct line to the north-west corner of the County of Washington, thence due south to the Gulf of Mexico, and thence westward within six leagues of the shore, to the most eastern junction of Pearl River with Lake Borgne, thence up said River to the thirty-first degree of North latitude, thence west along said degree of latitude to the Mississippi River, thence up the same to the beginning." The state in its extreme length is 330 miles; its greatest breadth is 199 miles. It has a coast-line on the Gulf of Mexico of about 75 miles. By government surveys begun in 1803, the state is divided into sections and townships.

Topography.—It contains no mountains, but there is a decided difference of levels between the alluvial lands lying between the Mississippi and Yazoo Rivers and the other sections of the state, which may be generally characterized as the uplands of the state. The latter comprise approximately five-sixths of the entire area of the state, constituting a plateau of an undulating character, the level of which gently descends in a general southerly direction to the coast. Its general elevation above the level of the Gulf of Mexico near Plaquemines Point is about 50 feet. The western and north-eastern portions are from about 150 to 500 and 600 feet above the level of the Gulf of Mexico. The drainage on the west is the Mississippi River and its principal tributaries the Yazoo, Tallahatchie, Coldwater, Sunflower, Big Black, and Womochitto Rivers; in the middle part the Pearl, which empties into Lake Pontchartrain, and, as a third chief tributary, the Chickasawha River, and the Escatawpa River, and in the south the Wolf, Pascagoula, Biloxie, Aboloitchi, and Catahoula Rivers. The upland sections of the state are undulating, and successive ridges divide the area between the water courses. The north-eastern portion contains a large area of prairie formation on the alluvial lands, known also as the Cherty Clay. The middle comprises a
Fauna and Flora.—In Mississippi we meet with all the different animals that are found in the gulf states. There are about forty different species of mammals in the state. Among them is the American opossum, which is abundant, and is highly prized as an article of food. The deer and the black bear, that once existed in great numbers, are disappearing owing to the clearing up of the country and the inefficient enforcement of the game laws. About one hundred and fifteen varieties of birds are found, about twenty of which are migratory, coming from the north during the fall and winter months. The mocking bird, exclusively a southern bird, and the most remarkable songster in the world, is found in the state, especially in the middle and southern portions, in great numbers. The wild turkey, a native of this country, is found in nearly all parts of the state. Quail are also very abundant. The game laws are more effective and are enforced vigorously than heretofore. More than fifty species of reptiles are found here, prominent among them being the alligator (A. mississippiensis), existing mainly in the middle and southern portions of the state on the rivers and lakes. It attains a maximum length of from 14 to 15 feet. There are at least sixty species of fish, the majority of which are edible. The oysters and crustaceans of the gulf exist in great quantities and are of the finest quality for food.

The state, in almost its entire area, was covered originally with a magnificent growth of forest trees. More than one hundred and twenty species exist at present. Among them are fifteen varieties of oak, including live oak and white and red oaks which are the most valuable. Cypress is still abundant in the river bottoms and on the lakes. Besides several species of hickory, the black walnut, chestnut, sweet gum, red cedar, red gum, elms of various varieties, maple, cah, sycamore exist here, among many other valuable varieties, all of large growth and valuable as timber. The long-leaf pine, the most valuable tree for timber for various uses, abounds in the southern portion of the state. The short-leaf pine, not quite so valuable, is widely distributed throughout the middle and northern sections. Next to cotton, timber is the most valuable product of the state. The value of the pine timber in the state was estimated in 1880, approximately, at $250,000,000. Allowing for the cutting since that time and also for the increase in the price of lumber, a conservative approximation estimate of its value should not be less than $300,000,000 at the present time.

Agriculture.—This is the principal industry in the state; of the male population 77.7% and of the female 71.8% are engaged in agricultural pursuits. Fully one half of the state is of extraordinary fertility. The only portion that is unproductive is the small strip of territory known geographically as Flat Woods, where only the bottom lands are fertile. Cotton is the principal product, being probably three times greater than the other industries of the state combined. The value of the cotton crop as shown by the census of 1900 was $54,032,941. The crop of 1879–1880 was valued at $80,000,000, showing an increase during that period of over $8,000,000. Among other minor products are Indian corn, oats, hay, peas of every variety, wheat, cane, sorghum, rice, potatoes, and almost every variety of orchard and garden product. In the southern
part of the state, sub-tropical and several varieties of tropical fruits are successfully cultivated. The Yazoo-Delta region, the most fertile section of the state. Its area is 6480 square miles, or 4,147,200 acres. With an alluvial soil that is practically inexhaustible, its cotton production exceeds that of any other land in the world. Its land produces from three quarters to a bale and a half an acre, and with careful tillage and in a good cotton year as much as a bale and a half to two bales to the acre. The increase in the value of the lands in the Delta, both timber and cultivated, is remarkable. In 1881 the state sold 1,500,000 acres of timber lands, by levee tax titles, which have been held valid, for six and one half cents per acre. These lands are now worth, on an average, $20 per acre. Twenty years ago cotton lands in a bale of cotton, and the market prices of cotton. The population of the delta is 195,346; of this number 24,137 are whites and 171,209 are negroes. The negroes generally cultivate the cotton farms and the large cotton plantations of the state, while the small farms are cultivated by white labor.

Population.—The state, as shown by the census of 1900, is 1,551,270, of which 641,200 are white and 907,630 are negroes, with 2203 Indians and 237 Chinese. A small percentage of the population is foreign born. There are 5345 males and 2536 females foreign born; total, 7891. Of these 7625 are white, and 266 negroes. The total number of males of voting age is 3,921,179, of whom 3,130,530 are whites and 190,649 negroes. There are 118,057 illiterate males of voting age, and of these 105,331 are negroes and 12,293 are whites. Illiteracy in the total population amounts to 32%. The illiteracy of the entire white population is 8% and of the total negro population, 49.1%. Under the influence of the extensive school facilities provided in the state, the percentage of illiteracy is steadily decreasing.

Administration.—The civil government of the state is structurally similar to that of the other states. There are three departments—executive, legislative, and judicial. The state officers and members of the legislature are elected by the people every four years. There are three supreme court judges, thirteen circuit court judges and eight chancellors, all appointed by the governor with the approval of the senate. The elective franchise contains the following conditions, viz: a voter must be twenty-one years old, he must be able to read or to understand the state Constitution when read to him (that is, a layman's and not a lawyer's test of comprehension); he must have resided in the state two years and in the precinct one year, and have paid all taxes, including an annual poll tax of $2 for two years preceding the election. Conviction of certain crimes against honesty entails the disfranchisement of a voter. This qualified suffrage has given the state a large white majority in its elected bodies. The validity of these suffrage qualifications has been sustained by the Supreme Court of the United States in the case of Williams vs. The State of Mississippi, decided by a unanimous court in 1896. The state maintains institutions for the insane, the blind, and the deaf and dumb, affording ample facilities for both races. There is a state hospital at Natchez and one at Vicksburg.

Education.—The public educational system of the state consists of a common school system in which each county is a school district, and in which many of the municipalities constitute separate school districts. This system is maintained at the public expense, by state, county, district; and town educational facilities are extended to all of the educable children of both races in the state. In addition, the state maintains the Industrial Institute and College for girls, at Columbus, and maintains,

in large part, the University at Oxford, the Agricultural and Mechanical College at Starkville. For colored students the state maintains the Alcorn Agricultural and Mechanical College near Brunswick and and Rodney College near Rodney, both in Claiborne County. The total number of children enrolled during 1906–1907 was 482,208, and the average attendance for the same period was 258,047. The total average attendance in 1905–1906 was 287,995, showing an increase of 19,053. There are 721 schools in the school districts, and 117 schools in the separate school districts. In the session of 1906–1907, there was a larger attendance of negro pupils than white pupils by 15,335. For the session of 1906–1907, $2,631,790.35 of public money went to the support of schools, as compared with $2,432,426.33 for 1905–1906. There are the following public institutions: 721 schools for white students: Jefferson College, near Natchez; Rust University, Holly Springs; Millsaps College and Belhaven College, Jackson; Blue Mountain College, Blue Mountain; Mississippi College, Clinton; East Mississippi College, Meridian; Stanton College, Natchez. There are other private schools of lesser prominence.

Penitentiary System.—The period of military government in the South, a prison system known as convict leasing was established in this and other southern states, and was continued in Mississippi until 1890, when it was abolished and the present system was adopted of working the prisoners on state lands at agricultural pursuits for the exclusive benefit of the state. The state owns 20,000 acres of cotton and land upon which the entire prison population of about 1200 prisoners are worked. The penitentiary lands cost originally $145,600 and are now worth at least $600,000. The annual cash income to the state from the labour of the prisoners is not less than $150,000. In addition to this, valuable improvements being made on the property by the prisoners. The present system is a satisfactory solution of the convict problem, in which all conditions, moral and sanitary, are obtained. Alabama, Georgia, South Carolina, and Louisiana have adopted this system.

Transportation.—The railroad mileage in the state amounts to 3759 miles, according to the Report of the State Railroad Commission of 1908. The state is well supplied with water transportation, having the following navigable rivers: Mississippi, Yazoo, Tallahatchie, Sunflower, Pearl, Pascagoula, Big Black, Tombigbee, and some minor streams that are navigable during a portion of the year. There are deep-water harbours on the Gulf coast at the Mouth of Saline, Ship Island, and Ship Island opposite Gulf Port. There is a depth of water at the pier of the Gulf and Ship Island Railroad at Gulf Port of 23 feet at low tide, and 30 feet in the protected roadstead inside of Ship Island, which is accessible by tugs and lighters through a deep-water channel. There are also harbours at Bay of St. Louis and Biloxi.

History.—In 1540 Hernando De Soto, one of the most adventurous of the Spanish explorers, discovered the Mississippi River, and his expedition reached the present limits of this state, and remained until his death in 1542. The expedition, under the leadership of Marcos de Nunez, was withdrawn in 1543, descending the river to the sea and thence along the coast to Mexico. It is difficult to trace the exact route of De Soto. It is known, however, that he passed through Florida and Georgia as high as 35° N. lat., then went to the vicinity of Mobile and then north-west to the Mississippi River. In 1682 La Salle and Fonti descended to the mouth of the Mississippi River and claimed the entire region for the King of France. In 1698 D'Ilbarville came to Mississippi, authorised by the French king to colonize the lower Mississippi. He went to Ship Island and Cat Island, to the mainland on Biloxi Bay, to Bay of St. Louis, and to Mobile. The
Mississippi colony did not prosper. D'Iberville returned to France, leaving his two brothers, Savouillé and Bien-
ville, in charge of the country. In 1699 D'Iberville
revised the boundaries of the Mississippi country,
considering them at that time as no more than a
province.
client and his lawyer. There is a general law by which the governor may grant charters of incorporation to religious denominations exempt from taxation. The only Catholic who has held a state office in Mississippi is the Hon. Frank Johnston, who was attorney-general in the years 1893, 1894, 1895 under appointment by the governor to fill an unexpired term. (See NATURE, DIocese or.)

The State is divided into 81 counties and 23 cities.

MISSOURI, STATE OF.—The State of Missouri was carved out of the Louisiana Territory, and derives its name from the principal river flowing through its territory, the Missouri (Kansas and Missouri). It is not a “big muddy” in the Indian language. Geographically, Missouri is the central commonwealth of the Federal Union.

BOUNDARIES AND AREA.—The boundaries are the State of Iowa on the north; Arkansas on the south; on the east the Mississippi River separates it from Illinois, Indiana, and Tennessee; on the west it is bounded by Nebraska, Kansas, and the new State of Oklahoma. It lies between 39° 30’ and 42° 30’ N. lat., except that a small projection, between the Rivers St. Francis and Mississippi, extends about 34 miles farther south between Tennessee and Arkansas. The area of the state is 69,415 square miles.

RIVER CHARACTERISTICS. The Missouri River follows the western boundary of the state as far south as Kansas City; then turning east, it flows across the state and empties itself into the Mississippi about twelve miles above St. Louis. The portion of the state lying north of the Missouri is a great extent of gently rolling prairie, intersected here and there by streams which are small, fertile, and filled with silt brought into the Missouri or east into the Mississippi. The western portion of the state, north of the Mississippi River, is generally level, but rises to about one thousand feet above sea-level in the north-western corner of the state. The eastern portion, north of the Missouri River, is more broken, with some hilly land bordering the Missouri Rivers. The portion of the state south of the Missouri is more rolling; it is well wooded, especially in the south-east, with some swamp lands in the extreme south-eastern section. The Osark Mountain range breaks into the south central part of the state, but rises to no considerable height (highest elevation 1,600 feet). West of these mountains the land is farmed and fertile, being especially adapted to fruit-growing. It is in this section that the famous Missouri red apples are grown in the greatest quantities.

POPULATION.—According to the first federal census of Missouri, taken in 1810, the state had then 20,845 inhabitants. The census of 1810 places the population at 3,293,335. According to the Missouri Bureau of Labor Statistics for 1909, the population of the state at the beginning of that year was 3,925,335.

RESOURCES.—Agricultural and Farm Products.—The value of the output of farm crops alone for the year 1908 was $171,815,553. Of the total crop valued at $113,354,944, Missouri is constantly gaining as a wool-producing state; in 1908 there was $1,306,922 worth of wool sold. The farm-yard products are important items in the agricultural statistics; the surplus of poultry, eggs, and feathers for the year 1908 was $4,960,973. Missouri has never been considered an important dairy state, but since 1904 there has been a remarkable growth in this industry. The statistics in 1904 show an estimated total value from the dairies of $4,900,783, while the statistics of 1908 give a total value of $20,651,778. The cotton crop of 1908 brought $3,723,352.

Mines and Timber.—In 1907 the Federal authorities ranked Missouri the chief lead-producing state of the Union. The returns from the smelters for 1908 show that the state mined enough lead ore to produce 122,451 tons of primary lead. The total valuation of the lead produced in 1908 was $8,672,- 873. For 1908 the State Mining Department placed the production of lime ore at 197,499 tons, and its value at $6,374,719.

Nickel, copper, and cobalt are among the valuable minerals produced in Missouri. According to the United States geological survey of 1907, Missouri and Oregon were the only states producing nickel; 400 tons of metallic nickel, 200 tons of metallic cobalt, and 700 tons of metallic copper were produced in 1908. Iron ore to the value of 218,182 was produced in the year 1908. There was an output of 28,204 in silver. In the production of clay and shale goods Missouri held seventh rank in 1908. In cement the state also held seventh place. The total output in lime, cement, brick, and tile for 1908 aggregated a value of $8,904,013. Petroleum wells exist in one or two counties close to the Kansas border, and some natural gas has been found in the state. Coal exists in abundance, the value of the output in 1908 being $5,644,530. The products of the forests of Missouri produced in 1908 over 450,000,000 feet of assorted lumber with an estimated valuation of $3,719,822, while over $4,000,000 worth of railroad ties were also produced in that year.

COMMERCE.—The following table of surplus products, given out by the Bureau of Labour Statistics in 1908, is a concise statement of the surplus of the state which was added to the commerce of the world during 1908.

The year ending 31 December, 1908, consisting of cattle, horses, hogs, mules, and sheep, was 7,097,655 head, valued at $113,354,944. Missouri is constantly gaining as a wool-producing state; in 1908 there was $1,306,922 worth of wool sold. The farm-yard products are important items in the agricultural statistics; the surplus of poultry, eggs, and feathers for the year 1908 was $4,960,973. Missouri has never been considered an important dairy state, but since 1904 there has been a remarkable growth in this industry. The statistics in 1904 show an estimated total value from the dairies of $4,900,783, while the statistics of 1908 give a total value of $20,651,778. The cotton crop of 1908 brought $3,723,352.
Commodity          Value
Fresh fruit         $5,069,384

Stone and clay products 8,904,013
Unclassified products 4,623,953

Total value        $314,743,528

Means of Communication.—Although the Mississippi River runs the full length of the eastern boundary of the state, and the Missouri River flows directly through the state, neither of these streams is of any considerable commercial value as means of communication or transportation. Railroad facilities, however, are ample, there being 7991 miles of main line with about 3000 miles of sidings. There are 63 steam systems operating in the state. There are one railroad bridge, one street-car bridge, and one combination railroad, street-car, and passenger bridge across the Mississippi River at St. Louis, and a municipal free bridge for the accommodation of railroads, electric roads, wagons, and foot traffic, is in process of construction.

Educational System. — State University. — The State University of Missouri was established by legislative act approved on 11 February, 1839, and the university college was opened on 24 June, 1839. The corner-stone of the main building was laid on 4 July, 1840. Courses of instruction in academic work were begun on 14 April, 1841, and a Normal Department was established in 1867 and opened in September, 1868. The College of Agriculture and Mechanic Arts and the School of Mines and Metallurgy were made departments of the university in 1870, the School of Mines and Metallurgy being located at Rolla. The law department was opened in 1872, the medical department in 1873, the engineering department in 1877, and the department of journalism in 1908. In 1888 the Experiment Station was established under Act of Congress, and the Missouri State Agricultural College was established by Act of Congress in 1890. In the university year 1908 there were enrolled in the entire university 3033 students. The officers of instruction and administration consisted of 104 professors, 64 instructors, and 54 assistants. Apart from the above-mentioned institutions, which are all under the supervision of the University of Missouri proper, there are: the Church of the Good Shepherd, City for the education of negro children in agriculture and mechanic arts.

Public Schools.—The state is divided into 10,053 school districts. The total number of teachers in the public schools in the year 1908 was 17,998, the total number of pupils being 984,659. For the year ending 1 July, 1908, the public schools cost the tax-payers $12,769,689.33. The law requires that every child with sound body and mind, from six to fourteen years of age, attend either a public or private school during each school year. Missouri has the largest permanent interest-bearing school-fund of any state in the Union. This fund in 1908 amounted to $14,014,335.45. Apart from the schools, a number of public buildings called normal institutions, of which one is located in each of the following cities: Columbia (Teachers' College), Kirkville, Warrensburg, Cape Girardeau, Springfield, and Maryville.

First Settlers.—The first settlement was made at Ste. Genevieve in 1735 by the French, and the second by the French at St. Louis in 1764. The Spanish also came up the river in search of gold, and St. Louis was soon a busy trading centre for the citizens and the Indians inhabiting the surrounding territory. From the eastward soon came emigrants from other states—especially Kentucky, Tennessee, and the Virginias—and later came the emigrants from foreign shores, particularly from Germany. The later growth of the state has been made up of settlers from almost all of the states lying to the eastward, but more particularly from those mentioned, with many from Maryland and the Carolinas. There are settlements of Italians, Hungarians, and Bohemians, but on the whole these nationalities make up only a small part of the population. St. Louis is a cosmopolitan city, but the predominant strains of foreign blood are German and Irish.

Admission to the Union.—Missouri was admitted into the Union conditionally on 2 March, 1820, and was formally admitted as a state on 10 August, 1821, during the presidential administration of James Monroe. At a convention held at St. Louis on 19 July, 1820, the people passed on the Act of Congress, which was approved in March of the same year, and a constitution was drawn up and a new state established. Under this constitution, in August, 1820, the people held a general election, in which the state and county officers were chosen and the state government organized. The constitution in force was adopted by vote of the people on 30 October, 1873, and came into operation on 30 November of the same year.

Notable Events in Political History. — The admission of Missouri as a state provoked much bitter discussion in Congress, and terminated in what has since been known as 'The Missouri Compromise'. The bill providing for Missouri was admitted as a slave state, but forever prohibited slavery in the remainder of the Louisiana Territory lying north of 36° 30' N. lat., which line is the southern boundary of Missouri. The matter of slavery was the cause of many controversies during the early history of the state, and while the Civil War over 100,000 soldiers were contributed to the Union army and 50,000 to the Confederacy.

Matters Directly Affecting Religion. — Freedom of Worship. — Section 5, Article 2, of the Constitution of 1875 provides that "all men have a natural and indefeasible right to worship Almighty God according to their own conscience; that no person can, on account of his religious persuasion or practice, be compelled to erect, support, or attend any place or system of worship, or to maintain or support any priest, minister, preacher, or teacher of any sect, church, creed, or denomination of religion; but if any person shall voluntarily make a contract for any such object, he shall be held to the performance of the same; that no money shall ever be taken from the public treasury directly or indirectly, in aid of any church, sect, or denomination of religion, or in aid of any priest, preacher, minister, or teacher thereof as such; and that no preference shall be given to any discrimination made against any church, sect, or creed of religion, or any form of religious faith or worship; and there shall be no religious test or oath required by the state, except such as may be created under a general law for the purpose only of holding the title to such
Marriage and Divorce.—Marriages are forbidden and void between first cousins, or persons more nearly related than first cousins, such as uncles and nieces, etc. Any judge of a court of record or justice of the peace, or any ordained or licensed preacher of the Gospel, who is a citizen of the United States, may perform a marriage ceremony. A licence of marriage is required, and no licence will be issued unless the age of twenty-one years be proved. The marriage of a minor of either sex, without the consent of the father of the minor or, if the father cannot act, of the mother or guardian. The law requires that the person performing the marriage ceremony shall return a certificate of the service to the state authorities. The causes for divorce are enumerated in the statute, and besides the usual causes, provided that a divorce may be granted when it is proved that the offending person "has been guilty of conduct that makes the condition of the complaining party intolerable". This clause makes it possible to secure a divorce on any grounds that the judge considers sufficient, and is thought to be the source of some abuse. Residence of one year in the state is required before a petition for divorce may be filed. There is no statutory prohibition against divorced persons marrying at any time after a decree of divorce has been granted.

Catholic Education.—Every parish of any considerable size in the state maintains a parochial school. The parochial schools are 228 in number, with an enrollment of 38,098 children in attendance. Each diocese has its own school-board, and a uniform system of text-books is used throughout the diocese. There are eight colleges and academies for boys with 1872 students in attendance, and 38 academies and institutions of higher education for girls with 4490 pupils in attendance. The St. Louis Province, under the direction of the Jesuit Fathers, is one of the leading educational institutions of the country. It conducts a school of divinity, a school of philosophy and science, a school of medicine, a school of dentistry, an institute of law, and an undergraduate and academic department. There is a total of 850 lay students in attendance. No parochial or private schools receive any assistance or support from the state, and all citizens are required to contribute to the support of the public schools regardless of whether their children attend a private or a public institution.

Charitable Institutions.—There are in the state 1 orphan asylum with 1248 inmates; 25 soldiers' homes; 2 deaf-mute institutions with 60 inmates; 3 homes for aged persons; 1 industrial and reform school; 1 foundling asylum, and 1 newsboys' home—all under Catholic auspices. The state does not contribute anything to the Catholic orphanages; but the foundling asylum in St. Louis receives some remuneration for keeping waifs who are found by the police and intrusted to that institution.

There is a State Board of Charities and Corrections, of which the governor is a member ex officio. This board has general supervision over the charitable institutions conducted by the state. There is a state hospital at Fulton, at St. Joseph, at Nevada, and at Farmington. There is a state Confederate Hospital at Higginsville, and a State Federal Soldiers' Home at St. James. A school for the deaf is maintained at Fulton, a school for the blind at St. Louis, and a colony for the feeble-minded and epileptic at Marshall. The Missouri State Sanitarium for the treatment of tuberculosis is located at Mt. Vernon on the west of the Ozarks.

Sale of Liquor.—Intoxicating liquors may be sold only by licensed saloon-keepers. In cities of two thousand or more inhabitants the application for licence must be accompanied by a petition asking that the licence be granted. This petition must be signed by a majority of the tax-paying citizens owning property on the block or square in which the saloon is to be
kept. In cities or towns of less than two thousand inhabitants the petition must be signed by a majority of the tax-paying citizens, and a majority in the block where the saloon is to be kept. The law provides that the license shall be revoked upon the application of any person showing to the county court that the licence-holder does not keep an orderly house, and it is provided that one (1) whose licence has been revoked, (2) who has violated any of the provisions of the licence law, (3) who has sold liquors to any minor, (4) who has employed in his business of saloon-keeper any person whose licence may be revoked, shall not be entitled to a licence. The law prohibits (1) the sale of intoxicating liquors to habitual drunkards, minors, or Indians, (2) the keeping of female employees in saloons, and (3) the keeping, exhibiting, or using of any piano, organ, or any other musical instrument, in a saloon. These laws are generally enforced. The law provides that upon application by petition to the county court signed by one-tenth of the qualified voters of any county, who shall reside outside of the cities or towns having a population of 2500 or more, an election shall be held to determine whether or not spirituous liquors shall be sold within the limits of such county. In cities or towns within a population of 2500 or more an statute is made by one-third of the qualified voters to the body having legislative functions therein. If a majority of the qualified voters at such election vote against the sale of intoxicating liquors, no licence can be issued for the sale of liquor within such jurisdiction. Section 3034 R. S. of 1889 provides among other things that nothing in the law shall be so construed as to prevent the sale of wine for sacramental purposes.

PRISONS AND REFORMATORIES.—The state penitentiary is at Jefferson City; there is a reformatory for boys at Booneville and an industrial home for girls at Chillicothe. The law provides for the appointment of a board of inspectors of the state institutions, consisting of the state treasurer, auditor, and attorney-general. The law makes no reference to the religious denomination of the chaplain, but provides that his selection shall be governed by his special qualifications for the performance of the duties devolving upon him. He is required to conduct at least three masses a month by St. Charles, Missouri. The board of school inspectors consists of the state treasurer, auditor, and attorney-general. The law makes no reference to the religious denomination of the chaplain, but provides that his selection shall be governed by his special qualifications for the performance of the duties devolving upon him. He is required to conduct at least three masses a month by St. Charles, Missouri. The board of school inspectors consists of the state treasurer, auditor, and attorney-general.

DIOCESES AND CATHOLIC POPULATION.—The state is divided into three dioceses, those of St. Louis, Kansas City, and St. Joseph. The Diocese of St. Louis comprises the eastern two-thirds of the state, the city, and the western portion of the state, south of the Missouri River, and the Diocese of St. Joseph, the western portion of the state, north of the Missouri River. The Catholic population in 1909 was 452,703. There are about 3000 Catholic negroes in the state, with one church in St. Louis and one coloured priest. There is one coloured school with 110 pupils, and one orphan-asylum for coloured children, conducted by the Oblate Sisters of Providence.

FIRST CATHOLIC MISSIONS.—The Cross was planted among the Indians who inhabited the region now known as Missouri during the first half of the sixteenth century by De Soto, who was buried in the waters of the Mississippi in 1541. A French settlement was made near the Mississippi as far south as the thirty-fourth degree in 1673, more than a century and a quarter after De Soto had marched northward, and tells us that he preached the Gospel to all of the nations he met. It is thought by some that there was a white settlement at the mouth of the River Des Peres in Missouri, a few miles below the mouth of the Mississippi. The early settlements of Cahokia, Illinois (the sole centre of civilization in the Mississippi Valley for some time), but the first permanent settlement of which we have any record was made at St. Genevieve about 1734. Among the oldest records in the state are those of the Catholic church at St. Genevieve. There was a mission in 1734 at Old Mines, which was abandoned in 1804. The next mission station in Missouri. St. Genevieve and Old Mines were attended by priests from Cahokia. The first mission was established in St. Louis in 1764, and the first church was built in 1770. A mission was established at Carondelet in 1767. Fredericktown, New Madrid, St. Charles, and Florissant were missionary points during the last half of the eighteenth century. The Lazarist fathers were established at Perryville in 1818, and the Jesuits at Florissant in 1823. The early settlements were made up of French, many of them coming from Canada. A great many German Catholics came to the state during the first part of the nineteenth century, but the first German sermon of which we have any record was preached by Rev. Joseph A. Lutz at St. Louis in 1832. During this same period a large portion of the immigration was made up of Irish Catholics. The names of many of the early settlements bear evidence of the Catholicism of those who were first established there. The later immigration into the state has brought a change, and almost all of the Catholic countries are represented. A famous episode in the state's history was the Drake Constitution of
MITHRAISM

1865. He finally won the case in the Supreme Court of the United States (see OATH, MISSOURI TEST). PRINCIPAL RELIGIOUS DENOMINATIONS.—According to the Bulletin issued by the Department of Commerce and Labour Bureau of the Census concerning religious bodies in 1906, the total population of church members in the State of Missouri was 1,199,229, and the principal religious denominations were as follows: Roman Catholics, 382,462; Baptists, 218,353; Congregationalists, 11,048; Disciples or Christians, 166, 137; German Evangelicals, 52,715; Lutherans, 46,988; Methodists, 214,431; Presbyterians, 71,909; Episcopalians, 13,328; Reformed Bodies, 1284; United Brethren bodies, 3316; other Protestant bodies, 23,166; Latter-day Saints, 8042; all other bodies, 6439. Thus, 33.9 per cent of the total number of church-going people in the state are Catholics, the Baptists having the next highest percentage (18.2), and the Methodists being third (7.8).

JOHN L. CORLEY.

Mithraism.—A pagan religion consisting mainly of the cult of the ancient Indo-Iranian Sun-god Mithra. It entered Europe from Asia Minor after Alexander's conquest, spread rapidly over the whole Roman Empire in the 2d century, reached its zenith during the third century, and vanished under the repressive regulations of Theodosius at the end of the fourth century. Of late the researches of Cumont have brought it into prominence mainly because of its supposed similarity to Christianity.

Origins.—The origin of the cult of Mithra dates from the time that Hindus and Persians still formed one people, for the god Mithras occurs in the religion and the sacred books of both races, i.e. in the Vedas and in the Avesta. In Vedic hymns he is frequently mentioned and is nearly always coupled with Varuna, but beyond the bare occurrence of his name, little is known of him. Vedic hymns are dedicated to him (Rigveda, III, 59). It is therefore possible that the god Mithras (Oldenberg, "Die Religion des Veda," Berlin, 1894) that Mithras was the rising sun, Varuna the setting sun; or, Mithra, the sky at daytime, Varuna, the sky at night; or, the one the sun, the other the moon.

In any case Mithras is a light or solar deity of some sort; but in the vague and general conception of him seems to indicate that his name was little more than a memory. In the Avesta he is much more of a living and ruling deity than in Indian piety; nevertheless, he is not only secondary to Ahura Mazda, but he does not belong to the seven Ameshaespands or personified virtues which immediately surround Ahura; he is but one of the seven, a solar demon or god. The Avesta however gives his promotion only after the Zoroastrian reformation; the inscriptions of the Achemenides (seventh to fourth century B.C.) assign him a much higher place, naming him immediately after Ahura Mazda and associating him with the goddess Anaitis (Anahata), whose name sometimes precedes his own. Mithras is the god of light, Anaitis the goddess of water. Indefinitely during the Zoroastrian reform, Mithras retained his place as foremost deity in the north-west of the Iranian highlands. After the conquest of Babylon this Persian cult came into contact with Chaldean astrology and with the national worship of Marduk. For a time the two priesthoods of Mithra and Marduk (magi and chaldei respectively) coexisted in Babylon and India, and the dualism became much from this intercourse. This modified Mithraism travelled farther north-westward and became the State cult of Armenia. Its rulers, anxious to claim descent from the glorious kings of the past, adopted Mithraic dates as their royal name (so five kings of Georgia, and Eupator of the Bospors). Mithraism then entered Asia Minor, especially Coin in Asia Minor, and spread to many Greek cities. When it came into contact with the Phrygian cult of Attis and Cybele from which it adopted a number of ideas and practices, though apparently not the gross obscenities of the Phrygian worship. This Phrygian-Chaldean-Indo-Iranian religion, in which the Iranian element remained predominant, came, after Alexander's conquest, into contact with the Western World. Hellenism, however, and especially Greece itself, remained remarkably free from its influence. When finally the Romans took possession of the Kingdom of Pergamum, occupied Asia Minor and stationed two legions of soldiers on the Euphrates, the success of Mithraism in the West was secured. It spread rapidly from the Bospors to the Atlantic, from Illyria to Britain. Its foremost apostles were the legionaries; hence it spread first to the frontier stations of the Roman army.

Mithraism was emphatically a soldier religion: Mithras, its hero, was especially a divinity of fidelity, manliness, and bravery: the stress it laid on good fellowship and brotherhood of soldiers and the secret bond among its members have suggested to the idea that Mithraism was Masonry amongst the Roman soldiers. At the same time Eastern slaves and foreign tradesmen maintained its propagandas in the cities. When magi, coming from King Tithides of Armenia, had worshipped in Nero an emanation of Mithras, the cult of Mithras spread through the German, Roman, and secret bond amongst its members were often made use of for the education of slaves and their children. In Rome, at the school of the temple of Mithras, Christian converts were often instructed in the secrets of the mysteries. As Mithraism passed as a Phrygian cult it began to share in the official recognition which Phrygian worship had long enjoyed in Rome. The Emperor Commodus was publicly initiated. Its greatest devotee however was the imperial son of a priestess of the sun-god at Sirmium in Pannonia, Valerian, who according to the testimony of Flavius Valentine, forgot the cave where his mother initiated him. In Rome, he established a college of sun priests and his coins bear the legend "Sol, Dominus Imperii Romani".

Diocletian, Galerius, and Licinius built at Carnuntum on the Danube a temple to Mithras with the dedication: "Fuctor, Imperii Suinulli." But with the triumph of Christianity Mithraism came to an end. According to Julian it had with other pagan cults a shortชาว. The pagans of Alexandria lynched George the Arius, bishop of the city, for attempting to build a church over a Mithras cave near the town. The laws of Theodosius I signed its death warrant. The pagans, however, continued to believe in Mithras, and the number of martyrs to rival the martyrs who died for Christ.

DOCTRINE.—The first principle or highest God was according to Mithraism "Infinite Time"; this was called Ahriman or Seculum, Eridan or Saturnus. This single thing is none other than Zervan, an ancient Iranian concept, which survived the sharp dualism of Zoroastrianism. Zervan was the father of Zervanes, the ancient Christian and connected the two opposites in a higher unity and was still worshipped a thousand years later by the Manichees. This personified Time, ineffable, sexless, passionless, was represented by a human monster, with the head of a lion and a serpent coiled about his body. He carried a sceptre and lightning as sovereign god and held in each hand a key as master of the two worlds. He had two pairs of wings to symbolize the swiftness of time. His body was covered with sodalical signs and the emblems of the seasons (i.e. Chaldean astrology combined with Zervanism). This first principle begat Heaven and Earth, which in turn begat their son and equal, Ocean. As in the European legend, Heaven was the seat of the Persian Empire, the Spenta Armaeti of the Persians or the Juno of the Westerns, Ocean is Apam-Napat or Neptune. The Persian names were not for-
gotten, though the Greek and Roman ones were habitually used. Ahura Mazda and Spéítta Armaiti gave birth to a great number of lesser deities and heroes: Artagnes (Hereules), Sharevar (Mars), Atar (Vulcan), Anaitis (Cybele), and so on. On the other hand there were Pluto, or Alfrun, also bequeathed of Infinite Time. This Infernate Evil rose with the army of darkness to attack and dethrone Oromasdes. They were however thrown back into hell, whence they escape, wander over the face of the earth and afflict mankind. It is man’s duty to worship the four simple elements, water and fire, air and earth, which in the main are man’s friends. The seven planets likewise were beneficent deities. The souls of men, which were all created together from the beginning and which at birth had but to descend from the empyrean heaven to the bodies prepared for them, received from the seven planets their passions and characteristics. Hence the seven days of the week were dedicated to the planets, seven metals were sacred to them, seven rites of initiation were made to perfect the Mithraist, and so on. As evil spirits ever lie in wait for hapless man, he needs a friend and saviour who is Mithra. Mithra was born of a mother-rock by a river under a tree. He came into the world: with the Phrygian cap on his head (hence his designation as Pileatus, the Capped One), and a knife in his hand. It is said that shepherds watched his birth, but how this could be, considering there were no men on earth, is not explained. The hero god first gives battle to the sun, conquers him, crowns him with a garland of laurel, makes him his eternal friend and fellow; nay, the sun becomes in a sense Mithra’s double, or again his father, but Πας Μιθρας is one ‘god. Then follows the struggle between Mithra and the bull, the central dogma of Mithraism. Ahura Mazda had created a wild bull which Mithra pursued, overcame, and dragged into his cave. This was a long journey with the struggle bull towards the cave is the symbol of man’s troubles on earth. Unfortunately, the bull escapes from the cave, whereupon Ahura Mazda sends a crow with a message to Mithra to find and slay it. Mithra reluctantly obeys, and plunges his dagger into the bull as it returns to the cave. Strange to say, from the bull’s gore all the life giving plants and herbs that cover the earth, from his spinal marrow the corn, from his blood the vine, etc. The power of evil sends his unclean creatures to prevent or poison these productions but in vain. From the bull proceed all useful animals, and the bull, resigning itself to death, is transported to the heavenly spheres. Man is thus restored and subjected to the malign influence of Ahriman in the form of droughts, deluges, and conf ablators, but is saved by Mithra. Finally man is well established on earth and Mithra returns to heaven. He celebrates a last supper with Helios and his other companions, is taken in his fiery chariot across the ocean, and now in heaven protects his followers. For the struggle between good and evil continues in heaven between the planets and stars, and

on earth in the heart of man. Mithra is the Mediator (Mediator) between God and man. This function first arose from the fact that as the light-god he is supposed to float midway between the upper heaven and the earth. Likewise a sun-god, his planet was supposed to hold the central place among the seven planets. The moral aspect of his mediation between god and man cannot be proven to be ancient. As Mazdean dualists the Mithraists were strongly inclined towards asceticism: abstention from food and absolute continence seemed to them noble and praiseworthy, though not obligatory. They battled on Mithra’s side against all impurity, against all evil within and without. They believed in the immortality of the soul, sinners after death were dragged to hell; the just passed through the seven spheres of the planets, through seven gates opening at a mystic word to Ahura Mazda, leaving at each planet a part of their lower humanity until, as pure spirits, they stood before God. At the end of the world Mithra will descend to earth on another bull, which he will sacrifice, and mixing its fat with sacred wine he will make all drink the beverage of immortality. He will thus have proved himself Nabarse, i.e. “never conquered”. Worship. — There were seven degrees of initiation into the Mithraic mysteries. The consecrated one (myteis) became in succession crow (corax), occult (cypius), soldier (miles), lion (leo), Persian (Perses), solar messengers (heliodromos), and father (pater). On solemn occasions they wore a garb appropriate to their name, and uttered sounds, the sacred oracles. The sacrifice of Mithra

THE SACRIFICE OF MITHRA
Vatican Museum, Rome

gestures in keeping with what they personified. “Some flay their wings as birds imitating the sound of a crow, others roar as lions”, says Pseudo-Augustine (Quest. V. N. Test. in P. L., XXXIV, 2214). Crows, auxiliaries and soldiers formed the lower orders, a sort of catechumens; lions and those admitted to the other degrees were participants of the mysteries. The fathers conducted the worship. The chief of the fathers, a sort of pope, who always lived at Rome, was called “Pater Patrum” or “Pater Patratus.” The members below the degree of pater called one another “brother,” and social distinctions were forgotten in Mithraic unity. The ceremonies of initiation for each degree must have been elaborate, but they have not been preserved. Many—illustrations and bathtubs, branding with red hot metal, anointing with honey, and others. A sacred meal was celebrated of bread and haoma juice for which in the West wine was substituted. This meal was supposed to give the participants supernatural virtue. The Mithraists worshipped in caves, of which a large number have been found, mainly five at Ostia alone, but they were small and could perhaps hold at most 200 persons. In the apse of the cave stood the stone representation of Mithra slaying the bull, a piece of sculpture usually of mediocre artistic merit and always made after the same Pergamean model. The light usually fell through openings in the top of the caves were near the surface of the ground. A hideous monstrosity representing Kronos was also...
shown. A fire was kept perpetually burning in the sanctuary. Three times a day prayer was offered the sun towards east, south, or west according to the hour. Sunday was kept holy in honour of Mithra, and the sixteenth of each month was sacred to him as mediator. The 25 December was observed as his birthday, the 24 June, the rebirth of the winter sun, unconquered by the rigor of the cold. Mithraism was a community not merely a religious congregation; it was a social and legal body with its decrees, magistri, curatores, defensores, and patroni. These communities allowed no women as members. Women might console themselves by forming associations to worship Analitha, Cybele, but whether these were associated with Mithraism seems Proof of immorality or obscene practices, so often connected with esoteric pagan cults, has never been established against Mithraism; and as far as can be ascertained, or rather conjectured it had an elevating and invigorating effect on its followers. From a chance remark of Tertullian (De Præscript., 3) we gather that their "Pater Patrum" was only allowed to be married once, and that Mithraism had its virgines and continentis; such at least seems the best interpretation of the passage. If, however, Dieterich's Mithras's liturgy be really a liturgy of this sect, as he ably maintains, its liturgy can only strike us as a mixture of heathen and charismatic in which the mystes has to hold his own and lower the sun till he is exhausted, to whistle, smack his lips, and pronounce barbaric agglomerations of syllables as the different mystic signs for the heavens and the constellations are unveiled to him.

RELATION TO CHRISTIANITY.—A similarity between Mithras and Christ strikes every early observer, such as Justin, Tertullian, and other Fathers, and in recent times has been urged to prove that Christianity is but a adaptation of Mithraism, or at most the outcome of the same religious ideas and aspirations (e.g. Robertson, "Pagan Christ", 1903). Against this erroneous and unscientific procedure, which is not endorsed by the greatest living authority on Mithraism, the following considerations must be brought forward.

(1) Our knowledge regarding Mithraism is very imperfect; some 600 brief inscriptions, mostly defaced, some 300 often fragmentary, exiguous, almost identical monuments, a few casual references in the Fathers or Acts of the Martyrs, and a brief passage against the Mithraeum which the Armenian Empire about 450 probably copied from Theodorus of Mopsuestia (d. 428) who lived when Mithraism was almost a thing of the past—these are our only sources, unless we include the Avesta in which Mithra is indeed mentioned, but which cannot be an authority for Roman Mithraism with which Christianity is compared. Our knowledge is mostly and much guess-work; of the real inner working of Mithraism and the sense in which it was understood by those who professed it at the advent of Christianity, we know nothing. (2) Some apparent similarities exist; but in a number of details it is quite as probable that Mithraism was the borrower from Christianity. Tertullian about 200 could say: "hes tertiique sumus evo"q. (we are but of yesterday, yet your whole world is full of us). It is not unnatural to suppose that a religion which filled the whole world, should have been copied at least in some details by another religion which was quite popular during the third century. Moreover the resemblances pointed out are superficial and external; some may be of which we are unconscious. (3) There is a sense that matters. During these centuries Christianity was coining its own technical terms, and naturally took names, terms, and expressions current in that day; and so did Mithraism. But under identical terms each system thought its own thoughts. Mithra is called a mediator; and so is Christ; but Mithra originally only in a cosmogonic or astronomical sense; Christ, being God and man, is the Mediator between God and man. And so in similar instances. Mithraism had a Eucharist, but the idea of a sacred banquet is as old as the human race and existed at all ages and amongst all peoples. Mithra saved the world by sacrificing a bull; Christ by sacrificing Himself. It is hardly possible to conceive a more geometrical difference than that. Christ was born of a Virgin; there is nothing to prove that the same was believed of Mithra born from the rock. Christ was worshipped in a cave; and Mithraists, but Mithra was born under a tree near a river. Much has been made of the presence of adoring shepherds; but their existence. The adoration of the idols and considering that man had not yet appeared, it is an anachronism to suppose their presence. (3) Christ was an historical personage, recently born in a well-known town of Judea, and crucified under a Roman Governor, whose name figured in the ordinary official lists. Mithraism was an abstraction, a personification not even of the sun but of the diffused daylight; his incarnation, if such it may be called, was supposed to have happened before the creation of the human race, before all history. The small Mithraic congregations were like masonic lodges for a few and for men only and even those mostly of one class, the military; a religion that excludes the half of the human race and to which all other cults are more or less inferior and tolerant of every other cult, the Pater Patrum himself was an adept in a number of other religions; Christianity was essentially exclusive, condemning every other religion in the world, alone and unique in its majesty.

Mitre.—Form, Material, and Use.—The mitre is a kind of folding-cap. It consists of two like parts, each stiffened by a lining and rising to a peak; these are sewn together on the sides, but are united above by a piece of material that can fold together. Two lappets trimmed on the ends with fringe hang down from the back. The mitre is, theoretically, always supposed to be white. The official "Ceremoniale Romanum" distinguishes three kinds of mitres: the mitra pretiosa, auriphrugiata, and simplex. The first two differ from each other only in the greater or less richness of the ornamentation; the mitra simplex, or simple mitre, is the common one of which we speak of in our common language. The fringe on the lappets at the back should be red. The bishop must wear the mitra pretiosa on those days on which the hymn Te Deum is used in the Office, the mitra auriphrugiata in the seasons of Advent and Lent, on fast days and during penitential processions, the mitra simplex on Good Fridays, at ordinations, and in the Mass on the days stroke the solemnity of the seasons. When bishops attend a general council, or are present at solemn pontifical acts of the pope, they wear a plain linen mitre, while the cardinals on such occasions wear a simple mitre of silk damask. The right to wear the mitre belongs by law only to the pope, the cardinals, and the bishops. Others require for its use a special papal privilege. This privilege

it is possessed, for example, by numerous abbots, the dignitaries of many cathedral chapters, and by certain prelates of the papal Curia, as well as by the pope; and, as it is more or less limited: for instance, such prelates can only use a simple mitre of white linen, unless the contrary is expressly granted them. The mitre is distinguished from the other episcopal vestments in that it is always laid aside when the bishop preys; for example, at the orationes of the Mass, the Office, in conferring Holy Orders, at the Canon of the Mass, etc. The reason for this is to be found in the commandment of the Apostle that a man should pray with uncovered head (I Cor., xi, 4). The giving of the mitre is a ceremony in the consecration of a bishop. It occurs at the close of the Mass after the solemn final blessing, the consecrator having first blessed the mitre.

Antiquity.—From the seventeenth century much has been written concerning the length of time the mitre has been worn. According to one opinion its use extends back into the age of the Apostles; according to another, at least as far back as the eighth or ninth century, while a further view holds that it did not appear until the beginning of the second millennium, but that before this it was a traditional dress of bishops. Exhaustive proof for this is given in the work (see also bibliography, “Die liturgische Gewandung im Occident und Orient” (pp. 431-48), where all that has been brought forward to prove the high antiquity of the mitre is exhaustively discussed and refuted. The mitre is depicted for the first time in the illuminations of the beginning of the thirteenth century; the one in a baptismal register, the other in an Exultet-roll of the cathedral at Bari, Italy. The first written mention of it is found in a Bull of Leo IX of the year 1049. In this the pope, who had formerly been Bishop of Toul, France, confirmed the primacy of the Church of Trier to Bishop Eberhard of Trier, his former metropolitan, who had accompanied him to Rome. As a sign of this primacy, Leo granted Bishop Eberhard the Roman mitre, in order that he might use it according to Roman custom in performing the offices of the Church. By about 1100-50 the custom of wearing the mitre was general among bishops.

Origin.—The pontifical mitre is of Roman origin: it is derived from a non-liturgical head-covering distinctive of the pope, the camelaucum, to which also the tiara is to be traced. The camelaucum was worn as early as the beginning of the eighth century, as shown by the biography of Pope Constantine I (708-815) in the “Liber Pontificalis.” The same head-covering is also mentioned in the so-called “Donation of Constantine.” The Ninth Oration states that the camelaucum was made of white stuff and shaped like a helmet. The coins of Sergius III (904-11) and of Benedict VII (974-83), on which St. Peter is portrayed wearing a camelaucum, give the cap the form of a cone, the original shape of the mitre. The camelaucum was worn by the pope principally during solemn processions. The mitre developed from the camelaucum in this way: in the course of the tenth century the pope began to wear this head-covering not merely during processions to the church, but also during the subsequent church service. Whether any influence was exerted by the recollection of the sacerdotal head-ornament of the high-priest of the Old Testament is not known, but probably not—at least there is no trace of any such influence. It was not until the mitre was universally worn by bishops that it was called an imitation of the Jewish sacerdotal head-ornament.

Granting of the Mitre to Dignitaries other than Bishops.—The Roman cardinals certainly had already the right to wear the mitre towards the end of the eleventh century. Probably they possessed the privilege as early as in the first half of the century. For if Leo IX granted the privilege to the cardinals of the episcopal See of Basançon (see CARDINAL: I. Cardinali Præstis) in 1051, the Roman cardinals surely had the same ornamental head-covering before that date. The first authentic granting of the mitre to an abbot dates from the year 1063, when Alexander II conferred the mitre upon Abbot Egilshus of the Abbey of St. Augustine at Canterbury. From this time on instances of the granting of the mitre to abbots constantly increased in number. At times also secular princes were granted permission to wear the mitre as a mark of distinction; for example, Duke Wratislav of Bohemia received this privilege from Pope Alexander II, and Peter of Aragon from Innocent III. The right also belonged to the German emperors.

Development of the Shape.—As regards shape, there is such difference between the mitre of the eleventh century and that of the twentieth that it is difficult to recognize the same form. In its earliest form the mitre was a simple cap of soft material, which ended above in a point, while around the lower edge there was generally, although not always, an ornamental band (circulus). It would also seem that lappets were not always attached to the back of the mitre. Towards 1100 the mitre began to have a curved shape above and to grow into a round cap. In many cases there soon appeared a depression in the upper part similar to the one which is made when a soft felt hat is pressed down on the head from the forehead to the back of the head. In handsome mitres an ornamental band passed from front to back across the indentation; this made more prominent the puffs on the upper part of the cap to the right and left sides of the head. This calotte-shaped mitre was used until late in the twelfth century; in some places until the last quarter of the century. From about 1125 a mitre of another form and somewhat different appearance is often found. In it the puffs on the sides had developed into horns (cornua) that ended each in a point and were stiffened with parchment or some other interlining. This mitre formed the transition to the third style of mitre which is essentially the one still used to-day; the third mitre...
is distinguished from its predecessor, not actually by its shape, but only by its position on the head. While retaining its form, the mitre was henceforth so placed upon the head that the 
corona no longer arose above the temples but above the forehead and the back of the head. The lappets had, naturally, to be fastened to the under edge below the horn at the back. The first example of such a mitre appeared towards 1150. Elaborate mitres of this kind had not only an ornamental band (circulus) on the lower edge, but a similar ornamental band (titulus) went vertically over the middle of the horns. In the fourteenth century this form of mitre began to be distorted in shape. Up to

ornamented with about five hundred more or less costly precious stones; it weighs over five and a half pounds. Similar mitres are also mentioned in the inventory of 1295 of Boniface VIII. Eight medieval mitres are preserved in the cathedral of Halberstadt. In the seventeenth and eighteenth centuries the mitre was ornamented with rich, heavy embroidery in gold, which gave it a still more imposing appearance. A mitre of the eighteenth century preserved in the cathedral treasury at Limburg-on-the-Lahn is remarkable for the large number of precious stones that adorn it. The original material of the mitre appears to have been white linen alone, but as early as the thirteenth cen-

then the mitre had been somewhat broader than high when folded together, but from this period on it began, slowly indeed, but steadily, to increase in height until, in the seventeenth century, it grew into an actual tower. Another change, which, however, did not appear until the fifteenth century, was that the sides were no longer made vertical, but diagonal. In the sixteenth century it began to be customary to curve, more or less decidedly, the diagonal sides of the horns. The illustration gives a summary of the development of the shape of the mitre. It should, however, be said that the changes did not take place everywhere at the same time, nor did the mitre everywhere pass through all the shapes of the development. A large number of mitres of the later Middle Ages have been preserved, but they all belong to the third form of mitre. Many have very costly ornamentation. For even in medieval times it was a favourite custom to ornament especially the mitre with embroidery, rich bands (auriflavia), pearls, precious stones, small ornamental disks of the precious metals; and even to use painting. Besides several hundred large and small pearls, a mitre of the late Middle Ages in St. Peter’s at Salsburg is also

tury (with the exception of course of the simple mitre) it was generally made of silk or ornamented with silk embroidery.

The Liturgical Head-Covering in the Greek Rite.—In the Orthodox Greek Rite (the other Greek Rites need not here be considered) a liturgical head-covering was not worn until the sixteenth century. Before this only the Patriarch of Alexandria, who wore one as early as the tenth century, made use of a head-covering, and his was only a simple cap. The Greek pontifical mitre is a high hat which swells out towards the top and is spanned diagonally by two hoops; on the highest point of the dome-shaped top is a cross either standing upright or placed flat.

Gewänder, II (Bonn, 1866); Rolhaug, De fleury, La messe, VIII (Paris, 1889); Braun, Die pontifikalen Gewänder des Abendlandes (Freiburg im Br., 1898); Idem, Die liturgische Gewandung im Oecident und Orient (Freiburg im Br., 1907).

Joseph Braun.

Mittarelli, Nicola Giacomo (in religion Gian Benedetto), monastic historian, b. 2 September, 1707, at Venice; d. 4 August, 1777, in the monastery of
San Michele di Murano near Venice. After joining the Camaldolese Order at the early age of fourteen, he studied theology at Florence and Rome, whereupon he took the veil of Linnamons, during the life of San Michele di Murano. Because he relinquished the scholastic method, his superiors sent him to the monastery of San Paolino in Treviso where he became confessor and archivist. In 1760 he was elected Abbot of San Michele di Murano and in 1765, General of his Order for the space of five years during which he resigned in 1772. He then retired to Treviso where he remained as abbot until his death. His monumental work, in the preparation of which he was assisted by his confrères Costadini and Calogera, is the "Annales Camaldulenses ordinis S. Benedicti, ab anno 907 ad annum 1770" 9 vols. folio (Venice, 1755-73). It follows the plan of Mabillon's "Annales ordinis S. Benedicti". His other works are: "Memorie della vita di San Pasquale, e del monastero dei Santi Cristiana e Paolino di Treviso" (Venice, 1748), "Memorie del monastero della Santa Trinità di Fienza" (Fienza, 1749), "Ad Scriptores rerum Italicarum A. Muratoriis accessiones historice Faventinum" (Venice, 1771), "De litterarum Faventinorum" (Venice, 1773). He was a learned and sagacious writer, but gave himself more to historical than to theological studies; and in 1792 was appointed Lecturer on Comparative Anatomy at St. Mary's Hospital Medical School. In 1787, he was appointed professor of Biology at the (Catholic) University College, Kensington. From 1809 to 1893 he gave a course of lectures on "The Philosophy of Natural History" in the University of Louvain, where he was professor of Natural History in the Royal Institution; Fellow of the Zoological Society from 1858, and Vice-President twice (1869 and 1882); Fellow of the Linnean Society from 1862; Secretary of the same during the years 1874-80, and Vice-President in 1882. In 1867 he became a member of the Royal Society—elected on account of the merit of his work on the "Apparatus Vegetabilium"

Milly, a titulary archbishopric in the island of Lesbos. Inhabited, first by the Pelasgians, then by the Iolians, it was ruled in turn by the Persians, the Athenians, the Macedonians, the Seleucids, and the Romans. Included in the empire of the East after the time of Theodosius it suffered much from the different invasions of the Scythians in 376, the Slavs in 769, the Arabs in 821, 981, 1035, the Russians in 864 and 1027. In 1204 after the foundation of the Latin empire, the city became a possession of the French, only to be reconquered in 1245 by John Duca Vatazete. It belonged to the Genoese when the sultan, Mahomet II, conquered it in 1462. The home of many famous persons, among them Sappho, Alccestis, and the sage Pithacus, Milly was famous for its beauty and for the state of the sea for many leagues. St. Paul visited it on his third journey (Acts, xx, 14). Among its bishops, whose names will be found in part in Le Quen, "Orients christianus", I, 953-962, are Zacharias Rhetor, or the Scholastic, the author of an Ecclesiastical History about the year 336; Saint George who died in exile at Cherson before 524 and whose feast occurs on 7 April and 16 May; another Saint George who died in 843 and is venerated by the Greeks on 1 February with his two brothers, Saint Simeon and Saint David (Analectaollandiana XVIII, 209 sq.). Until this time Milly was only an autocephalous archiepiscopical; the "Nottita" of Leo the Wise about 900 describes it as a metropolitan see with five suffragans. Doctor of the Church, member of the friends of the Council at the Union of Council of which he wrote a history in Greek (Mansi, XXXI, 463 sqq., 997, 1009). The list of the Latin titulars of 1205 to 1412 may be found in Le Quen, III, 991-994; Eubel, I, 370; Gams, 449. The present city of Metmion numbers 15,000 inhabitants, the greater number leavish Grecian, Frant, and Turkish. The island is still grouped about Milly and are included in the archbishopric of Smyrna. The parish is directed by the Franciscans; the Marist Brothers have a school for boys.

S. Salaville.

Mivart, St. George Jackson, Ph.D., M.D., F.R.S., F.Z.S. Corresponding member of the Academy of Natural Sciences, Philadelphia; Member of the Royal Institution, London; 30 November, 1827, d. there, 1 April, 1900.

Professor Mivart, whom Darwin styled the "distinguished biologist", third son of James Edward Mivart, owner of Mivart's Hotel in Brook Street, was born at 39 Brook St., Grosvener Square, London. His parents were Evangelicals; and his early success was received at the Grammar Grammar School, at Harrow, and at King's College, London; from which latter institution he intended to go to Oxford. His enthusiasm for architecture led him, at the age of sixteen, to make a tour of Pugin's Gothic churches; and while visiting St. Chad's, in Birmingham, he met Dr. Moore (afterwards President of St. Mary's College, Oscott) who received him into the Catholic Church in 1844. Mivart's conversion is said to have been determined by Milner's "End of Religious Controversy". On his reception he proceeded to Oscott College, where he remained until 1846. On 15 January of that year he became a student at Lincoln's Inn, and was called to the Bar in 1851. He did not, however, follow a legal career, but gave himself to biologic studies; and in 1862 was appointed Lecturer on Comparative Anatomy at St. Mary's Hospital Medical School. In 1874, he was appointed professor of Biology at the (Catholic) University College, Kensington. From 1890 to 1893 he gave a course of lectures on "The Philosophy of Natural History" in the University of Louvain, where he was professor of Natural History in the Royal Institution; Fellow of the Zoological Society from 1858, and Vice-President twice (1869 and 1882); Fellow of the Linnean Society from 1862; Secretary of the same during the years 1874-80, and Vice-President in 1882. In 1867 he became a member of the Royal Society—elected on account of the merit of his work on the "Apparatus Vegetabilium"

This work was communicated to the Society by Professor Huxley. Mivart was a member of the Metaphysical Society from 1874. He received the degrees of Doctor of Philosophy from Pope Pius IX in 1876, and of Doctor of Medicine from Louvain in 1884.

His communications, dating from 1864, to the "Proceedings" of learned societies, and the "Records of the Linnean, and the Zoological—are numerous and of great scientific value. He contributed articles to the "Encyclopedia Britannica," and to all the leading English and American reviews.

In 1871 he published his "Genesis of Species", in which work, foreshadowed by an article in the "Quarterly Review" of the previous year, he was an ardent opponent of the Darwinian hypothesis. This estranged him from Darwin and Huxley; but his reputation as a specialist in biological science was in no way impaired by the position he took up. In subsequent editions of his "Origin of Species" Darwin deals at great length with the objections raised by Mivart. His writings published and Lectured on have contributed to the evidence of how weighty he felt them to be. Mivart, however, himself professed a theory of evolution; but he hesitatingly and consistently asserted the irreconcilable difference between the inanimate and animate, as well as between the purely animal and the rational. By maintaining the creationist theory of the origin of the human soul he attempted to reconcile his evolutionism with the Catholic faith. In philosophical problems, towards which he turned more and more in later years, his attitude was rather that of a neo-scholastic as against the post-Cartesian philosophers; and he opposed with success a critical, or moderate realist, system of knowledge to the widely prevalent teleological view of things. Toward the end of his life Mivart's philosophical speculations began to verge on an "interpretation" of theological dogma that was incompatible with the Faith. The crisis, however,
did not become acute before his articles in the "Nineteenth Century" ("Modern Catholics and Scientific Freedom" in July, 1885; "The Catholic Church and Biblical Criticism" in July, 1887; "Catholicity and Reason" in December, 1887; "Sins of Belief and Disbelief" in October, 1888; "Happiness in Hell" in December, 1892) were placed on the Index.

In July, 1890, he was brought into the gravest suspicion by the articles "The Continuity of Catholicism" ("Nineteenth Century", January, 1900) and "Some Recent Apologists" ("Fortnightly Review", January, 1900). In the same month (18 January, 1900), after admonition and three formal notifications requiring him in vain to sign a profession of faith that would exonerate him, he was inhibited from the sacred functions by Cardinal Vaughan "until he shall have proved his orthodoxy to the satisfaction of his ordinary." The letters that passed between Archbishop's House and Dr. Mivart were published by him in the columns of the "Times" newspaper (27 January, 1900); and in March a last article—"Scripture and Roman Catholicism"—repudiating ecclesiastical authority, appeared in the "Nineteenth Century".

Dr. Mivart died of diabetes 1 April, 1900, at 77 Inverness Terrace, Bayswater, London, W., and was buried without ecclesiastical rites. After his decease his friends, persuaded that the gravity and nature of the illness from which he suffered offered a complete explanation of the anomalies of his position, thought it would be better for the bishop, by some private conversations, to have brought home to him the obligation of having an abler mind to deal with the public questions with which he had been called upon to deal. The text of the certificate has not been published, but an account of the matter is to be found in the second volume of "Life of Cardinal Vaughan".

Dr. Mivart's chief works are the following:—
"One Point of Controversy with the Agnostics" in Manning's "Essays on Religion and Literature" (1883); On the Genesis of Species" (London, 1871); 
"An Examination of Mr. Herbert Spencer's Psychology"; 
"Lessons in Elementary Anatomy" (London, 1873); "The Common Frog" in "Nature series" (1873); "Man and Ape" (London, 1873); "Lessons from Nature" (London, 1876); "Contemporary Evolution" (London, 1876); 
"Address to the Biological Section of the British Association" (1879); "The Cat" (London, 1881); "Nature and Thought" (London, 1882); "A Philosophical Catechism" (London, 1884); "On Truth" (London, 1889); "The Origin of Human Reason" (London, 1889); "Dogs, Jackals, Wolves and Foxes, Monograph of the Canidae" (London, 1890); "Introduction Générale à l'Étude de la Nature: Cours de Doctrine Physique à l'École Normale de Paris" (Paris, 1891); "Birds" (London, 1892); "Essays and Criticisms" (London, 1892); 

See Gentleman's Magazine (1856 and 1900); Royal Society Year Book (1901); Men and Women of the Time (1885); Darwin, the Life and Letters of Charles Darwin (London, 1891); Sears-Cox, The Life of Cardinal Vaughan (London, 1910); Oscodn, Jubilee Number (1888); The Times (January 12, 13, 27, 29, and April 4, 1900); The Tablet (April 7, 1900); Nature (April 12, 1900).

FRANCIS AVELING.

Mixe Indians (also Mixe, Latin, Mi-she), a mountain tribe in southern Mexico, noted for their extreme conservatism, constituting together with the neighboring Zoque, a distinct linguistic stock, the Zoquean. The Mixe occupy a number of towns and villages in the district of Yautatepe, Villa Alta, and Tehuantepco in southern Oaxaca and number altogether about 25,000. They maintained their independence against both the Aztec Empire and the powerful Zapotec with whom they are still at enmity and even yet can hardly be said to have been subdued by the Spaniards, as they hold themselves aloof from the whites, retaining a great deal of the ancient life, religion, and superstition of their ancient rite and superstitions even while giving ostensible obedience to the Church and manifesting a docile attachment to their resident priests. With the other tribes of Oaxaca, the Mixe were brought under subjection by the Spaniards in 1521–4. In 1584 the Mixe were placed under the jurisdiction of the Dominicans under Father Gonazlo Lucero and continued with them, shared after 1575 by the Jesuits until turned over to secular priests under later settled conditions. The work of conversion was slow and uncertain for many years, in consequence of the exceptional attachment of these tribes to their ancient religion. Idols were frequently discovered buried under the crosses erected in front of the chapel, so that they might be worshipped in secret under pretense of devotion to the Christian symbol, and heathen sacrifices were even offered up secretly from the very altars, under an impression, intelligible enough to the Indian, that the sacredness attaching to the Christian environment enabled the Sianuces to remain pagan rite. This prevailed to a great extent to-day.

Physically the Mixe are of good height and strongly built, not handsome in features, but hardy and active, and notable burden carriers. Many wear beards. Although described in ancient times as savage and warlike and addicted to cannibalism, they are commonly regarded to-day as timid, stupid, and suspicious, although industrious. It is probable, however, that the apparent stupidity is rather indifference and studied reserve, and Starr, their most recent visitor, expresses his surprise at their industry, neatness, and general prosperity, in view of what he had previously been told. It is characteristic of their stubborn disposition that their roads almost invariably run straight up and down the mountain instead of zigzagging to lessen the difficulties of the ascent. In the same way they still keep their villages upon the heights, while the other tribes, under Spanish influence, have generally moved their settlements down into the valleys. Their houses vary from light thatched structures in the country districts to adobe houses in the towns. They are good farmers, producing sugar, coffee, and bananas, and the women are noted for their pottery and weaving arts, producing beautiful fabrics in silk and cotton, with interwoven animal and bird designs and dyed in fadeless colours. From Starr we have an interesting account of their present
day customs and beliefs, including many pagan survivals, particularly bird and other animal sacrifices. Food is still buried with the dead and libations made to the earth, while offerings are still made secretly at heathen shrines and before idols hidden away in secret caves. One of these was discovered by the parish priest of their principal town a few years ago, and according to reliable testimony instances of cannibal sacrifices have occurred within living memory in Qu-\n-tam (c. 1660-1734). It was published at Puebla in 1729 and reprinted at Oaxaca in 1891.

Mixed Marriages. See MARRIAGE, MIXED.

Mixteca Indians (also MIXTECA, Latin, Mieb-\ntekas), one of the most important civilized tribes of southern Mexico, occupying an extensive territory in western and northern Oaxaca and extending into Guerrero and Puebla. They number in all about 250,000 souls, or somewhat more than the whole Indian population of the United States together. Their eastern neighbors are the people of the cultivated and powerful Zapotec, with the last named of whom they constitute a distinct linguistic stock, designated as the Zapotecan. The ancient culture and governmental forms of the Mixteca were practically the same as those of the Zapotec. They are now industrious farmers, weavers, and potters, the pottery manufacture, contrary to the Indian custom generally, being in the hands of the men. They stand high for industry and ingenuity, dignified and reliable disposition, hospitality and love of liberty. They were brought under Spanish dominion about the same time as the Zapotec and Mixe, in 1521-4, shortly after which the work of their conversion was begun by the Dominicans with such success that the whole nation may now be considered as Christian, notwithstanding some survivals from pagan times. They are active and enterprising, and have taken prominent part in Mexican politics, being particularly devoted to the Revolutionary cause in 1811. President Díaz of Mexico is of one-fourth Mixteca blood. His towns, one of them, is described by Starr as a delightful place, large and strung along two or three long straight streets. The houses were of poles set upright, with thick thatchings of palms, in yards completely filled with fruit trees, and garden beds of spinach, lettuce, and onions. Beehives in quantity were seen at nearly every house. Almost every woman wore garments, many of which were beautifully decorated. The men wore brilliant sahues, woven in the town. At Tepeculaca, "the great convent church historically interesting, is striking in size and architecture. The priest, an excellent man, is a pure-blooded Mixteca Indian, talking the language as his mother tongue. With great pride he showed us about the temple, which was once a grand Dominican monastery. ... The cura had ten churches in his charge. He seemed a devout man, and emphasized the importance of his preaching to his congregation in their native tongue and his. So convinced is he that the native idiom of the people is the shortest road to their heart and understanding, that he has prepared a catechism and Christian dox- trine in the modern Mixtec, which has been printed." The Mixteca language is spoken in a number of dialects and in spite of its peculiarly difficult character, has been much studied on account of the importance of the tribe. The standard authority is the "Arte en lengua Mixteca" of Fr. Antonio de los Reyes (Mexico, 1593, and reprinted at Mexico in 1750). The Indian poet, author and poet, is Fr. Castelano Palacios, whose "Catecismo" was published in Oaxaca in 1896. Pimentel also devotes a chapter to the language. (See also Zapotec.)

Moab, Moabités.—In the Old Testament, the word Moab (2670) designates (1) a son of Lot by his elder daughter (Gen. xix. 37); (2) the people of whom this son of Lot is represented as the ancestor (Ex. xvi, 15, etc.), and who are also called "the Moabités" (Gen. xix. 37); and possibly (3) the territory occupied by the Moabités (Num. xxi. 11). Its etymology: "from my father"; which is added by the Septuagint to the Hebrew text in Gen. xvi. 37. The name is found in no other language than any derivation suggested by modern scholars. The origin and race of the Moabites need not be discussed here, since according to Gen. xix. xii they are the same as those of the Ammonites, which have been examined in the article Ammonites.

From the mountainous district above Segr (Zoar), a town which lay in the plain near the south-western end of the Dead Sea (cf. Gen. xix. 30), Lot's children forcibly extended themselves in the region of eastern Palestine. Ammon settled in the more distant north-east country, Moab in the districts nearer to the Dead Sea. These were inhabited by the Emims, a gigantic people, whom, however, the Moabites succeeded in expelling (Deut. ii. 9, 10). Moab's territory was at first of considerable extent, some fifty miles long by thirty broad. It comprised the highlands east of the Dead Sea and the Jordan as far as the mountains of Galad, together with the level stretch between the highlands and the river, and the well-watered and fertile land at the south end of the Dead Sea. On three sides it had natural boundaries, and on the north, the Dead Sea and the southern sector of the Jordan; on the south, the Wady el-Hasy, separating the uplands of Moab from those of Edom; on the east, the Arabian desert. Only on the north, were there no natural features conspicuous enough to form a fixed boundary, and hence Moab's northern frontier fluctuated at different periods between the main range and the desert, to the south-east from the torrent now called Wady Nimrin to the Arabian desert.

The highlands are the great bulk of this territory. They form a table-land about 3000 feet above the Mediterranean, or 4300 feet above the Dead Sea, rising slowly from north to south, having steep western slopes, and separated eastward and from the desert by low, rolling hills. The geography of this almost treeless plateau is the same as that of the range of western Palestine; but its climate is decidedly colder. In spring, its limestone hills are covered with grass and wild flowers, and parts of the plateau are now sown with corn. It is traversed by three deep valleys, the middle of which, the Arnon, is the deepest, and it abounds in streams. It is dotted with dolmens, menhirs, and stone circles, and also with ruins of villages and towns, mostly of the Roman and Byzantine periods. In Old Testament times, Moab was an excellent pasture land (IV Kings, iii. 4), and its population was
MOABITE

much more considerable than at the present day, as is proved by the numerous cities, such as Ar Moab, Galilim, Kir Moab, Luith, Nemrim, Segor, Nephe, Onoam, Qiriath Husos (A.V. Kirjath-husoth), Aroer, Baal-meon, Beer Elim, Beth-gannam, Beth-simoth, Beth-phogor, Bosor, Cariath, Diboun, Eleale, Hebron, Hesebon, Jasa, Medabs, Mephaath, Sabama etc., which the Moabites inhabited at the time of the Judges.

Shortly before Israel’s final advance towards Palestine, the Moabites had been deprived of their territory north of the Arnon by the Amorrites, coming probably from the west of the Jordan (Num., xxi, 13, 26). Moab’s king at the time was Balaa’ who, in his unfriendliness towards the Hebrew tribes, hired Baal-meon to hold them back, but the Moabites, not only failed in this undertaking but the expected curses were divinely changed into blessings (see Balam). Another fiendish attempt in a different direction was only too successful; the daughters of Moab enticed the Israelites into their idolatry and immorality, and thereby brought upon them a heavy retribution (Num., xxv). Moab’s subsequent relations with the Hebrew tribes (Ruben, Gad) who had settled in its ancient territory north of the Arnon, were probably those of a hostile neighbour anxious to recover this lost territory. In fact, in the early history of the Judges, the Moabites had not only regained control of at least a part of that land, but also extended their power into western Palestine so as to oppress the Be thaath. After the Moabite Rose over Benjamin, it finally put an end to by Aod, the son of Gera, who as assassinated Eglon, Moab’s king, slaughtered the Moabites, and recovered the territory of Jericho to Israel (Judges, iii, 12-30). To this succeeded a period of friendly intercourse, during which Moab was a refuge for the family of Elimelech, and the Moabites Ruth was taken as the Israelites from which David descended (Ruth, i, 1; iv, 10-22). Saul again fought against Moab (I Kings, xiv, 47), and David, who, for a while confided his parents to a Moabite king (xxxi, 3, 4), ultimately invaded the country and made it tributary to Israel (II Kings, viii, 2). The subjugation apparently continued under Solomon, who had Moabite women in his harem and “built a temple for Chamos the idol of Moab” (III Kings, xi, 1, 7). After the disruption, the Moabites were vassals of the northern kingdom; but on the death of Achab, they broke into an open revolt the final result of which was their independence, and the full circumstances of which are best understood by combining the data in IV Kings, 1, and II Chronicles, 20. The inscription of Nebuchadnezzar, King of Moab, found in 1888 at the ancient Dibon, now preserved in the Louvre.

It seems that after this, they made frequent incursions into Israel’s territory (cf. IV Kings, xiii, 20), and that after the captivity of the trans-Jordanic tribes, they gradually occupied all the land anciently lost to the Amorrites. This new prosperity is frequently referred to in the prophetical writings, while their exceeding pride and corruption are made the object of threatening oracles (Is., xv-xvi; xxv, 10; Jer., xlvi; Ezech., xxv, 8-11; Amos, ii, 1-3; Soph., ii, 8-11; etc.). In the cuneiform inscriptions, their rulers are repeatedly mentioned as tribute-payers to Assyria. This was indeed the condition of their Molochous prosperity. It can hardly be doubted, however, that they sided at times with other Western nations against the Assyrian monarchs (Fragment of Sargon II; opening chapters of Judith). In the last days of the Kingdom of Judah, they transferred their allegiance to Babylonia, and fought against Nabuchodonosor against IV Kings, 21. Even after the fall of Jerusalem, Moab enjoyed a considerable prosperity under Nabuchodonosor’s rule; but its utter ruin as a state was at hand. In fact, when the Jews returned from Babylon, the Nabatean Arabs occupied the territory of Moab, and the Arabians instead of the Moabites were the allies of the Ammonites (cf. II Ead., iv, 7; I Mach., ix, 32-42; Josephus, “Antiq.”, xili, 13, 5, xiv, 1, 4). As is shown by the Moabite Stone, the language of Moab was “simply a dialect of Hebrew”. Its use of the waaw consecutive connects most intimately the two languages, and almost all the words, inflections, and idioms of this inscription occur in the original text of the Old Testament. At the time of the Moabite disintegration, Moab’s religious and national state was such that the fact that while the Moabites adored Chamos as their national god, they also worshipped Ahab as their consort. Besides these two divinities, the Old Testament mentions another local deity of the Moabites, viz. Baal of Mount Phegor (Peor; Beelpegor) (Num., xxv, 3; Deut., iv, 3; Osee, ix, 10, etc.). The Moabites* were divided into this same number of tribes. Although their religion is not fully known, it is certain that human sacrifices and also impure rites formed a part of their worship (IV Kings, iii, 27; Num., xxv, Osee, ix, 10).’

MOABITE STONE. See MESSA.

MOBILE (Fr. MOBIL, Sp. MAURILIA), DIACRIP OF (MOMILHIA, suffragan of New Orleans, comprises the State of Alabama (51,540 sq. miles) and western Florida (7281 square miles), and derives its name from Mauvila, the fort and chief city of the Gulf Indians, who with their “emperor”, Tuscaloosa, “black warrior” were conquered by the Spanish soldier and explorer, Hernando de Soto, in 1540.

The Rev. Henry Royer de la Vente was the first priest (July, 1704), his curate, the Rev. Alexander Huvé. The first entry found in the records of the new parish is that of the baptism of an Apalache girl (6 September, 1703), by the Rev. A. Davion. The Rev. J. B. de St. Cosme was murdered by savages on his way to Mobile from Natchez late in 1706. The last record of the secular clergy (13 January, 1721), that of the Rev. Alexander Huvé, appears in the ancient register of Mobile. The work was then resumed by the religious orders. The Quebec Act of 1774 conferred on the parish priest of Mobile among others, a legal title to its tithes. With the surrender of Mobile to Spain in 1783, the records are kept in Spanish, and the church in Mobile is definitely known as the church of the Immaculate Conception. Pius VII erected the diocese of St. Louis of New Orleans (25 April, 1793), usually styled Louisiana and the Floridas. The jurisdiction, therefore, of the ordinaries of Quebec and Santiago de Cuba over that immense territory ceased with the selection of its first
bishop, the Right Rev. Luis Peñalver y Cardenas, who arrived in New Orleans 17 July, 1795. From 1792 to 1800 the parish priest of Mobile was the Rev. Constantine McKenna, and its last incumbent under Spanish rule, the Rev. Vincent Genin.

BISHOPS.—(1) MICHAEL PORTER, b. at Montbrison, France, 1795; d. at Mobile, 4 May, 1859. He came to the United States 4 September, 1817. Completing his studies at St. Mary’s Seminary, Baltimore, Md., he was ordained priest by Bishop Dubourg at St. Louis (1818), and eight years later, in the same city was consecrated titular Bishop of Oleno by Bishop Rosati, and became first vicar Apostolic of the new Vicariate of Alabama and the Floridas. At the time of his accession he was the only clergyman in the vicariate and had practically only three congregations with churches, Mobile, Ala., and the old Spanish cities of St. Augustine, Fla. (founded 1565), and Pensacola, Fla. (founded 1560). The first priest who came to his assistance was the Rev. Edward T. Mayne, a student of Mt. St. Mary’s College, Emmitsburg, Md., sent by Bishop England of Charleston, to take charge of the deserted church of St. Augustine. Bishop Porter began his administration by riding through his vicariate and visited Pensacola, Tallahassee, and St. Augustine, all of which were newly organized and ministering the Sacraments as he went. He sailed for Europe (1829) in quest of assistants, and returning with two priests and four ecclesiastics, found the vicariate raised to the Diocese of Mobile. His cathedral was a little church twenty feet wide by fifty feet deep, his residences still smaller two-roomed frame structures. But in 1850 new edifices were erected in Mobile, Spring Hill, Summerville, Mount Vernon, Fish River, Pensacola, Tuscaloosa, and Montgomery. He was somewhat relieved in the same year by the detachment of the eastern portion of Florida and its annexation to the newly-created See of St. Petersburg, Fla. To add to his relief the new cathedral of the Immaculate Conception, built mainly through the uniring efforts of the Rev. J. McGahan, was finished at a cost of over eighty thousand dollars, and consecrated 8 December, 1850. About 1830 Bishop Porter established Spring Hill College and Seminary, at the head of which he was elected President and in 1848 he was consecrated Bishop of Dubuque (10 December, 1837) by Bishop Portier, who also consecrated another president of Spring Hill, the Rev. John S. Bazin, third Bishop of Vincennes, 24 October, 1847. Spring Hill College, for a time in charge of the Eustis Fathers, was taken over by the Jesuit Fathers (1846) and has since been one of the foremost institutions in Mobile. Bishop Porter held there a diocesan synod (19 January, 1835). In 1833 he secured from the Visitations convent, Georgetown, a colony of nuns who established in Mobile a house and academy, which is in a very flourishing condition. He brought the Brothers of the Sacred Heart from France (about 1847), and the Sisters of Mercy from Ireland (1844), and later established Bishop of Dubuque, and was ordained Bishop Portier, who also consecrated another president of Spring Hill, the Rev. John S. Bazin, third Bishop of Vincennes, 24 October, 1847. Spring Hill College, for a time in charge of the Eustis Fathers, was taken over by the Jesuit Fathers (1846) and has since been one of the foremost institutions in Mobile. Bishop Porter held there a diocesan synod (19 January, 1835). In 1833 he secured from the Visitations convent, Georgetown, a colony of nuns who established in Mobile a house and academy, which is in a very flourishing condition. He brought the Brothers of the Sacred Heart from France (about 1847), and the Sisters of Mercy from Ireland (1844), and later established orphan asylums for boys and girls respectively. One of his last acts was the foundation of an infirmary at Mobile conducted by the Sisters of Charity.

(2) JOHN QUINLAN, second Bishop of Mobile, b. in County Cork, Ireland, 19 October, 1826; d. at Mobile, 9 March, 1883. He came to the United States 1844, studied for the priesthood in Mt. St. Mary’s College, Emmitsburg, Md., and was ordained by Archbishop Purcell (1853), with a fellow student, Richard Gilmour, afterwards second Bishop of Cleveland. He was consecrated Bishop of Mobile, 4 Dec., 1859, by Archbishop Blanc in St. Louis’ cathedral, New Orleans, and the next year, or at least 1859, he travelled through the United States and fourteen schools for which he had only eight secular priests, and he therefore brought from Ireland eleven young candidates for the priesthood. Two of the priests who came to Bishop Quinlan at this time were zealous workers in the diocese to-day, the Very Rev. C. T. O’Callaghan, D.D., V.G., pastor of St. Vincent’s church, Mobile, several times administrator of the dioce; and the Very Rev. D. Savage, D.D., pastor of St. Peter’s church, Montgomery, a member of the bishop’s council. Bishop Quinlan’s administration fell upon the stormy days of interminable strife. After the battle of Shiloh, he hastened on a special train to the blood-stained battle-ground and ministered to the temporal and spiritual wants of North and South. After that war the diocesan activities were crippled. Nevertheless, besides repairing ruined churches, Bishop Quinlan built the portico of the Mobile cathedral, founded St. Patrick’s and St. Mary’s churches in the same city, and established churches in Huntsville, Decatur, Tuscumbia, Florence, Cullman, Birmingham, Eufaula, Whistler, and Toulminville. April, 1879, Bishop Quinlan invited the Benedictines from St. Vincent’s Abbey, Pa., to the diocese, and they settled at Cullman. The first abbot of the new settlement was the Rev. Benedict Menges, O.S.B., succeeded (1905) by Rt. Rev. Bernard Menges, O.S.B., under whose capable management the monastery and college are progressing and extending their influence considerably.

(3) DOMINIC MANUCY, third Bishop of Mobile, b. in St. Augustine, Fla., 20 December, 1823; d. at Mobile, 4 December, 1885. He was educated at Spring Hill College, and ordained (1850) by Bishop Portier, and for twenty-four years laboured in Montgomery and Mobile. He was consecrated at Mobile (9 Dec., 1874) Bishop of Duluth and was assigned to North Brownsville, Tex., and was transferred to the Diocese of Mobile (9 March, 1884), without being relieved, from his duties as vicar Apostolic, but finding the burden too great he resigned and was appointed, to the present see of Marona.

(4) JEREMIAH O’SULLIVAN, fourth Bishop of Mobile, b. in County Cork, Ireland, 1844; d. at Mobile, 10 August, 1896. He came to the United States, 1863, entered St. Charles College, Ellicott City, Md., whence he proceeded to St. Mary’s Seminary, Baltimore, Md., was ordained priest (June, 1868) by Archbishop Spalding, and consecrated Bishop of Mobile (20 Sept., 1868), by Cardinal, then Archbishop, Gibbons, Baltimore, Md. The present cathedral edifices were built by Bishop O’Sullivan, who successfully strove to restore the ruined financial status of the diocese. A gifted administrator, an admired orator, an extremely zealous and holy bishop, Bishop O’Sullivan travelled and laboured unceasingly in the diocese, left to posterity a monument of noble results, temporal and spiritual, quietly and unostentatiously achieved.

(5) EDWARD PATRICK ALLEN, fifth and present Bishop of Mobile, was born in Lowell, Mass., 17 March, 1853, and educated at Mt. St. Mary’s College, Emmitsburg, Md., where he was ordained priest by the Rev. Joseph W. Becker, 17 March, 1877, and was elected president of Mt. St. Mary’s (1884), and filled that office most aceptably until his consecration as Bishop of Mobile, by Cardinal Gibbons, in the cathedral, Baltimore, Md. (16 May, 1897). Under the able and prudent management of Bishop Allen, the diocese has advanced with great strides, and is still developing at a rapid growth. Many churches and missions have been erected, hospitals, orphanages, and schools established, the number of priests more than doubled, and considerable property acquired with a view to the further development of his rapidly increasing charge. The diocese was soon tried by a fearful storm and tidal wave (Sept., 1900). Many churches either partially or entirely destroyed, and the property of schools or repaired. But the complete results of Bishop Allen’s prosperous administration are best noticed by a comparison between the standing of the
where he assumed control and its existing admirable style.

Statistics.—1897 (year of Bishop Allen’s arrival).

—Churches with resident priests, 22; parishes with parochial schools, 15; children under Catholic care in colleges, academies, and schools, 2,556; hospitals, 2; orphanages, 2; baptisms, infants, 820, converts, 60; marriages, 163; Catholic population, 17,000; priests, secular and religious, 48.

1910—Priests, secular, 49; religious, 52, total, 101; churches with resident priests, 43; missions with churches, 31; total churches, 74; stations, 149; chapels, 25; brothers, 41; religious women, 274; children under Catholic care, 5039; colleges, 3; high school, 1; academies, 7; schools, 31, and orphanages, 3; hospitals, 4; home for aged poor, 1; baptisms, infants, 1,478, converts, 552; marriages, 302; Catholic population, 38,000.

Bishop Allen takes a lively interest in the Negro Missions, and is largely responsible for the good work being done by the Josephite Fathers in Mobile and vicinity, Birmingham, and Montgomery. Near the latter city is St. Joseph’s College, founded (1901) by the Benedictine Fathers, the only primary object of which is “to educate young colored men to be catechists and teachers.” With Bishop Allen’s sanction a colored fraternal organization was instituted in Mobile, 1909, by the Rev. C. Rebocher, which gives promise of universal good.

Benefactors.—The chief benefactors of the diocese were giveth of Old McGill—McGill Insti-tute, a high school for boys, bears their name. The Hannon Home for the aged poor is a tribute to the generosity of Major P. C. Hannon, who built it along the lines of Bishop Allen’s choosing.

Religious Orders.—In the Diocese of Mobile are the Jesuits, Benedictines, Josephite Fathers, and Brothers of the Sacred Heart. There are also the Visitations, Sisters of Charity, Sisters of Mercy, Sisters of Loreto, Sisters of St. Joseph, Sisters of St. Benedict, Little Sisters of the Poor, and Sisters of Perpetual Adoration. There are three Catholic cemeteries, one in Mobile, one in Birmingham, and one in Montgomery. The intrepid Admiral Semmes and Father Ryan, the poet-priest, are buried in the Catholic Cemetery, Mobile. By a singular coincidence the first priest who came to labour in the new Diocese of Mobile and the last and ruling Bishop of Mobile were students at Mt. St. Mary’s College, Emmitsburg, Md., while the first Bishop of San Antonio, Tex., the Rt. Rev. Anthony D. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, and its present Bishop, the Rt. Rev. Anthony M. Pellicer, are natives of Mobile, and the native priests of the diocese, both having been consecrated in its cathedral (the former, 8 Dec., 1874, the latter, 14 April, 1910), of which each in turn was pastor.

THOMAS J. EATON.

Mocissa, a titular metropolitan see of Cappadocia. Procopius (De sedif., V, iv) informs us that this fortified site, in north-western Cappadocia, was constituted metropolis of Cappadocia Tertia by Justinian, when he divided that province into three parts. The emperor gave it the name of Justinianopolis. Nothing is known of its history, and its name should perhaps be written Moccissus. There is no doubt that the site of Mocissus, or Moccissus, is that occupied by the modern town of Kir-Sheir, chief town of a sanjak in the vilayet of Angora, which possesses 8,000 inhabitants, most of them Musulmans. In the neighbourhood of Kir-Sheir there are some important ancient ruins. This metropolis figures in the “Notitiae episcopatuum” until the twelfth century. Only a few of its titulars are known: the earliest, Peter, attended the Council of Constantinople (536); the last, whose name is not known, was a Catholic, and was consecrated after the Council of Florence by Patriarch Metrophanes of Constantinople.

Le Quien, Orients christ., I, 407; Smith, Dict. of Greek and Roman Geog., s. v.; Ramaty, Asia Minor, 300. S. Pétridina.

Mocoví Indians.—The name is also written Marco, Mocobi, Mocobí, Mocoví. They are a warlike and predatory tribe of Guayanese stock, and are closely related linguistically to the Toba, Mbayas, and Apbópí, their usual allies, settled principally along the middle and upper Orinoco River, in the Chaco region of northern Argentina, although they formerly extended their forays as far south as Santa Fé and even to the gates of Buenos Aires. In habit of life and general characteristics they resembled the rest of the tribes just mentioned, but were distinguished even among the tribes of the Orinoco by their arrogance, avarice, and cruelty and hatred to the Spaniards. They conspired to ruin Tucuman, proving themselves formidable, not to solitary estates merely, but to whole cities”. They entirely destroyed the town of Concepción and massacred its inhabitants.

This special hostility to the people of Tucuman was due to the fact that a large number of Mocoví, who had been induced through the efforts of the Jesuits fathers Altamirano and Díaz to come in from the war-path and had been organized into the mission of San Xavier, had been treacherously seized and distributed as slaves by the governor of that province. They received a temporary check in 1710 from the Governor of the State of Santa Fé, but the sale of three thousand men against the Chaco tribes, with the result that several tribes made peace, while the Mocoví retired to the south-west and continued their raids in that quarter. Thirty years later, during a period of truce, some of the Mocoví became acquainted with the Jesuits of the College of Santa Fé, through whose influence they were won to friendship with the Spaniards, and the chiefs Aletín and Chitalin consented to receive Christian instruction together with their people. As a result the Mocoví mission colony of San Xavier was established in 1743 by Father Francisco Burgos Navarro, thirty leagues from the city, and from a small beginning increased rapidly until it contained at least seven hundred souls, who, were, from time to time, won over by the persuasions of the new converts. Prisoners captured in the various expeditions were also brought into the new mission, while many voluntarily took refuge there to escape pursuit.

The Mocoví proved devout, tractable, and willing workers, and particularly competent musicians under the instruction of the German Father Florian Pauke, who organized a band and chorus whose services were in demand on church occasions even in Buenos Aires. With bell in hand, the chief himself, Aletín, acted as crier every morning to call his people to Mass, and took the lead in every task of difficulty. A third chief, who had long held out against the Spaniards and made war upon his mission kinsmen in revenge for their abandonment of the old life, finally came voluntarily. In 1765 a second Mocoví mission, San Pedro y Pablo, was established by Father Pauke with another portion of the tribe which had until then continued hostile.

The time of the expulsion of the Jesuits in 1767 the two missions contained about 1200 Mocoví, of whom all but a few were Christians. Deprived of their accustomed teachers, most of them finally rejoined their wild kinsmen in the forests of the Chaco.
In 1800 the tribe was still loosely estimated at 2000 warriors or over 6000 souls. They are now reduced far below that number, but retain their tribal organization and habits, though no longer hostile, and range generally along the western banks of the Paraná. The best study of their language is Father Tavolini's "Introduzione al Arte Mocoví." (See also Toba.)

**Modena, Archidioecese of (Mutinensis), in central Italy, between the rivers Secchia and Panaro. The city contains many fine buildings. The Romanesque cathedral, begun in 1069, consecrated by Lucius III in 1184, bears on its interior façade scenes from the Old and from the New Testament sculptured in white marble, and the high altar possesses a Pieta by Guido Reni; the inlaid work of the choir, by the Lendinara brothers (1465), is very beautiful; in the belfry, called the Ghirlandina, is kept the famous wooden palm taken from the Bolognese after the battle of Zappolino (1325); this palm is the subject of the heroic-comic epic of Tassoni, "La Secchia Rapita"; the pulpit is a noteworthy work of Arrigo del Camocio. Notable churches of Modena are San Agostino, which contains the tombs of the historians Sigonio and Muratori; San Pietro, with its beautiful specimens of the art of Giambellini, Dossi, and Francia; San Stefano della Pomposa, of which Muratori was provost, and others, rich in works of art. The magnificent Ducal Palace, built in 1635 by Duke Francesco I, according to the plans of Avanzini, besides a valuable gallery of pictures, contains frescos by Franceschini, Tintoretto, Dossi, and others, and a library with more than three thousand manuscripts. The Royal, Comunal, and Capitolary archives possess many important documents. The university was founded by Duke Francesco III in 1378, but Modena, as early as 1182, had a studium generale which rivalled that of Bologna. The citadel, pentagonal in shape, dates from 1635; its walls and bastions were transformed into a public promenade in 1816. There has been a military school for infantry and cavalry in the royal palace of Modena since 1850: it was abolished in the last duke, Francesco V. The various beneficent institutions of this city are united in the Opera Pia Generale.

At the time of the Gallic War, Mutina, the Latin name of Modena, was already in the power of the Romans, who were besieged there in 223 B.C. A Roman colony was taken from Mutina, 234 B.C., and a deacon of the town was in the power of the Ligurians for a year. It was there, also, that Spartacus defeated the consul Cassius in 71 B.C. The famous bellicum Mutinense (42 B.C.) decided the fate of the republic at Rome. During the Empire Modena was one of the most prosperous cities in Italy, but in the war between Constantine and Maxentius, the city was besieged and fell into great decadence until 698, when it was revived by King Cunibert.

Charlemagne made it the capital of a line of counts, whose authority, however, was before long eclipsed by that of the bishops, one of whom, St. Lodoinus, in 897 surrounded the city with walls, to protect it against Hunidian incursions, and who was formally invested with the title of count by Emperor Conrad I. Later, Modena was a possession of the Countess Matilda, after whose death (1115) the city became a free commune, and in time joined the Lombard League against Barbarossa. In the struggle between the popes and Frederick II Modena was Ghibelline, and in conflict with the Guelph cities; nevertheless, it harboured a strong Guelph party, under the leadership of the Aigion family, while the Ghibellines were led by the Grasoli. In 1288, to put an end to internal dissensions, Modena gave its allegiance to Obizzo II of Este, Lord of Ferrara, who also became master of Reggio in 1291. After the death of his son Azzo VIII (1308), Modena became free again, but lost a part of its territory. On the arrival of Henry VII, the town received an imperial vicar; in 1317, it welcomed a pontifical legate, choosing later for its lord John of Bohemia, while, in 1336, it was ceded by Manfredo Pio of Carpi to Obizzo III of Este and Ferrara in whose family it remained until 1859. Among his successors were Nicolò III, who recovered Reggio and the Garfagnana for Modena. Borso, a natural son of Nicolò III, received the title of Duke of Modena from the emperor in 1452, and later that of Duke of Ferrara, from Paul II. In the sixteenth century, in the palace of the Grifillensi family, there flourished an academy of letters. The city submitted to Julius II in 1510, but was restored to the Duke of Parma in 1530 by Charles V at the death of Alfonso II; however, in 1597 Ferrara returned to immediate dependency upon the Holy See, but Modena, with Reggio and its other lands, as a fief of the Empire, passed to Cesare, cousin of Alfonso II.

From that time a new era began for Modena, henceforth the home of a court devoted to the arts and letters, and solicitous for the public weal. The son of Cesare, Alfonso III, after a reign of only one year (1529), became a Capuchin monk in the convent of Castelnuovo di Garfagnana, founded by him, and died in 1614. Alfonso IV, in 1602, was succeeded by the young Francesco II, whose regents were his mother Laura and his great-uncle Cardinal Rinaldo. He built the Ducal Palace and the citadel and added Coreggio to his territory. As Francesco II died without progeny (1658), Modena came into the possession of his uncle Rinaldo, a cardinal also, who married...
Carlotta of Brunswick, and after a reign frequently troubled by French invaders, left the ducal throne to his son Francesco III in 1727, when the latter was fighting against the Turks in Hungary. Francesco III also governed Modena for Maria Theresa. Ercole III, who by his marriage acquired the duchy of Massa and Carrara, succeeded to that of Modena in 1780, and at the approach of Napoleon, sought refuge at Venice. Modena declared the capital of the Caspadian republic, and eventually was incorporated into the Kingdom of Italy. In 1803 Ercole received, as compensation for the loss of Massa, Breisgau and Ortenua. His daughter and only child, Maria Beatrice, married the Archduke Ferdinando of Austria, and their son Francesco IV, in 1814 received the Duchy of Carrara while Maria Beatrice governed the Massa and Carrara until her death. In 1831 occurred the famous conspiracy of Ciro Menotti on the night of the third and fourth of February; it was discovered, and Menotti was imprisoned, taken to Milan by the duke, who had been constrained to flee to that city by the revolt of Bologna, and was hanged on 16 May, after the duke had returned to Modena. In 1846 Francesco V succeeded to the duchy, and in the troubles of 1848 was compelled to seek refuge in Austria, but returned in the following year. In 1859, however, having declared for Austria, he was again obliged to leave his states, and the provisional government, under Carlo Farini, decreed the annexation of Modena to the Kingdom of Italy.

In 1859, however, having declared for Austria, he was again obliged to leave his states, and the provisional government, under Carlo Farini, decreed the annexation of Modena to the Kingdom of Italy.

In the reign of Francesco IV the chief nobility of Modena were the astronomer Geminiano Montanari, the anatomist Gabriele Falloppio, the great Austrian general Monteculii, Cardinal Savoletto, Sigionius, Muratori, Tiraboschi, and the poet Tassoni. According to local tradition, the first Bishop of Modena was St. Cletus—probably sent there by Pope Dionysius about 270. After him three, perhaps more, bishops of Modena, one Antonius, or Autonuminus, to whom reference is made in the life of St. Germaninus his predecessor; this great bishop and protector of the city sheltered in 334 St. Athanasius and died in 349. Other bishops of Modena were St. Theodulus (about 308), formerly a notarius or secretary of St. Ambrose; St. Germaninus II (311) according to Capparulo, who is said to have induced Attila to enter the abbey of Modena (452); St. Lupicinus (749), in whose time the famous abbey of Nonantola was founded by Duke Anselm of Friuli; and Egidius (1097), who began the construction of the cathedral. In 1148 the Diocese of Modena was suppressed for a time on account of discord among the Abbots of Nonantola. William III of Modena, who in 1221, frequently served the pope, Henry III, and Gregory IX, as legate, especially among the Prussians, the Livonians, the Estonians, etc.; eventually he resigned his see to devote himself to the conversion of those peoples (cf. Balan, "Sulle legazioni compiute nei paesi nordici da Guglielmo vescovo di Modena," ibid., 1872). Bonadonna Bechettti, bishop in 1311, was the first Franciscan in the diocese, and the Ghiliani of Nicolò Boardo (1401) did much for ecclesiastical discipline; Nicolò Sandonino (1479) was pontifical legate in Spain; Giovanni Morone (1529) founded the seminary, and is famous for missions on which he was sent to Germany in the beginnings of Lutheranism. Under him, through the "Academia", Protestantism obtained a firm hold in Modena, and St. John of the Cross was excommunicated with difficulty; Egidio Foesarari (1550), to whom the Council of Trent entrusted the correction of the Roman Missal and the preparation of its Catechism for Parish Priests; Roberto Fontana (1646) and Giuseppe M. Folignano (1757) both restorers of the episcopal palace, while the second did much for the endowment of the cathedral.

In 1821 the Abbey of Nonantola, a prelatura nullius dioecesis, was united to the Diocese of Modena; and the latter, a suffragan of Milan until 1852, was then raised to the dignity of a metropolitana see, with Carpi, Guastalla, Massa, and Reggio Emilia for its suffragans. The Abbey of Nonantola was famous, once, as a center of discipline and ecclesiastical learning, and through it a great impetus was given to agriculture in the surrounding country. Politically, Nonantola entered into an alliance with Bologna to preserve its independence, especially against Modena, but like the latter it became a possession of the house of Este in 1441. Until 1441 the administration of Nonantola was confided to commendatory abbots, one of whom was St. Charles Borromeo. The literary treasures of the abbey gradually found their way into the various libraries of Italy.

The Archdiocese of Modena, with Nonantola, contains 250 parishes, in which there are 220,400 faithful, 745 secular and 80 regular priests; 8 religious houses of men, and 13 of women; 5 schools for boys and 7 for girls; 60 seminarians; 450 churches or chapels.

Cappelletti, La Chiesa d'Italia, XV; Tiraboschi, Memorie storiche moderne (Modena, 1793-94); In dem, Storia della Basilica di Nonantola (Modena, 1784); Salmi, Storia della diocesi di Modena (1785); Baraldi, Compendio storico della vita di Modena (Modena, 1795); Grimani, Gli scrittori di Modena (1801-9); Sandonini, Modena sotto il governo dei papali (Modena, 1879); Monumenti di storia patria per le province modenese (Parma, 1861—).
they called "Modernismo nel clero" (Modernism among the clergy). Several pastoral letters of the year 1906 made use of the same term; among others we may mention the Lenten charge of Cardinal Nava, Archbishop of Catania, to his clergy, a letter of Cardinal Bacileri, Bishop of Verona, dated 22 July, 1906, and a letter of Mgr Rossi, Archbishop of Acerenza and Matera. "Modernismo e Modernisti", a work by Abbate Cavallanti which was published towards the end of 1906, gives long extracts from these letters. The name "modernism" was not to the liking of the reformers. The propriety of the new term was discussed even amongst good Catholics. When the Decree "Lamentabili" appeared, Mgr Baudoilart expressed his pleasure at not finding the word "modernism" mentioned in it. "I use the term "modern" (Decree of 20 June, IV, p. 578). He considered the term "too vague". Besides it seemed to insinuate "that the Church condemns everything modern". The Encyclical "Pascendi" (8 Sept., 1907) put an end to the discussion. It bore the official title, "De Modernistarum doctrinia". The introduction declared that the name commonly given to the upholders of the new errors was not inapt. Since then the modernists themselves have acquiesced in the use of the name, though they have not admitted its propriety (Loisy, "Simplex refexionis sur le decret 'Lamentabili' et sur l'encycliche 'Pascendi' du 8 Sept., 1907", p. 14; "Il programma dei modernisti"; note at the beginning).

THEORY OF THE MODERNISTS. The essential error of Modernism. — A full definition of modernism would be rather difficult. First it stands for certain tendencies, and secondly for a body of doctrine which, if it has not given birth to these tendencies (practice often precedes theory), serves at any rate as their explanation and support. Such tendencies, which manifest themselves in different churches, are not united in every individual, nor are they always and everywhere found together. Modernist doctrine, too, may be more or less radical, and it is swallowed in doses that vary with each one's likes and dislikes. In the Encyclical "Pascendi", Pius X says that modernism embraces every heresy. M. Loisy makes practically the same statement when he writes that "in reality all Catholic theology, even in its fundamental principles, the general philosophy of religion, Divine law, and the laws that govern our knowledge of God, come up for judgment before this new court of assize" (Simples reflxions, p. 23). Modernism is a composite system: its assertions and claims lack that unity of thought which usually pertains to systems of thought or to the systematic thought of any one. The Encyclical "Pascendi" was the first Catholic synthesis of the subject. Out of scattered materials it built up what looked like a logical system. Indeed friends and foes alike could not but admire the patient skill that must have been needed to fashion something like a co-ordinated whole. In their answer to the Encyclical "Il programma dei modernisti", the Modernists tried to retouch this synthesis. Previous to all this, some of the Italian bishops, in their pastoral letters, had attempted such a synthesis. We would particularly mention that of Mgr Rossi, Bishop of Acerenza and Matera. In this respect, too, Abbate Cavallanti's book, already referred to, deserves mention. Even earlier still, German and French Protestants had done some synthetical work in the same direction. Prominent among them are Kant, "Die Religion innerhalb der Grenzen der reinen Vernunft" (1803); Schleiermacher, "Der christliche Glaube" (1821-1822); and A. Sabatier, "Esquisses d'une philosophie de la religion d'apres la psychologie et l'histoire" (1897).
IONS, and tendencies. From time to time these tendencies work out into systems, that are to renew the basis and superstructure of society, politics, philosophy, theology, of the Church herself and of the Christian religion. A remodelling, a renewal according to the ideals of the twentieth century—such is the longing that possesses the modernists. "The avowed modernists," says M. Loisy, "form a fairly definite group of thinking men united in the common desire to adapt Catholicism to the intellectual, moral and social needs of to-day" (op. cit., p. 13). "Our religious attitude," as "il programma dei modernisti" states (p. 5, note 1), "is ruled by the single wish to be one with Christians and Catholics who live in harmony with the spirit of the age." The spirit of this plan of reform may be summarized under the following heads: (a) A wholesome, complete emancipation, tending to weaken ecclesiastical authority; the emancipation of science, which must traverse every field of investigation without fear of conflict with the Church; the emancipation of the State, which should never be hampered by religious authority; the emancipation of the private conscience, whose inspirations must not be overruled by pastoral definitions or anathemas; the emancipation of the universal conscience, with which the Church should be ever in agreement; (b) A spirit of movement and change, with an inclination to a sweeping form of evolution such as abhors anything fixed and stationary; (c) A spirit of reconciliation among all men through the heartiest good-will and the most moderate and least provocative of the modernist dreams of an understanding between the different Christian religions, nay, even between religion and a species of atheism, and all on a basis of agreement that must be superior to mere doctrinal differences.

Such are the fundamental tendencies. As such, there is no need to explain, justify, and strengthen themselves in an error, to which therefore one might give the name of "essential" modernism. What is this error? It is nothing less than the perversion of dogmas. Manifold are the degrees and shades of modernist doctrine on the question of our relations with God. But no real modernist keeps the Catholic notions of dogmas intact. Are you doubtful as to whether a writer or a book is modernist in the formal sense of the word? Verify every statement about dogmas; examine his treatment of its origin, its nature, its sense, its authority. You will know whether you are dealing with a veritable modernist or not, according to the way in which the Catholic conception of dogma is traversed. Dogma by itself is an impenetrable barrier; dogma and.evidence are correlative terms; one implies the other as the action implies its object. In this way then we may define modernism as "the critique of our supernatural knowledge according to the false postulates of contemporary philosophy." It will be advisable for us to quote a full critique of such supernatural knowledge as an example of the mode of procedure. (In the meantime however we must not forget that there are partial and less advanced modernists who do not go so far). For them, external intuition furnishes man with but phenomenal, contingent, sensible knowledge. He sees, he feels, he hears, he tastes, he touches this something, this phenomenon that comes and goes without telling him aught of the existence of a suprasensible, absolute and unchanging reality outside all enirlinging space and time. But deep within himself man feels the need of a higher hope. He aspires to perfection in a being on whom he feels his destiny depends. And so he has an instinctive, an affective yearning for God. This necessity at first has its origins in the subconsciousness. Once consciously understood, it reveals to the soul the intimate presence of God. This manifestation, in which God and man collaborate, is nothing else than revelation. Under the influence of its yearning, that is of its religious feelings, the soul tries to reach God, to adopt towards Him an attitude that will satisfy its yearning. It generates, it searches. These gropings form the soul's religious experience. They are more easy, successful and far-reaching, or less so, according as it is now one, now another individual soul that sets out in quest of God. Anon there are privileged ones who reach extraordinary results. They communicate their discoveries to their fellow men, and forthwith demand of them the formation of a new religion, which is more or less true in the proportion in which it gives peace to the religious feelings.

The attitude Christ adopted, reaching up to God as to a father and then returning to men as to brothers—such is the meaning of the precept, "Love God and thy neighbour"—brings full rest to the soul. It makes of the man a child of God, a child of the modern religious faith, a true and definitive religion. The act by which the soul adopts this attitude and abandons itself to God as a father and then to men as to brothers, constitutes the Christian Faith. Plainly such an act is an act of the will rather than of the intellect. But religious sentiment tries to express itself in intellectual concepts, which in their turn serve to preserve this sentiment. Hence the origin of those formulas concerning God and Divine things, of those theoretical propositions that are the outcome of the successive religious experiences of souls gifted with the same faith. These formulae become dogmas, when religious authority approves of them for the life of the community. For the modernist it is not a matter of dogmas and of creeds, but of the consciences of the same faith, and with it comes authority. Dogmas promulgated in this way teach us nothing of the unknowable, but only symbolize it. They contain no truth. Their usefulness in preserving the faith is their only raison d'être. They survive as long as they exert their influence. Being the work of man in time, they are adapted to his varying needs, best but contingent and transient. Religious authority too, naturally conservative, may lag behind the times. It may mistake the best methods of meeting needs of the community, and try to keep up worn-out formulae. Through respect for the community, the individual Christian who sees the mistake continues in an attitude of outward submission. But he does not feel himself inwardly bound by the decisions of higher powers; rather he makes praiseworthy efforts to bring his Church into harmony with the times. He may confine himself, too, if he cares, to the older and simpler religious forms; he may live his life in conformity with the dogmas accepted from the beginning, as the Church wrote to Rome, as written to Freiburg, and such was his own private practice. (2) Catholic and Modernist Notions of Dogma Compared. The tradition of the Catholic Church, on the other hand, considers dogmas as in part supernatural and mysterious, proposed to our faith by a Divinely instituted authority on the ground that they are part of the general revelation the Apostles preached in the name of Jesus Christ. This faith is an act of the intellect made under the sway of the will. By it we hold firmly what God has revealed and what the Church proposes to us to believe. For believing is holding something firmly on the authority of God's word, when such authority may be recognized by signs that are sufficient, at least with the help of grace, to create certitude. Comparing these notions, the Catholic and the modernist, we shall see that modernism alters the source, the manner of promulgation, the object, the stability and the truth of dogma. For the modernist, the only and the necessary source is the private consciousness. And logically so, because hidden as signs of God's word (il programma, p. 96). For the Catholic, dogma is a free communication of God to the believer made through the preaching of the Word. Of course the truth from without, which is above and beyond any natural want, is preceded by a certain interior finality or perfecti-
bility which enables the believer to assimilate and live the truth revealed. It enters a soul well-disposed to receive it, as a principle of happiness which, though an unmerited gift to which we have no right, is still such as the soul can enjoy with unmeasured gratitude. In the modernist conception, the Church can no longer define dogmas in God's name and with His infallible help; it is no longer the Church's authority which is the repository of infallibility, in a second function, subject to the collective consciousness which she has to express. To this collective consciousness the individual need conform only externally; as for the rest he may embark on any private religious adventures he cares for. The modernist proportions dogma to his intellect or rather to his heart. For the modernist, the Incarnation or the Infallibility are either unthinkable (a modernist Kierkegaard) or at most a reach of the unintended reason (a modernist Hegelian tendency). "The truth of religion is in him (man) implicitly, as surely as the truth of the whole physical universe, is involved in every part of it. Could he read the needs of his own spirit and conscience, he would need no teacher." (Tyrrell, "Scylla and Charybdis", p. 277).

Assuredly Catholic truth is not a lifeless thing. Rather is it a living tree that breaks forth into green leaves, flowers, and fruits. There is a development, or gradual unfolding, and a clearer statement of its dogmas. Besides the primary truths, such as the Divine, the Humility of Jesus, the Mass, the Virgin Mary, the Communion of Saints, there are others which, one by one, become better understood, better defined, e. g. the dogma of the Immaculate Conception and that of the Infallibility of the Pope. Such unfolding takes place not only in the study of the tradition of the dogma but also in showing its origin in Jesus Christ and the Apostles, in the understanding of it, of which it is the proof, and in the historical or rational proofs added in support of it. Thus the historical proof of the dogma of the Immaculate Conception has certainly been strengthened since the definition in 1854. The rational conception of the dogma of Divine Providence is a continual object of study; the dogma of the Sacrifice of the Mass allows the reason to inquire into the idea of sacrifice. It has always been believed that there is no salvation outside the Church, but as this belief has gradually come to be better understood, many are now considered within the soul of the Church who would have been placed without, in a day when the distinction between the soul and the body of the Church had not generally obtained. It may be that the mind must first be purged of the idea of its truth is not sterile, but always serves to nourish devotion. But whilst holding with life, progress, and development, the Church rejects transitory dogmas that in the modernist theory would be forgotten unless replaced by contrary formula. She cannot admit that "thought, hierarchy, cult, in a word, everything has changed in the history of the Church," nor can she be content with "the identity of religious spirit" which is the only permanency that modernism admits (II programma dei Modernisti).

Truth consists in the conformity of the idea with its object. Now, in the Catholic concept, a dogmatic formula supplies us with at least an analogical knowledge of a given object. For the modernist, the essential nature of dogma consists in its correspondence with and its capacity to satisfy a certain momentary need of the religious feeling. It is an arbitrary symbol that tells nothing of the object it represents. At most, as M. Leroy, one of the least radical of modernists, suggests, it is a positive prescription of a practical order, a condition of superior obedience, the act of the Real Presence in the Holy Eucharist means: "Act as if Christ had the local presence, the idea of which is so familiar to you". But, to avoid exaggeration, we add this other statement of the same writer (loc. cit.), "This however does not mean that dogma bears no relation to thought; for (1) there are duties concerning the action of thinking; (2) dogma itself implicitly affirms that reality contains in one form or another the justification of such prescriptions as are either reasonable or salutary".

VARIOUS DEGREES OF MODERNISM AND ITS CRITERION.—Modernist attacks on dogma, as we have already remarked, vary according to the degree in which its doctrines are embraced. Thus, in virtue of the leading idea of modernism, we find an agnostic modernist, and Campbell (a Congregationalist minister) is a symbolic modernist. Again the tendency to innovation is at times not at all general, but limited to some particular domain. Along with modernism in the strict sense, which is directly theological, we find other kinds of modernism in philosophy, politics, and social and such cases a wider meaning must be given to the term.

Here, however, it is needful to speak of warning against unreasonable attacks. Not every novelty is to be condemned, nor is every project of reform to be dubbed modernist because it is untimely or exaggerated. In the same way, the attempt fully to understand modern philosophic thought so as to grasp what is true in such systems, and to discover the points of contact with the old philosophy, is very far from being modernism. On the contrary, that is the very best way to refute modernism. Every error contains an element of truth. Isolate that element and accept it. The structure which it helps to support, having lost its foundation, will be undermined and destroyed. The modernist then will be appropriate only when there is question of opposition to the certain teaching of ecclesiastical authority through a spirit of innovation. The words of Cardinal Ferrari, Archbishop of Milan, as cited in "La Revue Pratique d'Apologetique" (VI, 1906, p. 125), are characteristic: "We are deeply pained", he says, "to find that certain persons, in public controversy against modernism, in pamphlets, newspapers and other periodicals, go to the length of detecting the evil everywhere, or at any rate of imputing it to those who are very far from being infected with it". In the same year, Cardinal Maffei had to condemn "La Penta azuera", an anti-modernist organ, on account of its exaggeration in this respect. On the other hand, it is regrettable that certain avowed leaders of modernism, carried away perhaps by the desire to remain within the Church at all costs,—another characteristic of modernism,—have taken refuge in equivocation, reticence, or quibbles. Such a line of action merits no sympathy with its authors, for to talk not altogether justly, the distrust of sincere Catholics.

PROOFS OF THE FOREGOING VIEWS.—But does the principle and the quasi-essential error of modernism lie in its corruption of dogma? Let us consult the Encyclical "Pascendi". The official Latin text calls the modernist dogmatic system a leading chapter in their doctrine. The French translation, which is also authentic, speaks thus: "Dogma, of origin and nature, such is the ground principle of modernism. The fundamental principle of modernism is, according to M. Loisy, "the possibility, the necessity and the legitimacy of evolution in understanding the dogmas of the Church, including that of papal infallibility and authority, as well as in the manner of exercising this authority" (op. cit., p. 124). The character and leaning of our epoch confirm our diagnosis. It likes to substitute leading and fundamental questions in the place of side issues. The problem of natural knowledge is the burning question in present-day metaphysics. It is not surprising therefore that the modernist knowledge the object of discussion in religious polemics. Finally, Pius X has said that modernism embraces all the heresies. (The same opinion is expressed in another way in the encyclical "Edite" of 16 May, 1910.) And what error, we ask, more fully justifies the pope's statement than that which alters dogma in its root and es-
sence? It is furthermore clear—to use a direct argument—that modernism fails in its attempt at religious reform, if it makes no change in the Catholic notion of dogma. Moreover, does not its own conception of dogma explain both a large number of its propositions and its leaning towards independence, evolution, and conciliation?

MODERNIST AIDS EXPLAINED BY ITS ESSENTIAL ERROR.—The definition of an unchangeable dogma imposes itself on every Catholic, learned or otherwise, and it necessarily supposes a Church legislating for all the faithful, passing judgment on State action—from its own point of view of course—and that even seeks alliance with the civil power to carry on the work of the Apostolate. On the other hand, once dogma is held to be a mere symbol of the unknowable, a science which merely deals with the facts of nature or history could neither oppose it nor even enter into controversy with it. If it is true only in so far as it excites and nourishes religious sentiment, the private individual is at full liberty to throw it aside when its influence on him has ceased; nay, even the Church herself, whose existence depends on a dogma not different from the others in nature and origin, has no right to legislate for a self-sufficing State. And thus independence is fully realized. There is no need to prove that the modernist spares no effort to exploit the even in popular mony with its concept of ever-changing dogma and is unintelligible without it; the matter is self-evident. Finally, as regards the conciliation of the different religions, we must necessarily distinguish between what is essential to faith regarded as a sentiment, and beliefs which are accessory, mutable, and practically negligible. If the modernist attempts to adapt the Christian faith to the spirit of the age, he is a scholar, a philosopher, a theologian, a missionary, a publisher. He is a man of world, a man of business; he is a critic. When he is a believer, that is to say, a symbolical expression of faith, then docility in following generous impulses may be religious, and the atheist's religion would not seem to differ essentially from yours.

MODERNIST PROPOSITIONS EXPLAINED BY ITS ESSENTIAL ERROR.—We make a selection of the following propositions as the most flagrant for discussion: (a) The Christ of faith is not the Christ of history. Faith portrays Christ according to the religious needs of the faithful; history represents Him as He really was, that is, in so far as His appearance on earth was a concrete phenomenon. In this way it is easy to understand how a believer may, without contradicting his faith, believe in the resurrection and at the same time deny them in the quality of historian. In the “Hibbert Journal” for Jan, 1909, the Rev. Mr. Robert wished to call the Christ of history “Jesus” and reserve “Christ” for the same person as idealized by faith; (b) Christ's work in founding the Church and instituting the sacraments was mediata, not immediate. The main point is to find supports for the faith. Now, as religious experience succeeds so well in creating useful dogmas, why may it not do likewise in the matter of institutions suited to the age? (c) The sacraments act as eloquent formulae which touch the soul and carry it away. Precisely; for if dogmas exist only in so far as they preserve religion and order, and order as the substance of the sacraments? (d) The Sacred Books are in every religion a collection of religious experiences of an extraordinary nature. For if there is no external revelation, the only substitute possible is the subjective religious experience of men of particular gifts, experiences such as are worthy of being preserved for the community. THE MODERNIST MOVEMENT.—The late M. Poinc dated the modernist movement from the French Revolution. And rightly so, for it was then that many of those modern liberties which the Church has reproved as unrestrained and ungoverned, first found sanction. Several of the propositions collected in the Syllabus of Pius IX, although enunciated from a rationalist point of view, are characteristic of modernism; for example, are the fourth proposition, which derives all religious truth from the natural force of reason; the fifth, which affirms that revelation, if it joins in the onward march of reason, is capable of unlimited progress; the seventh, which treats the prophecies and miracles of Holy Scripture as poetical imaginations; propositions six to eighteen enunciate the equal value of all religions from the point of view of salvation; proposition fifty-five on the separation of Church and State; propositions seventy-five and seventy-six, which oppose the temporal power of the pope. The modernist tendency is still more apparent in the last proposition, which was condemned on 18 March, 1861: “The Roman Pontiff can and ought to conform with the modernist prophecies and to curb temptation in the name of the true and ancient faith.”

TAKING only the great lines of the modernist movement within the Church itself, we may say that under Pius IX its tendency was politico-liberal, under Leo XIII and Pius X social; with the latter pontiff still reigning, its tendency has become avowedly theological. It is in France and Italy above all that modernism is properly so-called, that is, the form which attacks the very concept of religion and dogma, has spread its ravages among Catholics. Indeed, some time after the publication of the Encyclical of 8th September, 1907, the German, English, and Belgian bishops congratulated themselves that their respective countries had been spared. But what has happened since? Individual upholders of the new error are to be found everywhere, and even England as well as Germany has produced modernists of note. In Italy, on the contrary, even before the Encyclical appeared, the bishops have raised the cry of alarm in their pastoral letters of 1906 and 1907. Newspapers and reviews, open and secret, open and secret are publishing the Divina Quaestio and the gravity of the danger which the Sovereign Pontiff sought to avert. After Italy it is France that has furnished the largest number of adherents to this religious reform or ultra-progressive party. In spite of the notoriety of certain individuals, comparatively few laymen have joined the movement; so far it has found adherents mainly among theologians, philosophers, and modernist writers. France possesses a modernist publishing house (La librairie Nourry). A modernist review founded by the late Father Tyrrell, "Nova et VETERA", is published at Rome. "La Revue Moderne Internationale" was started this year (1910) at Geneva. This monthly periodical calls itself "the organ of the international modernist movement", and represents the modernist opinions, and claims to have co-workers and correspondents in France, Italy, Germany, England, Austria, Hungary, Spain, Belgium, Russia, Rumania, and America. The Encyclical "Pascendi" notes and deplores the ardour of the modernists propagandists. A strong current of modernism is running through the Russian Schismatic Church. The Anglican Church has not escaped. And indeed liberal Protestantism is nothing but a radical form of modernism that is winning the greater number of the theologians of the Reformed Church. Others who oppose the innovation find refuge in the authority of the Catholic Church. THE PHILOSOPHICAL ORIGIN AND CONSEQUENCES OF MODERNISM can only be understood from its philosophical base. It does great service to the cause of truth; but error calls for its assistance too. Many consider the philosophical groundwork of modernism to be Kantian. This is true, if by Kantian philosophy is meant every system that has a root connexion with the philosophy of the Königsberg sage. In other words, the basis of modernist philosophy is Kantian if, because Kant's way to the most illustrious moderate representative, all a negativism be called Kantian (by negativism is meant the philosophy which denies that reason, used in any rate in a speculative and theoretical way, can gain true knowledge of suprasensible things). It is not our business here to oppose the application of the intellect Kantian axioms to the philosophy of faith. If we compare the two systems, we shall find that they have
two elements in common, the negative part of the "Critique of Pure Reason" (which reduces pure or speculative knowledge to phenomenal or experiential intuition), and a certain argumentative method in distinguishing dogma from the real basis of religion. On the positive side, however, modernism differs from Kantism in some essential points. For Kant, faith is a really rational adhesion of the mind to the postulates of God, liberty, and immortality. Modernist faith, on the other hand, is a matter of sentiment, a clinging of oneself towards the Unknowable, and cannot be scientifically justified by reason. In Kant, system, dogmas and the whole positive framework of religion are necessary only for the childhood of humanity or for the common people. They are symbols that bear a certain analogy to images and comparisons. They serve to inculcate those moral precepts that for Kant constitute religion. Modernist symbols, though changeable and fleeting, correspond to a law of human nature. Generally speaking, they help to express sentiments, and the internal religious sentiment which Kant (who knew it from his reading of the pietists) calls schepparmeri. Kant, as a rationalist, rejects supernatural religion and prayer. The modernists consider natural religion a useless abstraction; for them it is prayer rather that constitutes the inner life of religion. It would be incorrect to say that modernism is an offshoot of Schleiermacher (1768-1834), who though he owed something to Kant's philosophy, nevertheless built up his own theological system. Ritschl called him the "legislator of theology" (Rechtl. und Vers., III, p. 486). Schleiermacher conceives the modernist plan of reforming the church and the world through intellect and science. Thus would he establish an enlacement of culture among the various cults, and even between religion and the Infinite. Like a modernist, he has dreams of new religious apologetics; he wants to be a Christian; he declares himself independent of all philosophy; he rejects natural religion as a pure abstraction, and derives dogma from religious experience. His principal writings on this subject are "Ueber die Religion" (1799; note the difference between the first and the later editions) and "Der Christliche Glaube" (1821-22). Ritschl, one of Kant's disciples, recognizes the New Testament as a scientific document of faith. In Christ the consciousness of an intimate union with God, and considers the institution of the Christian religion, which for him is inconceivable without faith in Christ, as a special act of God's providence. Thus has he prepared the way for a form of modernism more temperate than that of Schleiermacher. Though he predicted a conflict, he did not foresee a complete solution of religion. Schleiermacher admitted a certain fixity of dogma. For this reason it seems to us that modernists owe their radical evolutionary theory to Herbert Spencer (1820-1903). It was through the writings of A. Sabatier (1839-1901), a French Protestant of the Broad Church type, that the religious theories we have spoken of, spread among the Latin races, in France and in Italy. It is in these countries, too, that modernism has done greatest harm among the Catholics. Sabatier is a radical modernist. He has especially drawn upon Schleiermacher for the composition of his two works on religious synthesis ("Esquisse d'une philosophie de la religion d'après la psychologie et l'historic", Paris, 1848; "L'Etat d'autorité et la religion de l'esprit", Paris, 1902).

The fundamental error of the modernist philosophy is its misunderstanding of the scholastic formula which takes account of the two aspects of human knowledge. Doubtless, the human mind is a vital faculty endowed with an activity of its own, and tending towards its own object. However, as it is not in continual activity, it is not self-sufficient; it has not in itself the full principle of its operations, but is forced to utilize sensible experience in order to arrive at knowledge. This incompleteness and falling short of perfect autonomy is due to man's very nature. As a consequence, in all human knowledge and activity, account must be taken both of the intrinsic character of the external object. Urged so by the finitude that inspires him, man tends towards those objects which suit him, while at the same time objects offer themselves to him. In the supernatural life, man acquires new principles of action and, as it were, a new nature. He is now capable of acts of which God is the formal object. These acts, however, must be proposed to man, whether God designs to do so by direct revelation to man's soul or whether, in conformity with man's social nature, God makes use of intermediaries who communicate exteriorly with man. Hence the necessity of preaching, of motives of credibility, and of external teaching authority. Catholic philosophy does not deny the soul's spontaneous life, the sublimity of its supersensible and supernatural possibilities, the incompleteness of vue to inculcate its yearnings. Scholastic doctors give expression to mystical transports far superior to those of the modernists. But in their philosophy they never forget the lowliness of human nature, which is not purely spiritual. The modernist remembers only the internal element of our higher activity. To make it for his advantage he chooses a definition of the modernist calls "vital immanence". When deprived of the external support which is indispensable to them, the acts of the higher intellectual faculties can only consist in vague sentiments which are as indeterminate as are those faculties themselves. Hence it is that modernist doctrines, not only in theory but in practice, are so intangible. Furthermore, by admitting the necessity of symbols, modernism makes to extrinsic a concession which is its own refutation.

(2) The Consequences.—The fact that this radically intrinsic conception of the spiritual or religious activity of man (this perfect autonomy of the reason sui-d-eus of what is exterior) is the fundamental philosophical conception of the modernists, as the alteration of dogma is the essential characteristic of their heresy, can be shown without difficulty by deducting from it their entire system of philosophy. First of all, of their agnosticism: the vague nature which they attribute to our faculties does not permit them, without a gory, to arrive at anything. Next, of their evolutionism: there is no determined object to assure to dogmatic formula a permanent and essential meaning compatible with the life of faith and progress. Now, from the moment that these formulæ simply serve to nourish the vague sentiment which for modernism is the only common intellectual result. Next, of their evolutionism: there is no determined object to assure to dogmatic formula a permanent and essential meaning compatible with the life of faith and progress. Now, from the moment that these formulæ simply serve to nourish the vague sentiment which for modernism is the only common intellectual result. Hence, radical modernism preaches union and friendship, even with mystical atheism. Modernism is inclined to pantheism also by its doctrine of Divine Immanence, that is, of the intimate presence of God within us. Does this God declare Himself as distinct from
us? If so, one must not then oppose the position of modernism to the Catholic position and reject exterior revelation. But if God declares Himself as not distinct from us, the position of modernism becomes open. Such is the dilemma proposed in the Encyclical. Modernism is pantheistic also in its way of reasoning. Independent of and superior to religious formule, the religious sentiment on the one hand originates them and gives them their entire value, and on the other hand, it cannot neglect them, it must express itself in them and by them; they are its reality. But we have here the ontology of pantheism, which teaches that the principle does not exist outside of the expression that it gives itself. In the pantheist philosophy, Being or the Idea, God, is before the world and superior to it, He creates it, and yet He has no reality outside the world; the world is the realization of God.

The POLITICAL CAUSES OF MODERNISM.—Curiosity and pride are, according to the Encyclical “Pascendi”, two remote causes. Nothing is truer; but, apart from offering an explanation common to all heretical obstinacy, we ask ourselves here why this pride has taken the shape of modernism. We proceed to consider this question. In modernism we find, first of all, the echo of many tendencies of the mentality of the present generation. Inclined to doubt, and distrustful of what is affirmed, men’s minds tend of their own accord to minimize the value of dogmatic definitions. Men are struck by the diversity of the religions which exist on the face of the earth. The Catholic religion is no longer, in their eyes, as it was in the thirteenth century, the universal religion of humanity. They have been shown the influence of race on the diffusion of the Gospel. They have been shown the good sides of other cults and beliefs. Our contemporaries find it hard to believe that the greater part of humanity is plunged in error, especially if they are ignorant that the Catholic religion teaches that the Catholic Church is the last hope of those who err in good faith. Hence they are inclined to overlook doctrinal divergencies in order to insist on a certain fundamental conformity of tendencies and of aspirations.

Then again they are moved by sentiments of liberalism and moderation, which reduce the importance of exactness; reason, as the various authors say, is only private opinions which change with time and place, and which merit an equal respect from all. In the West, where people are of a more practical turn, a non-intellectual interest explains the success of heresies which win a certain popularity. Consider the countries in which modernism is chiefly promulgated: France has opposed, a priori, the dogmas of religious science; in Italy, ecclesiastical authority has imposed social and political directions which call for the sacrifice of humanitarian and patriotic ideas or dreams. That there are important reasons for such commands does not prevent discontent. The majority of men have not enough virtue or nobility to sacrifice for long, to higher duties, a cause which touches their interest or which engages their sympathy. Hence it is that some Catholics, who are not quite steady in their faith and religion, attempt to revolt, and count themselves fortunate in having some doctrinal pretexts to cover their secession.

The leader of the periodical “La Foi Catholique”, a review started for the purpose of combating modernism, adds this explanation: “The insufficient cultivation of Catholic philosophy and science is the second deep explanation of the origin of modernist errors. Both have too long confined themselves to answers which, though fundamentally correct, are but little suited to the mentality of our adversaries, and are formulated in a language which they do not understand and which is not to their point. Instead of utilizing the fact that particular recognition which is quite consonant with the best scholastic tradition: "In this way, we have failed to secure a real point of contact between Catholic and modern thought" (Gaudue, “La Foi Catholique”, I, pp. 62–63). Another point is that the intrinsic nature of the movement of contemporary philosophy has been too much despised or ignored in Catholic schools. Instead of utilizing it that partial recognition which is quite consonant with the best scholastic tradition: "In this way, we have failed to secure a real point of contact between Catholic and modern thought" (Gaudue, ibid.). For lack of professors who knew how to mark out the actual path of religious science, many cultured minds, especially among the young clergy, found themselves defenseless against an error which seduced them by its speciousness and by any element of truth contained in its reproaches against the Catholic schools. It is scholasticism ill-understood and calumniated that has incurred this disdain. And for the pope, this is one of the immediate causes of modernism.” Cardinal Mercier, on the occasion of his first solemn visit to the Catholic University of Louvain (8 December, 1907), addressed the following compliment to the professors of theology: “Because, with more good sense than others, you have vigorously kept to objective study, and the calm examination of facts, you have both preserved our Alma Mater from the straying of modernism and have secured for her the advantages of modern scientific methods.” (“Annuaire de l’Université Catholique de Louvain”, 1908, p. XXI, XXVI.) Saint Augustine (De Genesi contra Manichaeos, I, Bk. I, 1) has text that universal admirable, the beautiful and the benevolent had come to the assembly, and the clear vision, if you have brought to our Alma Mater from the straying of modernism and have secured for her the advantages of modern scientific methods.” (“Annuaire de l’Université Catholique de Louvain”, 1908, p. XIX, XXVI.) Saint Augustin (De Genesi contra Manichaeos, I, Bk. I, 1) has text that universal admirable, the beautiful and the benevolent had come to the assembly, and the clear vision, if you have brought to our Alma Mater from the straying of modernism and have secured for her the advantages of modern scientific methods.” (“Annuaire de l’Université Catholique de Louvain”, 1908, p. XXI, XXVI.) Saint Augustin (De Genesi contra Manichaeos, I, Bk. I, 1) has text that universal admirable, the beautiful and the benevolent had come to the assembly, and the clear vision, if you have brought to our Alma Mater from the straying of modernism and have secured for her the advantages of modern scientific methods.” (“Annuaire de l’Université Catholique de Louvain”, 1908, p. XXI, XXVI.)
propositions. (5) The injunction of the Holy Office, "Recentissimo of 28 August, 1907, which with a
topic, in the history of the denunciations of the Pope, 8 September, 1907, of which we shall speak later on. (7) Three letters of the Cardinal Secretary of State, of 2 and 10 October, and of 5 November, 1907, on the attendance of the clergy at secular universities, urging the execution of the Declaration of 18 September, 1907, on the validity of the Encyclical on this subject. The Encyclical had extended this regulation to the whole Church. (8) The condemnation by the Cardinal-Vicar of Rome of the pamphlet "Il programma dei modernisti", and a decree of 29 October, 1907, declaring the excommunication of its authors, with special reservations. (9) The decree Motu Proprio of 18 November, 1907, on the validity of the decisions of the Biblical Commission, on the decree "Lamentabili", and on the Encyclical "Pascendi". These two documents are again confirmed and upheld by ecclesiastical penalties. (10) The address at the Consistory of 16 Dec., 1907. (11) The decree of the Holy Office of 13 Feb., 1908, in condemnation of the two newspapers "Sonrisa sacra" and "L'Illustrazione Cattolica". Since then several condemnations of the books have appeared. (12) The Encyclical "Pascendi" of 26 May, 1910, renewed the previous condemnations. (13) Still stronger is the tone of the Motu Proprio "Sacrorum
Antistitum", of 1 September, 1910, declared (14) by a decree of the Consistorial Congregations of 25 September, 1910, to investigate the modernist obstinacy and specious cunning. After having quoted the practical measures prescribed in the Encyclical, the Pope urges their execution, and, at the same time, makes new directions concerning the formation of the clergy in the seminaries and religious houses. Candidates for higher orders who refuse the profession of faith as priests, canons, the benefited clergy, the bishop's staff, Slovene preachers, the officials of the Roman congregations, or tribunals, superiors and professors in religious congregations, all are obliged to swear according to a formula which reproaches the principal modernist tenets. (15) The pope's letter to Prof. Decurtins on literary modernism. (All these documents are contained in Vermeersch, op. cit. infra.)

These acts are for the most part of a disciplinary character (the Motu Proprio of September, 1910, is clearly of the same nature); the decree "Lamentabili" is entirely doctrinal; the Encyclical "Pascendi" and the Motu Proprio of 18 March, 1907, are both doctrinal and disciplinary in character. The Church does not agree as to the authority of the two principal documents; the decree "Lamentabili" and the Encyclical "Pascendi". In the present writer's opinion, since the new confirmation accorded to these decrees by the Motu Proprio, they contain in their doctrinal conclusions the infallible teaching of the Vicar of Christ. But there is not a more modern opinion of Choupin in "Etudes" (Paris, CXIV, p. 119-120.)

The decree "Lamentabili" has been called the new Syllabus, because it contains the proscription by the Holy Office of 65 propositions, which may be grouped under the following heads: Prop. 1-8, errors concerning the teaching of the Church; Prop. 9-19, errors concerning the inspiration, truth, and study of Holy Writ, especially the Gospels; Prop. 20-36, errors concerning revelation and dogma; Prop. 27-28, Christological errors; Prop. 39-51, errors relative to the sacraments; Prop. 52-57, errors concerning the institution and organization of the Church; Prop. 58-65, errors on doctrinal evolution. The errors are neither less in number nor more grave, but the gravity of the danger, pointed out the necessity of firm and decisive action, and approved of the title "Modernism" for the new errors. It gives us first a very methodical exposition of modernism; next it follows its general condemnation with a word as to corollaries that may be drawn from the heresy. The Church then goes on to point out the effects of modernism, and finally seeks the necessary remedies. Their application he endeavours to put into practice by a series of energetic measures. An urgent appeal to the bishops fittingly closes this striking document.

MODIGLIANA
MODIGLIANA
MODIGLIANA
MODRA

Cappelletti, La Chiesa d'Italia, XVII (Venice, 1837).

U. Benigni.

Modra, a titular see of Bithynia Secunda, suffragan of Nicea. The city of Modra figures only in Strabo (XII, 543), who places it in Phrygia Epicetica, at the sources of the Gallus. It was probably situated at or near Aine Gueul, in the vilayet of Brousse. The region is called Medrena by Theophanes the Chronographer and Constantine Porphyrogennitus (De mat. vi). Several "Notitia episcopatum" mention the See of Medrena, or Mela. The name of this second place is also written Melina, and was called for a time Justinianopolis Nova in honour of Justinian. As from the twelfth century we find only Melagna, Melangeis, or Melanias, it is evident that the earlier Mela is the Malagina often mentioned by Byzantine historians as the first large station of the imperial armies in Asia Minor on the road from Constantinople to Doryleum, and an important strategic point. This city must have been located between Lefke and Vezirkhan, two railway stations on the Constantinople-Bagdad line. The bishops recorded are: Macedonius of Justinianopolis Nova, present at the Council of Chalcis (552); Theodore of Justinianopolis Nova or Mela, present at Constantinople (860); Necarius, or Nicetas of Mela, present at Nicea (787); Constantius of Mela, present at Constantinople (869); Paul of Mela, present at Constantinople (879); John of Malagina (1252); Constantine of Melangeis (thirteenth century); N. of Melanizia (1401).

Mohammedan Confraternities.—The countries where Mohammedanism prevails are full of religious associations, more or less wrapped in seccrety, which are also political, and which may prove troublesome at some future time. The oldest of them, the Kadiyra, dates from the twelfth century of our era, having been called into existence by the necessity of united counsels in order to make head against the Crusades. To the operations of its founder the Persian Sidi-abd-el-Kader-el-Djiliani, who died at Bagdad in 1166. His disciples speak of him as "The Sultan of the Saints". One of the more recent association, and a very aggressive one, is that of the Senoussiya, founded by an Algerian, Sheikh Senoussi (d. 1859). In contrast to the exclusive spirit of the other, this one has admitted hares to all of them, allowing them to keep their own names, doctrines, usages, and privileges. The prevailing principle of this combination is hatred of Christians; it isolates them in anticipation of the uprising which, on the appointed day of the Lord, will drive them out of "the Land of Islam" (dar el Islam, as opposed to dar el harb, "Land of the Infidels"), or, literally, "Land of the Holy War"). Its motto is: "Turks and Christians, I will break them all with one blow!" Those affiliated to the confraternities are called khousans (brethren) in North Africa; derevishes (poor men) in Turkey and Central Asia; fakirs (beggars) in India; moudirs (disciples) in Egypt, Syria and Spain. Since the conquest of Algeria by the French (1830) the reaction has resulted in an immense development of confraternities in all Mohammedan countries. Except among the wealthy and sceptical of the great cities, very few Musulmans escape the infection of this movement, and M. Pommerol numbers the total membership at 170,000,000. Leaving aside the excellent administrative and financial organization of the confraternities, we will here discuss only their religious side.

As is well known, at the call of the muezzins every Mohammedan is bound to recite daily certain prayers at stated hours. The khousans are also bound to follow these prayers with others, peculiar to their association. Among the chief of these is a kind of litany, called dikh (repeated three times), for which a chaplet is used. Fundamentally, it is the same for all the orders, but with slight variations, by which the initiated are enabled to recognize each other easily. In general, it contains the Mohammedan symbol or Credo: "There is no God but the true God" (La shaka d'll Allah, literally "No god except God"), which is repeated, say it is a hundred times. Other phrases or invocations are added, such as "God sees me", "God pardon", part of a verse of the Koran, or names of the Divine attributes, as "O Living One", a hundred times, or simply the "Allah is the Movable House" (Him). When the recitation in chorus becomes accelerated, the syllables of La shaka d'll Allah are gradually reduced to la hou, la hou, la hou, or even hou, ha, hi, or hou-hou. The phrase La shaka, etc., must be repeated by the Kadiyra one hundred and sixty-five times after each of the five daily prayers; by the Kzarazya, five hundred times; for the Assous, the daily total of repetitions is thirteen hundred and six hundred; and various confraternities have mystical tendencies, and make it their object to attain, on certain days and during certain moments, a profound union with God. This union (ittid), which is described by the Persian and Hindu sufis of the ninth century, resembles the Nirvana of the Buddhists. It is the annihilation of the personality by the identification (da'w). What is more, Sidi-abd-el-Kader-el-Djiliani proclaimed that "happiness is in unconsciousness of existence". Sheikh Senoussi defined ecstasy as "the annihilation of a man's individuality in the Divine Essence", and Abd-el-Kerim summed it up in two words, "unconsciousness and insensibility". Such teaching cannot shock Musulmans, for they venerate madmen as saints and believe that God dwells in empty brains, which explains why they allow demented persons a liberty which, to us, seems excessive. Sometimes the initiated person endeavours to obtain union with the founder of his order, whom he regards as a superior embodiment of the Godhead and His all-powerful intermediary. As to the method of arriving at this pseudo-ecstatic union: Sufism, which preceded the confraternities, and from which many of them are derived, was content to teach the moral method of renunciation-detachment carried as far as possible. This was the absence of primitive Sufism, which was simply a "way" (tariqah), a method of salvation, not a dogmatic system or an organization. The confraternities added special exercises, and in this lies the great difference from Christian mysticism. The latter confesses the impossibility of attaining a true mystical state by one's own efforts; God must produce it, and then it comes unexpectedly, whether during prayer or in the midst of some indifferent occupation. The Mussulman thinks otherwise: there is a physical process which consists in the manner of reciting the dikh in common and which takes effect especially on Sunday, the weekly holy day of Islam. There are various prescriptions as to how the breath should be blown, and its rapidity, and its reduplication. Among the most important details is the exhausting bodily exercise which is enjoined to produce a kind of vertigo or hysterical intoxication, followed either by convulsions or by extreme weakness. Thus, among the Kadiyra, says Le Chatelier, "the khousans give themselves up to a rapid and gradually accelerated swaying of the
upper part of the body which superinduces congestion of the cerebro-spinal system. Under the double influence of this purely physical cause and the concentration of all the intellectual faculties upon the same idea, that of the majesty of God, the phenomena of religious hysteria are produced in many of the adepts. . . . They are much in evidence in the convents of the order” (p. 29). The founder had prescribed that the faithful should continue their repetition to "ka, turning the head to the right, hou, turning it to the left, hi, bowing it, and prolonging each sound as much as the breath permits. It is easy to imagine the effect that may be produced on the most soundly constituted temperament by the repetition of these syllables accompanied with violent movements of the head” (p. 33). At the present time the Zaheiriya go through the same movements with the formula, La ilaha ill Allah, spoken in one breath, and sometimes as often as twenty-one times without a respiration. The Sarehouriyya, founded in the thirteenth century, repeat an indefinite number of times without interruption the phrase La ilaha, etc., while raising the head from the nave to the right shoulder, and thus they fall into a dumb state of unconsciousness. The Zaheiriya add the left shoulder. The Nakechabendiyia sometimes help the process with opium and similar drugs. Among the Beoumiyya the body is bent, at each invocation, down to the waist, while the arms are extended; they are uncrossed while the body is raised again, and then the hands are clapped together at the level of the face.

Some confraternities deserve special mention for the intense nervous paroxysms attained by their members. First, among the Khelouatiyya, founded in the fourteenth century, the members from time to time change their "place" (whence the name from kheloua, retreat); thus separated from the world, the disciple can communicate with others only by signs or in writing; he fasts from sunrise to sunset, and takes only such nourishment as is strictly necessary. By the use of coffee, he reduces his sleep to two or three hours. He recites certain sacred words, such as Haou (Him), Vaygoums (Immutable), Haqq (Truth), which have to be repeated from 10,000 to 30,000 times a day, according to the directions of the initiator. “The upper eyelid is briskly pressed down on the lower, to produce a distillation in the organ of sight which acts on the optic nerve and, through it, on the cerebral system. . . .” The word Vaygoums is repeated, and then the disciple kisses and kisses the head, with closed eyes. The rapidity of repetition cannot exceed once in every second, and the duration of such a prayer is from five to six hours. Supposing that the candidate is given three names to repeat in this way, it must take him eighteen hours a day. . . . The system of the order compare the Khleutins’ initiation to a deadly poison when taken in too large doses at first, and which can be assimilated by progressive use. . . . All the members who make frequent retreats, even if the duration is not prolonged, are seriously affected in mind. Emaciated, haggard-eyed, they return to ordinary life still retaining the traces of their harash trials. . . . An extreme exaltation, then, is the characteristic of this order, and it, more than any other, must be regarded as the focus of an intense fanaticism” (ibid., 62 sqq.).

Another very remarkable confraternity is that of the Aisseens, founded in the fifteenth century by Sidi-Mohammed-ben-Abessa. The dikr takes the shape of raucous cries, “to the cadence of a muffled music in the wind, the creaking of the knees, the rubbing of the hips, increasing in rapidity, accompany each of these cries, or circular movements of the head, which are also calculated to shake the nervous system. The nervous crises thus superinduced are soon expressed in cerebral intoxication and anæsthesia variously localised in different subjects. As these phenomena are successively recognized by the practised eye of the presiding sheikh, the khouans, at a given signal, pierce their hands, arms, and cheeks with darts. Others slash their throats or bellies with sabres. Some crunch pieces of glass between their teeth, eat venomous creatures, or chew cactus leaves bristling with thorns. All, one after another, fall exhausted, into a torpor which a touch from the mogaddem (presiding initiator) transforms, in certain cases, into hypnosis” (ibid., 101).

In another confraternity, that of the Refaya, founded in the twelfth century by Refal, a nephew of Sidi-abd-el-Kader, most of the devotees faint when the hysterical intoxication supervenes; others “eat serpents and live coals, or roll themselves about among burning brasiers. They accustom themselves moreover, to casting themselves down on the points of darts, to piercing their arms and cheeks, and to being trodden under foot by their sheikh” (ibid., 204, 206). The howling and the whirling dervishes, who give public exhibitions at Constantinople and at Cairo, belong to the Refaya. Their ceremony begins with shouting accompanied by oscillations and leaps keeping time to the beating of drums. “Forming a chain”, writes Théophile Gautier, “they produce, from deep down in their chests, a hoarse and prolonged howling: Allah hou! which seems to have nothing of the human voice in it. The whole band, acting under a single impulse, springs forward simultaneously, uttering a hoarse, muffled sound, like the growling of an angry menagerie, when the lions, tigers, panthers, and hyenas think that their feeding-time is being delayed. Then, by degrees, the inspiration comes, their eyes shine like those of wild beasts in the depths of a cave; an epileptic froth comes at the corners of their mouths; their faces become distorted and livid, shining through the sweat; the whole line lies down on the invisible breath, like blades of wheat under a storm, and still, with every movement, that terrible Allah-hou is repeated with increasing energy. How can such bellows be kept up for more than an hour without bursting the osseous frame of the breast and spilling the blood out of the broken vessels?” (Constantinople, xi). The whirling dervishes, founded in the thirteenth century, are Maoulaniya, also called Mevlevis. “They walkt with arms extended, head inclined on the shoulder, eyes half-closed, mouth half-opened, like confident swimmers who are letting themselves be borne away on the stream of ecstasy. . . . Sometimes the head is thrown back, showing the whites of their eyes and lips flecked with a light foam” (Constantinople, xi). At last they fall on their knees, exhausted, face to the earth, until the chief touches them, sometimes having to rub their arms and legs. No beholder, without previous information, would suspect the religious significance of these physical exercises of the
Mohammed and Mohammedanism. — I. The Founder. — Mohammed, "the Praised One", the prophet of Islam and the founder of Mohammedanism, was born at Mecca (20 August?) A. D. 570. Arabia was then torn by warring factions. The tribe of Fihr, or Quraish, to which Mohammed belonged, had established itself in the south of Hijaz (Hedjaz), near Mecca, which was, even then, the principal religious and commercial centre of Arabia. The power of the tribe was continually increasing; they had become the masters and the acknowledged guardians of the sacred Kaaba, within the town of Mecca—then visited in annual pilgrimage by the heathen and by the heathenish and pagan nations and tribulations—and had thereby gained such preeminence that it was comparatively easy for Mohammed to inaugurate his religious reform and his political campaign, which ended with the conquest of all Arabia and the fusion of the numerous Arab tribes into one nation, with one religion, one code, and one state. (ARABIA, CHRONOLOGICAL TABLE.) Mohammed’s father was Abdallah, of the family of Hashim, who died soon after his son’s birth. At the age of six the boy lost his mother and was thereafter taken care of by his uncle Abu-Talib. He spent his early life as a shepherd and an attendant of caravans, and at the age of twenty-five married a rich widow, Khadeejah, fifteen years his senior. She bore him six children, all of whom died very young except Fatima, his beloved daughter.

On his commercial journeys to Syria and Palestine he became acquainted with Jews and Christians, and acquired an imperfect knowledge of their religion and traditions. He was a man of retiring disposition, addicted to study and fasting. He was subject to epileptic fits. In his fortieth year (A. D. 610), he claimed to have received a call from the Angel Gabriel, and thus began his active career as the prophet of Allah and the apostle of Arabia. His first converts were about forty in all, including his wife, his daughter, his father-in-law Abu Bakr, his adopted son Ali Omar, and his slave Zayd. By the power and guidance of God, Mohammed conquered the heathenism, Mohammed provoked persecution which drove him from Mecca to Medina in 622, the year of the Hijra (Flight) and the beginning of the Mohammedan Era. At Medina he was recognized as the prophet of God, and his followers increased. He took the field against his enemies, conquered several Arab tribes, and it would seem that it would end in complete triumph in 630, demolished the idols of the Kaaba, became master of Arabia, and finally united all the tribes under one emblem and one religion. In 632 he made his last pilgrimage to Mecca at the head of forty thousand followers, and soon after his return died of a violent fever in the sixty-third year of his age, the eleventh of the Hijra, and the year 633 of the Christian era.

The sources of Mohammed’s biography are numerous, but on the whole untrustworthy, being crowded with fictitious details, legends, and stories. None of his biographies was compiled during his lifetime, and the earliest were written a century and a half after his death. The Koran is perhaps the only reliable source for the leading events in his career. His earliest and chief biographers are Ibn Ishaq (a. h. 151—A. D. 768), Wakidi (207—822), Ibn Hisham (213—828), Ibn Sa’d (230—845), Tirmidhi (279—892), Tabari (310—929), the “Lives of the Companions of Mohammed”, the numerous Islamic commentators, especially Tabari, quoted above; Zamakhshari (633—1144), the “Muqaddam”, or collection of traditions of Ahmad ibn Hanbal (241—855), the collections of Bukhari (256—870), the “Isbah”, or “Dictionary of Persons who knew Mohammed”, by Ibn Hajar, etc. All these collections and biographies are based on the so-called Hadiths, or “traditions”, the historical value of which is widely disputed. These traditions, in fact, represent a gradual, and more or less artificial, legendary development, rather than supplementary historical information. According to them, Mohammed was simple in his habits, but most careful of his personal appearance. He loved perfumes and hated strong drink. Of a highly nervous temperament, he shrank from bodily pain. Though gifted with great powers of imagination, he was taciturn. He was affectionate and magnanimous, pious and austere in the practice of his religion, brave, zealous, and above reproach in his personal and family conduct. Palgrave, however, wisely remarks that the ideals of Arab virtue were first conceived and then attributed to the Prophet. Not only was Mohammed not allowed for exaggeration, Mohammed is shown by his life and deeds to have been a man of dauntless courage, great generalship, strong patriotism, merciful by nature, and quick to forgive. And yet he was ruthless in his dealings with the Jews, when once he had ceased to hope for their submission. He approved of assassinations, and, however barbarous or treacherous the means, the end justified it in his eyes; and in more than one case he not only approved, but also instigated the crime.

Concerning his moral character and sincerity contradictory opinions have been expressed by scholars in the last three centuries. Many of these opinions are biased either by an extreme hatred of Islam and its founder or by an exaggerated admiration, coupled with a hatred of Christianity. Luther looked upon him as “a devil and first-born child of Satan”. Maracci held that Mohammed and Mohammedanism were not very dissimilar to Luther and Protestantism. Spanheim and D’Herbelot characterize him as a “maddened imbecile”. Far more justice and understanding, indeed, seems to be done him by Prideaux stamps him as a wilful deceiver. Such indiscriminate abuse is unsupported by facts. Modern scholars, such as Sprenger, Noldeke, Weil, Muir, Kelle, Grimme, Margoliouth, give us a more correct and unbiased estimate of Mohammed’s life and character, and substantially agree as to his motives, prophetic mission, personal qualifications, and sincerity. The various estimates of several recent critics have been ably collected and summarized by Zwemer, in his “Islam, A Challenge to Faith!” (New York, 1907). According to Sir William Muir, Marcus Dods, and some others, Mohammed was at first sincere, but later, carried away by success, he practised deception wherever it served his purposes. It was not until about the first period of Mohammed’s life in Khadija, his first wife, after whose death he became a prey to his evil passions. Sprenger attributes the alleged revelations to epileptic fits, or to “a paroxysm of cataleptic insanity”. Zwemer himself goes on to criticize the life of Mohammed by the standards, first, of the Old and New Testament, both of which he regarded as Divine revelation; second, by the pagan morality of his Arabian compatriots; lastly, by the new law of which he pretended to be the “divinely appointed medium and custodian”. According to this author, the prophet was false even to the ethical traditions of the idolatrous brigands among whom he lived, and grossly violated the easy sexual morality of
his own system. After this, it is hardly necessary to say that, in Zwemer's opinion, Mohammed fell very far short of the most elementary requirements of Scriptural morality. Quoting Johnstone, Zwemer concludes by remarking that the judgments of these modern scholars, however harsh, rests on evidence which "comes all from the lips and the pens of his own devoted adherents. . . . And the followers of the prophet can scarcely complain if, even on such evidence, the verdict of history goes against him".

II. THE SYSTEM.—A. Geographical Extent, Divisions, and Distribution of Mohammedianism. After Mohammed's death Mohammedianism aspired to become a world power and a universal religion. The weakness of the Byzantine Empire, the unfortunate rivalry between the Greek and Latin Churches, the schisms of Nestorius and Eutyches, the failing power of the Sassanian dynasty of Persia, the lax moral code of the new religion, the power of the sword and of fanaticism, the hope of plunder and the love of conquest—all these factors combined with the genius of the caliphs, the successors of Mohammed, to effect the conquest, in considerably less than a century, of Palestine, Syria, Mesopotamia, Egypt, North Africa, and the South of Spain. The Moslems crossed the Pyrenees and threatened to stable their horses in St. Peter's at Rome, but were at last defeated by Charles Martel at Tours, in 732, just one hundred years from the death of Mohammed. This defeat arrested their western conquests and saved Europe. In the eighth and ninth centuries they conquered Persia, Afghanistan, and a large part of India, and in the twelfth century they had already become the absolute masters of all Western Asia, Spain and North Africa, Sicily, etc. They were finally conquered by the Mongols and Turks, in the thirteenth century, but the new conquerors adopted Mohammed's religion and, in the fifteenth century, overthrew the tottering Byzantine Empire (1453). From that stronghold (Constantinople) they even threatened the German Empire, but were successfully defeated at the gates of Vienna, and driven back across the Danube, in 1683.

Mohammedianism now comprises various theological schools and political factions. The Orthodox (Sunni) uphold the legitimacy of the succession of the first three caliphs, Abu Bakr, Umar, and Ali, while the Schismatics (Shia) champion the Divine right of Ali as against the succession of these caliphs whom they call "usurers", and whose names, tombs, and memorials they insult and detest. The Shia number at present about twelve million adherents, or about one-twentieth of the whole Mohammedan world, and are subdivided into three divisions, called Ihwalis, Ismaelites, and Yazidites. The Sunnis are subdivided into four principal theological schools, or sects, viz., the Hanifites, found mostly in Turkey, Central Asia, and Northern India; the Shafiites in Southern India and Egypt; the Malikites, in Morocco, Barbary, and parts of Arabia; and the Hanbalites in Central and Eastern Arabia and in some parts of India. The Shiites are at present the most numerous of the two sects, as the name implies, but less important. Of the proverbial seventy-three sects of Islam, thirty-two are assigned to the Shia. The principal differences between the two are: (1) as to the legitimate successors of Mohammed; (2) the Shia observe the ceremonies of the month of fasting, Mahurram, in commemoration of Ali, Hasan, Husain, and Bibi Fatimah, whilst the Sunnites only regard the tenth day of that month as sacred, and as being the day on which God created Adam and Eve; (3) the Shia permit temporary marriages, contracted for a certain sum of money, whilst the Sunnites maintain that Mohammed forbade them; (4) the Shiites include the Fire-Worshippers among the infidels; (5) the Shiites do not recognize, as the Sunnites do, knowledge on Jews, Christians, and Moelms as such; (5) several minor differences in the ceremonies of prayer and ablution; (6) the Shia admit a principle of religious compromise in order to escape persecution and death, whilst the Sunni regard this as apostasy.

There are also minor sects, the principal of which are the Alites, or Fatimites, the Asarautes, Babakites, Babys, Idrisites, Ismaelians and Assassins, Jabrians, Kaisanates, Karthamians, Kharijites, followers of the Mahdi, Mut'azilites, Qadrians, Safrians, Sufians, Sufis, Wahabists, and Zaideites. The distinctive features of these various sects are political as well as religious; only three or four of them now possess any influence. In spite of these divisions, however, the principal articles of faith and morality, and the ritual, are substantially uniform.

According to the latest and most reliable accounts (1907), the number of Mohammedans in the world is about 233 millions, although some estimate the number as high as 300 millions, others, again, as low as 175 millions. Nearly 60 millions are in Africa, 170 millions in Asia, and about 5 millions in Europe. Their total number amounts to about one-fourth of the population of Asia, and one-seventh of that of the whole world. Their geographical distribution is as follows:

Asia.—India, 62 millions; other British possessions (such as Aden, Bahrein, Ceylon, and Cyprus), about one million and a half; Russia (Asiatic and European), the Caucasus, Russian Turkestan, and the Amur region, about 15 millions; Philippine Islands, 350,000; Dutch East Indies (including Java, Sumatra, Borneo, Celebes, etc.) about 30 millions; French possessions in Asia (Pondicherry, Annam, Cambodia, Cochinchina, Tonking, Laos), about one million and a half; Bokhara, 1,200,000; Khiva, 800,000; Persia, 8,800,000; Afghanistan, 4,000,000; China and Chinese Turkestan, 30,000,000; Japan and Formosa, 30,000; Korea, 10,000; Siam, 1,000,000; Asia Minor, 7,179,000; Armenia and Kurdistan, 1,795,000; Mesopotamia, 1,200,000; Syria, 1,100,000; Arabia, 4,500,000.

Total, 170,000,000

Africa.—Egypt, 9,000,000; Tripoli, 1,250,000; Tunisia, 8,700,000; Algeria, 4,100,000; Morocco, 5,000,000; Eritrea, 150,000; Anglo-Egyptian Sudan, 1,000,000; Senegambia-Niger, 18,000,000; Abyssinia, 350,000; Kamerun, 2,000,000; Nigeria, 6,000,000;
Dahomey, 350,000; Ivory Coast, 800,000; Liberia, 600,000; Sierra Leone, 333,000; French Guinea, 1,500,000; French, British, and Italian Somaliland, British East African Protectorate, Uganda, Togoland, Gambia and Senegal, about 2,000,000; Zanzibar, German East Africa, Portuguese East Africa, Rhodesia, Congo Free State, and French Congo, about 4,000,000; South Africa and adjacent islands, about 235,000. Approximate total, 60,000,000.

Europe.—Turkey in Europe, 2,100,000; Greece, Servia, Rumania, and Bulgaria, about 1,389,000.

Total, about 3,500,000.

North America and Australia, about 70,000.

About 7,000,000 (i.e., four-fifths) of the Persian Mohammedans and about 5,000,000 of the Indian Mohammedans are Shi'ahs; the rest of the Mohammedan world — about 221,000,000 — are almost all Sunnites.

B. Tenets.—The principal tenets of Mohammedanism are laid down in the Koran (q. v.). As aids in interpreting the religious system of the Koran we have: first, the so-called "Traditions", which are supposed to contain supplementary teachings and doctrine of Mohammed, a very considerable part of which, however, is decidedly spurious; second, the consensus of the doctors of Islam represented by the madrasas, the familiars of the Arabic, Islamic sects, the Koranic commentators and the masters of Mohammedan jurisprudence; third, the analogy, or deduction, from recognized principles admitted in the Koran and in the Traditions. Mohammed's religion, known among its adherents as Islam, contains practically nothing original; it is a confused combination of native Arabian heathenism, Judaism, Christianity, Sabism (Mandaism), Mani- nism, and Zoroastrianism.

The system may be divided into two parts: dogma, or theory; and morals, or practice. The whole fabric is built on five fundamental points, one belonging to faith, or theology, and the other four to morals, or practice. All Mohammedan dogma is supposed to be expressed in the one formula: "There is no God but the true God; and Mohammed is his prophet." But this one confession implies for Mohammedans six distinct articles: (a) belief in the unity of God; (b) in his angels; (c) in his Scripture; (d) in his prophet; (e) in the Day of Judgment; and (f) in God's absolute and irrevocable decree and predetermination both of good and of evil. The four points relating to morals, or practice, are: (a) prayer, ablutions, and purifications; (b) alms; (c) fasting; and (d) pilgrimage to Mecca. (1) Dogma.—The doctrines of Islam concerning God—his unity and Divine attributes—are essentially those of the Bible; but to the doctrines of the Trinity and of the Divine Sonship of Christ Mohammed had the strongest antipathy. As Noldeke remarks, Mohammed's acquaintance with those two dogmas was superficial; even the clauses of the Creed that referred to them were not properly known to him. He felt it his duty to bring them into harmony with the simple Semitic Monotheism; probably, too, it was this consideration alone that hindered him from embracing Christianity (Sketches from Eastern History, 62). The number of prophets sent by God is said to have been about 124,000, and of apostles, 315. Of the former, 22 are mentioned by name in the Koran—such as Adam, Noe, Abraham, Moses, Jesus. According to the Sunni, the Prophets and Apostles were sinless and superior to the angels, and they had the power of performing miracles. Mohammedan angelology and demonology are almost wholly based on later Jewish and early Christian traditions. The angels are divided into four classes. They are free from food or drink; there is no distinction of sex among them. They are, as a rule, invisible, save to animals, although, at times, they appear in human form. The principal angels are: Gabriel, the guardian and communicator of God's revelation to man; Michael, the guardian of men; Azrael, the angel of death, whose duty is to receive men's souls when they die; and Jibril, the angel of the East. Of the seraphim to these there are the Seraphim, who surround the throne of God, constantly chanting His praises; the Archangels, who record the actions of men; the Observers, who spy on every word and deed of mankind; the Travellers, whose duty it is to traverse the whole earth in order to know whether, and when, men utter the name of God; the Angels of the Seven Planets; the Angels who have charge of hell; and a countless multitude of heavenly beings who fill all space. The chief devil is Iblis, who, like his numerous companions, was once the nearest to God, but was cast out for refusing to pay homage to Adam at the command of God. These devils are harmful both to the souls and to the bodies of men, although their evil influence is constantly checked by Divine interference. Besides angels and devils, there are also jinns, or genii, creatures of fire, able to eat, drink, propagate, and die; some good, others bad, but all capable of future salvation and damnation.

God rewards good and punishes evil deeds. He is merciful and pitiful and is propitiated by repentance. The punishment of the impenitent wicked will be fearful, and the reward of the faithful great. All men will have to rise from the dead and submit to the universal judgment. The Day of Resurrection and of Judgment will be preceded and accompanied by seventeen fearful, or greater, signs in heaven and on earth, and eight lesser ones, some of which are identical with those mentioned in the New Testament. The Resurrection will be general and extend to all creatures—angels, jinns, men, and brutes. The torments of hell and the pleasures of Paradise, but especially the latter, are proverbially great and sensuous. Hell is divided into seven regions: Jahannam, reserved for faithless Mohammedans; Laza, for the Jews; Al-Hutama, for the Christians; Al-Saair, for the Sabians; Al-Saqar, for the Magians; Al-Jahm, for idolaters; Al-Hawiyat, for hypocrites. As to the torments of hell, it is believed that the damned will dwell amid pestilential winds and in scalding water, and that in the Resurrection the scorching heat of boiling water will be forced down their throats. They will be dragged by the scalp, flung into the fire, wrapped in garments of flame, and beaten with iron maces. When their skins are well burned, other skins will be given them for their greater torture. While the damnation of all infidels will be hopeless and eternal, the Moslems, who, through holding the true religion, have been guilty of heinous sins, will be delivered from hell after expiating their crimes.

The joys and glories of Paradise are as fantastic and sensual as the lascivious Arabian mind could possibly imagine. "As plenty of water is one of the greatest of the desires of the Arabian mind, so water is one of the most important elements of Paradise." The Koran often speaks of the rivers of Paradise as a principal ornament thereof; some of these streams flow with water, some with milk, some with wine and others with honey, besides many other lesser springs and fountains, whose pebbles are rubies and emeralds, while their earth consists of camphor, their beds of musk, and their sides of saffron. But all these glories will be eclipsed by the resplendent and ravishing girls, or hours, of Paradise, the enjoyment of whose company will be the principal felicity of the faithful. These maidens are created not of clay, as in the case of mortal women, but of pure musk, and free from all natural impurities, and with fair complexions, and free from any blemish, and modest and secluded from public view in pavilions of hollow pearls. The pleasures of Paradise will
be so overwhelming that God will give to everyone the potentialities of a hundred individuals. To each individual a large mansion will be assigned, and the very meanest will have at his disposal at least 80,000 servants and seven thousand of the girls of Paradise. While eating, they will be waited on by 800 attendants, the food being served in dishes of gold, whereof 300 shall be set before him at once, containing each a different kind of food, and an inexhaustible supply of wine and liquors. The magnificence of the garments and gems is conformable to the delicacy of their diet. For the bridegroom shall be clothed in the richest silks and brocades, and adorned with bracelets of gold and silver, and crowns set with pearls, and will make use of silken carpets, couches, pillows, etc., and in order that they may enjoy all these pleasures, God will grant them perpetual youth, beauty, and vigour. Music and singing will also be ravishing and everlasting” (Wollaston, “Muhammad, His Life and Doctrines”). The Mohammedan doctrine of predestination is equivalent to fatalism. They believe in God’s absolute decree and predetermination both of good and of evil; viz., whatever has been or shall be in the world, whether good or bad, proceeds entirely from the will of God, and that we are the mere agents or the pawns designed by Him from all eternity. The possession and the exercise of our own free will is, accordingly, futile and useless. The absurdity of this doctrine was felt by later Mohammedan theologians, who sought in vain by various subtle distinctions to minimize it.

(2) Practice.—The five pillars of the practical and of the religious duties of the Mohammedan are: the recital of the Creed and prayers, fasting, almsgiving, and the pilgrimage to Mecca. The formula of the Creed has been given above, and its recital is necessary for salvation. The daily prayers are five in number: before sunrise, at midday, at four in the afternoon, at sunset, and shortly before midnight. The forms of prayer and the prayers themselves are very minute and very limited Koranic liturgy. All prayers must be made looking towards Mecca, and must be preceded by washing, neglect of which renders the prayers of no effect. Public prayer is made on Friday in the mosque, and is led by an imam. Only men attend the public prayers, as women seldom pray even at home. Several collections of Hadith have commended. Fasting is commended at all seasons, but prescribed only in the month of Ramadan. It begins at sunrise and ends at sunset, and is very rigorous, especially when the fasting season falls in summer. At the end of Ramadan comes the great feast-day, generally called Bajram, or Fitr, i.e., “Breaking of the Fast.” The other great festival is that of Asha, borrowed with modifications from the Jewish Day of Atonement. Almsgiving is highly commended: on the feast-day after Ramadan it is obligatory, and is to be directed to the “faithful” (Mohammedans) only. Pilgrimage to Mecca once in a lifetime is recommended in case of sufficient means and bodily strength; the merit of it cannot be obtained by deputy, and the ceremonies are strictly similar to those performed by the Prophet himself (see Mecca). Pilgrimages to the tombs of saints are very common nowadays, especially in Persia and India, although they were absolutely forbidden by Mohammed.

(2) Morals.—It is hardly necessary here to emphasize the fact that the ethics of Islam are far inferior to those of Judaism and even more inferior to those of the New Testament. Furthermore, we cannot agree with Nöldeke when he maintains that, although in many respects the ethics of Islam are not to be compared even with such a Christian nation as Persia, it is really good in Mohammedan ethics is either commonplace or borrowed from some other religion, whereas what is characteristic is nearly always imperfect or wicked.

The principal sins forbidden by Mohammed are idolatry and apostasy, adultery, false witness against a brother Moslem, games of chance, the drinking of wine or other intoxicants, usurp, and divination by arrows. Brotherly love is confined in Islam to Mohammedans. Any form of idolatry or apostasy is severely punished in Islam, but the violation of any of the other ordinances is generally allowed to go unpunished, unless it seriously conflicts with the social order of the Moslem State. Some of the other prohibitions mention must be made of the eating of blood, of swine’s flesh, of whatever dies of itself, or is slain in honour of any idol, or is strangled, or killed by a blow, or a fall, or by another beast. In case of dire necessity, however, these restrictions may be dispensed with. Infanticide, extensively practiced by the pre-Islamic Arabs, is strictly forbidden by Mohammed, as is also the sacrificing of children to idols in fulfillment of vows, etc. The crime of infanticide commonly took the form of burying newborn females, lest the parents should be reduced to poverty by providing for them, or else that they might avoid the sorrow and disgrace which would follow, if their daughters should become captive virgins or become scandalous by their behaviour.

Religion and the State are not separated in Islam. Hence Mohammedan jurisprudence, civil and criminal, is mainly based on the Koran and on the “Traditions”. Thousands of judicial decisions are attributed to Mohammed and incorporated in the various collections of Hadith. The rules of the Koran are reverence and obedience to parents, and kindness to wives and slaves. Slander and backbiting are strongly denounced, although false evidence is allowed to hide a Moslem’s crime and to save his reputation or life. As regards marriage, polygamy, and divorce, the Koran explicitly (sura iv, v. 3) allows four lawful wives at a time, whom the husband may divorce on any slight occasion or the prompting of a whim, but this warning was not heeded either by Mohammed himself or by his followers. A divorced wife, in order to ascertain the paternity of a possible
or probable offspring, must wait three months before she marries again. A widow, on the other hand, must wait four months and ten days. Immorality in general is severely condemned and punished by the Koran, but the moral laxity and depraved sensualism of the Mohammedans at large have practically nullified Koranic ethics.

Slavery is not only tolerated in the Koran, but is looked upon as a practical necessity, while the manumission of slaves is regarded as a meritorious deed. It must be observed, however, that among Mohammedans, the children of slaves and of concubines are generally considered equally legitimate with those of legal wives, none being accounted bastards except such as are born of public prostitutes, and whose fathers are unknown. The accusation often brought against the Koran that it teaches that women have no souls is without foundation. The Koranic law concerning inheritance insists that women and orphans be treated with justice and kindness. Generally speaking, however, males are entitled to twice as much as females. Contracts are to be conscientiously drawn up in the presence of witnesses. Murder, manslaughter, and suicide are explicitly forbidden, although blood revenge is allowed. In case of personal injury, the law of retaliation is approved. Marriages should be made here to the sacred months, and to the weekly holy day. The Arabs had a year of twelve lunar months, and this, as often as seemed necessary, they brought roughly into accordance with the solar year by the intercalation of a thirteenth month. The Mohammedan year, however, has a mean duration of 364 days, and is ten or eleven days longer than the solar year. Many Mohammedan festivals, accordingly, move in succession through all the seasons. The Mohammedan Era begins with the Hegira, which is assumed to have taken place on the 16th day of July, A. D. 622. To find what year of the Christian Era (A. D.) is represented by a given year of the Mohammedan Era (A. H.), the rule is: Subtract from the Mohammedan date the product of three times the last completed number of centuries, and add 621 to the remainder. (This rule, however, gives an exact result only for the first day of a Mohammedan century. Thus, e. g., the first day of the fourteenth century came in the course of the year of Our Lord 883.) The first, seventh, eleventh and twelfth months of the Islamic year are sacred months; during these months it is not lawful to wage war. The twelfth month is consecrated to the annual pilgrimage to Mecca, and, in order to protect pilgrims, the preceding (eleventh) month and the following (first of the new year) are also inviolable. The seventh month is reserved for the fast which Mohammed substituted for a month (the ninth) devoted by the Arabs in pre-Islamic times to excessive eating and drinking. Mohammed selected Friday as the sacred day of the week, and several fanciful reasons are adduced by the Prophet himself and by his followers for the selection; the most probable motive was the desire to have a holy day different from that of the Jews and that of the Christians. It is certain, however, that it was a day of solemn gatherings and public festivities among the pre-Islamic Arabs. Abstinence from work is not enjoined on Friday, but it is commanded that public prayers and worship must be performed on that day. Another custom dating from antiquity and still universally observed by all Mohammedans, although not explicitly enjoined in the Koran, is circumcision. It is looked upon as a semi-religious practice, and its performance is preceded and accompanied by great festivities.

In matters political Islam is a system of despotism at home and of aggression abroad. The Prophet commanded absolute submission to the Imam. In recent times the sword was to be raised against him. The rights of non-Moslem subjects are of the vaguest and most limited kind, and a religious war is a sacred duty whenever there is a chance of success against the "Infidel". Medieval and modern Mohammedan, especially Turkish, persecutions of both Jews and Christians are perhaps the best illustration of this fa
dinational and religious spirit.

GABRIEL OTUSIANI.

Mohileff, ARCHIDIOCESE OF (MOTYLOVIENSI), Latin Catholic archdiocese and ecclesiastical province in Russia. For the few Catholics in Russia before the partition of Poland, some mission stations sufficed. The number of Jesuits in Warsaw in 1846 was 27. The Jesuits laboured in Moscow from 1648, and in 1691 built the first Catholic church there. The free exercise of the Catholic religion, granted in 1706 by Peter the Great, was also allowed by his immediate successors, on condition that the missionaries did not attempt to secure converts. The Capuchins, Franciscans, and Dominicans also laboured among the immigrant Catholics with fruitful results. When the Jesuits were suppressed in 1773, many of them found a refuge in Russia. However, no special diocese for Catholics was erected. The partitions of Poland brought under Russian sway many hundred thousand Catholics, whose treatment in striking contrast to that meted out to the Uniates. While Uniate churches were confiscated and delivered to the Orthodox, and such Uniates as refused to join the Orthodox Church were subjected to flogging, imprisonment, and confiscation of property, policy and shrewdness led the empress to treat the Latin Church very differently. Wishing to catch it napping, she erected the Diocese of White Russia with Mohileff as its see (1772), and appointed as first bishop
Stamialaus Siestrzeniecze Bohus, Auxiliary Bishop of Vilna (1773). At first Pius VI refused to recognize this appointment, but after some action and her petition of the Uniat, but finally appointed the bishop vicar Apostolic of the new diocese. In 1782 Catharine arbitrarily raised the bishops to an archdiocese. After some negotiations, the pope recognized the new Archdiocese of Mohileff by the Bull “Unerosa pastoralis officii” of 15 April, 1783, which reserved to the pope the foundation of other dioceses in the territory of the archdiocese, extending from the Baltic to the Pacific Ocean. At the second partition of Poland (1793) five Latin sees fell to Russia, Kamenetz, Kiew, Livonia, Lutsk, and Vilna. Although Catharine had promised in the Treaty of Grodno (1795) to maintain the status quo as regards the Catholic Church, she arbitrarily founded 15 new dioceses, and transferred the sees of Samogitia and Lutsk to Vilna. Part of the property of the suppressed bishopric was confiscated by the State and the rest given to favourites of the empress.

Catharine’s son and successor, Paul I, began, directly after his accession, negotiations with Pius VI, with a view to organizing the Latin Church in Church. Four of the five suppressed sees (Kamenetz, Vilna, Lutsk, and Livonia, the last under the title of Samogitia) were restored, and the new Diocese of Minsk was founded to replace Kiew. Part of the confiscated property was restored to the Church. The four old dioceses, with the new Diocese of Minsk, were united in the Archdiocese of Mohileff, which became a proper ecclesiastical province. Pius VI confirmed this arrangement on 15 November, 1798, by the Bull “Maximis undique pressi”, which forms the substantial basis of the constitution of the Latin Church in Russia to-day. The Archdiocese of Mohileff did not escape the persecutions to which both the Latin and Uniate Churches were subjected almost exclusively, especially during the reigns of Nicholas I and Alexander II (see Russia).

In the hope of weakening the Catholic religion, which it hated and barely tolerated, the Government regularly selected aged or compliant men for Mohileff, leaving the pope no option but to confirm its choice. The first archbishop, Siestrzeniecze (b. 1730; d. 1 Dec., 1826), was one of its most able prelates. Sprung from a noble but impoverished family of Lithuanian Calvinists, Siestrzeniecze, after serving in the army, became acquainted with Bishop Massalki of Vilna, and through his influence entered the Catholic Church and became a priest. Massalki, who never recognized Siestrzeniecze’s lack of character, was himself accused of being a papist and was punished.

Ambitious, uninfluenced by motives of honour or conscientious scruples, and greedy for power, Siestrzeniecze’s sole aim was to curry favour with the secular authorities and thus secure despotic power over the Catholic Church in Russia. To limit as far as possible the power of his clergy, he persuaded Tsar Paul I to establish the “College of the Roman Catholic Church”, to decide, as final court of appeal, all important matters concerning the Catholic dioceses. Its decisions had to receive the approval of the ruling senate, and it was furthermore declared the duty of the clergy to submit unconditionally to the will of the emperor in all matters, secular or ecclesiastical. The presiding officer of the college was Siestrzeniecze, who established an absolute ecclesiastical despotism, appointing to the council only unworthy and subservient men. He granted unlawful divorces for money, induced Alexander I, Paul’s successor, to expel the nuncio (who had reported to Rome the archbishop’s unscrupulous conduct), and did not enter the feebler part of the clergy into the college, which was abolished in 1815, and from Russia in 1820.

Caspier Cieszkowski (b. 1745), Bishop of Lutsk, succeeded Siestrzeniecze (28 February, 1827; d. 16 April, 1831). His great age pre- vented him from doing much in face of the series of oppressive measures of Nicholas I, a fanatical adherent of the Orthodox Church. These measures, which included an attempt to reduce the Catholic Church to a condition of servitude, and if possible to exterminate it completely in Russia, were furthered by the practice of leaving the archdiocese vacant for long periods—e.g. after the death of Cieszkowski and of his successor, Ignaz Ludwig Pawlowski (1841–42; b. 1775).

An epoch-making event in the history of Mohileff was the appointment of Pope Gregory XVI to the tsar during his visit to Rome in 1845 led to a Concordat, ratified by Russia in 1848 and promulgated by Pius IX, in accordance with which the Diocese of Tiraspol, with Saratoff as its see, was founded for the Catholic colonists in Southern Russia and made a suffragan of Mohileff. In December, 1848, Casimir Dzierzbicki, who was consecrated 2 October, 1851, was appointed archbishop. He was succeeded by Ignaz Holowinski (1851–58) and Wenceslaus Zylinski (1856–63), a tool of the government. Persecution, suppression, and confiscation continued even after the Concordat, especially under Alexander II. The Diocese of Kamenetz was arbitrarily suppressed in 1866, and Minsk in 1879. Under Nicholas II free exercise of religion was granted in 1905, while the edicts of toleration of 17 April and 17 October, 1905, weakened in some measure the privileged position of the Orthodox Church. These alleviations have, however, been since whittled down by the arbitrary conduct of subordinate officials, acting in the most rapacious spirit.

The recent archbishops are: Antonius Fialkowski (1871–73); Alexander Casimir Dzierzbicki Gintowt (1883–92); Simon Martin Kozlow (1891–93); Boleslaw Hieronymus Klopotowski (1901–03); George Joseph Elesias a Slupoff Szembek (1903–05); Appendarius Wnukowski (1909), and Vincentius Kluzicki (appointed 5 June 1910).

II. STATISTICS.—The suffragans of Mohileff are: Samogitia, Lutsk-Zhitomir, Vilna, and Tiraspol. From 1866 Kamenetz has been administered by the Bishop of Lutsk, and from 1869 Minsk by the archbishop. The ecclesiastical province is the largest in the world, including three-fourths of European (the ecclesiastical province of Warsaw is excluded) and the whole of Asiatic Russia (5,450,400 sq. miles). According to the diocesan statistics for 1910 the archdiocese contains 28 deaneries, 245 parish churches, 399 priests, 1,023,347 Catholics. The administrators of thirty-four other parishes and chapels are immediately under the jurisdiction of the archbishop. Among them are the most influential of the Roman Catholic rectories of Tashkent (15,000), and in Siberia: Krasnoyarsk (13,000), Tomsk (10,000), Vladivostok (10,500), etc. The see of the archdiocese is St. Petersburg. The archbishop presides over the Roman Catholic Collegium, which regulates the relations between the respective dioceses and the Department of Public Worship, and administers the property of the Catholic Catholic Church in the Kingdom of Poland. The Metropolitan Curia consists of a secretary and four other members; the archdiocesan chapter of a provost, dean, archdeacon, and six canons; the General Consistory of an official (secular administrator for the bishop), vice-official, three assessors, visitor of monasteries, Defensor et matrimoniorum, and twelve lay members. The Roman Catholic ecclesiastical academy at St. Petersburg has a rector, spiritual director, sixteen clerical and seven secular professors, and 58 students. The seminary has 2 provisors, a rector, spiritual director, inspector, 14 clerical and 5 secular professors, 33 theological students, 59 philosophical, and 31 in the preparatory course. There are no statistics as to the monasteries of the Church, but the Roman Catholic monthly has been published at St. Petersburg.
Mohler, Johann Adam, theologian, b. at Igersheim (Würtemberg), 6 April, 1798; d. at Munich, 12 April, 1838. The gifted youth first studied in the gymnasium at Mergentheim, and then attended the lyceum at Ellwangen, where he applied himself primarily to philosophical studies. In 1815 he turned to the study of theology, and, after leaving the theological college at Ellwangen, went to Tübingen to continue his studies. For a time he was a student of the learned professors Drey and Hirscher. In 1818 he entered the seminary at Rottenburg on the Neckar, was ordained priest on 18 September, 1819, and was sent as curate in charge to Weilerstadt and then to Riedlingen. In 1821 he became Repetent (tutor) in the Wilhelmsstift at Tübingen, and for more than a year devoted himself almost exclusively to classical literature, particularly to earlier Greek history and philosophy. In this way he acquired the keenness and clearness of judgment, delicacy of diction, skill in exposition, and fine sense of the aesthetic which distinguish all his writings and discourses. Soon, the theological faculty at Tübingen offered him the head of the theological faculty (in 1825). His aim was to prepare for which he visited the leading German and Austrian universities, meeting there the best-known Catholic and Protestant theologians and pedagogues—Niemeyer, Gesenius, Planck, Schleiermacher, Marheinecke, and in particular Neander, who made a powerful impression on the young man. Thus equipped, he began his lectures, and soon published his first book under the title "Die Einheit in der Kirche oder das Prinzip des Katholizismus, dargestellt im Geiste der Kirchenväter der drei ersten Jahrhunderte" (Tübingen, 1825). It was hailed with enthusiasm, and gave brilliant evidence of the profound knowledge and the remarkable penetration of the young scholar. He was indeed a child of his time, and betrayed certain Febronian views and some sympathy with the pseudo-reformism of the day, which the Hermesians later cast up to him, and which he often regretted. His book, nevertheless, was not merely a highly intellectual, but also a highly moral act, and that for many readers, like Chateaubriand’s "Sévigné," formed the starting point of their religious work there breathe, as it were, a new spirit, "which seems to herald a rejuvenescence of the Church and of theological science." There is here no shallowness or special pleading; one hears the accents of fresh, living, full Christianity, such as the author’s profound study of the church Fathers had revealed to him. For him, the church’s unity is twofold in character: a unity of spirit and a unity of body. The former is, first, the mystical unity in the Holy Spirit, which binds all the faithful in one communion; then the mental unity of doctrine, i.e., the comprehensive expression of the Christian mind in opposition to the manifold forms of heresy, and finally unity in multiplicity, i.e., the preservation of individuality in the unity of all the faithful. The unity of the body of the Church reveals itself first in the bishop, in whom is visible the unity of the diocese; to this correspond the wider circles of the metropolitan system and the council of the entire episcopate, and finally the Roman primacy, whose gradual development Möhler illustrates in the history of Christian antiquity and of the Middle Ages. Immediately after the appearance of his book Möhler was offered a place in the University of Freiburg; he refused it, and as a result was appointed extraordinary professor at Tübingen in 1826. After he had, two years later, declined another offer from Breslau, he became at Tübingen ordinary professor in the theological faculty, which conferred on him the Doctorate of Theology. Not long before, he had published his second work: "Athenaeus der Große und die Kirche seiner Zeit im Kampfe mit dem Arianismus" (Mainz, 1827). It is a pleasing and lively portrait of the great bishop of Alexandria, the champion of orthodoxy amid the great ecclesiastical conflicts of the fourth century; for Möhler the hero of his time, with a character that contrasts favourably with the gloomy attitude of Arius and the vacillating weakness of Eusebius of Cesarea. About the same time (Tübingen theologische Quartalschrift, 1827–8) he depicted in a similar masterly way one of the great figures of the Middle Ages, St. Anselm of Canterbury, as monk, scholar, and defender of ecclesiastical liberty.

His study of ecclesiastical life in early and medieval times led naturally to an examination of the distinctive differences between Catholicism and Protestantism. The results of his investigation he published in "Betrachtungen über den Zustand der Kirche im fünfhundert und zu Anfang des sechszehnten Jahrhunderts" (Gesammelte Schriften, II, 1–34). He concludes that the Reformation, really necessary in the sixteenth century, did not take place in the right way, but took on rather the character of an entirely revolutionary movement, by which the tranquil development of the medieval Church, with all its good elements, was subordinated to ecclesiastical unity. In connexion with these investigations he began—as he had seen done in the North German universities and as his Protestant colleague at Tübingen, Professor Baur, had done—lectures on the antithesis between Protestantism and Catholicism, or, as is usually said, on symbolism. By this term are meant, in this connexion, the distinctive notes of a given ecclesiastical communion, also certain set formulae, legally consecrated, and in a general way expressive of Christian faith or of certain fundamental dogmatic ideas; or again, especially since the Reformation (or rather since the seventeenth or eighteenth centuries), the confessions of faith that constitute the form or rule of belief for the faithful of any religious denomination. In this way symbolism, being the science of creeds, is a theological science that compares one religious system with another on the basis of their creeds, and thus demonstrates the truth or falsity of a particular creed. While symbolism—or, as it is now usually called, comparative symbolism—has not long been recognized as having the same theoretical value as the church’s unity, there are traces of it even in earliest Christian times. The Reformation created the conditions amidst which it grew to maturity; and its first representative was probably the Protestant professor, Leonard Rechtenbach, in his "Encyclopädie symbolica" (Leipzig, 1612). It is true that, in his opinion, the office of symbolism is merely to make it clear, in connexion with one’s own symbolic books, without paying any attention to those of another denomination. The founder of scientific symbolism in its modern sense was the Göttinien professor Planck in his "Abriss einer historischen und vergleichenden Darstellung der dogmatischen Systeme unserer verschiedenen christlichen Hauptparteien" (Göttingen, 1790), the first edition of which contains an exhaustive comprehension of all Christian creeds in their distinctive characteristics. Marheinecke went farther in his "Christliche Symbolik oder historisch-kritische und dogmatische komparative Darstellung des katholischen, lutherischen, reformierten, und socinianischen Lehrbegriffes" (Heidelberg, 1819–19). Planck and Marheinecke have found important, who continue down to the most recent times to treat this from the Protestant standpoint. For Catholics such studies had naturally had less attraction. When a student at Tübingen, Möhler had heard lectures on symbolism, and had later met many Protestant theologians. He was the first Catholic writer to develop this idea, and became the
MÖHLER

Founder of this science among Catholics through his classical work, "Symbolik oder Darstellung der dogmatischen Gegensätze der Katholiken und Protestanten nach ihrem offiziellen Lehrriscontrienschriften" (Mainz, 1832; 13th ed., 1904). He demonstrated that there could be no incompatibility between what was truly rational and what was truly Christian, both finding their sole, direct, and entirely adequate expression in Catholic dogma. He showed also how Catholic orthodoxy held the middle course between the extremes of Protestantism, e.g., between a supernaturalism and Pietism that denied the rights of reason, and a naturalism and rationalism that rejected absolutely the supernatural. With great clearness he exhibited the contradiction between Catholic and Protestant principles; for instance, in the doctrine of Christian divinity held by the latter as the perfection of the divine attributes, he showed how the other differences of doctrine regarding the Fall of Man, the Redemption, the sacraments, and even the Church, were only logical consequences of the anthropological views of the leaders of the Reformations. Contradictory as it may seem, it was Möhler's ironic nature that impelled him to publish this work. He was persuaded that a knowledge of the genuine and original documents, was a necessary preliminary to any definite appeal to the tribunal of truth. Such investigations seemed to him important, not only for theologians, but also for every true scholar, the truth being nowhere so important as in matters of faith. The work was accurately translated into English, German, and French within five editions in six years. An English translation by James Burton Robertson appeared in London in 1843 under the title "Symbolism; or, Exposition of Doctrinal Differences between Catholics and Protestants, as evidenced by their Symbolical Writings" (reprint, London and New York, 1894), and the work was also translated into Spanish. Möhler's book "What I had thought and felt, but could not clearly understand, much less adequately express, was brought out by Möhler with marvellous insight and in the clearest way" (Kihn). His German diction was also perfect. The "Symbolik" acted like an electric spark, and stirred up many both in and out of the Church. Naturally, Protestant theologians took up the gauntlet. Marheineke replied with moderation in his work, "Über Dr. J. A. Möhlers Symbolik" (Berlin, 1833), and Nitzsch in his "Eine protestantische Beantwortung der Symbolik Dr. Möhlers" (Hamburg, 1835). On the other hand his Tübingen colleague, Professor Benjamin Döllinger, wrote a protest against the German "Gegensatz des Katholizismus und Protestantismus". Both the Principen and Hauptdogmen der beiden Lehrbegriffe. Mit besonderer Rücksicht auf Dr. Möhlers "Symbolik" (Tübingen, 1834). Möhler replied with "Neue Untersuchungen der Lehrgegensätze zwischen den Katholiken und Protestanten. Eine Vertheidigung meiner Symbolik gegen die Kritik des Herrn Prof. D. Baur" (Tübingen, 1834; 5th ed., with introduction and notes by Schanz, Ratisbon, 1900), to which Baur again replied in the same year. In his reply Möhler was able to state with greater clearness certain points of difference, and to deal more profoundly with certain doubts and criticisms. These additions were edited anew by Raich in "Ergänzungen zu Möhlers Symbolik aus dessen Schrift: Neue Untersuchungen" (Mainz, 1839; latest ed., 1906). This controversy with Baur made Tübingen disagreeable to Möhler, and he decided to seek some other academic centre. The Prussian Government sought to attract the celebrated theologian to the Catholic theological faculty of the University of the Christian religion, and Möhler was about to accept the Academy of the Catholic religion, and Möhler was not unwilling to go to Bonn. But Professor Hermes, who had Archbishop Spiegel on his side, prevented the execution of this design. Döllinger, his intimate friend, was meanwhile active in his behalf at Munich, and through his influence Möhler was appointed to the Catholic theological faculty at that university to lecture on the exegesis of the New Testament.

He began at Munich with lectures on the Epistle to the Romans, but in the next term he added lectures on Church history and patrology. His intercourse with professors of like mind raised his spirits, and his health, which had failed at Tübingen, improved. He devoted himself with fervour to the preparation of a history of the monasticism, with the intention of setting forth the immeasurably influential of the Benedictine Order on Western civilization. While he cherished a warm attachment for the sons of St. Benedict, he was of opinion that the suspension of the Society of Jesus was not, historically speaking, to be regretted. His plan, however, was never realized. After a mild attack of cholera in 1838, which followed the publication of a pulmonary alment which compelled him to cease lecturing and seek health or alleviation at Meran in the Tyrol. After the condemnation of Hermesianism by Gregory XVI, the Prussian Government sought again to secure Möhler for Bonn, hoping perhaps that this would help to allay the controversies that had arisen in Catholic dogma. His health, however, was such that the delicate health caused him to refuse. Early in 1838 the King of Bavaria bestowed on him the Order of St. Michael, and on 22 March made him dean of the cathedral of Würzburg. Möhler never took up this office, however, for he died a few weeks later in the prime of life, not yet forty-two years of age, deeply lamented by kindred and friends alike, and by all who knew him. A monument, subscribed for by almost all Catholic Germany, adorns his grave in the cemetery of Munich, with the inscription: "Defensor fidei, literarum decus, ecclesiae solamen" (Defender of the faith, ornament of letters, consolation of the Church). The clergy of Würtemberg erected another monument that bore the dedication of which in 1880 his disciple and successor in Tübingen, Bishop Hefele of Rottenburg, paid a noble tribute to his fame.

Möhler, as Kihn has well shown, had an uncommonly attractive personality. He was an ideal priest, almost perfect in stature and comeliness, deeply pious and of childlike modesty, with a heart full of affection and gentleness, penetrated with the desire for peace in personal intercourse and for the restoration of harmony between the different creeds. He exercised a peculiar fascination over all who approached him, and men of every belief and party confidently turned to him for all maxims and directions. He charmed his hearers by his dignified bearing, his kindly presence, his keen wit, his classic diction, and his ripe knowledge. It may be said that he gave new life to the science of theology; also, and this is greater praise, that he reawakened the religious spirit of the age. He was, in the judgment of a Protestant (Realeencyklopädie für prot. Theol., 2nd ed., IX, 665 sq.), an epoch-making mind and a brilliant light of the Catholic Church; while, according to the same writer, the Evangelical Church, to which he owed much, had to thank him for fresh stimulus and for what it learned from his keen exhibition of ecclesiastical development. After his death Döllinger edited most of his minor writings in "Gesammelte Schriften und Aufsätze" (2 vols., Ratisbon, 1839-40). They are numerous, the most noteworthy being "Beleuchtung der Dankschrift für die Aufhebung des katholischen Geistlichen vorge schriebenen Cölbates", in which he refutes with great earnestness the opponents of priestly celibacy, and proves the sublimity of the virginal life from the Christian religion, as opposed to the New Testament. Other important studies are: "Hieronymus und Augustin im Streit über Galater 2, 14" (I, 1 sqq.); "Über den Brief an Diognetus" (I, 19 sqq.); "Fragmente aus und über Pseudoisidor" (I, 283 sqq.), ripe fruits of his studies of the Fathers.
and Church history. He was always greatly devoted to such studies, and in his lectures often drew attention to the liturgical treasures of Christian antiquity. To him the study of the unknown series of witnesses to the doctrine, worship, and constitution of the Church—the successive evidences of her many victories, as he puts it in the introduction to his "Patrologie oder christlichen Literargeschichte"; the first volume of which, dealing with the first three centuries, was edited by Reimay after additions of his own (Ratisbon, 1840). Less important translations are the "Kommentar über den Römerbrief" (Ratisbon, 1845), also edited by Reimay after Möhler's death; it is difficult to say how much of it is Möhler's own work. The same may be said of the "Kirchengeschichte von J. A. Möhler" (3 vols., Ratisbon, 1867-8; index vol., 1870), laboriously compiled from class notes by the Benedictine Pius Gams, and later translated into French.

REIMAY, Biographical sketch in the fifth edition of the Symbolik; Ideen in Kirchenw. (1893), s. v.; KHN in RAUCH, Beiträge (latest ed., 1900), i-iv; FRIEDRICH, J. A. Möhler, der Symboliker (Munich, 1894); KNÖPFLER, Röm. Christl. Zeitschrift, Monatshefte (Lausanne, 1897); WAGENMANN-BACH in RAUCH, Beiträge, s. v.; GOYAU, Hist. (Paris, 1906); SCHUMANN, Die christl. Entwicklungsgeschichte der Liturgie (Munich, 1897), 22-56, 572-99.

PATRICIUS SCHLAGER.

Mohr, Christian b. at Andernach, 1823; d. at Cologne, 1888. He practised his profession of sculptor chiefly at Cologne under the cathedral architect Zwirner. After some early ornamental work at Mainz and Coblenz, Mohr settled in Cologne in 1845. He first executed the statuettes on the tomb of the bishop Conrad of Hochstaden, the founder of the cathedral. Of importance are his figures of Christ, the Evangelists, and fifty-nine angels on the south portal of the cathedral, where the rich variety of the added symbols excites admiration. On the commission of Emperor William I the eight statues in the middle hall were executed. The "St. Peter" for the collegiate church at Trier was executed for the cathedral at the Paris Exhibition of 1855. He also carved the statue of the first Cologne cathedral architect, Gerhard Riele, and that of the veteran painter of the Cologne school, Stephan Lochner. He undertook many commissions outside of Cologne: the panoramic figures for the assembly-hall at Dusseldorf, the thirty-four figures of the emperors for the Rathaus at Aachen, the equestrian statues for the Fürstenbergische Schloss at Herdinger, the portrait effigies of the princes of Hohenzollern-Sigmaringen, the figures for the fountain on the market-place at Lübeck, etc. For more than forty years he was thus engaged at Cologne, executing commissions of that city and other cities.

The cathedral is indebted to him for the best of its sculptural decoration; the Rathhaus for the statues of the emperors, and the Museum for the bust of Michelangelo, which in 1873 secured for Mohr the honour of being made a regular member of the K. K. Akademie of Vienna. Mohr was equally esteemed as an art-collector and connoisseur of classical and German antiquities. His household furniture represented the art of the Dürer period. That he was not opposed to the Renaissance is proved by a beautiful silver epergne in that style. Finally, he appears as a writer on art in the works "Kön in seiner Glanzzeit" and "Kölner Torburgen". For his knowledge and his achievements he was indebted for the most part to his personal exertions, since he was practically self-educated; and, even though in many cases he only executed the plans of Schneller, still numerous independent works display both talent and taste.

Zeitschr. für bildende Kunst, XXIV, 100 sqq.; Illustrierte Zeitung, no. 860 (1890).

G. GIEITMANN.

Mohr, Joseph b. at Siegburg, Rhine Province, 11 Jan., 1834; d. at Munich, 7 February, 1892. Father Mohr did more than any other within the last century towards restoring to general use, especially in German-speaking countries, those virile melodies and texts sung in the vernacular by the people prior to the Reformation—some dating from the twelfth century—which had been displaced by a sentimental class of hymns more in keeping with modern taste. While at first Father Mohr stood practically alone in the pioneer work of research, he later found powerful assistance in the labours of Rev. Dr. Wm. Bäumker and Rev. Guido Maria Dreyes, at that time a Jesuit, both of whom became famous specialists in this field. Among his many works may be mentioned: "Lasset uns beten"; "Treatise on Psalmody"; "Cácelia", a hymn-book and prayer-book; "Cantate", a hymn and prayer-book; "Psalmi Officii hebdomadis sanctae"; "Vesperbühlein"; "Laudate Dominum", a hymn-book and prayer-book intended more especially for institutions of higher education; "Manuale Cantorum", and "Psalterlein", a hymn-book and prayer-book. Most of these collections—model hymn-books as well as prayer-books—have had large circulations; the "Cantate" has had forty-two editions, and the thirty-third edition of the collection, "Cácelia", has recently appeared. Several of these hymn-books became the official hymn-books of certain dioceses; others served as the basis for the compilation of official diocesan hymn-books. Mohr had the gift, rare at the present time, of writing genuine hymntunes, some of which are in his collections.

Molino, François-Napoléon-Marie, physicist and author, b. at Guiméné (Morbihan), 15 April, 1804, d. at Saint-Denis (Seine), 14 July, 1884. He received his early education at the Jesuit college at Saint-Clément; entered the novitiate of the order 2 Sept., 1822. He made his theological studies at Montmorency, devoting his leisure to mathematics and physics in which he achieved much success. Upon the outbreak of the Revolution in 1830, he fled with his brethren to Brie in Switzerland. Here he continued his studies and, being endowed with a remarkable memory, acquired at the same time several foreign languages, including Hebrew and Arabic. In 1836 he was appointed professor of mathematics at the well-known college of Ste-Geneviève, Rue des Postes, in Paris. Here he became widely known not only as a scholar, but also as a preacher and writer of ability. He wrote numerous articles for the press and was much esteemed by the scientific men of the time, including Cauchy, Arago, Dumas, Ampère, etc. He was engaged on one of his best known works, "Lecons de calcul différentiel et de calcul intégral", based chiefly on Cauchy's methods, and had already published the first volume, when he left the Society in 1843. Shortly afterwards he undertook a tour of Europe, contributing numerous letters to the journal "L'Epopée". He acted as chairman of the Lycee Leconte from 1848 to 1851. He became scientific editor of the "Presse" in 1850 and of the "Pays" in 1851 and in 1852 founded the well-known scientific
journal "Cosmos". In 1862 he founded "Les Mondes" and became associated with the clergy of St-Germain des Prés. In 1873 he was appointed one of the canons of the chapter of Saint-Denis. Moigno was a man of great industry and throughout his long career was a prolific writer, being distinguished rather as an expert in the works of art and antiquities. He not only wrote a large number of scientific and apologetical works of merit but also translated numerous English and Italian memoirs on science into French. He also edited the "Actualités scientifiques". Among his more important works may be mentioned "Répertoire d'optique moderne" (Paris, 1847-50); "Traité de physique chimique et mécanique" (Paris, 1859); "Leçons de mécanique analytique" (Paris, 1868); "Sacharimétrie" (Paris, 1869); "Optique moléculaire" (Paris, 1873); "Les splendeurs de la foi" (Paris, 1879-83); "Les livres saints et la science" (Paris, 1884), etc., and numerous articles in the "Comptes Rendus", "Revue Scientifique", "Cosmos", etc.

MOLESMME

Molai (MOLAY), Jacques de, b. at Rahon, Jura, about 1244; d. at Paris, 18 March, 1314. A Templar at Beaucaire since 1265, Molai is mentioned as Grand Master of the Templars as early as 1298. He was, as he described himself at his trial, an unlettered soldier, but well known to his order by his signal examples of courage and devotion to duty. He was present at the council of Lyons in 1274, a member of the commission appointed by the king to recover the temple property in England, and at the council of Mainz, 1313, he was present and a member of the commission appointed by the king to recover the property of the order. He was one of the leaders of the order, underwent a last interrogation in Paris before a new commission of cardinals, prelates, and theologians, authorized to pronounce sentence. He was condemned to imprisonment for life, and he continued to remain in prison until the last (see TEMPLES, KNIGHTS).

Molesme, Notre-Dame de, a celebrated Benedictine monastery in a village of the same name, Canton of Lavaux (Côte d'Or), ancient Burgundy, on the confines of the Dioceses of Langres and Troyes. St. Robert, Abbot of St-Michel de Tonnerre, not finding his monks disposed to observe the Rule of St. Benedict in its original simplicity, left them, accompanied by a few monks and hermits, and selected a spot on the seashore of the right bank of the River Leignes, where, having obtained a grant of land from Hugo de Laval, they built their monastery and cleared the woods of the surrounding country. They lived in extreme poverty until a certain bishop visited them, and, seeing their need, sent them a supply of food and clothing. Members of the noblest families, hearing of the saintly lives of these religious, soon hastened from all parts of the country to join them, bringing in many cases their flocks and all their worldly possessions, and the resulting benefactions enabled them to erect a church, the most beautiful in the country around, and suitable monastic buildings. The increase in numbers and possessions caused a temporary relaxation in fervour, in so far that the monks ceased to work the fields, being willing to live on the alms given them. Matters having gone even so far as open rebellion, St. Robert and the most fervent religious left Molesme (1098) and founded Citeaux, which, though intended as a Benedictine monastery, became the first and mother-house of the Cistercian Order. The monks of Molesme, repenting of their faults, begged Urban II to obligate St. Robert to return to them, and this request was accorded to (1099); Robert returned to Molesme until his death (1110). Besides Citeaux, Molesme founded seven or eight other monasteries, and had about as many monasteries of Benedictine nuns under its jurisdiction. The church and monastery were destroyed and their possessions confiscated in 1472 during the war between France and Burgundy. The buildings were again burned by the hands of the Huguenots at the close of the sixteenth century. In the seventeenth century the fervour of the monastery was renewed on the introduction of the reform of St. Maur (1648). All the glory of Molesme has now vanished. The magnificent church is razed to the ground, and the monastic buildings are used, a small part as a church, and the rest as common buildings.

MOLIFFRE

MOLIFFRE

Moliflette, Terlizzi, and Giovanni, Diocese of (Melphictensis, Terlittensis et Juvenacensis).—Moliflette is a city of the province of Bari, in Apulia, on the Adriatic Sea. Its history is unknown, but many objects of the neolithic, bronze, and the Mycenae epoch have been found at a place called Pulo, which shows that the site of Moliflette was inhabited in prehistoric times. The town has a beautiful cathedral, and beyond its limits is the sanctuary of the Virgin of the Martyrs containing an image brought by Crusaders in 1188. The first bishop of this city of whom there is any record was John, whose incumbency is referred to the year 1136. The see was at first suffragan of Bari, but in 1484 it became immediately dependent upon Rome. In 1818, it was enlarged with the territory of the suppressed sees of Giovinazzo and Terlizzi, which were re-established in 1835, remaining united, except principal. In the opinion of some people, Giovinazzo is the ancient Egnatie; it has been an ecclesiastical sees since 1071. Terlizzi was a city in the Diocese of Giovinazzo, and in 1731, to put an end to certain questions of its independence, it was declared an ecclesiastical sees, but united with Giovinazzo. The city was for a time the residence of the Emperors of the Aragonese.

The Diocese of Moliflette contains 4 parishes; 80 secular and 6 regular priests; 42,000 Catholics. Terlizzi contains 3 parishes; 40 secular and 6 regular priests; 24,100 Catholics. Giovinazzo contains 2 parishes; 57 secular and 3 regular priests; 12,150 Catholics. In the united dioceses there are 6 convents for women, 2 schools for boys, and 4 for girls.

A. Benigni.

Molière (properly, Jean-Baptiste Poquelin, the name by which he became known to fame was assumed when he went on the stage, to avoid embarrassing his family), French comic poet; b. at Paris, 15 Jan., 1622; d. there 17 Feb., 1673. He was the son of a Paris furniture dealer who was also a valet-de-chambre to the king, and succeeded his father in the latter capacity 12 years after marriage. After many studies with the Jesuits at the Collège de Clermont, he seems to have studied law in some provincial town—perhaps Orleans. It is not known, however, if he ever took his licentiate. The stage very soon attracted him and absorbed him. At twenty-one he entered the theatrical company, organized under the name of "L'Illustre Théâtre," in which were Madeleine Béjart and her brothers. The troupe engaged a band of four musicians at the cost of one livre per day, and a dancer, who was to receive Thirty-five sols per day and five sols extra for every day when there was a performance. The business started with a deficit, and Molière, who appears to have then been chosen president by his associates, was arrested for debt. He was imprisoned in the Châtelet, but released on his own recognizances.

In the course of the subsequent wanderings through different parts of France, Molière composed some small comic pieces of no importance, of which two have been preserved—"Le Jalousie de Barbouillé" and "Le Médecin Volant." Afterwards, about 1650 on 1855, he began to use the language of fine comedy which Corneille had created ten or twelve years before. "Le Désert Amoureux," produced at Béziers in 1656, should also be mentioned here. Before long the "Illustré Théâtre" regained confidence to face the Parisian public; we find it in Paris in 1656. Next year, "Le Mariage de Miséricorde de Monsieur, Frère du Roi" performed "Les Précieuses Ridicules." In this comedy Molière declared war against the spirit of refined humbuggery (l'Esprit précieux), and he never ceased to be its enemy, as witness "Les Femmes Savantes" (1672), one of his last pieces. The last twelve years of his life saw the culmination of his most famous works. "L'École des Marias" (1661) shows the beauty of a confiding and gentle character in a man; "Les Fâcheux" (also 1661) was written in fifteen days; "L'École des Femmes" (1662) gives another lesson to husbands—this was very creditable to the playwright, for he himself, at the age of forty, had just married a girl of twenty; Madeleine Béjart's sister, the volatile Armande who was to give him so much trouble. The "Critique de L'École des Femmes" and the "Impromptu de Versailles" (1663) are two little prose pieces in which the writer defends his comedy of the preceding year and attacks his critics. "Tartufe" (1664), the famous comedy, at first in three acts, afterwards five, deals trenchant blows at hypocrisy, unfortuntately, however, often striking true virtue at the same time. After its first production the public performance of this piece was forbidden, and the ban was not removed for five years.

In the interval Molière wrote: "Don Juan" (or "Le Festin de Pierre") (1665), apparently intended as a preface for the suppression of "Tartuffe," "Le Misanthrope" (1669) a great comedy of character; "Amphitryon" (1668), three acts in verse of various measures, where Jupiter assumes the form of the Theban general, Amphitryon, in order to betray his wife, Alcmene; lastly, "L'Avare" (1668). Excepting "Les Femmes Savantes," already mentioned, the comedies of his last five years form a great deal of gaiety, but not so much breadth—"Monsieur de Pourceaugnac" and "Le Bourgeois Gentilhomme," in 1669, "Les Fourberies de Scapin," in 1671 and "Le Malade Imaginaire" (1673). While on the stage playing in "Le Malade Imaginaire," the author was seized with a violent hemorrhage; he was carried home, and died.

In his lifetime the greatest of the comic poets whom her history has produced. Judging Molière exclusively from a literary point of view, it must be admitted that he does not owe his reputation to the quantity of dramatic entanglement in his plays; he owes it above all to the truth of his portraits. His friend Boileau called him "the looker-on" (le contre-amateur) of his period. He has a natural talent to note its vices and its failings, and his genius had the power of combining what he saw, melting all his observations together, adding to them, and thus creating beings who are no longer particular individuals, but are recognizable as men of their whole period—often of all periods of humanity. Moreover, the characters are his chief concern; with him, as with Racine, the characters carry the whole piece, they are its soul. His art may at times fail in other points—as in his dénouements, which are often ill contrived—but in that one respect he is always admirable. His plays, then, present a portrait of the heart of man, but a profile portrait drawn from the most varied angles. The satire which is a vital part of his art is implied in its very method of attack. His gaiety is always wholesome, his method is always deft and skillful, his dramatic business is to emphasize certain lines. This
verisimilitude—or, as his friend La Fontaine expressed it, carelessness "not to go one step away from nature"—is found in all Molière's works. It is particularly visible in his style. Good critics, it is true, have found fault with Molière's style, particularly in his verse; Boileau, Pénelon, and La Bruyère did so in the seventeenth century; Vauvenargues relieved his lines of the eighteenth; Théophile Gautier and others, in the nineteenth. On the other hand, a whole school has arisen in the last fifty years to extol this writer: for the Molériïsts, as they have been called, Molière is above all criticism; they preach a sort of cultus of Molière. To be more judicious, we must be more moderate. As Voltaire points out in his preface to the Lettres de Cato and the Discours sur l'Esprit de Conventions, there is need of some just balance. That of familiar conversations, permits him certain liberties, which he cannot be fairly blamed for using, still, making all due allowance for the nature of his medium, there is no denying that his style suffers from real carelessness—useless repetitions, incoherent metaphors, heavy and entangled phrases. Molière was obliged to write quickly; he was an improviser, but a genius of improvisation. For his style, in spite of its faults, is still, as Boileau said to Louis XIV, a "rare" style. Fram and natural, he excels in making reason and good sense talk. It is the style of a poet, too—warm, highly coloured, brilliant. Lastly, one finds in him striking words and striking touches, which could have been borrowed from Shakespeare.

As for morality, it owes Molière much less than literature does. Although he gave out, in his prefaces, that it was his wish and duty as a dramatic poet, to be of service to morality, he has been severely censured in this regard, from Bossuet to Jean-Jacques Rousseau. While he never put on the stage—as is so often charged of these days—a woman guilty of violating her marriage vows, or about to violate them, yet he has been reproached with the presentation of other dangerous pictures. Furthermore, he is always on the side of the young people, who surely need no encouragement in their evil propensities. All his sermons, all his satires, are for parents; all the unpleasant failings depicted by his comedies reside in the fathers and the old people; the laugh is always at their expense, except when their egoism excites horror. It must be confessed that, while the passions of the young king, Louis XIV, had only too much reason to be pleased with the author of "Amphitryon," religion had no cause to approve the author of "Tartuffe." For, while the former was not as pernicious as that of Corneille, Racine, Boileau, and nearly all the illustrious writers of his time. And yet, when there was question of his being given Christian burial, and the curé hesitated, on the ground that the priest had arrived too late to give absolution to the comedian, who, it may almost be said, passed from the stage to the tribunal of God; his widow proved that he had received the sacraments in the last previous season.

See the edition of Molière by DESMOS AND MERNARD in the Collection des grands écrivains (Paris, 1873-1900), also an English translation of his works with French text by walker, vol. 8, (London, 1905-7), and English version with memoir by Wall in Black's Library (3 vols., London, 1876-77); Lachaux, Bibliographie, moléresque (Paris, 1873); Velliot, Molière et Bourdaloue (Paris, 1877); Luchaire, Histoire de la litt. fran. au XVIIe siècle (Paris, 1862-78); Carlota y Celaya, Poesías liturgicas (Madrid, 1870), 317; Matthews, Molière (New York, 1910).

GEORGES BERTRIN.

Molina, Alonso de, Franciscan friar, b. probably 1511 or 1512, at Escalon, province of Toledo, Spain; d. 1584, in the city of Mexico. In 1523 his parents came to New Spain, where he learned the Natural, or Mexican language. His kindred was of Basque origin. When he arrived in 1524, seeing how thoroughly versed he was in the language of the natives, begged Cortés to use his influence with the child's mother that he might be allowed to help them in their preaching and catechizing. The mother readily consented, and young Alonso became so attached to the fathers that he never left them. When he reached the required age he joined the Franciscan order, and for fifty years was indefatigable in his work among the Indians, devoting also some time to the numerous works which he left. In order to allow him to follow uninterruptedly his chosen work, his superiors retired him to the convent of Téxoco, in 1555. Although no great actions mark the life of Molina, he is nevertheless remarkable for his untiring zeal, and for the wonderful constancy with which, for half a century, he continued his work, resisting its monotony, overcoming all difficulties. He left a long series of works, the following unpublished: "Traducción mexicana de las Epístolas y Evangelios de todo el año"; "Horas de Ntra. Sra. en mexicano"; many prayers and devotions for the Indians; "De Contemptu Mundi"; also a treatise on the sacraments. The following have been published: "Doctrina breve mexicana" (1571); "Vocabulario castellano-mexicano" (1555); "Confesionario menor" (1565); "Confesionario mayor" (1565); "Doctrina Cristiana" (1578); "Arte mexicano" (1571); and "Vocabulario castellano-mexicano y mexicano castellano" (1571, reprinted, Leipzig, 1880), the most important of his works.

The first encyclopedic hispano-americano, III (Barcelona, 1893); YETANCURT, Menologio franciscano (Mexico, 1871); MOLINA, Vocabulario de la lengua castellana mexicana (Mexico, 1871); MAECHL, Dictionnaire de la langue aya (Paris, 1885); Obras de D. J. Garcia Isaacbaloza (Mexico, 1896), III.

Camillo Crivelli.

Molina, Antonio de, a Spanish Carthusian and celebrated ascetical writer, b. about 1560, at Villanueva de los Infantes; d. at Miraflores, 21 September, 1612 or 1619. In 1575 he entered the Order of Augustinian Hermits, was elected superior at one of their houses in Spain, and for some time took part in the discussions on the question of whether to join an order of stricter discipline, by which he became a Carthusian at Miraflores, where he died prior of the monastery. He wrote in Spanish a few ascetical works, especially adapted for priests, which became the most popular books of their kind in Spain, and were translated into various foreign languages. The most famous of these is a manual for priests and cloistered nuns, under the title: "Instrucción de Sacerdotes, en que se da doctrina muy importante para conocer la alzada del sagrado oficio Sacerdotal, y para exercitarla debidamente." Twenty editions of this work are known to have been published, among them a Latin translation by the Belgian Dominical Nicolas Janssen Boy, which received five editions in Antwerp, 1623; Cologne, 1636, 1711, and 1712, and an Italian translation (Turin, 1685). It was severely attacked by the Jansenist Antoine Arnauld (De la fréquence Communion, 1643) but ably defended against him by Petavius ("Dogmata theologiae, De Penitentia", lib. III, cap. vi; new ed., Paris, 1855-7, VIII, 286-8). He is also the author of two ascetical works adapted to lay people, "Exercícios para personas ocupadas de coisas de sua salvacao," was published at Burgos in 1613; the other, "Exercícios espirituais de la excelência, provecho y necesidade de la oracion mental," etc., was first published at Burgos in 1615, and was translated into Latin.

ANTONIO, Bibliotheca Hispanic (Madrid, 1783-8), II, 145; HUNTER, Nomencal, 3rd ed., II, 608-9. MICHAEL OTT.

Molina (Mol. of Molina), Juan Ignacio, naturalist and scientist; b. 20 July, 1740, at Quaronen near Talca (Chile); d. 22 Oct. (12 Sept?), 1782, at Imola (Italy). Molina first studied in Santiago and became a Jesuit when only fifteen. The young scholar excelled in languages (he composed a number of poems), and in the natural sciences. In 1767 he was sent to Italy which grew to be his second home; he was ordained at Imola soon after, and then lived as
a tutor in Bologna. In his leisure time he devoted himself especially to the study of the natural sciences, alchemy, and the art of making water into gold, having in these studies the most prominent historian and geographer of his native American home. Molina published his works in Italian; they all appeared at Bologna, the first one anonymously. He treats of Chile in: (1) “Compendio della storia geografica, naturale e civile del regno del Chile” (1776), 8vo, 245 pp., 1 map, 10 tables; (2) “Saggio sulla storia naturale del Chile” (1827), 8vo, 365 pp., 1 map, 2nd enlarged edition (1810), 4to, 436 pp. These three works have been translated into German (Leipzig, 1786–91); French (Paris); Spanish (2 vols., Madrid, 1788–95); the most complete edition in English (Milwaukee, Wisconsin, 1898; London, 1909, 1925). The original and several of the translations contain Molina’s portrait. As an expression of her gratitude Chile named the town of Molina after him. If these works evidence his learning as a student of natural history, this is equally true of his “Memorie di storia naturale lette in Bologna” (Bologna, 1781, 1782, 8vo), in which Molina was a member laid before the Instituto Pontificio. Another work, “Analoga de los tres reinos de la naturalezza”, is of considerable interest, as it was written by Molina in Spanish, and because it was not published, although Mezzofanti procured the imprimatur in 1820. Molina was highly esteemed by the School of Jerosol, the “genius of the Gramineae, well known throughout Europe, Molinia; and Jussieu in the same year classified the genus Molinia; other generic names (as Molina) are no longer used.

Joseph Rompel.

Molina, Luis de, one of the most learned and renowned theologians of the Society of Jesus, b. of noble parentage at Cuenca, New Castile, Spain, in 1555; d. at Madrid, 12 October, 1600. At the age of eighteen, he entered the Society of Jesus at Alcalá, and, on finishing his novitiate, was sent to take up his philosophical and theological studies at Coimbra in Portugal. So successful was he at the close of his course, he was installed as professor of philosophy at Coimbra, and promoted a few years later to the chair of theology at the flourishing University of Evora. For twenty years, marked by untiring labour and devotion, he expounded with great success the system of St. Thomas Aquinas to eager students. In 1590 he was invited to his native city of Cuenca to devote himself exclusively to writing and preparing for print the results of his long continued studies. Two years later, however, the Society of Jesus opened a special school for the science of moral philosophy at Madrid, and the renowned professor was called from his solitude and appointed to the newly established chair. Here, on his death, he was buried before he had held his new post for half a year. By a strange coincidence on the same day (12 Oct., 1600) the “Congregatio de auxilia”, which had been instituted at Rome to investigate Molina’s new system of grace, after a second examination of his “Concordia”, reported adversely on its contents to Clement VIII. Molina, far from being disheartened, was roused to a profound and original thinker. To him we are indebted for important contributions in speculative, dogmatic and moral theology as well as in jurisprudence. The originality of his mind is shown quite as much by his novel treatment of the old scholastic subjects as by his labours along new lines of theological study.

Molina’s chief contribution to the science of theology is the “Concordia”, on which he spent thirty years of the most assiduous labour. The publication of this work was facilitated by the valuable assistance of Cardinal Albert, Grand Inquisitor of Portugal and librarian of the Order of T. E., having given the new famous work reads: “Concordia liberi arborum gratiae donis, divina praeacientia, providentia, praedestinatione et reprobatione” (Lisbon, 1588). As the title indicates, the work is primarily concerned with the difficult problem of reconciling grace and free will. In view of its purpose and principal contents, the book may also be described as a scientific vindication of the Tridentine doctrine on the permanence of man’s free will under the influence of efficacious grace (Sess. VI, cap. v-vi; can., iv-v). It is also the first attempt to offer a strictly logical explanation of the great problems of grace and free will, foreknowledge and providence, and predestination to glory or reprobation, upon an entirely new basis with the meeting of seemingly obvious objections. This new basis, on which the entire Molinist system rests, is the Divine scientia media. To make clear its intrinsic connexion with the traditional teachings, the work takes the form of a commentary upon several portions of the “Summa” of St. Thomas (I, Q. xiv, a. 13; Q. xix, a. 16; QQ. xxii.

MOLINISM

MOLINISM

ing parties, and in 1596 demanded that the documents be sent to the Vatican. To settle the controversy he instituted in 1598 a special “Congregatio de Auxiliis.” He was a man of great mortification to the very end of his life.

A biography and bibliography together with a portrait of Molina may be found in the Cologne edition of his De justitia et jure, i (1755). It bears the title E. Molina, S.J. vita morumque brevis, ad omnem utique addombrato autque operum Catalogus. There is no modern critical biography. See MODERNE IN Kirchens., v. v.; SOMMENVOLGIZED, ossentia et coeminentia de J. C. J., v. 1107-79; H. HENZL, Influenzator, I (2nd ed.), 47 sqq.

J. POHLE.

Molinism, the name used to denote one of the systems which purpose to reconcile grace and free will. This system was first developed by Luis de Molina, and was adopted in its essential points by the Society of Jesus. It is opposed by the Thomistic doctrine of grace—the term Thomism has a somewhat indifferent meaning—whose chief exponent is the Dominican Bañez. Along lines totally different from those of Molina, this subtle theologian endeavours to harmonize grace and free will on principles derived from St. Thomas. Whereas Molinism tries to clear up the mysterious relation between grace and free will by starting from the rather clear concept of freedom, the Thomist, in turn, endeavours to dispel the important misgivings and accusations of his adversaries. This edition bears the title: “Liberi arbitrii cum gratiae donis etc. concordia, aliers sui parte auctori” (Antwerp, 1695, 1699, 1705; new edition, Paris, 1876). To-day this is the only standard edition. After the lapse of nearly a century, the Dominican Fr. Hyacinth Serry, in his “Historia Congregationis de auxiliiis” (Louvain, 1700; Antwerp, 1709) accused Molina of having omitted many assertions from his Antwerp edition of the “Concordia,” which were parts of the Lisbon edition. But Father Liviens de Meyer, S.J., subjected the two editions to a critical comparison, and supplemented the “Concordia.” For that reason there were only of secondary moment, and that Serry’s accusation was thus groundless. Meyer’s work bears the title, “Historia controversiarum de auxiliiis” (Antwerp, 1708). De Molina was not less eminent as a moralist and jurist than as a speculative theologian.

A proof of this is his work “De Justitia et jure” (Cologne, 1583; 2 vols., Venice, 1614; 5 vols., Cologne, 1733). On broad lines Molina not only develops therein the theory of law in general and the special juridical questions arising out of the political economy of his time (e.g., the law of exchange, the law of property), but also at length and in full detail questions concerning the juridical relations between Church and State, pope and prince, and the like. It is a sad fact, that, in order to justify the brutal persecution of the Jesuits in France, the Benedictine Clémence (Extrait des assertions portueuses etc., Paris, 1672) ransacked even this solid work and contributed to make of it a mere collection of blemishes. This is but one of the many misfortunes which at that time of unrest fell so heavily, and as a rule so undeservedly, on the Society of Jesus (cf. Dollinger, “Moralcreatigkeiten”, Munich, 1889, p. 337).

The work “De Hispanorum primigeniiori origine et natura” (Alcalá, 1573; Cologne, 1588) is often attributed to Molina; in reality it is the work of another jurist of the same name, who was born at Uraso in Andalusia.

As a man, priest, and religious, Molina commanded the respect and esteem of his bitterest adversaries. During his whole life his virtues were a source of edification to all who knew him. To prompt obedience he contributed to make of it a virtue; in reality it is the work of another jurist of the same name, who was born at Uraso in Andalusia.

As a man, priest, and religious, Molina commanded the respect and esteem of his bitterest adversaries. During his whole life his virtues were a source of edification to all who knew him. To prompt obedience he contributed to make of it a virtue; it was of the highest moral purity and dignity, and being well known for having been asked what he wished done with his writings, he answered in all simplicity: “The Society of Jesus may do with them what it wishes”. His love for evangelical poverty was most remarkable; in spite of his bodily infirmity, brought on by overwork, he never sought any mitigation in the matter of either clothing or food. This system was first developed by Luis de Molina, and was adopted in its essential points by the Society of Jesus. It is opposed by the Thomistic doctrine of grace—the term Thomism has a somewhat indifferent meaning—whose chief exponent is the Dominican Bañez. Along lines totally different from those of Molina, this subtle theologian endeavours to harmonize grace and free will on principles derived from St. Thomas. Whereas Molinism tries to clear up the mysterious relation between grace and free will by starting from the rather clear concept of freedom, the Thomist, in turn, endeavours to dispel the important misgivings and accusations of his adversaries. This edition bears the title: “Liberi arbitrii cum gratiae donis etc. concordia, aliers sui parte auctori” (Antwerp, 1695, 1699, 1705; new edition, Paris, 1876). To-day this is the only standard edition. After the lapse of nearly a century, the Dominican Fr. The work “De Hispanorum primigeniiori origine et natura” (Alcalá, 1573; Cologne, 1588) is often attributed to Molina; in reality it is the work of another jurist of the same name, who was born at Uraso in Andalusia.
ment which he can never lose without annihilating his own nature. Man must of necessity be free in every state of life, actual or possible, whether that state be the purely natural (status pura nature), or the state of original justice in paradise (status justitiae originalis), or the state of fallen nature (status naturae lapsa), or the state of regeneration (status naturae regeneratae), so that the will chosen to be the instrument of God's will, he would necessarily degenerate in his nature and sink to the level of the animal. Since the purely natural state, devoid of supernatural grace and lacking a supernatural justice, never existed, and since the state of original justice has not been re-established by Christ's Redemption, man's present state alone is to be considered. But how can we determine the relation between grace and free will? In spite of original sin and concupiscence man is still free, not only with reference to ethical good and evil in his natural actions, but also in his supernatural salutary works in which Divine grace co-operates with his will. Molinism escaped every suspicion of Pelagianism by laying down at the outset that the soul with its faculties (the intellect and will) must be first constituted by prevenient grace a supernatural principle of operation in actus primo, before it can, in conjunction with the help of the supernatural concursus of God, elicit a salutary act in actus secundo. Thus, the salutary act is itself an act of grace rather than of the will; it is the co-action of God and man, and not, as the supernatural element of the act is due to God and its vitality and freedom to man. It must not be imagined, however, that the will has such an influence on grace that its consent conditions or strengthens the power of grace; the fact is rather that the supernatural principle of grace is first transformed into the vital energy of the will, as a supernatural concursus, excites and accompanies the free and salutary act. In other words, as a helping or co-operating grace (gratia adiuvans seu cooperans), it produces the act conjointly with the will. According to this explanation, not only does Divine grace make a supernatural act possible, but the act itself, though free, is wholly dependent on grace, because it is grace which makes the salutary act possible and which stimulates and assists in producing it. Thus the act is produced entirely by God as First Cause (Causa prima), and also entirely by the will as second cause (causa secunda). The unprejudiced mind must acknowledge that this exposition of the question incurring the suspicion of Pelagianism or Semi-pelagianism.

When the Thomists propound the subtiler question, through what agency does the will, under the influence and impulse of grace, cease to be a mere natural faculty (actus primus) and produce a salutary act (actus secundus), or (according to Aristotelian terminology) pass from potency into actuality, the Molinists answer without hesitation that it is no way due to the Thomistic predetermination (predeterminatio sive praemotio physica) of the will of God. For such a causal predetermination, coming from a will other than our own, is a denial of self-determination on the part of our own will and destroys its freedom. It is rather the will itself which holds the key, under the restrictions mentioned above, renders the prevenient grace (gratia praevieniens) co-operative and the completely sufficient grace (gratia vere sufficient) efficacious; for, to produce the salutary act, the free will need only consent to the prevenient and sufficient grace, which it has received from God. This theory reveals further the paradoxical fact that in the act of the will, God enters into the salutary act itself (actus secundus) only by means of a concomitant supernatural concursus (concursus simulaneous, gratia cooperans). The act, in so far as it is free, must come from the will; but the concursus praevius of the Thomists, which is ultimately identical with God's predestination of the free act, makes illusory the free self-determination of the will, whether in giving or withholding its consent to the grace. The two elements of the free act are thus to be understood as the concomitant grace and of efficacious grace (gratia efficax). Whereas Thomism derives the invariable success of efficacious grace from the very nature of this grace, and assumes consequently the grace to be efficacious intrinsically (gratia efficax sive cooperans), Molinism insists that the efficacy of grace to the free co-operation of the will and consequently admits a grace which is merely extrinsically efficacious (gratia efficax ab extrinsico). It is the free will that by the extrinsic circumstance of its consent makes efficacious the grace offered by God. If the will gives its consent, the grace which in itself is sufficient becomes efficacious: if it withheld its consent, the grace remains inefficacious (gratia ineficac), and it is due—not to God, but solely to the will that the grace it reduced to one which is merely sufficient (gratia minores sufficient). This explanation gave the Molinists an advantage over the Thomists, and that is, that they have safeguarded thereby the freedom of the will under the influence of grace, but especially because they offered a clearer account of the important truth that the grace, which is merely sufficient and therefore remains inefficacious, is nevertheless always really sufficient (gratia vere sufficient). Thus it would undoubtedly produce the salutary act for which it was given, if on the will could consent to concursus. Thomism, on the other hand, is confronted by the following dilemma: Either the grace which is merely sufficient (gratia minores sufficient) is able by its own nature and without the help of an entirely different and new grace to produce the salutary act for which it was given, or it is not: if it is not able, then this sufficient grace is in reality insufficient (gratia ineficac), since it must be supplemented by another; if it is able to produce the act by itself, then sufficient and efficacious grace do not differ in nature, but by reason of something extrinsic, namely in that the will gives its consent in one case and withholds it in the other. If then, when possessed of absolutely the same grace, one may be predeterminable and another remain obdurate, the inefficacy of the grace in the case of the obdurate sinner is due, not to the nature of the grace given, but to the sinful resistance of his free will, which refuses to avail itself of God's assistance. But for Thomism, which assumes an intrinsic and essential difference between sufficient and efficacious grace, so that sufficient grace become efficacious must be supplemented by a new grace, the explanation is by no means so easy and simple. It cannot free itself from the difficulty, as is possible for Molinism, by saying that, be it the refractory attitude of the will, God would have bestowed this supplementary grace. For, since the sinful resistance of the will, which is inherent in the act, is to be referred to a physical premotion on the part of God, as well as the free co-operation with grace, the will, which is predetermined ad unum, is placed in a hopeless predicament. On the one hand the physical premotion in the form of an efficacious grace, which is necessary to produce the salutary act, is lacking to the will, and, on the other, the entity of the past, free and efficacious act of Molinism, placed by God as the Prime Mover (Motor primus). Whence then is the will to derive the impulse to accept or to reject the one premotion rather than the other? Therefore, the Thomists conclude that the Thomists cannot lay down the sinful resistance of the will as the cause of the inefficacy of the grace, which is merely sufficient.
At this stage of the controversy the Thomists urge with great emphasis the grave accusation that the Molinists, by their undue exaltation of man's freedom of will, seriously circumscribe and diminish the supremacy of God. But this is contrary to the warning of St. Paul, that we must not glory in the work of our salvation as though it were our own (I Cor. iv, 7), and to his teaching that it is Divine grace which does not only give us the power to act, but "worketh also in us to will and to accomplish" (Phil. ii, 13); it is contrary also to the constant doctrine of St. Augustine, according to whom our free salutary acts are not our own work, but the work of grace.

The consideration of these serious difficulties leads us to the very heart of Molina's system, and reveals the real Gordan knot of the whole controversy. For Molinism attempts to meet the objections just mentioned by the doctrine of the Divine scientia media. Every one and the chief object that the idea of efficacious grace includes the free consent of the will, and also that the decree of God to bestow an efficacious grace upon a man involves with metaphysical certainty the free co-operation of the will. From this it follows that God must possess some infallible source of knowledge by means of which he knows from all eternity with metaphysical certainty, whether in the future the will is going to co-operate with a given grace or to resist it. When the question has assumed this form, it is easy to see that the whole controversy resolves itself into a discussion on the foreknowledge which God has of the free future acts; and thus the two opposing systems on grace are ultimately founded upon a priori logical grounds. Both systems are confronted with the wider and deeper question: What is the medium of knowledge (medium in quo) in which God foresees the (absolute or conditioned) free operations of His rational creatures? That there must be such a medium of Divine foreknowledge is evident. The Thomists answer: God foresees all future events (and by possibility) freely, and man in the eternal decrees of His Own will, which with absolute certainty produce praeveniendo as definite prae-determinaciones ad unum, all (absolute and conditional) free operations. With the same absolute certainty with which He knows His own will; He also foresees clearly and distinctly in the decrees of His will all future acts of man. However, the Molinists maintain that, since, as we remarked above, the predetermining decrees of the Divine Will must logically and necessarily destroy freedom and lead to Determinism, they cannot possibly be the medium in which God infallibly foresees future free acts. Rather these decrees must presuppose a special knowledge (scientia media) of the state of affairs, which at all times what attitude man's will would in any conceivable combination of circumstances assume if this or that particular grace were offered it. And it is only when guided by His infallible foreknowledge that God determines the kind of grace He shall give to man. If, for example, He foresees by means of the scientia media that St. Peter, after his denial of Christ, shall freely co-operate with a certain grace, He decrees to give him this particular grace and none other; the grace thus conferred becomes efficacious in bringing about his repentance. In the case of Judas, on the other hand, God, foreseeing the future resistance of this Apostle to a certain grace of conversion, decrees to give another grace which in itself was really sufficient, but remained inefficacious solely on account of the refractory disposition of the Apostle's will. Guided by this scientia media God is left entirely free in the disposition and distribution of grace. On His good pleasure alone it depends to whom He will give the supreme gift of final perseverance, to whom He will send a grace that He cannot withdraw, and to whom He will receive into Heaven, whom He will exclude from His sight for ever. This doctrine is in perfect harmony with the dogmas of the gratuity of grace, the unequal distribution of efficacious grace, the wise and inscrutable operations of Divine Providence, the absolute impossibility to merit final perseverance, and lastly the immutable decrees to glory or damnation; nay, more, it brings these very dogmas into harmony, not only with the infallible foreknowledge of God, but also with the freedom of the created will. The scientia media is thus in reality the cardinal point of Molinism; with it Molinism stands or falls. This doctrine of the scientia media is the battle-field of the two theological schools; the Jesuits were striving to maintain and fortify it, while the Dominicans are ever putting forth their best efforts to capture or turn the position. The theologians who have come after them, unhampered by the traditions of either order, have followed some the doctrine of the Jesuites, some the Dominican system.

The conviction directed against Molinism at its rise was, that its shibboleth, the scientia media, was a sheer invention of Molina and therefore a suspicious innovation. The Molinists on the other hand did not hesitate to hurl back at the Thomists this same objection with regard to their promotio physica. In reality both accusations were equally unfounded. As long as there is an historical element of the dogmas, it is natural that, in the course of time and under the supernatural guidance of the Holy Ghost, new ideas and new terms should gain currency. The deposit of faith, which is unchangeable in substance but admits of development, contains these ideas from the beginning, and they are brought to their full development by the inspired labors of a Pascal, Molina, or Fesquet. The idea of the scientia media Molina had borrowed from his celebrated professor, Pedro da Fonseca, S.J. ("Commentar. in Metaphys. Aristotelis", Cologne, 1615, III), who called it scientia mixta. The justification for this name Molina found in the consideration that, in addition to the Divine knowledge of the existing state of affairs (scientia visionis), there must be a third kind of "intermediate knowledge", which embraces all objects that are found neither in the region of pure possibility nor strictly in that of actuality, but partake equally of both extremes and in some sort belong to both kinds of knowledge. In this class are numbered especially those free actions, which, though never destined to be realized in historical fact, would come into existence if certain conditions were fulfilled. A hypothetical occurrence of this kind the theologians call a conditional future occurrence (actus liber conditionatus futuro seu futuribilis). In virtue of this particular kind of Divine knowledge of the state of affairs, it was possible for the Holy Ghost to instruct his hearers that the inhabitants of Tyre and Sidon would have done penance in sackcloth and ashes, if they had witnessed the signs and miracles which were wrought in Corozain and Bethsaida (cf. Matt., xi, 21 sq.). We know, however, that such signs and miracles were not wrought and that the inhabitants of Tyre and Sidon were not converted. Yet God had infallibly foreseen from all eternity that this conversion would have taken place if the condition (which never was realized) of Christ's mission to these cities had been fulfilled. Who will doubt that God in His omniscience foresaw distinctly what any inhabitant of New York would do throughout the day, if he were now in his situation? It is true that a number of Thomists, for example Lemastra ("De div. gratia auxilii"), Salamancus, 1611,
pp. 574 sqq.), denied, if not the existence, at least the infallibility of God’s knowledge concerning the conditioned free future, and attributed to it only great probability. But, from the time that such eminent theologians as Alvarez, Gonet, Gotti, and Billuart succeeded in harmonizing the infallibility of this Divine knowledge with the freedom of man, by the subtle theory of hypothetical Divine decrees, there has been no Thomist who does not uphold the omniscience of God also with regard to conditioned events. But have they not then become supporters of the scientia media? By no means. For it is precisely the Molinists who most sternly repudiate these Divine decrees with rigidity and absoluteness, as the deathknell of man’s freedom. For the very purpose of securing the freedom of the will and in no way to do violence to it by a physical premonition of any sort, the Molinists insisted all along that the knowledge of God precedes the decrees of His will. They thus kept this knowledge free and uninfluenced by any antecedent absolute or conditioned decree of God’s will. Molinism is pleaded to the following principle: The knowledge of God precedes as a guiding light the decree of His will, and His will is in no way the source of His knowledge. It was because by their scientia media they understood a knowledge independent of any decrees, that they were most sharply assailed by their opponents.

II. LATER DEVELOPMENT OF MOLINISM.—Thus far we have learned that the central idea of Molinism lies in the principle that the infallible success of efficacious grace is not to be ascribed to its own intrinsic nature, but to the Divine scientia media. The Society of Jesus has ever since clung tenaciously to this principle, but with the inward admitting itself bound to manifest all the assertions and arguments of Molina’s “Concordia”, on many points of secondary importance its teachers are allowed perfect freedom of opinion.

First of all it was clear to the Jesuits from the beginning and the disputations before the Congregatio de Auxilia (q. v.) did but strengthen the conviction, that a more perfect, more fully developed, and more accurate exposition of the Molinistic system on grace was both possible and desirable. As a modification of Molinism we are usually referred in the first place to that expansion and development, which afterwards took the name of Congrism (q. v.), and which owes its formal form to the joint labours of Bellarmine, Suarez, and Leses. As Congrism shows in detail, the system received its name from the gratia congrua, i.e. a grace accommodated to circumstances. By such is understood a grace which, owing to its internal relationship and adaptation to the state of the recipient (his character, disposition, education, place, time, etc.), produces its effect in the light of the scientia media with infallible certainty, and thus is objectively identical with efficacious grace. The expression is borrowed from St. Augustine, as when he says: “Cujus autem misericert, sic eum vocat, quomodo sit ei congruere, ut vocantem non respuit” (Ad Simplicianum, I, Q. ii, n. 13). Consistently then with this terminology, the grace which is merely sufficient in itself, is called gratia media with infallible certainty, which has not a congruity with the circumstances, and is therefore inefficacious. This term also is sanctioned by St. Augustine (l. c.), for he says: “Illi enim electi, qui congruerunt vocati; illi autem, qui non congruente neque contemperabantur vocationi, non electi, quia non securi, quamvis vocati”. This doctrine soon was advanced by Molina to this extent, that inefficacious grace and merely sufficient grace are made to differ even in acto primo—not indeed in their internal nature and physical entity, but in their moral worth and ethical nature—inasmuch as the bestowal of an ever so weak gratia congrua is an incomparably greater benefit of God than that of an ever so powerful gratia incongrua, the actual inefficacy of which God foresees from all eternity. Though Molina himself had taught this doctrine (“Concordia”, Paris, 1876, pp. 450, 466, 522, etc.), it seems that among his followers some extreme Molinists unduly emphasized the power of the will over grace, thus drawing upon themselves the suspicion of Semipelagianism. As a last Caneta of Belledonne, who advocated such one-sided Molinistic views, and who cannot have been mere imaginary adversaries; against them he skillfully strengthened the tenets of Congrism by numerous quotations from St. Augustine.

As was natural the later Molinism underwent considerable changes, and was improved by the unwearying labours of its authors. The scientia media—the most important factor in the whole system—on a deeper philosophical and theological basis, and to demonstrate its worth from a dogmatic point of view. The task was a very difficult one. The theory of the Thomistic decrees of the Divine will having been eliminated as the infallible source of God’s knowledge of free acts belonging to the divine future, some other theory had to be substituted. Molina’s doctrine, which Bellarmine and Becanus had made their own, was soon abandoned as savouring of Determinism. Molina (Concordia, p. 290, 303) transferred the medium of God’s infallible knowledge to the supercomprehensio cordis (supernaturalis, the searching of hearts). This supercomprehension, God knows the most secret inclinations and penetrates the most hidden recesses of man’s heart, and is thus enabled to foresee with mathematical certainty the free resolves latent in man’s will. This unsatisfactory explanation, however, met with the natural objection that the mathematically certain foreknowledge is an effect from its side, nothing more or less than the knowledge of a necessary effect; consequently the will would no longer be free (cf. Kleutgen, “De Deo Uno”, Rome, 1881, p. 322 sqq.). Therefore, the opinion, gradually adopted since the time of Suarez (but repudiated in Molina’s work), maintains that, by the scientia media, God sees the conditioned future acts in themselves, i.e. in their own (formal or objective) truth. For, since every free act must be absolutely determined in its being, even before it becomes actual or at least conditionally possible, it is from all eternity a definite truth (determinata veritas), and must consequently be knowable as such by the omnipotent God with metaphysical certainty. Ratzinger (“De Particul. e vocatione” in a society beyond his fellows, laid a deeper foundation for the theory, and succeeded in getting it permanently adopted by the Molinists. Further proofs for the scientia media may be found in Pohle’s “Dogmatik”, 4th ed., (1908), pp. 206 sq. However, when further investigations were made, so great and well-nigh innumerable were the difficulties which arose against the establishing of the absolute independence of the scientia media in regard to the Divine Will, that the greater number of the modern Molinists either give up the attempt to indicate a medium of Divine knowledge (medium in quo), or positively declare it to be superfluous; nevertheless, there are a few (e.g. Kleutgen, Condordi, Ratzinger) who make a distinction between the question of the actual existence of the scientia media and that of its process. While vigorously maintaining the existence of the scientia media, they frankly acknowledge their ignorance with regard to its process of operation. Thus, the scientia media, which was meant to solve all the mysteries concerning grace, seems to hold the greatest mystery of all. The most favourite statement of all, which may be made in its favour is that it is a necessary postulate in any doctrine of grace in which the freedom of the will is to be safeguarded; in itself it is but a theologoumenon. If we then consider that the Thomists also, with Billuart (De Deo dissert., Vili, art. iv, § 2 ad 6) at their head, call the reconciliation of their propòto
physica with the freedom of the will a "mystery," it would seem that man is not capable of solving the problem of the harmony between grace and free will. Another phrase, the development of his system, is the reason in the case of some of the Molinists have made concessions to the Thomists in the question regarding predestination, without however abandoning the essentials of Molinism. The theory of the *prae tensio physica* agrees admirably with the idea of an absolute predestination to glory irrespective of foreseen merits (prae tensio ante pravisa merita). This is the reason that they appear, except in the case of a few theologians, as a characteristic feature of the Thomistic doctrine on grace. Now, absolute predestination to glory necessarily involves the rather harsh doctrine of reprobation, which, though only negative, is nevertheless equally absolute. For, if God determines to bestow efficacious graces only upon those from whom He takes all eternity from post- to glory, those not contained in his decree of predestination are a priori and necessarily damned.

Some leading Molinists like Bellarmine and Suáres may possibly have been tempted to show the practical possibility of reconciling Molinism with the eternal and unchangeable decree of predestination by sidering with the doctrine of the probability in his questions. Consideration, without, however, sacrificing their allegiance to the *scientia media*. But the majority of Molina's followers, under the lead of Lessius and Vasques, most consistently held to the opposite view. For they admitted only a conditioned predestination to glory which becomes absolute only conditionally upon the foreseen merit of the elect (prae tensio propere—prae tensio merita), and rationally condemned negative reprobation on the ground that it not only limited but even ran counter to the salvific will of God. To-day there is scarcely a convinced Molinist who does not take along this reasonable standpoint. A modification of Molinism of minor importance arose with the new way of thinking in the Dominican schools, the *prae definitio bonorum operum* (by definition, in contradistinction to predestination to glory, theologians understand the absolute, positive, and efficacious decree of God from all eternity, that certain persons shall at some time in the future perform certain good works (cf. Francelin, "De Deo Uno", Paris, 1619). Thus, the Molinist work is either formal or virtual, according as God's decree governing these works and the bestowal of efficacious grace is either formal or merely virtual: Molina, Vasques, and Gregory of Valeriana defended virtual works, while Suárez, Tanner, Silvestre Maurus, and others upheld formal predestination. (See *Concordium;* Geneva, 1746.)

MOLINOS, Miguel de, founder of Quietism, b. at Muni-

mesta, 21 Dec., 1640; d. at Rome, 28 Dec., 1696. In his youth he went to Valencia, where, having been ordained priest and received the degree of doctor, he held a benefice in the church of Santo Tomás and was confessor to a community of nuns. He pretended to be a disciple of the Jesuits and quoted them as his authorities. In 1661 he went to Rome as procurator in the cause of the beatification of Venerable Jerónimo Simón. Here, after residing in various other places, he finally took up his abode at the church of Sant' Alfonso which belonged to the Spanish Discalced Augustinians. The Jesuits and Dominicans having accused him of pernici- ous teachings, the Inquisition ordered his books to be examined. He defended himself well and was acquit-

ted; but again Cardinal d'Estrees, French ambassador at Rome, acting on instructions from Paris, denounced him to the authorities. In May, 1885, the Holy Office formulated charges against him and ordered his arrest. The report of the process was read on 3 September, 1695. After the Cross was shown, the books of Minerva, in the presence of an immense concourse of people gathered for the occasion by means of grants of indulgences; he was declared a heretic, sentenced to life imprisonment, to be perpetually clothed in the penitential garb, to recite the Credo and one hundred of the Rosary, and to make confession four times every year. He died of the effects on his deathbed. He taught interior annihilation, asserting that this is the means of attaining purity of soul, perfect contemplation, and the rich treasure of interior peace; hence follows the licentiousness of impure carnal acts, inasmuch as only the lower, sensual man, instigated by the demon, is concerned in them. In the case of ignorant and simple persons he excused their lascivious acts, and claimed that those committed by himself were not blameworthy, as free will had no part in them.

Innocent XI, in the Bull "Ceclestis Pastor" (2 November, 1687), condemned as heretical, suspect, erroneous, scandalous, etc., sixty-eight propositions to which Molinos had been accused, among which were:

1. Having inserted them in speech and in writing, communicated them to others, and believed them—propositions which are not those of the "Guia Espiritual" alone. Moreover, the pope prohibited and condemned all his works, printed or in manuscript. Molinos had followers in abundance; when he was arrested, it is said that twelve thousand letters from persons who identified him were found in his possession. More than two hundred persons at Rome found themselves implicated in the affair; several communities of nuns practised the "prayer of quiet", while the Inquisitorial proceedings in Italy lasted until the eighteenth century. In Spain, the Bishop of Oviedo, taken to Rome and imprisoned in the Castles of the Angel, the priest Juan de Caudallas, and the Carmelite lay brother Juan de Longas, who corrupted a convent of religious women, were all punished as disciples of
Molinism. In France, the semi-mysticism of Fénélon and Jeanne Guyon (q. v.) took from Molinos only the technique of "La divinazione," for the writing of mirrorGRADE

Molinos may be mentioned the following: (1) "La devoción de la buena muerte" (published at Valencia, 1662, under the name of Juan Bautista Calatalá); (2) "La Guia espiritual" (published first in Italian, at Rome, 1675, then, in Spanish, at Madrid, 1676), approved by various theologians and by ecclesiastical authority, so much so that twenty editions appeared in twelve years, in Latin (1687), French, English (1685), German (1699), etc.; (3) "Tratado de la Comunión eutodiana" (1687).

MENÉNDEZ PELAYO, Heterodoxos españoles, II (Madrid, 1880), 284. He was also a writer of "La devoción de la buena muerte" (Madrid, 1676), and one of the most famous of the "La Guia espiritual." His works were published in Amsterdam (1688), Schrâbel, Jahrbuch für Gesch. theologische, XXIV, XXV (Hamburg and Gota, 1855); RÁFEL URBANO, Guía devoción, ed. by J. Reina, Clarín, apuntar errores Michaelis Molinos (Mossina, 1697); GÓMEZ, Biblioteca antiqua et nova of esrmores escoceses de lasa... en forma de Diccionario biblódico-biográfico, II (Salamanca, 1885), 328.

ANTONIO PÉREZ GÓYENA.

Molitor, Wilhelm (pseudonym, Ulric Rießler and Benno Bronner), poet, novelist, and publicist, born in the Rhine Palatinate, 24 August, 1819; d. at Speyer, 11 January, 1880. After studying philosophy and jurisprudence in Munich and Heidelberg (1836-40), he held various juridical positions in the service of the State from 1843-9. But feeling himself called to the priesthood, the pious young jurist studied theology at Bonn (1849-51) and was ordained on 15 March, 1851. In the same year he became secretary to Bishop Weis of Speyer; on 11 November, 1857, he was elected canon of the cathedral chapter and, soon after, appointed custos of the cathedral, and professor of archaeology and homiletics at the episcopal seminary. He took part in the consultations of the German bishops at Bamberg (1861), and Seligmann (1863), and fulfills (1869) and in 1871 Pius IX summoned him to Rome as a consultant in the labour preparatory to the Vatican Council. From 1875-7 he was a member of the Bavarian Landtag. He was the chief promoter of the Catholic movement in the Palatinate, and advanced the Catholic cause especially by founding of the "Hälscher Presseverein," the daily paper "Rheinpfalz" and the "Katholische Vereindruckerei." His pronounced ultramontane principles made him unacceptable to the Bavarian Government, which in consequence repeatedly prevented his election to the See of Speyer. He is the author of numerous poems, dramas, novels, sketches, on the questions of the day, and a few juridical treatises. A complete bibliography of his works was published in 1881 in Speyer under the title "Domlieder," in 1846. His dramas are: "Kynast" (1844); "Maria Magdalena" (1863, 1874); "Das alte deutsche Handwerk" (1864); "Die Freigelaessene Nero" (1865); "Claudia Procula" (1867); "Julian der Apostat" (1867); "Des Kaisers Gueinstling," a tragedy of the times of the martyr (1874); "Die Blume von Siena" (1873), "Die künstlerische Spiele," containing the dramatic legend "Sankt Ursula Rheinsfahrten," the comedy "Die Villa bei Amalfi," the dramatic tale "Schön Gundel" (1875), and his three festive plays, -"Weihnachtsbaum" (1867), "Das Haus zu Nazareth" (1872), and "Die Weisen des Morgenlandes" (1877). His novels are: "Die Schone Zweierlei" (2 vols. (1844); "Der Jesuit" (1873); "Herr von Syllaubus" (1873); "Memoiren eines Todtenkopfs," 2 vols. (1875); "Der Caplan von Friedlingen" (1877); "Der Gast im Kyffhäuser" (1880). His juridical works are: "Ueber kanonisches Gerichtsverfahren gegen Cleriker" (1873); "Die Immunität des Domes zu Speyer" (1879); "Die Diöze des Rheinpfalzes" (2 vols. (1844); "Das Theater in seiner Bedeutung und seiner gegenwärtigen Stellung" (1866); "Ueber Goethes Faust" (1869); "Brennende Fragen" (1874); "Die Grossmacht der Presse" and "Die Organisation der Katholischen Press" (1866); and a few other works of minor importance. In 1890, the writer wrote "Papst Pius IX in seinen Leben und Wirken," 4th ed. (1875) and in collaboration with Witthäuser "Rom, Wegweiser durch die ewige Stadt" (1866, 1870).

MICHAEL OTT.

Molloy (O'MOLLOY), Francis, theologian, grammarian, b. in King's County, Ireland, at the beginning of the seventeenth century; d. at St. Isidore's, Rome, about 1684. At an early age he entered the Franciscan Order, and was afterwards appointed lecturer in philosophy at the college of Klosternueberg, near Vienna, and in 1645 passed to the chair of theology at Gratz. Here he published a Scotist work on the Incarnation.

About 1650 he was called to Rome and appointed primary professor of theology in the College of St. Isidore. During his residence in Rome he wrote several works on theological subjects and a long Latin poem on Prince Prosper Philip of Spain. In 1676 he published an Irish catechism under the title of "Lúcerna Fidelium seu Fasciculus deceptus de Doctrina Christiann." This work, in the Irish language and characters, was printed at the office of the Congregation of the Propaganda, and was translated into French by the Jesuit, Protector of Ireland. Father Molloy is best known as the author of the first Latin-Irish printed grammar (Grammatica Latina-Hibernica). This book also came from the press of the Propaganda (1677), and is dedicated to Cardinal Massimi, a great friend of the Irish. It is highly esteemed by writers on the Celtic languages, and is largely drawn upon by modern writers on Irish grammar.

WADDINGTON, Scripture Ord. Min. (Rome, 1806); O'NEILL, Irish Writers (Dublin, 1820); BRENNAN, Ecc. History of Ireland; RYAN, Worthies of Ireland (London, 1841); ANDER-SON, Historical Sketches of the Native Irish (London, 1846); DOUGLAS HUTCH, Literary History of Ireland (London, 1863); O'MOLLOY, Irish Proverbs, LT. OF L'AGNEAULX (Dublin, 1868).

GREGORY CLEARY.

Molloy, Gerald, theologian and scientist, b. at Mount Tallant House, near Dublin, 10 Sept., 1834; d. at Aberdeen, 1 Oct., 1906. Monsignor Molloy was a distinguished Irish priest and for many years a very popular and much admired figure in the intellectual life of Ireland. He was educated at Castleknock College, where he was very successful in his studies, and subsequently was ordained in 1857. He then he applied himself with enthusiasm to the study of theology and the physical sciences. In both departments his record was a brilliant one. He was barely twenty-three years of age when in 1857 he became professor of theology at Maynooth, and continued to hold that chair until 1874, when he accepted the presidency of natural philosophy at the Catholic University of Ireland. In 1883 he succeeded Dean Neville of Cork as Rector of the Catholic University, which office he occupied up to the day of his death. The varied nature of Monsignor Molloy's work in connexion with Irish education is very striking. He acted on the commission on manual training in primary schools, and filled the post of assistant commissioner under the Educational Endowment Act. As early as 1880 he became a member of the Senate of the Royal University of Ireland, and remained so till 1882, when he was appointed to a fellowship in the same university. In 1890 he became a member of the governing board of that institution, and in 1897 he was appointed vice-chancellor. He was also a member of the Board of Intermediate Education. As a lecturer and skilled experimentalist, Molloy was very successful in dealing with difficult scientific subjects and rendering them
easily intelligible and interesting to his hearers. Under the auspices of the Royal Dublin Society, of whose council he was a member, he delivered a series of lectures on natural science, and in particular on electricity, in which he was an acknowledged expert. On one occasion he joined issue on the subject of lightning conductors with no less an adversary than Sir Oliver Lodge. Among his works are: "Geology and Revelation" (1870), a fuller and matured treat- ment of a series of papers on geology in its relation with revealed religion, which appeared from time to time in the "Irish Ecclesiastical Record", and dealt with the supposed conflict between geology and revelation, solving the problem of reconciliation; "Outlines of a Course of Natural Philosophy" (1880); "Wonders in Science" (1888), an interesting collection of popular lectures on scientific subjects; "The Irish Difficulty, Shall and Will" (1897). He also translated a number of passages from Dante's "Purgatorio", wrote of the Passion Play at Oberammergau, and was a frequent contributor to several magazines. At the time of his sudden death, due to heart failure, Father Molloy was representing the then University of Aberdeen, and was one of those on whom the honorary degree of Doctor of Laws was conferred by the latter university a few days before. His career is another striking contradiction of the theory that a Catholic clergyman must necessarily be an object of persecution.

**PETER F. CUSICK.**

**Molo, Gasparo** (he wrote his name also Mola and Molo.), skilful Italian goldsmith and planisher, chiefly known as a medalist. (b. (according to Forrer) in Lucca, and d. in Lugano, date of death unknown). He was first active in Milan, then at Mantua, from 1608 at Florence, from which latter period we possess his first signed medal. Here he was maestro delle stampe della moneta. In 1609 he became well known by his medals commemorating the marriage and the ascension of Charles II. In 1609 to 1610 he cast the dies for the talers and the "medals of merit" conferred by the grand duke. According to Kenyon, it is not necessary to suppose that he gave up his connection with the Florentine court at this time, because, in the following years, he struck medals for the court in Mantua, and at Florence. In the Southern Tyrol and Campania, he was especially busy in 1612, 1616 he was again working in Florence in 1614 (certainly in 1615). The medals also, which he made after 1620 for Prince Vincenzo II of Mantua, may very well have been struck at Florence. His further sojourn in Tuscany seems to have been rendered distasteful to him by intrigues. About 1623 he moved to Rome, where he became a die-cutter at the papal mint in place of J. A. Moro, who died in 1623. Here he made a great many coins and medals for Urban VIII (1632-44), Innocent X (1644-55), and Alexander VII (1655-57). His last works date from 1634. As it seems strange that Molo should, at the age of eighty-four, still continue working with unabated strength, it is thought that another artist of his name—perhaps his son—continued Gasparo's work. Indeed, we find in 1639 a G. D. Molo, who might have been a son of Gasparo and who apparently died young; but it is more likely that Gasparo founded a school in Rome, and that his engravers worked according to his instructions and signed themselves with unabated strength, it is thought that another artist of his name—perhaps his son—continued Gasparo's work. Indeed, we find in 1639 a G. D. Molo, who might have been a son of Gasparo and who apparently died young; but it is more likely that Gasparo founded a school in Rome, and that his engravers worked according to his instructions and signed themselves with unabated strength, it is thought that another artist of his name—perhaps his son—continued Gasparo's work. Molokai as foreign and as an apostasy from the worship of the true God. The offerings by fire, the probable identity of Moloch with Baal, and the fact that in Assyria and Babylonia Malik, and at Palmyra Malach-bel, were sun-gods, have suggested to many that Moloch was a fire- or sun-god.

FRANCIS E. GIGOT.

Molokai, an interesting island, one of the North Pacific group formerly known as the Sandwich Islands, or as the Kingdom of Hawaii, then as the Republic of Hawaii, and since annexation by the United States of America as the Territory of Hawaii. This annexation was determined by joint resolution of Congress, signed by the President 7 July, 1898, the completed organization taking effect 14 June, 1900. Of the eight principal islands, Molokai is the fifth in size, 261 sq. miles; also fifth in population (2504, Census of 1900). Its location is between the islands of Oahu and Maui, separated from the latter by a channel only eight miles in width, and having no great depth. Molokai is about thirty-eight miles in length from east to west, and its average width is about seven miles. The island, however, was larger in its original volcanic formation. The mountain backbone was split or displaced, the northern part being submerged in the ocean; and there now remains a line of majestic cliffs and noble headlands that for unique grandeur can hardly be surpassed, the great ocean beating at their base except where the few valleys or gulches form open places and where the cliffs recede like Naomi. The irregular line of bold mountain face varies in height from 2200 feet in the central part of the island to 3500 feet towards the east. Some higher peaks lie farther back in the eastern part, the highest being almost 5000 feet. All of these highlands are strangely seamed by erosion; verdure has crept in, covering the protected parts, and in some places good-sized trees are growing. Except in the very dry times, many riviètes appear, disappear, come again to the surface or in the open places in kaleidoscopic variety. After heavy rains these little streams become torrents and from overhanging places leap into the open, and are caught and carried away by the winds. In the mountains back of the open-faced northern coast, many wild deer are found. A coral reef, about half a mile in width, fringes the southern coast. The slopes to the south and lower-lying parts are used for grazing. Owing to the uncertainty of the supply of water, the island is not well adapted to agriculture. Honey is an important export. Some attempt has been made at sugar planting, without much success. This picturesque and lovely island is favored in being out of the cyclone belt, and in having no snakes.

LEPER SETTLEMENT.—The entire northern coast of Molokai has but one projection of land. The gulches are merely open places, like the mouth of a pocket, but just about in the central part of the coast, where the cliff is 2200 feet, there is at its base the Leper Settlement Peninsula (52 miles from Honolulu, 47 miles from the mouth of a horseshoe shape, about two miles wide near the cliff (pali), and projecting about two miles into the ocean. Around the extreme point this new coast line is from 100 to 150 feet high; nearer the pali it is not so much; at Kalawao, the eastern side, about fifty feet only; and at Kalaupapa, the western side, it is even less. An old and very difficult trail over the pali has been improved so that carrying the mails twice a week to and from the steamer landing of Kaluakalakai, on the southern side of the island, is practicable, and occasionally a passenger (usually an official) comes or goes that way. The steamer comes around to the landing at Kalaupapa once a week. This peninsula has been formed by the action of a local volcano, and the main island was formed. The dead crater, Kauhako, occupies a central part of the peninsula, and has a will of blackish water, up the surface keeping on a level with the ocean, its greatest depth being 570 feet. The entire formation is very porous, with many cavernous cavities. Just off Kalawao, and fronting the mouth of Waikalo Valley, are two masses of rock projecting from the sea, one known as Pilikana, the other Ola. Leprosy first appeared in the Hawaiian Islands in 1853. In 1864 its spread had become so alarming that 3 Jan., 1865, in the reign of Kamehameha V, the Legislarate passed "An act to prevent the spread of leprosy", the execution of the law being in the hands of the Board of Health. In 1868-69, there were 274 persons on the islands reported to be lepers. Under the act of 3 Jan., 1865, segregation was begun, and plans were made for a separate island for the lepers. This island was purchased for this in Palolo Valley, Island of Oahu, but when it became known in the neighbourhood, objections were so strong that the effort was abandoned. A site was then secured at Kalihi, near Honolulu, well separated from the other habitations, and in November, 1865, the hospital was established here. This was for retention, examination, and to some extent medical treatment of the lepers or suspects. This was indeed good; but the need was felt of a larger and more permanent settlement, isolated for those declared to be lepers, to be operated in connexion with the Kalihi Hospital, where efforts would continue for the cure of cases in the early stages. In locating a leper settlement the search was soon directed to the Molokai Peninsula, so well protected by the sea in front and by the towering cliff behind. Favored as it is by the wholesome trade-winds from the northeast, a place better adapted could hardly have been found. The Board of Health established its authority here on 6 Jan., 1886. Waikalo Valley, connected with the peninsula on the eastern side, becomes visible from other directions, was first selected, as the rich land there could be cultivated, and the little colony might become self-supporting. This attempt did not succeed, the deep valley being rather moist for habitaa-
tion. Therefore, a good part of the holdings upon the eastern and middle portions of the peninsula were secured and improvements were rapidly made. Hinalo Valley has not been useless, however, but has been used for cultivation of taro. The non-leper residents still remained at Kaluapapa, the steamer landing. In the time of these beginnings (1863-68) Dr. F. W. Hutchinson was President of the Board of Health, and was Minister and Improvement Commissioner from 26 April, 1865, until 11 Dec., 1872. Mr. R. W. Meyer, a resident of the mountain-top above the settlement, was Board of Health Agent and attended to the business. He continued as agent, the practical and very efficient business manager of the Leper Settlement until his death, 12 June, 1897.

The physician at Kalihi Hospital reported 2 March, 1866, having received 158 lepers, 57 of whom were sent to Molokai Asylum, 101 remaining at Kalihi Hospital for treatment. In sending to Molokai, some difficulty attended the separating of relatives. Therefore, a few non-leper relatives were allowed to go along as helpers or Kokuas. Some cattle and sheep were also sent to Molokai. For Kalihi Hospital, and Molokai Asylum (for settlement, as it generally became known later), the total amount of expenses in 1866 was $10,012.48.

Matters went on pretty well at first, but after some time an ugly spirit developed at Molokai. Drunken and lewd conduct prevailed. The easy-going, good-natured people seemed wholly changed. Thus the President of the Board of Health reported at some length in 1868; but he was able to state that a change for the better had come. Improvements had been made at Molokai, including the building of an hospital. Mr. and Mrs. Walsh had been employed to take charge in February, 1867, relieving Mr. Leparat, who had resigned. Mr. and Mrs. Walsh to act as schoolmaster and magistrate. Mrs. Walsh as nurse. This 1868 report gives the number of lepers received at Molokai as 179, the number remaining at the Kalihi Hospital as 43, the total amount of expenses for Kalihi Hospital and Molokai Settlement since 1866 amounting to $24,803.60.

From this time on, efforts were continually made to render the segregation and treatment of lepers more effective. Many difficulties were met and overcome. To keep good order in those early years was always difficult. The lepers were increasing in number. Nearly all who came to the settlement were located at Kalawao, on the eastern side of the peninsula, the leper settlement practically continuing there for many years. In 1890 a better supply of water was brought from Waikaloa and the settlement was extended to Kalapapa, the steamer landing. A reservoir was constructed midway on the ridge between Kalawao and Kalapapa. Previous to that time a pipe was laid from a small reservoir in Waialea Valley, between Waikaloa and Kalawao, and extended only partly through Kalawao. At Kalapapa, two miles distant, the water was pumped up into the Waialua Valley in containers upon horses and donkeys. The people at Kalapapa were chiefly non-lepers who lived there before settlement times. Their holdings (kuleanas) had not yet been secured for the lepers as those at Kalawao had been. This was done, however, in 1894, since, after the waterpipe was laid to Kalapapa, the people had begun to drift to that way, and the public buildings also, the shops, etc., had gradually been moved to that place. Therefore it was wisely determined that, in the interest of good order, as well as for convenience, the Government should own and control the entire peninsula and all of its approaches, the non-lepers being so accommodated. This was quite thoroughly accomplished in 1894.

**FATHER DAMIEN AND THE FRANCISCAN SISTERS.**

It is the name of Father Damien, however, that has made Molokai known throughout the whole world. He came to the Molokai Settlement to remain, 11 May, 1873. Good order in the settlement was somewhat precarious. Damien's determined character proved to be of great value. Besides his priestly offices, there was opportunity for his efforts at every turn. With a hungry zeal for work, he accomplished many things for the good of the place; he helped the authorities, and brought about a good spirit among the people. Ten years later (1883) the Franciscan Sisters came to Honolulu from St. Mary's, N. Y., having been engaged by the Hawaiian Government. They expected coming to the settlement at once, but the authorities concluded that conditions there were unsuitable, that better order must be secured, and some improvements made in buildings, etc. So the sisters remained at Kakaako Branch Hospital, near Honolulu, for about six years, a certain number of newly gathered lepers being retained there. This hospital was given up when the sisters came to Molokai. At the settlement in 1883 conditions would indeed have been intolerable for the sisters, and the same was true in 1886 when the writer joined Father Damien; but matters were being gradually improved. At last three sisters came to Kalapapa 15 Nov., 1888. Bishop Home for girls and women had been built. Two more sisters came 6 May, 1889, Robert Louis Stevenson coming by the same boat for a visit. Father Damien died 15 April, 1889. His death, after such a life, arrested the world's attention. A spontaneous outburst of applause from everywhere at once followed. The sixteen years of labour on Molokai made a record that seemed unique to the world at large. The world knew very little about lepers, and Father Damien's life came as a startling revelation of heroic self-sacrifice. He is acknowledged the Apostle of the lepers, and whatever others may do in the same field will help to perpetuate his fame and honour. A monument was offered by the people of England, and accepted by the Hawaiian Board of Health. It was given a place at Kalapapa, not far from the steamer landing, near the public road now called "Damien Road", adjoining the sisters' place at Bishop Home. The monument in itself is interesting, being an antique cross, fashioned and adapted from stone cutting of about the sixth century, such as was found in the ruins of the Seven Churches of Clonmacnoise on the river Shannon, Ireland. It was transferred by the Board of Health to the Catholic Mission on 11 Sept., 1893, the Bishop coming to receive and bless it. Two miles away, at the other end of the Damien Road, in Kalawao, the body of Father Damien lies, close by the church, where the Pandanus tree stood that sheltered him on his arrival in 1873. Over this grave stands a simple cross with the inscription on one side, "Father Damien", on the other,
"Damien Deveuster". The strong wooden coffin was placed in an excavation, and imbedded in a solid block of concrete. Since Father Damien's time, two men have usually been on duty at the settlement, one at Kalawao, the other at Kalaupapa. Father Pamphile Deveuster, Damien's brother, was here in 1895-7; he returned to Belgium, and died there 29 July, 1898.

GOVERNMENT AND THE LEPERS. — Public sentiment over the islands has always supported the Government in carrying out the law concerning lepers; official activity, although somewhat varying, has on the whole made fair progress; at times political interests have not been entirely favourable.

The first home at Kalawao, for orphan boys and helpless men, was begun in 1886 under Father Damien, with a few old cabins at the first, two large buildings being added in 1887-8, all irregular and provisional. The Government, however, recognized it as a home 1 January, 1889. Three Franciscan Sisters came to this Kalawao Home, 15 May, 1890, and the mother-superior visited it occasionally. In 1892-4 the present Baldwin Home was constructed, and put into use in May and June of 1893. The sisters were replaced 1 November, 1895, by four Brothers of the Picpus Order. Up to the present time (1910) the home has had, including those still living, 976 inmates. The Board of Health has always employed an experienced physician and other officials for the settlement. For many years the Hawaiians had strange ideas about regular physicians; now they would call on one and this continued at the settlement up to about 1902. They would, however, always take medicine from the brothers or sisters, and have had a friendly feeling for the Japanese treatment. It has been put in use, dropped, and revived many times. The elder Dr. Goto introduced it at Kakaako in 1886. Good order and favourable conditions were especially noteworthy in 1893. A glance over the records of the next ten years shows continued improvements in the water supply, enlarging of medical service, etc. Total expenses for segregation, support, and treatment of lepers for six years, ending 31 December, 1903, were $575,888.86.

In 1906 the buildings owned by the Government numbered 298; those owned by private parties numbered 150. In 1908 the lepers at Molokai numbered 791: of these, 693 were Hawaiians, 42 Chinese, 26 Portuguese, 6 Americans, 5 Japanese, 6 Germans, 2 South Sea Islanders, 1 Dane, 1 French Canadian, 1 Swede, 2 Porto Ricans, 1 Filipino, 1 Tahitian, 1 Russian, 1 Corean, 1 British Negro, 1 Hollander. The number of lepers at the settlement on 31 December was 115; it kept increasing until in 1890 the number reached 1213. Since then there has been a decrease until, 31 December, 1908, the number was 771. In 1908 the plan adopted in the earliest days (1865-69), of attempting to cure new cases, or any that seemed promising, before being sent to Molokai, has been abandoned. This new work could be more effective than in the early time because of the great advancements science has made in the past forty years. This new work is now carried on at Kalalau as it was over forty years ago, but in better buildings and under far greater advantages.

The general outfit at the Molokai Settlement is about complete: establishments for the medical department, hospital, dispensary, nursery, etc. There are bath houses and drug departments at the homes, and special houses for the sick. At Kalaupapa there are the poʻi factory, the shops, and warehouses, and the residences of the officials pleasantly located and well supplied with conveniences. A large building is used for outpatients, for white lepers, the furniture being furnished by generous friends throughout the islands. There are two Catholic churches, and several of other denominations. At Kalawao the most prominent features are Baldwin Home and the U.S. Leprosarium. This leprosarium is probably the greatest institution of its kind in the world. The appropriation by Congress was generous. The buildings are extensive, and the local improvements are based on scientific policy and latest invention, and everything in fact that present-day science can provide. Another new addition recently added by the U.S. Government is a fine lighthouse, a pyramidal concrete structure, the height of which is visible for about twenty-four miles.

C., 1903); Maio, Hawaiian Antiquities (Honolulu, 1905); Quinlan, Volcanoes in Hawaii (N.Y., 1904); Idem, Hawaiian Volcanoes (London, 1904); Alexander, A Brief History of the Hawaiian People (New York, 1901-99); Hiram, Hawaiian Annals (Honolulu, 1914-15); Herring, Hawaii and Its Volcanoes (Honolulu, 1910); Blackman, The Making of Hawaii (London, 1901); Bank, Around the World with Leopold (Chicago, 1901); Interior (Honolulu, 1904); Fremont, Report to Soc. of Nat. (Honolulu, 1867); Office of Immigration Board (Honolulu, 1886, 1888, 1904, 1909-10); Boethke, etc., Damien in the Catholic Encyclopedia.

Joseph Dutton.
ever, did not affect its industry. His literary im-
portance lies especially in his editions of ancient writ-
ing. The following may be mentioned: "Chronica
Eusebei, Hieronymi, Prosperi et Matthaei Palmerii"
(Milan, 1475); "Scriptores rei Augustae" (1475);
"Papiae Glossarium" (1476): "Mirabilia mundi" of
Solinus (s. a. s.). A very notable contribution to
hagiography, some of which were published in his
martyro-
logies, and lives of saints, which appeared un-
tilled by the title: "Sanctuarium" (2 folio vols., s. a. s.),
probably printed in 1480, and recently edited (Paris, 1910) by
the Benedictines of Solesmes (Boninus Mombritius,
Sanctuarium seu vitae Sanctorum. Novum editionem
cur. monachi Solesmeses. 2 tomi). He also com-
piled the "Scriptores rei Augustae" (1475), and in his editor-
ship of the ancient writings, and some printed sepa-
ately. Of the latter may be particularly mentioned
"De passione Domini" (reprinted, Leipzig, 1499).

MONACO, PRINCIPALITY AND DIocese OF, situated
on the Mediterranean Sea, on the skirts of the Turbie
and the Tete de Chien mountains, is surrounded on
all sides by the French department of the Maritime
Alps. It possesses something inimitable. With its
beautiful climate, it is one of the most popular win-
ter resorts in Europe. Its principal resources are
the fishery of the gulf, the cultivation of fruit trees (olive,
orange, lemon), and the Casino of Monte Carlo, es-
established in 1856, whose revenues are sufficient to free
the inhabitants of the principality from the burden of
taxation.
The capital consists of two large bor-
oughs: the old Monaco, which is built on a promon-
ty that extends 875 yards into the sea and encloses
the harbour; the other two are Condamine and Monte
Carlo. From ancient times until the nineteenth cen-
tury the port of Monaco was among the most im-
portant of the French Mediterranean coast, but now
it has lost all commercial significance. Among the
notable constructions of the principality are the an-
cient fortifications, the old ducal palace which contains
beautiful frescoes by Annibale Carracci, Orazio Fer-
rari, and Carlone, the cathedral, built (1884–87) in the
Byzantine style, by Prince Albert III, the Casino of
Monte Carlo, and the monumental fountain of the
pulchra viridescens. It has been important to the Phœnicians, who, on the promontory upon which the
town is built, erected a temple to the god Mel-
kart, called Monocô, solitary, that is, not con-
ected with the cult of Ashtoreth; whence the town
derived its name, which is Moneque, in Provençal.
In the early Middle Ages the neighbouring lords often
contended with each other for the possession of this
important port, which later was occupied by the Sara-
cenas; it was taken from them in the tenth century by
Count Grimaldi, in whose family the principality re-
 mains to this day. Formerly, it comprised Mentone
and Roquebrune. The Grimaldi often had to defend
themselves against Spanish or Genoese fleets; the most
famous block of this port was the town of Perpignan,
which failed. In 1619 Prince Honoreus II, with the
assistance of the French, drove the Spaniards from
Monaco, and since that time the principality has been
under the protection of France. During the Revolu-
tion, Monaco was annexed to France, but the prin-
cipality was re-established in 1814. A revolution
broke out in 1848, and the resistance of the Prince
Honoreus V, who lost Mentone and Roque-
brune, these cities declaring themselves free republics,
and (1860) voting for their annexation to France.

Monaco belonged to the Diocese of Nice, but, in
1868, it became an abbey nullius, and at the instance
of Prince Charles III, Leo XIII raised it to a diocese,
immediately dependent upon the Holy See, making the
abbot, Mgr Bonaventure Theuret, its first bishop.

U. BENIGNI.

Monad (from the Greek word, μονάς), in the
sense of ultimate, indivisible unit, appears very early
in the history of Greek philosophy. In the ancient
accounts of the doctrines of Pythagoras, it occurs as
the name of the unity from which, as from a principle
(ἀρχή), all number and multiplicity are derived. In
the Platonic "Dialogues" it is used in the plural
(μοναί) as a synonym for the Ideas. In Aristotle,
"Metaphysics" It occurs as the principle of number, itself being devoid of quantity, indivisible and
unchangeable. The word monad is used by the neo-
Platonists to signify the One; for instance, in the
letters of the Christian Platonist Synesius, God is
described as the Monad of Monads. It occurs both in
ancient and medieval philosophy as a synonym for
atom, and is a favourite term with such writers as Gi-
diano Bruno, who speak in a rather indefinite manner
of the minima, or minutely small substances which
constitute all reality. In general, it may be affirmed
that while the term atom, not only in its physical, but
also in its metaphysical meaning, implies merely cor-
poral, or material attributes, the monad, as a rule,
unites mental, spiritual, and material or vital.
The term monad is, however, generally under-
stood in reference to the philosophy of Leibniz, in
which the doctrine of monadism occupies a position
of paramount importance. In order to understand his
disciple (see Leibniz) on this point, it is necessary to
recall that he was actuated by a twofold motive in his
attempt to define a new system of philosophy, in
harmony with the substance and style of his philos-
ophy. He endeavoured to reconcile the doctrine
of the atomists with the scholastic theory of
matter and form, and besides he wished to avoid on
the one hand the extreme mechanism of Descartes,
who taught that all matter is inert, and on the other
the monism of Spinoza, who taught that there is but
one substance, God. All this he hoped to accomplish
by means of his doctrine of monads. Descartes had
defined substance in terms of independent existence,
and Spinoza was merely inferring what was implicitly
contained in Descartes's definition when he concluded
that therefore there is only one substance, the
supremely independent Being, who is God. Leibniz pre-
sents to us a new theory of universal substance, or
monadism, and thus escapes Descartes's doctrine that
matter is by nature inert. At the same time, since the
sources of independent action may be manifold, he es-
capes Spinoza's pantheistic monism. The atomists
had maintained the existence of a multiplicity of mi-
nute substances, but had invariably drifted into a
materialistic denial of the existence of spirits and spir-
Itual forces. The scholastics had rejected this mate-
rialistic consequence of atomism and, by so doing, had
seemed to put themselves in opposition to the current
of modern scientific thought. Leibniz thinks he sees
a way to reconcile the atomists with the scholastics.
He teaches that all substances are composed of minute
particles which, in every case, in the lowest materials,
as well as in the highest spiritual beings, are partly
material and partly immaterial. Thus, he imagines,
the sharp contrast between atomistic materialism and
scholastic spiritualism disappears in presence of the
decision that all differences are merely differences of
degree.

The monads are, therefore, simple, unextended sub-
stances, if by substance we understand a centre of
force. They cannot begin or end except by creation
or annihilation. They are capable of internal activ-
ity, but cannot be influenced in a physical manner by
anything outside themselves. In this sense they are
independent. Moreover, each monad is unique; that

J. P. KIRSCH.
is, there are no two monads alike. At the same time the monads must have qualities; "otherwise," says Leibniz (Monadol., n. 8), "they would not even be entities". There must, therefore, be in each monad the power of representation, by which it reflects all other monads in such a manner that an all-seeing eye could, by looking into one monad, observe the whole universe mirrored therein. This power of representation is different in different monads. In the lowest kind of substances it is unconscious—Leibniz finds fault with the Cartesians because they overlooked the existence of unconscious perception. In the highest kind it is fully conscious. We may, in fact, distinguish in every monad a zone of obscure representation and a zone of clear representation. In the monad of the greatest of dust, for example, the zone of clear representation is very restricted, the monad manifesting no higher activity than that of attraction and repulsion. In the monad of the human soul the region of clear representation is at its maximum, this kind of monad, the "queen monad", being characterised by the power of intellectual thought. Between these two extremes range all the monads, mineral, vegetable, and animal, each being differentiated from the monad below it by possessing a larger area of clear representation, and each being separated from the monad above it by having a larger area of obscure representation. There is then in every created monad a material element, the region of obscure representation, and an intellectual element, the region of clear representation. Everything in the created world is partly material and partly immaterial, and there are no abrupt differences among things, but only differences in the extent of the immaterial as compared with the material. Minerals shade off insensibly (in the case of crystals) into living things, plant life, animal life, and animal consciousness into intellectual thought. All created monads may be called souls. But, as feeling is sometimes more than simple perception, I am willing that the general name monads, or entelechies, shall suffice for those simple substances which have perception only, and that the term souls shall be confined to those in which perceptions are distinct, and accompanied by memory" (Monadol., n. 19). "We ascribe action to the monad in so far as it has distinct perceptions, and passivity, in so far as its perceptions are confused" (ibid., n. 49). If this is the only kind of activity that the monad possesses, how are we to account for the order and harmony everywhere in the universe? Leibniz answers by introducing the notion of Pre-established Harmony. There is no real action or reaction. No monad can influence another physically. At the beginning, however, God so pre-arranged the evolution of the activity of the monads that according as the body evolves its own activity, the soul evolves its activity in such a way as to correspond to the evolution of the body. "Bodies act as if there were no souls, and souls act as if there were no bodies; and yet both act as if one influenced the other" (ibid., n. 81). This pre-established harmony makes the world to be a cosmos, not a chaos. The principle extends, however, beyond the physical universe, and applies in a special manner to rational souls, or spirits. In the realm of spirits there is a subordination of souls to the beneficial rule of Divine Providence, and from this subordination results the "system of souls", which constitutes the City of God. There is, therefore, a moral world within the natural world. In the former God is ruler and legislator, in the latter He is merely architect. The architekton of the City of God is legislator and architect" (ibid., n. 89), because even in the natural world no good deed goes without its recompense, and no evil deed escapes its punishment. Order among monads is thus ultimately moral.

Since Leibniz' time the term monad has been used by various philosophers to designate indivisible centres of force, but as a general rule these units are not understood to possess the power of representation or perception, which is the distinguishing characteristic of the Leibnizian monad. Exception should, however, be made in the case of Renouvier, who, in his "Nouvelle monadologie", teaches that the monad has not only internal activity but also the power of perception.

Monaghan, John James. See Wilmington, Diocese of.

Monarchians, heretics of the second and third centuries. The word, Monarchians, was first used by Tertullian as a nickname for the Patripassian group (adv. Prax., x.), and was seldom used by the ancients. In modern times it has been extended to an earlier group of heretics, who are distinguished as Dynamistic, or Adoptionist, Monarchians from the Modalist Monarchians, or Patripassians.

I. DYNAMISTS, OR ADOPTIONISTS.—All Christians hold the unity (necessary) of God as a fundamental doctrine. By that, the Baptist used to deny the Trinity, and they are with some reason called Monarchians. But the Adoptionists, or Dynamists, have no claim to the title, for they did not start from the monarchy of God, and their error is strictly Christological. An account of them must, however, be given here simply because the name Monarchian has been adhered to in spite of the repeated protests of historians of dogma. But their ancient and accurate name was Theodotians. The founder of the sect was a leather-seller of Byzantium named Theodotus. He came to Rome under Pope Victor (c. 190-200) or earlier. He taught (Philosophumena, VII, xxxv) that Jesus was a man born of a virgin according to the counsel of the Father, that He lived like other men, and was most pious; that at His baptism in the Jordan the Christ came down upon Him in the likeness of a dove, and therefore wonders (Svndimai) were not wrought in Him until the Spirit (which Theodotus called Christ) came down and was manifested in Him. They did not admit that this made Him God, but as He ascended to Heaven (cf. Eph. 4:10) and was thereafter Resurrection. It was reported that Theodotus had been seized, with others, at Byzantium as a Christian, and that he had denied Christ, whereas his companions had been martyred; he had fled to Rome, and had invented his heresy in order to excuse his fall, saying that it was but a man and not God that he had denied. Pope had had less objection to the study of Plato or the Stoics, and that he disliked their purely literal exegesis, which neglected the allegorical sense. They also emended the text of Scripture, but their versions differed, that of Aselepiodotus was different from that of Theodotus, and again from that of Hermophilus; and the copies of Apolloniades did not even tally with those of Theodotus. In another article, The Prophets", that is to say, they followed Marcion in rejecting the Old Testament.

The only disciple of the leather-seller of whom we know anything definite is his namesake Theodotus the banker (οι τραπεζης). He added to his master's doc-
to visit Rome was probably Praxeas, who went on to Carthage some time before 206-208; but he was apparently not in reality a heresarch, and the arguments refuted by Tertullian somewhat later in his book "Adversus Praxeum" were probably those of the Roman Monarchians (see Praxeas).

A. History.—Noetus (from whom the Noetians) was a Smyrnaean (Epiphanius, by a slip, says an Ephyrian). He called himself Moses, and his brother Aaron. When accused before the presbyterate of teaching that the Father suffered, he denied it; but after having made a few discourses he was again interrogated, and expelled from the Church. He died soon after, and did not receive Christain burial. Hippolytus mockingly declares him to have been a follower of Heraclius, on account of the union of opposites which he taught when he called God both visible and invisible, possible and impassible. His pupil Epiphanus came to Rome. As he was not mentioned in the "Syntagma" of Hippolytus, which was written in one of the first five years of the third century, he was not then well known in Rome, or had not yet arrived. According to Hippolytus (Philos., IX, 7), Cleomenes, a follower of Epiphanus, was allowed by Pope Zephyrus to establish a school, which flourished under his approbation and that of Callistus. Hage- gogus, one of his most noted students, was not a Noetian at all, and that he was an orthodox opponent of the incorrect theology of Hippolytus. The same writer gives most ingenious and interesting (though hardly convincing) reasons for identifying Praxeas with Callistus; he proves that the Monarchians attacked in Tertullian's "Contra Praxeum" and "Philosophumena" were not necessarily heretical; he denies that Tertullian means us to understand that Praxeas came to Carthage, and he explains the nameless refuter of Praxeas to be, not Tertullian himself, but Hippolytus. It is true that it is easy to suppose Tertullian and Hippolytus to have misrepresented the opinions of their opponents, but it cannot be said that Sabellius was not a follower of the heretical Noetus, and that Sabellius did not issue from his school; further, it is not obvious that Tertullian would attack Callistus under a nickname.

Sabellius soon became the leader of the Monarchians in Rome, perhaps even before the death of Zephy- rus (208). He is said to have had a brother named Theophilus. He said he was the first to found his views on the Gospel according to the Egyptians, and the fragments of that apocryphon support this statement. Hippolytus hoped to convert Sabellius to his own views, and attributed his failure in this to the influence of Callistus. That pope, however, excommunicated Sabellius c. 220 ("fearing me", says Hippolytus). Hippolytus accuses Callistus of now inventing a new heresy by combining the views of the Monarchians with those of Sabellius, although he excommunicated them both (see CALLISTUS I, POPE). Sabellius was apparently still in Rome when Hippolytus wrote the Philosophumena (between 230 and 235). Of his earlier and later history nothing is known. St. Irenaeus (Against Heresies, II, 1, 1) says that Sabellius was not a follower of Zephyrus, but this seems to rest on the fact that Pentapolis was found to be full of Sabellianism by Dionysius of Alexandria, c. 260. A number of Montanists led by Eshines became Modalists (unless Harmack is right in making Modalism the original belief of the Monta- nists and in regarding Eshines as a conservative).

Irenaeus (or at least his recension) most probably amplified the original Noetianism. There was still Sabellianism to be found in the fourth century. Marcellus of Ancyra developed a Monarchianism of his own, which was carried much further by his disciple, Photinus. Priscillian was an extreme Monarchian and so was Commodian ("Carmen Apol."). 269, 277, 711. The "Monarchian Prologues" to the Gospels found in most old MSS. of the Vulgate, were attrib-

trine the view that Melchisedech was a celestial power, who was the advocate for the angels in heaven. As Jesus Christ was for men upon earth (a view found among later sects.—See MELCHISEDECHANS). This teaching was expressed by the Hebrews and Romans, 3, and refuted at length by St. Epiphanius as Heresy 55, "Melchisedechans", after he has attacked the leather-seller under Heresy 54, "Theodotians". As he meets a series of arguments of both hereticians, it is probable that some writings of the sect had been before Hippolytus, whose lost "Syntagma against all heresies" supplied St. Epiphanius with all his information. After the death of Pope Victor, Theodotus, the banker, and Aselepiodotus designed to raise their sect from the position of a mere school like those of the Gnostics to the rank of a Church like that of Marcion. They held to a certain confessor named Natalius, and persuaded him to be called their bishop at a salary of 150 denarii (34 dollars) a month. Natalius thus became the first antipope. But after he had joined them, he was frequently warned in visions by the Lord, Who did not wish His martyr to be lost outside the Church. He neglected the visions, for the sake of the honour and gain, but finally was scourged all night by the holy angels, so that in the morning with haste and tears he betook himself in sackcloth and ashes to Paphos. From this he urges that the episcopal and clerical, and even of the laity, showing the seals of the blows, and was after some difficulty restored to communion. This story is quoted by Eusebius II (VI, xxviii) from the "Little Labyrinth" of the contemporary Hippolytus, a work composed against Artemon, a late leader of the sect (perhaps c. 225-30), whom he did not mention in the "Philosophumena". Our knowledge of Artemon, or Artemes, is limited to the reference to him made at the end of the Council of Antioch against Paul of Samosata (about 266-268), where that heretic was said to have followed Artemon, and in fact the teaching of Paul is but a more learned and theological development of Theodotion (see Samosata). The sect probably died out about the middle of the third century, and can never have been numerous. All our knowledge of it goes back to Hippolytus. His "Syntagma" (c. 205) is epitomized in Pseudo-Tertullian (Præscript., iii) and Philostratus, and is developed by Epiphanius (Her., liv. iv); his "Little Labyrinth" (with a fragment in V, 28) and "Philosophumena" are still extant. See also his "Contra Noetum" 3, and a fragment "On the Melchis- edechians and Theodotians and Athingani", published by Caspari (Tidskr. für der Evangel. Luth. Kirke, Ny Raekke, VII, 3, p. 307). But the Athingani are a later sect, for which see MELCHISEDECHANS. The Monarchianism of Photinus (q. v.) seems to have been akin to that of the Theodotians. All speculations as to the origin of the theories of Theodo- tians are fanciful. At any rate he is not connected with the Ebonites. The Alogi have sometimes been classed with the Monarchians. Litus in his "Quel- lenkritik der Epiphanius" supposed them to be even more than his "Philosophumena" and others made Logos, and Epiphanius in fact calls Theodotus an ἀναρτωμα of the Alogi; but this is only a guess, and is not derived by him from Hippolytus. As a fact, Epiphanius assures us (Her., 51) that the Alogi (that is, Gaius and his party) were orthodox in their Christ- ology (see MONTANISTS).

Monarchians properly so-called (Modalists) exaggerated the oneness of the Father and the Son so as to make them but one Person; thus the distinctions in the Holy Trinity are energies or modes, not Persons: God the Father appears on earth as Son; hence it seemed to their opponents that Monarchians made the Father suffer and die. In the West they were called Patrocinians, whereas in the East they are usually called Sabellians. The first X.—29
Monarchians

By von Dobich, and P. Corssen to a Roman author of the time of Callistus, but they are almost certain to be the work of Priscillianus, Bishop of Bostra, is vaguely said by Eusebius (H. E., VI, 33) to have taught that the Saviour had no distinct pre-existence before the Incarnation, and had no Divinity of His own, but that the Divinity of the Father dwelt in Him. Origen disputed with him in a council and convinced him of his error. The minutes of the dispute were known to Eusebius and it is clear whether Priscillianus was a Modalist or a Dynamist.

B. Theology.—There was much that was unsatisfactory in the theology of the Trinity and in the Christology of orthodox writers of the Ante-Nicene period. The simple teaching of tradition was explained by philosophical ideas, which tended to obscure as well as to elucidate it. The distinction of the Son from the Father was so spoken of that the Son appeared to have functions of His own, apart from the Father, with regard to the creation and preservation of the world, and thus to be a derivative and secondary God. The unity of the Divinity was commonly guarded by a reference to the unity of origin. It was said that God from the beginning spoke through His Son (as Reason, in vulco cordis, λόγος ἑδιδότος), before the Word was spoken (ἐς ὑπὸ Πατρίς, λόγος πρὸς παροικίαν), or was generated and became Son for the purpose of creation. The Alexandrians alone insisted rightly on the generation of the Son from all eternity; but thus the Unity of God was even less manifest. The writers of the Ante-Nicene period held the traditional Unity in Trinity, but it hardly squares with the Platonism of their philosophy. The theologians were thus defending the doctrine of the Logos at the expense of the two fundamental doctrines of Christianity, the Unity of God and the Divinity of Christ. They seemed to make the Unity of the Godhead in some way inferior to or even something less than the supreme God the Father. This is eminently true of the chief opponents of the Monarchians, Hippolytus, and Novatian. (See Newman, “The Causes of Ariandianism”, in “Tracta theolog. eccl.).” Monarchianism was the protest against this learned philosophising, which, to the simplicity of the faithful looked too much like a mythology or a Gnostic emanationism. The Monarchians emphatically declared that God is one, wholly and perfectly one, and that Jesus Christ is God, wholly and perfectly God. This was right, and even most necessary, and whilst it is easy to see why the theologians like Tertullian and Hippolytus opposed those who held that the Spirit is a separate divine person, it is not easy to see why they opposed this Platonism in general, but it is not evident that they had grasped the principle that the works of God ad extra are common to the Three Persons as proceeding from the Divine Nature; and they seem to have said simply that God as Father is invisible and impassible, but becomes visible and possible as Son. This explanation brings them curiously into line with their adversaries. Both parties represented God as one and alone in His eternity. Both made the generation of the Son a subsequent development; only Tertullian and Hippolytus date it before the creation, and the Monarchians perhaps not until the Incarnation. Further, their identification of the Father and the Son against it, and the violence of the Incarnation. The very insistence on the unity of God emphasized also the distance of God from man, and was likely to end in making the union of God with man a mere indwelling or external union, after the fashion of that which was attributed to Nestorianism. They spoke of the Father as “Spirit” and the Son as “flesh,” and it is surely surprising that the Monarchism of Marcellus should have issued in the Theodotianism of Photinus.

It is impossible to arrive at the philosophical views of Sabellius. Hagemann thought that he started from the Stoic system as surely as his adversaries did from the Platonic. Dorner has drawn too much upon his imagination for the doctrine of Sabellius; Harnack is too fanciful with regard to its origin. In fact we know little of him but that he said the Son was the Father (so Novatian, “De Trin.” 12, and Pope Dionysius relate). St. Athanasius tells us that he said the Father is the Son and the Son is the Father, one in substance, and his teaching was that there are divisions of gifts, but the same Spirit, so that the Father is the same, but is developed into Son and Spirit” (Orat., IV, c. Ar., xxv). Theodoret says he spoke of one hypostasis and a threefold epistasis, whereas St. Basil says he willingly admitted three

Theologically identifying Christ with the one God. “What harm am I doing”, was the reply made by Novatian to those who reproved him for glorifying Christ? They replied: “We too know in truth one God; we know Christ; we know that the Son suffered even as He suffered, and died even as He died, and rose again on the third day, and is at the right hand of the Father, and cometh to judge the living and the dead; and what we have learned we declare” (Hippol., “Contra Naucrat.”). Here we are told that the Father and the Son were really identified, then no denial on their part could prevent the conclusion that the Father suffered and died, and sat at His own right hand. Hippolytus tells us that Pope Zephyrinus, whom he represents as a stupid old man, declared at the instance of Callistus: “I know one God the Father! I know Jesus Christ, the Son of God, and Who suffered”; but he added: “Not the Father died, but the Son”. The reporter is an unsympathetic adversary; but we can see why the aged pope was viewing the simple assertions of Sabellius in a favourable light. Hippolytus declares that Callistus said that the Father suffered with the Son, and that Tertullian was the first to be surprised that the Sabellians did not give to God the Son such essential distinctions as the Son was a man. Hagemann thinks Callistus-Praxeas especially attacked the doctrine of the Apologists and of Hippolytus and Tertullian, which assigned all such attributes as impassibility and invisibility to the Father and made the Son alone capable of becoming visible and manifest, ascribing to Him the work of creation, and all that is true of the Son is true of the Father, and who opposed this Platonizing in general, but it is not evident that they had grasped the principle that the works of God ad extra are common to the Three Persons as proceeding from the Divine Nature; and they seem to have said simply that God as Father is invisible and impassible, but becomes visible and possible as Son. This explanation brings them curiously into line with their adversaries. Both parties represented God as one and alone in His eternity. Both made the generation of the Son a subsequent development; only Tertullian and Hippolytus date it before the creation, and the Monarchians perhaps not until the Incarnation. Further, their identification of the Father and the Son against it, and the violence of the Incarnation. The very insistence on the unity of God emphasized also the distance of God from man, and was likely to end in making the union of God with man a mere indwelling or external union, after the fashion of that which was attributed to Nestorianism. They spoke of the Father as “Spirit” and the Son as “flesh,” and it is surely surprising that the Monarchism of Marcellus should have issued in the Theodotianism of Photinus.

It is impossible to arrive at the philosophical views of Sabellius. Hagemann thought that he started from the Stoic system as surely as his adversaries did from the Platonic. Dorner has drawn too much upon his imagination for the doctrine of Sabellius; Harnack is too fanciful with regard to its origin. In fact we know little of him but that he said the Son was the Father (so Novatian, “De Trin.” 12, and Pope Dionysius relate). St. Athanasius tells us that he said the Father is the Son and the Son is the Father, one in substance, and his teaching was that there are divisions of gifts, but the same Spirit, so that the Father is the same, but is developed into Son and Spirit” (Orat., IV, c. Ar., xxv). Theodoret says he spoke of one hypostasis and a threefold epistasis, whereas St. Basil says he willingly admitted three
MONARCHIA

451

MONARCHIA

aphrodisia in one hypostasis. This is, so far as words go, exactly the famous formula of Tertullian, "tres personae, una substantia," but Sallustius seems to have meant "three modes or characters of one person." The Father is the Monad of whom the Son is a kind of manifestation; for the Father is in Himself silent, inactive (σωφρον, ἀπεργήτητος), and speaks, creates, works, as Son (Athanal., 1, c., 11). Here again we have a parallel to the teaching of the Athanasians: of the person of the Son to be, as it were, identified with the Apologiste to date Sonship from the creative action of God. But we have few texts to go upon, and it is quite uncertain whether Sallustius left any writings. Monarchianism is frequently combated by Origen. Dionysius of Alexandria fought Sallustianism with some imprudence. In the fourth century the Athanasian formula was professed much less than it was in Sallustius and Origen, and indeed the alliance of Pope Julius and Arius with Marcellus gave some colour to accusations against the Nicene formulas as opening the way to Sallustianism. The Fathers of the fourth century (as, for instance, St. Gregory of Nyssa, "Contra Sallustium," ed. Mai) seem to contemplate a more developed formula, as if they were asking for a definition of the "Noetum" and "Philosophumena" and through him, to Epiphanius: the consummation of creation is to consist in the return of the Ἀγγέλος from the humanity of Christ to the Father, so that the original unity of the Divine Nature is after all held to have been temporally compromised, and only in the end will it be restored, etc.

Our chief original authorities for early Monarchianism of the Modalist type are Tertullian, "Adversus Praxean," and Hipppolytus, "Contra Noetum" (fragments) and "Philosophumena." The "Contra Noetum" and the lost "Syntagma" were used by Epiphanius, Hær. 57 (Noetians), but the sources of Epiphanius's Hær. 62 (Sallustians) are less certain. The references by Origen, Novatian, and later Fathers are somewhat indefinite.

The best Catholic exposition of Monarchianism is by Hagerman, Doctrines of the Church (Freiburg, 1884); the best recent account, Harnack, Realencyclopadie s. v. Monarchianismus (1903); Dönhoff, Entwicklungs geschichte der Lehre von der Person Christi, ed. by E. Beyschlag, 1926; Schulte, "Doctrine of the Person of Christ" (5 vols., Edinburgh, 1881-93); Bornemann, Die Taufe Christi in der dogmatischen Beurteilung der vier ersten Jahrhunderte, Leipzig, 1883; Lassmann, "Philosophus Theologus et Calixtus" (1850); Tr. JOHN CHAPMAN.

Monarchia Sicula, a right exercised from the beginning of the sixteenth century by the secular rulers of Sicily, according to which they had final jurisdiction in purely religious matters, independent of the Holy See. This right they claimed on the ground of a papal privilege. The oldest document advanced in support of the claim is a Bull of 1071, 1117, addressed by Urban II to Count Roger I of Sicily (Jaffé, loc. cit., 6582), confirmed this privilege and defined it more clearly. He bestowed upon the same Roger 13 Gelati, a papal privilege to legislate be sent thither, that is a representative of the pope, you in your zeal shall secure the execution of what the legate is to perform (ea videlicet ratione, ut si quando ille ex latere nostrum legatur dirigatur, quem profecto vicarium intelligimus, quae ab eo gerenda sunt, per tuum indigamns effectus mancipientur). Urban II had this the same Roger (together with a papal legate) power to levy taxes by the secular rulers; according to the Bull of Paschal II this meant that, when a papal legate was sent to Sicily to exercise jurisdiction in certain ecclesiastical matters as the pope's representative, he must communicate the nature of his commission to the secular ruler, who would then execute in person the pope's orders. In place of Roger 1 in his absence there was a question not of a jurisdiction of the princes of Sicily independent of the Holy See, but only of the privilege of the secular rulers to execute the precepts of the supreme Church authorities; in other words, the sovereign of Sicily was privileged, but also bound, to carry out papal regulations in his kingdom. As a result of the feudal relationship between the princes of Sicily and the pope, ecclesiastical matters here took on a more pronouncedly political character than elsewhere, and the Church in Sicily was reduced to the greatest dependence upon the secular power. However, up to the beginning of the sixteenth century the privileges enjoyed by Urban II were never invoked or even mentioned. When Ferdinand II of Aragon became King of Sicily, his secretary, Luca Bar beri of Noto in Sicily, undertook to collect the official documents by which the rights of the kings of Sicily, both in ecclesiastical and in secular matters, were clearly determined. To this collection (Calabrosetto) obtained a collection in 1518, the "Libere Monarchiae," meant to prove that the secular rulers of Sicily had always exercised the spiritual power. In this "Libere Monarchiae" the privilege conferred by Urban II in regard to the legatine power was first published. The kings urged it to give a legal basis to the authority they had long exercised over the local Church. They also used it to extend their pretensions that, by virtue of an old papal privilege, they possessed ecclesiastical authority in spiritual matters to be exercised independently of the pope. Despite doubts expressed concerning the genuineness of the Urban document, Ferdinand declared on 22 January, 1518, "As for the Kingdom of Sicily, where we exercise the supervision over the men and the clergy, and the exercise of a number of ecclesiastical rights belonging to the bishops, so that papal jurisdiction was almost wholly excluded.

When Baroniun, in an excursus on the year 1097 in the eleventh volume of his "Annales ecclesiastici" (Rome, 1605), produced solid reasons against the genuineness of Urban II's Bull and especially against the legitimacy of the bull itself, ecclesiastical rights arose, and the Court of Madrid prohibited the eleventh volume from all countries of the Spanish Empire. Baronius omitted the excursus in the second edition of the "Annales" (Antwerp, 1608), but pub-
lished instead a special "Tractatus de Monarchia Sicula". During the War of the Spanish Succession another serious conflict arose between the Papal Curia and the Spanish court in regard to this alleged legitime power. The occasion of the dispute was a question of canon law, and the Spanish court obtained, after Count Victor Amadeus had been made King of Sicily by the Peace of Utrecht and had been crowned at Palermo (1713). On 20 February, 1715, Clement XI declared the Monarchia Sicula null and void, and revoked the privileges attached to it. This edict was not recognized by the monarchs of Sicily, and, when a few years later the island came under the rule of Charles VI of Austria (1711-1713) entered into negotiations with him with the result that the Decree of Clement XI was withdrawn, and the Monarchia Sicula restored, but in an altered form. The king, through the concession of the pope could now appoint the "Judex Monarchiae Sicula", who was at the same time to be the delegate of the Holy See and empowered to decide the most important ecclesiastical and religious matters. On the basis of this concession the kings of Sicily demanded more and more far reaching rights in ecclesiastical affairs, so that fresh struggles with the Holy See constantly arose. The situation grew ever more unbearable. Pius IX tried in vain by amicable adjustments to enforce the essential rights of the Holy See (1846-1878). Besides those who claimed the rights of the papal legate, and, during the service in the cathedral at Palermo, caused the charter of the province, caused the legatine honour to be claimed in the Bull "Suprema" of 28 January, 1864, which was not published with the prescriptions for its execution until 10 October, 1867, Pius IX revoked the Monarchia Sicula finally and formally in the government of Victor Emmanuel II. An ordinance of 1st June, 1868, and the "Judex Monarchiae Sicula", Rinaldi, refused to submit, for which he was excommunicated in 1868. Article 15 of the Italian law of guarantees (15 March, 1871) explicitly revoked the Monarchia Sicula, and the question was thus finally disposed of.

J. P. KINDSCH

Monasteries, Double, religious houses comprising communities of both men and women, dwelling in contiguous establishments, united under the rule of one superior, and using one church in common for their liturgical offices. The reason for such an arrangement was that the spiritual needs of the nuns might be attended to by the priests of the male community, who were associated with them more closely than would have been possible in the case of entirely separate and independent monasteries. The system came into existence almost contemporaneously with monasticism itself, and like it had its origin in the East. Communities of women gathered around religious founders in Egypt and elsewhere, and from the life of the nuns under his rule and their relation to the male communities founded by him. Double monasteries, of which those of St. Basil and his sister, Macrina, may be cited as examples, were apparently numerous throughout the East during the early centuries of monasticism. It cannot be stated with any certainty when the system found its way into the West, though it seems probable that its introduction into Gaul may be roughly ascribed to the influence of Cassian, who did so much towards reconciling Eastern monasticism with Western ideas. St. Cassarius of Arles, St. Aurelian, his successor, and St. Radegundis, of Poitiers, founded double monasteries in the sixth century, and later on the system was propagated widely by St. Columbanus and his followers. Remiremont, Jouarre, Brie, Chelles, Andelys, and Soissons were other well-known examples of the seventh and eighth centuries. From Gaul the idea spread to Belgium and Germany and also to Spain, where it is said to have been introduced by St. Fructuoso in the middle of the seventh century. According to Veys there were in Spain altogether over two hundred double monasteries.

Ireland presents only one known example—Kildare—but probably there were others besides, of which all traces have since been lost. In England most of the early foundations were double; this has been wrongly attributed to the influence of the Anglo-Saxon nuns Educated in Gaul, where the system was then in vogue, but it seems more correct to ascribe it to the religious influence of the missionaries from Iona, since the first double monastery in England was that of St. Hilda at Whitby, established under the guidance of St. Aidan, and there is no evidence to show that either St. Aidan or St. Hilda was acquainted with the double organization in use elsewhere. Whitby was founded in the seventh century, and in a short time England became covered with similar dual establishments, of which Coldingham, Ely, Sheepway, Minster, Wimborne, and Barking are prominent examples. In Italy, the only other countries in which double monasteries are known to have existed, they were not numerous, but St. Gregory speaks of them as being found in Sardinia (Ep. xi), and St. Bede mentions one at Rome (Hist. Eccl., IV, 1). The Danish invasions of the ninth and tenth centuries destroyed the double monasteries of England, and, when they were restored, it was for one sex only, instead of the old community. The system seems to have died out also in other countries at about the same time, and it was not revived until the end of the eleventh century when Robert of Arbrissel inaugurated his reform at Fontevrault and gave the idea a fresh lease of life. It is not surprising to find that such a system was sometimes abused, and hence it was always an object of solicitude and strict legislation at the hands of ecclesiastical authority. Many synodal and conciliar decrees recognized its dangers, and ordered the strictest surveillance of all communications passing between monks and nuns. Too close proximity of buildings was frequently forbidden, and every precaution was taken to prevent any danger to the nuns. Probably it was this scant favour shown by the Church towards it that caused the gradual decline of the system about the tenth century.

In many double monasteries the supreme rule was in the hands of the abbess, and monks as well as nuns were subject to her authority. This was especially the case in England, e.g. in St. Hilda's at Whitby and St. Etheldrada's at Ely, though elsewhere, but more rarely, it was the abbot who ruled both men and women, and sometimes, more rarely still, each community had its own superior independent of the other. The justification for the anomalous position of a woman acting as the superior of a community of men was usually by the abbot that of the Cross, "Woman, behold thy son; Son, behold thy mother"; and it is still further urged that maternity is a form of authority derived from nature, whilst that which is paternal is merely legal. But, whatever may be its origin, the supreme rule of an abbess over both men and women was deliberately revived, and sanctioned by the Western Church, as a revival orders that consisted of double monasteries. At Fontevrault (founded 1099) and with the Bridgetines (1346), the abbess was the superior of monks as well as of nuns, though with the Gilbertines (1146) it was the prior who ruled over both. In the earlier double monasteries both monks and nuns observed the same rule mutatis mutandis; this example was fol-
followed by Fontevraud and the Bridgetines, the rule of the former being Benedictine, while the latter observed the Rule of St. Bridget. But with the Gilbertines, while the rule of the nuns was substantially Benedictine, that of the Augustinian Canons. (See Brightlines; Fontevraud; Gilbertines.) Little is known as to the buildings of the earlier double monasteries except that the church usually stood between the two conventual establishments, so as to be accessible from both. From excavations made on the site of Watton Priory, a Gilbertine house in Yorkshire, it appeared that the separation of nuns from canons was effected by means of a substantial wall, several feet high, which traversed the church lengthways, and it is probable that some similar arrangement was adopted in other double monasteries. No such communities exist at the present day in the Western Church.

G. CYPRIAN ALSTON.

Monasteries, Suppression of.—Under this title will be treated only the suppressions of religious houses (whether monastic in the strict sense or houses of the mendicant orders) since the Reformation. The somewhat more general subject of state encroachments on church property is found treated under such titles as LICITATION; CONDEMMATORY ABBOT; INVESTITURES, CONFLICT OF. The economic motives of state opposition to the tenure of lands by religious corporations (dating from the thirteenth century) are explained under MORTMAIN. The countries dealt with in the present article are: I. Germany, the Iberian Peninsula, and France; II. England and the British Isles; and III. Switzerland, Austria, and Bohemia.

I. Germany, Spain and Portugal, Italy.—A. Germany (including all Austrian Dominions).—The confiscation of religious property following upon the Treaty of Westphalia (1648) had been for the benefit of the state according to experience of previous conquests. Monasteries and innumerable pious foundations disappeared at this time. Towards the middle of the eighteenth century a new movement tended to the destruction of monastic institutions swept over those portions of the German Empire which had remained attached to the Catholic Faith. "Josephinism", as this political and religious movement was afterwards called, taking its name from its foster-father, the Emperor Joseph II, made the Church subservient to the State. The supernatural character of the religious life was ignored; abbeys and convents could be permitted to exist only on giving proof of their material utility. A plan was formulated for the transformation of all religious houses into foundations of a purely ecclesiastical property for the profit of the Catholic Governments in Germany. This was part of a general plan for a redistribution of territory. Frederick II (the Great) of Prussia had taken the initiative and had won over England and France to his idea. The opposition of Maria Theresa, of the Prince Bishop of Mainz, and of the French cardinal, had made the project to fail. The Holy See kept the diplomacy of Prussia in check for some years. To counteract the action of Rome on public sentiment, the partisans of secularization encouraged in Germany the spread of those philosophical errors—Materialism and Rationalism—which were then gaining ground in France (see ENCYCLOPEDIA). The secularization of the universities from Roman influence, withdrawing the universities from Roman influence.

Meanwhile the princes approached the task directly. The Elector Maximilian (Joseph) III (1745-77) began in Bavaria a work of destruction which was carried on by his successors down to the Elector Maximilian Joseph IV. Napoleon's ally, who became King Maximilian I of Bavaria in 1836 (d. 1852). Measures were taken first against the mendicant orders; the secular power began to meddle in the government of the monasteries, a commission being appointed by the civil authorities for that purpose. In the meantime (1773) the suppression of the Jesuits was decreed. About the year 1782 the Elector Charles Theodore (1778-99) obtained the assent of Pope Pius VI to a project for the extinction of several religious foundations. The Elector Maximilian Joseph IV (King Maximilian I) of Bavaria completed the work of destruction, influenced by the policy of his ally, Napoleon I, and assisted by the Count de Montgelas, his chief minister. A rescript of 9 September, 1800, deprived the religious orders in Bavaria of all property rights and prohibited them to receive novices. The convents of the mendicant orders (Franciscans, Dominicans, Augustinians, Carmelites) and the religious houses of women were the first to fall. Then came the turn of the Canons Regular and the Benedictines. The cathedral monasteries were not spared. Among the abbeys that disappeared in Bavaria was the famous Hofkloster, dedicated to St. Blasien of the Black Forest (the community, however, being admitted, in 1809, to the monastery of St. Paul), St. Emmeran of Ratisbon, Andechs, St. Ulrich of Augsburg, Michaelsberg, Benedictbeuren, Ettal, Kempten, Metten, Oberaltach, Ottobeuren, Scheyern, Tegernsee, Wessobrunn.

The monasteries of North Germany met with the common fate of all church property. On the left bank of the Rhine they were suppressed when that territory was annexed to France by the Peace of Lunéville, 9 February, 1801. Their property was disposed of by the Diet of Ratisbon (3 March, 1801—February, 1803), the deplorable business having been left to the provincial diet which, however, in the exception of novices was forbidden. In the Netherlands, the Principality of Liège, and the portions of Switzerland annexed by France, the religious houses disappeared completely.

In the territories immediately subject to the House of Hapsburg, the secularization of monastic houses had begun more than thirty years before this. In pursuance of the policy with which his name has been especially associated, the Emperor Joseph II (d. 1790) forbade the teaching of theology in monasteries, even to the young religious, and also the reception of novices. Intercourse with the Holy See was placed under imperial control. It was forbidden to receive any irregularly elected abbots or abbesses, or to concede the regular discipline of communities. Commandatory abbots were appointed. Monasteries were deprived of the parishes belonging to them. Superiors had to account to the emperor's representatives for the disposition of their incomes. Theological works printed outside the Empire could not be used. Such were the principal lines of action of the humiliation, of which Kaunitz was the minister. All this, however, was but the prelude to a decree of suppression which was issued on 17 March, 1783.

This decree applied to all monasteries, whether of women or of men, judged useless by the standards of Josephinism; their revenues were taken to increase the secular treasures of the secular establishments useful to religion and humanity. The dioceses of the Low Countries (then subject to the House of
Hapsburg) lost one hundred and sixty-eight convents, abbeys, or priories. In all, 738 religious houses were suppressed, among them the temples of Jehovah and the Virgin.

In anticipation of this disaster, Pius VI had conferred on the bishops extensive privileges. They had power to dispense expelled religious, both men and women, from wearing their habit, and, in case of necessity, to dispense them from the simple vows. They were to secure for them a pension—but, as this was generally insufficient, many of them were reduced to poverty. The government transformed the monasteries into hospitals, colleges, or barracks. The victims of the persecution remained faithful to their religious obligations. Their ordinances took great care of them, Cardinal de Frankenberg, Archbishop of Mechlin, affording a particularly brilliant example in this respect. The Abbey of Molen (near Liége) was spared; discreet of the sufferings of the monks, the houses were even affiliated to it; but on the death of Abbot Urban I (1783), the emperor placed over the monks a religious of the Pious Schools as commendatory abbot. The monasteries of Styria were soon closed, though some houses—e.g., Kremmen, Lambach, Admont—escaped the devastation. All the other religious houses of Bohemia had not yet recovered from the ravages caused by the wars of Frederick II and Maria Theresa, when they had to encounter this fresh tempest. Breunau, Emmaus of Prague, and Raigern, with a few monasteries of Cistercians and Premonstratensians, escaped complete ruin. The emperor abdicated in 1792. The government, going to Verona in 1793, restored the monastery of St. Martin of Pannonia and its dependencies. In Hungary the Benedictines were entirely wiped out. The death of Joseph II put an end to this violence, without, however, stopping the spread of those opinions which had incited it. His brother, Leopold II (d. 1792) allowed things to remain as he found them; but the revolution of 1792 and the reign of Joseph II undertook to repair some of the ruin, permitting religious to pronounce solemn vows at the age of twenty-one. The Hungarian Abbey of St. Martin of Pannonia was the first to profit by this benevolence, but its monks had to open the gymnasia in it and its dependencies. The monasteries of the Tyrol and Salzburg had escaped the ruin. These countries were attached to Austria by the Congress of Vienna (Sept., 1814—June, 1815). The monks were allowed to re-enter. The celebrated Abbey of Reichenschau alone did not arise from its ruins. The princely Abbey of St. Gall, too, had been dissolved during the Wars of Revolution and the Empire, though there was a project, at the Congress of Vienna, to re-establish it, but without giving it back its lands: the abbot would not accept the conditions thus imposed, and the matter went no further.

The Swiss monasteries were exposed to pillage and ruin during the wars of the Revolution. The government of the Helvetian Republic was hostile to them, they recovered a little liberty after the Act of Mediation, in 1803. But the situation changed after 1832. The Federal Constitution, revised at that time, suppressed the guarantees granted to convents and religious foundations. During the long period of persecution and confiscation in Switzerland, from 1835 to 1848 (for which see Lucerne), the monks of Mariastein sought refuge in Germany, and then in France and Austria; those of Mury were sheltered at Griess (Tyrol), others, like Disentis, fell into utter ruin. The Swiss Benedictines then went to the United States, where they founded the Swiss-American congregation.

B. The Iberian Peninsula. The constitution of the 12th of May, 1808, by which Napoleon imposed on it suppressed all religious congregations and confiscated their property, in accordance with the conqueror's general policy. They were re-established in 1814 by King Ferdinand, whom the War of Independence had restored to the Throne. Their existence was again threatened by the Revolution of 1820, when the Cortes decreed the suppression of religious orders, leaving only a few houses to shelter the aged and infirm. It must be said that, in this case, the effect of the generally anti-religious principles actuating the revolutionaries was reinforced by the impoverishment of the nation by the Napoleonic wars, by the revolt of its American colonies, and by changed economic conditions. Ferdinand VII, who was restored to the throne by the French Army, hastened to annul the decrees of the Cortes (1823). The monasteries and their property were given back to the religious, who were enabled once more to live in community. But in October, 1835, a decree of the government, inspired by Juan de Mendi- sabal, minister of finance, again suppressed all the religious foundations of Catalonia, which had not been consulted, approved of this measure next year, and promulgated a law abolishing vows of religion. All the movable and immovable property was confiscated and the income assigned to the sinking fund. Objects of art and books were, in general, reserved for the museums and public libraries, though some of the churches were secularized. The religious orders were dispersed. Large quantities of furniture and other objects were sold, the lands and rights of each house alienated, while speculators realized large fortunes. Certain monasteries were transformed into barracks or devoted to public purposes. Others were sold or abandoned to pillage. In 1859 the government gave to the bishops those religious houses which had not already been disposed of. Numerous conventual churches were turned over for parish use.

The religious were promised a pension not to exceed one franc a day, but it was never paid. No mercy was shown even to the aged and the infirm, who were not allowed to wait for death in their beds. Some of them were forced to sell their valuables in order to get the small change that would restore them their religious liberty, as had happened twice before, but the event proved otherwise. The destruction was irrevocable, some religious sought a refuge in Italy and in France. The greater number either petitioned the bishops to incorporate them in their dioceses or went to live with their families. The people of the Northern provinces, who are very devoted to Catholicism, did not associate themselves directly with the measures taken against the religious; so much cannot be said for those of the South and of the large towns, where the expulsion of religious sometimes took the appearance of a popular insurrection: convents were pillaged and burned, reli- gious arrested and often treated less humanely: here the authorities contented themselves with confiscating property and suppressing privileges; but the nuns continued to live in community. With time the passion and hatred of the persecutors diminished somewhat. The monks of the Abbey of Montserrat in Catalonia were able to come together again. The religious orders which escaped the clergy for the Spanish colonies, such as the Dominicans, Augustinians, and Franciscans, were authorized to retain some houses.

The monasteries in Portugal met the same fate as those in Spain, and at about the same time (1833). Only the Franciscans charged with religious duties in the Portuguese colonies were spared.

C. Italy.—During the eighteenth century, while Josephinism was rampant in Catholic Germany, Leopold, afterwards the Emperor Leopold II, tried to emulate in some degree the emperor's anti-monastic policy. But the general persecution of religious orders, which began with the wars of the Rev- olution and the Empire had effected a complete transformation in that country. France inspired with her anti-religious tendencies the new governments established by Napoleon, Church property was confiscated; monasteries and convents were suppressed,
though congregations devoted to the care of the sick and to the instruction of poor children were tolerated here and there as, for instance, in the Kingdom of Italy, founded in 1835. The repressive measures could not be enforced in other localities. In Tunisia the duke made a grant to the monasteries, in exchange for the lands that they had lost. In the Pontifical States things reverted to the ancient order: 1824 houses for men and 612 for women were re-established. In Naples the religious had diminished by at least one-half.

The period of peace, however, was not destined to endure: the establishment of Italian unity was fatal to the religious orders. The persecution was resumed in the constitutional Kingdom of Sardinia, which was about to become the agent and the type of united Italy. Cavour imposed this anti-religious policy on King Victor Emmanuel. He proposed first to secularize the monastic property; the money thus obtained would be used for the payment of the diocesan clergy. The king finally gave his sanction to a law which suppressed, in his own states alone, 334 convents and monasteries, containing 4280 religious men and 1200 nuns. This ruin and depredation proceeded uniformly with the cause of Italian unity, since the Piedmontese constitution and legislation did not go beyond the equal severities of the religious orders and benefices not charged with cures of souls were declared useless, and suppressed; the buildings and lands were confiscated and sold (1866). The Government paid allowances to the surviving religious. In some abbeys—as at Monte Cassino—the members of the community were allowed to remain as care-takers. The Papal States were subjected to the same policy after 1870. The Italian authorities contented themselves with depriving the religious of their legal existence and all they possessed, without raising any obstacles to a possible reconstruction of regular communities. A certain number of monasteries have thus been able to exist and carry on their work, owing something to the activity of a community of zealous missionaries, who, though the survival of the religious existence is precarious, and an arbitrary measure of the Government might at any time suppress them. After the general dissolution, some Italian religious—for instance, the Olivetans and the Canons Regular of St. John Lateran—crossed the Alps and established houses of their respective orders in France. J. M. Basses.

Suppression of Monasteries in England under Henry VIII.—From any point of view the destruction of the English monasteries by Henry VIII must be regarded as one of the great events of the sixteenth century. They were looked upon, in England, at the time of Henry's breach with Rome, as one of the great burdens which were consequently removed. They were called "the great standing army of Rome". One of the first practical results of the assumption of the highest spiritual powers by the king was the supervision by royal decree of the ordinary episcopal visitations, and the appointment of a layman—Thomas Cromwell—as the king's vicar-general in spirituals, with special authority to visit the monastic houses, and to bring them into line with the new order of things. This was in 1534; and, some time prior to the December of that year, arrangements were already being made for a systematic visitation. A document, dated 21 January, 1535, allows Cromwell to conduct the visit through "commissaries"—rather than persons named as commissaries, to be busy with "the affairs of the whole kingdom". It is now practically admitted that, even prior to the issue of these commissions of visitation, the project of suppressing some, if indeed not all, of the monastic establishments in the country, had been not only broached, but had become part of Henry's practical policies. It is well to remember this, to the advantage of an unexpected light upon the first dissolutions: the monasteries were doomed prior to these visitations, and not in consequence of them, as we have been asked to believe according to the traditional story. Parliament was to meet early in the following year, 1536, and, with the twofold object of replenishing an exhausted exchequer and of anticipating opposition on the part of the religious to the proposed ecclesiastical changes, according to the royal design, the Commons were to be asked to grant Henry the possessions of at least the smaller monasteries. It must have been felt, however, by the astute Cromwell, who is credited with the first conception of the design, that to succeed, a project such as this must be sustained by strong yet simple reasons calculated to appeal to the popular mind. Some decent pretext had to be found for presenting the proposed measure of suppression and confiscation to the nation, and it can hardly now be doubted that the device of blackening the characters of the monks and nuns was deliberately resorted to. The Act of Supremacy was passed on June 1533, although the visitatorial powers of the bishops were not suspended until the eighteenth of the following September. Preachers were moreover commissioned to go over the country in the early autumn, in order, by their invectives, to educate public opinion against the monks. "These pulpit orators were of three sorts, first, the "squealers"; who denounced the monks and nuns to the face, and called them "hypocrites, sorcerers, and idle drones, etc."; (2) "preachers", who said the monks "made the land unprofitable"; and (3) those who told the people that, "if the abbeys went down, the king would never want any taxes again". This last was a favourable argument of Cranmer, in his sermons at St. Paul's Cross. The men employed by the Government were distrusted with the task of getting up the required evidence—were chiefly four, Layton, Leigh, Aprice, and London. They were well fitted for their work; and the charges brought against the good name of some at least of the monasteries, by these chosen emissaries of Cromwell are, it must be confessed, sufficiently striking to bear out the modern notion of wholesale corruption.

The visitation seems to have been conducted systematically, and to have passed through three clearly defined stages. During the summer the houses in the west of England were subjected to examination; and this portion of the work came to an end in September, when Layton and Leigh arrived at Oxford and Cambridge respectively. In October and November the visitors changed the field of their labours to the eastern and southeastern districts; and in December we find Layton advancing through the midland counties to Lichfield, where he met Leigh, who had finished his work in the religious houses of Huntingdon and Lincolnshire. Thence they proceeded to the north, and the city of York was reached on 11 January, 1536. But with all their haste, to which they were urged by Cromwell, they had not proceeded very far in the work of their northern inspection before the meeting of Parliament.

From time to time, whilst on their work of inspection, the visitors, and principally London and Leigh, sent brief written reports to their employers. Practically all the accusations made against the good name of the monks and nuns are contained in the letters sent in this way by the visitors, and in the document, or documents, known as the "Comptera Monastica", which were drawn up at the time by the same visitors and forwarded to their employers. Other evidence as to the state of the monasteries at this time is forthcoming, and the inquirer into the truth of
these accusations is driven back ultimately upon the worth of these visitors’ words. It is easy, of course, to dismiss inconvenient witnesses as being unworthy of credit, but in this case a mere study of these letters and documents is quite sufficient to cast considerable doubt upon their testimony, whilst an examination into the subsequent careers of these royal inquisitors will more than justify the rejection of their testimony and render it wholly unworthy of belief. (G. J. F. de Gay, “Henry VIII and the English Monasteries,” 1, xi.)

It is of course impossible to enter into the details of the visitation. We must, therefore, pass to the second step in the dissolution. Parliament met on 4 February, 1536, and the chief business it was called upon to transact was the consideration and passing of the bill for the dissolution of the monastic houses. It may be well to state exactly what is known about this matter. We know for certain that the king’s proposal to suppress the smaller religious houses gave rise to a long debate in the Lower House, and that Parliament passed the measure with great reluctance. It is more than remarkable, moreover, that in the preamble of the Act itself Parliament is careful to throw the entire responsibility for the measure upon the king, and to declare, if words mean anything at all, that they took the truth of the charges against the good name of the religious, solely upon the king’s “declaration” that he knew the charges to be true. It must be remembered, too, that one simple fact prevents us from assuming that the king actually knew whether in the form of the visitors’ notes, or of the mythical “Black-book”—could have been placed before Parliament for its consideration in detail, still less for its critical examination and judgment. We have the “Compters” documents—the findings of the visitors, whatever they may be worth, with their accompanying statements andadvice, and it may be easily seen that no distinction whatever is made in them between the greater and lesser houses. All are, to use a common expression, “tarred with the same brush”; all, that is, are equally smirched by the filthy suggestions of Layton and Leigh, of London and Apsley. “The idea that the smaller monasteries rather than the larger were particular abodes of vice,” writes Dr. Gairdner, the editor of the State papers of this period, “is not borne out by the ‘Compters’.” Yet the preamble of the very Act, which suppressed the smaller monasteries because of their vicious living, declares positively that “in the great and solemn Monasteries of the realm, religion was well observed and provided for, and all that the king desired was, that the state of the monastic houses in the counties be such as to be presented to the king’s satisfaction.”

As early as April, 1536 (less than a month from the passing of the measure), we find mixed commissions of officials and country gentlemen appointed in consequence to make surveys of the religious houses, and instructions issued for their guidance. The returns made by these commissioners are of the highest importance in determining the moral state of the religious houses at the time of their dissolution. It is now beyond dispute that the accusations of Layton and Leigh, and Cromwell’s visitors were made prior to the passing of the Act of Suppression of 1536, and therefore prior to, not after (as most writers have erroneously supposed), the constitution of these mixed commissions of gentry and officials. The main purpose for which the commissioners were nominated was of course to find out what was the true condition of the monastic houses, and to take over such in the king’s name, as now by the late Act legally belonging to His Majesty. The gentry and officials were however instructed to find out and report upon “the conversation of the lives” of the religious, or in other words they were specially directed to examine into the moral state of the houses visited. Unfortunately, comparatively few of the returns of these mixed commissions are now known to exist; although some have been discovered, which were unknown to Dr. Gairdner when he made his “Calendar” of the documents of 1536. Fortunately, however, the extant reports deal expressly with some of the very houses against which Layton and Leigh have made their partialcriptures: in the first place, those in which the suppression was resolved upon and made legal, it did not matter to Henry or Cromwell that the inmates should be described as “evil livers”; and so the new commissioners returned the religious of these same houses as being really “of good and virtuous conversation”, and this, not in the case of one house or district only, but generally, among all the monasteries visited. They found that the inmates given of the houses are almost uniformly good.”

To prepare for the reception of the expected spoils what was known as the Augustmentation Office was established, and Sir Thomas Pope was made its first treasurer, 24 April, 1536. On this same day instructions were issued for the guidance of the mixed commissions in the work of dissolving the monasteries. According to these directions, the commissioners, having interviewed the superior and shown him the “Act of Dissolution”, were to make all the officials of the house swear to answer truthfully any questions put to them. They were then to examine into the moral and financial state of the establishment, and to report upon the land granted, the estate of the religious and “the conversation of their lives.” After that, an inventory of all the goods, chattels, and plate was to be taken, and an “indenture” or counterpart of the same was to be left with the superior, dating from 1 March, 1536, because from that date all had passed into the possession of the king. These documents were to be in the keeping of the king, and, if necessary, for the safe custody of the king’s property. At the same time the commissioners were to issue their commands to the heads of the houses not to receive any more rents in the name of the convent, nor to spend any money, except for necessary expenses, until the king’s pleasure should be known. They were, however, to be strictly enjoined to continue their care over the lands, and “to sow and cultivate” as before, until such time as some king’s farmer should be appointed and relieve them of this duty. As for the monks, the officer was told “to send those that will remain in religion to other houses with letters to the governors, and those that wish to go to the world to my lord of Canterbury and the lord chancellor that they may have their benefices or livings when such could be found for them.”

One curious fact about the dissolution of the smaller monasteries deserves special notice. No sooner had the king obtained possession of these houses under the money value of £200 a year, than he commenced to
refounded some "in perpetuity" under a new charter. In this way no fewer than fifty-two religious houses in various parts of England gained a temporary respite from extinction. The cost, however, was considerable, as the various sums of money, due to the property was again confiscated and the religious were finally swept away, before they had been able to repay the sums borrowed in order to purchase this very slender favour at the hands of the royal legal possessor. In hard cash the treasurer of the Court of Augmentation acknowledges to have received, as merely "part payment of the various sums of money, due to the king for fines or compositions for the toleration and continuance" of only thirty-three of these refounded monasteries, some £5948 6s. 8d. or hardly less, probably, than £60,000 of present-day money. Sir Thomas Pope, the treasurer of the Court of Augmentation, ingeniously adds that he has not counted the value of the new plate, all the vessels and ornaments of the houses, and each of the said monasteries, before the close of the account, have come into the King's hands by surrender, or by the authority of Parliament have been added to the augmentation of the royal revenues". "For this reason, therefore," he adds, "the King has allowed all sums of money still due to him, as the residue of their plate, to him, as a part payment of the new foundations "in perpetuity", which in reality as the event showed meant only the respite of a couple of years or so, varied considerably. As a rule they represented about three times the annual revenue of the house; but sometimes, as in the case of St. Mary's, Winchester, which was fined £333 6s. 8d. in 1537, it was re-established with the loss of some of its richest possessions.

It is somewhat difficult to estimate correctly the number of religious houses which passed into the king's possession in virtue of the Act of Parliament of 1536. Stowe's estimate is generally deemed sufficiently near the mark, and he says: "the number of the houses which suppressed was 469". In respect to the value of the property, Stowe's estimate would also appear to be substantially correct when he gives £30,000, or some £300,000 of present-day money, as the yearly income derived from the confiscated lands. There can be no doubt, however, that subsequently the promises of large annual receipts from the old religious estates proved illusory, and that, in spite of the efforts of the Crown farmers, the monastic acres furnished far less money for the royal purse than they had previously done under the thrifty management and personal supervision of their former owners.

As to the value of the spoils which came from the wrecked and dismantled houses, where the waste was everywhere so great, it is naturally difficult to appraise the value of the property, but it was a waste where the money was sent in kind into the king's treasury, and the proceeds from the sales of the lead, bells, stock, furniture, and even the conventual buildings. It is, however, reasonably certain that Lord Herbert, following Stowe, has placed the amount actually received at too high a figure. Not, of course, that these goods were not worth what Sir Thomas Pope supposed them to be. But the possession of the possessions might be plundered in the process of transfer, and the possessor, it may be not much beyond the mark to put these "Robin Hood's pennyworths", as Stowe calls them, at about £1,000,000 of present-day money.

Something must necessarily be said of the actual process which was followed by the Crown agents in dissolving these lesser monasteries. It was much the same in every case, and it was a somewhat long process, since the work was not all done in a day. The rolls of accounts, sent into the Augmentation Office by the commissioners, show that it was frequently a matter of six to ten weeks before any house was finally dissolved. The agent appointed to the task, was to sell the property and the goods in the buildings; to demolish the various buildings; to sell the plate and vestments; and to make up the accounts. The chief commissioners paid two official visits to the scene of operations during the progress of the work. On the first they assembled the superior and his subjects in the Chapter House, announced to the community and its dependents their impending doom; called for and defaced the convent seal, the symbol of corporate existence, while the King's business could be transacted; desecrated the church; took possession of the best plate and vestments "unto the King's use"; measured the lead upon the roof and calculated its value when melted; counted the bells; and appraised the goods and chattels of the community.

Then they turned to the scene of their next operation, leaving behind them the agents and workmen to carry out the designed destruction by stripping the roofs and pulling down the gutters and rain pipes; melting the lead into pigs and founders, throwing down the bells, breaking them with sledgehammers and packing the metal into barrels ready for the visit of the speculator and his bid for the spoils. This was followed by the work of collecting the furniture and selling it with the aid of the townsmen, the wainwrights, shutters, and doors by public auction or private tender. When all this had been done, the commissioners returned to audit the accounts and to satisfy themselves generally that the work of devastation had been accomplished to the king's contentment—that the nest had been destroyed and the birds scattered. What had been a monument of architectural beauty in the past was now a "bare roofless choir, where late the sweet birds sang".

No sooner had the process of destruction begun simultaneously all over the country than the people began at last to realize that the benefits likely to accrue to them out of the plunder were most illusory. What this was understood to mean, it is now too late to present a petition to the king from the Lords and Commons, pointing out the evident damage which must be done to the country at large if the measure were carried out fully; and asking that the process of suppression should be at once stopped, and that the lesser houses, which had not yet been dissolved under the authority of the king, should be allowed to stand. Nothing, of course, came of this attempt. Henry's appetite was but whetted by what had come to him, and he only hungered for more of the spoils of the Church and the poor. The action of the Parliament in 1536 in permitting the first measure to become law made it in reality much more difficult for Henry to draw back; and in mere terms of time it paved the way for the general dissolution. Here and there in the country active resistance to the work of destruction was organized, and in the case of Lincolnshire, Yorkshire, and the North generally, the popular rising of the "Pilgrimage of Grace" was caused in the main, or at least in great measure, by the desire of the people at large to save the royal house from ruthless destruction. The failure of the insurrection of the "Pilgrimage of Grace" was celebrated by the execution of twelve abbots and, to use Henry's own words, by a wholesale "tying-up" of monks. By a new and ingenious process, appropriately called "Dissolution by Attainder" an abbey was considered by the royal advisers to fall into the king's hands by the disappearance or constituting the death of the abbot. In this way several of the larger abbeys, with all their revenues and possessions, came into Henry's hands as a consequence of the "Pilgrimage of Grace".

The Parliament of 1536, it will be remembered, had granted Henry the possession only of the houses the annual value of which was less than £200. What happened in the three years that followed the passing
of the Act was briefly this: the king was ill satisfied with the actual results of what he had thought would prove a veritable gold mine. Personally, perhaps, he had not gone to the trouble of setting himself against the larger abbeys, in which, according to the Act of 1536, religion was "right well kept and observed". Not having received any mandate from Parliament to authorize the extension of their proceedings, the royal agents, eager to win a place in his favour, were busy up and down the country, caressing, coercing, commanding, and threatening the members of the various houses in order to force them to give up their monasteries unto the King's Majesty. As Dr. Gairdner puts it: "by various arts and means the heads of these establishments were induced to surrender, and occasionally when an abbey was found, as in the case of Woburn, to have committed treason in the sense of the recent statutes, the stretch of the Great Seal that had been forfeited to the king by his attainder. But attainders were certainly the exception, surrenderers being the general rule".

The autumn of 1537 saw the beginning of the fall of the friaries in England. For some reason, possibly because of their poverty, they had not been brought using "some or other of the grandeur of Grace" few dissolutions of houses, other than those which came to the king by the attainder of their superiors, are recorded. With the feast of St. Michael, 1537, however, besides the convents of friars the work of securing, by some means or other, the surrender of the greater houses went on rapidly. The inquisitors to the royal staff were, by all methods known to them, to get the religious "willingly to consent and agree" to their own extinction. It was only when they found "any of the said heads and convents, so appointed to be dissolved, so willful and obstinate that they would in no wise agree to sign and seal their own death-warrant, that the commissioners were authorized by Henry's instructions to 'take possession of the house' and property by force. And, whilst thus engaged, the royal agents were ordered to declare that the king had no design whatsoever upon the monastic property or system as such, or any desire to secure the total suppression of the religious houses. They were instructed at all events to stop to such rumours, 35 that naturally rife all over the country at this time. This they did; and the unscrupulous Dr. Layton declared that he had told the people everywhere that in this they utterly slandered the King their natural lord". He bade them not to believe such reports; and he "commanded the abbots and priors to set in the stocks" such as claimed such retreats, he was, however, only to be imagined, hard enough to suppress the rumour whilst the actual thing was going on. In 1538 and 1539 some 150 monasteries of men appear to have signed away their corporate existence and their property, and by a formal deed handed over all rights to the king.

When the work had progressed sufficiently the new Parliament, which met in April, 1539, after observing the General Act of 1536, had added up their houses to the king, "without constraint, coercion, or compulsion", confirmed these surrenders and vested all monastic property thus obtained in the Crown. Finally, in the autumn of that year, Henry's triumph over the monastic orders was completed by the horrid act of constructive treason of the great Abbots of Glastonbury, Colchester, and Reading. And so, as one writer has said, "before the win-
MONASTICISM

Monasticism.—Monasticism or monachism, literally the act of "dwelling alone" (Greek, μοναχία, μοναχός), has come to denote the mode of life pertaining to persons living in seclusion from the world, under religious vows and subject to a fixed rule, as monks, nuns, cenobites, etc. The basic idea of monasticism in all its varieties is seclusion or withdrawal from the world or society. The object of this is to achieve a life whose ideal is different from and largely at variance with that pursued by the majority of mankind; and the method adopted, no matter what its precise details may be, is always self-denial or renunciation. Taken in this broad sense monachism may be found in every religious system which has attained to a high degree of ethical development, such as the Brahmin, Buddhist, Jewish, Christian, and Moslem religions, and even in the system of those modern communistic societies, often antithetical in theory, which are a special feature of recent social development especially in America. Hence it is claimed that a form of life which flourishes in environments so diverse must be the expression of a principle inherent in human nature and rooted therein no less deeply than the principle of domesticity, though obviously limited to a far smaller portion of mankind. This article and its two ensuing sections, "Abbot and Cenobitic Rule" and "Wesiran Rule," deal with the monastic order strictly so called as distinct from the "religious orders" such as the friars, monks regular, clerics regular, and the more recent congregations. For information as to these see Religious Orders, and the article on the particular order or congregation required.

I. Its Growth. A. Morrow. — Origin.—Any discussion of pre-Christian asceticism is outside the scope of this article, but readers who wish to study this portion of the subject may be referred to Part I, of Dr. Zockler's "Askebe u.l. Mön. btrm." (Frankfort, 1897), which deals with the prevalence of the ascetic idea among races of the most diverse characters. It has already been pointed out that the monastic ideal is not an ascetic one, but it would be wrong to say that the earliest Christian asceticism was monastic. Any such thing was rendered impossible by the circumstances in which the early Christians were placed, for in the first century or so of the Church's existence the idea of living apart from the congregation of the faithful, or of renouncing the world, was not in common use. While admitting this however it is equally certain that monasticism, when it came, was little more than a precipitation of ideas previously in solution among Christians. For asceticism is the struggle against worldly principles, even with such as are merely worldly with a certain element of being sinful, and it is not, however, applicable to countries where the "Romanum Pontificum" is in force. For the transfer of a monastery from one site to another in the same locality, no permission of the Holy See is required, as this is translation, not renunciation. There was an ancient law that a new monastery could not be erected within a certain distance of an older one, but this has gone into abeyance. As regards convents of religious women, the consent of the ordinary is required, but not that of the Holy See. The same holds for the erection of houses of pious congregations and institutes.

MONASTICISM

Religious Orders, and the article on the particular order or congregation required.

Advent of Christ (cf. I Cor., vii, 29-31; I Pet., IV, 7, etc.). That this belief was widespread is admitted on all hands, and obviously it would afford a strong motive for renunciation since a man who expects this present order of things to end at any moment, will lose keen interest in many raters commonly held to be important. This belief however had ceased to be of any great influence by the fourth century, and it cannot be regarded as a determining factor in the origin of monasticism which then took visible shape. A second cause more operative in leading men to renounce the world was the vividness of their belief in evil spirits. The first Christians saw the kingdom of Satan actually realized in the political and social life of heaven around them. In their eyes the gods whose temples stood in every city, the deities by which men lived, and to participate in their rites was to join in devil worship. When Christianity first came in touch with the Gentiles the Council of Jerusalem by its decree about meat offered to idols (Acts, xvi, 20) made clear the line to be followed. Consequently certain professions were pratically closed to believers since a soldier, schoolmaster, or state official of any kind might be called upon at a moment's notice to participate in some act of the state religion. But the difficulty existed for private individuals also. There were gods who presided over every moment of a man's life, gods of house and garden, of food and drink, of health and sickness, and if one would be left at peace in these, they would attract inquiry and possibly persecution. And so when, to men placed in this dilemma, St. John wrote, "Keep yourselves from idols" (I John, v, 21) he said in effect "Keep yourselves from public life, from society, from politics, from intercourse of any kind with the heathen", in short "renounce the world".

By certain writers the communistic element seen in the Church of Jerusalem during the first years of its existence (Acts, iv, 32) has sometimes been pointed to as indicating a monastic element in its constitution, but no such conclusion is justified. Probably the community of goods was simply a natural continuation of the practice begun by Jesus and the Apostles, where one of the band kept the common purse and acted as steward. There is no indication that such a custom was ever instituted elsewhere and even at Jerusalem it seems to have collapsed at an early period. It must be recognized also that influences such as the above were merely contributory and of comparatively minor importance. The chief factor which got monachism was simply the desire to fulful Christ's law literally, to imitate Him in all simplicity, following in His footsteps whose "kingdom is not of this world". So we find monachism at first instinctive, informal, unorganized, sporadic; the expression of the same force working differently in different places, persons, and circumstances; developing with the natural growth of a plant according to the environment in which it finds itself and the character of the individual listener who heard in his soul the call of "Follow Me".

(2) Means to the End.-It must be clearly understood that, in the case of the monk, asceticism is not an end in itself. For him, as for all men, the end of life is to love God. Monastic asceticism then means the removal of obstacles to loving God, and that these obstacles are is clear from the nature of love itself. Love is the union of wills. If the creature is to love God, he can do it in one way only; by sinking his own will in God's, by doing the will of God in all things: "if ye love Me keep my commandments". Nor is this better than the mon; those words of the beloved disciple, "greater love hath no man than this that a man lay down his life", for in his case life has come to mean renunciation. Broadly speaking this renunciation has three great branches corresponding to the three evangelical counsels of poverty, chastity, and obedience.

(a) Poverty.—There are few subjects, if any, upon which more sayings of Jesus have been preserved than upon the superiority of poverty over wealth in His kingdom (cf. Matt., v, 3; iii, 22; xii, 21 sq.; Mark, x, 23 sq.; Luke, vi, 20; xvii, 24 sq., etc.), and the fact of their preservation would indicate that such words were frequently quoted and presumably frequently acted upon. That argument based upon such passages as Matt., xix, 21 sq., may be put briefly thus: If a man wish to attain eternal life it is better for him to renounce his possessions than to retain them. Jesus said, "How hardly shall they that have riches enter into the kingdom of God", the reason being no doubt that it is difficult to prevent the affections from becoming attached to things and so attach them to Christ's kingdom. As St. Augustine points out, the disciples evidently understood Jesus to include all who covet riches in the number of "the rich", otherwise, considering the small number of the wealthy compared with the vast multitude of the poor, they would not have asked, "Who then shall be saved?" "You cannot serve God and Mammon" is an obvious truth to a man who knows by experience the difficulty of a whole-hearted service of God; for the spiritual and material good are in immediate antithesis, and where one is the other cannot be. Man cannot sate his nature with the temporal and yet retain an appetite for the eternal; and if the one would grow, the other must go. He would find the lust of the earth and keep his heart detached from what is of its very nature unspiritual. The extent to which this voluntary poverty is practised has varied greatly in the monachism of different ages and lands. In Egypt the first teachers of monks taught that the renunciation should be made as absolute as possible. As Athanath used to say, "I would rather beize the soul would give you to give to another". St. Macarius once, on returning to his cell, found a robber carrying off his scanty furniture. He thereupon pretended to be a stranger, harnessed the robber's horse for him and helped him to get his spoil away. Another monk had so stripped himself of all things that he possessed nothing save a copy of the Gospels. After a while he sold this also and gave the price away saying, "I have sold the very book that made me sell all I had".

As the monastic institute became more organized legislation appeared in the various codes to regulate this point among others. That the principle remained the same however is clear from the strong way in which St. Gregory the Great causes the punished to make special allowance for the needs of the infirm, etc. (Reg. Ben., xxxiii). "Above everything the vice of private ownership is to be cut off by the roots from the monastery. Let no one presume either to give or to receive anything without leave of the abbot, nor to keep anything as his own, neither book, nor writing tablets, nor pen, nor money, the ultimate proprietorship in these things can never be permitted to him. (See Poverty; Mendicant Friars; Vow.)"
cannot be my disciple" (Luke, xiv, 26). It is obvious that all of the ties which bind the human heart to this world the possession of wife and children is the strongest of these, not only these but in accordance with the strictest teaching of Jesus all sexual relations or emotion arising therefrom. The monastic idea of chastity is a life like that of the angels. Hence the phrases, "angelicus ordo", "angelica conversatio", which have been adopted from Origen to describe the life of the monk, no doubt in reference to Mark, ch. vii, 25. It is primarily as a means to this end that fasting takes such an important place in the monastic life. Among the early Egyptian and Syrian monks in particular fasting was carried to such lengths that some modern writers have been led to regard it almost as an end in itself, instead of being merely a means and a subordinate one at that. This error of course is confined to writers about monasticism, it has never been countenanced by any monastic teacher. (See CEBELACIY OF THE CLERGY; CHERITY; CONTINENCE; FAST; VOW.)

(c) Obedience—"The first step in humility is obedience without delay. This befits those who cannot receive more than Christ, and that of a holy service which they have undertaken... without doubt such as these follow that thought of the Lord when He said, I came not to do my own will but the will of Him that sent me" (Reg. Ben., v.). Of all the steps in the process of renunciation, the denial of a man's own will is clearly the most difficult. At the same time, it is the most essential as such in the making of the monk. (Matt., xvi, 24), "If any man will come after me, let him deny himself and take up his cross and follow me". The most difficult because self-interest, self-protection, self-regard of all kinds are absolutely a part of man's nature, so that to master such instincts requires a supernatural strength. The most essential because it is the monk's own liberty which is only to be found where is the Spirit of the Lord. It was Seneca who wrote, "parere debis libertas est", and the pagan philosopher's dictum is confirmed and testified to on every page of the Gospel. In Egypt at the dawn of monasticism the custom was for a young monk to put himself under the guidance of a senior whom he obeyed in all things. Although the bond between them was wholly voluntary the system seems to have worked perfectly and the commands of the senior were obeyed without hesitation. "Obedience is the mother of all the virtues"; "obedience is that which openeth heaven and raiseth man from the earth"; "obedience is the food of all the saints... all the words of the saint have been written to come to perfection"; such sayings illustrate sufficiently the view held on this point by the fathers of the desert. As the monastic life came to be organized by rule, the insistence on obedience remained the same, but its practice was legislated for. Thus St. Benedict at the very outset, in the Prologue to his Rule, requires that of the Benedictine, "that thou mayest return by the labour of obedience to Him from whom thou hast departed by the sloth of disobedience". Later he devotes the whole of his fifth chapter to this subject and again, in detailing the vows his monks must take, while poverty and chastity are presumed as implicitly included, obedience is one of the three things explicitly promised.

Indeed the saint even legislates for the circum stance of a monk being ordered to do something impossible. "Let him seasonably and with patience lay before his superior the reasons of his incapacity to obey, without showing pride, resistance or contradiction. If, however, after this the superior still persists in his command, let the abbot be present for him, and let him obey for the love of God trusting in his assistance" (Reg. Ben., lviii). Moreover "what is commanded is to be done not fearfully, tardily, nor coldly, nor with murmuring, nor with an answer showing unwillingness, for the obedience which is given to another is given to God, since he hath said, "He that heareth me heareth Me" (Reg. Ben., iv). It is not hard to see why so much emphasis is laid on this point. The object of monasticism is to love God in the highest degree possible in this life. In true obedience the will of the servant is one with that of his master, and the union of wills is love. Wherefore, that the obedience of the monk's will to that of God may be as simple and direct as possible, St. Benedict writes (ch. ii) "the abbot is considered to hold in the monastery the place of Christ Himself, since he is called by His name" (see OBEDIENCE; VOW). St. Thomas, in chapter xi of his Opusculum "On the Perfection of the Spiritual Life", points out that the three means of perfection, poverty, chastity, and obedience, belong peculiarly to the religious state. For religion means the worship of God alone, which consists in offering sacrifice, and of sacrifices the holocaust is the most perfect. Consequently, when a man dedicates to God all that he has, all that he takes pleasure in, and all that he is, he offers a holocaust; and this he does pre-eminently by the three religious vows.

The Desert of the Monks. The Desert of the Monks has clearly understood that the monastic order properly so-called differs from the friars, clerks regular, and other later developments of the religious life in one fundamental point. The latter have essentially some special work or aim, such as preaching, teaching, liberating captives, etc., which occupies a large place in their activities, whereas the aim of the monastic life have to give way. This is not so in the case of the monk. He lives a special kind of life for the sake of the life and its consequences to himself. In a later section we shall see that monks have actually undertaken external labours of the most varied character, but in every case this work is extrinsic to the essence of the desert, which has remained always the same. Monasticism has varied greatly in its external forms, but, broadly speaking, it has two main species (a) the eremitical or solitary, (b) the cenobitical or family types. St. Anthony (q. v.) may be called the founder of the first and St. Pachomius (q. v.) of the second.

(a) The Eremitical Type of Monasticism—This way of life took its rise among the monks who settled around St. Anthony's mountain at Piæpir and whom he organized and guided. In consequence it prevailed chiefly in northern Egypt from Lycopolis (Asyut) to the Mediterranean, but most of our information about it deals with Nitria and Seète. Caesian (q. v.) and Palladius (q. v.) give us full details of its working and from their work we derive our knowledge of the life of the hermit of the desert. This type is that of a personal kind, their position and influence being in proportion to their reputation for greater wisdom. The monks would visit each other often and discourse, several together, on Holy Scripture and on the spiritual life. General conferences in which a large number took part were not uncommon. Gradually the purely eremitical life tended to die out (Caesian, "Conf.", xix) but a semi-eremitical form continued to be common for a long period, and has never ceased entirely either in East or West where the Carthusians and Camaldolese still practise it. It is needless here to trace its developments in detail as all its varieties are dealt with in special articles (see ANCONYER, CARTHUSIAN, CARMALDESE; CARTHUSIANS; HERMIT; LAURA; MONASTICISM, EASTERN; SYLLABITE OR PILLAR SAINTS; PAUL THE HERMIT, ST.).
(b) The Cenobitical Type of Monasticism.—This type began in Egypt at a somewhat later date than the eremitical form. It was about the year 318 that St. Pachomius, still a young man, founded his first monastery at Tabennisi near Denderah. The institute spread with surprising rapidity, and by the date of St. Pachomius's death (c. 345) it counted eight monasteries and several hundred monks. Most remarkable of all is the fact that it immediately took shape as a fully organised congregation or order, with a superior general, a system of visitations and general chapters, and all the machinery of a centralised government such as does not again appear in the monastic world until the rise of the Cistercians and Mendicant Orders some eight or nine centuries later. As regards the monastery itself, it is clear that the Pachomian monasteries had nothing of the family ideal. The numbers were too great for this and everything was done on a military or barrack system. In each monastery there were numerous separate houses, each with its own propositus, cellarer, and other officials, the monks being grouped in these according to the particular trade they followed. Thus the fullers were gathered in one house, the carpenters in another, and so on; an arrangement the more desirable because in the Pachomian monasteries regular organized work was an integral part of the system, a feature in which it differed from the Antonian way of life. In point of austerity however the Antonian monks far surpassed the Pachomian. They did not sit or lie down to eat, but went about clad only in tunics, carrying in their great monastery at Athribis, to combine the cenobitical life of Tabennisi with the austerities of Nitria.

In the Pachomian monasteries it was left very much to the individual taste of each monk to fix the order of life for himself. Thus the hours for meals and prayers were subject to the convenience of each monk, and each was free to do as he pleased as long as he held his position in the monastery. Thus he might eat with the others in common or have bread and salt provided in his own cell every day or every second day. The conception of the cenobitical life was modified considerably by St. Basil. In his monasteries a true community life was followed. It was no longer possible for each one to choose his own dinner hour. On the contrary, meals were in common, work was in common, prayer was in common, seven times a day. In the matter of asceticism too all the monks were under the control of the superior whose sanction was required for all the austerities they might undertake. It was from these sources that western monachism took its rise; further information on the monasteries of the great Saints: GREAT, SAINT; BASIL, RULE OF SAINT; BENEDICT OF NUBIA, SAINT; PACHOMIUS, SAINT; FALLADIUS, SAINT.

(4) Monastic Occupations.—It has already been pointed out that the monk can adopt any kind of work so long as it is compatible with a life of prayer and renunciation. In the way of occupations therefore prayer must always take the first place.

(a) Monastic Prayer.—From the very outset it has been regarded as the monk's first duty to keep up the official prayer of the Church. To what extent the Divine office was stereotyped in St. Anthony's day need not be discussed here, but Palladius and Cassian both make it clear that the monks were in no way behind the rest of the world as regards their liturgical customs. The practice of celebrating the office apart, or in twos and threes, has been referred to above as common in the Antonian system, while the Pachomian monks performed many of the services in their separate houses, the whole community only assembling in the church for the more solemn offices, while the Antonian monks met together on Sundays and Saturdays. Among the monks of Syria the night office was much longer than in Egypt (Cassian, "Instit.", II, ii; III, i, iv, viii) and new offices at different hours of the day were instituted. In prayer as in other matters St. Basil's legislation became the norm among Eastern monks, while in the west no changes of importance have taken place. St. Benedict's rule gradually eliminated all local customs. For the development of the Divine office into its present form see the articles, Breviary, Hours, Canonical, and also the various "hours", e.g. Matins, Lauds, etc.; Liturgy, etc. In the east this solemn liturgical prayer remains to-day almost the sole active work of the monks, and though in the west many other forms of activity have flourished, the Opus Dei or Divine Office has always been and still is regarded as the pre-eminent duty and occupation of the monk to which all other works, no matter how excellent in themselves, must give way, according to St. Benedict's principle (Reg. Ben., xiii), "Nil operi Dei preponatur" (let nothing take away from the work of God). Alongside the official liturgy, private prayer, especially mental prayer, has always held an important place; see Prayer; Contemplative Life.

(b) Monastic Labours.—The first monks did comparatively little in the way of external labour. We hear of them weaving, mending, making baskets and doing other work of a simple character which, while serving for their support, would not distract them from the continual contemplation of God. Under St. Pachomius manual labour was organized as an essential part of the monastic life; and, since it is a principle of the monks as distinguished from the mendicants, that the body shall be self-supporting, external work of one sort or another has been an inevitable part of the life ever since.

(i) Agriculture, of course, naturally ranked first among the various forms of external labour. The sites chosen by the monks for their retreats were usually in wild and inaccessible places, which were left to them precisely because they were uncultivated, and the monks were enjoined to do the work of clearing them. The rugged valley of Subiasco, or the fens and marshes of Glastonbury may be cited as examples, but nearly all the most ancient monasteries are to be found in places then considered uninhabitable by all except the monks. Gradually forests were cleared and marshes drained, rivers were bridged and roads made; until, almost imperceptibly, the desert place became a farm or a garden. In the later Middle Ages, when the Black Monks were giving less time to agriculture, the Cistercians re-established the old order of things; and even to-day such monasteries as La Trappe de Stauveli in N. Africa, or New Nursia in W. Australia do identically the same work as was done by St. Pachomius and the Antonian monks at the times of St. Basil. The great cultural restoration of a great part of Europe to the monks" (Hallam, "Middle Ages", III, 436); "The Benedictine monks were the agriculturists of Europe" (Guizot, "Histoire de la Civilisation", II, 75); such testimony, which could be multiplied from writers of every creed, is enough for the purpose here (see Cisternarians).

(ii) Copying of MSS.—Even more important than their services to agriculture has been the work of the monastic orders in the preservation of ancient literature. In this respect too the results achieved went far beyond what was actually aimed at. The monks copied the Scriptures for their own use in the Church services and, when their schools developed into schools, as the march of events made it inevitable they should, they copied also such monuments of classical literature as were preserved. At first no doubt such work was solely utilitarian, even in St. Benedict's rule the instructions as to reading and study make it clear that these filled a very subordinate place in the divines of the monastic orders and that they were devotedly set to make the transcription of MSS. and creation of books an organized and important monastic labour, but his insistence influenced western monachism of fact his chief claim to recognition.
monks. It is not too much to say that we to-day are
indebted to the labours of the monastic copists for the
preservation, not only of the Sacred Writings, but of
practically all that survives to us of the secular lit-
ernature of antiquity (see Manuscript; Cloister;
Scriptorium).
(iii) Education.—At first no one became a monk be-
fore he was an adult, but very soon the custom began of
receiving the young. Even infants in arms were
dedicated to the monastic state by their parents (see
Reg. Ben., lix) and in providing for the education of
these child-monks the cloister inevitably developed
into a schoolroom (see Oblate). Nor was it long be-
fore the schools thus established began to include chil-
ren not intended for the monastic state. Some writ-
ers have maintained that this step was not taken until
the time of Charlemagne, but there is sufficient indi-
cation that such pupils existed at an earlier date,
though the proportion of external scholars certainly
increased largely at this time. The system of educa-
tion followed was that known as the “Trivium” and
“Quadrivium” (see Arts, The Seven Liberal),
which was merely a development of that used during
classical times.

The greater number of the larger monasteries in
western Europe had a claustal school and not a few,
Cloister; Education; Schools).
(iv) Architecture, painting, sculpture and metal
work.—Of the first hermits many lived in caves,
tombs, and deserted ruins, but from the outset the
monk has been forced to be a builder. We have seen
that the Pachomian system required buildings of eleb-
ator plan and large accommodation, and the organ-
ized development of monastic life did not tend to sim-
plify the buildings which enshrined it. Consequently
skill in architecture was called for and so monastic
architects were produced to meet the need in the same
almost unconscious manner as were the monastic
schoolmasters. During the medieval period the arts
of architecture, painting, sculpture, and goldsmiths' work were practised in the monasteries all over Europe and the output must have been simply enor-

We have in the museums, churches, and elsewhere
such countless examples of monastic skill in these arts
that it is really difficult to realize that all this wealth of
beautiful things forms only a small fraction of the total
of artistic creation turned out century after century
by these skilful and untiring craftsmen. Yet it is cer-
tainly true that what has perished by destruction,
loss and decay would outweigh many times over the
entire mass of medieval art work now in existence, and
of this the larger portion was produced in the work-
shop of the cloister (see Architecture; Ecclesi-
tical Art; Painting; Illumination; Religious
Shrine; Sculpture).

(v) Historical and patriotic work.—As years
by the great monastic corporations accumulated
archives of the highest value for the history of
countries wherein they were situated. In

similar works on a less extensive scale have been un-
dertaken in every country of western Europe by
monks of all orders and congregations, and at the
present time (1910) this output of solid scholarly work
shows no signs whatever of diminution either in qual-
ity or quantity.

(vi) Missionary work.—Perhaps the mission field
would seem a sphere little suited for monastic ener-
gies, but no idea could be more false. Mankind is
proverbially imaginative and so, to establish a Christ-
ianity where paganism once reigned, it is necessary to
present not simply a code of morals, not the mere laws
and regulations, nor even the theology of the Church,
but an actual pattern of Christian society. Such a
“working model” is found pre-eminently in the
monastery, and so it is the monastic order which has
proved itself the apostle of the nations in western
Europe.

To mention a few instances of this—Saints
jumna in Scotland, Augustine in England, Bon.
Germany, Ansgar in Scandinavia, Switlzerland,
libor in the Netherlands, Rupert and Limmerich,
what is now Austria, Adalbert in Bohemia,
Columban in Switzerland, were monks whose
example of a Christian society which the
companions displayed, led the natives,
they lived from paganism to Christianity.
Nor did the monastic apostolate end
point but, by remaining as a community,
their converts in the arts of
society based on Gospel principles in the
stability of the Christian faith, and
individual missionary, even the mon-

show that the thing was done. A full practice of the last Evangelical counsel (obedience) could only be realized after the monkastic ideal had taken root and passed beyond the purely eremitical stage. The ante-Nicene ascetic would be a man who led a single life, practised long and frequent fasts, abstained from flesh and wine, and supported himself, if he were able, by some small handicraft, keeping of what he earned only as much as was absolutely necessary to support his own sustenance, and giving the rest to the poor. If he were an educated man, he might be employed by the Church in some such capacity as that of catechist. Very often he would don the kind of dress which marked its wearer off as a philosopher of an austere school.

At the time when St. Anthony first embraced the ascetic life, there were numbers of ascetics living in huts in the neighbourhood of the towns and villages. When St. Anthony died (356 or 357), two types of monasticism flourished in Egypt. There were villages or colonies of hermits—the eremitical type; and monasteries in which a community life was led—the cenobitic type. A brief survey of the opening chapters of Palladius's "Lauriac History" will serve as a description of the former type.

Palladius was a monk from Palestine who, in 388, went to Egypt to drink in the spirit of monasticism at the fountainhead. On landing at Alexandria he put himself in the hands of a certain Abbot, who in early life had been a hermit at Nitria and now apparently presided over a hospice at Alexandria without in any way abating the austerity of his life. By the advice of Isidore, Palladius placed himself under the direction of a hermit named Dorotheus who lived six miles outside Alexandria, with whom he was to spend the next three years, and then to return to Isidore to receive higher spiritual knowledge. This Dorotheus spent the whole day collecting stones to build cells for other hermits, and the whole night weaving ropes out of palm leaves. He never lay down to sleep, though slumber sometimes overtook him while working or eating. Palladius, who seems to have lived in his cell, ascertained from other solitaries that this had been his custom from his youth upwards. Palladius's health broke down before he completed his time with Dorotheus, but he spent three years in Alexandria and its neighbourhood visiting the hermitages and becoming acquainted with about 2000 monks. From Alexandria he went to Syria, where there were about 10000 monks, and thence to Egypt, where there were about 5000 solitaries. There was no kind of monastic rule. Some of the solitaries lived alone, sometimes two or more lived together. They assembled at the church on Saturdays and Sundays. The church was served by eight priests of whom the oldest always celebrated, preached, and judged, the others only assisting. All work was considered work, hence there were bakeries where bread was made, not only for the village itself, but for the solitaries who lived in the desert beyond. There were doctors. Wine also was sold.

Strangers were entertained in a guest-house. If able to read, they were lent a book. They might stay as long as they pleased, but after a week they were set to some kind of work. If at the ninth hour a man stood and listened to the sound of psalmody issuing from the different cells, he would imagine, says Palladius, that he was caught up into paradise. But, though there was no monastic rule at Nitria, there was municipal law, the outward symbol of which was the whip whips of which were enjoined on all the monks who might be guilty of some fault, one for thieves who might be caught prowling about, and the third for strangers who misbehaved. Further into the desert was a place called Cellos, or Cellia, whither the more perfect withdrew. This is described by the
author of the "Historia monachorum in Egyptio". Here the solitary lived in cells so far apart that they were out of sight and out of hearing of one another. Like those in Nitria, they met only on Saturdays and Sundays at church, whether some of them had to travel a distance of three or four miles. Often their death was only discovered by their absence from church.

In strong contrast with the individualism of the ascetic life was the rigid discipline which prevailed in the cenobitic monasteries founded by St. Pachomius. When, in 313, Constantine was at war with Maxentius, Pachomius, still a heathen, was forcibly enlisted together with a number of other young men, and placed on board a ship to be carried down the Nile to Alexandria. At some town at which the ship touched, the recruits were overwhelmed with the kindness of the Christians. Pachomius at once resolved to be a Christian and carry out his resolution as soon as he was dismissed from military service. He began as an ascetic in a small village, taking up his abode in a deserted temple of Serapis and cultivating a garden on the produce of which he lived and gave alms. The fact that Pachomius made an old temple of Serapis his abbey was enough for an ingenious theory that he originated as a pagan monk. This view is now quite exploded.

Pachomius next embraced the eremitical life and prevailed upon an old hermit named Palemon to take him as his disciple and share his cell with him. It may be noted that this kind of discipleship, which, as we have already seen, was attempted by Palladius, was a reaction against the Egyptian system. Afterwards he left Palemon and founded his first monastery at Tabennisi near Denderah. Before he died, in 346, he had under him eight or nine large monasteries of men, and two of women. From a secular point of view, a Pachomian monastery was an industrial community in which almost every kind of trade was represented. There was buying and selling, so the monks had ships of their own on the Nile, which conveyed their agricultural produce and manufactured goods to the market and brought back what the monasteries required. From the spiritual point of view, the Pachomian monk was a religious man under a rule more severe, even when a rule, than the Trappists had made for the Trappists.

A Pachomian monastery was a collection of buildings surrounded by a wall. The monks were distributed in houses, each house containing about forty monks. Three or four houses constituted a tribe. There would be from thirty to forty houses in a monastery. There was an abbot over each monastery, and provosts with subordinate officials over each house. The monks were divided into houses according to the work they were employed in: thus there would be a house for carpenters, a house for agriculturists, and so forth. But other principles of division seem to have been employed, e.g., we hear of a house for the Greeks.

On Sundays and other holy days the monks assembled in the church for Mass; on other days the Office and other spiritual exercises were celebrated in the houses.

"The fundamental idea of St. Pachomius's Rule," writes Abbot Butler, "was to establish a moderate level of observance (moderate in comparison with the life led by the hermits) which might be maintained on all; and then to leave it open to each—and to indeed encourage each—to go beyond the fixed minimum, according as he was prompted by his strength, his courage, and his zeal" ("Lausiac History", I, p. 238). This is strikingly illustrated in the rules concerning the priests. According to the priests, in his translation of the "Rule of Pachomius", the tables were laid twice a day except on Wednesdays and Fridays, which, outside of the seasons of Easter and Pentecost, were fast days. Some only took very little at the second meal; some at one or other of the meals confined themselves to a single food; others took just a meal of bread. Some abstained altogether from the community meal; for these bread, water, and salt were placed in their cell.

Pachomius appointed his successor a monk named Petronius, who died within a few months, having likewise named his successor, Horsiesi. In Horsiesi's time the order was threatened with a schism. The abbot of one of the houses, instead of forwarding the produce of his monastery to the head house of the order, where it would be sold and the price distributed to the different houses according to their need, wished to have the disposal of it for the sole benefit of his own monastery. Horsiesi, finding himself unable to cope with the situation, appointed Theodore, a favourite disciple of Pachomius, his coadjutor.

When Theodore died, in the year 388, Horsiesi was able to resume the government of the order. This threatened schism brings prominently before us a feature connected with Pachomius's foundation which is never again met with in the Esat, and in the West only many centuries later. "Like Citeaux in a later age," writes Abbot Butler, "it almost assumed the shape of a fully-organized congregation or order, with a superior general and a system of visitation and general chapters—in short, all the machinery of a centralised government, such as does not appear again in the monastic world until the Cistercian and the Mendicant Orders arose in the twelfth and thirteenth centuries" (op. cit., I, 235).

A word must be said about Schenoudi, or Schnoudi, or Sennuti. Shortly after the middle of the fourth century, two monks, Pgl and Pchaia, changed their eremitical monasteries into cenobitical ones. Of the latter we know scarcely anything. Schenoudi, when he was about forty years old, came under the care of his uncle Pgl. Both Pgl and Schenoudi were reformers—the Pachomian Rule was not strict enough for them.

Schenoudi succeeded his uncle Pgl as head of the White Monastery of Athribia and, till his death (about 453), was not only the greatest monastic reformer, but one of the most influential of the early Church Fathers. He waged war against heretics; he took a prominent part in the rooting out of paganism; he championed the cause of the poor against the rich. He once went in person to Constantinople to complain of the tyranny of government officials. On one occasion 20,000 men, women, and children took refuge in the White Monastery during an invasion of the savages of Blemmyes of Ethiopia, and Schenoudi maintained all the fugitives for three months, providing them with food and medical aid. On another occasion he ransomed a hundred captives and sent them home with food, clothing, and money for their journey (Leipoldt, "Schenute", A.T., 172, 173). Schenoudi's importance for the history of Christianism is small, for his influence, great as it was in his own country, did not make itself felt elsewhere. There were two barriers: Upper Egypt was a difficult and dangerous country for travellers, and such as did penetrate there would not be likely to visit a monastery where hardly anything but Coptic was spoken. According to Abbot Butler, "Schenoudi was named by any Greek or Latin writer" (op. cit., II, 204). He has been rediscovered in our own time in Coptic MSS. A description of the ruins of the White Monastery will be found in Curzon's "Monasteries of the Levant", ch. xi. There are photographs of the outside wall and the inside of the church in Milne's "Hst. of Egypt under Rom. Rule".

In part II of Butler's "Lausiac History" is a map of Monasticon Egypt. A glance at this map and
MONASTICISM

the notes accompanying it brings forcibly before the mind an important fact in monastic history. With the exception of a single monastery at Canopus, near Alexandria, the cenobitic monasteries are in the South, and confined to a relatively small area. The eremitical monasteries, on the contrary, are everywhere, and especially in the North. These latter were thus far more accessible to pilgrims visiting Egypt and so became the patterns or models for the rest of the Christian world. It was the eremitical, not the cenobitical, type of monasticism which went forth from Egypt.

Monasticism at a very early date spread along the route of the Exodus and the desert of the Forty Years' Wandering. The solitaries had a special predilection for Scriptural sites. At every place hallowed by tradition, which they visited (as, for instance, where she found monks. The attraction of Mt. Sinai for the solitaries was irresistible, in spite of the danger of captivity or death at the hands of the Saracens. In 373 a number of solitaries inhabited this mountain, living on dates and other fruit, such bread as they had been reserved for the Sacred Mysteries. All the while they lived apart in the desert, they gathered together in the church on Saturday evening and, after spending the night in prayer, received communion on Sunday morning. Forty of them were massacred in 373, and on the same day another group of solitaries at Rathe (supposed to be Elium) were killed by a second band of barbarians. These events were written by Eusebius (Tillemont, "Histoire eccl.", VII, 573–80). The same kind of life was being led at Mt. Sinai, and a similar experience was undergone some twenty years later when St. Nilus was there.

St. Hilarius, who for a time had been a disciple of St. Anthony, propagated monasticism of the eremitical type in the cities of Gaza and then in Cyprus. His friend St. Epiphanius, after practising the monastic life in Egypt, founded a monastery near Eleutheropolis in Palestine somewhere about 330 or perhaps a little later.

In Jerusalem and its neighbourhood there were numerous monasteries at a very early date. To name only a few, there was the monastery on the Mount of Olives, from which Palladius went forth on his tour of the Egyptian monasteries; there were two monasteries for women in Jerusalem, built by the older and younger Melania respectively. At Bethlehem St. Paula founded three monasteries for women and one for men. Of these which was built, both in Bethlehem the monastery where Cassian some years before began his religious life. The lauras, which were very numerous, formed a conspicuous feature in Palestinian monasticism. The first seems to have been founded before 334 by St. Chariton at Pharan, a few miles from Jerusalem; later on, two more were founded by the same saint at Jericho and at Suca.

St. Euthymius (473) founded another celebrated one in the Valley of Cedron. Near Jericho was the laura ruled over by St. Gerasimus (475). Some details concerning the rule of this laura have fortunately been preserved in a very ancient Life of St. Euthymius. It consisted of a cenobium where the cenobitic life was practised by novices and others less proficient. There were also seventy cells for solitaries. Five days in the week these latter lived and worked alone in their cells. On Saturday they brought their work to the cenobium, where, after receiving Holy Communion on Sundays, they partook of some cooked food. First thing in the morning breakfast was bread, dates, and water. When some of them asked to be allowed to heat some water, that they might cook some food, and to have a lamp to read by, they were told that if they wished to live thus they had better take up their abode in the cenobium (Acta SS., March, I, 386–87).

Antiochian monasticism was a young man, was full of ascetics and the neighbouring mountains were peopled with hermits. So great was the impulse driving men to the solitary life that at one time there was an outcry, amounting almost to a persecution, among Christians as well as pagans against those who embraced it. This was the occasion of the beginning of the offensive of monasticism: in the first book he dwelt upon the guilt incurred by them; the second and third were addressed respectively to a pagan and a Christian father who were opposing the wish of their sons to embrace the monastic state. The pathetic scene between the saint and his mother, which he describes in the beginning of these last two treatises, is typical of what took place in many Christian homes. He himself so far yielded to his mother's entreaties that he contented himself with the ascetic life at home till her death. Palestine and Antioch must suffice as examples of the rapid spread of monasticism outside of Egypt. There is abundant evidence of the existence of cenobitic monasteries in Syria, in some of the cities of the Mediterranean and Mesopotamia; and Mesopotamia, according to St. Jerome, whose testimony is amply borne out by other writers, rivalled Egypt itself in the number and holiness of its monks (Comm. in Isaiam, V, xix).

St. Anthony now comes to a name second only in importance to St. Anthony's for the history of eastern monasticism. St. Basil the Great before embracing the monastic state made a careful study of monasticism in Egypt, Palestine, Cœle Syria, and Mesopotamia. The result was a decided preference for the cenobitical life. He founded several monasteries in Pontus, over one of which he himself for a time presided, and in another of which he was the first superior. He desired to establish a number of monasteries in the East. His monks assembled together for "palmody" and "genuflexions" seven times a day, in accordance with the Psalmist's "Seventy with one who dined with the Lord's table" (Ps. civi, 164) at midnight ("Media nocte surgemus")—Ibid., 62), at evening, morning, and midday (Ps. iv, 18), at the third hour, the hour of Pentecost, and at the ninth, the sacred hour of the Passion. To complete the tale of seven, the midday prayer was divided into two parts separated by the community meal (Sermo "Asceticus", Benedictine edition, II, 321). St. Basil's monastic ideal is set forth in a collection of his writings known as the "Asceticus", or "Ascetical", the most important of which are the sixty-five answers to questions, fifty-five in number, and the "Regulæ breviores tractatus", in which three hundred and thirteen questions are briefly replied to. It must not be supposed that the "Regulæ" form a rule, though it would be possible to go a good way towards constituting one out of them. They are answers to questions which were naturally raised among persons already in possession of a framework of customs or traditions. Sometimes they treat of practical questions, but as often as not they deal with matters concerning the spiritual life. What is on the whole a good description of them will be found in Smith and Cheetham, "Dict. of Christ. Antiquities", II, 233 sqq.

It would not be easy to exaggerate St. Basil's influence upon eastern monasticism: he furnished the type which ultimately prevailed. But two points of utmost importance, as marking the difference between Eastern and Western monasteries, must be kept in mind. (1) He did not draw up a rule, but gave what is far more an elastic thing, a model or plan. (2) He was not the founder of a religious order. No Eastern, except St. Pachomius, ever was. An order, as we understand the word, is a purely Western product. "It is not enough", says a writer who ce:
MAINLY does not underrate St. Basil's influence, "to affirm that the Basilian Order is a myth. One must go further and give up calling the Byzantine monks Basilians. Those most concerned have never taken to themselves this title, and no Eastern writer that I know of has ever bestowed it upon them" (Pargore in "Dict. d'Archéologie chrétienne", s. v. "Basilei"). In a word, every monastery is an order of its own. With St. Basil Eastern monasticism reached its final stage—communities of monks leading the contemplative life and devoting themselves wholly to prayer and work. The monachial life has been a steady basis for the normal form of the religious calling, and the eremitical one the exceptional form, requiring a long previous training.

We must now speak of the grounds upon which St. Basil based his decision—a decision so momentous for the future history of monasticism—in favour of the cenobitical life. Life with others is more expedient because, in the first place, even for the supply of their bodily needs, men depend upon one another. Further, there is the law of charity. The solitary has only himself to regard; yet "charity seeks not itself"!

Again, the solitary will not equally discover his faults, the being no one to correct him with meekness and mercy. There are precepts of charity which can only be fulfilled in the cenobitical life. The gifts of the Holy Spirit are not all given to all men, but one is given to one man and another to another. We cannot be partners in the gifts not bestowed on ourselves if we live by ourselves. The great danger to the soul is that he may become a孤 pioneer, so that he is unable to learn his faults or his progress. How can he learn humility when there is no one to prefer before himself? Or patience when there is no one to yield to? Whose feet shall he wash? To whom shall he be a servant? (Reg. f. tract., Q. vii.)

This condemnation of the eremitical life is not complete. He hints at the flat and commonplace kinds of failure, against which the common life afforded the best protection. Clearly St. Basil found very little that was tragic during the two years he was investigating monasticism in Egypt, Mesopotamia, and elsewhere.

It might be supposed that so uncompromising a verdict against the eremitical life would stir up a fierce conflict. As a matter of fact, it did nothing of the kind. Palestine, towards the end of the fourth century, began to supersede Egypt as the centre of monasticism, and in Palestine the laura and the cenobium were in perfect harmony. That of St. Gerasimus, with its cenobium already referred to, may have been the original of St. Anthony's authority was given to St. Anthony's among the leaders of Palestinian monasticism; yet they took it as a matter of course that life in the laura was the most perfect, though under ordinary circumstances it should not be entered upon before an apprenticeship had been served in a cenobium. The paradox is not so great as it may at first sight appear. The dweller in the laura was under an archimandrite or abbot and so was exposed to the dangers of the purely eremitical state.

The Council of Chalcedon, monasticism had so recently been a recognized part of the life of the Church that it was especially legislated for. Monasteries were not to be erected without the leave of the bishop; monks were to receive due honour, but were not to mix themselves up with the affairs of Church or State. Monks were to be subject to the bishop and his clergy; and monks were not to serve in war or embrace a secular life (can. vii.). Monasteries were not to be secularized (can. xxiv.).

Solitary spots, according to St. Basil, should be chosen as sites for monasteries. Nevertheless, they soon found their way into cities. According to Monasticism in Antiquity in the East (1887, 330-398), at least fifteen monasteries were founded at Constantinople in the time of Constantine the Great; but Besse (Les Moine d'Orient, 18) affirms that the three most ancient ones only dated back to the time of Theodosius (375-95). In 518 there were at least fifty-four monasteries in Constantinople. Their names and those of their founders are given in a petition addressed by the monks of Constantinople to Pope Hormisdas in 518 (Martin, ibid., 18).

For Egyptian monasticism, not only are the original sources far superior to those for early Christian monasticism elsewhere, but it has been more thoroughly investigated. The most important work that has appeared in recent times is BUTLER, The Lusiac History of Palladius in C.G. (1st part, 1889; second part, 1904). Other important works are LADERE, Etudes sur le monastisme Alexandrin pendant le IV ème siècle, I (Leipzig, 1901); BESSE, Les moines d'Egypte en dehors de la première moitié du IV ème siècle (Leipzig, 1903); Cartwright, Early Christian Near Eastern Monasticism (1911). A study of the documents upon which our knowledge of Pachomius and Schenou is based is Besse, Die Pachomianer (11th edition, 1931). Christian asceticism in the first three centuries and 3 (2) monasticism in the fourth; he omits Schenoudi altogether. A very important point of difference, however, is that while Schenoudi on the one hand, and Butler on the other, is the unfavourable estimate formed by the first two and the favourable one by the last of Palladius's account of the Greek Fathers. His restorations and corrections of the original sources will be found in Butler, op. cit., pt. I., 1, 196 sqq.; pt. II., p. xii. The most valuable, however, is that the text has been preserved by Butler in his History of Palladius (see above).

What used to pass for Palladius was a text very much intermixed with the Historia monachorum (see above). An account of the travels of Palladius to Alexandria and Egypt (11th century) is that of a Spanish who visited Egypt in 394-95, written by one of them. The Greek text was printed for the first time by Franchimont, Palladius et Ruffinus (Giessen, 1887). Till 1897 it was only known in the Latin version of Ruffinus, which was supposed to be the original. As the experiences narrated do not square with the facts of Ruffinus's Life, this suppression reduced it to the level of an historical romance. Butler has proved, or nearly proved, that the account in the Historia Monachorum is the original and the restorations and corrections the way to place as a genuine record. He has done the same for the Lusiac Hist. by recovering the uninterpolated text. The Institutes of the De laubais Monks and the Records of the Historia Historica are important additions to our knowledge (see ar. CASSIAN, JOHN). For Pachomian monasticism the chief authorities are the Greek Life of Pachomius; Pachanian Lectionary, known as the Ammonius on Theodorus (all to be found in Acta SS., May I.); and Schenoudi's translation of it. The School of Alexandria, known as the Arabic MSS concerning Egyptian monasticism have been published of late years chiefly by AMPLEIER, for which we must refer the reader to the bibliography. There is a new translation of the text and its history to LEPOLET, op. cit.

An English translation of Byzantine versions of the Lusiac History, the Lectionary, and the Hist. Monach. (there attributed to St. Jerome) will be found in vol. I of Buxtor, Paradise of the Fathers (London, 1897). For Palladius, references to the corresponding Greek text of Butler will be found on pp. xxxii., xxxiv., etc.

For non-Egyptian Eastern monasticism, the chief sources are the Lives, when authentic, of individual monks and hermits. St. THEOGRAPHER, De vita patrum, 2 vols. (Paris, 1841). JEROME, ST. JOHN CHrysostom, ST. ERPHEM, ST. HILUS, etc., of the original, the Summa deserunt saeculi, etc. Among other books dealing with the subject Tillemont's Mémoires is perhaps the most indispensable. MARIN, Vies des Prés des déserts d' Orient (9 vols., Paris, 1854), gives copious quotations from the original sources. The only important modern work upon Eastern Monasticism as a whole seems to be Besse, Les moines d' Orient antérieurs au concile Chalcédonien (1891).

FRANCIS JOSEPH BACCHUS.

III. Eastern Monasticism.—(1) Origin.—The first home of Christian monasticism is the Egyptian desert. Hither during persecution men fled the world and the danger of apostasy, to serve God in solitude. St. Anthony (270-356) is courted as the father of this monasticism. His fame attracted many others, so that under Diocletian and Constantine there were large colonies of monks in...
Egypt, the first λατρεία. St. Athanasius's (d. 375) friendly relations to the Egyptian monks and the monk he found among them during his second (358-362) and third (362-363) exiles are well known incidents of his life. The monks lived each in his own hut, providing for their simple needs with their own hands, united by a bond of willing submission to the direction of some older and more experienced hermit, coming together on Saturday and Sunday for common prayer; others were not nearly so private in their contemplation and works of penance. Celibacy was from the beginning an essential note of monasticism. A wife and family were part of the "world" they had left.

Poverty and obedience were to some extent relative, though the ideal of both was developing. The major point was that the monk's calling was not necessarily a part of his nature, but formed a different class from the clergy who stayed in the world and assisted the bishops. For a long time this difference between monks and clergy remained; the monk fled all intercourse with other people to save his soul away from temptation. Later some monks were ordained priest in order to administer to their brethren. But even in the East the priest-monk (λατρευτός) is a special person distinct from the usual monk (μοναχός), who is a layman.

St. Anthony's scarcely less famous disciple Pachomius (d. 345) is believed to have begun the organization of the hermits in groups, "folds" (μοναχίαν) with stricter vows (μοναχίαν); but the organization was vague. Monasticism was still a manner of life rather than affiliation to an organized body; any one who left wife and family and the "world" to seek peace away from men was a monk. Two codified "Rules" are attributed to Pachomius; of these the longer is translated into Latin by St. Jerome, a second and shorter one by Palladius. Pachomius' "Rule" preserved not a few, and especially by the ascetic writings of monks, letters, sermons, and so on, in which they give advice to their colleagues. Of such monastic writers St. John Damascene (d. c. 755), George Hamartolos (ninth century), and especially St. Theodore of Studion (d. 639) are perhaps the most valuable for this purpose. At the head of each independent monastery (κοινονία is the common name in Greek) was the superior. At first (e.g., by Justinian: "Novii", V; CXXXIII, v and xxiv) he is called indifferently ἱεραρχή, ἱεραρχάρης, πρόεδρος. Later the common name is πρίγκιπας only. The archimandrite has become a person of superior rank and takes precedence over the hegumens. Monasticism meant the superior of a patriarchal monastery, that is, one immediately subject to the patriarch and independent of the jurisdiction of the ordinary. The title then would correspond to that of the Western "Abbas nullius".

Marin (Les Moines de Constantinople, pp. 87-90), adorning this, demonstrates from examples that there was an intermediate period (from about the sixth to the ninth centuries) during which the title archimandrite was given as a purely personal honour to certain hegumenoi without involving any exemption for the monastery. A further precedence belonged to a "great archimandrite". The election and rights of the hegumenos are described by St. Basil in his two Rules, by Justinian (Novel., CXXXIII, xxxiv), and Theodore of Studion (Testamentum, in P. G., XCIX, 1817-1818). He was elected by the monks by a majority of votes; in cases of dispute the patriarch or ordinary decided; sometimes lots were cast. He was to be chosen for his merit, not according to his wealth. He had already the power of the monastery, and should be sufficiently learned to know the canons. The patriarch or bishop must confirm the election and institute the hegumenos. But the emperor received him in audience and gave him a pastoral staff (the
The ceremony of induction is given in the “Euchologion” (Goar’s edition, Venice, 1730, 395-399). He then remained abbot for life, except in the event of his being deposed, after trial, for some canonical offence.

The hegumenos had absolute authority over all his monks, could receive novices and inflict punishments; but he was bound always by the rule of St. Basil and the canons, and he had to consult a committee of the more experienced monks in all cases of difficulty. This committee was the συνέδριον in which in many ways limited the autocracy of the superior (St. Basil’s Rule, P.G., XXXIV, 1037). The hegumenos in the Byzantine time, after Justinian, was generally, but not quite always, a priest. He received the confessions of his monks (there are instances of those who were not priests usurping this office (Marin, op. cit., 96)) and could ordain them to minor Orders, including the subdiaconate. Under the abbot there was a hierarchy of other officials, more or less numerous according to the size of the monastery. The διακόνοι took their place in case of his absence or sickness, the έπισκόποι had charge of all the property, the κελάριοι looked after the food, the ἱεραρχοῦσιν saw to the regular performance of services in the church, the καινοφύταi guided the singers during the Divine office. These officials, who usually formed the synaxis, acted as a restraint on the authority of the hegumenos. Numerous lesser offices, as those of informarian, guest-master, porter, cook, were also divided among the community. The monks were divided into three orders, novices, those who bear the lesser habit and those who have the great habit. Children (the οέρους of Trullo of 692 admits professional as valid after the age of ten years), married men (if their wives are willing), even slaves who are badly treated by their masters or in danger of losing their faith, could be received as novices. Justinian ordered novices to wear lay clothes (Novel., V, ii), but soon the custom was introduced that after a probation of about six months (while they were postulants) they should have their hair cut (τουράμια) and receive a tonsure (ψιλώσις) and the tall cap called καλωδίων. The service for this first clothing is in the “Euchologion” (Goar, pp. 378-380).

After three years’ novitiate the monk received the lesser habit or μαντύα (το μπους σχίμα, μαντίδια). He is again tonsured in the form of a cross, receives a new tonsure, belt, cap, postulants, and the monastic cloak (μαντίδια). For the rite, see Goar, pp. 382-389. The mantyas is the “angelic habit” that makes him a true monk; it is at this service that he makes his vows. An older form of the “sacrament of monastic perfection” (μαντηράς μανττίζής τελειώσας), that is, of the profession and reception of a monk, is given by Dionysius the Areopagite (p. 500), “de Eccles. Hierarch.” VI, ii (P. G., III, 533). The monk is “ordained” by a priest (λειψί; he always calls bishops λέιψία), presumably the abbot. Standing he recites the “monastic invocation” (τη μοναστική επιλογή), evidently a prayer for the grace he needs. The priest then asks him if he renounces everything, explains to him the duties of his state, signs him with the cross, tonsures him and clothes him in the habit, finally celebrates the holy Liturgy, and gives him Communion. From the time of his profession the monk remains inseparably attached to the monastery. Besides the vows of poverty, chastity, and obedience he makes a vow of perseverance in the religious exercises of the particular laura he has chosen. Normally he cannot change to another than go back to the world. He should moreover never go out at all. In theory all monks are “enclosed” (St. Basil, P.G., XXXI, 655-663); but this rule has never been taken very literally. Monks travelled about, with the consent of their superiors and with the excuse that they were engaged in business of the laura or of the Church.

But there still remained a further step. After having proved their perseverance for some years monks were accustomed to ask, as a reward for their advancement in the ascetic life, for the “great habit” (το μπους και διψίλων σχίμα). This was simply a larger and more dignified cloak, suitable for the veterans of the monastery. Gradually its reception became a regular ceremony and the wearers of the great habit began to form a superior class, the aristocracy of the laura. St. Theodore of Studion objected strongly, to the practice of the “As there is only one baptism,” he says, “so is there only one habit” (P.G., XCIX, 1819). It is true that there is no real place for the rank in the monastic system. At the reception of the first habit the monk makes his solemn vows for life and becomes a full monk in every sense. However, in spite of opposition, the custom grew. The imposition of the great habit repeats very much the ceremony of the lessor habit and forms a kind of renewal of vows (Goar, p. 403-414); it is from the older monks who have gone through this rite and are honourably distinguished by their long cloaks that the dignitaries of the laura are chosen. Another gradual development was the formation of a class of priest-monks. At first no monks received any ordination; then one or two were made priests to administer sacraments to the others, then later it became common to ordain a monk priest. But it has never become the rule that all choir-monks should be ordained, as it became in the West. On entering monasteries people changed their name. The monk was to abstain from flesh-meat always; his food was fruit and vegetables and on feast-days fish, eggs, milk, and cheese. Wine was allowed. The change of meal, the only full meal in the day, was served at the sixth hour (midday); on the frequent fast-days, including every Wednesday and Friday and the four fasting-times, it was put off till the ninth hour. Later in the evening, after the ἀνακλίνοντα (compline), the remains of the meal were again spread in the refectory and any who wished, chiefly the younger monks, might take partake of a light supper (cf. Marin, op. cit., p. 121).

The monk’s main occupation was the daily chanting of the long Byzantine office in church. This took up a great part of the day and the night. There were moreover the διοικητικά offices, which on the even of great feasts lasted all night. The rest of the time was spent in manual work, digging, carpentry, weaving,
and so on, portioned out to each by the abbot, of which the profit belonged to the monastery (St. Basil, P. G., XXXI, 1016, 1017, 1132, etc.; Marin, op. cit., 132–135). Men who already know an innocent and profitable era of its many continue to exercise it as a St. Basil in M. P., XXXI, 1305–1314). A monk who had proved his constancy for many years in the community could receive permission from the hegumenos to practise the severer life of a hermit. He then went to occupy a solitary cell near the laura (St. Basil’s Rule, P. G., XXXI, 1133). But he was still counted a member of the monastery. Theodore, St. Basil’s mother no longer found solitude too hard. At the court of the Patriarch of Constantinople was an official, the Exarch of the monks, whose duty it was to supervise the monasteries. Most other bishops had a similar assistant among their clergy.

Celibacy became an ideal for the hermits in the East gradually after the 4th century. In the fourth century we still find St. Gregory Nazianzian’s father, who was Bishop of Nazianzos, living with his wife, without scandal. But very soon after that the present Eastern rule obtained. It is less strict than in the West. No one may marry after he has been ordained priest (Paphnutius at the first Council of Nicaea maintains this). But Gregory Nazianzian was married in Constantinople, in the church of the Blessed Martyrs, on 25, 166, 2nd year of the Synod of Nicaea in 314 or 324, ib., p. 327, and Can. Apost., xxvi. The Synod of Elvira about 300 had decreed absolute celibacy for all clerics in the West, Can. xxiii., ib., pp. 238–239; priests already married may keep their wives (the same law applied to widows on the part of the clergy). But this law was modified in Trullo, 692; see "Echoes of Orient", 1900–1901, pp. 65–71, but bishops must be celibate. As nearly as all secular priests were married this meant that, as a general rule, bishops were chosen from the monasteries, and so these became, as they still are, the road through which advancement may be attained. Besides the communities in monasteries there were many extraordinary developments of monasticism. There were always hermits who practised various extreme forms of asceticism, such as binding tight ropes round their bodies, very severe fasting, and so on. A singular form of asceticism was that of the Stygites (στυγίται), who lived on columns. St. Symeon Styliotes (q. v.) began about 420.

From the time of Constantine the building and endowment of monasteries became a form of good work adopted by very many rich people. Constantine and Helen set the example and almost every emperor afterwards (except Julian) followed it (Marin, "Les moines de Constantinople", chap. 1). So monasteries grew up all over the empire. Constantinople especially was covered with them (see the list, ib., 23–25). One of the chief of these was Studion (Στουδιών) in the south-western angle of the city, founded by a Roman, Studius, in 402 or 403. It was occupied by so-called "sleepless" (σπυρόκοιμοι) monks, who divided into companies, kept an unceasing round of prayer and psalm-singing day and night in the church. But there was not a separate order; there was no distinction between various religious orders. St. Theodore, the great defender of images in the second Iconoclasm persecution, became Hegumenos of Studion in 799 (till his death in 826). His letters, sermons and constitutions for the Studite monks gave renewed ideals and influenced all Byzantine monasticism. Dion (this period of a great number of synods, ordinances of patriarchs, emperors, and abbots, further defined and expanded the rule of St. Basil. Many Eastern synods draw up among their canons laws for monks, often merely enforcing the old rule (e. g. the Synod of Capadocia in the middle of the fourth century, Can., xix., etc.). St. John Chrysostom (cf. Montalembert, "Histoire des Moines d’Occident", Paris, 1880, I, 124), the Patriarch John the Faster (d. 555: Pitra, "Spicilegium Solesmensis", Paris, 1852, IV, 416–444), the Patriarch Nicephoros (d. 829: ib., 381, 415), and so on, down to Photios (Hergenrother, "Photius", Ratisbon, 1867, II, 222–223), added to these rules, which, collected and commented in the various constitutions and typika of the monasteries, remain the guide of a Byzantine monk. Most of all, St. Theodore’s "Constitution of Studion" (P. G., XCIX, 1703–1720) and his list of punishments for monks (ib., 1734–1758) represent a classical and much copied example of such a collection of rules and principles from approved sources. But the latter had a modern view that the husbands of women at Annesos near the settlement of the men. From that time convents of nuns spread throughout the Byzantine Church, organized according to the same rule and following the same life as that of the monks with whatever modifications were necessary for their sex. The convicts were subject to the jurisdiction of the bishop; the church was provided for by a priest, generally a priest-monk, who was their "ghostly father" (πνευματικός ναότης). The abbess was called γυναικειόν.

Lastly, during this period the monks played a very important part in theological controversies. The Patriarch of Alexandria, for instance, in his disputes with the bishops of Constantinople in 402–403 over the monasticism of his clergy, shows that he was aware of the fanatical loyalty of the great crowd of monks who swarmed up from the desert in his defence. Often we hear of monks fighting, leading tumults, boldly attacking the soldiers. In all the Monophysite troubles the monks of Egypt, Syria, Palestine, and the capital were able to throw the great weight of their united influence. They were the leaders of the Arian and the Anacoretic schism (482–519), while the whole Byzantine Church broke communion with Rome, only the "sleepless" monks of Studion remained Catholic. On the whole, the monks were generally on the Catholic side. During the Iconoclast persecution they were so determined against the overthrow of the holy pictures that the Iconoclast emperors made the abolition of monasticism part of their programme and persecuted people for being monks just as much as for worshiping images (see ICONOCLASM). Especially the great Studion monastery at Constantinople had a tradition of unswerving orthodoxy and loyalty to Rome. They alone kept communion with the Holy See in the Aca- ritarchism, they were the leaders of the Iconoclasts, and their great abbot St. Theodore (d. 826) was one of the last defenders of union and the pope's rights before the great schism.

(3) From the schism to modern times.—The schism made little difference to the inner life of the Byzantine monasteries. Like the lower clergy and the people they quietly followed their bishops, who followed the patriarchs, who followed the Ecumenical patriarch into schism. After that their life went on as before, except that, having lost the advantage of intercourse with the West, they gradually drifted into the same stagnation as the rest of the Orthodox Church. They lost their tradition of scholarship, they had no teaching church, they had no work to do, but in the late Middle Ages they gradually arrived at the ideal that the "angelic life" meant, besides their immensely long prayers, contemplation
and fasting, doing nothing at all. In the eighteenth
century, when an attempt was made to found monas-
tic schools, they fiercely resented such a desecration
of their ideal. During the early Middle Ages the
Orthodox Church lent support, on the holy mountains. 
Catholic monks, who were converting western Europe
and making their monasteries the homes of scholarship.
The chief event of this period is the foundation of
the Athos monasteries, destined to become the centre
of Orthodox monasticism. When St. Athanasius of
Athos founded the great Laura there, there were al-
ready cells of hermits on the holy mountain. Never-
theless he is rightly looked upon as the founder of the
communities that made Athos so great a centre of
Orthodox monasticism (see Athos, Mount; also Kytiakos, Ekklesi-

In the tenth and eleventh centuries the famous monas-
teries called the Meteoras (Μετέωρα) in Thessaly were
built on their inaccessible peaks to escape the ravages
of the Slavs. The Turkish conquest made little dif-
terence to the monks. Moslems respect religious.
Their Prophet had spoken well of monks (Koran, Sura
V, 85) and had given a charter of protection to the
monks of Sinai; but they shared fully the degradation
of all church institutions to which they were subject.
The Turkish conquest sealed their isolation from the rest
of Christendom; the monasteries became the refuge of
peasants too lazy to work, and the monk earned the
scorn with which he is regarded by educated people in
the East. Eugenios Bulgari (d. 1800), one of the chief
restorers of classical scholarship among the Greeks,
made the Meteoras his home, and founded a school at
Athos. The monks drove him out with contumely as an
atheist and a blasphemer, and pulled his school down. Its
ruins still stand as a warning that study forms no part
of the “angelic” life.

(4) Monasticism in the present Orthodox Church.—
The sixteen independent Churches that make up the
Orthodox world (the Oecumenical or Greek) but which
are fewer convents. One great monastery, that of
Mount Sinai, follows what professes to be the old rule
of St. Anthony. All the others have St. Basil’s rule
with the additions, expansions, and modifications
made by later emperors, patriarchs, and synods.
There is no distinction of religious orders as in the
West, but a considerable degree of monasticism is
found. All monks are “Basilians” if one must give them
a special name. A monk is μοναχος, a priest-monk
ιερουργος. A monastery is μονή or λαος.
The novice (δρακος) wears a tunic called βασιν with a
belt and the kalimallion of all the clergy, he is often
called μαθηματικος. After two years (the period is some-
times shortened) he makes his (solemn) vows and re-
ceives the small habit (μαθηματικ). Technically he is
now a μαθηματικος, though the word is not often used.
After an undefined time of perseverance he receives the
great habit (κουσωλιος) and becomes μεγαλομαθηματικος.
The popular Greek name for monk is “good old man”
(ελληνικα). The election, the rights and duties of the
hierarchy, and many rules are retained from the time
before the schism. The title “archimandrite” ap-
pears to be given now to abbots of the more important
monasteries and also sometimes as a personal title of
distinction to others. It involves only precedence of
rank.

Most monasteries depend on the local metropolitan.
In the Orthodox states (Russia, Greece, etc.) the Holy
Church has a good deal to say in their management,
confirms the election of the abbot, controls, and
ubernaturally confiscates their property. But certain
great monasteries are exempt from local jurisdiction
and immediately subject to the patriarch or Holy
Synod. These are called στουρφησια. One Ortho-
odox monastery (Mount Sinai) which is in this class
also “Archbishop of Sinai”, is an autopoitephalous
Church, obeying only Christ and the Seven Councils.

The Γαννσιοι καπναρσιοι of the Oecumenical patriarchate
contain a chapter about monasteries (pp. 67 sqq.).
They are divided into three classes, those with more
than twenty, more than ten or more than five monks.
Only those of the first class (more than twenty
are bound to sing all the Divine office and celebrate
the holy Liturgy every day. Monasteries with less
than five monks are to be suppressed or incorporated
in larger ones. Monastic property accumulated in the
East as in the West. Many quarrels between the
Church and State have arisen from usurped control or
confiscation of this property by the various Orthodox governments. The first Greek Parl-
ament in 1833 (at Nauplion) suppressed all monas-
teries in the new kingdom that had less than six
monks. In 1864 Russia confiscated all monastic
property in Rumania, of which much belonged to the
monasteries of Mount Sinai, Jerusalem, and Athos.
In 1875 Russia confiscated three-fifths of the property
in Bessarabia belonging to the monastery of the Holy
Sepulchre. Of the rest it paid itself one-fifth for its
trouble and applied two-fifths to what it described
euphemistically as pious purposes in Russia. Many
monasteries have farms called μετασχα in distant lands.
Generally a few monks are sent to administer the me-
teria, but most of which all the rest live in the
monastery. The most famous monasteries in the southern
part of the Orthodox Church are Mount Sinai, the
Holy Sepulchre at Jerusalem, the Meteoras in Thes-
saly, Sveti Naum on the Lake of Ohrida and, most of
all, Athos. The national quarrels in the Orthodox
Church have full development at Athos. Till lately
the Greeks succeeded in found a school at Athos. They
drove the Georgians from Ivron, the Bulgars
from Philotheos, Xenophon, and St. Paul’s. Now
they are rapidly losing ground and influence; the
Slavs are building large Sketai, and Russia here as
everywhere is the great danger to the Greek element.
The Russians have only one laura (Panteleimon or
theotokos), but have thirty-five other monasteries
more than all the Greek lauras together. All the
Athos monasteries are stauropogia; only the Patriarch
of Constantinople has any jurisdiction. For ordina-
tions the hegumen invites the neighbouring Metro-
politan of Heraclea. The monasteries have also the
dignity of “Imperial” lauras, as having been under
the protection of emperors of former days.

(5) Monasticism in Russia.—The writer is indebted
to Mr. C. Faminovsky of the Russian Embassy
Church at London for the following account and the Russian
bibliography. There have been monks in Russia
since Christianity was first preached there in the tenth
century. Their great period was the fourteenth cen-
tury; their decline began in the sixteenth. Peter the
Great (1661–1725) at one time meant to suppress the
monasteries altogether. In 1723 he forbade new
monasteries to be received. Under Catherine II (1761–
1796) a more prosperous era began; since Alexander
I (1801–1825) monasteries flourish again all over the
empire. The latest census (1896) counts 495 monas-
teries and 249 monastic villages as the result of this
into 4 lauras (in Russia the name means a certain
precedence and special privileges); 7 stauropogia
(subject directly to the Holy Synod and exempt from
the ordinary’s jurisdiction), 64 monasteries attached
to bishop’s palaces. The rest are divided into three
classes. There are 73 of the first class (which have at
least 33 monks or, if convents, 52 nuns). 100 of the
second (17 monks or nuns) and 191 of the third (12
monks or 17 nuns). There are further 350 monas-
teries not classified. Catherine II introduced
the practice of drawing up official lists of the monas-
teries. She found 1072 monasteries in her empire of
which she abolished 496 and classified the rest. In
Russia, monasteries of Athos, monasteries (monastery
jitel’nye) or idiorhythmic (neobeshejitel’nye); but
these latter are not in favour with the Holy Synod
which restores the ecumenic rule wherever possible. Some monasteries are supported by government (khaltynie), others have to support themselves. The three classes mentioned above concern the amounts received by the supported monasteries. The main monasteries are: Solovetsky, at Archangel, Simonoff, Donskoy, Novoospassky, and Saikonoospassky at Moscow, Voekresensky, or New Jerusalem, Spaso-Yakovlewy. The censuses 1896 counted 22,940 monks and 7464 nuns in the empire. The most famous Russian monasteries are Kief (Kievsky Laura) founded in 1052 by St. Anthony, the last of all; the Troitsky, or Trinity, Laura near Moscow, founded by St. Sergius in 1335 and now the home of the first "Ecclesiastical Academy" (Serninary) in the empire; the Metropolitan of Moscow is its hegumenos. The Pochaievský Laura, founded in the thirteenth century and famous for its miraculous eikon of the Blessed Virgin; Solovetsky, founded in 1293; Surie (in the government of Novgorod) founded in 1302; Tikhviny (in Novgorod); Volokolamsky (in the Moscow government) founded by St. Joseph of Volokolamsk in 1749, which has an important library and has often been used as a state prison, and Kyrllya-Bilesersky (in Novgorod) founded by St. Cyril in 1387. *The Monasteries of the lesser Eastern Churches.*—Little need be said of these Churches. All had fully developed monasticism according to St. Basil's idea before they went into schism, and all have monks and nuns under much the same conditions as the Orthodox, though, naturally, in each case there has been some special development of their own. The Nestorians in Persia, the Chinese, the Chaldeans, the Assyrians, the Armenians, and the Melchites have all formed their own monasteries. The Copts have many monasteries arranged almost entirely like those of the Orthodox (Silbernagl, *Verfassung u. gegenwartiger Bestand samt. Kirchen des Orients*, Ratisbon, 1804, 291-293). The Assyrian monasteries are very flourishing in Persia and China. The Church of the Syrian Jacobites once had a great number of monasteries. Down to the sixteenth century there were still Stylites among them. They now have only nine monasteries in the present reduced state of their Church, most of them also residences of bishops. The Jacobite monk fasts very strictly. To eat meat is a crime punished as equal to adultery (Silbernagl, op. cit., 319-319). The Armens, Nestorians, and Chinese, as well as the flourishing of these lesser Eastern Churches, has the largest number of monks and the most flourishing monastic state. Armenian monks follow St. Basil's rule, but are much stricter in the matter of fasting. The novitiate lasts eight years. It is a curious contrast to this strictness that the abbot is often not a monk at all, but a married secular priest who hands on his office to his son by hereditary right. Most Armenian bishops live in monasteries. Etchmiadzin, the residence of the Catholicos, is theoretically the centre of the Armenian Church. The Armenians have the huge monastery of St. James, the centre of their quarter of Jerusalem, where their Patriarch of Jerusalem lives, and the court of Dervish uni on Mount Moriah with hundreds of nuns. Armenian monks do not at a rule become bishops; the bishops are taken from the unmarried Vartabeds, that is, the higher class of secular priests (doctors). In all the other Eastern Churches bishops are monks. All use their monasteries as places of punishment for refractory clergy. *The Uniates in Rome.*—The connection of Rome makes to Eastern monks is that there is in the Uniate Churches a certain tendency to emulate the Latin religious orders. As this generally means a disposition to do something more than recite the Divine office, it may be counted an unmixed advantage. Uniate monks, like all the uniate clergy, are admitted into the Roman clergy, while the schismatics, if some of them at least attend Western schools or seminaries of Latin religion in the East. It is a Latinizing tendency that makes them often use special names for their order and even evolve into something like separate religious orders. Thus most Uniate Byzantine monks call themselves "Basilians", as the Latins use "Benedictines" or "Franciscans". Among the Melchites the two great congregations of Salvatorians and Shuwertes (see Melchites) are practically different orders. The Uniate Armenians have the famous Mechitarist Congregation, really a special religious order founded by Mechitar (1676-1749). The Mechitarists have the monastery of San Giorgio Maggiore at Venice, and the Mechitarists in other countries, as in 1774, have a house at Vienna. By their schools, missions, and literary activity they have always done great things in educating and converting their countrymen. The Catholic Chaldæes have three monasteries, Rabban Hormuzd, Alkoeh, and Mar Yurgis in Mesopotamia. The Maronite Church from its beginning has been largely monastic. It was first formed by the schism of the monks of St. John Maro, in the Lebanon, from the Patriarch of Antioch. Since their union with Rome they have formed separate orders. Till 1757 there were two such orders, those of St. Isais and of St. Antony. The St. Antony monks then split again into two congregations, the Aleppoans (monks of Aleppo) and the Baladites (baladie, country monks). Clement XIV sanctioned this separation in 1770. All follow the rule of St. Antony. For the rest the Uniate monks of each Church have the same rule and customs as the corresponding schismatic orders. Certain details have been revised and abuses eliminated by the Roman Congregations. The following list is wide; there are Uniate Christians. Uniate bishops are by no means always monks as there are many of unmarried secular priests. One may note especially that the Uniate Byzantine monks in southern Italy and in the great monastery of Grottaferrata outside Rome. 

IV. WESTERN MONASTICISM.—(1) Pre-Benedictine Period.—The introduction of monasticism into the West may be dated from about A.D. 340 when St.
Athanasius visited Rome accompanied by the two Egyptian monks Ammon and Isidore, disciples of St. Anthony. The publication of the "Vita Antonii" some years later and its translation into Latin spread the knowledge of Egyptian monastic life in Italy. As however the records of early Italian monasticism are very scanty, it will be more convenient to give first a short account of early monastic life in Gaul, our knowledge of which is much more complete.

(a) Gaul.—The first exponent of monasticism in Gaul seems to have been St. Martin, who founded a monastery at Ligugé near Poitiers, c. 300 (see Ligugé; Martin of Tours, St.). Soon after he was consecrated Bishop of Tours; he then formed a monastery outside that city, which he made his customary residence. Although only some two miles from the city the spot was so retired that Martin found there the solitude of a hermit. His cell was a hut of wood, and round it his disciples, who soon numbered about 120, built a monastery. The type of life was simply the Antonian monachism of Egypt (see above, Eastern Monasticism) and so rapidly did it spread, that at St. Martin's funeral two thousand monks were present. Even more famous was the monastery of Lérins (q. v.) which gave to the Church of Gaul some of its most famous theologians. Daniel the Wool Gatherer (q. v.) settled there for living for seven years among the monks of Egypt, and from it he founded the great Abbey of St. Victor at Marseilles. Cassian was undoubtedly the most celebrated teacher that the monks of Gaul ever had, and his influence was all on the side of the primitive Egyptian ideas. Conspicuous among his teaching were the exhortations as being the summit or goal of monastic ambition and the means of perfection recommended were, as in Egypt, extreme personal austerities with prolonged fasts and vigils, and the whole atmosphere of ascetical endeavour so dear to the heart of the Antonian monk (see Cassian; John; France; Cassarius of Arles, St.).

(b) Celtic Monasticism (Ireland, Wales, Scotland).—Authorities are still divided as to the origin of Celtic monasticism, but the view most commonly accepted is that of Mr. Willis Bund which holds it to have been a purely indigenous growth and rejects the idea of any direct connexion with Gallic or Egyptian monasticism. It seems clear that the first Celtic monasteries were merely settlements where the Christians lived together—priests and laity, men, women, and children alike—as a kind of religious clan. At a later period actual monasteries both of monks and nuns were formed, and later still the religious life came into vogue. It seems highly probable that the ideas and ascetical requirements of the eastern monasteries influenced these later developments, even if the Celtic monasticism were purely independent in origin, for the external manifestations are identical in all three forms. Indeed the desire for austerities of an extreme character has always remained a special feature of Irish asceticism down to our own time. Want of space forbids any detailed account of Celtic monasticism in this place but the following articles may be referred to: (for Ireland) Armagh, Bangor, Clonard, Clonfert, Clonmacnois, Lismore, Bohro, Luxeuil, Saints Patrick, Carthage, Columbanus, Comgall; (for Wales) Llançarvon, Bangor, Saints Asaph, David, Dubric, Gildas, Kingtonern; (for Scotland) Aberdeen, of the Seven Bishops, Saint Ninian, Columba, Aidan. Undoubtedly, however, the chief glory of Celtic monasticism is its missionary work, the results of which are to be found over all northwestern Europe. The observance, at first so distinctive, gradually lost its special character and fell into line with that of other countries; but, by that time Celtic monasticism had passed its zenith and its influence had declined.

(c) Italy.—Like the other countries of western Europe, Italy long retained a purely Eastern character in its monastic observance. The climate and other causes however combined to render its practice far harder than in the lands of its origin. In consequence the standard of observance remained, and it is clear from the Prologue to St. Benedict's Rule that by his day the lives of many monks left much to be desired. Moreover there was as yet no fixed code of laws to regulate the life either of the monastery or of the individual monk. Each house had its own customs and practices, its own collection of rules dependent largely on the choice of the abbot of the moment. There were certainly in the West translations of various Eastern codes, e. g. the Rules of Pachomius and Basil and another attributed to Macarius. There were also St. Augustine's famous letter (Ep., cccxi) on the management of convents of nuns, and also the writings of Cassian, but the only actual Rules of Western monasticism were delineated by those of the women's convents nuns respectively, and that by St. Columbanus, none of which could be called a working code for the management of a monastery. In a word monachism was still waiting for the man who should adapt it to Western needs and circumstances and give to it a special form distinct from that of the East. This man was found in the person of St. Benedict, in about 480.

(2) The Spread of St. Benedict's Rule.—Full details of St. Benedict's legislation, which had such immense effect on the monasticism of Western Europe, will be found in the articles Benedict of Nursia, St., and Benedict, Rule of St. It is sufficient here to point out that St. Benedict legislated for the details of the monastic life in ways which had been adapted to either in East or West. It is clear that he had acquainted himself thoroughly with the lives of the Egyptian fathers of the desert, with the writings of St. Basil, Cassian, and Rufinus; and in the main lines he has no intention of departing from the precedents set by these great authorities. Still the standard of monasticism aimed at by the Benedictines, especially in the West, is less severe than that of Egypt or Syria. Thus he gives his monks good and ample food. He permits them to drink wine. He secures a sufficient period of unbroken sleep. His idea was evidently to set up a standard that could and should be attained by all the monks of a monastery, leaving it to individual inspiration to essay greater austerities if the need of them were felt by any one. On the other hand, probably as a safeguard against the relaxations mentioned above, he requires a greater degree of seclusion than St. Basil had done. So far as possible all connexion with the world outside the monastery is to be avoided. If any monk be compelled by duty to go beyond the monastery he must not dwell outside the town. The book which he has seen or heard. So too no monk may receive gifts or letters from his friends or relatives without permission of the abbot. It is true that guests from without are to be received and entertained, but only certain monks specially chosen for the purpose may hold intercourse with them. Perhaps, however, the chief point in which St. Benedict modified the pre-existing practice is his insistence upon the stabilitas loci. By this special Vow of Stability he unites the monk for life to the particular monastery in which his vows are made. This was really a new development and one of the highest importance. In the first place by this the last vestige of monastic freedom, of going away from the monk, Secondly it secured in each monastery that continuity of theory and practice which is so essential for the
family which St. Benedict desired above everything. The abbott was to be a father and the monk a child. Nor was he to be more capable of choosing a new father or a new home than any other child was. After all St. Benedict was a Roman, and the son of a Roman wife, and he alone brought to the monastic life that absolute dependence of all the members of a family upon the father which is so typical of Roman law and usage. Only at the selection of a new abbot can the monks choose for themselves. Once elected the abbot's power becomes absolute; there is nothing to control him except the Rule and his own conscience which is responsible for the salvation of every soul entrusted to his charge.

The Rule of St. Benedict was written at Monte Cassino in the ten or fifteen years preceding the saint's death in 543, but very little is known of the way in which it began to spread to other monasteries. St. Gregory (Dial., II., xxii.) speaks of a foundation made from Monte Cassino at Terracina, but nothing is known of this house. Again, the traditions of Benedictine foundations in Gaul and Sicily by St. Maurus and St. Placid are now generally discredited. Still the Rule must have become known very soon, for by the death of Simplicius, the third Abbot of Monte Cassino, in line from St. Benedict, it is referred to as being the foundation of Monte Cassino. An early (Annal. Benedict., VII. ii.) in the year 580 Monte Cassino was destroyed by the Lombards and the monks fled to Rome, taking with them the autograph copy of the Rule. They were installed by Pelagius II. in a monastery near the Lateran Basilica. It is almost certain that St. Gregory the Great who succeeded Pelagius II. introduced the Benedictine Rule and observance into the monastery of St. Andrew which he founded on the Caelian Hill at Rome, and also into the six monasteries he founded in Sicily. Thanks to St. Gregory the Rule was carried to England by St. Augustine and his fellow monks; and also to the Frankish and Lombard monasteries which the pope's influence did much to raise by binding them to the observance of his "Dialogues" to the story of St. Benedict's life and work, Gregory gave a strong impetus to the spread of the Rule. Thus the first stage in the advance of St. Benedict's code across Western Europe is closely bound up with the name of the first monk-pope.

In the seventh century the process continued steadily. Sometimes the Benedictine code existed side by side with an older observance. This was the case at Bobbio where the monks lived either under the rule of St. Benedict or of St. Columbanus, who had founded the monastery in 609. In Gaul at the same period a union of two or more rules was often to be found, as at Luxeuil, Solignac, and elsewhere. In this there was nothing surprising, indeed the last chapter of St. Benedict's rule seems almost to contemplate such an arrangement. In England, thanks to St. Wilfrid of York, St. Benedict Bishop and others, the Benedictine mode of life began to be regarded as the only true type of monachism. Its influence however was still slight in Ireland where the Celtic monasticism was developing slowly. In the eighth century the advance of Benedictinism went on with even greater rapidity owing principally to the efforts of St. Boniface. That saint is known as the Apostle of Germany although the Irish missionaries had preceded him there. His energies however were divided between the two tasks of converting the heathen tribes and bringing the Christianity of the Irish to the Continental Roman use and obedience. In both these undertakings he achieved great success and his triumph meant the destruction of the earlier Columban form of monachism. Fulda, the great monastery of St. Boniface' institution, was modelled directly on Monte Cassino in which Sturm the abbot had resided for some time so that he might become perfectly acquainted with the workings of the Rule at the fountain head, and in its turn Fulda became the model for all German monasteries. Thus by the reign of Charlemagne the Benedictine form of monachism had become the normal type throughout the West with the remarkable exception of some few Irish monasteries. So completely was this the case that even the memories of earlier things had passed away and it could be gravely doubted whether monks of any kind at all had existed before St. Benedict and whether there could be any other monks but Benedictines.

At the time of Charlemagne's death in 814 the most famous monk in western Europe was Benedict of Aniane, the friend and counsellor of Louis the new emperor. For him Louis built a monastery near his imperial palace at Aix, and there Benedict gathered thirty monks, chosen from among his own personal friends and in full sympathy with his ideas. This monastery was intended to be a model for all the religious houses of the empire, and the famous Assembly of 817 passed a series of resolutions which touched upon the whole range of the monastic life. The object of these resolutions was to secure, even in the minutest details, an absolute uniformity in all the monasteries of the empire, so that it might seem as if "all had been taught by one single master in one single school". And might have been expected the scheme failed to do this for even at this early stage of its development, the decision of his "Dialogues" to the story of St. Benedict's life and work, Gregory gave a strong impetus to the spread of the Rule. Thus the first stage in the advance of St. Benedict's code across Western Europe is closely bound up with the name of the first monk-pope.

In the seventh century the process continued steadily. Sometimes the Benedictine code existed side by side with an older observance. This was the case at Bobbio where the monks lived either under the rule of St. Benedict or of St. Columbanus, who had founded the monastery in 609. In Gaul at the same period a union of two or more rules was often to be found, as at Luxeuil, Solignac, and elsewhere. In this there was nothing surprising, indeed the last chapter of St. Benedict's rule seems almost to contemplate such an arrangement. In England, thanks to St. Wilfrid of York, St. Benedict Bishop and others, the Benedictine mode of life began to be regarded as the only true type of monachism. Its influence however was still slight in Ireland where the Celtic monasticism was developing slowly. In the eighth century the advance of Benedictinism went on with even greater rapidity owing principally to the efforts of St. Boniface. That saint is known as the Apostle of Germany although the Irish missionaries had preceded him there. His energies however were divided between the two tasks of converting the heathen tribes and bringing the Christianity of the Irish to the Continental Roman use and obedience. In both these undertakings he achieved great success and his triumph meant the destruction of the earlier Columban form of monachism. Fulda, the great monastery of St. Boniface' institution, was modelled directly on Monte Cassino in which Sturm the abbot had resided for some time so that he might become perfectly ac-
tain. Nothing is more remarkable in the history of Benedictine monasticism than its power of revival by the springtide of new life which flowed within. This power, and again and again, when reform had been needed, the impetus has been found to come from within the body instead of from outside it. But in the case of Cluny such a thing had been rendered practically impossible, and the only recovery no recovery took place.

(4) Reaction against Cluny.—The reaction against Cluny and the ultra-regular monasticism took various forms. Early in the eleventh century (1012) came the foundation of the Camaldolese by St. Romuald. This was a hard back to the ancient Egyptian ideal of a number of hermits living in a "laura" or collection of detached cells which were situated some considerable distance apart (see Camaldolese). A few years later (1015) came the foundation of the order of Vallombrosa, which is chiefly important for the institution of "lay brothers," as distinct from the choir monks, a novelty which assumed high importance in later monastic history (see Lay-brother; Vallombrosa). In 1074 came the Order of Grammont which however did not move to the place from which its name is derived until 1227 (see Grammond, Stephen; Munster, Sr.). Far more important than these was the establishment in 1084 of the Carthusians by St. Bruno, at the Grand Chartreuse near Grenoble, which boasts that it alone of the great orders has never required to be reformed (see Carthusians; Chartreuse, Le Grand; Bruno, St.). In a sense this was the beginning of the monasticism of the 12th century, e.g. the general chapters, to the use of the Black monks, a movement which made a great step in the path which later proved so successful. At the time however they were practically ignored by the monasteries on the Continent, and only in England was any serious effort made to put them into practice. The consequence was that the English monasteries of Black monks soon formed themselves into one national congregation throughout the country became largely uniform, and a far higher standard of life obtained than was common in continental monasteries at the same period. The system of periodical general chapters ordered by the Lateran Council was maintained. So too was the subjection of all monasteries to the diocesan bishop. The normal state of affairs was one in which all England were exempt from episcopal jurisdiction. There were of course individual failures here and there, but it is clear that, from the date of the Council of Lateran up to the time of their destruction, the English Benedictine houses maintained on the whole a good standard of discipline and preserved the affectionate respect of the great majority of the laity in every rank of life.

(5) Period of Monastic Decline.—On the Continent the period succeeding the Fourth Lateran Council was one of steady decline. The history of the time tells of civil disturbance, intellectual upheaval, and a continual increase of luxury among ecclesiastics as well as laity. The decay of the monasteries, "monastic order" it is used to exclude all monastic observance not exactly on the lines of the "new monastery," i.e., Citeaux, and subject to it. The monasteries of the Cistercians spread over Europe with surprising rapidity and from the style the habit they adopted was called the "White Monks," the older Benedictines and Cluniacs being known as the "Black Monks" (see Cistercians; Citeaux; Robert of Molesme, St.; Bernard of Clairvaux, St.).

The impetus given by these new foundations helped to revitalise the Benedictine monasteries of the older type. The system of monasteries under the rule of the Prior of Monte Fano, who ruled the whole congregation as general assisted by a chapter consisting of representatives from each house (see Sylvesterines).
The Celestines, founded about forty years later by St. Peter Morone (Celestine V), were organized on much the same plan but the superiors were not perpetual and the head of the whole body was an Abbot elected by the General Chapter for three years and ineligible for re-election for twelve years. The order was divided into six provinces and each province into a number of provinces (see Ceistercian Orders: Celestine V, St.). The Olivetans, founded about 1313 by Bernardo Tolomei of Siena, mark the last stage of development. In their case the monks were not professed for any particular monastery, but, like friars, for the congregation in general. The officials of the various houses were chosen by a small committee appointed for this purpose by the general chapter. The abbots-general were visitor of all monasteries and “superior of superiors”, but his power was held for a very short period only. This system had the very great advantage that it rendered the existence of commendatory superiors practically impossible, but it secured this at the cost of sacrificing all family life in the individual monastery which was the central idea of St. Benedict’s legislation. Further, by taking the right of election away from the monastic communities, it concentrated all real power in the hands of a small committee, a course obviously open to many possible dangers (see Olivetans).

Monastic Renewal.—In the great wave of reform and revival which characterized the later fifteenth and sixteenth centuries the older institutions of Benedictines once more gave proof of their vitality and a spontaneous renewal of vigour was shown throughout Europe. This revival followed two main lines. In the Latin countries the movement pursued the path marked out by the Olivetans. Thus in Italy and the monasteries of Black monks were gradually united together under the name of the Congregation of St. Justina of Padua, afterwards called the Cassinese Congregation (see under Benedictines). Similar methods were adopted in the formation of the Congregations of St. Maur and St. Vannes in France, in the two Congregations of Spanish Benedictines, and in the revival of the English Congregation. In Germany the revival took a different path; and, while keeping closer to the traditions of the past, united the existing monasteries very much in the manner ordered by the Fourth Council of Lateran in 1215. The Union of Bursfeld is perhaps the best example of this method. An example of uniform in the seventeenth century was the work of Abbé de Rancon in instituting the Cistercian reform at La Trappe. In this his object was to get as close as possible to the primitive form of Benedictine life. No one can question his sincerity or the singleness of his intentions, but de Rancon was not an antiquary and had not been trained as a monk but as a courtier. The result was that he interpreted St. Benedict’s rule with the most absolute literalness, and thus succeeded in producing a cast-iron mode of life far more rigid and exacting than there is any reason to believe St. Benedict himself either desired or did beget. The upheaval of the French Revolution and the wars which followed it seemed to give a death blow to Western monasticism and in fact it did destroy many monasteries in the hundred. But nothing perhaps is more noteworthy, in all the wonderful revival of Catholicism which the last hundred years have seen, than the resuscitation of monastic life in all its forms, not only in Europe, but also in America, Africa, Australia, and other distant lands whose very existence was unknown to the founders of this cloistered, fourth-century, this will be found in the articles on the various orders and congregations referred to above.

No mention has been made in this article of the question of women under Monasticism. Broadly speaking the history of contemplative nuns, as distinct from nuns of the more recent active orders, has been identical with that of the monks. In almost every instance the modifications, reforms, etc., made by the various monastic legislators have been adopted by convents of women as well as by the monks. In cases where any special treatment has been thought necessary, e.g., the Carthusian Nuns, a separate section of the article on the order or congregation in question has been dedicated to the subject. These sections should be referred to in all cases for detailed information. (For practical details of the monastic life and the actual working of a monastery see the articles Monasticism; Monastery; Abbey; Abbot; Abbes; Obedientiaries; Benedict, Rule of St.; Benedict of Nursia, St.; Nun.)

G. Roger Hulseston.

Moncada, Francisco de, Count of Osona, Spanish historian, son of the Governor of Sardinia and Catalonia, b. at Valencia, 29 December, 1586; d. near Goch, Germany, 1635. He entered the army at an early age, and in 1624, was appointed by King Philip IV ambassador to the imperial court at Vienna, where he soon succeeded in acquiring the esteem of Ferdinand II and his ministers. In 1629 he was recalled from Vienna and sent to Brussels in place of Cardinal de la Cueva, ambassador to the Infanta Isabella. His chief duty therewith consisted of teaching the Infanta in regard to the conditions in the Netherlands, in supervising the royal officials, and in watching over the disbursements of Spanish funds. He soon discovered the chief fault of the preceding administration and endeavoured to conciliate the Belgians a much larger share in the administration of their country’s affairs, for he realized that Portuguese confidence could they be kept loyal to the empire. He also proposed, though without success, to transfer the general management of Belgian affairs from Madrid to Brussels. In 1630 he was appointed commander-in-chief of the navy, in 1632 of the entire army, and in 1641, after the death of his brother Charles, 1st Duke of Burgundy, until relieved by the arrival of Prince Cardinal Ferdinand. His crowning and final achievement as military commander was the liberation of Breda, the citizens of which ordered memorial coins struck in his honour. The following year he accompanied the cardinal on an expedition into the Duchy of Cleves, where he died after a short illness at the siege of Goch. He had an amiable character, knew how to guide men according to his own desires, and combined great shrewdness and firmness with wise moderation. He wrote a valuable history of the expedition of the Catalonians and Aragonians against the Turks and Greeks (Barcelona, 1623; Madrid, 1777, 1805, 1883; Paris, 1841, in "Tesoro de los Leones de España.") We furthermore possess from his pen the "Vida de Anicio Manlio Torquato Severino Boecio", which was printed (Frankfort, 1642) seven years after his death.

Patriicus Schlegler.

Mondino (a diminutive for Raimondino; Mundinus) dei Lucci, anatomist, b. probably at Bologna, about 1275; d. there, about 1327. Mondino performed a series of pubic dissections at the University of Bologna in the early part of the fourteenth century. He is sometimes said to have performed only two or three dissections, but his own writings refute this. He is often proclaimed the first to have performed dissections in modern times, but Hauser says that many anatomists dissected before his time, and that we have even a manual of dissection written before this, by one Riccardus. For this Riccardus he wrote a manual called "Anathomia", which was used in nearly all medical schools for three centuries after his time. Its popularity can be judged from the editions issued after the invention of printing. There is one at Pavia (1478), Bologna (1482), and Padua (1484); there are Venice editions of 1494, 1498, 1500, and 1507; Leipzig (1505), Strassburg (1509), and Marburg and
Lyons shortly afterwards. His book was considered such an authority that an old teacher declared that medical students for centuries worshipped him as a god. Although onions were not described in Mondeno's "Anathemia," constantly open before them while dissecting, it was considered an anomaly. The work of course has been superseded by progress in the science of anatomy, but it is easy to understand from it how much practical anatomy for surgical purposes the medieval physicians were taught.

Many of the bishops of Mondeno were noted for their sanctity and learning. First among these is St. Rosendus, who, in consideration of his eminent virtues, was created a bishop when he was very young, and governed the diocese from 923 to 923. He founded the monastery of Celanova, to which he afterwards retired to live the life of a monk. Of another abbot of Celanova, Gonzalo, a legend has been preserved which attributes to his prayers the repulse of the Northmen who were devastating the coasts of Galicia.

The See of Mondeno, the cathedral of which is Villamayor de Brea, where the cathedral church of Santa Maria Vallabriensis was built. The Blessed Virgin, under her title of the Assumption, was the patroness of this church. Alfonso VII gave a charter to the monastery of Mondeno, which continued in the possession of the Bishops of Mondeno until Ferdinand II of Leon transferred the episcopal residence to Ribadeo. In 1233 Don Martin, successor to Don Pelayo, transferred it to its present location, Mondeno, now a town of 10,500 inhabitants. To appease the discontent occasioned in Ribadeo by this change, Bishop Nuno III restored the cathedral church in Ribadeo with a canon and four prebendaries (raciomeri).

The cathedral church of Mondeno, which was formerly the cathedral of the diocese, is the see of the bishop of Mondeno. The church was founded by St. Martin of Mondeno, and the see was established in 851. The church was sacked and destroyed by the Saracens, the bishop and priests took refuge in Asturias. In 899, during the reign of Alfonso III, Theodesimus, Bishop of Britonia assisted with other prelates at the consecration of the church of Santiago. It may also be noted that, in the partition of the parishes, the church of San Pedro de Nova was assigned as the residence of the bishops of Britonia and Orense, when they should come to assist at the councils of Oviedo. By that time, however, the See of Britonia had been translated to the town of Mondumat and the church of St. Martin of Dumio, or Mondeno. The diocese has been most generally known by this name, although formerly it was Britonia; it has fine old churches.

The church of St. Martin of Mondono, one of the best of the ancient churches of this region, has been the cathedral church since 866. The present parochial house is a part of the old episcopal palace, connected with the church by a gallery from what seems to have been one of the episcopal chambers. In 1112 this house became a monastery, transferred residence to Brea, a valley about seven and a half miles from St. Martin of Mondeno, in the midst of which is Villamayor de Brea, where the cathedral church of Santa Maria Vallabriensis was built. The Blessed Virgin, under her title of the Assumption, was the patroness of this church. Alfonso VII gave a charter to the monastery of Mondeno, which continued until Ferdinand II of Leon transferred the episcopal residence to Ribadeo. In 1233 Don Martin, successor to Don Pelayo, transferred it to its present location, Mondeno, now a town of 10,500 inhabitants. To appease the discontent occasioned in Ribadeo by this change, Bishop Nuno III restored the cathedral church in Ribadeo with a canon and four prebendaries (raciomeri).
In any other part of Spain, has been erected over his grave. His memory is venerated, and the faithful visit his tomb. The convent of the Alcantarines (Franciscans of the reform of St. Peter of Alcantara), founded in 1731, is now used as barracks. The court-house (1584) and the seminary are among the principal buildings of Mondóvar.

The present seminary building, in the Huertas del Torrillón, was built by Bishop José Francisco de Losada In 1770-75. Mondóvar, which until 1836, was the capital of the province, numbers among her distinguished sons the teacher Pascual Febrero, author of “Galera de Escritores” José Cayetano Suáez, Bishop of Palencia; Lucas Miranda, author of the “Teatro de Prelados de la Iglesia de Mondóvar”, and the sculptor Castro, designer of the inspiring figure of Saint Francis in the cathedral. Bishop Manuel Navarrete wrote a long history of Mondóvar and its bishops. The present (1910) Bishop of Mondóvar, Don Juan José Solé y Fernández, b. at Oviedo, 1848, was consecrated on 26 May, 1907.

RAMÓN RUIZ AMADO.

Mondoñedo, Diocese of (Montesregalan), in Piamont, province of Cuneo, northern Italy. The city is built upon three hills, at a height of about 1600 feet above sea-level, and dates from the year 1000; but the suburb of Brec, the name of which recalls the Bredolens, a city mentioned in a Roman inscription found in that neighbourhood, had a castle in the time of Charlemagne. The town, called Monsvici, also Monteregale, was under the bishops of Asti until 1198, when it established itself as a commune, but was compelled to struggle against the bishops of Asti, the marquesses of Saluzzo and of Monferrato, and the counts of Savoy, a struggle in which the jealously of the suzerainty of one or another of those lords. The commune maintained a war against the marquesses of Civa (1240-50), and finally, Bressadro di Vico, a powerful lord in Mondoñedo, attempted to make himself master of the city, which submitted to Charles of Anjou (1260), and from that time, with some interruptions, was subject to the crown of Naples, until 1396. In 1396, having again changed lords several times, it came under the dominion of the Savoyard lords of Achaia, and in 1418, under that of the dukes of Savoy, in whose possession it remained. In 1476 and in 1533, the inhabitants of Mondoñedo attempted to give their allegiance either to the Marques of Villahermosa or to the king of France, but the French contested for its possession with the imperialists (1530-43), and with the house of Savoy (1543-59). The city was at war with the Duke of Savoy for the salt monopoly (1678-99). Napoleon defeated the Piedmontese near Mondoñedo (1796), thereby assuring his way through the valley of the Po, and in 1799 it was occupied by the French.

It was the birthplace of the pious Cardinal Bona, of the celebrated physicist Becarca, and of Marquess Ormea, a statesman of the eighteenth century. Its cathedral contains paintings by Giulio Romano, Cambiaso, and others. The residence of the bishop is one of the noblest episcopal palaces in Italy. In the church of la Missione there are frescoes by the Jesuit Pergolesi. The city is the site of the Madonnina del Filone, dating from the fourteenth century, but finished later (1730-49). The palace of the counts of San Quintino contained the first printing-office in Piedmont, and was the seat of a university (1581-91) founded by Duke Emmanuel Filibert, the first institution of its kind in Piedmont. The city, at first part of the Diocese of Asti, had a bishop, suffragan of the Archbishop of Milan, but, since 1515, Turin has been its metropolitan. In 1817, the territory of Cuneo was detached from the See of Mondoñedo, and made a diocese. The first bishop of Mondoñedo was Damiano Zavaglia, a zealous and pious prelate: and before him was a small barracks in Palma (1429), Amadeo Romagnano (1497), who reconstructed the cathedral (1550); Michele Ghislieri, O.P. (1550), later Pope Pius V; Cardinal Vincenzo Lauro (1666), founder of the seminary, during whose incumbency the cathedral and other churches were torn down to make room for the citadel; Giovanni Battista Lamardi (1697), who restored the episcopal palace and the church of St. Dalmazio; Carlo Felice Sanmartino (1741), founder of the new seminary, and Giovanni Tommaso Ghilardi, O.P. (1842), a very pious and charitable man. The city contains 145parishes, with 170,000 faithful, 6 religious houses of women, 10 educational establishments for boys and 15 girls; it has the three Catholic newspapers.

Cappelletti, L'Chiesa d'Italia (Venice, 1887); XIV, GAZETTE, Memorie storiche della chiesa vescovile di Montereale (Turin, 1816); DEI DONNA, Storia dell'antica città di Montereale ossia Mondoñedo (2 vols., Turin, 1894-99).

U. BENIGNI.

Mone, Franz, historian and archaeologist, b. at Mingolheim near Bruchsal, Baden, 12 March, 1785; d. at Karlsruhe, 12 March, 1871. He attended the gymnasium at Bruchsal and in 1814 entered Heidelberg, where in 1817 he was appointed tutor (Privatdozent) in history, in 1818 secretary of the university library, in 1819 extraordinary, and in 1822 ordinary, professor, and in 1825 head of the university library. From 1825 to 1844 he was in Paris, where, in 1839, he returned. He then returned to Baden for a time, and in 1851, when he had been appointed professor of History, went to Kiel. While in Kiel he published (1850) his famous “Das deutsche Sprache”, (1851); “Celtische Forschungen”, (1857) suffered from his tendency to trace everything possible to a Celtic origin. More important are his works on literary history, which include: “Einleitung in das Nibelungenlied” (1818); “Geschichte des Heidentums im nördlichen Europa” (2 vols., 1822-3); “Onn” (1831); “Quellen und Forschungen für Geschichte der deutschen Literatur und Sprache” (1830); “Untersuchungen zur Geschichte der deutschen Heldensage” (1836); “Uebersicht der niederländischen Volksliteratur älterer Zeit” (1838). In the “Anzeiger für Kunde des deutschen Mittelalters” (1835-9), he calls attention to a great mass of unknown materials. Of great value is his history of his native language: “Das Badische Archiv” (2 vols., 1826-7); “Quellen- und Sammlung der badischen Landesgeschichte” (4 vols., 1848-67); “Das deutsche Mone, historian and archaeologist, b. at Mingolheim near Bruchsal, Baden, 12 March, 1785; d. at Karlsruhe, 12 March, 1871. MONGOLIA

The Mongols.—Organization.—With regard to the word Mongol, Mr. E. H. Parker (Asiatic Quart. Rev., July, 1910) writes: "It is usually believed that Jenghiz Khan gave the name Mung-Ku (the present Chinese name for 'Mongol') to his people, and the word is said to mean 'silver', just as the Liao (Lee) and Tang (T'ang) dynasties in China were mentioned under the Manchus (Niuchen) dynasty to mean 'gold'. . . . In the same way, I suspect the various forms, Mungu or Mungut, which have an unbroken descent from A.D. 600 to A.D. 1200 (before Jenghiz rose to power), must refer to some ancient stream or typographical peculiarity in the Onon region, near where Jenghiz arose." In the Yuan dynasty the Mongol tribes are styled Ta-ta (Tatars) and also Meng-gu. The Mongol tribes are divided into Nui Mung-ku (Inner Mongols) and Wai Mung-ku (Outer Mongoals). The Nui Mung-ku, including forty-nine banners (ho shun), arose out of the organization formed by the descendants of Jenghis Khan, which has continued to the present time. Under the Yuan dynasty they were organized in six divisions (Dzirughan Tuman, or "Six Ten Thousands"), forming two wings, the right occupying the western portion of the Mongolian territory, the left the eastern portion. The Inner Mongols are now divided into six menyt (Chinese), or chogolts (Mongol), including twenty-four pu (Chinese), and the Outer Mongol (Udumak), known as the Mongol League, comprising the following pu, or tribes: (1) Khorich, 6 banners; (2) Daljai, 1 banner; (3) Turtub, 1 banner; (4) Ghorlo, 2 banners. phlets, "Die katholischen Zustände in Baden" (1841–
3).

VON WECHS, Bodenliige Biographien, 11 (Heidelberg, 1870), 88–
9; in der All. deutscher Biogr., XXXII (Leipzig, 1885), 165–9. Portions of Moneta's correspondence were edited by von Wechs in Zeitkräfte, für die Geschichte, des Obersteir., LV (1901), 422 sqq., 450
sqq.; LVII (1903), 488 sqq.

KLEMMENS LÖFFLER.

Moneta (MoNeta), theologian, b. at Cremona, Italy, date unknown; d. at Bologna, 1240. He was one of the first disciples of St. Dominic. Previous to his entrance into the order in 1220, he was professor of philosophy in the university of Bologna, where his rare erudition and depth of thought as well as his clearness of exposition won for him a wide reputation. The eloquence of Bl. Reginald, the superior of the local community, attracted to the order so many renowned doctors and students that Moneta began to fear for his own prestige, to insure which, he carefully avoided the preacher and exhorted his pupils, by word and example, to do likewise. But yielding to his pupils' wishes one day he accompanied them to a sermon and was so deeply moved by it that he resolved to become a religious. He was later noted for his sanctity no less than for his eloquent and learned

counterparts with the heretics. His intense devotion to study caused him to lose his sight in the latter days of his life, but there is no doubt of his "Summa contra Catha-

ricos et Waldenses", a widely read work during his time. It was first edited in 1743 by a religious of his order, Thomas Aug. Ricchini, who supplied the work with copious notes. In a biographical sketch of the author with which he prefaced the work, we are informed that Moneta wrote also a commentary on Aristotle's logic and a "Summa contra Franciscanorum".

JOSEPH SCHRODER.

Mongola.—The name used to designate an im-

mensely uneven plateau, part of the Chinese Empire, ex-

tending, roughly speaking, from the Tarbagatai to the

great K'ingan chains.

Geography.—Mongolia is bounded on the north by the

Siberian provinces of Tomsk, Irkutsk, Yeniseisk, and Transbaikalia, as defined by the Russo-Chinese treaty of 1860; on the east by Manchuria, and the frontier crossing the Nonni River; on the south, the frontier, after following the Shara Muran, which separates it from the Chinese provinces of Chi-li, Shan- 

si, Shen-si, and, crossing the bend of the Huang-ho (Ordo Country), Kan-su, includes Ala-shan, following part of the Great Wall; on the southwest and west it is bounded by the New Dominion (Sin Kiang) and the

Siberian province of Semipalatinsk to Mount Kaldar (Altai). The population of Mongolia is estimated variously at 2,600,000 (Statesmen's Year Book, 1910), 2,580,000, or nearly 2 to the square mile, and 5,000,000.

Its area of 1,367,953 square miles may be di-

vided into three regions: the central region, known as the Ordo Country, covered in the east by the Great Shas-mo, or Desert of Gobi; the north-western region, a plateau connected with the Great Altai, including Kobdo and Uurga, and bounded on the S. E. by the Ektagh Altai (or Mongolian, or Southern Altai); the southwestern region of the great K'ingan, a long

chain of mountains, stretching from the Shara Muren to the Argun River; separating the plateau of Gobi from the Manchurian plains.

The climate is extremely dry, and the temperature varies abruptly with the season of the year and even the hour of the day. An idea of the severity of a Mongolian winter may be gathered from the following description of conditions in the month of October: "The cold blows from the tent to the tent was frozen through and through; potatoes were like lumps of iron; meat had to be broken rather than cut; and some eggs which we had brought with us were frozen so hard that, in spite of a preliminary thawing, the yolks were still solid lumps of ice when the whites were perfectly fried. Tea left in the bottom of the kettle was frozen solid in a very few minutes. The ink froze on one's pen as one wrote, and one had to blow on it after writing every two or three words, while each page had to be thawed over the lamp before it could be blotted. In the morning we woke with our moustaches fringed with lumps of ice and a coating of ice along the edge of the bed-clothes where the breath had taken" (Kiddston, "China", no. 3, 1904, 21).

The Kerulen, or Khérelon, River, though "an in-

considerable river, is the longest of the vast arid East

Mongol upland, and the permanence of the pastures along its banks has always attracted a large share of the nomad population; many of the Tsetseen princes keep their headquarters or close in a very few miles" (Campbell, 24). This river rises on the southern slopes of the Kentaial Mounts, near Mount Burkhan Kal-
duna and enters the Dalai Nor, five or six miles southwest of the Altan Emüli (Golden Saddle), a pair of

brown hills, famous in Mongol legend, between which the river flows. The Dalai, or Kulun Nor, is a lake in the Himalaya Manchurian region, between the Kolu-

nor and the Xunnor, about 25 miles south-east, and about 10 miles from east to west, near the Transbaikalian frontier of Russia; it was visited in 1889 by Father Gerbillon. This lake receives on the north the waters of the Dalai Gol, which, united to the Khalhar River, form the Argun River, and this in turn joins the Shilka. The Argun and Shilka being united take the name of Amur, which, flowing into the sea which runs into the Okhotek Sea. The Ursun Gol carries the overflow of the Buyr, or Bur, Nor to the Kulun Nor; the Khalha Gol, which rises in Lake Galba, on the western slope of the great K'ingan range, flows into the Buyr Nor; near it, on its south bank, stands the Ikte Boshun Sume (Monastery of the Great Buddha), famous for a start on Lake Baikal, rises in the Ulán Taša and Khan Taša Mountains; its main tributaries are on the left, the Eke Gol flowing from the Kossol Gol in the middle of which is the Buddhist sacred island of Dalai Kui; on the right the Orkholon, which springs from the Khan-
gai chain, receiving on the left the waters of the Tamir and on the right that of the Tulun. The People.—Organization.—With regard to the word Mongol, Mr. E. H. Parker (Asiatic Quart. Rev., July, 1910) writes: "It is usually believed that Jenghiz Khan gave the name Mung-Ku (the present Chinese name for 'Mongol') to his people, and the word is said to mean 'silver', just as the Liao (Lee) and Tang (T'ang) dynasties in China were mentioned under the Manchus (Niuchen) dynasty to mean 'gold'. . . . In the same way, I suspect the various forms, Mungu or Mungut, which have an unbroken descent from A.D. 600 to A.D. 1200 (before Jenghiz rose to power), must refer to some ancient stream or typographical peculiarity in the Onon region, near where Jenghiz arose." In the Yuan dynasty the Mongol tribes are styled Ta-ta (Tatars) and also Meng-gu. The Mongol tribes are divided into Nui Mung-ku (Inner Mongols) and Wai Mung-ku (Outer Mongols). The Nui Mung-ku, including forty-nine banners (ho shun), arose out of the organization formed by the descendents of Jenghis Khan, which has continued to the present time. Under the Yuan dynasty they were organized in six divisions (Dzirughan Tuman, or "Six Ten Thousands"), forming two wings, the right occupying the western portion of the Mongolian territory, the left the eastern portion. The Inner Mongols are now divided into six menyt (Chinese), or chogolts (Mongol), including twenty-four pu (Chinese), and the Outer Mongol (Udumak), known as the Mongol League, comprising the following pu, or tribes: (1) Khorich, 6 banners; (2) Daljai, 1 banner; (3) Turtub, 1 banner; (4) Ghorlo, 2 banners. II. Cho-

 phenomen Mysteries, "Die katholischen Zustände in Baden" (1841–
3).
sot'u League: (5) Kharsach'in, 3 banners; (6) T'unmed, 2 banners. III. Chao Uda League: (7) Ao Khan, 1 banner; (8) Naiman, 1 banner; (9) Barin, 2 banners; (10) Djar, 16 banners; (11) Auriak, 1 banner; (12) Ongniid, 1 banner; (13) Kenkhhteng, 1 banner; (14) Khalka of the Left, 1 banner. IV. Silinghol League: (15) Uchumch'in, 2 banners; (16) Khaochiid, 2 banners; (17) Sunid, 2 banners; (18) Abagha, 2 banners; (19) Abaganur, 2 banners. V. Ulan Ch'ap League: (20) Sae Tse Pu Lo, or Durban Keuked, 1 banner; (21) Mou Mingan, 1 banner; (22) Urad, 3 banners; (23) Khalka of the Right, 1 banner; VI. Ikh Chao League: (24) Oodo, 7 banners. W. F. Maysers who give these particulars (Chinese Government) adds that with the tribes of the Oodo there are amalgamated certain fragments of the T'unmed tribe, occupying the region adjacent to Kwei Hwa Ch'eng, to the north-east of the Great Bend of the Yellow River.

Inner Mongolia is broadly speaking "what is to the south of the Great Desert"; it extends over the plateau beyond the Kingan Mountains into the upper valleys of the Manchurian rivers, the Liao and the Sungari; it includes part of Outer Chi-li. With the exception of the Khalkha and the T'unmed, which are under the government of Manchu generals, each Mongolian banner is ruled by an hereditary chieftain or noble (Dassak or Jassak). These nobles are classed in six ranks, from ta'in wang, "prince of the first order", to taichi, or dadi, "noble". They are controlled by the Li fan Yuan. Campbell writes (op. cit. supra): "It is thought by many that this word means of preserving the integrity of Mongolian territory; it was resolved that two divisions of modern troops should be sent to this country, that education should be established according to Chinese methods, and that a railway should be built across Mongolia with its terminus at Peking. The religion of the Mongols is Buddhism under the Lamaist form, introduced from Tibet at the end of the Ming Dynasty. The lamas like the chepstundampa hui'uhk'uu at Urga, have their head clean shaven. Large monasteries exist at Je-hol and Dol-nor (Lama-miao), and at Wu T'ai shan, in the Shan-si Province. The Lamaist organization in and near Peking is headed by the Dalai Lama, the metropolitan Ch'ang-chia Hu't'uhk'uu of the Dalai Lama or, rather at Yung Ho Kung—and controls the Mongols of Ch'ahar. Lamaism has certainly altered the character of the warlike followers of Jenghis, who are now a peaceful population of herdmen. "The Lamas," writes Kidston (op. cit., p. 19), "exercise enormous influence; every village is divided into high and low; the sacred cairn, the repetitions of the sacred word, and the chanting of prayers are universal and incessant, and almost every collection of "yurts" has its prayer flags, fluttering conveniently easy petitions with every breeze that blows. Belief in the transmigration of the soul and in the utter unimportance of the mere body is so strong that the bodies of laymen are not buried at all, but simply thrown to the ants and dogs that make short work of them. The taking of life is regarded with horror, though sheer necessity makes an exception and provides quibbling excuses for the slaughter of sheep. On the whole journey we usually saw one fire-arm, and that was evidently intended for show rather than for use. It was carried by one of the escort provided by the Provinces. On all occasions of inquiry, I believe that it represented the entire armed force of the Principality."
Customs, Language, etc.—The typical Mongol is short and stumpy; the head is shaven, with the exception of a smooth bald head for the Mongol prince. Family ties are very loose; marriage being a civil contract the binding force of which is the mere will of the parties. Stock-breeding is the occupation of practically all Mongols. They are remarkable herdsmen, and their ponies which are excellent, are branded. They have herds of camels, and yaks to be found in the mountainous parts of modern Mongolia. Mr. George J. Kidston (China, No. 3, 1904) observes: “Both in features and in character they are less foreign to the European than the Chinese. They have often almost ruddy complexion; they laugh more heartily, have none of the endless formalities and (to us) crooked ways of thought that distinguish the Chinese, and they have certain customs that strike us as being distinctly Western. The Mongol, for instance, when they meet, embrace one another and kiss on both cheeks, while the men shake both hands. . . . Perhaps the first thing that strikes a stranger about the Mongols, after their exceeding filthiness, is their love of talking. . . . Hospitality is a universal virtue, and one may enter as ‘yurt’ upon the door, and in a setting of a kind of a place, uninvited, and be made welcome, but courage is not their strong point, and disputes die out in lengthy warfare of words.” They are also lazy and voracious. They live on mutton, milk, and brick tea; they have neither flour, vegetables, nor eggs. They have one very excellent preparation which the Chinese call ‘mil-ko-sti,’ it is made by boiling milk until the cream separates in a thick skin at the top, and it much resembles Devonshire cream. The only native strong drink is made from fermented mare’s milk. We were told that it is intoxicating if partaken of in large quantities. The Mongols, however, have a decided weakness for Chinese wine and spirits, and the Chinese also are said to speak of a drunken rapt” (op. cit., p. 181). The Mongol tent (ghurum) is made of a trellis of wooden staves fastened neatly together with strings of hide, the whole being covered with felt, the best of which comes from Russian Turkestan.

The Mongol language belongs to the Ural-Altaic family, the Kalmuk dialect, though containing a number of Turkish words, being the purest. The Ulghur is the name of the Turks, and Mongolian characters: it is of Syriac origin, introduced into Eastern Turkestan by the early Nestorian missionaries. There is a dialect poem in Ulghur, the “Kudatuku bikk,” dating from A. D. 1069, which was published in 1870 by Arminius Vamberty, and in 1891 by W. Radloff. The old Chinese alphabet was introduced into Ulghur in 1227, his dominions were divided among his four sons. Juji, the eldest son, died before his father, and was replaced by his own son Batu, who had for his share the plains of Kipchak, the lower course of the Syr-Daria, the Aral and Caspian Seas, the valleys of the Don and the Volga, and northward beyond the Ural River; Chagatai had the Kingdom of Merv; North or Tu-li, and also what is now Chinese Turkestan, Ferghana, Badakhshan, etc., and his capital was Almalik; Okkodai, the third son, had the Mongol country with the capital, Karakorum; lastly, Tu-li had the territory between the Karakorum mountains and the sources of the Onon River. Karakorum (kara, black; kuren, a camp), was called by the Chinese (Tsou), and his capital by Jenghiz Khan in 1266. Its full name, Ha-la Ho-lin, was taken from a river to the west. In the spring of 1235, Okkodai had a wall built round Ho-lin. After the death of Kublai, Ho-lin was altered to Ho-Ning, and in 1320 the name of the province was changed into Lingpe (“mountains of the North”), i.e., the Yang-shan chain, scenically beautiful place, Chien Chao (Progoz).

The researches have fully confirmed the belief that the Erdeni Tso, or Erdeni Chao, monastery, founded in 1866, occupies the site of Karakorum, near the bank of the Orkbow, between this river and the Kokchin (old) Orkbow. In 1266, Mangkou Khan decided to transfer the seat of government to Kaita-tu, or Shansi, near the present Dolon nor, north of Peking. In 1269, Kublai transferred his capital to Ta-tu (Peking), and it was called Khan-baligh. The second Supreme Khan was Okkodai (1229-41), replaced by his son Kuyuk (third Great Khan) (1246-48), Turakinha being regent (1241-46); Ogulgamish was regent (1245-51). The title was then transferred to the Tu-li branch of Jenghis family, and the fourth great Khan was Mangku, who was killed at the siege of Ho-chou in Sze-ch’u-an (1251-57).

Kublai, brother of Mangku, who succeeded him, was the fifth great Khan and the first real Emperor of China, the Yuan Dynasty (1260). His ancestor have the following descriptive titles: his father was the Son of Jenghis Khan, his grandfather the Son of Jenghis, his great-grandfather the Son of Tong Tem (Jengis), Tem Tsung (Okkodai), Tsung Sun (Mangku). Kublai himself has the miao hao of She Tsu and the two reign-titles (niem hao) of Chung Tung (1260) and Che Yuan (1264). The list of his successors according to their miao hao, with niem hao in parentheses, is as follows: Tung Tung, 1260 (Che Yuan); Tung Shin, 1264 (Che Chao, 1264); Shin Tung, 1264 (Che Chao, 1264); Shin Tung, 1267 (Che Ho, 1268); Sung Tung, 1269 (Che Chao, 1269); Sung Tung, 1271 (Ti Li, 1270); Teh, 1277; Wu Teh, 1280 (Chen Teh, 1280); Jun Teh, 1285 (Hwang K’ing, 1312; Chen Teh, 1285); Ying Teh, 1291 (Che Che, 1291); Ying Teh, 1291 (Che Che, 1291); Tai Ting Ti, 1294; Tai Ting, 1294 (Che Ho, 1294); Ming Tsung, 1295 (Tien Li, 1295); Men Ti, 1300 (Ti’en Li, 1300); Che Shun, 1300); Shun Ti, 1333 (Yuan Tung, 1333; Che Yuan, 1335; Che Chao, 1335). The misfortune of the Chinese in the person of the emperor, Liu-chia-chou, is now a popular expression in the history of China; the Yuan-chieh, to raise the standard of rebellion and expel the Mongols, in 1368. This priest ascended the throne under the title of Hung Wu, and established his dynasty, the Ming, at Nan-king. Of the Court of Kublai Khan the Venetian traveller Marco Polo has left us a glorious account. China was described by him as “a country more populous than Chinese territory, as far as the Yellow River, and to the Arap (1335-36); Musa (1336); Mohammed (1336-38); Totiga Timur (1338-39); Isiz ed Djinhan-Timur (1339); Satibeig (1339); Suleiman (1339-44); Adil Anushirwan (1344-45). After the death of Abusad all these princes were but nominal sovereigns, overruled by five small dynasties: (1) Ikhanian-Jeladat, in Bagdad (1336-1432); (2) Beni Kurt, in Khorsakan and Herat (1248-1383); (3) Modhafferin, in Irak, Fars, and Kerman (1335-92); (4) Serberdian, in Khorsakan (1335-81); (5) Jubanian, in Azerbaijan (1337-55). They were all destroyed by Timur or his successors. Among the first Ilkans, Arghun and Oljaitu had relations with the kings of France: two letters are presented in the French Archives, one from Arghun Khan (1289), brought by Bucarel, and the other from his son Oljaitu (May, 1305) to Philip the Fair. These letters are both in the Mongol language, and, according to Abel Rémuat and other authorities, in the Ulghur character, the parent of the present Mongol writing; Sir Thomas Roe, Prince Roland Bonaparte’s “Recueil des documents de l’époque mongole.” Under this dynasty, in 1318, Pope John XXII had created an archbishopric at Sulthaneyh, of which Franco of Perugia, William X.—31
Adam (1 June, 1323), John of Corna (1329), and others were the incumbents, down to Thomas de Abarane (19 Dec., 1425).

Chagatai died in 1241, and was replaced by his grandson Kara Hulaku. About 1321, under Kabak, the realm of Chagatai was divided into two parts; Maxwell-nur-Nair, or Transoxiana, and Moghulistan, or Jatah. About fifteen khans ruled Transoxiana, who intermarried and intermarried intermarried, until the great Timur conquered the land and restored order in 1370 (a.h. 771). The first ruler of Moghulistan (1321) was Isan Bugha Khán; after the death of Sultan Ahmed Khan (1504) a state of anarchy prevailed in the country until Sultan Mansur, the eldest son of Ahmed, established his authority at Aksu, Turfan, etc., and created the khanate of Uigure. Nestorian Kirghis in the steppes, having evicted khans, formed the Confederation of Kazak~Uzbek, and Sultan Said Khan, third son of Ahmed, established a khanate in Kashgar and the western provinces (see TURKESTAN).

From Juji, the eldest son of Jenghis Khan, descended the following dynasties of khans: (1) Ripchak, 1224-1502; (2) Astrakhan, 1466-1554; (3) Great Bulgaria, 1224-1438; (4) Kazan, 1438-1552; (5) Casimoff, 1450-1681; (6) Crimea, 1420-1783; (7) Nogais, 1242-1301; (8) Kazak~Uzbek, 1427-1830; (9) Turan and Tiumen, 1225-1659; (10) Tiumen and Sibir, 1301-1588; (11) Khazresa, 1515-1805; (12) Maxwell-nur-Nair, 1500-1798.

Peter Bormann. In 1838, the Vicarate Apostolic of Liao-tung was detached from the Diocese of Peking. It included both Manchuria and Mongolia. Emmanuel-Jean-François-Verrolles, of the Paris Missions Etrangères, was the first vicar Apostolic. Five years later (28 August, 1840) the new vicariate was divided into three vicariates Apostolic: (1) Liao-tung was united with Korea, (2) Mongolia had been a dependency of the Diocese of Peking from 1690 to 1838, and after 1783 had been administered by the Lazarists; the Paris Missions Etrangères kept it only two years, and when it was made a separate vicariate Apostolic (28 August, 1840) at the head of it was placed Joseph Martial Moully, titular Bishop of Pusols, who, on his transfer to Peking (1857), was replaced by Florient Dagui, titular Bishop of Trosa, who died 9 May, 1859. François Tagliabue was then appointed pro-vicar and superior of the mission. On 7 Sept., 1864, the Lazarists surrendered Mongolia to the Belgian missionaries, and Theophilus Verbiest (b. at Antwerp in 1828) was the first superior and Prior. He died 28 Aug., 1886, and was succeeded as pro-vicar by Edward Smorembourg. Jacques Bax (b. 1824) was appointed vicar Apostolic 22 Oct., 1874, was consecrated titular Bishop of Adrian, 6 Jan., 1875, and died 4 Jan., 1895, at Si-wan-tse. On 21 Dec., 1883, Leo XIII divided Mongolia into three vicariates Apostolic, Eastern, Central, and Western and Southern Mongolia, all in the hands of the Belgian missionaries (Congr. Imm. Cordis B.M. V. de Scheutveld). The first Vicar Apostolic of Eastern Mongolia was Conrad Abels, b. at West, Limburg, Holland, 31 Jan., 1856, consecrated titular Bishop of Lagania, 31 Oct., 1897; residence at Sung shu tsuei tse (Notre Dame des Fins). He was succeeded by Theodore Hermann Rutjes, titular Bishop of Eolutrepolis, who died 4 Aug., 1896. There are in Eastern Mongolia 39 European and 12 native priests; 19,864 Christians; 18 churches. (2) Central Mongolia, after the partition, in 1883, remained under Mgr Bax, who was succeeded as vicar Apostolic by Jerome Van Aertslers (b. 1 Nov., 1845), consecrated titular Bishop of Karakorum, 24 June, 1888, at Siwan-tse. There are 46 European and 23 native priests; 25,775 Christians; 37 churches. (3) Western Southern Mongolia.—To the vicariate created in 1883 were added by decree of 12 Oct., 1886, the Prefecture of Ning hia from the Kan-su vicariate and the Sub-prefecture K'iu-huan. The residence is at Eul ahe on K'ung ti. Vicar Apostolic Alphonse Bertram (b. 2 Aug., 1853) was consecrated 15 April, 1901, titular Bishop of Stratonicus. He replaced Alphonse de Vos, titular Bishop of Abdira, 21 July, 1888, and Ferdinand Hamer, who was transferred from Kan-su, 30 August, 1888, and martyred August, 1900. There are 45 European and 1 native priest; 13,896 Christians; 30 churches (see TALAC).

Henri Cordier. Monica, Sailor, widow: born of Christian parents at Tagaste, N. Africa, in 333; died at Ostia, near Rome, in 387. We are told but little of her childhood. She was married early in life to Patricius who held an official position in Tagaste. He was a pagan, though like so many at that period, his religion was no more than a name; his temper was violent and he appears to have been of dissolute habits. Consequently Monica's married life was far from being a happy one, especially as Patricius's mother seems to have been of a like disposition with herself. There was of course a gulf between husband and wife; her almsdeeds and her habits of prayer annoyed him, but it is said that he always held her in a sort of reverence. Monica was not the only matron of Tagaste whose married life was unhappy, for the story of her suffering is but a part of the larger story that we should tell. She was able to exercise a veritable apostolate amongst the wives and mothers of her native town; they knew that she suffered as they did, and her words and example had a proportionate effect.

Three children were born of this marriage, Augustine the eldest, Navigius the second, and a daughter, Perpetus. Monica was at first unable to secure baptism for her children, and her grief was great when Augustine fell ill; in her distress she besought Patricius to allow him to be baptized; he agreed, but on the boy's recovery withdrew his consent. All Moni ca's anxiety now centred in Augustine; he was wayward and, as he himself tells us, lazy. He was sent to school to be instructed in the faith, but he ran away and wrestled with God for the soul of her son. A great consolation was vouchsafed her—in compensation perhaps for all she was to experience through Augustine—Patricius became a Christian. Meanwhile, Augustine had been sent to Carthage, to prosecute his studies, and here he fell into grievous sin. Patricius died very shortly after, and the young people, into the Church and Monica resolved not to marry again. At Carthage Augustine had become a Manichean and when on his return home he ventilated certain heretical propositions she drove him away from her table, but a strange vision which she had urged him to recall him. It was at this time that she went to see a certain holy bishop, whose name is not given, but who consoled her with the now famous words, "the child of those tears shall never perish." There is no more pathetic story in the annals of the Saints than that of Monica pursuing her wayward son to Rome, whither he had gone by stealth; when she arrived he had already gone to Milan, but she followed him. Here she found St. Ambrose, and with renewed assurance pursued the way of seeing Augustine yield, after seventeen years of resistance. Mother and son spent six months of true peace at Cessaciun, after which time Augustine was baptized in the church of St. John the Baptist at Milan. Africa claimed them however, and they set
Monism (from the Greek mónos, "one", "alone", "unique") is a philosophical term which, in its various meanings, is opposed to Dualism or Pluralism. Wherever pluralistic philosophy distinguishes a multiplicity of things, Monism denies that the manifoldness is real, and holds that the apparently many are phases, or phenomena, of a one. Wherever dualistic philosophy distinguishes between body and soul, matter and spirit, object and subject, matter and force, the system which denies such a distinction, reduces one term of the antithesis to the other, or merges both in a higher unity, is called Monism.

I

In Metaphysics.—The ancient Hindu philosophers stated as a fundamental truth that the world of appearances is an illusion, an exchange, plurality, and causation are not real, that there is but one reality, God. This is metaphysical Monism of the idealistic-spiritual type, tending towards mysticism. Among the early Greek philosophers, the Eleatics, starting, like the Hindus, with the conviction that sense-knowledge is untrustworthy, and that only being is real, proclaimed the idealism of exchange; change, plurality, and origination do not really exist, that Being is one, immutable, and eternal. They did not explicitly identify the one reality with God, and were not, so far as we know, inclined to mysticism. Their Monism, therefore, may be said to be of the purely idealistic type. These two forms of metaphysical Monism recur frequently in the history of philosophy; for instance, the idealistic-spiritual type in neo-Platonism and in Spinoza's metaphysics, and the purely idealistic type in the national absolutism of Hegel. Besides idealistic Monism there is Monism of the materialistic type, which proclaims that there is but one reality, namely, matter, whether matter be an agglomerate of atoms or the material nebula of the IONIAN SCHOOL OF PHILOSOPHY, or the so-called cosmic nebula out of which the world evolved. There is another form of metaphysical Monism, represented in these days by Haeckel and his followers, which, though materialistic in its scope and tendency, professes to transcend the point of view of materialistic Monism and unite both matter and mind in a higher something. The weak point of all metaphysical Monism is its inability to explain how, if there is but one reality, and everything else is only apparent, there can be any real changes in the world, or real relations among things. This difficulty is met in dualistic systems of philosophy by the doctrine of matter and form, or primary and secondary qualities, which are the ultimate realities in the metaphysical order. Pluralism rejects the solution offered by scholastic dualism and strives, with but little success, to oppose to Monism its own theory of synecchism or panpsychism (see Pragmatism). The chief objection to materialistic Monism is that it stops short of the point where the real proper or metaphysical reality, which is the ultimate reality in the metaphysical order, even does not seem to have found a place in the Roman Brevislavia before the sixteenth century. In 1850 there was established at Notre Dame de Sion at Paris an Association of Christian mothers under the patronage of St. Monica; its object was mutual prayer for son and husband, and the care of the family. This Ass. was established in 1856 to the French, it may, of course, be continued. A new Confraternity and spread rapidly over all the Catholic world, branches being established in Dublin, London, Liverpool, Sidney, and Buenos Ayres. Eugenius IV had established a similar Confraternity long before.

II

In Theology.—The term Monism is not much used in theology because of the confusion to which its use would lead. Polytheism, the doctrine that there are many Gods, has for its opposite Monotheism, the doctrine that there is but one God. If the term Monism is employed in place of Monotheism, it must be understood that it is a monotheistic doctrine, or it may mean Pantheism, which is opposed to theism. In this sense of the term, as a synonym for Pantheism, Monism maintains that there is no real distinction between God and the universe. Either God is indwelling in the universe as a part of it, not distinct from it (pantheism), or He is the universe as such, but all as a reality (Acosmism), only as a manifestation or phenomenon of God. These views are vigorously combated by Theism, not only on considerations of logic and philosophy, but also on considerations of human life and conduct. For the ethical implications of pantheism are as detrimental to it as its shortcomings from the viewpoint of metaphysics and reasonableness. Theism does not deny that God is indwelling in the universe; but it does deny that He is comprised in the universe. Theism does not deny that the universe is a manifestation of God; but it does deny that the universe has no reality of its own. Theism is, therefore, dualistic: it holds that God is a reality distinct from the universe and independent of it, and that the universe is a reality distinct from God, though not independent of Him. From another point of view, theism is monistic; it maintains that there is but one Supreme Reality and that all other reality is derived from Him. Monism is not then an adequate equivalent of the term Theism.

In Psychology the central problem of rational psychology is the question of the relation between soul and body. Scholastic dualism, following Aristotle, maintains that man is one substance, composed of body and soul, which are respectively matter and form. The soul is the principle of life, energy, and perfection; the body is the principle of decay, change, plurality, and origination. The body is then complete substances; their union is not accidental as Plato thought, but substantial. They are, of course, really distinct, and even separable; yet they act on each other and react. The soul, even in its highest functions, needs the co-operation, at least extrinsic, of the body, and the body in all its vital functions is energized by the soul as the practical principle of those functions. They are not so much two in one as two forming one compound. In popular imagination this dualism may be exaggerated; in the mind of the extreme ascetic it sometimes is exaggerated to the point of placing a too sharp contrast between "the flesh" and "the spirit", "the beast" and "the angel".

Psychological Monism tends to obliterate all distinction between body and soul. This it does in one of three ways. (A) Monism of the materialistic type reduces the soul to matter or material conditions, and thus, in
effect, denies that there is any distinction between soul and body. The Stoics described the soul as a parallel with the material world and the nervous system; the Epicureans held that it is a compound of material atoms; modern Materialism knows no substantial soul except the nervous system; Cabanis, for instance, proclaims his materialism in the well-known crude formula: "The brain digests impressions, and organically secretes thought." Psychological materialism, as metaphysical materialism, closes its eyes to those phenomena of the soul which it cannot explain, or even denies that such phenomena exist. (B) Monism of the idealistic type takes an entirely opposite course. It reduces the body to mind or mental conditions. Some of the neo-Platonists held that all matter is non-existent, that our body is, therefore, an error on the part of our soul, and our soul is nothing but, or identical with, the soul of God. John Scottus Eriugena, influenced by the neo-Platonists, held the body to be a resultant from incorporeal qualities which the soul, by thinking them and synthesizing them, creates into a body for itself. In modern times, Berkeley included the human body in his general denial of the reality of matter, and maintained "nothing exists except soul and God." The grounds for this belief are epistemological. Psychological Monism runs counter to common sense and experience. Historically, it is a reaction against materialism. To refute materialism it is not necessary to deny that the body is a reality. The unreflecting dualism of common sense and the scientific dualism are immoral except so far as they are supported by our experience and by the desires of the Materialist, who sees nothing but body, and the cold paradox of the Idealist, who recognizes no reality except mind.

(C) A third kind of psychological Monism goes by the name of psychophysical parallelism. It maintains that body and mind are the other affirmative. First, it denies categorically that there is, or can be, any direct causal influence of the soul on the body or of the body on the soul: our thoughts cannot produce the movements of our muscles, neither can the action of light on the retina produce in us the "thought" of a color. Secondly, it affirms in some shape or form that both the body and the soul are phases of something else, that this something evolves its activities along two parallel lines, the physical and the psychical, so that the thought, for instance, of moving my hand is synchronous with the motion of my hand, without one in any way influencing the other. This is the doctrine of parallelism. Its chief exponent is Malebranche, who holds that the union of soul and body "consists in a mutual and natural correspondence of the thoughts of the soul with the processes of the brain, and of the emotions of the soul with the movements of the animal spirits." (Rech. de la Vérité, II, v). It is the doctrine of Spinoza, whose metaphysical Monism concerning the identity of body and soul are merely aspects of the one substance, God, under the attributes extension and thought, but that they unfold their modes of activity in a manner preordained to correspondence (Eth., II, ii, schol.). Leibniz meets the difficulty in his own characteristic way by teaching that all monads are partly material and partly immaterial, and that among all monads and their activities there exists a pre-established harmony (see LEIBNIZ; MONAD). In the so-called Identitätsphilosophie of some German Transcendentalists, such as Schelling, reality is mind in so far as it is active, and matter in so far as it is passive; mind and matter are, therefore, two harmonious, but independent, series of physical and psychical reality. Fechner's view has it that the reality pertaining to the whole universe is at once physical and psychical, that the physical is the "exterior" and the psychical the "interior", or "inner", side of reality, and that the body and soul in man are but one instance of a parallelism which prevails everywhere in nature. ("Introduct. to Phil.", tr. Thilly, 87, 88) and he also affirms that "two propositions are contained in the theory of parallelism: (1) Physical processes are never effects of psychical processes; (2) Psychical processes are never effects of physical processes." He adopts Fechner's panpsychism, maintaining that "everything corporeal points to something else, an inner, intelligible element, a being for whose sake the soul manifests within its own experience within ourselves." Both the corporeal and the "inner" are parts of the universal system, which is the body of God, and, though they do not interact, they act in such a way that harmony results.

Herbert Spencer uses the word parallelism in a slightly different sense: the separate impressions of the senses and the stream of our mental action must be adjusted by the activity of the mind, if the two series are to be of any use to the developing or evolving animal or man; that is, there must be a parallelism between a certain physical evolution and the psychical evolution (Principles of Psych., n. 179), "while both mind and matter are "forms" sets, and the system of the universe, and forever unknown to us" (op. cit., n. 63). This idea finds favor among the evolutionists generally, and has one distinct advantage: it obviates the necessity of explaining many phenomena of mind which could not be accounted for by the principles of materialistic evolution. Thus, under the name "double-skeletalism" theory, as advanced by Charles H. Huxley, and Huxley. Among empirical psychologists parallelism has been found satisfactory as a "working hypothesis". Experience, it is maintained, tells us nothing of a substantial soul that acts on the body and is acted upon. It does tell us, however, that psychical states are apparently conditioned by bodily states, and that there is an interaction of body and mind. But for the purposes of science, conclude the empiricists, it is enough to maintain as an empirical formula that the two streams of activity are, so to speak, parallel, though never confluent. There is no need to ground the formula on any universal metaphysical theory, such as the pan-psychism of Fechner and Pauli. It is enough that, as Wundt points out, the facts of experience establish a correspondence between physical and psychical, while the dissimilarity of the physical and the psychical precludes the possibility of one being the cause of the other. To all these parallelistic explanations of the relations between soul and body the Scholastic dualists take exception. First, the scholastics hold that both body and soul are mortal and perish at death. But to a certain point, the facts of experience are capable of a parallelistic, as well as of a dualistic, explanation. But when we come to consider the unity of consciousness, which is a fact of experience, we find that the theory of parallelism breaks down, and the only explanation that holds is that of dualists, who maintain that soul and body are perfectly distinct entities. If the parallelistic theory be true, what, asks the Scholastic dualists, becomes of the freedom of the will and moral responsibility? If our mental and bodily states are not to be referred to an immediate personal subject, but are considered phases or aspects of a universal substance, a cosmic soul, mind-stuff, or unknown "form of Power", it is not easy to say in what sense the will can be free, and man be held responsible for his mental or bodily acts.

In a minor sense the word monism is sometimes used in psychology to designate the doctrine that there is no real distinction between the soul and its faculties. Psychological dualism holds that soul and body are distinct, though they can act simultaneously. But how about the soul itself? Plato's doctrine that it has three parts has had very little following in philosophy. Aristotle distinguished between the substance of the soul and its powers (dunamies), or faculties,
and bequeathed to the Schoolmen the problem whether these faculties are really, or only notionally, distinct from one another. It is evident that the real distinction are sometimes called pluralists in psychology, and their opponents, who say that the distinction is nominal or, at most, notional, are sometimes called psychological Monists. The question is decided by inferences from the facts of consciousness. Those who hold real distinction of function argue that this is sufficient ground for a real distinction of faculties.

IV. In Epistemology, as in psychology, Monism is used in various senses to signify, in a general way, the antithesis of dualism. The Dualist in epistemology agrees with the ordinary observer, who distinguishes both in theory and in practice between "things" and "thoughts". Common sense, or unreflecting consciousness, takes things generally to be what they seem. It acts on the conviction that the internal world of our thoughts corresponds with the external world of reality. The philosophical dualist questions the extent and accuracy of that correspondence; he learns from psychology that many instances of so-called immediate perception have in them a large share of the semblance of thought, and that the activity of the mind. Nevertheless, he sees no reason to quarrel with the general verdict of common sense that there is a world of reality outside us, as well as a world of representation within us, and that the latter corresponds in a measure to the former. He distinguishes, therefore, between subject and object, but not between self and external world. The Monist in one way or another eliminates the objective from the field of reality, obliterates the distinction between self and not-self, and denies that the external world exists. The Monist in one way or another eliminates the objective from the field of reality, obliterates the distinction between self and not-self, and denies that the external world exists.

Sometimes he takes the ground of idealism, maintaining that thoughts are things, that the only reality is perceptible reality, and that everything else is a mere sense that it is perceived. He also fulfills the view of naïve realism, refers with contempt to the copy-theory (the view that our thoughts represent things) and is rather proud of the fact that he is in conflict with common sense. Sometimes he is a solipsist, holding that self alone exists, that the external world of consciousness is the only thing known, and that the existence of other minds than our own is a vulgar error. Sometimes, finally, he is an ascetic: he denies that the external world exists except in so far as it is thought to exist: or he affirms that we create our own external world out of our own thoughts.

However, the classical form of epistemological Monism is that of the Hegelian—metaphysical monism of the purely idealistic type. It holds that both subject and object are merely phases of an abstract, unlimited, impersonal consciousness called the Absolute; that neither things nor thoughts have any reality apart from the Absolute. It teaches that the universe is a process of becoming, a process of self-derivation. It is a process of self-derivation. It is the absolutely intellectual "ground" and multiform "appearance" of that ground, one appearance being what the Realist calls "things", and another what the Realist calls "thoughts". This is the doctrine of the Hegelians, from Hegel himself down to his latest representatives, Bradley and McTaggart. All these forms of epistemological Monism—namely, idealism, solipsism, acosmism, and absolutism—have, of course, metaphysical bearings, and sometimes rest on metaphysical foundations. Nevertheless, historically speaking, they are traceable to a psychological assumption which is, and always will be, the dividing line between Dualism and Monism in epistemology. The Dualists, in fact, are only vaguely aware of the fact that in every process of perception the object is immediately given. It seems like emphasizing the obvious to say so, yet it is precisely on this point that the whole question turns. What I perceive is not a sensation of whiteness but a white object. What I taste is not a sweet substance but a sweet taste. No matter how much the activity of the mind may elaborate, synthesize, or reconstruct the data of sense-perception, the objective reference cannot be the result of any such subjective activity; for it is given originally in consciousness. On the contrary, the Monist starts with the idealistic assumption that what we perceive is the sensation. Whatever objective reference the sensation has in our consciousness is conferred on it by the activity of the mind. The objective is, therefore, reducible to the subjective; things are thoughts; we make our world. In the dualist's analysis there is immediate, presentative contact in consciousness between the subject and the object. In the Monist's account of the matter there is a change between subject and object which must be bridged over somehow. The problem of Dualism or Monism in epistemology depends, therefore, for solution on the question whether perception is representative or presentative; and the dualist, who holds the presentative theory, seems to have on his side the verdict of introspective psychology as well as the arguments of the activity of the mind. In recent Pragmatist contributions to epistemology there is presented a different view of epistemological Monism from that given in the preceding paragraphs, and a solution is offered which differs entirely from that of traditional dualism. In William James's work, for instance, Monism is described as such that "the 'sense of the all' or collective-unit form is the only form that is rational", while opposed to it is Pluralism, that is, the doctrine that "the 'each-form' is an eternal form of reality no less than it is the form of temporal appearance" (A Pluralistic Universe, 324 sqq.). The multitude of "each-forms" constitute, not a chaos, but a cosmos because they are "organized together" into a system. The unity, however, which exists among the "each-forms" of reality is not an integral unity nor an articulate or organic, much less a logical, unity. It is a unity of the "strung-along type, the type of continuity, contiguity, or concatenation" (op. cit., 320). Into this unfinished universe, into this stream of subjective, subjective, subjective, subjective experience, steps at a certain moment. By a process which belongs, not to logic, but to life, which exceeds logic, he connects up these experiences into a concatenated series. In other words, he strings the single beads on a string, not of thought, but of the practical needs and purposes of life. Thus the subject makes his own world, and, beyond that, makes the object; if we accepted the verdict of the intellectualist Idealist. We have merely put the practical reason in place of the theoretical: so far as the value of knowledge is concerned the antithesis between Monism and Pluralism is more apparent than real, and the latter is as far from the sameness of realist Dualism as the former. It is a principle of self-derivation. In a sense, the existence of the external world; but so also does the Absolutist. The trouble is that neither admits it in a sense which would save the distinction between subject and object. For the Pluralist as well as the Monist is entangled in the web of subjective Idealism as soon as he favours the doctrine that perception is representative, not presentative.

V. In Cosmology, the central question is the origin of the universe. The early Ionian philosophers assigned, as the cause or principle (4ρη is the Aristotelian word) of the universe, a substance which is at once the material out of which the universe is made and the force by which it was made. As Aristotle says, of himself and his predecessors, 'the material cause and the efficient cause. They were, therefore, dynamists and hylomorphic. That is, they held matter to be of its nature active, and en-
dowed with life. Without the aid of any extrinsic force, they said, the original substance, by a process of thickening and thinning, or by quenching and kindling, or in some other immanent way, gave rise to the universe as we now see it. This primitive cosmoehtic Monism gradually gave way to a dualistic conception of the origin of the world. Tentatively at first, and then more decisively, the later Ionians introduced the notion of a primitive force, distinct from matter, which fashioned the universe out of the primordial substance. Anaxagoras it was, who, by clearly defining this force and describing it as mind (nous), earned the encomium of being the "first of the ancient philosophers who spoke sense". Dualism, thus introduced, withstood the onslaughts of many anomie in the modern and materialistic Stoicism and emanationistic neo-Platonism. It was developed by Socrates, Plato, and Aristotle, who brought to their description of the world-forming process a higher notion of cosmoehtic mind than the pre-Socratic philosophers possessed. It was left for the Christian philosophers of Alexandria and their successors, the Scholastics of medieval times, to elaborate the doctrine of creation ex nihilo, and thus bring out more clearly the role played by the Divine Power and Will in the formation of the universe. The order, harmony, and purposefulness evident everywhere in nature are cited by the creationists as evidence to show that mind must have presided at the beginning. A high degree of dynamism or mechanism hinges on the problem of the nature of matter. This phase of the question has been developed especially in post-Cartesian philosophy, some maintaining that matter is essentially inert and must, therefore, have acquired force and activity from without, while others as stoutly maintain that matter is essentially active as evil and has developed its own force from within. Evolution of the thoroughgoing type takes the latter view. It holds that in the primitive cosmic matter was contained "the power and potency" of all life and movement, in such a way that no external agent was required in order to bring it to actual existence. Here, as in the question of Theism, Christian philosophy is frankly dualistic, although it acknowledges that, since actuality antedates potency by nature and, as a matter of fact, the world originated in time, while God is eternal, there was, before creation, but One Reality.

VI. In Ernics, the word Monism is very little used. In some German works it is employed to designate nothingness, the non-omnes. Christian ethics is essentially heteronomic: it teaches that all law, even natural law, emanates from God. Kantian ethics and Evolutionistic ethics hold that the moral law is either self-imposed or emanates from the moral sense which is a product of the struggle for existence. In both the Kantian and the Evolutionistic systems there is source of the power of moral discrimination and approval. For this reason the word Monism is here used in its generic sense. In English philosophical literature, however, the word has no such signification. In accounting for the origin of evil, a problem which, though it belongs to metaphysics, has important bearings on ethical questions, some philosophers have adopted a Dualistic doctrine and explained that good and evil originate from two distinct principles, the one supremely good, the other completely and absolutely evil. This was the doctrine of the ancient Persians, from whom it was borrowed by Manes, the founder of the Manichean sect. Opposed to this is the Monistic view that God is the only absolutely real in the universe, and that evil is not to be assigned to any supreme cause distinct from God. Whatever explanation be given of the existence of evil in the world, it is maintained that a supreme principle of evil is utterly impossible and even inconceivable.

VII. CONTEMPORARY MONISTIC MOVEMENTS AND SCHOOLS.—In current philosophical literature, whenever no special qualification is added, Monism generally means the modified materialistic monism of Haeckel. Modern materialistic Monism in Germany begins with Feuerbach, a disciple of Hegel. Feuerbach was followed by Vogt and Molechott. To these succeeded Haeckel, who combines Darwinian evolution with a materialistic interpretation of Spirit. *Bruno*. Haeckel's works, both in the original and in English translations, have had a wide circulation, their popularity being due rather to the superficial manner in which Haeckel disposes of the most serious questions of metaphysics than to any intrinsic excellence of content or method. Haeckel is honorary president of the monistic movement and also founded at Jena in 1906, for the purpose of propagating the doctrines of Monism. The society is openly anti-Christian, and makes active warfare against the Catholic Church. Its publications, "Der Monist" (a continuation of the "Freie Glocken"—first number, 1890), "Blätter des deutschen Monistenbunds" (first number, July, 1906), and various pamphlets (Flugblätter des Monistenbunds), are intended to be a campaign against Christian education and the union of Church and State.

The group of writers in America who, under the editorship of Dr. Paul Carus, have been identified with the "Monist" (Chicago, monthly, first number, April, 1891) are the most coherent, acceptable, and unanimous against Christianity. Nevertheless, they hold Haeckel's fundamental tenet that Monism as a system of philosophy transcends Christianity as a form of belief, and is the only rational synthesis of science and religion. "Religious progress no less than scientific progress", writes Carus, "is a process of the organism. Religion is the basis of ethics... The ideal of religion is the same as that of science, it is a liberation of the mythological elements and its aim is to rest upon a concise but exhaustive statement of facts" (Monism, Its Scope and Import, 8, 9). This "concise but exhaustive statement of facts" is positive Monism, the doctrine, namely, that the whole of reality constitutes one inseparable and indivisible entirety. Monism is not the doctrine that one substance alone, whether it be mind or matter, exists: such a theory, says Dr. Carus, is best designated as Henism. True Monism "bears in mind that our words are abstracts representing parts or features of one and the same substance..." (Monism, Its Scope and Import, 7). This Monism is Positivistic, because its aim is "the systematisation of knowledge, that is, of a description of facts" (ibid.). "Radical free thought" is the motto of this school of Monism; at the same time, it disclaims all sympathy with destructive Atheism, Agnosticism, Materialism, and Negativism in general. Nevertheless, the group of the most trained students of philosophy will be likely to be more profoundly influenced by the Monistic criticism of Christianity than by the constructive effort to put something in place of the errors referred to.

All Monism may be described as resulting from the tendency of the human mind to discover unitary concepts under which to subsume the manifold of experience. So long as we are content to take and preserve the world of our experience as we find it, with all its manifoldness, variety, and fragmentation, we are in the condition of primitive man, and little better than brute animals. As soon as we begin to reflect on the data of the senses, we are led by instinct to the notion of a universal unity, that of a cause or reasons behind the events of the universe, or the unity of a causal concept. This we first do in the scientific plane. Afterwards, carrying the process to a higher plane, we try to unify these under philosophical categories, such as substance and accident, matter and force, body and mind, subject and object
The history of philosophy, however, shows with unmistakable clearness that there is a limit to this unifying process in philosophy. If Hegel were right, and the formula, ‘The rational alone is real’, were true, then man has no realm of his own, and reality is in all things. But Christian philosophy holds, the real extends beyond the domain of the (finite) rational. Reality eludes our attempt to compress it within the categories which we frame for it. Consequently, Dualism is often the final answer in philosophy; and Monism is the one philosophical instrument which Dupuis, but aims at an ideal completeness, often results in failure. Dualism leaves room for faith, and hands over to faith many of the problems which philosophy cannot solve. Monism leaves no room for faith. The only mysticism that is compatible with it is rationalistic, and very different from that ‘vision’ in which, for the Christian mystic, all the limitations, imperfections, and other shortcomings of our feeble efforts are removed by the light of faith.

WILLIAM TURNER.

Monita Secreta, a code of instructions alleged to be addressed by Acquaviva, the fifth general of the Society, to its various superiors, and laying down the methods to be adopted for the increase of its power and influence. According to them, every means is to be employed of acquiring wealth for the order, by enticing promising young men with their estates; and for that purpose, rich widows are to be coajusted and dissuaded from remarriage; every means is to be used for the advancement of Jesuits to bishoprics or other ecclesiastical dignities, and to discredit the members of other orders, while the world is to be persuaded that the Society is animated by the purest and least interested motives: the reputation of those who quit it is to be assailed and traduced in every way.

That the “Monita” are in reality what they pretend, cannot possibly be maintained. They are known to be the work of one Jerome Zahorowski, a Pole, who, having been a member of the Society, had been discharged in 1811. They first appeared in the Cracow in 1812 in MS., purporting to be a translation from the Spanish, and were printed in the same city in 1814. Various stories were told, however, as to the mode in which these secret instructions were originally discovered; the credit being most commonly assigned to Duke Christian of Brunswick who, having been born in 1690, was a mere boy when they first saw the light. The place where they were found was variously set down as Paderborn, Prague, Liège, Antwerp, Glatz, and on board a captured East Indianman. Attempts were likewise made at various times, as late even as 1783, to excite interest in the work as the result of a new discovery; to say nothing of an undated edition, in 1800. A more recent attempt, made the light tradition from the Propaganda Press, and to be authenticated by the testimonies of various Jesuit authorities. These, however, are manifestly nothing but impudent and malignant fabrications, the general, “Felix Acquaviva,” being utterly unknown in the Annals of the Society, and the censor who approves the publication bearing the ominous name of “Pascinelli,” while the titles which, it is alleged, show the expansion of partial men in general for the Society, include all the crimes and abominations of every kind—immoralities, conspiracies, murders, and regicides—which their bitterest enemies have ever attributed to the Society.

In looking for more authentic evidence as to the true character of the “Monita”, it is unnecessary to cite any to whose authenticity I am disposed of might attach—from Bishop Lipaki of Cracow (1616), through the long list of Jesuit writers who have from the first denounced the fabrication, and who are quoted by Father Bernard Duhre in his “Jesuiten Fabeln”. Witnesses beyond any such exception are few. For example, the famous Fra Paolo Sorber, the historian of the Council of Trent, the Jesuit Henri de Saint-Ignace, as well as Arnauld and the “Nouvelles Ecclésiastiques”, to whom may be added Pascal himself, whose negative testimony is sufficient to show what he thought on the subject.

To these witnesses may be added such pronounces and Jesuits as von der Lan, Dodgeair, Friedrich (the author of Janus) Huber, and Rese, as well as the Protestant historian Gieseler. In the British House of Commons, during the debates on Catholic Emancipation, the fraudulent character of the “Monita” was fully acknowledged by more than one speaker, while the authorities of the British Museum, and likewise the French bishops, the German, agree in describing the work as “apocryphal”.

The only defence seriously attempted on the other side is that offered by the late Dr. Litteldein in his notorious article “Jesuits”, in the “Encyclopedia Britannica”. He acknowledges, indeed, that the work is in reality “both caricature and libel”, but pleads nevertheless, that it is a shrewd and keen observer, having noticed how Jesuits actually worked, deduced from his observations the rules by which they were guided. As to this remarkable example of “jesuitical” argumentation, it is sufficient to inquire upon what solid foundation Dr. Litteldein’s basal assumption rests. There is, for instance, the evidence that the principles of the “Monita” animate Jesuit practice? The official rules and constitutions of the order plainly contradict in every respect these supposed instructions, for they expressly prohibit the acceptance of ecclesiastical dignities by its subjects, unless compelled by papal authority, and from the days of the founder, St. Ignatius himself, it is known that every charge levied against the Society in the way of such promotion. Moreover, in many cases, genuine private instructions from the general to subordinate superiors have fallen into hostile hands, but while in many cases they are found to give instructions directly contrary to those we have heard, it is not even alleged that in any instance they are.

JOHN GERARD.

Monk.—A monk may be conveniently defined as a member of a community of men, leading a more or less contemplative life apart from the world, under the vows of poverty, chastity, and obedience, according to a rule characteristic of the particular order to which he belongs. The word monk is not itself a term commonly used in the official language of the Church. It is a popular rather than a scientific designation. But it is at the same time very ancient, so much so that its origin cannot be precisely determined. So far as regards the English form of the word, that undoubtedly
comes from the Anglo-Saxon monuca, which has in turn arisen from the Latin monachus, a mere transliteration of the Greek μοναχός. This Greek form is commonly believed to be connected with μόνος, lonely or single, and is suggestive of a life of solitude; but we cannot altogether dismiss the fact that the different root, seems to have been freely used, e.g. by Palladius, as well as μοναχικός, in the sense of a religious house (see Butler, "Palladius’s Lausiac History", passim). Be this as it may, the Fathers of the fourth century are by no means agreed as to the etymological significance of monachus. St. Jerome writes to Heliodorus (P. L., XXXII, 350), “I interpret the name monk, it is thine own; what business hast thou in a crowd, thou who art solitary?” St. Augustine on the other hand fastens on the idea of unity (uni) and in his exposition of Ps. cxxxi, extols the appropriateness of the words “Ecce quam bonum et quae jucundum habitare fratres in unum when chanted in a monastery, because those who are monks should have but one heart and one soul (P. L. XXXVII, 1733). Cassian (P. L., XLIX, 1097), and Pseudo-Dionysius (De Eccl. Hier., vi) seem to have thought monks were so called because they were celibate.

In any case the fact remains that the word monastic in the fourth century was freely used of those consecrated to God, whether they lived as hermits or in communities. So again St. Benedict a little later (c. 535) states at the beginning of his rule that there are four kinds of monks (monachi)—(1) cenobites who live together under a rule or an abbot, (2) anchorites or hermits, who after long training in the discipline of a community, go forth to lead a life of solitude (and all of both these classes he approves); but also (3) "sara-bites" and (4) "girovaggi" (wandering monks), whom he strongly condemns as men whose religious life is but a pretence, and who do their own will without the restraint of obedience. It is probably due to the fact that the Rule of St. Benedict so constantly describes the brethren as monachi and their residence as monasterium, that a tradition has arisen according to which these terms in Latin and English (though not so uniformly in the case of the corresponding German and French words) are commonly applied only to those religious bodies which in some measure reproduce the conditions of life contemplated in the old Benedictine Rule. Of course, the Franciscans, Carmelites, etc., though they live in community and chant the Divine Office in choir, are not correctly described as monks. Their work of preaching, mixing with their fellow men in the world, soliciting alms, and moving from place to place, is inconsistent with the monastic ideal. The same is to be said of the "clerks regular," like the Jesuits, in whose rule the work of the apostolate is regarded as so important that it is considered incompatible with the obligation of sitting office in choir. Again members of the religious congregations of men, which take simple but not solemn vows, are not usually designated as monks. On the other hand it should be noted that in former times monks, even though he sang office in choir, was not necessarily a-priest, the custom in this respect having changed a good deal since medieval times. Besides the Benedictines with their various modifications and offshoots, e. e. the Cluniaces, Cistercians, Trappists etc., the best known orders of monks are the Carthusians, the Premonstratensians, and the Cistercian. The honorific title of Domus, and an abbreviation of Dominus is given to Benedictines and Carthusians.

**Monogram of Christ.**—By the Monogram of Christ is ordinarily understood the abbreviation of Christ's name formed by combining the first two letters of the Greek form ΧΡΙΣΤΟΣ, thus Χ; this monogram was also known as the Chriamon. There are, however, besides this type of monogram, three others of Christ—one of His name, Jesus, the other of both His names together. The most common form (that first alluded to), was adopted by Constantine the Great on his military standards. The monogram of the famous labarum (q. v.), as described by Eusebius (Vita Const., I, xxxi), is that given above. Lactantius (De mort., xlvii) describes it as "transversa X littera summo capite circumflexo," a somewhat obscure expression interpreted by Hauck ("Rea. kir. für prob. Theol.", s, vv. Monogram Christi) as a X with one of its strokes perpendicular and the upper arm of this stroke rounded to form a P. Many variants of these two forms exist in the monuments of the fourth and fifth centuries. The Greek letters P combined in a monogram occur on pre-Christian coins (e. g. the Attic tetradrachma and some coins of the Ptolemies), and in some Greek manuscripts of the Christian period they are employed as an abbreviation of such words as ΧΡΟΝΟΣ, ΧΡΙΣΤΟΣ, ΧΡΙΣΤΟΤΟΜΟΣ. Lowrie remarks, however, that when used as an abbreviation the X stands usually upon the monogram of Christ it lies on its side thus, appearing more symmetrical. The form P is of Christian origin; it came into use in the X course of the fourth century, and represents a stage in the development of the monogram into the cross.

The opinion of Hauck that the monogram, in the form in which it occurs upon the coins of Constantine, was, was well known in Christian society before Constantine would seem, from the circumstances of the case, to be well founded; for otherwise how would the emperor have recognized it as a Christian symbol? Yet, at the same time it must be said that it appears only rarely on pre-Constantinian manuscripts, and then generally as an abbreviation (compendium scripturae) rather than as an emblem; as, for instance, in a third century inscription in the Catacomb of St. Prisca: ΖΩΙ ΑΘΩZ ΕΝ P. The adoption of the monogram by Constantine for his use on the imperial military standards and on the shields of the soldiers, as a symbol of Christianity, was the beginning of its popularity in the empire. During the fourth century, as we find it on the vast majority of all manuscripts: on public edifices, churches, sarcophagi, lamps, vestments, clothing, household utensils, etc. It appears frequently in association with inscriptions on tombs, sometimes in relation with the apocalyptic letters Α and Ω, or with the symbolic fish, dove, palm branches, and the like. It rarely appears on Roman monuments, however, after the fatal year 410, when the Eternal City fell into the hands of Alaric, but in the East it long continued to enjoy its popularity. In the course of the fifth century, in the West, the P form became the more common, but in the East X the earlier form continued in favour.

**Monograms of Jesus.**—A monogram formed of the initial letters of both Christ's names appears in a Roman monument of the year 268 or 279 as part of the inscription on a tomb: BENE MERTI (in) X Domi No. Two Gallic monuments with this monogram, bearing the dates 491 and 597, are noted by Le Blant, and once it occurs on an ancient lamp, in association with the apocalyptic letters Α and Ω. In a somewhat different form it occurs in several monuments of the cemetery of St. Callistus: in these the I crosses the X horizontally instead of perpendicularly Χ. The IX monogram (for IHΣΟΤΟ ΧΡΙΣΤΟΣ), also appears on some sarcophagi of Provence enclosed in a circle, thus forming a star: the star that guided the Wise Men to Bethlehem. These monograms occur in manuscripts of the Scriptures (the Codex Alexandrinus and the Codex Claromontanus) as early as
the fifth and sixth centuries. Peculiar to the Latin Church is the monogram ΙΗΣ ΧΡ, which occurs in the sixth century Greek-Latin Codex Claromantunus, as an abbreviation of both Our Lord's Greek names. The Greeks also employed the letters ΗΙ as an abbreviation for the name of Jesus with a peculiarly exomorphic meaning. According to the Epistle of pseudo-Barnabas the circumcision by Abraham of 318 men of his household had a mystic signification. The Greek letters ΙΕΤ, used as numerals, amount to 318, and at the same time the first two of these letters are abbreviations of the Name of Jesus, while the third represents the greatest (Pseudo-Barnabas, c. 16). The same thing was borrowed by the Latin Church, and from them it was borrowed by the Latins. The familiar monogram IHS was first popularized by St. Bernardine of Siena in the early fifteenth century and later, with the addition of a cross over the central letter, by the Society of Jesus (see I.H.S.).

MAURICE M. HASSETT.

Monomotapa.—Whatever be the etymological meaning of the word Monomotapa, the origin of which is much disputed, it is certain, at any rate, that the Portuguese of the sixteenth century employed it to denote the paramount chief of the Makaranga, a powerful South African tribe dwelling between the Zambesi and Limpopo rivers and extending westward from the Indian Ocean probably as far as the twenty-fifth parallel of latitude. Thus, "is attached to this word Monomotapa, inasmuch as it was placed on maps of the day as if it were the name of a territory, not the title of a ruler, and soon it was applied to the entire region from the Zambesi to the mouth of the Fish River. Geographers, who knew nothing of the country, wrote the word upon their charts, and people in general, until the belief became general that a people far advanced in civilization, and governed by a mighty emperor, occupied the whole of southeastern Africa. . . . Such an empire never existed. The foundation upon which imagination constructed it is nothing more than a Bantu tribe. The empire of the Monomotapa was called Makaranga. In the year 1505 when the Portuguese first wrote of it, but, when the Portuguese arrived in 1505, it was in a state of dispersion. According to the reigning Monomotapa, Kamomba by name, had delegated his authority over the more distant parts of his dominions to members of his family who soon asserted their independence. The Makaranga still live scattered in different parts of Rhodesia over a territory which was once their own. In the matter of civilization they never had much to lose, but their warlike qualities have disappeared, so that the word Makaranga is used by their neighbours as a term of reproach and a synonym for coward. The word Monomotapa is no longer known among them. They are, at any rate, more intelligent and docile than their predecessors, which is a point in favor of their customs point to an infusion of Semitic blood. The theory has lately obtained in some quarters, that they built the Great Zimbabwe and other ruins scattered over their country. It is far more probable, however, that, as well as the numerous rock-mines found in the gold areas of Shona and Portuguese Africa, were the work of some Semitic people who occupied the country as gold seekers long before the arrival of the Bantu. The Makaranga were evangelized in 1561 by the Ven. Father Gonçalo da Silveira, S.J., who baptized the Monomotapa and many of their people. But within three months of his arrival the converted chief, together with the townspeople and other refugees from Mozambique, turned against the missionary and had him strangled on 16 March, 1561.

Monophysites and Monophysitism.—The history of this sect and of its ramifications has been summarized under EUTYCHIANISM (the nickname somewhat unfairly given by Catholic controversialists). The theology of Monophysitism has also been described under the same heading. Two points are discussed in the following article: first, the literary activity of the Monophysites both in Greek and Syriac; secondly, the question whether they can be exculpated from material heresy in their Christology.

LITERARY HISTORY.—From many points of view the Monophysites are the most important of early heretics, and no heresy or related group of heresies until the sixteenth century has produced so vast and important a literature. A large portion of it is lost; some remains in manuscript, and of late years important publications have brought much of this material to the light of day. Nearly all the Greek literature has perished in its original form, but much of it survives in early Syriac translations, and the Syriac literature itself is considerable in extent. The scientific, philosophical, and grammatical writings of Monophysites must for the most part be passed over here. Ecclesiastical history and biography, as well as dogmatic and polemical writings will be described for the fifth and sixth centuries, together with a few of the chief works of the centuries immediately following.

Dioscorus (q. v.) has left us but a few fragments. The most important is in the "Hist. Misc." III, 1, from a letter written in exile at Gangra, in which the banished patriarch declares the reality and completeness of our Lord's Human Body, intending evidently to deny that he had approved the refusal of Eutyches to admit Christ's consubstantiality with us.

Timothy, or, of Constantinople (d. 477) who had been ordained priest by St. Cyril himself, and preserved a profound attachment to that saint, published an edition of some of his works. He accompanied Dioscorus to the Robber Council of Ephesus in 449, as he says himself "together with my brother the blessed priest Basil, a friend and confidant of Cyril" (the second "asidus"). But, when Dioscorus arrived in 1505, it was in a state of dispersion. As the reigning Monomotapa, Kamomba by name, had delegated his authority over the more distant parts of his dominions to members of his family who soon asserted their independence. The Makaranga still live scattered in different parts of Rhodesia over a territory which was once their own. In the matter of civilization they never had much to lose, but their warlike qualities have disappeared, so that the word Makaranga is used by their neighbours as a term of reproach and a synonym for coward. The word Monomotapa is no longer known among them. They are, at any rate, more intelligent and docile than their predecessors, which is a point in favor of their customs point to an infusion of Semitic blood. The theory has lately obtained in some quarters, that they built the Great Zimbabwe and other ruins scattered over their country. It is far more probable, however, that, as well as the numerous rock-mines found in the gold areas of Shona and Portuguese Africa, were the work of some Semitic people who occupied the country as gold seekers long before the arrival of the Bantu. The Makaranga were evangelized in 1561 by the Ven. Father Gonçalo da Silveira, S.J., who baptized the Monomotapa and many of their people. But within three months of his arrival the converted chief, together with the townspeople and other refugees from Mozambique, turned against the missionary and had him strangled on 16 March, 1561.

Dioscorus (q. v.) has left us but a few fragments. The most important is in the "Hist. Misc." But within three months of his arrival the converted chief, together with the townspeople and other refugees from Mozambique, turned against the missionary and had him strangled on 16 March, 1561.
Under Eutychianism something has been said of his theology, and more will be found below. Of his works a fragment on the Two Natures, is in Migne (P. G., LXXXVI, 273). The unpublished Syriac collection of his works (in British Mus., MS. Addit. 1528, sixth century) contains (a) a treatise against the "Dyophysites" (Catholica) which contains mainly a collection of extracts from the Fathers against the Two Natures, the last of the citations being from a letter of Dioscorus. This is, however, but a summary of a larger work, which has recently been published entire in an Armenian translation under the title of "Refutation of the Council of Chalcedon." Elsewhere, Dioscorus is mentioned as the author of a work of the same title. (b) Extracts from a letter written to the city of Constantinople against the Eutychians (Isaias of Hermopolis and Theophilus, followed by another florilegium from the "Fathers" (almost entirely from Apollinarian forgeries). This letter is preserved entire by Zacharias (in Hist. Misc. IV, xii, where it is followed by the second letter), and also in the "Chronicle" of Michael the Syrian. (c) A second letter against the same. (d) Extracts from two letters to all Egypt, the Thebaid, and Pentapolis on the treatment of Catholic bishops, priests, and monks who should join the Monophysites. (e) A refutation of the Council of Chalcedon and of the Tome of Leo, written between 454 and 460, and respecting the title, and concluding with extracts from the "Acts" of the Robber Synod and four documents connected with it. (f) A short prayer which Blessed Timothy used to make over those who returned from the communion of the Dyophysites. (g) Exposition of the faith of Timothy, sent to the Emperor Leo by Constantine, and an abridged narration of what subsequently happened to him. A similar supplication of Ælurus to Leo, sent by the silentiary Diomedes, is mentioned by Anastasius Sin. The contents of this MS. are largely cited by Lebon. A translation into Latin of patriarchic testimonies collected by Ælurus was made by Constantine the Macedonian, with the Armenian collection. A Coptic list of Timothy's works mentions one on the Canticle of Canticles. The "Plerophoria" (33, 36) speak of his book of "Narrations," from which Crum (p. 71) deduces an ecclesiastical history by Timothy in twelve books. Lebon does not accept the attribution to Timothy. The Copt fragment (87) has established the existence of such a work, but he finds (p. 110) another reference to a historical work by the patriarch in MS. Addit. 14602 (Chabot, "Documents," 225 sqq.).

*Peter Monogus* (q. v.) of Alexandria was not a writer. His letters in Coptic are not genuine, though a complete Armenian text of them has been published, which is said to be more probably authentic. Peter Fullo (q. v.) of Alexandria similarly left no writings. Letters addressed to him exist, but are certainly spurious. *Timothy IV*, Patriarch of Alexandria (517–533), composed "Antirrhetica" in many books. This polemical work was lost; but a homily of his remains and is in Heraclius, the Theodosian (10–11 February, 535, and again July, 535–537 or 538) has left us a few fragments and two letters. The Severians of Alexandria were called Theodosians after him, to distinguish them from the Gaianites who followed his Inconstantist rival Gaianus. The letter left no writings.

Severus: The most famous and the most fertile of all the Monophysite writers was Severus, who was Patriarch of Antioch (512–518), and died in 538. We have his early life written by his friend Zacharias Scholasticius; a complete biography was composed soon after his death by John, the superior of the monastery where Severus had first embraced the monastic life. He was a native of Ptolemais, his father being a senator of the city, and descended from the Bishop of Sozopolis who had attended the Council of Ephesus in 431. After his father's death he was sent to study rhetoric at Alexandria, being yet a catechumen, as it was the custom in Ptolemais to delay baptism until a beard should appear. Zacharias, who was his fellow-student, testifies to his brilliant talents and the great progress he made in the study of rhetoric. He was an assistant to several orators, and also over Libanious. Zacharias induced him to read the correspondence of Libanious with St. Basil, and the works of the latter and of St. Gregory of Nazianus, and he was conquered by the power of Christian oratory. Severus went to study law at Beirut about the summa of 486, and he was followed therewith by Zacharias. Severus was later accused of having been in youth a worshipper of idols and a dealer in magical arts (so the libellus of the Palestinian monks at the council of 536), and Zacharias is at pains to refute this calumny indirectly, though at great length, by relating interesting stories of the discovery of a board of idols at Menuthus in Egypt and of the routing of necromancers and enchanters at Berytus; in both these exploits the friends of Severus took a leading part, and Zacharias asks triumphantly whether they would have consorted with Severus had he not agreed with them in the hatred of paganism and sorcery. Zacharias continued to influence him, by his own example, and induced him to devote the free time, according to which the students were free on Saturday afternoons and Sundays to the study of the Fathers. Other students joined the pious company of which an ascetic student named Evagrius became leader, and every evening they prayed together in the church of the Resurrection. Severus was persuaded to be baptized. Zacharias refused to be his godfather, for he declared that he did not connected with the bishops of Phenicis, so Evagrius stood sponsor, and Severus was baptized in the church of the martyr, Leontius, at Tripolis.

After his baptism Severus renounced the use of baths and betook himself to fasting and vigils. Two of his compositions deserve to be included in the works of Peter the Iberian. When the news of the death of that famous monk (488) arrived, Zacharias and several others entered his monastery of Beith-Aphthonia, at the native place of Zacharias, the port of Gassa (known also as Maiuma), where Peter had been bishop. Zacharias did not persevere, but returned to the praet. by which he had made his pilgr- 382
tiage in his own country, but he first visited the shrine of St. Leontius of Tripolis, the head of St. John Baptist at Emesa, and then the holy places of Jerusalem, with the result that he joined Evagrius who was already a monk at Maiuma. The great austerities there did not suffice for Severus, and he preferred the life of a solitary in the desert of Eleutheropolis. Severus, reduced himself to great weakness he was obliged to pass some time in the monastery founded by Romanus, after which he returned to the laura of the port of Gassa, in which was the convent of Peter the Iberian. Here he spent what his charities had left of his patrimony in building a monastery for the ascetics who were reduced to Patriarch Theodosian. Severus extended his influence over the whole East and the Empire, and was rudely disturbed by Nephalius, a former leader of the Acheptali, who was said to have once had 30,000 monks ready to march on Alexandria when, at the end of 483, Peter Monogus accepted the Henoticon and became patriarch. Later on Nephalius joined the more moderate Monophysites, and finally the Catholics, accepting the Council of Chalcedon. About 507–8 he came to Maiuma, preached against Severus, and obtained the expulsion of the monks from their convents. Severus betook himself to Constantinople with 200 monks, and remained there three years, influencing the Emperor Anastasius as far as he could in the support of the Henoticon, against the Catholics on the one hand and the Monophysites on the other. He was spoken of as successor to the Patriarch Macc
donius who died in August 511. The new patriarch, Timotheus, entered into the views of Severus, who returned to his cloister. In the following year he was consecrated Patriarch of Antioch, 6 November, 512, in succession to Flavian, who was banished by the emperors in his palace, and having dismissed the concessions to Monophysites. Elias of Jerusalem refused to recognize Severus as patriarch, and many other bishops were equally hostile. However, at Constantinople and Alexandria he was supported, and Elias was deposed. Severus exercised a most active episcopacy, living still like a monk, having destroyed the baths in his palace, and having dismissed the concords to Monophysites. Elias of Jerusalem refused to recognize Severus as patriarch, and many other bishops were equally hostile. However, at Constantinople and Alexandria he was supported, and Elias was deposed. Severus exercised a most active episcopacy, living still like a monk, having destroyed the baths in his palace, and having dismissed the concords to Monophysites. Elias of Jerusalem refused to recognize Severus as patriarch, and many other bishops were equally hostile. However, at Constantinopol
r uptibility" an obligatory doctrine, in spite of the fact that Julian had been anathematized by a council at Constantinople in 536, at which date he had probably been dead for some years.

A commentary by Julian on the Book of Job, in a Latin version, is printed in an old Paris edition of Origen (ed. Genebrardus, 1574). A MS. of the original Greek is mentioned by Mai. It is largely quoted in the catena on Job of Nicetas of Heraclea. The great work of Julian against Severus seems to be lost. Ten anathematisms remain. Of his commentaries, one on Matthew is cited by Moses Barkephu (P. G., CXI, 551). It is to be hoped that some of Julian's five books will be recovered in Syriac or Coptic translations. An anti-Dionysian catena in the British Museum (MS. Addit. 12155) makes mention of Julian's writings. We hear of a treatise by him, "Against the Eutychianists and Manichaeans," which shows that Julian, like his great opponent Severus, had to be on his guard against extravagant Monophysites. Part of the treatise which Peter of Calcinus, Patriarch of Antioch (578-591), wrote against the Damisians is extant in Syriac MSS. (see Assemani's and Wright's catalogues).

The writers of the Theissian sect (see TRINITARIANS) next demand our attention. The chief among them, John (or Ierocles) of Cyzicus, and the Cappadocian Trithystes at Alexandria at the beginning of the sixth century, and was the principal writer of his party. He was a grammarian, a philosopher, and an astronomer as well as a theologian. His principal theological work, Περὶ τῆς διαφορᾶς, in ten books, is lost. It dealt with the Chalcedonian and Trinitarian controversies of that time, and forms part of Julian's (De sectis, Oct. 5). In St. John Damascene (De her. sectis, XI, 101-107, ed. Le Quen) and in Niceph. Call., XVIII (see Mansi, XI, 301). A complete Syriac translation is in Brit. Mus. and Vat. MSS.

Another lost theological work, τετρασυμβολή, described the writer's theory of a creation of new bodies at the general resurrection. The author of this treatise is named by the clerical writers, Theophylact Presbyter and Nicephorus. As a philosopher, Philonous was an Aristotelian, and a disciple of the Aristotelian commentator Ammonius, son of Hermias. His own commentaries on Aristotle were printed by Aldus at Venice (on "De generatione et interitu," 1527; "Analytica posteriora," 1534; "Analytica priora," 1535; "De anima," 1535; "Meteorologia," 1551; "Metaphysica," 1583). He also wrote much against the "Gnostics," that is, the Neo-Platonists of Proclus, the last great Neoplatonist: eighteen books on the eternity of the world (Venice, 1635), composed in 529, and τετρασυμβολή (printed by Corderius, Vienna, 1630, and in Gallandi, XI, new ed. by Reichert, 1897), on the hexameron, in which he follows St. Basil and other Fathers, and shows a vast knowledge of all the literature and science accessible in his day. The latter work is dedicated to a certain Sergius, who may perhaps be identified with Sergius the Grammarian, the Eutychianizing correspondent of Severus. The work was possibly written as early as 476 and is practically the earliest extant work of a clerical error. A "Computatio de Pascha," printed after this work, argues that the Last Supper was on the 13th of Nisan, and was not a real passover. A lost theological work entitled ταματά is summarized by Michael the Syrian (Chronicle, II, 69). A book against the Council of Chalcedon is mentioned by Photius (cod. 585). A work "Concerning the Apostles" is preserved in a Syriac MS. Another work "Against the Antimonicarians" exists in MS., and may be the work Philonous is noted in grammar as manuscripts, and his extant writings on the subject are based upon the καθολικὸν τῆς Ηρωδίας of Herodian (τοιαῦτα εικονομικά, ed. Dindorf, 1825; τετρά τῆς ἐκκλησίας τοιούτων, ed. Egenolf, 1890).

This sixth century Monophysite is to be distinguished from an earlier grammarian, also called Philonous, who flourished under Augustus and Tiberius. Of his life little is known. On account of his Tritheistic opinions he was summoned to Constantinople by Justinian, but he excused himself on account of his age and infirmity. He addressed the emperor a letter, "De divisione, differentia, et numero," which seems to be the same as the treatise spoken of as "De differentia que manere creditur in Christo post unionem"; but it is lost. He addressed an essay on Trithism to Athanasius Monachus, and was condemned on this account at Alexandria. At a disputation held by the emperor's order before the Patriarch of Constantinople, John Scholasticus, Canon, and Eugenius represented the Trithystes; John condemned Philonous, and the emperor issued an edict against the sect (Photius, cod. 24). In 688 Philonous was still alive, for he published a pamphlet against John, which Photius describes with great severity (cod. 76). The style of Philonous, he says, is always clear; but without dignity, and his argumentation is puerile. (For the theological views of the sect, see TRINITARIUS.)

Conon, Bishop of Tarsus, though a Trithyst and, with Eugenius, a supporter of John Philonous before the emperor, disagreed with that writer about the equality of the three Persons of the Holy Trinity (see TRINITARIANS). "Pandecheses," a work of Conon of Caesarea, was written about the year 525, and in it Conon on the Theissians (see TRINITARIANS). Conon wrote a book, εἰς Ἰωάννην, against his views on the Resurrection. Eugenius is called a Cilician bishop by John of Ephesus, but Bar Hebraeus makes him Bishop of Seleucia in Isauria (see TRINITARIANS). The Trithystes, surnamed Calonymus, was a deacon of Alexandria, who separated from his patriarch, Timothy IV (516-535), and in 527, in which year a Council of Alexandria met, he wrote against Severus a book called "Apology for the late Theophobius," to which a Severian monk named Theodore replied; the answer of Theophobius was again refuted by Theodore in three books (Photius, cod. 108). Other works of Theophobius are referred to by St. Maximus Confessor, and some fragments are cited by Socrates, X, 36 (ed. by Scholz, 1763).) Conon represents the Trithystes is known only by the elaborate analysis of his book given by Photius (cod. 232); it was a "Sic et non" like that of Abelard, giving authorities for a proposition and then for the contrary opinion. At the end were some remarks on curious views of a number of Fathers. It was evidently, as Photius remarks, a periphrastic method (I, 148). Historiography.—We now turn to the historians. Zacharias of Gaza, brother of Procopius of Gaza, the rhetorician, Zacharias Scholasticus, Zacharias the Rhetorician, Zacharias of Mitylene, are all apparently the same person (so Kugener's latest view, Krüger, and Brooks). Of his early life we have a vivid picture in his memoirs of Severus, with whom he studied at Alexandria and at Berytus. His home was at the port of Gaza, near the monastery of the bishop, Peter the Iberian. In the latter he was greatly devoted, and believed that Peter had prophesied his unfitness for the monastic life. He in fact did not become a monk, when his friends Evagrus, Severus, and others did so, at the behest of Constantinople, and reached a high eminence in his profession. Of his writings Photius speaks: "that the world did not exist from eternity" was probably composed in youth while he lived at Berytus. "His "Ecclesiastical History" is extant only in a Syriac epitome which forms four books (III—VI) of the "Historia Miscellanea." It begins with a short account from a Monophyist point of view of the Council of Chalcedon, and then traces the history of the monophysite church from the council till the death of Zeno (491). From the same history is derived a curious statistical description of Rome in "Hist. Misc.," X, xvi. The very interesting life of Severus carries the author's recollections up to the accession of his hero to the See of Antioch in 512. It was written subsequently to the history, as the cubicularius Euphrasius, to whom that
work was dedicated, was already dead. His recollections of Peter the Iberian and of Theodore, Bishop of Antioch, are lost, but his biography of Isaías, an Egyptian ascetic, is preserved in Syriac. A dispute against the Manicheans, published by Cardinal Pitra in Greek, was probably written after the edict of Justinian against the Manicheans in 527. He seems to have been still a layman. Up to the time he wrote the life of Severus of Sirmium, and the homilias of the Nourm. It was the easy course under Zeno and Anastasius. It would seem that he found it paid to revert to orthodoxy under Justin and Justinian, for he was present as Bishop of Mitylene at the Council of Mennas at Constantinople in 536, where he was one of the three metropolitans who were sent to summon Anthimus to answer the charges of heresy brought against him. The printed list of subscriptions to that patriarch's deposition, but Labbe testifies that it is found in some MSS. (Mausi, VIII, 975); it is absent from the condemnation of Severus in a later session. Zacharias was dead before the ecumenical council of 553.

An important historical work in anecdotal form is the "Plerophoria" of John of Matara, composed about 515; it contains stories of Monophysite worthies up to date, especially of Peter the Iberian, whose life was also written by Zacharias, but is now lost. A later life of Peter has been printed, which contains curious information about the Iberian princes from whom the Monophysite bishop descended. The life was written by Zacharias, and is to be found in some MSS. The interesting "Historia Miscellanea", often referred to as Pseudo-Zacharias, was composed in Syriac in twelve books by an unknown author who seems to have lived at Amida. Though the work was completed in 569, he seems to have used part of the history of John of Ephesus, which was finished only in 571. Chapter IV was written in Psalter, or for the monks of the monastery, and contains 1205 verses; it is not to be confused with the Psalter of the Byzantine church, which is a much earlier work. The book contains a quantity of legendary matter, of which the sources are at first extant; a few words are added on the Syriac doctors Isaac and Dodo. Book II has the story of the Seven Sleepers. History begins in II, ii, with an account of Eutyches, and the letter of Proclus to the Armenians follows. The next four books are epitomes of the lost work of Zacharias Rhetor. The seventh book continues the story from the accession of Anastasius (491), and together with general ecclesiastical history it combines some interesting data, which is of use to those who study the history of the times.

A curious chapter gives the Prologue of Moro, or Mara, Bishop of Amida (a Syriac writer whose works appear to be lost), to his edition of the four Gospels in Greek, which were written as a companion to the Syriac version. Book X is lost, with most of X and XII. Some of X has been restored by Brooks from the "Chronicle" of Michael the Syrian (died 1199). It is necessary to mention the "Chronicle of Edessa", from 495 to 506, which is embodied in the "Chronicle" attributed to Josua the Stylite (who seems to have been a Catholic); this latter is included in the second book of the "Chronicle" attributed to the Patriarch of Antioch, Dionysius of Tell-Mahre, a compilation which has a fourth book (from the end of the sixth century to 775) which is an original work by the compiler, who was in reality a monk of the monastery of Zoro (north of Amida), possibly Joshua the Stylite himself.

Some small chronicles of the sixth, seventh, eighth, and ninth centuries have been published as "Chronica minora" in the "Corpus Script. Or." Of later histories, those of Bar Hebraeus (died 1266) must be noted. His "Chronicon Syriacum" is abridgment of Michael the Syrian with a continuation; the "Chronicon ecclesiasticum" contains the ecclesiastical history first of Western Syria and then of Eastern Syria, with lives of the patriarchs of Antioch, of the Jacobite missionary bishops (called marphrians) and of the Nestorian patriarchs. The "Chronicle" of Elías of Nisibis to 1008 is important because it mentions its sources, but it is very defective in the early period through the loss of some MSS. The lives of the bishops of Egea are counted as Monophysite writers by Ehrhard (in Krumbacher, p. 53), but Photius clearly makes them out Nestorians (cod. 41, 55, 107), and it is by a slip that he conjectures Basil to be the author of a work against Nestorius.

Syriac Writers.—Of the Syriac Monophysite writings none is more important than Philoxenus, otherwise Xenaias, who was Bishop of Mabug (Hierapolis) from 485. For his life and the version of Scripture which was made by his order, see Philoxenus. His dogmatic writings alone concern us here. His letter to the Emperor Zeno, published by Vauchalde (1902) is of 485, the date of his episcopal consecration and of his acceptance of the Nestorian. His treatises on the Incarnation date perhaps before 500; to the same period belong two short works, "A Confession of Faith" and "Against every Nestorian". He wrote also on the Trinity. A letter to Marco, lector of Anazarbus, is attributed to 515-518. After he had been exiled by Justin to Philippopolis, he wrote three letters to the monks of Teleda, and wrote another letter of which fragments are found in MS. Addit. 14533, in which he argues that it is sometimes wise to admit baptisms and ordinations by heretics for the sake of peace; the question of sacramental validity does not occur to him. Fragments of his commentaries on the Gospel are found in MSS. This work has also been published by Budge. They scarcely touch upon dogma. Of his three liturgies two are given by Renaudot. Out of the great mass of his works in MS. at Rome, Paris, Oxford, Cambridge, London, only a fraction has been published. He was an eager controversialist, a scholar, and an accomplished writer. His Syriac style is much admired. His sect had no more energetic leader until Jacob Baradzethus himself. He was president of the synod which elevated Severus to the See of Antioch, and he had been the chief agent in the excommunication of Flavian. He was an energetic foe of Catholicism, and his works stand next in importance to those of Michael the Syrian, with whom they are in the same party. He was exiled by Justin in 519 to Philippopolis and then to Gangra, where he died of suffocation by smoke in the room in which he was confined.

James of Sarugh, 451-521 (q. v.), became episcopale, or visitor, of Hauran in that district about 505, and bishop of its capital, Batanin, in 519. Nearly all his numerous writings have been lost. We are told that seventy amanuenses were employed to copy his 760 metrical homilies, which are in Wright's opinion more readable than those of Ephraem or Isaac of Antioch. A good many have been published at various times. In the Vatican are 233 in MSS., in London 140, in Paris, 100. They are much cited in the Syriac Liturgy, and a liturgy and a baptismal rite are ascribed to him. Numerous letters of his are extant in Brit. Mus., MSS. Addit. 14587 and 17163. Though his feast is kept by Maronites and even by some Nestorians, there is no doubt that he accepted the Henoticon, and was afterwards in relation with the leading Monophysites, rejecting the Council of Chalcedon to the end of his life. Stephen ben Soudail was an Edessa Monophysite who fell into Pantheism. He was attacked by Philoxenus and James of Sarugh, and retired to Jerusalem. The confession of faith of John of Tella (483-533; bishop, 519-521) is extant, and so is his commentary on the Trisagion, and his canons for the clergy and replies to the questions of
MONOPHYSITES

the priest Sergius—all in MSS. in the British Museum. The great James Baradates, the eponymous hero of the Jacobites, who supplied bishops and clergy for the Monophysites when they were definitively divided from the Eastern Catholics in 453, wrote little: liturgy, a few letters, a sermon, and a confession of faith are extant (see Baradates). Of Syriac translators it is not necessary to speak, nor is there need to treat of the Monophysite scientist Sergius of Reschians, the writer on philosophy, Aboudemmeh, and many others.

John of Ephesus, called also John of Asia, was a Syrian of Amida, where he became a deacon in 529. On account of the persecution of his sect he departed, and was made administrator of the temporal affairs of the Monophysites in Constantinople by Justinian, who sent him in the following year as a missionary bishop to the pagans of Asia Minor. He relates of himself that he converted 60,000, and had 96 churches built. He returned to the capital in 546, to destroy idol worship there also. But on the death of Justinian he suffered a continual persecution, which he describes in his "History," an excuse for its excision and repetitions. What remains of that work is of great value as a contemporary record. The style is strikingly similar to that of the expressions of the lives of blessed Easterns were put together by John about 565-566, and have been published by Land. They include great men like Severus, Baradates, Theodorus, etc. (For an account of these works and for bibliography see John of Ephesus.)

George, bishop of the Arabians (c. about 640; d. 734), is the author of the Assyrian Jacobites. He was a personal follower of James of Edessa, whose poem on the Hexameron he completed after the death of James in 708. In this work he teaches the Apocatastasis, or restoration of all things, including the destruction of hell, so that many Greek Fathers learned from Origen. George was born in the Tigris region, and was made bishop of the wandering Arabs in November, 686; his see was at Akoula. He was a man of considerable learning. His translation, with introduction and commentary, of the "Organa" of Aristotle ("Catagories," "De Interpretatione," and "Prior Analytics") is extant (Brit. Mus., MS. Addit. 14659), as is the translation of the Greek of the "New Testament," of Nazianzus, and an explanation of the three Sacraments (Baptism, Holy Communion, and consecration of chrism,—following Pseudo-Dionysius). His letters of 714 till 718 are extant in the same MS. as this last work (Brit. Mus., MS. Addit. 12154). They deal with many things; astronomical, exegetical, liturgical questions, explanations of Greek orthodoxy; and contains historical matter about Aphraates and Gregory the Illuminator. His poems included one in dodecasyllables on the unpromising subject of the cultivation of movable feasts and the correction of the solar and lunar cycles, another on the monastic life, and two on the consecration of the "Church of Body and Blood." Father, in the vernacular knowledge of Syriac Church and literature. His reading was vast, including the chief Greek Fathers, with whom he classes Severus and Pseudo-Dionysius the Areopagite; he knows the Pseudo-Clementines and Josephus, and of Syriac writers he knows Bardeanes, Aphraates, and St. Ephraem. His correspondence is addressed to literary monks of his sect. The canons attributed to George in the "Nomocanon" of Bar Hebraeus are apparently extracts from his writings reduced to the form of canons.

James of Edessa (q. v.), about 633-708, was the chief Syriac writer of his time, and the last that need be mentioned here. His works are sufficiently described in a separate article. The Syriac literature of the Monophysites, however, continued throughout the middle ages. Their Coptic, Arabic, and Armenian literature is large, but cannot be treated in an article like the present one.

ORTHODOX.—Were the Monophysites really heretics or were they only schismatics? This question was answered in the affirmative by Assenheimer, recently by the Oriental scholar Nau, and last of all by Lebon, who has devoted an important work, full of evidence from unpublished sources, to the establishment of this thesis. It is urged that the Monophysites taught that there is but one Nature of Christ, μακρινή θρησκεία, because they identify the words φίλος and σύμμαχος, but in just the same way the Nestorians have lately been justified. A simple scheme will make the matter plain:

Nestorians: One person, two hypostases, two natures.
Catholics: One person, one hypostasis, two natures.
Monophysites: One person, one hypostasis, one nature.

It is urged by Bethune-Baker that Nestorius and his friends took the word hypostasis in the sense of nature, and by Lebon that the Monophysites took nature in the sense of hypostasis, so that both parties really intended the Catholic doctrine. There is a prima facie argument against both these pleads. The Nestorians held that the doctrine of ὑποστάσεις might misunderstand one another and fight about words while agreeing as to the underlying doctrine, yet it remains that the words person, hypostasis, nature, (ὑποστάσεις, ὑποστάσεως, φίλος) had received in the second half of the fourth century a perfectly definite meaning, as to which the whole Church was at one. All agreed that in the Holy Trinity there is one Nature (ὑποστάσεις) having three Hypostases or Persons. If in Christology the Nestorians used ὑποστάσεως and the Monophysites φίλος in a new sense, not only does it follow that their use of words was singularly inconsistent and inexcusable, but (what is far more important) that they cannot hold that the Antiochene party had no difficulty in coming to terms with St. Leo; they understood him well enough, and declared that they had always meant what he meant. How far this was a fact must be discussed under Nestorianism. But the Monophysites always withstood the Catholic doctrine, declaring it to be false. The great, one half Nestorian, and that it divided Christ into two.

Lebon urges that Severus himself more than once explains that there is a difference in the use of words in "theology" (doctrines of the Trinity) and in "the economy" (Incarnation): "Admittedly hypostasis and φίλος or φίλος are not the same in theology; however, in the economy they are the same" (P. G., LXXXVI, 1921), and he alleges the example of Gregory of Nazianzus to show that in a new mystery the terms must take new significations. But surely these very passages make it evident that Severus distinguished between φίλος and ὑποστάσεως. Putting aside the Trinity and the Incarnation, every φίλος is a ὑποστάσις, and every ὑποστάσις is a φίλος—in this statement all Catholics and Monophysites agree. But this means that the denotation of the words is the same, not that there is no difference of connotation. Φίλος is an abstraction, and cannot exist except as a concrete, that is to say, as a ὑποστάσεως. But "admittedly" in the Trinity the denotation as well as the connotation of the words is diverse, it is still true that each of the three Hypostases is identified with the Divine Nature (that is, each Person is God); but
if each Hypostasis is therefore still a θειός (the one θειίς) yet the θειίς is not one but three Hypostases. The words retain their old sense (connotation) yet have received a new sense in a new relation. It is obvious that this is the phenomenon to which Severus referred. Catholics would add that in the Incarnation conversely two natures are one hypostasis. Thus the meanings of the terms (αὐτότος and οὐσίατος, φύσις, φύσικα ὄντως or ὑποστάσεις) in the Holy Trinity were a common possession; and all agreed further that in the created universe there cannot exist a nature which does not subsist, there is no such thing as a φύσις αὐτότος (αὐτότος). (α) But Catholics hold the Human Nature of Christ considered in itself to be one, to have no Hypostases, but that the second person of the Holy Trinity is its θεότης. As the infinity of the Divine Nature is capable of a threefold subsistence, so the infinity of the Hypostasis of the Word is able to be the Hypostasis of the Human Nature assumed as well as of the Divine. The union in Christ is not a union of two natures directly with one another, but a union of the two in one hypostasis; thus they are distinct yet inseparable, and each acts in communion with the other. (β) The Nestorians argued thus: There are, according to the Fathers, two natures in Christ; but since every nature is a hypostasis, the Human Nature in Christ is a hypostasis. In order to make one Christ, they tried (in vain) to explain how the union was to be understood (αὐτότος). They did not mean to divide Christ, but their prosopic union leaked at every seam; it was difficult to express it or argue about it without falling into heresy. The Antiochenes were glad to drop such inadequate formulae, for it was certain that "person" in the Holy Trinity was only another name for "his person", and the same for the Human Nature. They did not mean to divide Christ, two Christs, two Sons. (γ) Conversely, starting from the same proposition that every φύσις is a θεότης, the Monophysites argued that as Christ is one Person, one Hypostasis, so is He one Nature, and they preferred "one nature" to the equivalent "has one nature". They alleged high authority for their formula, not only St. Cyril, but behind him St. Athanasius, Pope St. Julius, and St. Gregory the Wonderworker. These authorities, however, were but Apol- linarian forgeries; the favourite formula of St. Cyril, the μαζί φύσις συγκεκριμένη, had been borrowed un- worthily from the doctrine of the Trinity the word θεότης was meant by its original inventor in a heretical sense. Nay, the "one nature" went back to the Arians, and had been used by Eudoxius himself to express the incompleteness of the Human Nature of Christ.

Yet the Monophysites were far from being Apollinarians, still less were they Arians; they were careful from the beginning to distinguish Christ is perfect Man, and that He assumed a complete Human Nature like ours. Diodorus is emphatic on this point in his letter to Secundinus (Hist. Misc., III, i) and with need, since he had acquainted Eutyches who had de- nied our Lord's "consubstantiality with us". Ælurus is just as clear in the letters by which he re- fused and excommunicated Isaias of Hierapolis and Theophilus as "Eutychians" (Hist. Misc., IV, xii), and Severus had an acute controversy with Sergius the Grammarian on this very point. They all declared with one voice that Christ is μαζί φύσις, but ἐν δύο φύσισιν, that His Divine Nature is combined with a complete Human Nature in one hypostasis, and was treated by all as a hypostasis, though Severus was not ranged with the Nestorian who thought of the Divine Nature of that one hypostasis, howbeit without mixture or confusion or diminution. Ælurus insists that after union the properties of each nature remain unchanged; but they spoke of "the divine and human things", divina et humana, not natures; each nature re- mains in its natural state with its own characteristics (ἐν θείᾳ τῇ κατὰ φύσις) yet not as a unity but as a part, a quality (ποιότητι φυσικό), not as a φύσις. All the qualities of the two natures are combined into one θεότης σύνθεσις and form the one nature of that one hypostasis. So far there is no heresy in in- tent, but only a wrong definition.—that one hypostasis can have only one nature.

But however harmless the formula "one nature" might look at first sight, it led in fact immediately to serious and disastrous consequences. The Divine Nature of the Word is not merely specifically but numerically one with the Divine Nature of the Son and the Holy Ghost. This is the meaning of the word Æcthos applied to the Three Persons, and if Haz- hock were right in saying that the Nicene Creed of Constantine in 381 was taken to imply only three Persons of one species, then that Council accepted three Gods, and not three distinct but inseparable Persons in one God. Now if the Divine and Human Natures are united in the Word into one Nature, it is impossible to avoid one of two conclu- sions, either that the whole Divine Nature became man and suffered and died, or else that each of the three Persons had a Divine Nature of His own. In fact the Monophysites split upon this question. Ælurus and Severus seem to have avoided the diffi- culty, but it was not long before those who refused the latter alternative were taunted with the necessity of reverting to the Nestorianism and the Eutychianism of Opesiches, making God to suffer. Vehemently Severus and his school declared that they made the Divinity to suffer not as God, but only as man; but this was insufficient as a reply. Their formula was not The Word made flesh, "the Son of God made man", but "one Nature of the Word made flesh"; the Nature became Man, the Word became a Divine Nature. They did not reply: "We mean hypostasis when we say nature, we do not mean the Divine Nature (which the Word has in common with the Father and the Holy Ghost) but His Divine Person, which in the present case we call His φύσις", for the φύσις τοῦ Ἰησοῦ Χριστοῦ, before the word cæcæcæ, has been added, is in the sphere of the "theology" not of the "economy", and its significance could not be doubted.

Just as there were many "Eutychians" among the Monophysites who denied that Christ is consubstantial with us, so there were found many to embrace boldly the paradox that the Divine Nature has be- come incarnate. Peter Fullo added to the praise of the Arians of Antioch and the Nestorians which were refused to allow the natural inference to be explained away. Stephen Niobes and the Niobites expressly denied all distinction between the Human and the Divine Natures after the union. The Actistetes de- clared that the Human Nature became "uncreated" by the union. If the greatest theologians of the sect, Severus and Philetus, who handed down these excesses, it was by a refusal to be logically Monophysite.

It was not only the orthodox who were scandalized by these extreme views. An influential and very learned section of the schism rebelled, and chose the second of the two alternatives.—that of making the Divine Nature itself threefold, in order to ensure that the Human Nature in Christ was made one with the Nature of the Son alone and not with the whole Divine Nature. John Philoponus, the Aristotelian commen- tator, therefore taught that there are in the Trinity three partial substances (μερική oibpi) and one com- mon substance (μαζὶ oibpi), thus falling into Polythei- smism, with three, or rather four, gods. This Tritheistic and Monophysite doctrine was accordingly adopted. Though they were excommunicated at Alexandria, the Patriarch Damian held a view not far different. He so distinguished between the Divine oibia and the three Hypostases which partake (μεριξαίσθησι) in it, that he conceded the oibia to be existent of itself (μαζὶ oibτω),
and his followers were nicknamed Tetradiotes. Thus Peter Fullo, the Actistetes, and the Nicobites on the one hand, and the Trithists and Damianites on the other, developed the Monophysite formula in the only two possible directions. It is obvious that formula which involved such alternatives were heretical in fact as well as in origin. Severus tried to be orthodox, but at the expense of consistency. His "corruptibility" view is absurd, and the nature is concerned with the abstract apart from the union (see Eutychianism), but to consider this union as an entity was certainly an admission of the Two Natures. All change and suffering in Christ must be (as the Julianists and Justinian右边 swept) strictly voluntary, in so far as the union gives to the Sacred Humanity a right and claim to so become. It is just this same dedication of Severus was willing to divide the Natures not merely "before" the union (that is, logically previous to it) but even after the union "theoretically," and he went so far in his controversy with the orthodox John the Grammarian as to concede δος φόρος επί θεοσ. This was indeed an immense concession, but considering how much more orthodox were the intentions of Severus than his words, it is scarcely astonishing, for St. Cyril had concealed much more.

But though Severus went so far as this, it is shown elsewhere (see Eutychianism, Maximus Confessor, and especially Monothelitism) that he did not avoid the error of giving one activity to our Lord, one will, and one mind. It is true that he had the intention of admitting any incompleteness in the Humanity of Christ, and that he and all the Monophysites started merely from the proposition that all activity, all will, and intelligence proceed from the person, as ultimate principle, and on this ground alone they asserted the unity of each in Christ. But it was in fact that Monothelites, not Eutychians. It was not supposed by the best Catholic theologists who attacked that doctrine that the Monophysites denied Christ to have exercised human activities, human acts of the will, human acts of cognition; the error was clearly recognized as lying in the failure to distinguish between the human or the mixed (theandric) activity of Christ as a Man, and the purely Divine activity, will, knowledge, which the Son has in common with the Father and the Holy Spirit, and which are in fact the Divine Nature. In speaking of one activity, one will, one knowledge in Christ, Severus was reducing Monophysitism to pure heresy just as much as did the Nicobites or the Trithists whom he certainly held in mind. His confusion between human and human faculties of Christ—activity, will, intellect—and the Divine nature itself. This is not Apollinarism, but is so like that it the distinction is theoretical rather than real. It is the direct consequence of the use of Apollinarian formula. St. Cyril did not go so far; and in this Monothelite error we may see the essence of the heresy of the Monophysite; for all fell into this snare, except the Trithists, since it was the logical result of their mistaken point of view.

For general literature see Eutychianism. In P.G. there are more fragments than complete writings. Important collections are Ammonius, Bibliotheca historica sive de omnibus et aliis, Corpus Christii Orient., Corpus Syriacorum, Graeae, 1862; de Le Blanc, Histoire de la Monophysite (Lyon, 1857); A. Scholten, Carth. of the Syrian MS. in the Brit. Mus. (1798, 2 vols.); and Cook, Carth. of the Syrian MSS. of the Univ. of Cambridge (Cambridge, 1801); G. Hantsch, Handschriften-Verzeichniss der K. Bibl. zu Berlin, 1801, etc. On the various literature in general see Ammonius, op. cit., II. Dissertationes de Monophysitacce, etc. (Gottingen, 1833—6); Wright, Syriac Literature (Encyclop. Brit., 9th ed., 1857; published separately as A Short History of Syriac Literature, London, 1864); Duval, La litterature Syrienne (3rd ed., Paris, 1897); many excellent articles by Kuehner in Realencyclopaedia.

Le lettera di Filsegno ai Monaci di Tell Adda in Mem dell'Acad. dei Lincei, 1616, p. 497, vol. II. [Ed. of _Monopolii_, op. cit., by J. J. Winckelmann. JOHN CHAPMAN.

Monopoly, Dioecese of (Monopolitana), in the Province of Bari, in Apulia, southern Italy. The city has been the subject of an antiquarian. It was the ancient Egnatis, the ruins of which are not far from the modern town. In the eighth and ninth centuries, Monopoli was often ravaged by the Saracens. After the end of the Normans counts, it became (1042) the seat of Hugues. During the war between France and Spain for the possession of the Kingdom of Naples, Monopoli was captured twice by the Venetians (1495 and 1528), and on the second occasion was sacked. In 1552 Charles V surrounded the town with walls and towers that still exist. The episcopal see was created in 1602, and its first prelate was Deodatus. The cathedral was erected by the second bishop, Roseme, in 1610. It is magnificent. There was a small town situated on a high promontory along the Adriatic, which is united to this diocese. The diocese is immediately subject to the Holy See; it has eight parishes, 65,000 inhabitants, and three educational institutes for girls.

CAFFELETTI, La Chiesa d'Italia, XXI (Venice, 1887).

U. BENIGNI.

Monopoly, Moral Aspects of.—According to its etymology, monopoly (monopolia) signifies exclusive sale, or exclusive privilege of selling. Present usage, however, extends the term to one's exercise of unified control over a commodity sufficient to enable the person or corporation in control to limit supply and fix price. The proportion of the supply of an article that must be controlled in order to attain these ends, depends upon many factors, and differs considerably in different industries. In the majority of cases, the unified control of industry, based on between 70 and 90 per cent, although there are cases in which the unified control of a little more than one half the supply of the commodity seems to suffice. In most of the cases in which the monopoly controls less than three-fourths of a business, the independent dealers seem to have the power to overthrow the monopoly by bidding down the market prices and setting off steadier market conditions established by the dominant concern. They are, consequently, passive factors in the monopolized condition of the trade. No matter how great the degree of control which the monopoly enjoys, its power over supply and prices is not absolute. Many economic and prudential considerations will prevent the exercise of this power to the extent that it might desire—for example, the fear of potential competition, the discovery of a substitute for the monopolized article, or the possibility that people may get on without either the article or a substitute. But in all cases monopoly implies the ability deliberately to regulate supply and prices, and to maintain them at a point other than that which would have been reached by the natural action of the market under normal competition. However inexpedient a monopoly may be, it is not in itself immoral. Its moral character depends entirely upon its actions and its effects. More specifically, its morality is determined by the prices that it establishes, and by the methods that it employs toward actual or potential competitors.

I. Monopoly Prices.—According to the older moral theologians, monopoly prices were unjust when they were higher than the prices that would have prevailed under competition (cf. Lugo, "De Justitia et de Jure," disp. xxvi, n. 72). While this rule was substantially correct for the Middle Ages, when the competitive, or rather the customary, price was generally fair to both producers and consumers, it is far from acceptable to-day, when the competitive price is often too low to provide a just return to the agents of production. For competitive prices, as well as for monopoly prices, the objective rule of justice is that a sufficient return should be so high that it is conveniently high to remunerate fairly all who have contributed to the production of the thing; the subjective rule of justice is the social estimate, the price approved by competent and fair-minded men (cf. Tanqueray, "De Justitia," 776). If the monopoly price does not exceed these limits, it is not unjustly high, even though it is much higher than what was had obtained or would have obtained under the stress of competition. Since the different classes that help to produce a socially useful commodity have a right to a fair return for their services, and since this return can only come from the price at which the commodity is sold, the latter is unjustly low unless it is sufficient for this purpose. Today, it can be said in competition by which an unjust price can be made just. On the other hand, there is no secret virtue in monopoly to justify a selling price that is more than sufficient to render fair returns to the different agents of production. These propositions are accepted by the overwhelming majority of persons, whether experts or not: the practical difficulty is to determine precisely what is a fair return to each of the different agents.

Putting the matter as briefly and as summarily as possible, we may say that a just remuneration to the agents of production comprises: (1) a living wage for all labourers, and something more than this for all those who form part of the union of workers; (2) fair profits for the business man, on account of his activities as director of industry; (3) a fair rate of interest on the actual capital invested in the business. Fair recompense for the work of the worker, fair profit for the business man, and a fair rate of interest on the actual capital invested in the business services in a competitive business. Although competition is not of itself a determinant of fair wages in the case of ordinary labour, inasmuch as it often forces remuneration below the level of decent living, it is generally fair to the director of industry, inasmuch as it enables him not merely to obtain a decent livelihood, but to maintain himself in accordance with that higher standard of living to which he has a reasonable claim. And it yields even more than this to those business men whose ability is exceptional. A fair rate of interest on monopoly capital will be the rate that prevails in the market, as it enables him not merely to maintain a sufficient amount of risk. The capitalist or interest receiver as such, does not work, but is free to earn his livelihood by his labour from other sources. Thus, since
interest is not his sole means of livelihood, the just rate of interest is not determined by, nor does it bear to those from which he must derive his livelihood in the individual case. Consequently, competition may be the proper rule of justice for the interest receiver, as well as for the director of industry, although it is not always a just rule for the ordinary wage-earner.

What are the grounds for the assertion that the investor in a monopoly has no right to more than the competitive or prevailing rate of interest? The answer to this question is bound up with the more fundamental question concerning the basis of the right of any investor to receive any interest at all. But, no matter what answer we give to this latter question, no matter what justification of interest we may advance, we cannot suppose that the investor has any ground upon which to erect the beginnings of a proof, that the capitalist has a right, as capitalist, to more than the prevailing or competitive rate of interest. If we assume that interest is justified as the product of capital, or of the product of capital, we have no reason to assert that the so-called product has a higher value than men attribute to it in the ordinary conditions. If we regard interest as the due reward of the capitalist's sacrifices in saving, we have no ground for maintaining that these are not fully remunerated in the current rate. If we adopt the theory that seems to be most satisfactory and least assailable, namely, that interest is a purely physical and monetary consideration, it is obvious that it probably would not be sufficient capital unless men were encouraged to save by the hope of interest, we must likewise conclude that the current competitive rate is sufficiently high, since it brings forth sufficient saving and sufficient capital for society's needs. The argument based upon this theory may be stated as follows: suppose that the price of capital cannot be shown to be unjust on individual grounds, that is, as a payment from the purchaser of the product of capital to the owner of capital (for it must be remembered that the consumer is the real and final provider of interest on capital), it will be justified on social grounds if it is necessary in order to evoke sufficient social capital; and there is an overwhelming probability that it is necessary for this purpose. Since interest is justified only for this purpose and to this extent, the just rate of interest cannot be higher than the rate that attains this end, which in our time is the competitive rate.

The doctrine that capital has no right to more than the competitive rate is the just rate in the case of money loaned (cf. Tanqueray, "De Justitia", n. 906). Where the risk and other circumstances are the same, men do not valuate an investment higher than a loan; they will put their money into the one or the other indifferently; consequently, it would seem clear that, when the circumstances just referred to are the same, a fair return on invested money need not exceed a fair return on loaned money. To be sure, investors and business men do obtain more than the competitive rate of interest in some years and in some enterprises, even where competition is active and constant; but this advantage is either offset by exceptionally low rates in other years, or it is due to unusual business ability, or it arises from an increase in the value of the land connected with the enterprise. In all these cases the exceptionally high rate is undoubtedly lawful more or less as a result of the monopolistic price of capital pure and simple. Since the prevailing or competitive rate is sufficiently high to satisfy the demands of justice in businesses that are subject to competition, there seems to be no good reason why it is not, generally speaking, sufficiently high in monopolistic concerns. The owner of a monopoly has no more right to a larger profit than the investor to whose advantage it is a debarrement to have to pay a higher rate of interest on his investment than the money-lender has to exploit the distress of the borrower in order to exact an exorbitant rate of interest on the loan. It would seem that the only exception to this rule would occur when the monopoly, while paying a fair wage to labour and a fair price to those from whom it buys materials, introduces economies of production which enable it to sell its goods at less than the prices charged by its competitors, and yet make unusual profits and interest on its investment. In such a case it seems reasonable that a monopolistic concern (more properly, its active directors, who alone have affected the productive and marketing enterprises) should be exempt from the payment of the higher rate of interest on the cheaper methods of production. On the other hand, there is no good reason why the monopoly should appropriate all the benefits of the improvement. If it does not share them with the consumer by reducing prices below the competitive level, it renders no social service to compensate for the social danger which is inherent in the monopoly. In fact, in the matter of the fact, the great majority of existing monopolies do not pay higher wages nor higher prices for material than competitive concerns, and yet they charge the consumer higher prices than would have prevailed under competition (cf. Final Report of the Industrial Commission, pp. 621, 625, 690).

The passage in reference is had to monopolistic concerns that fix prices without any supervision or restriction by the State. When the public authority exercises adequate control over the charges of public service monopolies, such as gas and street-railway companies, and determines these freely and honestly, it would seem that the monopolistic concern no longer gains an unfair advantage by charging the public more than the charges established by the public authorities, even though they should yield unusual profits on the investment, for the presumption is that such charges are fair to both producer and consumer. No such presumption extends to those cases in which the state control over charges is only mildly corrective and partial, instead of fundamental and thorough.

II. MONOPOLISTIC METHODS.—The methods and practices employed by monopolies in dealing with their rivals did not occupy the attention of the older moral theologians who wrote on the subject of monopoly. Nor have recent writers given this phase of the subject the attention that it deserves. As a consequence, there is a passing and ethical treatment of this phase in the public opinion, which regards it as one of the worst practices by which monopolistic concerns harass and eliminate their competitors. Among the most notable of these methods are discriminatory underselling, the factor's agreement, and railway favouritism.

Discriminative underselling occurs, when the monopoly sells its goods at unprofitably low prices in the territory in which it wishes to destroy competition, while imposing unreasonably high prices elsewhere. While the independent dealer who is driven out of business by this device has no strict right to the patronage of the customers who are drawn away from him through the low prices established by the monopoly, he has a right not to be deprived of that patronage by unjust methods. According to a general and far-reaching moral principle, a man is unjustly treated when he is prevented by unjust means from obtaining an advantage which he has a right to pursue (cf. Lehmkühl, "Theologia Moralis", I, n. 974; Tanqueray, "De Justitia", n. 588). Among the unjust methods which enables the monopoly to force, fraud, deception, falsehood, intimidation, and extortion. Now when a manufacturer or a merchant is deprived of the patronage of his customers through ruinously low prices, which the monopoly is enabled to
maintain by means of the exorbitantly high prices that it establishes at another place or time, he is deprived of this advantage by unjust means. The unjustly high prices are as truly the means by which the independent dealer is injured, as the lying reports brought to a would-be benefactor are the means by which his intended beneficiary is deprived of a legacy. This is the stock example used by the moral theologians to illustrate the general principle stated above. When, however, a business concern eliminates a competitor by lowering prices universally, and keeping them low even after the latter has gone out of business, no injustice is done, because no unjust means are employed. Even when a monopolistic concern lowers prices everywhere, and employs the media of time and transportation, and has no competitors driven from the field, the latter would seem to be victims of injustice. For, although the unjust prices do not come into existence until after the injury has been accomplished, they are as certainly the means whereby the injury was done, as though they had been established simultaneously with the ruinously low prices. In both cases the exorbitant prices operate as the moral cause of the act by which the unprofitably low prices are established.

The factor's agreement is exemplified when a merchant engages to handle no goods, or no goods of a certain kind, except those manufactured by a monopoly; although in performing justice to the injured concern, the monopolistic concern will refuse to sell him any goods at all. If the agreement is established, the result is that the rivals of the monopolistic manufacturing concern are deprived of the patronage of the merchant through intimidation. It is a species of secondary boycott, inasmuch as the monopoly refuses to sell to the independent manufacturer. It is a violation of the law of the land and the courts. In a suit for breach of the contract, the seller may, unless the latter refuses to do business with the independent manufacturer. It seems sufficiently clear that boycotts of this kind are unreasonable and unjust whenever, as in this instance, there exists no sufficient reason for the intimidation and the refusal of intercourse (see Labour Unions, Moral Aspects of). Indeed, the motive of the monopoly is, as a rule, not merely lacking in reasonableness, but positively unjust; for its ultimate aim is not simply to acquire the patronage that now goes to its rivals, but in addition to raise prices to the consumer after its rivals have been eliminated.

Railway favouritism is the most important of all the meaner methods of business man through unjust prices. It has in all probability been as effective in creating and maintaining monopolies as all the other methods combined. It appears under many forms, but its essence is found in the fact that the goods dealt in by a monopoly are carried by the railroad at a rate so much below that charged to independent dealers that the latter must either go out of business or be satisfied with insufficient profits. This practice is undoubtedly immoral: (1) because it is forbidden by the civil law; (2) because the railroad, as a quasi-public agency, is under obligation to treat all its patrons with the same distributive justice that the state itself would be obliged to accord them if it were the owner of the railroads; (3) because the lower charges collected from the monopoly imply unjustly high charges extorted from the independent shippers. As a violation of the civil law, railway favouritism is against legal justice; as unequal treatment of different patrons, it is a violation of both distributive and commutative justice, precisely as the unequal imposition of taxes violates both these forms of justice. If the rate charged the monopoly for carrying its goods is sufficiently high to be just, the higher rate imposed upon its rivals exceeds the limits of justice. If the former rate is so low as to be unremunerative to the railroad, the injustice done to the independent dealers is still greater, inasmuch as they are compelled to bear a part of the charges that should be defrayed by the monopoly. The favours accorded to the latter are not deducted from the normal revenues and profits of the railroad company.

As a matter of purely natural justice, a railroad might concede somewhat lower carrying rates to a monopolistic concern because the monopoly ships goods in larger lots. The cost of such transportation is always smaller than when the same volume of goods is carried in separate lots for several different concerns. Nevertheless, even this degree of favouritism is a violation of legal justice, and frequently a violation of charity as regards the smaller shipping concerns. Inasmuch as the practice of railway favouritism to monopolies is seldom confined within these narrow limits, the question raised in this paragraph is not at all of much practical importance. Again, the railroad might be absolved from the charge of violating natural justice if the lower rates which it extended to the monopoly did not fall below the lowest level (pretium infimum) of justice, while the charges exacted from the independent shippers did not exceed the highest level (pretium summum) sanctioned by justice. A private enterprise, such as a mercantile concern, could probably be absolved from the stigma of injustice if it indulged in this practice toward its different customers. But, as we have seen above, a railroad is not a purely private concern. Since it performs a quasi-public function, it would seem to be bound by the same rules of distributive and commutative justice as governments, and, as such, it is now operating the business of transportation. The share of the monopoly in the immorality and injustice connected with railway favouritism consists in the fact that it requests, urges, and sometimes intimates the railway to indulge in the practice. The monopoly is therefore a co-operator. In the language of the moral theologians, it is a mediator, and likewise a participant, or beneficiary (frequently the only beneficiary) of the injustice done to its rivals through overcharges for transportation.

While monopoly is not necessarily unjust, and while any particular monopoly may be free from unjust practices, experience shows that the power to commit injustice which is included in monopoly cannot be unreservedly entrusted to the average human being or group of human beings. Consequently, it is the duty of public authority to prevent the existence of unnecessary monopolies, and to exercise such supervision over necessary monopolies as to render impossible monopolistic injustice, whether against the independent manufacturer or the consumer through unjust prices. Many of the moral judgments enunciated in this article will perhaps strike the reader as lacking in positiveness, inasmuch as they are modified by such phrases as "it would seem," "it is probable," "it is reasonable." Yet no other course was possible. Concerning most of the specific questions discussed in the foregoing pages, there exists no specific teaching by the Church, or even by the unanimous voice of theologians. There are not even well-defined bodies of theological opinion. All that can be done is to draw conclusions from, and make specific applications of, the more general principles of justice as found in approved Catholic sources.

**John A. Ryan**

**Monotheism** (from the Greek μόνος "only", and θεός "god") is a word coined in comparatively modern times to designate belief in the one supreme God, the
Creator and Lord of the world, the eternal Spirit, All-powerful, All-wise, and All-good, the Rewarder of good and Punisher of evil, the Source of our happiest and most perfect bliss. On this point there can be no doubt. It is opposed to Polytheism, which is belief in more gods than one, and to Atheism, which is disbelief in any deity whatsoever. In contrast with Deism, it is the recognition of God's presence and activity in every part of creation. In contrast with Pantheism, it is belief in a God of conscious freedom, distinct from the physical world. Both Deism and Pantheism are religious philosophies rather than religions.

On the other hand, Monotheism, like Polytheism, is a term applying primarily to a concrete system of religion. The grounds of reason underlying monotheism have already been set forth in the article God. These grounds enable the inquiring mind to recognize the existence of God as a morally certain truth. Its reasonableness acquires still greater force from the positive data associated with the revelation of Christianity. (See Revelation.)

**Primitive Monotheism.**—Was monotheism the religion of our first parents, and hence the primitive form of religion? Many Evolutionists and Rationalist philosophers have considered it possible that the first revelation of positive, Divine revelation, they hold that the mind of man was in the beginning but little above that of his ape-like ancestors, and hence incapable of grasping so intellectual a conception as that of Monotheism.

They assert that the first religious notions entertained by man in his upward course towards civilization were superstitions of the grossest kind. In a word, primitive man was, in their opinion, a savage, differing but little from existing savages in his intellectual, moral, and religious life. Catholic doctrine teaches that the religion of our first parents was monotheistic and supernatural, being the result of Divine revelation, which they could not have received without the help of God to know and worship God. The first man, like his descendants to-day, had by nature the capacity and the aptitude for religion. Being a man in the true sense, with the use of reason, he had the tendency then, as men have now, to recognize in the phenomena of nature the workings of an unseen power. In primitive man, however, he lacked experience and scientific knowledge, it was not easy for him to unify the diverse phenomena of the visible world. Hence he was not without danger of going astray in his religious interpretation of nature. He was liable to miss the important truth that, as nature is a unity, so the God of nature is one. Revelation, then, was necessary for our first parents, it is for men to-day, to secure the possession of true monotheistic belief and worship.

The conception that Almighty God vouchsafed such a revelation is eminently reasonable to everyone who recognizes that the end of man is to know, love, and serve God. It is repugnant to think that the first man, in their view, had no such knowledge of God, being impossible for our first parents, was not without a fitting substitute. They were set right from the first in the knowledge of their religious duties by a Divine revelation. It is a Catholic dogma, intimately connected with the dogma of original sin and with that of the Atonement, that our first parents were raised to the state of sanctifying grace, that is, to the supernatural state, namely, the beatific vision of God in heaven. This necessarily implies supernatural faith, which could come only by revelation.

Nor is there anything in sound science or philosophy to invalidate this teaching that Monotheistic belief was imparted by God to primitive man. While it is true that human life in the beginning was, on a comparatively low plane of material culture, it is also true that the first men were endowed with reason, i.e., with the ability to conceive with sufficient distinctness of a being who was the cause of the manifold phenomena presented in nature. On the other hand, a humble degree of culture along the lines of art and industry is quite compatible with right religion and morality, as is evident in the case of tribes converted to Catholicism in recent times; while retaining much of their rude and primitive mode of living, they have reached very clear notions concerning God and shown remarkable fidelity in the observance of His law. As to the bearing of the Evolutionistic hypothesis on this question, see Friesius.

It is thus quite in accordance with the accredited results of physical science to maintain that the first man, created by God, was keen of mind as well as sound of body, and that, through Divine instruction, he began life with right notions of God and of his moral and religious duties. This does not necessarily mean that God communicated to them the moral and philosophically profound. Here it is that scholars are wide of the mark when they argue that Monotheism is a conception that implies a philosophic grasp and training of mind absolutely impossible to primitive man.

The notion of the Supreme God, notably life is not the highly metaphysical conception demanded by right philosophy. If it were, few could hope for salvation. The God of religion is the unspeakably great Lord on whom man depends, in whom he recognizes the source of his happiness and perfection; He is the righteous Judge, rewarding good and punishing evil; the loving and merciful Father, who withholds not the gifts of life and life itself, the needy and penitent children. Such a conception of God can be readily grasped by simple, unphilosophic minds—by children, by the unlettered peasant, by the converted savage.

Nor are these notions of a supreme being utterly lacking even where barbarism still reigns. Bishop Hugues, in his own country of France, quotes a testimony of a "sage" (Paris, 1909), and Mr. A. Lang, in his "Making of Religion" (New York, 1898), have emphasized a point too often overlooked by students of religion, namely, that with all their religious crudities and superstitions, such low-grade savages as the Pygmies of the Northern Congo, the Australians, and the natives of the Andaman Islands, have preserved notions of the Supreme Deity. To say, then, that primitive man, fresh from the hand of God, was incapable of monotheistic belief, even with the aid of Divine revelation, is contrary to well-ascertained fact. From the opening chapters of Genesis we gather that our first parents recognized God to be the author of all things, their God and Lord, the Giver of all good, the Father of all, the Source of all happiness, rewarding good and punishing evil. The simplicity of their life made the range of their moral obligation easy of recognition. Worship was of the simplest kind.

**MOSAIC MONOTHEISM.**—The ancient Hebrew religion, promulgated by Moses in the name of Jehovah (Jahweh), was an impressive form of Monotheism. That it was Divinely revealed is the unmistakable teaching of Holy Scripture, particularly of Exodus and the following books which treat explicitly of Mosaic legislation. Even non-Catholic Scriptural scholars, who no longer accept the Pentateuch, as it stands, as the literary production of Moses, recognize, in great part, that, in the Pentateuch, the mind of the time and set them, go to make up the Pentateuch, there are portions that reach back to the time of Moses, showing the existence of Hebrew monotheistic worship in his day.
Now, the transcendent superiority of this Monotheism taught by Moses offers a strong proof of its Divine origin. At a time when the neighbouring nations representing the highest civilization of that time—Egypt, Babylonia, Greece—were giving an impure and idolatrous worship to many deities, we find the insignificant Hebrew people professing a religion in which idolatry, impure rites, and a degrading mythology had no legitimate place, but where, instead, belief in the one true God was associated with a dignified worship and a lofty moral code. Those who reject the claim of Mosaic Monotheism to have been revealed have never yet succeeded in giving a satisfactory explanation of this extraordinary phenomenon. In the first place, the History of Personification of God in the Hebrew people, destined in the fullness of time to give place to the higher monotheistic religion revealed by Christ, in which all the nations of the earth should find peace and salvation. The Jewish people was thus God's chosen people, not so much by reason of their own merit, as because they were destined to prepare the way for the absolute and universal religion, Christianity. The God of Moses is no mere tribal deity. He is the Creator and Lord of the world. He gives over to His chosen people the land of the Chanaanites. He is a jealous God, forbidding not only worship of strange gods, but the use of images, which might lead to abuses in that age of almost universal idolatry. Lastly, there is the fact that God is truth, the predominant emotion. The religious sanction of the law is centred chiefly in temporal rewards and punishments. Laws of conduct, though determined by justice rather than by charity and mercy, are still eminently humane.

CHRISTIAN MONOTHEISM.—The sublime Monotheism of Jesus Christ has no parallel in the history of religions. God is presented to us as the loving, merciful Father, not of one privileged people, but of all mankind. In this filial relation with God—a relation of confidence, gratitude, love—Christ centres our obligations both to God and to our fellow-men. He lays hold of the individual soul and reveals to it its high destiny of Divine sonship. At the same time, He impresses on us the corresponding duty of treating others as God's children, and hence as our brethren, entitled not simply to justice, but to mercy and charity. To complete this idea of Christian fellowship, Jesus shows Himself to be the eternal Son of God, sent by His heavenly Father to save us from sin, to raise us to immortality, to the Delivered Life of God through the atoning merits of His life and death. The love of God the Father thus includes the love of His incarnate Son. Personal devotion to Jesus is the motive of right conduct in Christian Monotheism. Co-operating in the sanctification of mankind is the Holy Ghost, the Spirit of truth and life, sent to confirm the faith in faith, hope, love, and charity. These three Divine Persons, distinct from one another, equal in all things, Father, Son, and Holy Ghost, are one in essence, a trinity of persons in the one, undivided Godhead (see TRINITY, THE). Such is the Monotheism taught by Jesus. The guaranty of the truth of His teaching is to be found in His supreme moral excellence, in the perfection of His ethical teaching, in His miracles, especially His bodily resurrection, and in His wonderful influence on mankind for all time. (Cf. John, xvii, 3; 1 Cor., viii, 4.) As Christianity in its beginnings was surrounded by the polytheistic beliefs and practices of the pagan world, a clear and authoritative expression of Monotheism was necessary to combat the temptations of living in polytheism. It is open with the words: “I [we] believe in God [theos, deum]” or, more explicitly, “I [we] believe in one God [mon, unum deum].” (See Denzinger-Bannwart, “Enchiridion,” 1–40; cf. Apostles’ Creed; Athanasian Creed; Nicene Creed.) Among the early heresies, some of the most important and most directly opposed to Monotheism arose out of the attempt to account for the origin of evil. Good they ascribed to one divine principle, evil to another. (See Gnosticism; Manichaeism; Marcionites.) These dualistic errors gave occasion for a vigorous defence of Monotheism by such writers as St. Ireneaus, Tertullian, St. Augustine, etc. (see Bardenhewer-Shahan, “Patrology,” St. Louis, 1920, i, cols. 109–112.)

The same doctrine naturally held the foremost place in the teaching of the missionaries who converted the races of Northern Europe; in fact, it may be said that the diffusion of Monotheism is one of the most striking phenomena of the Church. In the various conciliar definitions regarding the person of Christ, the oneness of the Divine nature; e.g., Fourth Council of Lateran (1215), in Denzinger-Bannwart, “Enchiridion,” 428. The medieval Scholastics, taking up the traditional belief, brought to its support a long series of arguments based on reason; see, for instance, St. Thomas, “Contra Gentes,” i, 11, and St. Anselm, “Monol.,” iv. During the last three centuries the most conspicuous tendency outside the Catholic Church has been towards such extreme positions as those of Monism (q. v.) and Pantheism (q. v.), in which it is asserted that all things are really one in substance, and that God is identical with the world. The Church, however, has steadfastly maintained, not only the plurality of persons, but the unity of the Divine nature, else, but also that there is only one God. “If any one deny the one true God, Creator and Lord of all things visible and invisible, let him be anathema” (Conc. Vatican., Sess. III, “De fide,” can. 1).

MOHAMMEDAN MONOTHEISM.—Of Mohammedan Monotheism little need be said. The Allah of the Koran is practically one with the God of the Old Testament. Its keynot is islam, submissive resignation to the will of God, which is expressed in everything that happens. Allah is, to use the words of the Koran, “The Almighty, the All-knowing, the All-just, the Lord of the worlds, the Author of the heavens and the earth, the Creator of life and death, in whose hand is dominion and irresistible power, the great all-powerful Lord of the glorious throne. God is the Mighty, . . . the Swift in reckoning, who knoweth every ant’s weight of good and of ill that each man hath done, and who suffereth not the reward of the faithful to perish. He is the King, the Holy, . . . the Guardian over His servants, the Shelterer of the orphan, the Guide of the blind, the Unleashing of the captive, the Consoler of the bereaved, the Consoler of the afflicted, . . . the generous Lord, the gracious Hearer, the Near-at-hand, the Compassionate, the Merciful, the Forgiving” (cited from “Islam”, by Ameer Ali Syed). The influence of the Bible, particularly the Old Testament, on Mohammedan Monotheism is well known and need not be dwelt on here.
among peoples of inferior culture to-day. It is only since modern science has brought all these phenomena within the reign of physical law that the tendency to view them as manifestations of distinct personalities has been thoroughly dispelled. Now such a personification of nature's forces is compatible with Monotheism so long as these different intelligences fancied to produce such phenomena are viewed as the handiwork of God's creative mind, and hence not worthy of Divine worship. But where the light of revelation has been obscured in whole or in part, the tendency to deify these personalities associated with natural phenomena has asserted itself.

In this way polytheistic nature-worship seems to have arisen. It arose from the mistaken application of a sound principle, which man everywhere seems naturally to possess, namely, that the great operations of nature are due to the agency of mind and will. Professor George Fisher observes: "The polytheistic religions did not err in identifying the manifold activities of nature with voluntary agency. The spontaneous feelings of mankind in this particular are not belied by the principles of philosophy. The error of polytheism lies in the splintering of that will which is immanent in all the operations of nature into a plurality of personal agents, a throng of divinities, each active and dominant within a province of its own" ("Grounds of Christian and Theistic Belief," 1903, p. 29). The nature-worship is to be found among practically all peoples who have lacked the guiding star of Divine revelation. Such history of these individual religions as we possess offers little evidence of an upward development towards Monotheism: on the contrary, in almost every instance of known historic development, the tendency has been to degenerate further and further from the monotheistic idea. There is, indeed, scarcely a Polytheistic religion in which one of the many deities recognized is not held in honour as the father and lord of the rest. This is the result of an upward development, as non-Catholic scholars very generally assert, is speculative possible. But that it may as well be the outcome of a downward development from a primitive monotheistic belief cannot be denied. The latter view seems to have the weight of positive evidence in its favour. The ancient Chinese religion, as depicted in the oldest records, was remarkably close to pure Monotheism. The gross Polytheistic nature-worship of the Egyptians of later times was decidedly a degeneration from the earlier form of monotheistic belief. In the Vedic religion, a strong Monotheistic tendency asserted itself, only to weaken later on and change into Pantheism. The one happy exception is the upward development which the ancient Aryans introduced into the land of the Iranians. Through the wise reform of Zoroaster, the various gods of nature were subordinated to the supreme, omniscient spirit, Ormuzd, and were accorded an inferior worship as his creatures. Ormuzd was honored as the creator of all that is good, the revealer and guardian of the laws of religious and moral conduct, and the sanctifier of the faithful. The sense of sin was strongly developed, and a standard of morality was set forth that justly exalted human aspiration. In the final renovation of the world, including the bodily resurrection, were elements in Zoroastrian eschatology. A nobler religion outside the sphere of revealed religion is not to be found. Yet even this religion is rarely classed by scholars among monotheistic religions, owing to the polytheistic colouring of its worship of the subordinate nature-spirits, and also to the fact that the ancient Aryan spirit worship, justified by Zoroastrians of modern times as a form of symbolic worship of Ormuzd.

The so-called survivors in higher religions, such as Judaism and Christianity are but outgrowths of lower religions. The presence of the greater part of these superstitious beliefs and customs in the more ignorant sections of Christian peoples is easily explained as the survival of tenacious customs that flourished among the ancestors of European peoples long before their conversion to Christianity. Again, many of these beliefs and customs are such as might easily arise from faulty interpretations of nature, unavoidable in unscientific grades of culture, even where the monotheistic idea prevailed. Superstitions like these are but the rank weeds and vines growing around the tree of religion.

Charles F. Aiken.

Monotheism and Monothelitism (sometimes written Monothelites, from monothēλētai, but the u is more naturally transliterated into late Latin by i), a heresy of the seventh century, condemned in the Sixth General Council. It was essentially a modification of Monophysitism, propagated within the Catholic Church in order to conciliate the Monophysites, in hopes of reuniting them.

The Theological Question.—The Monophysites were habitually represented by their Catholic opponents as denying all reality to the human nature of Christ after the union. This was perhaps a logical deduction from some of their language, but it was far from being the real teaching of their chief doctors.

Yet at least it is certain that they made the unity of Christ (on which they insisted against real and supposed Nestorianists) imply only one principle of intention and will, and only one kind of activity or operation (eνεργεία). Personality seemed to them to be manifested in will and action; and they thought a single personality must unite will, intention, and a single category of action. The Person of Christ, being divino-human, must therefore involve one divino-human will and one divino-human activity (see Eutychianism; Monophysites and Monophysitism).

The two Wills.—The Catholic doctrine is simple, at all events in its main lines. The faculty of willing is an integral part of human nature: therefore, our Lord had a human will, since He took a perfect human nature. His Divine will on the other hand is numerically one with that of the Father and the Holy Ghost. It is therefore necessary to acknowledge two wills in Christ.

But if the word will is taken to mean not the faculty but the decision taken by the will (the will willed, not the will willing), then it is true that the two wills always acted in harmony; there were two wills willing and two acts, but one object, one will willed; in the phrase of St. Maximus, there were δύο εὐθυμίαν though μία υλή. The word will is also used to mean the decision of the will in each act of willing, voluntas ut natura (ἀνάλογος) as opposed to voluntas ut ratio (βολή). These are but two movements of the same faculty; both exist in Christ without any imperfection, and the natural movement of His human will is perfectly subject to its rational or free movement. Lastly, the sensitive appetite is also
sometimes entitled will. It is an integral part of human nature, and therefore exists in the perfect human nature of Jesus Christ, but without any of the imperfections by which it is possessed by original sin. He has no passions (in that sense of the word which implies a revolt against the reason), no concupiscence, no 'will of the flesh'. Therefore this "lower will" is to be denied in Christ, in so far as it is called a will, because it resists the rational will (it was in this sense that St. Bonaventure was said by St. John to have denied that Christ had a lower will); but it is to be asserted in Him so far as it is called will, because it obeys the rational will, and so is voluntas per participacionem: in fact in this latter sense the sensual appetite is less improperly called will in Christ than in us, for quo perfectior et volens, eo magis sensualitas in eo de voluntate habet. But the strict sense of the word will (voluntas, δύναμις) is always the rational will, the free will. It is therefore correct to say that in Christ there are but two: the Divine will, which is the Divine nature, and the human rational will, which always acts in harmony with and in free subjection to the Divine will. The denial of more than one will in Christ by the heretics necessarily involved the incompleteness of His nature, and, in the division of the faculty with the decision of the faculty. They argued that two wills must mean contrary wills, which shows that they could not conceive of two distinct faculties having the same object. Further, they saw rightly that the Divine will is the ultimate governing principle (arché), but free human will acting under its leadership seems to them to be a will, not a necessary omission prevents our Lord's actions from being free, from being human actions, from being meritorious, indeed makes His human nature nothing but an irrational, irresponsible instrument of the Divinity—a machine, of which the Divinity is the motive power. To St. Thomas, our Lord's knowledge was similarly of one kind. He has only divine knowledge without any cognitive faculty. Such thoroughgoing conclusions were not contemplated by the inventors of Monothelitism, and Sergius merely denied two wills in order to assert that there was no repugnance in Christ's human nature to the promptings of the Divine, and he certainly did not see the consequences of his opinion.

B. The two operations. Operation or energy, activity (δύναμις, operatio), is parallel to will, in that there is but one activity of God, ad extra, common to all the three Persons; whereas there are two operations of Christ, on account of His two natures. The word ἐνέργεια is not here employed in the Aristotelian sense (as it is when we speak of an instrument in the sense of an operator); but it is used in the same way as esse (existentia), and it is an open question amongst Catholic theologians whether there is one esse in Christ or two. Nor does ἐνέργεια here mean simply the action (as Vasquez, followed by de Lugo and others, wrongly held) but the faculty of action, including the act of the faculty. Pseudo-Dionysius speaks of duo genera operationum as equivalent to duo operationes, which introduces an unfortunate confusion between ἐνέργεια and ἔργον or έργα, that is between faculty of action and the multiple actions produced by the faculty. This confusion of terms is frequent in modern theologians, and occurs in the ancients, e. g. St. Sophronius. The actions of God are innumerable in Creation and Providence, but His ἐνέργεια is one, for He has one nature of the three Persons. The various actions of the incarnate Son proceed from two distinct and unquestionably separate natures, because He has two natures. All are the actions of a single divine nature, save the (quod), but are either divine or human according to the nature (principium quod) from which they are elicited. The Monophysites were therefore quite right in saying that all the actions, human and divine, of the incarnate Son are to be referred to one agent, who is the God-man; but they were wrong in inferring that consequently His actions are complex, and must be all called "theandric" or "divino-human," and must proceed from a single divino-human δύναμις, St. Sophronius, and after him St. Maximus and St. John Damascene, showed that the two δύναμες produce three classes of actions, since actions are complex, and some are therefore mingled of the human and the Divine. (1) There are Divine actions exercised by God the Son in common with the Father and the Holy Ghost (e. g. the creation of souls or the conservation of the universe) in which His human nature bears no part whatever, and these cannot be called divino-human, for they are purely Divine. It is true that it is correct to say that a child ruled the universe (or the community of众生), but this the matter by words, and is an accidental, not a formal predication—He who became a child ruled the universe as God, not as a child, and by an activity that is wholly Divine, not divino-human. (2) There are other Divine actions which the Word Incarnate exercised in and through His human nature, as to raise the dead by a word, to heal the sick, and the like. The Divine action is distinguished from the human actions of touching or speaking, though it uses them, but through this close connexion the word theandric is not out of place for the whole complex act, while the Divine action as exercised through the human may be called formally theandric, or divino-human. (3) Again, there are actions of Christ as a man, as walking or eating, but these are due to the free human will, acting in response to a motion of the Divine will. These are elicited from a human potentia, but under the direction of the Divine. Therefore they are also called theandric, but in a different sense—they are materially theandric, humano-divine. We have seen that in the expression of the Divine will the actions the word theandric cannot be applied at all; to some it can be applied in one sense, to others in a different sense. The Lateran Council of 649 anathematized the expression una desseinitas operativa, μία θεαρχή δύναμις, by which all the actions divine and human are performed. It is unfortunate that the respect felt for the writing of Pseudo-Dionysius has hitherto prevented theologians from proscribing the expression desseinitas operativa altogether. It has been shown above that it is correct to speak of desseinitas actus or actions ἐνέργεια και τροπάσχεσα, and that the expression theandric thus becomes a correct epithet of the Divine operation under certain circumstances, and that is all. Though the Monophysites in general spoke of "one theandric operation", yet a speech of St. Martin at the Lateran Council tells us that a certain Colluthius would not be even a Christian unless he believed that "theandric" might leave some operation to the human nature; he preferred the word theantos, θεον ἔστιν, and Deo decibitis (Manes, I. 892). The denial of two operations, even more than the denial of two wills, makes the human nature of Christ an inanimate instrument of the Divine will. St. Thomas points out that though an instrument participates in the action of the agent who uses it, yet even an inanimate instrument has an activity of its own; much more the rational human nature of Christ has an operation of its own under the higher motion it receives from the divinity. But by means of this higher motion, the two natures act in concert, according to the famous words of St. Leo's Constitution: "Agit enim Deus, cum utriusque divinitatis membra quod proprium est; Verbo silecit operante quod Verbi est, et carne exsequente quod carnis est. Unum hominum coruscavit miraculis, aliud succumbit in-
juris” (Ep. 28, 4). These words were quoted by Cyrus, Sergius, Sophronius, Honorius, Maximus, etc., and played a large part in the controversy. This interpretation of the divine ions filled the Catholic doctrine of the περιποιηθες, circuminstesios, of the two unconfused and inseparable natures, as again St. Leo: “Expiitit quidem sub distincta actionibus veritatem suam utraque natura, sed neutra sae alternius connexione dispusuit” (Serm. liv, 1). St. Sophronius (Mansi, XI, 480 sqq.) and St. Maximus (Ep. 19) expressed this truth at the very outset of the controversy as well as later; and it is insisted upon by St. John Damascene. St. Thomas (III, Q.xix, a.1) well explains it: “Motum participat operationem monentis, et movens utitur operatione moti, et sic utrumque agit cum communicatione alterius”. Kriger and others have doubted whether it could be said that the question of two operations was already decided (as Loofs held), in Justinian’s time. But it seems that St. Leo’s words, yet earlier, were clear enough. The writings of Severus of Antioch assumed that his Catholic opponents would uphold two operations, and an obscure monk in the sixth century, Eustathius (De duabus naturis, P. G., LXXVII, 909) accepts this interpretation of the Doctrine of the Greek and Latin Fathers adduced at the Lateran Council and on other occasions are inconclusive, but some of them are clear enough. Really learned theologians like Sophronius and Maximus were not at a loss, though Cyrus and Honorius were puzzled. The Patriarch Eulogius of Alexandria (350-607) had written on this subject in his will, but his work was unknown to Cyrus and Sergius.

HISTORY.—The origin of the Monothelite controversy is thus related by Sergius in his letter to Pope Honorius. When the Emperor Heraclius in the course of the war which he began about 619, came to Theodosiopolis (Erzeroum) in Armenia (about 622), a meeting was arranged of the Catholic and Monophysite bishops and Sergius made a speech before him in favour of his heresy. The emperor refuted him with theological arguments, and incidentally made use of the expression “one operation” of Christ. Later on (about 625) he inquired of Cyrus, Bishop of Phasis and metropolitan of the Lazi, whether his words were correct. Cyrus was unable to give him the information and Sergius wrote to the Patriarch of Constantinople, whom Heraclius greatly trusted, for advice. Sergius in reply sent him a letter saying that he had written by Mennas of Constantineople to Pope Vigilius and approved by the latter, in which several authorities were cited for one operation and one will. This letter was afterwards delivered to Cyrus and Sergius for forwarding to the Sixth General Council. Nothing more occurred, according to Sergius, until in June, 631, Cyrus was promoted by the emperor to the See of Alexandria. The whole of Egypt was then Monophysite, and it was constantly threatened by the Saracens. Heraclius was doubtless very anxious to unite all to the Catholic Church, for he had already denounced the heretics among themselves, and by their bitterness against the official religion. Former emperors had made efforts for reunion, but in the fifth century the Henoticon of Zeno had been condemned by the popes yet had not satisfied all the heretics, and in the sixth century the condemnation of the three Chapters had nearly caused a schism between East and West without in the least placating the Monophysites. Cyrus was for the moment more successful. Imagining, no doubt, as all Catholics imagined, that Monophysitism involved the assertion that the human nature of Christ was a nullity after the Union, he was delighted at the acceptance by the Monophysites of a letter in which nine Chapters were declared heretical, and in which it “in two natures” is asserted, the “one composite hypostasis”, and μονοθεῖος καὶ καθ' ὑποστάσιν ημῶν, together with the adverbs διἐκτιτος, ἐπιστρέφως, διελαύνως. St. Cyril, the great doctor of the Monophysites, is cited; and all is satisfactory until in the seventh proposition our Lord is spoken of as “working union of the divine and human natures”, according to the divine Dionysius. This famous expression of the Pseudo-Dionysius the Areopagite is taken by modern critics to show that he wrote under Monophysite influences. But Cyrus believed it to be an orthodox expression, used by Mennas, and approved by Pope Vigilius. He was triumphant therefore at the reunion to the Church of a large number of Theodosian Monophysites, so that, as Sergius phrases it, all the people of Alexandria and nearly all Egypt, the Thebaid, and Libya had become of one voice, and whereas formerly they would not hear even the name of St. Leo and of the Council of Chalcedon, now they acclaimed them with a loud voice in the holy synodaries. But the Monophysites saw things clearly, and Anastasius of Mount Sinai tells us that they boasted “they had not communicated with Chalcedon, but Chalcedon with them, by acknowledging one nature of Christ through one operation”.

St. Sophronius, a much venerated monk of Palestine, soon to become Patriarch of Jerusalem, was in a similar strait. He apostrophised Sergius in a letter. He deplored the expression “one operation” and unconvinced by Cyrus’s defence of it, he went to Constantinople, and urged on Sergius, upon whose advice the expression had been used, that the seventh capitulum must be withdrawn. Sergius thought this too hard, as it would destroy the union so gloriously effected; but he was so far convinced that it would be best for the future to drop both expressions “one operation” and “two operations”, and he thought it necessary to refer the whole question to the pope. (So far his own story.) This last proceeding must warn us not to judge Sergius too harshly. It may be invention that he was born of Monophysite parents and educated at the school of the Monophysite opponent of the Monophysites, and he based his defence of “one operation” on the citations of Fathers in the spurious letter of his orthodox predecessor Mennas, which he believed to have had the approval of Pope Vigilius. He was a politician who evidently knew little theology. But he had more to answer for than that. He wrote a letter to the Emperor in which he says that Sergius sent him a letter of Mennas. Further, St. Maximus tells us that Sergius had written to Theodore of Pharan asking his opinion; Theodore agreed. (It is probable that Stephen of Dora was mistaken in making Theodore a Monothelite before Sergius.) He also worked upon the Severian Paul the one-eyed, the same with whom Sergius had disputed, and excommunicated him. Sergius had written to Arsas, a Monophysite follower of Paul the Black of Antioch, to furnish him with authorities for the “one operation”, saying in his letter that he was ready to make a union on this basis. The Alexandrian St. John the Almsgiver (609 or 619) had taken this letter from Arsas with his own hand, and was only prevented by the iniquity of the Saracens (619) from using it to obtain the deposition of Sergius.

In the letter to Honorius, Sergius unwittingly develops another heresy. He admits that “one operation”, though used by a few Fathers, is a strange expression, and might suggest a denial of the confused union of two natures. But the “two operations” are said to be two distinct but inseparable operations, and though when the Word of God wished to fulfil His saving Passion, His humanity resisted and contradicted His will, and thus two contrary wills would be
introduced, which is impious, for it is impossible that in the same subject there should be two wills at once, and contrary to one another as to the same thing. So far he is right; but he continues: "For the saving doctrine of the Church, which teaches that the naturally animated flesh of the Lord never performs its natural movement apart from, and by its own impetus conversely to, the direction of the Word of God hypothetically united to it, but only at the time and in the manner and to the extent that the Word of God wishes, just as our body is moved by our rational soul. Herein St. Leo published a similar error when he taught that the intellectually animated flesh of the Lord, the will of the flesh, and of the Divine will, but makes no mention of the higher free will, which indeed is wholly subject to the Divine will. He may indeed be understood to include this intellectual will in "the intellectually animated flesh", but his thought is not clear, and his words simply express the heresy of one will. He concludes that it is best simply to confess that "the only begotten Son of God, which is truly both God and Man, works both the Divine and the human works, and from one and the same incarnate Word of God proceed indivisibly and inseparably both the Divine and the human operations as St. Leo teaches: Agit enim utraque, etc." If these words and the quotation from St. Leo are taken seriously, it is clear that the doctrine of Honorius, but Sergius's error lies precisely in deprecating this expression. It cannot be too carefully borne in mind that theological accuracy is a matter of definition, and definition is a matter of words. The prohibition of the right words is always heresy, even though the author of the prohibition has no heretical intention and is not necessarily understood to imply a heretical interpretation. The words of Sergius are not approvingly quoted by St. Leo, and any theologian worthy of his name would reprovingly quote Sergius for rejecting his "new expression" of "two operations". He approves the recommendations made by Sergius, and has no blame for the capitula of Cyrus. In one point he goes further than either, for he uses the words: "Wherefore we acknowledge one Will of our Lord Jesus Christ." We may reasonably believe the testimony of Abbot John Synnapus, who wrote the letter for Honorius, that he intended only to deny a lower will of the flesh in Christ which contradicted His higher will, and that he was not referring at all to His Divine will; but in connexion with the letter of Sergius such an interpretation is scarcely the more obvious one. In a final devolution description of St. Leo's teaching as more heretic than was Sergius, but he was equally incorrect in his decision, and his position made the mistake far more disastrous. In another letter to Sergius he says he has informed Cyrus that the new expressions, one and two operations, are to be dropped, their use being more harmful than good.

In one of the last four months of 638 effect was given to the pope's letter by the issue of an "Exposition" composed by Sergius and authorized by the emperor; it is known as the Exposition of Heraclius. Sergius died 9 Dec., a few days after having celebrated a council in which the Exposition was acclaimed as "truly agreeing with the Apostolic teaching" and therefore "false and has been done away with" as referred to its being founded on the letter of Honorius. Cyrus received the news of this council with great rejoicing. The Exposition itself is a complete profession of Faith according to the five General Councils. Its peculiarity consists in adding a prohibition of the expression one and two operations, and an assertion of one will in Christ lest contrary wills should be held. The letter of Honorius had been a grave document, but not a definition of Faith binding on the whole Church. The Exposition was a definition. But Honorius had no cognizance of it, for he had died on 12 Oct. The envoys who came for the emperor's confirmation of the new Pope Severinus refused to receive any Act of the new pope unless it were sent to them to lay it before him for judgment (see MAXIMUS or CONSTANTINOPLE). Severinus, not consecrated until May, 640, died two months later, but not without having condemned the Ecthesis. John IV, who succeeded him in December, lost no time in holding a synod to condemn it formally. When Heraclius, who had merely intended to give effect to the teaching of Honorius, heard that the document was rejected in Rome, he disowned it in a letter to John IV, and laid the blame on Sergius. He died Feb., 641. The pope wrote to the elder son of Heraclius, saying that the Ecthesis would doubtless now be withdrawn, and apologizing for Pope Honorius, who had not meant to teach one human will in Christ. St. Maximus Constantinopolitanus published a similar letter to the emperor, but neither of these apologists says anything of the original error, the forbidding of the "two operations" which soon became the principal point of controversy. In fact on this point no definition of Honorius was possible. But Pyrrhus, the new Patriarch of Constantinople, was a supporter of the Ecthesis and confirmed it in a great council, which St. Maximus, however, reproves as irregularly convened. After the death of Constantine and the exile of his brother Hesitaneos, Pyrrhus himself was exiled to Africa. Here he was persuaded in a famous controversy with St. Maximus (q.v.) to renounce the appeal to Vigilius and Honorius and to condemn the Ecthesis; and sent a letter to Pope Theodore, John IV having died (Oct., 642).

Meanwhile protests from the East were not wanting. St. Sophronius, who, after becoming Patriarch of Jerusalem, died just before Sergius, had yet had time to publish at his enthronization a formal defence of the dogma of two operations and two wills, which was regarded as an authoritative approval of the doctrine of Honorius. The most remarkable document was the first full exposition of the Catholic doctrine. It was sent to all the patriarchs, and St. Sophronius humbly asked for corrections. His references to St. Leo are interesting, especially his statement: "I accept all his letters and teachings as proceeding from the mouth of Peter the Corypheus, and kiss them and embrace them with my soul." Further on he speaks of receiving St. Leo's definitions as those of Peter, and St. Cyril's as those of Mark. He also made a large collection of testimonies of the Fathers in favour of two operations and two wills. He finally sent to Rome Stephen, Bishop of Dora, the first bishop of the patriarchate, who has given us a moving description of how he was brought to Rome to the holy place of Calvary and there charged him, saying: "Thou shalt give an account to the God who was crucified for us in this holy place, in His glorious and awful advent, when He shall come to judge the living and the dead, if thou delay and allow the Faith to be endangered, since, as thou knowest, I am myself let, by reason of the invasion of the Saracens which is come upon us for our sins. Swiftly pass, then, from end to end of the world, until thou come to the Apostolic See, where are the foundations of the holy doctrines. Not once, not twice, but many times, make clearly known to all those holy men there all that has been done" and so forth to the religious and the bishop's exhortation to his followers. The letter is dated to the city fallen into the hands of the Arabs under Amru, and the unfortunate heretics have remained until today (save for a few months in 646) under the rule of the infidel. Thus the whole of the Patriarchates of Constantinople, Antioch, Jerusalem, and Alexandria were separated from Rome. There is no doubt, except in Egypt, the great number of the bishops of the East, whose flocks were orthodox and had no wish to accept the Ecthesis.
The bishops of Cyprus, independent of any patriarch, held a synod 29 May, 643, against the Ecthesis. They wrote to Pope Theodore a letter of entreaty: "Christ, our God, has instituted your Apostolic chair, O holy head, as a God-fixed and immovable foundation. Despise not then, Father, the Faith of our Fathers, tossed by waves and imperilled; disperse the rule of the foolish with the light of thy divine knowledge, O most holy. Destroy the blasphemies and insolence of the new heretics with their novel expressions. For nothing is wanting to your orthodox and pious definition and tradition for the augmentation of the Faith amongst us. For we—O inspired one, you who hold converse with the holy Apostles and sit with them—believe and confess from of old since our very swaddling clothes, teaching according to the holy and God-fearing Pope Leo, and declaring that 'each nature works with the communion of the other what is proper to it,' etc. They declare themselves ready to be martyred by fire to preserve the true name of Christ, but their Archbishop Sergius when the persecution arose, was found on the side of the persecutors, not of the martyrs. It is abundantly clear that St. Maximus and his Constantinopolitan friends, St. Sophronius and the bishops of Palestine, Sergius and his suffragans, had no notion that the Apostolic See had been condemned, nor that the synods of Cyprus, in condemning the Ecthesis, condemned Christians", and so forth. They enclose letters to the emperor and to the patriarch Paul, to be sent to Constantinople by the pope. They are afraid to write directly, for the former governor, Gregory (who had presided at the disputation of his friend St. Maximus with Pyrrhus) had revolted and made himself emperor; and they feared that this was a defection from orthodoxy, which it brought into discredit at Constantinople. Victor, elected primate of Carthage after the letters were written, added one of his own.

Paul, the patriarch whom the Emperor Constans had substituted for Pyrrhus, had not been acknowledged by Pope Theodore, who demanded of him that Pyrrhus should first be tried by a council before two representatives of the Holy See. Paul's reply is preserved: the views he exposes are those of the Ecthesis, and he defends them by referring to Honorius and Sergius. Theodore pronounced a sentence of deposition against him, and Paul retaliated by destroying the Latin altar which belonged to the Roman See in the palace of Constantine at Constantinople, in order that the papal envoys might be unable to offer the Holy Sacrifice; he also persecuted them, together with many orthodox laymen and priests, by imprisonment, exile, or stripes. But Paul, in spite of this violence, had no idea of resisting the definitions of Rome. Until now, Honorius had not been disowned there, but defended. It was said that he had not taught one will; but the prohibition of the Ecthesis, infallibly blessed, had an enforcement of the course Honorius had approved, and nothing had as yet, it seems, been officially published at Rome on this point. Paul, somewhat naturally, thought it would be sufficient if he dropped the teaching of one will, and prohibited all reference to one will or two wills as well as to one operation or two operations; it could hardly be urged that this was not in accordance with the teaching of Pope Honorius. It would be a measure of peace, and East and West would be again united. Paul therefore persuaded the emperor to withdraw the Ecthesis, and to substitute for that elaborate confession of Faith a mere discipline. All compromise measures were rejected: severe penalties; none of the emperor's orthodox subjects have any longer permission to quarrel over them, but no blame is to attach to any who may have used either alternative in the past. Transgression of this law is to involve deposition for bishops and clerics, excommunication and expulsion for monks, loss of office and dignity for officials, fines for rich persons, corporal punishment and permanent exile for the poorer. By this cruel law heresy is to be blameless and orthodoxy forbidden. It is known as the Type of Constans. It is not a Monothelite document, for it forbids that heresy just as much as the Catholic Faith. Its date falls between Sept. 645 and Sept. 648. Pope Theodore died 5 May of the latter year, and was succeeded in July by St. Martin I. In October St. Martin held a great council at the Lateran, at which 105 bishops were present. The pope's opening speech gives a history of the heresy, and condemns the Ecthesis, Cyrus, Sergius, Pyrrhus, Paul, and the Type. John IV had spoken of Sergius with respect; and Martin I had forbidden all representations of him; but it was impossible to defend him if the Type was to be condemned as heresy. Stephen of Dora, then on his third visit to Rome, presented a long memorial, full of devotion to the Apostolic See. A deputation followed, of 37 Greek abbots residing in or near Rome, who had apparently fled before the Saracens from their monasteries in Jerusalem and other places. They demanded the condemnation of Sergius, Pyrrhus, Paul, and Cyrus and the anathematizing of the Type by the Apostolic and head See. The heretical documents read were part of a letter of Theodore of Pharar, the seventh proposition of Cyrus, the letter of Sergius to Cyrus, excerpts from the synods of Cyzicus, the letter of Sergius to Paul, and excerpts in the name of Sergius (desired to be repented of his repentance), and the approval of the Ecthesis by Cyrus. The letter of Sergius to Honorius was not read, nor was anything said about the correspondence of the latter with Sergius. St. Martin summed up; then the letter of Paul to Pope Theodore and the Type were read. The council admitted the good intention of the emperor in promoting this decree, but declared it heretical, for forbidding the teaching of two operations and two wills. Numerous excerpts from the Fathers and from Monophysite writers were read, and twenty canons were agreed to, the eighteenth of which condemns Theodore of Pharar, Cyrus, Sergius, Pyrrhus, Paul, the Ecthesis, and the Type, under anathema. A letter to the emperor was signed by all. An ecumenical letter was sent throughout the Church in the name of St. Martin and the council, addressed to all bishops, priests, deacons, abbots, monks, ascetics, and to the entire sacred fulness of the Catholic Church. This was a final and complete condemnation of the Constantinopolitan, or Roman, See (except in ex cathedra). Stephen of Dora had been before appointed as vicar in the East, but he had by error been informed only of his duty to depose heretical bishops, and not that he was authorized to substitute orthodox bishops in their place. The pope now gave this commission to John, Bishop of Philadelphia in Palestine, who was ordered to appoint bishops, priests, and deacons in the name of the patriarch; and Marcus, Archbishop of Alexandria, sent letters to these patriarchates, and to Peter, who seems to have been governor, asking him to support his vicar; this Peter was a friend and correspondent of St. Maximus. The pope deposed John, Archbishop of Thessalonica, and declared the appointments of Macarius of Antioch and Peter of Alexandria to be null and void. Constans retaliation by having St.
Martin kidnapped at Rome, and taken a prisoner to Constantinople. The saint refused to accept the Eptheas, after which he burned in the Chalcis and died a martyr in the Crimea in March, 655 (see MARTIN I, Porz). St. Maximus (662), his disciple the monk Anastasius (also 662), and another Anastasius, a papal envoy (666), died of ill-treatment, martyrs to their orthodox and devotion to the Apostolic See.

On 26th March, 667, Macarius was arrested and tortured at Constantinople, the patriarch Paul was dying. "Alas, this will increase the severity of my judgment," he exclaimed to the emperor, who paid him a visit; and Constanza was induced to spare the pope's life for the moment. At Paul's death Pyrrhus was restored. His successor Peter sent an ambiguous letter to Pope Boniface, saying that he would accept the orthodoxy and a heretic in the See of Rome (see ANASTASIUS I, Pope). The Council had set the example of condemning dead writers, who had died in Catholic communion, but George suggested that his dead predecessors might be spared, and only their teaching anathematized. The legates might have saved the name of Honorius also had they agreed to this, but they evidently had directions from Rome to make no objection to his condemnation if it seemed necessary. The final dogmatic decree contains the decisions of the five preceding general councils, condemns the Euthus and the Type, and heretics by name, including Honorius, and "greets with uplifted hands" the letters of Pope Agatho and his council (see ANASTASIUS II, Pope). The address to the emperor, which was composed by all the bishops, had followed Agatho, and he the Apostolic teaching. "With us fought the prince of the Apostles, for to assist us we had his imitator and the successor to his chair. The ancient city of Rome professed you a divinely written confession and caused the daylight of dogmas to rise by the Western parchment. And the ink shone, and you, Agatho, Peter, Chicago, and you, Rome, were voted with the Almighty who reigns with you." A letter to the pope was also signed by all the Fathers. The emperor gave effect to the decree in a lengthy edict, in which he echoes the decisions of the council, adding: "These are the teachings of the voices of the Gospels and the Apostles, these are the doctrines of Holy Synods and of decrees of the four councils, these have been preserved untainted by Peter, the rock of the faith, the head of the Apostles; in this faith we live and reign." The emperor's letter to the pope is full of such expressions; as for example: "Glory be to God, Who does wondrous things, Who has kept safe the Faith among you unharmed. For how should He not do so in that rock on which He founded His Church, and prophesied that the gates of hell, all the embattlements of heretics, should not prevail against it? From it, as from the vault of heaven, the word of the true confession flashed forth," etc. But St. Agatho, a worker of many miracles, was dead, and did not receive the letter, so that it fell to St. Leo II to perform the council's wish and send it to the West after an incomplete but deplorable scheme.

It would seem that in 687 Justinian II believed that the sixth council was not fully enforced, for he wrote to Pope Conon that he had assembled the papal envoys, the patriarchs, metropolitans, bishops, the senates and civil officials and representatives of his various armies, and made them sign the original acts which had recently been discovered. In 711 the throne was seized by Philippicus Bardanes, who had been the pupil of Abbot Stephen, the disciple "or rather leader" of Macarius of Antioch. He restored to the diptychs Sergius, Honorius, and the other heretics condemned by the council; he burned the acts (but privately, in the palace), he deposed the Patriarch Cyrus, and exiled some persons who refused to subscribe a rejection of the council. He fell, 4 June, 713, and orthodoxy was restored by Anastasius II (713–15). Pope Constantine had refused to recognize Bardanes. The intruder patriarch, John VI, wrote him a long letter of apology, explaining that he had submitted to him at his request, according to asserting in many words the headship of Rome over the universal Church. This was the last of Mono-

To be continued.
thelita are the acts of the Lateran synod and of the sixth council, the works of St. Maximus Confessor and Anastasius Sinaita, and the Collectanea of Anastasius Bibliothecarius. Of modern works only a few need be specially mentioned: Comenius, Ausdorium novum, II (Historia Monasticarum et Dissertatio apol. pro actis VI synodi (Paris, 1648); Peregrinus, De Incarnatione, VII (1671); Shute, Hist. of Tunstall, V (Eng. tr.).

JOHN CHAPMAN.

Monreale, Archdiocese of, in the province of Palermo, Sicily, on the skirts of Mount Caputo. The city is built in a commanding situation over the port of Monreale, which is a pleasure resort of the Norman kings, to whom it owes its foundation. In 1167 William II built there the church of Santa Maria Nuova, with its adjoining monastery for the Benedicines of Cava dei Tirreni—

the most superb monastic building of the Benedictine Order in Europe, famous for its cloister and its graceful Moresque colonnade. At the present time only the lower portion of the convent is in the possession of the monks. The church (now the cathedral) is the noblest in Sicily, though the portico of its façade has been restored in a style not in harmony with the remainder of the building. Its bronze doors, the work of Bonanno di Pisa (1180), are notable, as are also the ara-besques of the portals.

The interior has three naves, and the columns of Egyptian marble have foiled and figured capitals, each different from the others. The apse and the lateral walls are covered with beautiful mosaics, representing scenes from the Old and New Testaments. The high altar and the side altars are decorated with sheets of silver (seventeenth century), and, in a chapel to its right, are the tombs of William I the Wicked and of William II. The chapel of Saint Benedict contains sculptures by Marabitti (eighteenth century). In 1811 a fire destroyed the roof, which was restored in a way to leave the rafters exposed to view. On the mountain beyond the city is the monastery of San Martino of the Cassinese Benedictines, whose church is rich in works of art; farther on is the castle of San Benedetto, built by the Saracens. In 1174 the abbey of Monreale was declared a "pulera nullius"; two years later its abbots were vested with the title and jurisdiction of a bishop, and in 1182 he became the metropolitan of Catania and of Syracuse. At first the archbishops were elected by the monks, but were not always Benedictines; since 1275, however, the election has been reserved to itself by the Holy See. In time Girgenti and Caltagirone also became suffragans to Monreale; but Syracuse, in 1844, and Catania, in 1860, became archiepiscopal sees. The former having become the Metropolitan and the latter the See of Caltanissetta (1860), which see and Girgenti are now its only suffragans. Among the archbishops of this see have been Cardinal Giovanni Proccamazza (1278); Cardinal Aussio Despug de Podio (1458); Cardinal Pompeo Colonna (1531); Cardinal Ippolito de' Medici (1532); Alessandro Farnese (1538); Ludovico de Torres (1564), founder of the seminary; Cardinal Vitaliano Vincenzi (1670); Cardinal Traian d'Acquaviva d'Aragona (1739). From 1775 to 1802 Monreale and Palermo were united. The archdiocese has 30 parishes with 228,600 inhabitants; 352 secular and 66 regular priests; 26 convents of men and one of women; three educational institutes for male students and three for girls.

U. BENIGNI.

Monroe, James, soldier, convert, b. in Albemarle county, Virginia, 6 Sept., 1799; d. at Orange, New Jersey, 29 Sept., 1830. He was the son of Andrew a brother of President James Monroe, and greatly resembled his illustrious uncle. After the usual course at the U. S. Military Academy at West Point, he graduated in 1815, and was commissioned a lieutenant of artillery. In the war with the Algerian pirates he was wounded, 17 June, 1815, while directing the guns of the frigate "La Guerrière" in a battle off the coast of Gata, Spain. As an aide to General Scott he served during 1817-22, and did garrison duty as a first lieutenant of the 4th Artillery on 20 Sept., 1832, when he resigned from the army. Settling in New York he entered public life, being elected to the Board of Aldermen, 1833-35, and to Congress, 1839-41. He was nominated to Congress also in 1846, but the election being contested and a new election ordered he declined to run again. In 1850-52 he was a member of the New York legislature, and then retired from public life on the death of his wife. Previous to the outbreak of the Civil War he was much sought by speeches and personal influence to prevent the secession of his native State, Virginia. All through the war he was a staunch upholder of the Union. His brother Andrew F. Monroe, b. at Charlottesville, Va., 5 March, 1824, after graduating at the U. S. Naval Academy served during the Mexican War, and while on a naval expedition to China, in 1853, also became a convert. He joined the Society of Jesus in 1854 and was ordained priest in 1860. He was for a number of years one of the faculty of St. Francis Xavier's College, New York, where he died 2 Aug., 1872.

THOMAS F. MEEHAN.

Monsebré, Jacques-Marie-Louis, celebrated pulpit orator, b. at Blois, France, 10 Dec., 1827; d. at Havre, 21 Feb., 1907. He was ordained as a secular priest 15 June, 1851, but soon felt he had a religious vocation. On the thirty-first of July, 1851, the feast of St. Ignatius, he celebrated his first Mass and thought seriously of entering the Society of Jesus. Four days later, however, the feast of St. Dominic, he decided to become a Dominican and immediately
wrote a letter of application to Père Lacordaire. He had to wait four years for release from the diocese, as the bishop had received authorization a year earlier to see to withholding that long his permission for newly ordained priests to enter a religious order. In May, 1855, he received his dismissions, entered the novitiate at Flavigny, received the habit on the thirty-first of the same month and one year later made his simple profession. A few days later he was sent to the house of studies at Chalais, where he spent a year in solitude and prayer. In the winter he was appointed to preach the Lenten sermons in the church of St. Ni- sier, at Lyons, where he gave the first indication of that eloquence which was later to illuminate all France. After preaching the Lenten sermons in Lyons, Monsabré was assigned to the convent of St. Thomas, in Paris, where he began to give conferences. After interrupting this ministry for several years he took it up again. In the Advent of 1867 he gave conferences in the convent church. He preached then for a number of years in the principal cities of France, Belgium, and even in London, conducting retreats, novenas, and triduums. His reputation, however, was really first made by the course of Advent sermons which he preached in the Cathedral of Notre Dame, Paris, in 1869, as successor of the unfortunate Carmelite, Père Hyacinthe Loysen. The success of these conferences brought the invitation to preach the Lenten sermons in Notre Dame in 1870, succeeding Père Félix de la Société de Jesus. During the siege of Paris by the Prussian troops, the conferences at Notre Dame were interrupted. On the capitulation of Metz, Monsabré preached from one of its pulpits. Meanwhile the Archbishop of Paris, Monsignor Dar- boy, had fallen a victim to the Commune and was succeeded by Monsignor Guibert, who lost no time in inviting Monsabré to occupy the pulpit of his cathedral. From this time on, Père Monsabré preached in the Cathedral of Notre Dame for twenty years and proved himself a worthy successor of Bossuet, Lacordaire and all the other great preachers whom the French Church has produced. He conceived and executed the logical plan of expounding the whole of Catholic dogmatic theology. Not often, perhaps never before, did a preacher succeed in holding so large an audience completely under the sway of his eloquence for so long a time. The classic and elegant form of Monsabré's discourses attracted the educated class of France. His intense love of souls andapoietical zeal made his discourses move with life, and his clear and profoundly theological mind enabled him to shed light even upon the most abstruse tenets of the faith, while his earnest and impassioned appeals to all the noblest impulses of man always met with an enthusiastic response. Monsabré's published works consist of forty-eight volumes, of the Exposition du Dogme Catholique; and popular exposition of Catholic dogma. In 1890 he preached the Advent sermons in Rome. In 1891 he gave the same course in Toulouse. On the death of Monsignor Freppel, Bishop of Angers, he was invited to fill the vacancy in the Chamber of Deputies, but declined. In 1871 he was sent to the General Chapter of the Congregation of his province and in 1898 to that of Avila as Definitor. His apostolic labours closed with the magnificent oration delivered at Reims on the occasion of the fourteenth centenary of the baptism of Clovis, King of the Franks. Since 1903 he lived in retirement. In that year the Dominican convent in which he lived was suppressed by the government, and he was obliged to take refuge in a modest little home in which he died.

L'Annee Dominicaine, April, 1907, 146; July, 1907, 289; The Rosary Magazine, XXX, 459.

JOSEPH SCHOEDER.

**Monsieur** (from mon, "my" and seigneur, "elder" or "lord", like Lat. senior), a French honorific appellation, etymologically corresponding to the English "my lord", and the Italian **monsignore**. It is, after all, nothing but the French monsieur; but, while the latter has become current as applied to every man who is in good society, Monsignore has retained its honorific force. In ecclesiastical usage it is reserved for bishops and archbishops, and is chiefly employed when speaking or writing to them. It is used before the name (thus abridged: Mgr Dupanloup). Formerly it was not prefixed to the title of dignity, but it is now, the term Monsignore is also used as the equivalent of the Italian Monsignore, and as the latter title is given to Roman prelates, some confusion results; in Italy, however, no inconvenience arises from this usage as in that country bishops have the title of Excellenza, i. e., Excellency. In France, only the Archbishop of Reims, as legatus natus, has the title of Excellency (see Monsignor).

HÉRICOURT, Les lois ecclésiastiques de France, E. V. 22.

A. BOUDINON.

**Monsell, William, Baron Emly, b. 21 Sept., 1812; d. at Tervoe, Co. Limerick, Ireland, 20 April, 1894.** His father was William Monsell of Tervoe; his mother, Olivia, daughter of Sir John Walsh of Ballykilcavan. He was educated at Winchester (1826-1830) and Oriel College, Oxford, but he left the university without proceeding to a degree. As his father had died in 1822 he succeeded to the family estates on coming of age and was a popular landlord, the more so as he was resi- dent. In 1836 he married Anna Maria Quin, daugh- ter of the second Earl of Dunraven, but there was no issue of the marriage. After her death in 1836 he married Bertha, youngest daughter of the Comte de Martigny (1857), by whom he had one son and one daughter. In 1847 he was returned to Parliament as member for the County of Limerick in the Liberal interest and represented the constituency till 1874. In 1850 he became a Catholic and thereafter took a prominent part in Catholic affairs, especially in Parliament. As a friend of Wiseman, Newman, Montalambert, W. G. Ward, and other eminent Catholics, he was inti- mately acquainted with the various interests of the Church, and his parliamentary advocacy was often of great advantage to the hierarchy. In 1867 he was successful and filled many offices. He was clerk of the ordinance from 1852 to 1857; was appointed privy councillor in 1855; was vice-president of the board of trade in 1866; under-secretary for the colonies, 1868-1870; postmaster-general, Jan., 1871, to Nov., 1873. Finally he was raised to the peerage as Baron Emly on 12 Jan., 1874. He lost much of his popularity in Ireland during his later years, owing to his opposition to the land league and to the Home Rule movement. His work being chiefly parliamentary, he wrote little, but published some articles in the "Home and Foreign Review" and a "Lecture on the Roman Question" (1869).

MONSIGNOR

EDWIN BURTON.

MONSIGNOR (dominus meus; monseigneur, My Lord).

As early as the fourteenth century it was the custom to address Monsignor as His Highness or as the title Monsignore or Monsignore. In the intercourse of seculars, either of equals or of superiors with inferiors, there was no fixed rule. Until the seventeenth century French nobles demanded from their subjects and dependents the title of Monsigneur. In international intercourse two titles gradually won general recognition as the eldest brother of the King of France (if not his presumptive) and "Monsigneur" for the Dauphin, or eldest son of the French king, who was also crown prince, or for whatever male member of the family was recognized as his presumptive to the throne. Actually all Bourbon pretenders assume this title as a matter of course, e.g., the late Don Carlos Duke of Madrid, his son Don Jaime, the Count of Caserta, the Duke of Orleans, etc. Moreover, the custom often obtains, especially in Spain, France, and Italy, of extending by courtesy the title Monsieur to the adult members of the Bourbons and closely allied families usually addressed as "Your Royal Highness". In official usage, however, this would scarcely be the case. To a great extent the title is assumed by persons of civil rank, and, as far as the author of this article is aware, no one else lays claim to it. Among ecclesiastics the title Monsignore implies simply a distinction bestowed by the highest ecclesiastical authority, either in conjunction with an office or merely titular. In any case it bears with it a certain prestige. To counteract the widely spread conception we may state here that the pope does not bestow the title Monsignore, but a distinction of some sort to which this title is attached. Accordingly it is quite incorrect to say that any one has been appointed a Monsignor by the pope. If we may be permitted to use a comparison, Monsignor in the spiritual order corresponds to the word officer in the military. The highest general and the youngest lieutenant are equally officers, and the most venerable patriarch bears the title Monsignore as well as the simplest honorarv chaplain. Thus among prelates, both higher and lower, it is no badge of distinction except as it denotes in a very general way an elevation above their fellows. The chief title of Monsignor, who are familiari summi pontificis, those who, by virtue of some distinction bestowed upon them, belong as it were to the family and the retinue of the Holy Father. These familiari are entitled to be present in the cappella pontificia (when the pope celebrates solemn Mass), and to participate in all public celebrations of the pontiff or ecclesiastics in character, at which the pope, the cardinals, and the papal retinue assist. It is assumed that they will appear in the robes corresponding to their respective offices.

Up to 1630, when Urban VIII reserved the title Eminence (Eminentissimus) for the exclusive use of cardinals, the latter bore the title Monsignore in common with the other prelates of high rank, and in France it is still customary to address a cardinal as Monsignore. In all other languages this usage has completely disappeared, so that, practically speaking, cardinals are no longer to be counted among the Monsignori. All other prelates, from patriarchs downwards, receive a personal distinction or are archbishops, bishops, or mere abbots (among secular clergy only), have a right to this title. The fact that it has lapsed in usage in many countries, so far as these are concerned, does not affect the question. Instead of addressing patriarchs as "Vostra Beattitudine", archbishops as "Your Grace", bishops as "My Lord", abbots as "Gracious Lord", one may without any breach of etiquette salute all equally as Monsignor. Following is a list of official and honorary prelates exclusive of those already mentioned: (1) the college of the seven official prothonotaries Apostolic de numero participantium (of the number of participants); (2) the supernumerary prothonotaries (in such number as a College of the three patriarchal basilicas of Rome, (b) the prelate canons of certain cathedral churches, while in office; (3) prothonotaries Apostolic ad instar participantium (after the manner of participants), including, (a) prelate canons of certain cathedral churches, as above, (b) prothonotaries appointed ad personam (in individual cases). In the Church of Rome, the Sacra Rota Romana, these are officials or delegated prelates; (5) the college of official clergies of the Apostolic Camera; (6) all other prelates not members of any of the above named colleges, the numerous domestic prelates scattered throughout the world. All the above-mentioned prelates are entitled to wear the mantelletta and rochet; (7) the private chambers constituting the official college of pontifical masters of ceremonies; (8) the official private chambers known as participantes; (9) the supernumerary private chambers (camerieri segreti supranumerari), of whom there are several hundred in various parts of the Catholic world; (10) the honorary chaplain is no longer a supernumerary, but a private chaplain, who is not received in their official capacity in the papal court when held at Rome; (12) the official college of private chaplains; (13) the honorary private chaplains; (14) the honorary chaplains extra urbem (see 11); (15) the private clerics; and (16) the official college of private chaplains. In the case of certain of the above-mentioned classes the honorary office (together with the corresponding title and distinctive dress) lapses at the death of the pope. This is particularly true with regard to the supernumerary private and honorary Chambers. The reason for this is self-evident. It is possible to be prothonotary of the Holy Roman Church or cleric of the Apostolic Camera, etc., but one cannot be chamberlain to the Holy Roman Church, but simply chamberlain to a particular pontiff, whose death dissolves the relation between the two. Unless the newly elected pontiff renews the appointment the former chamberlain returns to his former rank. He does not HAVE the right to the rank of clergy. Nor is there inconsistency in the fact that only a few may chamberlains continue in the papal service immediately after a papal election. Their services are necessary to the new pontiff and he naturally recognizes such persons, which amounts practically to a tacit appointment. It is regrettable that occasionally persons thus distinguished by the pope either assume a dress arranged according to their own notion or being dissatisfied with the dress conceded, appropriate that of a higher office. The farther a country is from Rome, the more apt are such unfortunate things to occur. It should be noted that members of religious orders may use the title "Monsignor" only if they are bishops or archbishops. All other ranks of the prelacy are of course closed to them, if we except the Master of the Sacred Palace, who being always a Dominican, is one of the prelates, but may not be addressed as Monsignor. The custom introduced in the sixteenth century of giving the general religious orders the title "Monsignor" was of short duration.

PIETÀ

BARTOLOMMEO MONTAGNA, VATICAN GALLERY, ROME
Monstrat, Enguerrand de, a French chronicler, b. about 1300 or 1305; d. in July, 1453. He was probably a native of Monstrelet, a village situated in the present department of the Somme. His life was spent at Cambrai in the service of Philip, Duke of Burgundy, who was also Count of Flanders. The cartulary of the church of Cambrai proves that in 1348 he was the canons and the dean of the cathedral of Cambrai. He was of the patronymic of the gavennus, which was paid to Philip by the holders of the churches in return for the protection which he gave them. From 20 June, 1436, to January, 1440, he was bailiff (bailli) of the chapter of Cambrai and he was provost (provost) of Cambrai from 1440 to 1447. As lieutenant of the governor, as such it was his duty to collect in the Cambrais the called "gavenne," which was paid to Philip by the tenants of the churches, of which the treasury; as such he became bailiff of Walcourt on 12 March, 1445, an office which he held until his death. Monstrelet, who lived through an agitated period, did not take personal part in the conflicts of the day. To him, perhaps, applies a letter of pardon granted in 1424 to a certain Enguerrand de Monstrelet by Henry V of England.

The "Chronicle," according to this letter, had committed certain highway robberies, believing that he had a sufficient excuse because he robbed the Armagnacs, enemies of the Duke of Burgundy. However this may be, his attitude in his "Chronicle" is that of an impartial narrator. He speaks of himself but once, when he relates in the first chapter of the second book of the "Chronicle" of how he was present at the interview which Joan of Arc, taken prisoner before Compiègne, had with Philip of Burgundy; and with his usual sincerity and modesty he declares that he does not remember well the words of the duke. The "Chronicle" of Monstrelet opens with a mention of the coronation of Charles VI, which took place in 1380; but its true starting-point is Easter-day, 1400, when the history of Froissart begins, and it extends down to 1444. While Froissart confined himself almost entirely to events which took place in France, Monstrelet deals also with other countries, giving many documents. He treats not only of military history, but also of interesting details of great religious events such as the Councils of Pisa, Constance, and Basle. We feel, moreover, that the ravages of war and the sufferings of the people therefrom cause him real pain, and he is not over-enthusiastic about great feats of arms. He is occasionally guilty of chronological errors and confusing proper names. For the literary form, the book is well written; the narrative is often heavy, monotonous, diffuse, and lacks the charm of Froissart. In the early editions of Monstrelet—which of the first, published at Paris towards 1470 in three folio volumes, goes back almost to the invention of printing—the chronicles contain a third book, relating the events which took place between April, 1444, and the death of the Duke of Burgundy in 1467. But the "Néologe des Cordeliers de Cambrai" and the "Memoriaux" of Jean le Robert prove that Monstrelet died in July, 1453, so that all this book could possibly have been written by him. Furthermore, the history of years 1444-53, given in this third book, is so brief that it contrasts singularly with the prolixity of the first two books. It is, besides, much more partial to the House of Burgundy than the first two, and, in contrast to these, scantly contains a single document. Whereas the first two books are preceded by a preface, the third has none; finally, the historian, Matthieu d'Escouy, who belongs to his own chronicle, states that Monstrelet's "Chronicle" ends at 20 March, 1444. Modern scholars unanimously accept the statement of Matthieu d'Escouy and hold that this so-called third book was not written by Monstrelet.

Chronique d'Enguerrand de Monstrelet, ed. of Arcq (6 vols., Paris, 1857-63); Chronique de Matthieu d'Escouy, ed. by Brancas (Venice, 1648); Crowe and Crowe, History of Italy (London, 1891).
Montagnais, Quebec, French for "Mountain-chiefs", the collective designation of a number of bands speaking dialects of a common language of Algonquian stock, and ranging along the shores of the St. Lawrence River and Gulf, from about the St. Maurice River to below Cape Whittle, and inland to about the main divide at the heads of the rivers. They are closely allied and considerably intermixed with the cognate Nascapée (q.v.), who wander generally farther inland in the interior of the Labrador Peninsula, but frequent the same trading and mission stations along the St. Lawrence. Among the Montagnais bands or tribes, when Champlain first met them at the mouth of the Saguenay, in 1603, they were the Attikameg, or "Whitefish", about the head of the St. Maurice; the Kakouchac, or "Porcupine", on Lake St. John; the Tadousac about the mouth of the Saguenay; the Bersamite, farther east; the Papinchois, north of the last-named; the Oumamiekew, farther east, along the St. Lawrence; the Chissedeck, about the Bay of Seven Islands. They were traders, cultivators or potter, subsisting entirely by hunting and fishing. Polygamy was common, with divorce at will, descent being held in the female line. Their dwellings, as well as their canoes, were of birch bark or brushwood. They were good tempered, patient, peaceable, honest, and musical under instruction.

The discovery of Christianity at Tadousac, a French trading post, regular missionary work was begun among them by the Recollet, Fr. Jean d'Albeau, in 1615. Ten years later the Jesuits were invited to help. Fr. Jean du Quen, S.J., established the mission at Tadousac in 1640; later, stations were erected by the Jesuits at Gaspe Bay, St. Lawrence, and from them to the St. Lawrence, and a smallpox epidemic, in 1670, greatly reduced them, practically destroying the Attikamek. In consequence, the Montagnais began to resort to the mission at Sillery, near Quebec. The whole tribe is now civilized and Catholic, with the exception of forty-eight officially reported (1899) as Anglicans. They are still dependent on the fur trade for subsistence, but also work at lumbering and the making of canoes, snow-shoes, and mocassins. A few of them are successful farmers. Apart from drunkenness, they are moral, devout, industrious, and said to be "improving every year". Their largest settlements are at Pointe Bleue, on the west shore of Lake St. John, on the Lot, and at Caribou. Their total number is probably at least 2500. Father Pierre Laure, S.J. (d. 1738), compiled a grammar, dictionary, and other works in the Montagnais language, most of which are still in manuscript.

Montagnais, Michel-Eugene de, writer, b. at the chateau of Montaigne, in Perigord, France, on Feb. 15, 1533. His grandfather had been a Bordeaux merchant of wines, salt-fish, etc., and it was he who purchased the estate of Montaigne. His first entry at the age of six and a half he was sent to the College of Guise at Bordeaux, where he remained seven years. Little is known of the ensuing years. It is believed that he studied logic and dialectics for two years at the Bordeaux Faculty of Arts, with Marc-Antoine de Muret as tutor. He afterwards studied law, probably at Poitiers, and at 23 set out for France. Having become counsellor at the Cour des Aides of Perigord, he was soon incorporated like his colleagues in the Parliament of Bordeaux. But the new counsellor had no liking for his profession, and he was often absent from the Parliament. From 1551 to 1553 he attended the court. From 1559 he knew La Babelle, his cousin, and the latter the first of Montaigne's counsellors in the Parliament of Perigord and his elder by six years; but death soon separated them (1563).

Two years later Montaigne married Françoise de la Chassaigne, the daughter of a parliamentary advocate. They had five daughters, only one of whom survived him. In 1570 at the age of thirty-seven he sold his estate, and retired to his chateau of Montaigne. For four years he did not leave his chateau. In 1574, he went to Venice and reached Rome, the end of his journey, where he received letters of citizenship. During his absence he had been made mayor of Bordeaux, which office he held for four years (1581–85), his duties coming to an end when the pest broke out. Montaigne being absent from the town did not feel obliged to return to it. In 1588 he published a new edition of his Essays, corrected and augmented by a third book. He continued to revise his work until his death. In 1595 Mlle de Gournay, the young woman who at the age of twenty-two became his enthusiastic admirer, and whom he called his daughter, issued a new edition, in which she inserted the revisions and additions which have since been made (1597). It is impossible to analyse the Essays. They are a long conversation in which the author sets forth his opinions and his reflections.
His memories are the result of his personal experience and especially of his very extensive reading. According to his own expression he himself is "the subject of his own thought" inasmuch as he is doubtless the fact that in depicting himself he often depicts human nature in general. He is a charming conversationalist, a writer full of pith and colour, artlessness, grace, and life. His literary merits add to the dangers of his book, which is deliberately lascivious and as a whole openly favourable to the Pyrrhonians. He has even written that which is "black" and "shackled". However, on the other hand, he thanked "our sovereign Creator for having stayed our trust on the everlasting foundation of His holy word". He also said that outside of the path pointed out by the Church reason is "lost, embarrased, shackled".

In a letter he relates in a Christian manner the Christian death of his friend La Boëtie. He himself, as soon as he became ill, would not send for a priest, and in his last illness did not depart from this custom. Pasquier relates that "he caused Mass to be said in his chamber and when the priest came to the elevation the poor gentleman raised himself as well as he could in bed with hands joined and thus raised his soul to God". He died therefore in a supreme act of faith.

Georges Berthier.

Montalcino, Diocese of (Ilcinensis).—Montalcino is a small town about twenty miles from Siena, some 1900 feet above sea-level and over-looked by the Ombrone, and the Umbrone. In the neighbourhood are mineral springs and chalk quarries. In the ninth century it belonged to the abbey of San Antonio. In 1212 it was taken by the Sienese, but soon afterwards the inhabitants declared themselves in favour of Florence. In 1200, after the battle of Montaperti, it once more fell into the hands of the Sienese, who made it a strong fortress. It was besieged by the imperial troops; in 1555, when Siena was annexed by Tuscany, Pietro Strozzi with the aid of French troops endeavoured to set up a free republic at Montalcino, but in 1556 the French were obliged to retreat and the town submitted to Cosimo I.Earthquakes have not been unfrequent, the last being in 1908. Montalcino belonged to the Diocese of Arezzo; in the twelfth century the abbots of San Antonio had quasi-episcopal jurisdiction over it; in 1402 it was made a diocese and united with the See of Pienza, which, however, became in 1563 a separate diocese. Its first bishop was Giovanni Cinigghi; Francesco Piccolomini (Pius Ill) administered the see at one time. The diocese is directly subject to the Holy See; it has 34 parishes and 39,130 souls, 1 convent for men and two for women.

U. Benigni.

Montalembert, Charles-Forbes-René, Comte de, b. in London, 15 April, 1810; d. in Paris 13 March, 1886. He was the son of a Scotch Protestant family and had made many important journeys to India, which he related in the four volumes of his "Oriental Memoirs", published in 1813; he also wrote in 1810 a volume entitled "Reflections on the character of the Hindus and the necessity of converting them to Christianity". Montalembert's mother, converted by Abbe Busson and Pere MacCarthy, made her abjuration of heresy to Cardinal de Latil in 1822. The early years of Montalembert's life were passed in England; afterwards he studied at the Lycee Bourbon and at the College Sainte-Barbe at Paris, where out of twenty pupils in the sixteenth year of their age hardly one was a practical Catholic. At Sainte-Barbe young Montalembert made a friend of Léon Cornet, who was also a Catholic, and the letters the boys exchanged in their seventeenth year have remained famous. At that early age Montalembert wrote: "Would it not be a splendid thing to show that religion is the mother of liberty!", a phrase which was to become the motto of his whole life. In 1829 he wrote to Rio: "My age, my tastes, my future call me to support the new ideal; but my religious beliefs and moral emotions cause me to lament bitterly the past days, the ages of faith and self-sacrifice. If Catholicism is to triumph it must have liberty as its ally and tributary subject!" Soon after its establishment in 1830 Augustin de Meaux, with the motto (borrowed from Champfleury): "Civil and Religious Liberty for the whole world", the review "Le Correspondant" had Montalembert as a contributor. In September and October, 1830, he travelled in Ireland, where he met O'Connell; he was thinking of assisting the cause for which O'Connell was struggling by writing a history of Ireland, when he learned that the House of Commons had passed the Irish Emancipation Act.

While he was in Ireland he received the prospectus of the new paper "L'Avenir", founded in October, 1830, by Lamennais. On 26 Oct., 1830, he wrote to Lamennais: "All that I know, and all that I am able to do I lay at your feet!" On 5 Nov., 1830, he met Lamennais in Paris, and on 12 November at Lamennais's house he met Lacordaire. At times, Montalembert had to smooth over some of the risky things Lamennais allowed himself to be led into writing against the royalists in the paper; on the other hand he was engaged in controversy with Lacordaire, whose idea of aristocracy and the past glory of the French nobles he considered too narrow. It was Montalembert who, the day after the sack of St. Germain l'Auxerrois by the Parisian mob, published in "L'Avenir" an eloquent article on the Cross of Christ, which has ruled over the destinies of the modern world." He especially distinguished himself in the "L'Avenir" by his campaign in favour of freedom for Ireland and Poland, and for these he received the congratulations of Victor Hugo and Alfred de Vigny. In 1831 he thought of going to Poland and joining the
When the "Agence générale pour la défense de la liberté religieuse" (Central committee for the safeguarding of religious liberty) founded by the last number of "L’Avenir", had solemnly declared war on the monopoly of the French University by opening a primary school (9 May, 1831), Montalembert was indicted. As at this time by his father's death on 20 June, 1831, he became a peer of France, he demanded that he be tried by the House of Peers; and the famous "Free School Case" was tried before that assembly, 19 and 20 September, 1831.

The speech delivered by Montalembert on that occasion was a gem of eloquence. The trial ended in his condemnation to a fine of one hundred francs; but his eloquence succeeded in calling public attention to the question of freedom of teaching, which was destined not to be solved until 1850. The name of "L'Avenir" appeared (15 November, 1831), Montalembert accompanied Lacordaire and Lamennais to Rome. While in March, 1832, Lacordaire divined the wishes of Gregory XVI, and returned to France, Montalembert persisted in remaining in Rome with Lamennais, who insisted on a public decision on the pope concerning "L'Avenir". It was not until July that they left Rome, and the Eucyelic "Mirari Vos", which overtook them at Munich, was a cause of great sorrow to them. Montalembert submitted at once, and when early in 1833 Lamennais announced his intention of again taking up his editorial work, excepting the field of theology, and concerning himself only with social and political questions, Montalembert did all he could to dissuade him from so imprudent a step. When Gregory XVI by his Brief dated 5 October, 1833, found fault with the "long and violent frente" Montalembert had written for Mickiewicz's "Livre des Pelerins Polonais" and when this attack on the Holy See was condemned by the Holy See to Rossi, whom Guizot had sent to Rome, had brought about the partial dispersion of the French Jesuits, he loudly expressed his surprise and sorrow. "You are our father, our support, our friend", wrote Père de Ravigan to him. In the House he, moreover, defended the interests of foreign Catholics; in 1843 at the synod of Lyons, again mentioned Guizot as to what France was doing to protect Christians in the East; in 1846 he questioned him concerning the massacres committed by Austria in Galicia, and the cruelties practised against the Poles of that province; on 11 January, 1848, he enthusiastically praised the hopes Pius IX held out to the poor people, when he said that France for the lukewarm support it gave the new pope against Metternich; on 14 January, 1848 in a speech on the Sonderbund, the finest, perhaps, he ever uttered, he impeached European radicalism, and proclaimed that France, in the face of Radicalism, was destined to uphold the flag and safeguard the rights of liberty." But it was especially to secure liberty of teaching (see France and Falloux du Courray) that Montalembert devoted his efforts. In 1839 he addressed an eloquent letter to Villemain, minister of public instruction, demanding that liberty; in 1841 under pressure from the episcopate, he compelled Villemain to withdraw a bill on education because it was not sufficiently liberal; in his pamphlet "Du Devoir des Catholiques dans la question de la liberté d'enseignement", published in 1843, he summoned the Catholics to take part in the struggle. On 16 April, 1844, in the House of Peers, he undertook the defence of the bishops who were attacked at the end of the year 1844, and he replied to Dupin, who demanded the punishment of the bishops: "We are the sons of the crusaders; and we shall never yield to the sons of Voltaire"; then again he took an active part in the discussion of the bill, which owing to Villemain's mental infirmity was abandoned. Between 1845 and 1846 he solicited donations among the laity for the support of religious education, and he succeeded in having 140 supporters of educational liberty elected as deputies in 1846. In 1847 he renewed the attack on the bill introduced by Salvandy and declared it unacceptable. The July monarchy fell before the question was settled. The Revolution of 1848 respected the rights of the Church and Pius IX, 26 March, 1848, wrote to Montalembert: "We gladly believe that it is in part owing to your eloquence, which has endeared your name to your generous countrymen, that no harm has been done to religion or its ministers".

Under the Second Republic Montalembert, in reply to Victor Hugo, who questioned the right of the Church to own property; in Dec., 1848, when ecclesiastical burial had been refused to Montalembert by Pius IX, declared amid the applause of two-thirds of the Constituent Assembly that the Church is "a mother, the mother of Europe, the mother of modern society". Once more he took up the struggle for liberty of education; in 1849, together...
with Dupanloup he was the chief instigator of the negotiations between the Catholics and a number of liberals such as Thiers, which resulted in spite of the sharp attacks of Louis Veulliot in the definitive grant of liberty of education by the Falloux Law. When in October, 1850, Montalembert went to Rome, Pius IX congratulated him, and caused him to be named "Romanus" by the municipality of Rome. After the Coup d'État, 2 Dec., 1851, in an open letter to the "Unvers", he invited the Catholics to rally to Louis Napoleon; this manifesto, which he afterwards regretted, was the result of an idea he had that it was unwholesome for Catholics to abstain from taking part in the destinies of the State. But when in 1852 he had appealed in vain to Louis Napoleon to abrogate the organic articles, to grant liberty of higher education, and freedom of association, he refused to enter the Senate.

He was deputy for Besançon to the legislature of 1852–1857, but failed to be re-elected in 1857 owing to the defection of many Catholic voters. He cut himself off entirely from Louis Veulliot and the "Unvers", which he thought adequate with too great complacency all the acts of the new government curtailing certain political liberties.

The break began in 1852 when Montalembert's pamphlet "Les Intérêts Catholiques au XIXe Siècle" was published by Dominique Guéranger and Louis Veulliot; it became more marked in 1855 when Montalembert, taking from Lenormant's hands the management of the "Correspondant", which had at the time only 672 subscribers, made that review an organ of the political opposition, and took up the side known as "liberal" in contradistinction to the views supported by Louis Veulliot. As an organ of the opposition "Le Correspondant" was often at odds with the imperial government: in 1858 an article Montalembert wrote entitled "Un débat sur l'inde au Parlement anglais" led to his prosecution, and in spite of the defence set up by Berryer and Dufaure, he was sentenced to three months' imprisonment, which the emperor remitted. In 1859 his article on "Pius IX et la France en 1849 et 1859", in which he attacked the partiality of the empire towards Italy and all the opponents of the temporal power, caused some dissiquit in court circles, and won for him the congratulations of Pius IX. His two letters to Cavour, Oct., 1890, and April, 1891, in which he attacked the centralising spirit of Garibaldi and took up the defence of the Holy See, drew from Pius IX the enthusiastic exclamation "Vivat, vivat! our dear Montalembert has surpassed himself!" But the hostility between the "Correspondant" and the "Univers" was growing, and in the heat of the struggle Montalembert wished to profit by the Congress of Belgian Catholics at Mechlin (August, 1863) to pour out his whole soul concerning the future of modern society and the Church.

His first speech aimed to show the necessity of Christianizing the democracy by accepting modern liberties. His second speech dealt with liberty of conscience, and the conclusion he drew was that the Church could be in perfect harmony with Protestant liberty and with the modern state which is founded on that liberty, and that everyone is free to hold that the modern state is to be preferred to the one which preceded it. The future Cardinal Pie, Bishop of Poitiers, the future Cardinal Ledochowski, Nuncio at Brussels, Mgr. Talbot, Chamberlain to Pius IX, Louis Veulliot, and the Jesuits who edited the "Clair Matin", were alarmed at these declarations. On the other hand Cardinal Sterck, Archbishop of Mechlin, the future Cardinals Guibert and Lavigerie, many well-known Paris Jesuits, such as Péres de Ponlevoy, Ouilvaint, Matignon, and especially Bishop Dupanloup of Orléans, who had supported him and worked up his defence. At the end of March, 1864, he received a letter from Cardinal Antonelli finding fault with the Mechi speeches. When, on 8 Dec., 1864, the Encyclical "Quanta Curas" and the Syllabus were issued, Montalembert resisted the advice given him by the Protestant Léon de Malleville to protest publicly against these pontifical documents as a political measure; and the commentary on the Syllabus which Dupanloup published, and Pius IX approved of, 4 Feb., 1865, met with his joyous adhesion.

When the Vatican Council drew near he feared that the council would infer from the Syllabus and define as articles of faith certain affirmative propositions concerning liberty and touching on the State. He encouraged the authors of the Coblenz manifest to doubt the infallibility question, and he drew up under the heading "Questions au futur concile" a great number of disquieting grievances which he circulated among the bishops. The three hundred pages he wished to insert in the "Correspondant" on the causes of Spanish decadence, and in which he made a lively attack on the "Civilta Cattolica", were refused by the "Correspondant", and so Montalembert broke off his connexion with that review.

His letter to the lawyer Lallemand, published in the "Gazette de France", 7 March, 1870, was intended to reconcile his former "ultramontanism" with his present state of feeling; which had justified Coblenzism. In that year he wrote of "The power which the lay theologians of absolutism had set up in the Vatican." The impression left by this letter, which Abbé Combatot in the pulpit of San Andrea della Valle styled a "satanic work", was still fresh in the mind of Pius IX, when Montalembert died, 13 March, 1870. Pius IX himself now a solution service to be held for him in the Ara Coeli; but a few days later he gave orders that an office should be sung in Santa Maria Traspontina, and he attended there himself in one of the barred galleries.

The letter (published very much later) which on 28 September, 1869, he wrote to M. Hyacinthe Loyson to dictate him from leaving the Church, in the opinion of M. Emile Ollivier "one of the most pathetic appeals that ever came from the human heart"; and the future Cardinal Perraud, when pronouncing the panegyric of Montalembert in the Sorbonne, could say that even his latest writings, however daring they might be, were filled with "a noble passion of love for the Church."

A member of the French Academy from 9 January, 1851, Montalembert was both an orator and a historian. As early as 1835 he had planned to write a life of St. Bernard. He was led to publish in 1860, under the title "Les Moines d'Occident", two volumes on the origin of monasticism; then followed three volumes on the monks in England; he died before he reached the period of St. Bernard. But he left among his papers, on the one hand, a manuscript entitled "Influence de l'ordre monastique sur la noblesse féodale et la société latine jusqu'à la fin du XIème siècle", and on the other a work on Gregory VII and the conflict of investitures; and these two MSS., published in 1877 and 1879, are a decided study. The bishop of Meaux, made up the sixth and seventh volume of the "Moines d'Occident". His work on "L'Avenir politique de l'Angleterre", published in 1856, drew a brilliant picture of the parliamentary institutions of England, and rejoced in the ascendant march of Catholicity in the British Empire.

Finally, Montalembert was one of the writers who did most to foster in Europe regard and taste for Gothic Art. His letter to Victor Hugo on "Vandalisme en France", published 1 March, 1833, made a strong impression everywhere, and helped to save many Gothic monuments from impending ruin. Auguste Rechensperger and the Catholics of Rheinland Prussia profited by the artistic lessons of Montalembert. In 1838 he addressed to the French clergy an
the eastern portion, and the confluents of the Columbia the western. The former is formed by the junction of the Jefferson, Madison, and Gallatin, the two last named having their source in the Yellowstone National Park and the other in the mountains in the extreme south-western part of the state. The main tributary of the Missouri, the Yellowstone, likewise takes its rise in the park, in a lake of the same name. Another tributary of the Missouri, the Milk River, has its origin in the north-western section of the state, which is noted for its scenic beauty. From the summit of the mountains there one may overlook a country within which are the head-waters of three great continental river-systems—the Mississippi-Missouri, the Saskatchewan, and the Columbia. This region has lately been made a national reservation under the name of Glacier Park. The Missouri traverses the state from Three Forks, named from its location at the confluence of the three rivers mentioned above, a distance of approximately 550 miles. The Yellowstone, following a course roughly parallel to the main stream, makes a waterway within Montana's borders 450 miles long. The Kootenai drains a portion of the extreme northwestern part of the state, but the great bulk of the western waters in that region comes south, by the Flathead, to meet with those from the southern portion which flow north and east. These two streams unite to form the Clark's Fork of the Columbia. The Flathead feeds and empties, in its course, Flathead Lake, the largest fresh-water lake between the Mississippi and the Pacific.

The climate is very similar in character throughout the state, except, of course, on the lofty mountains, at the extreme north, and in the summer—a providential condition, in consequence of which water for irrigation is supplied in comparative abundance in the period of drought. The extremes of temperature are not quite so great and rain falls somewhat more abundantly on the western slope of the mountains. The climate, except for brief periods in the winter season, is remarkably agreeable. In the northern part of the state the severity of the colder months is tempered by an occasional warm west wind, known as the chinook, which tempers the climate without bringing excessive moisture. A very low temperature is endured with much less discomfort than in regions where the atmosphere is more dense, the humidity greater, and the temperature at Helena is 65° (Fahr.) for the months of June, July, and August; 44° for September, October, and November; 22° for December, January, and February, and 41° for March, April, and May. The mean annual rainfall for the entire state, based on reports for ten years, is 15.57 inches.

The highest mountain in the state has an interesting history. About a third of a century before the Revolution, in 1742, it was visited by a party of French explorers headed by two young sons of Pierre Gauthier de Varennes de la Verendrye, on a quest for a river leading to the Pacific. They started from Fort La Reine, one of the most remote of a chain of posts, which the explorers called la Vérendrye had established in the wilderness north and west of Lake Superior in an effort to reach the western sea. The wanderings of the youthful adventurers led them from Fort La Reine on the Assini-
boine, west of Winnipeg, to the village of the Mandans on the Missouri River near the present city of Bismarck, North Dakota, whither their father had preceded them four years before. Thence, proceeding in a general southwesterly direction through the counties of Custer and Rosebud, they crossed the rivers falling into the Yellowstone until they reached the Big Horn Mountains, near or across the Wyoming line. Sixty-two years later, the exploration of Lewis and Clark gave to the world authentic information of the country. It followed the Missouri to the Three Forks, then ascended the Jefferson to its source in the Bitter Root range, and crossed the mountain barrier. Returning, the leaders traveled together until they reached the Big Blackfoot, a tributary of the Missouri. Here they parted, Lewis ascending that stream to its source, Clark going to the southwest to the river of the same name. The expedition descended the river near the mouth of the Cheyenne and set out over the plains with the aid of horses purchased from the Mandans. After proceeding some distance to the northeast, doubled less than twenty miles from the Missouri, Clark ascended the Missouri, taking the route followed in the construction of the Northern Pacific Railroad to the Yellowstone river near Livingston, and, descending that stream, rejoined his companion at its mouth.

The Astor expedition, which set out for the mouth of the Columbia in 1811, pursued the route which had been opened up by the Lewis and Clark party. By the 1830's the Blackfeet were on the Northern Pacific Railroad near the mouth of the Yellowstone. In 1832 the steamboat "Yellowstone" owned by the American Fur Company, which had absorbed its rival, ascended the Missouri to Fort Union, near the mouth of the river after which the company was named. The region east of the mountains was a part of the Louisiana Purchase, over which the United States acquired dominion by the Missouri Compromise. The western portion was constituted a part of the Oregon Territory. The conflicting claims of the United States and Great Britain to this country were not settled until 1846. Meanwhile hunters and trappers bearing allegiance to both nations overrun the country. A few homebuilders established themselves within the borders of the Oregon country. The history of the development of the commonwealth begins with the discovery of gold at Gold Creek and Bannack in 1862. The Alder Gulch placers were discovered in 1863, giving rise to Virginia City, and those of Last Chance Gulch in 1864, bringing Helena into existence. The story of the fabulous wealth of these deposits attracted a great multitude, who made the journey either by ox-teams from Omaha, or came up the river by boat to Fort Benton, which was established in 1846. Every promising gulch in the state was quickly prospected, many of them proving very remunerative. The source of the placer deposits was soon sought in the lead, and quarts-mining speedily began. The excitement was so great that the country was denominated as an incentive to those having some skill in agriculture to engage in ranching, and the fertile valleys of the Gallatin, the Deer Lodge, the Bitter Root, and the Prickly Pear were subjected to tillage. The abundant nutritious grasses of the plains, that had supported immense numbers of buffalo and antelope, and of the parks in the mountains, where deer and elk abounded, invited the pursuit of raising cattle, sheep, and horses.

Long before this period, however, as early as 1840, Father Peter J. De Smet, S.J., had come from St. Louis in response to an invitation conveyed by a delegation from the Flathead Indians to Christianize that tribe. He established St. Mary's Mission in the Bitter Root valley near the present town of Stevensville. In 1844 he founded the Mission of St. Ignatius in the midst of a beautiful valley, within what is now the Flathead Reservation. Father Nicholas Point preached to the Blackfeet in the winter of 1846-7, laying the foundations of St. Peter's Mission which however was not permanently established until 1858. Father A. Racalli, who shared the residence of St. Ignatius, the founder of St. Mary's, was called to that mission in 1845. The county in which it was located is named in his honour. The western part of the state was successively a part of Oregon Territory, Washington Territory, and Idaho Territory. The eastern portion became a part of the Louisiana Territory on the cession of the latter to Mexico, its seat being attached to various territories organized out of that region. But there was no organized government anywhere. Even after the rush consequent upon the gold discoveries, though nominally subject in those parts to the government of Idaho Territory, the constituted authorities were so remote that the people themselves administered a form of government in the manner of miners' courts and vigilance committees. In 1864 the Territory of Montana was organized with boundaries identical with those which now define the state. Hon. Sidney Edgerton was appointed governor. The first legislative assembly convened at Bangor on 12 December, 1864. The capital was held at Virginia City in 1866, from which place the capital was moved to Helena in 1874, the migrations of the seat of government indicating to some extent the variations in the centres of population. General Thomas Francis Meagher was appointed secretary of the territory in 1865 and, in the absence of the governor, assumed, under the law, the duties of that office, which he continued to discharge until his unfortunate death by drowning in 1867. Samuel McLean was the first delegate to Congress from the territory. The state was admitted to the Union by proclamation of President Harrison on 8 November, 1889, pursuant to an Act of Congress approved on 22 Feb., 1889, the constitution having been meanwhile framed and adopted.

In 1880 the Utah and Northern Railroad Company, subsequently merged in the Union Pacific system, built into Butte from Ogden. Three years later the Northern Pacific completed its line across the territory aided by a grant made by Congress in 1884, by which it acquired every alternate section of land within forty miles of its line. The Great Northern was completed to the coast across Montana in 1891, and the year 1909 witnessed the construction of another transcontinental line crossing the state from east to west,—that of the Chicago, Milwaukee, and Puget Sound Railway Company. The Montana Central, since a part of the Great Northern system, was built in the very heart of the mountain country in 1887, to connect the mines at Butte with the smelters at Great Falls. Since the opening of the railroads, resulting in the extinction of the buffalo, the main reliance of the Indians for subsistence, the task of keeping them in check on the reservations has become comparatively easy. In the struggle with them to secure the peace, local events attain special prominence—the brush with General Sully at the Bad Lands in 1864, while escorting a party of 250 emigrants from Minnesota bound for the mines of Montana; the Custer Massacre in 1876, and the raid of Chief Joseph after the Battle of
the Big Hole and his masterly retreat, followed by his capture in the Bear Paw Mountains in 1877 by General Miles.

RESOURCES.—The industry which gave rise to the original settlement of Montana was mining. In 1863 gold valued at $8,000,000 came from the sluices. The next year produced double that amount. The total production of gold up to and including the year 1876 is conservatively estimated at $140,000,000. About that time silver mining became paramount, but about 1890 it yielded pre-eminence to copper, which is at present the chief metal produced. The copper mines are at Butte, while the smelters are located at Anaconda and Great Falls. A silver and lead smelter is in operation at East Helena. In 1891, there was produced copper to the value of $40,021,756, with silver and lead to the extent of $3,286,212. Montana's stores of ore are very great. Estimates made by the authorities of the United States Geological Survey give the area of bituminous and lignitic-bituminous coal at 13,000 square miles, and the lignite areas at from 25,000 to 50,000 square miles. Coal-mining is extensively carried on in the counties of Carbon, Cascade, and Lewis. Lumbering is an industry of the western portion of the state, where there are dense forests of pine, fir, larch, cedar, and hemlock. It is, however, by no means confined to that region, as all the mountains of any considerable height bear a more or less abundant growth of timber. Nearly 20,000,000 acres of the public domain, or about $21,148,619, and gold, are included within the national forest reserves. Stock-raising early assumed an important place in the business life of the state. Vast herds of cattle, horses, and sheep were reared and matured on the open range with little or no provision for feeding even in the depth of winter. The appropriation of the public lands to settlers has occurred, but that is not the present method, however, as to enforce a radical change in the method by which the business is carried on. Provision for feeding is now almost universally made, but, except in stormy weather, sheep especially thrive without much regard to temperature on the native grasses that cover the plains and foot-hills, cured by the hot sun of the summer season when comparatively little rain falls. The annual production of wool in the state is about 40,000,000 pounds, the clip of approximately five and a half million sheep. The number of cattle in the state is in excess of 600,000. Agriculture is undergoing a marvellous development, both as to the area under cultivation and the methods of farming. As the result yields bountifully. Recent immigration to the state has been markedly to the more promising agricultural sections which, within the past two years, have received an influx hitherto unknown. In earlier years irrigation was universally resorted to, but more recently great areas have been cultivated with marked success by the "dry farming" system. Eight great works of irrigation are being carried on, or have been completed by the government reclamation service. The state is directing others under the Carey Land Act, and private corporations are engaged in many similar enterprises. Montana produced in 1905: 3,703,000 bushels of wheat on 135,000 acres; 10,566,000 bushels of oats on 254,000 acres; and 875,000 bushels of barley on 25,000 acres. Fruit-raising is a profitable business in many parts of the state, particularly in the counties of Ravalli, Missoula, and Flathead, where it is extensively carried on. Apples are the staple fruit crop, the quality being excellent and the yield large. The culture of sugar beets has been stimulated by the construction of a factory at Billings, which went into operation in 1898. The supply is itself supplied (in 1910) with over 115,000 tons of beets. The abundance of sunshine and the character of the soil gives to the Montana beet an exceptionally high percentage of saccharine matter. Manufacturing is still in its infancy, but is destined to a great growth owing to the extent of available water-power. Three large dams now turn the power of the Missouri River, and three more are in process of construction. Another large dam utilizes in part the energy of the Madison River. The Flathead River tumbles over seven miles of cascades, as it issues from Flathead Lake, offering stupendous opportunities for power development.

State Institutions.—The capitol at Helena was erected in 1900 at a cost of $350,000. The growth of the state is shown by the fact that additions were authorized by the last session of the legislature to cost half a million dollars. The funds for the original construction, as well as the work now to be undertaken, are derived from lands donated to the state on its admission to the Union by the general government. The state maintains a university at Missoula, an agricultural college at Bozeman, a school of mines at Butte, a normal school at Dillon, a soldiers' home at Columbia Falls, a deaf, dumb, and blind asylum at Boulder, a reform school at Miles City, and a penitentiary at Deer Lodge. The insane are cared for at a private institution in Great Falls, and the feeble-minded public schools prevails, and nearly all the towns of consequence maintain public libraries.

Education.—In 1908 there were enrolled 61,928 of the 77,039 children of school age. The total expense for all school purposes was $2,178,322.90. The average monthly salary paid to male teachers was $99, and to female teachers $91. The value of the state's endowment about $24,148,619, and gold, is held by the state are under the direction of a state superintendent and a state board of education, consisting of that officer, the governor and the attorney-general, and eight other members appointed by the governor. County superintendents supervise the administration of the school system in the rural communities, and city superintendents in the cities. These officers are derived from taxes collected by the county treasurer. The school fund consists of the revenues from grants of land made by the general government, and other grants from the federal authority, the avails of escheated estates, and fines for violations of various laws. The fund must be kept intact and only the interest used. The state university has a grant of 45,000 acres from the nation, which may be sold at not less than $10 per acre. The avails constitute a fund the income of which only is subject to use. For the year 1909 there were appropriated for its support $67,500, and it has other revenues amounting to about $120,000. Its corps of professors numbers twenty. In 1908 it had 184 students, 126 being special work and not including those taking the course at the biological station, which is maintained in connexion with it.

Early Missionaries and Missions.—It is not improbable that Father C. G. Coquart, S.J., accompanied the Vérendyres brothers on their expedition into Montana in 1804. He was a member of the party when they set out from Montreal on their great enterprise and is quoted as saying that the Vérendyres on some of their excursions went beyond the great falls of the Missouri, and as far as the Gate of the Mountains near Helena. The establishment of the early missions has been mentioned. Besides those referred to, the Holy Family Mission among the Blackfeet, originally a dependency of St. Peter's, became a fixed establishment in 1885. St. Paul's, another offshoot of St. Peter's, was established about the same time among the Gros Ventres and Assiniboines on the Fort Belknap Indian Reservation. St. Labre, the mission among the Cheyennes, dates from 1854, when Rev. Joseph Weier came to the Missouri. St. Xavier, under the leadership of the Ursuline Sisterhood, with Mother Amadeus at their head in response to a call issued by Bishop Gilmore at the appeal of Bishop Brondel, lately appointed to the newly created See of Montana. St. Xavier's, among the Crowds, dates
from 1887. Schools, as a matter of course, are maintained at all the missions, those at St. Ignatius particularly being models. The Ursulines have convents at St. Peter's. The Jesuits were the pioneer missionaries to both Indians and whites in Montana. The missions of Father De Smet extended to all the tribes that have been mentioned, and he, as well as all of his associate 'black robes', was held in the highest reverence by them. His labors were prodigious. In 1835 he induced five sisters of the community of Leavenworth to come to Helena, where they founded St. Vincent's Academy.

Dioceses.—In the earlier territorial days, the western part of the state was included in the Vicariate of Idaho, and the eastern part in that of Nebraska. An episcopal visit was made to those then remote regions by Bishop James O'Connor of Omaha in 1877, and by Archbishop Charles J. Seghers of the Province of Oregon in 1879 and again in 1882. Upon the urgent recommendation of the last-named prelate, Montana was made a vicariate on 7 April, 1883, and the Rt. Rev. John B. Brondel, then Bishop of Victoria, Vancouver Island, was appointed to that charge. On 7 March, 1884, the Diocese of Helena was created, embracing the whole of Montana, and Bishop Brondel was appointed to the see. He was at the head of its affairs until his death in 1903, when the diocese was divided, the eastern part of the state becoming the Diocese of Great Falls and the remainder continuing as the Diocese of Helena. The Rt. Rev. Mathias Lenihan, D.D., was then appointed bishop of the latter, and the Rt. Rev. Mathias Lenihan, D.D., of the former diocese.

Catholic Population.—The Catholic population of the Great Falls diocese is about 15,000; of the Helena diocese about 50,000. Thirty priests minister to the people of the new, fifty-three to those of the old diocese. If all were to arrive from the old diocese in the future, the Catholic population of the state would be about one-third of that of the whole people of the state. Among the former, the dominant blood is probably Irish, a very large percentage of the adults being native Americans. But almost every Catholic country of Europe has contributed to the truly cosmopolitan citizenship of Montana. China and Japan have added to some extent to the population. In recent years Italians, Austrians, Bulgarians, and Servians have come in considerable numbers. Most of these are more or less closely attached to the ancient faith.

Charitable Institutions.—Hospitals are conducted by sisters of various orders at Great Falls, Billings, Helena, and Butte. There is a House of the Good Shepherd and an orphanage at Helena, and academies at Lewistown, Miles City, St. Peter's, Helena, and Deer Lodge. The parochial schools enrolled 5536 pupils in 1908, not including those attending the mission schools on the reservations.

Distinguished Catholics.—The spirit of religious intolerance has had scant encouragement in Montana, and many Catholics have occupied prominent positions in her industrial development and political history. Among those who have served in high official station are General Thomas Francis Meagher, acting governor from 1865 to 1867; Hon. James M. Cavanaugh, delegate in Congress from 1877 to 1878; Hon. Martin Maginnis, delegate in Congress from 1873 to 1885; Hon. Thomas H. Carter, delegate in Congress from March to November, 1889, and representative from the admission of the state to 1891; afterwards, from 1895 to 1901 United States Senator, and now serving his second term, having been again elected in 1906; Hon. H. S. Hinkley, delegate from 1889 to 1895. Among those who have written their names large in the industrial history of the state are Marcus Daly, Thomas Cruse, Peter Larson, and John D. Ryan, the latter being at present at the head of the Amalgamated Copper Company.

Freedom of Worship.—Freedom of religion is guaranteed by the following provision of the constitution: "Art. III, Sec. 4. The free exercise and enjoyment of religious profession and worship, without discrimination, shall forever hereafter be guaranteed, and no person shall be denied any civil or political right or privilege on account of his opinions concerning religion, but the liberty of conscience hereby secured shall not be construed to dispense with the duties of oaths or affirmations, except as a conscientious belief, by bigamous or polygamous marriage, or otherwise, or justify practices inconsistent with the good order, peace or safety of the state, or opposed to the civil authority thereof, or of the United States. No person shall be required to attend any place of worship or support any ministry, religious sect or denomination, against his consent; nor shall any preference be given by law to any religious denomination or mode of worship." The diversion of the public funds to the promotion of sectarian purposes is forbidden by the following: "Art. V, Sec. 35. No appropriation shall be made for charitable, industrial, educational or benevolent purposes to any person, corporation or community not under the absolute control of the state, or denominational or sectarian institution or association." Oaths.—Every court or officer authorized to take testimony or decide on evidence may administer oaths or affirmations, the witness being entitled to elect whether he shall be sworn or shall simply affirm.

Sunday Observance.—No law against the observance of the Sabbath as Sunday, as is Christmas, New Year's, and Columbus Day (12 October). If Christmas or New Year's Day falls on Sunday, the day following is a holiday. Whenever any secular act, other than a work of necessity or mercy, is appointed by law or contract to be done on a certain day, and it so happens that such a day is a holiday, it may be done on the day following with like effect as if done on the day appointed. It is a misdemeanour to keep open or maintain on Sunday any barber-shop, theatre, play-house, dance-house, race-track, concert saloon, or variety hall. It is likewise a misdemeanour to disturb any assembly of people met for religious worship by profane discourse or in any other manner. Neither blasphemy nor profanity is otherwise made punishable.

Prayer in the Legislature.—The law provides for the election of a chaplain of each house of the legislature and the daily sessions are opened with prayer by that officer. The Bannack session seems to have had no chaplain, but Rev. Joseph Giorda, S.J., officiated in that capacity at Butte during the second session held at Virginia City in 1866. Rev. L. Palladino, S.J., the historian of the Montana Missions, universally revered for his saintly life, who came to Saint Ignatius in 1867, acted in the same capacity at the ninth session.

Seal of Confession.—Disclosures made in the confessional are held sacred by express statute. A clergyman will be neither compelled nor permitted to testify as to them.

Incorporation of Churches.—Special provision is made for the incorporation of religious bodies and congregations. The method is simple. At a meeting, trustees are elected and they are authorized by resolution to file articles with the county clerk or the secretary of state, according as the organization is to be local or general in its nature. The articles state the name of the corporation, its purpose, and the number of trustees. It then has continual succession, and the usual powers of a corporation. Another act provides for the organization of corporations sole 'whenever the rules, regulation, discipline, or denominational, society or Church, permit or require the estate, property, temporalities, and business thereof, to be held in the name of, or managed by a bishop, chief priest, or presiding elder, of such religious denomination, society or church.' The passage of this
act was procured by Bishop Brondel who incorporated under the name of the "Roman Catholic Bishop of Helena".

Exemption of Clergymen and Church Property.—All clergymen are exempt from jury duty. The constitution declares that "such property as may be used exclusively for agricultural and horticultural societies, for educational purposes, places for actual religious worship, hospitals and places of burial not used or held for private or corporate profit, and institutions of purely public charity may be exempt from taxation" (Art. XII, Sec. 2), and the statutes declare the exemptions in the same terms.

Marriage and Divorce.—Marriage may be contracted by mutual consent followed by a solemnization or public assumption of the marital relation. The marriageable age is eighteen in the case of males, and sixteen in females. Marriages between ancestors and descendents of every degree, between brothers and sisters of the half as well as the whole blood, and between aunts and nephews or uncles and nieces, are declared void ab initio. So likewise are marriages between a white person on one side, and a negro or a person part negro, or a Chinese or Japanese, on the other side. Marriages contracted without the state and valid where contracted are valid within the state. Marriage certificates are required of the clerk of the court of the county where the marriage is to be solemnized, and a return must be made by the officiating clergyman or officer. Licences cannot be granted to minors without the written consent of the parents or guardian. Marriage may be solemnized by a justice of the Supreme Court, judge of the circuit, justice of the peace, priest or minister of any denomination, or mayor of the city or by religious societies. It need not be solemnized at all if the parties make and file a joint declaration giving their names, the fact of marriage, the date of marriage, and that it has not been solemnized. Marriages licensed and not solemnized as provided are forbidden, but are expressly declared not to be void.

Divorces are authorized for six causes, viz.: adultery, extreme cruelty, wilful desertion, wilful neglect, habitual intemperance, and conviction of felony. The constitution forbids the passage by the legislature of any special law granting divorce, or separation a month. The same process for separate maintenance, a power the early territorial legislatures freely exercised. Residence in the state one year by the plaintiff is a requisite of jurisdiction.

Liquor.—The sale of liquor is permitted under licences issued by counties and cities. Local option is authorized by law, but the traffic is not prohibited in any county. The employment of women in places where liquor is sold is forbidden, as is its sale in places of public amusement, or at any camp meeting, or near any cemetery. A law, known as the "Wine Room Law", makes it punishable to have in connexion with a saloon any room or apartment into which females are permitted to enter.

Wills and Testaments.—Wills may be made by any person over eighteen. If in his own handwriting it need be neither witnessed nor attested; if not, it must bear the signatures of two witnesses. A nuncupative will may be made orally disposing of an estate less than $1000 in value, when the testator is in actual military service in the field, or doing duty on shipboard and in peril or fear of death, or when he is expecting death, or has received the same in writing. A wife has a dower right in her husband's real estate, but he has no interest in her property except that she cannot without his written consent deprive him by will of more than two-thirds of her estate. The will of an unmarried woman is revoked by her subsequent marriage, as is that of a man made before he marries by his subsequent marriage, unless his wife is provided for by contract or in the will, or unless the will expressly excludes her from taking.

Charitable Bequests.—Charitable bequests contained in wills made within thirty days of the death of the testator are void. If the aggregate of such bequests in any will will exceed one-third of the value of the estates, and the testator has legal heirs they are scaled down until their sum does not exceed such amount.

Cemeteries.—A law applicable specially to that subject authorizes the incorporation of cemetery associations. Burial without a certificate of death is made punishable, as is violation of sepulchres, defacing of graves or monuments, or neglecting to bury the bodies of dead kindred.

Montañés, Juan Martínez (d. 1649), a noted Spanish sculptor of the seventeenth century, sometimes called "the Sevillian Phidias". Like many of his countrymen, he confined himself almost exclusively to the figure of the Virgin, to which he gave effects of great tenderness and sentiment. He was born at Seville; according to Cordiello, his contemporary, at Alcalá la Real. He studied under Pablo de Rojas at Granada; and later settled at Seville where most of his works are to be found. One of the earliest is a charming Infant Jesus (cathedral sacristy, Seville) bearing the date 1607 and the sculptor's signature. In 1610 he modelled the head and hands of the statue of St. Ignatius Loyola — used in the religious celebrations of the beatification of the saint (chapel of the university, Seville). This image, clothed and coloured by Pacheco, is esteemed one of the truest and most aesthetic representations ever made of the soldier saint. The St. Francis Xavier in the same place is attributed to Montañés. He was executed for the Hieronymite monastery of St. Iadius del Campo, near Seville, the life-size penitent St. Jerome, one of his most masterly productions, and the reedos and statues for the altar; in 1614 the famous large crucifix for the Carthusians of St. Maria de las Cuevas; 1617 to 1618 two reedos in the lay choir of the same monastery, 1619 the image of Our Lady of Bonavena; 1625 three figures representing the theological virtues, and lovely reliefs of the Adoration of the Magi and Shepherds; the expressive St. Bruno, now in the museum, was made for the Carthusians in 1620. In 1635 the sculptor went to Madrid and spent seven months there modelling a portrait of Philip IV, which was to be used by Pietro Tacca for his equestrian statue of the king, finished in Florence, 1640, and now in Madrid (Plaza del Oriente). The likeness of Montañés by Velasquez (Prado Gallery), was probably painted at this time. As a reward for his services the king granted Montañés the rights in a merchant ship "whether in the fleet of the Continent or of New Spain" (America). This promise was fulfilled. He sculptured the head of the Virgin for the church of the Jesuits at Seville, and the pedestal for the statue of St. Ignatius in the Sagrario, and in 1649 other works at Seville are the St. Dominic of heroic size in the museum, the convent of Portaceli; a beautiful St. John Evangelist in the church of San Juan de las Palmas; the high altar of the church of San Lorenzo and a statue of the patron saint; and, at the cathedral (Seville), a very fine life-size Immovable Conception of the Virgin in the Sacristy of the Chalices, and that renowned "Christ bearing the Cross" carried in Holy Week processions, so vivid and sorrowful, the sculptor would station himself at the corners of streets to see it pass, "absorbed and wondering at the work of his own hands". Montañés is noted for the majesty and religious character of his types, his profound sense of beauty, and his elegant and correct
modelling. His child forms, infant and cherub, are peculiarly happy. He would not consent that any of his figures should be tinted except under his own supervision.

M. L. HANDLEY.

MONTANISTS. Scematics of the second century, first known as Practipients, or "those training in Philosophy" (el ἐκτός Φάσης), then as Montanists, Pepusians, and (in the West) Cataphrygians. The sect was founded by a prophet, Montanus, and two prophetesses, Maximilla and Priscilla, sometimes called Prisica.

CHRONOLOGY. An anonymous anti-Montanist writer, cited by Eusebius, addressed his work to Abercius Marcellus, Bishop of Hierapolis, who died about 200. Maximilla had prophesied continual wars and troubles, but this writer declared that he wrote more than thirteen years after her death, yet no war, general or partial, had taken place, but on the contrary the Christians enjoyed perpetual peace through the mercy of God (Eusebius, "Chronicle," vii, 39). This writer could identify only the seven and a half years of Commodus (17 March, 180—31 December, 192). The wars between rival emperors began early in 192, so that this anonymous author wrote not much later than January, 193, and Maximilla must have died about the end of 197, not long before Marcus Aurelius, Montanus and Priscilla had died in 198. Consequently the date given by Eusebius in his "Chronicle"—eleventh (or twelfth) year of Marcus, i. e. about 172—for the first appearance of Montanus leaves insufficient time for the development of the sect, which we know further to have been of great importance in 177, when the Church of Lyons wrote to Pope Eleutherius on the subject. Again, the Montanists are co-ordinated with the mar-tyr Thraseas, mentioned chronologically between Poly- carp (155) and Sagaris (under Sergius Paulus, 166—7) in the letter of Polycrates to Pope Victor; the date of Thraseas is therefore about 160, and the origin of Montanism must be yet earlier. Consequently, Zahn, Harnack, Duchesne, and Voigt (again) date it about 190. In any case the late date given by Eusebius, regard St. Epiphanius (Hær., xviii, 1) as giving the true date of the rise of the sect, "about the nineteenth year of Antoninus Pius" (that is, about the year 156 or 157).

Bonwetsch, accepting Zahn's view that previously (Hær., xvi, 1) Epiphanius had given the twelfth year of Antoninus Pius where he should have said M. Aurelius, wishes similarly to substitute that emperor here, so that we would get 179, the very date of the death of Maximilla. But the emendation is unnecessary in either case. In "Hereses," xvi, 1, Epiphanius clearly meant the earlier date, whether right or wrong; and in xvi, 1, he is not dating the death of Maximilla but the first appearance of the sect. From this passage (Hær., V, xvi, 7, we learn that this was in the proconsulship of Gratus. Such a proconsul of Asia is not known. Bonwetsch accepts Zahn's suggestion to read "Qua- dratus," and points out that there was a Quadratus in 155 (if that is the year of Polycarp's death, which was about Quadratus), and another in 168, so that one of these years was the real date of birth of Montanis- m. But 166 for Quadratus merely depends on Schmid's chronology of Aristides, which has been rejected by Ramsay and others in favour of the earlier chronology worked out by Waddington, who obtained 155 for the Quadratus of Aristides as well as for the Quadratus of Polycarp. Now it is most probable that Epiphanius's authority counted the years of emperors from the September preceding their accession (as Hegesippus seems to have done), and therefore the nineteenth year of Pius would be Sept., 155—Sept., 156. Even if the later and Western mode of reckoning from the January after accession is used, the year 157 cannot be reconciled with Quadratus in 155, if we remember that Epiphanius merely says "about the nineteenth year of Pius," without vouching for strict accuracy. He tells us further on that Maximilla prophesied: "After me there shall be no prophetess, but the end," whereas he was writing after 290 years, more or less, in the year 375 or 376. He directs the evidence to show that 157 is the year in which brings us roughly to the death of Maximilla (385 for 379). But ἄντικριτος for ἄντίκριτος is a big change. It is more likely that Epiphanius is calculating from the date he had himself given. 19th of Pius—156, as he did not know that of Maximilla's death; his "more or less" corresponds to his former "about." So we shall with Zahn adopt Scaliger's conjecture ἄντικριτος for ἄντικριτος, which brings us from 156 to 375—219 years. As Apollonius wrote forty years after the sect emerged, his work must be dated about 196.

MONTANISM IN ASIA MINOR.—Montanus was a re- cent convert when he first began to prophesy in the year of Arbaces the Phrygian. He was certainly not to have been previously a priest of Cybele; but this is perhaps a later invention intended to connect his ecstasies with the dervish-like behaviour of the priests and devotees of the "great goddess." The same prophetic gift was believed to have descended also upon his two companions, the prophetesses Maxi- milla and Priscilla. The latter's headquarters were in the village of Pepus. The anthropo- omen of the sect describes the method of prophecy (Eusebius, V, xxvii, 2—3): first the prophet appears dis- traught with terror (ἐπενεχθέναι), then follows quiet (ἄξια καὶ ἀποβολα, fearlessness); beginning by studied vacancy of thought or passivity of intellect (ἐκείνου ὧν ἀδύνα, he is seized by an uncontrollable madness (ἐκείνου ἡράκλετος ἕχει). The prophets did not speak as messengers of God: "Thus saith the Lord," but described themselves as possessed by God and spoke in His Person. "I am the Father, the Word, and the Paraclete," said Montanus (Didymus, "De Trin.," III, xii); and again: "I am the great God omnipotent from the beginning of time, and neither an angel, nor an ambassador, but I, the Lord, the Father, am come" (Epiphanius, "Hær.," xlviii, 11). And Maximilla said: "Hear not me, but hear Christ" (ibid.); and: "I am driven off from among the sheep like a wolf [that is, a false prophet—cf. Matt., vii, 15]; I am not a wolf, but I am he, the living spirit, and power." This possession by a spirit, which spoke while the prophet was incapable of resisting, is described by the spirit of Montanus: "Behold the man is like a lyre, and I dart like the plectrum. The man sleeps, and I am awake" (Epiphanius, "Hær.," xlviii, 4).

We hear of no false doctrines at first. The Para- clete ordered a few facts and abstinence; the latter was to be strict zor хозио—eating, fasting, and prayer; and then, in 157, a first act of discipline: before the second assembly, and even then the Saturdays and Sundays did not count (Tertullian, "De jej.," xv). Not only was virginity strongly recommended (as always by the Church), but second marriages were disapproved. Chastity was declared by Priscilla to be a preparation for ecstasy: "The holy [chaste] minister knows how to guard his heart holiness. Of Montanus, in whose sanctum sanctorum [reading purificandas enim corda, by conjecture for purificanda enim concordia] both see visions, and placing their head downwards (!) also hear manifest voices, as saving as they are secret" (Tertullian. "Ex- hor." X, in one MS.). It was rumoured, however, that Priscilla had been married, and had left her hus-
band. Martyrdom was valued so highly that flight from persecution was disapproved, and so was the buying off of punishment. "You are made an outlaw?" said Montanus, "it is good for you. For he who is not outlawed among men is outlawed in the Lord. Be not confounded. It is justice which hales you in public. Why are you confounded, when you are sowing praise? Power comes, when you are stared at by men." And again: "Do not desire to depart this life in beds, in miscarriages, in soft fevers, but in martyrdoms, that He who suffered for you may be glorified." (Tertullian, "De fuga", ix; cf. "Acta Anima", i). Tertullian says: "Those who receive the Paraclete, know neither to flee persecution nor to bribe." (De fuga, 14), but he is unable to cite any formal prohibition by Montanus.

So far, the most that can be said of these didactic utterances is that there was a slight tendency to extravagance. The people of Phrygia were accustomed to the orgiastic cult of Cybele. There were doubtless many Christians there. The contemporary accounts of Montanism mention Christians in otherwise unknown villages: Ardabau on the Myssian border, Pepuzu, Tymion, as well as in Otrus, Apamea, Cumeane, Eumenea. Early Christian inscriptions have been found at Otrus. (Ptolemy's Geography, 260), Trajanopolis (of 279), Eumenea (of 249) etc. (see Harnack, "Expansion of Christianity", II, 360). There was a council at Synnada in the third century. The "Acta Theodoti" represent the village of Malus near Ancyra as entirely Christian under Diocletian. Above all we must remember what crowds of Christians came to Pepuzu in the winter of 257-258. The numbers were 112, not only in the cities but in country places. No doubt, therefore, there were numerous Christians in the Phrygian villages to be drawn by the astounding phenomena. Crowds came to Pepuzu, it seems, and conviction was provoked. In the very first days Apollinaris, a successor of St. Papias as Bishop of Hierapolis, who also wrote against Montanus, Eusebius knew this letter from its being enclosed by Serapion of Antioch (about 191-212) in a letter addressed by him to the Christians of Caria and Pontus. Apollinaris related that Elius Publius Julius of Debellum (now Burgas) in Thrace, knew that "Sotas the blessed who was in Ancyra, heard the Lord and saved. The Lord and the prophet (and he wished to be saved) took the demon from Sotas; but the hypocrites would not allow it." Clearly Sotas was dead, and could not speak for himself. The anonymous writer tells us that some thought Montanus to be possessed by an evil spirit, and a troubler of the people; they rebuked him and tried to stop his prophecy, but a companion of Maximilla, who had such a prophetic standing, denounced them as impious, and condemned the heresy, so that the discipulc were thrust out of the Church and its communion.

It is difficult to say how soon this excommunication took place in Asia. Probably from the beginning something must have been said. But it is clear that Montanus and his followers were growing commoner before the death of Maximilla; but it was hardly a general rule much before the death of Maximilla in 179; condemnation of the prophets themselves, and mere disapproval of their disciples was the first stage. We hear of holy persons, including the bishops Zoticus of Cumana and Julian of Apamea, attempting to exorcize Maximilla and Julian, but without success. But Themison prevented them (Eusebius, V, xvi, xviii, 12). This personage was called a confessor but, according to the anonymous writer, he had bought himself off. He published "a catholic epistle, in imitation of the Apostle", in support of his party. Another so-called martyr, called Alexander, was for many years a companion of Maximilla, who as such a prophet, did not know that it was for robbery, and not "for the Name", that he had been condemned by the proconsul Eumelius Frontinius (date unknown) in Ephesus; in proof of this the public archives of Asia are appealed to. Of another leader, Alcibiades, nothing is known. The prophets are accused of taking gifts under the guise of offerings. Montanus sent our salaried preachers; the prophetesses painted their faces, dyed their eyelids with stibium, wore ornaments and played at dice. But these accusations may be untrue. The great point was the manner of prophesying. It was denounced as contrary to custom and to tradition. A Catholicus, Epiphanius, wrote a book to which the anonymous author refers, "How a prophet ought not to speak in ecstasy". It was urged that the phenomena were those of possession, not those of the Old Testament prophets, or of New Testament prophets like Silas, Agabus, and the daughters of Philip the Deacon; or of prophets recently known in Asia, Quadratus (Bishop of Athens) and Ammia, prophetess of Philadelphia, of whom the Montanist prophets boasted of being successors. To speak in the first person as the Father or the Paraclete appeared blasphemous. The older prophets had spoken "in the Spirit", as mouthpieces of the Spirit, but to have no free will, to be helpless in a state of madness, to be without soul and without spirit, to be subject to the prophets. Montanus declared: "The Lord hath sent me as the choicer, the revealer, the interpreter of this labour, this promise, and this covenant, being forced, willingly or unwillingly, to learn the gnosia of God." The Montanists appealed to Gen., ii, 21: "For the Lord hath sent me as Peter, and I will prophesy in my ecstasy"; Acts, x, 10: "There came upon him [Peter] an ecstasy"; but these texts proved neither that an ecstasy of excitement was proper to sanctity, nor that it was a right state in which to prophesy.

A better argument was the declaration that the new prophecy was of a higher order than the old, and therefore did not need the consent of the Apostles, and even beyond the teaching of Christ. Priscilla went to sleep, she said, at Pepuzu, and Christ came to her and slept by her side "in the form of a woman, clad in a bright garment, and put wisdom in me, and revealed to me that this place is holy, and that here Jerusalem above comes down". "MySQ. of Eusebius, vii, 29, 11. Eusebius, v, xviii, 27, 11. In Epiphanius's time Pepuzu was a desert, and the village was gone. Marcellina, surviving the other two, prophesied continual wars after her death—no other prophet, but the end.

It seems on the whole that Montanism had no particular doctrine, and that his prophetesses went further than he did. The extravagances of his sect were due to the deaths of all three; but it is difficult to know how far we are to trust our authorities. The anonymous writer admits that he has only an uncertain report for the story that Montanus and Maximilla both hanged themselves, and that Themison was carried into the air by a devil, flung down, and died. The text is fragmentary. It seems also that some Churches were wholly Montanist. The anonymous writer found the Church at Ancyra in 153 greatly disturbed about the new prophecy. Tertullian's lost writing "De Festa", in defence of their trances, is said by Frædestinus to have been an answer to Pope Soter (Hier., xxvi, xxxvi, 2), who had condemned or disapproved them; but the authority is not certain. He has presumably confounded Soter with Sotas, Bishop of Anchialus. In 177 the Churches of Lyons and Vienne sent to the Churches of Asia and Phrygia their celebrated account of the martyrdoms that had been taking place. Eusebius tells us that at the same time they enclosed letters which had been written in prison by the companions of the Montanists. They sent the same by Trenesium to Pope Eleutherius. Eusebius says only that they took
a prudent and most orthodox view. It is probable that they disapproved of the prophets, but were not inclined to extreme measures against their followers. It was not denied that the Montanists could count many martyrs; it was replied to their boast, that all the heretics had many, and especially the Marcionites, but that true martyrs like Gaius and Alexander of Eusebians had not. The comunions of the Montanist martyrs who had approved the new prophecy (Anon. in Eusebius, V, xvi, 27). The acts of Carpus, Pappus, and Agathonice (the last of these threw herself into the fire), martyrs of Thyatira under Marcus Aurelius (about 161-9), may exhibit an influence of Montanist on the martyrs.

Montanism in the West.—A second-century pope (more probably Eleutheros than Victor) was inclined to approve the new prophecies, according to Tertullian, but was dissuaded by Praxeas (q. v.). Their defender in Rome was Proculus or Proculus, much revered among Tertullian. A disputation was held by Gaius against him in the presence of Pope Zephyrinus (about 202-3, it would seem). As Gaius supported the side of the Church, Eusebius calls him a Churchman (II, xxxv, 6), and is delighted to find in the minutes of the discussion that Gaius rejected the Johannine authorship of the Apocalypse, and attributed it to Cerinthus. But Gaius was the worse of the two, for we know from the commentary on the Apocalypse by Eusebius, that Gaius had probably borrowed material from it (see Theodore H. Robinson in "Expositor," VII, sixth series, June, 1906), that he rejected the Gospel and Epistles of St. John as well, and attributed them all to Cerinthus. It was against Gaius that Hippolytus wrote his "Heads against Gaius" and also his "Defence of the Gospel and the Apocalypse of John" (unless the first following of that of Epiphanius used for his fifty-first heresy (cf. Philastrius, "Her.", Ix), and as the heresy had no name he invented that of "Algae", meaning at once "the unreasoning" and "those who reject the Algae". We gather that Gaius was led to reject the Gospel out of opposition to Proculus, who taught (Pseudo-Tertullian, "De Praxe.", iii) that the Holy Ghost was in the Apostles, but the Paraclete was not, and that the Paraclete published through Montanists more than Christ revealed in the Gospel, and not only more, but also better and greater things; thus the promise of the Paraclete (John, xiv, 16) was not to the Apostles but the Holy Ghost, and thanks to Eve for making him (II, xi, 9): "Others, in order that they may frustrate the gift of the Spirit, which in the last days has been poured upon the human race according to the good pleasure of the Father, do not admit that form [the lion] which corresponds with the Gospel of John in which the Lord promised to send the Paraclete; but they reject the Gospel and with it the prophetic Spirit. Unhappy, indeed, in that, in wishing to have no false prophets [reading with Zahn pseudo prophetae esse vultur for pseudo prophetae esse vultur], they drive away the grace of prophecy from the Church; resembling persons who, to avoid those who come in hypocrisy, withdraw from communion even with brethren who dwell at the right side of the Father, as were an Asiatic sect (see Alon) no longer tenable; they were the Roman Gaius and his followers, if he had any. But Gaius evidently did not venture to reject the Gospel in his dispute before Zephyrinus, the account of which was known to Dionysius of Alexandria as well as to Eusebius (cf. Eusebius, III, xx, 1-4). It is true that he especially denied the episcopate of St. John in Asia, since he considers the Johannine writings to be forgeries, attributed by their author Cerinthus to St. John; hence he thinks St. John is represented by Cerinthus as the ruler of the Asiatic Churches. Another Montanist (about 200), who seems to have separated from Proclus, was Eshines, who taught that "the Father is the Son", and is counted as a Montanist of the tradition of Natus of Sabellius.

But Tertullian (q. v.) is the most famous of the Montanists. He was born about 150-5, and became a Christian about 190-5. His excessive nature led him to adopt the Montanist teaching as soon as he knew it (about 202-3). His writings from this date onwards grow more and more bitter against the Church, from which he definitively broke away about 207. He died about 223, or not much later. His first Montanist work was a defence of the new prophecy in six books, "De Ecstasy", written probably in Greek; he added a seventh book in reply to Apollonius. The work is lost, but a sentence preserved by Prædentinus (xxvi) is important: "In this we have to bear in mind that we do not receive second marriage, and that we do not refuse the prophecy of Montanus concerning the future judgment." In fact Tertullian holds as an absolute law the recommendations of Montanus to eschew second marriages and flight from persecution. He denies the possibility of forgiveness of sins by the Church; he insists upon the newly ordained fasts and abstinences. Catholics are the Psychics as opposed to the "spiritual" followers of the Paraclete; the Catholic Church consists of gluttons and adulterers, who hate to fast and love to remarry. Tertullian evidently exaggerated those parts of the Montanist teaching which appealed to himself, caring little for the past, but retreating to the extreme on Pepoza, but he speaks of joining in spirit with the celebration of the Montanist feasts in Asia Minor. The Acts of Sts. Perpetua and Felicitas are by some thought to reflect a period at Carthage when the Montanist teaching was arousing interest and sympathy, but had not yet formed a schism. Tertullian himself describes them as having been large; but a Tertullian sect survived him and its remnants were reconciled to the Church by St. Augustine (Her., lxxvi). About 392-4 an African lady, Octaviana, wife of Hesperius, a favourite of the Duke Arbogastes and the usurper Maximus, brought to Rome a Tertullianist priest who raved as possessed. He obtained the use of the church of Sts. Processus and Martinianus on the Via Aurelia, but was turned out by Theodosius, and he and Octaviana were heard of no more. Epiphanius distinguished a sect of Montanists as Pepuzians or Quintillians (he calls Priscilla also Quintilla). He says they had some foolish sayings which were the greeting of the tree of knowledge. They used to sleep at Pepuzia in order to resemble Priscilla had done. Often in their church seven virgins would enter with lamps, dressed in white, to prophesy to the people, whom by their excited action they would move to tears; this reminds us of some modern missions rather than of the Irvingites "speaking with tongues", with which the Montanist ecstasies have often been compared. These heretics were said to have women for their bishops and priests, in honour of Eve. They were called "Artotyrites", because their sacrament was of bread and cheese. Prædentinus says the Pepuzians did not really differ from other Montanists, but despised all who did not virtually "speak with tongues". There is a well-known story that the Montanists (or at least the Pepuzians) on a certain feast took a baby child whom they stuck all over with brazen pins. They used the blood to make cakes for sacrifice. If the child died it was looked upon as a martyr; if it lived, as a high priest. This story was no doubt a pure invention; but it is in the "De Ecstasy" of Tertullian. An absurd nickname for the sect was Tarratæa, from Thargyrian words meaning peg and nose, because they were said to put their forefinger up their nose when praying "in order to appear dejected and pious" (Epiphanius, Her., xlviii, 14).

It is interesting to take St. Jerome's account, written in 384, of the doctrine of Montanism as he be-
lived them to be in his own time (Ep., xii). He describes them as Sabellians in their idea of the Trinity, as forbidding second marriage, as observing three Lents "as though three Saviours had suffered!" Above bishops they have "Cenones" (probably not σωματικόν, but a Phrygian word) and patriarchs above these at Paphos. They close the door of the Church to almost every sin. They say that God, not being able to abide the words of Christ, and the prophet,"took flesh of the Virgin Mary, and in Christ, His Son, preached and died for us. And because He could not accomplish the salvation of the world by this second method, the Holy Spirit descended upon Montanus, Priscas, and Maximilla, giving them the plenteud which St. Paul had not (I Cor., xiii, 9). St. Jerome refuses to accept the words of the bishop of Miletus, but it is clearly unjust to set the account is already exaggerated beyond what the Montanists would have admitted that they held. Origen ("Ep. ad Titum" in "Pamp. Apol.", I fin.) is uncertain whether they are schismatics or heretics. St. Basil is amazed that Dionysius of Alexandria admitted their baptism to be valid (Ep., cxxxvii). According to his heart, he wore a black cassock (xix). The bishop of Miletus (sozomen, xviii) tells us that they observed Easter on 6 April or on the following Sunday. Germanus of Constantinople (P. G., XCIII, 44) says they taught eight heavens and eight degrees of damnation. The Christian emperors from Constantine onwards made laws against them, which were scarcely put into execution, as its power was not yet general. Later they became a small and secret sect. The bones of Montan was dug up in 861. The numerous Montanian writings (βιβλία τοῦ προφήτη, "Philosophumenen", VIII, xix) are all lost. It seems that a certain Asterius Urbanus made a collection of the prophecies (Euseb., V, xvi, 17).

The notion of the origin of Montanism, originated by Ritschl, has been followed by Harnack, Bonwetsch, and other German critics. The secularising in the second century of the Church by her very success and the disappearance of the primitive "Enthusiasmus" made a difficulty for "those believers of the old school who protested in the name of the Gospel against this secular church, and who wished to gather together a people prepared for their God regardless alike of numbers and circumstances". Some of these "joined an enthusiastic movement which had originated amongst a small circle in a remote province, and had at first a merely local importance. Then, in Phrygia, the cry for a strict Christian life was reinforced by the belief in an imminent coming of Christ. The"wish was, as usual, father to the thought; and thus societies of 'spiritual' Christians were formed, which served, especially in times of persecution, as rallying points for all those, far and near, who sighed for the end of the world and the euruscos e aculco, and who wished in these last days to lead a holy life. These sects halted the spread of the Paraclete in Phrygia, and surrendered themselves to his guidance" (Harnack in "Encycl. Brit.", London, 1878, s. v. Montanism). This ingenious theory has its basis only in the imagination, nor have any facts ever been advanced in its favour.

FUNK in Kirchenle. (1893), s. v. Montanismus: JUTTEN, Er.

JOHN CHAPMAN.

Montauban, Diocese of (Monts Albari), suffragan of Toulouse, comprises the entire department of Tarn and Garonne. Suppressed in 1802 and divided between the three neighbouring dioceses of Toulouse, Agen, and Cahors, Montauban was re-established by imperial decree of 1809, but this measure was not approved by the Holy See. Re-established by the concordat of 1817, it was filled only in 1824. In 820 the Benedictine monks had founded the Abbey of Montauriul under the patronage of St. Martin; subsequently it adopted the name of its abbot St. Theodard, Archbishop of Narbonne, who died at the abbey in 893. The Count of Toulouse, Alphonse Jordan, a nephew of Charlemagne, was buried on the heights overlooking the right bank of the Tarn, and founded there the city of Montauban; a certain number of inhabitants of Montauriul and serfs of the abbey formed the nucleus of the population. The monks protested, and in 1149 a satisfactory agreement was concluded. Notwithstanding the sufferings of Montauban during the Albigensian Crusade, the abbey flourished. The Council of 1215 is to be considered the abbey's consti
d sail. With the Bull "Salvator" (25 June, 1317), separated from the ecclesiastical province of Narbonne, the See of Toulouse, made it an archiepiscopal see, and gave it as suffragans four dioceses created within its territory: Montauban, St.-Papoul, Rieux, Lombez, Bertrand de Puy, abbot at Montauriul, was first Bishop of Montauban; and among its bishops: Cardinal Georges d'Amboise (1484-1491), minister of Louis XII, and Jean de Lettes (1539-1556), who married and became a Protestant. Despite the resistance of Jacques de Prés-Montpezat (1556-1589), a nephew of Jean de Lettes who succeeded him as bishop, the Calvinists became masters of the city; in 1561 they interdicted Catholic worship; the destruction of the churches, and even of the cathedral, was begun and carried on until 1567. In 1570 Montauban became one of the four strongholds granted the Protestants and in 1578, 1579, and 1584 harboured the synods held by the députés of the Reformed Churches of France. For a short time the Spirit of Reformation was established but was soon suppressed; Bishop Anne Carrion de Murvilo (1600-1652) withdrew to Montech during the greater part of his reign and administered thence the Church of Montauban. In spite of the unsuccessful siege of Montauban by Louis XIII (August-November, 1621), the fall of La Rochelle (1627) entailed the subjection of the city, and Richelieu entered it on 20 August, 1629. Other bishops of note were: Le Tonnellier de Breteuil (1762-1794), who died during the Reign of Terror in the prison of Rouen, after converting the philosopher La Harpe to Cathol
cism; the future Cardinal de Cheverus (q. v.), 1824-

The Church of Moissac, whose portal built in 1107 is a veritable museum of Romanesque sculpture, de

notices; its cloister (1100-1108) is one of the most remarkable in France. Legend attributes to Clovis the foundation of the Abbey of Moissac in 596, but St. Amand (594-675) seems to have been the first abbott. The abbey grew, and in a few years its posses
sions extended the suburbs of Toulouse. The threats and incursions of the Saracens, Hungarians, and Northmen brought the monks of Moissac to elect "knight abbots" who were laymen, and whose mission was to defend them. From the tenth to the thirteenth century several of the counts of Toulouse were knighth-
abbeys of Moissac; the death of Alfonso II (1271) made the King of France the legitimate successor of the counts of Toulouse, and in this way the abbey came to depend directly on the kings of France, henceforth its "knights-abbeys". Some of the abbots were saints: St. Aubert (983-978); St. Léonardis (678-693). The Abbey of Cluny was begun by Abbot Stephen as early as 1047, and completed in 1063 under Abbot Durand. Four filial abbeys and numerous priories depended on the Abbey of Moissac. Among the commendatory abbots were Louis of Lorraine, Cardinal de Guise (1556-1578); Charles of Lorraine, Cardinal de Vaudemont (1578-1590). In 1618 Moissac was united with the priory of Les Arques in the church which had, among other titulars, Cardinal Mazarin (1644-1661), and Cardinal de Loménie de Brienne, minister of Louis XVI (1775-1788). On 25 July, 1753, fifteen inhabitants of Moissac, after they had made a pilgrimage to Compostella, grouped themselves into a confraternity "à l'heur de Dieu de Notre Dame et Monseigneur Saint Jacques". This confraternity, reorganized in 1616 by letters patent of Louis XIII, existed for many years. As late as 1830 "pilgrims" were still seen in the Moissac processions. In fact Moissac and Spain were long closely united; a monk of Moissac, St. Géraud, was Archbishop of Braga from 985 to 1009. The general synod of the Regulars held at Montpellier in 1145 was to give meaning to the creation of an academy at Montauban; it was opened in 1600, was exclusively Protestant, and gathered students from other countries of Europe. In 1632 the Jesuits established themselves at Montauban, but in 1659 transferred the Academy to Puylaurens. In 1816, a faculty of Protestant theology was created at Montauban.

The principal pilgrimages of the diocese are: Notre Dame de Livron or de la Déléverance, visited by Blanche of Castille and Louis XIII; Notre Dame de Lorm, at Castelferrus, dating from the fifteenth century; Notre Dame de la Peyrouse, near Lafrançaise. Before the application of the law of 1901 as to associations, the diocese counted 127 parishes, and various orders of School Brothers. Among the congregations of women which originated in the diocese we mention: Sisters of Mercy, hospitaliers and teachers, founded in 1804 (mother-house at Moissac); Sisters of the Guardian Angel, hospitaliers and teachers, founded in 1839 at Quillan in the Diocese of Cambrai; Sisters of the Daughters of Wisdom, whose mother-house was transferred to the château de La Molle, near Montauban in 1858. At the beginning of the twentieth century the religious congregations had charge of: 1 creche, 24 day nurseries, 10 girls' orphanages, 1 refuge (œuvre de réhabilitation), 2 houses for the relief of the poor, 11 hospitals or ancillaries, 30 houses for the care of the sick in their own homes. In 1905 the Diocese of Montauban counted 188,563 inhabitants, of whom 7000 were Protestants; 31 parishes; 296 curing parishes; 85 vicariates.

Montaut, Xavier Barbière de, b. at Loudun, 6 February, 1850; d. at Blasay, Vienne (France), 29 March, 1901. He came of a noble and large family, and, when only eight years old, was confided to the care of his great-uncle, Mgr Montaut des Isles, Bishop of Angers. He studied theology at the Seminary of St. Stupice, and went to Rome to continue his studies in theology and archaeology at the Sapienza and the Roman College. After four years his health obliged him to return to France (1887), where he was appointed historiographer of the Diocese of Angers. He searched the archives of the diocese with great diligence, studied its inscriptions and monuments, and founded a diocesan museum, a project in which de Crévecœur took a lively interest. After fourteen years in Rome (1881-1905) enabled him to augment his already extensive knowledge of liturgy and Christian antiquities. Meanwhile he was of great service to different French bishops as canonical consultant, and at the Vatican Council acted as theologian to Mgr Desfleurs, Bishop of Angers. His first archeological study appeared in 1858 in the "Annales archéologiques," and Didron assigned him the task of making an index for this publication. Mgr Barbier de Montaut was one of the most prolific contributors to the "Revue de l'art chrétien" from the inception of this periodical, his articles continuing to appear until 1903 (two years after his death). He also wrote numerous articles for other reviews as well as several separate works on iconography, ecclesiastical furniture, liturgy, canon law, etc. In 1889 he began to reprint his scattered works, classifying them according to subjects. This publication was to comprise sixty volumes, but went not further than the sixteenth, and is to be recommended more for its erudition than for its critical value. Works: "Œuvres complètes" (unfin.) I. "1598, dossier du concile du Vatican." II. "Le Pape." IV-V. "Droit papal." VI-VIII. "Dévotions populaires." IX-XVI. "Hagiographie" (Rome, 1889-1902). "Traité d'iconographie chrétienne" (2 vols., Paris, 1890); "Collection des décrets authentiques des ss. congrégations romaines" (8 vols., Rome, 1872). Barbière, Mgr Xavier Barbière de Montaut in Revue de l'art chrétien, (1901), 357-60; Girou, Mgr X. B. de Montaut, bio-bibl., Hommes (1910).

R. MAERE.

Montboissier, Peter of (better known as Peter the Venerable), Blessed, born in Auvergne, about 1092; died at Cluny, 25 December, 1156. His mother, Blessed Rainarde, offered him to God in the monastery of Sauxillanges of the Congregation of Cluny, where he made his profession at the age of seventeen. He was only twenty years old when he was appointed professor and prior of the monastery of Vézelay, and he discharged his duties in that house, and later in the monastery of Domène, with such success that at the age of thirty he was elected abbot of Cluny, which then counted not less than 2000 houses throughout Europe, was in need of reform. The abbot had begun this work when his predecessor, the Abbot Pontius, who had been deposed by the pope, attempted to be reinstated in his office by violence. Our saint had to face other attacks made on his order by St. Bernard himself, who did not fall however to acknowledge the eminent virtue of Peter and was the first to call him Venerable. Peter resisted the attacks with both firmness and meekness, and took occasion of them to write the rules of the Congregation of Cluny, one of the most complete and perfect codes of religious life. He was prominent in resisting the schism caused by the Antipope Anacletus II, after the death of Honorius II (1130). With St. Bernard, he was the soul and the light of the General Council of Pisa (1134), and having encouraged Innocent II to stand firm in the midst of persecutions, he predicted the end of the schism, which happened in 1138.

During a visit to Spain (1139) he became interested in Mohammadanism and had the first time translated into Latin. He made several journeys to Rome, where the popes entrusted him with delicate missions, and he accompanied Eugene III to the Council of Reims (1147), where the doctrines of Gilbert de la Porte were condemned. Kings and emperors came to him for advice and in the midst of his
labours he found time to write numerous letters, valuable theological works on the questions of the day, the Divinity of Christ, the Real Presence, against the Jews and the Mohammedans, and concerning the statutes and privileges of his church. He succeeded in his task after a sublime sermon to his brethren on the mystery of the day". Honoured as a saint by both the people and his order, he was never canonized; Pius IX confirmed the cult offered to him (1862).

A. Fournet.

Montcalm-Gozon. Louis-Joseph, Marquis de, a French general, b. 28 Feb., 1712, at Candiac, of Louis-Diégo de Gozon, lord of Montcalm, a rich merchant, and his wife. He was descended from Gozon, Grand Master of Rhodes of legendary fame. The warlike spirit of his ancestors had given rise to the saying: "War is the tomb of the Montcalms." Though less clever than a younger brother, a prodigy of learning seven, Louis-Joseph was a classical scholar. A soldier at fifteen, he served as a lieutenancy in the corps of Grenadiers and German. He served successively at the sieges of Kehl and Philippsbourg, and became a knight of St. Louis (1741) after a campaign in Bohemia, and was appointed colonel of the Auzerrois regiment (1743). He received five wounds at the battle of Piacenza. In 1756 he had married Angélique-Louise Talon de Boylay, grand-niece and heiress of the intendant Talon, bearing that name. Of this union were born ten children. In 1755 he succeeded the ill-fated Dieskau, in the command of the French army in Canada, under governor Vaudreuil. The dissonance of character between the two chiefs was to cause much friction during this trying period. Unlike his superior, Montcalm was quick in conception, genial and gregarious, relying and decisive in action. Intendant Bigot's unscrupulous dishonesty, the apathy of the French court for the "few arpents of snow", an impoverished colony, an ill-fed, ill-clad and badly provided army, all this enhances Montcalm's heroism courage and faithfulness to duty. He was ably seconded by the skilful, patient and wise intendant de Lévis. The disparity in numbers and resources between the belligerent forces rendered more arduous the problem to be solved. Yet it was only after a record of three brilliant victories that he was to end his glorious career on the Plains of Abraham. First in order of time comes the capture of Chouaguen (Oswego), an undertaking wherein all toiled and laboured, all diffidence, Montcalm succeeded (14 Aug., 1758), thereby winning the region of Ontario to the domination of France, and with a few badly armed troops taking 1600 prisoners, 5 flags, 100 guns, at the cost of only 30 killed and wounded. Attributing his success to God, he raised a cross with the inscription: "In hoc signo vincent." In connexion with a later triumph, the capture of Fort William Henry (9 Aug., 1757), Montcalm has been accused of tolerating the massacre by the Indians of the English prisoners. Yet, even Bancroft admits that he exposed himself to death to stop the savages infuriated by the rum given them by the English contrary to his orders. The ill-fated and great city of Quebec, ceded by Lévis and Bourlamaque, was at Carillon (Ticonderoga), a battle which was to result either in the salvation or destruction of New France. Although a first encounter (5 July, 1758) had proved disastrous to the French, the death of the valiant young Lord Howe, the real head of the English troops, deprived Abercorn of his chief support. On the 9th the onslaught of the entire Anglo-American army was rendered impossible by the earthworks and complicated barricade of felled trees protecting Fort Carillon; while a deadly fire decimated the assailants. When the fray was over 2000 English soldiers lay killed or wounded, while the French losses were only 104 killed and 248 wounded; 4000 men had repulsed 15,000. In thanksgiving to the God of Hosts, Montcalm raised a cross with an inscription.

After arresting the invasion by land, Montcalm had to face the attack of the naval forces. During the siege of Quebec by Wolfe, Montcalm with Lévis won a first victory at Montmorency Falls, with a loss of 450 to the English (31 July, 1759). But the final act was drawing nigh, which was to seal the fate of New France. On 13 Sept. the enemy stealthily scaled the Heights of Abraham, and at early morn was ranged in battle. Montcalm, thunderstruck by the unexpected tidings, hurried from Beaufort and arrayed his troops. Though about equal in numbers, they were deficient of discipline, ignoring the principles of surprise, hardship, privation, fatigue, and a disadvantageous position. Both generals fell, Wolfe dying on the battle-field, and Montcalm the next morning. This battle, considered in its results, was one of the greatest events of the eighteenth century. It saved Canada from the French Revolution and heralded the dawn of American Independence. A brave and generous commander, a high-minded and disinterested patriot; a faithful Christian giving to God the glory of his victories. His memory is cherished in the Old and the New World. In Canada he shares the honours awarded to his victor, as the following inscription on their joint monument testifies:

Communem famam historia Monumentum posteritatis dedit.

—a tribute duly anticipated by the French Academy in the last words of the hero's epitaph in the chapel of the Ursuline monastery:

Galli jugentes depopuerunt et generosae hostium fidei
Commune furores spectantes novis
(26 June, 1759) (The French mourned and buried him and commended him to the enemies' generosity).

Lionel Lindsay.

Monte Cassino, Abbey of, an abbey nullius situated about eighty miles south of Rome, the cradle of the Benedictine Order. About 529 St. Benedict left Subiaco, to escape the persecutions of the jealous priest, Florentius (see BENEDICT OF NURSIA, SAINT). Accompanied by a chosen band, among them Sts. Maur and Placid, he vowed to erect a monastery on the lands which the emperor gave to him by Tertullian, Placid's father. The town of Cassino (Cassino), lying at the foot of the mountain, had been destroyed by the Goths some thirty-five years earlier, but a temple of Apollo still crowned the summit of the mountain, and the few remaining inhabitants were still sunk in idolatry. Benedict's first act was to break the image of Apollo and destroy the altar, on the site of which he built a church dedicated to St. John the Baptist, and an oratory in honour of St. Martin of Tours. Around the temple there was an enclosing wall with towers at intervals, the arx (cittadel) of the destroyed city of Cassinium. About one of the towers the saint took up his abode, and to this fact its preservation is due, for, while the rest of the Roman arx has been destroyed, this tower has been carefully pre-
served and enclosed in the later buildings. Outside
the existing monastery, however, there still remains a
considerable part of a far more ancient enclosure, viz.
a cloistered wall some twenty-six feet high and four-
teen and a half feet in thickness, which once ran down
the mountain side enclosing a large triangular space
that contained the Cassinum of pre-Roman times.
Once established at Monte Cassino, St. Benedict never
left it. There was written the Rule whose influence
was to spread over all Western monachism; there he
received the visit of Totila in 542, the only date in his
life of which we have certain evidence; there he died,
and was buried in one tomb with his sister, St. Schol-
astica. After the saint’s death, the abbey continued to
flourish until 580, when it was pillaged and burned by
the Lombards, the surviving monks fleeing to Rome.
Here, welcomed by the pope, Pelagius II, and
permitted to establish a monastery beside the Lateran
Basilica, they remained for a hundred and thirty
years, during which time Monte Cassino seems not to
have been entirely deserted, though nothing like a
regular community existed there. To this period also is
assigned the much discussed translation of St.
Benedict’s body to Fleury in France, the truth of
which it seems almost impossible to doubt. (See
FLEURY, ABBEY OF.)

The restoration of Monte Cassino took place in 718,
when Abbot Petronax, a native of Brescia, was
entrusted with this task by Gregory II. Helped by some
of the Lombard monks, Petronax restored the buildings at Monte Cassino and built a
new church over the tomb of St. Benedict. This
was consecrated in 748 by Pope Zachary in person,
who at the same time confirmed all the gifts made to
the monastery and exempted it from episcopal juris-
diction. The fame of the abbey at this period was
great, and, among the monks professed, may be men-
tioned Caribon, the son of Charles Martel, Racis,
brother of the great Lombard Duke Astolf, and Paul
Warnefrid (usually called Paul the Deacon), the his-
torian of the Lombards. Towards the middle of the
ninth century the Saracens overran this part of Italy
and Monte Cassino did not escape. In 884 Abbot
Bertarius and some of his monks were killed, the rest
fleeing to Teano. Within two years the restoration of
Monte Cassino was begun, but Teano retained the
being brought from Amalfi, Lombardy, and even Con-
stantinople to supervise the various works. The
abbey church, rebuilt and decorated with the utmost
splendour, was consecrated in 1071 by Pope Alexan-
der II, who was assisted by ten archbishops, forty-
four bishops, and so vast a crowd of princes, abbots,
monks, etc. that, the enthusiastic chronicler declares,
“it would have been easier to number the stars of
heaven than to count so great a multitude.” A de-
tailed account of the abbey at this date exists in the
“Chronica monasterii Cassinensis” of Leo of Ostia

From this date a decline set in. The unsettled
condition of Italy and the great strategical value of
Monte Cassino involved the abbey in the constant
political struggles of the period. In 1239 the monks
were driven out of their cloister by Frederick II, but
returned thither under Charles of Anjou. In 1294
Celestine V endeavourd to unite Monte Cassino to
his new order of Celestines (q. v.), but this scheme
collapsed on his abdication of the papacy. In 1321
John XXII made the church of Monte Cassino a
cathedral, the abbot becoming bishop of the newly
constituted diocese, and his monks the chapter. There
is no doubt that this was done with the best of in-
ten tions, as an additional honour to the great abbey;
in practice, however, it proved disastrous. The
bishops of Monte Cassino, collected monks from other
dioceses to reinforce the community, and in 1370 ap-
pointed Andrew of Faenza, a Camaldolese, as superior.
The revival, however, was short-lived; in 1454 the
system of commendatory abbots was reintroduced and
lasted until 1504, when Julius II united Monte Cas-
sino to the recently established Congregation of St.
Justina of Padua (see BENEDICTINES), which was
thenceforth known as the Cassinese Congregation.
In 1799 the abbey was taken and plundered by
the French troops who had invaded the Kingdom of
Naples, and in 1866 the monastery was suppressed in
common with all other Italian religious houses. At

The bulk of the community until 949, when Abbot Alig-
erus effected the return. The autograph copy of
St. Benedict’s Rule, which had been preserved till now
through all the vicissitudes of the community’s exist-
ence, perished in a fire during the stay at Teano. The
high state of discipline at Monte Cassino about this
time is vouched for by St. Nilus, who visited it in the
latter half of the tenth century and again by St. Odilo
of Cluny some fifty years later. The abbey’s reputa-
tion reached its zenith, however, during the reign of
the present day Monte Cassino is the property of the Italian Government, which has declared it a national monument; the abbey, however, is recognized as Guardian in view of his administration of the diocese. The reigning abbot is Dom Gregorio Diamare (elected 1909); the community (1909) consists of thirty-seven choir monks and thirty lay brothers. The present building, a monastery, a lay school with 126 boarders and two seminaries, one open to all and the other reserved for the Diocese of Monte Cassino with 76 and 50 pupils respectively. In the management of these institutions the monks are assisted by a number of secular priests.

The present buildings form a vast rectangular pile externally more massive than beautiful. The ancient tower of St. Benedict, now a series of chapels elaborately decorated by monastic artists of the Beuron school, is the only portion dating back to the foundation of the abbey. The entrance gate leads to three square court-yards opening out of one another with arcades in the Doric order. These date from 1515 and are attributed, on somewhat slight evidence, to Bramante. From the middle court-yard an immense flight of steps leads to the atrium or forecourt of the basilica. This quadrangle has an arcade supported by ancient columns taken from the basilica of Abbot Desiderius, and probably once in the devotees of the abbey. The vast buildings contain, besides the present church stands. The existing church, the fourth to occupy the site, is from the designs of Cosimo Fanzaga. It was begun in 1649, and was consecrated in 1727 by Benedict XIII. In richness of marbles, the interior is said to be surpassed only by the Certosa of Pavia, and the first impression is one of stinging magnificence. On closer inspection, however, the style is found to be somewhat decadent, especially in the plasterwork of the ceiling, while the enormous profusion of inlaid marble and gilding produces a slightly restless effect. Still it is undoubtedly the finest example of Florentine mosaic work in Europe, and the general colour scheme is excellent. The church is cruciform in plan, with a dome at the crossing, beneath which is the high altar. Behind this altar is the choir with its elaborately carved stalls. The tomb of St. Benedict is in a crypt chapel beneath the eastern portion of the church, but it is extremely doubtful whether any relics of the saint now remain there. This church has recently been redecorated with frescoes from designs by artists of the Beuron school, the severity of which contrasts markedly with the slightly Rococo paintings by Luca Giordano in the church above. The sacristy contains the ancient pavement of opus alexandrinum, which was formerly in the basilica of Abbot Desiderius. In the left transept is the monument of Pietro di Medici, son of Lorenzo the Magnificent, and brother of Leo X. This tomb, which is by the great architect Antonio di Sangallo, is unquestionably the most beautiful and dignified work in the whole building. The west door, a bronze piece of the twelfth century, is engraved with the names of all the parishes in the Diocese of Monte Cassino. The kitchens are approached from the ground-floor by a long covered passage on an inclined plane, large enough for two mules laden with provisions to pass. This curious structure dates from the twelfth century and is lit by an exquisite marble window of four arches in the style known as Cosmatesque. The buildings as a whole produce an effect of great dignity and magnificence, and are isolated from the inaccessibility of the monastery and the extreme severity of the exterior. The view from the "Loggia del Paradiso" or forecourt, is one of the most famous in Southern Italy.

The archives (archivium), besides a vast number of documents relating to the history of the abbey, contains some 1400 manuscript codices chiefly patristic and historical, many of which are of the greatest value. The library contains a fine collection of modern texts and apparatus criticus, which is always most courteously put at the disposal of scholars who come to work on the manuscripts. When the abbey was declared a national monument, orders were given that no building or transport of building material, not even the National Library at Naples; but, owing to the personal intercession of Mr. Gladstone, then Prime Minister of England, the order was reversed, and instead one of the community was appointed as Archivist with a salary from the Government, an arrangement which still continues.

The Diocese of Monte Cassino includes most of the Abruzzi, and is one of the most extensive in Italy. It was formed by uniting seven ancient dioceses, a fact which is borne in mind by the interesting custom that, when the abbot sings pontifical High Mass, he uses seven different precious mitres in succession. As ordinary the abbot is directly subject to the Holy See, and the choir monks take rank as the chapter of the diocese, of which the abbatial basilica of Monte Cassino is the cathedral. The conferring of sacred orders, blessing of Holy Oils, and administration of the Sacrament of Confirmation are the only pontifical functions which the abbot does not exercise. The vicar-general is usually one of the community.

G. ROGER HEDSTON.

Montefeltro, Diocese of (Forlì-terna), in the province of Urbino, in the Marches, Central Italy. The earliest mention of it, as Mons Feretri, is in the diplomas by which Charlemagne confirmed the grants of Pepin the Short to the Holy See. Montefeltro was then the seat of counts, who became imperial vicars in 1135, and Counts of Urbino in 1213. Their rule was interrupted from 1322 to 1375, when Ederigo I of Montefeltro and Urbino succeeded in recovering the territory. This prince and his successors made several attempts to recover Montefeltro, from which Cardinal Albornoz (1359) again expelled them in the person of Nofilo. The elder Guido of Montefeltro, a famous Ghibelline captain, finally became a Francisan, and died in 1268. The first known bishop of Montefeltro was Agahto (839), whose residences were at Pesaro, Urbino, and Ravenna; he was Valentino (1173), who finished the cathedral; Benvenuto (1219), deposed as a partisan of Count Ederigo; Benedetto (1390), a Benedictine monk, rector of Romagna and Duke of Spoleto; the Franciscan Giovanni Seclani (1413), who built the episcopal palace of Calamelle; Cardinal Ennio Filonardi (1549); Giovanni Francesco Sarmani (1567), founded by the commendatory of Pennabili, thenceforth residence of the bishops, the episcopal see having been transferred to that town from San Leo, an important fortress of the Pontifical States. Under Bishop Flaminio Dondi (1724) the see was again transferred to San Leo, but later it returned to Pennabili. This diocese is suffragan to Urbino, and has 19 parishes, 33 vicariates, 30 regulars, 69,350 Catholics, 9 religious houses of men, 9 of women, 2 educational institutions for male students, and 3 for girls.

CAPPENETTI, La Chiesa d' Italia, III (Venice, 1857).
Montefiascone, Diocese of (Montis Falsici), in the province of Rome. The city is situated nearly 2000 feet above sea-level, on a tufa mass that overlooks the Lake of Bolsena; it is famous for its wine. The town is of Etruscan origin and was called Falsicorum. Tradition believes that it is the ancient Fanum Volturnum. For the Falsicans, and later for the popes, it was a most important strategic position; Gregory IX fortified it in 1235 against Frederick II, but the town surrendered to that prince in 1240, and thenceforth never regained its earlier importance. The castle, now in ruins, was restored by Leo X. The cathedral is the work of Sanmichieli (1519). Outside the city, on the road to Bolsena, is the famous double basilica of San Flaviano, the lower portion of which dates from 1030, while the upper basilica, dating from 1262, presents the interesting feature of alternating ogive and round arches. There also is the tomb of that famous drinker whom the wine of Montefiascone brought to his death (Est, Est, Est), and who, contrary to report, was neither a canon nor one of the Fugger family of Augsburg. Montefiascone is the birthplace of the poet Giambattista Casti, who died in 1802. This city, originally in the Diocese of Bagnaia, was made an episcopal see in 1369; its first bishop was the French Augustinian Pierre d'Anguiscen (1376), a partisan of the antipope Clement VII. In 1435 the see was united with that of Corneto, and so remained until, in 1584, Corneto became a part of the Diocese of Civitavecchia.

Among its bishops were Alessandro Farnese (1490), later Paul III; the two brothers and cardinals Paolo Emilio Zaccaria (1601) and Ludovico Zaccia (1605), both of whom did much for the building of the cathedral; Cardinal Paluzio Albertoni Altieri (1660), founder of the seminary and restorer of the cathedral, which was damaged by a fire in 1670; the learned cardinal M. Antonio Barbarigo (1687), who was transferred later to Padua; he gave great assistance after the earthquake of 1695; Cardinal Pompeo Aldobrandini (1734); the learned Giuseppe Garangi (1776), who gave his library to the seminary, and Cardinal Giovanni Sifredo Manzy (1794); the attitude of this prelate towards Napoleon was not imitated by his clergy, who therefore suffered imprisonment and exile. The diocese is directly dependent on the Holy See; it contains 18 parishes, 14 secular priests, 21 regulars, 26,147 inhabitants, 3 religious houses of men, 14 of women, and 3 convent schools for girls.

U. BENIGNI

Montemayor (Montemór), Jorge de, writer, b. at Montemór, province of Coimbra, Portugal, about 1520; d. at Turin, 26 February, 1561. Although of Portuguese birth, Montemayor occupies a prominent place in the history of Spanish letters. Little is known of his life. We are informed, however, that he was not a man of university training, being not even acquainted with Latin.

The work which has given him fame is his pastoral novel “La Diana”, published, according to common report, at Valencia, in 1542, but thought by others, from allusions in the work itself, to have been published after 1564, probably in 1558 or 1559. This book, which for a long time served as a model for novels of its kind, is written in good Spanish prose, and in it the author describes certain incidents in his own life, among others an unfortunate love affair. The portions written in verse are not so meritorious as those written in prose. The author promises a sequel which never appeared. Three other “Dianas” appeared, however, which purported to be continuations of Montemayor’s. One by Alonso Perela, who claimed that Montemayor had entrusted to him his plans for finishing the work, appeared in 1564 and was a failure. The two others, by Gaspar Gil Polo in 1564 and by Jerónimo de Tajadas in 1567, were more deserving of praise.

The “Diana” enjoyed great popularity and led to many imitations by famous authors, notably “La Arcadia” of Lope de Vega, and “La Galatea” of Cervantes, and it is said that Shakespeare used his “Two Gentlemen of Verona” upon an episode in “La Diana”. It went through many editions both in and out of Spain. There are six French, two German, and one English translation of the book, the latter the work of Bartholomew Wilde (London, 1598). Montemayor has also left a number of lyric poems, published in 1554 under the title of “Cancionero”, and reprinted in 1562, 1572, and 1588. These are also written in Spanish, but are not of any particular merit.

VENTURA FUENTES

Montenegro, a kingdom in the Balkan Peninsula, on the east coast of the Adriatic Sea; the territory was in ancient times a portion of the Roman province of Dalmatia. Emperor Diocletian made Southern Dalmatia a separate province, Prevalis (Diocles, Dicletiania) with Diocles as its capital. From the seventh century the north-western portion of the peninsula began to be invaded by Slav tribes; one of these, the Serbs, settled in the territory which they still possess, and founded there severai principalities (Zupanate), the most southern of which was that of (or on the site of the ancient Diocles) Duklja. From Zeta sprang the Nemanjiden family, under whose autocracy the Servian Empire attained its greatest power (see Servia). Stefan I Nemanja was recognized as Chief Zupan by Emperor Manuel I, in 1165; having reduced into submission the stubborn lesser Zupans, he embraced the Orthodox Faith, and then began to organize the Servian Church. His youngest son, Sava, or Sabas, after being appointed first Orthodox Archbishop of Servia in 1221, founded a see for Zeta in the monastery of St. Michael near Cattaro. In the Empire of the Serbs, each heir apparent to the throne was first appointed administrator of the Province of Zeta. However, under King Stefan Dušan (1331-55) a member of the Balacica family was named Governor...
of Zeta. From 1380 to 1421 this family ruled in Zeta, notwithstanding the constant opposition of the Cner-
nojević family, settled in Upper Zeta. On the de-
solution of the Great Serb Empire by the Turks
the battle of Amsfeld in 1389 Zeta became the
refuge of the most valiant of the Serbs, who refused to
submit to the Turkish yoke.

At the beginning of the fifteenth century, the Ve-
etianans established a settlement on the eastern coast of
the Adriatic, and conquered a portion of the Ser-
bian Empire in Asian Albania, which had been in the
possession of the opposition of the people.

As vassal of the Venetians, Ivan Cernojević, the son
of Stefan (brother-in-law of Skanderbeg), secured for
himself sovereign authority. He founded the mon-
astery of Cetinje about 1478 or 1485. It was dur-
ing this period that the land received the name of
Crnauga, or Montenegro. Under Ivan's son, George
(1493-5), the first Slav liturgical books were printed
at Obod (1493-5). In 1516 he abdicated and the
people invested the bishop (vladika), who was also
superior of the mon-
astery at Cetinje,
with supreme secular
authority. Subse-
quently the bishop,
who until 1697 was
always chosen by the
National Assembly,
was both spiritual and temporal ruler of the little state,
although he named a secular governor of the opposition of the people.
The Turks made re-
peated attacks dur-
ing the fifteenth cen-
tury on the freedom of the Montenegrins, and kingdom. The Montenegrins,
notwithstanding their heroic opposition, were fi-
nally forced to make their submission, and from 1430 to 1530 had to pay tribute to the Sanjak
of Scutari. In domestic affairs, however, they re-
mained independent, and the sovereignty of the
Porto was mostly of a purely nominal character.

Frequently the little nation, which (according to the
description of the Italian Mariano Bolissia in 1611)
then contained 90 settlements and 9077 armed men,
engaged in war with the Turks, being often assisted
with money and arms by the Venetians.

In 1696 Danilo Petrović, of the Njepeš family, was
elected vladika, and made the episcopal dignity hered-
itary in his house, the vladika, who as bishop could
not marry, being succeeded on his death by his
nephew or brother. As prince of a nation recognizing
the Porto as its Church, Danilo inaugurated closer rela-
tions with Russia, which held the same religious beliefs,
and Peter the Great undertook the protectorate of
Montenegro in 1710. Since that date the Montene-
grins have always shown themselves the faithful allies
of Russia in its wars against the Turks, although at
the end of these wars they usually reaped no advan-
tages. They, however, often made large con-
tributions of money to their poor allies; in 1714 Peter
I contributed 10,000 rubles towards the relief of those
whose property had been burnt and for the rebuilding
of the destroyed monasteries; in 1715 he assigned an
annual contribution of 500 rubles and other presents
to the monastery of Cetinje; and in 1857 Emperor
Nikola I contributed 400 rubles in the prince a fixed annual in-
come of 9000 ducate.

The most prosperous era of Montenegro opened
with the reign of Vladika Peter I Petrović (1777-
1830), who repelled unaided a fierce attack of the
Turks in 1796 and rendered valuable aid to the Rus-
sians against the French during the War of 1813.
Because of his glorious reign, Peter was proclaimed
a saint by the people in 1834. He was succeeded by
Peter II Petrović (1830-51), who was educated at
St. Petersburg; this monarch, who was a distinguished
poet, rendered valuable services to his country by
raising its intellectual and commercial condition.
Having abolished the office of vojvoda, which had
been too frequently the occasion of strife, he took into
his own hands the secular administration, founded
schools, instituted a system of taxation, organized
a guard as the nucleus of a standing army, and es-
tablished a senate of twelve members. His successor
and nephew, Danilo (1851-60), transformed Montenegro
from a secular state, disturbed by ecclesiastical con-
fusion, and undertook the administration of a
secular prince. At a national assembly held at
Cetinje on 21
March, 1852, the
separation of the
spiritual and secular powers of the
vladika was
taken. The
supreme ecclesiasti-
cal authority
entrusted to the archi-
mandrite of the mon-
astery of Ostrog.
In the same year Russia and Austria recog-
nized Montenegro
as an hereditary,
secular, and indepen-
dent state. The
Porto, however,
which still regarded
the vladika as a
"portion of its Ra-
jahs temporarily in
revolt," refused its
recognition and sent
an expedition of 60,
000 men against it.
When the land seemed about to be overwhelmed by
such huge forces, Austria interfered in its behalf, and com-
pelled the Porto to discontinue the war. The politi-
cal position of the land, however, remained still
undefined. In 1858, when the Turks attacked Monte-
negro without any declaration of hostilities, the Euro-
pean Great Powers, especially France and Russia,
came forward as its protectors, and a compromise of
the Powers fixed the frontiers of the country, whose
territory was increased by a few districts.

In 1860 Danilo was shot by a Montenegrin deserter
and, as he left behind only a daughter two years old,
his widow secured on 14 August, 1860, the election of
the youngest son of Danilo's brother, who still
ruins. Montenegro's participation in the
emergence of Herzegovina led in 1862 to a war with Turkey,
during which the Turks invaded the land and occu-
pied Cetinje. The Peace of Scutari conceded to the
Turks various fortresses along the road leading from
Herzegovina through Montenegro to Scutari. In
1870, however, the Porto surrendered its right to oc-
cupy these fortresses. In 1875, when the war again occurred in Bosnia, Nikita, who controlled an army of 15,000 well-armed troops, formed an alliance with the Bosnians against the Turks, and prosecuted the
war with success until 1878. Not only did he repel
all the Turkish attacks, but he even succeeded in
capturing Anti-vari (thus securing a long-desired
maritime outlet for his country) and Danilo in 1879.
At the Congress of Berlin Turkey recognized
the political independence of Montenegro (13 July, 1878),
the territory of which was now more than doubled. According to Article 29 of the Treaty of Berlin, however, Montenegro might neither keep ships of war, nor fortify the coast, and was obliged to recognize the right of Austria to police the coast. It was only in 1909 that the country secured a release from these conditions. When Austria-Hungary annexed Bosnia and Herzegovina in October, 1908, and thereby annulled the dreams of Montenegro and Servia of a United Servian Empire, Montenegro protested in common with Servia and, encouraged by Russia, demanded from Austria the annulment of Article 29 of the Treaty of Berlin and the evacuation of Spizza. In April, 1909, Austria agreed to the abrogation of Article 29, but refused to surrender Spizza, and secured the retention of that portion of the Berlin Treaty, which forbade the transformation of Antivari into a naval station. In 1905 Nikita granted the country a constitution and a national assembly elected by popular suffrage. Although the economical resources of the land are small, and its cultural conditions, notwithstanding the great progress made in the last fifty years, leave much to be desired, it occupies a position of increased consideration and importance with regard to the Balkan politics of the European powers on account of the ability of its ruler and its intimate relations with Russia, Italy, and Servia. In 1900 Prince Nikita received the title of Royal Highness, and in August, 1910, with the assent of all the people, crowned himself king. On that occasion Russia gave expression to the ancient friendship existing between the countries by naming the new king General Field-Marshal, the heir-apparent Major General, and Prince Mirko Lieutenant Colonel of the Russian Army.

Monte is 230 square miles and a population of 260,000 inhabitants, of whom the great majority are of unmixed Serb stock. About 223,500 belong to the Greek Orthodox Church; 12,900 are Catholics (mostly Albanians), and about 14,000 are Mohammedans. The capital is Cetinje. The earlier plenary power of the prince has not been substantially lessened by the Constitution of 0 (19) December, 1906. The members of the popular assembly (Skupetschina) are elected by public direct suffrage every four years; the assembly includes twelve ex-officio members, among whom are the Orthodox metropolitan, the Catholic Archbishop of Antivari, the Mufti of Montenegro, the president of the Supreme Court of Justice, etc. The state religion is the Greek Orthodox; other religious bodies recognized by the State are at liberty to practice their religion, but every attempt on their part to gain converts from among the Orthodox is forbidden. The Orthodox Church of Montenegro is autocephalous, i.e., independent of the Patriarch of Constantinople; its spiritual head, who bears the titles of Metropolitan of Skanderia and Paralaseda, Archbishop of Tuzlina, etc., is chosen by the National Assembly from the ranks of the native unmarried secular clergy or monks, and is consecrated by the Russian Holy Synod at St. Petersburg. He resides at the monastery of St. Peter at Cetinje. In 1877 a second see, that of Buda and Ostrog, was erected. The protopresbyter numbers 17, and the parishes about 180. The priest's office is a rule hereditary, since each priest trains his son for the priesthood; the office of protopresbyter is similarly in the possession of certain families.

Since the convention between the Holy See and the Prince of Montenegro of 18 August (ratified 8 October), 1886, the Catholic Church enjoys full official recognition; the chief is the Archbishop of Antivari, who is immediately subject to the Holy See. There are 13 secular priests, 10 regular priests, 27 churches and chapels, and eleven elementary schools. The number of parishes is thirteen, but a law recently passed by the Skupetschina, in contraven-

The earlier literature will be found in Valentinii, Bibliografia della Dalmazia e del Montenegro (Zagabria, 1856; Supplement, 1862). Joseph Lins.
Saint Agostino and of the Oratorio della Misericordia are worthy of mention. Among the civic buildings are notable the Tarugi palace, like the Mercato a work of Pignola; the Contucci palace designed by Sangallo, and the fourteenth-century Palazzo Municipale, which contains a small gallery of Sienese and of Umbrian art. The most famous men of Montepulciano are Cardinal Bellarmine, Pope Marcellus II, Cervini, Angelo Ambrognini, better known as Poliziano (1454-1494), and the humanist Bartolomeo of Montepulciano. St. Agnes of Montepulciano died in 1137.

The city belonged originally to the Diocese of Arezzo, and had a collegiate church, whose archpriest became a mitred abbot in 1400; in 1480 it became a prelatura nuda, and in 1561 was made the seat of a bishop. Its first bishop was Spinello Beni (1562); among the others the following are well known: Talento de' Talenti (1640), a great savant; Antonio Cervini (1663), who did much for the cathedral and the episcopal palace; Pietro Franceschi (1737) opposed the novelties of the Council of Florence in 1787; Pellegro Maria Carletti (1802), author of several works and of eighteen letters on the National Council of Paris of 1810, at which he assisted. The diocese is immediately dependent on the Holy See, and has 18 parishes, 15,879 inhabitants, two religious houses of men, and two of women.

The cathedral, Montepulciano.

U. BENIGNI.

Monterey and Los Angeles, Diocese of (Montereyensis et Angelorum), comprises that part of the State of California which lies south of 37° 5' N. lat. and covers an area of 80,000 square miles. It thus embraces in its bounds the twenty-one Indian missions which made California famous. Originally the whole state with the peninsula of Lower California formed the Diocese of Both Californias whose first bishop was the Rt. Rev. Francisco Garcia Diego y Moreno. On his arrival in Upper California he established his residence at Santa Barbara Mission. On 1 May, 1850, the pope organized the Diocese of Monterey and named Rt. Rev. Joseph Sadoc Alemany, O.F.M., its first bishop, but Lower California was not withdrawn from his jurisdiction until 21 Dec., 1851. In 1853 the peninsula was placed under the administration of the Metropolitan of Mexico. When on 29 July, 1853, the Archdiocese of San Francisco was erected, the boundaries of the Monterey Diocese were drawn as they exist at present. Archbishop Alemany on 29 July, 1853, was promoted to the See of San Francisco, and on the same date Rt. Rev. Thaddeus Amat, C.M., was appointed Bishop of Monterey. The new bishop resided at Santa Barbara, however, until 9 July, 1859, on which date the pope permitted him to reside in Los Angeles, but with instructions to retain the old title.

Around the former missions and the four military garrisons in the course of time immigrants from almost every part of the world took up their abode and founded cities, but the names of the saints under whose invocation the Indian missions had been estab-
Angeles, San Luis Obispo, and San Bernardino. In 1871 Bishop Amat laid the cornerstone for the cathedral; he started the home for the diocese, under the patronage of St. Vibiana (Bibiana), virgin and martyr. The building was completed and dedicated 30 June, 1876. In 1870 he attended the Vatican Council. Owing to constant ill-health he asked for a coadjutor who was given him in the person of Rt. Rev. Francis Mora. Bishop Amat died 12 May, 1878. His remains lie buried in the cathedral which he erected.

Rt. Rev. Francis Mora was born at Vich, Catalonia, Spain, 25 Nov., 1827; he attended the seminary of his native city; in 1855 he accompanied Bishop Amat to California, and was ordained priest at Santa Barbara 19 March, 1856. From July of that year to the end of 1860 he was stationed at the Indian mission of San Juan Bautista, and from September, 1861, to July, 1866, he had charge of Mission San Luis Obispo. After that he resided at Los Angeles. On 20 May, 1873, Father Mora was consecrated Bishop of Moynoplis in partibus infidelium and made coadjutor of Bishop Amat. At the death of the latter he succeeded to the seat of the episcopal see, and when Rome, 20 June, accepted his resignation he returned to Spain. He died at Sarria, Catalonia, 3 August, 1905. During his administration the Sisters of St. Joseph and of St. Marys were organized in the city. Bishop Mora was remarkable for his financial ability, and succeeded in paying off many of the important debts of the diocese, and by his careful investments left it in a splendid financial condition.

Rt. Rev. George Montgomery was born in Daviess County, Kentucky, 20 December, 1847, and was ordained priest at Washington, D.C., 20 December, 1879. He held the post of Chancellor of the Archdiocese of San Francisco until his consecration as titular Bishop of Tumi 8 April, 1894, when he became coadjutor to Bishop Mora. Two years later he succeeded to the see and at once displayed remarkable energy. At this period immigrants from the eastern States began to flock to California in great numbers, and the population of Los Angeles more than doubled its population. New needs arose which it was the endeavour of the bishop to meet by building churches and schools, and by calling to his aid more priests and religious. In season and out of season Bishop Montgomery insisted on the necessity of educating children in Catholic schools. In 1900 he was appointed by the Commissioner of Indian Affairs to recognize the right of Indian parents and guardians to send their children to the schools of their choice independent of the reservation agent. Subsequently this same view was adopted by the Government, and made the rule for all the Indians in the United States. The bishop thus in every way manifested a watchful solicitude for the spiritual and temporal welfare of the diocese. His personality won friends for the Church on all sides, whilst his vigorous defence of Catholic doctrine, as well as his clean-cut, outspoken advocacy of American rights and duties, gave to the Church in southern California a great onward movement and prepared the way for Bishop O'connor's administration. In 1903 Bishop Montgomery was appointed Archbishop of Osino in partibus and made coadjutor to the Archbishop of San Francisco. He died 10 January, 1907, sincerely lamented by all classes, especially by the poor. During his administration the following congregations of religious were received into the diocese: Congregation of the Holy Cross, Sisters of the Holy Names, Sisters of Notre Dame, Sisters of the Presentation, and the Ursuline Sisters.

Rt. Rev. Thomas James Conaty was born in Killanleck, County Cavan, Ireland, 1 August, 1847, and came to America with his parents in 1850. He attended the College of the Immaculate Conception, graduated from Holy Cross College, Worcester, Mass., in 1869, was ordained priest at Montreal Seminary 21 December, 1872, was made assistant at St. John's Church, Worcester, Mass., 1 January, 1873, and pastor of the church of the Sacred Heart, Worcester, 10 January, 1880. During these years he was actively engaged in the cause of total abstinence and education. He was president of the Total Abstinence Union of America, and for several years president of the Catholic Summer School at Cliff Haven. At different times he was elected to public positions of trust in the city of Worcester. On 10 January, 1897, he was appointed Rector of the Catholic University, Washington, D. C., by Leo XIII. On 1 November, 1903, he was made domestic prelate, and 14 July, 1901, named titular Bishop of Samos, and was consecrated at the cathedral, Baltimore, 21 November, 1901, by Cardinal Gibbons. On 27 March, 1903, he was appointed Bishop of Monterey and Los Angeles to succeed Bishop Montgomery. The influx of immigrants from the eastern States, especially from the city of New York, has been phenomenal. From his arrival in the latter part of 1903 to the latter part of 1912 twelve new parishes have been added to the episcopal see, and nine parish schools have been erected in various parts of the diocese for 2500 additional pupils. The number of priests has increased from 101 in 1893 to 206 in 1911, 75 of whom belong to the Order of the Holy Cross. The character of the Catholic population numbering 100,000, of whom 60,000 live in Los Angeles, is cosmopolitan. The percentage of Catholics to the inhabitants of the diocese is about one-sixth. Besides the English-speaking races, there are large colonies of Spaniards or Mexicans, Germans, Italians, Portuguese, Poles, Slavonians, Slovaks, Roumanians, and Syrians. Churches and priests are caring for the spiritual interests of these different nationalities. One feature of the diocesan work is the care of the Indians, most of whom are descendants of the former Mission Indians. About 4000 are cared for by seven priests who devote themselves entirely or to a great extent to this work. There are 32 schools for young people in English and to their elders in Spanish, which is generally understood by the natives. Churches have been built for them at all reservations. A church and parochial residence have also been erected near the Government Indian School at Sherman, and a priest acts as chaplain for the Catholic children of that institution. The Church is also in charge of a large boarding school for Indian children at Banning which is in charge of the Sisters of St. Joseph. As the diocese annually receives its share of the Pious Fund of Mexico, it has been able to provide for many of the religious necessities of the Indians, but there are many demands calling for diocesan help. The rapidly growing population of the diocese impelled Bishop Conaty to call to his assistance the following additional religious orders and congregations: Benedictine Fathers for the Basques, Fathers of the Society of the Divine Saviour for the Poles, Sons of the Immaculate Heart of Mary for the Mexicans, Jesuit Fathers, Redemptorist Fathers, Sisters of the Good Shepherd, Little Sisters of the Poor, Missionary Sisters of the Immaculate Heart (Italian), and Sisters of St. Francis.

STATISTICS.—Besides the items already mentioned above, there are 166 churches and chapels, 43 stations without churches, 33 ecclesiastical students, 1 seminary for Franciscan Fathers, 2 colleges for young men with 407 students, 1 college and 16 academies for girls (seven of the latter are for the education of the pupils of the academies) 5424 children, 9 orphan asylums with 1048 inmates, 1 Catholic Indian boarding school with 118 pupils, 2 Government Indian schools with 355 Catholic pupils, 5 hospitals and 3
homes for the aged. A new cathedral is contemplated which will be worthy of the city of Los Angeles.

ZEPHYRIN ENGELHARDT.

Montessa, Military Order of.—This order was established in the Kingdom of Aragon to take the place of the Order of the Temple, of which it was in a certain sense the continuation. It derived its title from St. George of Montessa, its principal stronghold. The Templars were received with enthusiasm in Aragon from their very foundation (1128). Berenger III, Count of Barcelona, wished to die in the habit of a Templar (1130). King Alfonso I, "The Fighter," having no direct heir, bequeathed his dominions to be divided among the Templars, the Hospitalers, and the Canons of the Holy Sepulchre, but naturally this bequest was annulled by his subjects (1131). The Templars had to be contented with certain castles, the chief of which was Montson. Although the Aragonese branch of the order was pronounced innocent at the famous trial of the Templars, Clement V's Bull of suppression was applied to them in spite of the protests of King James II (1131). By way of compensation, however, this monarch obtained from Pope John XXII authority to dispose of the possessions of the Templars in his Kingdom of Valencia in favour of a military order not essentially differing from that of the Templars, which should be charged with the defence of his frontier against the Moors and the pirates. It was affiliated to the Order of Calatrava, from which its first recruits were drawn, and it was maintained in dependence upon that order. The first of the fourteen grand masters, who ruled the Order of Montessa until the office was united with the Crown by Philip II in 1557, was Guillermo d'Erl.

CH. MOELLER.

Montesino, Antonio, Spanish missionary, date of birth unknown; d. in the West Indies, 1545. Of his early life little is known. He entered the Order of St. Dominic and made his religious profession in the convent of St. Stephen, Salamanca, where in all probability he studied. He was noted for his exemplary piety, his love of strict observance, his eloquence, and moral courage. In September, 1510, under the leadership of Pedro de Cordova, he landed with the first band of Dominicans in Hispaniola. He was the first, in 1511, to denounce publicly in America the enslavement and oppression of the Indians as sinful and disgraceful to the Spanish nation. Being censured for this, he was cited to Spain in 1512, where he pleaded the cause of the Indians so successfully that the king took immediate measures towards ameliorating their condition.

In June, 1526, with Father Anthony de Cervantes, he accompanied several hundred colonists under the leadership of Ayllon to Guanape, probably where the English subsequently founded Jamestown; or, as some are inclined to think, proceeded even as far as New York. In either case, however, we are safe in asserting that Holy Mass was celebrated for the first time in the present territory of the United States by these Dominicans. On the death of Ayllon (Oct., 1526) the colony abandoned the country and returned to San Domingo. According to Helpe, "Spanish Conquest in America," he went to Venezuela about 1528 with twenty of his brethren. Nothing more is known of him except the slight information furnished by a note in the margin of the register of his profession in the convent of St. Stephen, in Salamanca, which says: "Obit martyr in Indiis." He is the author of "Informatio juridica in Indorum defensionem".

JOSEPH SCHROEDER.

Montesinos, Luis de, Spanish theologian, date and place of birth unknown; d. 7 Oct., 1621. He entered the Dominican Order and studied philosophy and theology in the Spanish universities where he gained a reputation for sound scholarship and solid piety that made him illustrious among the savants of his time. Beginning his career as a professor of philosophy he was gradually promoted to the most important chairs. He was the foremost exponent of Thomistic theology at the University of Alcalá. His vast erudition, power of penetration, and clearness of exposition won for him the surname Doctor clarus. He possessed a singular charm of manner which secured for him at once love and respect. Such was his respect for his intellectual power that his lecture hall, though one of the largest in Spain, was too small to admit his audiences. For thirty years he taught with untiring zeal and devotion, refusing all ecclesiastical honours. Though threatened with total blindness in his latter years, he continued to teach till his death. He is the author of "Commentaria in primam secundae S. Thomae" (Alcalá, 1622).

JOSEPH SCHROEDER.

Montes Piotatis are charitable institutions of credit that lend money at low rates of interest, or without interest at all, upon the security of objects left in pawn, with a view to protecting persons in want from usurers. Being charitable establishments, they lend only to people who are in need of funds to pass through some financial crisis, as in cases of general scarcity of food, misfortunes, etc. On the other hand, these institutions do not seek financial profit, but use all profits that may accrue to them for the payment of employees and to extend the scope of their charitable work. Formerly there were not only monasterly montes (dem. monasterio monte), but also grain montes (granatieri), flour montes, etc. In the history of these establishments it may be observed that the word mons, even in ancient Latin (Plautus, Prudentius), was used to signify a "great quantity," or heap, with reference to money, while the juridic term for a monetary "fund" was rather massa: and long before the term montes pietatis the word mons (in Italian, monte) was used to designate collected funds, destined to various ends, which in time came to be called montes profani. Thus the public debt that was contracted by the Republic of Venice between 1164 and 1178 was called Mons or Impresta, and similar montes were created by Genoa (1300) and by Florence (1436); the stock companies of the Middle Ages, also, were
called montes, as, for example, the "monse aluninarius", which operated the alum deposits of Tofla. The same was true of insurance societies and of the banks of exchange or of credit that for the greater part were in the hands of Jews or of the so-called Lombards. As these banks often lent money on objects delivered to them in pawn, the charitable institutions which were created for transactions of that class also took the name of mons, pietais being added to express the fact that the establishments in question were beneficent and not speculative.

In the Middle Ages it was very difficult to obtain money, as much on account of its scarcity as of the prohibitions by which Christians were bound in relation to Jews, the secondaries of monopoly of the credit business to the Jews, who were excluded from all other kinds of trade or industry, and who were often accorded great privileges by the towns, on condition of the establishment of pawn banks. They lent money at excessive rates of interest as much as 60 per cent—or, when that was prohibited, as at Florence, where they were not allowed to charge more than 20 per cent, they resorted to subterfuges that made it possible for them to obtain as high rates as elsewhere. And in this way, they soon became rich and hated. Not less hated, however, were the so-called coaraini (named not after the city of Cahors in France, but after the Jews, who were a kind of travelling bankers, and whose exactions were often even greater than those of the Jews, their usual rate of interest being 43½ per cent, and frequently as high as 80 per cent. It was often a question, during the Middle Ages, of finding a remedy for the misfortune of others. As they were all not true Jews, Padua founded a mons pietais. The celebrated Doctor Durand de Saint Pourçain, Bishop of Mende, proposed that the magistrates of cities be compelled to lend money at low rates of interest. It is not known whether this proposition was accepted or not, but, in either event, it did not suggest the idea of the mons, for there lacked the condition of objects pawned, which was the case, also, in the institution of the "Mont de Salins", established later than 1350. The first real mons pietais was founded in London, where Bishop Michael Nothburg, in 1361, left 1000 marks of silver for the establishment of a bank that should lend money on pawned objects, without interest, for the period of one year. As the first of the institutions of this kind was founded, however, was not realized. Finally (1462), the first mons pietais was established at Perugia, and in a few years there were similar institutions throughout Italy. The establishment and dissemination of montes pietais is one of the brightest glories of the followers of the "Poverello" of Assisi, for the mons pietais of Perugia was founded in consequence of the preaching at that city of the Franciscan Michele Carcano of Milan, who inveighed against the usury of the Jews (1461). The fund for that charitable establishment was made up in part by voluntary contributions and in part by money lent by the Jews themselves. But the idea of the mons pietais was developed in the region of Tuscania, and of Teramo, and of the Genoese of Favorino Coppoli of Perugia. In fact it seems that for a long time the preachers of the Franciscan Order had considered the problem of applying an effectual remedy to the evils of usury (cf. Holzapfel, 32 sq.).

The assistance and the influence of the Apostolic delegate to Perugia, Ernolori Barbaro, Bishop of Verona, greatly facilitated the work at the former town, and it was soon repeated at Orvieto (1483) through the action of the Franciscan Bartolommeo da Colle, and also at Gubbio and at other towns of Umbria. In the Marches the first mons was established at Monterubbiano, in 1465, through the efforts of the Franciscan Antonuzio and the Dominici Cristoforo; the first city of the Papal States that established a mons pietais was Viterbo (1469); in Tuscany, Siena (1472); in Liguria, Savona, and Genoa (1480), and in the Milanese territory, Milan (1483); everywhere it was the Franciscan Observants who took the initiative. But the greatest development was given to this work by Blessed Bernardino da Feltre, whose secondaries of monopoly of the credit business to the Jews, were accorded great privileges, and who were often accorded great privileges by the towns, on condition of the establishment of pawn banks. They lent money at excessive rates of interest as much as 60 per cent—or, when that was prohibited, as at Florence, where they were not allowed to charge more than 20 per cent, they resorted to subterfuges that made it possible for them to obtain as high rates as elsewhere. And in this way, they soon became rich and hated. Not less hated, however, were the so-called coaraini (named not after the city of Cahors in France, but after the Jews, who were a kind of travelling bankers, and whose exactions were often even greater than those of the Jews, their usual rate of interest being 43½ per cent, and frequently as high as 80 per cent. It was often a question, during the Middle Ages, of finding a remedy for the misfortune of others. As they were all not true Jews, Padua founded a mons pietais. The celebrated Doctor Durand de Saint Pourçain, Bishop of Mende, proposed that the magistrates of cities be compelled to lend money at low rates of interest. The first true mons pietais was founded in London, where Bishop Michael Nothburg, in 1361, left 1000 marks of silver for the establishment of a bank that should lend money on pawned objects, without interest, for the period of one year. As the first of the institutions of this kind was founded, however, was not realized. Finally (1462), the first mons pietais was established at Perugia, and in a few years there were similar institutions throughout Italy. The establishment and dissemination of montes pietais is one of the brightest glories of the followers of the "Poverello" of Assisi, for the mons pietais of Perugia was founded in consequence of the preaching at that city of the Franciscan Michele Carcano of Milan, who inveighed against the usury of the Jews (1461). The fund for that charitable establishment was made up in part by voluntary contributions and in part by money lent by the Jews themselves. But the idea of the mons pietais was developed in the region of Tuscania, and of Teramo, and of the Genoese of Favorino Coppoli of Perugia. In fact it seems that for a long time the preachers of the Franciscan Order had considered the problem of applying an effectual remedy to the evils of usury (cf. Holzapfel, 32 sq.).

The assistance and the influence of the Apostolic delegate to Perugia, Ernolori Barbaro, Bishop of
but merely against the condition of requiring interest. It was not admitted that the use of the interest to maintain the charity justified the usury, since a good end could not justify evil means, and it was held that lending money on interest was incompatible with being unfruitful by its nature, and since Christ expressly forbids the practice (Luke, vi, 33). The term interest was not readily admitted by the friends of the montes, who replied that there were in reality two contracts between the montes and the borrower: one that of the loan, which should be gratuitous, the other implying the custody of the object pawned, therefore, the use of space and personal responsibility, which should not be gratuitous; and it was precisely on account of these two conditions that interest was charged. The loan, therefore, was regarded merely as a conditio sine qua non, and not as a direct cause of the interest. On the other hand, even the adversaries of the montes admitted that the damnum emergens or the lucrum cessans were legitimate titles upon which to require interest; and these two principles may be applied to the mons pietatis. Many other objections to which it was easy to reply were adduced, and in these disputations the friends of the montes were victorious. Only at Fænza, in 1494, where the use of the montes was opposed to the objections of the Augustinian Bariano, who is the author of a work entitled "De Monte Impietatis." It was among the Dominicanis, however, that the montes found a greater number of antagonists, notably the young Tommaso de Vio, who became Cardinal Cajeto. It cannot be said that the order as a whole was as opposed to the montes as several of its members favoured the establishment of the montes as has been seen in the case of Monte­rubiano, and as was the case at Florence, where Savonarola (1495) reopened the montes which had been established in 1494. Meanwhile other Dominicans, e. g. Amico da Viterbo and Domenico da Imola, were venturing to profess the dangers of the montes, but the writer who most exercised himself in their defence was the Franciscan Bernardino de Bustis (Defensorium Montis Pietatis). The legal and theological faculties of the universities, as well as individual jurists, gave opinions favourable to the montes. The papacy had approved of several of these institutions in the Holy See, either for its sanction, in general, or for special concessions; Holzapfel (10 sq.) refers to sixteen of these acts, anterior to the Bull "Inter multiplicis" of Leo X (4 May, 1515). By this Bull the pope and the Lateran Council, which took up the case of the montes in its tenth session, declared the institutions in question in no way illicit or sinful, but on the contrary meritorious, and that whosoever preached or wrote against them in the future, incurred excommunication. This Bull also provided that montes established thereafter should obtain the Apostolic approbation. The Bishop of Trani was the only member of the council who spoke against the montes, and Cardinal Cajeto, general of the order, was absent during the session, subsequently abandoned his position on the subject of these establishments.

The question of moral right having been determined in their favour, the montes pietatis spread rapidly, especially in Italy, where, in 1596 there were 556 of them, with a combined capital of nearly 79,000,000. In a month of Italy the best known and most successful pietatis were at Ypres in Belgium, (1534) but the institution did not develop in that country until 1618, when the Lombards were forbidden to receive objects in pawn; since 1848 the law has transformed the montes into municipal establishments. In France the first mont e pietatis appeared at Avignon, then a papal possession (1577); the next at Beaucar (1583); and in 1626, an ordinance prescribed the creation of montes pietatis in all the cities that might need them. However, they were not merely charitable institutions, because they were bound to lend money to all applicants, whether rich or poor, not, while not infrequently the rate of interest was not high. The law of 1551, with the special feature that their directors be appointed by the Government. In Germany and in Austria the montes pietatis were introduced at the end of the fifteenth century. At present they are municipal establishments—although some of them belong to the Government—and their net profits are applied to the account of public charities. The first mons pietatis in Spain was created in 1702 at Madrid. In England this form of charity never obtained a foothold, on the contrary it was held in aversion on account of its connexion with the papacy; an attempt to establish such an institution at London in 1797 failed in less than twenty years, through default on the part of its managers.

The aversion in which montes pietatis are held by many, even in our own day, leads to the question of the advantages and of the defects of these institutions; it is held that they promote carelessness in contracting debts, that they destroy love for labour, incite idleness, are for the most part fatal, and, lastly, that they are contrary to the principle of free competition. On the other hand, they are a necessity; for without them the needy would be exposed either to the extortions of private lenders or to ruin, into which they might be plunged by some misfortune from which a momentary loan might save them. Nevertheless their disadvantages are undeniable, but disadvantages are common to all human contrivances. For the rest the montes pietatis, besides the relief that they brought to the poor, exerted great influence upon the ideas concerning interest on loans; for the rigid views of the theologians of the Middle Ages in that connexion underwent a first modification, which prepared the way for a generalization of the principle that moderate interest might justly be charged, and also the mere existence of the montes pietatis compelled private speculators to reduce their rates of interest from the usurious rates that had hitherto prevailed.

U. BENIGNI.

Montesquieu, CHARLES-LOUIS DE SECONDAIGNE, BARON DE, French writer and publicist, b. in the Château de la Brède near Bordeaux, 18 January, 1689; d. at Paris, 10 February, 1755. His family was of noble rank; his grandfather, President of the Bordeaux Parliament, his father, a member of the royal bodyguard, and his mother, Marie de Penel, who died when he was eleven, traced her ancestry to an old English family. Young Charles de la Brède, as he was known, was sent to the Oratorian College at Juilly (1700–11), where he received a wholly literary and classical education in which religion held but a minor place. When, at twenty-five years of age he returned home, after having been called to the bar, he received from his paternal uncle the style and title of Baron de Montesquieu, by which he was known, and became councillor of the Bordeaux Parliament. He married a Protestant, Jeanne Cartigre,
"and they had three children; but neither his profession nor his family seem to have claimed much of his attention. At the age of nineteen, he left his book-office, and gave himself up entirely to study which henceforth became his life's one and only passion. "Study", he wrote afterwards, "has been my sovereign remedy against the worries of life. I have never had a care that an hour's reading could not dispel". As a matter of fact the story of his life is but the chronicle of that preparation, which was the composition of his book-office. His earliest productions were read before the Academy of Bordeaux, of which he became a member (1716). They deal with a variety of subjects, but mainly with scientific topics, history, and politics. For a time he thought of writing a "physical history of the Earth" for which he began collecting material (1719), but abandoned this plan in 1720. His interest in different orders of his book-office, publishing the "Lettres persanes" (Amsterdam, 1721), so named because it pretended to be a correspondence between two Persian gentlemen travelling in Europe, and their friends in Asia, who sent them the gossip of their seraglio.

Under this fictitious guise the writer goes on to describe, or rather satires, French and especially Parisian manners between 1710 and 1720. The king, the absolute monarchy, the Parliament, the Academy, the University, are all very transparently ridiculed, but it was the Catholic religion, its dogmas, its practices, its ministers from pope to monks that came in for his bitterest raillery. Because of its ideal of celibacy, the Catholic Church is accused of being a cause of depopulation, and because of its teaching concerning this world's goods, it is charged with weakening the prosperity of the nation, while its intolerant proselytism is a source of disturbance to the state. On the other hand Protestantism is held up as more favourable to material progress. Coming ostensibly from those two sources, the deformities then seemed less shocking to thoughtful minds, but they were none the less one of the first and rudest attacks directed against the Church during the eighteenth century. In them, he showed himself as incapable of understanding the Church's dogmas as he was of appreciating her services to society. Though in later years he was to find a juster point of view, his witty criticisms in their lively setting of romance and sensuality, quite to the taste of that age, assured a great success for the "Lettres persanes". Eight editions were published within a year. Montesquieu had not signed his name to them, but the author was quickly discovered, and the public nominated him for the Academy. His election is in 1726. Knowing to the scandal the "Lettres persanes" had caused, the king did not approve and an excuse was given that the author did not live in Paris, as the rules of the Academy required. Whereupon Montesquieu took up his residence in Paris, and was elected once more, and admitted in 1728.

Side by side with their frivolity the "Lettres persanes" contain some profound observations on history and politics. They show even then Montesquieu's meditation on the laws and customs of mankind, from which was to result his later work, "L'Esprit des lois". As a preparation for this work he set out (1726) on a long series of travels through Europe, and visited Vienna, and Hungary, spent some time in Venice, Florence, Naples, Geneva, and Rome, where he was received by Cardinal de Polignac and Benedict XIII. In the suite of Lord Chesterfield he went to England where he remained eighteen months, and was the guest of Prime Minister Walpole, of Swift, and Pope. Wherever he went he made the acquaintance of various illustrious persons of his own time, and heard, and read with avidity. After an absence of three years he returned to his family, his business, his vineyards and the farming of his estates at Château de la Brède. As a relaxation he paid occasional visits to Paris, and mixed with literary men and their friends in the salons of Madame de Tencin, Madame Geoffrin, and Madame du Deffand. Yet he studiously avoided over familiarity with what was known as the philosophical set. Though his religious convictions were not deep, his serious and moderate turn of mind had nothing in common with the noisy and aggressive impiety of Voltaire and his friends.

Henceforth his great aim in life was to write the "Esprit des lois" and all his spare time in the studious seclusion at La Brède was devoted to it. To begin with, ancient Rome gave him ample material for thought, but took up so much space in his work that in order not to mar the proportions of his book he published all that concerned it as a distinct work, "Les Considérations sur les causes de la grandeur et de la décadence des Romains" (Amsterdam, 1734). In this book he shows successively the glorious progress and slow decay which the Empire experienced from the foundation of Rome to the capture of Constantinople by the Turks. He devotes several pages to the narrative of events, but supposing that they are already known, he seeks to discover the links in the chain of events, and to point out the sources from which they sprang, choosing preferably those political causes, that is, institutions. By exhibiting them in their natural relationships he throws unexpected light on certain events of ancient history and those of more recent date. Boswell had already devoted two chapters of his "Histoire Universelle" to explaining the "sequence of events at Rome". Montesquieu treats the same subject in a larger way and with closer correlation of facts. His point of view is that of the statesman rather than of the moralist, and every religious precept is left aside. Such indeed is his indifference that he has not a word about religion. This concession to the prejudices of his age was a mistake, as modern criticism has shown, especially in the works of Fustel de Coulanges, that religion played a greater part in the political conduct of the Romans than Montesquieu credited it with.

"Les Considérations" was but an advance chapter of "L'Esprit des lois" which Montesquieu published after twenty years of labour (2 vols., Geneva, 1748). In this second work the author studies human laws in their relationships with the government, climate, and general character of the country, its customs, and its religion. He undertakes, not to examine various laws and discover their meaning, but to point out their underlying principles and to lay down the conditions which must be verified if such laws are to work for the happiness of man in society. In his judgments and conclusions Montesquieu is careful to take into account experience and tradition. He believes that laws can be enacted only for men in definitely known conditions of time and place. In so far he differs from the theorists and utopians of his day and of a later age, who had no hesitation in drafting laws for man in the abstract or for a humanity freed from all spatial and temporal determinations, and who took as the basis
of their deductions either the idea of a social contract in primitive times, or of a state of nature which had to be developed or restored. He thus avoids the errors of Hobbes, Locke, and Jean-Jacques Rousseau. His personal sympathies went rather with the liberal ideas which have triumphed almost everywhere in the civilized world of to-day, but which were novelities then. He declared himself in favour of separating the executive, legislative, and judiciary powers (XI, vi), condemned slavery and torture, and advocated gentler treatment of criminals, toleration in religious belief, and freedom of worship. But in this work he treats the religious issue with more gravity than he had done in the "Lettres persanes". True, he passes over the truth of its teaching and the sanctity of its moral precepts, and treats of it "only as regards its advantages for civic life". But far from thinking that there can be a conflict between religion and society, he insists that the one is useful to the other. "Something", he says, "must be fixed and permanent, and religion is that something." He says again, more clearly: "What a wonderful thing is the Christian religion! It seems to aim only at happiness in a future life, and yet secures our happiness in this life also!" He does not dream of separating Church and State, nor of subjecting the former to the latter. "I have never claimed that the interests of religion should give way to those of the State, but that they should go hand in hand." Nevertheless on various points he seriously misunderstood Catholic teaching: "Les Nouvelles Eclesiastiques" (Oct., 1749) called attention to some of his statements of this sort, and the Sorbonne drew up a list of passages from his writings which seemed to call for censure (August, 1752). Before this (March, 1752), "L'Esprit des lois" had been placed on the Roman Index. But these measures created no great stir. The success of the book was enormous, its political influence world-wide. The early statesmen were very familiar with "L'Esprit des lois" and from it (XI, vi) derived much of their idea of federal government. Jefferson, the author of the Declaration of Independence, Hamilton, Madison, and Jay who wrote in the "Federalist" in defence of the new Constitution, were all enthusiastic readers of Montesquieu. Montesquieu's reputation became so widespread and he was so often able to enjoy peacefully the homage it brought him until his death, for which he prepared himself by receiving the sacraments of the Church, and showing every outward mark of perfect obedience to her laws. The influence of his ideas was to be felt long afterwards both in France and elsewhere.

Besides the works which we have mentioned, and which are the most important, Montesquieu left a few papers which he read before the Academy of Bordeaux, and a few incomplete writings. "Le temple de Gndie", a short novel of a sensuous turn written for the licentious society of the Regency epoch, does him little credit. He wrote an "Essai sur le goét", a "Dissertation sur l'Académie", a "Article et Isémonie", an uninteresting novel, and a few letters. These have all been collected in the "Oeuvres complètes de Montesquieu", edited by Edward Laboulaye (7 vols., Paris, 1875-79); "Mélanges inédits de Montesquieu published by Barven de Montesquieu (Bordeaux, 1892); "Voyages de Montesquieu", published by the same (Bordeaux, 1854-96); "Penseés et fragments inédits de Montesquieu", published by the same (Bordeaux, 1899-1901: two volumes have appeared; others are in course of preparation).

ANTOINE DEGERT.

Montesquieu, Claudius, distinguished musician, b. at Cremona, May, 1567; d. at Venice, 29 Nov. 1643. He studied under Ingegneri (composer of the "Responsoria", that until recently were regarded as by Palestrina), and at the age of sixteen he published a book of canzonets, followed by four volumes of madrigals. Although the majority of his early works show little trace of the inventive genius which afterwards distinguished the productions of his madrigals, printed in 1592, is remarkable for its many suspensions of the dominant seventh, and its inversion, as also suspended ninths. He was appointed Maestro di Cappella to the Duke of Mantua in 1602, and in 1613, was elected Maestro at Venice in succession to Martinengo, at a salary of three hundred ducats a year. So highly was he appreciated at St. Mark's that in 1616, the Procuratori increased his salary to five hundred ducats. From that date until his death he produced numerous choral compositions, as also operas, cantatas, ballets, most of which cannot now be traced. Fortunately, the score of his opera "Orfeo", printed in 1609, has come down to us, and it is sufficient to indicate the powers of a musician who broke away from the trammels of the older school and created a school of his own.

Montesquieu not only showed his genius in his dramatic writing but in the employment of new instrumental effects, and the combination of instruments in the theatre band. In his interlude written for the festival at the palace of Grand-Logis, he employed the device of an instrumental trombone till then unknown. Another novel effect was his employment of trombones to accompany the "Gloria" and "Credo" of a Mass, in 1631. At this date he was studying for the priesthood, and he was ordained in 1633. Six years later he composed an opera "Atone" for the opera house of San Cassiano, followed by two others, and a ballet for the carnival at Piaenza, in 1641. His enduring fame consists in his use of unprepared disords, his improvement of recitative, his development of orchestral resources and his revolution of instrumentation. He may justly be claimed as the founder of dramatic music, as we now understand it, and he anticipated Wagner in the employment of leitmotiv.

W. H. GRATTAN-FLOOD.

Monte Vergine (Montis Virginis), an abbey in the province of Naples, Italy, near the town of Avelino, commanding a magnificent view of the Mediterranean along the Bays of Naples, Salerno, and Gaeta, and inland as far as the Abruzzi Mountains. Monte Vergine was one of the three principal foundations of a temple sacred to Cybele that stood there; also as Mona Virgiliana, from the legend that Virgil retired thither to study the Sibylline books. St. Felix of Nola is said to have taken refuge there, and in the seventh century St. Vitalian of Capua erected on the hill a chapel to the Blessed Virgin Mary, called "Sancta Maria Magdalenae de Monte Vergine". According to Castellani, St. Felix was canonized by this pope, and his feast is kept on 25 June. As early as 1191 the abbey is spoken of as be-
longing "ad Dominum Papam specialiter". It received throughout the Middle Ages many marks of consideration from the kings of the Two Sicilies, within whose domains there were at one time no less than one hundred monasteries of this branch of the Benedictine order. Between many vicissitudes, laxity of rule threatened ruin to the abbey, and in the sixteenth century Clement VIII charged Blessed John Leonard, founder of the Clerks Regular of the Mother of God, as rector, and his abbots. The new constitutions were approved by Paul V in 1611, and included among other things a regulation that the monks of Monte Vergine should use the Camaldolese Breviary. The habit of the monks was to be white, and they were to wear a white scapular.

From the beginning the abbey seems to have been frequented, as was its abbey, by the bishops of the See of Benevento. The abbey had the faculty of conferring the four minor orders and confirmation. Between 1440 and 1515 it was held in commendam by five cardinals, and in that year was united with the Hospital of the Nunziata at Naples. The governors of the hospital sent as their representative to Monte Vergine a sacristan who interfered with the daily life of the monks. Among the independent monks were freed by St. Pius V in 1557. In 1579 Gregory XIII gave them charge of St. Agatha's in Subura, Rome; Paul V made it a privileged abbey, and it remained in their care until Gregory XVII gave it to the Irish students (see Irish College, Rome).

The monastery chapel contains an ancient Byzantine mosaic of the Virgin and Child, and a number of other mosaics have been discovered. The front of the Blessed Virgin standing out from a background of bright gold have won for it from peasants and pilgrims the name of "Schiovan." The story runs, that the head of the picture was cut from its frame by Baldwin, the Latin Emperor of Jerusalem, to save it from the Saracens, who had massacred the monks by his grand-niece Catherine of Valois (who lies buried in the chapel), and that she gave it to Monte Vergine. The lower portion of the picture as it exists in the shrine was added at a later date by the brush of Montana di Aresso. The church is also said to contain relics of the bodies of the young men, Sir drach, Mischach, Abdenago, who were saved from the fiery furnace. These relics were brought from Jerusalemy by Frederick II. Pentecost and the eighth of September are the two great days of pilgrimage and rejoicing at Monte Vergine. The nearest town is Mercogliano and on these days its population is more than doubled. The present abbot is Mgr. Victor Cor vesto, born in Rome on 18 January, 1884. The chapter consists of 15 canons. The abbots' jurisdiction extends over 7 parishes forming part of four communes in the border provinces of Avellino and Benevento. There are 27 churches within the privacy, and the population of 8070 souls is ministered to by 31 secular priests and 18 regulars.

Montevideo, Archdiocese of (Montevideo), in Uruguay, comprises the whole of the republic. This territory was under the jurisdiction of the Paraguayan Church till 1620, when it became subject to Buenos Aires. In 1828 the Holy See erected it into a vicariate Apostolic. On 15 July, 1878, it was raised to episcopal rank. Mgr. Hyacinth Vers being first bishop; on 19 April, 1897, it was made an archdiocese. It was decreed at that time to erect two archdiocesan parishes, Salt6, but no appointments have yet been made (1910).

Since colonial days ended, the Church has been persecuted at times, especially between 1880 and 1890 under Santos, who forbade religious under forty to make vows, instituted civil marriage and made it a crime to baptize a child before its birth was registered civilly. To-day however, the Church is flourishing, and the archdiocese contains many congregations of men (Jesuits, Capuchins, Redemptorists, Salesians, etc.), and over 300 nuns engaged in teaching and charitable work. The diocese contains 72,210 square miles, and about 1,103,000 inhabitants (in 1906), almost all Catholics, of whom 308,000 were in the Department of Montevideo. 7 parishes, 7 basilicas, 27 churches, 122 priories, and about 100 chapels and churches. The present occupant of the see is Mgr. Mariano Soler, b. at San Carlo, Uruguay, 25 March, 1846; elected bishop, 29 June, 1891; consecrated archbishop, 19 April, 1897; he has two auxiliary bishops: Mgr. Ricardo Isaacs (titular Bishop of Amemurium), b. at Montevideo, 7 February, 1876; elected, 13 December, 1897; and Mgr. Pio Gasquetto Secondo Stella (titular Bishop of Amizana), b. at Paso del Molino, Uruguay, 7 August, 1857; elected, 22 December, 1893. Almost all the inhabitants are Catholics, there is, however, a small Piedmontese Waldensian agricultural colony in the East of Colonia.

Noteworthy buildings of the City of Montevideo may be mentioned the cathedral, begun in 1803, completed and restored in 1905; and the Jesuit, Redemptorist, and Franciscan churches. Within recent years conferences of St. Vincent de Paul have been established in all the city parishes; likewise an excellent Catholic club; and an institute for Catholic working-men. The growth of Montevideo is of the seventeenth century; a small fort, San José, was built there in 1724; in January, 1728, the town was founded by Bruno de Zabala with the name San Felice y Santiago; in 1807 it was captured by the British; in 1828 it became the capital of the republic; from 1842 to 1851 it withstood the nine years' siege by Orie and his troops. The city has grown to be one of the seven greatest seaports in the world (see URUGUAY). San José de Mayo (9000) contains a magnificent church, more massive than the cathedral; and also the college of the Sisters of Nuestra Señora del Huerto, which has a very pretty chapel attached. (For the early Uruguayan missions among the Indians see REDUCTIONS OF PARAGUAY.)

Montfacon, Bernard de, French scholar, b. in 1555, at the château de Soulage, Department of Lot, and of noble parentage. For six years, he was an inmate of the Abbey of St-Germain-des-Prés, in 1741. He was the son of Timoléon de Montfacon and of Flore de Maigain. His family, originally of Gascony, had settled in Languedoc after the Albigensian Crusade of the thirteenth century; its principal seat was the château of Roquetailleade (arrondissement of Albi). He was instructed by Pavillon, Bishop of Alth, his father's friend, and in 1762, at the age of thirteen, he entered the Académie des Cadets at Perpignan, to prepare for a military career. After his father's death, he left home with his relative, the Marquis d'Hautpoul, a captain of grenadiers in the Regiment of Languedoc, and served as a volunteer under Turenne. He went through the campaign of Alsace, was at the battle of Marienthal, and fell dangerously ill at Saverne. In pursuance of a vow made to the Blessed Virgin, he then returned to his own country, resolved upon entering religion. On 13 May, 1676, he made his profession in the Benedictine monastery of La Coudre, at Besançon, Melun and Salté, but no appointments have yet been made (1910). Since colonial days ended, the Church has been persecuted at times, especially between 1880 and 1890 under Santos, who forbade religious under forty to make vows, instituted civil marriage and made it a crime to baptize a child before its birth was registered civilly. To-day however, the Church is flourishing, and the archdiocese contains many congregations of men (Jesuits, Capuchins, Redemptorists, Salesians, etc.), and over 300 nuns engaged in teaching and charitable work. The diocese contains 72,210 square miles, and about 1,103,000 inhabitants (in 1906), almost all Catholics, of whom 308,000 were in the Department of Montevideo. 7 parishes, 7 basilicas, 27 churches, 122 priories, and about 100 chapels and churches. The present occupant of the see is Mgr. Mariano Soler, b. at San Carlo, Uruguay, 25 March, 1846; elected bishop, 29 June, 1891; consecrated archbishop, 19 April, 1897; he has two auxiliary bishops: Mgr. Ricardo Isaacs (titular Bishop of Amemurium), b. at Montevideo, 7 February, 1876; elected, 13 December, 1897; and Mgr. Pio Gasquetto Secondo Stella (titular Bishop of Amizana), b. at Paso del Molino, Uruguay, 7 August, 1857; elected, 22 December, 1893. Almost all the inhabitants are Catholics, there is, however, a small Piedmontese Waldensian agricultural colony in the East of Colonia.

Noteworthy buildings of the City of Montevideo may be mentioned the cathedral, begun in 1803, completed and restored in 1905; and the Jesuit, Redemptorist, and Franciscan churches. Within recent years conferences of St. Vincent de Paul have been established in all the city parishes; likewise an excellent Catholic club; and an institute for Catholic working-men. The growth of Montevideo is of the seventeenth century; a small fort, San José, was built there in 1724; in January, 1728, the town was founded by Bruno de Zabala with the name San Felipe y Santiago; in 1807 it was captured by the British; in 1828 it became the capital of the republic; from 1842 to 1851 it withstood the nine years' siege by Orie and his troops. The city has grown to be one of the seven greatest seaports in the world (see URUGUAY). San José de Mayo (9000) contains a magnificent church, more massive than the cathedral; and also the college of the Sisters of Nuestra Señora del Huerto, which has a very pretty chapel attached. (For the early Uruguayan missions among the Indians see REDUCTIONS OF PARAGUAY.)

Montfacon, Bernard de, French scholar, b. in 1555, at the château de Soulage, Department of Lot, and of noble parentage. For six years, he was an inmate of the Abbey of St-Germain-des-Prés, in 1741. He was the son of Timoléon de Montfacon and of Flore de Maigain. His family, originally of Gascony, had settled in Languedoc after the Albigensian Crusade of the thirteenth century; its principal seat was the château of Roquetailleade (arrondissement of Albi). He was instructed by Pavillon, Bishop of Alth, his father's friend, and in 1762, at the age of thirteen, he entered the Académie des Cadets at Perpignan, to prepare for a military career. After his father's death, he left home with his relative, the Marquis d'Hautpoul, a captain of grenadiers in the Regiment of Languedoc, and served as a volunteer under Turenne. He went through the campaign of Alsace, was at the battle of Marienthal, and fell dangerously ill at Saverne. In pursuance of a vow made to the Blessed Virgin, he then returned to his own country, resolved upon entering religion. On 13 May, 1676, he made his profession in the Benedictine monastery of La Coudre, at Besançon, Melun and Salté, but no appointments have yet been made (1910).
caused him to be sent to the Abbey of Sainte-Croix at Bordeaux. Finally, in 1687, he was transferred to Paris, to the Abbey of St-Germain-des-Prés, which, under the rule of Mabillon, had become one of the chief centres of French erudition. He was then chosen to assist in preparing the edition of the Greek Fathers which the Benedictines had undertaken. To this end, he made the acquaintance of the study of Hebrew, Chaldean, Syriac, and Coptic, as well as that of numismatics, and in 1694 was appointed curator of the numismatic collection at St-Germain-des-Prés.

In 1690 Montfaucon had published a treatise on "La vérité de l'histoire de Judith". The monastery of St-Aubin, in which he laboured with Dom Pouget and Dom Lopin, appeared in 1698 and was well received (3 vols., folio, Paris; reprinted in P.G., XXV–XXVIII). Before undertaking new patristic labours, he resolved to study the manuscripts in the libraries of Italy. Obtaining permission in 1698, he set out with Dom Paul Briois, P. Millas; he made the acquaintance of Muratori; at Venice he was received very coldly, and was not even allowed to see the manuscripts in the Benedictine monasteries of San Giorgio Maggiore and San Marco. On the other hand, he was welcomed at Mantua, Ravenna, and especially at Rome by Innocent XII. Having been named procurator general at Rome of the Order of St. Benedict, he encountered difficulties with the Jesuits led to his resignation of that office which brought with it so many distractions from his chief work, and in 1701 he secured his recall to France. The scientific results of his journey were embodied in the quarto volume of his "Diarium Italicum" (Paris, 1702); he also collected a number of his companions. Dom Paul Briois, who had died on the journey (edited by Omont, "Revue des Bibliothèques", XIV, 1904).

In the full maturity of his powers, at liberty to satisfy his passion for work, with a large experience of life and an immense fund of general information, Montfaucon now took up his abode at the Abbey of St-Germain-des-Prés, where he spent the last forty years of his life. Here a choice body of scholars gathered around him, his avowed disciples, whose affection for their master prompted them to take the name of "Bardemins". Among these were Claude de Vio and Joseph Vaissette, authors of the "Vocabulaire de l'ancien Langage"; the heliast Charles de la Rue (his favorite disciple), Dom Lombez, the historian of Brittany, and even the Abbé Prévost, who was then a collaborator on the "Gallia Christiana". Montfaucon, moreover, corresponded with scholars all over Europe, and, in spite of the heavy tasks he took upon himself, he succeeded, thanks to his abstemious and regular life, in working almost to his last day. During this productive period, he supplemented the former edition of the Greek Fathers with a "Collectio nova patrum et scriptorum grecorum" (2 vols., folio, Paris, 1706). In 1709 he translated into French the "De vita contemplativa" of Philo Judeus, and essayed to prove that the Therapeutae there mentioned were Christians. Next he prepared the edition of Origen (2 vols., f.d., Paris, 1713) and that of St. John Chrysostom (13 vols., folio, Paris, 1718), prepared with the assistance of François Faverolles, treasurer of St-Denis, and four Benedictines, who spent thirteen years in collating 300 manuscripts.

The scientific bent of Montfaucon's mind led him to elaborate a new auxiliary science out of the studies he had made for the verification of his Greek texts. As Mabillon had created the science of diplomacy, so Montfaucon was the father of Greek paleography, the principles of which he established by the rigour of his method in grouping his personal observations. His great "Palaepgraphia Graeca" (folios, Paris, 1708) inaugurated the scientific study of Greek texts. Another auxiliary science of history, that of bibliography, owes to him a work still of considerable value, the "Bibliotheca bibliothecarum manuscriptorum nova" (2 vols., folio, Paris, 1739), a catalogue of the Greek manuscripts of the chief libraries of Europe. He also considered what benefit might accrue to history from the study of figured monuments, and, if he was not the creator of archeology, he was at least the first to show what advantages might be derived from it. Two of his works show him to be an originator. In 1719 he published "L'Antiquité expliquée et représentée en figures", a treatise on ancient art, which he reproduces, methodically grouped. All the ancient monuments that might be of use in the study of the religion, domestic customs, material life, military institutions, and funeral rites of the ancients. Of this work, which contains 1120 plates, the whole edition of 1800 copies was exhausted in two months, in spite of its enormous size. The regent, Philippe d'Orléans, desired that the author should become a member of the Académie des Inscriptions et Belles-Lettres, and he was elected to replace Père Letellier (1719). Montfaucon then conceived a more daring idea, and worked, similar to "l'Antiquité expliquée", which should embrace the whole history of France. The work, entitled "L'histoire de la monarchie française", was dedicated to Louis XV, appeared from 1729 to 1733 (5 vols., folio, Paris). In it Montfaucon studies the history, as it is shown in the monuments, of each successive reign down to that of Henry IV. His reproductions are inexact, and the work remained incomplete. On 19 December, 1741, he read before the Académie des Inscriptions a plan for continuing this work; two days later he died tranquilly, without any premonitory symptoms of illness. An indefatigable scholar, a bold thinker, an originator of scientific methods, he left after him a mighty generation of disciples to form the connecting link between the old Benedictine learning and modern scholarship.

LOUIS NICHEUR.

Montfort, Simon de, Earl of Leicester, date of birth unknown, d. at Toulouse, 25 June, 1218. Simon (IV) de Montfort was descended from the lords of Montfort l'Amaury in Normandy, being the second son of Simon (III), and Amicia, daughter of Robert de Beaumont, third Earl of Leicester. Having succeeded his father as Baron de Montfort in 1181, in 1190 he joined Alix de Montfort and Simon of Bouchard (III) de Bouchaner. In 1199 while taking part in a tournament at Écry-sur-Aisne in the province of Champagne he heard Fulk de Neueil preaching the crusade, and in company with Count Thibaud de Champagne and many other nobles and knights he took the cross. Unfortunately, the crusade ended in disaster, and the French knights, instead of co-operating with the pope, decided on a campaign in Egypt, and on their arrival at Venice entered on a contract for transport across the Mediterranean. Being unable to fulfil the terms of the contract, they compounded by assisting the Venetians to capture Zara in Dalmatia. In vain the pope urged them to seek for the Holy Land. They then proceeded to Constantinople, though Simon de Montfort offered energetic opposition to this proposal. Notwithstanding his efforts, the expedition was undertaken and the pope's plans were defeated.

In 1204 or 1205 Simon succeeded to the Earldom of
Leicester and large estates in England, for on the death of the fourth Earl of Leicester in that year, his honour of Leicester devolved on his sister Alicia, Simon's mother; and as her husband, Simon (III), and her eldest son were already dead, the barony devolved on Simon himself. But though he was recognized by King John as Earl of Leicester, he was never formally invested with the earldom, and in February, 1207, the king seized all his English estates on pretext of a debt due from him. Shortly afterwards they were restored, only to be confiscated again before the end of the year. Simon, content with the Norman estates he had inherited from the de Montforts and the de Beaumonts, remained in France, where in 1208 he was made captain-general of the French forces in the Crusade against the Albigeenses. At first he declined this honour, but the pope's legate, Arnold, Abbot of Citeaux, ordered him in the pope's name to accept it, and he obeyed.

Simon thus received control over the territory conquered from Raymond (VI) of Toulouse and by his land was shown by his efforts to dissuade Louis of France from invading England in July, 1216, in which matter he was seconded, though fruitlessly, by the legate Gualo. Having at this time raised more troops in Paris, Simon returned to the south of France, where he occupied himself in waging war at Nimes, until in 1217 a rebellion broke out in Provence, where Count Raymond's son re-entered Toulouse. Simon hastened to besiege the city, but was hampered by lack of troops. On 25 June, 1218, while he was at Mass he learned that the besieged had made a sortie. Refusing to leave the church he ordered the sortie to be protected, and the scene of action only to be wounded mortally. He expired, commending his soul to God, and was buried in the Monastery of Haute-Bruyère. He left three sons, of whom Almeric the eldest ultimately inherited his French estates; the youngest was Simon de Montfort, who succeeded him as Earl of Leicester, and who was to play so great a part in English history.

EDWIN BURTON.

Montgolfier, JOSEPH-MICHEL, inventor; b. at Vidalon-lez-Annony, Department of Ardèche, France, 26 August, 1740; d. at Balaruc-les-Bains, Department of Hérault, France, 26 June, 1810. His father was a prosperous paper-manufacturer, who brought up nine children, presenting to them an example of high virtue, honesty, economy, and piety. Joseph was educated at the local college in a very unsatisfactory manner. When he returned home he found in the manufacture of paper subjects of study more to his liking. He set up an independent establishment with his brother Augustine in order to exercise the inventive faculties that were held in check by his economical father. His numerous ideas and projects and his simplicity of character exposed him to financial losses, and eventually brought upon him an unjust temporary imprisonment.

He improved the manufacture of paper, invented a method of stereotyping, and constructed an air-pump for supplying the air in the moulds. Numerous objects of everyday life occupied his inventive faculties. His most important work, however, was in connexion with hydraulics and aeronautics. He interested his brother Etienne in these so-called chimerical projects. They invented the hydraulic ram, which uses the energy from a copious flow of water under a small head in order to force a small portion of that water to a considerable height. Observations on the behaviour of a sheet hung over a fire led them to attempt a number of experiments with balloons made of taffetas and filled with heated air. On 5 June, 1783, a successful exhibition took place before the États of Vivarais, assembled at Annony. A globe, 110 feet in circumference and weighing about 500 pounds, was filled with air heated at 160°. This balloon rose to a height of 6600 feet and came down very gently at a distance of a mile and a half. This attempt naturally excited enormous interest throughout the civilized world. Joseph left to his brother the honour and duty of reporting to the Academy of Sciences at Paris and of repeating experiments at the expense of the state. Balloons were constructed that carried with them a furnace for the purpose of keeping the air heated and therefore light, and two courageous physicists, Biot and Gay-Lussac made a successful ascent. At Lyons, Joseph and six others went up in a balloon 126 feet feet 6 inches in diameter. On 20 August, 1783, the brothers were placed by acclamation on the list of correspondents of the Academy, "as scientists to
whom we are indebted for a new art that will make an epoch in the history of human science". Etienne received the decoration of Saint-Michel for himself, and letters of nobility for his father. Joseph obtained a pension, and 40,000 livres for the construction of an experimental dirigible balloon. This he was unable to realize.

He was noted for extraordinary bodily strength and for courageous philanthropy. During the stormy days of the Revolution he offered and ensured protection and asylum to many proscribed persons, who were often not known to him even by name. "With no faction, he submitted to the political laws unless they were in opposition to the laws of humanity, and awaited with confidence the return of order". His business having been ruined, he went to Paris, where the new Government rewarded him. He was called to the consulting bureau of arts and manufactures, was rewarded and recompensed. He was the successor of Coulomb, and was made a Knight of the Legion of Honour.

Apart from a few memoirs in "Journal des Mines" and "Journal de l'Ecole polytechnique", he published very little, viz.: "Discours sur l'aérostat" (with his brother Etienne), Paris, 1783; "Voyageurs aériens" (with Etienne), Paris, 1784; "Mémoires sur la machine aérostatique", Paris, 1784; "Notes sur le bélier hydraulique", Paris, 1803.

William Fox.

Months, Special Devotions for.—During the Middle Ages the public functions of the Church and the popular devotions of the people were intimately connected. The laity assisted at the daily psalmody, the sacrifice of the Mass, the numerous processions, and were quite familiar with the liturgy. Those few religious exercises outside of official services, e.g. the Rosary (a substitute for the 150 Psalms) originated in the liturgy. Later, however, especially since the sixteenth century, popular devotion followed its own channels; liturgical practices like the Stations of the Cross, the Quarrant’Ore, various litanies and rosaries (corones), prevailed everywhere; novenas and series of Sundays and week-days in honour of particular saints or mysteries were instituted. Entire months of the year were given over to special devotions. Following is a list of the more common devotions with the indulgences attached: (1) January, the Holy Name of Jesus (feast of the Holy Name, second Sunday after Epiphany); indulgences, one hundred days each day if the devotion is made publicly, three hundred days each day if the devotion be in a public church or chapel, plenary indulgence for daily assistance at the public functions, under the usual conditions (Leo XIII, "Brief", 21 Dec., 1901; "Acta S. Sedis", XXXIV, 425). (2) March, St. Joseph (feast, 19 March); indulgences, three hundred days for those privately or publicly perform some pious practice in honour of St. Joseph, during the month, a plenary indulgence on any day of the month under the usual conditions (Pius IX, "Rescript Congr. Indulg.", 27 April, 1865). This month of devotions may commence in February and be concluded 19 March (Pius IX, 19 March, 1877). March of every month in case of legitimate impediment (Raccolta, 404). The practice of a triduum before the feast of St. Joseph has been recommended by Leo XIII (Enecyl. "Quamquam pluries", 15 August, 1889). (3) May, the Blessed Virgin Mary. The May devotion in its present form originated at Rome where Father Latomus in the Roman College of the Jesuits, roused the fidelity and immorality among the students, made a vow at the end of the eighteenth century to devote the month of May to Mary. From Rome the practice spread to the other Jesuit colleges and thence to nearly every Catholic church of the Latin rite (Alber, "Blüthenkränzle", IV, 531 sq.). This practice is the oldest instance of a devotion extending over an entire month. Indulgences, three hundred days each day by assisting at a public function or performing the devotion publicly in private, plenary indulgence on any day of the month or on one of the first eight days of June under the usual conditions (Pius VII, 21 March, 1824; Pius X, 19 March, 1912; ten years; 18 June, 1822 in perpetuum).

In June, the Sacred Heart, consecrated last of all in Rome, was publicly practised, was approved by Pius IX, 8 May, 1873 (Reser. auth., n. 409), and urgently recommended by Leo XIII in a letter addressed by the Cardinal Prefect S.R.C. to all the bishops, 21 July, 1909. Indulgences: (a) seven years and seven quarantines each day for performing the devotion publicly or privately; (b) plenary indulgence for the devotion practised daily in private, or if a person assist at least ten times at a public function, a plenary indulgence on any day in June or from 1-8 July (Deer. Urbis et orbis, 30 May, 1902); (c) the indulgence toties quoties on the thirtieth of June or the last Sunday of June (25 Jan., 1908) in those churches where the month of June is celebrated solemnly. Pius X (8 Aug., 1906) urged a daily sermon, or at least for eight days in the form of a mission (26 Jan., 1908); (d) to those priests, who preach the sermons at the solemn functions in June in honour of the Sacred Heart and to the rectors of the churches where these functions are held, the privilege of the Gregorian Altar on the thirtieth of June (Pius X, 8 Aug., 1906); (e) plenary indulgence for the devotion in private for the public devotion: seven years and seven quarantines each day; plenary indulgence on any day in July or 1-8 August, after having assisted eight times at a public function under the usual conditions; if the devotion be held privately three hundred days each day with plenary indulgence on 31 July, or 1-8 of August (Pius IX, 4 June, 1859). For this practice any other month or any period of thirty days during the year may be chosen (Raccolta, 178). (6) September, the Seven Dolours of the Blessed Virgin Mary (feast of the Seven Dolours, third Sunday in September); indulgences, three hundred days each day and the devotions may be performed in public or private; plenary indulgence on the first Sunday of September under the usual conditions (Leo XIII, "Raccolta", 27 Jan., 1888, 232).

(7) October, the Holy Rosary (feast of the Holy Rosary, first Sunday in October). Leo XIII personally instituted this practice in an Encyclical (1 Sept., 1893) in which he admonished the faithful to
dedicate the month of October to the Queen of the Holy Rosary in order to obtain through her intercession the grace that all men might come to defend His Church in her sufferings, and for nineteen years he published an encyclical on this subject. By the decree of the Congregation of Rites (20 Aug., 1885; 26 Aug., 1886; 2 Sept., 1887) he ordained that every year during the entire month of October, including the first and second of November, in every cathedral and parochial church in all the churches and chapels which are dedicated to the Blessed Virgin Mary, five decades of the Rosary and the Litany of Loreto are to be recited, in the morning during Mass or in the afternoon whilst the Blessed Sacrament is exposed; and by the encyclical letter of 15 August, 1889, a prayer in honour of St. Joseph was added. Indulgences (S. C. F. M. C. 1889; 1890; 1891) were granted every day for the public or private recitation of five decades; (b) plenary indulgence on the feast of the Holy Rosary or during the octave for those who during the entire octave recite daily five decades and fulfil the other usual conditions; (c) plenary indulgence on any other day of the month for the recitation of five decades in any of the churches and chapels of the city; (d) remission of at least ten years the five decades ("Raccolta", 354; Alber, "Blutenkenrzte", III, 730 sq.). Also in October there are devotions in honour of St. Francis of Assisi (Teast, 4 Oct.); indulgences, three hundred days each day by assisting at the public devotions in honour of St. Francis in a church or public oratory; plenary indulgence for those who receive the Holy Sacrament and the Holy Eucharist during the octave of the feast; see for other devotions (Leo XIII, 17 Jan., 1888). Popular devotion has also selected other mysteries and has dedicated January to the Holy Childhood and the hidden life of Jesus according to the Gospel of the first Sunday after Epiphany; March, to the Holy Family, on account of the feast of St. Joseph and the Annunciation (25 March); August, to the Maternal Heart of Mary (feast on the Sunday after twenty-second of August); October, to the Holy Angels (feast, 2 Oct.); December, to the Immaculate Conception (feast, 8 Dec.) or to the Holy Child in the stable at Bethlehem (25 Dec.). These practices, however, are not formally approved by the Church, nor enriched with indulgences.

These devotions, of course, vary with conditions in different countries. Though there is a wide variety, constantly changing, the prayers more commonly used are the litanies of the Holy Name, Sacred Heart, St. Joseph, the Blessed Virgin, the indulgenced prayers of the Raccolta, the rosary of the Dominicans. For the May and June devotions, a short sermon or instruction usually follows, with Benediction of the Blessed Sacrament concluding the services.

BENIGNO, Die Abhlas (13th ed., Paderborn, 1906); SCHWROHOFER, Abenteuer (Munich, 1900).

FREDERICK G. HOLWECK.

Monti di Pieta. See Montes Pietatis.

MONTMAGNY, Charles Huault de, second French Governor of Canada, b. in France towards the end of the sixteenth century, of Charles Huault and Antoinette du Drac; d. in the Antilles after 1651. Educated by the Jesuits, he joined the Order of Malta in 1622, and fought against the Moslems and the corsairs of Africa. Appointed to replace Chaplain before the announcement of the latter's death, he reached Quebec on 15 June, 1636. He rebuilt Fort St-Louis, and traced the plan of the city, giving to its four primitive streets the names they still bear in honour of King Louis, of the queen-mother, and of the patron saints of Paris, and of his order. With him had come several noble families destined to contribute to the country's development and renown. During his administration were built the Jesuit College (founded 1635), the Ursuline monastery, and Hôtel-Dieu (1639). Isle Jésus, lying parallel to Montreal, was first called by the Jesuit Lejeune Isle Montmagny in his honour. From the outset, he was ardent for the conversion of the natives and priests in the country. The Jesuits went to Sillery, where Montmagny strove to have the Indians instructed. When Maisonneuve, in the autumn of 1641, came with forty colonists to find Montreal, Montmagny kept them for the winter, and in the spring personally escorted them to their destination. He built Fort Richelieu (now Sorel) at the mouth of the Saint Lawrence, and here he received on the 20th of July a band of fifty Iroquois. The English then occupied the fortress at Queenston and Montmagny, in 1643, while the Iroquois were repulsed, the onslaught of 700 Iroquois. At the expiration of a third term of office, he was replaced by Daillebrot (1648), and departed sincerely regretted by all and leaving behind him an undying reputation for prudence and wisdom. He had efficaciously aided in the progress of the colony by the concession of twenty large domains to the enterprising hands of many noble families. Shortly after his return to France, he was sent to St. Christopher in the Antilles, a possession of his order, where he died. He lies buried in the church of Bassetterre. Parkman accuses him of being a tool in the hands of the Jesuits, but his refusal to develop actively their missions in the region of the Great Lakes, to the benefit of the French in Canada, gives ample proof of his independent government. Awdy by his imposing stature and dignity, the aborigines called him Onomutho or "High Mountain" (a translation of his name, Montmagny, Mons magnum). I was withal mild, courteous, and affectionate, winning the attachment of both Indians and whites. He was called the "second father" of New France.

LIONEL LINDSAY.

Montmirail (Monte-Mirabilis), John de, son of Andrew, Lord of Montmirail and Ferté-Gaucher, and Hildiade d'Olay, b. in 1165; d. 29 Sept., 1217. He was trained in piety by his mother, and well instructed in the secular sciences. Whilst young he embraced a military career, and was presented at the Royal Court, where he formed a lasting friendship with Philip Augustus, later King of France. The discipline of court life led him to neglect the training of his youth; even his marriage with a most estimable lady, Helvide de Dampierre, failed to effect a change for the better. However, in his thirtieth year he met Jober, Prior of St-Etienne de Montmirail, whose words of counsel proved sufficient to cause his conversion; and he turned to God with generosity and fidelity. He built an hospital for the sick of all kinds, but the objects of his predilection were the lepers, and those hopelessly afflicted. He loved the poor as brothers, and provided for them. He was severe on himself, wearing a coarse hair-shirt, passing frequently entire nights in prayer. Not satisfied with a life of holiness in the world, nor with that of a recluse, which he tried for a while, he entered the Cistercian monastery of Longpont, after having distributed amongst the poor all his possessions not needed by his wife and family; and he gave himself wholly to prayer and penance, so much so that he had to be reprimanded for going to extreme mortification. He had to cast off all his former friends; even members of his own family abused him for having abandoned honour and wealth for poverty and subjection. But none of these things could weaken the fervour with which he sought perfection. Innumerable miracles were wrought at his
tomb, and attract pilgrims even to the present day. Leo XIII granted a special office in his honour for the Diocese of Soissons.

Monarchy, Anne, First Duke of, b. at Chantilly, 15 March, 1492; d. at Paris, 12 November, 1567. He belonged to that family of Montmorency whose members from 1327 held the title of first Barons of France. Educated with the future Francis I, appointed marshal in 1522 as a reward for his services in the capture of Novara, his successful efforts to obtain the freedom of Francis I, taken prisoner at Pavia (1525), assured him of his favour. He immediately became grand master of the royal house and Governor of Languedoc. To his cleverness was due the treaty of Cambrai (1529), by which the two sons of Francis I, retained as hostages by Charles V since 1526, were released; in 1530 his power became unlimited. He inaugurated a new policy; his foremost aim was that France should retain her strength and live at peace with the emperor and the pope. He arranged the interview at Marseilles (1533) between Francis I and Clement VII in which the marriage of Catherine de Médicis with Prince Henry, the second son of the king, was arranged. The continued friendship of Francis I with certain German princes and his ambitions in Italy which were opposed to those of the emperor, made an understanding with Charles V very difficult. With the outbreak of war in 1536, Montmorency adopted the tactics of never giving battle; he laid waste Provence so that when the imperial forces invasiously entered his province they were obliged by famine to retreat. The articles of agreement which Charles V and Francis I signed (July, 1538), were the work of Montmorency, who declared afterwards that "the interests of both might be considered identical". The journey of Charles V to France (January, 1540) led Francis I to believe that the emperor was about to cede Milan to him; but he was soon undeceived. Montmorency, constable since 1538, was disgraced (June, 1541) through the influence of the favourite, Mme. d'Etampes. In 1547 Henry II, hardly became king, recalled Montmorency and made him really his favourite: Charles V made advances to the constable who in 1551 became a duke and a peer. He soon found himself opposed to the Guises. In spite of the military glory of occupying Metz (April, 1552), his one desire was to secure peace between France and the Empire, and in 1555 he made a vain effort to bring this about through the mediation of Mary Tudor. The war was prolonged; at Saint-Quentin (August, 1557) Montmorency, defeated, was taken prisoner; it was in 1558 that he commenced the negotiations which terminated in the treaty of Cateau-Cambrésis (April, 1559) by which France obtained Metz, Toul, Verdun, and Colmar but renounced all claim to Italy, Savoy, Brescia, and Bugey. Montmorency, in retirement during the reign of Francis II, under the regency of Catherine de Médicis found his position very complicated. The uncle of Coligny and an enemy of the Guises, it seemed as if he ought to have sustained that policy of toleration towards the Protestants at first inaugurated by the queen-regent; but his Catholic convictions led him with the Duke of Guise and the Marchéal de Saint-André to form a triumvirate (6 August, 1561) to save Catholicism. Wounded mortally at the Huguenot battle of Dreux (19 December, 1562) after the peace, he joined with the Protestant Condé in the effort to take Havre from the English (30 July, 1563). In the second war of religion he again opposed Condé; and it was a follower of Condé who mortally wounded him at the battle of Saint-Denis (10 November, 1567).

Of indomitable courage, his cruelty towards conquered soldiers was shocking. He preferred defensive to offensive warfare. Although definitively the first of the great French lords, he worked towards the development of royal absolutism; under Francis I and Henry II he showed himself a faithful defender of the royal authority and suspected the Guises of being its enemies. A conservative in religion, he could not understand the intrigues of Catherine de Médicis and throughout the religious wars he fought vigorously for Catholicism under the same banner as the Guises whom he detested. An enlightened and generous protector of the writers and artists of the Renaissance, in 1549 he entrusted to his counselor and confidant together a numismatic collection which later, after the condemnation of the Duke of Montmorency, the descendant of Anne, Louis XIII gave to his brother, Gaston d'Orléans, and which was the beginning of the Cabinet des Médailles of the national library of Paris. The library of Chantilly as formed by Anne contained a beautiful collection of French and English translations of Latin authors. The Institut de France in 1900 bought "Les Heures du contétable" to add them again to this library from which they had been taken; they form one of the most admirable illuminated manuscripts of the sixteenth century, and we find in them a very beautiful prayer to Saint Christopher, composed by Anne himself during his years of disgrace; this manuscript was completed in 1549. During his disgrace Anne built the chateau of Ecouen where Jean Goujon, Rosso, and Bernard Palissy worked, and where were to be found two slaves in marble of Michael Angelo.

Montmorency, Anne, First Duke of. La triomphe et les gestes de Mgr. Anne de Montmorency, ed. Delisle (Paris, 1904); Delville, Les heures du contétable Anne de Montmorency ou Messe Condé (Chantilly, 1903); La tribu des Lartetrie. Un conte de la vie du contétable de Montmorency (Paris, 1879); Deville, Anne de Montmorency, grand maire et constable de France de la Tour, aux armes, a combattu d'un comte (Paris, 1886); Deville, Anne de Montmorency, contétable et pair de France sous les rois Henri II, Francois II et Charles IX (Paris, 1889). See also bibliography under Guise and Catherine de Médicis. — Georges Goyau.

Montor, Alexis-François Artaud de, diplomat and historian, b. at Paris, 31 July, 1772; d. at Paris, 12 Nov., 1849. An émigré during the Revolution, he was, however, entrusted by the royal princes with missions to the Holy See and served during the campaign of Champagne. In 1805 he wrote for the government a satisfactory report on the French legation at Rome; Artaud occupied this post under Cacault, left Rome for a short time when Cardinal Fesch, Cacault's successor, brought Chateaubriand with him, and returned to Rome in the same capacity after Chateaubriand had resigned. Appointed chargé d'affaires of France to Florence in 1835 he was busy with diplomatic business and was successfully suspected of having employed his power in behalf of the Queen of Etruria whose possessions Napoleon wished to give to Elisa Bonaparte. Made censor during the last years of the empire, he became under the Restoration secretary of the embassy at Vienna, then again at Rome. In 1830 he retired upon a pension to devote himself exclusively to literary works. — Besides
his translation of Dante's "Divina Commedia" (1811-1813) which was rated very highly, Artaud de Montor left important historical works: "Machiavel, son génie et ses erreurs" (Paris, 1833); the volume on the history of Italy in the collection of the "Université populaire" (Paris, 1833); "Lettres à un ami" (Paris, 1836); "Histoire de Dante Alighieri" (Paris, 1841); "Histoire des souverains pontifes romains" (8 vols., Paris, 1842); "Histoire de Léon XII" (Paris, 1843); "Histoire de Pie VIII" (Paris, 1843). Shortly before his death, he published in 1849 when Pius IX was banished to Gaeta, a work entitled "La papauté et les révoltes" in which he rejected his earlier views on the merits of the Pope's observations as a diplomat form the valuable feature of Artaud de Montor's historical works. He was a member of the Académie des Inscriptions et belles lettres from 17 Dec., 1830.

MONTPELLIER. DIOCÈSE OF (MONTIS PESSULANI), comprises the department of Hérault, and is a suffragan of Avignon. When the Concordat of 1802 re-established this diocese, it accorded to it also the department of Tarn, which was detached from it in 1822 by the creation of the Archdiocese of Albi; and from 1802 to 1822, Montpellier was a suffragan of Toulouse. A Brief of 18 June, 1877, authorized the bishops of Montpellier to call themselves bishops of Montpellier, Béziers, Agde, Lodève, and Saint-Pons, in memory of the different dioceses united in the present Diocese of Montpellier.

(A) Diocese of Montpellier.—Maguelonne was the original diocese. Local traditions, recorded in 1853 by Abbe Maret in his "Histoire des évêques de Maguelonne", affirm that St. Simon the Leper, having landed at the mouth of the Rhône with St. Lazarus and his sisters, was the earliest apostle of Maguelonne. Gareiél invokes in favour of this tradition a certain manuscript brought from Byzantium. But the chronicler, Bishop Arnaud de Verdela (1339-1352) was ignorant of this alleged Apostolic origin of Maguelonne. It is certain that the tombstone of a Christian woman named Vera was found at Maguelonne; Le Blant assigns it to the fourth century. The first historically known Bishop of Maguelonne was Bontius, who assisted at the Council of Narbonne in 589. Maguelonne was completely destroyed in the course of the wars of the counts of Carcassonne and the Saracens. The diocese was then transferred to Subastian, but Bishop Arnaud (1030-1060) brought it back to Maguelonne which he rebuilt. Near Maguelonne had grown up by degrees the two villages of Montpellier and Montpelleret. According to legend, they were in the tenth century the property of the two sisters of St. Fulcan, Bishop of Lodève. About 975 they gave them to Ricius, Bishop of Maguelonne. It is certain that about 990 Ricius possessed these two villages; he kept Montpellier and gave Montpelleret in feoff to the family of the Guillemaus. In 1065 Pierre, Count of Subastian and Melgueil, became a vassal of the Holy See for this countship, and relinquished the right of nomination to the Diocese of Maguelonne. Urban II charged the Bishop of Maguelonne to proclaim the papal suzerainty, and he spent five days in this town when he came to France to preach the Crusade. In 1215 Innocent III gave the countship of Melgueil in feoff to the Bishop of Maguelonne, who thus became a temporal lord.

From the time the Bishop of Maguelonne had the right of cocainage. Clement IV reproached (1266) Bishop Bérenger de Fréol with causing to be struck in his diocese a coin called "Miliarensis", on which was read the name of Mahomet; in fact at that date the bishop, as well as the King of Aragon and the Count of Toulouse, authorized the coinage of Arabic money, not intended for circulation in Maguelonne, but to be sold for exportation to the merchants of the Mediterranean.

In July, 1204, Montpellier passed into the hands of Peter of Aragon, son-in-law of the last of the Guillemes; Jaime I, son of Peter II, united the city to the Kingdom of Majorca. In 1282 the King of Majorca paid homage to the King of France for Maguelonne. Bérenger de Frédol, Bishop of Maguelonne, ceded Montpellier to Philip IV (1292). Jaime III of Majorca sold Montpellier to Philip VI (1349); and the city, save for the period from 1365 to 1382, was henceforth French. Urban V (Guillaume de Grimoard) had studied theology and canon law at Montpellier and was crowned pope by Cardinal Ardoni Aubert, nephew of Innocent VI, and Bishop of Maguelonne from 1352 to 1354; hence the attachment of Pope Urban for this diocese which he favoured greatly. In

Cathedrale, Montpellier
1364 he caused the foundation at Montpellier, of a Benedictine monastery under the patronage of St. Germain, and came himself to Montpellier to see the new church (9 Jan.-5 March, 1367). He caused the city to be surrounded by ramparts, in order that scholars might work there in safety; and finally he caused a large canal to be begun by which Montpellier might communicate with the sea. At the request of King Francis I, who pleaded the epidemics and the ravages of the pirates which constantly threatened Maguelonne, Paul III transferred the see to Montpellier (27 March, 1539). The new diocese was introduced in Feb., 1560, by the pastor, Guillaume Mauguet, was much troubled by the wars of religion. Under Henry III a sort of Calvinistic parish was installed there. The city was reconquered by Louis XIII (October, 1622).

Among the 54 bishops of Maguelonne, and the 18 bishops of Montpellier, may be mentioned: Blessed Louis Aleman (1418-23), later Bishop of Arles; Guillaume Pellier (1527-68), whom Francis I sent as an ambassador to Venice, and whose learning as a humanist and naturalist made him after Soévole de Sainte-Marthe, "the most learned man of his century"; the preacher Pierre Penouillet (1608-62); François de Boquet (1657-76), whose historical labours were
very useful to the celebrated Baluze; the bibliophile Colbert de Croisy (1696–1738), who induced the Oratorian Pouget to compose in 1702 the famous "Catechism of Montpellier," condemned by the Holy See in 1712 and 1721 for Jansenistic tendencies; Fournier (1808–94), who in 1891 was confined for a time in the house of Dr. Dechante at the demand of the bishop for a sermon against the Revolution. Among the numerous councils and synods held at Montpellier, the following merit mention: the council of 1162 in which Alexander III excommunicated the antipope, Victor; the provincial synod of 1195, which was occupied with the Saracens of Spain and the Albigensian crisis; the council of 1215, in which was presented over by Peter of Benevento,legate of the Holy See and passed important canons concerning discipline, and declared also that subject to the approval of the pope, Toulouse and all the other towns taken from the Albigenses should be given to Simon de Montfort; the council of 1224, which rejected the request of the magnates of Languedoc to be allowed to take part in the Synod of Toulouse; the council of 1258, which by permitting the seneschal of Beaucaire to arrest ecclesiastics taken in the act of crime, in order to hand them over to the bishop, made way for royal magistrates to exercise power within the ecclesiastical jurisdiction and thus inaugurated the movement as a result of which, under the name of "privileged cases," a certain number of offenses committed by ecclesiastics became amenable to lay justice.

(B) Diocese of Agde.—Local traditions designate as the first Bishop of Agde, St. Venustus, said to have suffered and died during the legendary invasion of the barbarian, Chroesus, about 407 or 408. The first historically known Bishop of Agde is Sophronius who assisted at the Council of Agde in 506.

(C) Diocese of Béziers.—Local traditions assign as the first Bishop of Béziers the Egyptian saint, Aphrodias, said to have sheltered the Holy Family at Hierapolis and to have become a disciple of Christ, also to have accompanied Sergius Paulus to Gaul when the latter went thither to found the Church of Narbonne, and to have died a martyr at Béziers. The first historically known bishop is Paulinus mentioned in 418; St. Guiraud was Bishop of Béziers from 1121 to 1123; St. Dominic refused the See of Béziers to devote himself to the运动. Among the fifteen synods held at Béziers must be mentioned that of 356 held by Saturninus of Arles, Arian archbishop, against St. Hilary; those of 1233, 1246, and 1255 against the Albigenses.

Local traditions made St. Aphrodiasius arrive at Béziers mounted on a camel. Hence the custom of leading a camel at the beginning of each Mass at Béziers on the feast of the saint; this lasted until the Revolution.

(D) Diocese of Lodève.—Since the fourteenth century local tradition has made St. Florus first bishop of Lodève, and relates that as a disciple of St. Peter, he afterwards evangelized Haute-Auvérargue and died in the present village of St.-Flour. It is historically certain that the bishops of Lodève mentioned since 421, the first historically known bishop is Maternus, who was present at the Council of Agde in 506. Among the bishops of Lodève are: St. George (863–884), previously a Benedictine monk; St. Fulcran (949–1006), who in 975 dedicated the cathedral of St. Genès and founded the Abbey of St. Sauveur; the Deacon Baudoin (1124–1130); Count of Carcassonne, Guillaume d’Estouteville (1450–1453), who played an important part as papal legate, also in the rehabilitation of Joan of Arc; the brothers Guillaume Briçonnet (1489–1516) and Denis Briçonnet (1516–1520).

(E) Diocese of Saint-Pons-de-Thomières.—The Abbey of St-Pons was founded in 936 by Raymond, Count of Toulouse, who brought thither the monks of St. Géraud d’Aurillac. By a Bull of 18 Feb., 1318, John XXII raised the abbey to a see.

Special honour is paid in the present Diocese of Montpellier to St. Pons (Pontius) de Cimiez, martyr under Valerian, patron of St.-Pons-de-Thomières; St. Tiberius and Modestus and St. Florence, martyrs at Carcassonne; St. Martin, born at Canet; St. André, at Agde (d. about 500); St. Maxence, a native of Agde and founder of the Abbey of St.-Maxence, in Poitou (447–515); St. Benedict of Aniane, and his disciple and first historian, Saint Ardo Smargus (d. in 843); St. Guillaume, Duke of Aquitaine, who in 894, founded near Lodève, on the advice of St. Benoît de Saint-Denis, the Monastery of Gellone (later St-Guillaume du Désert), died there in 812, and under the name of "Guillaume au Court Nœ" became the hero of a celebrated epic chanson; St. Etienne, Bishop of Apt (975–1046), born at Agde; Blessed Guillaume VI, Lord of Montpellier from 1121 to 1149 and who died a Cistercian at Grandesle; Bl. Peter of Castelnau, Archdeacon of Maguelonne, inquisitor (d. in 1208); St. Gérard (or Géri), Lord of Lunel (end of thirteenth century); the celebrated pilgrim, St. Roch, who was born at Montpellier about the end of the thirteenth century, saved several cities of Italy from the pest, and returned to Montpellier to live as a hermit, where he died in 1225. The Benedictine Abbey of Lodève, at the limits of the diocese, in the thirteenth century a centre of monastic reform. The Benedictine Abbey of Valmagne was founded in 1138 by Raymon of Trouvel, Viscount of Béziers. As early as 1180 the Hospital of the Holy Ghost at Montpellier received exposed or abandoned children.

The chief pilgrimages of the diocese are: Notre Dame de Grâce at Gignac, on the site of a sanctuary built by St. Flur, first Bishop of Lodève; Notre Dame de Grau near Agde, on the site of an oratory built in 1146 by St. Severus; Notre Dame de Mougerous at Mougerous (fifteenth century); Notre Dame de Montaigu at Ceyras, a pilgrimage founded by the Franciscans in the first half of the sixteenth century; Notre Dame de Roubiac (dating from the tenth century); Notre Dame du Sac at Brissac, established by the Benedictines; Notre Dame de Trédos, a pilgrimage already in existence in 1162; Notre Dame des Tables at Montpellier, dating from the ninth century, and particularly developed under the Franciscans in the thirteenth century; Notre Dame des Tables disappeared after the Revolution; but the cult transferred to the chapel of the Jesuits is still in vogue, and in 1889, Mgr. de Cabrières crowned the statue in the name of the pope. Before the application of the Law of 1901 there were in the diocese, Carthusians, Jesuits, Franciscans, Lazarists, Missionaries of the Sacred Heart, Redemptorists, Congregations of the Missionaries of the Sacred Heart, 8 houses of mercy, 15 establishments for nursing the sick in their homes, 1 hospital for the insane, 6 hospitals or infirmaries.

In 1908 the diocese numbered 482,779 inhabitants, 43 parishes, 310 chapels, 27 vicariates.

University of Montreal.—It is not known exactly at what date the schools of literature were founded which developed into the Montpellier faculty of arts; it may be that they were a direct continuation of the Gallican Roman schools. The school of law was founded c. 1089 by Placide, archbishop of Narbonne, and Bonnet, who came to Montpellier in 1160, taught there during two different periods, and died there in 1192. The school of medicine was founded perhaps by a graduate of the Spanish medical schools; it is certain that, as early as 1137, there were excellent physicians at Montpellier. The statutes given in 1220 by Cardinal Constantin were confirmed by Pope Honorius III in 1240 by Pierre de Conques, placed this school under the direction of the Bishop of Maguelonne. Nicholas IV issued a Bull in 1289, combining all the schools into a university, which was placed under the direction of the bishop, but which in fact enjoyed a large measure of autonomy. Theology was at first a part of the Department of the Arts in the Universities of Padua, Raymond Lullus, and the Dominican Bernard de la Treille lectured. Two letters of King John prove that a faculty of theology existed at Montpellier independently of the convents, in January, 1390. By a Bull of 17 December, 1421, Martin V granted canonical institution to this faculty and united it closely with the faculty of law.

In the sixteenth century the faculty of theology disappeared for a time, when Calvinism, in the reign of Henry II, held complete possession of the city. It resumed its functions after Louis XIII had re-established the royal power at Montpellier in 1622; but the rivalries of Dominicans and Jesuits interfered seriously with the progress of the faculty. After the Revolution the faculty numbered among its illustrious pupils of law Petrarch, who spent four years at Montpellier, and among its lecturers Guillaume de Nogaret, chancellor to Philip the Fair, Gaillarde de Grimoard, afterwards pope under the name of Urban V, and Pedro de Luna, afterwards pope under the name of Benedict XIII. But after the sixteenth century this faculty fell into decay, as did also the faculty of arts, although for a time, under Henry IV, the latter faculty had among its lecturers Casaubon. The Montpellier school of medicine owed its success to the ruling of the Guilhems, lords of the town, by which any licensed physician might lecture there; there was no fixed limit to the number of teachers, lectures were multiplied, and there was a great wealth of teaching. Rabelais took his medical degrees at Montpellier. It was in this school that the biological theory of vitalism, elaborated by Barthez (1734-1806), had its origin. The French Revolution did not interrupt the existence of the faculty, although the number of members and the number of letters were re-established in 1810; that of law in 1880. It was on the occasion of the sixteenth centenary of the university, celebrated in 1889, that the Government of France announced its intention—which has since been realized—of reorganizing the provincial universities in France.

Montreal, Archdiocese of, Metropolitan of the ecclesiastical Province of Montreal. Suffragans: the Dioceses of Saint-Hyacinthe, Sherbrooke, Valleyfield, and Joliette. Catholic population, 470,000; clergy, 720, of whom 395 are secular priests. Protestant population, 80,000, composed of different sects. The diocese, separated from Quebec by Grand River XVI (1836), was a maximum length of sixty and breadth of fifty-two miles. (See the official reports of His Grace the Archbishop to the Holy See, in the Archives of Montreal.)

The present article will be continued in: I. History; II. Present Conditions. Division I will be subdivided by periods: A. Before the Cession (1763); B. From the Cession to the Formation of the Diocese (1836); C. From 1836 to the present time (1910), in the last subdivision including an account of the Eucharistic Congress of 1910.

I. History.—A. Before the Cession.—On his second voyage (1535), Jacques Cartier, the discoverer of Canada, stopped at Stadacona (Quebec). He went up the St. Lawrence to the savage village of Hochelaga, now Montreal, which afterwards bestowed the beautiful and well deserved name of Mont Royal on the mountain that overhangs the present city. In 1608 Quebec was founded by Samuel de Champlain. While, in Canada, the youthful colony was endeavouring to live under the rather weak, but too selfish and mercantile, government of the Compagnie de la Nouvelle-France, the Compagnie de Notre-Dame-de-Montreal was being formed in France. Two men of God, M. Olier, of Saint-Sulpice, and M. de la Dauversière, were the life of this Compagnie de Montréal. They offered themselves without imposing any burden on the king, the clergy, or the people, having as their sole aim, the glory of God and the establishment of religion in New France. This association having addressed itself to M. Chomodey de Maisonneuve, found in him one who would carry out its wishes faithfully. The island of Montreal was purchased from the Compagnie des Cent-Associés, for purposes of colonization (7 August, 1640). On 18 May, 1642, M. de Maisonneuve arrived with a company of thirty from the Seigneurie of Saint-Sulpice, landed with Mlle Jeanne Mance, the future foundress of the Hôtel-Dieu. Ville-Marie, as he first named Montreal, was then founded. (See Canada.) For thirty years an heroic struggle had to be carried on against the Iroquois. In 1636 there arrived Marguerite Bourgeoys, who a little later established the Sisters of Charity. In 1648 the first French Fueliess were forcibly sent by M. Olier on his death-bed, settled under the direction of M. de Queyless. From that time the spiritual wants of Montreal have been entrusted mainly to the Fathers of Saint-Sulpice (see Saint-Sulpice, Congregation of). It was at Montreal that Dollard formed his famous battalion in 1650. There also, Lemoine and, before him, Lambert Close, after Maisonneuve, had won great distinction. M. de Queyless, the Sulpician, had come to Canada as Vicar-General of Rouen (1557). Rightly or wrongly, the Archbishop of Rouen believed that Canada was subject to him in spiritual matters, as the missionaries had gone thither from his diocese; near the pope nor the bishop. In 1657 Mgr de Laval arrived at Quebec in 1659. M. de Queyless, not having been informed directly, either by the Court or by the Holy See, of the nomination of Laval by Alexander VII, hesitated a moment before
yielding up the spiritual rights which he believed to be his (see Laval, Saint-Sulpice). On 26 October, 1873, Mgr de Laval erected canonically the parish of Notre-Dame at Montreal, which was naturally confided to the Sulpicians. From that time to the cession, the successive curés were MM. François Dollier de Casson (30 Oct., 1678); François Vauchon de Bellefont (29 Sept., 1701); Louis Normant (25 May, 1732); Etienne Montgolfier (21 June, 1759). The third successor of Mgr de Laval, Mgr Desquet, from 1725 till 1739 Coadjutor, and later Bishop, of Quebec, was an old Sulpician from Montreal. In 1832, the Recollects were called to Montreal. From the time of their arrival at Quebec in 1615, these religious had been travelling through the country, and one of their number, Father Viel, had paused, with his disciple Abraham, in the Saint-Sulpice. Thanks to the influence of Mgr. Plessis (b. at Montreal in 1763) was consecrated at Quebec. This was the great bishop (1801-1815) who fought so ably and so resolutely for religious liberty. The clergy of Montreal supported him. Mgr Plessis, having asked for auxiliaries, obtained, among others, Mgr Provencher for the West and Mgr Larigle, a time plan, for Montreal. The last Bishop of Telmessus in 1820. In 1809 the College of St. Hyacinthe was founded by M. Giroud; in 1825 the College of Saint-Thérèse, by M. Ducharme; in 1832, the College of the Assumption, by M. François Labelle. This was the answer given to the English Protestants, who, with their Institution Reformed, wished to make the French their branches. In 1824 the fabriques (administrative councils in charge of church revenues) were authorized to acquire and hold property for the support of the schools. In 1838 normal schools were established by the help of the clergy. In 1832, and again in 1834, a cholera epidemic afforded opportunities for the display of heroic zeal. In 1836 the Société de la Propagation of the Faith was established at Montreal, on the model of the society founded at Lyons in 1822, with which it became affiliated in 1843, but from which it separated in 1876. Mgr Plessis was succeeded in the See of Quebec by Mgr Panet, in 1825, and Mgr Signay (Sainia) followed in 1832. Finally, on 13 February, 1836, a diocese was erected into a diocese by Pope Gregory XVI.

C. From 1836 to the Present Time (1910).—This was a disturbed, but very fruitful and prosperous period. After the unfortunate events of 1837-38 (when several Montreal villages, on the Richelieu and at Deux Montagnes, inspired by a noble-hearted generosity rather than by prudence, rose up in arms against the encroachments of British burghers) there followed the period called the Union of the Two Canada (1840-67). Parliamentary institutions dependent on the people were established by the efforts of Lafontaine and Cartier. The Confederation was established in 1867. (See CANADA). During this period the diocese of Montreal grew. Mgr Larigle, consecrated in 1821, titular in 1836, d. 1840; Mgr Bouret, coadjutor in 1837, titular in 1840, resigned in 1876, d. 1885; Mgr Fabre, coadjutor in 1873, titular bishop in 1876, archbishop in 1886, d. 1896; Mgr Bruchési, archbishop from 1897 to the present time. The superiors of Saint-Sulpice, after Mgr Labelle, Mgr Guitard, were Mgr M. B. Bouchard (1856), Bayle (1866), Colin (1881), and Lecocq (1902).

The foundation of the Grand Séminaire at Montreal took place in 1840; of the Canadian College at Rome, in 1848; of the Séminaire de Philosophie, near the Grand Séminaire, at Montreal, in charge of the Sulpicians, in 1854. The Brothers of the Christian Schools arrived in 1837; the Oblates of Mary Immaculate, in 1841. The Jesuits returned in 1842, their novitiate was opened in 1843, and the Collège Sainte-Marie, in 1848. The Viateurs and the Fathers of the Holy Cross arrived in 1847. Of the communities of women, the Religious of the Society of the Sacred Heart arrived from France in 1842; the Sisters of the Holy Cross from Angers, for teaching and establishing homes for penitents. The same year the Sisters of Providence were founded by Madame Gamelin, for teaching and works of charity. Two were the teaching Sisters of the Holy Names of
Jesus and Mary; the Sisters of the Holy Cross, also a teaching institute from France, arrived in 1847; in 1848 the institute of Sœurs de la Miséricorde was founded for the care of Magdalenes and in 1850 the Sisters of St. Anne, for teaching. Colleges were founded at Joliette and Bourget, by the Clerics of Saint-Viateur, in 1846 and 1850; at Saint-Laurent, by the Fathers of the Holy Cross, in 1847. (For the Laval University, chartered in 1852, and its successor at Montreal, see LAVAL University.) In 1850 the Diocese of St. Hyacinthe was erected, and in 1874 that of Sherbrooke; both of these became suffragans of Montreal in 1886, when Montreal became a metropolitan see. The other two suffragans, Valleyfield and Joliette, were erected in 1892 and 1904 respectively. Other notable events were: in 1840, the missions of Mgr. Laberge, parish priest of St. Jérôme, to counteract the emigration movement towards the United States; in 1866, division of the parish of Notre-Dame (then divided further into more than 50 parishes); in 1868, the condemnation by Bishop Bourget, confirmed by the Holy See, of the “Institut Canadien,” a club which by means of its books and its lectures had become a centre of Voltaireanism and irreligion; also “the Guibord affair,” a famous lawsuit in reference to the burial in consecrated ground of a member of the same club. About 1884, began at Montreal the Lenten lectures in Notre Dame, then those in the Gesù, and lastly those in the cathedral (in 1889) under Mgr. Bruchési. In 1896 Loyola College was founded by the Jesuits for English-speaking Catholics; in 1905, Mgr. Racicot was appointed auxiliary bishop to the Archbishop of Montreal.

The Eucharistic Congress of 1910.—The Twenty-first International Eucharistic Congress was held at Montreal, 7–11 September, 1910. (For the origin and object of these congresses, see CONGRESSES, CATHOLIC: International Congresses.) At the Eucharistic Congress of London, in 1908, the Committee offered Mgr. Bruchési the opportunity to hold the Congress of 1910 in his archiepiscopal city. For a year the various committees at Montreal worked energetically in preparation for the event. Pius X sent as legate a latera His Eminence Vincenzo Vannutelli, Cardinal-Bishop of Palestrina. All the bishops of Canada and the United States and a large number from Europe were present in person or sent representatives. There were three hundred priests and twenty archbishops and bishops, between three and four thousand priests, and more than a half million lay visitors came to Montreal. The literary reunions of the French-speaking section were held at the house of the Fathers of the Blessed Sacrament, Laval University, and the National Monument, while those of the English-speaking and of the Jesuits were held at the Convent of the Sacred Heart, Windsor Hall, and Stanley Hall. More than a hundred studies on the Blessed Eucharist—in relation to dogma, moral history, discipline, pious practices, devotion, and associations—were read and discussed. Each session was presided over by a bishop. Special reunions for priests, men and women, and for the young were held with great success.

A splendid gathering of twenty thousand young men received the papal legate with enthusiasm; thirty thousand school-children passed in review before him. It is estimated that a hundred thousand men marched in procession on the occasion of the solemn Mass in the Cathedral. Sunday, 11 September, in the presence of 700,000 spectators. The streets of the city were magnificently decorated for the occasion with triumphal arches, draperies, and flags, under the direction of the committee of archi-

pecters. On the side of Mont Royal, in the Parc Maneu, an immense park in the form of an amphitheatre, a monumental altar had been erected; there Mass was celebrated in the open air on 10 September, and there on the following day, the great procession terminated, when nearly 800,000 Christians assembled to welcome Jesus in the Eucharist held in the hands of the cardinal legate, blessing Montreal, Canada, America, and the whole world. Besides the literary reunions already mentioned, two great meetings were held on Friday and Saturday evenings at Notre-Dame, where speeches in honour of the Christian Faith and the Blessed Sacrament were delivered by: Cardinal Vannutelli, Cardinal Logue, Archbishops Bruchési, Bourne, and Ireland. Bishops Touchet and Rumeau, Sir Wilfrid Laurier, Sir Lomer Gouin, Hon. Thomas Chapais, Judge Doherty, Deputy Tellier, Judge O'Sullivan, Deputy Henri Bourassa, M. Gerlier, and many other distinguished ecclesiastics and laymen of the Old and New World. These memorable displays of eloquence made a deep impression in the souls of the twelve to fifteen thousand auditors. Also in the church of Notre-Dame, at the first hour of Thursday, 8 September, as a religious prelude to the literary sèances, an imposing midnight Mass was celebrated, at which thousands of men received Holy Communion, the Mass having been preceded by an hour’s solemn adoration under the direction of members of the Association Adoration Nocturne of Montreal. The ceremony of the official reception of the papal legate, the special Mass on Thursday, 8 September, in favour of the numerous religious communities of Montreal, and also the high Mass on Sunday, 11 September, sung by the cardinal legate, at which Cardinal Gibbons and Mgr. Touchet preached, all took place in the cathedral of St. James. At the open-air Mass on Saturday, 10 Sept., sung by Mgr. Farley, the preachers were Mgr. O’Connell and the Rev. Father Hage.

What specially distinguished the Congress of Montreal from any previous Eucharistic Congress was the official participation of the civil, federal, provincial, and municipal authorities. The Canadian Pacific Railway Company had sent a representative to meet the legate in Rome, and His Eminence
crossed the ocean on board one of the Empress liners of the same company. At Quebec the Federal Government yacht met the cardinal and his suite, and conveyed them thence to Montreal. All along the route, the population on the banks of the river greeted the legate as he passed. At Montreal, despite most inconstant weather, an immense crowd gave him an enthusiastic reception. Mayor Guérin presented addressed a welcome in French and English. During the congress, the Federal Government, the Provincial Government, and the City of Montreal each held a reception for the legate and other official personages.

Under the immediate direction of Archbishop Bruchési and the more remote direction of the Permanent Committee of the Eucharistic Congress, presiding over Mgr Henry, Bishop of Namur, four great committees laboured to organize the Congress of Montreal: Committee of Works: president, Canon Gauthier; vice-presidents, M.M. Lecocq, M.-Shane, Perrier, and Auclair. Committee of Finance: president, Canon Martin; vice-president, Sir Thomas Shaughnessy and Hon. L. J. Forget. Committee of Reception: presidents, Canon Danth and Father Donnelly; vice-presidents, Canon Roy and Father Troie. Committee of Decorations and Procession: president, Canon Le Pailleur; vice-presidents, Fathers Belanger, Laforce, Piètre, Rusconi, O'Reilly, Martin, Deschamps, Heffernan. To these committees there had been added for press purposes a special committee composed by Father Elie J. Auclair.

Present Conditions.—The Diocese of Montreal, at the present time (1910) is under the direction of Mgr Paul Bruchési, with an auxiliary bishop (present the Rt. Rev. Mgr Zoétique Racicot, titular Bishop of Pogla), and a cathedral chapter. The Catholic population is about 470,000, served by 72 priests, 112 Catholic clergy, 150 parishes or missions, 66 of which are in the city and suburbs. Besides Laval University (see above), the seminaries and colleges are: the Grand Séminaire, with 350 students; the Seminary of Philosophy, 120; the Montreal College, 300; and Sacré-Cœur College, recently founded and under the direction of the Sulpicians; St. Mary's and Loyola College, under the direction of the Jesuits; those of Ste Thérèse and L'Assomption, under secular priests, and of Saint Laurent, under the Fathers of the Holy Cross. In all, some 2000 boys and young men are trained in these colleges. In addition to these, 64,000 children are taught in the schools or convents of religious orders, and 8,000 by lay Catholic teachers, mostly women. Some 1500 Brothers, and more than 3700 Sisters devote themselves, in the diocese, to works of teaching or of charity. There are nearly 60 hospices, asylums, or orphanages, where some 45,000 old people, orphans, sick, and infirm are charitably cared for. Moreover, according to the latest official diocesan report, from which the above statistics are gathered, more than 200 secular priests from this diocese and more than 4000 Sisters minister or teach in other parts of Canada or in the United States.

In 1909, there were some 390 secular priests in the diocese, 80 Sulpicians, 150 Jesuits, 20 Oblates of Mary Immaculate, 30 Franciscans (in Montreal since 1890), 30 Trappists, 50 Redemptorists (in Montreal since 1884), 30 Fathers of the Holy Cross, 20 of the Holy Sacrament (1890), 8 of St. Viator, 5 of the Company of Mary, 10 Dominicans (1901), 2 Brothers of St. Vincent de Paul (1908). It would be impossible to give all the details of this useful and fruitful religious life. The Carmelites (1875) and the Sisters of the Precious Blood (1874) have 50 houses and the community is increasing. To these communities have been added the Little Sisters of the Poor (1887), the Sœurs de l'Espérance (1901), the Sisters of the Immaculate Conception (1904), the Daughters of Wisdom (1910), and the Brothers of the Presentation (1910). The parishes, in town and country, are in a flourishing condition. Mgr Bruchési has devised a plan of giving poor church help and protection by making certain rich, older parishes act as their sponsors. Every year, on one of the Sundays of September, all Montreal visits the cemetery, near the top of Mount Royal, where, in the presence of 50,000 Catholics, a service for the dead takes place, possibly the only one of its kind in the world. On the eve of the civic Labour Holiday, the archbishop has, for some years past, invited the workmen of his diocese to be present at a religious service.

ELIE J. AUCLAIR.

Montreuil, Charterhouse of Notre-Dame-des-Prés, at Montreuil, in the Diocese of Arras, Department of Pas-de-Calais, France, founded by Robert, Count of Boulogne and Auvergne. The charter of foundation is dated from the château d'Hardelet on 15 July, 1324; the church was consecrated in 1338. The foundation, being close to Calais, was liable to disturbance in time of war. Thus it was often sacked by the English during the wars in the fourteenth and fifteenth centuries, and was for a time abandoned. The religious returned when peace was restored. In 1542 the monastery was again wrecked by the Imperial troops and in the wars of religion fresh troubles attended the community. The house was rebuilt by Dom Bernard Bruyant in the latter part of the seventeenth century and remained undisturbed until the Revolution. In 1790 the monastery was suppressed and its property sold by auction the following year. Eighty-two years later the Carthusians repurchased a portion of their old estate and the first stone of the new monastery was laid on 15 May 1878. The work was pushed forward with such energy by the Prior, Dom Eusèbe Berger, that the whole was finished in three years. The monastery contains twenty-four cells in its cloister. Montreuil has taken a special position among Carthusian houses, owing to the establishment there of a printing press from which has been issued a number of works connected with the order. Dom le Couteulx's "Annales" (in eight vols.) and the edition of Denys the Carthusian may be quoted as examples of the fine printing done by the monks. By the recent "Association Laws" the community of Montreuil has been once more ejected. The monks are now lodged in the Charterhouse of Paul, minister, England; but printing works have been transferred to Tournai in Belgium.

TROMBY, Stoia ... dall' ordine Cartusiano (Naples, 1773); LE COUTEULX, Annales ordinis Cartusiani (Montreuil, 1901); LEPEYRE, S. Bruno e l'ordine dei Chartes (Paris, 1866); G. ROGER HUDLESTON.

Montreuil Abbey, a former convent of Cistercian nuns in the Diocese of Laon, now Soissons, France. Some incorrectly claim that it was the first convent of Cistercians in the country. It is situated in the town of Montreuil, a few kilometers northeast of Soissons, near the city of Laon. The abbey was established in the 12th century by Saint Barolomeus, Bishop of Laon, and within a few years it numbered nearly three hundred. In early days the community busied themselves not merely in weaving and embroidery, but also in tilling the fields, clearing the forest, and weeding the soil.
Mont-St-Michel, a Benedictine Abbey, in the Diocese of Avranches, Normandy, France. It is unquestionably the finest example both of French medieval architecture and of a fortified abbey. The buildings of the monastery are piled round a conical mound which rises abruptly out of the waters of the Atlantic to the height of 300 feet, on the summit of which stands the great church. This rock is nearly a mile from the shore, but in 1880 a causeway was built across the dangerous quicksand that occupies this space and is exposed at low water, so that there is now no danger in approaching the abbey. The monastery was founded about the year 708 by St. Aubert, Bishop of Avranches, and according to the legend, by direct command of the Archangel Michael himself, who appeared to the bishop in a dream on three separate occasions. About 966, Richard the Fearless, third Duke of Normandy, finding the community in a relaxed condition, installed Benedictines from Cerezo of Mont-St-Michel. A few years later, in 1017, Abbot Hildebert II began the colossal scheme of buildings all round the rock which should form a huge platform level with the summit, on which the abbey church might stand. In spite of the enormous difficulties involved in the design, difficulties increased by fire and the collapse of portions of the church, the scheme was persevered in until 1522, five centuries and crowned by the completion of the flamboyant choir in 1520. Even among religious communities, such an instance of steadfast purpose and continuity of plan stands unrivalled; but the completion was only just in time. In 1223 the abbey was granted in commendam to Cardinal Le Veneur and the series of commendatory abbots continued until 1622 when the abbey, its community reduced almost to the vanishing point, was united to the famous Congregation of St-Maur. At the French Revolution the Maurist monks were ejected and the splendid buildings became a prison for political offenders while, with unconscious irony, the name of the place was changed from Mont-St-Michel to Mont Libert. In 1794 the prison was closed and for a few years the abbey was leased to the Bishop of Avranches, but in 1872 the French Government took it over as a national monument and undertook, none too soon, the task of restoration. The work has gone on almost continually ever since, and the restorers must be praised for the skill with which the great pile has been saved from ruin, and the good taste with which the whole has been done.

This vast group of buildings has been the subject of several important monographs. Speaking generally, the monastic buildings consist of three main stories. Of these, the two lower take the form of vast irregular rings completely enclosing the natural rock, while the upper forms a core to the whole edifice. The third story rests partly on the two lower stories and partly on the apex of the rock which is found immediately beneath the pavement of the church. The most remarkable part of all is the mass of buildings known as "la mervelle" (the marvel) on the north side of the rock facing the ocean. This vast structure, half military,
he was empowered to bestow favours on the nobles of the province, who bound themselves in return to guard the abbey in time of war. In 1489 King Louis XI founded the Order of St. Michael, and held the first chapter of its knights in the “salle des chevaliers.” It is said that the cockle shell, horn, and staff, which became the recognised insignia of a pilgrim from the thirteenth century onwards, take their origin from Montyon. The staff was used by the pilgrim across the treacherous quicksand, the horn served to summon aid should tide or fog surprise the pilgrim; while the cockle shell was fixed in the hat as a souvenir to show that the pilgrim had accomplished his journey in safety. The abbey bore as its arms a cockle shell and fleurs-de-lis with the significant motto “Tremor immersus Oceanis.”

MONTYON

Montyon, Antoine-Jean-Baptiste-Robert Auguste, Baron de, famous French philanthropist; b. at Penthievre, January 29, 1735; d. December 29, 1820. He was the son of a wealthy official of the Exchequer. As soon as he had completed his education, young Montyon was made king’s advocate at the court of Le Châtelet (Paris) where his inflexible integrity won for him the surname of “Grenadier of the Bar.” In 1758 he entered the Great Council and in 1764 was made a member of the petitioners. In 1767 he became intendant of Auvergne, where his liberality to the poor endeared him to the people. It is said that he yearly spent as much as twenty thousand francs of his private income to give work and help to needy families. On his refusal to install the new magistrates appointed by Maupou after the suppression of the Parlements, he was transferred to the Intendance of Provence and then to La Rochelle. In 1775, through the influence of the duc de Penthièvre, he was recalled to Paris and appointed councillor of State. Amidst the cares of public life, he had found time for the study of economics and belles-lettres. The French Academy awarded a distinction to his “Essai de Fiscalité” (Paris 1774). The following year he published “Recherches et considérations sur la population de la France.” Montyon’s great concern, however, was philanthropy, which he delighted to practice in an anonymous way. In order to foster emulation for the good among his countrymen, he founded a number of prizes to be awarded by the Academy of Science, the Academy of Medicine. At the beginning of the French Revolution, he thought it was his duty to share the fortunes of the princes of the House of Bourbon, and he left the country. He travelled in Switzerland and Germany, but spent the greater part of his exile in London; during his stay in that city, he gave each year ten thousand francs to relieve the French refugees, and the French soldiers who were prisoners in England; the same amount was sent to the poor of Auvergne. Montyon returned to France in 1815 at the time of the second restoration and henceforth devoted all his time to the work that had made his name famous. He re-established the prizes which he had founded before the Revolution and which had been abolished by the National Convention. The best known of these prizes are “le prix de vertu,” to reward a virtuous act done by a poor Frenchman, and the prize to be bestowed on the author of the work most useful to morals. These prizes are to be awarded by the French Academy. Montyon also distributed large sums of money among the bureaus of charities in Paris. His will, in which are expressed sentiments of the deepest piety, besought the bulk of his property to the hospitals and homes of his native city.

PATRIE MARQUE.

MOORE, Hugh, Venerable. See MOYTON, ROBERT, VENERABLE.

Moore, Arthur, Count, b. at Liverpool, 1849; d. at Mooresfort, Tipperary, Ireland, 1904, was the son of Charles Moore, M.P. for Tipperary. Educated at Ushaw, he afterwards travelled in Spain and in 1874 was elected M.P. for the Borough of Clonmel. In Parliament he was a follower of Mr. Butt, and strongly advocated land reform, better treatment of children in workhouses, university education for Irish Catholics, and Home Rule; and he specially interested himself in providing Catholic chaplains for the navy. In 1877 he married a daughter of an English baronet, Sir Charles Edward, who was created a peer and received the title of Count from the pope. During the Gladstone Parliament of 1880–85 Count Moore was usually on the side of Parnell. He favoured land purchase as the best settlement of the Irish land question; he advocated the providing of suitable cottages for Irish labourers, and better treatment of Irish emigrants on board ship; he always voted for Home Rule, and vehemently denounced coercion. But he had no faith in violent agitation, and did not favour the full programme of the Land League or that of the National League; and he voted for the second reading of Gladstone’s Land Bill though Parnell and his friends abstained from voting. Count Moore would only follow the party, and he was too independent to be blindly obedient to Mr. Parnell; when the Redistribution Act of 1885 disfranchised Clonmel, he was left without a seat in Parliament. He had therefore no share in the stirring scenes which followed the general election of 1885. But he was not content to lead a life of ease and inactivity, believing that “a Catholic layman should be up and doing and not merely telling his beads in a corner.” Blessed with ample wealth he was a generous contributor to schools, churches, convents, and hospitals; a militant but not an aggressive Catholic he was always ready to do battle for Catholic truth, and in speeches, lectures, and newspaper articles often did splendid service for the Church and her interests. He spared no effort to secure that Catholic sailors should not be left without religious instruction during life, or without a priest at the hour of death; and so valuable was his work in this matter that the Irish Bishops, at their meeting at Maynooth in 1865, thanked him and invited him to join the Catholic Truth Society and attend its meetings; he desired to have a branch of the Benedic- tine Order in Ireland, and would have helped to es- tablish it. He established and generously endowed the Cistercian Abbey at Roeceosa. Always ready to help others he did not forget his own personal sanctity. He attended Mass every day, spent hours before the tabernacle in his own chapel, fasted rigorously, made frequent retreats; and he went, year after year, to Lourdes and to the Holy Land, not as a mere sight-seeing traveller but as a pilgrim and a penitent. At home he was the kindest and the most indulgent of landlords, and no beggar went unrelieved from his door. When he died, his body, enclosed in the Fran- ciscan habit, was interred at a high altar in the church of the Cistercians at Roeceosa.

CHARLES, Life of Count Arthur Moore (Dublin, 1895).

E. A. D’ALTON.
Moore (or Moore), Michael, priest, preacher, and professor, b. at Dublin, Ireland, 1640; d. at Paris, 22 Aug., 1726. Educated at Nantes and Paris, he taught philosophy and rhetoric at the Collège des Grasins. Returning to Ireland, he was ordained priest in 1664, and appointed Vicar-General of the Diocese of Dublin by Archbishop Russell. When the Revolution of 1688 drove James II from his British dominions, Ireland was held for him by Richard Talbot, Earl (afterwards Duke) of Tyrconnell. The provost of Trinity College, Dublin, Dr. Huntingdon, fled to England when James landed in Ireland. The college was seized by the Jacobites, the chapel was made a powder magazine, one portion of the building was turned into a barrack, and another into a gaol for persons suspected of disaffection to the royal cause. Moore was chaplain and confessor to Tyrconnell through whose influence and on the recommendation of the Irish Catholic bishops, he was appointed (1689) by James, provost of Trinity College—the only Catholic who ever held that position. He upheld the rights of the college, secured it from further pillage, and endeavored to mitigate the treatment of the prisoners. With the librarian, Father McCarthy, he prevented the soldiery from burning the library, and by preserving its precious collections rendered an incalculable service to letters. A sermon with a dedicatory address to Charles, Prince of Wales, was inscribed on the Within the king so deeply that he was obliged to resign (1690), and retired to Paris. When James, after the battle of the Boyne (1690), fled to Paris, Moore, removed to Rome, became Censor of Books, and won the favour of Innocent XII and Clement XI. When Cardinal Barbarigo established his college at Montefiascone, Moore was appointed Master of the University of the Papacy (1701–2), and received from Innocent XII an annual grant of two thousand crowns. After the death of James II (1701), Moore returned to France, where, through Cardinal de Noailles, he was appointed Rector of the University of Paris (17 Oct., 1701 to 9 Oct., 1702). He was also made principal of the Colleges of Navarre, and professor of philosophy, Greek, and Hebrew in the Collège de France. In 1702 he was selected to deliver the annual panegyric on Louis XIV, founded by the City of Paris. Moore joined Dr. Farrelly (Fealy) in purchasing a house near the Irish College for poor Irish students. Blind for some years, he died in 1726. After four years, his widow, as an act of his master's affection to steal and sell many hundreds of volumes of his choice library. What remained Moore bequeathed to the Irish College. He died in the Collège de Navarre, and was buried in the vault under the chapel of the Irish College. His published works include: "De Existentia Dei, et Humane Mentis Immortali, etc."; "Doctrinae Aristotelicae Compendium" (Paris, 1692); "Horatio ad Studium Linguarum Graecarum et Hebraicarum" (Montefiascone, 1700); "Vera Scientiæ Methodus" (Paris, 1718).

P. J. Lennox.

Moore, Thomas, poet and biographer, b. 25 May, 1779, at Dublin, Ireland; d. 26 February, 1832, at Devizes, England. His father was a grocer till 1806 when, he, in common with Lord Byron, moved to London. His mother, a woman of varied accomplishments, did much to train him for his remarkable success in society. Thomas early manifested a remarkable power of rhyming, singing, and acting. When fifteen he was entered at Trinity College, Dublin, which the Catholic Relief Act of 1793 had opened its doors to Catholics, who were, however, hardly more than tolerated. Denied all incentive because of his religious belief, Moore gave little or no heed to academic honors. A curious point noted by a recent biographer is that Moore was entered as a Protestant, possibly by his school-master, Mr. Whyte, who himself was a Protestant, wished to qualify his favorite pupil for all the good things that the college offered to non-Catholics. Moore probably was not aware of this; at any rate he never availed himself of it. Though his education and associations were mostly Protestant, and though he himself was in fact after his first year in college scarcely more than a nominal Catholic, he never changed his creed. Among his intimate friends was Robert Emmet, whose tragic death made on him a lasting impression. Moore shows this in his writings, as in the beautiful lyric, "O breathe not his name," and also in the veiled allusions in "The Fire Worshipers," one of the four long poems of "Lalla Rookh." After graduating in 1798 he set out in the following spring for London to study law. He was never admitted to the Bar, as legal studies had for him no attraction. Literature was more to his liking. When scarcely fifteen, some verses of his appeared in a Dublin magazine "The Anthologia Hibernica." While in college he wrote a metrical translation of the "Odes of Anacreon" which he published in London in 1800, with a dedication "by permission" to the Prince of Wales. He published also a volume of original poems under the title of "The Poetical Works of the late Thomas Little," which met with severe criticism on the grounds of indecency. Later editions were expurgated; but Moore showed his fondness for amorous poetry by recurring to it in "The Loves of the Angels." Again criticized, he went on, in his metrical version of Washington Irving's "Life of Washington." Moore's success almost from the day he set foot in England was extraordinary. It was no doubt his personal charm and the masterly singing of his own songs that gave him the start in his successful career. Like the ancient bard he sang his own verses to his own accompaniment, and was welcomed everywhere. Early in 1803 the Government proposed to establish an Irish laureateship and offered Moore the position with the same salary and emoluments as the English office of similar title; but Moore declined the honour. Another offer later in the year, that of Registrar of the Admiralty Court of Bermuda, he accepted and left England in September for his post of considerable importance. After four years, when he returned to his liking he appointed a deputy and sailed for New York. He visited the principal cities of the States, and then went to Canada. He was delighted with his Canadian tour, but was far differently impressed by "the land of the free" and its people. Judging everything from his pro-English viewpoint, he could find scarcely anything to admire in the young republic which had so lately gained its independence from England. After an absence of fourteen months he returned to London "with a volume of poetic travels in his pocket" which with later additions he published in 1806 under the title of "Epistles, Odes and other Poems." In addition to his animadversions on America it contained several splendid sonnets. The famous critic, Jeffrey, in an article in the "Edinburgh Review" attacked the book severely and called its author "the most licentious of modern versifiers." This brought on the famous "lead pencil duel," and paved the way for the lifelong friendship between the poet and the critic. Another challenge from Moore, this time to Lord Byron, was given the "lead pencil" used in the meeting with Jeffrey, resulted in another close friendship between "hostile forces".

In 1807 Moore published the first numbers of his "Irish Melodies." Were all his other works lost, these would give him the right to the title of a much more "The Poet of the people of Ireland." The importance and the difficulty of this undertaking—to
fit words to the old national airs of Ireland—Moore fully realized. But the task of marrying words to these airs was no easy one. "The Poet", as Moore himself wrote, "who would follow the various sentiments which they involved, and bring the rapid fluctuation of spirits, that unaccountable mixture of gloom and levity which composes the character of my countrymen and has deeply tinged their Music". Almost all contemporary writers, among them Shelley and Landor, spoke enthusiastically of the melodies, saying that they were lyrics of the highest merit. His friend and biographer, Lord John Russell, wrote in 1853 that "of all lyrical poets, Moore is surely the greatest". Moore continued to write these at intervals for twenty-seven years, receiving $500 for each, which gave him an annual income of $2500. Six of the ten numbers of his melodies were published, when he tried his hand with like success at "Sacred Songs" and "National Airs".

The lyrics, however, did not take up all his time. In 1808 he published poems on "Corruption" and on "Intolerance" and in the following year "The Sceptic". These attempts at serious satire, in which he used the heroic couplet of Pope, did not meet with success. On the contrary, they strained and directed against the prince his former patron, who on becoming regent through the insanity of his father had changed front and broken with the Whigs, with whom Moore had previously allied himself. These pieces, together with those he wrote against several members of the Ministry, were gathered together and published in 1813 with the title "Intercepted Letters or The Two-penny Postbag". In this sort of light-hearted satire Moore had struck a rich vein which he worked for more than twenty years with his "Fudge Family in Paris", "The Fudges in England", and "Fable of the Holy Alliance". Moore's reputation in the literary world of his time derived from the distinguished arrangements made for the copyright of "Lalla Rookh" (1817). Longmans, the publishers, agreed to give the highest price ever paid for a poem, $15,000, and that, too, without seeing a line of the work. And twenty years later they still called it the "cream of the copyrights". After considerable reading and studying of the history and the manners of Persia and of the Persians up to the time of Baber, foundering a story on the long and fierce struggle between the Persian fire-worshippers and their haughty Moesian masters—a theme that had much to recommend it to an Irishman familiar with the long struggle between his countrymen and their rulers. Men who had lived long in the East marvelled at his skill in reproducing faithfully life in the Orient with its barbaric splendours.

Scarce was this off his hands when the news arrived that he must make good the loss of $30,000 caused by his agent in Bermuda. Moore had not saved anything out of his large income. His friends would have come to his assistance; but he would not ask for help, nor for refuge, and preferred to suffer on the continent. More than three years he had of rather enjoyable exile, most of which was spent in Paris where his family joined him in 1820. He had in 1811 married a young actress, Miss Beasy Dyke. Towards the close of 1822, after settling the Bermuda claim, which had been reduced to $5,000, he took up his residence again in England. Heretofore he had been almost exclusive of verse, or prose; from this time he is primarily a writer of prose—he becomes a biographer, a controversialist, an historian. During the summer of 1823, he accompanied Lord Lansdowne on a visit to the south of Ireland. While there he learned much of the discontent among the peasants, of their secret organizations, and of their mysterious leader, Captain Rock. On his return he read history, and as a result of his reading and his sight-seeing, he wrote a "History of Captain Rock and his Ancestors" in which he gives the history of agrarian crimes and denounces, not the Shanavestes of "Foggy Boggie Tipperary" whom eight years before he called murderous savages deserving death, but the bad laws of England that generated all sorts of crime. The book made its way everywhere. In England, perhaps for the first time, the cause of Ireland received a hearing. Naturally it became popular in Ireland where even Catholics, notwithstanding (in the words of Moore) "some infidelities to their religion which break out now and then in it", expressed their gratitude for his defence of their country.

This favourable reception delighted Moore; only now he began to know Ireland and her people. He came back at times to his own and endeavoured to make amends for his former lack of sympathy, as may be seen in some of his later writings, as the "Life of Lord Edward Fitzgerald" (1831). This, which is probably his best prose work, was a labour of love; for in writing a sympathetic account of a young Irish patriot who suffered for his country in the uprising of 1798, Moore could hardly hope for encouragement from an English reading public. In the meantime he had published the "Life of Sheridan" (1835), a work which he had engaged upon during his exile of seven years. So successful was it financially that the publishers added $1500 to the original price of the copyright. Its chief value lay, as the critic Jeffrey said, in the historical view it gave of public transactions for the past fifty years. The next prose work, "The Epicurean" (1827), has some merit as a story, but as a life of 1815 of Stendhal, it marks a transition in the Epicurean philosophy. Moore was to be Byron's editor; he became, instead, his biographer. His "Life of Byron" (1830) is one of the most popular biographies ever written, though the picture given is not wholly true to life.

After finishing the life of Fitzgerald he wrote a theological treatise from which he departed "to the poetry of Ireland in defence of their Ancient National Faith", and called it "The Travels of an Irish Gentleman in Search of a Religion" (1834). The Irish Gentleman wishes to become a Protestant, studies hard at home and abroad, but fails to find anything either in Scripture or the Church Fathers to justify a change. This very conviction as found in the work is the more touching as it was written as it was by one who had married a Protestant, and was glad to have his children brought up as Protestants. In his fifty-fifth year Moore doubtless took a different view of life, and saw the folly of mere worldly advantages when these involved a sacrifice of religious truth. Similar motives likely influenced him in his next and last work, "The History of Ireland" (1839—46). During much of his life he had been more of an English Whig than an Irish Nationalist. But the last of it he gave generously to his country by calling the attention of the English people to their misgovernment of Ireland. The task which he undertook was, however, too much for him; the one volume intended lengthened out into four, and then stopped at the reign of Queen Elisabeth.

Moore was now broken down. Financial troubles had constantly harassed him, notwithstanding his large income. He had expected, and with good reason, great things from the Government when his friends the Whigs got in power. A recognition came in 1833 when he received a literary pension of $1500, to which was added, a few years before his death, another pension of $500. He was not spared domestic troubles. Two daughters died in infancy; the third lived only to be a girl of sixteen. Of his two sons one died from consumption in 1841; the other, Thomas, wild and extravagant, died in Africa in 1845. At this time Moore wrote in his letter, "Out of five children is now gone and we are left desolate and alone. Not a single relative have I now left in the world."
He had previously lost his parents and his sisters, his favourite Ellen dying suddenly at about the same time as his son Thomas. His life was now practically over, and he died in his seventy-third year, being buried at Brayham Deane near Wilsborrow. Moore’s biographer, Lord John Russell, declared: “When these two great men” (Scott and Byron) “have been enumerated, I know not any writer of his time who can be put in comparison with Moore”; and yet when Moore wrote, England was rich in great writers. Such praise as this may appear exaggerated to-day when criticism operates with a swing to the opposite extreme, especially among younger writers. The truth, as usual, seems to lie between two extremes. Much of Moore’s work is ephemeral, but there remains a group of lyrics that are as perfect of their kind as anything in the world of literature. In 1841 Moore collected and arranged his poems, to which he wrote interesting prefaces.

Moore, Memoirs, Journals, and correspondence, edited by LORD JOHN RUSSELL (London, 1853–6); GWYN, Thomas Moore (London, 1905); GILDER, Moore, Past and Patriot (Dublin, 1900); Memoirs of the author prefixed to the poems collected by Moore himself (1841); VALLET, Études sur la vie et les œuvres de Thomas Moore (Paris, 1889).

M. J. FLAHERTY.

Mopsuestia, a titular see of Cilicia Secunda in Asia Minor and suffragan of Anazarbus. The founding of this city is attributed to the soothsayer, Mopsus, who lived before the Trojan war, although it is scarcely mentioned before the Christian era. Pline calls it the free city of Mopsos (Hist. nat., V, 22), but the ordinary name of Mopsia or better Mopsuesta, as found in all the Christian geographers and chroniclers. At one time the city took the name of Seleucia, but gave it up at the time of the Roman conquest; under Hadrian it was called Hadriana, under Decius Deica, etc., as we know from the inscriptions and the coins of the city. Constantius built there a magnificent bridge over the river Araxes, called “Chromonas,” (XII, P. G., XCIV, 488) afterwards restored by Justinian (Procopius, De Edificiis, V, 5) and still to be seen in a very bad state of preservation. Christianity seems to have been introduced very early into Mopsuesta and during the third century there is mention of a bishop, Theodorus, the adversary of Paul of Samosata. Worthy of mention are Saint Auxentius, who lived in the fourth century and whose feast is kept on 18 December, and Theodore, the teacher of Nestorius. The Greek diocese which depended on the Patriarch of Antioch, still existed at the beginning of the fourteenth century (Le Quen, “Oriens christianus”, II, 1002). At first a suffragan of Anazarbus, Mopsuesta was an autocephalous archbishopric (1137, Mansi, Consil. Collectio, XVII, XVIII, 472, 476–480, etc.) and perhaps it was already so in 714 (Le Quen, II, 1000). The city was taken by the Arabs at the very beginning of Islam; in 686 we find all the surrounding forts occupied by them and in 700 they fortified the city itself (Theophanes, a. m. 678, 6193). Nevertheless, because of its position on the frontier, the city fell naturally from time to time into the hands of the Byzantines; about 772 its inhabitants killed a great number of Arabs (op. cit., a. m. 6284). Being besieged in vain by the Byzantine troops of John Tzimisce in 964, Mopsuesta was taken the following year after a long and difficult siege by Nicephorus Phocas. The city then numbered 200,000 inhabitants, some of whom were killed, some transported elsewhere and replaced by a Christian population. Its river, the Pyramus, formed a great harbour extending twelve miles to the sea.

In 1097 the Crusaders took possession of the city and engaged in a fratricidal war over its walls; it remained under the possession of Tancred who annexed it to the Principality of Antioch. It suffered very much from Crusaders, Armenians, and Greeks who lost it and reconstructed it alternately, notably in 1106, in 1152, and in 1171. The Greeks finally abandoned it to the Armenians. Set on fire in 1206, Mamissas, as it was called in the Middle Ages, became two years afterwards the capital of the Kingdom of Lesser Armenia, at the time that a council was held there. Although it was by this time in a state of decline it still possessed at least four Armenian churches. In 1322, the Armenians suffered a great defeat under its walls; in 1432 the Frenchman, Bertrand, found the city occupied by the Musulmans and largely destroyed. Since then it has steadily declined and to-day, under the name of Misis, is a little village of about 800 inhabitants, partly Armenians, partly Musulmans; it is situated in the sanjak and the vilayet of Adana. The list of its Latin bishops may be found in Le Quen, III, 1197–200; in Ducange, “Les familles d’outre-mer”, 770; in Eubel, “Hierarchia catholica medii aevi” I, 588; and of the Armenian bishops in Alishan, “Siissoun”, 290.

Mopsuestia, Theodore of. See Theodore of Mopsuestia.

Mor (Moor), Antonis Van DASHERST, commonly called ANTONIO MORO, or ANTHONIS MORE, a Dutch painter, b. at Utrecht, in 1519; d. at Antwerp, between 1576 and 1578. Of his early life we only know that his artistic education was commenced under Jan van der Soorel, and that his earliest work is probably the portrait at Stockholm, dated 1533. Recent investigations would indicate that the group of knights of St. John, at Utrecht, supposed to have been painted about 1541, and a picture of two pilgrims at Berlin, dated 1544, together with the portrait of a woman unknown, in the Berlin gallery, were probably among his earliest works, although their authenticity has not been questioned. In 1547, he was received as a member of the Venerable Guild of St. Luke at Antwerp, and shortly afterwards (about 1548) he attracted the attention of Cardinal Granvelle, Bishop of Arras, who became his steady patron, and presented him to the Emperor Charles V. The portraits executed during the commencement of his Granvelle career, two are especially valuable, one of the bishop himself in the Imperial gallery at Vienna, and of the Duke of Alba, which now belongs to the Hispanic Society of New York. He probably visited Italy first in 1550, for we hear of him in Rome, where he copied some works by Titian, notably the “Danae”. A copy was sent by Queen Elizabeth to the Earl of Salisbury. In 1552 it has been gravely suggested, but on insufficient evidence, that one of the masterpieces of the Prado gallery, the portrait of the unknown young Cardinal, hitherto attributed to Rafael, and regarded as one of his noblest works, should be credited to Mor. From Rome, he went to Genoa, and thence to Madrid. In 1553 he was sent to England, where he painted the portrait of Mary Tudor, perhaps one of his very noblest works; and in all probability the portraits of Sir Henry Sidney, and of Ambassador Simon Renard. That of Renard's wife was not painted until three years later. To this period should be attributed the miniature of Mary Tudor in the Duke of Buccleuch's collection, two portraits of Elizabeth, and the portrait of twenty-one, one of which once belonged to Dr. Prept, and another even more notable, of Roger Ascham, now in the collection of Mr. Pierpont Morgan. This
was at one time the property of Ascham's college, and later, of the Marquess of Hastings. At about this time Mor married, but we know little of his wife, save that her name was Metgen, and she is supposed to have been a widow. He became a man of large means, acquired property, and was known as Mor van Dashorst when residing in Utrecht. He had one son, Philip, afterwards a canon, and two daughters. At the end of 1554, he was back in Holland, where he painted a portrait of William of Orange, and other notable works. A little later he executed his own portrait, now in the Uffizi Gallery, one of his wife, now in the Prado, a portrait of a knight of St. James at Budapest, one of Alexander Farnese at Parma, the portrait of an unknown man in Verona, and a very extraordinary religious picture of the Resurrection, now at Nimwegen in a private collection. His portrait of Jean Le Coq (Galatius), one of his wife, and that called Don Carlos, in the gallery at Cassel, is the of the Duchess de Feria (?), and of a widow, in the Prado, of himself in Lord Spencer's collection, and of Campaña, the Brussels painter, in the Basle gallery, are of a subsequent period. Several very important works, executed towards the close of his life are, Elizabeth Queen of Spain, in the Bischofsmuseum, London, Jacopo da Torello and three other fine portraits, in the Stueters gallery (Paris), and the famous portrait of his own master, Jan van Scorel, belonging to the Society of Antiquaries (London). Other noted works are those representing a Professor of the University of Oxford in the Brunswick Gallery, and the very famous portraits of Sir Thomas and Lady Gresham, at one time at Strawberry Hill, now in the Hermitage collection (St. Petersburg). After the disgrace of Cardinal Granvelle, Mor remained in Spain for a while, and the following portraits belong to this period of his life: The Jeweller, in the gallery of The Hague, Sir Henry Lee, in the Duke of Alba's collection, Antonio del Rio, his sons, and his wife, in the Louvre, the Duke of Alba, at Brussels, Ferdinand of Toledo, at Vienna, and several others of unknown people. His last portrait appears to be that of "Goltzius", in the Brussels Gallery. The last document that refers to him was one issued at Antwerp, in 1573, and we obtain the date of his death from certain documents still extant in the church of Notre Dame in that city. The many references to him and the numerous essays on his career, have been summed up by Henri Hyman in his memoir of Mor (Brussels, 1910), and to this invaluable work all students must now be referred.

Hymans, Antonino Moro, son œuvre et son temps (Brussels, 1910).

George Charles Williamson.

Morales, Ambrosio, Spanish historian, b. at Cordova, 1513; d. in 1591. After his studies at the University of Salamanca and Alcalá, he took Holy orders. Soon he was elected to the chair of Belles-Lettres at Alcalá. In 1574 he was appointed chronicler of Castile and commissioned to continue Florían de Ocampo’s "Crónica General de España". This he brought down, after ten years of labour on it, to the date of the union of Castile and Leon under Ferdinand I. His pupil Sandoval continued it down to 1079. While he exhibits more talent and a better training than his predecessor Ocampo, Morales still proves to be on the whole a dull chronicler, and manifests little tendency to react upon his facts, correlate cause and effect, or philosophize in any way. His style is rather wearisome. See the "Crónica general de España", prosiguiendo adelante los cinco libros que el Maestro Florían Doccampo, Coronista del Emperador D. Carlos V diez escribió" (Alcalá, 1574); and see also the ed. of Madrid, 1791-92. Other writings of Morales are "De las antigiedades de las ciudades de España", and the "Viaje por orden del Rey D. Felipe II etc.

Memorias de la Academia Española, VIII, 285 sqq.

J. D. M. Ford.

Morales, Juan Bautista, missionary, b. about 1597 at Ecija in Andalusia, Spain; d. at Fu-ning, China, 17 Sept., 1684. He entered the Order of St. Dominick at a very early age, and, after devoting some years to missionary work in the Philippine Islands, accompanied in 1633 a band of Dominican missionaries to China, taking up their work in the province of Fu-kien. Here he took an active part in the controversy between the Jesuits and the Dominicans and Franciscans on the other, regarding Chinese customs (see CHINA). The latter maintained that the Jesuits, to win over more easily the people to the religion of Christ, tolerated to a certain extent the cult of Confucius and of ancestors; and, seeing in this alleged condescension to heathen customs, a prejudice to the purity of the faith, they despised Morales to Rome in 1644, and on 12 Sept., 1645, obtained from Innocent
X a decision condemning the methods of the Jesuits. The latter also appealed to Rome, and obtained from Alexander VII a favorable answer. In 1661 Morales visited Madrid, which caused the attention of the Habsburgs to turn from Flanders to this country. In 1672 he returned to Flanders, where he died in 1683. His works, however, have not been forgotten, and in 1868, five years after the death of Morales, Clement IX issued a new decree deciding against the Jesuits. About the same time the Dominicans discovered an enemy in their own ranks in the person of the Chinese friar, Gregory Lopes, Bishop of Basiles, who sent to the Holy See a memorandum favourable to the Jesuits. Among the works of Morales the following are the most important: (1) "Questo xvii a Fr. J. B. de Morales, missionum sina-
rum procuratore, proposita Rome 1643 S. Congreg.
de Prop. Fide" (Rome, 1645); (2) "Tractatus ad explicandas et elucidandas opiniones et controversias inter Patres Societatis Jesu et religiosos S. Ord.
Prav."; (3) "Commentarius explicatitianis libri V. Vin-
ginis lingua sinica"; and (4) "Tractatus ad Dei amorem
in voluntate excitandum, lingua sinica."}

JOSEPH SCHROEDER.

MORALIES

MORALITIES

Morales, Luis de, Spanish painter, b. at Badajos in Extremadura about 1509; d. at Badajos, 1586. His life was spent in painting devotional subjects for churches and oratories. Painting was for him not merely a means of charming the sense of vision: he strove by his brush to express the religious enthusiasm which characterized his age. Critics have detected two different periods in the artistic career of Morales. In his earlier style, the influence of the Florentine school is more marked: he executed various studies and exercises after works of Michangelio; notably, he copied at Evora a picture representing Christ on the Cross, with the Blessed Virgin and St. John. To this, not easily definable, period is referred a "Circumci-
sion" at the Museum at Madrid, which he may have painted for the high altar of the church of La Higuera of Fregenal. In his second style Morales lessens the number of figures in his compositions, which seldom contain more than two or three, often in bust or in half-length. His favourite themes, frequently re-
produced without any change, are "Ecce Homo," "Christ at the Column," and "The Blessed Virgin holding the Dead Christ." The drawing is clean and firm, the anatomy correct, the figures, which recall primitive German and Flemish work by their slender-
ness, are not wanting in grace, and at times are char-
acterized by a certain air of melancholy. The colour-
ing is delicate and as brilliant as enamel. Morales excelled in the faculty of making his modelling stand out by the skill and the rapidity of his handling. Like the early Northern painters, he exercises minute care in the reproduction of the beard and hair, and makes a point of rendering faithfully the drops of blood falling from the thorn-crowned brow of Christ, and the tears flowing from the eyes of the afflicted Mater Dolorosa.

No artist of his time knew better than he how to appeal to the ardent faith of his countrymen, because no one else in that day knew so well how to impart to his sacred characters so intense and infectious emotion. As an example of this we may take the "Christ at the Column" in the Church of San Isidro el Real at Madrid; here the painter pathetically places the dying Saviour between the columns of the Divine Master at the flagellation. The resignation of Jesus, His loving look directed towards Peter and fraught with forgiveness, the deep penitence of the Apostle, are so vividly rendered that one shares the enthusiasm of Morales's countrymen, and can under-
stand why they called him El Dueño. Natural to his mind is the rendering of Philip II, however, whose preference was for the Italian painters, does not seem to have shared the general

enthusiasm: he gave Morales but one commission, for the "Christ going up to Calvary," which he pre-
sented to the Jeronymite church at Madrid. The king had ordered the abbots in 1577 to give Morales those who had become destitute in his old age. Many imitators of Morales exaggerated his style into manne-
rierism and caricature. His son Cristóbal accomplished little beyond mediocre reproductions of his works, but one of his pupils, Juan Labrador, became distinguished as a painter of still life. To the works of Morales already mentioned we may add: at Badaj-

GASTON SORTAIS.

Moralities (or Moral Plays) are a development or an offshoot of the Miracle Plays and together with these form the greater part of Medieval drama. They were very popular in the thirteenth and early fourteenth centuries and existed side by side with the Miracle Plays of that date. A Morality has been defined by Dr. Ward as "a play enforcing a moral truth or lesson by means of the speech and action of characters which are personified abstractions—figures representing virtues and vices, qualities of the human mind, or conditions in general life. In whole, that defi-

Gaston Sortais.
yet that does not seem to have been contemporary opinion, for the multitude of extant printed editions of Moralties is stated by Mantsius to exceed by far that of the Miracles and farces. Mr. Pollard is, moreover, of the opinion that in its earlier days the Morality was not wholly unworthy to be ranked with the Miracle Play. It is, of course, clear that the substitution of the moralities' abstract ideas (Love, Friendship, etc.) in place of the human or supernatural characteristics of the Bible or legendary narrative, would tend to produce a less real effect if acted carelessly, or if the audience did not thoroughly comprehend, or was out of sympathy with, the meaning of the play (and this is practically the position of the modern reader, especially if non-Catholic). But the abstract ideas, after all, are more fully authenticated on the stage, and if we put ourselves even slightly into the Catholic, religious, and moral atmosphere of the medieval audience (to which the ethical bearing of the play was not naturally dull but vivid, because of the tremendous human issues it was concerned with), we should be able to understand why the Moralities were popular not only in the Middle Ages but on into the time of the Renaissance. Besides this, in many Moralities the characters were not all abstract qualities—there were angels and devils, priests, doctors, and, especially in English plays, the fool, under various names, chiefly that of the "Vice". The verisimilitude of the Morality was very much on the whole, more varied than that of the Miracle Plays. One of the latest and most thorough of English writers upon this stage of the drama points out that four main plots can be distinguished in the earlier Moralities, sometimes occurring alone and sometimes in combination: the Debate of the Heavenly Graces; the Coming of Death and the Conflict of Virtue and Vice; and the Debate of the Soul and the Body.

In England, however, we have not extant examples of all the four, though the Morality Play is well represented in our literature. The earliest English Morality of which we have a play of the "Lord's Prayer" of the latter half of the fourteenth century "in which all manner of vices and sins were held up to scorn and the virtues held up to praise": this play is lost, but it must have been much thought of, for a Guild was formed in York (where it was played) with the special object of maintaining it. Also lost is another early and highly interesting Morality of the "Creed". The earliest complete Moral play extant, leaving out the "Dance of Death and the Confession of Life" (ed. Waterhouse, see below), is the "Castell of Perseverance", 3560 lines long, written perhaps in the early fifteenth century. This "traces (to quote Mr. Pollard's skilful summary) the spiritual history of Humanum Genus [Mankind or the typical man] from the day of his birth to his appearance at the Judgment Seat of God, personified by the way whom his pathway is beset, the Guardian Angel by whose help he resists them, and the ordinances of Confession and Penance by which he is strengthened in his conflict". Dramatic power is shown in this Morality; the plot forms a unity, and is developed in logical sequence. It must have been a thrilling moment for the audience when Humanum Genus after hearing the persuasive arguments of his Good and his Bad Angel, beseeches which to follow:—

"Whom to folowe, wetyen I ne may; I stonde in stodye, and gyinne to rave: I wolde be ryche in gret aray, And fayn I wolde my soyle save I my schame. Thou (to Bad Angel) woldest to the world I me toke; And he wolde that I it forsake. Now so God me helpe, and the holy boke I not (knowe not) wyche I may have."

Other early Moralities approaching the same type are

"Mind, Will, and Understanding"; "Mankind" (these, with the "Castell of Perseverance", included in one MS. and named in modern times after a former owner, the "Macro Moralties", ed. Pollard and Furnivall, see below); "Everyman" (London, 1902), a translation from a Dutch original; the "World and the Child" (Mundus et Infans; ed. Manly, see below). All these plays are lengthy and belong, almost certainly to the fifteenth century. About the same date we may place two plays which though not pure Moralities are yet much influenced by the Moralphies, "St. Mary Magdalen" (ed. Furnivall, see below), and what is known as the Croxton Play of the "Sacrament" (ed. Waterhouse, see below).

At least by the end of the fifteenth century a kind of Morality play appears in English Morality, of which we have been speaking, time was not an object, nor was there need to limit the number of actors, but little by little, as performances began to take place indoors, in the hall of a king or a noble, and as they passed into the halls of professional actors, compression began to be necessary both in time and in the number of personages introduced. The aim of the play, also, became gradually more secular. The result was a modified and shortened Morality known as an Interlude. The meaning of this term is not yet clearly defined. Its primary meaning according to Mr. Chambers is that of a play in dialogue between actions, and as such that of a stage play. The secondary meaning, that of a dramatic diversion in the pause or interlude between the parts of a banquet or other entertainment, which has been generally given to the term, may still stand. The nature of the Moral Interlude and its close connexion with the earlier Morality proper is, however, clear. It deals with portions of the man's life; in the ethical drama, in some Interludes, is mainly limited to warnings against the certain sins (especially those of youth) and in others to exhortations to learning and study. "Hick Scornor" (ed. Manly, see below) and the Interlude of the "Four Elements" (Hazlitt, "Dodson's Old Plays", London, 1874) are early examples. This type of play was often used as a means of asserting Protestantism against Catholicism. Among the writers of this later type of Morality we find John Skelton in his "Magnyficyence" (ed. Ramsay, see below), and John Heywood, the dramatist, who was especially noted for his Interludes, some of which, however, are more like plays proper having a satirical rather than a definite moral aim, and leading life of the man's life; to the 15th-century, in some Interludes, are lively enough, but in others there appears something of the dramatic lifelessness which has been, perhaps rashly, attributed to Moralities in general. When we find an Interlude on the subject of Love, in which the characters are named "Loving not Loved" and "Loved not Loving", "Both Loving and Loved", "Neither loved nor Loving", it is plain that this type of work is reaching its end, or if it is to continue must take on a more living character. John Heywood's work, however, on the whole, brings us in Interludes such as "The Four P's" and "The Pardner and the Frere" (both plays to be found in Hazlitt's "Dodson's"), to the threshold of real drama. Allegory has passed away, together with the recognized moral plot, and the characters are drawn from contemporary life. This "transformed morality takes its place as one of the threads which went to make up the wondrous web of the Elizabethan drama".

MORALITY

Art. 15. Gomel, II (London, 1903); Gatley, Representative English comedies (New York, 1903); Idem, Plays of Our Forefathers (London and New York, 1908); Manly, Specimens of Pre-Shakespearean Drama (Boston and London, 1897).

MORALITY.

It is necessary at the outset of this article to distinguish between morality and ethics, terms not seldom employed synonymously. Morality is an antecedent to ethics: it denotes those concrete activities of which ethics is the science. It may be defined as human conduct in so far as it is freely subordinated to the ideal of what is right and fitting. This ideal governing our free actions is common to the race. Though there is wide divergence as to theories of ethics, there is a fundamental agreement among men respecting essential lines of conduct in public and private life. Thus Mr. Hobhouse has well said: "The comparative study of ethics, which is apt in its earlier stages to impress the student with a bewildering sense of the diversity of moral judgments, ends rather by impressing them with a more fundamental and far-reaching uniformity. Through the greatest extent of time and space over which we have records, we find a recurrence of the common features of ordinary morality, whi...o my mind at least is not less impressive than the varia:ions which also appear" (Morals in Evolution, I, 1, n. 11). Plainly this uniformity regards principles rather than their application. The actual rules of conduct differ widely. We may acknowledge as obligatory, certain savage tribes believe that filial piety requires them to despacht their parents when the infirmities of old age appear. Yet making allowance for all such diversities, it may be said that the common voice of the race proclaims it to be right for a man to reverence his parents; to care for his own body, to feed his soul, to control his appetites; to be honest and just in his dealings, even to his own damage; to show benevolence to his fellows in time of distress; to bear pain and misfortune with fortitude. And only within comparatively recent years has anyone been found to deny that beyond this man is bound to honour God and to prefer his country's interests to his own. Thus, indeed, the advance of morality lies not so much in the discovery of new principles as in the better application of those already accepted, in the recognition of their true basis and their ultimate sanction, in the widening of the area within which they are held to bind, and in the removal of obstructions inconsistent with their observance.

The study of ethics, then, is a subject of keen debate during the past century. In much recent ethical philosophy it is strenuously maintained that right moral action is altogether independent of religion. Such is the teaching alike of the Evolutionary, Positivist, and Idealist schools. And an active propaganda is being carried on with a view to the general substitution of secular for religious morality based on the beliefs of Theism. On the other hand, the Church has ever affirmed that the two are essentially connected, and that apart from religion the observance of the moral law is impossible. This, indeed, follows as a necessary consequence from the Church's teaching as to the nature of morality. She admits that the moral law is knowable to reason: for the due regulation of our free actions, in which morality consists, is simply their right ordering with a view to the perfecting of our rational nature. But she insists that the law has its ultimate obligation in the will of the Creator by whom our nature was fashioned, and who has given us his right ordering as a duty, and that its ultimate sanction is the judgment of God which its violation must entail. Further, among the duties which the moral law prescribes are some which are directly concerned with God Himself, and as such are of supreme importance. Where morality is divorced from religion, reason will, it is true, enable a man to recognize to a large extent the ideal to which his nature points. But much will be wanting. He will disregard some of his most essential duties. He will, further, be destitute of the strong motives for obedience to the law afforded by the sense of obligation to God and the knowledge of the tremendous sanction attached to its neglect—motives which experience has proved to be necessary as a safeguard against the influence of the passions. And, finally, his actions, if in accordance with the moral law, will be based not on the obligation imposed by the Divine will, but on considerations of human dignity and on the good of human society. Such motives, however, cannot present themselves as strictly speaking, obligatory. But where the motive of obligation is wanting, action lacks an true moral force. They can be substituted for this connexion the Church insists upon the doctrine of original sin. She teaches that in our present state there is a certain obscurity in reason's vision of the moral law, together with a morbid craving for independence impelling us to transgress it, and a lack of complete control over the passions; and that by reason of this inherited taint, man, unless supported by Divine aid, is unable to observe the moral law for any length of time. Newman has admirably described from the psychological point of view this weakness in our grasp of the moral law: "The sense of right and wrong ... is so delicate, so fitful, so easily puzzled, obscured, perverted, so subtle in its argumentative process, so invulnerable by evidence, so impervious by pride and passion, so unsteady in its course, that in the struggle for existence amid the various exercises and triumphs of the human intellect, the sense is at once the highest of all teachers yet the least luminous" (Newman, "Letter to the Duke of Norfolk", in section on conscience).

Dealing with this subject, however, it is further necessary to take account of the historical argument. Various facts are adduced, which, it is alleged, show that morality is, in point of fact, capable of dissociation from religion. It is urged (1) that the most primitive peoples do not connect their religious beliefs with such moral code as they possess; and (2) that even where the moral consciousness and the religious system have reached a high degree of development, the spheres of religion and morality are sometimes regarded as separate. Thus the Greeks of classical time were in moral questions influenced by non-religious conceptions such as that of aibds (natural fate) by fear of the gods; while one great religious system, namely Christianity, has in the entire independence of the moral code any belief in God. To these arguments we reply, first: that the savages of to-day are not primitives, but degenerates. It is the merest superstition to suppose that these degraded races can enlighten us as to what were the beliefs of man in his primitive state. It is among civilized races, where degeneration has not proceeded so far, that we must seek for knowledge as to what is natural to man. The evidence gathered from them is overwhelmingly in favour of the contention that human reason proclaims the essential dependence of morality on religious belief. In regard to the contrary instances alleged, it must be denied that the morality of the Greeks was disconnected with religion. Though they may not have realized that the laws prescribed by natural law were derived from a divine command, they most certainly believed that their violation would be punished by the gods. As to Buddhist belief, a distinction must be drawn between the metaphysical teaching of the Buddha himself, and the practical interpretation of that teaching as expressed in the lives of the great mass of the adherents of the creed. It is only the Buddhist monks who have really followed the speculative teaching of their masters on this point and have dissociated the moral law from belief in God. The mass of adherents never did.
so. Yet even the monks, while denying the existence of a personal God, regarded as a heretic any who disputed the existence of heaven and hell. Thus they too help to bear witness to the universal consensus that the moral law is based on supernatural sanctions. We may, however, readily admit that where the religious convictions and the moral code were still intact, while ancestral precept and civic obligation were viewed as the preponderating motives. A broad distinction must be made between such cases and that of those nations which having once accepted the Christian faith with its clear profession of the connexion between moral obligation and a Divine law, have subsequently repudiated this belief in favour of a purely natural morality. There is no parity between “Fore-Christians” and “After-Christians”. The evidence on our command seems to establish as certain that it is impossible for these latter to return to the inadequate grounds of obligation which may sometimes suffice for nations still in the immaturity of their knowledge; and that the rejection of those motives necessarily followed by a moral decay, leading rapidly to the corruptions of the most degraded periods of our history. We may see this wherever the great revolt from Christianity, which began in the eighteenth century, and which is so potent a factor to-day, has spread. It is naturally in France, where the revolt began, that the movement has made most headway. There its effects are not disputed. The birth-rate has shrunk until the population, were it not for the immigration of Flemings and Italians, would be a diminishing quantity; Christian family life is disappearing; the number of divorces and of suicides multiplies annually; while one of the most ominous of all symptoms is the alarming increase of juvenile crime. But these effects are not peculiar to France. The movement away from Christianity has spread to certain sections of the population in the United States, in England, in Germany, in Australia, countries providing in other respects a wide variety of circumstances. Wherever it is found, there in varying degrees, the movement has a similar development. There its effects are not disputed. The birth-rate has shrunk until the population, were it not for the immigration of Flemings and Italians, would be a diminishing quantity; Christian family life is disappearing; the number of divorces and of suicides multiplies annually; while one of the most ominous of all symptoms is the alarming increase of juvenile crime. But these effects are not peculiar to France. The movement away from Christianity has spread to certain sections of the population in the United States, in England, in Germany, in Australia, countries providing in other respects a wide variety of circumstances. Wherever it is found, there in varying degrees, the movement has a similar development. There its effects are not disputed.

Grating religion to be the essential basis of moral action, we may further inquire what are the chief conditions requisite for the growth and development of morality in the individual and in the community. Three such may be singled out as of primary moment, namely: (1) a right education of the young, (2) a healthy public opinion, (3) sound legislation. It will bring us in due course than to discuss in the briefest manner on these points. (1) Under education, we include the early training of the home as well as the subsequent years of school life. The family is the true school of morality, a school which nothing can replace. There the child is taught obedience, truthfulness, self-restraint, and the other primary virtues. The obligation to practise them is impressed upon him by those whose claim on him he at once recognizes, whose word he does not dream of doubting; while the observance of the precept is made easy by the affection which unites him with those who impose it. It is, therefore, with reason that the Church has ever declared divorce to be fatal to the true interests of a nation. Where divorce is frequent, family life in its higher form disappears, and with it perishes the foundation of a nation's morality. Similarly the Church maintains, that during the years of school life, the moral and religious atmosphere is of vital importance, and that apart from this the possession of intellectual culture is a danger rather than a safeguard. (2) It is hardly necessary to do more than call attention to the necessity of a sound public opinion. The great mass of men have neither opportunity nor leisure to determine a standard of morals for themselves. They accept that which prevails around them. If it is high, they will not question it. If it is low, they will aim no higher. When the nations were Catholic, public opinion was predominantly swayed by the teaching of the Church but not always formed by the press; and since the press as a whole views morality apart from religion, the standard proposed is inevitably very different from what the Church would desiderate. Hence the immense importance of a Catholic press, which even in a non-Catholic environment will keep a true view before the minds of those who recognize the Church's authority. But public opinion is also largely influenced by voluntary associations of one form or another; and of recent years immense work has been done by Catholics in organizing associations with this purpose, the most notable instance being the German Volksvereine. (3) It may be said with truth that the greater part of a nation's legislation and its legal system arise in the Church. This is of course manifestly the case with all laws connected with the family or with education; and with those, which like the laws regarding the drink traffic and the restriction of bad literature, have the public morals for their immediate object. But it is also true of all legislation which deals with the circumstances of the lives of the people, e.g., Law for the Factory. By looking at the conditions of labour and protecting the poor from the hands of the usurer, promote morality, for they save men from that degradation and despair in which moral life is practically impossible. It is thus evident how necessary it is, that in all such questions the Church should in every country have a definitely formed opinion and should make her voice heard. (See ETHICS; LAW.)

MORAZ, PATRICK FRANCIS. See SYDNEY, ARCHDIOCESE OF.

MORATIN, LEANDRO FERNANDEZ DE, Spanish poet and playwright, b. at Madrid, 10 March, 1760; d. at Paris, 21 June, 1828. He is usually known as the younger Moratín, and was the son of Nicolás Fernández de Moratín (1737–80), a lawyer and professor of poetry at the Imperial College, also a playwright. The elder Moratín had devoted himself to attempting to reform the Spanish drama and had written several plays after the style of Racine and Corneille. In 1762 he had published his “Desengaño al Teatro Español” in which he criticized the old drama and especially the “Auto Sacramental” which still flourished. So successful was this work, that three years later the exhibition of “Autos” was forbidden by royal edict. Among his works were “La Petimbre”, “La Manca”, etc., and probably the best known, “Herminando”, a tragedy. Knowing by his own experience how precarious was literature as a means of livelihood, the elder Moratín apprenticed his son to a jeweller, thinking in this way to develop his son’s artistic skill. While serving as apprentice, young Leandro won two prizes offered by the Academy, one in 1779 with an epic ballad entitled “La toma de Granada”, and the
other in 1782 with "La lección poética", a satire upon the popular poets of the day. These brought him to the notice of the statesman and author Jovellanos, through whose influence Moratín was appointed secretary to Count Rancón, and afterwards to Fray López de Villalpando, who was a chaplain in the Spanish Legation at Paris before returning to Spain in 1787.

During the year that he spent in Paris he improved the opportunity to study the French drama and formed friendships with men of letters, both of which circumstances aided materially in the artistic development of the young poet. Returning to Spain in 1789, Moratín set out to continue the work begun by his father in reforming the Spanish drama upon the French classical model. He secured the patronage of Manuel Godoy, prime minister and favourite of Charles IV, through whose influence he was able in 1790 to stage the first of his plays, "El Viejo y la Niña"; a comedy in three acts and in verse. This was followed in 1792 by "La Comedia nueva" or "El Café" in two acts and in prose. In the same year Godoy gave him the means for foreign travel and his journey through France, England, the Low Countries, Germany, and Italy completed his education. His next play "El Barón" was produced in 1803, followed in 1804 by "La Mojigata" (the female hypocrite), a weak imitation of Molière's "Tartuffe". An unsuccessful attempt to formulate religious grounds by means of the Inquisition. Moratín's crowning triumph came in 1806 when the second of his prose comedies and his best work "El Sí de las Niñas" was produced. Performed before crowded houses night after night, it ran through several editions in one year, and was translated into several languages, including English under the title of "The Fair Maid of Edinburgh".

friend Godoy, Moratín was compelled to flee from Spain, but returned shortly afterward to accept from Joseph Bonaparte the post of royal librarian, a lack of patriotism which lost him the friendship of loyal Spaniards, so that when the Spaniards returned to power, Moratín was compelled to pass the rest of his days in exile. He died in 1838 in Paris, where he had spent the greater part of his life following the Spanish revolution. Moratín's works have been translated into several languages and have had a considerable influence on Spanish literature.

In his work, Moratín shows originality, he skilfully describes the manners of his time and is clever in his dialogue. He adheres to the French unities, but introduces certain peculiarities of the Spanish stage, dividing his plays into three acts and using the slight romantic verse. He was unquestionably the best dramatic writer Spain had produced since the famous ones of the Siglo de oro. The "Biblioteca de Autores Españoles", Vol. II, contains the plays of both the elder and the younger Moratín.

VENTURA FUENTES.

MORAVIA (German MÄHREN), Austrian crown land east of Bohemia. In the century before the Christian era the Germanic Quadi (a tribe closely related to the Marcomanni, who had just driven the Celtic Boii from Bohemia) took possession of the modern Moravia. Of these two tribes Bohemia and Moravia we know nothing beyond their collisions with the Romans—e.g., their wars with Marcus Aurelius in A.D. 185 and 181 and with Valentinian I (364-75). The invasion of the Huns under Attila drove the majority of the Marcomanni and Quadi from their settlements. In the fifth century the desolated territory was overrun by the Franks and the Slavs. Of the sixth century, these were conquered by the Avars, who advanced as far as Thuringia. The Slavs were delivered from the Avar yoke temporarily (622-38) by Samo, who was perhaps of Frankish parentage, and finally by Charlemagne, whose defeat of the Avars in 796 enabled the Moravians to recover the territory extending from the Danube to the northern borders of the Gran. During this period a uniform principality had developed on Moravian soil, and received the name of the Kingdom of the Morimorites from the founder of the dynasty, Moimir. Moravia stood towards the Frankish Empire in relations of dependence; at least, the "Maharancers" brought presents to Emperor Louis at the Diet of Ratibor in 822. When Moimir sought to assert his independence of the empire, he was deposed by the Germans and his nephew Wratlawa appointed prince. The latter's struggle for complete freedom ended in his betrayal into the hands of Louis the German by his nephew Swatopluk, who then attained to power under German protection.

In the ecclesiastical domain Wratlawa had also desired independence of the German Empire. Christianity had already been preached in Moravia, but had failed to reach the great mass of the people, as the German and Italian missionaries were ignorant of the vernacular speech. In 863 Wratlawa asked the Greek emperor to send new apostles acquainted with the Slav tongue. This last effort failed, on religious grounds by means of the Inquisition. The translation of a portion of the Bible into the Slav language, for which purpose they invented special Slav characters. In 867 they set out for Rome to extend the Bishopric of Prague. The Bishop's Service in the vulgar tongue. Pope Adrian II, who consecrated both brothers bishops, is said to have acceded to their petition. While Constantine, having a premonition of his approaching end (869), remained in Rome, Methodius returned to Moravia and there resumed his work of evangelization, in opposition to the ecclesiastical clergy. In 870 Methodius was deposed by the German spiritual authorities, was confined for two and a half years in a German monastery, and was freed only at the strict command of the pope in 873. His activity was, however, even now narrowly restricted by the Bavarian bishops, although the use of the Slav Liturgy was expressly recognized by the popes.

The understanding between Swatopluk and the Frankish Empire was of short duration. From 882 Swatopluk was engaged in fierce conflict with Arnulf, who administered Carinthia and Pannonia. In 885, however, a complete reconciliation took place, and the Moravian prince lent Arnulf his zealous support until the latter successfully established Christianity to the German Crown. But the energetic Arnulf was not likely to tolerate any longer the growth of Swatopluk's power, so dangerous to his empire. In 892 war again broke out, and Swatopluk died in 895 before any decisive result had been reached. Subsequently the Moravian Kingdom was rent asunder by the struggle of various claimants for the Moravian crown. In the middle of the tenth century succumbed to the attack of Hungary at the battle of Presburg. The country remained in the hands of Hungary until the battle of Lechfeld in 955, when it was united with Bohemia by the Bohemian Duke Boleslaw of the Premysl family, the confederate of Emperor Otto I. Towards the end of the tenth century Moravia was conquered by the Polish duke, Boleslaw Chrobry (992-1025), but, when domestic disturbances broke out in Poland after his death, Duke Udalrich of Bohemia, with the assistance of his son Břetislav, recovered Moravia from the Poles. Břetislav administered the land as Duke of Moravia, and established his residence at Olmütz. After the death of the booty then in his hands of Swatopluk, he founded the first Moravian monastery, that of Raigern near Brunn (1048). The strife, caused by X.—36
the law establishing in Bohemia the right of succession by seniority (1054), extended also to Moravia (which would have been divided to provide petty principalities for the younger sons of the ducal house), especially to the principalities of Brunn, Olomitz, and Znaim. The suzerainty of the Bohemian duke was honored by granting his successor in contravention of the law regulating succession by seniority, long wars were waged against him by the rightful heir, Duke Udalrich of Brunn (1101, 1105, and 1107). These wars reached their climax in 1125, when Prince Otto of Olmütz rose against Duke Sobeslaw, the youngest son of Wratislav II, and was supported by Lothair of Supplinburg. Lothair led an army in person for his confederate Otto, but he was defeated in a decisive battle near Kulm (1126). Sobeslaw (1125–40) and his nephew and successor, Wladislaw II, energetically maintained the Bohemian supremacy over Moravia; during the reign of the latter the Moravian branch of the Přemysl family became extinct, whereupon Prince Conrad Otto of Znaim, who probably belonged to the collateral line of the Bohemian Přemysls, united the three divisions of the Moravian kingdom (1174). On his attempting also to annex Bohemia (from which, on the death of Wladislaw, his son Frederick had been expelled by his barons), Barbarossa, to whom Frederick had fled, joined with the Přemysl nobles to appear before his tribunal at Ratisbon, and decided (29 Sept., 1182) that Frederick should rule in Bohemia, but that thenceforth Conrad Otto should hold Moravia as an immediate margravate, independent of Bohemia. After Conrad Otto's death in Sicily (1191), a new war of succession broke out between the brothers Ottokar and Henry Wladislaw; to avoid bloodshed, the latter renounced in 1197 his claims to Bohemia, accepting Moravia as a margravate feudal to the Bohemian crown. Thenceforth, this was the political condition of Moravia.

The German colonization of Moravia, begun under Henry Wladislaw, greatly increased under his successors Henry Wladislaw II and Přemysl, as the invasions of the Mongols in 1241 and the Cumane in 1252 had swept away numbers of the inhabitants into captivity. This immigration of Germans led to the formation of German townships, the development of which was encouraged by the Přemysl family, especially by Ottakar II. The privileges, accorded to these towns, generally on those of Magdeburg and Nuremberg. After Ottakar had fallen in the battle of Marchfeld fighting against Rudolf of Hapsburg (1278), Moravia remained for five years as a pledge in Rudolf's hands, but was then under Ottakar's successor, Wenceslaus II, reunited with Bohemia, though its area was somewhat reduced. With Wenceslaus III, the ruling line of the Přemysls became extinct in 1306. Moravia at first fell with Bohemia to Albert I of Hapsburg; then on Albert's death in 1307 to Henry of Carinthia, and in 1309 to John of Luxembourg, son of Emperor Henry VII. In the Privilege of 1311 John granted the country important liberties, which formed the foundation of the subsequently augmented rights of the estates. Under the provostship of Lips and Margrave Charles (1333), later Emperor Charles IV, a new period of prosperity began. In 1349 Charles enfeoffed his brother John in the margraviate. In 1371 John divided the country among his three sons, Jobst (Jodocus) receiving the title of Ancient Margrave and Overlord; his two younger sons were also given the title of Margrave, but were only in their lands in fief from Jobst. This partition and the great Western Schism, which evoked two ecclesiastical parties in Moravia as elsewhere, gave rise to much discord and disturbances between 1380 and 1405. On the death of the childless Jobst, Moravia, as a vacant fief, reverted to the Bohemian Crown, and its administration was entrusted to certain district governors by Wenceslaus IV.

As in Bohemia, where similar political and ecclesiastical conditions prevailed, Hussitism maderapid and great progress in Moravia under the feeble rule of Wenceslaus V, especially among the nobility and peasantry; the Bishop of Olmütz and almost all the imperial cities inhabited by Germans, however, remained true to the Catholic cause. On Wenceslaus's death his brother, Emperor Sigismund, was recognized in Moravia as margrave, although the Bohemians refused to recognize him as king. Against the Hussites, who, under the leadership of two apostate priests, had established a fortified camp in the neighbourhood of Ungarisch-Hradisch (Neu Tabarz), were received vigorous support from Duke Albert of Austria. In 1423 Albert received for these services the Margraviate of Moravia in fief. After the chief power of the fanatical Hussites in Bohemia had been crushed in the battle near Lipau (1434), a treaty of peace was also arranged in Moravia, according to which the Hussites were allowed to receive Communion under both species; these Compacte, as they were called, being published at the Diet of Iglaú (1436). Under Albert's son, Wladislaw Posthumus (1449), began the first attempts to stem Utraquism and to restore to the Catholic Church its earlier dominant position. Especially efficacious towards this end was the missionary activity of St. John Capistran, whose influence, however, prevented him from attaining complete success. George of Podiebrad, who became King of Bohemia on Wladislaw's death in 1457, had to resort to arms to secure recognition in Moravia from the German and Catholic towns. In 1464 he promised the Moravian Estates that the margraviate should never be separated from those of Bohemia by sale, exchange, or mortgage. After his death, however, the strife between Matthias Corvinus and Władysław of Poland for the Bohemian Crown resulted in the peace of 1478, according to which Corvinus received Moravia for life and Władysław Bohemia. On the death of Corvinus, Moravia also fell under the sway of Władysław (1490). Thanks to the excellent
administration of the governor Cibor of Cymburg (1469–94), who, although a Utraquist, enjoyed the confidence of both princes, Władysław was able to leave to his son Louis II in 1516, considering the troubled era, a splendidly ordered land. Louis was slain in the Battle of Mohács in 1526. As he was childless, Ferdinand of Hapsburg, husband of Anna Jagellon, the sister of Louis, claimed Moravia with Bohemia and Hungary. His claim was submitted by the assembly of the Moravian Estates, who did homage to Ferdinand at Brünn and Olmütz in 1527.

Turning to ecclesiastical affairs, there was in Moravia in the fifteenth century, besides the Catholics and Utraquists, a third confession, the so-called "Brethren's Union". This body had spread widely, thanks mainly to the patronage of certain influential nobles, who could defy all decrees of banishment. Luther's teaching thus found a favourable soil in Moravia, and spread rapidly, especially in the cities of Olmütz, Znaim, and Iglau. From 1526 Moravia was also the refuge and new home of the Anabaptists, the adherents of Hübmaier, the Gabrielists, and the Moravian Brethren, who later emigrated to Russia and thence to the United States. The friendly attitude of Emperor Maximilian II (1564–76) towards Protestantism favoured the growth of all these non-Catholic movements, and the defection of the colleges of Brünn and Olmütz (1574) the Catholic Counter-Reformation set in, its direction being undertaken by Franz von Dietrichstein, Bishop of Olmütz (1599–1636). The Bohemian rising against the emperor in 1618 extended for a short time to Moravia, and on 19 August, 1619, the opposition party of the Moravian Estates was compelled to separate Gaarstein at Prague for the deposition of Ferdinand and the election of Frederick of the Palatinate as King of Bohemia. In Feb., 1620, the latter succeeded in making his entry into Brünn as Margrave of Moravia, but the Battle of the White Mountain gave victory to the cause of the emperor and Catholicism, and the imperial seventh contingent of some thousands of the inhabitants was meted out to the leaders of the rebellion and the revolting cities; in 1622 the Anabaptists were compelled to leave the land, and in 1623–8 the Brethren's Union.

An imperial edict of 9 March, 1628, ordered the return to the Catholic Church, and compelled all recusants to emigrate. The Protestant religion, however, continued to increase, and its priority being secured in all the townships. From 1642 Moravia was the theatre of the devastating wars between the imperial forces and the Swedes, who maintained a foothold in the land until the Peace of 1648 (in Olmütz until 1650). Sixty-three castles, twenty-two large towns, and three hundred and thirty villages were destroyed, and the plague swept away thousands of the inhabitants whom the war had spared. On the conclusion of the Thirty Years' War the Catholic restoration was actively resumed. From Olmütz, Brünn, Iglau, Znaim, and Hradisch outwards, the Jesuits displayed a fruitful activity by holding missions far and wide, while the Piarists performed invaluable service by establishing schools and colleges; the Jesuits and to a certain extent the clergy, however, continued for a long time an obstacle to complete Catholicization. Under Leopold I, Joseph I, and Charles VI, Moravia enjoyed as a rule peaceful conditions, although in 1633 the Turks and Tatars penetrated as far as Olmütz and Brünn, devastating the land. The wars begun by Frederick II of Prussia for the possession of Silesia reduced Moravia to a pious state, especially northern Moravia and Olmütz. Maria Theresa and Joseph II introduced extensive alterations in almost all branches of the administrative system. The administration was greatly centralized, the autonomy of the estates and the Diet was abolished, and in 1782 Moravia was united with Slavonia for administrative purposes. In favour of the Protestants a patent of tolerance was issued, while on the other hand thirteen monasteries for men and six for women were suppressed. The University of Olmütz, deserted after the suppression of the Jesuit Order, was transferred in 1778 to Brünn, where a bishopric had been founded in 1777, Olmütz and Znaim being simultaneously raised to an archdiocese. Emperor Leopold restored to the estates a certain independence.

The Napoleonic era did not pass by without leaving a landmark in Moravia, for at Austerlitz, in the centre of the land, was fought the decisive battle of the Third Coalition War, and the subsequent conflict between Austria and Napoleon took place partly in Moravia (Battle of Znaim). The Restoration was followed by many years of peace. The Austrian Revolution of 1848 gave Moravia and the other crown lands of Austria a constitution, substantially unaltered to-day, and admitted the co-operation of the people in the making of laws. In 1866 Moravia was the scene of the latest war between Austria and Prussia, which was decided at the Battle of Königgrätz, and a Moravian town, Nikolsburg, witnessed the preliminary negotiations which resulted in the Peace of Prague.

In the subsequent era of peace Moravia made great strides in cultural and economical development. The national quarrels between the Germans and Czechs, however, were by no means solved, and especially the portion of Bohemia bordering on Moravia, found a friendly settlement in Moravia in 1905. The electoral conditions were altered so as to include—in addition to the three electoral classes of the landed interests, the cities, and the rural districts—a fourth general electoral class consisting of every qualified male Bohemian and Czech, and districts where such election was not established according to the national land registers, and curiae of the separate nationalities were instituted to settle all disputes involving the question of nationality. The question of language in the case of the autonomous national and district authorities has been settled on a bilingual basis, and the division of the school board accords with the national proportion. Although, by the acceptance of this franchise reform, the Germans lost their previous majority in the Diet, they gave their consent to the change in the interests of public peace.

Politically speaking the Margraviate of Moravia is an Austrian crown land, the highest administrative authority being vested in the chief of state, the Diet consists of 149 deputies: 2 members with individual vote, the Archbishop of Olmütz and the Bishop of Brünn; 30 members of the landed interests (10 German, 20 Czech); 3 deputies from the Chamber of Commerce of Olmütz and from that of Brünn; 40 representatives of the towns (20 German, 20 Czech), 51 representatives of the rural communes (14 German); 2 representatives of the town electors, 1 deputy from the electoral curie (6 German). In the Imperial Diet of the Austrian Crownlands Moravia is represented by 49 deputies. Ecclesiastically, the land is divided into the dioceses of Olmütz and Brünn, which are treated in separate articles. The Protestant have 1 Superintendent, 14 Seniorate, and 46 preachers; the Jews have their rabbis; the Jewish community of Brünn is the largest in Moravia, and the Jewish community of Olmütz is the smallest. Moravia is 8573 square miles. According to the census of 1900 the population of Moravia was 2,437,706 inhabitants, including 2,325,574 Catholics, 185 Uniates, 66,365 Protestants, 44,255 Jews; and, according to nationality, 695,492 Germans and 1,727,270 Czechs. At the beginning of 1909 the population was estimated at 2,595,164.

E. B. WELD-BLUNDELL.

MORE, Henry, great-grandson of the martyred English chancellor; b., 1586; d. at Watton in 1661. Having studied at St. Omer and Valladolid, he entered the Society of Jesus, and after his profession, and fulfilling various subordinate posts in the colleges, he was sent on the English Mission where he was twice arrested and imprisoned (1621-1622), while acting as chaplain to John, the first Lord Petre. He became provincial in 1635, and in that capacity had a good deal to do with the negotiations of Pansani, Conn, and Rossetti, the papal agents at the court of Queen Henrietta Maria. He was rector of St. Omer in 1649-1652, and again in 1657-1660. During these years he wrote his important history of the English Jesuits: "Historia Missionis Anglicane, sub anno MDLXXX ad MDCXXXV" (St. Omer, 1860, fol.). Besides translating Jerome Platus's "Happiness of the Religious State" (1632), and the "Manual of Meditations" by Thomas de Villa Casini (1618), he wrote "Vita et Doctrina Christi" in meditations quotidianas per annum (2nd ed., 1649), followed by an English version, entitled, "Life and Doctrines of our Saviour Jesus Christ" (Ghent, 1565, in two parts; London, 1880).

J. H. POLLEN.

MORE, Sir Thomas. See Thomas More, Blessed.

MOREL, Gall, a poet, scholar, esthetic, and educationist, b. at St. Fiden, Switzerland, on 24 March, 1827; d. at the Abbey of Einsiedeln, 9 December, 1872. His parents' names were Benedict, but the monastery he took the name of Gall. In 1814, he entered the gymnasia at St. Gall. A pilgrimage to Einsiedeln in 1817 influenced him deeply, and soon afterwards he entered the monastery school as a novice. In 1820 he took the final vows, and after several years spent in theological and philosophical studies, was ordained priest in 1826, being appointed forthwith instructor in the monastery school. From this period his life presents a picture of extraordinary activity. From 1826 to 1832 he was professor of rhetoric, and until 1835 he lectured on philosophy. In this latter year he became librarian of the abbey, and retained this office until the end of his life, while fully engaged in the offices of chorister director (1834-40), prefect (1836), and rector (1848) of the abbey school, archivist of the abbey (1839-45), counsellor of education of the Canton Schwyz (1843-5), and subprior of the abbey (1846-52).

In spite of the many demands upon his time and strength, the industrious scholar exhibited a many-sided activity. He is best known as a poet, ten volumes of lyric, didactic, and dramatic verse testifying to his prolific poetical talent. Endowed by nature in so many directions, it has been said that in his poems, "he shows himself now as a childlike pious monk, now as a good-natured humorist, now as a man fully conversant with worldly affairs, and often as a keen satirist, forcible and epigrammatic in ex-
Mohed. Though Morel may not rank among the princes of verse, still his modest muse produced many a poem of enduring worth. But Morel also proved himself a scholar of great versatility. Under his care the library of Einsiedeln was enriched in thirty-seven years by more than 20,000 volumes; many of these are most valuable, especially the manuscripts, which include a tenth-century MS. of Horace, rescued by Morel from the bindings of books, and named after him "Codex Morellianus." Drawing on these literary treasures, Morel published the "Lateinische Hymnen des Mittelalters," "Offenbarungen der Schwester Mechtilde von Magdeburg," and other works. Another publication was the "Regesta der Archive der schweizerischen Eidgenossenschaft"; and he also compiled the Regesta of the Benedictine Abbey of Einsiedeln. Morel's compilations and catalogues are models of accuracy and arrangement. He was associate founder of the Swiss Society for Historical Research (1840), and wrote many valuable contributions for its "Archiv." He likewise assisted in the formation of "Verein der fünf alten Orte," and was a contributor to its organ, the "Geschichtsfreund." 

In aesthetics, Morel became an authority by painstaking study and repeated art journeys to Munich, Vienna, Venice, Milan, Rome, and Paris. His concepts were clearly expressed in words that he considers it the prime object of aesthatics to reconstruct creation: the Divine ideas by the understanding in philosophy, the Divinely picturesque by our fancy in art, and God's creation by our will in our lives. An accomplished violinist, Morel critically treated music as an important branch of aesthetics. Morel's aesthetic views as an educator were nearly fifty years ago easier to estimate than to describe. His energy and his quickening influence over teachers and scholars raised the humble Klosterschule to a high rank among institutions of learning. In this connection special mention must be made of his efforts to foster school drama, including the publication of two volumes entitled "Jugend- und Schultheater." In the apt words of Bishop Greith of St. Gall, "Father Call Morel was a living vindication of the monastic and cloistered life against the attacks of misunderstanding and prejudice."

N. SCHEID.

Morel, Juliana, Dominican nun, b. at Barcelona, Spain, 16 February, 1594; d. at the convent of the Dominican nuns at Avignon, France, 26 June, 1653. The accounts of the learning of this celebrated Spanish lady seem to be on the miraculous. In a laudatory poem Lope de Vega speaks of her "as the fourth of the Graces and the tenth Muse," and says "that she was an angel who publicly taught all the sciences from the professorial chairs and in schools." The apparently extravagant praise of the poet is confirmed by the reports of contemporaries. Left motherless when very young, Juliana's first training was received from the Dominicans at Barcelona. At the age of four she began Latin, Greek, and Hebrew at home under competent teachers, and, when not yet seven years old, wrote a pretty Latin letter to her father who was away. Accused of taking part in a murder, the father fled to Lyons with his daughter, then eleven years old. At Lyons Juliana continued her studies and devoting nine hours daily to music, dialectics, ethics, and music. At the age of twelve she defended in public her theses in ethics and dialectics "summa cum laude." She then applied herself to physics, metaphysics, and canon and civil law. Her father, who had meanwhile settled at Avignon, wanted his daughter to obtain a doctorate in the last-named faculty. This was gained in 1608, when she publicly maintained her law theses at the papal palace of the vice-legate before a distinguished audience, among whom was the Princesse de Condé. Disregarding wealth and a desirable marriage, she entered during the same year the convent of Sainte-Praxede at Avignon. In 1609 she received the habit of a nun, and on 20 June, 1610, took the vows. Just as she had distinguished herself in secular life by her learning, so in the order she excelled all others in piety, humility, and faithful observance of the rules, being on three occasions, notwithstanding her reluctance, named prioress. In this manner the pious nun spent the remainder of her life in the convent, which she had been specially beloved by the sisters. For two years before her end she was in great bodily suffering and her death agony lasted five days. She left a number of religious writings: (1) a translation of the "Vita Spiritualis" of St. Vincent Ferrer, with comments and notes to the various chapters (Lyons, 1617; Paris, 1619); (2) "Exercices spirituels pour la contemplation" (Avignon, 1637); (3) French translation of the Rule of St. Augustine, with additional of various explanations and observations for the purpose of instruction (Avignon, 1680); (4) History of the reform of the convent of St. Praxedis, with lives of some pious sisters, in manuscript; (5) Latin and French poems, some printed and some in manuscript.

QuETIN ET EICHARD, Script. Ord. Prud., II (1721), 845 sqq.; BARONIUS, Apologeticus, V, 320; ANTONIO, Bibliotheca hispanica, II (1872), 544-5.

Morelos, José María, Mexican patriot, b. at Valladolid (now called Morelia in his honour), Mexico, on 30 September, 1779; died at Guadalupe, on 22 December, 1815. His father died while he was still a youth, and, being left destitute, he worked for some time as a muleteer, until he succeeded in obtaining admission, as an extern, to the College of San Nicolás at Valladolid, the rector of which institution was at that time the reverend Don Miguel Hidalgo. Having been ordained priest, he was appointed parish priest of Carcáquez and Nuecepéarto in Michoacan. When Hidalgo left Valladolid for Mexico City, after uttering his Grito de Dolores, Morelos offered himself to him at Chareo, and Hidalgo commissioned him to raise troops for the cause of Independence on the southern coast, and to get possession of the port of Acapulco. Returning to his parish, he collected a small amount of money, and hastened towards Zacatula, and, following the coast, reached Acapulco with some 3000 men whom he had recruited on the way and supplied with arms taken from the royalists. After defeating Paris, who had come from Oaxaca with the object of relieving Acapulco, he left part of his forces to continue the siege and made for Chilpancingo. Forming a junction there with the brothers Galiana and Bravo, he marched to Chilapa and captured that town. As the viceroy, Venegas, was keeping all the colonial troops occupied with the siege of Zitacuaro, Morelos, who had been joined at Jante-leco by his fellow-priest Mariano Matamoros—thenceforward his right hand in almost every enterprise he organized four arms in support of the revolution in various parts of Mexico. But the easy surrender of Zitacuaro to Calleja, and the approach of that commander with all his forces, placed Morelos, with some 4000 men, in the situation of being besieged at Cuautla by 8000 of the best troops of the viceroyalty. With indomitable courage, fighting day after day, Morelos held out for fourteen-three days and succeeded in breaking away with all that remained of his army. He then passed over to Huajuapan, from whence to Ometepec and on to Oaxaca, capturing all those places, and defeating every body of troops that encountered him.

On 14 September, 1813, the independent
Congress assembled at Chilpancingo and there passed the decree: "That dependence upon the Spanish Throne has ceased forever and been dissolved. That the said Congress neither professes nor recognizes any religious, political, or social authority, public or private, of any other; that it will protect with all its power, and will watch over, the purity of the Faith and its dogmas and the maintenance of the regular bodies". From Chilpancingo he turned towards his native Valladolid, which was then held by the royalist leaders Iturbide and Llano; driven back before he moved on Churubusco. At Purbuey his brave companion Matamoros was captured, and was shot at Valladolid, 3 February, 1814. These reverses were followed by the recapture of Oaxaca by the royalist troops. The independent Congress of Chilpancingo had removed to Apatzzingan, where it promulgated the Constitution of 22 October, 1814. Then it determined to remove again from Apatzzingan to Tehuacán, Morelos accompanied it to protect it, and engaged in the Battle of Tresmalacas, where he was made prisoner.

Having been taken to Mexico City, on 22 November, 1815, proceedings were instituted against him by both the military and the ecclesiastical tribunal, and an accusation was lodged against him for rebellion. The principal charges against him were: (1) Having committed the crime of treason, failing in his fealty to the king, by promoting independence and causing it to be proclaimed in the Congress assembled at Chilpancingo. Morelos answered to this that, as there was no king in Spain (Ferdinand VII having been taken to France, a prisoner), he could not have been loyal to the king; and that, as to the declaration of independence, of the said Congress, he had concurred in it by his vote because he believed that the king would not return from France and that, even if he should return, he had rendered himself unworthy of fealty by handing over Spain and its colonies to France like a flock of sheep. (2) Having treated those who were prisoners to him as prisoners, he declared that he had done this in obedience to orders sent first by the Junta at Zitacauro and then by the Congress at Chilpancingo, by way of reprisals, moreover, because the viceregal Government had not accepted the exchange of prisoners proposed instead of General Matamoros. (3) Having ignored the excommunications pronounced and inflicted by the bishops and the Inquisition. He declared that he had not considered these excommunications valid, believing that they could not be imposed upon an independent nation, such as the insurgents must be considered to constitute, so long as they the sentences were not those of a pope or an eccumenical council. (4) Having celebrated Mass during the time of the Revolution. He denied this, since he had regarded himself as under irregularity from the time when blood began to be shed in the territory under his command.

The case having been concluded in the military tribunal that court requested of the ecclesiastical tribunal the action and support of a priest, in accordance with the formalities prescribed by the canons; the ecclesiastical tribunal granted both requests, and communicated its decision to the vicerey. It was at this point that the tribunal of the Inquisition intervened, requesting the vicerey, Callejas (who had succeeded Venegas) to delay execution of the sentence four days, and citing Morelos to a public auto de fe on 27 November. On that occasion, with all the formalities proper to such proceedings, twenty-three charges were preferred against him: the Inquisitors added to the charges brought at the former trial others which they believed themselves competent to try, as implying, according to them, suspicions of heresy. And in that (1) Having refused, deliberately, to give the lives of his associates in the Independent Government.
In 1654 twelve of his plays were published in one volume under the title of "First Part of the Comedies of Moreto". Among them may be mentioned "El lindo Don Diego", "Los jueces de Castilla" dealing with the life of Peter the Cruel, "San Franco de Sena", and "Trampa Adeinante".

A writer, Moreto lacked the creative genius of some of his contemporaries, but he excelled them all in knowledge of stagecraft, in the power of coming quickly to the point in evolving his plots. He also excelled in the variety of his characters and in depicting human passions, while at character drawing he was a master surpassed by none. He handles a humorous situation with great delicacy of touch, and is at his best in comedies of the lighter and gayer sort. His best play "El desden con el desden" (Diadan met with Diadan), published at Valencia in 1676, is borrowed from Lope de Vega's "Milagros del desprecio" (Scorn works Wonders), and is generally conceded to be better than the original. Mollère, in his "Prince d'Elde", tried to repeat Moreto's success, but fell far short of his model. The "Biblioteca de Autores Españoles", XXXIX (Madrid, 1856), contains a collection of Moreto's plays with a biography of the author by Luis Fernández Guerra.

Consult, besides the above-mentioned life by Guerra, Ticknor's History of Spanish Literature (Boston, 1860); AITKEN-BURCH-KELLY, History of Spanish Lilt. (New York, 1900).

VENTURA FUENTES.

Moreto de Brescia, Il. See Bonvicino, Alessandro.

Morgagni, giovanni Battista, called by Virchow, the "Father of Modern Pathology", a distinguished Italian physician and investigator in medicine; b. at Forli, 25 February, 1682; d. at Bologna, 6 December, 1771. His father died when Morgagni was very young, but his mother, a woman of uncommon good sense and understanding, devoted her life to the education of her gifted son. At sixteen he went to the University of Bologna for his higher studies, where before his graduation he attracted attention by his powers of observation. His two great teachers, Albertini and Valsalva, became deeply interested in him, and Valsalva picked him out as his special assistant in anatomy. In the year following his graduation as Doctor of Medicine and Philosophy, though not yet twenty-two, he was sometimes allowed to take Valsalva's classes during his master's absence. He became a leader in thought among the young men and founded a society called the "Academia Inquisitorum" (the Academy of the Restless), a title indicating that the members were not satisfied with previous knowledge but wanted to get at science for themselves by direct observation and experiment. After several years of graduate work at Bologna, Morgagni spent a year in special medical investigations at the Universities of Pisa and Padua. His incessant work impaired his sight and he returned to his native town to recuperate. At the age of 24 he

Moreto y Cabaña, Augustín, Spanish dramatist; b. at Madrid, 9 April, 1618; d. at Toledo, 28 October, 1669. He received what little academic training he had at the University of Alcalá de Henares and graduated Licentiate in Arts in 1639. From a very early age he began to write for the stage, and it is known that from 1640, probably through his friendship with Calderón, his plays began to be produced. The Spanish drama had reached the height of its success during Moreto's boyhood, and a gradual decline had set in. The clergy began to preach against plays as they were then given, and in 1644 the Royal Council instituted radical reforms by reducing the number of dramatic companies, modifying stage costumes, and establishing a strict censorship. It was furthermore ordered that henceforth no comedies were to be played but those of an historical nature, or those dealing with the lives of the saints. The playhouses were taxed heavily, and Moreto devoted himself to this kind of drama. Like many famous writers of his time, Moreto received Holy orders toward the end of his life, though it is not known exactly when he did so. He entered the household of the Cardinal Archbishop of Toledo, Don Baltasar de Mendoza, and in 1659 joined the Brotherhood of St. Peter.
went to Bologna to lecture on anatomy, and there published a series of notes called "Adversaria Anatomica" (1706). These gained him such a reputation that he was called to the University of Padua, and later became second professor of anatomy at Bologna. He was particularly the throat, and the hyoid of Morgagni in this region; Morgagni s name. After a few years he succeeded to the first professorship of anatomy, the most important post in the medical school, for anatomy was to medicine at that time what pathology is now. Here Morgagni wrote his great book, "De sedibus et causis morborum per anatomen inexactis" (1761; The Seats and Causes of Diseases) (Venice, 1771, trans. French, English, and German) which laid the foundation of modern pathology. Benjamin Ward Richardson said (Disciples of Æsculapius): "To this day no medical scholar can help being delighted and instructed by this wonderful book. Morgagni's studies in aneurisms and in certain phases of pulmonary disease were especially valuable. He thought tuberculous contagious and refused to make autopsies on tuberculous subjects. As a consequence of his teaching laws were introduced at the end of the seventeenth century in Rome and Naples, declaring tuberculous contagious and requiring upon the death of the patients that their rooms be disinfected and their clothing burned. Veneseculation was abolished. Morgagni, in his books of this time, but Morgagni himself was unable to credit its power for good and would not allow it to be performed on himself. He studied the pulse, and especially palpitation of the heart apart from organic cardiac affection, thus anticipating most of our modern teaching. With regard to cancer, Morgagni insisted that it was the custom to try many remedies, but the knife was the only remedy that gave fruitful results.

Morgagni was most happy in his private life. He lived with such simplicity that he was blamed for parsimony, but his secret charities, revealed after his death, disprove this charge. Of his fifteen children there were three sons, one of whom died in childhood, another became a Jesuit and did some striking scientific work after the suppression of the Society, while the third followed his father's profession but died young. All of Morgagni's daughters who grew to womanhood, eight in number, became nuns. The estimation in which he was generally held can be judged from the fact that, when invading armies laid siege to Bologna, the inhabitants grumbled that no harm was to come to Morgagni. He was one of the most profoundly learned men of his time not only in science, but in the literature of science. The Royal Society of England elected him a fellow in 1724, the Academy of Sciences of Paris made him a member in 1731, the Imperial Academy of St. Petersburg in 1735, and the Academy of Berlin in 1754. He was in correspondence with most of the great scientists of his time, among them such men as Ruysech, Boerhaave, Sir Richard Meade, Haller, and Meckel. Cooke, his English biographer, declares "that the learned and great who came into his neighbourhood did not depart without a visit to Morgagni." The patriots of Venice counted him a disinterested friend. King Emanuel III of Sardinia often turned to him for advice. The five popes of the second half of his life consulted him on educational and medical matters. Benedict XIV (De Beatificazione) mentions him in special terms of commendation. Clement XII lodged him at the papal palace on his visits to Rome. He was the most hospitable man of his time and even more beloved than respected.

Journal, 1 (1894), 725; Richardson, Disciples of Æsculapius (London, 1891); Walsh, Makers of Modern Medicine (Fordham University Press, New York, 1907); Nichola, Morgagni, Father of Modern Pathology in Montreal Medical Journal (1893).

JAMES J. WALSH.

Morgan, Edward, Venerable, Welsh priest, martyr, b. at Bettisfield, Hamner, Flintshire, executed at Tyburn, London, 26 April, 1642. His father's Christian name was William. Of his mother we know nothing except that one of her kindred was Lieutenant of the Tower of London. From the fact that the martyr was known at St. Omer as John Singleton, Mr. Gillow thinks that she was one of the Singletones of Stening Hall, near Blackpool, in Lancashire. Of his reported education at Douai, no evidence appears; but he certainly was a scholar at St. Omer, and at the English colleges at Rome, Valladolid, and Madrid. For a brief period in 1609 he was a Jesuit novice, having been one of the numerous converts of Father John Bennett, S.J. Ordained priest at Salamanca, he was sent on the English Mission in 1621. He seems to have laboured in his fatherland, and in April, 1629, was in prison in Flintshire, for refusing the oath of allegiance. Later about 1632 he was condemned in the Star Chamber to have his ears nailed to the pillory for having accused certain judges of treason. Immediately afterwards he was committed to the Fleet Prison in London, where he remained until a few days before his death. He was condemned at the Old Bailey for being a priest under the provisions of 27 Eliz., c. 2 on St. George's Day, 23 April, 1642. At the same time was condemned John Francis Quahab, a Scots Minim, who subsequently died in Newgate Prison. The last scene of the martyrdom is fully given (apparently by an eye witness) in Father Pollen's work cited below.

John B. Waine Wright.

Morganatic Marriage. See Marriage.

Morgenson, Raffaello, an Italian engraver, b. at Portici, 19 June, 1758 (1757?); d. at Florence, 8 April, 1833. His father, Filippo, came of a family of German engravers, his mother was the daughter of Lianii, court painter to Charles III. Raffaello's first teachers were his father and his uncle Jean, and before he was twelve he had achieved a good plate. When only twenty he produced seven noteworthy plates illustrating the carnival of 1778, and later went to study in Rome, under Volpato, whose daughter he married. Impressed with Sanzio's pictures in the Vatican, Morgan engraved his "Poetry" and "Theology". In 1787 he finished one of his principal works, Guido's "Aurora" from the fresco in the garden-house of the Rospiollos Palace, his art and his time being far better suited to this style than to translating the work of greater masters. When he visited Naples in 1790, the court offered him a salary of six hundred ducats, which he declined, but later accepted (1793) the invitation of Ferdinand of Tuscany to live in Florence. Here he received only four hundred scudi, but he was free to found a school of engraving, to engrave what he chose, and own all the prints from his plates. His next
important plate, Raphael's "Transfiguration", was begun in 1798, but so many were his commissions that it was not finished until 1812. While some of the etchings lack in tone and aerial perspective, this engraving exhibits brilliant technique and immense dexterity. The first edition brought him one hundred and forty thousand francs. The dedication of this plate to Napoleon I resulted in a summons to Paris, where he was urged to establish a school of engraving; but the French proceeded to destroy those who would be detrimental to their own artists and the plan was never carried out. Morgheh engraved a portrait of Napoleon, poor in resemblance and weak in execution.

The most celebrated work of the Volpato School and Morgheh's chef-d'oeuvre was his engraving from da Vinci's "Supper" which he began in 1794 and finished in 1800. It was immediately successful despite the fact that it is flat and the figures resemble Sanzio's more than da Vinci's. This flatness, however, is not a serious fault, since the original is practically in one plane. Morgheh's greatest artistic success is the equestrian portrait of Francois de Moncade (Van Dyck), wherein he shows more of sentiment, temperament, and vigor than in any of his two hundred and fifty-four engravings. His plates are pleasing, quiet, harmonious, typifying the graver's art at the beginning of the nineteenth century, and mark the revival of classical line engraving in Italy. Great paintings were to him more themes for technical skill than masses to be followed; hence his reproductions of the Masters are all much alike. His prolific burin "flew over the plate" to witness his mastery of hatch, dot, and flick. Morgheh began many of his plates by etching the salient lines and was probably the first engraver to dry-point the flesh-tints of his portraits. He etched some very spirited and delicate compositions and produced many vignettes. He was made professor in the Florence Academy of Art, engraver to the Grand Duke of Tuscany and associate of the Institut de France (1803). Louis XVIII gave him the Order of St. Michel, and made him a member of the Legion d'Honneur. When he died Italy resounded with sonnets to "the imperishable glory of the illustrious engraver of the Last Supper". Among his works should be noted the "Miracle of Bolsena" (Raphael Sanzio), "Charity" (Correggio), and "Shepherds in Arcady" (Poussin).

LEIGH HUNT.

MORIGI, CARAVAGGIO. MICHELANGELO, Milanese painter, b. at Caravaggio in 1569; d. at Porto d'Ercole in 1609. His family name was Morigi, but he assumed that of his birthplace, and was known by that almost exclusively. He was the son of a mason, and as a boy worked at preparing the plaster for the fresco painters of Milan, acquiring from them a great desire to become an artist. He received no instruction as a youth, but trained himself by copying natural objects, doing the work with such rigid accuracy that in later life he was seldom able to rid himself of a habit of slavish and almost mechanical imitation. After five years of strenuous work he found his way to Venice, where he carefully studied the works of Giorgione, and received instruction from an unknown painter. Thence he went to Rome, and on account of his poverty engaged himself to Cesare d'Arpino, who employed him to execute the floral and ornamental parts of his pictures. He soon, however, acquired a reputation for his own work, and his accurate imitations of natural objects were attractive. The artist's hot temper, however, led him into trouble, and in a fit of anger he killed one of his friends and had to leave Rome in haste. For a while he was at Naples, and then in Malta, where twice he painted the portrait of the Grand Master of the Knights of Malta, but he quarrelled with one of the Order, who threw him into prison, and it was with difficulty that he escaped, fled to Syracuse and returned to Naples. There he obtained a pardon for the manslaughter of his companion, set out again for Rome, was taken prisoner on the way by some Spaniards who mistook him for another person, and when set at liberty found that he had lost his boat and all that it contained. At Porto d'Ercole he fell ill and died of a violent fever.

His paintings are to be found at Rome, Berlin, Dresden, Paris, St. Petersburg, Malta, Copenhagen, Munich, and in the National Gallery, London. His colouring is vigorous, extraordinary, and daring; in design he is often careless, in drawing frequently inaccurate, but his flesh tints are exceedingly good, and his skill in lighting, although inaccurate and full of tricks, is very effective. His pictures are distinguished by startling contrasts in light and shade, and by extraordinary effects of light on half-length figures, giving the desired appearance of high relief, the general effect of the remainder of the picture being over sombre.
His chief works are: "Histoire de la délivrance de l'Eglise chrétienne par l'empereur Constantin" (Paris, 1630); "Excerpta ecclesiasticae in utrumque Samaritanorum Pentateuchum" (Paris, 1631), in which he maintained that the Samaritan text and the Septuagint should be preferred to the Hebrew text, a position he upheld again in the following work: "Excerpta from the Bible of the Samaritans in the ancient script and the Latin text" (Paris, 1633, 1636, 1686); "Commentarius historico de disciplina in administratione sacramenti Pentenitentiae XIII primus seculi" (Paris, 1651); "Commentarius de sacris Ecclesiae ordinationibus" (Paris, 1655; Antwerp, 1655; Rome, 1751). The two preceding works are very important for the history of the Old Testament. Morm on published: "Bibliotheca graeca et Latina testamenti secundum Septuaginta" (Paris, 1628); and in Lejay's "Polyglotte", vol. V (1645), "Pentateuchos hebraeo-samaritanus" and "Pentateuchos samaritanus". He left several manuscript works.

MORMONES, or the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS.—This religious body had its origin during the early part of the nineteenth century. Smith, the founder of the sect, was the son of a Vermont farmer, and was born in Sharon township, Windsor County, in that state, on 23 December, 1805. In the spring of 1820, while living with his parents at Manchester, Ontario (now Wayne) County, New York, he became deeply concerned upon the subject of his salvation, a condition produced by a religious excitement which agitated a few of his relatives to the Presbyterian sect. He sought Divine guidance, and claimed to have received in answer to prayer a visitation from two glorious beings, who told him not to connect himself with any of these Churches, but to return to the coming of the Church of Christ, which was about to be re-established. According to his own statement, there appeared to him on the night of 21 September, 1823, a heavenly messenger, who gave his name as Moroni, and revealed the existence of an ancient record containing the fullness of the Gospel of Christ as taught by Jesus Christ. This book or record, containing the history of the Nephites, a branch of the House of Israel which inhabited the American continent ages prior to its discovery by Columbus. Moroni in mortal life had been a Nephite prophet, the son of another prophet named Mormon, who was the compiler of the record buried in a hill anciently called Cumorah, situated about two miles from the mormon town that was converted. Joseph Smith states that he received the record from the Angel Moroni in September, 1827. It was, he alleges, engraved upon metallic plates having the appearance of gold and each a little thinner than ordinary tin, the whole forming a book about eight inches long, six inches wide, and six inches thick, bound together by nails. The characters engraved upon the plates were in a language styled the Reformed Egyptian, and with the book were interpreters—Urím and Thummim—by means of which these characters were to be translated into English. The result was the "Book of Mormon", published at Palmyra, New York, in March, 1830; in the preface eleven witnesses, exclusive of Mr. Smith, swore to the authenticity of the plates from which it was taken. On renouncing Mormonism subsequently, Cowdery, Whitmer, and Harris, the three principal witnesses, declared this testimony false.
The "Book of Mormon" purports to be an abridged account of God's dealings with the two great races of prehistoric Americane—the Jaredites, who were led from the Tower of Babel at the time of the confusion of tongues, and the Nephites, who came from Jerusalem just prior to the Babylonian captivity (600 B.C.). According to this book, America is the "Land of Zion", where the New Jerusalem will be built by a gathering of scattered Israel before the second coming of the Messiah. The labours of such men as Columbus, the Pilgrim Fathers, and the patriots of the Revolution, are pointed out as preparatory to that consummation. The work of Joseph Smith is also prophetically indicated, he being represented as a lineal descendant of the Joseph of old, commissioned to begin the gathering of Israel foretold by Isaiah (xi, 10-18) and other ancient prophets. In another part of his narrative Joseph Smith affirms that, while translating the "Book of Mormon", he and his scribe, Oliver Cowdery, were visited by an angel, who declared himself to be John the Baptist and ordained them to the Aaronic priesthood; and that subsequently they were ordained to the priesthood of Melchisedech by the Apostles Peter, James, and John. According to Smith and Cowdery, the Aaronic priesthood gave them authority to preach faith and repentance, to baptize by immersion for the remission of sins, and to administer the sacrament of the Lord's Supper; the priesthood of Melchisedech empowered them to lay on hands and bestow the gift of prophecy. It is now published in its final form, consisting of five books, the first of which is called "Joseph Smith's Testimony", and the second, "The Book of Mormon", published several months before. Up to that time Rigdon had never seen the book, which he was accused of helping Smith to write. The Mormons are equally emphatic in their denial of the identity of the "Book of Mormon" with Spaulding's "Manuscript Found", now published in the New York Observer. In connexion James H. Fairchild, president of that institution, who, in a communication to the "New York Observer" (5 February, 1885), states that Mrs. L. L. Rice and he, after comparing the "Book of Mormon" and the Spaulding romance, "could detect no resemblance between the two, in general or detail", and that the companions, after baptizing about one hundred persons in Ohio, went to western Missouri, and, thence crossing over at Independence into what is now the State of Kansas, laboured for a time among the Indians there. Meanwhile the Mormons of the East, to escape the opposition awakened by their extraordinary claims, and to be nearer their proposed ultimate destination, moved their headquarters to Kirtland, Ohio, from which place, in the summer of 1831, departed its first colony into Missouri, Jackson County in that state having been designated as the site of the New Jerusalem. Both at Kirtland and at Independence efforts were made to establish "The United Order", a community of men, of pure character, designed to make the church members equal in things spiritual and temporal. The prophet taught that such a system had sanctified the City of Enoch, whose people were called "Zion, because they were of one heart and one mind, and dwelt in righteousness", with "no poor among them". He also declared that the American Indians were destined to restore the "Book of Mormon", if they had endeavored to establish such an order at Jerusalem (Acts, iv, 32-37), and that, according to the "Book of Mormon", it had prevailed among the Nephites for two centuries after Christ. In the latter part of 1833 trouble arose between the Mormons and the Missourians, based largely, say Mormon writers, upon a feeling of apprehension concerning the aims and motives of the new settlers. Coming from the north and the east, they were suspected of being abolitionists, which was sufficient of itself to make them unpopular in Missouri. It was also charged that they intended to unite with the Indians and drive the older settlers from the land. The Mormons denied their innocence, but their denial did not avail. Armed mobs came upon them, and the whole colony—twelve hundred men, women, and children—were driven from Jackson County, and forbidden on pain of death to return.
In Ohio the Mormons prospered, though even there they had their vicissitudes. At Kirtland a foreign mission was opened in the summer of 1837, when Heber C. Kimball and Orson Hyde, two of the "twelve apostles of the Church", were sent with other missionaries for that purpose. While this work of proselytizing was in progress, dissatisfaction was rife at Kirtland, and the ill-feeling grew and intensified until the "prophet" was compelled to flee for his life. It is of importance to bear in mind that the opposition to the Mormons in the localities where they settled is, from the contradictory and divergent states of mind of the people of the States and the neighbors not of their belief, difficult of explanation.

It is safe to assume that there was provocation on both sides. The main body of the Mormons, following their leader to Missouri, settled in and around Far West, Caldwell County, which now became the chief gathering-place. The sect had been organized by six men, and a year later it was said to number about two thousand souls. In Missouri it increased to twelve thousand. A brief season of peace was followed by a series of calamities, occasioned by religious and political differences. The trouble began in August, 1838, and during the strife considerable blood was shed and much property destroyed, the final act in the drama being the mid-winter expulsion of the entire Mormon community from the state.

In Illinois, where they were kindly received, they built around the small village of Commerce, in Hancock County, the city of Nauvoo, gathering in that vicinity to the number of twenty thousand. Another temple was erected, several towns founded, and the new country was divided. Up to this time there had been no Mormon recruiting from abroad, all the converts to the new sect coming from various states in the Union and from Canada. In 1840-1 Brigham Young and other emissaries visited Great Britain, preaching in all the principal cities and towns. Here they baptized a number of people, published a new edition of the "Book of Mormon", founded a periodical called the "Millennial Star", and established a permanent emigration agency. The first Mormon emigrants from a foreign land—a small company of British converts—reached Nauvoo, by way of New York, in the summer of 1840. Subsequently the immigration came via New England. The people of Illinois granted a liberal charter to Nauvoo, and, as a protection against mob violence and further drivings and spoliations, the Mormons were permitted to organize the "Nauvoo Legion", an all but independent military body, though part of the state militia, commanded by Joseph Smith as lieutenant-general. However, a municipal court was instituted, having jurisdiction in civil cases, as well as in legal proceedings of a persecuting or vexatious character. Similar causes to those which had resulted in the exodus of the Mormons from Missouri in 1841, brought about their expulsion from Illinois, prior to which a tragic event robbed them of their prophet, Joseph Smith, and their patriarch, Hyrum Smith, who were killed by a mob in Carthage jail on 27 June, 1844. The immediate cause of the murder of the two brothers was the destruction of the press of the Nauvoo "Expositor", a paper established by seceders from Mormonism to give voice to the widespread indignation caused by the promulgation of Smith's revelation of 12 September, establishing polygamy, which had been practised personally by the prophet for many years. Another avowed purpose of this paper was to secure the repel of the Nauvoo Charter, which the Mormons looked upon as the bulwark of their liberties. The "Expositor" issued but once, when it was condemned as a public nuisance by order of the city council, its printing-office being destroyed and its editor, Foster, expelled. This summary act united anti-Mormon sentiment, and, on Smith's preparing to force by the warrant procured by Foster for his arrest, the militia were called out and armed mobs began to threaten Nauvoo. At Carthage was a large body of militia, mustered under Governor Thomas Ford to compel the surrender of Nauvoo. Smith submitted and returned to Carthage, and on 27 June he and his brother Hyrum, with others, were placed in jail. Fearful of a bloody collision, the governor disbanded most of his force, and with the remainder marched to Nauvoo, where the Mormons laid down their arms. During the governor's absence, a portion of the disbanded militia returned to Carthage and assaulted the jail. After the jail was breached, the prisoners were imprisoned, shooting Joseph and Hyrum Smith, and all but fatally wounding John Taylor; Willard Richards, their fellow-prisoner, escaped unhurt.

In the exodus that ensued, Brigham Young led the people westward. Passing over the frozen Mississippi (February, 1846), the main body made their way across the prairies of Iowa, reaching the Missouri River about the middle of June. A Mormon colony, sailing from New York, rounded Cape Horn, and landed at Yerba Buena (San Francisco) in July, 1848. Prior to that time only a few thousand Americans had settled on the Pacific Coast, mostly in Oregon, where in 1840 there was then claimed by the Mexican and the United States. So far as known, no American had then made a permanent home in what was called "The Great Basin". The desert region, now known as Salt Lake Valley, was then a part of the Mexican province of California, but was inhabited by Indians and a few wandering trappers and hunters. The Mormons entered Missouri in April, 1847, arrived in Salt Lake Valley on 24 July. This company, numbering 143 men, 3 women, and 2 children, was led by Brigham Young. Most of the exiles from Nauvoo remained in temporary shelters on the frontier, where they entered into winter quarters in what is now Nebraska. Well armed and disciplined, they accomplished the journey of over a thousand miles to Salt Lake Valley without a fatality. A few days after their arrival they laid out Salt Lake City. The people left the Missouri migrated in the autumn of 1848, and after them came yearly to the Rocky Mountains, generally by the old wagon road to the Great Salt Lake. Mormon emigrants from the states, from Europe, and from other lands to which missionaries continued to be sent. Most of the converts were drawn from the middle and working classes, but some professional people were among them.

While awaiting the time for the establishment of a civic government, the Mormons were under ecclesiastical rule. Secular officers were appointed, however, to preserve the peace, administer justice, and carry on public improvements. These officers were often selected at church meetings, and civil and religious functions were frequently united in the same person. But this state of affairs did not continue long. As soon as a civic government was organized, many of the forms of civil procedure already in use in American commonwealths were introduced, and remained in force till statehood was secured for Utah. In March, 1849, thirteen months after the signing of the treaty by which Mexico ceded this region to the United States, the settlers in Salt Lake Valley founded the provisional G.OVERNMENT. On 9 December, 1849, a bill was introduced by the American Congress upon their petition for admission into the Union. Deseret is a word taken from the "Book of Mormon", and signifies honey-bee. Brigham Young was elected governor, and a legislature, with a full set of executive officers, was also chosen. Congress denied the petition for
statehood, and organized the Territory of Utah, naming it after a local tribe of Indians. Brigham Young was appointed governor by President Millard Fillmore (September, 1850) and four years later was reappointed by President Franklin Pierce. The period between 1850 and 1858, during which the Mormons defied the authority of the Federal Government, is one of the least creditable chapters of their history.

One reason given for the persistent hostility to the Mormons was the dislike caused by the acrimonious controversy over polygamy or plural marriage. Joseph Smith, the founder of Mormonism, claimed to have received a revelation and a command ordering him to re-introduce plural marriage and restore the polygamous condition tolerated among the pre-Judean tribes. Polygamy now became a principle of the creed of the Latter-Day Saints, and, though not enforced by the laws of the Mormon hierarchy, was practised by the elders and practised by the chiefs of the cult and by many of the people. The violation by the Mormons of the monogamous law of Christianity and of the United States was brought to the attention of Congress, which prohibited under penalty of fine and imprisonment the perpetuation of the anti-Christian practice, refusing, however, to make the prohibition retroactive. The Mormons appealed to the Supreme Court, which sustained the action of Congress, and declared the existing laws of the anti-polygamy statutes invalid. The Latter-Day Saints, strangely enough, submitted to the decrees of Congress, unwittingly admitting by their submission that the revelation of their founder and prophet, Joseph Smith, could not have come from God. If the command to restore polygamy to the modern world was from on high, then the latter-day Saints, in violation of the decision of the Supreme Court, the Mormon hierarchy reversed the apostolic proclamation and acknowledged it was better "to obey man than to obey God".

So long as Utah remained a territory there was much bitterness between her Mormon and non-Mormon citizens, the latter termed "Gentiles". The Mormons submitted, however, and their president, Wilford Woodruff, issued a "Manifesto", which, being accepted by the Latter-Day Saints in General Conference, withdrew the sanction of the Church from the further solemnization of any marriages forbidden by the law of the land. One of the results of this action was the admission of Utah into the Union of States on 41st November 1896.

Instances of the violation of the anti-polygamy laws subsequent to the date of the "Manifesto" having been brought to light, the present head of the Church, President Joseph F. Smith, in April, 1904, made the following statement to the General Conference assembled at Salt Lake City, and it was endorsed by resolution and adopted by unanimous vote:

"OFFICIAL STATEMENT.

"Inasmuch as there are numerous reports in circulation, that plural marriages have been entered into, contrary to the official declaration of President Woodruff, of September 24th, 1890, commonly called the Manifesto, which was issued by President Woodruff and adopted by the Church at its General Conference October 6th, 1890, which forbade any marriages violative of the law of the land; I, Joseph F. Smith, President of the Church of Jesus Christ of Latter-day Saints, hereby affirm and declare that no such marriages have been solemnized, or knowledge of the Church of Jesus Christ of Latter-day Saints; and "I hereby announce that all such marriages are prohibited, and if any officer or member of the Church shall assume to solemnize or enter into any such marriage, he will be deemed in transgression against the Church, and will be liable to be dealt with according to the rules and regulations thereof, and excommunicated therefrom.

Joseph F. Smith,
President of the Church of Jesus Christ of Latter-day Saints."

In an "Address to the World", adopted at the General Conference of April, 1907, President Smith and his counsellors, John R. Winder and Anthon H. Lund, in behalf of the Church, reaffirmed its attitude of obedience to the laws of Congress. The practice of plural marriage is indeed fast becoming a thing of the past.

Mormonism announces as one of its principal aims the preparation of a people for the coming of the Lord; a people who will build the New Jerusalem, and there await His coming. The United Order, the means of preparation, is at present in abeyance, but the preliminary work of gathering Israel goes on, not to Zion proper (Jackson County, Illinois), but to the Saint of Zion, now numbering sixty-one, most of them in Utah; the others are in Idaho, Arizona, Wyoming, Colorado, Oregon, Canada, and Mexico. A stake is a division of the Mormon Church, organized in such a way as to constitute almost a "church" in itself; in each stake are subdivisions called wards, also fully organized. The apostles, or "Prophets", as they are called, are usually that of a county, though the extent of territory differs according to population or other conditions. Each stake is presided over by three high-priests, who, with twelve high councilors, constitute a tribunal for the adjudication of differences among church members within their jurisdiction. Each ward has a bishopric of three; a presiding bishop, and two counselors. The ward is usually that of a town, village, or hamlet, being in a county, but taken to the high council. The extreme penalty inflicted by the church courts is excommunication. In each stake are quorums of high-priests, seventies, and elders, officers and callings in the Melchisededc priesthood; and in each ward, quorums of priests, teachers, and deacons, who officiate in the Aaronic priesthood.

Presiding over the entire Church is a supreme council of three high-priests, called the First Presidency, otherwise known as the president and his counsellors. Next to these are the twelve apostles, equal in authority to the First Presidency and the bishops serving under their direction. Whenever the First Presidency is dissolved, which occurs at the death of the president, the apostles take the government and reorganize the supreme council—always, however, with the consent of the Church, whose members are called to vote for or against this or any other proposition submitted to them. The manner of voting is with the uplifted right hand, women voting as well as men. Besides the general conferences held semi-annually and the usual Sabbath meetings, there are stake and ward conferences, in which the consent of the people is obtained before any important action is taken. The special function of the apostles is to preach the Gospel, or have it preached, to all nations, and to set in order whenever necessary, the affairs of the entire Mormon Church. Among the general authorities there is also a presiding patriarch, who, with his subordinates in the various stakes, gives blessings to the people and comforts them with sacred ministrations. The first council of the Seventy, seven in number, assist the bishopric and preside over branches consisting of seventies. Upon a presiding bishopric of three devolves the duty of receiving and disbursing the revenues of the Church, and otherwise managing its business, under the general direction of the first presidency.

The Mormon Church is supported by the tithes and

The New York Public Library
offerings of its members, most of whom reside in the
Stakes of Zion, though a good number remain in the
seven missions scattered in various countries of the
globe. About two thousand missionaries are kept in
the field; while they consider themselves under the
Divine injunction to "preach the Gospel to every creature", they have special instructions to baptize no
married woman without the consent of her husband,
and no child under age without the consent of its par-
ents. Their services are used for the building of temples
and other places of worship, the work of the ministry,
the furtherance of education, the support of the sick
and indigent, and for charitable and philanthropic pur-
poses in general. Nearly every male member of the
Church holds some office in the priesthood, but only
those who devote their entire time to its service re-
cieve it. The Church school system comprises the Brigham Young
University at Provo, the Brigham Young College at
Logan, and the Latter-Day Saints University at Salt
Lake City. There are also nearly a score of stake
academies. There are four Mormon temples in Utah,
the principal one being at Salt Lake City. It was
begun in 1854 and completed in 1893. The cost of con-
structing it is said, about $4,000,000. In these temple
ordina-
cences are administered both for the living and the
dead. It is held that vicarious work of this character,
such as baptisms, endowments etc., will be effectual in
saving souls, once mortal, who believe and repent in
the spirit state. The Mormons claim a total member-
ship of 584,000. An annual conference of the Church was
held in Salt Lake City on the April 18, 1910. The
church report for 1909, published May 1, 1910, states
there were 256,647 Mor-
mons within the Federal Union.

W. R. HARRIS.

MOROCCO. Prefecture Apostolic of.—The coun-
try known as Morocco (from Marrakesh, the name of
one of its chief cities) forms the northwest corner of
the Continent of Africa, being separated from French
Algeria by an imaginary line, about 217 miles in
length, running from Nemours to Teniers as Suesi. It is
the Gattulia or Mauretania Tingitana (from Tingis = Tan-
gier) of the ancient Romans. The natives call it
Gharb (West), or Magreb el Aksa (Extreme West).
The total area is a little more than 308,000 square
miles; the population, about 10,000,000. Excepting
Abyssinia, it is now the only independent native state
in Africa which can put a frontier between itself and
Europeans to penetrate. Though Morocco is often
spoken of as an empire, the authority of the sovereign
is a mere fiction throughout the greater part of its ter-
ritory, which is, on this account, divided, more or less
precisely, into the Bled el Maksen, or "country subject
to taxes", and the Bled el Siba, or "unsubdued coun-
try". Physically, the surface is broken into two
parallel mountain-chains: the most important of
these, the Great Atlas, forms a plateau, forty to fifty
miles in width, from which rise peaks, often snow-
clad, 10,000 to 13,000 feet high. Facing the Medi-
terranean are the mountains of the Rif, below which
stretches the well-watered and fertile range of the
Tell. On the other side, to the extreme south lies
the Arid Sahara, broken only by a few oases. Between
the Mediterranean littoral and the Sahara, the Atlas
Plateau, broken by ravines and valleys, rivers and
smaller streams, contains many tracts of marvel-
ously fertile country. The sea-coast of Morocco is
for the most part dangerous, and offers few advan-
tages. On the other side, to the extreme south, lies
the Orange Valley, Tangier, Mogador, and Agadir. El Arâds, or Lar-
ache, and Tangier are the maritime outlets for Fes, which is one of the three capitals of Morocco, the other
two being Marrakesh and Meine. Owing to the
high mountains, the sea breezes and the openness of
the country, the climate is healthy, temperate, and
invigorating. The climate is, on the whole, a little
south than in the north; the heat, in certain districts,
becoming at times insufferable. The soil is adapted
to every kind of crop, and sometimes yields three har-
vests in a year. Cattle-breeding is also carried on.
There is very little industry, and commerce is chiefly
in the hands of Europeans and Jews.

The history of Morocco has been inhabited by the Berbers (whence the name
Barbar) These people were known to the Romans as Numida, but to the Phcenicians as Madorim (Westerners); from the Phcenician name the Greeks,
and, after them, Latin writers, made Murni, whence the English Moors. These Moors, Numidians, or Vandals, were subdued by the Stagirens, Vandals, the Byzantines, the Visigoths, and, lastly, the Arabs, whose political and religious conquest began in 681. The Moors and Berbers together crossed over into Spain, and thence into France, where their pro-
gress was stopped at Poitiers (732) by Charles Martel.
Not until 1492, when Granada fell, were the Christians of the Iberian Peninsula definitively rid of the Moors
in Europe, and able to carry the war against them into Africa. Portugal no longer retains any of
her possessions in Morocco; but Spain still holds eight
ports, known as the prescidos, one on the Atlantic
Coast and seven on the Mediterranean. Besides the
Berbers, the population of Morocco includes Jews, and all the cities are under the control of the Mellah (melh), Sudanese negroes, mostly slaves, and Euro-
peans engaged in commerce on the coast, chiefly at
Tangier and Mogador. For two hundred years Mo-
rocco has been ruled by a dynasty of Arab shers, who claim descent from Ali, the uncle and son-
in-law of Mohammed. The shers, or sultan, is theo-
retically supreme in both temporal and spiritual
affairs, his wishes being carried out by viziers, or
secretaries, in the various branches of the adminis-
tration (magneh). As a matter of fact, the normal
condition of the country is revolution and anarchy.
In 1906 the International Conference of Algeciras
provided for a combined French and Spanish system
of police, but the Moroccan question is still (1910)
unsettled.

With the exception of the European residents, the
segregated Jews mentioned above, and a body of
aborigines (Berbers), living in the Atlas, who have
proved refractory to Islam, the whole population of
Morocco is Mohammedan, and is inaccessible to
the French and Catholic missions; this country was organized in 1234, when Father An-
geo, a Franciscan friar and papal legate, was ap-
pointed Bishop of Morocco. The succession lasted
until 1566, when the see was suppressed, and its jur-
tinction given to the Archbishop of Seville. In 1831 the Prefecture Apostolic of Morocco was founded; its first incumbent, Blessed Giovanni da Prato, O.F.M., was martyred at Marrakesh in that year, and his feast is kept by the Franciscan Order on 29 May. Other missionaries continued to exercise their ministry through trials and persecutions of every kind until 1859, when the prefecture was reorganized on its present basis. It is administered by the Franciscans of the College of Compostella. There are in Morocco about 10,000 Catholics, nearly all Europeans; 24 missionaries, 8 stations (in the leading ports), 16 schools, with 1200 children, and a hospital at Tangier, where the prefect Apostolic resides.

Statemen's Year Book (London, 1910); Missiones Catholicae (Rome, 1907), 372.

A. LE ROY.

Morone, Giovanni, Cardinal, Bishop of Modena, b. at Milan 25 Jan., 1509; d. at Rome, 1 Dec., 1580. He belonged to a distinguished Milanese family, raised to the nobility in the twelfth century. His father held the dignity of chancellor of Milan, and it was probably to bind the father to his interest that Clement VII in 1529 named his son Giovanni, then only twenty years of age, to the See of Modena. By this appointment great offence was given to Cardinal Ippolito d'Este, who on the pretext that the See of Modena had previously been promised to himself, invoked the aid of Paul IV, who overthrew the pope's possession of the see, appropriating all its revenues. The dispute was not settled until 1532, when Morone at last bought off the opposition of d'Este by agreeing to pay him an annual pension of 400 ducats. Even as early as 1529, the young bishop-elect, whose talents had already attracted attention at the University of Bologna, began the preparation for his episcopal mission to France. Under Paul III Morone's gifts as a negotiator placed him at once in the very front rank of ecclesiastical politicians. He was sent as papal envoy to Duke Sforza of Milan in 1535, and in the following year accepted, not altogether without reluctance, the important mission of nuncio at the court of Ferdinand, King of the Romans. His instructions were to press on the affair of the council in Hungary and Bohemia. He was to obtain from Ferdinand a safe-conduct for those who intended to take part in it, and to insist upon Mantua or some other Italian city as the place of meeting.

Except for the exception of an interval from September, 1538 to July, 1539, and another in 1541, Morone remained at his post in Germany for nearly six years, and he was present at the diets of Hagenau in 1540 and Ratisbon in 1541, while at the important meeting of Spiers in 1542 he appeared as the pope's special representative, and played a leading part, though even his great tact and resources were but little in the complicated tangle of German religious affairs. During these early years in Germany, and indeed throughout his life, Morone remained a conspicuous member of a little group of moderate and intellectual men who saw that in the deadly struggle with Lutheranism, the faults were not all on one side. When Cardinal Sadoletto in 1537 was addressing a courteously worded appeal to Melanchthon he denounced by many of his own side as little better than a traitor and a heretic, Morone wrote the cardinal a letter of sympathy. "There are in these parts," he said, "many reputed defenders of the Catholic faith who think that our religion consists in nothing but having a reverend interminius" which makes it, and they are so wedded to this point of view that, without ever looking into the matter itself, they take in bad part not only all negotiations with the Lutherans, but every single word spoken about them which is not abusive." Morone further advises Sadoletto to treat his critics with silent contempt, and states his own conviction that to show charity to heretics was a better way than to overwhelm them with abusive language, adding: "if only this course had been adopted from the first, there would probably be less difficulty than there is in bringing about the union of the Church" (see the letter in "Archiv f. Reformationsgeschichte", 1904, 1, 80-311).

On 22 May, 1542, Paul III published his Bull, which had been drafted by Sadoletto, summoning the council to meet at Trent, on 1 Nov., of the same year. On 2 June, Morone was created a cardinal, and on 16 Oct., he and Cardinals Parvisio and Pole were named legates to preside over the assembly as the pope's representatives. But this first attempt to launch the long-desired council was a failure, and Morone went to Trent and waited until the handful of representatives, who never met in public session, gradually dispersed, the council being formally prorogued 6 July, 1543. Before the assembly was again convened Morone was named legate (practically papal governor) at Bologna, and he had nothing to do with the sessions of the council which took place at Trent between December, 1545 and June, 1546, though after the council had been ostensibly transferred to Bologna, he was named by Julius III as one of the commissioners to arrange for its return to Trent. In 1555 he was sent to the Diet of Augsburg, but the death of Julius necessitated his recall and under the Pontificate of Pius IV Morone was able to turn his liberal views had the misfortune to awaken the pope's suspicions when the latter presided over the Roman Inquisition, was arrested by the pontiff's order, confined in the Castle of Saint Angelo (31 May, 1557), and made the object of a formal prosecution for heresy, in which his views on justification, the election of saints, the veneration of relics and other matters were inculcated and submitted to rigid inquiry.

The cardinal strenuously repudiated these charges, but he was kept in confinement until the death of Paul IV. In 1560 his successor Pius IV authorized a revision of the process against Morone, and as a result the imprisonment of the cardinal and the whole procedure against him were declared to be entirely without justification; the judgment also recorded in the most formal terms that not the least suspicion rested upon his orthodoxy. A few years later when the cardinal legates Gonzaga and Seripandi died at Trent, Morone and Cardinal Navagero were appointed to succeed them, and at the conclusion of the session the concluding sessions of the council with conciliar decree were duly carried into execution. Under the succeeding pontiffs his credit was in no way impaired. He was sent on a mission to Genoa in 1575, and in 1576 was appointed to the See of Ratisbon as papal legate. As Cardinal Protector of England, Morone in 1578-1579 had much to do with the administration of the English College (see Catholic Record Society, "Miscellanea", II, London, 1906); and when he died he had been for some time Cardinal Bishop of Ostia. Few ecclesiastics in that century were so successful in retaining the esteem of men of all parties and all creeds as this large-minded and eminently able and honest churchman. His reports as nuncio, recently published of late years in the German series of "Nuntiaturberichten", throw a flood of light upon the religious conditions of the empire, and it is interesting to note that the "Claustrum interminius" which he denounced to good account by Raynaldi proves to be no other than Morone himself (see Ehres in "Römische Quartalschrift", 1903). It may be mentioned in conclusion that Morone had much to do with the founding of the important Collegium Germanicum in Rome,
**MORONI** 576

**MORONI, GIOVANNI BATTISTA,** painter, b. at Bondo, near Albino, in the territory of Bergamo, between 1520 and 1525; d. at Bergamo, in 1578. He was the pupil of Alessandro Bonvicino, called Moretto da Brescia (about 1498-1555), and one of the best imitators of his style. Moroni’s work was done chiefly at Bergamo and in the vicinity. He was remarkable as a portrait painter, and as such was not to be understood. He has the same sincerity and nobility, but more originality. His portraits are amongst the most vigorous of the Renaissance; of these we may mention a “Scholar with an open book before him” and a “Man in Black” at the Uffizi (Florence); at the Gallery of Bergamo a “Young Man” and a “Woman”, of excellent workmanship; at the Brera (Milan) the portrait of Antonio Navagero, podestà of Bergamo; at the Ambrosiana Library in Milan, a “Man of sickly appearance”; at the National Gallery (London), portrait of a member of the Fenaroli family, “The Tailor”, and Canon Lodovico Terzi of Bergamo; at the Louvre “An Old man seated holding a book”, “A Gentleman and his two children”; in the Museum of Madrid a “Venetian Captain”; in the Dresden Gallery, portrait of a man; in the Gallery of Vienna, two portraits of men. In religious pictures, on the other hand, Moroni is inferior to Moretto, especially in the way he gives the appearance of grace, but his colouring, of a clear greyish tone, is not disagreeable. “It is only in his last works that the grey tone becomes monotonous and soft, together with a rather hard reddish colouring” (J. Burckhardt and Bode). Worthy of note are the “Coronation of the Virgin”, painted for the church of the Trinity at Bergamo; the “Last Judgment” for the parish church of Gorlago, near Bergamo; “Virgin and Saints” and “St. Jerome” at the Carrara Academy of Bergamo; the “Assumption of the Virgin”, the “Virgin surrounded by Saints” (two pictures) at the Brera of Milan; “The Jesuit” (portrait of Eufrosino Lauro) at Stafford House, the London residence of the Duke of Sutherland.

**BLANC, Histoire des peintres de toutes les écoles (Paris, 1865-77).**

**MORRIS, JOHN,** canon, afterwards Jesuit, F.S.A., b. in India, 4 July, 1826; d. at Wimbledon, 22 Oct., 1893, son of John Carnac Morris, F.R.S. He was educated in the diocesan, including Wiseman, and of other illustrious men. In the index of the “Dizionario” (a.v., Moroni), he indicates the various passages of the work in which he speaks of himself, and which thus constitute a kind of autobiography.

**HERBERT THURSTON**

---

_The Tailor_  
**GIOVANNI BATTISTA MORONI, NATIONAL GALLERY, LONDON**
partly in India, partly at Harrow, partly in reading
or Cambridge with Dean Alford, the New Testament
scholar. Under him a great change passed over Mor-
ris's ideas. Giving up the thought of taking the law
as his profession, he became enthusiastic for ecclesi-
aucal antiquities, a deep interest in the Tracta-
tian movement, and resolved to become an Anglican
dergyman. Going up to Trinity College, Cambridge,
in October, 1845, he became the friend, and then the
pupil of F. A. Paley, grandson of the well-known di-
vine, and already one of the leading Greek scholars of
the university. The conversion of Newman, fol-
lowing the recruitions of so many others, deeply im-
pressed him, and he was invited by Bishop Wyling,
20 May, 1846. A storm followed, beginning in the
"Times", which made itself felt even in Parlia-
ment. Paley had to leave Cambridge (which led to
us subsequently joining the Church), while Morris
was practically cast off by his family. He then went
to the English College, Rome, under Dr. Grant (q. v.),
and was there during the revolution of 1848. Soon
after the restoration of the English Hierarchy in 1850,
he was made Canon of Northampton, and then re-
turned as vice-rector to Rome (1853–1856). He now
became postulator for the English Martyrs (q. v.),
whose cause owes perhaps more to him than to any
other living Englishman. Going to England, he took part
in the third Synod of Westminster, became secretary to
Cardinal Wiseman (q. v.), whom he affectionately
nursed on his death-bed, and served under Archbishop
Manning (q. v.), until he became a Jesuit in 1867. He
ought Church History from 1873–1874; he was Rec-
or of St. Ignatius' College, Malta, from 1877–78;
professor of Greek, and directed the translation of the
New Testament into English in 1888. Always remarkable
for his ardent affectionate nature, his untiring energy
and earnest holiness of life, he was also an excellent
scholar, an eloquent speaker, and a high-minded
leader of souls. His death befitted his life; for he ex-
pired in the pulpit, uttering the words, "Rendcr to
God the things that are God's." His principal works
are: "The Life and Martyrdom of St. Thomas Becket"
(London, 1859 and 1885); "The Life of Father John
Jerard" (London, 1881), translated into French,
German, Spanish, and Polish; "Troubles of our Cath-
olic Forefathers" (3 vols., London, 1872–1877); "Let-
er-books of Sir Amias Poulet" (London, 1874); and
more particularly "The Master of the Month", "The
Dublin Review", "Archeologia", and other periodicals.

MORRIS, John B. See LITTLE ROCK, Diocese of.

MORRIS, John Brande, b. at Brentford, Middle-
ex, in 1826; d. at Hammersmith, end of
1, April, 1840; he studied at Balliol College, Oxford,
graduating in 1834 (B.A. honours) and 1837 (M.A.).
He was at once elected Peruian Fellow of Exeter Col-
lege, and lectured on Hebrew. His favourite field of
study was Eastern and patriotic theology. While at
Oxford he wrote an "Essay towards the Conversion of
earned Jews" (1832), and translated "Nature: a Parable"
(1842); and translated "Select Homilies from St. Ephraem"
(1846), likewise St. Chrysostom's "Homilies on the
Romans" (1841) for the "Library of the Fathers".
Having joined the Tractarian Movement, he was re-
ceived into the Church, 16 January, 1846, resigning
his clerical use and was ordained priest at
Oscott in 1851 and in the same year was ap-
pointed professor at Prior Park, near Bath. He soon
seem parish work and for the next nineteen years
ministered in Plymouth, Shortwood (Somersetshire),
and other parts of England. He was for a time chap-
ain to Sir John Acton and Coventry Patmore. In
1870 he became spiritual director of the Scours de
M Miscerode, Hammersmith, which post he occupied
till his death. After his conversion he contributed to the
"Dublin Review", the "Lamp" and other Catho-
lic periodicals; and wrote "Jesus the Son of Mary"
(1851), a treatise on the Incarnation and devotion to
Our Lady; "Taleetha Koomes" (1858), a metrical re-
ligious drama; and "Eucharist on Calvary", an essay
on the first Mass and the Passion.

MORRIS, Martin Ferdinand, lawyer and jurist, b.
3 December, 1834, at Washington, D. C.; d. 12 Sept-
ember, 1909, at Washington, D. C. Descended from
an Irish Catholic family, he was educated at George-
town University; from which he graduated in 1854.
On leaving Georgetown he entered the Jesuit Novi-
icate, at Frederick, Md., to prepare himself for
the priesthood, to which high calling his inclinations
from early youth had impelled him, and for which, by
reason of his studious habit, scholarly tastes, and high
moral standards, he was in every way fitted. His
ambition, however, could not be realized, as the death
of his father left him the sole support of his mother
and sisters. In 1863 he began the law in Baltimore, Maryland, and in 1867 removed to Wash-
ington to enter into partnership with the late Richard
T. Merrick. He continued a member of the firm of
Merrick and Morris until the death of Mr. Merrick
(1885) when he formed a partnership with George E.
Hamilton, and continued actively to practise his pro-
Fation being connected with important cases, both in
the local courts and in the Supreme Court, un-
til appointed by President Cleveland an Associate
Justice of the Court of Appeals of the District of
Columbia upon the establishment of that Court in
1893. Modest, unassuming, almost diffident in man-
ner, he was best adapted to quiet practice, and yet,
when occasion required it, was fearless and a suag-gerator in the trial of cases. A skilled lawyer, standing high
in his profession, judicial labours did not prevent him
from taking an active interest in civic and social con-
ditions, or from broadening the scope of his re-
searches into the fields of science, of literature, and of
art. Actively interested in his Alma Mater, and in the
growth and development of Catholic education, he
was one of the founders of Georgetown Law School
(1871), then under the direction of the late P. F.
Healey, S.J., to-day one of the largest and most suc-
cessfully conducted law schools in this country. In
1877 he received from Georgetown, in recognition of
his nobility of character, and his local and national
achievements as lawyer and judge, the degree of
LL.D. He wrote "Lectures on the History of the De-
velopment of Constitutional and Civil Liberty"
(1898); also numerous monographs and addresses.

MORSE (Lat. morus), also called the MONILE, FY-
BULA, FIRMALE, PECTORALE, originally the rectan-
gular ornamented piece of material attached to the
two front edges of the cope near the breast to pre-
vent the vestment from slipping from the shoulders.
Mores were provided with hooks and eyes, which
were often richly ornamented with embroidery or precious
stones. The name was also applied to metal clasps
used instead of such pieces of woven fabric. As early
as the eleventh century such metal clasps are found
represented in miniatures and mentioned in invent-
ories. These clasps, however, gradually lost their
secular use and were disused, and were sometimes sewn
firmly to the flaps that served to fasten the cope, som-
times only attached to the flaps by hooks, so that, after the vestment had been
worn, the clasps could be removed and cared for sep-
ately. This latter was especially the case when,
as frequently happened at least in the later Middle
Ages, the cope was very heavy or very valuable. As

X.—37
early as the thirteenth century inventories mention clasps which formed distinct ornaments in themselves. Many churches had a large number of such morse. They were generally made of silver covered with gold, and decorated with enamels, niello work, architectural designs, small figures of saints, ornamental work in flowers and vines, and similar designs. Such clasps were frequently the finest products of the goldsmith's art; they were generally either round, square, quatrefoil, or like a rosette in form; yet there were also more elaborate and at times peculiar shapes. A direct proof of the desire for costly clasps for the cope is shown by the old inventories and by the numerous medieval morses preserved (especially in Germany) in churches and museums. According to present Roman usage the morse is reserved to cardinals and bishops ("Cer. episc."). I, c. vii. n; 1; S. R. C., 15 September, 1733.

**Morse, Henry, Venerable, martyr; b. 1595 in Norfolk; d. at Tyburn, 1 February, 1644. He was received into the Church at Douai, 5 June, 1614, after various journeys was ordained at Rome, and left for the mission, 10 June, 1624. He was admitted to the Society at Hendon, that at Newgate where he was arrested and imprisoned for three years in York Castle, where he made his novitiate under his fellow-prisoner Father John Robinson, S.J., and took simple vows. Afterwards he was a missionary to the English regiments in the Low Countries. Returning to England at the end of 1630 he laboured in London, and in 1636 he is reported to have received about ninety Protestant families into the Church. He himself contracted the plague but recovered. Arrested 27 February, 1636, he was imprisoned in Newgate. On 22 April he was brought to the bar charged with being a priest and with having withdrawn the king's subjects from their faith and allegiance. He was found guilty on the first count, not guilty on the second, and sentence was deferred. On 23 April he made his solemn profession of the three vows to Fr. Edward Lusher. He was released on bail for 10,000 florins, 20 June, 1637, at the instance of Queen Henrietta Maria. In order to free his sureties he voluntarily went into exile when the royal proclamation was issuing ordering all priests to leave the country before 7 April, 1641, and became chaplain to Gage's English regiment in the service of Spain. In 1643 he returned to England; arrested after about a year and a half, he was imprisoned at Durham and Newcastle, and sent by sea to London. On 30 January he was again brought to the bar and condemned on his previous conviction. On the day of his execution his hurdle was drawn by four horses, and the French Ambassador attended with all his suite, as also did the Count of Egmont and the Portuguese Ambassador. The martyr was allowed to hang until he was dead. At the quartering the footmen of the French Ambassador and of the Count of Egmont dipped their handkerchiefs in the martyr's blood. Many persons possessed by evil spirits were relieved through the application of his relics.

**John B. Wainwright.**

**Mortification.** One of the methods which Christian asceticism employs in training the soul to virtuous and holy living. The term originated with St. Paul, who traces an instructive analogy between Christ dying to a mortal and rising to an immortal life, and his followers who renounce their past life of sin and rise through grace to a new life of holiness. "If you live after the flesh", says the apostle, "you shall die, but if through the spirit you mortify the deeds of the flesh, you shall live" (Rom. viii, 13; cf. also Col., iii, 5, and Gal., v, 24). From this original use of the term mortification, though under one aspect it is a law of death, under another and more fundamental aspect it is a law of life, and so does not destroy but elevates nature. What it slays is the disease of the soul, and by slaying it this restores and invigorates the soul's true life.

Thus the diseases it sets itself to slay, sin, the one mortal disease of the soul, holds the first place. Sin committed it destroys, by impelling to true penitence and to the use of those means of forgiveness and restoration which our Lord has confided to His Church. Temptations to sin it overcomes by inducing the will to accept hardships, however grave, rather than yield to the temptations. To this extent, mortification is obligatory on all, but those who wish to be more thorough in the service of Christ, carry it further, and strive with its aid to subdue, so far as is possible in this life, that "rebellion" of the flesh against the spirit which is the internal incentive to sin. What is needed to achieve this victory is that the passions of man should be subdued to the control of the spirit, that indulgence in sensual concupiscences, which when freely indulged exercise so pernicious an influence on human conduct, should be trained by judicial repression to subordinate and conform their desires to the rule of reason and faith, as discerned by the mind. But for this training to be effectual it is not sufficient to restrain these desires of the flesh only when their denial is deemed unlawful; they must be disciplined in nature, and must be treated as one treats a twisted wire when endeavouring to straighten it, namely, by twisting it the opposite way. Thus in the various decretals of ascetic observance, earnest Catholics are constantly found denying themselves even in matters which in themselves are confessedly lawful. Of this mortification, viewed as the carrying off bad habits and implanting good ones, has its recognized place in the methods even of those who are engaged in pursuing purely natural ends. What is peculiar to Christian mortification is that it relies for the attainment of its spiritual objects, not merely on this natural efficacy of its methods, but still more on the aids of the graces, for which the discipline of the spirit is the means and the Christian motive which inspires it, it can plead so powerfully with God. And here, as further contributing to increase its spiritual efficacy, another motive for which it is practised comes in. It is practised likewise as an expiation for past sins and shortcomings, for it is the belief of the Catholic Church that, through only the Atonement is efficacious for the expiation of the sins of men, men ought not to make that an excuse for doing nothing themselves, but should rather take it as an incentive to add their own expiations to the extent of their power, and should regard such personal expiations as very pleasing to God. This explains why many of the mortifications recommended by devout persons are of evil propensities, but take the form of painful exercises or privations self-inflicted because they are painful, e.g., fastings, hard beds, abstention from lawful pleasures, etc. Not that these external mortifications are of themselves available, for spiritual writers never tire of insisting that the internal mortification of pride and self-love in their various forms is essential, but that external penances are good only so far as they spring from this internal spirit, and react by promoting it (see ASCETICISM).

**Syden F. Smith.**
Mortmain (Old Fr., morte meyn), dead-hand, or "such a state of possession of land as makes it inalienable" (Wharton, "Law Lexicon", 10th ed., London, 1902, s. v.), is "the possession of land or tenements by any corporation" (Bouvier, "Law Dictionary", Boston, 1897, s. v.). When the union came ad manum mortuam, which was then it came to some corporation" (Lord Bacon, "Reading on the Statute of Uses"), alienation of lands or tenements to a corporation being termed alienation in mortmain (Stephen, "New Commentaries on the Laws of England", 18th ed., London, 1908, i, 296). The alienation was formerly expressed by the now obsolete words amortization and amortissement, the personal so alienating being said to amortize (Murray, "New English Dictionary", Oxford and New York, 1888), a verb used by Chaucer in connexion with good works "amortised by sinne following" (The Personaes Tale). In Old French amortissement was used in connexion with licences termed choses d'amortissement, validating an alienation, amortir being defined etoidre en tout ou en partie les droits de la seigneurie féodale ("La Grande Encyclopédie", Paris, s. d.; "Century Dictionary", New York, s. d., s. v. amortization; cf. the same use of the English word in statute 15 Richard II, c. 5). Corporate ownership, recognized by the Roman Law as one of the sources of law, not codified in the Moslem law (s. v. pergamens quas in ea nemo unquam mortuar (an everlasting body continuing perpetually the same as if in it no one may ever die). A third of the value of property is said to have been sometimes the price of its amortissement (Littre, "Dictionnaire de la langue française", Paris, 1889, s. v.).

The Catholic Church, having been recognized "since the time of the Emperor Constantine" in the countries which adopted the feudal system "as possessing a legal personality and the capacity to take and give, in Roman Law (Pius IX, Roman Catholic Church, 210 United States Supreme Court Reports, 311), feudalism recognized not only the Church, but its religious communities, as spiritual corporations. Such a community has been thought to be appropriately described to be gens aeterna sed perpetuo peramans quasi in ea nemo unquam moritur (an everlasting body continuing perpetually the same as if in it no one may ever die). The communities might consist of men, each of whom was deemed, because of his vows, civilly dead. But to the communities themselves, viri religiosi, "people of religion", gens de main morte, the law attributed a perpetual existence and perpetual ownership of property. Therefore, when dealing with the corporate existence of associations, which were corporations aggregate, and also allowing of such an artificial existence in an official individual, considered not only the king, but each bishop, parson, and vicar as a corporation sole. And such might be a chantry (q. v. priest, to whom land had been given by its owner, subject to a perpetual service a chânter pur y e pur ces heures du jour (see Year Books of the reign of King Edward the First, Years XX-XXI, London, 1866, 265).

Corporate ownership of land, however, by subjects of the realm was repugnant to feudal theory. According to this theory all land of subjects was deemed to have been acquired, immediately or mediately, by grant or fee out of mortmain; in mortmain had been necessary "among the Saxons" (B. 11, c. 18, 269) does not apply. Magna Carta,
nor, in any general sense, by the fact that the allusion in the Constitutions of Clarendon (1164) to mortmain was confined to advowsons (ibid.).

The mortmain statute of Edward I, known as "Statuta de viris religiosis", 7 Edward I, enacted in 1279, and so often referred to by writers on English real property law, recites that religious men have entered into their own fees as well as into the fees of other men, and that those services due "and which at the beginning were provided for the defence of the Realm, and long as withdrawn and the escheats lost to the chief lords" (Duke, "The Law of Charitable Uses", London, 1805, 193).

The statute therefore ordains that "no person, religious or other, nullus religiosus aut alius quisquaque, shall buy or sell lands or tenements or receive them, or appropriate them (under pain of forfeiture) so as to cause the land to come into mortmain, per quod ad manum mortuam terrae et tenementum hume mortuorum demens fuerit quoque modo.

A violation of the statute renders lawful to the king "and other chief lords of the fee immediate", nobis et aliis immediatis capellibus dominis fidei, to enter and hold the land. The chief lord immediate is afforded a six month's grace period, and a further half-year next ensuing, and so every lord immediate may enter into such land, if the next lord be negligent in entering. If all the chief lords who are "of full age, within the four seas and out of prison be negligent or slack", "we", the king, namely, "shall take such lands and tenements into our own hands", copiam in manum nostram.

The term manus mortuis is not applied to the sovereign, yet land so taken "in manum nostram" is not to be retained. Such a retaining would be in mortmain. And the king promises to convey the land to other persons subject to services from which ownership by the "religious men" or others had withdrawn it, services for which the royal tenants in chief per certa servitut notis et alius dei futuros, facing to the lords "their wards and escheats and other services". A statute of 1290 permits any freeman to part with his land, the feoffe to hold of the same lord and by the same services as his feoffor held. But the statute cautiously adds that in no case was the tenant who survived the landor the statute against the statute (see 18 Edward I, c. 1, c. II, c. III).

Where churches stood "the ground itself was hallowed" (see Ponce vs. Roman Catholic Church, 210 United States Supreme Court Reports, 312). And a statute of Richard II (15 Richard II, c. V; 1391) re- cites that "some religious persons, persons, vicars and others have entered in diverse lands and tenements, which be adjoining to their churches and of the same by sufferance and assent of the tenants, have made churchyards and by bulls of the bishop of Rome [sic]—the French and more authoritative text reads: par bulles del apostollis] have dedicated and hallowed the same" and in these make "profits with ease". Thereby all persons possessed of land "to the use of religious people or other spiritual persons", of which these latter take the profits, are required upon pain of forfeiture to procure licence of amortization within a time limited, or to "sell and alien" to some other use.

This statute does not confine its operation to "spiritual persons" and churchyards, but enacts that the statute of 1279 shall "be observed of all lands, tenements, fees, advowsons, and other possessions purchased or to be purchased to the use of guilds and fraternities" and "Mayors, Bailiffs and Commons of Cities, Boroughs and other towns that have a perpetual commonality", all of whom are forbidden to purchase. Licences by the respective or religious persons, transferred into mortmain, notwithstanding the statute, were issued from time to time. The text of a licence of Edward I himself has been preserved, permitting a certain person to give a parcel of land to a certain priory and convent to be held sibi et successoribus suis in perpetuum, but subject to the due and accustomed services to the capellan in the precincts of the Books of the reign of King Edward I, years XXXI- XXXIII, London, 1864, 499). This licence recites that it is given ob affectionem et benevolentiam towards the religious order. Nor do licences in mortmain seem to have ever become in England, as in France, recognized sources of royal revenue.

Legal devices, too, as in the times before the Magna Carta of Henry III, were resorted to for the purpose of escaping the operation of the statute, such as purchases alluded to in the statute of Richard II "to the use" of persons other than those to whom the legal title was transferred. These devices have produced far-reaching and enduring influence on the development of English jurisprudence. Concerning English aggregate ecclesiastical bodies of former times, Sir Edward Coke observes in language which we might imagine to be applied to modern "trusts" and combinations of capital, that those bodies "in this were to be commended, that they ever had of their counsel the best learned men that they could get" (Blackstone, "Codex immediatissimus", 16.)

Before the coming of the Conqueror and his feudal lawyers much land in England had been acquired to be held by the spiritual tenure of frankalmoino, a tenure subjecting the holders to what was termed the triumia necessitas (or threefold obligation) of repairing highways, building castles, and repelling invasions, but other wise to no service. A tenant entered in divers lands of the donor and his heirs, dead or alive (Stephanus, op. cit., I, 139, 140). To such pious foundations already established none of the mortmain legislation applied.

When Henry VIII commenced his ecclesiastical alterations, the general body of the parochial clergy being, in a corporate way, their lands by this tenure (ibid.) "acknowledged", to quote Sir Edward Coke (1 Reports, 24, a), "King Henry VIII to be supreme head of the church of England", and thus continued to hold their lands by the Saxon tenure, by which "the parochial clergy and very many ecclesiastical and deanery foundations", observes Sergeant Step- then, "hold their lands this day" (op. cit., I, 140).

Land held in mortmain by some of the religious corporations were confiscated by the statute 27 Henry VIII, c. 28 (1535), and thus, according to Lord Bacon (Reading on the Statute of Uses), "the possessions that had been in mortmain began to stir and be 'stirring' extended in divers lands and tenements, which be adjoining to their churches and of the same by sufferance and assent of the tenants, have made churchyards and by bulls of the bishop of Rome [sic]—" the French and more authoritative text reads: par bulles del apostollis] have dedicated and hallowed the same" and in these make "profits with ease". Thereby all persons possessed of land "to the use of religious people or other spiritual persons", of which these latter take the profits, are required upon pain of forfeiture to procure licence of amortization within a time limited, or to "sell and alien" to some other use.

This statute does not confine its operation to "spiritual persons" and churchyards, but enacts that the statute of 1279 shall "be observed of all lands, tenements, fees, advowsons, and other possessions purchased or to be purchased to the use of guilds and fraternities" and "Mayors, Bailiffs and Commons of Cities, Boroughs and other towns that have a perpetual commonality", all of whom are forbidden to purchase. Licences by the respective or religious persons, transferred into mortmain, notwithstanding the statute, were issued from time to time. The text of a licence of Edward I himself has been preserved, permitting a certain person to give a parcel of land to a certain priory and convent to be held sibi et successoribus suis in perpetuum, but subject to the due and accustomed services to the capellan in the precincts of the Books of the reign of King Edward I, years XXXI- XXXIII, London, 1864, 499). This licence recites that it is given ob affectionem et benevolentiam towards the religious order. Nor do licences in mortmain seem to have ever become in England, as in France, recognized sources of royal revenue.

Legal devices, too, as in the times before the Magna Carta of Henry III, were resorted to for the purpose of escaping the operation of the statute, such as purchases alluded to in the statute of Richard II "to the use" of persons other than those to whom the legal title was transferred. These devices have produced far-reaching and enduring influence on the development of English jurisprudence. Concerning English aggregate ecclesiastical bodies of former times, Sir Edward Coke observes in language which we might imagine to be applied to modern "trusts" and combinations of capital, that those bodies "in this were to be commended, that they ever had of their counsel the best learned men that they could get" (Blackstone, "Codex immediatissimus", 16.)

Before the coming of the Conqueror and his feudal lawyers much land in England had been acquired to be held by the spiritual tenure of frankalmoino, a tenure subjecting the holders to what was termed the triumia necessitas (or threefold obligation) of repairing highways, building castles, and repelling invasions, but other wise to no service. Thereby all persons possessed of land "to the use of religious people or other spiritual persons", of which these latter take the profits, are required upon pain of forfeiture to procure licence of amortization within a time limited, or to "sell and alien" to some other use.
petitions appears in a statute of Henry VIII, which preceded the confiscating statutes. This is the statute 23 Henry VIII, c. X (1531), directed against holding of lands, "to the use of parish churches, chapels, churchwardens, guilds, fraternities, commonalties, companies, or brotherhoods", purposes previously accused of being "abuses and scandals and abuses of the same kind."

Excluding from its operation cities and towns corporate, having, by their ancient customs, power to "devise into mortmain," the statute alluded to declares trusts or assurances to the uses just mentioned "erected and made of devotions or by common assent of the people without any corporation", or "to the uses and intents of theclergy or the service of a priest forever", or for sixty or eighty years, to be within the mischiefs of alienation "into mortmain"; and as to future gifts void except for terms not exceeding twenty years (cf. 1 Edward VI, c. XIV).

Sir Edward Coke explains this statute to have been directed against some purposes which were thenceforth to be condemned as superstitious, although formerly approved as charitable, "such superstitious uses", he points out, "as to pray for souls supposed to be in purgatory, and the like". Not long before the date of the statute, Coke observes "by the light of God's word", "diverse superstitions and errors in the Church of England had hac many years been thought to have their origin in the capacity of charity and devotion were discovered". With true charity, he claims, the statute was not intended to interfere. For, he observes, "no time was so barren as to abolish learning and knowledge nor so uncharitable as to prohibit relieving the poor" (op. cit., 24 a). And he allows us to infer such to be the fact, even though the charity might constitute a perpetuity.

Dispositions for charity, which the law would specially commend, a statute of Queen Elizabeth mentions (43 Elizabeth, c. IV, 1601). Dispositions in aid of "superstitions" were not to be deemed charitable, and these the courts were to ascertain and condemn, in the varying light of English Statutes, as evils like to alienations in mortmain.

An authority on the law of charitable uses (Duke, op. cit., 125) states that "religion being variable, according to the pleasure of succeeding princes, that which at one time is held for orthodox may at another be accounted superstitious". And accordingly the English courts even condemned as superstitious the projects and ambitions of Scotchmen to propagate in Scotland the doctrines of the Church of England. For, by statute, presbyteries had been settled in that portion of the United Kingdom [Methodist Church vs. Remington, 1 Watts (Pa.), Reports, p. 224].

The manner of establishing a charity was in the course of time restricted by "the statute of mortmain commonly so called", remarks the Master of the Rolls in Corbyns vs. French, 4 Vesey's Reports, 427, "but"; he adds, "very improperly, for it does not prevent the alienation of land in mortmain, nor was that the object of the Act".

Reciting that gifts of lands in mortmain are restricted by Magna Carta, and other laws as against the public utility, but that "nevertheless this public mischief has of late greatly increased by many large and improvident alienations or dispositions to uses called charitable uses", this statute (9 George II, c. XXXVI, 1736) provides that henceforth such dispositions shall be "null and void", unless executed within three years after the death of the donor, and not less than twelve months before the death of the donor.

The statutes 23 Henry VIII and this statute of George II, in their effect on the dispositions of land, which they prohibit, differ from the old mortmain acts. The statutes referred to render such dispositions void, that is, of no effect whatsoever. But alienations in mortmain properly so termed were not mere nullities, but were effectual to transfer ownership of land to a corporation, by which the land might be retained until its forfeiture.

Enforcement of a forfeiture and the declaring void a charge on, or use of, land are in their nature and result very different.

Sir Matthew Hale states the statute in the case cited from Vesey's Reports that devises for charitable uses are not in themselves alienations in mortmain, the latter word's meaning has yet been claimed to embrace any perpetual holding of land "in a dead or unserviceable hand". And such, it is claimed, "is the characteristic of alienations to charitable uses". Land dedicated to the service of the Church or religion is said to be "practically inalienable", because any disposition of it, which is incompatible with the carrying out or continuity of the benevolent purposes of the conveyance, will be restrained by Courts of Equity (Lewis, "A practical treatise on the Law of Perpetuity", Philadelphia, 1846, 689), in England the Court of Chancery.

For, notwithstanding mortmain statutes, and as if to protect the sovereign from the reproach which, according to Coke, he might otherwise have incurred, the lord chancellors seem, from a period long previous to that of King Henry VIII, to have protected and guarded trusts or uses in favour of charity. The chancellors seem to have administered this duty in the way of the rule of law, the principle of charity, and by force of an assumed, if not expressed, delegation of the royal prerogative and sovereign will.

We cannot here consider the subject of royal prerogative, nor how the modern differs from the ancient theory concerning it. Whether modern legislation against perpetual holdings of land is to be deemed to prohibit dispositions of charity and religion is said to be "practically inalienable", because any disposition of it, which implies perpetual ownership, has been the subject of extensive legal discussion and of discordant judicial decisions.

But according to the existing law of England we learn from Sergeant Stephen (op. cit., III, I74) that "there is now practically no restraint whatsoever on gifts of land by will for charitable purposes. Pure personal estate", he adds, "may, of course, be freely bequeathed for these purposes". All corporations, however, are yet precluded by English law from purchasing land "except by licence in mortmain from the Crown" (ibid., 26).

As to what dispositions of property which otherwise would be deemed secular or to be deemed legally superstitious, the modern law of England is less narrow and rigid than the law was formerly interpreted to be (ibid., 180).

The statutes of mortmain themselves were not extended to the colonies. And respecting the United States Chancellor Kent observes, "We have not in this country re-enacted the Statutes of Mortmain or generally assumed them to be in force; and the only legal check to the acquisition of lands by corporations consists in those special restrictions contained in the acts by which they are incorporated . . . and in the force to be given to the exception of corporations out of the Statute of Wills" (Commentaries on American law, 4th ed., Boston, 1873, II, 203). The commentator states, by way of exception, that the statutes of mortmain are in force in the State of Pennsylvania. The supreme court of that State, in 1832, stated that these statutes had been extended to the State "only so far as they prohibit dedications of property to superstitious uses and grants to corporations, without a solemn and solemnity not less than twelve months before the death of the donor."

The court had in mind, but seemed reluctant to follow, the "Report of the Judges" made in 1808, and which is to be found in 3 Binney's Reports. The "Report" almost follows the statute of Henry VIII, in declaring all conveyances "void made either to an individual or to any number of persons associated, but not incorporated, if the said conveyances are for
uses or purposes of a superstitious nature, and not calculated to promote objects of charity or utility."

Notwithstanding this early declaration, no such doctrine as that of the English courts on the subject of superstitious uses or trusts can well have a place in the jurisprudence of the United States, where "all religious beliefs, doctrines and forms of worship are free." (Holland vs. Acock, 108 New York Court of Appeals Reports, 329).

The people of the States make known their sovereign will by enactments of the State legislatures, to which bodies the prerogatives of sovereignty have been delegated. And, therefore, the validity of dispositions of land in favour of charity is controlled by the legislature of the State where the property is situated and without any implied delegation of prerogative to any judicial officer. And the same remark applies to the general power of corporations to acquire and to hold land in the several States. (See Property, Ecclesiastical, of the Statutes at Large (Cambridge, 1800); Sturrock, Select Charters and other Illustrations of English Constitutional History (6th ed., Oxford, 1884); BURGESS, Commentaries on Colonial and Federal Law, Vol. I (London, 1899), 11, 446, 456; Girard's Executors, 9 Howard, United States Supreme Court Reports, v, 194, 195; Fountain vs. Rasenel, 17 d., v, 384, 385, 389; DILLON, Easement Law, 2 for the Souls of Departed Persons (London, 1890); Holmes vs. Mead, 2 New York Court of Appeals Reports, 321; Auch vs. Stevens, 101 d., 122; THOMPSON, Commentaries on the Law of Private Corporations (Indianapolis, 1909), sections 2600-2601; HALSBURY, The Laws of England (London, 1909), s. v. Corporations.

CHARLES W. SLOANE.

Morton, JOHN, Cardinal, Archbishop of Canterbury, b. in Dorsetshire about 1420; d. at Knowle, Kent, 15 Sept., 1500. He was educated at Oxford (Balliol College) where he graduated B.C.L. Being ordained priest he practised in London as an ecclesiastical lawyer. The patronage of Cardinal Bourchier obtained for him much preferment and he became privy councillor, Chancellor of the Duchy of Cornwall, master in Chancery, subdean of Lincoln (1450), principal of Peckwater Inn, Oxford (1453), and prebendary of Salisbury and Lincoln (1458). During the Civil War he joined the Lancastrians, was attainted by the Yorkists and lost all his offices. During the reign of Edward IV his attainted was reversed on his submission, and he was made Master of the Rolls (16 March, 1472-3), Archdeacon of Winchester and Chester (1474), and was elected Bishop of Ely on 31 Jan., 1476-9. During the reign of Richard III he was imprisoned in the Fleet, afterwards in the Tower, and after the fall of the house of Lancaster when Henry VII became king in 1485. He was much trusted by the king and was all-powerful in the government. He was elected Archbishop of Canterbury, 8 Oct., 1486, and in the following March became Lord Chancellor of England. In 1493 Alexander VI created him Cardinal of St. Anastasia. He was made Chancellor of Oxford in 1495. It is probable that he was the author of the "History of Richard III" usually ascribed to Blessed Thomas More, who as a boy was a page in his household and who subsequently translated it into English.

EDWIN BURTON.

Morton, ROBERT, VENERABLE, English priest and martyr, b. at Bawtry, Yorks, about 1548; executed in Lincoln's Inn Fields, London, Wednesday, 28 August, 1588 (the catalogue probably compiled by Fr. John Gerard), and printed by Fr. Pollard, 8, 1, in Cath. Rec. Soc. Publ. 1, V, 288-293, gives the date of the deaths of the Venerables Morton, Moor, Holford, Claxton, and Felton as 30 August, but this seems to be an error). He was the son of Robert Morton, and nephew of Dr. Nicholas Morton, was ordained deacon at Rome and priest at Reims in 1587, and condemned at Newgate 26 August merely for being a priest contrary to 27 Eliz., c. 2. At the same time and place suffered Hugh Moor, a layman, aged 25, of Grantham, Lincolnshire, and Gray's Inn, London, for having been reconciled to the Church by Fr. Thomas Stephenson, S.J. On the same day suffered (1) at Mile End, William Dean, a priest (q. v.); and Henry Wely, a layman, born at York; and (2) near the Theatre, William Gunter, a priest, born at Raglan, Monmouthshire, educated at Reims; (3) at Clerkenwell, Thomas Holford, a priest, born at Aiston, in Acton, Cheshire, educated at Reims, who was hanged only; and (4) between Brentford and Hounslow, Middlesex, James Claxton or Clarkson, a priest, born in Yorkshire and educated at Reims; and Thomas Felton, born at Bermondsey Abbey in 1567, son of B. John Felton, tonsured 1583 and about to be professed a Minim, who had suffered terrible tortures in prison. According to one account there also suffered on the same day at Holywell, London, one Richard Williams, a Welsh priest of Queen Mary's reign. Another, however, puts his death in 1592 or 1593. Fr. Pollen thinks his name occurs in this year in mistake for that of John Harrison, alias Symonds, a letter carrier, who was it seems executed at Tyburn, 5 October, 1588.

Mosaic Legislation, the body of juridical, moral, and ceremonial institutions, laws, and decisions comprised in the last four books of the Pentateuch, and ascribed by Christian and Hebrew tradition to Moses. Name. —As early as the Davidic era, the name τήρω (to watch) was particularly used to designate this collection, which, however, might not then have embraced all the enactments it now contains. After the captivity, the term became synonymous with the Pentateuch, and this usage has obtained ever since. Side by side with these meanings are others less comprehensive and more ancient. If, as is generally admitted, the word (to watch) be the root, there would be a peculiar historic interest attaching to the word, because of the implication that the first τήρω, or decisions, of whatever kind, were arrived at chiefly, or at least in important cases, by the casting of lots. The deity would then be regarded as the author of them. More developed than these are the first to avail himself of this word (to watch) as were处置 in the case of private litigation at Raphidim (Ex., xviii, 13 sq.) by Moses, relying for his direction on the analogies of precedent or custom. On the lips of the priests and prophets τήρω was sometimes referred to the moral and religious prescriptions of the Law alone, or again, to the ceremonial part of that, whether in theory or practice; in short, to any direction, written or oral, given in Jehovah's name by one enjoying an official capacity.

Quite naturally, when the period of formal codification set in, each new code was styled a τήρω, and these separate τήρω were the stepping-stones to, and afterwards the constituent parts of the "Tora" or Code, which has always been identified with the name of Moses. —More restricted in their signification are the following Biblical terms: δικαίωμα, πρότυπον, precepts; χειρ, mīqwaḥ, commandment; πράξη, ed(wo)th, testimonies, i.e. expressions of God's will to man, chiefly in moral and religious matters; ἀρχή, mishpāḥa, a judgment, usually not excluding positively and negatively, implied in the fact of a literally eventuating, implying an obligatory force arising from the nature of moral verdict, which is enhanced, not obscured, by the notion of theocratic economy; and ψηλή, ἀρχή, hūqeq (root, to engrave), statute, or thing engraved (e. g. on stone), thereby becoming fixed, so to speak, as an ordinance. From this varied terminology, however indiscriminate
the use made of it may have been as time went on, it
seems right to conclude that its originators had more
than a faint perception of the distinction between the
civilly independent and the church. If, in given cases, equal penalties were meted
out for delinquencies from the moral and ceremonial
laws, it was because the nearness of the latter to the
national God by reason of their universal character,
gave deep sense of resistance against them a peculiar hein-
ousness, not found in other crimes. The legislator
understood well that when monotheistic ceremonies
declined, polytheistic institutions would supplant
them, and then there would be no morality left to

"Origin."—The Torah, as a whole, was neither mir-
accurously communicated from heaven, nor was it
labouriously thought out and put together by Moses
independently of his race and influences. It is just
sometimes hazardously asserted that it antedated Moses
by a thousand years or more, since much that
is in the Torah is found also in the Code of Ham-
marâbi. Indeed, certain decrees in the Babylonian
code are more excellent than their Mosaic parallels;
in more important ones, however, the Torah takes
preference over the other versions (Ex., perhaps,
thebrew society that dictated Israel's first laws, by
leading to the establishment of family and tribal customs. Yet it would be wrong to maintain with too much
assurance that the same or a similar collection of laws
would have resulted spontaneously and independently
from the same natural conditions in any other peo-
l. This was the case in Mesoopotamia, where a predomi-
customs and practices as Israel adopted, among other
races with which the founders of Israel's laws had
come in contact, and it seems an irresistible conclu-
sion that, since Israel borrowed its language from its
neighbours and could be so easily won over to heathen
rites as to defy the vigilance of judges, priests, and
powers that be, not only in Israel, but in the social and
politic life of the neighbouring peoples.

The possibilities then are, the following: the migra-
tion of Abraham from Chaldea would be responsible
for the nucleus of Mosaic Legislation, which is pecu-
larily Semitic. The sojourn of the patriarchs among
the Canaanites, coupled with their relations with the
heathen, implies the attainment in his time of a slight
strenghening of the original stock during Jacob's retreat to Mesopotamia. The Egyptian op-
pression would certainly elicit some well-defined views
regarding justice and right. The education of Moses
by Pharaoh's daughter would prepare a master-mind
for tribal unification, while his experiences among the
Semitic Midianites would give him a knowledge of
certain institutions peculiar to desert life, with a due
respect for established usages, such as must be taken
into account even to-day in dealing with the Sinaitic
tribes. Any real influence from the Code of Ham-
murâbi would have to operate, as it likely did,
through one or other of these channels. The direct
result of the evidences would be a transformation of
principles through the knowledge of concrete exam-
les illustrating them, the primitive mind not being
capable of grasping or forming bare abstractions.
What these traditinary laws were, and how they were
reduced to practice in domestic and political life, is
set forth at large in the article on Biblical Anti-
quities.

No matter how much, or how little can be ex-
plained in this way, room must always be left for
direct, external, and Divine intervention, that is for
an historic revelation made by God of Himself to the
chosen people, in such a way as to guarantee them
a special Providence and direction in working out
their high destiny. Since the divine institution was
to be secured to future generations only through the Law by
which they would be governed, the Sinaitic manifesta-
tions must be explained as placing a Divine seal upon
existing laws, which they did not abrogate, and upon
any normal development of them in the future which
would be calculated to carry out the design of
Jehovah more efficiently. There, then, the sense has
been something settled and fixed on the spot, as a
norm to which subsequent prophets might appeal in
their judgments of future laws and contingencies.
It would be strange if some such remote preparation
had not been made for a stupendous event like the
Incarnation. Hence it is that the more reflecting
among Christian critics, whatever be their views as to
the literary composition of the Pentateuch, are at one
in asserting that the Pentateuchal laws, even those of
a ceremonial character, are traceable back to Moses as
their founder; hence, too, the peculiar psychological
phenomenon all through Israel's history, that observ-
ance of the law or any of its parts was superior to
(non-compulsory) sacrifice, because it was a homage of
obedience paid directly to the nation's God.

"Codification."—In its present form the Mosaic Leg-
islation appears without logical order, and interspersed
with historical reminiscences. It is largely
casuistic, as might be expected from the manner of
its early transmission. (1) The Decalogue, with its
setting forth, as it does, the sovereignty and spiritual-
uty of God, together with the sacredness of His and
the neighbour's rights. (2) The "Book of the Cove-
nant", so called in Ex. xxiv, 7, embraces Ex. xxi-
xxiii, 19 (or xx, 20-xxiii, 33), and contains judicial,
moral, and religious regulations for people living in
primitive agricultural conditions. (3) The Deuteron-
omic code amplifies the preceding and adapts it to new
conditions. (4) The "Law of Holiness" as contained
in Lev., xvii-xxvi has reference chiefly to holiness
of a moral and ceremonial nature. It forms a small
part of what is now critically styled the (5) "Priest's
Code". This latter derives from the later enactments,
and comprises nearly all Leviticus and Numbers, with a few chapters of Exodus.

In the light of criticism there is no need of abandoning the tra-
ditional belief that Moses compiled, under the influ-
ence of inspiration, any or all of these codes as they
stood originally, or in that stage of development they
had reached at the time of the composition of the
Pentateuch. We must be content to assert that
these various divisions were by later writers revised,
enlarged, and brought to date, while the changes in
Israel's life, from a nomadic to a sedentary state,
from a dispersed to a king-ruled nation, explain full
well the appearance, as time went on, of a limited
amount of new legislation, that would accord with the
soul and spirit of the old. Common Law, as it were,
grew and developed, but the statutory enactments
remained inviolable.

"Contents."—Abstracting from the distinction of
codes, the Torah exhibits a dogmatic system that is
rigorously monotheistic. A moral standard issues
from this, having for its chief end the constitu-
tion of civil, social, and religious observance, with
service performed directly and immediately for
Jehovah, and at His bidding. A ceremonial char-
terized by its picturesque and wealth of detail
follows, the evident purpose of which was to keep
the people constantly in mind of the Covenant into
which they or their ancestors had entered, and to as-
 sure them of God's fidelity to His promises, if only
they would do their part. The civil and criminal
enactments are sufficiently well explained elsewhere.

The article on Biblical Antiquities dispenses us
from treating in detail any of these topics save the
ceremonial. Even that is largely dealt with under
the paragraph on Sacred Antiquity. (loc. cit.) and the
articles Atonement, Dedication, Jubilee, Pasch,
Pentecost, Purim, Sabbath, Tabernacles, Trumpets.
MOASICS was the centre of public worship. This was a portable tent measuring fifty-two by seventeen feet, and divided by a veil into two unequal parts, the Holy Place and the smaller Holy of Holies. The latter contained only the Ark of the Covenant, and might be entered by no one but Moses and the high priests. Any priest might enter the Holy Place. This was furnished with a table for the Loaves of Proposition, a seven-branched golden candlestick, and the Altar of Incense. Outside, in the surrounding court, were the Altar of Holocauses and the brazen laver for priestly ablutions. The tribe of Levi furnished the ministers, the descendants of Aaron being priests, and the remaining majority, Levites properly so-called. The priests were consecrated, wore special vestments, offered sacrifice, attended to the Holy Place, and acted as judges and teachers. For the peculiar distinction of high priesthood, see the article AARON (section II). The Levites were the priests’ assistants. They carried the Tabernacle whenever it was moved. Bloody and unbloody sacrifices were prescribed. The former class embraced the Holocaust, in which the entire victim was consumed on the altar by fire and the Expiatory and Pacific sacrifices, when only the fat was burned on the altar. The vest was either burned elsewhere or given to the priest as in the first instance, but divided between priest and offerer as in the second, and followed by a sacrificial meal. The Unbloody sacrifices, in the first instance, were tithes, meat and drink offerings, and incense. Both oblations and sacrifices were seasoned with salt.

The most striking feature of the ceremonial legislation is the distinction between legal cleanness and uncleanness, with its concomitant provision for numerous external purifications. The faithful Hebrew had always to abstain from blood. He might not use for food any quadrupeds that did not divide the hoof and chew the cud, nor any fish that did not have both fins and scales, nor birds of prey, nor water fowl, nor reptiles, nor insects, the locust excepted. To do so would make him unclean. The use of marriage, childbirth, and leprosy also induced uncleanness. It is true that this legislation is largely hygienic, but the Hebrews did not consider it as forming a part of the Law, they were regarded as direct from Jehovah, precautions against them were designed primarily to avert them by appeasing the sender. Those, therefore, who failed to take such precautions, either necessarily or otherwise, were displeasing to Jehovah, and legal defilement was the result. How effectually the Torah prepared the Hebrews for their contention with the Chaldeans, the Scythians, the Pharaohs, the Medeans, Babylonians, Persians, and Greeks, is well shown by the many details of the Law, and the fact that in all these cases the edges of the安东，and even in the streets of Rome. There is little doubt but that mosaic in jewellery is of considerable antiquity.

History.—In passing these various species in historical review, the earliest to be mentioned is that in Exodus, a pavement (xxiv, 10), “a pavement of sapphire stones”, and the pavement of Ahasuerus at Susa “paved with porphyry and white marble, and embellished with painting of wonderful variety”, which here, probably, means varied inlaid colour, since surface painting would be out of place on a pavement. And we may well believe that the Persians knew of tessellated work when we consider the enameled bricks, which may be called a large kind
of "tessellatum," now in the Louvre from this same palace at Susa. This is the only record earlier than the existing examples in the Roman pavements of the Republic and Empire such as remain in the Reggia, the Temple of Castor, the House of Livia, Pompeii, etc. Suetonius says that Caesar was accustomed to carry in his campaign both tessellated and sectile pavements. It appears according to Pliny (XXXVI, i) that in the theatres and basilicas, as well as in certain palaces of noble Romans, the pavements were in tessellated work or in marble sectile, and the walls decorated with marble or glass subjects and patterns. Here is the passage from Holland's quaint translation: "Scaurus when he was Edile, caused a wonderful piece of worke to be made, and exceeding all that had ever been knowne wrought by man's hand . . . and a theatre it was: the stage had three lofty one above another . . . the base or nethermost part of the stage was all of marble, the middle of glass, an excessive superfuitie never heard of before or after." Signor Luigi Visconti informed Herr von Minutoli (Ueber die Anfertigung und die neu-Anwendung der färbigen Gläser bei den Alten," p. 15, Berlin, 1836) that the walls of a chamber in a palace between the gate of St. Sebastian and that of St. Paul at Rome were found covered up to five or six feet from the pavement with beautiful marbles and above that with coloured glass plaques and patterns. Some existing examples appear to have been of curious structure, the pieces of coloured glass were laid upon a flat surface and a sheet of glass laid over these and melted to a sufficient heat to join them together.

Concerning the method called "tessellatum" we have existing remains to prove the perfection to which the art was carried by the Romans in the pavements, and in remains of wall glass mosaic at Pompeii. One of the finest examples of pavements is the representation of the "Battle of Issus" from the Casa del Fauno at Pompeii [Fig. 1], now in the Naples Museum. Many of the pictures and mosaics in  

![Fig. 3—Specimen of Roman pavement Found at Silchester, England](image)

Pompeii are supposed to be traditional copies of celebrated antique paintings; and it is suggested that this "Battle" is a traditional copy of a celebrated picture by Helen, a daughter of Timon, of the Egyptian Hellenic school. From Pompeii came further the very beautiful columns in glass mosaic now in the Naples Museum [Fig. 2]. Pompeii, as we know, was destroyed on 24 August, A.D. 79, so

that these works precede the Christian Era. Their perfection argues a development of considerable antiquity, the genesis of which is at present unknown. Of the subsidiary work in mosaic of Roman pavements, mention has already been made—it consists of patterns in black and white, plain floors with ornamental borders; groups of still life, festoons of flowers, and other designs. These exist in sufficient quantity to show how general was their use. That mosaic pavements continued in use during the Christian era is proved by the numerous examples that have been discovered, apparently of Roman origin, at places as distant from one another as Carthage, Dalmatia, Germany, France, and England. In England a great variety have been found in London and in all parts of the country dominated by the Romans; an example from Silchester is given in Figure 3. The British Museum contains many mosaic fragments; amongst these is the fine specimen of work from Carthage [Fig. 4]. Some of the earlier Carthaginian pavements have glass tesserae; the later ones are of marble or ceramic cubes.

Entirely different in method from the work formed of cubes was the opus sectile, where, as already described, the ornament or picture was formed of pieces of marble, stone, or glass of different colours cut to a required shape, in the same way that a painted glass window is now made. The manufacture of the necessary opaque glass was carried to a very great perfection by the Romans, as is testified by the multitude of fragments that have been found in rubbish or in the Tiber. Opus sectile as a wall decoration seems to have been very subject to decay, the pieces of glass becoming detached by their own weight, on the wall becoming damp, decayed, or shaken. There are some very fine specimens in the Naples Museum; others have been found in the church of St. Andrea in Catabarbara, Rome, which is supposed to have been originally the basilica of the house of the Bassi on the Esquiline, dating from about A.D. 317. From this house comes the spirited work [Fig. 5] of the "Tiger and Heifer," now preserved in the church of St. Antonio Abbate. The background and stripes of the tiger are in green porphyry, the rest of the tiger's skin of giallo antico; the heifer is pale fawn marble, and its eyes of mother-of-pearl. Other decorations of the same house showed that the walls had opus sectile in glass ornament and figures, much in the manner described in the quota-
tion from Pliny, already given. Sectile work in glass is found in some examples of Christian art, but marble is more common, although the tessellated work in the same buildings may be of glass. This use of marble probably arose from the decay in the manufacture of the special glass and the difficulty of cutting and grinding it exactly to the forms. Sectile in marbles is found in Santa Sabina, Rome (425–450); in the baptistery of the cathedral, Ravenna; in San Vitale, Ravenna (sixth century); at Parenzo (sixth century); in Sancta Sophia at Constantinople and at Thessalonica, (sixth century); its use thus has been continuous ever since, and was an especial feature of the Renaissance.

The portion of this theme of the greatest importance in the present article is that concerned with the glass mosaic of Christian churches. The initial steps by which it gradually emerged from Pagan art are in a measure lost, for it rises suddenly like a phoenix from the ashes, complete, entire in its manipulation, whilst the character of the subjects and designs represented bespeak the traditions adopted by the artists of the catacombs. Mosaic, as far as one can at present ascertain, became a vehicle of Christian art in the fourth century. The earliest examples, such as those of the first basilica of St. Peter and St. Paul, are all destroyed. In the church of St. Costanza on the Via Nomentana there still remains interesting work. We have also preserved in the Chigi Library some mosaic from the catacomb of Cyriacus. A mosaic of St. Agnes in the catacomb of St. Callistus was, however, so decayed, that the existing picture was painted over it in the sixth century. Other mosaics have been found on sarcophagi in the catacombs. The most interesting early work is, however, that now existing in the apse of the church of St. Pudentiana (398) [Fig. 7]. It has been much restored in parts and was added to in 1588, but the design remains. Of the same period is the mosaic in the baptistery at Naples. It is uncertain whether the apse of St. Rufinus's is of the fourth or fifth century, but it is interesting as early work.

A great impetus to the art occurred when Constantine, in establishing himself on the throne of Byzantium, commenced to give his capital an imperial appearance as far as art was concerned. He gathered together artists from all celebrated centres, and gave to them special legal and civil or civic favours. Of the works carried out by them, the mosaics of the church of St. George at Thessalonica in many cases yet occupy their original position. The naves of St. Mary Major's in Rome still retains some of the fine mosaics placed there in the fifth century (430–440) and the churches of St. Sabina (422–433), of St. Paul without the walls, and of St. John Lateran were also so decorated in the same era (440–462). St. Paul's, destroyed by fire in 1823, has since been restored and little of the original remains. What remains of the original mosaics of St. John Lateran's dates from 432–440. The mosaics of the church of Saints Cosmas and Damian (526–530) were restored in 1600. At Ravenna the mosaic work in the various churches is the finest of its period. That in the baptistery of the cathedral dedicated to St. John the Baptist [Fig. 6] is an especially good example, the church being originally built at the end of the fourth century but burnt in 434. The mosaics of the Mausoleum of Galla Placidia (450) are also of excellent design and workmanship. Unfortunately some of these have been restored with painted stucco. Those in the chapel of the archiepiscopal palace and of the church of St. John the Evangelist are too of this period. The mosaics of the cathedrals of Novara and Astoia and the chapel of St. Satira in St. Ambrose's, Milan, are also of the fifth century. In France at Nantes, Clermont, and Toulouse historians record the placing of mosaics which no longer remain.

The greatest works of the sixth century, and perhaps the greatest of all mosaic works in extent, were those carried out under the Emperor Justinian in Sancta Sophia, Constantinople. In 533, a fire destroyed what then existed, but in a quarter of a century the restoration was commenced under Anthemos and Isidore, who, it is recorded, employed ten thousand builders, craftsmen, and artists. The colour is subdued, and the design and execution good of its period. Justinian also caused the church of Sancta Sophia at Thessalonica to be built, and decorated with mosaic. Further great works were executed at Ravenna at the same period. After the conquest by Belisarius in 533, it became the residence of the exarch in 552, and S. Apollinare Nuovo [Fig. 8], S. Maria in Cosmedin (553–566), S. Vitale (524–534) [Fig. 9], and S. Apollinare-in-Classe (534–549) were built and filled with mosaics. It will be observed that these churches were commenced under the Ostrogoths and finished under Justinian, who probably had the mosaics executed by local artists.
worn by Persians in the Pompeian mosaic of the “Battle of Issus” [Fig. 1] which is not unlike that in the painting of the three children in the furnace, in the catacomb of St. Priscilla, and that in the mosaic of the prophet Daniel at Daphne. The mosaic from S. Michele-in-affresco at Ravenna was taken to Berlin in 1847 and Pope Adrian I permitted Charlemagne to take what he chose of mar-ble and mosaic for his cathedral at Aachen. In Rome the church of Saints Cosmas and Damian (526–530) has mosaics of an entirely different character from those at Ravenna and of a ruder type. In Rome also the basilica of St. Lawrence was decorated with mosaic (577–590). These have been restored. In Paris the church of the Apo- sles which occupied the site where the Panthéon now is was decorated with mosaic about this period.

Notwithstanding the deplorable condition of Rome in the seventh century, the arts were still kept alive and Pope Honorius decorated the tribune of the apse of St. Agnes’s with a beautifully designed mo-saic which still remains. The composition represents in the centre St. Agnes, above her the Divine Hand blessing, and the popes Honorius and Sym-machus on each side. The work appears to be Greek. In the chapel of St. Venantius at St. John Lateran’s, and at St. Stephen’s on the Caelian Hill some mosaics were placed by John IV; other works were done at St. Peter’s and at St. Costanza’s on the Via Nomentana. Mo-saics were also executed for Autun and Auxerre in France. An immense and very fine pavement of this period was found by M. Renan in ancient Tyre, but it is not Christian. Of the eighth century very little mosaic re-mains. Considerable work was done in the old basilica of St. Peter, of which only a fragment, which came from one of the chapels, exists. It is in St. Maria in Cosmedin, and represents the “Adoration of the Wise Men” and strikingly resembles the design of the same subject in enamel on the “Chasse de Huy”. The mosaic was commissioned by John VII in 705–8. In the apse of St. Theodore’s, restored in the last quarter of the eighth century, there is a “majesty”: Christ is seated on an orb, with Sts. Peter, Paul, and Theo-dore. The triclinium of the Lateran Palace was

ornamented with a mosaic of Christ appearing to the Apostles. On the sides were the groups of Christ and St. Sylvester, Constantine, Coporonicus, and St. Peter with Leo III and Charlemagne—all these mosaics, never of high class, were injured by removal and restoration in the eighteenth century. The cathedral of Aachen executed from the orders of Charle-magne at this period was injured by fire in 1650, and utterly destroyed soon afterwards. Certain mo-saics are known to have existed in Picardy, and were eventually destroyed by fire in the twelfth century. Some good fragments of inter-esting mosaic of the early ninth century remain at Germeroydes-Prés, Loiret, France.

In the ninth century, although the decadence in mosaic work was complete, there was, however, an attempt at a slight revival. In Rome mosaics were placed in the churches of Sts. Nereus and Achilleus (795–813), S. Maria (817–824), S. Prassede, S. Cecilia, S. Mark, Sts. Sylvester and Martin (844–847), and portions of St. Peter’s and of S. Maria in Trastevere (885–888). Mosaic was placed in S. Margaretta in Venice (837), in St. Ambrose’s, Milan, and in Sanza Sophia at Constantinople, and some subjects were inserted in the cathedrals of Capua and Padua. Probably the most interesting of the period are those in S. Prassede, where that in the apse appears to be an adaptation of an older design in Santa Cosmas and Damian. In the tenth and eleventh centuries some mosaics were placed in St. Mark’s, Venice, one subject representing Christ with the Blessed Virgin and St. John on each side, and in 1071–1084 the Doge Do-menico Selvo had other mosaics executed, notably in the grand dome, and portions of the pave-ment. It is likely that the smalti were made by the Greeks, who were also probably the designers and executants.

A comparison of the western works of this period with those in the east is very unfavourable to the for-mer. The art had been degenerating in the West, and in certain instances, such as that of Sanza Maria Antiqua, painting on the wall had taken its place. Evidence of this decay, both in design and practice is shown in the fact that when Abbot Desiderius, formerly legate at Constantinople and who became pope as Victor III, wished to decorate the monastery of

FIG. 8—SIXTH-CENTURY MOSAIC
From S. Apollinare Nuovo, Ravenna, Italy
Monte Cassino with mosaics, he brought artists and workmen from Constantinople in 1066 for that purpose. These mosaics are lost or decayed, but it is not unlikely that the artists so engaged, designed and worked on the wall paintings of Sant' Angelo-in-formis, a subsidiary church of the monastery near Capua. These most interesting paintings are still in a fair state of preservation. It is probable that this action of Desiderius had a far-reaching influence in importing fresh energy, especially when he came to occupy the papal chair. The schools of Paulus Laurentius and Rainerius were founded, which were ultimately influenced by the Cosmati, and all the work of this character was at one time erroneously called cosmati work. The generation of these schools is of considerable interest in the history of mosaic, and is given by Mr. A. L. Frothingham, in the "American Journal of Archæology" I, 183. The main features of the decorative mosaic of the Roman School were derived from southern Italy, indirectly from Byzantium, in the eleventh century. The mosaics of the twelfth century are remarkable both for their number and the development of design in Christian art. A new period was inaugurated in Rome under Innocent II. In Italy, in Greece, in Syria and Arabia, as well as in Germany and France, important examples are preserved. In Rome, S. Maria in Trastevere (where the design and execution of the mosaic in the apse is extremely grand), S. Crisogono, S. Maria, and S. Francesca Romana were also so decorated.

The Roman artists exerted great influence in Umbria, and the Abruzzi, including the Marches. These men were at times both architects, mural painters, and mosaic workers. From the Roman centre their work went west to considerable distances. Other great works in Italy of this period are in the cathedral of Torcello, in the chapel of St. Zeno, and in the apse of S. Maria, in Venice, 1150; in the cathedral of Palermo, in Sicily, and in the Palatine chapel Arab workmen assisting the Greeks both in the design and execution. The Mohammedans themselves, notwithstanding the order of the prophet, had occasionally figure design in the mosaic of their mosques; that of Abd-el-Melik at Jerusalem has figures of prophets in the porch, and on the walls inside an Inferno and a Mohammedan Paradiso. The mosaic ornamentation in the mosques of Seville, Cordova, and Granada are well known to travellers. In Greece there still remain the most interesting mosaics of the churches of Daphne, and of St. Luke of Stiris in Phocis [Fig. 11]. In Syria, there remain the celebrated series of mosaics in the church of the Nativity, Bethlehem; those in the Church of the Holy Sepulchre, and the Mosque of Omar. The mosaics of this period in the churches of Mount Athos are all lost excepting a few figures at Vatopedi. In France, Abbot Sugger had mosaics executed for the church of Saint Denis, and there are records of such work at Lyons and Troyes.

The great period of Christian mosaic was probably in the thirteenth century. Rome, Florence, Pisa, Venice, Parno, and Spoleto still possess great works of this era, and the names of Cimabue, Giotto, P. Cavallini, Gaddo Gaddi, Jacobus Torriti, Tafi, Apollonio, and others are connected with the craft. Torriti did important work in St. Mary Major's and St. John Lateran's; Pietro Cavallini designed the subjects under the apse of S. Maria in Trastevere; important mosaics were done in St. Peter's, St. Clemente's, and other churches. In 1298 the great Giotto was called to Rome to design the "navicella" for the Porch of S. Peter's; that now in situ is a restoration. In Florence the mosaics of the baptistery commenced in 1225 by Jacobus, a Franciscan, were continued at the end of the century by Andrea Tafi, Gaddo Gaddi, Apollonio, and afterwards by Arnolfo Gaddi. Gaddo Gaddi also did the beautiful "Madonna" at Santa Maria del Fiore, and the "majesty" at San Miniato is also attributed to him, but it is so much restored that it is difficult to pass judgment upon it. At the end of the century (1298-1301) there was executed the celebrated "majesty" in the apse of the cathedral at Pisa. This has generally been attributed to Cimabue and the side figures to Vicino. To this opinion Venturi adheres with strong evidence (Storia dell' Arte Italiana, V, 239-240). Gerspach, however, will not have Cimabue amongst the mosaicists (La Mosaïque, 127). At Civitã Cas-
fore the shrine of St. Thomas in Canterbury cathedral, and that of the sanctuary of Westminster Abbey was laid, and the shrine of St. Edward the Confessor, with its inlaid mosaic, was executed. Concerning this last, Robert de Ware was sent by the king to Rome in 1267 to procure workmen for the ornamentation of Westminster Abbey and to erect a new monument to St. Edward the Confessor, that made in 1241 not being good enough. The abbot brought back with him one "Petrus", who laid the mosaic pavement before the high altar and executed the tomb for the golden shrine of St. Edward. That this Petrus was an eminent person is without doubt. There are recorded many artists of this name, but he who, in the opinion of Mr. Frothingham (American Journal of Archaeology, 1889, 186), did the work in St. Edward's Chapel was Petrus Orderisi, son of Andreas. Horace Walpole (History of Painting in England, I, 17) considers that the artist so called was Pietro Cavallini; both these artists may be termed Cosmati. A portion of the inscription reads: VEC TO ESS FACTUM QUO PETRUS DUXIT IN ACTUM ROMANUS CITIV.

The work of the fourteenth century in Rome and in Italy generally was a continuation of that of the thirteenth, the design towards the end of the era becoming influenced by the rising art of the more western styles. In St. Mary Major's the "Coronation of The Blessed Virgin" was commenced at the conclusion of the thirteenth and completed early in the fourteenth century; it is signed by the celebrated artist and mosaicist, Jacobus Torriti. Gaddo Gaddi designed the smaller subjects underneath, soon afterwards. The same artist is said to have completed the work in St. Peter's left by Torriti. He was then called to Arezzo to do the result of the cathedral, which fell away before the end of the century. Torriti also did the apse of St. John Lateran's; Filippo Rusuti designed the "majesty", and Gaddo Gaddi the lower subject of the façade of St. Mary Major's, Rome. A mosaic by Müno de Zamaro, a Dominican who died in 1300, is on the floor of St. Sabina's. At the beginning of the century the work in St. Mark's, Venice, was continued. A mosaicist, Solferino, did the dome at Spoleto; and the apse at Parenzo was filled with mosaic. Perhaps the most important developments of the art are shown in the subjects decorating the lower part of the apse of S. Maria in Trastevere [Fig. 12]; in 1291 these subjects were commenced by Pietro Cavallini, who is said by Vasari to have been a pupil of Giotto, although this is questioned by modern critics on fairly substantial evidence. He was the most celebrated Roman artist of his time and his designs, while adhering more to the Byzantine than those of Giotto did, show a ten-

dency to what may be called Gothic development. His accessories show his cosmatesque affinity; this is very noticeable in the throne of the Blessed Virgin in S. Crisogono.

Mosaic work of the period remains at Salerno, Naples and Ravello; at Ferano there are mosaics by Deodato Cosmos (1332); at Orvieto by two religious, Ceco Vanni and Francesco; at Fies (in 1321) by Vicino, who finished that commenced by Gimabue, from the designs of Gaddo Gaddi. Andrea di Mino and Michele worked in the cathedral of Sienna, and Deodato Cosmos worked at Teramo. Charles IV called Italian mosaicists to Prague; they also worked at Marienweide and Marienburg, but the art did not apparently thrive in Germany. Mosaic was, however, being rapidly superseded by fresco, which as a primary art giving the sentiment and character of the artists immediately, was of course much more esteemed by persons of discrimination than a mere copy in tessere, or slabs of opaque glass. Hence in the fifteenth century the cessation of mosaic work in Italy generally was very notable, except in the case of churches in which it had been commenced. Some little was done in St. Peter's, and the work in St. Mark's, Venice, was continued in 1430, when in the chapel of the Mascoli the "Life of the Blessed Virgin" was designed and executed by Grambomo. Mosaicists named Petrus, Lazarus, Sylvester, and Antonius also worked there. In Florence, Alessandro Baldovinetti (1425-1450) did a mosaic for St. John's and restored that in San Miniato; he studied the making of smalti, etc. from a German and wrote a work on the technique of the art. He was the master of Domenico Ghirlandajo, who not only did the mosaic of the "Assumption" over a porch of the cathedrals, the chapel of St. Zeno, but also designed some of the painted windows in S. Maria Nuova, and whose brother David also followed the same vocation and in 1497 worked at Orvieto and Siena. A specimen of David's work is in the Musée de Cluny. Ridolfo Ghirlandajo, son of Domenico and a friend of Raphael, has certain later mosaics attributed to him.

In the sixteenth century the work of St. Mark's was still carried on and a great many artists of reputation were engaged on the designs. The mosaics executed in this cathedral, commencing in 1530, are far too numerous to recapitulate here, and are perhaps less fitted to the building than any hitherto placed; in fact, that greatest of painters, Titian, when rendered in mosaic, becomes coarse, heavy, and, on occasions, grotesque. Other works were designed by Tintoretto, Saliati, and the best Venetian artists of the day, and rendered in mosaic by Zucchi, Rizzo, Mariano, and
others. Unfortunately many of the earlier mosaics were destroyed by the senate, it is said, on the advice of Titian, to make room for the new work. The condition of many of them was bad. Amongst his many other works, Raphael designed for mosaic. The "Creation of the World" in the Chigi Chapel, Santa Maria del Popolo, Rome, from his design, is very fine. It was done in mosaic by Luigi di Pace, who came from Venice for the purpose. Baldassare Peruzzi also designed mosaic for Santa Croce in Gerusalemme, and F. Zucchio executed a mosaic in Santa Maria Scala-Casli, whilst the work in St. Peter's was commenced under Mussiano da Brescia. That the mosaic art had degenerated altogether and lost its vitality is evident by the work done in St. Peter's, Rome, from the seventeenth century under this same Mussiano da Brescia (1528-1592) and other artists.

The establishment of the pontifical works commenced in 1727 when the Cisterci and were appointed superintendents by order of Benedict XIII. After occupying various localities these mosaic works were finally settled in a cortile of the Vatican in 1825. In the first half of the seventeenth century the paintings and frescoes of the basilica began to be imitated in mosaic. The quality of the work was on the side of excessive smoothness, as much as some modern works are on that of excessive and affected roughness. Other works of the eighteenth and nineteenth centuries and great restorations kept the art alive, notably those of St. John Lateran's and St. Mark's, Venice, by the Italian mosaicists. The "Last Judgment" on the façade of St. Mark's was designed by Battistini Quercano in 1836. In 1859 a school of mosaicists arose in Russia, its primary object being the restoration of the mosaics of Santa Sophia in Kieff, and eventually Pius IX allowed certain of the pontifical mosaicists in 1850 to go to St. Petersburg and join the Russian mosaicists. An example of their work was shown in the international exhibition held in Hyde Park, London. The mosaics of the Russian church, London, are not, however, very successful.

Numerous mosaics have been executed in England during the last half century, notably the figures of great painters in the Museum of South-Kensington. The earliest of these were done by Venetians, but some of the more recent figures were executed at the works of South-Kensington itself. Many mosaics were done in St. Paul's cathedral, London; those in the choir were designed by Sir W. B. Richmond, and under the dome some strong figures were designed by Mr. Watte, R.A. The mausoleum at Frogmore is also elaborately decorated with mosaic, as is the monument of Prince Albert in Hyde Park, both designed by John Clayton, who is architect for Bramptton chapel in Westminster cathedral. Mr. W. C. Symons designed the mosaics for the chapel of the Holy Souls of Westminster cathedral in which mosaic work is still being inserted in the various chapels. The writer of the present article designed a mosaic of the "Last Judgment" for the church of the Annunciation, Chislehurst; a figure of Blessed Giacomo di Ulma for South-Kensington, and an "Epiphany" for the front of an altar at the Assumption Church, Warwick Street, with other works elsewhere.

In Aachen the mosaic of the dome of Charlemagne was restored, or rather redone, in 1869. In France, various mosaics of fair excellence have been executed, but unfortunately the speed of the early centuries, so exceptionally suitable to the art, has not been attempted. The modern French mosaic appears to have been initiated by Signor Bellini, one of the Vatican mosaicists, at the close of the eighteenth century, who became the principal of the "manufacture royale"—one of its productions is in the Salle du Paupère in the Louvre. The mosaics are the work of Gérard and M. Badary Garnier, and the mosaic by Curzon Facchino. The mosaics at the Opéra are of Italian execution. In 1876 a national school of mosaic was formed, when M. Gerspass was sent to Rome and obtained, with the consent of the pope, the services of Signor Poggioli of the Vatican works. The execution of the apse of the Madeleine and that over the grand staircase of the Louvre, M. Ravaux having executed some mosaics for the new cathedral of Marseilles.

Technique.—The making of a mosaic picture has differed in various periods and under various manufacturers, and the materials to which the tesserae were fixed have been the subject of discussion and, in some medieval examples, of secrecy. Historically the method by which it has been simplest to every ancient example not destroyed—is partially restored. The following interesting account is from the personal examination by Messrs. Schults and Barnsley of the old work at St. Luke's of Stiri:

The method of fixing the mosaic was as follows:—Over the structural network of the surfaces to be covered, a coat of plaster in ordinary wall coverings, was roughened on the face in order to make a second coat of finer stuff adhere. On the surface of this second coat, which was evidently of a very slow-setting nature, the main lines of the mosaic figure or composition were sketched on in tone with a brush, and the mosaic cubes were then pressed close against the face, forcing up the stuff between the cubes in order to act as a key. We are inclined to think that, at any rate in the case of the single figures, the first cubes put in position were the double or treble row of gold tessere which enclosed the subject; we have found in many cases that these do not correspond with the lines of the figures as executed, odd spaces between the lines and the final outline of the figure having been filled up with further gold cubes after the mosaics of figure had been finished in position. The backgrounds are universally formed of gold tessere, while the figures of subjects are composed of cubes of many colours and generally the principal coloured cubes are cut out of sheets of opaque coloured glass, while the lighter ones, such as the flesh tints, etc., are of marble. The gold mosaics are formed in the usual manner; a piece of gold leaf,

CHURCH AT MEDABA (MEDEBA)—DISCOVERED IN 1896
having been laid on glass, a thin transparent film was then spread over the same, and the whole afterward exposed to the rays of the sun. The images vary greatly in size, the average being about three-eighths of an inch. They are, however, slightly larger in the main outlines of the draperies, etc., and smaller in the delicate gradations of the face and hands. The main portion of the gold background is laid fairly regularly in horizontal lines up to the rows entirely filled out. It was written out by Jettler in the "Ecclesiæ Graecæ Monumenta," II (Paris, 1861), which is reprinted in Migne, P. G., LXXXVII, III, 2851-3112. A Latin translation by Bl. Ambrose Traversari, is printed in Migne, P. L., LXXIV, 121-240, and an Italian version made from the Latin of Traversari (Venice, 1475; Vicenza, 1479). Conjointly with Sophronius, Moschus wrote the Dialogi de Subterraneis, a fragment of which is preserved in the first chapter of the "Vita S. Ioanni Eleeemosynarii" by Leontius, under the name of "Simeon Metaphrastes" (P. G., CXIV, 895-906).}

Michael Ott.

Moscow (Russian Moskva), the ancient capital of Russia and the chief city of the government (province) of Moscow, situated in almost the centre of European Russia. It lies on both sides of the River Moskva, from which it derives its name; another small stream, the Yauza, flows through the eastern part of the city. Moscow was the fourth capital of Russia—the ancient city of Kieff no longer holds the place of the Terns from 1340 until the time of Peter, the Great, in 1711. It is the holy city of Russia, almost surpassing in that respect the city of Kieff, and is celebrated in song and story under its poetic name Bieokamennaya, the "White-Walled." The population, according to the latest (1907) available statistics, is 1,355,104, and it is the greatest commercial and industrial city of Russia. It is the see of a Russian Orthodox metropolitan with three auxiliary or vicar bishops, and has 440 churches, 24 convents, over 500 schools (with high schools, professional schools, and the university besides), some 500 establishments of charity, mercy, and hospital service, and 23 cemeteries, with the level of the Moskva and its tributaries beyond. There are 1,242,990 Orthodox, 26,320 Old Ritualists, 25,540 Catholics, 26,650 Protestants, 8905 Jews, and 5336 Mohammedans, together with a small scattering of other denominations.

Historically, the city of Moscow, which has grown up gradually around the Kremlin, is divided into five principal parts or concentric divisions, separated from one another by walls, some of which have already disappeared and their places been taken by broad boulevards. These chief divisions are the Kremlin, Kitajgorod (Chinese town), Byelygorod (white town), Zemljanigorod (earthwork town), and Mietschanskygorod (the bourgeois town). The actual municipal division of the city is into seventeen wards, each of which has a set of local officials and separate police sections. The city hall or Duma is situated on Ascension Square near the Kremlin. The Kremlin itself is a walled acropolis and is the most ancient part of Moscow, the place where the city originated; it is situated in the very center of the present city, some 140 feet above the level of the Moskva. The Kitajgorod, or Chinese town, is situated to the north-east and outside of the Kremlin, and is in turn surrounded by a wall with several gates. It is irregularly built up, contains the Stock Exchange, the Gostiny Door (bazaar), the Board (great glass en-
closed arcades), and the printing office of the Holy Synod. Just why it was called the Chinese town is not known, for no Chinese have ever settled there. The allusion may be to the Tatars, who besieged and took Moscow several times, camping outside the Kremlin.

The Kremlin and Kitaigorod are considered together and known as the "City" (gorod), much as the same word is applied to a part of London. The enormous walls surrounding them were originally whitewashed and of white stone, and are even yet white in places, thus giving rise to the poetic name.

where the Tatars dwelt for a long time after they had been driven from Moscow proper. Now it is the Old Russian quarter, where old-fashioned merchants dwell in state and keep up the manners and customs of their fathers. The famous Tretiakov art galleries are situated here. There are six bridges across the River Moskva connecting both parts of the city.

The name Moscow is mentioned in Russian chronicles for the first time in 1147. In March of that year Yuri Dolgoruki (George the Long-armed), Grand Duke of Kiev and son of Vladimir Monomachus, is

Just outside of it lies the Bielygorod, or white town, extending in a semicircle from the Moskva on the one side until it reaches the Moskva again. The Bielygorod is now the most elegant and fashionable part of the city of Moscow. Containing as it does, beautiful and imposing palaces, many fine public monuments and magnificent shops, theaters, and public buildings, it presents a splendid appearance worthy of its ancient history. Around this, in a still wider semicircle, is the Zemlianygorod, or earthwork town, so called because of the earthen ramparts which were constructed there by Tsar Michael Feodorovich in 1620 to protect the growing city in the Polish wars. They have been levelled and replaced by the magnificent boulevards known as the Sadowaya (Garden Avenues).

The wealthy merchants and well-to-do inhabitants dwell here, and fine buildings are seen on every side. The remainder of the city is given over to the industrial and poor classes, railway stations, and factories of all kinds. In addition, there is that part of the city which lies on the south side of the Moskva, the so-called Zamoskvorechische (quarter beyond the Moskva) said to have met and entertained his kinmen there at the village on the Moskva. So pleased was he with the reception which he had received and so impressed by the commanding location of the situation that he built a fortified place on the hill where the meeting took place, just where the present Kremlin is situated. The word Kremlin (Russian Kreml) seems to be of Tatar origin, and means a fortified place overlooking the surrounding country. Many other Russian cities dating from Tatar times have kremlins also, such as Nizhni-Novgorod, Vladimir, Kazan, and Samara.

In the beginning of its early history Moscow was nothing but a cluster of wooden houses surrounded by palisades; in 1237 the Tatar Khan laid siege to it, and his successors for several centuries were alternately victors and vanquished before it. In 1293 Moscow was besieged and burned by the Mongols and Tatars, but under the rule of Daniel, son of Alexander Nevsky, its fame increased and it became of importance. He conquered and annexed several neighbouring territories and enlarged his dominions to the entire length of the River Moskva.
In 1300 the Kremlin was enclosed by a strong wall of earth and wooden palisades, and it then received its appellation. In 1316 the Metropolitan of Kiev changed his see from that city to Vladimir, and in 1322 thence to Moscow. The first cathedral of Moscow was built in 1327. The example of the metropolitan was followed in 1328 by Grand Duke Ivan Danilovich, who left Vladimir and made Moscow his capital. In 1333 he was recognized by the Khan of Kasan as the chief prince of Russia, and he extended the fortifications of Moscow. In 1367 stone walls were built to enclose the Kremlin. Notwithstanding

self Tsar, the Slavonic name for king or ruler found in the church liturgy, and that name has survived to the present time, although Peter the Great again changed the title and assumed the Latin name Emperor (Emperor). This latter name is the one now commonly used and inscribed on public monuments and buildings in Russia. Moscow was almost completely destroyed by fire in 1547; in 1571 it was besieged and taken by Devlet-Ghurei, Khan of the Crimean Tatars, and again in 1591 the Tatars and Mongols under Kara-Ghirei for the last time entered and plundered the city, but did not succeed in taking

this, the city was again plundered by the Tatars two years later. During the rule of Dimitri Donskoi in 1382 the city was burned and almost entirely destroyed. Vasili II was the first Russian prince to be crowned at Moscow (1425).

The city, although still the greatest in Russia, began to decline until the reign of Ivan III (1462-1505). He was the first to call himself "Ruler of all the Russians" (Hospodar uezya Rossii), and made Moscow pre-eminently the capital and centre of Russia, besides constructing many beautiful monuments and buildings.

His wife, who was Sophia Palaeologus, was a Greek princess from Constantinople, whose marriage to him was arranged through the pope, and who brought with her Greek and Italian artists and architects to beautify the city. But even after that the Tatars were often at the gates of Moscow, although they only once succeeded in taking it. Under Ivan IV, sur

named the Terrible (Ivan Goryny), the development of the city was continued. He made Novgorod and Pakoff tributary to it, and subdued Kasan and Astraksan. He was the first prince of Russia to call himself the Kremlin. During the reign of Ivan the Terrible the adventurer Yermak crossed the Ural Mountains, explored and claimed Siberia for Russia; the first code of Russian laws, the Stoglav (hundred chapters), was also issued under this emperor, and the first printing-office set up at Moscow. Ivan was succeeded by Feodor I, the last of the Rurik dynasty, during whose reign (1584-98) serfdom was introduced and the Patriarchate of Moscow established. During the latter part of the reign of Ivan the Terrible, Boris Godunoff, a man of high ambitions who had risen from the ranks of the Tatars, attained to great power, which was augmented by the marriage of his sister to Feodor. To ensure his brother-in-law's succession to the throne, he is said to have caused the murder of Ivan's infant son, Demetrius, at Uglich in 1582. When Feodor I died, Boris Godunoff was made Tsar, and ruled fairly well until 1605. The year before his death the "False Demetrius" (Lshedidimitri) appeared. He was said to have gone under the name of Gregory Otrepieff, a monk of the Chudoff monastery (Monastery of the Miracles) in the Kremlin, who fell into disgrace, escaped to Poland, gave himself
out as Demetrius, the son of Ivan the Terrible, who had in some way escaped Boris Godunov, another child having been murdered. King Sigismund of Poland espoused his claims, furnished him an army, with which and its Russian alliances the pretender followed his way back to Moscow and worshiped the rightful heir to the throne. All who looked on Boris Godunov as a usurper flocked to his standard, the widow of Ivan, then a nun, recognized him as her son, and he was crowned in the Kremlin as the Tsar of the Russians. For ten months he ruled, but, as he was too favourable to the Poles and even allowed Catholicks to come to Moscow and worship, the tide then turned against him, and in 1606 he was assassinated at his palace in the Kremlin by the Strelci or sharpshooters who formed the guard of the Tsars of Russia.

After seven years of civil war and anarchy Michael Romanoff, the founder of the present dynasty, was elected Tsar in 1613. But Moscow never regained its earlier pre-eminence, although it became a wealthy commercial city, until the first part of the reign of Peter the Great (1689—1725). He sent persons abroad, and, having observed the advancement and progress of Western Europe, determined to improve his realm radically by introducing the forms of western civilization. At earlier part of his war with the Swedish invaders and the Polish kings. In 1700 he abolished the patriarchate of Moscow, left the see vacant, and established the Holy Synod. These acts set Moscow, the old Russians and the clergy against him, so that in 1712 he changed the imperial residence and capital from Moscow to St. Petersburg, which he had chosen for the new capital on the banks of the Neva. After the departure of the Tsars from Moscow, it diminished in political importance, but was always regarded as the seat and centre of Russian patriotism. In 1755 the University of Moscow was founded. In 1812 during the invasion of Russia by Napoleon, the Russians determined after the Battle of Borodino to evacuate Moscow before the victorious French, and on 14 September, 1812, the Russian troops deserted the city, followed by the greater part of the inhabitants. Shortly afterwards the French entered, and Napoleon found that he had no submissive citizens to view his triumphal entry, but that the inhabitants would not go to meet him even from the city, and that the houses even then built largely of wood. He revenged himself by desecrating churches and destroying monuments. The Russian winter begins in October, and, with a city in smoking ruins and without supplies or provisions, Napoleon was compelled on 19—22 October, to evacuate Moscow. Moscow, retired and Nishtford, Cold and privation were the most effective allies of the Russians. The reconstruction of the city commenced the following year, and from that time hardly any wooden buildings were allowed. In May, 1896, at the coronation of Nicholas II, over 2000 persons were crushed and wounded in a panic just outside the city gates. The Grand Duke Sergius was assassinated in the Kremlin and revolutionary riots occurred throughout the city. Although Moscow is no longer the capital, it has steadily grown in wealth and commercial importance, and, while second in population to St. Petersburg, it is the latter's close rival in commerce and industry, and is first above all in the heart of every Russian.

In the religious development of Russia Moscow has held perhaps the foremost place. In 1240 Kieff was taken by the Tatars, who, in 1299 pillaged and destroyed much of that mother city of Christian Russia. Peter, Metropolitan of Kieff, who was then in union with Rome, in 1316 changed his see from that city to the city of Vladimir upon the Khiarm, now about midway between Moscov and Nizhni-Novgorod, for Vladimir was then the capital of Great Russia. In 1322 he again changed it to Moscow. After his death in 1328 Theognoetus, a monk from Constantinople, was consecrated Metropolitan at Moscow under the title "Metropolitan of Kieff and Exarch of all Russia", and strove to make Great Russia, of the monastic order, a metropolitan of all Russia. In 1371 the South Russians petitioned the Patriarch of Constantinople: "Give us another metropolitan for Kieff, Smolensak, and Tver, and for Little Russia." In 1379 Pimen took at Moscow the title of "Metropolitan of Kieff and Great Russia", and in 1408 Phiotius, a Greek from Constantinople, was made "Metropolitan of all Russia" at Moscow. Shortly afterwards an assembly of South Russian bishops was held at Novgorod, and determined to become independent of Moscow, sent to the Patriarch of Constantinople for a local metropolitan to rule over them. In 1416 Gregory I was made "Metropolitan of Kieff and Lithuania", independently of Phiotius who ruled at Moscow. But at the death of Gregory no successor was appointed for his see. Gerasim (1431—5) was the successor of Phiotius at Moscow, and had correspondence with Pope Eugenius IV as to the reunion of the Eastern and Western Churches. The next Metropolitan of Moscow was the famous Greek monk, Isidore, consecrated under the title of, he was a great advocate of union. When the Council of Florence for the reunion of the East and the West was held, he left Moscow in company with Bishop Abraham of Suzdal and a large company of Russian prelates and theologians, attended the council, and signed the act of union in 1439. Returning to Russia, he arrived at Moscow in 1441, but in his subsequent efforts for union to little liturgy at the cathedral of the Assumption in the Kremlin in the presence of Grand Duke Vasili II and the Russian clergy and nobility. At its close his chief deacon read aloud the decree of the union of the churches. None of the Russian bishops or clergy raised their voices in opposition, but the grand duke afterward upheld Isidore for turning the Russian people over to the Latins, and shortly afterwards the Russian bishops assembled at Moscow followed their royal master's command and condemned the union and the action of Isidore. He was imprisoned, but eventually escaped to Lithuania and Kieff, and after many adventures reached Rome. The relations of Russia were entirely distinct, the prelates of Moscow bearing the title "Metropolitan of Moscow and all Russia" and those of Kieff, "Metropolitan of Kieff, Halich, and all Russia". This division and both titles were sanctioned by Pope Pius II. But Kieff continued Catholic and in communion with the Holy See for nearly a century, while Moscow adhered to Orthodoxy and remained in schism. After Isidore the Muscovites would have no more metropolitans sent to them from Constantinople, and the grand duke thereupon selected the metropolitan. Every effort was then made to have the metropolitans of Moscow independent of the metropolitan of Kieff at Constantinople. After the Turks had captured Constantinople, the number of its patriarch dwindled still more. When the Bishop of Novgorod declared in 1470 for union with Rome, Philip I, Metropolitan of Moscow, frustrated it, declaring that, for signing the union with Rome at Florence, Constantinople had been punished by the Turks. This hatred of Rome was fomented to such a point that, rather than have one who favored Rome, a Jew named Zozimas was made Metropolitan of Moscow (1490—4); as, however, he openly supported his brethren, he was finally deposed as an unbeliever. Yet in 1525 the metropolitan Daniel had a correspondence with Pope Clement VII in regard to the Florentine Union, in 1545 with the Jesuit Fossevo, who visited Ivan the Terrible and sought to have him accept the principles of the Union. In 1586, after
standing. It was once a busy and prosperous town, trading in woolen goods and morocco leather, but during the nineteenth century, owing to lack of communications with the outside world and also to the opening of the Suez canal which changed the caravan route, it has decayed. At the present time it is the capital of a vilayet and has 70,000 inhabitants. Its girdle of wall more than two miles circumference has not proved large for it. The town has sulphur springs and many very fine mosques and churches. Among its more famous citizens were Baha ed-Din, Ibn el-Athir, and Ibn Khallikan, Mussalmans; Thomas of Marga, Isaac of Nineveh, Hanna of Adiabene, etc. Christians.

The Council of Seleucia-Ctesiphon, the Metropolitan of Adiabene had the united titles of Ar-bela, Hazza, Assyria, and Mosul (Chabot, "Synodical orientale," 265, 619). This is the earliest mention of the See of Mosul. It continued under the same style up to the seventh century. Soon after the Arab invasion the title of Adiabene was replaced by that of Assyria and Mosul. Le Quien (Ortes chrest., II, 1215-1220) gives a long list of titularies from the seventh to the sixteenth century. Many of the Nestorian patriarchs of Mosul became converts and resided there, beginning with Elias Denham in 1751.

As there was already a Catholic Chaldean patriarch at Diarbekir, Rome in 1838 and especially in 1830 brought the orders of the Eastern Church to improve the condition in Mosul. Elias, also known as John VIII, was recognized as the only patriarch. He transferred the residence of the see to Bagdad, and since that time the Chaldean patriarchs have again taken up their residence at Mosul. The Chaldean archdiocese numbers 20,000 souls; 45 secular priests; 12 parishes; and 13 churches. In the north the Chaldean archdiocese of Mosul, the home of the Antonian Congregation of St. Hormisidas of the Chaldean rite, who have two other convents in the diocese. The congregations numbers in all 63 religious of whom 30 are priests. The Jacobites took up their residence at Mosul at an early date, especially at the Convent of Mar Mattai, the principal centre of their activity. There also since 1089 dwells the "Maphrian" or delegate of the patriarch for the ecclesiastical provinces in Persia, a title or office now purely honorary. The Monophysites are very numerous in the city and the diocese. The Syriac Catholic diocese numbers 6,000 souls; 20 priests; 7 parishes; and 10 churches. Le Quien (Ortes chrest., II, 1559-1564) gives a list of Jacobite titularies of Mosul.

The Apostolic Mission of Mosul was founded in 1750 by Benedict XIV as a Prefecture Apostolic and entrusted to the Italian Dominicans who had repeatedly labored in the province from the thirteenth century onwards. Thanks to them, a Syrian Catholic diocese was erected at Mosul in that same year. In 1780, the Nestorian patriarch Mar Yohannan, who resided at Alkosh, 25 miles north-east of Mosul, became a Catholic together with five bishops of his nation, the greater part of the inhabitants of his town, and of six villages in the vicinity. The French monks who replaced the Italian friars in 1856, thanks to M. Boré, and to the French Consul, the Assyriologist of Botta, to open boys' and girls' schools, and to found a printing press for Arabic and Syriac works, and finally college at Mosul. The Apostolic Mission at the present day is bounded by three other French Missions, that of the Capuchins at Mardin, the Carmelites at Baghdad, and a few protesting. It includes the south-east of Mesopotamia, Kurdistan, and the north-east of Armenia Major, a stretch of territory covering the vilayets of Mosul, Bitlis, Van, and a part of Diarbekir. Besides the Arabs, Kurds, and Mussulman Turks (about 3,000,000), and the Yezidis or Devil-worshippers (about 30,000), the Mission numbers 30,000 Nestorians; 5000 Protestants; and 10,000 Jews. The Catholics of all the rites scattered through the territory amount to 80,000. The Mission has 23 Latin priests, all Dominicans, and 15 native priests who assist them in teaching. There are 9 Latin churches, 5 residential stations (Mosul, founded in 1750; Mar-Yakoub in 1847; Van in 1851; Seert in 1882; Djeireh in 1894), and 98 secondary stations visited by the missionaries. In 1910 a station was founded in the heart of the Nestorian patriarchate. The Syro-Chaldean Seminary, founded at Mosul in 1882, has educated more than 60 priests; it has between 50 and 60 students. There are 50 parochial schools for boys; 8 for girls; 1 Normal School for Chaldean Catholic teachers at Mar-Yakoub; 3 colleges for boys; 4 boarding schools for girls; 4 orphanages opened in consequence of the massacres of 1895. The Dominicanesses of the Presentation have houses at Mosul, Seert, and Van.

S. VAILLÉ.

Mostar and Markana-Trebinje, Dioceses of (MANDATRIENSIS, MARCANESI ET TIBURNENSIS).

When at the Berlin Congress (1878) Austria-Hungary was allowed to occupy Bosnia and Herzegovina, the religious situation was at once regulated. The religious hatred existed as best it could. The foreign administrator, Count Keyserling (567,000, 43 per cent), Mohammedans (549,000, 35 per cent), Catholics (330,000, 21 per cent), and Jews (800, 0.5 per cent) was moderately. In 1881 the Emperor Francis Joseph formed the ecclesiastical province of Sarajevo (Bosna-Serbi; Sarashimir) with the three sees of Banjaluka (Banialucus), Mostar, and Markana-Trebinje as suffragans. The Bishop of Mostar, through his pro-vicar, administers Markana-Trebinje, in which there are only eight secular priests and 20,000 Catholics.

Mostar is the capital of Herzegovina, and numbers 15,000 inhabitants, among whom there are 3500 Catholics. Herzegovina, which lies east of southern Dalmatia, received its name from the title of Herzog (duke) conferred by the Emperor Frederick IV (1448) on the Grand Waywode Stephan Vukčić. In 1463 Stephan Tomasević, the last King of Bosnia, was made a prisoner by the Turks and beheaded, in defiance of a promise to spare him. Twenty years later Herzegovina came under the rule of Turkey. With Bosnia it received Christianity from the Franks, in the first half of the seventh century the Slavs took possession. In the eleventh century the Eastern Schism and the sect of the Bogomil the Catholic Church great and unrepaired harm. National writers trace this sect to a Buddhist priest, Jeremias, who was also called Bogomil. His followers were called Patareane; they rejected matrimony, allowed no intercourse with those of other religions, unconditionally forbade war and taking of oaths, and wished to yield obedience to no authority but God. In 1483, during the Turkish occupation of the country, the majority of the Bogomil, those of the upper classes, went over to the name of Tatar. Those who remained loyal to Christianity became outlaws (Kajaks). After the siege of Vienna and the retreat of the Turks in 1883, the poor peasants repeatedly took up arms, but only made their condition worse. During this unhappy time the Franciscans, unaided and with great difficulty, preserved the life of the Catholic Church in the country. The Divine service amid the cold and snow in the open air. They lived in the most wretched poverty, and many became martyrs.

The Franciscans deserved that one of their order should be chosen Bishop of Mostar and Markana-Trebinje in 1881. The order maintains two schools and six classes for the education of the rising genera-
tion. There are 12 secular priests and 64 Franciscans in the diocese, and the number of Catholics is estimated at 130,000.

C. WOLFGRUBER.

Most Pure Heart of Mary, Feast of the. — In its principal object this feast is identical with the feast of the "Inner Life of Mary", celebrated by the Sulpitians on 19 October. It commemorates the joys and sorrows of the Mother of God, her virtues and perfections, her love for God and her compassion for mankind. In a subordinate manner, its object is also the physical Heart of Mary, which, being part of her sinless and virginal body, is the symbol and sensible object representing the sentiments and virtues of Mary (see Heart of Mary, Devotion to the). The feast originated with Blessed John Eudes as the patronal feast of his congregations of priests and nuns, and was, since 1644, kept at the seminary of Caen on 20 October. The office, which is very beautiful, was composed by Blessed John Eudes in 1641, but its text was not definitely fixed before 1672. In 1647 the date of the feast was changed to 8 February, the feast being solemnized publicly for the first time, with the permission of Bishop Ragemery of Paris, at the cathedral of Autun on 8 February, 1648. In 1665 Cardinal Vondome approved the office, and the feast was adopted the same year by the French Franciscans, the Benedictine Nuns of the Perpetual Adoration, and later by a number of diocesan and religious communities, contrary to decrees of the Congregation of Rites prohibitive of such observance. The Congregation of the Church in France claimed at this period the right to institute new feasts, and to compose offices and new breviaries without consulting the Roman authorities. In 1672 Blessed John Eudes could state that the feast had spread over nearly all France. It was mostly kept on 8 February, but at the Hôtel-Dieu of Quebec (since 1690) on 3 July, and at St. Maclou, Rouen, on the Sunday after 22 August (Office pr. 1765; triple of the first class).

The Nuns of Notre Dame de Corbell (8 Feb., 1787) were the first to obtain papal sanction for the feast from Pius VI (kept on 22 August as a double of the first class with octave). The same pope later approved the devotion of the Nuns of Fontevrault (Sunday after 2 July). On 22 March, 1799, it was granted to the city of Palermo (third Sunday after Pentecost); on 13 Aug., 1805, to the Clerics Regular of the Mother of God; in 1806 to Siena; in 1807 to the Discalced Carmelites; on 2 Sept., 1807, to the Capuchins and Hermits of St. Augustine from the Sunday after the octave of the Assumption; on 19 Sept., 1807, to Tuscany. The city of Rome adopted the feast in 1879. In the Society of Jesus it is observed on the Sunday within the octave of the Assumption. The feast has not yet been extended to the entire Church. It is kept as the patronal feast of the Republic of Ecuador, of the Congregation of the Holy Ghost, of the Society of the Sacred Hearts of Jesus and Mary, and of the Missionary Society of the Heart of Mary on the Sunday after 22 August. The feast is celebrated at Cosenza (Calabria) on 7 February (earthquake, 1873), by the English Benedictines on the first Sunday of May; in the ecclesiastical province of Lemberg on the last Sunday of June; at Bonn on the second Sunday after Pentecost, etc. The office of Blessed John Eudes, universally used in France for over a hundred years, was finally approved for the Eustists (8 Feb.) in 1861. The office contained in the Appendix of the Roman Breviary was granted on 21 July, 1857; the dioceses of Palermo, Salerno, Catanzaro, etc., used that composition by Père Galliffet in 1726.

The feast of the Archconfraternity of the Immaculate Heart of Mary, refuge of sinners, is celebrated on the Sunday before Septuagesima at Paris, Chartres Reims, Limoges, Vannes, Nantes, at Lucca in Toscani, in the ecclesiastical province of St. Louis, Missouri, etc.

_Études Complètes du B. Jean Eudes, XI (Vannes, 1910), 147 sq.; Nilles, De rationibus festorum usitatum Codici (Innsbruck, 1889); Holweck, Festi Mariani (Freiburg, 1912).

FREDERICK G. HOLWECK.

Mostyn, Francis. See Menevia, Diocese of.

Mostynopoule, titular see, suffragan of Trajanopolis in Rhodope. A single person is known, Paul, who assisted at the council of 875, who added to the established Phocius (Le Quen, "Orients christi", I, 1205). The see is mentioned in the "Notitiae" of Leo the Wise, about 900 (Gelzer, Ungedruckte . . . Notitiae episcopatum, 558); in that for 940 (Gelzer, "Georgii Cyprii Descriptio orbis romani", 79); in that for 1170 under the name of Misonoupolis (Parthey, "Hirciules Synecdemus", 122). The monk Ephremus (Cesares, V. 5695, in P. G., CXIII, 216) says that the city was taken in 1190 by the Emperor Frederick of Swabia; and that Caloian, Tsar of the Bulgarians, ravaged it about 1206 (Cesares, V. 7816). It is not known exactly where this town of Macedonia was situated nor what name it bears to-day.

S. VALIÈRE.

Motet.—A short piece of music set to Latin words, and sung instead of, or immediately after, the Offertorium, or as a detached number in extra-liturgical functions. The origin of the name is involved in some obscurity. The ancient meaning of the Latin term motu is from the Latin mutus, "movement"; but the French mot, "word," or "phrase," has also been suggested. The Italian motetto was originally (in the thirteenth century) a profane polyphonic species of music, the air, or melody, being in the Tenor clef, taking the then acknowledged place of the canto fermo, or plainchant, theme. Philip de Vitry, who died Bishop of Meaux, wrote a work entitled "Ars compositionis de motetis", the date of which was probably 1320. This volume (now in the Paris Bibliothèque Nationale) contains our oldest speciments of sacred motets, and these continued in vogue for over two centuries. Gerbert prints some other moteta of the first half of the eleventh century, but those with a pre-figured Tenor are rare. At any rate, motets are of such usual interest, and are mostly in two parts. It was not until the commencement of the following century, especially between the years 1390 and 1435, that a number of distinguished composers—e.g., Dunstable, Power, Dufay, Brasart, and Binchois—produced polyphonic motets that are still worthy of attention. Dunstable's "Quam pulchra est" is a charming specimen of a three-part motet, the concluding Alleluia being far in advance of any similar work during the first quarter of the fifteenth century, betraying a genuinely artistic style. Equally beautiful are the motets of Lionel Power, the manuscripts of which are at Vienna, Bologna, and Modena. One of his happiest efforts is a four-part motet in which the treatment is peculiarly melodious and of an Irish flavour. Dufay, who was a Wallon, composed numerous motets, including "Salve Virgo", "Flos florum", "Alma Redemptoris", and "Ave Regina ccelorum"; and by his will he ordered the last named exquisite composition to be sung by the altar boys and chorus of Ghent cathedral at his death-bed. Brasart, also a Wallon, whose name appears among the pontifical singers in 1431, composed motets, including a four-part "Fortis cum quevis actio" and a very pretty "Ave Maria". Binchois, another native of Flanders has left some motets in three parts, including "Beata Dei Genitrix", but the treatment is
have left us beautiful specimens. However, in the case of Monteverde (1567–1643), he broke away from the predominant traditions of the Tridentine school of music, employing unprepared discords and other harmonic devices. Croce, who was a priest, published many beautiful motets, including "O sacrum convivium". In the mid-seventeenth century, owing to the conflict between the older and the newer schools, no appreciable advance was made in motet-writing. The only new composers who nobly upheld the true polyphonic sermons were Allegri and Cascolini. Allegri was a priest and a pontifical singer, and he is best known by his famous Miserere for nine voices in two choirs. A few of Cascolini's motets are still sung. From 1660 to 1670 the modern type of motet, with instrumental accompaniment, came into vogue, and the ancient mediævalistic "modal" treatment was superseded by the prevailing scale-tonality. The masters of this epoch were Leo, Durante, Scarletti, Pergolesi, Carissimi, Stradella, and Purcell. During the eighteenth century the motet received adequate treatment at the hands of Johann Sebastian Bach, Keiser, Graun, Hasse, Handel, and Bononcini. A further development, but on different lines, took place during the next two centuries, of which may be found in the published works of Mozart, Haydn, Cherubini, and Mendelssohn. However, the motu proprio of Pope Pius X has had the happy effect of reviving the polyphonic school of the sixteenth and early seventeenth centuries, when the motet in its true form was at its highest.}

**Motive. See Morality.**

**Motolinia, Toribio de Benavente, Franciscan** missionary, b. at Benavente, Spain, at the end of the fifteenth century; d. in the City of Mexico, 10 August, 1568. He was one of the first band of Franciscans who sailed for Mexico with Fray Martin de Valencia, and survived all his companions. Upon entering religion, he changed his name of Paredes for that of Benavente, following the then regular custom of the order. As he and his companions, on their way to the City of Mexico, passed through Tlaxcalta, the Indians, seeing the humble aspect and ragged habits of the religious, kept repeating to each other the word motolinia. Fray Toribio, having asked the meaning of this word and learned that it was the Mexican for poor, "It is the first thing I have learned, he said, "and that, I may not forget it, it shall henceforth be my name." Berna Diaz del Castillo, an eyewitness of the arrival of the first friars, singles Motolinia out from the others, saying of him: "Whatever was given him he gave to the Indians, and sometimes was left without food. He wore very torn clothing and went barefoot, and the Indians loved him much, because he was a holy person." When Motolinia and his companions arrived at the City of Mexico, Cortés went out to receive them, accompanied by all his captains and the chief men of the place. The religious carried wooden crosses in their hands; Cortés and those with him knelt and kissed their hands with the deepest respect, and then conducted them to the Indians. The Indians wondered much when they saw those whom they considered supernatural beings prostrate at the feet of these humble and apparently despicable men. Cortés seized the opportunity to address a discourse to the caciques (chiefs) and lords who accompanied him, recommending due veneration and respect, as he esteemed them, for those who had come to teach them the Christian religion.

When Cortés set out on the expedition to Las Hibueras, the influence of Motolinia over the Indians
was so great that the conqueror commissioned him to see that "no rising took place in Mexico or the other provinces" during his absence. Motolinia subsequently made a journey to Guatemala, where he made use of the faculties which he had to administer confirmation, and thence passed to Nicaragua. Returning to Mexico, he was guardian successively at Tepotzotlán, and his residence at the viceregal palace of the Province of Santo Eivangelio. When Don Sebastian Ramirez de Fuenleal, president of the second Audiencia, decided to found the settlement of Puebla, Fray Toribio, who had joined in requesting this foundation, was one of the commissioners chosen to carry out the work, with the auditor Don Juan de Saldarriaga, according to the plan of Tlaxcala, Cholula, Huejotzingo, and Tepeaca, and employing a large number of Indian labourers, they built the city. Motolinia said the first Mass here on 16 April, 1530, and with his companions made the allotments of land, choosing for the convent the site upon which is still to be seen the beautiful church of San Francisco. He himself left in writing the total of baptisms performed by him, amounting to 400,000, "which," says Padre Torquemada, "I who write this have seen confirmed by his name." The Indians loved him tenderly for his virtues and, above all, for his ardent charity. He died in the convent of S. Francisco, in the City of Mexico, and the crowd at his burial "ought to be remembered from cutting in pieces the habit in which his corpse wore, pieces of which they would have taken as relics of a saint.

Among the writings of Motolinia is his famous letter to Emperor Charles V, written on 2 January, 1555. It is a virulent attack upon Bishop Bartolomé de las Casas, intended to discredit him because of his opinions concerning his "lousy man, servile, insatiable, imprudent, turbulent, injurious, and prejudicial"—and moreover an apostate in that he had renounced the Bishopric of Chiapas. The monarch is even advised to have him shut up for safe keeping in a monastery. While it is impossible to save the memory of Motolinia from the blot which this letter has placed upon it, some explanation of his conduct can be given. He may have foreseen the extremely grave evils that would have resulted to the social system, as it was then established in New Spain, if the theories of Las Casas had become completely dominant. Indeed, when it is remembered that these theories jeopardized the fortunes of nearly all the colonists, not merely the friars, but throughout the entire New World—fortunes which they had perhaps amassed illegally, but, in many instances, in good faith and at the cost of incredible labours and perils—it may well be understood why so tremendous an anarchy should have been felt against the man who not only had originated the theories, but had effected their triumph at Court. He was endeavouring with incredible tenacity of purpose to put them into practice, and who, in his directions to confessors, asserts that all the Spaniards of the Indies must despise themselves of all their property, except what they have acquired by commerce, and no longer hold encomiendas or slaves. The theory of encomiendas was not in itself blameworthy; for the Indians, being like all other subjects bound to contribute towards the expenses of government, it made no difference to them whether they paid tribute direct to the government or to the holders of royal commissions (encomiendas). What made the system intolerable was the mass of horrible abuses committed under its shadow; had in his attack made it surely against the abuses, he might perhaps have been more successful in benefiting the Indians. It is certain that the "New Laws," the greatest triumph of las Casas, remained virtually ineffective in Mexico; in Chiapas and Guatemala they led to serious disturbances, and in Peru they resulted in a civil war fraught with crimes and horrors, amidst which the aborigines suffered greatly. Such was the man whom Motolinia sought to oppose, and his attitude was shared by men of the most upright character, e.g. Bishop Marroquin, the viceroy, Don Antonio de Mendes, and the visitador Telío. However pardonable the intention, it is impossible to forgive the aggressive and impetuous methods by which las Casas achieved his object. He wrote some works which were of assistance to Mendieta and to Torquemada, one of the chief being his "Historia de los Indios de Nueva España".

Mouchy, Antoine de (called Democharis), theologian and canonist, b. 1494, at Ressons-sur-Mats, near Beauvais, in Picardy; d. 8 May, 1574, at Paris. In 1539 he was appointed rector of the University of Paris. He was also associated with the Sorbonne, canon Penitentiarius of Noyon. As inquisitor fidei he exerted his influence against the Calvinists. In 1562 he accompanied the Cardinal of Lorraine to the Council of Trent, and in 1564 was present at the Synod of Reims. Mouchy wrote a work in defence of the Mass (Paris, 1560); he edited the "Corpus juris canonici" (3 vols. fol., including the glosses, Paris, 1561; 4 vols. 8vo, without the glosses, Paris, 1547–50; 7 vols. 12mo, Lyons, 1554).

Leo A. Keely
MOUFFANG, FRANK CHRISTOPH IGNAZ, theologian, b. at Mainz, 17 Feb., 1817; d. there, 27 Feb., 1890. His early studies were made at Mainz. In 1834 he went to the University of Bonn and then moved to Freiburg, but then turned to theology. Among his masters were Klee, Windischmann, and Walter. In 1837 he went to Munich, and the next year took the prescribed theological examinations at Giessen, after which he entered the ecclesiastical seminary at Mainz, where he was ordained priest 19 Dec., 1839. His first appointment was as curate in Seligenstadt on the Main, where his uncle, Adam Franz Lennig, later vicar-general and dean of the cathedral at Mainz, was pastor. Lennig stimulated him in a broad interest for the religious questions of the time. Moufang also taught at the pre-gymnasium at Seligenstadt. After brief charges of the parishes of Bensheim, and that of St. Quafing in Mainz he was appointed in 1845 religious instructor at the Mainz gymnasium.

When Bishop von Ketteler re-established in 1851 the philosophical and theological school in connexion with the seminary at Mainz, he appointed Moufang regent of the seminary and professor of moral and dogmatic theology. On 6 Nov., 1854, and spiritual adviser and member of the diocesan court 2 December of the same year. On the occasion of the twenty-fifth anniversary of his priesthood the theological faculty of Würzburg bestowed the honorary degree of doctor of theology upon him. On the death of Lennig in 1868, the bishop wished Moufang to ascend the cathedral and vicar-general. Moufang, however, declined, preferring to devote himself to the seminary. In November, 1868, he was summoned to Rome, for the preparatory work of the Vatican Council, and was placed on the committee for ecclesiastico-political matters under Cardinal Raffo. On the conclusion of the Kulturkampf, to Moufang's great sorrow, the theological school of the seminary was closed (1877) by hostile legislation. After the death of Bishop von Ketteler (13 July, 1877), the chapter elected Moufang administrator of the diocese. The hostile attitude of the Prussian Government made this office very difficult during the ten years' vacancy of the see. On 16 April, 1886, Leo XIII made him a domestic prelate. Under Bishop Haffner the theological school of the seminary was reopened on 25 October, 1887, and Moufang again directed the seminary as regent. But ill-health prevented him from remaining long at the work that was so dear to him.

Moufang rendered great and permanent services to the Archdiocese of Mainz as an educator of the clergy and in many other ways. He was so prominent in the circle that centred about Lennig's strong, energetic personality, and he took an eager part in all efforts to improve religious and social conditions. He assisted in the formation of the Piusverein, and as a member of the "St. Vincenz- und Elisabeth-Verein" did much to promote its prosperity. In the regeneration of Catholic Germany his name is inseparably linked with the history of the general conventions (Generalversammlungen) of the Catholics of Germany. Like his colleague, Heinrich, he was, for almost forty years, one of the leading personalities and most prominent speakers. For a number of years he was also active as a legislator. After 1863, as representative of the bishop, he had a seat in the upper chamber of the Hessian Landtag, and repeatedly took a prominent part in the debates on social and political questions, and questions of Church policy. In 1871 he entered the Hochkommission of 1856 to 1706 and was he was held in great esteem by the Centre for his political services and as an intermediary in harmonizing the differences between North and South Germany. The most prominent feature of his literary activity was his work in reorganizing and publishing the "Katholik", in which he worked in collaboration with Heinrich he edited from 1851 until his death.

His other literary work was mainly in the history of the older Catholic catechisms in Germany. His chief works on this subject are: "Die Mainzer Katechismen von der Entstehung bis zum Ende des 17. Jahrhunderts" (Mainz, 1875); "Katholische Katechismen des 16. Jahrhunderts in deutscher Sprache, herausgegeben und mit Anmerkungen versehen" (Mainz, 1881). Among his numerous shorter writings are: "Die barmherzigen Schwestern, eine Darstellung ihrer Gründung, Verbreitung, Einrichtung und Wirksamkeit" (Mainz, 1842); "Der Informativ-Process. Eine kirchenrechtliche Erörterung" (Mainz, 1850); "Die katholischen Pfarrschulen in der Stadt Mainz" (Mainz, 1863); "Das Verbot der Ehen zwischen nahen Verwandten. Beleuchtung der Gründe dieses Verbotes" (Mainz, 1863), 1; "Die Handwerkerfrage" (Mainz, 1864), a speech delivered in the Upper Chamber of the Landtag at Darmstadt and published with notes; "Die Kirche und die Versammlung katholischer Gelehrten" (Mainz, 1864), a reply to Dr. Michels's "Kirche oder Partei?"; "Das kirchenrechtliche Verhältnis der Katholiken in der Kirche" (Mainz, 1865); "Der Kampf um Rom und seine Folgen für Italien und die Welt" (Mainz, 1868); "Carl August, Cardinal von Reinsch", in "Katholik", 1870, I, 129-80; "Der besondere Schutz Gottes über Papst Pius IX" (Mainz, 1871); "Aktenstücke betreffend die Jesuiten in Deutschland, sowie die Freikirchen und mit Erlaubnis v. (Mainz, 1872). He also published a prayerbook, "Officium divinum", which is very widely used and has passed through numerous editions, the first appearing at Mainz, in 1851, the nineteenth in 1905.

FRIEDRICH LAUCHERT.

MOULINS, DIACOPE OF (MOLINENSIS), suffragan of Sens—comprises the entire department of Allier. Under the old regime Moulins did not even have a parish, the churches which served as parishes were attached to the several châteaux of neighboring villages, Yeuere and St-Bonnet. In 1788 a see was created at Moulins; and des Gallois de la Tour, who exercised in that city the functions of vicar-general to the Bishop of Autun, was appointed bishop, but had not been consecrated when the Revolution broke out in 1792. The See of Moulins was restored in 1817, by Concordat of 1817, and had titulars from 1822. This new diocese was formed of dismembered parts of the Dioceses of Autun, Bourges, and Clermont-Ferrand. In this diocese the cantonal districts do not bear their geographical names, as in all other dioceses, but the name of a saint which becomes the patron of the deanery; the Vichy deanery, for instance, is called the deanery of St-Raphael. Joan of Arc came to Moulins in November, 1429, and from there wrote letters to all the important surrounding towns, asking for assistance. In 1604 Henry IV authorized the Jesuits to found a college at Moulins. The devotion to the Sacred Heart of Jesus was inaugurated in 1676 at the Visititation monastery of Moulins; St. Jane Frances de Chantal died in this convent in 1641. The monastery of Saint Lieu Sept Fons, in the present territory of the diocese, was founded in 1132 by monks of Citeaux on a site where there were seven springs (septem fontes) and a sanctuary of the Blessed Virgin; it was reformed in 1603 by Dom Eustache de Beaufort, abbot of Rieux Moutier de Roi, and the monastery was restored by the Trappist Dom Stanislaus Lapierre. St. Benoît Labre passed two months there in 1769. The Benedictine monastery of Souvigny, founded in 916, had a fine Gothic church, where
even yet the tombs of many Seigneurs de Bourbon can be seen. Saint Mayeu (Majolus), second abbot of Cluny, died at Souvigny in 994, and St. Odilo, third abbot of Cluny, died there in 1049. The town of Gannat arose about an ancient abbey of Augustinians; the town of St. Pourcain owes its origin to the monastery founded in the sixth century by the slave St. Pourcain (Portianus) who put a stop to the devastations of Thierry, King of Austrasia, during his campaign against Auvergne. The preacher Jean de Lenginies (1595-1666) and the schismatic Abbé Challet, founder of the "French Catholic Church" (1795-1857), were born in the territory of the present Diocese of Moulins.

The principal pilgrimages of the diocese are: Notre-Dame de St. Germain des Fossés; the body of the hermit St. Patrickus (sixth century) at Colombier; the relics of St. Mayeu at Souvigny; and the church of St. George at Bourbon l'Archambault, which possesses one of the largest known fragments of the Holy Cross, a relic given by St. Louis to his son Robert of Clermont. Before the application of the Association of Monasteries Law of 1901, there were Benedictines, Jesuits, Martinists, Lazarists, Redemptorists, Missionary Fathers of the Sacred Heart, and several orders of School Brothers in the Diocese of Moulins. At the beginning of the twentieth century the religious congregations of the diocese had charge of: 1 crèche, 15 day nurseries, 2 boys' orphanages, 10 girls' orphanages, 5 industrial rooms, 1 Magdalen hospital, 6 "houses of mercy" for the relief of the poor, 13 hospitals, 36 dormitories, 3 houses for the care of the sick in their own homes.

In 1908 the Diocese of Moulins counted 390,812 inhabitants, 31 parishes, 281 parochial priests, 55 vicarates.

GEORGES GOYAU.

Mount Carmel, Congregations of.—I. Daughters of Mount Carmel, founded in 1619 by Virginis Centurione (d. 1651), daughter of the Doge of Genoa and wife of Gasparo Grimaldi Braccioli (d. 1625), who about this time of famine gathered a number of abandoned children into a home, which she called Santa Maria del Refugio del Tribolati in Monte Calvario. Under her inspiration those associated with her in the work decided to lead a common life, follow the rule of St. Francis, and pledge themselves to the service of the poor and sick. They bound themselves, however, by no vows, but by a solemn promise of perseverance. Among the prominent Genoese who promoted the work of the sisters was the Marquess Emmanuele Brignole, through whose munificence a second house was founded in 1641, after which the sisters were often called "le suore Brignole". The congregation soon spread through northern Italy. In 1815 Pius VII invited the sisters to Rome, and in 1833 Gregory XVI assigned them a house on the Esquilino, near the church of St. Norbert, now the chief house of the institute.

II. Missionary Society of Mount Calvary, a congregation of secular priests, formed in 1633 by Hubert Charpentier to honour the Sacred Passion and to spread and maintain the Faith especially in regions under Huguenot control. The first houses were at Betharram in the Diocese of Lescar and at Notre-Dame de Ceraison in the Diocese of Auch. United with a similar association formed by the Capuchin Père Hyacinthe, at the instance of Louis XIII, on Mont-Valérien near Paris, the congregation received royal confirmation in 1650. Later the pastors of Paris were admitted to membership, and during Holy Week pilgrimages were made from different parishes of Paris to Mount Valérien. The society did not survive the Revolution.

FLORENCE RUDGE MCGAHAN.

Mount Carmel, Feast of Our Lady of—This feast was instituted by the Carmelites between 1376 and 1386 under the title "Commemoratio B. Mariae Virg., duplex" to celebrate the victory of their order over its enemies in obtaining the approval of its name and constitution from Honorius III on 30 Jan., 1226 (see Colvenerius, "Kal. Mar.," 30, "Summa Aurea," III, 737). The feast was assigned to 16 July, because on that date in 1251, according to the Carmelite traditions, the scapular was given by the Blessed Virgin to St. Simon Stock; it was first approved by Sixtus V in 1587. After Cardinal Bellarmine had examined the Carmelite traditions in 1609, it was declared the patronal feast of the order, and is now celebrated in the Carmelite calendar as a major double of the first class with a vigil and a privileged octave (like the octave of Epiphany, admitting solemn offices of the first class) under the title "Commemoratio solemnis B.M.V. de Monte Carmelo". By a privilege given by Clement X in 1672, some Carmelite monasteries keep the feast on the Sunday after 16 July, or on some other Sunday in July. In the seventeenth century the feast was adopted by several churches in the south of Italy, although its celebration in Carmelite churches, was prohibited in 1628 by a decree contra abusus. On 21 Nov., 1674, however, it was first granted by Clement X to Spain and its colonies, in 1675 to Austria, in 1679 to Portugal and its colonies, and in 1725 to the Papal States of the Church. On 24 Sept., 1726, it was extended to the entire Latin Church by Benedict XIII. The lessons contain the legend of the scapular (q.v.); the promise of the Sabbatine privilege was inserted into the lessons by Paul V about 1614. The Greeks of southern Italy and the Catholic Chaldeans have adopted this feast of the "Vestment of the Bl. Virgin Mary" (Nilles, "Kal. Mar.", II, 548, 665). The object of the feast is the purification of any person who professes themselves her servants by wearing her scapular (see Carmelites).

Mount of Olives. See Olivet, Mount.

Mount St. Mary's College, the second oldest among the Catholic collegiate institutions in the United States, is located at Emmitsburg, Maryland, within the limits of the Archdiocese of Baltimore. Its situation on high ground at the foot of the Maryland range of the Blue Ridge Mountains is remarkable for beauty and healthfulness while it affords ample opportunity for physical exercise. Mount St. Mary's Theological Seminary has been maintained in connection with the college since the foundation of the latter. The institution is directed by an association of secular clergymen who, with several lay professors, compose its faculty. Its material interests are controlled by a board of directors of which the Archbishop of Baltimore is ex officio, the president. For the academic year 1899-10 the teaching corps included 140 men, being enabled to teach in the various branches, with 298 students in the college and 54 in the seminary. Instruction is given in four departments: collegiate, academic, commercial, and modern languages. The degrees conferred are those of bachelor of arts and master of arts.

Mount St. Mary's College was founded in 1808 when Rev. John Dubois (q.v.) was transferred to Emmitsburg. Eight students formed the nucleus out of which the college developed. Its first president was Rev. John Dubois (q.v.) who had been labouring for some years in the neighbouring missions and had built a brick church on the slope above the present site of the college. In 1814 he was succeeded by Father (afterwards Bishop) Dubourg (q.v.), who directed Mother Seton also to Emmitsburg for the establishment of St. Joseph's Academy. Father Dubois had as his assistant Father Bruté (q.v.) who was consecrated first Bishop of Vincennes in 1814. Father Dubois himself became in 1826 Bishop of New York and was succeeded in the presidency by Rev. Michael de Burgo Egan (1826–28), Rev. J. F. McCerry (1828–29), and Rev. John B. Purcell (1830–33), later Archbishop of Cincinnati. In January, 1830, Father Purcell obtained from the General Assembly of Maryland a charter of incorporation for the college. This document prohibited the requiring of any religious test from any student who held the property of 1,000 acres in the Maryland to 1,000 acres and the total value of the college property to $25,000: all gifts or revenues in excess of this amount, after the payment of necessary debts, were to be held for the use of the State of Maryland. After the brief (five months) incumbency of Rev. F. Jamison during the latter half of 1833, Rev. Thomas L. Butler was chosen president (1834–38). During his administration, a new charter, still in force, was granted on 4 April, 1836, wherein the college authorities are empowered to confer all collegiate honours and degrees except that of doctor of medicine. Father Butler's successor was Rev. John J. McCaffrey, a man of great energy and zeal, whose long term as president (1838–1872) was marked on one hand by the growth and prosperity of the college, on the other by reverses that threatened its very existence. He was the builder of the new church at Emmitsburg which was dedicated in June, 1842. The cornerstone of Bruté Hall, for which $12,000 had been appropriated, was laid on 2 May, 1843, and, in 1852, the foundation of the tower was laid. In 1858 the college celebrated its semi-centennial with appropriate exercises in which many distinguished alumni took part.

The "Mountain" already counted among its graduates such men as John Hughes, later Archbishop of New York; William Quinlan, afterwards Bishop of New York and Cardinal; William Henry Elder, Archbishop of Cincinnati; William George McCloskey, president of the American College, Rome, and later Bishop of Louisville; Francis S. Chardot, president of the American College, Rome, and later Bishop of Vincennes; Michael Augustine Corrigan, later Archbishop of New York; Richard N. Whelan, first Bishop of Wheeling; Francis X. Garland, first Bishop of Savannah; Francis P. McFarland, third Bishop of Hartford.

Within three years after the celebration of its golden jubilee, the college was confronted by difficulties due to the outbreak of the war between the States. Although both North and South continued their war to the very door of the faculty as well as in the student body, the college as a whole remained neutral. But shortly after the beginning of hostilities, an exodus of students representing each section took place in such numbers that only seven were left for the graduating class of 1863, and only two for that of 1864. Moreover as parents of pupils of both sections feared for the safety of the pupils whom the college maintained during the four years of war, the financial standing of the institution was seriously compromised, and as a result the college at the end of the conflict was overwhelmed with debt. In June, 1872, Dr. J. J. McCaffrey, in consequence of failing health, with the consent and the approval of the President of the Senate of the University of the South, was succeeded by Father John McCloskey who was elected to the office with Rev. H. S. McMurrie as vice-president. Under their administration, the student body varied from 130 to 165. In 1877 Rev. John A. Watterson became president and retained the office until his promotion to the See of Richmond in 1880. He was succeeded by Rev. Michael J. Kenrick, who was a good financier and administrator. During the period of his administration, the debt was reduced by about one third, and the number of students increased to 280. The completion of the new gymnasium building was a notable feature of his administration.

Father John McCloskey once more took up the burden of the presidency, but only for a short time, as he died towards the close of 1880. In January, 1881, Rev. Wm. J. Hill, of Brooklyn, came to the college and petitioned to have a receiver appointed. The appointee was James McSherry, later Chief Justice of the Court of Appeals of Maryland. He turned over the affairs of the institution, in June, 1881, to Very Rev. William M. Byrne, Vicar-General of Boston, whose firmness, prudence, and wise economy restored prosperity to the college. His policy was continued by Rev. Edward F. Carlin, who was appointed bishop of Mobile in 1897. During his administration, McCaffrey Hall was completed (1894); and under his successor, Rev. Wm. L. O'Hara (1897–1905), Dubois Hall was completed, improvements were continued to accommodate the increasing number of students.

The presidency of his successor, Very Rev. Dennis J. Flynn (1905--), has been marked by the celebration, in October, 1908, of the centenary of the college. This occasion brought to the "Mountain" a large number of men prominent in ecclesiastical, professional, and public life who claim the college as their Alma Mater (for full account see "The Mountaineer", Oct. and Nov., 1908). It may indeed be said that the highest tribute to the college and the best proof of its efficiency is found in the careers of those whom it educated. Its service to the Church is shown by the fact that among its officers and graduates at least twenty-five have been bishops, including one cardinal and five archbishops—hence its well deserved title, "Mother of Bishops". But it has been not only to the hierarchy but to every department of useful citizenship a large number of men distinguished by ability and integrity (see partial list in "The Mountaineer", Oct., 1908, 34–43). Among the causes which explain this success, the most
Movable Feast. See Feasts, Ecclesiastical.

Movers, Franz Karl, exegete and Orientalist, b. at Koesfeld, Westphalia, 17 July, 1806; d. at Breslau, 28 Sept., 1856. He attended the gymnasium of his native town, and from 1822 to 1825 the gymnasium at Münster. The next four years he studied at the academy of Münster, taking up philosophy, theology, and especially Oriental languages under Laurens Reinke. In the autumn of 1829 he was ordained a deacon in Patmos, and on January 10, 1830, he began his Oriental studies for a short time at the University of Bonn. After that he remained as tutor for several years with Baron von Geyr at Rath, near Deutz. In 1833 he became pastor at Berkum, near Bonn, in 1839 extraordinary professor of Old-Testament exegesis at the University of Breslau, and in 1842 ordinary professor at the same university.

In the field of exegesis Movers published the following works: "Kritische Untersuchungen über die biblische Chronik, ein Beitrag zur Einleitung in das Alte Testament" (Bonn, 1834); "De utrusque recensionis Vaticiniornorum Jeremia, Graec Alexandrina et Hebraica musearchie, indole et origine Commentatio critica" (Hamburg, 1837); "Loci quidam biatorum canonis Veteris Testamenti illustrati, Commentatio critica" (Breslau, 1842); and various essays which appeared in theological magazines, especially in "Zeitschrift für Philosophie und katholische Theologie", published at Bonn. The first edition of the "Kirchenlexicon" contains a number of articles by Movers.

Movers showed great scholarship as an Orientalist and performed large and lasting services by his studies of the ancient Phoenicians. His chief work, "Die Phönizier", though never completed, is still an important contribution to the subject. It appeared in parts under separate titles, as follows: Vol. I, "Untersuchungen über die Geschichte und die Götterkulten der Phönizier, mit Rücksicht auf die verwandten Culte der Cartager, Syrer, Babylonien, Assyrier, der Hebräer und der Aegypter" (Bonn, 1841); vol. II, "Das phönizische Alterthum" in three parts, part I, "Politische Geschichte und Staatsverfassung" (Berlin, 1849); part II, "Geschichte der Colonien" (Berlin, 1850); part III, first half, "Handel und Schiffahrt" (Berlin, 1856). Movers gave a shorter compendium of the results of his researches in his article "Phönizien" in "Allgemeine Encyklopädie der Wissenschaften und Künste" (1848), section III, part XXIV, pp. 319-443. In addition to brief essays appearing in magazines, Movers published "Phönizien, Teil der Welt" (Breslau, 1845), "Die punischen Texte im Pfunnsul, Ploitus kritisch gewidmet und erläutert" (Breslau, 1846); part I, "Das punische Texte im Pfunnsul, Ploitus kritisch gewidmet und erläutert"; part II, "Das Opferwesen der Cartager, Commentar zur Opfer- tafel von Marseille". Another work to be mentioned is "Denkschrift über den Zustand der katholischen theologischen Facultät an der Universität zu Breslau seit der Vereinigung der Breslauer und Frankfurter Universität bis auf die Gegenwart" (Leipzig, 1845).

RHIANNON, Nachrichten von dem Leben und den Schriften Münder's (Münster, 1868), 223 seq.; KURTH in "Allgemeine Deutsche Biographie", XXI, 417 seq.; "Nielsen, Geschichte der katholischen Theologie" (Munich, 1856), 544-46; WENNER, Geschichte der apologistischen und polemischen Literatur (Schaffhausen, 1887), 7, 442-452.

FRIEDRICH LAURENT.

MOXOS INDIANS (MOYOS INDIANS).—According to one authority, they are named from Musu, their Quichua name; according to others, from the Moxos word, muha, erroneously thought by the Spaniards to be the tribal name. This collective designation is that of a group of tribes famous in the mission annals of South Aru, originally ranging through the forests and pampas of the upper Morona, extending east and west from the Cuapore (Itenes) to the Beni, and centring in the present Province of Mojos, Department of Beni, Bolivia. They numbered altogether at least 50,000 souls, in perhaps a hundred small tribes or sub-tribes, speaking at least thirteen distinct languages, each with dialects, viz., Moxo (spoken with dialectic variation by the Moxos proper, Baure, Ticomiere, and several small tribes), Paicone, Mopeciana, Icabicici, Mapicena, Movima, Cayubaba, Itonama, Sapiboconas, Cheriba, Rucotona, Mure, Canichana. Of these, the Moxos and Paicone, with all their dialects, belong to the widespread Arawakan stock, which includes also the Xavantes. The Mure (q.v.), confined to the lower valley of the Tocanaan to the Beni river; the Mure are an offshore from the Mura of the great Tupian stock of eastern and central Brazil; the Movima, Cayubaba, Itonama, Canichana, and Rucotona (Ocorona) represent each a distinct stock; while the others remain unclassified. Besides all these, there were gathered in the Jesuit mission at the eastern end of the Moxos, the Chiguriano, each of different language, from the southern Bolivian missions. Of them all, the Moxos proper were the most important.

The mode of life of the Moxos, in their primitive condition, was determined by their peculiar environment. During the rainy season, lasting four months, nearly the whole country is inundated, excepting certain elevated places, where the scattered bands made their temporary villages. As the waters retreat the hot sun generates pestilence in the low grounds along the rivers, while the prevailing oppressive heat is varied by spells of piercingly cold winds from the mountains which prevent the ripening of corn. The Indians therefore went up in the mountains, but subsisted chiefly upon fish and roots during the greater part of the year, and upon the wild game of the mountains when driven from the low grounds by the floods. They were thus compelled to a wandering habit, at the same time that they were skilful fishers and river men. The constant shifting also brought the bands into collision, and each tribe was constantly making war on its neighbours.

Their houses were low huts, occupied each by a single family, instead of being communal as in so many tribes. The larger villages had also well-built "townhouses" for the celebration of tribal functions. They slept upon mats upon the ground or in hammocks, with a smouldering fire close at hand to drive away the swarms of mosquitoes and other insects. They ate when they could find food, without regard to time, feasting equally upon putrid fish taken from stagnant pools, and upon human flesh of prisoners taken in war, for all or nearly all the tribes were cannibal. Of game, the monkey was their favourite food. They used dogs for hunting, and they were addicted to intoxicating drinks, brought about by a fermented liquor of their own manufacture, and their frequent dance festivals always ended in general intoxication, frequently with bloody encounters in revenge for old injuries. Notwithstanding the generally rude culture, the Moxos proper and Baure excelled in hammock-weaving,
boat-making, pottery, and music, their favourite musical instrument being a sort of pan-pipes sometimes six feet in length. The Moxos had also a method of picture writing. The Canichana, even fattened prisoners for their cannibal feasts and afterwards fashioned their skulls into drinking cups. In some cases prisoners were held as slaves. Unlike the Iroquois, who exorcised the ghosts of their murdered victims, the Moxos moved away from the spot of the sacrifice to escape the vengeance of the dead. The savage Canichana in particular may have been put after coming into the missions they would sometimes steal children secretly for this purpose, even casting lots among themselves to decide who should give up a child, until the missionaries took steps to note each birth immediately upon delivery.

Marriages were arranged between the parents, usually without consulting the young people, and polygamy was permitted, although not common, but adultery was considered disgraceful. The wife was the mistress of the household and always chose the camping place. If the mother died the infant was buried alive with her, and if twins were born, one also was always buried. The woman who suffered miscarriage was killed by her own husband. The helpless aged were put to death by their children, and put through a severe course of training and initiation involving a year's abstinence from all animal food, together with a battle with a jaguar—regarded as an embodied god—until wounded, and thus marked, by the divinity. Their principal festivals were regulated by the new moon, beginning with a day's fast and ending with a night dance and drinking orgy.

The earlier attempts to missionize the tribes of central Bolivia met with no success. About the year 1873 the Moxos province was brought to the attention of the Jesuits of the college at Lima by José del Pilar Baraza, afterwards so noted as a missionary, at once asked and obtained the permission to undertake their conversion. In 1874, accompanied only by Brother Castillo and some Indian guides, he entered their country from Santa Cruz by way of a twelve-days' canoe voyage down the Mamoré river. In four years he had won their love and nearly mastered the language, when serious illness compelled his return to the healthier climate of Santa Cruz. He employed his convalescence in learning weaving, in order to induce them to clothe themselves, as a beginning in civilization. In the meantime, however, he was assigned to labour
among the Chiriguano, among whom he spent five years before he was permitted to return to his first charges. In 1659 he founded the first mission, Loreto, followed in rapid succession by Trinidad (1657), San Ignacio (1659), San Xavier (1690), San José (1691), San Francisco de Borja (1693), the six missions soon containing altogether nearly 20,000 Indians, Loreto alone in 1691 having 4000. Later missions were: San Pedro (the capital, 1698), Santa Ana, Fuerte, San Magdalen, Rio San Ramon, Conception, San Simón, San Joaquin, San Martín, San Luis, San Pablo, San Juan, San Nicolas, Santos Reyes, San Judas, Santa Rosa I (del Itenes), San Miguel, Patrocinio, Santa Rosa II, Desposorios, Santa Cruz. Of these, the two missions of Santa Rosa del Itenes and San Miguel occupied chiefly by the Mure, Masave, and Bourbon tribes (all were entirely broken up by the raids of the Portuguese slave-hunters (see Guarani Indians; Mameluco) subsequent to 1742, and the survivors removed to other foundations. Wars, epidemics, and removal led to the abandonment almost of San Luis, San José, San Pablo, Patrocinio, and San Juan. Santa Rosa II (1765), Desposorios, and Santa Cruz (de la Sierra) were the latest; and were occupied by Siriono, Chiriguano, and Chiquito, south of the Moxos province proper. The whole number of missions at one time was about twenty, containing in 1736 about 30,000 converts, increased to nearly 50,000 before the period of the Jesuit period, but again reduced to 20,345 souls in eleven missions in 1797, thirty years after the expulsion of the Jesuits.

Baraza himself was their great apostle and civilizer. Besides teaching the principal languages and adapting himself to the Indian life so that he was able to penetrate every part of the province and thus make successful discovery of a shorter mountain passage to Peru, he introduced cattle, weaving, agriculture, carpentry, and brick-making. The mission churches reared by the Indians under his supervision rivalled those of Peru. At last after twenty-seven years of labour he was treacherously murdered at the age of sixty-one, on 16 September, 1702, among the then unconverted Baure, a tribe of considerably higher native culture than the Chiriguano, living in palisaded villages on the eastern border of the province.

On the expulsion of the Jesuits from Spanish America in 1767 the Moxos missions were turned over to the Franciscans, under whom they continued into the modern period. The population has been greatly reduced, first by the slave raids and epidemic fevers in the earlier times, and more lately by the constant drain of the Indians to the rubber forests of Brazil, whence few of them ever return, their superiority as boatmen rendering their services in demand as far as the Amazon. They are comfortably dressed in clothing made by themselves from bark fibre. In physique they are robust, and taller than most of the Bolivian tribes. They are distinguished by a remarkably erect and upright character, and great industry. They give up less time to merry-making than their southern kinsfolk, and are generally of more laborious habits, hence their industries are greatly developed, and although living far from the large towns and markets, the other Indians as weavers, builders and wood carvers" (Reclus). They are zealous Catholics, entirely under the spiritual authority of their priests, and noted for their voluntary penances, as were their convert forefathers two centuries ago. Under the two principal names of Moxos and Baure, they number now about 30,000, of it including several hundreds of Caracan, Movima, etc.—included in the Moxos missions, but still retaining their distinct name and language.

For all that relates to the primitive condition and early mission history of the Moxos tribes, our principal authorities are the journals of the Jesuits CASTILLO, EDER, and EUSCILLI. For the language of the Moxos and its cognates with enough grammar and vocabulary, our principal source is the Arte of the Jesuit MARAN, B #LIVIAN, "Descripción geográfica de la República de Bolivia, I. Las Provincias de Moxos y Chiquitos (La Paz, 1906); BRAYTON, The American Race (New York, 1901); CASTILLO, Relaciones de la Provincia de Moxos en BALLESTIN, supra; EDER, Descripción Provincias Montaunias en Regio Peruana (Buda, 1791); EUSCILLI, La Misión de los Moxos (1698); GRAN, Exploration of the Valley of the Amazon, part II (Washington, 1854); smaller tribes: HEATH in Kansas City Review of Science, VI (Kansas City, 1883); HERRAN, Catálogo de las Lenguas, I (Madrid, 1900); LETO, Relaciones, 1-11 (Paris, 1707), especially letter of ARLET on Carancho tribe and mission of SanFalsy, Ensayo de la lengua moza, con vocabulario y cartulario (1701); reprinted, Leipzig, 1904); MARAN, Tribes in the Valley of the Amazon in Jour. Amer. Instute, XXIV (London, 1886), a brief notice: Moxos in Bibliotheca Boliviana; Catálogo del Archivo de Moxos (Santiago de Chile, 1888); OBRION, L'Homme American (II, Paris, 1929); PAIS, La Plata, the Argentine Confederation and Paraguay (New York, 1859); RECLUS, The Earth and its Inhabitants: South America, I. Los Andes Regiones (New York, 1894); SOUTHW, History of Brazil, III (London, 1819); Simplicidad educativa y progresiva de la república de Bolivia (La Paz, 1803); PERERA in Bolivar, published by the International Bureau of the American Republics (Washington, D.C., 1901).
he was never a leader in the struggle for the Catholic cause. In Austrian politics he soon abandoned his straightforward position and became reconciled to the modern trend, warmly defending the Concordat. Among his writings, in which he devoted the greatest attention to careful research and lucid arrangement, may be mentioned "Der Lehrbuch des Staatsrechts" (Ratisbon, 1840-46); "Die dempeiments matrimoni" (Munich, 1827); "Die Ehe und die Stellung der katholischen Kirche in Deutschland" (Landschung, 1830); "Das Ehrehheit der Christen in der morgenländischen und abendländischen Kirche bis zum Ende der Kulturen nach den Quellen dargestellt" (Ratisbon, 1833), by all means his best work; "Grundlinien einer Philosophie des Rechts vom Katholischen Kirchenrecht mit besonderer Rücksicht auf Oesterreich" (Innsbruck, 1857), which he edited as far as the fifth volume. Biographisches Lexicon der Kaiserthums Oesterreich, XIX (1858), 165-187; Allgemeine deutsche Biographie, XII (1859), 420.

Patricius Schlager.

Moye, John Martin, Venerable, priest of the Diocese of Metz, founder of the Sisters of Divine Providence (q.v.), missionary in China, b. at Cutting, Lorraine, 27 January, 1730; d. at Trier, 4 May, 1793. He was the sixth of the thirteen children of John and Maria. His elder brother, a seminarian, taught him the first rudiments of Latin, and he completed his classical studies at the College of Pont-à-Mousson. He then studied philosophy at the Jesuit College of Strausburg, and entered the theological Seminary of St-Simon, Metz, in the fall of 1751. Ordained a priest 9 March, 1754, he was appointed vicar in the episcopal city the same month. His great zeal for souls attracted attention; many pious ladies placed themselves under his firm and wise direction. This enabled him to find some select souls for the establishment of schools for country children whose education he had much at heart. He began the work in 1763; in 1767 in spite of the ill-will existing in that period among a few of his fellow priests, the Congregation of the Sisters of Divine Providence was founded. That same year he was appointed superior of the little seminary of St. Didier. Leaving the care of his sisterhood to two friends, Father Moye now determined to act upon his long delayed desire to become a missionary. In 1789 he joined the Séminaire des Missions de la Congrégation de Paris, and in 1773 he was at work in Oriental Szechuan, China. Nine years of hard labour, frequently interrupted by persecution and imprisonment, made him realize the necessity of native help. In 1782 he founded the "Christian Virgins", religious women following the rules of the Congregation of Providence at home, devoted to the care of the sick and to the Christian instruction of pagan Chinese women and children in their own homes. After a hundred years of success, they are still active in the Chinese mission. Exhausted by labours and sickness, Father Moye returned to France in 1784. He resumed the direction of the Sisters of Divine Providence and evangelized Lydia. In the year of 1777-78, at the outbreak of the great insurrection, the Revolution of 1791 drove him into exile, and with his Sisters he retired to Trier. After the capture of the city by the French troops, typhoid fever broke out, and, helped by his Sisters, he devoted himself to hospital work. He contracted the virulent disease and died, a martyr of Christian charity, 1793. The spot where he was buried is now a public square.

Leo XIII declared John Martin Venerable and authorized the publication of the cause of his beatification 14 January, 1891.

Marchal, Vie de M. l'Abbé Moye (Paris, 1872); Weil, Le souv. de l'Abbé, le 1er Janvier 1891; Puy-Pey, Le Directoire des Sœurs de la Providence (Paris, 1887); Rohrbacher, Histoire de l'Eglise (Paris, 1842-48, 8th ed., 1901); Lettres édifiantes (Paris).

Camillus P. Maes.

Moylan, Francis, Bishop of Cork, b. at Cork, 1759; d. in 1815. He was the son of a rich merchant. As the penal laws made it impossible for him to obtain a suitable education at home, he was sent to Paris, and educated there. His father desired that he should adopt a mercantile calling; but young Moylan's vocation being for a religious life he wished to join the Carthusians. Delicate health, however, stood in his way, and after finishing his course at the University of Toulouse, where he was graduated as doctor of theology, he was ordained priest in 1761 and for some years laboured in Paris. Returning to Cork he was appointed pastor of St. Finbarr's in the city, and remained there till 1775, when he became Bishop of Kerry. In 1787 he was transferred to the See of Cork and continued to rule that diocese till his death. Like Dr. Troy of Dublin, Dr. Moylan had no sympathy with violence as a means of redressing wrong, and therefore he condemned the Whiteboys; and, in 1796, he urged his flock to resist the French, when Hoche's fleet was in Bantry Bay. Dr. Moylan had a share in the establishment of Maynooth College and witnessed its final triumph. He was President of the Union, and was one of the bishops who agreed to the "veto" in 1799. He regretted, however, having done this, for he found that he had been tricked by Pitt and Castlereagh, and when the veto question was revived (1814) he opposed it. During his time in Cork, the Christian Brothers were introduced and also the Ursulines and Presentation Nuns. He was indeed for many years the trusted friend and adviser of Nano Nagle.

Hutch, Life of Nano Nagle (Dublin, 1879).

E. A. D'Alton.

Moylan, Stephen, American patriot and merchant, b. in Ireland in 1734; d. at Philadelphia, 11 April, 1811. He received his education in Ireland, but resided for some time in England, and seems to have travelled considerably on the Continent before he came to Philadelphia in the capacity of a broker. He was commissioned as Captain of the Continental Army. Restless again, seemingly, for a more direct participation in the conflict, he resigned this position in the following October, raising at once a troop of light dragoons, the First Pennsylvania regiment of cavalry, of which he was colonel. With this troop he served at Valley Forge through the dismal winter of 1777-78, at the Battle of Monmouth, on the Hudson River, and in Connecticut, with Wayne in Pennsylvania, and rounded out the full measure of his service with General Greene in his southern campaign at the close of the war. In acknowledgment of his indefatigable energy and bravery, before the war closed, in 1782, he was brevetted brigadier-general. After the successful termination of the war he quietly
resumed his mercantile pursuits in Philadelphia. In 1792 he was Register and Recorder of Chester County, Penn., and was Commissioner of Loans of Pennsylvania for a few years before his death. Duly allowing for the over excitability of the times, the eulogy of a fellow patriot quoted by Irving (Life of Washington, 111, ch. 30) remains a no uncertain estimate of esteem: "The world has lost not only at the time of my visitation, and I might add, in the universe," explains Wilkinson, "a man of more sublime sentiment, or who combined with sound discretion a more punctious sense of honour, than Colonel Moylan." General Moylan was one of the organizers of the Friendly Sons of St. Patrick in Philadelphia in 1771, and for a time was in the service of his native country. One of his brothers became Bishop of Cork, Ireland, and another, John, acted during the war as United States Clothier General.

JARVIS KEELER.

Mozambique (Mozambique), the former official and still usual name given to the Portuguese possessions on the eastern coast of Africa opposite the island of Madagascar. Portuguese East Africa extends from Cape Delgado (10° 41' S. lat.) to the south of Delagoa Bay (25° 58'), that is about twelve hundred miles. It is bounded on the north by German East Africa; on the east by the Mozambique Channel, on the south by the Mozambique Channel, on the west by the Mozambique Channel, on the north by the Mozambique Channel, and on the west by the Indian Ocean, and on the west by British South and Central Africa. It is the second largest Portuguese colony, its area approximating 293,000 square miles (that of Portuguese Angola is about 400,000); its population is between two and three millions. The coasts, in general low and marshy, are intersected here and there by rivers which terminate in almost every instance in muddy deltas or estuaries choked with sand. The low-lying tract between the Limpopo River and the delta of the Zambezi is barren, sprinkled with lagoons, malarial, and infested by the terrible trychee fly, which renders cattle-raising, the one industry otherwise suited to parts of this area, impossible. Between the Zambezi and the Rovuma the soil is very fertile, especially in the basin of the former river, where the land is fertilized by periodic inundations and produces abundant crops. The climate of the regions along the coast is torrid, unhealthy, and subject to sudden and great variations; the mean annual temperature is very high (76° at Beira). As one proceeds inland the climate even becomes much more favorable, attaining a great altitude in the mountains which border on Lake Shirwa. In the interior both soil and climate are favourable to cultivation and European life; the chief crops are millet, maize, rice, wheat, sesame, earth-nuts, sugar-cane, cocoa, and tobacco. The large forests of the interior yield ebony, sandalwood, a number of other valuable timber timbers, and india-rubber. Besides an unusual variety of game, the fauna include the elephant, antelope, buffalo, lion, leopard, and, in certain districts, the rhinoceros and the hippopotamus. The mineral deposits, including coal, iron, and gold, are of exceptional importance, but not yet fully investigated.

Long before the arrival of the first European explorers, the Arabs, taking advantage of the regularity of the monsoons which greatly facilitated their voyages, carried on a brisk commerce with this portion of East Africa, and were in possession of the island of Mozambique when it was discovered by Vasco de Gama in 1488. Sofala had been already discovered by Corte Real of Portugal in 1489. The Portuguese had at first contended with the fierce opposition of the Arabs who dominated all the adjacent country. In 1505 Albuquerque established at the mouth of the Sofala River the first European settlement. Vasco de Gama captured the island of Mozambique in 1506, and thanks to his exertions and those of other Portuguese captains (Saladha, Almeida, and Tristão da Cunha) the neighbouring country was quickly brought under Portuguese rule. Although the Portuguese sent an expedition up the Zambezi about 1565 and occupied Tete in 1632, they seem to have paid scant attention to the interior. In 1607 and 1608 the Dutch made unsuccessful attempts on Mozambique, but in 1638 the town and fort of Mocambique was captured by the Dutch, which was restored to the Sultan of Maccota, reduced the Portuguese territory to the country south of Cape Delgado. The waning political importance and power of Portugal rendered efficient colonization and control impossible. To the great fleeciness of the authorities at home is due the late continuation of the slave trade between Mozambique and the colonies. One of his brothers became Bishop of Cork, Ireland, and another, John, acted during the war as United States Clothier General.

The explorations of Serpa Pinto in 1877 and subsequent years also led Portugal to take a keener interest in its possessions. In 1875 the dispute between England and Portugal for the possession of Delagoa Bay was decided by the arbitrator Marshal MacMahon, in favour of Portugal. The result of a subsequent collision between English and Portuguese claims was less favourable to Portugal. According to the treaty of 1875 by which the southern boundary of Angola was fixed between Portuguese and British South Africa, the territory situated between her possessions on the east and west coasts of Africa; but when in 1889 England proclaimed its protectorate over Matabeleland, Mashonaland, Nyassaland etc., Portugal, notwithstanding the immense indignation aroused by the occurrence at Lisbon, had to acquiesce. In 1889 lack of capital compelled the government to lend with administrative authority a large portion of the colony to the Mozambique and Nyassa Companies; the former controls the Manica and Sofala regions, and the latter the territory enclosed between the Rovuma, Lake Nyassa, and the Lurio River. It is generally accepted that the Anglo-German Secret Treaty of 1898 dealt with the partition of Mozambique in the event that Portugal should be unable to extricate itself from its financial difficulties. The chief exports of Mozambique are rubber, sugar, various ores, wax, and ivory; it imports mainly cottons, hardware, spirits, beer, and wine. Lourenco Marques (9849 inhabitants), the capital of the colony, and Beira are thriving ports. The chief exports are slavers, cotton, and tobacco; the largest number of slave traders is from Lisbon, from St. Sebastian of Mozambique, situated on the island of the same name, has diminished greatly in importance since the abolition of the slave trade. The college built by the Jesuits in 1670, which was made the governor's residence after the suppression of the order, is one of the very few buildings of importance. The early explorers were interested in their voyages by Franciscan fathers who founded under Alves of Coimbra the first mission in Mozambique in 1500. In 1560, after the arrival of the Jesuits, a glorious future seemed to await the mission, the King of Inhambane and the Emperor of Monomotapa being baptized with numbers of their subjects. The Dominicans also laboured for a period in this colony, their most illustrious representative being João dos Santos (d. 1622), whose work, "L'Ethiopía oriental e varia historia de cousas nataveis do Oriente", was long authoritative on the geography and ethnology of the country. The Jesuits returned in 1610 and were received by the Court, and the British also, with the exception of a few, had not had many settlers. The operation was, however, attended with great difficulties owing to the fickleness of the natives, the opposition of the Mohammedans, the insularity of the climate, and the irregular communication with Europe. The powerlessness of Portugal to exercise a firm control and the demoralizing effects of the slave trade resulted in an equally low standard of morals in the case of
This had not been the case somewhat earlier. In 533
Profuturus, Bishop of Braga and Metropolitan of the
Suevic kingdom, had consulted Pope Vigilios on
theological matters. This document contains infor-
mation concerning the Roman usages in the
Mass and in baptism. The Council of Braga (561), held
at the time of the conversion of the Arian Suevi to
Catholicism, decided (cc. iv, v) that the orders of
Mass and baptism obtained from Rome by Profu-
trus should be exclusively used in the kingdom.
This probably continued as long as the Suevi re-
mained independent, and perhaps until the conver-
sion of the Visigothic king Recared to Catholicism in
589.

Until this date the kings and the Teu-
tonic ruling class were Arians, the native Spanish
population was largely Catholic, and the rite—which
was possibly revised and added to by St. Leander of
Bourges and the first Council of Toledo in 589—was
described and perhaps arranged by his brother and suc-
cessor, St. Isidore (d. 636), and regulated by the
Fourth Council of Toledo in 633—was no doubt that
previously in use among the Spanish Catholics. This
is confirmed by the scanty liturgical decrees of the
various Spanish councils of the sixth century. What
Spanish rite we have here may originate in the
Christian Spain, the rite continued to be used by the
Christians in the Moorish dominions who were known
as Mozarabes or Musulrubes. The form Mostdrabes is
also found. The derivation of the word is not quite
clear; in fact, it was used in 633, 636, in the chapel of
San Salvador, and also in the cathedral of Salamanca.
The name is not a good one.

The rite originated in the fact that, after its abolition in
Christian Spain, the rite continued to be used by the
Christians in the Moorish dominions who were known
as Mozarabes or Musulrubes. The form Mostdrabes is
also found. The derivation of the word is not quite
clear: in fact, it was used in 633, 636, in the chapel of
San Salvador, and also in the cathedral of Salamanca.
The name is not a good one.
St. Moraleda y Esteban says (El Rito Monstrabe), the Words of Consecration to the Roman Use. This condition is still observed, but whether that has always been the case, and how far it is now observed, is a matter of some doubt.

The old Spanish form is as follows:

"ne antiquitas ignoretur", as Leslie says in his notes to the Mozarabic Missal—but the Roman is used in actual practice.

Of the existing manuscripts of the rite, though a very few may possibly belong to the ninth century, almost all are of the eleventh century. The oldest manuscript is that belonging to John X and the introduction of the Roman Rite in the second half of the eleventh century, during which period the old Spanish Rite held undisturbed possession of the whole of Spain, whether under Christian or Moors rule. During these centuries the Christian kingdoms were gradually driving back the Moors. Besides Asturias and Navarre, which had never been conquered, Galicia, Leon, and Old Castile had been regained, and the Kingdom of Aragon had been formed.

In 1064 Cardinal Hugo Candidus was sent from Rome by Alexander II to abolish the Spanish Rite, some vague attempts in that direction having been already made by his predecessor Nicholas II, who in 1059 abolished it in Milan. The centralizing policy of the popes of that period included uniformity of liturgical practice. The Spanish kings and clergy were against the change, and Bishops Munio, of Calahorra, Eximeno of Oca, and Fortunio of Alava were sent to Italy with Spanish office-books, including a Liber Ordinum from Albelda, which was never abolished. These books, containing the Rite of Milan, were carefully examined by the Council of Mantua (1067), and were pronounced not only free from heresy but also worthy of praise.

But in Aragon King Sancho Ramirez was in favour of the change, and on 22 March, 1071, the first Roman Mass was sung in the presence of Cardinal Hugo Candidus and his companion clerics. The Rite was not abolished by Sancho (near Jaca, at the foot of the Pyrenees, and the burial place of the early kings of Aragon). The Roman Rite was introduced into Navarre on the accession of Sancho of Aragon to the throne in 1074, and into Catalonia a little later. Meanwhile Alfonso VI became King of Castile and Leon, and St. Gregory VII became pope. A solemn framework was given to the struggle by St. Hugh of Cluny, and by his first wife Agnes, daughter of William, Duke of Gascony and Guienne and Count of Poitiers, introduced the Roman Rite into Castile and Leon in 1077. This was resisted by his subjects, and on Palm Sunday, 1077, according to the "Chronicon Burgense", occurred the incident of "El Juicio de Dios", in which a Toledan, says the chronicler,—were chosen to fight "pro lege Romana et Teletana." The champion of the Spanish Rite, Juan Ruiz de Matansas, who was the victor, was certainly a Castilian, but it is improbable that the champion of the Roman Rite, whose name is not recorded, was a Toledan, and the Annals of Castile say "the Toledan was the other of the king's party." The "Chronicon Malloceense", which alleges treachery, calls the latter "miles francorum", and at the later ordeal by fire in 1090 the Roman Rite is called impartially "romano", "frances", or "gallicano". It is said that two bulls, one named "Roma" and the other "Toledo", were set to fight, and there also the victory was with Toledo.

But, in spite of the result of the trials by battle, Alfonso continued to support the Roman Rite, and a Council of Burgos (1080) decreed its use in Castile. In 1086 Toledo was taken and the question of rites arose again. The Mozarabic Christians, who had made peace with the Toledans, again, and as well, resisted the change. This time another form of ordeal was tried. The two books were thrown into a fire. By the time the Roman book was consumed, the Toledan was little damaged. No one who has seen a Mozarabic manuscript, with its extraordinarily solid vellum, will adopt any hypothesis of Divine intervention, nor is there the slightest evidence to show. The old Spanish form is given in the modern books—"ne antiquitas ignoretur", as Leslie says in his notes to the Mozarabic Missal—but the Roman is used in actual practice.

All new churches were to use the Roman Rite, but in the six old churches, Sts. Justa and Rufina, St. Eulalia, St. Sebastian, St. Mark, St. Luke, and St. Torquatus, the Mozarabes might continue to have their old rite, and might hand it on to their descendants. Flores mentions also the Ermita de S. Maria de Alfìen, which is probably the church of St. Mary which Neale says "disappeared, we know not how, some centuries ago." But the rite still continued in the Moorish dominions, as well as in certain monasteries, apparently, according to Rodrigo Ximenes, Archbishop of Toledo (1210-49), even in the Christian kingdoms. When King James of Aragon conquered Valencia in 1238, he found there Mozarabic Christians using the old rite, and the same apparently happened when the Muslims and Amb Anam were conquered by Ferdinand I in 1238. When Ferdinand and Isabella took Granada in 1492, there were certainly some Mozarabic Christians there, as well as Christian merchants and prisoners from non-Moorish countries, but whether the Mozarabic Rite was used by them does not appear. With the disorganisation which began with the fall of Granada, it disappeared.
