</table>
Tables of Abbreviations.

tr. ................. translation or translated. By itself it means "English translation", or "translated into English by". Where a translation is into any other language, the language is stated.

tr., tract .......... tractate.
v. ................. see (Lat. vide).
Ven ................. Venerable.
Vol ................ Volume.

II.—Abbreviations of Titles.
Acta SS. .......... Acta Sanctorum (Bollandists).
Ann. pont. cath. ....... Battandier, Annaire pontifical catholique.

Dict. d'arch. chrét. .. Cabrol (ed.), Dictionnaire d'archéologie chrétienne et de liturgie.
Dict. de théol. cath. .. Vacant and Mangenot (ed.), Dictionnaire de théologie catholique.
Kirchenlex. .......... Wetzler and Welte, Kirchenlexicon.
P. G. ................ Migne (ed.), Patres Graeci.
Vig., Dict. de la Bible.Vigouroux (ed.), Dictionnaire de la Bible.

Notes I.—Large Roman numerals standing alone indicate volumes. Small Roman numerals standing alone indicate chapters. Arabic numerals standing alone indicate pages. In other cases the divisions are explicitly stated. Thus "Rashdall, Universities of Europe, I, ix" refers the reader to the ninth chapter of the first volume of that work; "I, p. ix" would indicate the ninth page of the preface of the same volume.

Notes II.—Where St. Thomas (Aquinas) is cited without the name of any particular work the reference is always to "Summa Theologiae" (not to "Summa Philosophiae"). The divisions of the "Summa Theol." are indicated by a system which may best be understood by the following example: "I-II, Q. vi, a. 7, ad 2 um" refers the reader to the seventh article of the sixth question in the first part of the second part, in the response to the second objection.

Notes III.—The abbreviations employed for the various books of the Bible are obvious. Ecclesiasticus is indicated by Ecclus., to distinguish it from Ecclesiastes (Eccles.). It should also be noted that I and II Kings in D. V. correspond to I and II Samuel in A. V.; and I and II Par. to I and II Chronicles. Where, in the spelling of a proper name, there is a marked difference between the D. V. and the A. V., the form found in the latter is added, in parentheses.

THE CATHOLIC ENCYCLOPEDIA

M

M A S S, M U S I C O F T H E.—Under this heading will be considered exclusively the texts of the Mass (and not, therefore, the Asperges, Vidi aquam, Litanies, Prophecies, etc., which in the Roman Missal are found more or less closely associated with the Mass in certain seasons of the Church Year), which receive a musical treatment. These texts comprise those which are sung (that is, recited in musical monologue with occasional cadences or inflections) by the celebrant and the sacred ministers (who will be referred to as priest, deacon, and sub-deacon) and which are styled "Accentus"; and those which are assigned to the choir and which are styled "Concentus". For the sake of convenience of reference the Concentus may be divided into the following classes: first, those which are found in the section of the Roman Missal under the heading "Ordinarium Missae" (namely, the Kyrie, Gloria, Credo, Sanctus, Benedictus, Agnus Dei) and which will be briefly referred to as the Ordinary; second, those texts which are found under the headings "Proprium de Tempore", "Proprium Sanctorum", "Commune Sanctorum" (namely, the Proper of the Mass and the Proper of the Day, namely: Introit, Kyrie, Sequence, Tract, Offertory, Communion) and which will be referred to briefly as the Proper, a serviceable but ambiguous term frequently used to describe these texts.

The "Graduale Romanum" (together with the Missal) provides plain-song melodies for all the texts stated above. These texts are found in the present typical edition, styled the Vatican Edition, of the "Roman Gradual". The Concentus, if sung to plain-song melodies, must also be in the approved form found in the Vatican Edition of the "Gradual"; but these texts may employ "modern" (sacred) music. Indeed, the use of music in the sacred liturgy is modern, and the serviceable distinction will be employed throughout this article: chart, chanting, chant, will refer to plain-song melodies; music, musical, to figured music.

I. Accentus.—These chants should never be accompanied by the organ or any other instrument. The priest intones the Gloria (Gloria in excelsis Deo) and the Credo (Credo in unum Deum). The choir must not repeat these words of the intonation, but must begin with Et in terra pac, etc., and Patrem omnipotentem, etc., respectively. The priest also sings the Collects and post-Communions and the Dominus vobiscum and Oremus preceding them. Amen is sung by the choir at the end of these prayers, as also after the Per omnia secuta seculum preceding the Preface, the Pater noster and the Pax Domini...vobiscum. The choir responds with Et cum spiritu tuo to the Dominus vobiscum preceding the prayers, the Gospel, and the Preface. Both of these choir responses vary from the usual monotone when occurring before the Preface; and the Amen receives an upward inflection before the Pax Domini, etc. Indeed, the Dominus vobiscum and its response vary in melody for all the three forms of the Preface (the Tonus Dominus, the Tonus Perialis, the Tonus Solennior found in the "Cantus Missalis Romanii"), as do also the chants and responses of the Sursum corda, etc., preceding the Preface. It would be highly desirable that choirs be well practised in these special "tones" since exact correspondence with the form used by the priest is not only of esthetic but of practical value; for any deviation from one of the "tones" into another may easily lead the priest astray and produce a lamentable confusion of forms which ought to be kept distinct.

At the end of the priest's chant of the Pater noster the choir responds with Sed libera nos a malo. The sub-deacon chants the Epistle, the deacon the Gospel. The respective responses (Deo Gratias and Laus tibi Domine) are merely to be recited by the Pater noster, Epistle, Sequence, Tract, Offertory, Communion and Mass, and are not to be sung or recited by the choir. This is clear from the fact that the "Roman Gradual" does not assign any notation to these responses (see "Ecclesiastical Review", Nov., 1903, p. 539). To the deacon's chant of the Ite missa est (or Benedictus Domino) the choir responds with Deo gratias. A choral recitation of the Kyrie, Gloria, Credo, Sanctus, Benedictus is permitted if the organ is to supply for this response wherever this is customary (see "Church Music", May, 1909, 175-6), provided the response be "recited" in a clear voice (see "Church Music", May, 1907, 229). The chants melodies for all these choir-responses are given in the "Roman Gradual" under the heading "Toni Communes Missae". It will be apparent that these melodies are fitted to harmonize the chant-responses and even to depart in some details from the melodies officially assigned to the chant-responses. In summing up the legislation in this matter, the "Motu Proprio" says (No. 12): "With the exception of the melodies proper to the celebrant at the altar and to the ministers, which must be always sung only in Gregorian chant, and without the accompaniment of the organ, all the rest of the liturgical chant belongs to the choir of Levites and, therefore, singers in church, even when they are laymen, are really taking the place of the ecclesiastical choir. Hence the music rendered by them must, at least for the greater part, retain the character of sacred music." But while the choir is thus permitted to respond in music or in harmonized chant, good taste might suggest the desirability of responding in unharmonized chant according to the exact melodies provided in the "Toni Communes Missae".

Inasmuch as the Vatican "Gradual" is meant merely for the use of the choir, the complete Accentus of the celebrant and ministers will not be found there. The Missal contains these chants in full (except, of course, the chants for the prayers, prophecies, etc., which are...
to be recited or sung according to certain general forms which are indicated in the "Toni Com. Mis."

However, a number of changes made in the Missal melodies by order of the Vatican Commission on Chant have been comprised in a separate publication entitled "Cantus Missalis Romani" (Rome, Vatican Press, 1907), which has been edited in various styles by competent liturgical scholars. Henceforth no publisher is permitted to print or publish an edition of the Missal containing the melodies in use heretofore, but must insert the new melodies according to the scheme found in the "Cantus Missalis Romani". Some of the new melodic forms are to appear in the places occupied, in the typical edition of the Missal (1909), in the revised form of the liturgy in use at present, while some are to be placed in an Appendix.

The Decree of 8 June, 1907, contains the following clauses: (1) Dating from this day, the proofs containing the new typical chant of the Missal are placed by the Holy See without special conditions, at the disposal of the publishers, who can no longer print or publish the chant of the Missals in use at present. (2) The new typical chant must be inserted in the new editions exactly in the same place as the old. (3) It may, however, be published separately or it may be placed at the end of the older Missals now in print, and in both of these cases may bear the general title, "Cantus Missalis Romani iuxta editionem Vaticanam". (4) The Text of the missal and the rubrics, after being printed with the words only, without chant notation. (5) The intonations or chants ad libitum, Asparges me, Gloria in excelsis, and the more solemn tones of the Prefaces must not be placed in the body of the Missal, but only at the end, in the form of a supplement or appendix; to them (the ad libitum intonation or chants) may be added, either in the Missals or in separate publications of the chanted parts, the chants of the "Toni communes", already published in the "Gradual", which have reference to the sacred ministers. (6) No change is made in the words of the text or in the rubrics, which, therefore, must be reproduced without modification, as in the last typical edition (1909).

In the midst of the perplexities inevitably associated with such modifications of or additions to the former methods of rendering the Accentus, Dom Janssen, O.S.B., of the Beuron Congregation, has come to the assistance of clerics, by collecting into one convenient manual Missa brevis, Missa Missae Bis Ecclesiasticae, iuxta editionem Vaticanam", Ratisbon, 1909: 146 pages, 12 mo.) all of the Accentus (including the responses) found in the "Toni Commines Missae" of the "Graduale Romanum" (1908) and in the "Cantus Missalis Romani" (1908). These he has illustrated with appropriate extracts from the "Rubricae Missalis Romani", and has added comments and explanations of his own in brackets in order to distinguish them from official matter (e.g. pp. 14, 15, when discussing the festal tone of the Oratio). While such a volume is appropriate for the study or the class-room, the intonations of the priest and deacon have been issued for use in the sanctuary, in various forms. At Tournai, Belgium, is published "Tabulionem celebriatis Missae ad exemplar editionis Vaticanae" (containing the Asparges, Vidi aquam, Gloria, Credo, Ite Missa est, Benedictamus Domini, for all the masses contained in the "Kyriale") on seven cards of Bristolboard which are enclosed in a case and also in form of a pamphlet bound in cloth. At Düsseldorf is issued the intonation of the "Tabula Intonationum" (of the Gloria) (15), Credo (4), Ite Missa est and Benedictamus (17), and Requiescant in pace, pasted on thin but strong cardboard (cloth-covered) of four pages each, merely as illustrations of the practical means at hand for actually inaugurating the reform of the Accentus; official editions of the chant books may be consulted for other forms for use in the sanctuary.

Some of these forms of chant-intonations are for use ad libitum. The various intonations of the Gloria and Credo bear a close relation to the succeeding chant of the choir, while those of the Ite Missa est or Benedictamus are frequently identical in melody with the chant of the Kyrie. Hence, these chant-intonations are assigned to definite seasons of the Church Year or to peculiar kinds of rite (solemn, double, semi-double, ferial, etc.), but inasmuch as permission has been given to use the chants of the "Kyriale" indifferently for any rite or season, the only requirement to be met by the priest is the artistic one, of sung the Intonation of Mass which the choice of the intonation actually render in chant. Thus it will be seen that the many intonations furnished do not represent an obligatory burden but merely a large liberty of choice. The chant of the Ite missa est by the deacon would seem similarly to be a matter of artistic appropriateness rather than of liturgical law.

II. The Concentus. These texts may be sung in chant or in music. If chant be used, it must be either that contained in the "Vatican Gradual," or some other approved form of the "traditional melodies" (see "Motu Proprio" of 25 April, 1904; d; the Decree of the S. R. C., 11 August, 1905; VI; the Decree prefixed to the "Kyriale", dated 14 August, 1905, and paragraph): these meet all the requirements summarized in the "Motu Proprio" of 22 November, 1903 (see Music, ECCLESIASTICAL). Under the heading of Concentus must be considered (a) the Ordinary, (b) the Proper.

(a) The Ordinary. The texts are those of the Kyrie, the Gloria, the Credo, the Sanctus, the Benedictus, the Agnus Dei. Addition to these, or a portion of them, is styled simply a "Mass". When several "Masses" are written by the same composer, they are differentiated numerically (e.g. Mozart's No. 1, No. 2, No. 17) or by dedication to some particular feast (e.g. Gounod's "Messe de Paques"), or saint (e.g. Gounod's "St. Cecilia" Mass), or devotion (e.g. Gounod's "Messe du Sacré Cœur"), or musical association (e.g. Gounod's "Messe des Orphéonistes", Nos. I, II), or musical patron (e.g. Palestrina's "Missa Papae Marcelli"), or special occasion (e.g. Cherubini's "Third Mass in A" entitled the "Coronation Mass", as it was composed for the coronation of King Charles X.). The Mass composed for the Mass of the Dead requiring only a moderate time for its renditions (e.g. Palestrina's "Missa Brevis"; Andrea Gabrielli's printed in Vol. I. of Proske's "Musica Divina") although the term scarcely applies, save in another sense, to J. S. Bach's "Missa Brevis" (in A) comprising in its forty-four closely printed pages only the music of the Kyrie and Gloria. In some Masses, the place of the Benedictus is taken by an O Salutaris. A polyphonic Mass composed, not upon themes taken from chant melodies (as was the custom), was styled "sine nomine". Those founded upon chant subjects were thus styled (e.g. Palestrina's "Ecce Sacerdos Magnus", "Virtute Magna", etc.) or when founded on secular song themes unashamedly bore the appropriate title (e.g. Palestrina's "L'homme armé"). Masses were sometimes styled by the name of the chant-mode in which they were composed (e.g. "Primi Toni") or, founded on the hexachordal system, were styled "Missa super voce musicales" (Missa Ut, Re, Mi, Fa, Sol, La); or bore as title the number of voices employed (e.g. "Missa Quattuor thora").

This is not the place to rehearse the story of the gradual development and corruption of ecclesiastical music, of the many attempts at reform, and of the latest pronouncements of the Holy See which oblige consciences with all the force of liturgical law. An excellent summary of this history is given by Dr. Rockstro in Greve's "Dictionary of Music and Musi-
cianus" (a. v. Mass), which may be supplemented by the recent abundant literature of the reform-movement in Church Music. It is of more immediate and practical importance to indicate the various catalogues or lists of masses compiled by those who are seeking to reform the music of the Mass. It is interesting to reflect that in his earlier legislation on this subject, Leo XIII recommended a diocesan commission to draw up a diocesan Index of Repertories, or at least to sanction the performance of pieces therein indicated, whether published or unpublished. In the later Regolamento of 6 July, 1894, the S. C. of Rites does not refer to any such index but merely requires bishops to exercise appropriate supervision over the masses and pastores so that inappropriately music may not be heard in their churches. The present pope has nowhere indicated the necessity, or even the advisability, of compiling such an index or catalogue, but has required by an appointment, in every diocese, of a competent commission which shall supervise musical matters and see that the legislation of the "Motu Proprio" be properly carried out. Nevertheless, it was the stimulus of the Regolamento of 1894 which led to the compilation, in the Diocese of Chicago in 1895, according to the "Guida by Cardinal Spellmann," of that diocesan commission, which was made obligatory by Archbishop Elder in a letter dated 26 July, 1899, and which was to go into operation on the First Sunday of Advent (3 Dec.) of that year. The commission requested pastores to submit the music used, for inspection by the commission. The catalogue so compiled is noteworthy not only for the number of these compositions, but takes the trouble both to mark "rejected" after the various titles and to give, usually, the reason for the rejection. In the following year it issued its "Second Official Catalogue". Both catalogues are important as illustrating the exact musical conditions of one great diocese, and show forth more recently. The commission, said that its purpose was "to inform the faithful of the proper music for the singing of the Mass and the other divinae mysteries." These catalogues have been rendered obsolete by the more stringent recent legislation. But, although that legislation has not prescribed the compilation of lists of approved music, many such catalogues or lists have been compiled. They all pay great attention to the music of the Mass, and should prove of value. The following are noteworthy: "Church Music", Dec., 1905, 80–92; March, 1906, 157–168; Sept., 1906, 541–545, for an account of the two Cincinnati catalogues, and for those of Salford, Eng., Grand Rapids, Mich., Pittsburgh, Pa., Waterford and Lismore, Ireland, Covington, Ky., Liverpool, Eng., and Maastricht, Ger., see supplement to the "Encyclopedia of Catholic Church Music" (St. Francis, Wisconsin, 1905); Terry, "Catholic Church Music" (London, 1907), 201–213; the lists of publishers who understand and respect the provisions of the "Motu Proprio," and the review-pages of the many magazines, in various lands, devoted to the reform movement in sacred music. Correct and appropriate music for Mass, for all degrees of musical ability or choral attainment and of the greatest abundance and freshness and individuality of style, can now be easily obtained. In selecting a Mass it is always advisable to read the text in order to see that it is both complete and liturgically correct; that there should be no alteration, or inversion of the words, no undue repetition, no breaking of syllables. In addition, the "Motu Proprio" specifies [No. 11 (a)]: "The Kyrie, Gloria, Credo, etc., of the Mass must preserve the unity of composition proper to their text. It is not lawful, therefore, to compose them in separate pieces, in such a way that each part is sung in a separate style of chant in itself, and be capable of being detached from the rest, and substituted by another." It further remarks (No. 22): "It is not lawful to keep the priest at the altar waiting on account of the chant or the music for a length of time not allowed by the liturgy. According to the ecclesiastical prescriptions the Sanctus of the Mass should be over before the Elevation and therefore the priest must not sing anything, the Gloria and Credo ought, according to the Gregorian tradition, to be relatively short." Something remains to be said of the chant of the Ordinary which is found in the separate small volume entitled "Kyriale". It is issued by the various competent publishers in all styles of printing, paper, binding, in large and small forms; in medieval and in modern notation; with and without certain "rhythmical signs". (See "Church Music", passim, for review-notices of the various issues; and particularly March, 1906, pp. 235–249, for an elaborate article on the earlier issues.) The eighteen "Masses" it contains are nominally assigned to various qualities of rite; but, in accordance with ancient tradition and with the unanimous agreement of the pontifical Commission on the Chant, liberty has been granted to select any "Mass" for any quality of rite (see the note "Quos-libet cantus" etc., p. 64 of the Vatican Edition of the "Kyriale": "Any chant assigned in this Ordinarium to one Mass may be used in any other; in the same degree of solemnity, any one of those which follow [that is, in the section styled "Cantus ad libitum"] may be taken"). The decrees relating to the publishing of editions based on this typical edition, and to its promulgation, are given in Latin and English translation in "Church Music", March, 1906, pp. 250–256. But it is noteworthy that the "Masses" gives no direction about singing the Benedictus after the Elevation, but prints both chants in such juxtaposition as to suggest that the Benedictus might be sung before the Elevation. In the "Revue du Chant Grégorien" (Aug.–Oct., 1905), its editor, Canon Grospierré, who was one of the Consultors of the Gregorian Commission, wrote that if time permitted, the Benedictus might be sung immediately after the Sanctus. The Pontifical Commission at its meeting at Appuldurcombe, in 1904, unanimously accepted a resolution to this effect. The preface to the Vatican "Gradual", while giving minute directions for the ceremonial rendering of the Missal, merely says: "When the offertory is ended, the choir goes on with the Sanctus, etc." At the elevation of the Blessed Sacrament, the choir is silent like every one else. Nevertheless, inasmuch as the "Gradual" does not declare that the Benedictus is to be chanted after the Elevation, the "etc." is understood to imply that it is to be sung immediately after the Sanctus. The "Ceremonial Episcoporum", however, directs that it be sung "after the elevation of the chalice". The apparent conflict of authorities may be harmonized by supposing that the "Ceremoniale" legislated for the case of musically developed (e. g. polyphonic) settings of the Sanactus and the Benedictus, whose length would necessitate their separation from each other; while the "Gradual" contemplates, of course, the much briefer settings of the plain-song (see "Church Music", Jan., 1909, p. 87). (b) The Proper.—While the texts of the Ordinary do not (with the exception of the Agnus Dei, which is altered in Requiem Mass) change, those which commonly, but somewhat ambiguously, are called the "Proper", change in accordance with the character of the feast or Sunday or ferial day. These texts are the Introit, Gradual, Alleluia-Verse, Sequence, Tract, Offertory, Communio. Not all of these will be found in any one Mass. Thus, e. g. Holy Saturday has no Introit, Gradual, Offertory, Communio; from Low Sunday to Trinity Second in one year there is an Alleluia-Verse; from Septuagesima to Easter, as well as on certain penitential days, the Alleluia-Verse, which ordinarily follows the Gradual, is replaced by a Tract; in only a few Masses is a Sequence used; there
is no Introit on Whitewash Eve, while the customary Gloria Patri after the Introit is omitted during Passion-tide. In Requiem Masses the Gloria Patri is omitted after the Introit and a Tract and a Sequence follow the Gradual. Nor do the texts differ for every feast, as is illustrated by the division of the Sancorale into the "Proprium de Sanctis" and the "Commune Sancorale", the latterdivision grouping the feasts into classes, such as the feasts of confessors-bishops, confessors-not-bishops, martyrs, virgins, etc., in which the texts of the "Tract" serve for many feasts of the "Propers" in many churches. They are, however, an integral part of the duty of the choir, and must be sung, or at least "recited", in a clear and intelligible voice, the organ meanwhile sustaining appropriate chords.

In a Rescript dated 8 August, 1906, the S. R. C., answered a question proposed by the Abbot of Santa Maria Maggiore in Naples, declares that in solemn Mass, when the organ is used, the Gradual, Offertory, Communion, when not sung, must be recited in a high and intelligible voice, and that the Dec Gratias following the Ite missa est should receive the same treatment (see "Church Music", May, 1907, 229-235). The Proprietarian of the S. R. C. then suggests advising the Guérangerian Church to use the rubrics of the Coimbra decision. Thus (Coimbra, 14 April, 1753): in a "Community Mass" it is always necessary to sing the Gloria, Credo, all of the Gradual, the Preface, Pater noster; so, too, a question from Chiogia in 1875, as to whether the custom introduced into that diocese of omitting the chant of the Gradual, the Tract, the Sequence, the Offertory, the Benedictus, the Communion was contrary to the rubrics and decisions of the S. R. C., was answered affirmatively, and the question was remitted to the Coimbra decision. A specific difficulty was offered for solution by a bishop who declared that in his diocese where a single chanter was used, and where the people had to hurry to their daily work, the custom had obtained of making almost the entire Mass singing. In stigmatized Masses, the Gloria, Gradual, Tract, Sequence, Credo. He was answered (29 Dec., 1884) that the custom was an abuse that must be absolutely eliminated. The spirit of the Church legislation is summed up in the "Moot Proprio" (22 Nov., 1903, No. 3): "As the texts that may be rendered in music, and which therefore have an equal right to be rendered, are determined for every function, it is not lawful to confuse this order or to change the prescribed texts for those collected at will, or to omit them entirely or even in part, except when the rubrics allow that some verses of the text be supplied with the organ while these verses are simply recited by chant; but this is not to be done according to the custom of the Roman Church, to sing a motet to the Blessed Sacrament after the Benedictus in a solemn Mass. It is also permitted after the Offertory prescribed for the Mass has been sung, to execute during the time that remains a brief motet to words approved by the Church."

A practical difficulty is encountered in the fact that many choirs have met the limit of their capacity in preparing the chant or music of the Ordinary, whose texts are fixed and repeated frequently. How shall such choirs prepare for a constantly changing series of Proper texts, whether in chant or in music? Several practical solutions of the difficulty have been offered. There is, first of all, the easy device of recitation. For an elaborate discussion of the times when it may be used, the character it should assume, the legal aspects and decisions concerning it, see the Rev. Ludwig Bonvin's article in "Church Music", March, 1906, pp. 146-156. Then there is the solution offered in the excellent exposition found in the well-prepared simple psalm-like settings which could be easily mastered by a fairly equipped choir. The work "The Proper of the Mass for Sundays and Holidays" (New York, 1907-1908, Vol. II, No. 2928) is reviewed in "Church Music" Jan., 1907, 127-128; Mar., 1908, 171-178; see also June, 1906, "One Outcome of the Discussion", 409-415, including a specimen-four-page Toque sequence book of treatment of the Proper text. A third volume which will comprise various local texts is in course of preparation. Another method is that undertaken by Marcello Capra, of Turin, Italy, which provides musical settings for the Proper of the principal feasts, for one or two voices, and with easy organ accompaniment. Still another method is that of Giulio Bas, who has compiled a volume, "Graduale Versus Alleluiaetici et Tractus" (Düsseldorf, 1910), of plain-song settings from the Ambrosian, Aquelean, Greek, Mozarabic chant, for Sundays and Double Feasts, in order to facilitate the rendering of the more difficult portions of the Proper.

However rendered, these chants of the Proper must now be omitted, if that is not to be avoided. But apart from the liturgical necessity, they challenge admiration because of their devotional, poetic, aesthetic perfection: "If we pass in review before our musical eye the wonderful thoughts expressed in the Introit, Graduals, Alleluia Verses, Tracts, Offertories, and Communions of the whole ecclesiastical year, from the first Sunday in Advent to the last day of the year, from the numerous Masses of the saints, apostles, martyrs, confessors, virgins, we must feel that in the Roman Church we have an anthology worthy of our highest admiration" (Rev. H. Bewerunge, "Address at London Eucharistic Congress"). It should be a part of a choirmaster's business to translate and explain these texts to his choir, to lead them in with the understanding as well as with the voice. To this end the "Missal for the Laity", with its Latin and parallel English version, might be used. The spirit of the liturgy may also be largely acquired from the volumes of Dom Guéranger's "Liturgical Year". As such is, however, such an extensive work, the much briefer and didactic volume of the Proper with comment on the spirit, which ran serially through the issues of "Church Music", would prove highly serviceable.

With respect to the plain-song setting, two typical chants should be studied carefully (see Dom Eugène's articles in "Church Music", March, 1906, 222-235, on "the Gradual for Easter", "the Hee dies", and June, 1906, 360-373, on "the Introit Gaudeamus", which give the plain-song notation with transcription into modern notation, rhythmical and dynamical analyses, etc.). Such a study will encourage the present day musician to acquire a greater familiarity with the plain-song work of the Proper. Every student should have: "First, there is the Gregorian Chant. The more one studies these ancient melodies the more one is impressed by their variety and rare beauty. Take the distinctiveness of their forms, the characteristic style which distinguishes an Introit from a Gradual, an Offertory from a Communion. Then within each class what variety of expression, what amazing interpretation of the words, and above all what sublime beauty and mystical spirit of prayer! Certainly, anyone who has tasted the sweetness of these chants must envy the few privileged places where there is high Mass every day and thus a chance is given of hearing all of these divine strains at least once a year" (Bewerunge).

There is a large body of settings of the classical polyphonic schools, and of modern polyphony, as also much illustration of modern homophonic music, of the proper texts. Care should be taken to see that the texts thus treated are verbally correct. For in the return to the traditional melodies of the chants, the particular care to use the proper texts found in very many instances, omitted portions of text, and in various ways to restore to use the more ancient forms of the texts. In the "Proprium de Tempore", for instance, there are about 200 textual...
changes. A summary view of their general character is given in "Church Music" (July, 1908), pp. 232–235. Since these altered texts differ from those still retained in the Missal, choirs which "recite" the texts will do so "in the manner of the Gradual and is not "the Gradual. When the "Gradual" was first issued, it was noticed that the Propers of some American feasts (as also, of course, the Propers of many foreign dioceses as well) were omitted (see "Church Music," March, 1908, 132–134). Some publishers have added these Propers for America, in an appendix bound in with the work. It is very likely that in the future the use of women as organists; the adoption of a sanctuary choir, whether in place of, or in conjunction with, the gallery choir. Historically the reform movement in the chant was signalized by the issuance, first of all, of the "Kyrilla", which contains the Ordinary chants, and then of the "Graduale", which comprises all; chant; this matter also belongs to a more general treatment.

OTTEN, Literature of Mensuralism, ibid., 277; BONVIN, Obligation to Applied Mensuralism Examined (July, 1908), 223.

These references to Missal are not necessarily exhaustive for all Missals. To add to the list, the composers and editors of the Missal are highly prejudicial to the uniform restoration of the chant throughout the Church "the opinion which has held that chant must be sung according as the text is written and that the change in the words appeals to the evidence of the preface of the "Gradual", to pass on to a 'metrical chants' is a technical, indeed, rhythm, or that advocated in general by the Benedictines, Mensuralism, or "measured" rhythm, is not free. For a translation of a "metrical chants" is usually done, see the recent editions of Missals: Much omission of text. No Graduale, no Communio, no Libera. The Introit omits several, and the Interlude is very defective in purchase, the Introit and its repetition. The Sequence omits forty-two lines of text. The Offertory omits a tongue, to pass on to two additional measures of superfluous and superficially adds Amen at the end. The Sanctus omits Dominus. For the current edition of the Vatican chant books consult Church Music (pastoral).

H. T. HENRY.
The rite of the nuptial Mass and blessing is this:
The Mass has neither Gloria nor Creed. It counts as a 
voitive Mass not for a grave matter; therefore it has 
two collections: the first is a prayer of consecration of 
cardinals and bishops, and the third is the one chosen for semi-doubles 
at that time of the year, unless there be two com-
memorations. At the end Benedictus Domino and 
the Gospel of St. John are said. The colour is white. 
The bridegroom and bride assist near the altar (just 
outside the sanctuary), the man on the right. After 
the Psalter the celebrant genuflects and goes to the 
epistle side. Meanwhile the bridegroom and bride 
come up and kneel before him. Turning to them he 
says the two prayers Propitiae Domine and Deus qui 
potestate (as in the Missal) with folded hands. He 
then goes back to the middle and continues the Mass. 
They go back to their places. He gives them Commu-
nion at the usual time. This implies that they are 
fasting and explains the missae misa ("wedding 
breakfast") afterwards. But the Communion is not a 
strict law (S. R. C., no. 5582, 21 March, 1874). 
Immediately after the Benedictus Domino and its answer 
the celebrant again goes to the Epistle side and the 
bridegroom and bride kneel before him as before. 
They genuflect to the right of St. Paul, the prayer of 
Abraham (without Ôremus). He is then told to 
warn them with grave words to be faithful to one an-
other. The rest of the advice suggested in the rubric 
of the Missal is now generally left out. He sprinkles 
them with holy water; they retire, he goes back to 
the middle of the altar, says Placate tibi, gives the blessing 
and makes his usual exit.

In the cases in which the “Missa pro sponso et 
sponsa” may not be said but may be commemorated, 
the special prayers and blessing are inserted in the 
Mass in the same way. But the music must be that 
of the day. During the closed time it is, of course, 
quite possible for the married people to have a Mass 
solemnly said, or a Mass celebrated in the usual way, 
without Communion. The nuptial blessing in this Mass 
is quite a different thing from the actual celebration of 
the marriage, which must always precede it. The 
blessing is given to people already married, as the 
prayers imply. It need not be given (nor the Mass 
said) by the priest who assisted at the marriage. But 
both the prayers (assistance and blessing) are 
rights of the parish priest, which no one else may 
take without delegation from him. Generally 
they are so combined that the marriage takes place 
immediately before the Mass; in this case the priest 
may assist at the marriage in Mass vestiments, 
but without the manipule. In England and other countries 
with a well-defined form of marriage, in particular 
reservals are usually made in the sacristy between the marriage 
and the Mass. Canon Law in England orders that 
marrriages be made only in churches that have a district 
with the cure of souls (Conc. prov. Westm. I, decr. 
XXII, 4). This implies as a general rule, but does not 
command absolutely, that the nuptial Mass also be 
celebrated in such a church.

Rituale Romanum. Tu. VII: de sacrificio matrimonii; Le 
Venerable Servant, Liturgia Canticorum (1910) p. 195; 
de Hurd, Sacra Liturgia Praeita, III (Louvain, 1894), 381-377. 
ADRIAN FORTESCUE.

MASS, SACRIFICE OF THE.—A. The Dogmatic Doce-
trine of the Mass.—The word Mass (missa) first established itself 
as the general designation for the Eucharistic 
Sacrifice in the West after the time of Pope 
Gregory the Great (d. 604), the early Church having 
used the expression the "breaking of bread" (frac
tio panis) or "liturgy" (Acts, xiii, 2, ἑστασάμενοι); the 
Greek Church has employed the latter name for 
about sixteen centuries. There were current 
early days of Christianity other terms: "The Lord's 
Supper" (canna dominica), the "Sacrifice" (προσφορά, 
oblatio), "the gathering together" (ἐκδίον, congreg-
gatio), "the Mysteries", and (since Augustine) "the 
Sacrifice of the Altar". With the name "Love-
Feast" (ἀγάπη) the idea of the sacrifice of the Mass 
was presented in quite different terms. Etymolo-
gically, the word misa is neither (as Baraccas 
states) from the Hebrew מִסָּה nor from the Greek 
μίσσα, but is simply derived from misio, just as 
oblatio is derived from oblatio, collecta from collectio, 
and ulta from ultio (Du Cange, "Glossary," s. v. "Missa"). 
The reference was however not to a Divine "mission", 
but simply to a "dismission" (dismisio), as was also 
customary in the Greek rite (cf. "Canon. Apost.
VIII, XV: ἀπόδειξις ἐν ἐκκλησίᾳ", and as is still echoed in 
the phrase ἡ ἐκκλησία εἰ ἐστι). This solemn form of leave-
-taking was not introduced by the Church as something 
new, but was adopted from the ordinary language of 
the day, as is shown by Bishop Avitus of Vienna as 
late as a.d. 500 (Ep. 1 in P. L., LIX, 199): "In 
churches and in the emperor's or the prefect's courts, 
Missa est is said when the people are released from 
attendance." In the sense of "dismission", or rather 
"close of prayer", misa is used in the celebrated 
Peregrinatio Silviae at least seventy times (Corpus 
scriptor. eccl. lat. nov., XXXVIII, 386 sq.), and the 
phrase and the Mass is often called "Compline", the regular formula: Et missae finis (prayers 
are ended). Popular speech gradually applied the 
ritual of dismissal, as it was expressed in both the 
Mass of the Catechumens and the Mass of the Faithful, 
by synecdoche to the entire Eucharistic Sacrifice, the 
whole being named after the part. The first certain 
mention of such an application is found in the 
usual form of it, xx, 4, in P. L., XVI, 995). We will use the word in 
this sense in our consideration of the Mass in its (1) 
existence, (2) essence, and (3) causality.

(1) The Existence of the Mass.—Before dealing 
with the proofs of revelation afforded by the Bible 
and tradition, certain preliminary points must first be 
settled. One reason why the Church intends the Mass 
to be regarded as a "true and proper sacrifice", and will not tolerate the idea that 
the sacrifice is identical with Holy Communion. 
That is the sense of a clause from the Council of Trent (Sess. 
XXII, can. i): "If any one saith that in the Mass a 
true and proper sacrifice is not offered to God; or, that 
that sacrifice is not offered in union with us; let him be anathema" (Denzinger, "Enchirid.
10th ed., 1908, n. 948). When Leo XIII in the 
dogmatic Bull "Apostolicn Cure" of 13 Sept., 1896, 
based the invalidity of the Anglican form of consecra-
tion on the fact among others, that in the consecrating 
formula of Edward VI (that is, since 1549) there is no 
reference to the sacrifice, he was in reality replying to 
the Eucharistic Sacrifio of the Mass, the Anglican archbishops 
answered with some irritation: "First, we offer the Sacrifice of praise and 
thanking and; next, we plead and represent 
before the Father the Sacrifice of the Cross... and, 
lastly, we offer the Sacrifice of ourselves to the Creator 
of all things, which we have already signified by the 
consecration of His creatures. This whole is more than 
the people has necessarily to take part with the priest, 
we are accustomed to call the Eucharistic Sacrifice." 
In regard to this last contention, Bishop Hedley of 
Newport declared his belief that not one Anglican in 
a thousand is accustomed to call the communion the 
"Eucharistic Sacrifice". But, even if they were all ac-
customed, they would have to interpret the terms 
in the sense of the Thirty-nine Articles, which deny both 
the Real Presence and the sacrificial power of the 
priest, and thus admit a sacrifice in an unreal or 
figurative sense only. Leo XIII, on the other hand, 
in union with the whole Christian past, had in mind in 
the above-mentioned passage the "Eucharistic Sacrifice of the true Body and Blood of Christ" on the altar. This Sacrifio is certainly not 
identical with the Anglican form of celebration (see 
Anglicanism).
The simple fact that numerous heretics, such as Wyclif and Luther, repudiated the Mass as "idolatry", while retaining the Sacrament of the true Body and Blood of Christ, proves that the Sacrament of the Eucharist is something essentially different from the Sacrifice of the Mass. In truth, the Eucharist is intended primarily for the sanctification of the soul, whereas the sacrifice serves primarily to glorify God by adoration, thanksgiving, prayer, and expiation. The recipient of the one is God, who receives the sacrifice of His onlybegotten Son; of the other, man, who receives the sacrament for his own good. Furthermore, the unbloody Sacrifice of the Eucharistic Christ is in its nature a transient action, while the Sacrament of the Altar continues as something permanent after the sacrifice, and can even be preserved in monstrance and ciborium. Finally, this difference also deserves mention: communion under one form only is the reception of the whole sacrament, whereas, without the use of the sacrament of the Body and Blood, the mystical slaying of the Victim, and therefore the Sacrifice of the Mass, does not take place.

The definition of the Council of Trent supposes as self-evident the proposition that, along with the "true and real Sacrifice of the Mass", there can be and are in Christendom other kinds of sacrifice, such as prayers of praise and thanksgiving, alms, mortification, obedience, and works of penance. Such offerings are often referred to in Holy Scripture, e.g. in Eschus., xxxv, 4: "And he that doth mercy, offereth sacrifice"; and in Ps. exi, 2: "Let my prayer be directed as incense in thy sight; the lifting up of my hands as evening sacrifice." These figurative offerings, however, necessarily presuppose the real and true offering, just as a picture presupposes its subject and a portrait its original. The Biblical metaphors—a "sacrifice of jubilation" (Ps. xxvi, 6), the "calves of our lips" (Osee, xiv, 5), the "sacrifice of praise" (Heb., xii, 15)—expressions which apply sacrificial terms to actions in the symbolic plan of salvation, are the principle sacrificium the sacrificial intent is embodied in the spirit of prayer, inspires and animates the external offering as the body animates the soul, and without which even the most perfect offering has neither worth nor effect before God. Hence, the holy psalmist says: "For if thou hast desired sacrifice, I would indeed have given it: with burnt-offering would I have obiated thee. A broken spirit, O God, is an afflicted spirit" (Ps. i, 18 sqq.). This indispensable requirement of an internal sacrifice, however, by no means makes the external sacrifice superfluous in Christianity; indeed, without a perpetual oblation deriving its value from the sacrifice once offered on the Cross, Christianity, the perfect religion, would be inferior not only to the Old Testament, but even to the perfect form of natural religion. Since sacrifice is therefore essential to religion, it is all the more necessary for Christianity, which cannot otherwise fulfill its duty of showing outward honour to God in the most perfect way. Thus, the Church, as the mystical Christ, desires and must have her own permanent sacrifice, which, not only be either an independent addition to that of Golgotha or its intrinsic complement; it can only be the one selfsame sacrifice of the Cross, whose fruits, by an unbloody offering, are daily made available for believers and unbelievers and sacrificially applied to them.

If the Mass is to be a true sacrifice in the literal sense, it must realize the philosophical conception of sacrifice. Thus the last ordinary question arises: What is a sacrifice in the proper sense of the term? Without attempting to state and establish a comprehensive theory of sacrifice (q. v.), it will suffice to show that, according to the comparative history of religions, four things are necessary to a sacrifice: a sacrificial gift (res olbata), a sacrificing minister (minister legitimus), a sacrificial action (actio sacrificii), and a sacrificial end or object (finis sacrificii). In contrast with sacrifices in the figurative or less proper sense, the sacrificial gift must exist in physical substance, and must be really or virtually destroyed (animals slain, libations poured out, other things rendered unfit for ordinary uses), or at least really transformed, at a fixed place of sacrifice (ara, altare), and offered up to God. As regards the person offering, it is not permitted that any and every individual should offer sacrifice on his own account. In the revealed religion, as in nearly all heathen religions, only a qualified person (usually called priest, sacerdos, lepeta), who has been given the power by commission or vocation, may offer up sacrifices in the body and blood of Jesus. Thus, Moses, the priests authorized by law in the Old Testament belonged to the tribe of Levi, and more especially to the house of Aaron (Heb., v, 4). But, since Christ Himself received and exercised His high priesthood, not by the arrogation of authority but in virtue of a Divine call, there is still greater need that priests should be more scrupulously marked out by particular authority and sanctity through the Sacrament of Holy orders to offer up the sublime Sacrifice of the New Law. Sacrifice reaches its outward culmination in the sacrificial act, in which we have to distinguish between the proximate matter and the real form. The form lies, not in the real transformation or complete destruction of the sacrificial gift, but rather in its sacrificial oblation, in whatever way it may be transformed. Even where a real destruction took place, as in the sacrificial slayings of the Old Testament, the act of destroying was performed by the servants of the Temple, whereas the proper oblation, consisting in the "spilling of blood" (asperio sanguinis), was the exclusive function of the priests. Thus, the term "Sacrifice of the Cross" consisted neither in the killing of Christ by the Roman soldiers nor in an imaginary self-destruction on the part of Jesus, but in His voluntary surrender of His blood shed by another's hand, and in His offering of His life for the sins of the world. Consequently, the destruction or transformation constitutes at most the proximate matter; the sacrificial oblation, on the other hand, is the physical form of the sacrifice. Finally, the object of the sacrifice, as significant of its meaning, lifts the external offering beyond any mere mechanical action into the sphere of the spiritual and Divine. The object is the soul of the sacrifice, and, in a certain sense, its "metaphysical form." In all religions we find, as the "essence of the sacrifice, a complete surrender to God for the purpose of union with Him; and to this idea there is added, on the part of those who are in sin, the desire for pardon and reconciliation. Hence at once arises the distinction between sacrifices of praise and expiation (sacrificium laudentium et propitiatorium), and sacrifices of thanksgiving (sacrificium laudatum et presentatorium): hence also the obvious inference that, under pain of idolatry, sacrifice is to be offered to God alone as the beginning and end of all things. Rightly does St. Augustine remark (De civi. Dei, X, iv): "Who ever thought of offering sacrifice except to one whom he may know, or thought of giving a present to one whom he may know?" If then we combine the four constituent ideas in a definition, we may say: "Sacrifice is the external obla-
tion to God by an authorized minister of a sense-perceivable object, either through its destruction or at least through the real transfer, in acknowledgment of God's supreme dominion and for the appeasing of His wrath." We shall demonstrate the applicability of this definition to the Mass in the section devoted to the nature of the sacrifice, after settling the question of its existence.

(a) Scriptural Proof.—It is a notable fact that the Divine institution of the Mass was established, one might almost say, with greater certainty by means of the Old Testament than by means of the New.

(i) The Old Testament prophecies are recorded partly in types, partly in words. Following the precedent of many Fathers of the Church (see Bellarmine, "De Intron., v, 6), the Council of Trent especially (Session XXIII, can. 2) transferred on the prophetic relation that undeniably exists between the offering of bread and wine by Melchisedech and the Last Supper of Jesus. The occurrence was briefly as follows: After Abraham (then still called "Abram") with his armed men had rescued his nephew Lot from the four hostile kings who had fallen upon him and robbed him, Melchisedech, King of Salem, in the type of the Messiah, brought forth [proferens, Heb. נַעֲשֵׂה, Hiphil of מַעֲשֶׂה] bread and wine; for he was a priest of the Most High God; he blessed him (Abraham) and said: Blessed be Abram by the Most High God . . . And he [Abraham] gave him the tithe of all ." (Gen. xiv, 18-20). Catholic theologians (with very few exceptions) have from the beginning emphasized the correspondence between the sacrifice of Melchisedech and the Mass. Wherever the Church of Christ proffers the gifts of the Sacrament, not only and solely at the Last Supper, on that occasion He likewise made an unbloody food-offering, only that, as Antitype, He accomplished something more than a mere obliteration of bread and wine, namely the sacrifice of His Body and Blood under the mere forms of bread and wine. Otherwise, the shadows cast before the "good things to come" would have been more perfect than the things themselves, and the antitype at any rate no richer in reality than the type. Since the Mass is nothing else than a continual repetition, commanded by Christ Himself, of the Sacrifice accomplished at the Last Supper, it follows that the Sacrifice of the Mass partakes of the New Testament fulfillment of the prophecy of Melchisedech. (Concerning the Paschal Lamb as the second type of the Mass, see Bellarmine, "De Euchar.", V, vii; cf. also von Cichowski, "Das alte Testamentl. Pascha in seinem Verhältnis zum Opfer Christi", Munich, 1849.)

Passing over the more or less distinct references to the Mass in other prophets (Ps, xxi 27 sqq.; Is, lxvi, 18), we shall take the one principal incident. The Mass is undoubtedly that of Malchias, who makes a threatening announcement to the Levite priests in the name of God: "I have no pleasure in you, saith the Lord of hosts: and I will not receive a gift of your hand. For from the rising of the sun even to the going down, my name is great among the Gentiles ((rotation, non-Jews), and in every place there is sacrifice and the bread transfer, in acknowledgment of God's supreme dominion and for the appeasing of His wrath."

(ii) We shall demonstrate the applicability of this definition to the Mass in the section devoted to the nature of the sacrifice, after settling the question of its existence.

(b) Reasoning Proof.—For he declared these three things that certainly come to pass: (1) The institution of Levitical sacrifices, and (2) the institution of an entirely new sacrifice. As God's determination to do away with the sacrifices of the Levites is adhered to consistently throughout the denunciation, the essential thing is to specify correctly the sort of sacrifice that is promised in their stead. In regard to this, the following propositions have to be established: (1) that the new sacrifice is to come about in the days of the Messiah; (2) that it is to be a true and real sacrifice, and (3) that it does not coincide formally with the Sacrifice of the Cross.

It is easy to show that the sacrifice referred to by Malchias did not signify a sacrifice of his time, but was rather a future sacrifice belonging to the age of the Messiah. For the phraseology of the original can be translated by the present tense (there is a sacrifice; it is offered), the mere universality of the new sacrifice—"from the rising to the setting," "in every place," "even among the Gentiles," i.e. heathen (non-Jewish) peoples—is irrefragable evidence that the Prophet held that present an event of the future. Wherever Jehovah was made known of His glorification by the "heathen," He can, according to Old Testament teaching (Ps, xxxi, 28; lxii, 10 sqq.; Is, xi, 9; xiii, 6; lx, 9; lxvi, 18 sqq.; Amos, ix, 12; Mich., iv, 2, etc.), have in mind only the kingdom of the Messiah or the future Church of Christ; every new kingdom of the Messiah or of the Church, even if all could a new sacrifice in the time of the prophet himself be thought of. Nor could there be any idea of a sacrifice among the genuine heathens, as Hittig has suggested, for the sacrifices of the heathen, associated with idolatry and impurity, are unclean and displeasing to God (1 Cor., x, 20). Again, it could not be a sacrifice of the dispersed Jews (Diaspora); for apart from the fact that the existence of such sacrifices in the Diaspora is rather problematic, they were certainly not offered the world over, nor did they possess the unusual significance attaching to special modes of honouring God. Consequently, the reference is undoubtedly to some entirely distinctive sacrifice of the Church, and such a sacrifice among genuine heathens, such as the Old Mexicans or the Congo negroes? This is as impossible as in the case of other heathen forms of idolatry. Perhaps then it was to be a new and more perfect sacrifice among the Jews? This also is out of the question, for since the destruction of Jerusalem by Titus (A.D. 70), the whole system of Jewish sacrifice is irrevocably a thing of the past; and the new sacrifice, moreover, is to be performed by a priesthood of an origin other than Jewish (Is, lxvi, 21). Everything, therefore, points to Christianity, in which, as a matter of fact, the Messiah rules over non-Jewish peoples.

The second question now presents itself: Is the universal sacrifice thus promised "in every place" to be only a purely spiritual offering of prayer, in other words a sacrifice of praise and thanksgiving, such as Protestantism is content with; or is it to be a true sacrifice in the strict sense, as the Catholic Church maintains? It is with the clear that abolition and substitution must correspond, and accordingly that the word real sacrifice corresponds to a true unreal sacrifice. Moreover, prayer, adoration, thanksgiving, etc., are far from being a new offering, for they are permanent realities common to every age, and constitute the indispensable foundation of every religion whether before or after the Messiah. The last
doubt is dispelled by the Hebrew text, which has no fewer than three classic sacramental declarations referring to the promised sacrifice, thus designedly doing away with the possibility of interpreting it metaphorically. Especially important is the substantive הַנַּעַם. Although in its origin the generic term for every sacrifice, including the bloody offering and the prayer offering, came to be understood as a promised sacrifice (such as a prayer offering), but even became the technical term for an unbloody sacrifice (mostly of food offerings), in contradistinction to the bloody sacrifice which is given the name of אֱלֹהִים, Sebach (see Knabenbauer, “Commentar. in Prophet. minor.”, II, Paris, 1898, pp. 350 sqq.).

As to the third and last proposition, no lengthy demonstration is needed to show that the sacrifice of Melchisedech cannot be formally identified with the Sacrifice of the Cross. This interpretation is at once contradicted by the Minchah, i.e. unbloody (food) offering. Then, there are other cogent considerations based on fact. Though a real sacrifice, belonging to the time of the Messiah and the most powerful means conceivable for glorifying the Divine name, the Sacrifice of the Cross, so far from being offered “in every place” and among non-Jewish peoples, was confined to Golgotha and the midst of the Jewish people. Nor can the Sacrifice of the Cross, which was accomplished by Jesus through the fact of his being the representative priest, be identified with that sacrifice for the offering of which the Messiah makes use of priests after the manner of the Levites, in every place and at all times. Furthermore, he willfully shuts his eyes against the light, who denies that the prophecy of Malachi is fulfilled to the letter in the Sacrifice of the Mass. For in this union and characteristic of the promised sacrifice: its unbloody sacrificial rite as genuine Minchah, its universality in regard to place and time, its extension to non-Jewish peoples, its delegated priesthood differing from that of the Jews, its essential unity by reason of the identity of the Chief Priest and the Victim (Christ), and its intrinsic and essential purity which no Levitical or moral uncleanness can defile. Little wonder that the Council of Trent should say (Sess. XXII, cap. i): “This is that pure oblation, which cannot be defiled by unworthiness and impiety on the part of those who offer it, and concerning which God has predicted through Malachi, that there would be offered up a clean oblation in every place which would be great among the Gentiles” (see Denzinger, n. 930).

(ii) Passing now to the proofs contained in the New Testament, we may begin by remarking that many dogmatic writers see in the dialogue of Jesus with the Samaritan woman at Jacob’s well a prophetic reference to the Mass (John, iv, 21 sqq.). “Woman, believe me, the hour cometh, when ye shall neither on this mountain [Garizim] nor in Jerusalem, adore the Father. . . . But the hour cometh, and now is, when the true adorers shall adore the Father in spirit and in truth.” Since the point at issue between the Samaritans and the Jews related, not to the ordinary, private offering of prayer practiced everywhere, but to the solemn, public, and communal sacrifice of the altar, it is clear Jesus really seems to refer to a future real sacrifice of praise, which would not be confined in its liturgy to the city of Jerusalem but would captivate the whole world (see Bellarmine, “De Euchar.”, v, 11). Not without good reason do most commentators appeal to Heb., xii, 26: “For without us we have an altar, wherefore they have no altar to eat.” (Ὡς γάρ ἐδόθη ἡ παρακολουθία τῆς θανάτου, ἐκεῖ ἐστὶν ἐδοθή.) Since St. Paul has just contrasted the Jewish food offering (βρῶματος, εσκία) and the Christian altar food, the partaking of which was denied to the Jews, the inference is obvious: where there is an altar, there is a sacrifice. But the Eucharist is the food which the Christians alone are permitted to eat: therefore there is a Eucharistic sacrifice. The objection that, in Apostolic times, the term altar was not yet used in the sense of the “Lord’s table” (cf. I Cor., x, 21) is clearly a begging of the question, since Paul might well have been the first to introduce the name, it being adopted from him by later writers (e.g. Ignatius of Antioch, died a. d. 107).

It can scarcely be denied that the entire mystical explanation of the “unbloody spiritual food from the altar of the cross,” favored by St. Thomas Aquinas, Estius, and Stentrup, is far-fetched (cf. Thalhofer, “Das Opfer des A. und N. Bundes,” Ratisbon, 1870, pp. 233 sqq.). It might on the other hand appear still more strange that in the passage of the Epistle to the Hebrews, where Christ and Melchisedech are compared, the two food offerings should be not only not placed in prophetic relation with each other, but not even mentioned. The reason, however, is not far to seek: such a parallel lay entirely outside the scope of the argument. All that St. Paul desired to show was that the high priesthood of Christ was superior to the Levitical priesthood of the Old Testament (cf. Heb., vii, 4 sqq.), and this he fully demonstrated by proving that Aaron and his priesthood stood far below the unattainable height of Melchisedech. So much more, therefore, must Christ as “priest according to the order of Melchisedech” excel the Levitical priesthood. The peculiar dignity of Melchisedech, however, was manifested not only in his offering of bread and wine, a thing which the Levites also were able to do, but chiefly through the fact that he blessed the great “Father Abraham and received the tithes from him” (for the proofs relating to the Sacrifice of the Mass in I Cor., x, 16-21, see Al. Schäfer, “Erklärung der beiden Briefe an die Korinther,” Münster, 1903, pp. 93 sqq.).

The main testimony of the New Testament lies in the account of the institution of the Eucharist, and most clearly in the words of consecration spoken over the chalice. For this reason we shall consider these words first, since thereby, owing to the analogy between the two formulae, clearer light will be thrown on the meaning of the words of consecration pronounced over the bread. For the sake of clearness and easy comparison we subjoin the four passages in Greek and English:

For this is my blood of the new testament, which shall be shed for many unto remission of sins.

(2) Mark, xiv, 24: Τώστο γὰρ ἐστιν ὁ ἄμωμον τῆς καρδίας διαθήκη τὸ ὅπερ πολλῶν ἐκχυμονοῦσον.

This is my blood of the new testament, which shall be shed for many.

This is the chalice, the new testament in my blood, which shall be shed for you.

(4) I Cor., xi, 25: Τώστο τοῦ ἁγίου ἡ καρδιὰ διαθήκη εἰς τῷ ἐμῷ αἵματι.

This chalice is the new testament in my blood.

The Divine institution of the sacrifice of the altar is proved by showing (1) that the shedding of blood spoken of in the enigma (ἐκχυμονοῦσον) and not for the first time on the cross; (2) that it was a true and real sacrifice; (3) that it was considered a permanent institution in the Church. The present form of the participle ἐκχυμονοῦσον in conjunction with the present ἐστι establishes the first point. For it is a grammatical rule of New Testament Greek, that, when the double present is used (Nom. and Participle and the finite verb, as is the case here), the time denoted is not the distant or near future, but strictly the present (see Fr. Blass, “Grammatik des N. T. Griech.,” p. 193, Göttingen, 1896). This rule does not apply to other constructions of the present tense, as when Christ says earlier (John, xiv, 12): “I go (ἐρχόμενος) to the father”. Alleged exceptions to the rule
are not such in reality, as, for instance, Matt., vi, 30: "And if the grass of the field, which is to-day and to-morrow is cast into the oven (βαλλόμενον) God doth so clothe (διψάτωσιν): how much more you, O ye of little faith?" For in this passage it is a question not of something in the future but of something now, in fact, in the mouth of the Saviour the words: "This do ye, as often as you shall drink, for the commemoration of me."

We are now in a position to appreciate in their deeper sense Christ's words of consecration over the bread. Since only St. Luke and St. Paul have made additions to the sentence, "This is My Body", it is only on them that we can base our demonstration. (1) Luke, xxii, 19: Hoe est corpus meum, quod pro vobis datur; τοῦτο ἐστὶν τὸ σῶμα μου τὸ ἐν τῷ ὀμνίῳ διίκας; This is my body which is given for you. (2) I Cor., xi, 24: Hoc est corpus meum, quod pro vobis tradetur; τοῦτο μόνον ἐστὶν τὸ σῶμα τὸ ἐν τῷ ὀμνίῳ (κλαμπιμον); This is my body which shall be broken for you. Once more, we maintain that the sacrificial "giving of the body" (in organic unity of course with the "pouring of blood" in the chalice) is here to be interpreted as a present sacrifice and as a permanent institution in the Church. Regarding the decisive point, i.e. indication of what is actually taking place, it is again St. Luke who speaks with greatest clearness, where, with the σῶμα, the ἐν τῷ ὀμνίῳ, he describes by which he describes the "giving of the body" as something happening in the present, here and now, not as something to be done in the near future.

The reading κλαμπιμον in St. Paul is disputed. According to the best critical reading (Tischendorf, Lachmann) the participle is dropped altogether, so that St. Paul is probably writing the following: "For his body, i.e. for you, i.e. for your salvation." There is good reason, however, for regarding the word κλαμπιμον (from κλαμερ) as a parallelism of the σῶμα, to break as Pauline, since St. Paul shortly before spoke of the "breaking of bread" (I Cor., x, 16), which for him meant "to offer as food the true body of Christ". From this however we may conclude that the "breaking of the body" not only confines Christ's action to the strictly present, especially as His natural Body could not be "broken" on the cross (cf. Ex., xii, 46; John, xix, 32 sq.), but also implies the intention of offering a "body broken for you" (ἐν τῷ ὀμνίῳ) i.e. the act constituted in itself a true food offering. All doubt as to its sacrificial character is removed by the expression τὸ σῶμα τὸ ἐν τῷ ὀμνίῳ in Luke, xxii, 20, which quite correctly translates into the present: "quod pro vobis datur." But "to give one's body for others" is as truly a Biblical expression for sacrifice (cf. John, vi, 52; Rom., vii, 4; Col., i, 22; Heb., x, 10, etc.) as the parallel phrase, "the shedding of blood". Christ, therefore, at the Last Supper offered up His Body as an unbloody sacrifice. Finally, that He commanded the renewal for all time of the Eucharistic sacrifice through the Church is clear from the addition: "Do this for a commemoration of me" (Luke, xxxii, 19; I Cor., xi, 24).

(b) Proof from Tradition.—Harnack is of opinion that the early Church, up to the time of Cyprian (c. 210), contented itself with the purely spiritual offices of adoration and thanksgiving and that it did not possess the sacrifice of the Mass, as Catholicism now understands it. In a series of writings, Dr. Wieland, a Catholic priest, likewise maintained in the face of vigorous opposition from other theologians, that the early Christians confined the essence of the Christian subjective Eucharistic prayer of thanksgiving, till Irenaeus (d. 202) brought forward the idea of an objective offering of gifts, and especially of bread and wine. Here, according to this view, was the first to include in his expanded conception of sacrifice, the entire new idea of material offerings (i.e. the Eucharistic elements) which up to that time the early Church had formally repudiated. Were this assumption correct, the doctrine of the Council of Trent (Sesa.
mass

xxii, c. ii), according to which in the Mass the "priests offer up, in obedience to the command of Christ, His Body and Blood" (see Denzinger, "Enchiridion", n. 949), could hardly take its stand on Apostolic tradition; the bridge between antiquity and the present would thus have been broken by the abrupt intrusion of a completely contrary view. An impartial study of the earliest texts seems indeed to make this much clear, that the early Church paid most attention to the spiritual and subjective side of sacrifice and laid chief stress on prayer and thanksgiving in the Eucharistic function.

This admission, however, is not identical with the statement that the early Church rejected out and out the objective sacrifice, and acknowledged as genuine only the spiritual sacrifice as expressed in the "Eucharistic thanksgiving". That there has been an historical dogmatic development from the indefinite to the definite, from the implicit to the explicit, from the seed to the fruit, no one familiar with the subject will deny. An assumption so reasonable, the only one in fact consistent with Christianity, is, however, fundamentally different from the hypothesis that the Christian idea of sacrifice has veered from one extreme to the other. This is a prius improbable and unproved in fact. In the Didache or "Teaching of the Twelve Apostles" (Acta, xx, 7) referred to as a "sacrifice" (θυσία) and mention made of it in one's own sacrifice before the sacrifice (cf. Matt., v, 23), but the whole passage is crowned with an actual quotation of the prophecy of Malachi, which referred, as is well known, to the effective act of sacrifice (c. a. d. 96), not only is the "breaking of bread" (cf. Acts, xx, 7) referred to as a "sacrifice" (θυσία) and mention made of it in one's own sacrifice before the sacrifice (cf. Matt., v, 23), but the whole passage is crowned with an actual quotation of the prophecy of Malachi, which referred, as is well known, to the effective act of sacrifice.

The early Christians gave the name of "sacrifice" not only to the Eucharistic "thanksgiving," but also to the entire ritual celebration including the liturgical "breaking of bread", without at first distinguishing clearly between the prayer and the gift (bread and wineBody and Blood). When Ignatius of Antioch (d. 107), a disciple of the Apostles, says of the Eucharist: "There is only one flesh of our Lord Jesus Christ, only one chalice containing His one Blood, one altar (τὸ θουαστήριον), as also only one bishop with the priesthood and the deacons" (Eph., ad. Philad., iv), he gives here to the liturgical Eucharistic celebration, on which alone he speaks, by his reference to the "altar" (τὸ θουαστήριον) and the "chalice" (θυσιαστήριον), a clear indication of its sacrificial character, as he may use the word "altar" in other contexts in a metaphorical sense.

A heated controversy had raged round the conception of Justin Martyr (d. 166) from the fact that in his "Dialogue with Tryphon" (c. 117) he characterizes the prayer and thanksgiving (εὐχαὶ καὶ εὐχαριστίαι) as the "one perfect sacrifice acceptable to God" (ἐνθριασμὸς καὶ εὐχαρίστησις). Was it the "perfect sacrifice" acceptable to God (μιᾶς εὐχαριστίας)? Did he intend by this emphasis on the interior spiritual sacrifice to exclude the exterior real sacrifice of the Eucharist? Clearly he did not, for in the same "Dialogue" (c. xii: P.G., VI, 584) he says the "food offering" of the lepers, assured of a real gift (cf. Mark vii, 39), is a figure (τίμιον) of the breaking of the Eucharist which God has commanded to be offered (θυσία) in commemoration of His sufferings. He goes on: "Of the sacrifices which you (the Jews) formerly offered, God through Malachi has said: 'I have no pleasure, etc.' By the sacrifices (θυσία), however, which we Gentiles present to Him in every place, that is (τούτους) of the bread of the Eucharist and likewise of the chalice of the Eucharist, He then said that we glorify His name, while you dishonour him." Here "bread and chalice" are the use of τούτων clearly included as objective gift offerings in the idea of the Christian sacrifice. If the other apologists (Aristides, Athenagoras, Minucius Felix) in this respect present to Him in every place, that is (τούτων) of the bread of the Eucharist and likewise of the chalice of the Eucharist, He then said that we glorify His name, while you dishonour him."

For Augustine nothing is more certain than that every religion, whether true or false, must have an exterior form of worship and was for our Lord Jesus Christ and Chrysostom (d. 407) who have been charged with exaggerating "realism", and whose plain discourses on the sacrifice rival those of Basil (d. 379), Gregory of Nyssa (d. c. 394) and Ambrose (d. 397). Only about Augustine (d. 430) must a word be said, since, in regard to the real presence of Christ in the Eucharist, he is cited as favouring the "symbolical" theory. Now it is precisely his teaching on sacrifice that best serves to clear away the suspicion that he inclined to a merely spiritual interpretation.

smoothly along in a well-ordered channel, without check or disturbance, through the Middle Ages to our own time. Even the powerful attempt made to stem it by the Reformation had no effect. A brief demonstration of the existence of the Mass is the so-called proof from prescription, which is thus formulated: A sacrificial rite in the Church which is older than the oldest attack made on it by heretics cannot be deemed as "idolatry", but must be referred back to the Church of Christianity as a rightful heritage of which He was the heir. Now the Church's legitimate possession as regards the Mass can be traced back to the beginnings of Christianity; it follows that the Mass was Divinely instituted by Christ. Regarding the minor proposition, the proof of which alone concerns us here, we may begin at once with the Reformation, the only movement that utterly did away with the Mass. Psychologically, it is quite intelligible that men like Zwingli, Karlstadt and Zéclampadius should tear down the altars, for they denied Christ's real presence in the Sacrament. Calvinism also reviled the "papistical mass" which the Heidelberg catechism characterised as "cursed idolatry", and merely as a custom, since it still had only a "stamped" presence. It is rather strange on the other hand that, in spite of his belief in the literal meaning of the words of consecration, Luther, after a violent "nocturnal disputation with the devil" in 1521, should have repudiated the Mass. But it is exactly these measures of violence that best show what the Church had been doing to the Mass ever since the root by that time in Church and people. How long had it been taking root? The answer, to begin with, is: all through the Middle Ages back to Photius, the originator of the Eastern Schism (869). Though Wycliffe protested against the teaching of the Council of Constance (1414-18), which maintained that the Mass was the Church's "sacrament", and that the Albigenses and Waldenses claimed for the laity also the power to offer sacrifice (cf. Denzinger, "Enchiridion", 585 and 430), it is none the less true that even the schismatic Greeks held fast to the Eucharistic sacrifice as a precious heritage from their Catholic past. In the negotiations for reunion at Lyons (1274) and Florence (1439) they showed moreover that they had kept it intact; and they have faithfully safeguarded it to this day. From all which it is clear that the Mass existed in both Churches long before Photius, a conclusion borne out by the monuments of Christian antiquity.

Taking a long step backwards from the ninth to the fourth century, we come upon the Nestorians and Monophysites who were driven out of the Church during the fifth century at Ephesus (431) and Chalcedon (451). From that day to this they have celebrated in their solemn liturgy the sacrifice of the New Law, and since they could only have taken it with them from the old Christian Church, it follows that the Mass goes back in the Church beyond the time of Nestorianism and Monophysitism. Indeed, the first Nicene Council (325) in its celebrated eighteenth canon forbade priests to receive the Eucharist from the hands of deacons for the very obvious reason that "neither the canon nor custom have handed down to us, that those, who have not the power to offer sacrifice (σφορόφιον) may give Christ's body to those who offer (σφορόφιον)". Hence it is plain that for the celebration of the Mass there was required the dignity of a special priesthood, from which the deacons as such were excluded. Since, however, the Nicene Council speaks of a "custom", that takes us at once into the third century, we are already in the age of the Catacomb (q.v.), which has been, as it were, the key to the underground strata of pagan religions. Here, however, a rich variety of hypotheses is placed at their disposal. In this age of Pan-Babylonism it is not at all surprising that the germinal ideas of the Christian communion should be located in Babylon, where in the Adapa myth (on the tablet of Tell Amarna) men were called to a "good of life" (Zimmern). Others (e. g. Brandt) fancy they have found a still more striking analogy in the "bread and water" (Pathâ and Mambûhâ) of the Mundran religion. The view most widely held to-day among
upholders of the historic-religious theory is that the Eucharist and the Mass originated in the practices of the Persian Mithraism (Dieterich, H. T. Holtzmann, Pfeiderer, Robertson, etc.), "In the Mandan mass", writes Cumont ("Mysterien des Mithra", Leipzig, 1893, p. 118) "to celebrate these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to operate the well Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(a) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(b) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. This alone is the origin and nature of the Mass.

(c) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(d) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(e) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(f) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(g) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(h) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(i) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(j) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.

(k) The Physical Character of the Mass.—In regard to the physical character there arises not only the question as to the concrete portions of the liturgy, in which the real offering lies hidden, but also the question regarding the relation of the Mass to the bloody sacrifice on the Cross. To be celebrated in detail these wild creations of an overheated phantasy. Let it suffice to note that all these explanations necessarily lead to inpenetrable night, as long as men refuse to believe in the true Divinity of Christ, who commanded that His bloody sacrifice on the Cross should be daily renewed by an unbloody sacrifice of His Body and Blood in the Mass under the simple elements of bread and wine. This alone is the origin and nature of the Mass.
of the Church (cf. Trent, Sess. XXII, i) that the Mass is in its very nature a "representation" (repräsentation), a "commemoration" (memoria) and an "application" (applikatio) of the Sacrifice of the Cross. When indeed the Roman Catechism (II, c. iv, Q. 70), as a fourth relation, adopts the daily repetition (instauratim), it means that such a repetition is to be taken not in the sense of a multiplication, but simply of an application of the merits of the passion. Just as the Church repudiates nothing so much as the suggestion that by the Mass the sacrifice on the Cross is as it were set aside, so she goes a step farther and maintains the essential identity of both sacrifices, holding that the main difference between them is in the different manner of sacrificing, the one bloody, the other unbloody (Trent, Sess. XXII, can. 3). "Haec nunqua sacerdotum ministerio, qui sequitur tune in cruce obtulit, sola offrendi ratione diversa." Inasmuch as the sacrificing priest (offerens) and the sacrificial victim (hostia) in both sacrifices are Christ Himself, their sameness amounts even to a numerical identity. In regard to the manner of the sacrifice (offerendi ratio) on the other hand, it is naturally a question only of a specific identity or unity that includes the possibility of ten, a hundred, or a thousand masses.

(b) Turning now to the other question as to the constituent parts of the liturgy of the Mass in which the real sacrifice is to be looked for, we need only take into consideration its three chief parts; the Offertory, the Mass, and the Communion. The view of Johann Eck, according to which the act of sacrifice was comprised in the prayer "Unde et memores . . . offerimus", is thus excluded from our discussion, as is also the opinion of Melchior Canus, who held that the sacrifice is accomplished in the symbolic ceremony of the breaking of the Host and its concommittal with the other elements of Mass. The question now is: Is the sacrifice comprised in the Offertory? From the wording of the prayer this much at least is clear, that bread and wine constitute the secondary sacrificial elements of the Mass, since the priest, in the true language of sacrifice, offers to God bread as an "unspotted host" (immaculatum hostiam) and wine as the "chalice of salvation" (calicem salutaria). But the very significance of this language proves that attention is mainly directed to the prospective transsubstantiation of the Eucharistic elements. Since the Mass is not a mere offering of bread and wine, like the figurative food offering of Melchisedech, it is clear that only the Body and Blood of Christ can be the primary material in the sacrifice. Consequently, the sacrifice is not in the Offertory. Does it consist then in the priest's Communio? There were and are theologians who favour that view. They can be ranged in two classes, according as they see in the Communion the essential or the eventual.

Those who belong to the first category (Dominicus Soto, Renz, Bellard) had to beware of the heretical doctrine proscribed by the Council of Trent (Sess. XXII, can. 1), viz., that Mass and Communion were identical. In American and English circles the so-called "banquet-theory" of the late Bishop Bellard once created some stir (cf. The Ecclesiastical Review, XXXIII, 1905, 258 sq.). According to that view, the essence of the sacrifice was not to be looked for in the offering of a gift to God, but solely in the Communion. Without communion there was no sacrifice. Regarding pagan sacrifices Döllinger ('Heidentum und Judentum', Ratisbon, 1857) had already demonstrated the falsity of the theory. With the complete shedding of blood pagan sacrifices ended, so that the supper which sometimes followed it was expressive merely of the satisfaction felt at the reconciliation with the gods. Even the horrible human sacrifices had as their object the death of the victim only and not a sannibal feast (cf. Mader, "Die Menschenopfer der alten Hebräer und der benachbarten Völker", Freiburg, 1909). As to the Jews, only a few Levitical sacrifices, such as the peace offering, had feeding connected with them; most, and especially the burnt offerings (holocausta), were accomplished without feeding (cf. Levit., vi, 9 sq.). Bishop Bellard, having cast in his lot with the "banquet-theory", could naturally find in the sacrifice of the Mass in the priest's communion only. He was indeed logically bound to allow that the Crucifixion itself had the character of a sacrifice only in conjunction with the Last Supper, at which alone food was taken; for the Crucifixion excluded any ritual food offering. These disquieting consequences are all the more serious in that they are devoid of any scientific content (cf. Pesch, "Præf. dogmat.", VI, 379 sq., Freiburg, 1908).

Harmless, even though improbable, is that other view (Bellarmine, De Lugo, Tournely, etc.) which includes the Communion as at least a co-essential factor in the constitution of the Mass; for the consumption of the Host and of the contents of the Chalice, being a kind of destruction, would appear to accord with the conception of the sacrifice developed above. But only in appearance; for the sacrificial transformation of the victim must take place on the altar, and not in the body of the celebrant, while the partaking of the two elements can at most represent the burial and not the sacrificial death of Christ. The Last Supper also would never have been the Communion of Christ had given the Communion not only to His apostles but also to Himself. There is however no evidence that such a Communion ever took place, probable as it may appear. For the rest, the Communion of the priest is not the sacrifice, but only the completion of, and participation in, the sacrifice; it belongs therefore not to the essence, but to the form of the sacrifice. And this integrity is also preserved absolutely even in the so-called "private Mass" at which the priest alone communicates; private Masses are allowed for that reason (cf. Trent, Sess. XXII, can. 8). When the Jansenist Synod of Pistoia (1786), proclaiming the false principle that "participation in the sacrifice is essential to the sacrifice", demanded at least the making of a "spiritual communion" on the part of the faithful as a condition of allowing private Masses, it was denied by Pius VI in his Bull "Auctorem fidei" (1796) (see Denzinger, n. 1528).

After the elimination of the Offertory and Communion, there remains only the Consecration as the part in which the true sacrifice, in reality, that part alone is to be regarded as the proper sacrificial act which is such by Christ's own institution. Now the Lord's words are: "This is my Body; this is my Blood." The Oriental Epiclesis (q. v.) cannot be considered as the moment of consecration for the reason that it is absent in the Mass in the West and is known to have first occurred in Apostolic times (see Eucharist). The sacrifice must also be at the point where Christ personally appears as High Priest and the human celebrant acts only as his representative. The priest does not however assume the personal part of Christ either at the Offertory or Communion. He only does so when he speaks the words: "This is My Body; this is My Blood", in which there is no possible reference to the body and blood of the celebrant. While the Consecration as such can be shown with certainty to be the act of Sacrifice, the necessity of the twofold consecration can be demonstrated only as highly probable. Not only elder theologians such as Frasen, Gottzi, and Bonacina, but also later theologians, like Schmid, have supported the untenable theory that when one of the consecrated elements is invalid, such as barley bread or cider, the consecration of the valid element not only produces the Sacrament, but also the (mutated) sacrifice. Their chief argument is that the
sacrament in the Eucharist is inseparable in idea from the sacrifice. But they entirely overlooked the fact that the Eucharistic representation of the sacrifice for the sacrifice of the Mass (not for the sacrament), and especially the fact that in the consecration of one element only the intrinsically essential relation of the Mass to the sacrifice of the Cross is not symbolically represented. Since it was no mere death from suffocation that Christ suffered, but a bloody death, in which His veins were emptied of their blood, this condition of separation must receive visible representation on the altar, as in a sublime drama. This condition is fulfilled only by the double consecration, which brings before our eyes the Body and the Blood in the state of separation, and thus represents the mystical shedding of blood. Consequently, the double consecration is the equally essential element of the Mass as a relative sacrifice.

(b) The Metaphysical Character of the Sacrifice of the Mass.—The physical essence of the Mass having been established in the consecration of the two species, the metaphysical question arises as to whether and in what degree the scientific concept of sacrifice is realized in this double consecration. Since the three ideas, sacrificing priest, sacrificial gift, and sacrificial object, present no difficulty to the understanding, the problem is finally seen to lie entirely in the determination of the real sacrificial act (actio sacrificii), and indeed not so much in the form of this act as in the matter, since the glorified Victim, in consequence of its immateriality, has no existence apart from the fact that it may not constitute a hypothetical theolologem on the basis of a theory, one can no longer from such a standpoint successfully defend the indispensability of the double consecration. Equally difficult is it to find in the Eucharistic Christ's voluntary surrender of his sensitive functions the relative moment of sacrifice, i.e., the representation of the crucifixion of the Cross. The standpoint of Suarez, adopted by Scheeben, is both exalting and imposing; the real transformation of the sacrificial gifts he refers to the destruction of the Eucharistic elements (in virtue of the transubstantiation) at their conversion into the Precious Body and Blood of Christ (in statu perfectio), just as, in the process of incense in the Old Testament, the incense were transformed by fire into the higher and more precious form of the sweetest odor and fragrance. But, since the antecedent destruction of the substance of bread and wine can by no means be regarded as the sacrifice of the Body and Blood of Christ, Suarez is finally compelled to identify the substantive production of the Eucharistic Victim with the sacrificing of the same. Herein is straightforwardly revealed a serious weakness, already clearly perceived by De Lugo. For the production of a thing can never be identical with its sacrifice; otherwise one might declare the gardener's production of plants or the shepherd's raising of sheep to be the sacrifice, for the latter is at most the object of the sacrifice, not the sacrifice itself; (4) since this postulated kenosis, however, can be no real, but only a mystical or sacramental one, we must appraise intelligently those moments which approximate in any degree the "mystical slaying" to a real exanishment, instead of rejecting them. With the aid of these four criteria it is comparatively easy to arrive at a decision concerning the probability or otherwise of the different theories concerning the sacrifice of the Mass.

(i) The Jesuit Gabriel Vasquez, whose theory was supported by Perrone in the last century, requires for the essence of an absolute sacrifice only—and thus, in the present case, for the Sacrifice of the Cross—a true destruction or the real slaying of Christ, whereas for the idea of the relative sacrifice of the Mass it suffices that the former slaying on the Cross be visibly represented in the separation of Body and Blood on the altar. This view soon found a keen critic in Cardinal de Lugo, who, appealing to the Tridentine definition of the Mass, claimed that the scriptural proofs for Vasquez for reducing the Mass to a purely relative sacrifice. Were Jephta to arise again to-day with his daughter from the grave, he argues (De Euchar., disp. xix, sect. 4, n. 58), and present before our eyes a living dramatic reproduction of the slaying of his daughter after the fashion of a tragedy, we would undoubtedly see before us not a true sacrifice, but a historic or symbolical representation of the sacrifice. Such may indeed satisfy the notion of a relative sacrifice, but certainly not the notion of the Sacrifice of the Mass, which includes in itself both the relative and the absolute (in opposition to the merely relative) sacrificial moment. If the Mass is to be something more than an Ober-Ammergau Passion Play, then not only must Christ appear in the Immanence on the altar, but He must also be in some manner really sacrificed on that very altar. The theory of Vasques thus fails to fulfill the first condition which we have named above.

To a certain extent the opposite of Vasquez's theory is that of Cardinal Cienfuegos, who, while exaggerating the absolute moment of the Mass, failed to recognize the equally essential relative moment of the sacrifice. The sacrificial destruction of the Eucharistic Christ he would find in the voluntary suspension of the powers of sense (especially of sight and hearing), which the sacramental mode of existence implies, and which lasts from the consecration to the muing of the two Species. But, apart from the fact that one may not constitute a hypothetical theolologem on the basis of a theory, one can no longer from such a standpoint successfully defend the indispensability of the double consecration. Equally difficult is it to find in the Eucharistic Christ's voluntary surrender of his sensitive functions the relative moment of sacrifice, i.e., the representation of the crucifixion of the Cross. The standpoint of Suarez, adopted by Scheeben, is both exalting and imposing; the real transformation of the sacrificial gifts he refers to the destruction of the Eucharistic elements (in virtue of the transubstantiation) at their conversion into the Precious Body and Blood of Christ (in statu perfectio), just as, in the process of incense in the Old Testament, the incense were transformed by fire into the higher and more precious form of the sweetest odor and fragrance. But, since the antecedent destruction of the substance of bread and wine can by no means be regarded as the sacrifice of the Body and Blood of Christ, Suarez is finally compelled to identify the substantive production of the Eucharistic Victim with the sacrificing of the same. Herein is straightforwardly revealed a serious weakness, already clearly perceived by De Lugo. For the production of a thing can never be identical with its sacrifice; otherwise one might declare the gardener's production of plants or the shepherd's raising of sheep to be the sacrifice, for the latter is at most the object of the sacrifice, not the sacrifice itself; (4) since this postulated kenosis, however, can be no real, but only a mystical or sacramental one, we must appraise intelligently those moments which approximate in any degree the "mystical slaying" to a real exanishment, instead of rejecting them. With the aid of these four criteria it is comparatively easy to arrive at a decision concerning the probability or otherwise of the different theories concerning the sacrifice of the Mass.

(ii) Disavowing the above-mentioned theories concerning the Sacrifice of the Mass, theologians of to-day are again seeking a closer approximation to the pre-Tridentine conception, having realized that post-Tridentine theology had perhaps for polemical reasons needlessly exaggerated the idea of destruction in the sacrifice. The old conception, which our catechisms still teach to the people as the most natural and intelligible, may be fearlessly declared...
patristic and traditional view; its restoration to a position of general esteem is the service of Father Billot (De sacram., I, 4th ed., Rome, 1907, pp. 507 sqq.). Since this theory refers the absolute moment of sacrifice to the (active) "sacramental mystical mas- saging", and the relative to the (passive) "separation of Body and Blood", it has indeed made the "two-edged sword" of the double consecration the cause from which the double character of the Mass as an absolute (real in itself) and relative sacrifice proceeds. We have an absolute sacrifice, for the Victim is—not indeed in specie propria, but in specie altera—sacramen-
tally slain; we have also a relative sacrifice, since the sacramental separation of Body and Blood represents perceptibly the former shedding of Blood on the Cross.

While this view meets every requirement of the metaphysical nature of the Sacrifice of the Mass, we do not think it right to reject offhand the somewhat more elaborate theory of Lessius instead of utilizing it in the spirit of the traditional view for the extension of the idea of a "mystical slaying". Lessius (De perfect. moribusque div., XII, xiiii) goes beyond the old ex-
planation by adding the not untrue observation that the intrinsic force of the double consecration would have been equal to both, the shedding of Blood on the altar, if this were not per accidens impossible in conse-
quently of the impassibility of the transfigured Body of Christ. Since ex vi verborum the consecration of the bread makes really present only the Body, and the consecration of the Chalice only the Blood, the tendency of the double consecration is towards a form-
al of sacrifice to the Body and Blood of Christ. Mystical slaying thus approaches nearer to a real destruct-
ion and the absolute sacrificial moment of the Mass receives an important confirmation. In the light of this view, the celebrated statement of St. Gregory of Nazianus becomes of special importance (Ep. cixxi, ad Amphil. in P. G., XXXVII, 282): "Hesitate not to approach the Body with boils [θηματος ταμα] thou separatest [ςπαστη] the Body and Blood of the Lord, having speech as a sword [πους ὕψω το λείψε]". As an old pupil of Cardinal Franselín (De Euchar., p. II, thes. xvi, Rome, 1887), the present writer may perhaps speak a good word for the once popular, but recently combated theory of Christ's actual presence in the Eucharist, if it lived a long period of neglect; not however that he intends to proclaim the theory in its present form as entirely satisfactory, since, with much to recommend it, it has also serious defects. We believe, however, that this theory, like that of Lessius, might be most profitably utilized to develop, supplement, and deepen the tradi-
tional view. Starting from the principle that the Eucharistic destruction can be, not a physical, but only a moral one, De Lugo finds this exainment in the voluntary reduction of Christ to the condition of food (reductio ad statum cibi et potus), in virtue of which the Saviour, after the fashion of lifeless food, leaves him-
self at the mercy of mankind. That this is really the essence of the Mass in one false place, the ne-
cessity of the double consecration is not made properly apparent, since a single consecration would suffice to
produce the condition of food, and would therefore achieve the sacrifice; secondly, the reduction to the state of articles of food reveals not the faintest analogy to the blood-shedding on the Cross, and thus the real sacrifice must be regarded as one in which the Mass is not properly dealt with. De Lugo's theory, there-
fore, of no service in this connexion. It renders, how-
ever, the most useful service in extending the tra-
ditional idea of a "mystical slaying", since indeed the reduction of Christ to food is and purports to be nothing else than the preparation of the mystically slain Victim for the feast in the Communion of the priest and the faithful.

(3) The Causality of the Mass.—In this section we shall treat: (a) the effects (effectus) of the Sacrifice of the Mass, which practically coincide with the various ends for which the Sacrifice is offered, namely ador-
tion, thanksgiving, impetration, and expiation; (b) the manner of its efficacy (modus efficacitatis), whether in part objectively in the Sacrifice of the Mass itself (ex opere operato), and partly dependently on the personal devotion and piety of man (ex opere operantis).

(a) The Effects of the Sacrifice of the Mass. The Reformers found themselves compelled to reject en-
tirely the Sacrament of the Mass since they regarded the Eucharist merely as a sacrament. Both their views were founded on the reflection, properly appraised above, that the Bloody Sacrifice of the Cross was the sole Sacrifice of Christ and of Chri									tendom, and thus does not admit of the Sacrifice of the Mass. As a sacrifice of praise and thanksgiving in the sym-
pathy of the Church for its forefathers, and of the Mystical Body of the Mass, and Melanchthon resented the charge that Protestants had entirely abolished it. What they most bitterly opposed was the Catholic doctrine that the Mass is a sacrifice not only of praise and thank-
giving, but also of impetration and atonement, whose fruits may benefit others, while it is evident that a sacramentist's st\n\nHere the Council of Trent interposed with a definition of faith (Sess. XXII, can. iii): "If any one say, that
the Mass is only a sacrifice of praise and thanksgiving... but not a propitiatory sacrifice; or, that it profits only the recipient, and that it ought not to be offered for the living and the dead for sins, punishments, satisfactions, and other necessities; let him be anathema!” (De senect., ix, 90). In this, Tertullian gives a summary of all the sacrificial effects in order, the synod emphasizes the propitiatory and imperative nature of the sacrifice. Propitiatio (propitiation) and petition (impetatio) are distinguishable from each other, inasmuch as the latter appeals to the goodness and the former to the mercy of God. Naturally, therefore, they differ also as regards their objects, since, while petition is directed towards our spiritual and temporal concerns and needs of every kind, propitiation refers to our sins (peccata) and to the temporal punishments (poenas), which must be expiated by works of penance or satisfaction (satisfactiones) in this life, or otherwise by a corresponding suffering in purgatory. In all these respects the imperative and expiatory Sacrifice of the Mass is of the greatest utility, both for the living and the dead.

Should a Biblical foundation for the Tridentine doctrine be asked for, we might first of all argue in general as follows: Just as there were in the Old Testament, in addition to sacrifices of praise and thanksgiving, propitiatory sacrifices, the pagans (Ego: 23, sqq.; II Kings, xxiv, 21 sqq., etc.), the New Testament, as its antitype, must also have a sacrifice which serves and suffices for all these objects. But, according to the prophecy of Malachias, this is the Mass, which is to be celebrated by the Church in all places and at all times. Consequently, the Mass is the imperative and expiatory sacrifice. As such, it is also a sacrifice to Tertullian (Ad scapul, ii), the Christians sacrificed “for the welfare of the emperor” (pro salute imperatoris); according to Chrysostom (Hom. xxi in Act. Apost. n. 4), “for the fruits of the earth and other needs”. St. Cyril of Jerusalem (d. 389) describes the liturgy of the Mass of his day as follows: “(Catech. nuncius, p. C. X. XXXIII, 1115): “As for the spiritual sacrifice [σωματική θυσία], the unbloody service [διανύστος λατρεία], we pray to God over this sacrifice of propitiation [αὐτή του θυσίας εικόνα του Νασαυα] for the universal peace of the churches, for the proper guidance of the world, for the emperor, soldiers and companions, for the infirm and the sick, for those stricken with trouble, and in general for all in need of help we pray and offer up this sacrifice [τοῦ ἀπολύτου τής θυσίας]. We then commemorate the patriarchs, prophets, apostles, martyrs, that God may, at their prayers and intercession, graciously accept our supplication. We afterwards pray for the dead... since we believe that it will be of the greatest advantage to the outside world of the faithful and most awesome Victim [τῆς θυσίας καὶ φιλικοσυναρτησίας τῆς θυσίας].”

The chief source of our doctrine, however, is tradition, which from the earliest times declares the imperative and expiatory nature of the Mass. According to Tertullian (Ad scapul, ii), the Christians sacrificed “for the welfare of the emperor” (pro salute imperatoris); according to Chrysostom (Hom. xxi in Act. Apost. n. 4), “for the fruits of the earth and other needs”. St. Cyril of Jerusalem (d. 389) describes the liturgy of the Mass of his day as follows: “(Catech. nuncius, p. C. X. XXXIII, 1115): “As for the spiritual sacrifice [σωματική θυσία], the unbloody service [διανύστος λατρεία], we pray to God over this sacrifice of propitiation [αὐτή του θυσίας εικόνα του Νασαυα] for the universal peace of the churches, for the proper guidance of the world, for the emperor, soldiers and companions, for the infirm and the sick, for those stricken with trouble, and in general for all in need of help we pray and offer up this sacrifice [τοῦ ἀπολύτου τής θυσίας].”

We then commemorate the patriarchs, prophets, apostles, martyrs, that God may, at their prayers and intercession, graciously accept our supplication. We afterwards pray for the dead... since we believe that it will be of the greatest advantage to the outside world of the faithful and most awesome Victim [τῆς θυσίας καὶ φιλικοσυναρτησίας τῆς θυσίας].”

Discharge our prayers for them. The Christ, who was slain for our sins, we sacrifice [Χριστὸς λειψαμένος ἐν τῷ θανάτῳ διανύστηκε τῶν ἁμαρτιῶν] to propitiate the merciful God for those who are gone before and for ourselves. This beautiful passage, which leads the minds of the faithful into the most holy and most awesome Victim [τῆς θυσίας καὶ φιλικοσυναρτησίας τῆς θυσίας]... it seems inconceivable that the Heavenly Father could accept with other than infinite satisfaction the sacrifice of His only begotten Son. Consequently God, as Malachias had already prophesied, is in a truly infinite degree honoured, glorified, and praised in the Mass; through Our Lord Jesus Christ he is thanked by men in an infinite manner, in a manner worthy of God.

But when we turn to the Mass as a sacrifice of impetration and expiation, the case is different. We must always regard its intrinsic value as infinite, since it is the sacrifice of the God-Man Himself, its extrinsic value must necessarily be finite in consequence of the limitations of man. The scope of the so-called “fruits of the Mass” is limited. Just as a tiny chip of...
wood cannot collect within it the whole energy of the sun, so also, and in a still greater degree, is man incapable of converting the boundless value of the imputatory and expiatory sacrifice into an infinite effect for his soul. Wherefore, in practice, the imputatory value of the sacrifice is always as limited as is its propitiatory and satisfactory value. The greater or less measure of the fruits derived will naturally depend very much on the personal efforts and worthiness, the devotion and fervour of those who celebrate or are present at Mass. This limitation of the fruits of the Mass must, however, not be construed to mean that the presence of a large congregation causes a diminution of the benefits derived from the Sacrifice by the individual, as if such benefits were after some fashion divided into so many aliquot parts. Neither the Church nor the Christian people has any tolerance for the false principle: 'The less the number of the faithful in the church, the richer the fruits'. On the contrary, the Bride of Christ desires for every Mass a crowded church, being rightly convinced that from the unlimited treasures of the Mass much more grace will result to the individual from a service participated in by a full congregation, than from one attended merely by a few of the faithful. This relative infinite value refers in a general (fructus generalis), and not to the special (fructus specialis)—two terms whose distinction will be more clearly characterized below. Here, however, we may remark that by the special fruit of the Mass is meant that for the application of which according to a special intention a priest may accept a stipend.

Masae, whether in this connexion the applicable value of the Mass is to be regarded as finite or infinite (or, more accurately, unlimited). This question is of importance in view of the practical consequences it involves. For, if we decide in favour of the unlimited value, a single Mass celebrated for a hundred persons or intentions is as efficacious as a hundred individual Masses is first of all a stipend.

On the other hand, it is clear that, if we incline towards a finite value, the special fruit is divided pro rata among the hundred persons. In their quest for a solution of this question, two classes of theologians are distinguished according to their tendencies: the minority (Gotth, Billuart, Antonio Bellarini, etc.) are inclined to the special fruit, the majority to the infinite. The majority, arguing that the infinite dignity of the High Priest Christ cannot be limited by the finite sacrificial activity of his human representative. But, since the Church has entirely forbidden as a breach of strict justice that a priest should seek to fulfil, by reading a single Mass, the obligations imposed by several stipends (see Denzinger, p. 1110), these theologians hasten to admit that their theory is not to be translated into practice, unless the priest applies as many individual Masses for all the intentions of the stipend-givers as he has received stipends. But inasmuch as the Church has spoken of strict justice (justitia commutativa), the overwhelming majority of theologians, in theory, admit the satisfactory—and, according to many, also the propitiatory and impetulatory—value of a Mass for which a stipend has been taken, is so strictly circumscribed and limited from the outset, that it accurses pro rata (according to the greater or lesser number of the living or the dead for whom the Mass is offered) to each of the individuals. Only on such a hypothesis is the custom prevailing among the faithful of having several Masses celebrated for the deceased or for their intentions intelligible. Only on such a hypothesis can one explain the widely established 'Mass Association', a pious union whose members voluntarily bind themselves to read or get read at least one Mass annually for the souls of the deceased. In the eighth century we find in Germany a so-called 'Totenbund' (see Pertz, 'Monum. Germaniae hist. Leg.', II, i, 221). But probably the greatest of such societies is the Massbund of Ingolstadt, founded in 1724; it was raised to a confraternity (Confraternitity of the Immaculate Conception) on 3 Feb., 1874, and at present contains 80,000 members (Abklasse, ihr Wesen u. ihr Gebrauch', 13th ed., Paderborn, 1906, pp. 610 sqq.). Tourneul (De Euch. q. viii, a. 6) has also sought in favour of this view important internal grounds of probability, for example by advertizing to the visible course of Divine Providence: all natural and supernatural effects in general are seen to be slow and gradual, not sudden or decisive, wherefore it is also the most holy intention of God that man should, by his personal exertions, strive through the medium of the greatest possible number of Masses to participate in the fruits of the Sacrifice of the Cross.

(b) The Manner of Efficacy of the Mass.—In theological phrase an effect 'from the work of the action' (ex opere operato) signifies a grace conditioned exclusively by the objective bringing into activity of a cause of the supernatural order, in connexion with which the proper disposition of the subject comes subsequently into account only as an indispensable antecedent condition (conditio sine qua non), but not as a real joint cause (concursus). Thus, for example, baptism is effectually obtained only by the suit of the interior grace in each recipient of the sacrament who in his heart opposes no obstacle (obex) to the reception of the graces of baptism. On the other hand, all supernatural effects, which, presupposing the state of grace, are accomplished by the personal actions and exertions of the subject (e. g., everything obtained by prayer), are called effects 'from the work of the agent' (ex opere operantis). We are now confronted with the difficult question: In what manner does the Eucharistic Sacrifice accomplish its effects and fruits? As the early scholastics gave scarcely any attention to this problem, we are indebted for almost all the light thrown upon it to the later scholastics.

Masae, whether in every sacrifice of the Mass four distinct categories of persons really participate. At the head of all stands of course the High Priest, Christ Himself; to make the Sacrifice of the Cross fruitful for us and to secure its application, He offers Himself as a sacrifice, which is quite independent of the merits or demerits of the celebrant. The Church, whilst she contains the sacrifice, and is for these an opus operatum. Next after Christ and in the second place comes the Church as a juridical person, who, according to the express teaching of the Council of Trent (Sess. XXII, cap. i), has received from the hands of her Divine Founder the institution of the Mass and also the commission to ordain constantly priests and to have celebrated for these the most vulnerable Sacrifice. This intermediate stage between Christ and the celebrant may be neither passed over nor eliminated, since a bad and immoral priest, as an ecclesiastical official, does not offer up his own sacrifice—which indeed could only be impure—but the immaculate Sacrifice of Christ and his spotless merits, which can be consecrated by the celebrant. But to this special sacrificial activity of the Church, offering up the sacrifice together with Christ, must also correspond a special ecclesiastical-human merit as a fruit, which, although in itself an opus operantis of the Church, is yet entirely independent of the worthiness of the celebrant and the faithful, and therefore constitutes for these an opus operatum. When, however, as De Lugo rightly points out, an excommunicated or suspended priest celebrates in defiance of the prohibition of the Church, this ecclesiastical merit is always lost, since such a priest no longer acts in the name and with the commission of the Church. His sacrifice is nevertheless valid, since, by the very nature of the Church, it is always a sacrifice in the name of Christ, even though in opposition to His wishes, and, as the self-sacrifice of Christ, even such a
Mass remains essentially a spotless and untarnished sacrifice before God.

We are thus compelled to concur in another view of De Lugo, namely that the greatness and extent of this ecclesiastical service is dependent on the greater or less holiness of the body-church, the clergy throughout the world, and that for this reason in times of ecclesiastical decay and laxity of morals (especially at the papal court and among the episcopate) the fruits of the Mass, resulting from the sacrificial activity of the Church, might under certain circumstances easily be very small. With Christ and His Church is associated in the third place the celebrating priest, since he is the representative through whom the real and the mystical Christ offer up the sacrifice. If, therefore, the celebrant be a man of great personal devotion, holiness, and purity, there will accrue an additional fruit which will benefit not himself alone, but also those in whose favour he applies the Mass. The faithful are thus guided by sound instinct when they prefer to have Mass celebrated for their intentions by an upright and holy priest rather than by an unworthy one, since, in addition to the chief fruit of the Mass, they secures this special fruit which springs ex opere operantis, from the piety of the celebrant.

And in the fourth place, must be mentioned those who participate actively in the Sacrifice of the Mass, e.g. the servers, sacristan, organist, singers, and the whole congregation joining in the sacrifice. The priest, therefore, prays also in their name: Offerimus (i.e. We offer). That the effect resulting from this (metaphorical) sacrificial activity is entirely dependent on the worthiness of the person mediating therein and results exclusively ex opere operantis, is evident without further demonstration. The more fervent the prayer, the richer the fruit. Most intimate is the active participation in the Sacrifice of those who receive Holy Communion during the Mass, since in their case the special fruits of the Communion are added to those of the Mass. Should sacramental Communion be impossible, the Council of Trent (Sess. XXII, cap. vi) advises the faithful to make at least a "spiritual communion" (spirituales effectus communi- care), which consists in the ardent desire to receive the Eucharist. However, as we have already emphasized, the omission of real or spiritual Communion on the part of the faithful who receive Holy Communion at the Sacrifice of the Mass either invalid or unlawful, wherefore the Church even permits "private Masses", which may on reasonable grounds be celebrated in a chapel with closed doors.

(ii) In addition to the active, there are also passive participators in the Sacrifice of the Mass. These are the persons in whose favour it may be even without their knowledge and in opposition to their wishes—the Holy Sacrifice is offered. They fall into three categories: the community, the celebrant, and the person (or persons) for whom the Mass is specially applied. To each of these three classes corresponds ex opere operato a separate and distinct fruit of the Mass, whether the same be an imper- titory effect of the Sacrifice of Petition or a propitiatory and satisfactory effect of the Sacrifice of Expiation. Although the development of the teaching concerning the threefold fruit of the Mass begins only with Scotus (Quest. quodlibet, xx), it is nevertheless based on the very essence of the Sacrifice itself. Since, according to the wording of the Canon of the Mass (q.v.), prayer and sacrifice is offered for all those present, the whole Church, the pope, the diocesan bishop, the faithful living and dead, and even "for the salvation of the whole world", there must first of all result a "general fruit" (fructus generalis) for all mankind, the bestowal of which lies immediately in the will of Christ and His Church, and secondly is frustrated by no contrary intention of the celebrant. In this fruit of the excommunicated, heretics, and infidels partici- pate, mainly that their conversion may thus be ef- fected. The second kind of fruit (fructus personalis, specialis, or ministerialis) falls to the personal share of the cele- brant, since it was unjust that he—apart from his worthiness and piety (opus operantis)—should come away empty-handed from the altar. Between these two fruits lies the third, the so-called "special fruit of the Mass" (fructus specialis, medius, or ministerialis), which is usually applied to particular living or de- ceased persons according to the intention of the cele- brant or the donor of a stipend. This "application" rests so exclusively in the hands of the priest that even the prohibition of the Church cannot render it inefficacious, although the celebrant would in such a case sin through disobedience. For the existence of the special fruit of the Mass, rightly defended by Pius VI against the Jansenistic Synod of Pistoia (1786), we have the testimony also of Christian antiquity, which offered the Sacrifice for special persons and intentions. To secure in all cases the certain effect of this fructus specialis, Suarez (De Euch., disp. lxxix, sect. 10) gives priests the wise advice that they should always add to the first a "second intention" (intention secunda), which, should the first be inefficacious, will take its place.

(iii) A last and an entirely separate problem is afforded by the special mode of efficacy of the Sacrifice of Reconciliation. As an effect of the sacrifice, the double function of obliterating actual sins, especially mortal sins (effectus stricte propitiatorius), and also of taking away, in the case of those already in the state of grace, such temporal punishments as may still remain to be endured (effectus satisfactorius). The main question is: Is this double effect ex opere operato or ex opere operantis? Since the actual forgiveness of sin, it must, in opposition to earlier theologians (Aragon, Casalis, Gregory of Valencia), be maintained as undoubtedly a certain principle, that the expiatory sacrifice of the Mass can never accomplish the forgiveness of mortal sins otherwise than by way of contrition and penance, and therefore only mediately through procuring the grace of conversion (cf. Council of Trent, Sess. XXII, cap. ii: "donum penitentiae concedens"). With this limitation, how- ever, the Mass is able to remit even the most grievous sins (Council of Trent, l. c., "Crimina et peccata etiam ingentia dimitit"). Since, according to the present economy of salvation, no sin whatsoever, grievous or trifling, can be forgiven without contrition and an act of faith, we must confine the efficacy of the Mass, even in the case of venial sins, to obtaining for Christians the grace of contrition for less serious sins (Sess. XXIII, cap. i). It is indeed this purely mediate activity which constitutes the essential distinction between the sacrifice and the sacrament. Could the Mass remit sins immedi- ately ex opere operato, like Baptism or Penance, it would be a sacrament of the dead and cease to be a sacrifice (see SACRAMENT). Concerning the remission of the temporal punishment due to sin, however, which appears to be effected in an immediate manner, our judgment must be different. The reason lies in the intrinsic distinction between sin and temporal punishment. Without the personal co-operation and sorrow of the sinner, all forgiveness of sin by God is impossible; this cannot however be said of a mere remission of punish- ment. One person may validly discharge the debts or fines of another, even without apprising the debtor of his intention. The same rule may be applied to a just person, who, after his justification, is still burdened with temporal punishment consequent on his sins. It is certain that, only in this immediate way, can assistance be given to the poor souls in purgatory through the Sacrifice of the Mass, since they are henceforth powerless to perform personal works of satisfaction (cf. Council of Trent, Sess. XXV, de purgat.). From this consideration we derive by analogy our legitimate conclusion that the case is exactly the same as regards the living.

B. Practical Questions Concerning the Mass.—From the exceedingly high valuation, which the Church places on the Mass as the unbloody Sacrifice of the God-Man, issues, and with it were spontaneously, all those practical precepts of a positive or a negative nature, which are given in the Rubrics of the Mass, in Canon Law, and in Moral Theology. They may be conveniently divided into two categories, according as they are intended to secure in the highest degree possible the objective dignity of the Sacrifice or the subjective worth of the celebrant. 

(1) Precepts for the Promotion of the Dignity of the Sacrifice.—(a) One of the most important requisites for the worthy celebration of the Mass is that the place in which the all-holy Mystery is to be celebrated, should be a suitable one. Since, in the days of the Apostolic Church, there were no churches or chapels, priests celebrated Mass, when suitably appointed, for the solemnization of “the breaking of bread” (cf. Acts, ii, 46; xx, 7 sqq.; Col., iv, 15; Philem., 2). During the era of the persecutions the Eucharistic services in Rome were transferred to the catacombs, where the Christians believed themselves secure from government agents. The first “houses of God” (in Greek, hagia) in general did not exceed the first century, as we learn from Tertullian (Ad Valent., iii) and Clement of Alexandria (Strom., i, 1). In the second half of the fourth century (a. d. 370), Optatus of Mileve (De Schism. Donat., ii, iv) could already reckon more than forty basilicas which adorned the city of Rome. From this period dates the prohibition of the celebration of Mass in private houses. Thenceforward the public churches were to be the sole places of worship. In the Middle Ages the synods granted to bishops the right of allowing house-chapels within their dioceses. According to the law of to-day (Council of Trent, Sess. XXII, de reform.), the Mass may be celebrated only in chapels and churches (semi-public). The consecrated or at least blessed. At present, private chapels may be erected only in virtue of a special papal indulg. (S. C. C, 23 Jan., 1847; 6 Sept., 1870). In the latter case, the real place of sacrifice is the consecrated altar (or altar-stone), which must be placed in a suitable room (cf. Missale Romanum, Rubr. gen., lit. xx). In such a room it is usually stipulated that the sea be calm during the celebration, and that a second priest (or deacon) be at hand to prevent the spilling of the chalice in case of the rocking of the ship.

(b) For the worthy celebration of Mass the circumstance of time is of great importance. In the Apostolic age the first Christians assembled regularly on Sundays for “the breaking of bread” (Acts, xx, 7: “the first day of the week”), which day the “Didache” (c. xiv), and later Justin Martyr (i Apol., lxvi), already name “the Lord’s day.” Justin himself seems to be aware only of the Sunday celebration, but Tertullian adds the fast-days on Wednesday and Friday and the anniversary of the apparition of the Lord (c. xxxi; “De orat.,” xix). As Tertullian calls the whole paschal season (until Pentecost) “one long feast,” we may conclude with some justice that during this period the faithful not only communicated daily, but were also present at the Eucharistic Liturgy. As regards the time of the day, there existed in the Apostolic age fixed and specified precepts regarding the order in which the Eucharistic celebration should take place. The Apostle Paul appears to have on occasion “broken bread” about midnight (Acts, xx, 7). But Pliny the Younger, Governor of Bithynia (died a. d. 114), already states in his official report to Emperor Trajan that the Christians assembled in the early hours of the morning and stood themselves up in a Thurible (c. xxxi), by which we can understand to-day only the celebration of the mysteries. Tertullian gives as the hour of the assembly the time before dawn (De cor. mil., iii: antelucanis cælis). When the fact was adverted to that the Saviour’s Resurrection occurred in the morning before sunrise, a change of the hour set in, the celebration of the Mass being postponed until the second hour (Acts, xiii, 2). The writings of the Sunday celebration (Ep., ixii): “We celebrate the Resurrection of the Lord in the morning.” Since the fifth century the “third hour” (i. e. 9 a. m.) was regarded as “canonical” for the Solemn Mass on Sundays and festivals. When the Little Hours (Prime, Terce, Sext, None) began in the Middle Ages, the Mass was fixed for the third hour of the day, which was ante meridiem, and hence the precepts governing the hour for the conventional Mass received a new meaning. Thus, for example, the precept that the conventual Mass should be held after None on fast days does not signify that it be held between midday and evening, but only that “the reception of None in choir is followed by the Mass” (Council of Sardica). It is evident that the priest could celebrate at any hour between dawn and midday (ab aurora usque ad meridiem). It is proper that he should read beforehand Matins and Lauds from his breviary.

The sublimity of the Sacrifice of the Mass demands that the priest should approach the altar wearing the sacred vestments (amice, stola, cincture, maniple, etc.). Whether the priest is vested in the vestments, the historical developments from Judaism or paganism, is a question still discussed by archaeologists. In any case the “Canones Hippolyti” require that at Pontifical Mass the deacons and priests appear in “white vestments”, and that the lectors also wear festive garments. No priest may celebrate the Mass without the necessary vestments, except in case of urgent necessity (e. g. to consecrate a Host as the Viaticum for a person seriously ill). The altar-cross is also necessary as an indication that the Sacrifice of the Mass is nothing else than the unbloody reproduction of the Sacrifice of the Cross. Usually, also, the priest must be at the altar by a server of the male sex. The celebration of Mass without a server is allowed only in case of need (e. g. to procure the Viaticum for a sick person, or to enable the faithful to satisfy their obligation of hearing Mass). A person of the female sex may not serve at the altar itself, e. g. transfer the missal, present the cruets, etc. (S. R. C., 27 August, 1836). Women (especially nuns) may, however, answer the celebration from their places, if no male server be at hand. During the celebration of Mass a simple priest may not wear any head-covering—whether biretta, pileolus, or full wig (comas Jactitas)—but the bishop may allow him to wear a plain perruque as protection for his hairless scalp.

To preserve unimpaired the honour of the most venerable sacrifice, the Church has surrounded with a strong rampart of special defensive regulations the institution of “mass-stipends”; her intention is on the one hand to keep remote from the altar all base ava-
rice, and on the other to ensure and safeguard the right of the faithful to the conscientious celebration of the Masses bespoken. By a mass-stipend is meant a certain monetary offering which anyone makes to the priest for the Masses to be said for him. There must be given to the Mass in accordance with the intentions of the donor (ad intentionem dantis). The obligation incurred consists, concretely speaking, in the application of the "special fruit of the Mass" (fructus specialis), the nature of which we have already described in detail (A, 3). The idea of the stipend emanates from the earliest ages, and its justification lies incontestably in the axiom of St. Paul (1 Cor., ix, 13): "They that serve the altar, partake with the altar." Originally consisting of the necessaries of life, the stipend was at first considered as "alms for a Mass" (elemosyna missarum), the object being to contribute to the proper support of the clergy. The character of a pure alms has been since lost by the stipend, since such may be accepted by even a wealthy priest. But the Pauline principle applies to the wealthy priest just as it does to the poor. The now customary money-offering, which was introduced about the eighth century and was tacitly approved by the Church, is to be regarded merely as the substitute or commutation of the earlier presentation of necessaries. In one institution (fundacja) the change from the ancient practice has been introduced, since at present the individual priest receives the stipend personally, whereas formerly all the clergy of the particular church shared among them the total obligations and gifts. In their present form, the whole matter of stipends has been officially taken by the Church end in the ecclesiastical Constitution of Trent (Sess. XXII, de ref.) and by the dogmatic Bull "Auctorem fidei" (1796) of Pius VI (Denzinger, n. 1554). Since the stipend, in its origin and nature, claims to be and can be nothing else than a lawful contribution towards the proper support of the clergy, the false and foolish views of the ignorant are shown to be without foundation. In this respect the stipend may be simoniacally purchased with money? (cf. St. Thomas, II-II, Q. c, art. 2). To obviate all abuses concerning the amount of the stipend, there exists in each diocese a fixed "mass-tax" (settled either by ancient custom or by an episcopal regulation), which no priest may exceed, unless extraordinary inconvenience is shown. In addition, the Money Act of 1521 forbids the collection of funds or real property, the interest or income from which is to procure for ever the celebration of Mass for the founder or according to his intentions. Apart from anniversaries, foundations of Masses are divided, according to the testamentary arrangement of the testator, into monthly, weekly, and daily foundations. Annual annuities and other sums are subject to the administration of the ecclesiastical authorities, especially of the diocesan bishop, who must grant his permission for the acceptance of such and must appoint for them the lowest rate. Only when episcopal approval has been secured can the foundation be regarded as completed; thenceforth it is unlawful for anyone to assume the ecclesiastical property is subject to the approval of the State (e.g. in Austria). The establishment of a foundation must also be submitted to the secular authorities. The declared wishes of the founder are sacred and decisive as to the manner of fulfillment. Should no special intention be mentioned in the deed of foundation, the Masses may be said according to the will of the founder himself (S.C.C., 18 March, 1668). To secure punctuality in the execution of the foundation, Innocent XII ordered in 1697 that a list of the mass-foundations, arranged according to the months, be kept in each church possessing such endowments. The administrators of pious foundations are bound under pain of mortal sin to forward to the bishop at the end of each year a list of all founded Masses left uncélébrated together with the money therefor (S. C. C., 25 May, 1893).

The celebrant of a founded Mass is entitled to the full amount of the foundation, unless it is evident from the circumstances of the foundation or from the wording of the deed of foundation that this is not the case when the foundation serves also as the endowment of a benefice, and consequently in such a case the beneficiary is bound to pay his substitute only the regular tax (S. C. C., 25 July, 1874). Without urgent reason, founded Masses may not be celebrated in churches (or on altars) other than those stipulated by the foundation. Permanent transference of such founded Masses is reserved to the pope, but in isolated instances the dispensation of the bishop suffices (cf. Council of Trent, Sess. XXI de ref.; Sess. XXV de ref.). The unavoidable loss of the income of a foundation puts an end to all obligations connected with it. A serious diminution of the foundation capital, owing to the depreciation of property, is made provisionally for by the necessary increase of the mass-tax, scarcity of priests, poverty of a church or of the clergy may con-
This connotates not alone freedom from all ecclesiastical censures (excommunication, suspension, interdict), but also a becoming preparation of the soul and body of the priest before he approaches the altar. To celebrate in the state of mortal sin has always been regarded by the Church as an infamous sacrilege (cf. 1 Cor. xi, 27 sqq.). For the worthy (not for the valid) celebration of the Mass it is, therefore, especially required that the celebrant be in the state of grace. To place him in this condition, the awakening of perfect sorrow is no longer sufficient since the Council of Trent (Sess. XIII, cap. vii in Denzinger, n. 880), for there is a still ecclesiastical precept that the reception of the Sacrament of Penance must precede the celebration of Mass. This rule applies to all priests, even when they are bound by their office (ex officio) to read Mass, e.g. on Sundays for their parishioners. Only in instances, when no confessor can be procured, may they content themselves with reciting an act of perfect sorrow (contrito), and they then incur the obligation of going to confession "as early as possible" (quem primum), which, in canon law, signifies within three days at furthest. In addition to the pious preparation for Mass (accessus), there is prescribed a correspondingly long thanksgiving after Mass (recessus), whose length is fixed by moral theologians between fifteen minutes and half an hour, although in particular official engagements of the priest must be considered. As regards the length of the Mass itself, the duration is naturally variable, according as a Solemn High Mass is sung or a Low Mass celebrated. To perform worthily all the ceremonies and pronounce clearly all the prayers in Low Mass requires an average of about half an hour. Moreover, Canonists justly declare that the scandalous haste necessary to finish Mass in less than a quarter of an hour is impossible without grievous sin.

With regard to the more immediate preparation of the body, custom has declared from time immemorial, and positive canon law since the Council of Constance (1414), that the priest, as a sign of the sacrament of the altar, and priests, when celebrating the Holy Sacrifice, must be fasting (jejumina naturale), which means that they must have partaken of no food or drink whatsoever from midnight. Midnight begins with the first stroke of the hour. In calculating the hour, the so-called "mean time" (or local time) must be used. The day begins with midnight (12 July, 1893), Central-European time may be also employed, and, in North America, "one time". The movement recently begun among the German clergy, favouring a mitigation of the strict regulation for weak or overworked priests with the obligation of duplicating, has serious objections, since a general relaxation of the ancient strictness might easily result in lesser respect for the Blessed Sacrament and in a harmful reaction among thoughtless members of the laity. The granting of mitigations in general or in exceptional cases belongs to the Holy See alone. To keep away from the altar irreverent adventurers and unworthy priests, the Council of Trent (Sess. XXIII, de ref.) declares that, in the absence of the priests, the sacred vessels and the vestments of the Church, in places in which, that an unknown priest without the Celebrant (q. v.) may not be allowed to say Mass in any church.

(b) A second question may be asked: "Who must say Mass?" In the first place, if this question be considered identical with the enquiry as to whether a general obligation of Divine Law binds every priest by the very name of his priestly dignity, the answer must be in the negative. St. Thomas, Durandus, Paludanus, and Anthony of Bologna certainly maintained the existence of such an obligation; on the other hand, Richard of St. Victor, Alexander of Hales, Bonaventure, Gabriel Biel, and Cardinal Cajetan declared for the opposite view. Canon law teaches nothing on the subject. In the absence of a decision, Suarez (De Eucharist., clasp. ixxx, sect. 1, n. 4) believes that one who conforms to
the negative view, may be declared free from grievous sin. Of the ancient hermits we know that they did not celebrate the Holy Sacrifice in the desert, and St. Ignatius Loyola, guided by high motives, abstained for a whole year from celebrating. Cardinal De Lugo (De Euchar., disp. xx, sect. 1, n. 13) takes a middle course, by interpet; Christmas the bishops should while declaring that, in practice, omission through lukewarmness and neglect may, on account of the scandal caused, easily amount to mortal sin. This consideration explains the teaching of the moral theologians that every priest is bound under pain of mortal sin to celebrate at least a few times each year (e.g. at Easter, Christmas, the Epiphany). The obligation of hearing Mass on all Sundays and holy days of obligation is of course not abrogated for such priests. The spirit of the Church demands—and it is to-day the practically universal custom—that a priest should celebrate daily, unless he prefers to omit his Mass occasionally through motives of reverence.

Until far into the Middle Ages it was left to the discretion of the priest, to his personal devotion and his zeal for souls, whether he should read more than one Mass on the same day. But since the twelfth century canon law declares that he must in general content himself with one daily Mass, and the synods of the thirteenth century allow, even in case of necessity, at most three Masses on one day. The feast of the Holy Sacrifice twice on the same day was more and more curtailed. According to the existing law, duplication is allowed, under special conditions, only on Sundays and holy days, and then only in the interests of the faithful, that they may be enabled to fulfill their obligation of hearing Mass. But in the case of the state of the Mass, the priests have a privilege universally allowed to retain the privilege of three Masses; in Spain and Portugal this privilege was extended to All Souls’ Day (2 Nov.) by special Indult of Benedict XIV (1746). Such customs are unknown in the East.

This general obligation of a priest to celebrate Mass must not be confused with the special obligation which results from the acceptance of a Mass stipend (obligatio ex stipendio) or from the cure of souls (obligatio ex cura animarum). Concerning the former sufficient has been already said. As regards the cure of souls, the obligation of Divine Law that parish priests and administrators of a parish should frequently celebrate Mass, and the obligation of the benefactors, arises from the relations of pastor and flock. The Council of Trent (Sess. XXIII, de ref.) has specified this duty of application more closely, by directing that the parish priest should especially apply the Mass, for which no stipend may be taken, for his flock on all Sundays and holy days (cf. Benedict XIV, "Cum semper oblatas", 19 Aug. 1744). The obligation to apply the Mass pro populo extends also to the holy days abrogated by the Bull of Urban VIII, "Universa per orbem", of 13 Sept., 1642; for even to-day these remain "canonically fixed feast days", although the faithful are dispensed from the obligation of hearing Mass and may engage in servile works. The same obligation of the Mass also likewise holds on bishops, as pastors of their dioceses, and on those abbots who exercise over clergy and people a quasi-episcopal jurisdiction. Titular bishops alone are excepted, although even in their case the application is to be desired (cf. Leo XIII, "In suprema", 10 June, 1882). As the obligation of Mass is not only personal, but also real, the application must be made in union of one Mass, either be made soon afterwards, or be effected through a substitute, who has a right to a mass stipend as regulated by the law. Concerning this whole question, see Heuser, "Die Verpflichtung der Pfarrer, die hl. Messe für die Gemeinde zu applizieren" (Düsseldorf, 1850).

(c) For the sake of completeness a third and last question must be touched on in this section: For whom may Mass be celebrated? In general the answer may be given: For all those and for those only, who are fitted to participate in the fruits of the Mass as an impecunious, propitiatory, and satisfactory sacrifice. From this is immediately derived the rule that Mass may not be celebrated for the blessed in Heaven, since they are incapable of receiving the fruits of the Mass; for the same reason children who die unbaptized are excluded from the benefits of the Mass. Thus, there remain as the possible participants only the living on earth and the poor souls in purgatory (cf. Trent, Sess. XXII, can. iii; Sess. XXV, de purg.). The offering of the Mass is a participation in the Sacrifice, however, and partly to avoid scandal, the Church has surrounded with certain conditions, which priests are bound in obedience to observe, the application of Mass for certain classes of the living and dead. The first class are non-tolerated excommunicated persons, who are to be avoided by the faithful (excommunication stans). Although, according to various authors, the priest is not forbidden to offer up Mass for such unhappy persons in private and with a merely mental intention, still to announce publicly such a Mass or to insert the name of the excommunicated person in the prayers, even though he may be in the state of grace owing to perfect sorrow or may have been absolved from the sin of "excommunication divina", and is strictly forbidden under penalty of excommunication (cf. C. 28, de sent. excomm., V, t. 39). It is likewise forbidden to offer the Mass publicly and solemnly for deceased non-Catholics, even though they were princes (Innoc. III, C. 12, X, 1, 3, tit. 28). On the other hand it is allowed, in consideration of the Supreme Pontiff, to offer Mass for living rulers even a public Solemn Mass. For living heretics and schismatics, also for the Jews, Turks, and heathens, Mass may be privately applied (and even a stipend taken) with the object of procuring for them the grace of conversion to the true Faith. For a deceased heretic the private and hypothetical application of the Mass is allowed only when the priest has good grounds for believing that the deceased held his error in good faith (bona fide). Cf. S. C. Officii, 7 April, 1875. To celebrate Mass privately for deceased catechumens is permissible, since we may assume that they are already justified by their desire of Baptism and are in purgatory. In like manner Mass may be privately applied for living heathens, who have led an upright life, since the sacrifice is intended to benefit all who are in purgatory. For further details see Göpfert, "Moralthologiae", III (5th ed., Paderborn, 1906).

**Massa Candida.**—Under the date 24 August, the "MartYROLOGIUM ROMANUM" records this commemoration: "At Carthage, of three hundred holy martyrs in the time of Valerian and Gallienus. Among other torments, the governor, ordering a limetkin to be lighted and live coals with incense to be set near by, said to these confessors of the Faith: 'Choose whether you will offer incense to Jupiter or be thrown down into the lime.' And they, armed with faith, confessing Christ, the Son of God, with one swift impulse hurled themselves into the fire, where, in the fumes of the burning lime, they were reduced to a powder. Hence this band of blessed ones in white raiment have been held worthy of the name, White Mass." The date of this event may be placed between A. D. 253, when Galienus was associated with his father in the imperial office, and A. D. 260, when Valerian was entrapped and made prisoner by Sapor, King of Persia. As to the exact place, St. Augustine [Ser. ccxi (al. cxii)] calls these martyrs the "White Mass of Utica," indicating that there they were specially commemorated. Utica was only 25 miles from the city of Carthage, which was the seat of the see in Africa; and it is likely the three hundred may have been brought from Utica to be judged by the procurator (Galerius Maximus). The fame of the Massa Candida has been perpetuated chiefly through two early references to them: that of St. Augustine, and that of the poet Frudentius (q. v.). The latter, in the thirteenth hymn of his episcopal collection, describes the deaths of the "pit dug in the midst of the plain, filled nearly to the lime that emitted chocking vapours," how the "stones vomit fire, and the snowy dust burns." After telling how this ordeal ceased, he concludes: "Whiteness (candor) possesses their bodies; purity (candor) bears their minds [or, souls] to heaven. Hence it [the "head-long swarm" to which the poet has referred in a preceding line] has merited to be forever called the Massa Candida." Both St. Augustine and Frudentius were at the height of their activity before the end of the fourth century. Moreover, St. Augustine was a native and a resident of this same Province of Africa, and Frudentius was a Spaniard. It is natural to suppose that the glorious tale of the three hundred of Carthage had become familiar to both writers through a fresh and vivid tradition—no older than the traditions of the Revolutionary War now are in, say, New England. It is not even probable that either of them originated the metaphor under which the martyrs of the limetkin have been known to later generations: the name Massa Candida had, most likely, been long in use among the faithful of Africa and Spain. As Christians, they would have been reminded of Apoc., vii, 13 and 14, by every commemoration of a martyrdom; as Romans—at least in language and habit of thought—they were aware that candidates (candidati) for office were said to have been so called in Republican Rome from the custom of whitening the toga with chalk or lime (calx) when canvassing for votes. Given the Apocalyptic image and the Latin etymology (candor—candidus—candidatus; cf. in the "Te Deum"); "Candidatus martyrum exercitus"); it was almost in-evitable that this united body of witnesses for Christ, together with their hearth of incandescent lime, which reduced their bodies to a homogenous mass, should, by the peculiar form of their agony, have suggested this name to the African and Spanish Christians.

(For the casuistry of the self-destruction of the Massa Candida, see Suicide.)

**Massachusetts.** one of the thirteen original United States of America. The Commonwealth of Massachusetts covers part of the territory originally granted to the Plymouth Company of England. It grew out of the consolidation (in 1692) of the two original colonies, Plymouth and Massachusetts Bay. The settlement at Plymouth began with the landing of the Pilgrims, 22 December, 1620; the Colony of Massachusetts Bay was established under John Endicott at Salem in 1628. The royal province created by this consolidation included also the District of Maine and so remained until the present State of Maine was set off from Massachusetts by Congress, 3 March, 1820. No authentic and complete survey of the State of Massachusetts exists, but it is generally believed to include an area of about 8040 square miles, with a population of rather more than three millions. Of this number 1,373,752 are Catholics, distributed among the three Dioceses of Boston (the Archdiocese), Fall River, and Springfield, which are the actual ecclesiastical divisions of the state. Classified by nationality, the Catholic population comprises more than 7000 Germans, 50,000 Portuguese, 100,000 Italians, 150,000 French Canadians, 10,000 Lithuanians, 3000 Syrians, 25,000 Poles, 1000 Negroes, 81 Chinese, 3000 Bravas, the remainder—more than 1,000,000—being principally Irish or of Irish parentage.
I. Colonial History.—A Settlement.—The explorations and settlements of the Northmen upon the shores of Massachusetts, the voyaging fur-traders, the temporary settlement (1602) of the Gosnold party on one of the Elizabeth Islands of Buzzard's Bay, and the explorations and the mapping of the New England coast by Captain John Smith are usually passed over as more or less conjectural. The undisputed history of Massachusetts begins with the arrival of the “Mayflower” in December, 1620. The discovery of the gardening being made by the fishery in the search of the fisheries set forth by Cabot, or by the daring Drakes, Frobishers, and Hawkinses of Elizabeth's reign, does not seem clear. It is an accepted fact that, when Gosnold set out in 1602, there was not a single English settlement on the Continent. France did not acknowledge the claim of England over the whole protected region, and the French colony had been established where now is northern Virginia, under the name of “New France.” This was after Verazzano’s expedition made by order of the French king himself, the first of the English explorers, too, the Huguenot Sieur de Monts, had been to Canada, and knew much about the resources of that country, especially the fur trade of the Indian tribes. Hence, the French granted to Béobec a patent to all the country now included in New England, also a monopoly of the fur trade.

All this is important, because it entered into the conditions of the early permanent settlement here.

For a quarter of a century prior to the coming of the Pilgrims, the French and the Dutch resented the encroachments of the English. “The Great Patent for New England”, of 1620, granted to Gorges and his forty associates, has been called a “despotism as well as a gigantic commercial monopoly.” This grant included the New Netherlands of the Dutch, the French Acadia and Beobec, and the purpose of it seemed to be to establish British possessions in North America, besides all New England, the State of New York, half of New Jersey, nearly all of Pennsylvania, and the country to the west—in short, all the territory from the fortieth degree of north latitude to the forty-eighth, and from the Atlantic to the Pacific Ocean. The English had increased the enemy of the French by destroying the Catholic settlements at Ste-Croix and at Port-Royal, and had aroused the suspicion and hostility of the Indians by the treachery of Hunt, an act described by Mather as “one which constrained the English to suspend their trade and abandon their prospects of a settlement in New England.”

The religious conditions were no less ominous for the Pilgrims. At the opening of the sixteenth century, all Christian Europe, with slight exceptions, was Catholic and loyal to the papacy; at the close of that century England herself was the mother of three anti-papacy sects: the State Church and its two divisions; the Nonconformists, or Puritans; and the Separatists, or Pilgrims. At the time of the “Mayflower”, the Puritans had become as fully disenfranchised by the Anglican Church as the Pilgrims had estranged themselves from both; each distrusted the others; all three hated the Church of Rome. Gorges and his associates had found the French and their Jesuit missionaries a stumbling-block in the way of converting the Indians; the conceit of the cherub hopes of the Pilgrims to find a home away from their English persecutors, and, after much chicanery on the part of the promoters, the company agreed to found a home for the Pilgrims in the new world. The articles of agreement were wholly commercial, and the “Mayflower” sailed for Virginia. This story differs in its interpretation of the company's knowledge of the new voyage, but all agree that the Pilgrims, in landing at Plymouth, 22 December, 1620, were outside any jurisdiction of their patrons, the Virginia Company. The Pilgrims themselves recognized their difficulty, and the famous “Compact” was adopted, before landing, as a basis of government by mutual agreement. This Compact was taken directly from James I the new charter of 1620 which controlled, on a commercial basis, all religious colonization in America. The struggle of race against race, tribe against tribe, neighbour against neighbour were all encouraged so long as the warfare brought gain to the mercenary adventurers at home. The Pilgrims, by reason of their religious disabilities, ill-feeling, were forced by the law of self-preservation to continue religious intolerance and the extermination of the Indians. Thus it is that we find the laws, the customs, and the manners of these first English settlers so interwoven with the religio-commercial principle. The coming of the Puritans, in 1629–30, with the factor of given and an extinguishing in America the very thing against which these “Purists” had fought at home, namely, the union of Church and State. Here, again, at Puritan Salem, Gorges and Mason cloaked their commercialism under religion, as the accounts of La Tour and Winslow attest, and so effective were their machinations that, as early as 1635, Endicot's seal had not left a set of the king's colours intact with the red cross thereon—that “relief of popery insufferable in a Puritan community.”

B. Colonial Legislation.—The legality of the early acts of the colonists depends, to a great degree, on whether the charters granted to the two colonies were corporate charters, for public purposes, or whether they are regarded as constitutions and foundations of a government. This much-controverted point has never been settled satisfactorily. The repeated demands from the king, often with threat of prosecution, for the return of the charters were ignored, so that, until 1694, the colony was practically a free state, independent of England, professing little, if any, loyalty. Judging from the correspondence, it is more than probable that the intention of the Crown in granting the charter was that the corporation should have a local habitation in England, and it is equally evident that the colony did not possess the right to make its own laws. It is plainly stated in the patent granted to the Puritans who the governor and other officials of the colony should be showing thereby that the Crown retained the right of governing. A new charter was granted in 1692, covering Massachusetts, Plymouth, Maine, Nova Scotia, and the intervening territory, entitled “The Province of Massachusetts Bay in New England”, nevertheless the proceedings on the part of the home Government, to assert the Crown's rights, abated notably. During the half-century in which the Puritans ignored the terms of their charter, and made laws in accordance

coat-of-arms

forming part of the seal of Massachusetts

Massachusetts
with their own selfish interests, many of those acts occurred which history has since condemned. At the first meeting of the General Court held 30 August, 1630, it was agreed ‘‘to build a harbor for the purpose of trade and maintain it at the state’s expense—an act described by Benedict, in his ‘History of the Baptists,’’ as ‘‘the first dangerous act performed by the rulers of this inexpient government which led to innumerable evils, hardships, and privations to all who had the misfortune to dissent from the ruling power in after-times.’’

The Puritans in England had been in revolt against church and State. After the execution of King Charles I, however, the forced emigration of the Irish brought many to that race to these shores; their number is hard to estimate, first, because the law made it obligatory that all sailings must take place from English ports. By 1640 there were 40,000 Irish in Massachusetts. The next order of events came from Ireland with English sailing registry; secondly, because the law, under heavy penalties, obliged all Irishmen in certain towns of Ireland to take English surnames—the name of some small town, of a colour, of a particular trade or office, or of a certain art or craft. Children in Ireland were separated forcibly from their parents under penalties sent into the colonies. Men and women, from Cork and its vicinity, were openly sold into slavery for America. Connacht, which was nine-tenths Catholic, was depopulated. The frequently published statement in justification of Cromwell’s persecution, that the white men were exterminated, is contradicted by finds in the existence of the single penitentiary colony in this country. In 1634 the General Court of Massachusetts Bay also granted land for an Irish settlement on the banks of the Merrimac River. (See Boston, Archdiocese of; Irish in Countries Other Than Ireland.)

II. Modern Massachusetts.

A. Statistics of Population.

In 1630 the population of Plymouth and Massachusetts Colonies was estimated at 8000 white people; in 1650, at 16,000; in 1700, at 70,000; while in 1790 it was placed at 220,000. In 1790 the population of the State of Massachusetts was 378,787; in 1800 it was 1,000,650. The density of population increased from 47 to the square mile, in 1790, to 373, in 1805. In 1790 over nine-tenths of the population lived in rural communities, while in 1905 less than one-fourth (22.28 per cent) of the total population lived in communities of 8000 or less. The great tide of Irish immigration began in 1847. This has since conspicuously modified the population of Massachusetts, the ratio of Irish and foreign-born of the population was 6.48 per cent and 8.47 per cent respectively; the number of native-born in the total population being 2,085,636, and that of the foreign-born being 918,044, an increase of the latter of 459.7 per cent since 1880. This foreign-born population is mostly (83.91 per cent) in cities and towns with populations of more than 5000. Ireland furnishes 25.75 per cent of the total foreign-born population. Canada (exclusive of New Brunswick, Nova Scotia, and Prince Edward Island) is second, with a population of 12.88 per cent of the total foreign-born population. At present Russia supplies the largest increase in foreign-born, having risen from one-half of one per cent, in 1896, to 8.43 per cent, in 1905. Italy’s contribution in the period rose from 76 per cent to 5.51 per cent. Almost sixty per cent of the entire population of Massachusetts is now of foreign parentage. In the cities of Fall River and Lawrence it runs as high as four-fifths of the entire population, while in Holyoke, Lowell, and Chicopee it is more than three-fourths. In Boston the population of foreign parentage forms 69.03 per cent, while at New Bedford it rises to 72.34 per cent, at Worcester to 65.64 per cent, at Cambridge to 65.16 per cent, at Woburn to 63.63 per cent, and at Salem to 61.10 per cent. The Greeks have increased in Massachusetts 1242.7 per cent since 1895, a greater rapidity of increase than all peoples of foreign parentage in the population. A new influx of Jews began in 1904. In 1860, the Irish population of Boston, Irish parentage gives 174,770 out of a total census of 410,860 persons of foreign parentage, and this nationality predominates in every ward except the eighth, where Russian parentage stands first. The transformation in the racial and national population in Massachusetts has likewise changed the religious denominations of the people. The present order of denominations in this state is: Catholic, 69.2 per cent; Congregationalists, 7.6 per cent; Baptists, 5.2 per cent; Methodists, 4.2 per cent; Protestant Episcopalians, 3.3 per cent.

B. Economic Conditions.

Massachusetts was not favored by nature for an agricultural centre. The soil is sandy in the level country and light in the low sections. The valleys of the streams are rich in soil favourable to vegetable and fruit-production. The early industries were cod and mackerel fisheries. At the outbreak of the Revolution, commerce was the most profitable occupation, and after the declaration of peace, Massachusetts sent its ships to all parts of the world. The European and American commerce greatly until the War of 1812, with its embargo and non-intercourse laws, which forced the American vessels to stay at home. It had its recompenses, however, in the birth of manufactures, an industry attempted as early as 1631 and 1644, but subsequent efforts were almost in vain. The first cotton mill was established at Beverly in 1787. It was not until 1840, however, that the cotton and leather industries attained permanent leadership. According to the published statistics of 1908, Massachusetts had 6044 manufacturing establishments, with a yearly product valued at $1,172,808,782. The boot and shoe industry was the leading industry of the State, with a yearly production of $213,506,562. This industry produced 18.2 per cent of the product value of the State, and one-half of all the product in this line in the United States. The cotton manufacturers were 13.51 per cent of the State’s total product. The total capital devoted to production in the State was $717,787,935. More than 480,000 wage-earners were employed (323,308 males, 156,826 females) in the various manufacturing industries of the State, the two leading industries employing 35.22 per cent of the aggregate average number of all employees. The average yearly earning for each operative is $501.71. The Massachusetts laws prohibit more than fifty-nine hours’ weekly employment in meat-packing establishments. The working hours in the slaughtering industries are ten hours. No woman or minor can be employed for purposes of manufacturing between the hours of ten o’clock p.m. and six o’clock a.m.; no minor under
eighteen years and no woman can be employed in any textile factory between six o'clock p.m. and six o'clock a.m.; no child under fourteen years of age can be employed during the hours when the public schools are in session, nor between seven o'clock p.m. and six o'clock a.m. Children under fourteen years, and children over fourteen years and under sixteen years, who cannot read at sight and write legibly simple sentences in the English language, shall be permitted to work on Saturdays between six o'clock a.m. and seven o'clock p.m. only. Transportation facilities have been set up, or are to be set up, in all branches of the industries. Two main railroad systems connect with the West, and, by means of the interstate branches, these connect with all the leading industrial cities. One general railroad system with its sub-divisions connects with the South, via New York. The means of transportation by water are not less complete, and other supplies of the world into connection with the various railroad terminals for distribution.

C. Education.—All education in Massachusetts was at first religious. We read of the establishment in 1636 of Harvard College, "lest an illiterate ministry might be left to instruct the congregation in the duties of the people in piety, morality, and learning." The union of Church and State was accepted, and the General Court agreed to give 400 pounds towards the establishment of the college. Six years later it was resolved, "taking into consideration the great neglect of many parents and guardians in training up their children in learning and other useful knowledge which may be profitable to the Commonwealth... that those men in every town are to redress this evil, are to have power to take account of parents, masters, and of their children, especially of their ability to read and understand the principles of religion and the capital laws of the country." This was at one time education in Massachusetts. In 1647 every town was ordered, under penalty of a fine, to build and support a school for the double purpose of religious instruction and of citizenship; every large town of one hundred families to build a grammar school to fit the youths for the university. Thus was established the common free school. The work of the common school of the rural districts was of secondary education as in civic affairs. When the grants from the legislature—colonial, provincial, and state—failed to meet the expenses of salaries and maintenance, lotteries were employed. The last grant to Harvard College from the public treasury was in 1814. Congregationalism had controlled education and legislation during the first three quarters of the century, and the work of the new Congregational colleges, which were limited to state officials and a specified number of Congregational clergyman. It was not until 1843 that other than Congregationalists were eligible for election as overseers of the college.

The original system of state education, as outlined above, was uninterrupted until the close of the Revo
tu. The normal Colleges of the North, act substituting six taxation, reduced the "grammar school" to a very low standard. Men of ability found a more lucrative occupation than teaching. Private schools sprang into existence about this time, and the legacies of Dummer, Phillips, Williston, and others made their foundations the preparatory schools for Harvard. In 1769 the legislature passed an act substituting six months for the constant instruction provided for of towns of fifty families; and the law required a gram
teacher of determined qualifications for towns of 200 families, instead of the similar requirements for all towns of half that population. In 1797 the Legis
lature formally adopted all the incorporated academies and required the law of 1769. More and more the the law adoption almost entirely replaced the grammar schools founded in 1647. The act of 1789 was repealed in 1824. This aided greatly the private denominational schools and gave to them a false and fictitious social, intellectual, and moral standing. The American Institute of Instruction was formed in 1830 at Boston as a protest against the low standard of teaching in the public schools. Three years prior to this (1827) the Legislature had established the State Board of Education, which remained unchanged in form until 1900. That same year was made historic by the Legislature voting to make it unlawful to use the common schools, or to teach anything in the schools, in order to turn the children to a belief in any particular sect. This was the first show of what was manifest in Massachusetts, and it has retained its control of the educational policy of the state since that date. In 1835 the civil authorities at Lowell authorized the establishment of separate Catholic schools with Catholic teachers and with all text-books subject to the pastor's approval. The municipality paid all the expenses except the rent of rooms. This experiment was a great success. The general wave of religious fanaticism, which swept the country a few years later, was responsible for the acceptance of the referendum vote of 21 May, 1855, which adopted the constitutional amendment that "all moneys thus raised and put to the use of schools in any part of the state, shall never be appropriated to any religious purposes or for the maintenance exclusively of its own schools". The Civil War resulted in a saner view of many questions which had been blurred by passion and prejudice, and in 1862 (and again in 1880) the statute law was modified so that "Bible reading is required, but without writing, oral or written." The pupil is not made to take part in any such exercise if his parent or guardian so wishes; any version is allowed, and no committee may purchase or order to be used in any public school books calculated to favor the tenets of any particular sect of Christians."—This, in brief, is the process by which the secularization of the public schools can be about, a complete repudiation of the law of 1842.

Massachusetts has ten state normal schools with over 2000 pupils and a corps of 130 teachers. In the 17,566 public schools there are 524,319 pupils with an average attendance of 92 per cent. The proportion of teachers is 1251 male and 13,497 female. The total valuation of the state is $14,697,774. There are forty-two academies with an enrolment of over 6000 pupils, and 344 private schools with a registration of 91,772. The local annual tax for school support per child between the ages of five to fifteen years is $26. The total valuation of all schools in Massachusetts is $3,512,557,604. There are within the state eighteen colleges and universities, six of which are devoted to the education of women only. Massachusetts has also eight schools of theology, three law schools, four medical schools, two dental schools, one school of pharmacy, and three textile schools. The only colleges in Massachusetts (except textile schools) receiving state or federal subsidies are the State Agricul
tural College, and the World's College of Technology, the latter receiving both. The number of public libraries in Massachusetts exceeds that of any other state. The list includes 2586 libraries with 10,810,974 volumes valued at $12,657,757. There are 623 reading rooms, of which 301 are free. There are thirty schools for the dependent and the afflicted. The growth of the Catholic schools has been most notable. Besides Holy Cross College at Worcester, and Boston College at Boston, there are in the diocese of Boston many grammar schools and twenty-six high schools with a teaching staff of 1075 persons and an enrolment of 52,142. This represents an investment of more than $2,700,000, a yearly interest of $174,000. More than one third of the population of the diocese now maintain parochial schools. In the Diocese of Fall River there are over 12,000 pupils in 28 parochial schools, besides a commercial school with
363 pupils. In the Diocese of Springfield there are 24,542 pupils in 56 parochial schools.

D. Laws affecting Religion and Morals.—Elsewhere in this article we have traced colonial laws and legislation. The Constitution of the United States gave religious liberty. The State Constitution of 1780 imposed a religious test as a qualification for office and it authorized the legislature to tax the towns, if necessary, “for the support and maintenance of public Protestant teachers of piety, religion, and morality.” The former law was repealed in 1821, and the latter in 1833. Complete religious liberty has existed since the latter date. The observance of the Lord’s Day is amply safeguarded, but entertainments for charitable purposes given by charitable or religious societies are permitted. The keeping of open shop or engaging in work or business for charitable purposes is forbidden. Many of the rigid laws of colonial days are yet unrepealed. There is no law authorizing the use of prayer in the Legislature; custom, however, has made it a rule to open each session with prayer. This same custom has become the rule in opening the several sittings of the higher courts. Catholic priests have officiated at times at the former. The present Archbishop of Boston offered prayer at the opening of his first session in the State House Court, but later it was the custom of the Catholic to perform this office. The courts and the judiciary have full power to administer oaths.

The legal holidays in Massachusetts are 22 Feb., 19 April (Patriots’ Day), 30 May, 4 July, the first Monday in September (Labor Day), 12 Oct. (Columbus Day), Thanksgiving Day, and Christmas Day. The Society of Jesus is not allowed to celebrate Mass on the Feast of the Holy Innocents. The observance of the Lord’s Day has been known as a custom, if not a law, since the earliest years of the state. The protest of the clergy of both Protestant and Catholic faith has been in favor of the observance. Since 1831 the law has been repealed.

The seal of confession is not recognized by law, although in practice sacramental confession is generally treated as a privileged conversation. Incorporation of churches and of charitable institutions is authorized by statute. Such organizations may make their own laws and elect their own officers. Even religious societies so organized shall constitute a body corporate with the powers given to corporations. Section 44, chapter 36, of the Public Statutes provide that the Roman Catholic archbishop or bishop, the vicar-general of the diocese, and the pastor of the church for the time being, or a majority of these, may associate with these twain, or, by letter, communicants of the church, may form a body corporate, to issue and execute a certificate of incorporation becoming the trustees. Such corporations may receive, hold, and manage all real and personal property belonging to the church, sell, transfer, hold trusts, bequests, etc., but all property belonging to any church or parish, or held by such a corporation, shall be held in trust for all time.

All church property and houses of religious worship (except that part of such houses appropriated for purposes other than religious worship or instruction) are exempt from taxation. This exemption extends to the property of literary, benevolent, charitable, and scientific institutions and to the monuments, libraries, cemeteries, and tombs. Clergymen are exempt from service as constables, from jury service, and service in the militia. Clergymen are permitted by law to have access to prisoners after death sentence, and are among those designated as “officials” who may be present at executions. The statutes prohibit marriage between relatives, and recognize marriage by civil authorities and by church. The statutory grounds for divorce recognized are adultery, impotency, desertion continued for three consecutive years, confirmed habits of intoxication by liquor, opium, or drugs, cruel and abusive treatment; also if either party is sentenced for life to hard labour, or five or more years term in jail, or house of correction. The Superior Court hears all divorce cases. After a decree of divorce has become absolute, either party may marry again as if the others were dead; except that the party from whom the decree was granted shall not marry within two years. The sale of intoxicating liquors is regulated by law. Each community, city, or town votes annually upon the question, whether or not licence to sell liquor shall be issued in that municipality. Special boards are appointed to regulate the conditions of such licences. The number of licences that may be granted in each town or city is limited to one to each thousand persons, though Boston has a limitation of one licence to each five hundred of the population. The hours of opening and closing of licensed places are regulated by law. Any person owning property can object to the granting of a licence to sell intoxicating liquors within twenty-five feet of his property. A licence cannot be granted to sell intoxicating liquors on the same street as, or within four hundred feet of, a public school.

E. Religious Liberty.—In the beginning Massachussetts was Puritan against the Catholic first, against all non-conformists to their version of established religion next. The Puritan was narrow in mind and for the most part limited in education, a type of man swayed easily to extremes. England was at that period intensely anti-papal. In Massachusetts, however, the antipathy early became racial; first against the French Huguenots, then the Quakers, and finally against the Roman Catholic, but so great was the determination to maintain the racial religious bigotry that it has not disappeared wholly in Massachusetts. Within the pale of the Church racial schisms have been instigated from time to time in order that the defeat of Catholicism might be accomplished when open antagonism from without failed to accomplish the end sought. In politics it is often effective to bleat for the extermination of Catholics or to have them excluded from office. The first measure was the banishment of all foreigners in 1631 except Puritans were excluded by law from the freedom of the body politic. In 1647 the law became more specific and excluded priests from the colony. This act was reaffirmed in 1770. Bowdoin College preserves the cross and Harvard College the Indian. In the time of King Charles, the priest excluded under the provision of the law. In 1746 a resolution and meeting at Faneuil Hall bear testimony that Catholics must prove, as well as affirm, their loyalty to the colony. Washington himself was called upon to suppress the insult of Pope Day at the siege of Boston. Each of these events was preceded by a period of French and Irish immigration. The circumstances which were repeated in the religious fanaticism of the middle of the nineteenth century. Cause and effect seem well established and too constant to be incidental. In all the various anti-Catholic uprisings, from colonial times to the present, there is not one instance where the Catholics were the aggressors; they were ever rulers, and the men of peace and forbearance have always been in marked contrast to the conduct of their non-Catholic contemporaries. In every one of the North Atlantic group of states, the Catholics now constitute the most numerous religious denomination. In Massachusetts the number of the leading denominations is as follows: Catholics, 75,000; Jews, 2,575; Unitarians, 1,350; Methodists, 1,725; Baptists, 1,530; Presbyterians, 855.
the Otis, the Lees, the Perkins, Everett, and Loring—all non-Catholics—whose voices and pens were enlisted heartily in the cause of justice, toleration, and unity.

In 1846, Rhode Island and Connecticut were set off from the Diocesan Diocese of Boston. Maine and New Hampshire, also under the jurisdiction of Boston, were made a new diocese ten years later, with the episcopal Irish immigration, and Boston received a large quota. This new influx was, as in the previous century, looked upon as an "intrusion" and the usual result followed. New England had now become what Lowell was pleased to call "New Ireland". This religious and racial transformation, made the necessity for churches, academies, schools, asylums, priests, and teachers an imperative one. The work of expansion, both material and spiritual, went forward apace. The great influx of Canadian Catholics added much to the Catholic population, which had now reached more than a million souls—over sixty-nine per cent of the total religious population of the state. The era was not without its religious strife, this time within public and charitable institutions, state and municipal. This chapter reads like those efforts of proselytizing in the colonial days when names of Catholic children were changed, and that of his brother, all in the hope of destroying the true religious inheritance of the state's wards. The influence of Catholics in the governing of institutions, libraries, and schools has since then increased somewhat. The spiritual necessities of the vast Catholic communities are provided for abundantly; orphans are well housed; unfortunately charity is not provided; there is great need for more schools, and the sick have the sacraments at their very door. Schools, academies, colleges, and convets, wherein Catholic education is given, are now within the reach of all. The whole period of Archbishop Williams's administration (1866-1907) has been appropriately called "the brick and mortar age of the Catholic Church in New England". (See Boston, Archdiocese of.)

Upon the death of Archbishop Williams, in the summer of 1907, his coadjutor, the Most Reverend William H. O'Connell, D.D. (the present archbishop), was promoted to the metropolitan see. This archbishop is the founder of the devotion of Catholic Societies to meet in Boston with restoring interest, activity, and strength to that society, in which, indeed, he has shown a special interest. To develop the solidarity of priests and people, of races and nations, of the cultured and the unlettered—a unity of all the interests of the Church, the archbishop needed a free press: he purchased "The Pilot", secured able and fearless writers and placed it at a nominal cost within the reach of all. The dangers to the immigrant in a new and fascinating environment are all anticipated, and safeguards are being strengthened daily. At the same time, the inherited misunderstandings of Puritan Massachusetts, and the ever growing work: he had the wisdom to give the Church, to its priests, and to their spiritual leader. In every diocese and in each county well-organized branches of the Federation exist, temperance and church societies flourish, educational and charitable associations are alive and active. The Church's oldest laymen are enlisted, and all are helping mightily to reconstruct the Church of Boston, to make Massachusetts the leading Catholic state in the country. (See also Cheverus, Jean Louis de; Boston, Archdiocese of; Fall River, Diocese of; Springfield, Diocese of.)

THOMAS F. HARRINGTON.

Massaia, Guglielmo, Cardinal, b. 9 June, 1809, at Piova in Piedmont, Italy; d. at Cremona, 6 August, 1889. His baptismal name was Lorenzo; that of Guglielmo was given him when he became a religious. He was first educated at the Collegio Reale at Asti under the care of his elder brother Guglielmo, a canon and preceptor of the cathedral of that city. On the death of his brother he was sent to the Jesuit observance in the Turin church, and thence to the Jesuit seminary; but at the age of sixteen entered the Capuchin Franciscan Order, receiving the habit on 25 September, 1825. Immediately after his ordination to the priesthood, he was appointed lector of theology; but even whilst teaching he acquired some fame as a preacher and was chosen confessor to Prince Victor Emmanuel, afterwards King of Italy, and Ferdinand, Duke of Genoa. The royal family of Piedmont would have nominated him on several occasions to an episcopal see, but he strenuously opposed their project, being desirous of joining the foreign missions of his order. He obtained his wish in 1846. That year the Congregation of Propaganda, at the instance of the traveler Antoine d'Abbadie, determined to establish a Vicariate-Apostolic for the Gallias in Abyssinia. The mission was confined to the Capuchins, and Massaia was appointed first vicar-apostolic, and was consecrated on Rome in 24 May of that year. On his arrival in Abyssinia he found the country in a state of religious agitation. The heretics of the ancient men had there been a movement amongst the Copts towards union with Rome. Massaia, who had received plenary faculties from the pope, ordained a number of native priests for the Coptic Rite; he also obtained the appointment by the Holy See of a vicar-apostolic for the Copts, and himself consecrated the missionary Giustino de Jacobs to this office. But this act aroused the enmity of the Coptic Patriarch of Egypt, who sent a bishop of his own, Abba Salama, to Abyssinia. As a result of the ensuing political agitation, Massaia was banished from the country and had to flee under an assumed name. In 1850 he visited Europe to gain a fresh band of missionaries and means to develop the Church there. He was received with the Minister of Foreign Affairs in Paris, and with Lord Palmerston in London. On his return to the Gallas he founded a large number of missions; he also established a school at Marseilles for the education of Gallas boys whom he had freed from slavery; besides this he composed a grammar of the Gallas language which was published at Marseilles in 1867. During his thirty-five years as a missionary he was exiled seven times, but he always returned to his labours with renewed vigour. However, in 1880 he was compelled by ill-health to resign his mission. In recognition of his merit, Leo XIII raised him to the titular Archibishopric of Statoorpis, and on 10 November, 1894, to the dignity of cardinal. In the title of S. Vitale, in which he was placed in 1894, he wrote an account of his missionary labours, under the title, "I miei trentacinque anni di missione nell'
Massa Marittima, Diocese of (Massana), in the Province of Grosseto, in Tuscany, first mentioned in the eighth century. It grew at the expense of Populonia, an ancient city of the Etruscans, the principal product of which was iron, and especially copper works. Populonia was besieged by Sulla, and later by the forces of the Lombard kings, and in 817 by a Byzantine fleet. After this, the bishops of Populonia abandoned the town, and in the eleventh century, established their residence at Massa. In 1226 Massa became a commune under the protection of Pisa. In 1307 it made an alliance with Siena, which was the cause of many wars between the two republics that brought about the decadence of Massa. The town has a fine cathedral. The first known Bishop of Populonia was Attelius (about 450); another was Saint Certonius (546), protector of the city, to whom Saint Gregory refers in his Dialogues. Among the bishoprics of Massa were the friar Antonio (1430), a former general of the Franciscans, and legate of Boniface IX; Leonardo Dati (1467), author of poetic writing; Alessandro Petrucci (1601), who embellished the cathedral and the episcopal palace; the Camaldolese Eusebio da Ciani (1719), who governed the diocese for fifty-one years. This see was at first suffragan of Pisa, but since 1458 of Siena. It has 29 parishes, 68,200 inhabitants, one religious house of men and four of women.

Masses, Bequests for (Canada).—The law governing bequests being concerned with "property and civil rights", falls within the legislative competency of the provincial legislatures, not of the Dominion Parliament. The basic law in all the provinces is, however, not the same. Any question concerning bequests is, therefore, one of provincial, not Dominion law. There is no statute enacted by any of the legislatures specially affecting bequests for Masses.

Quebec.—In this province there is no question of the validity of such bequests. The basic law is the French law as in force in the province at the time of the cession (1759–63). Whether such bequests were or are valid under English statute or Common Law, is immaterial. Under article 869 of the Civil Code a testator may make bequests for charitable or other lawful purposes. The freedom of the practice of the Catholic religion being not only recognized but guaranteed, as well under the Treaty of Cession (1763) as under the terms of the Quebec Act (1774), and subsequent Provincial Legislation (14 & 15 Vic. Cap. 175) having confirmed that freedom, a bequest for the saying of Masses is clearly for a lawful purpose.

Ontario.—In this province the law of England, as in force on 15 October, 1792, introduced "so far as it was not from local circumstances inapplicable", under powers conferred by the statute of 1791 which divided the old Province of Quebec into Lower and Upper Canada, is the basic law. That Act preserved to Roman Catholics in Upper Canada the rights as regards their religion secured to them under the Act of 1774. The provincial legislation cited as regards Quebec being enacted after the reunion of Upper and Lower Canada, was also law in this province. The validity of bequests for the saying of Masses was upheld in the case of Elmesley and Madden (18 Grant Chan. R. 386). The court held that the English law, as far as under it such dispositions may have been invalid, was inapplicable under the circumstances of the province, wherein the Catholic religion was tolerated. This case has been accepted as settling the law.

British Columbia, Manitoba, Alberta, and Saskatchewan.—In British Columbia the civil law of England, as it existed on 19 November, 1858, and in the three other of these provinces, that law as it existed on 15 July, 1870, "so far as from local circumstances inapplicable", is the basic law. The Ontario judgment above cited is in practice accepted as settling the question under consideration.

In Nova Scotia, New Brunswick, and Prince Edward Island, though there is no statutory enactment making the English law applicable, it has, since the acquisition of Acadia by Great Britain, been recognized as being in force. In these provinces, however, that law in so far as it may treat as void dispositions for the
MASSES, BEQUESTS FOR (ENGLAND).—Before the Reformation, dispositional provisions, whether real or personal, of the bequestors, were valid. Where, in the case of real property, they might happen to conflict with the Mortmain laws by being made to religious congregations. There was a tenure of land known as tenure by divine service, an incident of which was the saying of Masses and of prayers for the dead. The Statute of Westminster, 31 Edward III, c. 11, contained a provision that the administration of intestate Masses should be able to recover by action debts due to the intestate and that they should administer and dispense for the soul of the dead. The wills of various great people who lived in those ages contain bequests for Masses. Henry VII left £250 for 10,000 Masses to be said for his and other souls. The will of Henry VIII, made on 28 December, 1546, commanded his corpse to be placed on an altar over his tomb in St. George's Chapel in Windsor, where daily Mass shall be said "as long as the world shall endure," and it sets out a grant to the dean and canons of the chapel of lands to the value of £600 a year for ever to find two priests to say Mass and to keep four obits yearly and to give alms for the King's soul; and contains other provisions for requiem Masses and prayers for his soul. But in A.D. 1531, by the statute 23, Henry VIII, c. 10, all subsequent assurances or dispositions of land to the use of a perpetual obit (i.e. a service for the dead to be celebrated at certain fixed periods) or the continual service of a priest to be void if the use was to extend over more than a year, but if the use was for a less period the dispositions were to be valid. That even private Masses were at that time approved by the state is shown by the six articles passed in A.D. 1539 (32 Henry VIII, c. 14), which constituted the denial of their expediency a felony. Henry VIII died 28 January A.D. 1547. The change of religion became much more marked in the following reign, and the government fostered the establishment in England of the Protestant doctrines which had begun to spread on the continent. In the same year the Six Articles were repealed and the Statute of Chauntreys (1 Edward VI, c. 14) was passed from which the invalidity of bequests for requiem Masses has been made subject to the statute of 1692, "a great part of the superstitious and errors in the Christian religion hath been brought into the minds and estimation of men by reason of the ignorance of their very true and perfect salvation through the death of Jesus Christ and by devising and phantasying vain opinions of purgatory and masses satisfactory to be done for them which be departed, that the said doctrine and vain opinion by nothing more is maintained and upheld than by the abuse of tren- tals, chauntreys and other provisions made for the continuance of the said blindness and ignorance." The statute, after further reciting that the property given to such uses ought to be devoted to the founding of schools and other good purposes, enacted that proprietary given to such uses, which had been so used within the succeeding five years, should be given to the king. The statute only applied to past dispositional property and it did not declare the general illegality of bequests for requiem Masses, nor has any other statute ever so declared (Cary v. Abbot, 1802, 7 Ves. 495). Nevertheless, the effect of the statute has been to bring it. (West v. Shuttleworth, 1835, 2 M. & K. 679; Heath v. Chapman, 1854, 2 Drew 423.)

The statute was not repealed under Mary, and by 1 Ellis, c. 24, all property devoted to such uses in Mary's reign was given to the crown. There is a series of cases on the question decided under Elizabeth, notably that of Adama v. Lambert, decided in 1602, in the course of which the other and the following cases these decisions are slightly conflicting, but the main points to be drawn from the series are, first, that uses for Masses or prayers for the dead were held to be superstitious and unlawful, but, second, that the question of their unlawfulness was considered according as they came within the provisions of the Statute of 1 Edward VI, c. 14. In the case of the Catholic Church, the Catholic religion was proscribed and any devise or bequest for the promotion of it was illegal and, as regarded the purpose thereof, void (Re Lady Portington 1692, 1 Salk. 162). In the report of that case, as also in other later cases, the terms "superstitious" and "unlawful" appear to be applied indifferently to purposes for the maintenance of any religious belief. But dispositions for Catholic poor or Catholic schools or other Catholic purposes which might come under the general construction of "charity," passed to the crown to be devoted to other lawful charitable purposes (Cary v. Abbot above). In 1829 the Roman Catholic Relief Act was passed, which contained, however, in some of its clauses and penal provisions against members of religious orders of men by reason of which the status of these orders in the United Kingdom is illegal. In 1832 the Roman Catholic Charities Act (2 and 3 William IV, c. 115) was passed. By it Catholics were, as regards their charitable purposes, put in the same position as that of Protestant dissenters. The law as to bequests for a bequest for the celebration of Masses with no intention for souls departed would be valid, and, moreover, it would constitute a good charitable bequest, and so, it would be valid though made in perpetuity (Re Michel's Trusts, 1860, 28 Beav. 42). But it has been held that the act has not validated bequests for requiem Masses, that the term of the so-called "superstitious" (West v. Shuttleworth above), that they do not constitute charitable bequests and that, accordingly, the property given under them passes to the person otherwise entitled (Heath v. Chapman above). This is the position of the law to-day with the exception made by the Roman Catholic Charities Act, 1850, which provides that any lawful devotional service given to any Catholic or Catholic Charity is to be invalidated because the estate devised or bequeathed is, also, subject to any trust deemed to be superstitious or prohibited through being to religious orders of men, but such latter trust may be apportioned by the Court or the Charity Commissioners to some other lawful charitable trust. Thus the true position of such Masses is as such invalid, and where no question of apportionment can arise, for instance, where there is a specific legacy of money for the purpose only of such Masses, the estate which is subject to the trust does not pass to any charity but to the person otherwise entitled to it (Re Fleetwood, Siddgoves, 1850, 18 Ch. D. 609). Also, a legacy for requiem Masses is invalid even though the legacy be payable in a country where it would be legally valid (Re Elliott, 1891, 39 W.R. 297). The grounds on which this position of the law is based appear rather unsatisfactory. Admittedly, there is no direct statutory illegality. In the case of Heath v. Chapman (above) Viner V. C. stated that the Statute 1 Edward VI, c. 14, assumed that trusts for Masses were already illegal—that they were in fact so—and that the statute has stamped on all such trusts, whether made before or since it, the character of illegality on the ground of being superstitious. Seeing that the statute was passed in the year of the death of Henry VIII, it is not possible to derive the validity of the Six Articles, and that during that time there had been no statutory abolition of the Mass or condemnation of the doctrine of purgatory, it is not easy to discern how the legal invalidity of such bequests had al-
ready become established. In West v. Shuttleworth (above), which is the leading case on the subject, Pepys M. R. stated that it was by analogy to the statute that the illegality of these bequests had become established. This would seem to mean that their illegality was based upon the general policy of the law and upon principles resulting from such a change in the national system as must have arisen in that case from the complete change in the national church. In that case, since the policy applied to the whole realm including Ireland, where Protestantism became the established church and an even more vigorous anti-Catholic policy was pursued by the legislature, one would expect to find the illegality of bequests for Masses as well as for Requiem Masses established in Ireland through the very fact itself did not apply to Ireland. Thus, in the case of the Attorney-General v. Power, 1809 (1 B. & Ben. 150) Lord Manners, Irish Lord Chancellor, in giving judgment with regard to a bequest to a school by a Catholic testator, stated that he would not act upon the presumption that it was for the endowment of a Catholic school, and that such a bequest would by the law of England be deemed void either as being contrary to the provisions of the statute of Edward VI or as being against public policy. Yet the same Lord Chancellor, in the case of the Commissioners of Charitable Donations v. Walsh, 1823, 7 Ir. Eq. 32, after a prolonged argument before him, held a bequest for requiem Masses to be valid.

The ground of public policy in respect of this question seems no longer to hold good. There is no longer any public policy against Catholicism as such. As mentioned above, seemingly, a bequest for the mere celebration of Masses with no intention for souls departed would be valid. Moreover, seemingly, a bequest for the celebration of the Mass at the funeral of the testator himself would be a good charitable bequest (Thorton v. Howe, 1862, 31 Beav. 19). Thus, since the Roman Catholic Charities Act 1832, putting Catholics as regards "their...charitable purposes" in the same position as other persons, the holding a bequest for Masses for the dead to be invalid appears necessarily to imply that the bequest is not to a charitable purpose and thereby to involve the inconsistency that it is not a "charity" to practise by the exercise of a "charity" the doctrine which it is a "charity" to propagate. Yet this is so even though, by the bequest being for Masses to be said for the departed generally, there is evidence of an intention on the part of the testator of promoting mortality. In view of this evidence, the real basis of the legal view of these bequests is that the law may not recognize the purpose of a spiritual benefit to one's fellow-creatures in an after existence intended by a person believing in the possibility of such a benefit. But such an attitude, apart from the inconsistency mentioned, seems to be opposed to the present policy of the law with regard to religious opinions, especially when the act of worship directed by the bequest, when viewed apart from the particular believed effect, is approved by the law as a charity. Doubt as to the soundness of the present law on the subject was expressed by Romilly M. R. in the case Re Michels Truste (above), where he upheld a bequest for a Jewish prayer to be recited on the testator's anniversary in perpetuity, there being no evidence that the prayer was to be recited for the benefit of the testator's soul, and in the case Re Blundell's Trusts, 1861 (30 Beav. 362), where he considered himself compelled, in compliance with the judgment in West v. Shuttleworth (above), to disallow a bequest by a Catholic for requiem Masses, stating that the law declaring such bequests to be invalid had now become so established that only a judgment of the House of Lords could alter it. It would be desirable that the decision of that tribunal should be obtained on this question.

In Ireland bequests for requiem Masses have long been regarded as valid, and, by a recent decision given upon exhaustive consideration of the question by the Irish Court of Appeal, the law is settled that such bequests, even when the Masses are to be said in private, constitute good charitable gifts and so may be made in perpetuity (O'Halton v. Logue, 1906, 1 Ir. 247). But in Ireland, also, religious orders of men are illegal and any bequest to such an order which is to go to the benefit of the order is invalid (Burke v. Power, 1905, 1 Ir. 123). But such a bequest was allowed in one recent case, and in cases where the bequest for Masses contains no indication that the money is to go to the order itself the Court will allow the bequest (Bradshaw v. Jackson, 1857 21 L. R. Ir. 15). The decisions show a strong general tendency to seek any means of escaping the provisions of the Catholic Relief Act, 1829, which, though never actively enforced, still remain on the statute book. This statutory illegality of any bequest to a religious order of men to go to the benefit of the order applies, of course, equally to England and to Scotland, where these provisions against religious orders are also law, but there does not appear to be any report of any decision on the point in either of these countries.

In Scotland the position seems, otherwise, to be as follows: though, in the centuries succeeding the Reformation the public policy was distinctly anti-Catholic and there was legislation (such as the Mass and Recusants Act passed in 1700, which, amongst other provisions, penalised the hearing of Mass) directed against the Catholic religion, yet there seems to have been no Statute which has given rise to the question of "superstition" on the special point of gifts for prayers for the dead. By an Act passed in 1793 Catholics in Scotland, and by an Act of 1801, no longer required, were put upon the same footing as other persons. The Catholic Charities Act, 1832, applied also to Scotland. The term "charity" is even rather more widely interpreted in Scottish law than in English law. Thus, in Scotland through the repeal of the legislation against Catholics and the legalisation of bequests to their charitable purposes, legacies for requiem Masses seem to pass unquestioned. There is little doubt that, if they were to be challenged, the Courts would uphold them. In a recent case where there was a bequest for the celebration of Mass in perpetuity (there was no mention of any intention for the dead) the validity of the bequest was not in any way called in question (In Re Macneil's Estates, 1904, 7 F. 42). The law as to superstitious uses prevailing in England is not taken to be imported into the laws of British colonies or possessions (Yase v. Ong, 1875, L. R. 6 C. P. 396). In Australia, though by an Act of the British Parliament passed in 1828, all the laws and statutes in force in England at that date were carried over (7 & 8 Geo. IV. c. 22), the validity of the bequest was not in any way called in question in the case of the insertion of a bequest for requiem Masses in favour of the administration of justice in the Courts of the new Australasian Colonies, the law as to superstitious uses has been held by the Supreme Court of Victoria not to apply there (In the Will of Purcell, 1895, 21, V. L. R. 249). This decision was followed in the Supreme Court of New South Wales in 1907 (Re Hartnett, 7 S. R. 465). There is little doubt that the law which these cases declare would be followed in all other Australasian Colonies and in New Zealand. In India bequests for requiem Masses are valid (Das Mercers v. Coates, 1864, 2 Hyde 65; Judah v. Judah, 1870, 2 B. L. R. 433).

Given on Littleton 96 (b); Nicholls, Will of the Kings and Queens of England and of members of the Blood Royal from Willam the Conqueror to Henry VII (London, 1778); Will of King Henry the VIII, stating that Mass should be said for King Henry (London, 1763); Duke on the Law of Charitable Uses, edited by Bristow (London, 1805).

R. S. NOLAN.

Masses, Devises and Bequests for (United States).—Prior to the period of the Reformation in England in 1532, Masses for the repose of the souls of
the donors of property given for that purpose were upheld in England, but during that year a statute was passed declaring the holding of land, except leaseholds of twenty years, to the intent to have perpetual or the continued service of a priest, or other like uses, should be void. In the reign of Edward VI (1547), another statute was passed declaring the king entitled to all real and certain specified personal property theretofore disposed of for the perpetual supply of clerks, and personal tenance of any anniversary or obit, or other like thing, or any light or lamp at any church or chapel. These statutes did not make disposition of personal property to such uses void, and the statute of Henry VIII was prospective and applied only to assurances of land to churches and chapels, and that of Edward VI was limited to the provision of perpetual clergy and personal tenance of any anniversary or obit, or other like thing, or any light or lamp at any church or chapel. The English chancellors and the English judges, in the absence of any express statute, determined all dispositions of property, whether real or personal, given or devised for uses specified in the two statutes, to be absolutely void as contrary to public policy, being for superstitious uses. The decision in such cases was not as to the validity of the bequest or the soul of the donor or for the bringing up of poor children in the Roman Catholic faith.

It has been expressly decided that these statutes and the doctrine of superstitious uses as enunciated by the English judges do not apply in the United States, although the first colonies from which the States grew were British colonies, must not be considered as a reason for the adoption of the statutes referred to, and this, notwithstanding the fact that in some of the states statutes were passed adopting the common law and statutes of England so far as the same might be applicable to the altered condition of the settlers in the colonies. The doctrine is that it is a maxim of law in the United States that a man shall dispose of his property as he will with his own, so long as he does not violate the law by so doing or devote his property to an immoral purpose; consequently, since there is a legal equality of sects and all are thus in the eyes of the law equally orthodox, to discriminate between what is a pious and what a superstitious use would be to infringe upon the constitutional guarantee of perfect freedom and equality of all religions (see opinion of Tuley, J., in the case of Kehoe v. Kehoe, reported as a note to Gilman v. McArdle, 12 Abb. N. C., 427 New York). In none of the states of the Union, therefore, are bequests or devises for property for Masses for the dead invalid on the ground that they are of a superstitious or religious character. The decisions as to the circumstances under which such bequests or devises will be sustained.

In New York the law of England on the subject of charitable and religious trusts has been completely abrogated by statute, it being intended that there should be no system of public charities in that state except through the medium of corporate bodies. The policy has been to enact from time to time general and special laws specifying and sanctioning the particular object to be promoted, restricting the amount of property to be enjoyed, carefully keeping the subject under legislative control, and always providing a competent and ascertained donee to take and use the charitable gifts (Levy v. Levy, 33 N. Y. 97; Holland v. Alcock, 108 N. Y., 312). In accordance with this policy a general act was passed regulating the incorporation of religious bodies, and empowering the trustees to take into their possession property, whether the same has been given, granted or devised directly to a church, congregation or society, or to any other corporation duly authorized by law to hold charitable property. (Gen. Laws and other Statutes of N. Y., p. 3401). By the provisions of other statutes Roman Catholic churches come under this act (Laws of 1882, c. 45; Cummings and Gilbert, loc. cit., p. 3425). Therefore a bequest of real property for Masses will be upheld if it comply with the statutory requirements, which are: (1) that the gift be to a corporation duly authorized by law to hold charitable property; (2) that the statute to take gifts for such purpose and not to a private person; (2) that the will by which the gift is made shall have been properly executed at least two months before the testator's death (Cummings and Gilbert, loc. cit., p. 4470; Laws of 1848, c. 319; Laws of 1860, c. 360; Lefevre v. Lefevre, 59 N. Y., 434), and (3) that if the testator have a wife, child, or parent, the bequest shall not exceed one-half of his property after his debts are paid (ibid., see Hagenmeyer's Will, 12 Abb. N. C., 432). Every trust of personal property, which is not contrary to public policy and is not in conflict with the statute regulating the accumulation of interest and protecting the suspension of absolute ownership in property of that character, is valid when the trustee is competent to take and a trust is for a lawful purpose well defined so as to be capable of being specifically executed by the court (Holmes v. Mead, 52 N. Y., 332). "If then a Catholic desire to make provision by will for saying of Masses for his soul, there is not the shadow of a doubt but that every court of this State (New York) would hold he bequeath the bequest if the mode of making it were agreeable to the law" (see careful article written in 1886 by F. A. McCloskey in "Albany Law Journal", XXXII, 136).

For similar reasons in Wisconsin, where all trusts are abolished by statute except certain specified trusts with a definite beneficiary, a gift for Masses, to be valid as such, must take the form of a trust. Thus a bequest in the following language: "I give and bequeath unto the Roman Catholic Bishop of the Diocese of Green Bay, Wisconsin, the sum of $4150, the said sum to be used and applied as follows: For Masses for the repose of my soul, two thousand dollars, for Masses for the repose of the souls of my deceased wife, etc., etc." The bequest is a trust as created by this language, and says: "It is evident that such a trust is not capable of execution, and no court would take cognizance of any question in respect to it for want of a competent party to raise and litigate any question of abuse or perversion of the trust." But it adds: "We know of no legal reason why any person of the Catholic faith, believing in the efficacy of Masses, may not make a direct gift or bequest to any bishop or priest of any sum out of his property or estate for Masses for the repose of his soul or the souls of others, as he may choose. Such gifts or bequests, when made in clear, direct, and legal form, should be upheld; and they differ no more from a sale or purchase reached invalid under the rule that prevailed in England by which they were held void as gifts to superstitious uses" (72 N. W. Rep., 631).

The same view was taken by the Supreme Court of Alabama, where a bequest to a church to be used in solemn Masses for the repose of the soul of the testator was held invalid inasmuch as it did not respond to any one of the following tests: (1) that it was a direct bequest to the church for its general uses; (2) that it created a charitable use; or (3) that it created a valid private trust. It was not a charity inasmuch as it was "for the benefit alone of his own soul, and cannot be upheld as a public charity without offending every principle of law by which such charities are supported," and it was not valid as a private trust for want of a living beneficiary to support it (Festorassi v. St. Joseph's R. C. Church of Mobile, 25 Law. Rep. Ann., 360).

In Illinois an opposite conclusion is reached, it being held distinctly that a devise for Masses for the repose of the soul of the testator, the Masses to be said for the soul of the testator, and the Masses of other named persons, is valid as a charitable use, and the devise for such purpose will not be allowed to fail for want of a competent trustee, but the court will appoint a trustee to take the gift and apply it to the purposes of the trust. Such a bequest is distinctly
held to be within the definition of charities which are
to be sustained irrespective of the indefiniteness of the
beneficiaries, or of the lack of trustees, or the fact that
the trustees appointed are not competent to take; and
it is not derived from the Statute of Charitable Uses
(43 Elizabeth, c. 4), but existed prior to and independ-
dent of that statute. The courts quote with approval
the definition of a charity as given by Mr. Justice Gray
of Massachusetts: "A charity in a legal sense may be
more fully defined as a gift, to be applied consistently
with existing laws, for the benefit of an indefinite num-
er of persons, either by bringing their hearts under
the influence of education or religion, by relieving
their sufferings, or by assisting them to establish themselves for life, or by
erecting and maintaining public buildings or works,
or otherwise lessening the burthen of government. It
is immaterial whether the purpose is called charitable
in the gift itself, if it be so described as to show that it
is charitable in its nature" (Jackson v. Phillips, 14
Allen, 539). The court proceeds to show that the
Mass is intended to be a repetition of the sacrifice of
the Cross, and is the chief and central act of worship
in the Catholic Church; that it is public. It points out
the Catholic belief on the subject of Purgatory, and
holds that the adding of a particular remembrance in
the Mass does not change the character of the religious
service and render it a mere private devotion; and fur-
ther, that the bequest is an aid to the support of the

In Pennsylvania bequests and devisees for Masses
are distinctly held to be gifts for religious uses, the
Supreme Court of that state having expressed the
same view of the law subsequently adopted in Illinois.
The courts use the following language: According to
the Roman Catholic system of faith there exists an
intermediate state of the soul, after death and before
final judgment, during which guilt incurred during life
and unatoned for must be expiated; and the temporary
punishments to which the souls of the penitent
are thus subjected may be mitigated or arrested
through the efficacy of the Mass as a propitiatory sac-
rifice. Hence the practice of offering Masses for the
departed. It cannot be doubted that, in obeying
the injunction of the testator, intercession would be
especially invoked in behalf of the testator alone. The
service is just the same in kind whether it be designed to
promote the spiritual welfare of one or many. Prayer
for the departed is no less efficacious than prayer for
a religious act as a petition for the salvation of thou-
sands. The services intended to be performed in
carrying out the trust created by the testator's will,
as well as the objects designed to be attained, are all
essentially religious in their character" (Rhymers' Ap-
peal, 65 Pa., 142). In Pennsylvania care must be
taken to observe the provisions of the Act of 26 April,
1855, P. L., 342, which prohibits devisees or legacies for
charitable or religious uses, unless by will executed at
least one month before the death of the testator. A
gift to be expanded for Masses, being a religious use,
would come within this statute. The provisions of the
late relations involving witnesses, requiring the credi-
tible and interested witnesses when any gift is made
by will for religious or charitable uses, should also be
noted.

In Massachusetts the courts take the same view as
those of Pennsylvania, that gifts for Masses are to be
sustained as for religious uses (Re Schouler, 134 Mass.,
126).

In Iowa the Supreme Court has sustained a bequest
"to the Catholic priest who may be pastor of the R.
Catholic Church when this will shall be executed, three
dollars that Masses may be said for me," as valid, al-
though it contains no element of a charitable use.
The court says: "We have said that this bequest, if the
priest should receive it, is a private trust; and we think it
essential elements of such a trust, as much as it would if the
object were the erection of a monument or the doing
of any other act intended alone to perpetuate the
memory or name of the testator. But even if there is a
technical departure because of no living beneficiary,
still the bequest is valid. We have also said that it is
not a charitable trust, but a trust in good conscience,
or a trust under the Act of 1855. We hold that it is a
charity in its nature, and that the object is one of a
charity in it. It seems to be a matter entirely personal
to the testator. In one or more cases the courts have
felt the necessity in order to sustain such a bequest, to
denominate it a charity because charitable bequests
have had the sanction of the law. We know of no such
limitation on testamentary acts as that bequests or
calls to charities must be made by persons who are the
holders of a charity in the legal sense, if others are to
be deemed to be charitable, if an otherwise lawful"

It follows then that there is no legal prohibition on
bequests for Masses in any of the United States either
on the ground of public policy or because they offend
against any inherent principle of right. But care must
be taken in drafting the will to observe the statutes,
where any exist, in relation to devises or bequests in
trust for any purpose as well as the current of decisions
where cases have arisen. The language should be clear
and drawn in accordance with legal rules. It should
not be left to the chances of interpretation.

See the authorities quoted above.

WALTER GEORGE SMITH.

Massillon. See Semipelagians.

Massillon, Jean-Baptiste, celebrated French
preacher and bishop; b. 24 June, 1663; d. 28 Sep-
tember, 1742. The son of François Massillon, a notary
of Hyères in Provence, he began his studies in the
college of that town and completed them in the college
of Marseilles, both under the Oratorians. He entered
the Congregation of the Oratory at the age of eighteen.
After his novitiate and theological studies, he was sent
as professor to the colleges of the congregation at
Pézenas, Marseilles, Montbrison, and, lastly, Vienne,
where he taught philosophy and theology for six years
(1689-95).

Ordained priest in 1691, he commenced preaching
in the chapel of the Oratory at Vienne and in the vicin-
ity of that city. Upon the death of Villeroi, Arch-
bishop of Lyons (1693), he was called upon to deliver
the funeral oration, and six months later that of M.
de Villars, Archbishop of Vienne. Joining the Lyons
Oratory in 1695, and summoned to Paris in the follow-
ing year, to be director of the Seminary of Saint-
Mauguir, he was thenceforward able to devote himself
exclusively to preaching. As director of this seminary
he delivered those lectures (conférences) to young
clerics which are still highly esteemed. But a year
later he was removed from his position at Saint-
Mauguir for having occupied himself too exclusively
with preaching. Having preached the Lent at Montpellier
in 1698, he preached it the next year at the Oratory of
Paris. His eloquence in this series of discourses was
very much approved, and, although he aimed at pre-
aching in a style unlike that of his predecessors, public
opinion already hailed him as the successor of Bossuet,
and Bourdaloue. At the age of 60, his eloquence was
reduced to silence by age. At the end of this year he
preached the Advent at the court of Louis XIV—an
honour which was in those days highly coveted as the
consecration of a preacher's fame. He justified every
hope, and the king wittily declared that, where he had
formerly been well pleased with the preachers, he was
now very ill pleased with himself. Massillon, by com-
mand, once more appeared in the chapel of Versailles
for the Lent of 1701. Bossuet, who, according to his
secretary, had thought Massillon very far from the
sublime in 1699, this time declared himself very well
satisfied, as was the king. Massillon was summoned
again for the Lent of 1704. This was the apogee of his
success and his success. The king assiduously
attended his sermons, and in the royal presence Mas-
Massorah delivered that discourse "On the Fowlness of the Elect", which is considered his masterpiece. Nevertheless, whether because the compromising relations of the orator with certain great families had produced a bad impression on the king, or because of hisesy in Paris. Only believing him inclined—as some of his brethren of the Oratory were thought to be—to Jansenism, Massillon was never again summoned to preach at the Court during the life of Louis XIV, nor was he even put forward for a bishopric. Nevertheless he continued, from 1704 to 1718, to preach Lent and Advent discourses with great success in various churches of Paris. Only in the Advent of 1715 did he leave those churches to preach before the Court of Stanislas, King of Lorraine.

In the interval he preached, with only moderate success, sermons at ceremonies of taking the habit, panegyrics, and funeral orations. Of his funeral orations that on Louis XIV is still famous, above all for its opening: "God alone is great"—uttered at the grave of a prince to whom his contemporaries had yielded the title of "The Great".

After the death of this king Massillon, aged 1710, was given to favour at Court. In 1717 the regent nominated him to the Bishopric of Clermont (Auvergne); and in 1718 he was made a cardinal of the Oratory, of Jansenism, and again he is so lax as to be accused of complaisance for the sensibilities and the philosophy of his time. His chief merit was to have excelled in depicting the passions, to have spoken to the heart in a language it always understood, to have,mined the great, and, princes, understand the loftiest teachings of the Gospel, and to live as a bishop conform to those teachings. During Massillon's lifetime only the funeral oration on the Prince de Conti was published (1709); he even disavowed a collection of sermons which appeared under his name at Toulouse (1705, 1706, 1714). The first complete edition of his orations was published by his nephew, Father Joseph Massillon, of the Oratory; it has been frequently reprinted. But the best edition was that of Blampon, Bar-le-Duc, 1855-68, and Paris, 1868, in four vols. It comprises ten sermons for Advent, forty-one for Lent, eight on the mysteries, four on virtues, six on panegyrics, six on sermons, six on ordinations, six on SYNODAL discourses, twenty-six sermons, paraphrases on thirty psalms, some penes chrestes, and some fifty miscellaneous lections or notes.

Massorah, the textual tradition of the Hebrew Bible, an official registration of its words, consonants, vowels and accents. It is doubtful whether the word should be pointed הָנָּשָׁה (from הָנָּשָׁה, "to bind") or הָנָּשָׁה (from the New Hebrew verb, הָנָּשָׁה, "to hand down"). The former pointing is seen in Ezek. xx, 37; the latter is due to the fact that, in the Mishna, the word's primary meaning is "tradition". Our chief witness to Massorah is the actual text of MSS. of the Hebrew Bible. Other witnesses are several collections of Massorah, and the numerous marginal notes scattered over Hebrew MSS. The upper and lower margins and the end of the MS. contain the Greater Massorah, such as lists of words; the side margins contain the Lesser Massorah, such as variants. The best collection of Massorah is that of Ginsburg, "The Massorah compiled from MSS. alphabetically and lexically arranged" (3 vols. his works). Massorah will treat (I) the history and (II) the critical value of Massorah. For the number and worth of Massoretic MSS., see MSS. of the Bible.
I. HISTORY OF MASSORAH.—Their sacred books were to the Jews an inspired code and record, a God-intended means to conserve the political and religious unity of the community. For this purpose they employed a method of interpunction, the Massorah, by means of which it was arranged that certain letters and other elements of the Hebrew text should have characteristic marks upon them to keep those books intact. So far back as the first century B.C., copyists and revisers were trained and employed to fix the Hebrew text. All had one purpose,—to copy הִגְמָטִיס יִשְׂרָאֵל, i.e., according to the face-value of the Massorah. To reproduce their exemplar perfectly, to hand down the Massorah, to make this and nothing more was purposed by the official copyists of the Hebrew Bible. Everything new was shunned. There is evidence that false pronunciations were fixed by Massorah centuries before the invention of points such as are seen in our present Massorethic text. At times such early translations as those of Aquila, Theodotion, the LXX and the Peshitto give evidence of precisely the same erroneous pronunciation as is found in the pointed Hebrew text of to-day.

(1) The Consonantal Text.—Hebrew had no vowels in its alphabet. Vowel sounds were for the most part handed down by tradition. Certain consonants, כ, ב, ה, and sometimes ר, were used to express some long vowel sounds after certain letters. The Rabbis, therefore, because they determined the pronunciation. The efforts of copyists would seem to have become more and more minute and detailed in the perpetuation of the consonantal text. These copyists (פרמיטרי) were at first called Sopherim (from ספירה, “to count”), because, as the Talmud says, “they counted all the letters in the Torah” (Kiddushin, 34a). It was not until later on that the name Massoretes was given to the preservers of Massorah. In the Talmudic period (c. A.D. 300–500), the rules for perpetuating Massorah were extremely detailed. Only skins of clean animals must be used for parchment rolls and fastenings thereof. Each column must be of equal length, not more than sixty letters or less than twenty. The line must contain thirty letters, written with black ink of a prescribed make-up and in the square letters which were the ancestors of our present Hebrew text-letters. The copyist must have before him an authentic copy of the text; and must not write from memory a single letter, not even a god,—every letter must be copied on the exemplar, letter for letter. The interval between consonants should be the breadth of a hair; between words, the breadth of a narrow consonant; between sections, the breadth of nine consonants; between books, the breadth of three lines. Such numerous and minute rules, though scrupulously observed, were not enough to perpetuate the consonantal text fixed and unchanged. Letters were omitted which had surreptitiously crept in; variants and conjectural readings were indicated in side-margins,—words, “read but not written” (Qere), “written but not read” (Kethibh), “read one way but written another.” These marginal critical notes went on increasing with time. Still more was done to fix the consonantal text. The words and letters of each verse and of every section of the twenty-four books of the Hebrew Bible were counted. The middle words and middle letters of books and sections were noted. The Talmud, we see how one rabbi was wont to take with him a copy of the Talmud, and this with such trivial textual questions as the interpretation of certain letters in this or that section of a scroll, and the number of times that certain words and phrases occurred in the several books of the whole Bible; and searched for mystic connotations in the consonantal text and in the interpunction. The rabbis counted the number of times certain words and phrases occurred in the several books of the whole Bible; and searched for mystic connotations in the consonantal text. They were wont to mark with distinctive signs certain letters in this or that section of a scroll, and the number of times that certain words and phrases occurred equally often,—for instance, of the word תּוֹם (Tomm, γέφύρ) among other words that occurred equally often. For instance, of the word נֶטֶן (Neten, тομές) among other words that occurred equally often. It was a part of the copyist’s work to keep a record of the number of times certain words and phrases occurred in the several books of the whole Bible; and searched for mystic connotations in the consonantal text. They were wont to mark with distinctive signs certain letters in this or that section of a scroll, and the number of times that certain words and phrases occurred equally often,—for instance, of the word תּוֹם (Tomm, γέφύρ) among other words that occurred equally often. For instance, of the word נֶטֶן (Neten, тομές) among other words that occurred equally often.
Massoulié, Antoine, theologian, b. at Toulouse, 28 Oct., 1632; d. at Rome, 23 Jan., 1706. At an early age he entered the Order of St. Dominic, in which he held many important offices; but above all these he prized study, teaching, and writing, for the love of which he refused a bishopric and asked to be relieved of distraction duties. It was said that he knew by heart the Summa of St. Thomas. He devoted himself with such earnestness to the study of Greek and Hebrew that he could converse fluently in both of these languages. His knowledge of Hebrew enabled him to overcome in public debate two Jewish Rabbins, one at Avignon in 1658, the other at Florence in 1665. The method of his argument is full of error and evasion being modestly ascribed by Massoulié to pray more than to successful disputations. His published works and some unpublished manuscripts (preserved in the Casanatense Library at Rome) may be divided into two classes: those written in defence of the Thomistic doctrine of physical premonition, relating to God's omniscience on the one hand, and the unfortunate Quietists, whom he strenuously opposed, both by attacking their false teachings and also by explaining the true doctrine according to the principles of St. Thomas. His principal works are: "Divus Thomas sui interpres de divina motione et libertate creata" (Rome, 1696). Orationes... "Summam theologiam de a. Thomas sur les trois vies, purgative, illuminative et unitive" (Toulouse, 1678); "Traité de la véritable oraison, où les erreurs des Quitistes sont réfutées" (Paris, 1699); "Traité de l'amour de Dieu" (Paris, 1703). See also E. Chambry, Script. Ord. Prad. II, 793; Toussaint, "Histoire des hommes ilus. V, 751-73; Hurter, Nomenclator. D. J. Kennedy.

Massuet, René, Benedictine patologist, of the Congregation of St. Maur; b. 13 Aug, 1666, at St. Ouen de Mancelles in the diocese of Evreux; d. 11 Jan., 1716, at St. Germain des Prés in Paris. He made his solemn profession in religion in 1682 at Notre Dame de Lire, and studied at Bonnouvelle in Orleans, where he showed more than ordinary ability. After teaching at the Academy of the Congregation, in 1690 he entered the University of Paris and studied the sciences. He entered the Benedictine Order at the Abbey of St. Stephen's, in Caen, he attended the lectures of the University and obtained the degrees of bachelor and licentiate in law. After this he taught at the University of Caen and three years at Fécamp. He spent the year 1702 in Rome in the study of Greek. The following year he was called to St. Germain des Prés and taught theology there to the end of his life. His principal work, which he undertook rather reluctantly, is the edition of the writings of St. Ireneus, Paris, 1710. An elegant edition of these writings had appeared at Oxford, 1702, but the editor, John Erasmus Graebe, was less intent on an accurate rendering of the text than on making Ireneus favour Anglican views. Massuet enriched his edition with valuable annotations on the heresies impugned by St. Ireneus and on the life, writings, and teaching of the saint. He also edited the fifth volume of the "Annales Ord. S. Ben." of Mabillon, with some additions and a preface inclusive of the biographies of Mabillon and Ruinart. We owe him, moreover, a letter to John B. Langlois, S.J., in defence of the Benedictine Order, with a number of annotations on the heresies impugned by St. Augustine, and five letters addressed to Bernard P. found in Schelhorn's "Amenonites Literarius". He left in manuscript a work entitled "Augustinus Graecus", in which he quotes all the passages of St. John Chrysostom on grace.

Francis Mershmann.

Massys (Massys, Metzis). Quentin, painter, b. at Louvain in 1456; d. at Antwerp in 1530 (bet. 13 July and 16 September), and not in 1529, as his episcopal states (it dates from the seventeenth century). The life of this great artist is all adorned, or obscured, with legends. It is a fact that he was the son of a smith. There is nothing to prove, but it is not impossible that he first followed his father's trade. In any case he was a "bronzier" and "bronzier". On 29 March, 1526, Erasmus wrote to Bontzen that Massys had engraved a medallion of him (Effigiem meam ludite aere). This was perhaps the medal dated 1519, a copy of which is at the Museum of Basle. In 1575 Molanus in his history of Louvain states that Quentin is the author of the standard of the baptismal fonts at St.-Pierre, but his name is the same as that of a painter very well known over the well in the Marché-aux-Gantes at Antwerp, which popular tradition attributes to him, the attribution is purely fanciful. Tradition also states that the young smith, in love with a young woman of Antwerp, became a painter for her sake. Indeed this pretty fable explains the poetical character of Massys. All his works are like love songs. Factual is the only that the young man, an orphan since he was fifteen, was emancipated by his mother April 4, 1491, and that in the same year he was entered as a painter on the registers of the Guild of Antwerp. He kept a studio which four different pupils entered from 1495 to 1510.

He had six children by his first marriage with Alyt van Tuyl. She died in 1521. Another wife, in 1508 or 1509, he married Catherine Heyns, who bore him, according to some, ten children, according to

Walter Drum.
others, seven. He seems to have been a respected personage. As has been seen, he had relations with Erasmus, whose portrait he painted in 1517 (the original, or an ancient copy, is at Hampton Court), and with the latter's friend, Petrus Egidius (Peter Gillis), magistrate of Antwerp, whose portrait by Massys is preserved by Lord Radnor at Longford. Dürrer went to visit him immediately on his return from his famous journey to the Low Countries in 1519. On 29 July of that year Quentin had purchased a house, for which he had perhaps carved a wooden statue of his patron saint. In 1520 he worked together with 250 other artists on the triumphal arches for the entry of Emperor Charles V. In 1524 on the death of Joachim Patenier he was named guardian of the daughters of the deceased. This is all we learn from documentary sources concerning him. He led a quiet, well-ordered, middle-class, happy life, which scarcely tallies with the legendary figure of the little smith becoming a painter through love of art.

Nevertheless, in this instance also, the legend is right. For nothing explains better the appearance in the dull prosaic Flemish School of the charming genius of this lover-poet. It cannot be believed, as Molanus asserts, that he was the pupil of Rogier van der Weyden, since Rogier died in 1482, two years before Quentin's birth. But the masters whom he might have encountered at Louvain such as Gonts, or even Dirck, the best among them, distress by a lack of taste and imagination a dryness of ideas and style which is the very opposite of Massys's manner. Add to this that his two earliest known works, in fact the only two which count, the "Life of St. Anne" at Brussels and the Antwerp triptych, the "Deposition from the Cross", date respectively from 1498 and 1511, that is to say, a period when the master was nearly fifty years old. Up to that age we know nothing concerning him. The "Banker and His Wife" (Louvre) and the "Portrait of a Young Man" (Collection of Mme. André), his only dated works besides his masterpieces, belong to 1513 and 1514 (or 1519). We lack all the elements which would afford us a formation. He seems like an inexplicable, miraculous flower.

When it is remembered that his great paintings have been almost ruined by restorations, it will be understood that the question of Massys contains insoluble problems. In fact the triptych of St. Anne at Brussels is perhaps the most gracious, tender and sweet of all the painting of the North. And it will always be mysterious, unless the principal theme, which represents the family or the parents of Christ, affords some light. It is the theme, dear to Memling, of "spiritual conversations", of those sweet meetings of heavenly persons, in earthly costumes, in the serenity of a Paradise court. This subjectivity is wholly Teriër and mystic, Memling, as is known, had brought from Germany, where it had been tirelessly repeated by painters, especially by him who was called because of this, the Master of the Heiligen Sippe. Here the musical, immaterial harmony, resulting from a composition which might be called symphonic, was enhanced by a new harmony, which was the feeling of purity, has never been expressed in all the assembled persons. It was the poem arising from the quite Germanic intimacy of the love of family. One is reminded of Suss or of Tauler. The loving, tender genius of Massys would be stirred to grave joy in such a subject. The exquisite history of St. Anne, that poem of maternity, of the holiness of the desire to survive in posterity, has never been expressed in a more penetrating, chaste, disquieting art.

Besides, it was the beginning of the sixteenth century and Italian influences were making themselves felt everywhere. Massys translated them into his brilliant architecture, into the spaciousness of the refined which he imparted to the blue summits of the mountains, to the horizons of his landscapes. A charming luxury mingles with his ideas and disfigures them. It was a unique work, a unique period; that of an ephemeral agreement between the genius of the North and that of the Renaissance, between the world of sentiment and that of beauty of which was at the foundation of all the desires of the South, from Dürrer to Rembrandt and Goethe, was realised in the simple thought of the ancient smith. By force of candour, of melancholy, he loved and he found the secret which others sought in vain. With still greater passion, the same qualities are found in the Antwerp "Deposition". The subject is treated, not as the Florentine or Umbrìan "Pietà", but with the familiar and tragic sentiment which touches the Northern races. It is one of the "Tombs" compositions, of which the most famous are those of Saint Mihiel and Solesmes. The face of the most exhausted, the most "dead", the most moving that painting has ever created. All is full of tenderness and desolation.

Massys has the genius of tears. He loves to paint tears in large pearls on the eyes, on the red cheeks of his holy women, as in his wonderful "Magdalen" of Berlin or his "Pietà" of Munich, or even in that of the same time the keenest sense of grace. His Heroi diades, his Salomes (Antwerp triptych) are the most bewitching figures of all the art of his time. And this excitable nervousness made him particularly sensitive to the ridiculous side of things. He had a sense of the grotesque, of caricature, of the droll and the hideous, which is displayed in his figures of old men, of executioners. And this made him a wonderful genre painter. His "Banker" and his "Money Changers" inaugurated in the Flemish School the rich tradition of the painting of manners. He had a pupil in this style, Marinus, many of whose pictures still pass under his name.

Briefly, Massys was the last of the great Flemish artists prior to the Italian invasion. He was the most sensitive, the most nervous, the most poetical, the most comprehensive of all, and in him is discerned the
tumultuous strain which was to appear 100 years later in the innumerable works of Rubens.

**Master of Arts.** See **Arts, Master of.**

**Master of the Sacred Palace.**—This office (which has always been entrusted to a Friar Preacher) may briefly be described as being that of the pope's theologian. St. Dominic, appointed in 1218, was the first Master of the Sacred Palace (Magister Sacri Palatii). Among the eighty-four Dominicans who have succeeded him, eighteen were subsequently created cardinals, twenty-four were made archbishops or bishops (including some of the cardinals), and six were elected generals of the order. Several are famous for their works on theology, etc., but only Durandus, Torquemada, Prierias, Mamachi, and Orsi can be mentioned here. As regards nationality: the majority have been Italians; of the remainder ten have been Spaniards and ten Frenchmen; one has been a German and one an Englishman (i. e. William de Boderichia, or Bondenask, or 1270). It has sometimes been asserted that St. Thomas was a Master of the Sacred Palace. This is due to a misconception. He was Lector of the Sacred Palace. The offices were not identical. (See Bullarium O. P. III, 18.) Though he and two other contemporary Dominicans, namely his teacher Bl. Albert the Great and his fellow pupil Bl. Ambrose Sancesconio (about both of whom the same assertion has been made) held successively the office of Lector on Scripture or on Theology in the papal palace school, not one of them was Master of the Sacred Palace. Their names do not occur in the official lists. While all Masters of the Sacred Palace were Dominicans, several members of other orders were Lectors of the Sacred Palace (e. g. Peckham O. S. F., who became Archbishop of Canterbury in 1279).

St. Dominic's work as Master of the Sacred Palace consisted partly at least in expounding the Epistles of St. Paul (Colonna, O. P. c. 1255, who says that the commentary was then extant; Flaminius; S. Antonius, a monk near 1253 who was given it; the Epistles used by the Saint as Master of the Sacred Palace was preserved in Toulouse; Echard; Renazzi; Mortier, etc.). These exegetical lectures were delivered to prelates and to the clerical attendants of cardinals who, as the saint observed, had been accustomed to gather in the antechamber and to spend the time in gossip while their masters were having audiences with the pope. According to Renazzi (I. 25), St. Dominic may be regarded as the founder of the papal palace school, since his Biblical lectures were the occasion of its being established. Catalanus, who, however, is not guilty of the confusion alluded to above, says he was the first Lector of the Sacred Palace and that the Epistles were given him in 1253 and that in the thirteenth century the chief duty of the Master of the Sacred Palace was to lecture on Scripture and to preside over the theological school in the Vatican: "in schola Romana et Pontificia regimine et in publica sacra scripture expositione" (Echard). The Lectores or Magistri scholastorum S. Palatii taught under him. It became customary for the Master of the Sacred Palace, according to Cardinal de Luca, to preach before the pope and his court in Advent and Lent. This had probably been sometimes done by St. Dominic. Up to the sixteenth century the Master of the Sacred Palace preached, but after it this work was permanently entrusted to his companion (a Dominican) by Benedict XIV (Decree, "Inculta Fratrum", 1743); present the companion preaches to the papal household, and a Capuchin preaches to the pope and to the cardinals.

But the work of the Master of the Sacred Palace as papal theologian continues to the present day. As it has assumed its actual form by centuries of development, we may give an account of the legislation respecting it and the various functions it comprises and also of the honours attaching to it. The Acta (or "Calenda") of the Palantine officials in 1409 (under Alexander V) show that on certain days the Master of the Sacred Palace was bound to deliver lectures and on other days was expected, if called upon, either to propose or to answer questions at the theological conference which was held in the pope's presence. On 30 October, 1439, Eugenius IV decreed that the Master of the Sacred Palace should rank next to the dean of the Rota, that no one should preach before the pope whose sermon had not been previously approved of by him, and that in accordance with ancient usage no one could be made a doctor of theology in Rome but by him (Bullarium O. P. III, 81). Callixtus III (13 November, 1455) confirmed and amplified the second part of this decree, but at the same time exempted cardinals from its operation (ibid., p. 356). At present it has fallen into disuse.

The Fifth Lateran Council (sext. x, 4 May, 1513) Leo X ordained that no theologian was to be ordained without consecration in Rome or in its district without leave from the cardinal vicar and the Master of the Sacred Palace (ibid., IV, 318). Paul V (11 June, 1620) and Urban VIII added to the obligations imposed by this decree. So did Alexander VII in 1663 (Bullarium, passim). All these later enactments regard the inhabitants of the Roman Province or of the Papal States. They were renewed by Benedict XIV (1 Sept., 1744). And the permission of the Master of the Sacred Palace must be got not only to print, but to publish, and before the second permission is granted, three printed copies must be deposited with him, one for himself, another for his companion, another for the Roman Vicariate. The Roman Vicariate never examines work intended for publication. For centuries the imprimatur of the Master of the Sacred Palace who always examines them followed the St. videbitur Reverendissimo Magistro Sacri Palatii of the cardinal vicar; now in virtue of custom but not of any ascertained law, since about 1855 the diocesan gave the name to the office and it follows that of the Master of the Sacred Palace. At present the obligation once incumbent on cardinals of presenting their work to the Master of the Sacred Palace for his imprimatur has fallen into disuse, but through courtesy many cardinals do present their works. In the Constitution "Officiorum ac munerum" (25 Jan., 1897) Leo XIII declared that all persons residing in Rome may get leave from the Master of the Sacred Palace to read forbidden books, and that if authors who live in Rome intend to get their works published elsewhere, the joint imprimatur of the cardinal vicar and the Master of the Sacred Palace renders it unnecessary to ask any other approbation. As is well known, if an author not resident in Rome desires to have his work published there, provided that an agreement with the author's Ordinary has been made and that the Master of the Sacred Palace judges favourably of the work, the imprimatur will be given. In this case the book is known by its having two title-pages: the one bearing the name of the domiciliary, the other of the Roman publisher.

Before the establishment of the Congregations of the Inquisition (in 1542) and Index (1567), the Master of the Sacred Palace condemned books and forbade reading them under censure. Instances of his so doing occur regularly till about the middle of the sixteenth century; one occurred as late as 1604, but he degrees this task to the above-mentioned congregations of which he is an ex officio member. The Master of the Sacred Palace was
made by Pius V (29 July, 1570; see "Bullarium", V, 245) canon theologian of St. Peter's, but this Bull was revoked by his successor Gregory XIII (11 March, 1575). From the time when Leo X recognised the Roman University or "Sapienza" (5 November, 1513; by the Decree "Dum suavisissimo") he transferred to it the old theological school of the papal palace. The Master of the Sacred Palace became the president of the new theological faculty. The other members were the pope's grand sacristan (an Augustinian), the commissary of the Holy Office (a Dominican), the procurators general of the five Mendicant Orders, I. e. Dominican, Franciscan (Conventual), Augustinian, Carmelite, and Servite, and the professors who succeeded to the ancient Lectors of the Sacred Palace. Sixtus V is by some regarded as the founder of this college or faculty, but he may have only given its definite form. It is said he had to confirm the prerogative enjoyed by the Master of the Sacred Palace of conferring all degrees of philosophy and theology. Instances of papal diplomas implying this power of the Master of the Sacred Palace occur in the "Bullarium" passim (e. g. of Innocent IV, 6 June, 1406). The presidential authority of the Master of the Sacred Palace over this, the greatest theological faculty in Rome, was confirmed by Leo XI in 1624. But under Clement XI in 1770 the Sapienza has been laicized and turned into a state university. It is said that on the special occasions when the Master of the Sacred Palace holds an examination, e. g. for the purpose of examining all that are to be appointed to sees in Italy, or again of conferring the title of S.T.D., he does so, with the assistance of the high dignitaries just mentioned, in his apartments in the Vatican. He is also examiner in the concursus for parishes in Rome which are held in the Roman Vicariate. Before Eugene IV issued the Bull referred to above, the Master of the Sacred Palace was in processions, etc., the dignitary immediately under the Apostolic subdeacons, but when this pope raised the auditors of the Rota to the rank of Apostolic subdeacons, he placed the Master of the Sacred Palace the place immediately next to the dean who was in charge of the papal mitre. In 1655, Alexander VII put the other auditors of the Rota above the Master of the Sacred Palace. This was done, according to Cardinal de Luca, solely because one white and black hat looking for several years amounted to a sinecure. The official duties of the Master of the Sacred Palace is performed in conjunction with the auditors of the Rota; namely to watch over the three apertures or "drums" through which during a conclave the cardinals receive all communications. In papal processions the Master of the Sacred Palace walks next to the auditors, immediately behind the bearer of the tiara.

Though he has, as we have seen, gradually lost some of his ancient authority and rank, nevertheless at the present day the Master of the Sacred Palace is a very high official. He is one of the three Palatine prelates (the others being the Maggiordomo and the Grand Almoner) to whom as to bishops, the papal guards presented with their addresses, even by foreigners, as "Most Reverend". In the Dominican Order he ranks next to the general, ex-general, and vicar-general. He is ex-officio consultor of the Holy Office, prelate-consultor of Rites, and perpetual assistant of the Index. He is consultant of the Biblical Commission, and is frequently consulted on various matters, as the theologians. As the Pope's chaplain, his presence occurs once a fortnight. The official apartment of the Master of the Sacred Palace was in the Quirinal, and until recently it contained the unbroken series of portraits of the Masters of the Sacred Palace, from St. Dominic down. These frescoes have been effaced by the present occupants of the Quirinal, but copies of them are to be seen in the temporary apartment of the Master of the Sacred Palace in the Vatican.

**Master of the Sentences.** See Peter Lombard.

**Mastrius, Bartholomew, Franciscan, philosopher and theologian, b. near Forli, at Meldola, Italy, in 1602; d. 3 Jan., 1673. He was one of the most prominent writers of his time on philosophy and theology. He received his early education at Cesena, and took degrees at the University of Bologna. He frequented the Universities of Padua and Rome before assuming the duties of lecturer. He acquired a profound knowledge of scholastic philosophy and theology, being deeply versed in the writings of Scotus. He was an open-minded and independent scholar. As a controversialist he was harsh and arrogant towards his opponents, mingling in his writings a mixture of audacity and modesty. His opinions on some philosophical questions were fiercely combated by many of his contemporaries and especially by Matthew Fesch and the Irish Franciscan, John Ponce. When presenting the second volume of his work on the "Sentences" to Alexander VII, to whom he had dedicated it, the pope asked him where he had learned to treat the questions in this book. His answer was: "in the manner of the sententiae". His statements on the interpretation of Holy Scripture were "hard and not without reason": the pope smilingly remarked, "From such masters other things could be learned". Ponce in his treatise on Logic holds that with qualifying explanations of God's words in the Scriptures in the Categories. Mastrius in combating this opinion characteristically says, "hic Pontius male tractat Deum sicut et alter". Mastrius had a well-ordered intellect which is seen in the clearness and precision with which he sets forth the subject-matter of discussion. His arguments for and against a proposition are of a real critical power, correct, and clear language. His numerous quotations from ancient and contemporary authors and various schools of thought are a proof of his extensive reading. His works shed light on some of the difficult questions in Scotistic philosophy and theology. His "Philosophy" in five volumes folio, his "Sentences" in four volumes, and his Moral Theology "ad mentem S. Bonaventurae" in one volume were all published at Venice.

**Mataco Indians (or Mataguayos).—A group of wild tribes of very low culture, ranging over a great part of the western Chaco region, about the head waters of the Vermejo and the Pilemomayo, in the Argentine province of Salta and the Bolivian province of Tarija, and noted for the efforts made by Jesuit and Franciscan missionaries in their behalf in the seventeenth and eighteenth centuries. The group consists of or is derived from four tribes, distinguished by speaking the same language with slight dialectic differences, and together constituting a distinct linguistic stock, the Matacoan or Mataguayans, which, however, Quevedo suspects to be connected with the Guaycuran stock, to which belong the Toba, Mocobi and the famous Abipon tribes. Of the Matacoan group the principal tribes were the Mataco, Mataguayu, and Vejoe. At present the names in most use are..."
are Mataco in Argentina and Nocten (corrupted from their Chiriguano name) in Bolivia. From 60,000 (estimated) in the mission period they are now reduced to about 20,000 souls. In 1690 Father Ares, from the Jesuit college of Tarja, attempted the first missionary work. At a later period, 1755, the Jesuit mission of San Ignacio de Leodesa on the Rio Grande, a southern head stream of the Vermejo, was founded for Toba and Matagauyo, of whom 600 were enrolled there at the time of the expulsion of the order in 1767.

About the end of the eighteenth century the Franciscans of Tarja undertook to restore the mission work in the Chaco, founding a number of establishments, among which were Salinas, occupied by Matagauyo and Chiriguano, and Canta (now Olta, Salta province), occupied by Matagauyo and Vejos, the two missions in 1799 containing nearly 900 Indians, with 7300 cattle. With the decline of the Spanish power these missions also fell into decay and the Indians went over to the Caracas rivers. In 1854, when the Piedmont Ligurian missionaries, passing by the place where the old Cents mission, found a cattle corral where the church had been. An interesting account of the present condition of the wild Mataco is quoted by Quevedo from a letter by Father Alejandro Corrado, Franciscan, at Tarja. Their houses are light brush structures scattered through the forests, hardly high enough to allow of standing upright, and are abandoned for others set up in another place as often as insects or accumulation of filth make necessary. The only furniture is a wooden mortar with a few earthen pots, and some skins for sleeping. Men and women shave their hair and wear several girdles about the part of the body. The men also pluck out the beard and paint the face and body. They live chiefly upon fish and the fruit of the algarroba, a species of mesquite or honey-locust, but will eat anything that is not poisonous, even rats and grasshoppers. From the algarrobas they prepare an intoxicating liquor which robs them of their appearance, Mayaguan festival ceremony is in connexion with the ripening of the algarrobas, when the priests in fantastic dress go out about the trees, dancing and singing at the top of their voices to the sound of a wooden drum, keeping up the din day and night. A somewhat similar ceremony takes place when a young girl arrives at puberty. Everything is in common, and a woman divides her load of fruits or roots with her neighbours without even a word of thanks. They recognize no authority, even of parents over their children. The men occupy themselves with fishing or occasional hunting, their arms being the bow and club. The women do practically all the other work.

People and at the will of the young people, the wife usually going to live with her husband's relatives. Polygamy and adultery are infrequent, but divorce is easy. The woman receives little attention in pregnancy or childbirth, but on the other hand the father conforms to the couvade. Children are named when two or three years old. Abortion is very frequent; infanticide more rare, but the infant is often buried alive on the breast of the dead mother.

Disease is driven off by the medicine men with singing and shaking of rattles. They believe in a good spirit to whom they seem to pay no worship; and in a malevolent night spirit, whom they strive to propitiate. They believe that the soul, after death, descends into the bowels of the earth upon the language of the Mataco tribes is the grammar and dictionary of the Jesuit missionary.

Matelica. See Fabrianz and Matelica, Diocese of.

Mater, a titular bishopsric in the province of Byzantium, mentioned as a free city by Pliny under the name of Matra (Hist. natur., V, iv, 5). Mgr. Toulotte ("Géographie de l’Afrique chrétienne", proconsulaire, 197) cites only two occupants of this see: Rusticius, who died shortly before 411, and Quintus, who succeeded him. Gams (Series episcoporum, 497) mentions four: Rusticius, Celsus for Quintus, Adeleus in 484, and Victor about the year 556. Mater is now known as Mater, a small town of 4000 inhabitants, in great part Christian, and is situated in Tunis. The modern town is encircled with a wall, with three gates; it is situated on the railway from Tunis to Bizerta, not far from the lake to which it has given its name.

S. VAILÀTE.

Matera. See Acerenza, Archidiocese of.

Materialism.—As the word itself signifies, Materialism is a philosophical system which regards matter as the only reality in the world, which undertakes to explain every event in the universe as resulting from the conditions and activity of matter, and which thus denies the existence of God and the soul. It is diametrically opposed to Spiritualism and Idealism, which, in so far as they are one-sided and exclusive, declare that everything in the world is either mental or mental. If the world and even matter itself are mere conceptions or ideas in the thinking subject. Materialism is older than Spiritualism, if we regard the development of philosophy as beginning in Greece. The ancient Indian philosophy, however, is idealistic; according to it there is only one real being, Brahma; everything else is mere appearance. Certain Indian schools of philosophy were more or less materialistic; they assumed the existence of a single primordial matter—water, earth, fire, air—or of the four elements from which the world was held to have developed. Materialism was methodically developed by the Atomists. The first and also the most important systematic Materialist was Democritus, the "laughing philosopher". He taught that out of nothing comes nothing; that everything is the result of combination and division of parts (atoms); that these atoms, separated by empty spaces, are infinitely numerous and varied. Even to man he extended his cosmological Materialism, and was thus the founder of Materialism in the modern sense, that is the sense in which materialism is a complex of very fine, smooth, round, and fiery atoms; these are highly mobile and penetrate the whole body, to which they impart life. Empedocles was not a thorough-going Materialist, although he regarded the four elements with love and hatred as the formative principles of the universe, and refused to recognize a spiritual Creator of the world. Aristotle re-approaches the Ionian philosophers in general with attempting to explain the evolution of the world without the Nous (intelligence); he regarded Protagoras, who first introduced a spiritual principle, as a sober man among the inebriated.

The Socraetic School introduced a reaction against Materialism. A little later, however, Materialism found a second Democritus in Epicurus, who treated the system in greater detail and gave it a deeper four-
soul cease to exist. However, the soul is no mere odour of a body, but a being with real activity; consequently, it must itself be real, and likewise distinct from the body, since thought and volition are incorporeal activities, and, as Lucretius at least, is the only function of the atoms.

Christianity reared a mighty dam against Materialism, and it was only with the return to antiquity in the so-called restoration of the sciences that the Humanists again made it a powerful factor. Giordano Bruno the Pantheist, was also a Materialist: "Matter is not without its forms, but without substance; and since it carries what is wrapped up in itself, it is in truth all nature and the mother of all the living." But the classical age of Materialism began with the eighteenth century, when de la Mettrie (1709-51) wrote his "Histoire naturelle de l'âme" and "L'homme machine". He holds that all that feels must be material: "The soul is formed, it grows and decreases with the organs of the body, wherefore it must also share in the latter's death"—a palpable fallacy, since even if the body is only the soul's instrument, the soul must be affected by the varying conditions of the body. In the case of this Materialist we find the moral consequences of the system revealed without disguise. In his two works, "L'Observation" and "L'Always of the Catastrophe of Man", the soul is a kind of vapour scattered throughout the world, especially in organic structures and mental activities. However, the soul and its origin present no puzzle, for to Lucretius, the soul is a kind of vapour scattered throughout the world, and mixed with a little heat. The bodies surrounding us give off continually certain minute particles which penetrate to our souls through our sense-organs and excite mental images. With the dissolution of the body, the corporeal soul is also dissipated. The same materialistic conception of the immaterial nature of psychical states as opposed to those of the body—to say nothing of the childish notion of sense-perception, which modern physiology can regard only with an indulgent smile.

Epicurean Materialism received poetic expression and further development in the didactic poem of the Roman Lucretius. This bitter opponent of the gods, like the modern representatives of Materialism, places it in outspoken opposition to religion. His cosmology is that of Epicurus; but Lucretius goes much further, inasmuch as he really seeks to give an explanation of the order in the world, which Epicurus referred unreservedly to chance. Lucretius claims that chance is just one of the infinitely numerous possibilities in the arrangement of the atoms; the present order was as possible as any other. He takes particular pains to disprove the immortality of the soul, seeking thus to dispel the fear of death, which is the cause of so much care and crime. The soul (anima) and the mind (animus) consist of the smallest, roundest, and most mobile atoms. That "feeling is an excitement of the atoms", he lays down as a firmly established principle. He says: "When the flavour of the wine vanishes, or the odour of the ointment passes away in the air, we notice no diminution of weight. Even so with the body when the soul has disappeared." He overlooks the fact that the flame is not necessarily lower even though we cannot measure them. That they do not perish is now certain, and, we must therefore conclude, still the spiritual

In Germany Materialism was vigorously assailed, especially by Leibniz (q. v.). As, however, this philosophy sought to repress the consciousness of the body, it was subjected to a spiritualistic system, he did not give a real refutation. On the other hand, Kant was supposed to have broken definitively the power of Materialism by the so-called idealistic argument, which runs: Matter is revealed to us only in consciousness; it cannot therefore be the cause or the principle of consciousness, which are shown to be independent of matter, against Materialism, unless we admit that our consciousness creates matter, i.e. that matter has no existence independent of consciousness. If consciousness or the soul creates matter, the latter cannot impart existence to the soul or to any psychical activity. Materialism would indeed be thus utterly annihilated: there would be no matter. But, if matter can create consciousness, it may possess all kinds of activities, even psychical, as the Materialists aver. As long as the impossibility of this is not demonstrated, Materialism is not refuted. Idealism or Phenomenalism, which entirely denies the existence of matter, is more absurd than Materialism. There is, however, some truth in Kantian rationalism. Consciousness is a psychical is far better known to us than the material; what matter really is, no science has yet made clear. The intellectual or the psychical, on the other hand, is presented immediately to our consciousness; we experience our thoughts, volitions, and feelings; in their full clearness they stand before the eye of the mind. From the Kantian standpoint a refutation of Materialism is out of the question. To overcome it we must show that the soul is an entity, independent of and essentially distinct from the body, an immaterial substance; only as such can it be immortal and survive the dissolution of the body. For Kant, however, substance is a purely subjective form and not a standing thing. From the Kantian standpoint we arrange our experiences. The independence of the soul would thus not be objective; it would be simply an idea conceived by us. Immortality would also be
merely a thought-product; this the Materialists gladly admit, but they call it, in plainer terms, a pure fabrication.

The German Idealists, Fichte, Hegel, and Schelling, seriously espoused the Phenomenalism of Kant, declaring that matter, and, in fact, the whole universe, is a subjective product. Thereby indeed Materialism is entirely overcome, but the Kantian method of refutation is reduced to absurdity. The objection that this extravagant Spiritualism was inevitable, and it resulted by a sort of necessary consequence in the opposite extreme of outspoken Materialism. Repelled by these fantastic views, so contrary to all reality, men turned their whole energy to the investigation of nature. The extraordinary success achieved in this direction led to the nutriment of new notions of the importance of matter, its forces, and its laws, with which they believed they could explain even the spiritual. The chief representatives of Materialism as a system during this period are Büchner (1824–99), the author of "Kraft und Stoff"; K. Vogt (1817–95), who held that thought is "secreted" by the brain, as gall by the liver and urine by the kidneys; C. G. E. Noldeke (1817–73); Molschott, to whom his Materialism brought political fame. Born on 9 August, 1822, at Herzogenbusch, North Brabant, he studied medicine, natural science, and the philosophy of Hegel at Heidelberg from 1842. After some years of medical practice in Utrecht, he qualified as instructor in physiology and anthropology at the University of Leiden, where he published his "Kreislauf des Lebens" (1852), created a great sensation. On account of the gross materialism, which he displayed both in his works and his lectures, he received a warning from the academic senate by command of the Government, whereupon he accepted in 1854 a call to the newly founded University of Zürich. In 1861 Causer, the Italian professor, gave him a chair at Turin, whence fifteen years later he was called to the Sapienza in Rome, which owed its foundation to the popes. Here death suddenly overtook him in 1893, and, just as he had burnt the bodies of his wife and daughter who had committed suicide, he also appointed in his will that his own body should be reduced to ashes. The most radical rejection of everything ideal is contained in the revised work "Der Einzige und sein Eigentum" (1845; 3rd ed., 1893) of Max Stirner, which rejects everything transcending the particular Ego and its self-will.

The brilliant success of the natural sciences gave Materialism a powerful support. The scientist, in divining nothing but the power of material forces, and consequently of denying it. Absorption in the study of natural matter is apt to blind one to the spiritual; but it is an evident fallacy to deny the soul, on the ground that one cannot experimentally prove its existence by physical means. Natural science overlooks its limits when it encroaches on the spiritual domain and claims to pronounce there an expert decision, and it is a palpable error to declare that science demonstrates the non-existence of the soul. Various proofs from natural science are of course brought forward by the Materialists. The "closed system of natural causation" is appealed to: experience everywhere finds each natural phenomenon based upon another as its cause, and the chain of natural causes would be broken were the same brought in. On the other hand, Sigwart (1830–1904) justly observes that the soul has its share in natural causation, and is therefore included in the system. At most it could be deduced from this system that a pure spirit, that God could not create, is marvellous; but this cannot be proved by either experience or reason. On the contrary it is clear that the Author of nature can interfere in its course, and history informs us of His many miraculous interventions. In any case it is beyond doubt that our bodily conditions are influenced by our ideas and volitions, and this influence is more clearly perceived by us than the causality of fire in the production of heat. We must therefore reject as false the theory of a closed system of natural causation, if this means the exclusion of spiritual causes.

But modern science claims to have given positive proof that in the human body there is no place for the soul. The great discovery by R. Mayer (1814–78), Joule (1818–89), and Helmholtz (1821–94) of the conservation of energy proves that energy cannot disappear in nature and cannot originate there. But the soul could of itself create energy, and there would also be energy lost, whenever an external stimulus influenced the soul and gave rise to sensation, which is not a form of energy. Now recent experiment has shown that the energy in the human body is exactly equivalent to the energy consumed in the body. Therefore, however, there is absolutely nothing against the existence of the soul. The law of the conservation of energy is an empirical law, not a fundamental principle of thought; it is deduced from the material world and is based on the activity of matter. A body cannot set itself in motion, can produce no force; it must be impelled by another, which in the impact loses its own power of movement. This is not lost, but is changed into the new movement. Thus, in the material world, motion, which is really kinetic energy, can neither originate nor altogether cease. This law does not hold good for the immaterial world, which is not subject to the law of inertia. That our higher intellectual activities are bound to some external influence is plainly seen in our freedom of will, by which we determine ourselves either to move or to remain at rest. But the intellectual activities take place with the cooperation of the sensory processes; and, since these latter are functions of the bodily organs, they are like them subject to the law of inertia. They do not enter into being by themselves, but only through the cooperation of their activity without some external influence. They are, therefore, subject to the law of the conservation of energy, whose applicability to the human body, as shown by biological experiment, proves nothing against the soul. Consequently, while even without experiment, one must admit the law in the case of sentient beings, it can in no wise affect a pure spirit or an angel. The "Achilles" of materialistic philosophers, therefore, proves nothing against the soul. It was accordingly highly opportune when the eminent physiologist, Du Bois Reymond (1818–96), called a vigorous halt to his colleague by his "Ignoramus et Ignorabimus". In his lectures,"Ueber die Gesetze der Naturerkenntniss" (Leipzig, 1872), he shows that feeling, consciousness, etc., cannot be explained from the atoms. He errs indeed in declaring permanently inexplicable everything for which natural science cannot account; the explanation must be furnished by philosophy.

Even theologians have defended Materialism. Thus, for example, F. D. Strauss in his work "Der alte und neue Glaube" (1872) declares openly for Materialism, and even adopts it as the basis of his religion; the material universe with its laws, although they occasionally crush us, must be the object of our veneration. The cultivation of music compensates him for the loss of all ideal goods. Among the materialistic philosophers of this time, Ueberweg (1826–71), author of the well-known "History of Philosophy", deserves mention; it is noteworthy that he at first supported the Aristotelian teleology, but later fell away into materialistic mechanism. There is indeed considerable difficulty in demonstrating mathematically the final object of nature; with those to whom the consideration of time display, the fact that a sum does not bring the conviction that it cannot owe its origin to blind physical forces, proofs will avail but little. To us, indeed, it is inconceivable how any one can overlook or deny the evidences of design and of the adaptation of means for the attainment of manifold ends.
The teleological question, so awkward for Materialism, was thought to be finally settled by Darwinism, in the mechanism of the Origin of Species, Charles Darwin showed the door. The blind operation of natural forces and laws, without spiritual agencies, was held to explain the origin of species and their purposiveness as well. Although Darwin himself was not a Materialist, his mechanical explanation of teleology brought water to the mill of Materialism, which recognizes only the mechanism of "tacitly assumed," but rather the evolution of the organism from the protosperm to man, announced from university chairs as the result of science, was eagerly taken up by the social democrats, and became the fundamental tenet of their conception of the world and of life. Although officially socialists disown their hatred of religion, the rejection of the higher destiny of man, the concept of "the most advantageous" among the most advantageous, is but another instance of what the oldest experience shows: the line of progress is not vertical but spiral. Overstraining in one direction starts a rebound in the other, which usually reaches the opposite extreme. The spiritual will not be reduced to the material, but it frequently commits the error of refusing to tolerate the material. Thus at present the reaction against Materialism leads in many instances to an extreme Spiritualism or Phenomenalism, which regards matter merely as a projection of the soul. Hence the widely-echoed cry: "Back to Kant!" Kant regarded matter as entirely the product of consciousness, and this view is outraged by the failure of L. Böckh and others, "Geist und Körper, Seele und Leib" (Leipzig, 1903) earnestly to discredit Materialism. He treats exhaustively the relations of the psychical to the physical, refutes the so-called psycho-physical parallelism, and decides in favour of the interaction of soul and body. His conclusion is the complete denial of matter. "Metaphysically the world-picture changes . . . . The corporeal world as such disappears—it is a mere appearance for the apprehending mind—and is succeeded by something spiritual. The idealistic spiritualistic metaphysics, whose validity we here tacitly assume without further justification, recognizes no corporeal but only spiritual being. 'All reality is spiritual.'" (p. 479).

How little Materialism has to fear from Kantian rivalry is plainly shown, among others, by the natural philosopher C. F. Wolff. In the "Neue Rundschau" of 1907 (Umriss einer neuen Weltanschauung), he most vigorously opposes Darwinism and Haeckelism, but finally rejects with Kant the substantiality of the soul, and falls back into the Materialism which he severely condemns. He says: "The disintegrating influence of Haeckelism on the spiritual life of the masses comes, not from the consequences which his conception of eternal things calls forth, but from the Darwinian thesis that there is no purpose in nature. Really, one might suppose that on the day, when the great discovery of the descent of man from the ape was made, the call went forth: 'Back to the Ape.'" "The walls, which confine Materialism, still stand in all their firmness: it is impossible to explain the purposive character of life from material forces. "We are so constituted that we are capable of recognizing certain purposes with our intellect, whereas the spiritual is mere beauty. One general plan binds all our spiritual and emotional forces into a unity. "This view of life Haeckel seeks to replace by his senseless talk about cell-souls, and thinks by his boyish trick to an "Kant. Chamberlain's words on Haeckelism will find an echo in the soul of every educated person: 'It is not poetry, not imagination, nor even three.' But what does the "Giant Kant" teach? That we ourselves place the purpose in the things, but that it is not in the things! This view is also held by Materialists. Uexküll finds the refutation of Materialism in the "empirical scheme of the objects," which is formed from our sense-perceptions. This is for him, indeed, identical with the "sum of motion," to which he reduces objects. Thus again there is no substance but only motion, which Materialism likewise teaches. We shall later find the Kantian Uexküll among the outspoken Materialists.

Philosophers of another tendency endeavour to refute Materialism by supposed every thing endowed with life and soul with to the "natural scientist" (R.W. Wundt, Paulsen, Haeckel, and the botanist Franck, who ascribes intelligence even to plants. One might well believe that this is a radical remedy for all materialistic cravings. The pity is that Materialists should be afforded an opportunity for ridicule by such a fiction. That brute matter, atoms, electrons should possess life and soul, however, is but a boast of modern science that it admits only what is revealed by exact observation; but the universal and unvarying verdict of observation is that, in the inorganic world, everything shows characteristics opposite to those which life exhibits. It is also a serious delusion to believe that one can explain the human soul in its unity and complexity by the cell-souls. A number of souls could never have one and the same consciousness. Consciousness and every psychic activity are immanent, they abide in the subject and do not operate outwardly; hence each individual soul has its own consciousness, and of any other knows absolutely nothing. A combination of cell-souls is by no means a unitary consciousness which contains many consciousnesses. But, even if it were possible, this composite consciousness would have a completely different content from the cell-souls, since it would be a marvel if all these felt, thought, and willed exactly the same. In this view immortality would be as completely done away with as it is in Materialism.

We have described this theory as an untenable fiction. R. Semon, however, undertakes to defend the existence of memory in all living beings in his work "Die Mneme als erhaltendes Prinzip im Wechsel des organischen Geschehens." (Leipzig, 1905). He says: "The effect of a stimulus on living substance continues after the stimulation, it has an engraving effect. The matter is called the effect of the stimulus, and the sum of the engrams, which the organism inherits or acquires during its life, is the mneme, or memory in the widest sense." Now, if by this word the persistence of psychic and corporeal states were alone signified, there would be little to urge against this theory. But by memory is understood a psychic function, whose presence in plants and minerals not the slightest plea can be offered. The persistence is even more easily explained in the case of inorganic nature. This Hypothesis, which, as Kant rightly declares, is the death of all science, is also called the "double aspect theory" (Zweiseitentheorie). Fechner indeed regards the material as only the outer side of the spiritual. The relation between them is that of the convex side of a curve to the concave; they are essentially one, regarded now from without and again from within—the same idea expressed in different words. By this explanation Materialism is not overcome but proclaimed. For as to the reality of matter no sensible man can doubt; conversely, if the spiritual is mere beauty, it also must be material. The convex side of a ring is really one thing with the concave; there is but the same ring regarded from two different sides. Thus Fechner, in spite of all his disclaimers of Materialism,
must deny the immortality of the soul, since in the dis-
solution of the body the soul must also perish, and he
labours to no effect when he tries to bolster the
doctrine of survival with all kinds of fantastic ideas.

Closely connected with this theory is the so-called
"psycho-physical parallelism", which most modern
psychologists since Fechner, especially Wundt and
Paulsen, energetically advocate. This emphasizes so
strongly the spirituality of the soul that it rejects as
impossible any influence from the body on the soul and
thus makes spiritual and bodily activities run side by
side (parallel) without affecting each other. Wundt,
indeed, goes so far as to make the whole world consist
of will-units, and regards matter as mechanized
spiritual activity. Paulsen, on the other hand, endeav-
sors to explain the concurrence of the two series of
activities by the thesis that the soul and the body are
the reflection of the spiritual. One might well think
that there could not be a more emphatic denial of
Materialism. Yet this exaggerated Spiritualism and
Idealism agrees with the fundamental dogma of
the Materialists in denying the substantiality and
immortality of the soul. It asserts that the soul is
nothing else than the aggregate of the successive in-
ternal activities without any physical essence. This
declaration leads inevitably to Materialism, because
activity without an active subject is inconceivable;
and, since the substantiality of the soul is denied, the
body must be the subject of the spiritual activities, as
other wise it would be impossible that to certain
physical impressions there should correspond con-
siderations, volitions, and movements. In any case this
exaggerated Spiritualism, which no intelligent person
can accept, cannot be regarded as a refutation of
Materialism. Apart from Christian philosophy no
philosophical system has yet succeeded in successfully
carrying through this attempt. One must have a somewhat
accurate knowledge of the recent literature of
natural science and philosophy to be convinced that the "re-
putation" of Materialism by means of the latest Ideal-
ism is idle talk. Thus, Ostwald proclaims his doctrine of
energy the refutation of Materialism, and, in his "Vorlesungen
über Naturphilosophie", endeavours "to fill the yawning chasm, which since Descartes
gapes between spirit and matter", by subordinating
the ideas of matter and spirit under the concept of
energy. Thus, consciousness also is energy, the nerve-
energy of the brain. He is inclined "to recognize
consciousness as an essential characteristic of the
energy of the central organ, just as space is an essential
class of energy of the nervous system, and inorganic
energy is motion." Is not this Materialism pure and
simple?

Entirely materialistic also is the widely accepted
physiological explanation of psychic activities, espe-
cially of the feelings, such as fear, anger etc. This is
defended (e.g.) by Uexkull, whom we have already
referred to as a vigorous opponent of Materialism. He
endeavours to found on it, at least to illustrate this by
the most modern experiment. In his work "Der
Kampf um die Tierseele" (1903), he says: "Sup-
pose that with the help of refined röntgen rays we
could project magnified on a screen in the form of
movable shadow-waves the processes in the nervous
system of man. According to our present knowledge,
we might thus expect the following. We observe the
subject of the experiment, when a bell rings near by,
and we see the shadow on the screen (representing the
wave of excitation) hurry along the auditory nerve to
the brain. We follow the shadow into the cerebrum,
and, if the person makes a movement in response to
the sound, centrifugal shadows are also presented to
our eyes. Observations of this kind suggest that..."
They are the same, but the way different from any physical experiment of a simi-
lar nature, except that in the case of the brain with its
intricate system of pathways the course of the stimulus
and the transformation of the accumulated energy
would necessarily form a very complicated and con-
fused picture." But what will be thereby proved or
even illustrated? Even without röntgen rays we
know that, in the case of hearing, nerve impulses proceed
to the brain, and that from the brain motor effects
pass out to the peripheral organs. But these effects are
mere movements, not psychical perception; for
consciousness attests that sensory perception, not to
speak of thought and volition, is altogether different
from movement, in fact the very opposite. We can
think... Not one of these opposite elements can be
simultaneously present in our consciousness, for
otherwise we could not compare them, nor perceive
and declare their oppositeness. Now, it is absolutely
impossible that a nerve or an atom of the brain should simultaneoulsy act as opposite move-
ments. And, not merely in the case of these opposites,
but also in the judgment of every distinction, the
nervous elements must simultaneously have different
movements, of different rapidity and in different
directions.

An undisguised Materialism is espoused by A. Kann
in his "Naturgeschichte der Moral und die Physik des
Denkens", with the subtitle "Der Idealismus eines
Materialisten" (Vienna and Leipzig, 1907). He says:
"To explain physically the complicated processes of
thought, it is above all necessary that the necessity of
admitting anything 'psychical' be eliminated. Our
ideas as to what is good and bad are for the average
man so intimately connected with physical activity
that a prime necessity to eliminate the psychical
from our ideas of morality, etc. Only when pure,
material science has built up on its own founda-
tions the whole structure of our morals and ethics
can one think of elaborating for unbiased readers
what I call the 'Physics of Thinking'. To prepare
the ground for the new science, one must first
'clear away the debris of ancient notions', that is 'God,
prayer, immortality (the soul)'." The reduction of
psychical life to physics is actually attempted by J.
Fikler in his treatise "Physik des Seelenlebens"
(Leipzig, 1901). He converses with a pupil of the
highest form, at first in a very childish way, but
finally heavy guns are called into action. "That all
the various facts, all the various phenomena of psychi-

cal life, all the various states of consciousness are
the self-preservation of motion, has not yet, I think,
been explained by any psychologist." Such is indeed
the case, for, generally speaking, gross Materialism has
been rejected. Materialism refers psychical phenom-
enas to the movements of nerve energy, and self-
preservation of motion is motion, and consequently
this new psycho-physics is pure Materialism. In any
case, material cannot "self-preserve" its motion;
motion persists on its own account in virtue of the law
of the conservation of energy. Therefore, according
to this theory, all matter ought to exhibit psychical
phenomena.

Still more necessary and simple was the evolution
of the world according to J. Lichtneckert (Neue wissen-
schaftl. Lebenslehre der Weltalls, Leipzig, 1903). His
"Ideal oder Selbstzweckmaterialismus als die absolute
Philosophie" (Ideal or End-in-itself Materialism as the
Absolute Philosophy) offers "the scientific solution of
all great physical, chemical, astronomical, theological,
philosophical, evolutionary, and physiological world-
riddles." Let us select a few ideas from this new
absolutist philosophy. "That God and matter are
absolutely identical notions, was until to-day un-
known." "Hitherto Materialism investigated the
external life of matter, and Idealism its internal life.
The fusion of the two conceptions, and the absorption
of the world, which since the earliest times have walked
their separate ways and fought each other, issues the
present 'Absolute Philosophy.' Heretofore Material-
ism has denied, as a fundamental error, teleology or
the striving for an end, and hence also the spiritual or
Anthropological Materialism is completely disproved by demonstrating for psychical activities a simple, spiritual substance distinct from the body,—i.e., the soul. The Idealist, or Monist, is the crown or acme of all philosophies, since in it is contained the absolute truth, to which the leading intellects of all times have gradually and laboriously contributed. Into it flow all philosophical and religious systems, as streams into the sea. "Spirit or God is matter, and, vice versa, matter is spirit or God. The Ideal is no raw, lifeless mass, as was hitherto generally assumed, since all chemico-physical processes are self-purposive. Matter, which is the eternal, unending, visible, audible, weighable, measurable, etc., deity, is gifted with the highest evolutionary and transforming spiritual or vital qualities, and indeed possesses power to feel, will, think, and remember. All that exists is matter or God. A non-matter being does not exist. Even space is matter..."

One needs only to indicate such fruits of materialistic science to illustrate in their absurdity the consequences of the pernicious conception of man and the universe known as Materialism. But we cite them only as an example. The much-lauded victory of modern Idealism over Materialism has no foundation in fact. To our own time may be applied what the well-known historian of Materialism, Friedrich Albert Lange (Geschichte des Materialismus u. Kritik seiner Bedeutung in der Gegenwart), wrote in 1875: "The materialistic strife of our day thus stands before us as a serious sign of the times. To-day, as in the period before Kant and the French Revolution, a general relaxation of philosophical effort, a retrogression of ideas, is the basic explanation of the spread of the idealistic belief."

"What he says indeed of the relaxation of philosophical effort is no longer true to-day: on the contrary, seldom has there been a better time for the elevation of man to the unqualified as at the beginning of the present and the end of the last century. Much labour has been devoted to philosophy and much has been accomplished, but, in the words of St. Augustine, it is a case of magni gresus praeter viam (i.e., long strides on the wrong road). We find simply philosophy without ideas, Positivism, Pragmatism, the psychology, and the numerous other modern systems are all enemies of ideas. Even Kant himself, whom Lange invokes as the bulwark against Materialism, is very appropriately called by the historian of Idealism, O. Willman, "the lad who throws stones at ideas". "If we start with the revival and development, as Lange expects, "will raise mankind to a new level" is nowhere to be found, not to be sought in non-Christian philosophy. Only a return to the Christian view of the world, which is founded on Christian philosophy and the teachings of the Socratic School, can prevent the catastrophes prophesied by Lange, and perhaps raise mankind to a higher cultural level. This philosophy offers a thorough refutation of cosmological and anthropological Materialism, and raises up the true Idealism. It shows that matter cannot of itself be uncreated or eternal, which indeed may be deduced from the fact that of itself it is inert, indifferent to rest and motion. But it must be either at rest or in motion if it exists; if it existed of itself, in virtue of its own nature, it would be also of itself in either one of these conditions. If it were of itself originally in motion, it could have never come to rest, and it would not be true that its nature is indifferent to rest and to motion and could be equally well in either of the two conditions. With this simple argument the fundamental error of materialism is falsified. An exhaustive refutation will be found in the "Göttliche Philosophie" (Paderborn, 1908): "Gott und die Schöpfung" (Ratisbon, 1910); "Die Theodizee" (4th ed., 1910); "Lehrbuch der Apologetik", I (3rd ed., 1940).
MATHIAS (B. Osmia, A. Mathias), one of the sons of Nebo who married an alien wife (1 Esd., x, 41) and later repudiated her; he is called Matthias in II Esd., ix, 35.

(2) MATHIAS (Sept. Mattathias), one of the six who stood at the right of Esdras while he read the law to the People (II Esd., viii, 4).

(3) MATHIAS (Sept. Mattathias), a Levite of Corite stock and eldest son of Sellum; he had charge of the frying of cakes for the temple-worship (1 Par., ix, 31).

(4) MATHIAS (Sept. Mattathias), a Levite, one of Aassaph's musicians before the ark (1 Par., xvi, 5).

(5) MATHIAS (I Mach., xi, 2), a captain of the army of Jonathan the Machabee; together with Judas the son of Calphi, he alone stood firm by Jonathan's side till the tide of battle turned away from them.

(6) MATHIAS (I Mach., xi, 14), a son of Simon the high priest; he and his father and brother Judas were murdered by Ptoleeme, the son of Abobus, at Doch.

(9 and 10) MATHIAS (Matthathias), two ancestors of Jesus (Luke, iii, 25, 26). WALTER DRUM.

Mathew, Theobald, Apostle of Temperance, b. at Thomastown Castle, near Cashel, Tipperary, Ireland, 10 Oct., 1790; d. at Queenstown, Cork, 8 Dec., 1856. His father was James Mathew, a gentleman of good family; his mother was Anne, daughter of George Whyte of Capsgghwyte. At twelve he was sent to St. Canice's Academy, Kilkenny. There he spent nearly seven years, during which time he became acquainted with two Capuchin Fathers, who seem to have influenced him deeply. In September, 1807, he went to Maynooth College, and in the following year joined the Capuchin Order in Dublin. Having made his profession and completed his studies, he was ordained. His description Dr. Zouch gives is this: "I go Easter Sunday, 1814. His first mission was in Kilkenny, where he spent twelve months. He was then transferred to Cork, where he spent twenty-four years before beginning his great crusade against intemperance. During these years he ministered in the "Little Friary," and organized schools, industrial classes, and benefit societies at a time when there was no recognized system of Catholic education in Ireland. He also founded a good library, and was foremost in every good work for the welfare of the people. In 1830 he took a long lease of the Botanic Gardens as a cemetery for the poor. Thousands, who died in the terrible cholera of 1832, owed their last resting-place as well as their interment in the Church, to Father Mathew. In 1828 he was appointed Provincial of the Capuchin Order in Ireland—a position which he held for twenty-three years.

In 1836 came the crisis of his life. Drunkenness had become widespread, and was the curse of all classes in Ireland. Temperance efforts had failed to cope with the evil, and after much anxious thought and prayer, and in response to repeated appeals from William Martin, a Quaker, Father Mathew decided to inaugurate a total abstinence movement. On 10 April, 1838, the first meeting of the Cork Total Abstinence Society was held in his own schoolhouse. He presided, delivered a modest address, and took the pledge himself. Then with the historic words, "Here goes in the Name of God", he entered his signature in a large book lying on the table. About sixty followed his example that night and signed the book. Meetings were held twice a week, in the evenings and after Mass on Sundays. The crowds soon became so great that the schoolhouse had to be abandoned, and the Horse Bazaar, a building capable of holding 4000, became the future meeting-place. Here, night after night, Father Mathew addressed crowded assemblies. In three months he had enrolled 25,000 in Cork alone; in five months the number had increased to 130,000. The movement now assumed a new phase. Father Mathew decided to go forth and preach his crusade throughout the kingdom. The Bazaar became capable of holding 6000, and became the center of the evangelistic movement. Thousands came in from the adjoining counties and from Connaught. In four days he gave the pledge to 150,000. In the same month he went to Waterford, where in three days he enrolled 50,000. In March, 1840, he enrolled 70,000 in Dublin. In Maynooth College he received a great har- vest, winning over 8 professors and 250 students, whilst in Maynooth itself, and the neighborhood, he gained 37,300 adherents. In January, 1841, he went to Kells, and in two days and a half enrolled 100,000. Thus in a few years he travelled through the whole of Ireland, and in February, 1843, was able to write to a friend in America: "I have now, with the Divine Assistance, hoisted the banner of Temperance in almost every parish in Ireland."

He did not confine himself to the preaching of temperance alone. He spoke of the other virtues also, denounced crime of every kind, and secret societies of every description. Crime diminished as his movement spread, and neither crime nor secret societies ever flourished where total abstinence had taken root. He was of an eminently practical, as well as of a spiritual turn of mind. Thackeray, who met him in Cork in 1842, wrote of him thus: "Avoiding all political questions, no man seems more eager than he for the practical improvement of this country. Leases and rents, farming improvements, reading societies, music societies—he was full of these, and of his schemes of temperance above all." Such glorious success having attended his efforts at home, he now felt himself free to answer the earnest invitations of his fellow-countrymen in Great Britain. On 13 August, 1842, he reached Glasgow, where many thousands joined the movement. In July, 1843, he arrived in England and opened his memorable campaign in Liverpool. From Liverpool he went to Manchester and Salford, and, having visited the chief towns of Lancashire, he went on to Yorkshire, where he increased his recruits by 200,000. His next visit was to London where he enrolled 74,000. During three months in England he gave the pledge to 600,000.

He then returned to Cork where trials awaited him. In July, 1845, the first blight destroyed the potato crop, and in the following winter there was bitter distress. Father Mathew was one of the first to warn the Government of the calamity which was impending. Famine with all its horrors reigned throughout the
country during the years 1846-47. During those years, the Apostle of Temperance showed himself more than ever the Apostle of Charity. In Cork he organized societies for collecting and distributing food supplies. He stopped the building of his own church, and gave the funds in charity. He spent £600 ($3000) a month in relief, and made his own land and America to obtain food and money. Ireland lost 2,000,000 inhabitants during those two years. All organization was broken up, and the total abstinence movement received a severe blow. In 1847 Father Mathew was placed first on the list for the vacant Bishopric of Cork, but Rome did not confirm the choice of the clergy. In the early part of 1849, in response to earnest invitations, he set sail for America. He visited New York, Boston, New Orleans, Washington, Charlestown, Mobile, and many other cities, and secured more than 500,000 disciples. After a stay of two and a half years he returned to Ireland in Dec., 1851. Men of all creeds and politics have borne important testimony to the wonderful progress and the beneficial effects of the movement he inaugurated. It is estimated that he gave the total abstinence pledge to 7,000,000 people, and everyone admits that in a short time he accomplished a great moral revolution. O'Connell characterized it as "a mighty miracle", and often declared that he would never have ventured to have a "monster meeting" were it not that he had the teetotalers "for his policemen".

His remains rest beneath the cross in "Father Mathew's Cemetery" at Queenstown. On 10 Oct., 1864, a fine bronze statue by Foley was erected to his memory in Cork, and during his centenary year a marble statue was erected in O'Connell Street, Dublin. The Mathew Memorial Hall, Dublin, is a centre of social, educational, and temperance work, and is modelled on the Temperance Institute, founded and maintained by the Apostle of Temperance himself. The Father Mathew Hall, Cork, is doing similar work. The Dublin Hall publishes a monthly magazine called "The Father Mathew Record", which has a wide circulation. "A "Memorial Crusade" was founded in Jan., 1905, and its membership is already over 100,000.

**Freeman's Journal (Dublin): The Nation (Dublin), contemporary**

Mathieu, Francois-Désiré, bishop and cardinal, b. 27 May, 1839; d. 26 October, 1908. Born of humble parents in the Moselle, France, he was made his studies in the diocesan school and the-seminary of the Diocese of Nancy, and was ordained priest in 1863. He was engaged successively as professor in the school (petit seminaire) of Pont-a-Mousson, chaplain to the Dominicanees at Nancy (1879), and parish priest of Saint-Martin at Foy (1886). In 1889, he had the Degree of Doctor of Letters with a Latin and a French thesis, the latter being honoured with a prize from the French Academy for two years. On 3 January, 1893, he was nominated to the Bishopric of Angers, was consecrated on 19 January, and consecrated on 20 March. He succeeded Mgr Freppel, one of the most remarkable bishops of his time, and set himself to maintain all his predecessor's good works. To these he added the work of facilitating the education of poor children destined for the priesthood. He inaugurated the same pious enterprise in the Diocese of Toulouse, to which he was transferred three years later (30 May, 1896) by a formal order of Leo XIII. In his new see he laboured, in accordance with the views of this pontiff, to rally Catholics to the French Government. With this aim he wrote the "Devoir des catholiques", an episcopal charge which attracted wide attention and earned for him the pope's congratulations. In addition he was summoned to Rome to be a cardenal at the conclave (19 June, 1899). Having resigned the See of Toulouse (14 December, 1899), his activities were henceforward absorbed in the work of the Roman congregations and diplomatic negotiations which have since been so "monotonous". Nevertheless, he found leisure to write on the Concordat of 1801 and the Conclave of 1903. In 1907 he was admitted to the French Academy with a discourse which attracted much notice. Death came to him unexpectedly next year in London, whither he had gone to assist at the Eucharistic Congress. Under a somewhat commonplace exterior he had a rich and active nature, an inquiring and open mind, a fine and well-cultivated intelligence which did credit to the Sacred College and the French clergy. His works include: "De Joannis abbatia Gorziensi vita" (Nancy, 1878); "L'Ancien Régime dans la Province de Lorraine et Barrois" (Paris, 1871; 3rd ed., 1907); "Le Concordat de 1801" (Paris, 1903); "Les derniers jours de Léon XIII et le concile de 1903" (Paris, 1904); a new edition of his works began to appear in Paris, July, 1910.

**Antoine Dégert.**

Mathusa, one of the Hebrew patriarchs, mentioned in the book of Genesis (v). The word is given in Mathusaleh in I Par. Luke, iii, 37; and in the Revised Version as Methuselah. Etymologists differ with regard to the signification of the name. Holzinger gives "man of the jelin" as the more likely meaning; Hommel and many with him think that it means "man of Selah", Selah being derived from a Babylonian word, given as a title to the god Sin; while De Wette makes it the Babylonian word which is not understood. The author of Genesis traces the patriarch's descent through his father Henoch to Seth, a son of Adam and Eve. At the time of his son's birth Henoch was sixty-five years of age. When Mathusa had reached the great age of one hundred and eighty-seven years, he became the father of Methusaleh. Of Methusaleh, he had a son named Jared. Following this he lived the remarkable term of seven hundred and eighty-two years, which makes his age at his death nine hundred and sixty-nine years. It follows thus that his death occurred in the year of the Deluge. There is no record of any other human being having lived as long as this, for which reason the name, Mathusa, is his become a synonym for longevity.
The tendency of rationalists and advanced critics of different creeds leads them to deny outright the extraordinary details of the ages of the patriarchs. Catholic commentators, however, find no difficulty in accepting the words of Genesis. Certain exegetes solve the difficulty to their own satisfaction by declaring that the year meant by the sacred writer is not the equivalent of our year. In the Samaritan text Mathusala was sixty-seven at Lamech's birth, and 720 at his death.

JOSPEH V. MOLLOY.

Matilda, Saint, Queen of Germany, wife of King Henry I (The Fowler), b. at the Villa of Engern in Westphalia, about 885; d. at Quedlinburg, 14 March, 968. She was brought up at the monastery of Erfurt. Henry, whose marriage to a young widow, named Hathburg, had been declared invalid, asked for Matilda's hand, and married her in 900 at Walshausen, which he presented to her as a dowry. Matilda became the mother of: Otto I, Emperor of Germany; Henry, Duke of Bavaria; St. Bruno, Archbishop of Cologne; Gerberga, who married Louis IV of France; Hedwig, the mother of Hugh Capet. In 912 Matilda's husband succeeded his father as Duke of Saxony, and in 918 he was chosen to succeed King Conrad of Germany. As queen, Matilda was humble, pious, and zealous, and was ready to help the oppressed and unfortunate. She wielded a wholesome influence over the king. After a reign of seventeen years, he died in 936. He bequeathed to her all his possessions in Quedlinburg, Poedzeln, Nordhausen, Grona, and Duderstadt.

It was the king's wish that his eldest son, Otto, should inherit his kingdom, but Matilda wanted her favourite son Henry on the royal throne. On the plea that he was the first-born son after his father became king, she induced a few nobles to cast their vote for him, but Otto was elected and crowned king on 8 August, 936. Three years later Henry revolted against his brother Otto, but, being unable to wrest the royal crown from him, they agreed to separate the kingdom of Saxony and Bavaria. Otto was made Duke of Bavaria. Soon, however, the two brothers joined in persecuting their mother, whom they accused of having impoverished the crown by her lavish almsgiving. To satisfy them, she renounced the possessions the deceased king had bequeathed to her, and retired to her villa at Engern in Westphalia. But Otto, her son, was not satisfied. In a letter to his mother, Matilda was called back to the palace, and both Otto and Henry implored her pardon.

Matilda built many churches, and founded or supported numerous monasteries. Her chief foundations were the monasteries at Quedlinburg, Nordhausen, Engern, and Poedzeln. She spent many days at these monasteries and was especially fond of Nordhausen. She died at the convent of St. Servatius and Dionysius at Quedlinburg, and was buried there by the side of her husband. She was venerated as a saint immediately after her death. Her feast is celebrated on 14 March.

The lives of Matilda are extant: one, Vita antiquior, written in the monastery of Nordhausen and dedicated to the Emperor Otto II; edited by KOEPE in Mon. Germ. Script., 3, 1845; 4, 1846, 1854, L. Cl. 119; in English, The other, Vita Matildis regina, written by order of the Emperor Henry II, is printed in Mon. Germ. Script., IV, 293-302, and in MOWS, P. L. Ch. V, 489-520. CLAVS, Die heilige Mathilde, ihr Gemahl Heinrich I. und ihre Söhne Otto I. Heinrich und Bruno (Münster, 1897); Schwabe, Die heilige Mathilde, Gemahlin Heinrichs I. Könige von Deutschland (Ratisbon, 1846); Acta SS., March, II, 351-56.

MICHAEL OTT.

Matilda of Canossa, Countess of Tuscany, daughter and heiress of the Marques Boniface of Tuscany, and Beatrice, daughter of Frederick of Lorraine, b. 1046; d. 24 July, 1114. In 1053 her father was murdered. Duke Gottfried of Lorraine, an opponent of the Emperor Henry III, went to Italy and married the widowed Beatrice. But, in 1055, when Henry III entered Italy he took Beatrice and her daughter Matilda prisoners and had them brought to Germany. Thus the young countess was early dragged into the bustle of these troublous times. That, however, did not prevent her receiving an excellent training; she was finely educated, knew Latin, and was very fond of serious books. She was also deeply religious, and even in her youth followed with interest the great ecclesiastical questions which were then prominent. Before his death in 1056 Henry III gave back to Gottfried of Lorraine his wife and stepdaughter. When Matilda grew to womanhood she was married to her stepbrother Gottfried of Lower Lorraine, from whom, however, she separated in 1071. He was murdered in 1076; the marriage was childless, but it cannot be proved that it was never consummated, as many historians asserted. From 1071 Matilda entered upon the government and administration of her extensive possessions in Middle and Upper Italy. These domains were of the greatest importance in the political and ecclesiastical disputes of that time, as the road from Germany by way of Upper Italy to Rome passed through them. On 22 April, 1073, Gregory VII (q. v.) became pope, and before long the great battle for the independence of the Church and the reform of ecclesiastical life began. In the controversy Matilda stood resolute, unyielding, and unwavering ally of Gregory and his successors.

Immediately on his elevation to the papacy Gregory entered into close relations with Matilda and her mother. The letters to Matilda (Beatrice d. 1076) give distinct expression to the pope's high esteem and sympathy for the princess. He called her and her mother "his beloved Matilda and Peter" (Regest., II, ix), and wished to undertake a Crusade with them to free the Christians in the Holy Land (Reg., I, xi). Matilda and her mother were present at the Roman Lenten synods of 1074 and 1075, at which the pope published the important decrees on the reform of ecclesiastical life. Both mother and daughter supported the pope in his efforts; the pope complained of the inconstancy and changeableness of the king, who apparently had no desire to be at peace with him. In the next year (1076) Matilda's first husband, Gottfried of Lorraine, was murdered at Antwerp. Gregory wrote to Bishop Hermann of Metz, 25 August, 1076, that he did not yet know in which state Matilda "the faithful handmaid of St. Peter" would, under God's guidance, remain.

On account of the action of the Synod of Worms against Gregory (1076), the latter was compelled to lay Henry IV under excommunication. As the majority of the princes of the empire now took sides against the king, Henry wished to be reconciled to the pope, and accordingly traveled to Hamburg in 1077. On this journey he was seized with a severe winter, in order to meet the pope there before the latter should leave Italian soil on his journey to Germany. Gregory, who had already arrived in Lombardy when he heard of the king's journey, betook himself at Matilda's advice to his mountain stronghold of Canossa for security. The excommunicated king had waited the Countess Matilda and her companions, Adelaide, and Abbot Hugh of Cluny, to intercede with the pope for him. These fulfilled the king's request, and after long opposition Gregory permitted Henry to appear before him personally at Canossa and alone for his guilt by public penance. After the king's departure the pope set out for Mantua. For safety Matilda accompanied him with armed men, but bearing a rumour that Archbishop Wibert of Ravenna, who

X-4
was unfriendly to Gregory, was preparing an ambush for him, she brought the pope back to Canossa. Here she drew up a first deed of gift, in which she ceded her domains and estates from Ceperano to Radiciofanò to the Roman Church. But as long as she lived she continued to govern and administer them freely and independently. When, soon after, Henry again renewed the contest with Gregory, Matilda constantly supported the pope with soldiers and money. On her security the monastery of Canossa had its treasure melted down, and sent Gregory seven hundred pounds of silver and nine pounds of gold as a contribution to the war against Henry. The latter withdrew from the Romagna to Lombardy in 1082, and laid waste Matilda's lands in his march through Tuscany. Nevertheless the countess did not desist from her adherence to Gregory. She was confirmed in this by her confessor, Anselm, Bishop of Lucca.

In similar ways she supported the successors of the great pope in the contest for the freedom of the Church. When in 1087, shortly after his coronation, Pope Victor III was driven from Rome by the Antipope Wilbert, Matilda advanced to Rome with an army, occupied the Castle of Sant' Angelo and part of the city, and called Victor back. However, at the threats of the emperor the Romans again deserted Victor, so that he was obliged to flee once more. At the wish of Pope Urban II Matilda married in 1089 the young Duke Welf of Bavaria, in order that the most faithful defender of the papal chair might thus obtain a powerful ally. In 1090 Henry IV returned to Italy to attack Matilda, whom he had already deprived of her estates in Lorraine. He laid waste many of her possessions, conquered Mantua, her principal stronghold, by treachery in 1091, as well as several castles. Although the vassals of the countess hastened to make their peace with the emperor, Matilda again promised fidelity to the cause of the pope, and continued the war, which now took a turn in her favour. Henry's army was defeated before Canossa. Welf, Duke of Bavaria, and his son of the same name, Matilda, went over to Henry in 1095, but the countess remained resolute. When the new German King, Henry V, entered Italy in the autumn of 1110, Matilda did homage to him for the imperial fiefs. On his return he stopped three days with Matilda in Tuscany, kept a proper mark of respect, and made her imperial vice-regent of Lucca.

In 1112 she confirmed the donation of her property to the Roman Church that she had made in 1077 (Mon. Germ. Hist.: Legum, IV, i, 653 sqq.). After her death Henry went to Italy in 1116, and took her lands—not merely the imperial fiefs, but also the freeholds. The Roman Church, though, put forward its legitimate claim to the inheritance. A lengthy dispute now ensued over the possession of the dominions of Matilda, which was settled by a compromise between Innocent II and Lothair III in 1133. The emperor and Duke Henry of Saxony took Matilda's freeholds as fiefs from the pope at a yearly rent of 100 pounds of silver. The duke took the feudal oath to the pope; after his death Matilda's possessions were to be restored wholly to the Roman Church. Afterwards there were again disputes about these lands, and in agreements between the popes and emperors of the twelfth century this matter is often mentioned. In 1213 the Emperor Frederick II recognized the right of the Roman Church to the possession of Matilda.

Matina.—I. NAME.—The word "Matina" (Lat. Mutilium or Mutatine), comes from Mutila, the Latin name for the Greek goddess Leucothea or Leucotothea, white goddess, or goddess of the morning (Aurora): Leucothea graius, Mutula vocabere nostris, Ovid, V, 545. Hence Mutatine, Mutatinus, Mutilatinum tempus, or simply Mutilatum. The word actually used in the Roman Breviary is Mutilatum (i.e. tempus); some of the old authors preferred Mutatine to Mutilatum. In any case the primitive signification of the word under these different forms was Aurora, sunrise. It was at first applied to the office of Lauds, which, as a matter of fact, was said at dawn (see Lauds), its liturgical synonym being the word Gallatinum (cock-crow), which also designated this office. The night-office retained its name of Vigils, since, by a rule, Vigils and Matins (Lauds) were combined, the latter serving, to a certain extent, as the closing part of Vigils. The name Matins was then extended to the office of Vigils, Matins taking the name of Lauds, a term which, strictly speaking, only designates the last three psalms of that office, i.e. the "Laudate" psalms. At a time when this change of the custom of saying Vigils at night was observed scarcely anywhere but in monasteries, whilst elsewhere they were said in the morning, so that finally it did not seem a misapplication to give to a night office a name which, strictly speaking, applied only to the office of day-break. The change, however, was only gradual. St. Benedict (sixth century) in his description of the Divine Office, always refers to Vigils as the Night Office, whilst that of day-break he calls Matins, Lauds being the last three psalms of that office (Regula, cap. XIII-XIV; see Lauds). The Council of Tours in 567 had already applied the title "Matins" to the Night Office: "ad Mutilumum sese antiqui; Laudes Matutina; Matistani grani" are also the names of ancient authors as synonymous with Lauds. (Hefer-Leclercq, "Hist. des Conciles" V, III, 188, 189.)
II. ORIGINS (Matins and Vigils).—The word Vigils, at first applied to the Night Office, also comes from a Latin source, both as to the term and its use, namely, the Vigilia or nocturnal watches or guards of the soldiers. The night from six o’clock in the evening to six o’clock in the morning was divided into four watches or vigils, and the third and fourth vigils. From the point of view and in its origin, the use of the term was very vague and elastic. Generally it designated the nightly meetings, synaxes, of the Christians. Under this form, the watch (Vigil) might be said to date back as early as the beginning of Christianity. It was either on the account of the secrecy of the meetings, or because of some mystical idea which made the middle of the night the hour par excellence for prayer, in the words of the psalm: media nocte surgebam ad confidendum tibi, that the Christians chose the night time for their synaxes, and of all other nights, preferably the Sabbath. There is an allusion to it in the Acts of the Apostles (xx, 4), as also in the letter of Pliny the Younger. The liturgical services of these synaxes was composed of almost the same elements as that of the Jewish Synagogue: readings from the Books of the Law, singing of psalms, divers prayers. What gave them a Christian character was the fact that they were followed by the Eucharistic service, and that to the reading from the prophets added that from the apocryphal. The Vigil was very soon added, as also the Gospels and sometimes other books which were non-canonical, as, for example, the Epistles of Saint Clement, that of Saint Barnabas, the Apocalypse of Saint Peter, etc.

The more solemn watches, which were held on the anniversaries of martyrs or on certain feasts, were also known by this title, especially during the third and fourth centuries. The Vigil in this case was also called vespers, because the greater part of the night was devoted to it. Commenced in the evening, they only terminated the following morning, and comprised, in addition to the Eucharistic Supper, homilies, chants, and divers offices. These last Vigils it was that gave rise to certain abuses, and they were finally abolished in the Church (see Vespers). Notwithstanding this, however, the Vigils, in their strictest sense of Divine Office of the Night, were maintained and developed. Among writers from the fourth to the sixth century we find several descriptions of them. The “De Virginitate”, a fourth-century treatise, gives them as immediately followed by the Eucharistic service. The Angels are invoked to determine the number of psalms which had to be recited. Methodius in his “Banquet of Virgins” (Symposium sine Conivium decem Virginum) subdivided the Night Office or vespers into watches, but it is difficult to determine what he meant by these nocturnes. St. Basil also gives a very vague description of the Night Office or Vigils, but in terms which permit us to conclude that the psalms were sung, sometimes by two choirs, and sometimes as responses. Cassian gives us a more detailed account of the Night Office of the fifth century monks. The number of psalms, which at first varied, was subsequently fixed at twelve, with the addition of a lesson from the Old and another from the New Testament. St. Jerome defied the attacks of Vigilantius, but it is principally concerning the watches at the Tombs of the Martyrs that he speaks in his treatise, Contra Vigilantium. Of all the descriptions the most complete is that in the “Peregrinatio in Aethiopiam”, the author of which assisted at Matins in the Churches of Jerusalem, where great solemnity was displayed (see, e.g., pp. 79, 122, 139, 186, 208, 246, etc.) Other allusions are to be found in Cæsarius of Arles, Nicetius or Nicetae of Treves, and Gregory of Tours (see Bäumer-Biron, loc. cit., 1, 216, 227, 232).

III. THE ELEMENTS OF MATINS FROM THE FOURTH TO THE SIXTH CENTURY.—In all the authors we have quoted, the form of Night Prayers would appear to have varied a great deal. Nevertheless in these descriptions, and in spite of certain differences, we find the same elements repeated: the psalms generally chanted in the form of responses, that is to say by one or more chanters, the choir repeating one verse, which served as a response, alternately with the verses of psalms which were sung by the chanters; readings taken from the Old and the New Testament; and litany or supplications; prayer for the divers members of the Church, clergy, faithful, neophytes, and catechumens; for emperors; travellers; the sick; and generally for all the necessities of the Church, and even prayers for Jews and for heretics. [Bäumer, Liturgie, 227, in Studien des Benedictines, II (Bauger, 1886), 257, 289.] It is quite easy to find these essential elements in our modern Matins.

IV. MATINS IN THE ROMAN AND OTHER LITURGIES.—In the modern Roman Liturgy, Matins, on account of its length, the position it occupies, and the matter of which it is composed, may be considered as the most important office of the day, and for the variety and richness of its elements the most remarkable. It commences more solemnly than the other offices, with a psalm (Ps. xcv) called the Invitatory, which is chanted or recited in the form of a response, in accordance with the most ancient custom. The hymns, which have been burnt out of the Matins of the primitive Liturgy, as well as the hymns of the other hours, form part of a very ancient collection which, so far at least as some of them are concerned, may be said to pertain to the seventh or even to the sixth century. As a rule they suggest the symbolic significance of this Hour (see No. V), the prayer of the middle of the night. This principal form of the Office should be distinguished from the Office of Sunday, of Feasts, and the ferial or week day Office. The Sunday Office is made up of the invitatory, hymn, three nocturns, the first of which comprises twelve psalms, and the second and third three psalms each; nine lessons, three to each nocturn, each lesson except the ninth being followed by a response; and finally, the canticle De Deum, which is recited or sung after the ninth lesson instead of a response. The Office of Feasts is similar to that of Sunday, except that there are only three psalms to the first nocturn instead of twelve. The week-day or ferial office and that of simple feasts are composed of one nocturn only, with twelve psalms and three lessons. The Office of Vespers in the three last days of Holy Week are simpler, the absolutions, benedictions, and invitatory being omitted, at least for the three last days of Holy Week, since the invitatory is said in the Offices of the Dead.

The principal characteristics of this office which distinguish it from all the other offices are as follows:
(a) The Psalms used at Matins are made up of a series commencing with Psalm i and running without intermission to Psalm xxi inclusive. The order of the Psalter is followed almost without interruption, except in the case of feasts, when the Psalms are chosen according to their signification, but always from the series i–viii, the remaining Psalms being repeated for Vespers and other Offices.

(b) The Lessons form a unique element, and in the other Offices give place to a Capitulum or short lesson. This latter has possibly been introduced only for the sake of symmetry, and in its present form, at any rate, gives but a very incomplete idea of what the true reading or lesson is. The Lessons of Matins on the contrary are readings in the proper sense of the term, for they comprise the most important parts of the Old and the New Testament, extracts from the works of the principal doctors of the Church, and legends of the martyrs or of the other saints. The lessons from Holy Scripture are distributed in accordance with certain fixed rules (rubrics) which assign such or such books of the Bible to certain seasons of the year.
this manner extracts from all the Books of the Bible are read at the Office during the year. The idea, however, of having the whole Bible read in the Office, as proposed by several reformers of the Breviary, more especially during the seventeenth and eighteenth centuries, has never been regarded favourably by the Church, which views the Divine Office as a prayer and not as an object of study for the clergy.

(c) The Invitatory and, on certain days, the Finale or Te Deum also form one of the principal characteristics of this Office.

(d) The Responses, more numerous in this Office, recall the most ancient form of psalmody; that of the psalmist seated alone in the whole choir, as opposed to the antiphonal form, which consists in two choirs alternately reciting the psalms.

(e) The division into three or two Nocturns is also a special feature of Matins, but it is impossible to say why it has been thought by some to be a souvenir of the military watches (there were not three, but four, watchen) or even of the ancient Vigils, since ordinarily there was but one meeting in the middle of the night. The custom of rising three times for prayer could only have been in vogue, as exceptional, in certain monasteries, or for some of the more solemn feasts (see Nocturnae).

In the Office of the Church of Jerusalem, of which the vigil ζεγήα gives us a description, the Vigils on Sundays terminate with the solemn reading of the Gospel, in the Grotto of the Holy Sepulchre. This practice of reading the Gospel has been preserved in the Benedictine Liturgy. It is a matter for regret that in the Roman Liturgy this custom, so ancient and so beautiful, was never represented but by the breviary.

The Ambrosian Liturgy, better perhaps than any other, has preserved traces of the great Vigils of παντοχρόνια, with their complex and varied display of processions, psalmody, etc. (cf. Dom Cagin; "Pélerinage Musical", vol. VI, p. 8, sq.; Paul Lejay; Ambrosien (rit.) in "Dictionnaire d'Archéol. Chrétiens du Liturgique", vol. I, p. 1423 sq.).

The Ambrosian Liturgy has also preserved Vigils of long psalmody. This Nocturnal Office adapted itself at a later period to a more modern form, approaching more and more closely to the Roman Liturgy. Here too are found the three Nocturns, with Antiphon, Psalms, Lessons, and Responses, the ordinary elements of the Roman Mass, and a few features quite Ambrosian. In the Benedictine Office, Matins, like the ext of the Office, follows the Roman Liturgy quite closely. The number of psalms, viz. twelve, is always the same, there being three or two Nocturns according to the degree of solemnity of the particular Office celebrated. Ordinarily there are four Lessons, followed by their responses, to each Nocturn. The two most characteristic features of the Benedictine Matins are: the Canticles of the third Nocturn, which are not found in the Roman Liturgy, and the Gospel, which is sung solemnly at the end, the latter trait, as already pointed out, being very ancient. In the Mozarabic Liturgy (q. v.), on the contrary, Matins are made up of a systematic series of Collects and Lessons, and its influence made them quite a departure from the Roman system.

V. SIGNIFICATION AND SYMBOLISM. — From the foregoing it is clear that Matins remains the principal Office of the Church, and the one which, in its origin, dates back the farthest, as far as the Apostolic ages, as far even as the very inception of the Church. It is doubtless passed through a great many transformations, the ancient Night Office, the Office of the Vigil. In a certain sense it is, perhaps, the Office which was primitively the preparation for the Mass, that is to say, the Mass of the Catechumens, which presents at any rate the same construction as that Office: the reading from the Old Testament, then the Epistles and the Acts, and finally the Gospel—the whole being intermingled with psalmody and termi-
obtained the upper hand, and the chiefs of the Ghibelline party were obliged to go into exile; among these was the poet Dante, who was exiled in 1302. "Divina Commedia" (Paradiso, XIII, 124-28), Dante certainly speaks as an extreme Ghibelline against Matteo of Aquasparta. Matteo, however, had died before this. He was buried in the Franciscan church of Ara Coeli, where his monument is still to be seen.

Matteo was a very learned philosopher and theologian; he was a personal pupil of St. Bonaventure, whose teaching, in general, he followed, or rather developed. In this respect he was one of what is known as the older Franciscan school, who preferred Augustinianism to the more pronounced Aristotelianism of St. Thomas Aquinas. His principal work is the acute "Questiones disputatione", which treats of various subjects. Of this one book appeared at Quaracchi in 1903 (the editing and issue are discontinued for the present), namely: "Questiones disputationes selectae", in "Bibliotheca Franciscana scholastica medii aevi", I; the "Questiones" are preceded by a "Tractatus de excellencia S. Scriptura" (pp. 1-22), also by a "Sermon de studio S. Scripturae" (pp. 22-26); it is followed by "Concessa sensitio suae..." (pp. 29-54). "Questiones de Cognitione" had already been edited in the collection called "De humane cognitionis ratione ancedota quedam" (Quaracchi, 1883), 87-182. The rest of his works, still unedited, are to be found at Assisi and Todi. Among them are: "Commentarius in libros Sententiarum" (autograph); "Concessa sensitio suae..." (autograph); "Postilla super librum Job"; "Postilla super Psalmistum" (autograph); "In 12 Prophetas Minores"; "In Danielem"; "In Ev. Matthaei"; "In Apocalypsim" (autograph); "In Epist. ad Romanos"; "Sermones dominicales et feriales" (autograph).

On the editions referred to (1903), pp. v-xvi, and De Hum. Cognit., pp. xiv-xv; Chronica XXIV Mo-nstr. Generali O. M. in Annuale Franciscana, III (Quaracchi, 1898), 408-19; 699; 703; 706-7; 131; 132; 135; 228; (Rome, 1560), 252, (1806), 172, (1806), 269-70; SHARANZ, Suppl. ad Script. O. M. (Rome, 1806), 525; DEMUS-CHATEL, Charitats. Univ. Parts. II (Paris, 1861), 56; EHRH. in Zeitschrift f. kathol. Theologie, VII (Innsbruck, 1883), 46; GRANZEN, Die philosophischen und theologischen Enzyklopelische des Kardinals Mathaus von Aquasparta (Vienna, 1900); Theologische Studien der Leo Gesellschaft, Pt. XIV.

MICHAEL BIHL

MATTER

MATTEO

53

MATTEO

according to G. Milanesi (in his edition of Vassari, II, Florence, 1878, p. 483, note 3), the main portion of the structure of the poet Dante, while the lateral portions have been removed to the sacristy. Some other Madonnas of his deserve particular mention: one in the Palazzo Tolomei at Siena; the Virgin and Infant Jesus painted, in 1484, for the city palace of Siena, on a pilaster in the hall decorated by Spinello Aretino; in the duomo of Pienza, a Virgin and Child enthroned between St. Matthew and St. Catherine, St. Bartholomew and St. Luke. On the lunette Matteo painted the Flagellation, and on the predella three medallions—"Ecco Homo", the Virgin, and an Evangelist. The signature reads: "Opus Mathei Johannis de Senis". As decoration for the pavement of the cathedral of Siena, he designed three subjects: "The Sinful of Samsó", "The Death of Bethulia", and "The Massacre of the Innocents".

In 1477 he painted his "Madonna della Neve" (Our Lady of the Snow), for the church under that invocation at Siena. On comparing this with the Servite Madonna of 1470, it is seen to surpass the earlier work in beauty of types, symmetry of proportions, and colour-tone. The St. Barbara, a predella passion made for the church of San Domenico at Siena, is also a remarkable work: two angels are gracefully laying a crown on the saint's head, while others, accompanied by St. Mary Magdalene and St. Catherine of Alexandria and playing musical instruments, surround her. When Matteo treats subjects involving lively action, he loses a certain power of suggestion. Two characteristics are combined in a confused way, the expression of feeling is forced, and degenerates into grimace, and the general result is affected and caricature-like.

GASTON SORTELA.

Matteo of Aquasparta, a celebrated Italian Franciscan, b. at Aquasparta in the Diocese of Todi, Umbria, about 1235; d. at Rome, 29 October, 1302. He was a member of the Bentivogli family, to which Cardinal Bentivenga (d. 1290), also a Franciscan, belonged. Matteo, the Franciscan Order at Todi, took the degree of Master of Theology at Paris, and taught also for a time at Bologna. The Franciscan, John Peckham, having become Archbishop of Canterbury in 1279, Matteo was in 1280 made Peckham's successor as Lector sacri Palatii apostolici, i.e. he was appointed to the office of Master of Theology at Oxford. In 1287 the chapter held at Montpellier elected him general in succession to Arlotto of Prato. When Girolamo Masci (of Ascoli), who had previously been general of the Franciscan Order, became pope as Nicholas IV, 15 Feb., 1288, he created Matteo cardinal of the title of San Lorenzo in Damaso in May of that year. After this Matteo was made Cardinal Bishop of Porto and penitentiarius maior (Grand Penitentiary). He still, however, retained the direction of the order until the chapter of 1289. Matteo had summoned this chapter to meet at Assisi, but Nicholas IV caused it to be held in his presence at Rieti; here Raymond Guafredi, a native of Provence, was elected general. As general of the order Matteo maintained a moderate, middle course. Among other things he reorganized the studies pursued in the order. In the quarrel between Boniface VIII and the Colonna, from 1297 onwards, he strongly supported the pope, both in official memorials and in public sermons. Boniface VIII appointed him, both in 1297 and 1300, to an important embassy to Lombardy, where he attempted in vain to save the Blacks (Neri) and the Whites (Bianchi), that is, the Guelphs and Ghibellines, were violently at issue with each other. In 1301 Matteo returned to Florence, following Charles of Valois, but neither peace nor reconciliation was brought about. The Blacks finally

MATTEO

MATTER

MATER

Mater (Gr. ἡΔα; Lat. materia; Fr. matière; Ger. matter and stuff), the correlative of Form. See HYLOMORPHISM; FORM.

Taking the term in its widest sense, matter signifies that out of which an object is made or composed. Thus the original meaning of ἅνα (Homer) is "wood", in the sense of "grove" or "forest"; and hence, derivatively, "wood cut down" or timber. The Latin materia, as opposed to ligum (wood used for fuel), has also the meaning of timber for building purposes. In modern languages this word (signifying raw material) is used in a similar way. Matter is thus one of the elements of the becoming and continued being of an artificial product. The architect employs timber in the building of his house; the shoemaker fashions his shoes from leather. It will be observed that, as an intrinsic element, matter connotes composition, and is most easily studied in a consideration of the nature of change. This is treated of in a later article on CAUSE (q. v.). It will, however, be necessary to touch upon it briefly again here, since matter can only be rationally treated in so far as it is a correlate. The present article will therefore be divided into paragraphs giving the scholastic doctrine under the following heads: (1) Secondary Matter (in accidental exchange); (2) Permanent Matter (in accidental exchange); (3) The Nature of Primordial Matter; (4) Privation; (5) Permanent Matter; (6) The Unity of Matter; (7) Matter as the Principle of Individuation; (8) The Causality of Matter; (9) Variant Theories.

(1) Secondary Matter.—Accepting matter in the ori-
(2) Primordial Matter.—The explanation is not so obvious when it is extended to cover substantial change. It is indeed true that already, in speaking of the “matter” of accidental change (substance), we go beyond the experience given in sense perception. But, when we attempt to deal with the elements of corporeal substance, we proceed still further in the process of abstracting. It is, therefore, inevitable that we must form a concept of what we call “matter.” We have, however, no intuitive knowledge of these, nor of their principles. We may reason about them, indeed, and must so reason if we wish to explain the possibility of change; but to imagine is to court the danger of arriving at entirely false conclusions. Hence whatever may be asserted with regard to primordial matter must necessarily be the result of pure and abstract reasoning upon the concrete data furnished by sense. It is an inexisting principle invoked to account for substantial alteration. But, as St. Thomas Aquinas remarks, whatever knowledge of it we may acquire is reached only by its analogy to “form” (ibid.). The two are the inseparable companions of each other. The concepts of Aquinas may be briefly set out here as embodying that also of Aristotle, with which it is the main identical. It is the teaching commonly received in the School; though various other opinions, to which allusion will be made later, are to be found advanced both before and after its formulation by Aquinas.

(3) Prenatality.—The so-called “primordial matter” of St. Thomas is the common ground of substantial change, the element of indetermination in corporeal beings. It is a pure potentiality, or determinability, void of substantiality, of quality, of quantity, and of all the accidents that determine sensible being. It is not created, neither is it creatable, but is in a certain sense indefinable and undefined, (q. v.), to which it is opposed as a correlate, as one of the essential “intrinsic constituents” (De Principiis Naturae) of those corporeal beings in whose existence the act of creation terminates. Similarly it is not generated, neither does it corrupt in substantial change, since all generation and corruption is a transition in which one substance becomes another, and consequently can only take place in changes of composite subjects. It is produced out of nothing and can only cease to be by falling back into nothingness (De Natura Materie, i). Its potentiality is not a property superadded to its essence, for it is a potentiality towards substantial being (In I Phys., Lect. 14). St. Thomas says, to be for III, q. iv, a. 2 ad 4: “The relation of primordial matter...to passive potentiality is as that of God...to active (potentiam activam). Therefore matter is its passivity as God is His activity.” It is clear throughout that St. Thomas has here in view primordial matter in the uttermost degree of abstraction. Indeed, he is explicit upon the point. That is commonly called the “primordial matter” which is in the category of substance as a potentiality cognized apart from all species and form, and even from privation; yet susceptible of forms and privations” (De spiritual. creat., Q. i, a. 1).

If we were “obliged to define its essence, it would have for specific difference its relation to form, and for genus its substantiality” (Quod., IX, 6. 3). And again: “It has its being in the same manner that comes to it, since in itself it has incomplete, or rather no being at all” (De Principi. Nature). Such information is mainly negative in character, and the phrases employed by St. Thomas show that there is a certain difficulty in expressing exactly the nature of the principle under consideration. This difficulty evidently arises from the imagination, and with imagination the philosophy of matter has nothing to do. We must begin with the real, the concrete being. To explain this, and the changes it is capable of undergoing, we must infer the coexistence of matter and form determinate and determinant. We may then strip matter, by abstraction, of this, or that determination; we may consider its being apart from a representation, i.e., its being abstract to consider it apart from that analogy by which alone we can know it, once strip it mentally of its determinability by form, and nothing—absolute nothing—remains. For matter is neither realizable nor thinkable without its correlata. The proper object of intelligence, and likewise the subject of being, is Eux, being. Hence St. Thomas says that “primordial matter is a substantial reality” (i.e., a reality reductively belonging to the category of substance), “potential towards all forms, and, under the action of a fit and proportioned efficient cause, determinable to any species of corporeal substance” (In VII Met., sect. 2); and, again: “It is never stripped of form and privation; now it is under one form now under another. Of itself it can never exist” (De Principi. Natur.). What has been said may appear to deny to matter the reality that is predicated of it. This is not the case. As the determinable element in corporeal substance it must have a reality that is not that of the determinate forms. Therefore the process of abstraction may consider it as potential to form and privation, but not overstep the limit of its potentiality as existent (cf. Aristotle’s τῷ εὐνάρετον (Phys., iii, 194b, 16) and realized in bodies without finding itself contemplating absolute nothingness. Of itself matter can never exist, and consequently of itself it can never be thought.

(4) Prenatal Matter.—The notion of prenatal matter by Aquinas brings us to an exceedingly interesting consideration. While primordial matter, as “understood” without any form or privation, is an indifferent potentiality towards information by any corporeal form, the same matter, considered as realized by a given form, and actually existing, does not connote the same, if not indeed something to be formed. In fact, a certain rhythmic evolution of forms observable in nature. By electrolysis only oxygen and hydrogen can be obtained from water; from oxygen and hydrogen in definite proportions only water is generated. This fact St. Thomas expresses in the physical terms of his time: “If any particular matter, e.g. fire or air, were deprived of its form, it is manifest that the potentiality towards other edible forms remaining in it would not be so ample, as is the case in regard to matter (considered) universally” (De Nat. Mat., v). The consideration gives us the signification of “privation,” as used in the theory of substantial change. Matter is deprived of the form or forms towards which alone it has potential when deprived of the existent, or other state of determination. Hence the distinction that is found in the Opuscula “De Principiis Naturae”.

(5) Permanent Matter.—“Matter that does not con-
note a privation is permanent, whereas that which does is transient". The connotation of a privation limits primordial matter to that which is realized by a form disposing it towards realization by certain other definite forms. "Privation" is the absence of those forms. Permanent matter is matter considered in the hope of a desire for abstraction of accident, and there is no more nor less of its correlation to form in general.

(6) The Unity of Matter.—Further, this (permanent) matter is said to be one; not however, in the sense of a numerical unity. Every corporeal being is held to result from the union of matter and form. There are in consequence as many distinct individual realized portions of matter as there are distinct individual (atoms) in the universe. Nevertheless, when the severally determining principles and privations are abstracted from, when matter is cognized in its greatest abstraction, it is considered as possessing a logical unity. It is understood without any of those dispositions that make it appear numerically with the multiplication of bodies (De Principiis Naturae).

(7) Matter as the Principle of Individuation.—More important is the doctrine that grounds in matter the numerical distinction of specifically identical corporeal beings. In the general doctrine of St. Thomas, the individual—"this thing" (hoc aliquid)—is a primordial substance, by the face of it there is nothing else in the world ("Substantia individuatur per substantiam"; Summa, Pars I, Q. xxix, a. 1). It is intrinsically complete, capable of subsisting in itself as the subject of accidents, and of predicates in the logical. It is undivided in itself, distinct from all other, incommunicable (cf. De Principiis Individuationis). These characteristics are realized in the case of substances that differ by essence. Thus, for St. Thomas, no two angels (q. v.) are specifically identical (Summa, Pars I, Q. I, a. 4). More than this, even a corporeal form, however material and low in the hierarchy of forms, would not be other than unique in its species, if it could exist (or be thought), apart from its relation to matter (De Spiritu: Creaturis, Q. I, a. 5). Whence, if it could subsist without any subject, would be unique. If a plurality of such accidental forms could subsist they also would differ specifically—as whiteness, redness, etc. But this distinction evidently does not obtain in the case of a number of individuals belonging to one species. They are essentially identical in their nature, and yet, that the essence of any substance differs. The answer given by St. Thomas to this question is his doctrine of the Principle of Individuation. Whereas the plurality of simple substances, or "forms", is due to a real difference of their essences (as a triangle differs from a circle), the plurality of identical essences, or "forms", supposes an intrinsic principle of individuation for each (as two triangles realized in two pieces of wood). Thus, simple substances differ by reason of their nature, formally; while composite ones differ by reason of an inherent principle, materially. They are multiplied within a given species by reason of matter.

At this point a peculiarly delicate question arises. The abstract essence of a specific matter be the principle of individuation, it would seem that the abstract essence is already individualized. Werein lie the admitted difference between the species and the individual? On the other hand, if that be not the case, it would appear equally evident that, in adding to the individual a principle not contained in the thing, it is an action of classification in the species. It would not be merely the concrete realization of the essence, but something more. In either case the doctrine would seem to be incompatible with modern Realism. St. Thomas avoids the difficulty by teaching that matter is the principle of individuation, but only as correlated to quantity. The expressions that he uses are "materia signata", "materia subjecta dimensioni" (in Boeth. de Trin., Q. iv, a. 2), "materia sub certa dimensionibus" (De Nat. Mat., ii). This needs some explanation. Quantity, as such, is an accident; and it is evident that no accident can account for the individuality of its own subject. But quantity results in corporeal substance by reason of matter. Primordial matter, therefore, has a necessary relation to quantity consequent upon its necessary relation to form (De Nat. Mat., iv). When actuated by form it has dimensions—"the inseparable concomitants that determine it in time and place" (De Princ. Indiv.)). The abstract essence, then, embracing matter as it does form, will connotate an aptitude or potentiality towards fixed and determinate dimensions, that necessarily resultant in each concrete subject realized.

Here, as formerly, the fact must not be lost sight of that the reasoning begins with the concrete bodies actually existing in nature. It is by an abstraction that we consider matter without the actual quantity that it always exhibits when realized in corporeal substance. Peter, as a matter of fact, differs from Paul, yet they are specifically identical as rational animals. Peter is "this" man, and Paul is "that", but "this" and "that", because "here" and "there", "Form is not individuated in that it is received in matter, but only in that it is received in this or that distinct matter, and determined to here and now" (in Boeth. de Trin., Q. i, a. 1). It is evident that the immediate and inseparable signs for us of the individual. They indicate "aen caro et osa". And they are only possible by reason of (informed) matter, the ground of divisibility and location in space. Still, it must be noted that matter signata quantitate is not to be understood as primordial matter having an aptitude towards fixed and determinate dimensions.

The determined dimensions that are found in the existing subject are to be attributed, St. Thomas teaches, to matter as "individuated by indeterminate dimensions preunderstood in it" ("In Boeth. de Trin."); Q. iv, a. 2; "De Nat. Mat., iv, vii). This remark explains how an individual (as Peter) can vary in dimension without varying in identity; and at the same time gives the reply of Aquinas to the difficulty raised above. Primordial matter, as connoted in the essence, has an aptitude towards indeterminate dimensions. These dimensions when realized are the ground of the determined dimensions (ibid.) that make the individual hic et nunc an object of sense-perception (De Nat. Mater., iii).

(8) The Causality of Matter.—Since Primordial Matter is numbered among the causes of corporeal being, the nature of its causality remains to be considered. (See Cause.) All scholastics admit its concurrence with form, as an intrinsic cause; but they are not unanimous as to the precise part it plays. For neither is it unitive; for John of St. Thomas receptive. The Cominences places its causality in both notes. It would, perhaps, seem more consonant with the doctrine of St. Thomas to adopt Cardinal Merecey's opinion that the causality of matter is first receptive and second unitive; provided always that its essential potentiality be not neutral.

(9) Variant Theories of Matter.—The teaching of Aquinas has been given as substantially identical with that of Aristotle. The main point of divergence lies in the opinion of Aristotle that the world—and consequently matter—is eternal. St. Thomas, in accepting the doctrine of Creation, denies the eternity of primordial matter. He disapproves of the concept of matter, as the potential, or determinable, element in change, unites and corrects the views of Heraclitus, Parmenides, and Plato. The perpetual flux of the first is found in the continual transformations that take place in material nature. The changeless "one" of the second is recognized in the abstract essences eternally identical with themselves. And the world of "ideas" of Plato is assigned its place as a world of intellectual
abstractions practised upon the bodies that fall under the observation of the senses. The universal is imma-
ent in the individual and multiplied by reason of its man-
er, for Plato it is a form of substance. Plato (and the
"formless and invisible") is also the condition
under which being becomes the object of the senses.
It gives to being all its imperfections. It is by a mix-
ture of being and nothingness, rather than by the
realization of a potentiality, that sensible things
exist. While for Aristotle matter is a real element of
being, for Plato it is a form. For the Neoplatonists, Plato (fol-
lowing Plato and the Stoics) also considered matter
the principle of imperfection, of limitation and of evil;
Plotinus made it empty space, or a pure possibility of
Being.

These systems are mentioned here because through
them St. Augustine drew his knowledge of Greek
philosophy. And in the doctrine of St. Augustine and
the source of an important current of thought that
ran through the Middle Ages. He puts forward at differ-
ent times two views as to the nature of matter. It is
first, corporeal substance in a chaotic state; second,
an element of complete indetermination, approaching
to the ψής of Plato. St. Augustine was not directly
acquainted with the works of Aristotle, yet he
 came to consider matter very closely to this thought
(probably through the Latin writings of the Neoplatonists)
in certain passages of the "Confessions" (cf. Lib.
XIII, v, and xxxiii): "For the 'confabulation'
of changeable things is capable of all those forms to
which the changeable are changed. And what is this?
Is it soul? Or body? If soul, it could be said: "Nothing:
something that is and is not", that would I say."

"For from nothing they were made of Thee, yet not of Thee:
not of anything not Thine, or which was before,
but of concreted matter, because Thou didst
create its informity without any interposition of
time. St. Augustine does not teach the dependence
of quanta upon matter; and he admits a quite
inert matter in the angels. Moreover, his doctrine of the
rationes seminales (of Stoical origin), which found
many adherents among later scholastics, clearly
assigns to matter something more than the character
of pure potentiality attributed to it by St. Thomas.
It may be noted that Albert the Great, the predecessor
of St. Thomas, also taught this doctrine and, further,
was of the opinion that the angelic "forms" must be
held to have a fundamentum, or ground of differen-
tiation, analogous to matter in corporeal beings.

Following St. Augustine, Alexander of Hales and
St. Bonaventure, with the Franciscan School as
a whole, teach that matter is one of the intrinsic ele-
ments in nature and form together are the principles of individuation for St. Bonaventure.
Duns Scotus is more characteristically subtle on the
point, which is a capital one in his synthesis. Matter
is to be distinguished as: (a) Materia primo prima, the
universalized indeterminate element of contingent be-
ings. This has real and numerical unity. (b) Materia
secunda" (or "form" and "quod"
(c) Materia tertio prima, subject of accidental change
existing bodies. For Scotus, who acknowledges his
indebtedness to Avicenne for the doctrine (De rerum
princip., Q. vii., a. 4), Materia prima prima is homoge-
neous in all creatures without exception. His system
is dualistic. Among later notable scholastics Suarez
may be cited as attributing an existence to primordial
matter. This is a logical consequence of his doctrine
that no real distinction is to be admitted between
essence and existence (q. v.). God could, he teaches,
"preserve matter without a form as He can a form
without matter" (Disput. Metaph., xv, sec. 9). In
his opinion, also, quantified matter no longer appears as
the principle of individuation. A considerable number
of theologians and philosophers have professed his
document upon both these points.

Matteucci, Carlo, physicist, b. at Forli, in the
Romagna, 21 June, 1811; d. at Ardezzo, near Leg-
horn, 25 July, 1868. He studied mathematics at the
University of Bologna, receiving his doctorate in
1829. Then he went to the Paris Ecole Polytechnique for two
years as a foreign student. In 1835 he went to
Forli and began to experiment in physics. In taking
up the Voltaic pile he took sides against Volta's con-
tact theory of electricity. He remained at Florence
until his father's death in 1834, when he went to
Ravenna and later to Pisa. His study of the Voltaic
battery led him to announce the law that the decom-
mposition in the electrolytic cells formed and
developed in the elements of the pile. From the ex-
ternal effect it became possible to calculate the ma-
terial used up in the pile. In 1837 he was invited by his
friend Buoninsegni, president of the Ravenna
Hospital, to take charge of its chemical laboratory and at
the same time assume the title and rank of professor
of physics at the college. There he did most excellent
work and soon became famous. Arago, hearing of
the vacancy in the chair of physics at the University of
Pisa, wrote to Humboldt asking him to recommend
Matteucci to the Grand-Duke of Tuscany. This appli-
cation was successful and there at Pisa he continued
his researches. Beginning with Arago's and Faraday's
discoveries he developed by ingenious experiments our
knowledge of electro-statics, electro-dynamics, in-
duced currents, and the like, but his greatest achieve-
ments however were in the field of electro-physiology,
with frogs, torpedoes, and the like.

He was also successful as a politician. In 1848
Commissioner of Tuscany to Charles Albert; sent to
Milan to plead the cause of the Northern school of the
German Assembly; 1849 in Pisa, director of the tele-
graphs of Tuscany; 1859 provisional representative
of Tuscany at Turin, and then sent to Paris with Peruzzi
and Neri Corsini to plead the annexation of Piedmont;
1860 Inspector-General of the telegraph lines of the
Italian Kingdom. Senator at the Tuscan Assembly
in 1848, and again in the Italian Senate in 1860; Minister
of Public Instruction, 1862, in the cabinet of Rattazzi.
He won the Copley medal of the Royal Society of
London, and was made corresponding member of
the Paris Academy of Sciences in 1844. He published
a great deal in English, French, and Italian journals of
science. His larger works were: "Lazioni di fisica"
(4th ed., Pisa, 1858); "Lazioni sui fenomeni fisico-
chimici dei corpi viventi" (2nd ed., Pisa, 1846); "Ma-
nuale di telegrafia elettrica" (2nd ed., Pisa, 1851);
"Cours special sur l'induction, le magnetisme de rota-
tion", etc. (Paris, 1854); "lettres sur l'instruction
publique" (Paris, 1864); "Trait des phenomenes elec-
trico-physiologiques de l'animal" (M.1. 1864).

Matthew, Saint, Apostle and Evangelist.—The name Matthew is derived from the Hebrew Mattiha,
ST. MATTHEW

GIOVANNI FRANCESCO BARBIERI (IL GUERCINO), THE GALLERY, DRESDEN
being shortened to Maltai in post-Biblical Hebrew. In Greek it is sometimes spelled Maltaios, B D, and sometimes Maltheos, CEKL, but grammarians do not agree as to which of the two spellings is the original. Matthew is spoken of five times in the New Testament: first in Matt., ix, 9, when called by Jesus to follow Him; second in the "Protevangelium" of James, where he is mentioned in the seventh (Luke, vi, 15, and Mark, iii, 18), and again in the eighth place (Matt., x, 3, and Acts, i, 13). The man designated in Matt., ix, 9, as "sitting in the custom house", and "named Matthew" is the same as Levi, recorded in Mark, ii, 14, and Luke, v, 27, as "sitting at the receipt of custom", or "tax-gatherer", and is therefore, by the vocation of Matthew-Levi being alluded to in the same terms. Hence Levi was the original name of the man who was subsequently called Matthew; the Maltaios λεγομενος of Matt., ix, 9, would indicate this fact. The fact of one man having two names is of frequent occurrence among the Jews. It is true that the same person usually bears a Hebrew name such as "Shaoul" and a Greek name, Ναταλ. However, we have also examples of individuals with two Hebrew names as, for instance, Joseph-Caiphas, Simon-Cephas, etc. It is probable that Mattia, "gift of Iaveh", was the name conferred upon the tax-gatherer by Jesus Christ when He called him to the Apostolate, and by it He would distinguish him from the common city the other tax-gatherer, Levi being his original name. Matthew, the son of Alpheus (Mark, ii, 14) was a Galilean, although Eusebius informs us that he was a Syrian. As tax-gatherer at Capernaum, he collected custom-duities for Herod Antipas and, although a Jew, was despised by the Pharisees, who hated all publicans. When summoned by Jesus to leave these unclean offices and follow Christ, He anointed Him a feast in his house, where tax-gatherers and sinners sat at table with Christ and His disciples. This drew forth a protest from the Pharisees whom Jesus rebuked in these consoling words: "I came not to call the just, but sinners." No further allusion is made to Matthew in the Gospels, except in the list of the Apostles; as a disciple and an Apostle he is therefore for followed Christ, accompanying Him up to the time of His Passion and, in Galilee, was one of the witnesses of His Resurrection. He was also amongst the Apostles who were present at the Ascension, and afterwards withdrew to an upper chamber, in Jerusalem, praying in union with Mary, the Mother of Jesus, and with his brother James. Of Matthew's subsequent career we have only inaccurate or legendary data. St. Ireneaus tells us that Matthew preached the Gospel among the Hebrews, St. Clement of Alexandria claiming that he did this for fifteen years, and Eusebius maintains that, before going into other countries, he gave them his Gospel in the mother tongue. Ancient writers are not as one as to the countries evangelized by Matthew, but almost all mention Ethiopia to the south of the Caspian Sea (not Ethiopia in Africa), and some Persia and the kingdom of the Parthians, Macedonias, and Syria. According to Heracleon, who is quoted by Clement of Alexandria, Matthew did not die a martyr, but this opinion conflicts with all the traditions. Hence, however, that the account of his martyrdom in the apocryphal Greek writings entitled "Martyrium S. Matthiei in Ponto" and published by Bonnet, "Acta apostolorum apocrypha" (Leipzig, 1898), is absolutely devoid of historic value. Lipsius holds that this "Martyrium S. Matthiei", which contains traces of Gnosticism, was actually written in the third century. There is a disagreement as to the place of St. Matthew's martyrdom and the kind of torture inflicted on him, therefore it is not known whether he was burned, stoned, or beheaded. The Roman Martyrology simply says: "S. Matthae, qui in Ethio- piis predictans martyrium passus est". Various writings are now considered apocryphal, have been attributed to St. Matthew. In the "Evangelia apocrypha" (Leipzig, 1876), Tischendorf reproduced a Latin document entitled: "De Ortu beate Mariae et infantia Salvatoris", supposedly written in Hebrew by St. Matthew the Evangelist, and translated into Latin by Jerome, the priest. It is an abridged adaptation of the "Prophecies of Isaiah" (Jerome), and is therefore a Greek apocryphal of the second century. This pseudo-Matthew dates from the middle or the end of the sixth century, and M. Aman has just given us a new edition of it: "Le Protévangile de Jacques et ses remaniements latin" (Paris, 1910). The Latin Church celebrates the feast of St. Matthew on 21 November, and the Greek Church on 16 November. St. Matthew is represented under the symbol of a winged man, carrying in his hand a lance as a characteristic emblem.

E. JACQUEREL.

Matthew, Saint, Gospel of.—I. Canonicity.—The earliest Christian communities looked upon the Books of the Old Testament as Sacred Scripture, and read them at their religious assemblies. That the Gospels, which contained the words of Christ and the narrative of His life, soon enjoyed the same authority as the Old Testament, is made clear by Hegesippus (Eusebius, "Hist. eccl. IV, xxiii, 3), who tells us that the first reading in the synagogues of the law, the prophets, and the Lord. A book was acknowledged as canonical when the Church regarded it as Apostolic, and had it read at her assemblies. Hence, to establish the canonicity of the Gospel according to St. Matthew, we must investigate primitive Christian tradition for the use that was made of this document, and for indications proving that it was regarded as Scripture in the same manner as the Books of the Old Testament.

The first trace that we find of it are not indubitable, because post-Apostolic writers quoted the texts with a certain freedom, and principally because it is difficult to say whether the passages thus quoted were taken from oral tradition or from a written Gospel. The first Christian document whose date can be fixed with comparative certainty (95-98), is the Epistle of St. Clement to the Corinthians. It contains sayings of the Lord which closely resemble those recorded in the First Gospel (Clement, vii, 15 = Matt., xi, 28; Clem., xxiv, 5 = Matt., xiii, 9), but it is possible that they are independent. Questioned from Apostolic tradition, in Clement, and in the Gospel of St. John, on the other hand, we find a mixture of sentences from Matthew, Luke, and an unknown source. Again, we note a similar commingling of Evangelical texts elsewhere in the same Epistle of Clement, in the Doctrine of the Twelve Apostles, in the Epistle of Polycarp, and in Clement of Alexandria. Whether these texts were thus combined in oral tradition or through a collection of Christ's utterances, we are unable to say.—The Epistles of St. Ignatius (martyred 110-17) contain no literal quotation from the Holy Books; nevertheless, St. Ignatius borrowed expressions and some sentences from Matthew ("Ad Polyc. II, 2 = Matt., x, 18; "Eph.", xiv, 2 = Matt., xii, 33, etc.). In his Epistle to the Philippians (Phil., xiv, 12), he borrows the Gospel in which he takes refuge as in the Flesh of Jesus; consequently, he had an Evangelical collection which he regarded as Sacred Writ, and we cannot doubt that the Gospel of St. Matthew formed part of it.—In the Epistle of St. Polycarp (110-17), we find various passages from St. Matthew quoted literally (xiii, 3 = Matt., v, 44; xxvi, 4 = Matt., xxvii, 41, etc.). The Doctrine of the Twelve Apostles contains sixty-six passages that recall the Gospel of Matthew; some of them are literal quotations (viii, 2 = Matt., vi, 7-13; vili, 1 = Matt., xxvii, 19; xi, 7 = Matt., xii, 31, etc.). In the so-called Epistle of Barnabas (117-30), we find a passage from St. Matthew (xxiii, 14), introduced by the scriptural formula, της ἐγγέννησις, which proves that the author considered
the Gospel of Matthew equal in point of authority to the writings of the Old Testament.—The "Shepherd of Hermas" has several passages which bear close resemblance to passages of Matthew, but not a single literal quotation from it.—In his "Dialogue" (xxix, 8), St. Justin quotes, almost literally, the prayer of Christ in the Garden of Olives, in Matthew, xxvi, 39, 40. In his "Dialogue" (xxxi, 4), St. Justin narrates a passage from the Gospel of Matthew, and proves that he ranked it among the Memoirs of the Apostles which, he said, were called Gospels (I Apol., lxvi), were read in the services of the Church (ibid., lxvii), and were consequently regarded as Scripture.—In his "Legatio pro christianis", xi, 11, Athenagoras (117) quotes almost literally, a sentence from the written on St. Mount (Matt., v, 44).—Theophilus of Antioch (Ad Autol., III, xiii-xiv) quotes a passage from Matthew (v, 28, 32), and, according to St. Jerome (In Matt. Prolog.), wrote a commentary on the Gospel of St. Matthew.—We find in the Testaments of the Twelve Patriarchs—drawn up, according to some critics, about the middle of the second century—numerous passages that closely resemble the Gospel of Matthew (Test. Gad, v, 3; vi, 6; v, 7 = Matt., xviii, 15, 35; Test. Jos., i, 5, 6 = Matt., xxxv, 35, 36, etc.), but Dr. Charles maintains that the Testaments were written in Hebrew in the first century before Jesus Christ, and translated into Greek in the middle of the same century. In the Testaments, the Gospel of Matthew is interwoven with the Testaments and not the Testaments upon the Gospel. The question is not yet settled, but it seems to us that there is a greater probability that the Testaments, at least in their Greek version, are of later date than the Gospel of Matthew; they certainly received numerous Christian additions.—The Greek text of the Clementine Homilies contains some quotations from Matthew (Hom. iii, 52 = Matt., xv, 13); in Hom. xviii, 15, the quotation from Matt., xiii, 35, is literal.—Passages which suggest the Gospel of Matthew might be quoted from heretical writings of the second century and from apocryphal gospels—the Gospel of Peter, the Protoevangelium of James, etc., in which the narrations, to a considerable extent, are derived from the Gospel of Matthew.—Tatian incorporated the Gospel of Matthew in his "Diatesseron"; we shall quote below the testimonies of Papias and St. Irenaeus. For the latter, the Gospel of Matthew, from which he quotes numerous passages, was one of the four that constituted the Gospels of the New Testament, and were of the new discovery of the single spirit.—Tertullian (Adv. Marc., IV, i) asserts, that the "Instrumentum evangelicum" was composed by the Apostles, and mentions Matthew as the author of a Gospel (De carnis Christi, xii.)—Clement of Alexandria (Strorn., III, xiii) speaks of the four Gospels that have been transmitted, and quotes over three hundred passages from the Gospel of Matthew, which he introduces by the formula, en oti tou ekkatalMatthew σαλµονιον or by φυλαρβα και.

It is unnecessary to pursue our inquiry further. About the middle of the third century, the Gospel of Matthew was received by the whole Christian Church as a Divinely inspired document, and consequently as canonical. The testimony of the Fathers ("In Matth."

quoted by Eusebius, "Hist. ecc.", III, xxv, 4), of Eusebius (op. cit., III, xxiv, 6; xxv, 1), and of St. Jerome ("De Viris Illi.", iii, "Prolog. in Matt.") are explicit in this respect. It might be added that this Gospel is found in the most ancient versions: Old Latin, Syriac, and Egyptian. Finally, it stands at the head of the four Gospels in the Codex Vaticanus of the Council of Laodicea (363) and in that of St. Athanasius (326-73), and very probably it was in the last part of the Muratorian Canon. Furthermore, the canonicity of the Gospel of St. Matthew is accepted by the entire Christian world.

II. AUTHENTICITY OF THE FIRST GOSPEL.—The question of authenticity assumes an altogether special aspect in regard to the First Gospel. The early Christian writers assert that St. Matthew wrote a Gospel in Hebrew; this Hebrew Gospel has, however, entirely disappeared, and the Gospel which we have, and from which ecclesiastical writers borrow quotations as coming from the Gospel of Matthew, is in Greek. What connexion is there between this Hebrew Gospel and the Greek Gospel, both of which tradition attributes to St. Matthew? Such is the problem that presents itself for solution. Let us first examine the facts.

A. Testimony of Tradition.—According to Eusebius (Hist. eccl., III, xxxix, 16), Papias said that Matthew collected (συναγωγέω; or, according to two manuscripts, συνενωτέο; composed of τα Λογια (the oracles or sayings of Jesus) in the Hebrew (Aramaic) language, and that each one translated them as best he could.

Three questions arise in regard to this testimony of Papias on Matthew: (1) What does the word Λογια signify? Does it mean only detached sentences or sentences incorporated in a narrative, that is to say, a Gospel such as that of St. Matthew? Among classical writers, λόγιον, the diminutive of λόγος, signifies the "answer of oracles", a "prophecy"; in the Septuagint and in Philo, "oracles of God" (τα δευτερα λόγια, the Ten Commandments). It sometimes has a broader meaning and seems to include both facts and sayings. Thus the New Testament the signification of the word λόγιον is doubtful, and if it is used to indicate teachings and narratives, the meaning "oracles" is the more natural. However, writers contemporary with Papias—e.g. St. Clement of Rome (Ad Cor. lii), St. Irenaeus (Adv. Her. I, vii, 2), Clement of Alexandria (Strorn., I, cxxxii), and Origen (De Principio, B. 3, 5)—have used it to designate facts and sayings. The work of Papias was entitled "Exposition of the Oracles [λογια] of the Lord" and it also contained narratives (Eusebius, "Hist. eccl.", III, xxxix, 9). On the other hand, speaking of the Gospel of Mark, Papias says that this Evangelist wrote all that Christ had said and done, but adds that he established no connexion between the Lord's sayings (συναγωγε των ευρασεων λογου). We may believe that here λογια comprises all that Christ said and did. Nevertheless, it would seem that, if the two passages on Mark and Matthew followed each other in Papias as in Eusebius, the author intended to emphasize a difference between them, by implying that Mark recorded Christ's sayings, while Matthew records his discourses. The question is still unsolved; it is, however, possible that, in Papias, the term λογια means deeds and teachings.

(2) Second, does Papias refer to oral or written translations of Matthew, when he says that each one translated the sayings "as best he could"? As there is nowhere any allusion in the numerous Greek translations of the Logia of Matthew, it is probable that Papias speaks here of the oral translations made at Christian meetings, similar to the extemporaneous translations of the Old Testament made in the synagogues. This would explain why Papias mentions that each one (each reader) translated "as best he could".

(3) Finally, were the Logia of Matthew and the Gospel to which ecclesiastical writers refer written in Hebrew or Aramaic? Both hypotheses are held. Papias says that Matthew wrote the Logia in the Hebrew (בָּבֶל) language; St. Irenaeus and Eusebius maintain that he wrote his Gospel for the Hebrews in the Hebrew tongue. Aramaic was also used in both; it is found in several writers. Matthew would, therefore, seem to have written in modernized Hebrew, the language then used by the scribes for teaching. But, in the time of Christ, the national language of the Jews was Aramaic, and when, in the New Testament, there is mention of the Hebrew language (בָּבֶל סדר), it is Aramaic that is implied. Hence, the aforesaid
writers may allude to the Aramaic and not to the Hebrew. Besides, as they assert, the Apostle Matthew wrote his Gospel to help popular teaching. To be understood by his readers who spoke Aramaic, he would have had to reproduce the original catechisms in this language, and it cannot be imagined why, or for whom, he should have taken the trouble to write it in Greek. For the second time in his life, however, he had to be translated hence into Aramaic for use in religious services. Moreover, Eusebius (Hist. eccl., III, xxiv, 6) tells us that the Gospel of Matthew was a reproduction of his preaching, and this, we know, was in Aramaic. An investigation of the Semitic idioms observed in the Gospel does not permit us to conclude as to whether the original was in Hebrew or Aramaic. The two languages are so closely related. Besides, it must be borne in mind that the greater part of these Semiticisms simply reproduce colloquial Greek and are not of Hebrew or Aramaic origin. However, we believe the second hypothesis to be the more probable, viz., that Matthew wrote his Gospel in Aramaic.

Let us now recall the testimony of the other ecclesiastical writers on the Gospel of St. Matthew. St. Ireneus (Adv. Her., III, i, 2) affirms that Matthew published among the Hebrews a Gospel which he wrote in their own language. Eusebius (Hist. eccl., V, x, 3) says that, in India, Pantaenus found the Gospel according to St. Matthew written in the Hebrew language, and had left it there. Again, in his "Hist. eccl." (VI, xxv, 3, 4), Eusebius tells us that Origen, in his first book on the Gospel of St. Matthew, states that he has learned from tradition that the first Gospel was written by Matthew, who, having composed it in Hebrew, published it for the converts from Judaism according to Eusebius (Hist. eccl., V, x, 3). Matthew preached first to the Hebrews and, when obliged to go to other countries, gave them his Gospel written in his native tongue. St. Jerome has repeatedly declared that Matthew wrote his Gospel in Hebrew ("Ad Damasum," xx; "Ad Helif.," iv), but says that it is not known with certainty who translated it into Greek. St. Cyril of Jerusalem, St. Gregory of Nazianzus, St. Epiphanius, St. John Chrysostom, St. Augustine, etc., and all the commentators of the Middle Ages repeat that Matthew wrote his Gospel in Hebrew. Erasmus was the first to express doubts on this subject: "It does not seem probable to me that Matthew wrote in Hebrew, since no one is aware of an authoritative passage of the New Testament." This is not accurate, as St. Jerome uses Matthew's Hebrew text several times to solve difficulties of interpretation, which proves that he had it at hand. Pantaenus also had it, as, according to St. Jerome ("De Viris Illi.", xxxvi), he brought it back to Alexandria. However, the testimony of Pantaenus is only second-hand, and that of Jerome remains rather ambiguous, since in neither case is it positively known that the writer did not mistake the Gospel according to the Hebrew (written of course in Hebrew) for the Hebrew Gospel of St. Matthew. However, all ecclesiastical writers assert that Matthew wrote his Gospel in Hebrew, and, by quoting the Greek Gospel and ascribing it to Matthew, thereby affirm it to be a translation of the Hebrew Gospel.

B. Examination of the Greek Gospel of St. Matthew.—Our chief object is to ascertain whether the characteristics of the Greek Gospel indicate that it is a translation from the Aramaic, or that it is an original document; but, that we may not have to revert to the peculiarities of the Greek Gospel of Matthew, we shall here treat them in full.

(1) The Language of the Gospel.—St. Matthew used about 1475 words, 137 of which are ἀραὶ λέγεμα (words used by him alone of all the New Testament writers). Of these latter 76 are classical; 21 are found in the Septuagint; 15 (ἀπαντάσεις, βεβήλη, εἰσόδημα, etc.) were introduced for the first time by Matthew, or at least he was the first writer in whom they were discovered; 8 words (ἡσυχασία, ἀποκάλυψις, etc.) were employed for the first time by Matthew and Mark, and 15 others (ἐνθάνεται, ἵππος, etc.) by Matthew and another New Testament writer. It is probable that, at the time of the Evangelist, all these words were in current use. Matthew's Gospel contains many peculiar expressions which help to decide decisively in his style. Thus, he employs thirty-four times the expression βασιλεία τῶν οχρών; this is never found in Mark and Luke, who, in parallel passages, replace it by βασιλεία τοῦ θεοῦ, which also occurs four times in Matthew. We must likewise note the expressions: ἐν ᾧ ἦσαν, ἐν τῷ ὀλίγῳ, συνήθει τοῦ, ἐν τῷ ὀλίγῳ, κύριος, etc., which are common to Matthew and Luke and never occur in Mark.

Matthew prefers the expression τῆς Παλαιστίνης for Jerusalem, and not Ἰερουσαλήμ, which he uses but once. He has a predilection for the prepositions ἐν, ἐκ, ἐν τῷ, καὶ ὑπὸ, etc. He adopts the Greek form ἄνθρωπον for Jerusalem, and not Ἰσραήλ, which he uses but once. He has a predilection for the preposition ἐν, using it even when Mark and Luke use ἐκ, and for the expression στὰς ἐν τῇ. Moreover, Matthew is fond of repeating a phrase or a special construction several times within quite a short interval (cf. i, 1, 13, and 19; iv, 12, 18, and v, 2; vii, 2–3 and 28; ix, 26 and 31; xiii, 44, 45, and 47, etc.). Quotations from the Old Testament are variously introduced, as: ἄναφθηκε ἐπάνω, ἢ ἂν, ὅτι πᾶσα ἡ γῆ, ὡς τὸ Κορινθίου ἀναθηματισμοὶ, etc. These peculiarities of language, especially the repetition of the same words and expressions, would indicate that the Greek Gospel was an original rather than a translation, and this is confirmed by the paronomasia (βασιλεία, τολμηρία, ὑποτάσσεται, καὶ ἔφεστο, etc.), which ought not to have been found in the Aramaic, by the employment of the genitive in some cases and, above all, by the linking of clauses through the use of μὲν...δὲ, a construction that is peculiarly Greek. However, let us observe that these various characteristics prove merely that the writer was thoroughly conversant with his language, and that he translated his text rather freely. Besides, these same characteristics are noticeable in Christ's sayings, as well as in the narratives, and, as these utterances were made in Aramaic, they were consequently translated; thus, the construction μὲν...δὲ (except in one instance) and all the examples of paronomasia occur in discourses of Christ. The fact that the genitive absolute is used mainly in the paronomasia, in the narrative, and in the genitive absolute of the Septuagint, a marked difference is at once apparent. The original Hebrew shines through every line of the latter, whereas, in the First Gospel Hebraisms are comparatively rare, and are merely such as might be looked for in a book written by a Jew and reproducing Jewish teaching. However, these observations are not conclusive in view of the fact that, in the first place, the unity of style that prevails throughout the book, would rather prove that we have a translation. It is certain that a good portion of the matter existed first in Aramaic—at all events, the sayings of Christ, and thus almost three-quarters of the Gospel. Consequently, these at least the Greek writer has translated. And, since no difference in language and
style can be detected between the sayings of Christ and the narratives that are claimed to have been composed in Greek, it would seem that these latter are also translated from the Aramaic. This conclusion is based on the fact that they are of the same origin as the discourses. The unity of plan and the artificial arrangement of the subject matter, as well as the fact that the narrative in the Aramaic Gospel has been made in Matthew's Aramaic as in the Greek document; the fine Greek construction, the lapidary style, the elegance and good order claimed as characteristic of the Gospel, are largely a matter of opinion, the proof being that critics do not agree on this question. Although the phraseology is not more Hebraic than in the others, the same is not true of the Aramaic Gospel. All this, as well as the fact that from a literary examination of the Greek Gospel, no certain conclusion can be drawn against the existence of a Hebrew Gospel of which our First Gospel would be a translation; and inversely, this examination does not prove the Greek Gospel to be a translation of an Aramaic original.

(3) Quotations from the Old Testament.—It is claimed that most of the quotations from the Old Testament are borrowed from the Septuagint, and that this fact proves that the Gospel of Matthew was composed in Greek. The first proposition is not accurate, and, even if it were, it would not necessitate this conclusion. Let us examine the facts. As established by Stuart, the New Testament Gospels as Hebrew or Aramaic (Cambridge, 1909, p. 342), the quotations from the Old Testament in the First Gospel are divided into two classes. In the first are ranged all those quotations the object of which is to show that the prophecies have been realized in the events of the life of Jesus. They are introduced by the words: · · · Now all this was done that it might be fulfilled which was spoken of the Lord by the prophet · · · or other similar expressions. The quotations of this class do not in general correspond exactly with any particular text. Three among them (ii, 15; viii, 17; xxvii, 9, 10) are borrowed from the Hebrew; five (ii, 15; iv, 15, 16; xi, 18–21; xiii, 35; xxi, 4, 5) bear points of resemblance to the Septuagint, but were not borrowed from that version. In the answer of the chief priests and scribes to Herod (ii, 6), the text of the Old Testament is slightly modified, without, however, conforming either to the Hebrew or the Septuagint. The Prophet Michaes writes (v, 2): · · · And thou Bethlehem, Ephratah, art a little one among thousands of Judah · · · whereas Matthew says vii, 6, 8: And there shall be a great astonishment among the princes of Judah. A single quotation of this first class (iii, 2) conforms to the Septuagint, and another (i, 23) is almost comparable. These quotations are to be referred to the first Evangelist himself, and relate to facts, principally to the birth of Jesus (i, ii), then to the mission of John the Baptist, the preaching of the Gospel by Jesus (v, 17; xiii, 30, 55), the miracles of Jesus, etc. It is surprising that the narratives of the Passion and the Resurrection of Our Lord, the fulfillment of the very clear and numerous prophecies of the Old Testament, should never be brought into relation with these prophecies. Many critics, e.g. Burkitt and Stanton, think that the quotations of the first class are from a collection of passages forming a part of the Messiahian expectations. Stanton being of opinion that they were accompanied by the event that constituted their realization. This · · · catena of fulfilments of prophecy · · · as he calls it, existed originally in Aramaic, but whether the author of the First Gospel had a Greek translation of it is uncertain. The second class of quotations from the Old Testament is chiefly comprised of passages that are sometimes repeated either by the Lord or by His interrogators. Except in two passages, they are introduced by one of the formulæ: · · · It is written · · · ; · · · As it is written · · · ; · · · Have you not read? · · · ; · · · Moses said: · · · . Where Matthew alone quotes the · · · Lord's words, the quotation is sometimes borrowed from the Septuagint (v, 21 a, 27, 58) or, again, it is a free translation which we are unable to refer to any definite text (v, 21 b, 23, 43). In those passages where Matthew runs parallel with Mark and Luke or with either of them, all the quotations save one (xi, 10) are taken almost literally from the Septuagint.

(4) Analogy to the Gospels of St. Mark and St. Luke.—From a first comparison of the Gospel of Matthew with the two other Synoptic Gospels we find (a) that 330 verses are peculiar to it alone; that it has between 330 and 370 in common with both the others, from 170 to 180 with Mark's, and from 230 to 240 with Luke's; (b) that in like parts the same ideas are expressed sometimes in identical and sometimes in different terms; that Matthew and Mark most frequently agree and Matthew and Luke are agreeing with Mark against Luke. The divergence in the use of the same expressions is in the number of a noun or the use of two different tenses of the same verb. The construction of sentences is at times identical and at others different. (γ) That the order of narrative is, with certain exceptions which we shall later indicate, almost the same in Matthew, Mark, and Luke. These facts indicate that the three Synoptists are not independent of one another. They borrow their subject—matter from the same oral source or else from the same written documents. To declare oneself upon this alternative, it would be necessary to treat the synoptic question, and on this critics have not yet agreed. We cannot deal with these documents (Matthew, Mark, and Luke) here. We shall, therefore, deal with the Gospel of St. Matthew. From a second comparison of this Gospel with Mark and Luke we ascertain: (a) that Mark is to be found almost complete in Matthew, with certain divergences which we shall note; (b) that Matthew records many of our Lord's discourses in common with Luke; (c) that Matthew has special passages which are unknown to Mark and Luke. Let us examine these three points in detail, in an endeavour to learn how the Gospel of Matthew was composed.

(a) Analogy to Mark.—(i) Mark is found complete in Matthew, with the exception of numerous slight omissions and the following pericopes: Mark, i, 23–28, 35–37; iv, 26–29; vii, 33–36; xx, 29 ix, 1–40; xii, 41–44. In all, 31 verses are omitted. (ii) The general order is identical except that, in chapters v–xiii, Matthew groups facts of the same nature and sayings conveying the same ideas. Thus, in Matt., viii, 1–15, we have three miracles that are separated in Mark; in Matthew, viii, 23–ix, 9, there are gathered together events otherwise separated and placed sentences in a different environment from that given them by Mark. For instance, in chapter v, 15, Matthew inserts a verse occurring in Mark, iv, 21, that should have been placed after xiii, 23, etc. (iii) In Matthew the narrative is usually shorter because he suppresses a great number of details. Thus, in Mark, we read: · · · And the wind ceased; and there was a great calm · · · whereas in Matthew the first part of the sentence is omitted. All unnecessary particulars are dispensed with, such as the numerous picturesque features and indications of time, place, and number, in which Mark's narrative abounds. (iv) Sometimes, however, Matthew is the more detailed. Thus, in Mark, xii, 22–45, he has a discursive speech of Jesus; in Matthew, xiii, 33, he repeats some of these repeated either by the Lord or by His interrogators. Except in two passages, they are introduced by one of the formulæ: · · · It is written · · · ; · · · As it is written · · · ; · · · Have you not read? · · · ; · · · Moses said: · · · . Where Matthew alone quotes the · · · Lord's words, the quotation is sometimes borrowed from the Septuagint, (v) Changes of terms or divergences in the mode of expression are extremely frequent. Thus, Matthew often uses εἰρήνη, when Mark has εἰρωνεία; μῦρος · · · δέ, instead of καθ, as in Mark, etc.; the aorist instead of the imperfect employed by Mark. He avoids double negatives and the construction of the participle with ἐν· his style is more correct and less harsh than that of Mark,
resolves Mark's compound verbs, and replaces by terms in current use the rather unusual expressions introduced by Parts pewc [(vii)] to Mark. Matthew.—These are numerous, as Matthew has 330 verses that are distinctly his own. Sometimes long passages occur, such as those recording the Nativity and early childhood (i, ii), the cure of the two blind men and one dumb man (ix, 27-34), the death of Judas (xxvii, 3-10), the guard placed at the Sepulchre (xxvii, 62-66), the imposture of the two blind priests (xxviii, 11-15), the parable of Judas (Galilee (xxviii, 16-20), a great portion of the Sermon on the Mount (v, 17-37; vi, 1-8; vii, 12-23), parables (xii, 24-30; 35-53; xxv, 1-13), the Last Judgment (xxv, 31-46), etc., and sometimes detached sentences, as in xxvii, 3, 28, 33; xxviii, 25, etc. (cf. Rushbrooke, "Synopticon", pp. 171-97). Those passages in which Matthew reminds us of another writer, or of the fulfillment of the prophecies, are likewise noted as peculiar to him, but of this we have already spoken.

These various considerations have given rise to a great number of hypotheses, varying in detail, but agreeing fundamentally. According to the majority of recent critics—H. Holtzmann, Wendt, Jülicher, Wernle, von Soden, Wellhausen, Harnack, B. Weiss, Nicolaudot, W. Allen, Montefiore, Plummer, and Stanton—the author of the First Gospel used two documents: the Gospel of Mark in its present or an earlier form, and a collection of discourses or sayings, which is designated by the letter Q. The repetitions occurring in Matthew (v, 29, 30 = xviii, 8, 9; v, 32 = xx, 10; vi, 22 et al.); the partial identity of parallel passages in Mark and Matthew may be explained by the fact that two sources furnished the writer with material for his Gospel. Furthermore, Matthew used documents of his own. In this hypothesis the Greek Gospel is supposed to be original, and not the translation of a complete Aramaic Gospel. It is admitted that the collection of sayings Q predates the Gospel of Mark, but the question of whether the Evangelist had it in this form or in that of a Greek translation. Critics also differ regarding the manner in which Matthew used the sources. Some would have it that Matthew the Apostle was not the author of the First Gospel, but merely the collector of the sayings of Christ mentioned by Papias. However, says Jülicher, "the author's individuality is so strikingly evident in his style and tendencies that it is impossible to consider the Gospel a mere compilation". Most critics are of a like opinion. Endeavours have been made to reconcile the information furnished by tradition with the facts resulting from the study of the Gospel as follows: Matthew was known to have been associated in Aramaic with Jesus; on the other hand, there existed at the beginning of the second century a Gospel containing the narratives found in Mark and the sayings gathered by Matthew in Aramaic. It is held that the Greek Gospel ascribed to Matthew is a translation of it, made by him or by other translators whose names was later attempted to ascertain.

To safeguard tradition further, while taking into consideration the facts we have already noted, it might be supposed that the three Synoptists worked upon the same catechesis, either oral or written and originally in Aramaic, and that they had detached portions of this catechesis, varying in literary condition. The diversities may be explained first by this latter fact, and then by the hypothesis of different translations and by each Evangelist's peculiar method of treating the subject-matter, Matthew and Luke especially having adapted it to the purpose of their Gospel. There is nothing to prevent the supposition that Matthew worked on the Aramaic catechesis; the divergences may have been due to the translator, who was more conversant with Greek than was the popular preacher who furnished the catechesis reproduced by Mark. In reality, the only difficulty lies in explaining the simi-
larity of style between Matthew and Mark. First of all, we may observe that the points of resemblance are less numerous than they are said to be. As we have seen, they are very rare in the narratives at all events, much more so than in the discourses of Christ. Why, then, should we not suppose that the three Synoptists, depending upon the same Aramaic catechism, sometimes agreed in rendering similar Aramaic expressions in the same words? It is also possible to suppose that sayings of Christ, which in the three Synoptic Gospels (or in two of them) differed only in a few expressions, were unified by copyists or other persons. To us it seems probable that Matthew’s Greek translator used Mark’s Greek Gospel, especially for Christ’s discourses. Luke, also, may have similarly utilized Mark’s Gospel, or at least his version of Mark’s discourses of Christ. Finally, even though we should suppose that Matthew were the author only of the Logia, the full scope of which we do not know, and that a part of his Greek Gospel is derived from that of Mark, we would still have a right to ascribe this First Gospel to Matthew as its principal author.

Other hypotheses have been put forth. In Zahn’s opinion, Matthew wrote a complete Gospel in Aramaic; Mark was familiar with this document, which he used while abridging it. Matthew’s Greek translator utilized Mark, but only for form, whereas Luke depended upon Mark and secondary sources, but was not acquainted with Matthew. According to Belser, Matthew’s Gospel was made by a Greek of the first century b.c. The translation of it being made in 59–60, and Mark depended on Matthew’s Aramaic document and Peter’s preaching. Luke made use of Mark, of Matthew (both in Aramaic and Greek), and also of oral tradition. According to Camerlynck and Coppieters, the First Gospel in its present form was composed either by Matthew himself, or by another Apostle; in any case, lengthier than the second century of the first century by combining the Aramaic work of Matthew and the Gospel of Luke.

III. PLAN AND CONTENTS OF THE FIRST GOSPEL.—The author did not wish to compose a biography of Christ, but to demonstrate, by recording His words and the deeds of His life, that He was the Messiah, the Head and Founder of the Kingdom of God, and the promulgator of its laws. One can scarcely fail to recognize that, except in a few parts (e.g. the Childhood and the Passion), the arrangement of events and of discourses is artificial. Matthew usually combines facts and precepts of a like nature. Whatever the reader gets through to the fifty or forty (thirty or thirty-nine) which may be counted—three divisions in the genealogy of Jesus (i, 17), three temptations (iv, 1–11), three examples of justice (vi, 1–18), three cures (vii, 1–15), three parables of the seed (xiii, 1–32), three denials of Peter (xxvi, 69–75), etc.; of five (these are less numerous)—five long discourses (vii–viii, 27; x, xii, 1–52; xviii, 31–44; xxvii–xxx, 31), etc., the First Gospel can be very naturally divided as follows:—

A. Introduction (i–iii).—The genealogy of Jesus, the prediction of His Birth, the Magi, the Flight into Egypt, the Massacre of the Innocents, the return to Nazareth, and the life there.

B. The Public Ministry of Jesus (iii–xxvii).—This may be divided into three parts, according to the place where He exercised it.

1. In Galilee (iii–xxiv).—(a) Preparation for the public ministry (iii, 1–iv, 11): John the Baptist, the Baptism of Jesus, the Temptation, the return to Galilee. (b) The preaching of the Kingdom of God (iv, 17–xviii, 35): the preparation of the Kingdom by the preaching of penance, the call of the disciples, and numerous cures (iv, 17–25), the promulgation of the code of the Kingdom of God in the Mount (v, 1–xii, 29); (ii) the propagation of the Kingdom in Galilee (vii, 1–xvii, 35). He groups together: (e) the deeds by which Jesus established that He was the Messiah and the King of the Kingdom: various cures, the calming of the tempest, missionary journeys through the land, the calling of the Twelve Apostles, the principles that should guide them in their missionary travel (viii, 1–x, 42); (b) divers teachings of Jesus called forth by circumstances: Jesus answers Judas’s question and the Lord’s answer, Christ’s confutation of the false charges of the Pharisees, the departure and return of the unclean spirit (xi, 2–xii, 50); finally, the parables of the Kingdom, of which Jesus makes known and explains the end (xiii, 3–52). (iii) Matthew then relates the different events that terminate the preaching in Galilee: Jesus’s visit to the Nacarouses of Christ. Finally, even though we should suppose that Matthew were the author only of the Logia, the full scope of which we do not know, and that a part of his Greek Gospel is derived from that of Mark, we would still have a right to ascribe this First Gospel to Matthew as its principal author.

2. Outside Galilee on the way to Jerusalem (xix–xxv).—Jesus leaves Galilee and goes beyond the Jordan; He discusses divorce with the Pharisees; answers the rich young man, and teaches self-denial and the danger of wealth; explains by the parable of the labourers how the elect will be called; replies to the indirect question of the mother of the sons of Zebedee and curtsies the request of James and John; In Jerusalem (xxvi–xxvii).—Jesus makes a triumphal entry into Jerusalem; he curses the barren fig-tree and enters into a dispute with the chief priests and the Pharisees who ask Him by what authority He has banished the sellers from the Temple, and answers them by the parable of the two sons of the husbandman, and the marriage of the king’s son: New questions are put to Jesus concerning the tribute, the resurrection of the dead, and the greatest commandment. Jesus anathematizes the scribes and Pharisees and foretells the events that will precede and accompany the fall of Jerusalem and the end of the world.

C. The Passion and the Resurrection of Jesus (xxvii–xxxviii).—(1) The Passion (xxvi–xxxvi).—Events are now hurrying to a close. The Sanhedrin plots for the death of Jesus, a woman anoints the feet of the Lord, and Judas betrays his Master. Jesus eats the passch with His disciples and institutes the Eucharist. In the Garden of Olives, He enters upon His agony and prays the Agnus Dei. All the disciples are brought before the Sanhedrin. Peter denies Christ; Judas hangs himself. Jesus is condemned to death by Pilate and crucified; He is buried, and a guard is placed at the Sepulchre (xxvi, 1–xxvii, 66).

(2) The Resurrection (xxxvii).—Jesus rises the third day and appears first to the holy women at Jerusalem, then in Galilee to His disciples. From then He sends forth to propagate throughout the world the Kingdom of God.
cause of their sins, the Jews, as a nation, shall have no part in this kingdom; (C) the Gospel will be announced to all nations, and all men are called to salvation.

A. St. Matthew has shown that in Jesus all the ancient prophecies on the Messias were fulfilled. He was the Emmanuel, born of a Virgin Mother (i, 22, 23), announced by Isaia (vii, 14); He was born at Bethlehem (ii, 6), as had been predicted by Micah (v, 2); He went to Nazareth, as foretold by Osai (xi, 1). According to the prediction of Isaia (xi, 3), He was heralded by a precursor, John the Baptist (iii, 1 sqq.); He cured all the sick, as foretold by Osai (xi, 1). Finally, He suffered, and the entire drama of His Passion and Death was a fulfilment of the prophecies of Scripture (Isaia, iii, 12-13; Ps. xxi, 13-22). Jesus proclaimed Himself the Messias by His approbation of Peter's confession (xvi, 16, 17) and by His answer to the high priest (xxvi, 63, 64). St. Matthew also endeavours to show that the Kingdom inaugurated by Jesus Christ is the Messianic Kingdom. From the beginning of His public life, Jesus proclaims that the Kingdom of Heaven is at hand (iv, 17); in the Sermon on the Mount He proclaims the charter of this kingdom, and in parables He speaks of its nature and conditions. In His answer to the high priest (xxvi, 64), He declares that the Messianic Kingdom, foretold by the Prophets, has come to pass, and He describes its characteristics: "The blind see, and the lame walk, the lepers are cleansed, the deaf hear, the dead rise again, the poor have the gospel preached to them." It was in these terms that Isaia had described the future kingdom (xxvi, 5, 6; xxxv, 5; Lam. iii, 17). Matthew expresses very formally the Lord's coming upon the Jews; "But if I by the Spirit of God cast out devils, then is the kingdom of God come upon you" (xxii, 28). Moreover, Jesus could call Himself the Messias only as much as the Kingdom of God had come. That the pagans were called to salvation instead of the Jews, Jesus declared explicitly to the unbelieving Israeitels: "Therefore I say to you, that the kingdom of God shall be declared to you, and shall be given to a nation yielding the fruits thereof" (xxv, 43); "He that soweth the good seed, is the Son of man, and the field is the world" (xiii, 38-39). "And this gospel of the kingdom shall be preached in the whole world for a testimony to all nations, and then shall the consummation come" (xxiv, 14). Finally, appearing to His Apostles in Galilee, Jesus gives them this supreme command: "All power is given to me in heaven and in earth. Therefore go, teach ye all nations" (xxviii, 18, 19). These last words of Christ are the summary of the First Gospel. Efforts have been made to maintain that these words of Jesus, commanding that all nations be evangelized, were not authentic, but in a significant number of manuscripts, and in upper cases, the Lord's sayings, recorded in the First Gospel, proceed from the teaching of Jesus. For this particular question see, Meinert, "Jesus und die Heidenmission" (Münster, 1908).

V. DESTINATION OF THE GOSPEL.—The ecclesiastical writers Papias, St. Irenæus, Origen, Eusebius, and St. Jerome, whose testimony has been given above (II, A), agree in declaring that St. Matthew wrote his Gospel for the Jews. Everything in this Gospel proves, that the writer addresses himself to Jewish readers. He does not explain Jewish customs and usages to them, as do the other Evangelists for their Greek and Latin readers, and he assumes that they are acquainted with Palestine, since, unlike St. Luke, he mentions places without giving any indication of their topographical position. It is true that the Hebrew words, Emmanuel, Golgotha, Elios, are translated, but it is likely that these translations were inserted when the Aramaic text was reproduced in Greek. St. Matthew chronicles those discourses of Christ that would interest the Jews and leave a favourable impression on them. The law is cited, but not fulfilled (v, 17). He emphasizes more strongly than either St. Mark or St. Luke the false interpretations of the law given by the scribes and Pharisees, the hypocrisy and even the vices of the latter, all of which could be of interest to Jewish readers only. According to certain critics, St. Irenæus (Fragment xxix) said that Matthew wrote to convert the Jews by proving to them that Christ was the Son of David. This interpretation is badly founded. Moreover, Origen (In Matt., i) categorically asserts that this Gospel was published for Jews converted to the Faith. Eusebius (Hist. eccl., III, xxiv) is also explicit on this point, and St. Jerome, summarizing tradition, declares that St. Matthew wrote for the Jewish people, both in Palestine and in the Hebrew language, principally for those among the Jews who believed in Jesus, and did not observe even the shadow of the Law, the truth of the Gospel having replaced it (In Matt. Prol.). Subsequent ecclesiastical writers and Catholic exegetes have taught that St. Matthew wrote for the converted Jews. The ecclesiastical writers of the early Church (e. g., to the N. G. Testament, ii, 562), "the apologetical and polematic character of the book, as well as the choice of language, make it extremely probable that Matthew wished his book to be read primarily by the Jews who were not yet Christians. It was suited to Jewish Christians who were still exposed to Jewish influence, and also to Jews who still resisted the Gospel".

VI. DATE AND PLACE OF COMPOSITION.—Ancient ecclesiastical writers are at variance as to the date of the composition of the First Gospel. Eusebius (in his Chronicle), Theophylact, and Euthymius Zigabenus are of opinion that the Gospel of Matthew was written about the years 30-41; but following Eusebius (Hist. eccl., III, v, 2), it is possible to fix the definitive departure of the Apostles about the year 60, in which event the writing of the Gospel would have taken place about the year 60-68. St. Irenæus is somewhat more exact concerning the date of the First Gospel, as he says: "Matthew produced his Gospel when Peter and Paul were evangelizing and founding the Church of Rome, consequently about the years 64-67." However, this text presents difficulties of interpretation which render its meaning uncertain and prevent us from deducing any positive conclusion. In our day opinion is rather divided. Catholic critics, in general, favour the years 40-45, although some (e. g. Patrial) go back to 36-39 or (e. g. Aberle) to 43-45; Belser assigns the composition to 50-51; Hug, Reuschl, Schanz, and Rose, 60-67. This last opinion is founded on the combined testimonies of St. Irenæus and Eusebius, and on the remark inserted parenthetically in the discourse of Jesus in chapter xxiv, 15: "Therefore when you shall see the abomination of desolation, which was spoken of by Daniel the
prophet, standing in the holy place"; here the author interrupts the sentence and invites the reader to take heed of what follows, viz.: "Then they that are in Judea, let them flee to the mountains." As there would have been no occasion for a like warning had the destruction of Jerusalem already taken place, Matthew must have written his Gospel before the year 70 (and probably 66-67 according to Bittel). Protestant and Liberalistic critics also are greatly at variance as regards the time of the composition of the First Gospel. Zahn sets the date about 61-66, and Godet about 60-66; Keim, Meyer, Holtzmann (in his earlier writings), Beyschlag, and Maclean, before 70; Bartlet about 68-69; W. Allen and Plummer, about 66-75; Harnack (in his later works) after 70; B. Weisse and Harnack, about 70-75; Renan, later than 85; Réville, between 89 and 96; Jullicher, in 81-96; Montefiore, about 90-100; Volkmar, in 110; Baur, about 130-34. The following are some of the arguments advanced to prove that the First Gospel was written several years after the Fall of Jerusalem. When Jesus prophesies to His Apostles that they will be delivered up to the councils, scourged in the synagogues, brought before governors and kings for His sake; that they will give testimony of Him, will for Him be hated and driven from city to city (x, 17-23); and when He commissions them to teach all nations and make them His disciples, His words intimate, it is clear, that the established Church in distant parts, and its cruel persecution by the Jews and even by Roman emperors and governors. Moreover, certain sayings of the Lord—such as: "Thou art Peter; and upon this rock I will build my church" (xvi, 18); "If He [thy brother] will not hear us: tell the Church" (xviii, 10)—carry us to the time when the Christian Church was not yet constituted, a time that could not have been much earlier than the year 100. The fact is, that what was predicted by Our Lord, when He announced future events and established the charter and foundations of His Church, is converted into reality and made coexistent with the writing of the First Gospel. Hence, to give these arguments a probatory value it would be necessary either to deny Christ's knowledge of the future or to maintain that the teachings embodied in the First Gospel were not authentic.

VII. Historical Value of the First Gospel.—Of the Narratives.—(1) Apart from the narratives of the Christ's life, the cup of the two blind men, the tribute money, and a few incidents connected with the Passion and Resurrection, all the others recorded by St. Matthew are found in both the other Synoptics with one exception (viii, 5-13) which occurs only in St. Luke. Critics agree in declaring that, regarded as a whole, the events of the life of Jesus recorded in the Synoptic Gospels are fictitious. For us, these facts are historic even in detail, our criterion of truth being the same for the aggregate and the details. The Gospel of St. Mark is acknowledged to be of great historic value because it reproduces the preaching of St. Peter. But, for almost all the events of the Gospel, the information given by St. Mark is found in St. Matthew, while such as are peculiar to the latter are of the same nature as events recorded by St. Mark, and resemble them so closely that it is hard to understand why they should not be historic, since they also are derived from the primitive catechism. It may be further: observed that the narratives of St. Matthew are never contradictory to the events made known to us by profane doctors; that they give us the same moral and religious ideas, the manners and customs of the Jewish people of that time. In his recent work, "The Synoptic Gospels" (London, 1909), Montefiore, a Jewish critic, does full justice to St. Matthew on these different points. Finally, all the objections that could possibly have been raised against their veracity vanish, if we but keep in mind that the standpoint of the author, and what he wished to demonstrate. The comments that we are about to make concerning the Lord's utterances are also applicable to the Gospel narratives. For a demonstration of the historic veracity of the narratives of the Holy Childhood, we recommend Father Durand's scholarly work, "L'enfance de Jésus-Christ d'après les évangiles canoni ques" (Paris, 1907). Of the remaining part of Christ's short sayings are found in the three Synoptic Gospels, and consequently spring from the early catechism. His long discourses, recorded by St. Matthew and St. Luke, also formed part of an authentic catechism, and critics in general are agreed in acknowledging their historic value. There are, however; some who maintain that the sayings (in the latter 24 chapters) of Jesus that were intended to adapt them to the faith professed in Christian communities at the time when he wrote his Gospel. They also claim that, even prior to the composition of the Gospel, Christian faith had altered Apostolic reminiscences. Let us first of all observe that these objections would have no weight whatever, unless we were to concede that the First Gospel was not written by St. Matthew. And even assuming the same point of view as our adversaries, who think that our Synoptic Gospels depend upon anterior sources, we maintain that these changes, whether attributable to the Evangelists or to their sources (i.e. the faith of the early Christians), could not have been effected. We have already been introduced into Christ's teachings could not have been made by the Evangelists themselves. We know that the latter selected their subject-matter and disposed of it each in his own way, and with a special end in view; but this matter was the same for all three, at least for the whole contents of the pericopes, and was taken from the original sources. It is clear that these sources were well established not to admit of the introduction into it of new ideas and unknown facts. Again, all the doctrines which are claimed to be foreign to the teachings of Jesus are found in the three Synoptists, and are so much a part of the very framework of each Gospel that their removal would mean the destruction of the order of the narrative. Under these conditions, that there might be a substantial change in the doctrines taught by Christ, it would be necessary to suppose a previous understanding among the three Evangelists, which seems to us impossible, as Matthew and Luke at least appear to have worked independently of each other, and it is in their Gospels that Christ's longest discourses are recorded. Some of the sayings are already embodied in the sources used by the three Synoptists, could not have resulted from the deliberations and opinions of the earliest Christians. First of all, between the death of Christ and the initial drawing up of the oral catechism, there was not sufficient time for originating, and subsequently enjoying upon the Christian conscience, ideas so radically opposed to those said to have been exclusively taught by Jesus Christ. For example, let us take the doctrines claimed, above all others, to have been altered by the belief of the first Christians, namely, that Jesus Christ had called all nations to salvation. It is said that the Lord restricted His mission to Israel, and that all those texts wherein He teaches that the Gospel should be preached throughout the entire world originated with the early Christians and especially with Paul. Now, in the first place, these universalist doctrines could not have sprung up among the Apostles. They and the primitive Christians were Jews of poorly developed intelligence, with very narrow outlook, and were moreover marked with particularism and ethnocentricism. From the Gospels and Acts it is easy to see that these men were totally unacquainted with universalist ideas, which had to be urged upon them, and which, even then, they were slow to accept. Moreover, how could this first Christian generation, who, as we are told, believed that Christ's Second Coming was close at hand, have origins'
these passages proclaiming that before this event took place the Gospel should be preached to all nations. A youthful convert made a deep impression on his neighbors. Long before St. Paul could have exercised any influence whatever over the Christian conscience, the Evangelical sources containing these precepts had already been composed. The Apostle of the Gentiles was the special propagator of these doctrines, but he was not their creator. Enlightened by the Holy Spirit, he understood the religious precepts, and this he transmitted in the Person of Jesus, and that the doctrines taught by Christ were identical with those revealed by the Scriptures.

Finally, by considering as a whole the ideas constituting the basis of the earliest Christian writings, we ascertain that these doctrines, taught by the prophets, and accentuated by the life and words of Christ, form the framework of the Church and the basis of Pauline preaching. They are, as it were, a kind of fuses which it would be impossible to unbind, and into which no new idea could be inserted without destroying its strength and unity. In the prophecies, the Gospels, the Pauline Epistles, and the first Christian writings an internal correlation joins all together, Jesus Christ himself being the bond and the only bond. What one has said of Him, the others reiterate, and never do we hear an isolated or a discordant voice. If Jesus taught doctrines contrary or foreign to those which the Evangelists placed upon His lips, then He becomes an inexplicable phenomenon, because, in the matter of ideas, He is in contradiction to the idea of the Church, and is therefore to be ranked with the least intelligent sections among the Jewish people. We are justified, therefore, in concluding that the discourses of Christ, recorded in the First Gospel and reproducing the Apostolic catechesis, are authentic. We may, however, again observe that, his aim being chiefly apostolic, Matthew selects the discourses most characteristic of Christ, and also those discourses in a way that would lead up to the conclusive proof which he wished to give of the Messiahship of Jesus. Still the Evangelist neither substantially altered the original catechesis nor invented doctrines foreign to the teaching of Jesus. His action bore upon details or form, but not upon the basis of words and ideas.

Matthew, Pseudo-Gospel of. See Apocrypha.

Matthew, Sir Tobie, English priest, b. at Salisbury, 3 Oct., 1577; died at Ghent, 13 Oct., 1655. He was the son of Dr. Tobie Matthew, then Dean of Christ Church, Oxford, afterwards Anglican Bishop of Durham, and finally Archbishop of York, and Frances, daughter of William Barlow, Anglican Bishop of Chichester. Tobie Matthew matriculated from Christ Church, Oxford, 13 March, 1659-60, and became M.A. 5 July, 1597. He seems to have been harshly treated by his parents, who were angered at his conversion. On 18 May, 1599, he was admitted at Gray's Inn, where he was instructed in the law. In 1601 he made an acquaintance with Francis Bacon, and two years later became M.P. for Newport, Cornwall. During this period of his life he frequented the dissolute court of Elizabeth. On the accession of James I he sat in Parliament for St. Alban's, and joined the new court, receiving a large grant from the Crown which empirically provided for his future needs. In 1603 he went to travel, he left England in November, 1604, visiting France on his way to Florence, though he had promised his father he would not go to Italy. At Florence he came into the society of several Catholics and ended by being received into the Church. A new persecution was raging in England, but he determined to return. He was imprisoned in the Fleet for six months, and every effort was made to shake his resolution. Finally he was allowed to leave England, and he travelled in Flanders and Spain. In 1614 he studied for the priesthood at Rome and was ordained by Cardinal Bellarmine (20 May). The king allowed him to return to England in 1617, and he stayed for a time in London with Bacon, and then moved to Italy. From 1619 to 1622 he was again exiled, but on his return was favourably received by the king, and acted as an agent at court to promote the marriage of Prince Charles with the Spanish Infanta. In the same cause James sent him to Madrid and on his return knighted him, 20 Oct., 1623. During the reign of King Charles I he remained a foreigner, and his life was spent in helping the Jesuits and the English Catholic cause. When the Civil War broke out in 1640 he, now an old man, took refuge with the English Jesuits at their house at Ghent, where he died. He was always an ardent supporter of the Jesuits, and, though it has long been denied that he was ever himself a Jesuit, he was recently discovered to have been at one time a Jesuit, a strong reason for supposing that he was in fact a member of the Society. Besides the Italian version of Bacon's "Essays," he translated St. Augustine's "Confessions" (1620), the Life of St. Teresa written by herself (1623), and Father Arias's "Treatise of Patience" (1650). His original works were: "A Relation of the death of Gulio Ludovico Solerti, Governor of Rome" (1620); "A Missive of Consolation sent from Flanders to the Catholics of England (1647); "A True Historical Relation of the Conversion of Sir Tobie Matthew to the Holy Catholic Faith" (first published in 1604); some manuscript works (see GILLOW, "Bibl. Dict. Engl. Cath." 1V, 841-42). His letters were edited by Dr. John Donne in 1660.

EDWIN BURTON.

Matthew of Cracow, renowned scholar and preacher of the fourteenth century, b. at Cracow about 1335; d. at Pisa, 5 March, 1410. The view, once generally held, that he was descended from the Pomeranian noble family of Crakow, is now entirely discredited (cf. Sommerlad, "Matthäus von Krakow", 1891). His father was probably a notary in Cracow. Entering the University of Prague, Matthew graduated bachelor of arts in 1335 and master in 1337, and later filled for several terms the office of dean in the same faculty. In 1357 we first find documentary reference to him as professor of theology, and this usage continued of him as "city preacher of Prague." About 1382 he headed an embassy from his university to Urban VI, before whom he delivered a dissertation in favour of reform. Accepting an invitation from the University of Heidelberg, he joined its professorial staff in 1386, and a year later was appointed rector. In 1395 he was
named councillor to Ruprecht II, and the raising of Ruprecht III to the dignity of King of Rome in 1400 marks the beginning of Matthew's career as a statesman. Frequently employed by the king both at court and on embassies, he appeared at Rome in 1403 to solicit Boniface IX's confirmation of Ruprecht's claims. On the elevation of Innocent VII to the papal throne in 1404, Matthew greeted him on behalf of Ruprecht. The same year, Matthew was appointed Bishop of Worms, but, beyond his settling of the dispute between the people and clergy of that city, we know little of his episcopal activity.

That he continued to reside at Heidelberg is very probable, and also that he continued to act as professor. Gregory XII wished to name him Cardinal Priest. During the next few years, Matthew declined the honour. As ambassador of Ruprecht to the Council of Pisa, he displayed the greatest zeal on behalf of Gregory XII, whom he regarded as the legitimate occupant of the papal throne. He was a very prolific theological writer. Apart from Biblical commentaries, sermons, and works on current topics, the most important of his writings are: "De consolations theologis", "De modo confendi", "De puritate conscientiae", "De corpore Christi"; "De celebratione Missae". That he wrote "De arte moriendo"—to be distinguished from a similar work by Cardinal Capran—cannot be maintained with certainty, and recent investigation has shown beyond doubt that the work "De arte moriendo" attributed to Matthew of Rome was, in fact, a Scheme of the hands (Schaeuffgen, "Beiträge zur Gesch. des gréven Schismas", 1889, p. 91).

MATTHEW WESTMINSTER. See WESTMINSTER, MATTHEW.

MATTHIAS, SAINT, APOSTLE. — The Greek Matthias, Μ. Α. C. E., or Matthias, R. D*, is a name derived from Mariadatos, Heb. Mattithiah, signifying "gift of Jehovah." Matthias was one of the seventy disciples of Jesus, and had been with Him from His baptism by John to the Ascension (Acts, i, 21, 22). It is related (Acts, i, 15-26) that in the days following the Ascension, Peter proposed to the assembled brethren, who were now, in the number of seventy, to select one to fill the place of the traitor Judas in the Apostolate. Two disciples, Joseph, called Barsabas, and Matthias were selected, and lots were drawn, with the result in favour of Matthias, who thus became associated with the eleven Apostles. Zeller has declared this narrative unhistoric, on the plea that the Apostles were in Galilee after the death of Jesus. As a matter of fact they did return to Galilee, but the Acts of the Apostles clearly state that about the feast of Pentecost they went back to Jerusalem.

All further information concerning the life and death of Matthias is vague and contradictory. According to Nicophorus (Hist. eccl., 2, 40), he first preached the Gospel in Judea, then in Ethiopia (that is to say, C. chis), and was crucified. The Synopsis of Dorotheus contains this tradition: Matthias in intérieu Ethiopis, ubi Syrus maris portus et Phasis fluvis ost, hominibus barbaris et carnivoris predicavit Evangelium. Mortuis est autem in Sebastopolis, ibique proue templum Solis sepultus (Matthew preached to barbarians and carnivorous peoples in the interior of Ethiopia, at the harbour of the sea of Syrus, at the mouth of the river Phasis. He died at Sebastopolis, and was buried there, near the Temple of the Sun). Still another tradition maintains that Matthias was stoned at Jerusalem by the Jews, and then beheaded (cf. Tillemon, "Mémoire sur l'apparition à l'histoire eccl. des six premiers siècles", i, 406-7). It is said that St. Helena brought the relics of St. Matthias to Rome, and that a portion of them was at Trier. Bollandus (Acta SS., May, III) doubts if the relics that are in Rome are not rather those of the St. Matthias who was Bishop of Jerusalem about the year 120, and whose history would seem to have been confounded with that of the Apostle. The Latin Church celebrates the feast of St. Matthias on 24 February, and the Greek Church on 9 August.

Clement of Alexandria (Strom., III, 4) records a sentence that the Nicoldians ascribe to Matthias: "We must combat our flesh, set no value upon it, and concede to it nothing that can flatter it, but rather follow the footsteps of the Lord in everything." This teaching was probably found in the Gospel of Matthias which was mentioned by Origen (Hom. i in Lucam); by Eusebius (Hist. eccl., III, 25), who attributes it to heretics; by St. Jerome (Pref. in Math.); and in the Decree of Gelasius (VI, 8) which declares it apocryphal. It is at the end of the list of the Codex Baroccianus (205). This Gospel is probably the document whence Clement of Alexandria quoted several passages, saying that they were borrowed from the traditions of Matthias, Patapoböes, the testimony of which he claimed to have been invoked by the heretics Valentineus, Marcion, and Basilides (Strom., VII, 17). According to the Philosopheropoeus (Strom., VII, 17), Matthias, as not being dead, was not of the number of the martyrs which he attributed to Matthias. These three writings: the Gospel, the Traditions, and the Apocryphal Discourses were identified by Zahn (Gesch. des N. T., Kanon, II, 751), but Harnack (Chron. der altchristl. Litteratur, 597) denies this identification. Tischendorf, in his Apocryphon, Leipzic, 1851, published after Thilo, 1846, "Acta Andreae et Pauli in urbe anthropophagorum", which, according to Lipsius, belonged to the middle of the second century. This apocrypha relates that Matthias went among the cannibals and, being cast into prison, was delivered by Andrew. Needless to say, the entire narrative is without historical value. Moreover, it should be remembered that, in the apocryphal writings, Matthew and Matthias have sometimes been confounded.

E. JACQUIER.

MATTHIAS, GOSPEL OF. See APOCRYPHA.

MATTHEW CORVINUS, King of Hungary, son of János Hunyady (see HUNYADDY, JÁNOS) and Elisabeth Szécsi, born at Hont, Hungary, 23 Feb., 1440; d. at Vienna, 6 April, 1490. In the house of his father he received along with his brother Ladislaus, a careful education under the supervision of Gregor Sanocki, who taught him the humanities. Johann Vitez, Bishop of Grosswardein from 1446, the friend of Matthias's father when a boy, and himself an enthusiastic patron and promoter of classical studies, had a decided influence on his education. The chequered career of his father likewise left its imprint on the life of Matthias. On political grounds he was betrothed in 1455 to Elisabeth, the daughter of Count Ulric Cailey, his father's deadly enemy, with the aim of effecting the reconciliation of the two families. The noisy defeat of Elisabeth interfered with this plan, and after the death of János Hunyady, Cailey's emnity was directed against the sons. At the instigation of Cailey and his accomplices, who accused Ladislaus and Matthias Hunyady of a conspiracy against King Ladislaus V, both were arrested, Ladislaus being executed, and Matthias being sent to Vienna castle, where he was not allowed to follow the king to Prague. After the death of King Ladislaus at Prague, Matthias settled down at the court of the Bohemian king, George Podiebrad, who betrothed him to his daughter Catharine. On 23 Jan., 1458, Matthias was proclaimed King of Hungary shortly afterwards, the Pope recognizing him as such.
Buda, his uncle Michael Siságyi at the same time being appointed governor for five years. Matthias soon freed himself, however, from the regency of Siságyi, and took the reins of government into his own hands. At the very beginning of his reign he had to contend with a movement among discontented Hungarians, who offered the crown to the Emperor Frederick III, who had assumed the title of King of Hungary. The quarrel with Frederick lasted till 1462, when an agreement was made by which, among other things, it was settled that if Matthias should die without leaving an heir, Frederick would be authorized to bear the title of King of Hungary as long as he lived. At the same time Frederick adopted Matthias as his son, and pledged himself to deliver up the Hungarian crown which he had in his possession. The treaty was confirmed by the Hungarian Reichstag and Matthias was crowned king in 1463. Not long before he had married Catharina, the daughter of the Bohemian king, Podiebrad, who, however, died at the beginning of 1464. Relations with the Emperor Frederick again became strained; political conditions and, in particular, the question of the Bohemian crown, affected the relations considerably. The friction between the Holy See and King Podiebrad led to the deposition of the latter, and Matthias was now called upon by the pope to take up arms against the deposed king. In 1468 came the Bohemian expedition of Matthias, elected king by the Catholics of Bohemia. The war continued till the death of Podiebrad in 1471, when the Bohemians, defeating Matthias, chose Vladislav, son of Casimir, King of Poland, as king. The years up to 1474 were marked by indecisive battles with the Bohemian king and with the Emperor Frederick. An armistice caused a brief cessation of hostilities, but from 1476 relations with the Emperor Frederick grew continually more strained. In 1477 Matthias, invading Austria, besieged Vienna. Peace was effected between Matthias and Frederick by the intervention of the papal legate in 1477, but war soon broke out again, and in 1485 Matthias took Vienna. In the war with the Emperor Frederick, Matthias had made an alliance with the Austrian archbishop. In this connection he was led not merely by the aim of securing for Hungary a leading position in the West of Europe, but also by the design to unite the powers of Europe in a crusade against the Turks. He was obliged, however, to abandon this scheme. Equally fruitless was the plan of a crusade against the Turks; nevertheless he managed to fix a limit to the advance of the Turks, and to strengthen the supremacy of Hungary over Bosnia. In 1463 Bosnia fell again into the hands of the Turks. The victory of Matthias over the Turks in Servia, Bosnia, and Transylvania resulted in 1483 in a truce with the Sultan Bajazet. Matthias's relations with the Catholic Church were good till the year 1477. The latter part of his reign was marked by a series of most serious blunders and acts of violence. In spite of legal enactments, he gave bishoprics to foreigners, and rewarded political services with gifts of church property, which he dealt with as though it were the property of the state. His relations with the Holy See were at first decidedly cordial, but later there was danger of a rupture, which was happily avoided. Under Matthias's reign the Hungarians made their entry into Hungary. His library in Buda, the Bibliotheca Corviniana, wins just admiration even to-day by virtue of the remanent which it scattered over Europe. During his reign the first printing press in Hungary was established, that at Buda, the first known production of which is the "Chronicle of Buda", printed in 1473. The area, too, found in Matthias a generous benefactor. He introduced reforms in the army, in finance, and in the administration of the courts and the law. The reorganization of military affairs was based on the principle of a standing army. With this body, the so-called black troops, he defeated the Turks and the Hussite troops of Sikus, which were laying waste Upper Hungary. In financial affairs, a reform in the mode of taxation was introduced, while his enactments in judicial affairs earned for him among the people the title of "The Just". In 1476 he married Beatrice, the daughter of the King of Naples, but the union was childless. His exertions to secure the throne for his illegitimate son John Hunyadi were rewarded by the title by the opposition of Hungary and the plotting of Beatrice. Matthias was buried at Székes-Fehérvár (Stuhlweissenberg).

Matthias of Neuburg of Neuenburg (Neuburgensis), chronicler, b. towards the close of the thirteenth century, possibly at Neuburg, in Baden; d. between 1364 and 1370, probably at Strasburg, in Alsace. He studied jurisprudence at Bologna, and later received minor orders, but never became a priest. In 1367 we meet him as a papal legate at Basle, and shortly after, while clerk to Bishop Berthold von Buchecke, holding a similar position in Strasburg. At present he is generally considered the author of a Latin chronicle from 1243 to 1350, and of its first continuation from 1350 to 1355. Later, three other writers carried on the work to 1386, and two have been known in an alternate form. Matthias's works have been compared with Alsatian and Halberstadt history and for the times in which Matthias lived; indeed, the part covering the period between 1346 and 1350 is one of the best authorities, not only for the history of his own country, but for that of the entire empire. It has been attributed to different writers, among them to the Speyer notary, Jacob of Mainz (cfr. Wichert "Jacob von Maimz", Königsberg, 1881), also to Albert of Strasburg, especially by earlier editors, while those of later times attribute it to Matthias of Neuburg. For the voluminous literature on this controversy see Pothast, "Bibliotheca Kin. Med. Évt." (Berlin, 1896). Among the editions may be mentioned: "Ecclesiastical Carlsbad"—"Annales Radbolenses"—"Annales Aurelii Reports"—"Annales Casinensia". The last contains a parallel account of the proceedings of Henry IV, first as taken from an appendix to Cuspinian's work "De consilibus Romanorum commentarii" (Basle, 1553), 667-710, very much abridged; G. Studer, "Matthio Neuburgensis
chronica cum continuatione et vita Berchtoldii"; "Die Chronik des Matthäus von Neuenburg" from the Berne and Strasbourg manuscripts (Berne, 1866); A. Huber, "Mathiae Neuenburgensis Chronicae, 1273-1350" in Böhrer, "Fontes rerum Germanicarum", IV (Stuttgart, 1868), 149-276; "Continuatio" pp. 276-297. It has also been edited from a Vienna and a Vatican manuscript in "Abhandlungen der Gesellschaft der Wissenschaften", xxxvii-xxxviii (Göttingen, 1891-2), and translated into German by Grandaur (Leipzig, 1892).

Maundy Thursday.—The feast of Maundy (or Holy) Thursday solemnly commemorates the institution of the Eucharist and is the oldest of the observances peculiar to Holy Week. In Rome various accessory ceremonies were early added to this commemoration, namely the consecration of the holy oils and the reconciliation of penitents, ceremonies obviously practical in character and readily explained by the proximity of the Christian Easter and the necessity of preparing for it. Holy Thursday could not but be a day of liturgical reunion since, in the cycle of movable feasts which surrounds the anniversary of the institution of the Liturgy. On that day, whilst the preparation of candidates was being completed, the Church celebrated the Missa chrismalis of which we have already described the rite (see Holy Oils) and, moreover, proceeded to the reconciliation of penitents. In Rome everything was carried on in daylight, whereas in Antwerp on Holy Thursday was celebrated after the evening meal, in view of more exact conformity with the circumstances of the Last Supper. Canon xxix of the Council of Carthage dispenses the faithful from fast before communion on Holy Thursday, because, on that day, it was customary to take a bath, and the bath and fast were considered incompatible. St. Augustine, too, speaks of this custom (Ep. civ, vii and Januarium, n. 7); he even says that, as certain persons did not fast on that day, the oblation was made twice, morning and evening, and in this way those who did not observe the fast could partake of the Eucharist after the morning meal, whilst those who fasted awaited the evening repast.

Holy Thursday was taken up with a succession of ceremonies of a joyful character: the baptism of neophytes, the reconciliation of penitents, the consecration of the holy oils, the washing of the feet, and the commemoration of the Blessed Eucharist, and, because of all these ceremonies, the day received different names, all of which allude to one or another of its solemnities.

Reddito symboli was so called because, before being admitted to baptism, the catechumens had to recite the creed from memory, either in presence of the bishop or his representative.

Pedilium (washing of the feet), traces of which are found in the most ancient rites, occurred in many churches on Holy Thursday, the capitulium (washing of the head) having taken place on Palm Sunday (St. Augustine, "Ep. cvii, exxii", c. 18).

Exomologesis, and reconciliation of penitents: the letter of Pope Innocent I to Decentius of Gubbio, testifies that in Rome it was customary "quinta feria ante Pascha" to absolve penitents from their mortals and venial sins, except in cases of serious illness which kept them away from church (Labbe, "Concilia", II, col. 1247; St. Ambrose, "Ep. xxxii ad Marcellinam"). The penitents heard the Missa pro reconciliations penitentium, and absolution was given them before the offertory. The "Sacramentary" of Pope Gelasius contains an Ordo aequitis publico pontificis (Muratori, "Iturgia romana vetus", I, 548-551).

Olei exordiati confecti.—In the fifth century the custom was established of consecrating on Holy Thursday all the chrisir necessarium for the anointing of the newly baptized. The "Comes Hieronymi", the Gregorian and gelasian sacramentaries and the "Missae presbesci" of Pamfilus, all agree upon the consecration of the chrisir on that day, as does also the "Ordo romanus I".

Anniversarium Eucharisticum.—The nocturnal celebration and the double oblation early became the object of increasing disfavour, until in 692 the Council of Trullo promulgated a formal prohibition. The Eucharistic celebration then took place in the morning, and the bishop reserved a part of the sacred species for the communion of the morrow, Missa presanctificatorum (Muratori, "Iturg. rom. Vetus", II, 993).

Other Observances.—On Holy Thursday the ringing of bells ceases, the altar is stripped after vespers, and the night office is celebrated under the name of Tenebrae.

H. Leclercq.

Maunoury, Auguste-Louis, Hellenist and exegete, b. at Champeceet, Orne, France, 30 Oct., 1811; d. at Sées, Orne, 17 Nov., 1898. He made brilliant classical studies at the preparatory seminary at Sées, to which institution he returned in 1854 as a professor. He taught the whole of his long priestly career. Until 1852, he taught the classics with great success, and then became professor of rhetoric, a position which he occupied for twenty-two years. During this period, keeping abreast of the progress of Hellenistic studies in France and Germany, he composed, published, and published again, a series of his works ("Grammaire de la Langue Grecque", "Christomathie" etc.) which proved him to be one of the best Greek scholars of his day. Towards 1866, Maunoury began his work as a commentator of Holy Writ, by treating some sections of the Gospel in the "Semaene Catholiquet" of his native diocese; but it was only after 1875, that he gave himself fully to the pursuit of Biblical studies. In 1877, he became canon of the cathedral of Sées; and the following year, he began to publish his commentaries on all the Epistles of the New Testament.

These commentaries appeared in five volumes, as follows: (1) "Com. sur L'Épitre aux Romains" (Paris 1887); (2) "Com. sur les Épitres aux Grecs" (Paris, 1879); (3) "Com. sur les Épitres aux Galates, aux Ephésiens, aux Philippiens, aux Colossiens, et aux Thessaloniciens" (Paris, 1880); (4) "Com. sur les Épitres à Timothée, à Titre, à Philémon, aux Hébreux" (Paris, 1882); (5) "Com. sur les Épitres Catholiques de St. Jacques, St. Pierre, St. Jean et St. Jude" (Paris, 1888). In explaining the Sacred Text he made an excellent use of his great familiarity with Greek grammar and authors, availed himself chiefly of the commentaries of St. John Chrysostom and Theodoret, and always remained an enlightened and safe theologian. In 1894, he published his "Com. in Psalmos" (2 vols., Paris), a Latin work, written with elegance, almost exclusively on the basis of the Vulgate and the Septuagint. His only contribution to apologetics is a volume entitled "Sorires d'Autome, ou la Religion prouvé aux gens du monde" (Paris, 1887).

Francis E. Gigot.

Maurice, Saint, leader (primicerius) of the Theban Legion, massacred at Agaunum, about 287 (286, 297, 302, 303), by order of Maximian Herculius. Feast, 22 Sept. The legend (Acta SS., VI, Sept., 308, 895) relates that the legion, composed entirely of Christians, had been called from Africa to suppress a revolt
of the Bagaudae in Gaul. The soldiers were ordered to sacrifice to the gods in thanksgiving but refused. Every tenth was then killed. Another order to sacrifice and another refusal caused a second decimation and then a general massacre. (On the value of the legions, see also the Appendix and Themist Legion.) St. Maurice is represented as a knight in full armour (sometimes as a Moor), bearing a standard and a palm; in Italian paintings with a red cross on his breast, which is the badge of the Sardinian Order of St. Maurice. Many places in Switzerland, Piedmont, France, and Germany have chosen him as their patron, as have also the dyers, clothmakers, soldiers, swordsmiths, and others. He is invoked against gout, cramps etc.

See Chevalier, Bic-Bul., s.v.; Histoire X, 733.

Francis Mershman.

Maurice (MAURICIUS, MAURICUS), Roman Emperor, b. in 539; d. in Nov., 602.

He sprang from an old Roman (Latin) family settled in Cappadocia, and began his career as a soldier. Under the Emperor Tiberius II (578-582) he was made commander of a new legion levied from allied barbarians, with which he did good service against the Persians.

When he returned triumphantly to Constantinople, Tiberius gave him his daughter Constantina in marriage and appointed him his successor (578). Almost immediately afterwards (Theophylact, Infra, says the next day) Tiberius died and Maurice succeeded peacefully. At his accession he found that the overthrow of the Greek church, the exchequer was empty and the State bankrupt. In order to remedy this Maurice established the expenses of the court on a basis of strict economy. He gained a reputation for parsimony that made him very unpopular and led eventually to his fall. The twenty years of his reign do not in any way stand out conspicuously from early Byzantine history. The forces at work since Justinian, or even Constantine, continued the gradual decay of the Empire under Maurice, as under Tiberius his predecessor and Phocas his successor. For the first ten years the long war with the Persians continued; then a revolution among the enemy brought a respite and the Roman Emperor was invoked by Chosroes II to restore him to his throne. Unfortunately Maurice was not clever enough to draw any profit for the Empire from this situation. The Avars and Slavs continued their invasion of the northern provinces. The Slavs penetrated even to the Peloponnesus. The Lombards ravaged Italy with impunity. As the Empire could do nothing to protect the Italians, they invaded them with nothing to protect the Greeks, they invaded them with nothing to protect the Greeks, they invaded them with nothing to protect them (584). This first invasion of Italy by the Franks began the process that was to end in the separation of all the West from the old Empire and the establishment of the rival line of Emperors with Charles the Great (800). Maurice had to buy off the Avars with a heavy bribe that further reduced his scanty resources and made economy still more imperative. The emperor became more and more unpopular. In 599 he could not or would not ransom 12,000 Roman soldiers taken by the Avars, and they were all murdered. Further harassing regulations made for the army with a view to more economy caused a revolt that became a revolution. In 602 the soldiers drove away their officers, made a certain centurion, Phocas, and their leader, then Maurice of Constantinople. Maurice, finding that he could not or would not organize a resistance, fled across the Bosporus with his family. He was overtaken at Chalcedon and murdered with his five sons. Phocas then began his tyrannical reign (602-610).

In Church history Maurice has some importance through his relations with Gregory I (590-604). As soon as Gregory was elected, he wrote to the emperor begging him to annul the election. The fact has often been quoted as showing Gregory's acceptance of an imperial right of veto. Later the pope's organization of resistance against the Lombards was very displeasing to the emperor, though the government at Constantinople did nothing to protect Italy. Further trouble was caused by the tyranny of the imperial exarch at Ravenna, Romulus. Against this person the pope took the Italians under his protection. On the other hand the exarch and the emperor repulsed the bishops in the North of Italy who still kept up the schism that began with the Three Chapters quarrel (Pope Vigilius, 540-555). The assumption of the title of 'ecumenical patriarch' by John IV of Constantinople (see John the Faster) caused more friction. All this explains St. Gregory's unfriendly feeling towards Maurice, and it also helps to explain his ready and friendly recognition of Phocas which has been alleged by some to be a blot in the great pope's career. But it is quite probable that the pope was misinformed and not placed in full possession of all the circumstances attending the change of government in the distant East.

Maurists, The, a congregation of Benedictine monks in France, whose history extends from 1618-1818. It began as an offshoot from the famous reformed Congregation of St-Vannes. The reform had spread from Lorraine in France under the influence of Dom Laurent Bénard, Prior of the Collège de Cluny in Paris, who inaugurated the reform in his own college. Thence it spread to St-Augustine de Limoges, to Nouillère, to St-Faron de Meaux, to Jumièges, and to the Blanches-Manteaux in Paris. In 1618 a general chapter of the Congregation of St-Vannes was held at St-Mauusot de Toul, whereas it was decided that an independent congregation should be erected for the
MAURISTS

reformed houses in France, having its superior residing within that kingdom. This proposal was supported by Louis XIII as well as by Cardinals de Retz and Richelieu; letters patent were granted by the king, and the new congregation was named of St-Maur in order to obviate any rivalry between its component houses. It was formally approved by Pope Gregory XV on 17 May, 1621, an approval that was confirmed by Urban VIII six years later. The reform was welcomed by many of great influence at the Court as well as by some of the greater monastic houses in France. Already under the first presidency of the congregation, Dom Martin Testière (1618–21), it had included about a dozen great houses. By 1630 the congregation was divided into three provinces, and, under Dom Grégoire Tarisse, the first Superior-General (1630–48), it included over 80 houses. Before the end of the seventeenth century the number had risen to over 180 monasteries, the congregations being divided into six provinces: France, Normandy, Britany, Burgundy, Chelis-Benolt, and Gascony.

In its earlier years, however, the new congregation was forced, by Cardinal Richelieu, into an alliance with the Congregation of Cluny. Richelieu desired an amalgamation of all the Benedictines in France and eventual bringing into being of an organization that was called the “Congregation of St. Benedict” or “of Cluny and St-Maur”. This arrangement, however, was short-lived, and the two congregations were separated by Urban VIII in 1644. From that date the Congregation of St-Maur grew steadily both in extent and in influence. Although the twenty-one houses in France steadily resisted all attempts to establish the congregation beyond the borders of France, yet its influence was widespread. In several of its houses schools were conducted for the sons of noble families, and education was provided gratuitously at St-Martin de Vertou for those who had become poor. But from the beginning the Maurists established a number of monasteries of nuns of the congregation, the only exception being the Abbey of Chelles, where, through Richelieu’s influence, a house was established with six monks to act as confessors to the nuns.

The congregation soon attracted to its ranks many of the most learned scholars of the period, and though its greatest glory was in the seventeenth century, yet, throughout the eighteenth century also, it continued to produce works whose solidity and critical value still render them indispensable to modern students. It is true that the Maurists were not free from the infiltration of Jansenist ideas, and that the work of some of its most learned sons was hampered and coloured by the factionist spirit of the period. The Congregation of France had already under its presidency of philosophy and theology, spent a “year of recollection” before they were admitted to the priesthood. The discipline was marked by a return to the strict rule of St. Benedict. All laboured with their hands, all abstained from flesh-meat, all embraced regular poverty; the Divine Office was recited at the canonical hours, and the history of the congregation, a long and useful history, was observed as for the advancement of their intellectual achievements.

To the great body of students, indeed, the Maurists are best known by their services to ecclesiastical and literary history, to patrology, to Biblical studies, to diplomacy, to chronology and to liturgy. The names of D. Luce d’Achery, Jean Mabilon, Thury, Francois Lonzi, Pierre Coursant, Denys de Sainte-Marthe, Edmond Martene, Bernard de Montfacon, 1. Francais Dantin, Antoine Rivet de la Grange and Martin Bouquet recall some of the most scholarly works ever produced. To these and to their confreres we are indebted for critical and still indispensable editions of the great Latin and Greek scholars, of the history of the Benedictine Order and the liturgy of its saints, for the “Gallia Christiana” and the
"Histoire Littéraire de la France,"" for the "De re Diplomatica" and "L’art de vérfier les dates" for "L’antiquité expliquée et représentée" and the "Paleographia Graeca," for the "Recueil des historiens des Gaules," the "Veterum scriptorum amplissima collection," the "Thesaurus Aenectorum," the "Spicilegium veterum scriptorum," the "Museum Italicum," the "Scriptores veterum," the "Scriptores antiquorum," and the "Scriptores hiérarchiques" that are the foundation of modern historical and liturgical studies. For nearly two centuries the great works that were the result of the foresight and high ideals of Dom Grégoire Tarisse, were carried on with an industry, a devotion, and a mastery that aroused the admiration of the learned world. To this day, all who read them will say that there is no other work that can stand the growth of Western Christendom, must acknowledge their indebtedness to the Maurist Congregation.

The following were the monasteries of the Maurist Congregation in the latter half of the eighteenth century.

(1) Province of France.—Diocese of Amiens: Corbie, St.-Fuscien-aux-Bois, St.-Jesse-sur-mer, St. Riquier, St.-Valéry.—Diocese of Beauvais: Breteuil-sur-Noye, St.-Lucien-de-Beauvais.—Diocese of Boulogne: St.-Saüveur-de-Montreuil, Samer.—Diocese of Chartres: Meulan.—Diocese of Laon: Nangis-sous-Couey, Ribemont, St.-Jean-de-Laon, St-Nicholas-aux-Bois, St-Vincent-de-Laon.—Diocese of Meaux: Reims, St.-Symphorien.—Diocese of Meslay-de-Ville: St.-Philippe-en-Vienne, St.-Paul-Mont-Quentin, St.-Eloi-de-Noyon, St.-Quentin-en-l’Isle.—Diocese of Paris: Argenteuil, Chelles, Lagny, Les-Blancs-Manteaux-de-Paris, St.-Denis-de-Paris, St.-Germain-des-Prés.—Diocese of Reims: Notre-Dame-de-Rethel, St.-Basié, St-Marcouf-de-Corbeny, St.-Nicolas-des-Ateliers, St.-Pierre-de-Fricourt, St.-Remi.-Diocese of Rouen: Le Tréport, St.-Martin-de-Pontoise.—Diocese of Soissons: Château, Orbais, St.-Côme-de-Compiègne, St-Crépin-de-Soissons, St.-Médard-de-Soissons.

(2) Province of Normandy.—Diocese of Bayeux: Cerisy-la-Foret, Fontenay, St-Étienne-de-Caen, St-Vigor-le-Grand.—Diocese of Beauvais: St-Germer-de-Fly.—Diocese of Chartres: Guilmont, Josephailles-Chartres, St-Florentin-de-Boenneval, St-Père-en-Vallée, Tiron.—Diocese of Coutances: Lesay.—Diocese of Evreux: Conches, Ivry-la-Bataille, Lyre, St-Taurin d’Evreux.—Diocese of Le Mans: Lonlay-l’Abbaye.—Diocese of Lisieux: Beaumont-en-Auge, La Couture-d’Ennery, St-Evroul-d’Auge, St.-Flour-du-Tancay, Fréteval.—Diocese of Rouen: Pont-de-l’Arche, Bonne-Nouvelle, Fécamp, Jumièges, Le Bec, St.-Georges-de-Boscherville, St-Ouen-de-Rouvroy, St-Wandrille-Rençon, Valmont.—Diocese of Sées: St-Martin-de-Sées, St-Pierre-sur-Dive.

(3) Province of Brittany.—Diocese of Angers: Bourgueil, Château-Cher, Crecy, Notre-Dame-de-l’Eve, St-Florent-en-Saumur, St-Florent-le-Vieil, St-Maur-sur-Loire, St-Nicolas-d’Angers, St-Serge-d’Angers.—Diocese of Avranches: Mont-Saint-Michel.—Diocese of Dol: Le Tronchet, St-Jacut-de-la-Mer.—Diocese of Le Mans: Evron, St-Pierre-de-la-Couture, St-Vincent-du-Mans, Solesmes, Tuffé.—Diocese of Nantes: Blanche-Couronne, Notre-Dame-de-Chantemerle, St-Gildas-d’Intrezec, Vez.-Diocese of Poitiers: Montmelou-Belley.—Diocese of Quimper: Landevenec, Quimperlé.—Diocese of Rennes: St-Magoire-de-Lehon, St-Maléine-de-Rennes, Ste-Croix-de-Vitré.—Diocese of St-Brieuc: Lantenac.—Diocese of Saint-Malo: St-Malo.—Diocese of St-Malo-de-Léon: St-Mathieu-de-Fine-Terre.—Diocese of St-Maurice-de-Pontlevoy, St-Julien-de-Tours, Turpenay, Villedon.—Diocese of Vannes: St-Gildas-de-Rhuys, St-Sauveur-de-Redon.

(4) Province of Burgundy.—Diocese of Autun: Corbigny, Flavigny, St-Martin-de-Cures.—Diocese of Auxerre: St-Germain.—Diocese of Blois: Punt-le-Voy, St-Laumer-de-Blois, Ste-Trinité-de-Vendôme.—Diocese of Chalon-sur-Saône: St-Pierre.—Diocese of Dijon: St-Bénigne-de-Dijon, St-Seine-l’Abbaye.—Diocese of Langres: Bèze, Molemes, Molotme, Montier-Saint-Jean, St-Michel-de-Tonnere.—Diocese of Le Mans: St-Calais.—Diocese of Lyons: Ambronay.—Diocese of Orleans: Bonne-Nouvelle, St-Benoît-sur-Loire.—Diocese of Orleans-sous-Sére, St-Benoît-sur-Loire, Melun, St-Pierre-le-Vif-de-Sens, St-Colombe-la-Sens.

(5) Province of Cholet-Bolbec.—Diocese of Bourges: Cholet-Bolbec, St-Benoît-du-Sault, St-Sulpice-de-Bourges, Vierzon.—Diocese of Cahors: Souillac.—Diocese of Clermont: Chaise-Dieu, Issoire, Mauriac, St-Allyre-de-Clermont.—Diocese of La Rochelle: Ste-Croix-sur-Sèvre, St-Vincent-de-Paul, Ste-Beauregard, Meymac, St-Angel, St-Augustin-de-Limoges, Solignac.—Diocese of Luçon: St-Michel-en-L’Herm.—Diocese of Lyons: Saigneville.—Diocese of Périgueux: Brantôme.—Diocese of Poitiers: Nouailhac, St-Cyprien-de-Poitiers, St-Jouin-de-Marnes, St-Léonard des Ferrières, St-Maixent, St-Savin.—Diocese of St-Flour: Chateauguay.—Diocese of Saintes: Bassac, St-Jean-d’Angely.

(6) Province of Gascogne.—Diocese of Agde: St-Tibéry.—Diocese of Agen: Eysses, St-Maurin, Ste-Livrade.—Diocese of Aire: La Reule, St-Pé-de-Génes, St-Savin, St-Séver-Cap-de-Gascogne.—Diocese of Alais: St-Pierre-de-Salève.—Diocese of Aumale: Montrouge, St-Avignonec-Rochefort, Ste-Andrée-de-Villeneuve.—Diocese of Bayonne-Montagne.—Diocese of Bordeaux: La Sauge-Majeure, Ste-Croix-de-Bordeaux.—Diocese of Carcassonne: Montolieu, Notre-Dame-de-la-Grave.—Diocese of Dax: St-Jean-de-Sordes.—Diocese of Grenoble: St-Robert-de-Cornillon.—Diocese of Lavaur: Sornèse.—Diocese of Leccé: St-Pierre-de-la-Breteille.—Diocese of Lodève: St-Guillaume-de-Durt.—Diocese of Mirepoix: Camon.—Diocese of Montpellier: St-Sauveur-d’Aniane.—Diocese of Narbonne: La Murguer, St-Pierre-de-Caunes.—Diocese of Nimes: St-Baisselle.—Diocese of St-Pons: St-Chinian.—Diocese of Toulouse: St-Marc-Garnier, Notre-Dame-de-la-Daurade.

The Superiors of the Congregation were:—Presidents: D. Martin Tesnière (1613-21), D. Columban Régnier (1621-24), D. Martin Tesnière (1624-27), D. Maur Dupont (1627-30).

The Procurateurs-General in Rome, who were all of importance in the history of the Congregation, were:—D. Placie Le Simon (1623-61); D. Gabriel Flambart (1665-72), D. Antoine Durban (1672-81), D. Camille Flammart (1681-84), D. Claude Estienne (1684-99), D. Bernard de Montfaucon (1699-1701), D. Guillaume Laparre (1701-11), D. Philippe Raier (1711-16), D. Charles Conrade (1716-25), D. Pierre Malet (1721-33). No successor to D. Malet was appointed.

MAURUS, Sulpicer. Writer on philosophy and theology. b. at Spoleto, 31 Dec., 1619; d. in Rome, 13 Jan., 1657. He entered the Society of Jesus, 21 April, 1636. After finishing his course of studies and preparing himself by teaching humanities at the College of Macerata, he held in the same place the chair of philosophy for three years, and subsequently in Rome for several years. Then he was promoted to the chair of theology at the Roman College, and remained in this position for a considerable number of years. For a period he was also rector of the latter institution. The mental endowment of Father Maurus was a brilliant combination of speculative and practical turn of mind. His doctrine was noted for its soundness and solidity; at the same time, he constantly put in practice St. Paul’s principle, “not to be more wise than it behoves to be wise, but to be wise unto sobriety”. Though he was a good philosopher and theologian, he was a better religious. Those well acquainted with him are convinced that he never lost his baptismal innocence. Neither his holiness nor his learning made him a disagreeable companion or an undesirable friend. It would be hard, therefore, he was more admired or loved by those who came into contact with him.

The following works of Father Maurus deserve mention: (1) "Questionum philosophicarum S. Vicentii Mauri, Soc. Jesu, in Collegio Romano Philosophiae Professoris". This work is divided into four books, and appeared at Rome in 1658. A second edition was issued in 1670. The latest edition, in three volumes, appeared at Le Mans, 1875-76. (2) "Aristotelis opera quae extant omnia, brevi paraphasii, ac litterae perspicuo inherente explanatione illustratae". The work appeared in six volumes. In this second volume, containing Aristotle’s moral philosophy, was added anew in 1696-98. The whole work was published again in Paris, 1855-57, by Fathers Ehrle, Fechlin, and Beringer; this edition formed part of the collection entitled "Bibliotheca Theolgete et Philosophiae Scholasticae". (3) "Opus theologicum ill. 6.," published at Rome, 1676-79; this edition contains all the principal theological treatises. (4) "Opus theologicum," published in three folio volumes at Rome, 1657, treats of all the main questions of theology accurately, concisely, and clearly. The first volume contains some information concerning the author, and also his picture engraved by Louis LeFant.

A. J. MAAR

MAURUS, Rabanus. See Rabanus.
applause. As a reward he received a benefice and appointment as royal preacher. At the General Synod of 1775 he fearlessly exposed the failings of the court bishops, and in 1784, preaching on St. Vincent of Paul, he denounced the ingratitude of France towards one of her most illustrious sons. If his name were preserved; the remainder were burnt by Maury himself—to save, as he said, his reputation. Nevertheless, it was owing to them that he obtained a seat in the Académie (1784). In 1789 he was elected by the clergy of Péronne to be their deputy in the States-General, and soon became the acknowledged leader of the Court and Church party. Mirabeau's name at once occurs whenever the National Assembly is mentioned. Little is heard of the Abbé Maury, who was the great tribune's most docty adversary, and who, though always defeated on the vote, was not seldom the conqueror in the debate. In September, 1791, the Assembly was dissolved, and Maury quitted France for Coblenz, the headquarters of the emigrants. Here he was received by the king's brothers with extraordinary attention. Pius VI invited him to reside in Rome, and created him Archbishop of Nicaea (April, 1792). Soon afterwards he represented the Holy See at the Diet of Frankfort, where Francis II was elected emperor. The royal and noble personages who thronged the palaces and streets in his honour. On his return he was made cardinal and Archbishop of Montefiascone. When the Republican armies overran Italy in 1798, Maury fled to Venice, and took a prominent part, as representative of Louis XVIII, in the circle at which Pius VII was elected (1800). He did his best to stop the drawing up of the Concordat and the organization of the French bishops, to support his royal master and returning to Paris. Just as he had given his whole energies to the royal cause, so now he devoted himself entirely to Napoleon. In the difficult question of the divorce he sided with the emperor, and it was he who suggested a means of dispensing with the papal institution of the bishops. He accepted from Napoleon in this way the See of Paris, though he never styled himself anything but archbishop-elect. At the fall of the Empire (April, 1814), he was ordered to quit France, and was suspended by the pope. During the Hundred Days he was confined in the Castle of St. Angelo. Consalvi obtained his release, and brought about his reconciliation with Pius VII. He was restored to his See, and invited him, and he was made a member of the Congregation of Bishops and Regulars. Maury did not live long to enjoy his restoration to papal favour. The hardships of his prison life had destroyed his constitution, and aggravated the malady from which he had long been suffering. Early in May, 1817, his strength had so failed that the Last Sacraments were administered to him. During the night of 10 May his attendants found him lying dead with his rosary still in his grasp.

Louis XVIII had obstinately refused all reconciliation, and now forbade his body to be buried in his titular church, Trinità dei Monti. By order of the pope the body was laid before the high altar of the Chiesa Nuova, by the side of Baronius and Tarugi. When Pius VII heard of his death he said: "He combated many faults, but who is there that has not done the like? I myself have committed many grave ones."

T. B. SCANNELL.

MAXENTIUS, Marcus Aurelius, Roman Emperor 306-12, son of the Emperor Maximianus Herculeus and son-in-law of the chief Emperor Galerius. After his father's abdication he lived in Rome as a private citizen; but when Galerius established in Rome and Italy the new poll and land taxes decreed by Diocletian he was elected (25 October, 306) rival emperor. Maxentius owed his elevation not to personal merit but to the senators and people who disliked the unusual measures of the emperor, feared lest they should lose their privileged position. Maxentius's adherents then summoned his father from Campania to Rome; and the young ruler invested him with the purple as co-regent. Thus the Roman empire had six rulers. Severus, the Augustus of the West, received a commission from Galerius to expel the youthful usurper from Rome; but when he reached the capital, part of his army deserted to their old commander, Maximian. Severus with a few followers escaped to Ravenna so as to maintain military relations with Galerius. He then made terms with Maximian and surrendered to him, expecting honourable treatment, but he was imprisoned and afterwards, and Galerius approaching from Illyria with an army, he was forced to commit suicide. Alberti at Galerius's intervention, Maximian on behalf of Maxentius,

519 and 520. These monks adopted the formula: "One of the Trinity suffered in the flesh" to exclude Nestorianism and Monophysitism, and they sought to have the works of Faustus of Riez condemned as being tainted with Pelagianism. On both these points they acted with opposition. John Maximian sent an appeal to the papal legates then at Constantinople (Ep. ad legatos sedis apostolicae, P. G., LXXVI, i, 75-86); but it failed to bring forth a favourable decision. Some of the monks (not Maximian, however) proceeded, therefore, to Rome to lay the case before Pope Hormisdas. As the latter delayed his decision, they addressed themselves to some African bishops, banished to Sardinia, and St. Fulgentius, answering in the name of these prelates, warmly endorsed their cause (Fulg. ep. xxvii in P. L., LXV, 451-93). Early in August, 520, the monks left Rome. Shortly after, 13 August, 520, Hormisdas addressed a letter to the African bishop, Possessor, then at Constantinople, in which he severely condemned the conduct of the Scythian monks, also declaring that the writings of Faustus were not received among the authoritative works of the Fathers and that the sound doctrine on grace was contained in the works of St. Augustine (Hormisdas ep. xxviii Thel, p. 928). Maximian assailed this letter in the strongest language as a document written by heretics and circulated under false names, and accused Hormisdas to Sardinia, and St. Fulgentius, answering in the name of these prelates, warmly endorsed their cause (Fulg. ep. xxvii in P. L., LXV, 451-93). This is the last trace of the Scythian monks and their leader in history. The identification of John Maximian with the priest John to whom Fulgentius addressed his "De veritate predestinationis etc." and with the priest and archimandrite, John, to whom the Archbishop of Carthage sent the "Epi wellassumed, on a baseless assumption. Maximian is also the author of: (1) two dialogues against the Nestorians; (2) twelve anathematisms against the Nestorians; (3) a treatise against the Aæphal (Monophysites). As to the "Profe de Christo", printed as a separate work, it is but a part of the "Epistola ad legatos sedis apostolicae". His works, originally written in Latin, have reached us in a rather unsatisfactory condition. They were first published by Cochleus (Basle and Hagenau, 1520), reprinted in P. G., LXXVI, i, 75-158.

MAXENTIUS, Joannes, leader of the so-called Scythian monks, appears in history at Constantinople.

W.
tius, negotiated with Constantine to whom he gave his
daughter Fausta as bride. Meanwhile Galerius with his
Illyrian legions pushed forward to the neighbour-
hood of the Christians in Italy and Africa, but finding
that he was unable to occu-
py it or any of the fortified places, he withdrew his
forces. At this suggestion a conference of all the
Caesars took place at Carnuntum on the Danube (307)
in which the prestige of Diocletian had great influence.
Maxentius retained his imperial dignity. Though
it is true that soon after this he put an end to the persecu-
tion of the Christians in Italy and Africa, his reign
was stained with acts of debauchery and cruelty.

After his father's death, Maxentius and Maximin,
Emperor of the East, fearing the political alliance
of Constantine and Licinius, came to an understanding
unfriendly to Constantine. Maxentius made exten-
sive military preparations, and destroyed the statues
and paintings of Constantine. 'Constantine advanced
over what is now Mont Cenis with a comparatively
small but well-drilled army and, victorious in several
battles, occupied Upper Italy; he then marched
against Rome, where his opponent, strongly en-
trenched behind the Tiber and the walls of Aurelian,
hoped to resist him successfully. Thoughtlessly
and imprudently, Maxentius, in an attempt to
outmanoeuvre Constantine, moved his army from a
convenient position, made a bridge of boats across the
Tiber (near the Milvian Bridge now Ponte Molle),
and awaited the troops of Constantine on the right bank
of the river. It was then that occurred the miracle
related by Eusebius (Vita Constant. I, 28-30), that when
Constantine implored supernatural aid, a fiery cross
appeared over the camp, and Constantine, in a
solitary cell, witnessed the phenomenon. To this sig-

Further, he was advised by
Christ, in a dream the previous night, to go into
battle armed with this sign. Maxentius' soldiers
were thrown into confusion by the impetuosity of the
Gallic horsemen, and in the efforts of the retreating
army to escape over the narrow bridge, many were
thrown into the Tiber, and drowned, among those
were
Maxentius (28 October, 312). His son and coun-
celors were put to death, but his officials and depen-
dents retained their positions.

KARL HOEBER.

MAXFIELD, (vorne MACKESFIELD), THOMAS, VENER-
ABLE, English priest and martyr; b. in Stafford gaol,
about 1590, martyred at Tyburn, London, Monday,
1 July, 1616. He was one of the younger sons of
William Mackesfield of Chesterton and Maer and As-
ton, Staffordshire (a firm recusant, condemned to
death in 1597). Being a harbouring priest, one of whom
was his father, he received from his father's sister, the
Hon. Ursula, daughter of Francis Roos, of Laxon, Nottinghamshire. William
Mackesfield is said to have died in prison and is one of the
protomartyrs as William Maxfield; but, as his death
occurred in 1608, this is doubtful. Thomas arrived at
the English College at Douai on 16 March, 1602-3, but
had to return to England 17 May, 1610, owing to ill
health. On 9 June he was ordained priest, and
in the next year came to London.
Within three months of landing he was arrested, and
sent to the Gatehouse, Westminster. After about
eight months' imprisonment, he tried to escape by a
rope let down from the window in his cell, but was
captured on reaching the ground. This was at mid-
night 14-15 June, 1616. For seventy hours he was
placed in the stocks in a filthy dungeon at the Gate-
house, and was then on Monday night (17 June) re-
moved to Newgate, where he was set amongst the
worst criminals, two of whom he converted. On
Wednesday, 26 June, he was brought to the bar at the
Old Bailey, and the next day was executed. He
was beheaded under 27 Ec. 1, 2. The Spanish
ambassador did his best to obtain a pardon, or at least
a reprieve; but, finding his efforts unavailing, had
solemn exposition of the Blessed Sacrament in his
chapel during the martyr's last night on earth. The
procession to Tyburn early on the following morning
was joined by many devout Spaniards, who, in spite of
the threats of the sheriffs, insisted on offering a gar-
ment for the honour for the martyr. Tyburn-tree itself
was found decorated with garlands, and the ground round
about strewn with sweet herbs. The sheriff ordered
the martyr to be cut down alive, but popular feeling
was too strong, and the dismembering did not take
place till he was quite senseless. Half of his relics are
now in St. Mary's, Duras, in France, the other halves
are in miraculous shrines in the churches of

land and Wales (London, 1887), 298; The William Salt Archae-
ological Society's Correspondence for 1817-1900, II, iii, v, vi, 207; new series, v, 128; XII, 248.

JOHN B. WAINWRIGHT.

MAXIMIANopolis, a titular see of Palestina Secunda.
suffragan of Scythopolis. Its ancient name, Adad-
Rammon, according to the Vulgate (according to the
Hebrew, Haddad-Rimon) is found in Zach., xi, 11:
"... there shall be a great lamentation in Jerusalem
like the lamentation of Adadrammon in the plain of
Mageddon," an allusion to the death of Josias, King of
Judah, whom, killed by the king of Babylon, he fought near this place (IV Kings, xxxii, 29; II Par.
xxxv, 20-25). In the time of the so-called "Pilgrim of
Bordeaux" (ed. Geyer, 19, 27) and of St. Jerome
(Comment. in Zach. , ad cap. xii, 11; Comment. in Os. , 5), Adad-Rammon already bore the name of
Maximinopolis. Three of its ancient bishops are
known: Paul, in 325 (Gælag. "Patrum Nicæensium
nomina", lxi)—not Maximus, as Le Quien gives it in
"Oriens Christianus", III, 703; Megas, in 518, and
Domnus, in 536 (Le Quien, op. cit., 708-06). Maximi-

now has resumed its ancient name of Rimmom, and
is now the almost deserted little village of Roum-
manch, nearly four miles to the south of Ledjum, or
Maleo (see LEGIO).

S. VAILHÉ.

MAXIMIANUS, MARCUS AURELIUS VALERIUS, sur-
named HERCULIUS, Roman Emperor, was adopted
by Diocletian and named his co-regent in 285, because
by this division of the sovereignty the danger of the war-
ners' mutiny, the ambitious efforts of the usurpers,
and the attacks of foreign enemies seemed to be pre-
vented. The son of a simple peasant, he possessed only
very little education; he was violent and brutal, but
was a brave fighter. For this reason, when Diocletian
was struggling with the Persians in Asia, Maximianus
was entrusted with the leadership of the punitive expedition
against the peasants and field slaves (Bagaudas) in
Gaul who, driven by economical causes, had risen
against Diocletian. The new emperor soon restored
peace, and received from Diocletian, in token of the
latter's gratitude, the title of Augustus on 1 April, 286.
However, only the administration of the empire was
divided; the sovereignty remained centralized now as
ever, and the will of the emperor-in-chief, Diocletian,
was absolute. While Maximianus, having established
his residence in Aquileia (II, 11-13), was spending
his days with the Burgundians and the Alamanni, who
had crossed the frontier and the Rhine, he found many ob-
stacles in repulsing the Menapian pirate chief Carau-
Sius. Originally commander-in-chief of the Roman
Maximilian had pursued and conquered the pirates of the German ocean; then, driven by greed and ambition, he had forced Britain to do homage to him, and seized the whole trade in Gaul and Britain. In 1286 he even appropriated the title of Augustus, and caused coins to be struck which bore his own portrait. Even Diocletian, by a compromise in 290, was forced to recognize Carausius as the legal emperor, while the latter agreed to supply Diocletian with corn, as had been the custom.

As Diocletian left Syria to enter the countries of the Lower Danube, he met Maximianus, and both the emperors crossed the Alps in the beginning of 291 in order to attend a conference at Milan, there to discuss the better administration of the empire and the improvement of the state. Instead of conferring the titles of Caesar on his sons, Constantius and Galerius were proclaimed Caesars 1 March, 293; the first was forced to marry the stepdaughter of Maximianus, Theodora, after the exile of his mother Helena. Maximianus now took charge of the administration of Italy, Africa, and Spain. His residence was Milan, where he was surrounded by 6000 Illyrian picked troops, called Hercules. Constantius on his part was now successful in his struggle with Carausius. The war came quickly to an end, as Carausius was assassinated by Allectus, prefect of his guard, in 293. Constantius then reunited Britain with the Roman Empire, while Maximianus gave the Gauls occasion to assure their Teutons on the Upper Rhine. When Constantius had returned from Britain, Maximianus went in 297 to Africa, where he successfully made war upon rebellious tribes of the Moors, and sent a great many captives into the other provinces. In 302 he celebrated a great triumph with Diocletian in Rome; seventeen times he held the sword of the emperor. The possession of the Christians, which Diocletian had conducted with reckless brutality in the East since 303, was also taken up by Maximianus in the western provinces, of which he was governor.

It is said that during these persecutions—it is impossible to state the time correctly—the Christian soldiers of the Theban legion also suffered martyrdom in Agaunum (St-Maurice, Canton of Valais, Switzerland) in the then Diocese of Octodurum. The Christian soldiers of this legion refused to execute his orders when Maximianus, on a march over what is now the Great St. Bernard, commanded them to punish the Christians living in these districts; for this refusal the legate threatened them with the sword, and warned the survivors held out to the last, all the soldiers were massacred by order of the emperor. Because Rome was degraded by Diocletian more and more to the position of a provincial town, and because Galerius’s new and hard system of taxes was to be extended also to Italy and to Rome, the senators and the pretorians proclaimed the Caesar M. Aurelius Maximianus, the son of Maximianus; the latter laid down the purple at Milan. But the new emperor proved to be incapable of governing, and Maximianus, who was popular with the army, was recalled to restore order for the new Augustus. His he did not accomplish, and the old Diocletian, living as a private person in Salona, called a meeting of all the members of the dynasty at Carnuntum for the end of the year 307. Maximianus had to renounce the purple for the second time. He now went to Gaul, and gave his youngest daughter Fausta in marriage to Constantine. As his hope to regain his former imperial dignity failed here also, he returned to his son Maxentius in Italy. Reunited by the latter and all the members of the dynasty at Carnuntum he departed once more for Gaul and donned the imperial purple for the third time. When the news of Constantine’s approach reached his own soldiers, they surrendered him to his rival and opponent at Marsilia. Although Constantine in his generosity pardoned him, he returned to the forging of nefarious schemes against his son-in-law, and finally was compelled to take his own life in 310.

Karl Houbemer.

Maximilian, the name of several martyrs. (1) Maximilian of Antioch, a soldier, martyred at Antioch, Jan. 353, with Bonoetus, a fellow soldier, of the Herculean cohort; they were standard-bearers, and refused to remove the chrismion (monogram of Christ) from the standard, as had been ordered by Julian. Count Julian, beside of the emperor, commanded them to replace the chrismion with images of idols, and, upon their refusal, had them tortured and beheaded. The Roman martyrology and most other calendars mention them on 21 August, while in a few martyrologies and in the heading which is prefixed to their Acts, 21 Sept. (XII Kal. Oct.) is designated as the day of their martyrdom. Both dates are wrong, as is evident from the Acts of the two martyrs, which represent Count Julian as inflected with an ugly disease, contracted at the martyrdom of St. Theodoret 23 Oct., 362. (2) Maximilian of Celeia.—His Acts, composed in the thirteenth century and unreliable, say he was b. at Celeia (Cilli, Styria), made a pilgrimage to Rome, went as missionary to Noricum, and here was the bishop of Laureacum (Lorch, near Passau), and suffered martyrdom under Numerianus (283–4). It is historically certain that Maximilian was a missionary in Noricum during the latter half of the third century, founded the church of Lorch, and suffered martyrdom. His cult dates at least from the eighth century. In that century St. Rupertus founded a church at Bischofshofen, and brought his relics thither. They were transferred to Passau in 985. His feast is celebrated 12 Oct., at some places 29 Oct. (3) Maximilian of Thebeste, martyred at Thebeste near Carthage, 12 March, 295. Thinking a Christian was not permitted to be a soldier, he refused to enter the army and was beheaded. Since death was not then the legal punishment for those who refused to join the army (Arrius Menander, Digesto XLIX, xvi, 4 P. 10), it is probable that he was beheaded because he gave his Christianity as the reason of his refusal. He was buried at Carthage by the noble matron Pompejana. Dods, A. 258, 438; A. 39, 403, 429; Ambrosio, (Ratibon, 1589), 606–12; Lecjesc, Les Martyrs I, III (Paris, 1904), 100–4; Tillotson, Menes pour servir à l’État, col. 107–8; Denis pour servir à l’État, col. 100–3; Lecjesc, Les Martyrs II, (Paris, 1904), 105–105; Harnack, Mélites (Tubingen, 1895), 114; Ruhnau, Acta Martyrum (Ratibon, 1589), 340–2, Fr. tr, Lecjesc, Les Martyrs II, (Paris, 1905), 182–5.

Michael Ott.

Maximilian I, Duke of Bavaria, 1598–1622, Elector of Bavaria and Lord High Steward of the Holy Roman Empire, 1623–1651; b. at Munich, 17 April, 1573; d. at Ingolstadt, 27 September, 1651. The last being in the country and the Catholic Church justified the dogma of the Incarnation of the Holy. He was the son of zealous Catholic parents, William V, the Pious, of Bavaria, and Renate of Lorena. Mentally well endowed, Maximilian received a strict Catholic training from private tutors and later (1587–91) studied law, history, and mathematics at the University of Ingolstadt. He further increased his knowledge by visits to Italy, Greece, and Naples, and to places of pilgrimage including Rome, Loretto, and Einsiedeln. Thus equipped Maximilian assumed (15 Oct., 1597) the government of the small, thinly populated country at his father’s wish during the latter’s lifetime. Owing to the over-learned rule of
the two preceding rulers the land was burdened with a heavy debt. By curtailing expenditure and enlarging the revenues, chiefly by working the salt-mines himself and by increasing the taxes without regard to the complaints of the powerless estates, the finances were not only brought into a better condition but it was also possible to collect a reserve fund which, in spite of the necessity of supplying the troops during the difficult times of his reign, was never quite exhausted. At the same time internal order was maintained by a series of laws issued in 1616. Maximilian gave great attention to military matters. No other German prince of that time possessed an army so well organized and equipped. Its commander was the veteran soldier from the Netherlands, Johann Tilly, Count of Tilly, who, austere himself, knew how to maintain discipline among his troops. The fortifications at Ingolstadt on the Danube were greatly strengthened, and Munich and other towns were surrounded by walls and moats. Well-filled arsenals were established in different places as preparation for time of need. Opportunity for the use of this armament soon offered itself.

The small free city of Donauwörth fell under the imperial ban for violating the religious peace. In executing the imperial decree Maximilian not only succeeded in bringing this city into submission to Bavaria but also in re-establishing the Catholic Church as the one and only religion in it. This led to the forming (1609) of the Protestant Union, an offensive and defensive confederation of Protestant princes, in opposition to which arose in 1609 the Catholic League organized by Maximilian. Oddly enough, both coalitions were headed by princes of the Wittelsbach line: Maximilian as head of the League, Frederick IV of the Palatinate, of the Union. The Thirty Years' War, during which Bavaria suffered terribly, broke out in 1619. Under Tilly's leadership the Bohemian revolt was crushed at the battle of the White Mountain (Weissen Berg) near Prague, 8 November, 1620, and the newly elected King of Bohemia, Frederick V, fled to flee. His allies, the Margrave of Baden and the Duke of Brunswick, were defeated by the forces of Bavaria and the Upper Palatinate, in the Leukfeld (1622), as was also at a later date (1626) King Christian of Denmark. Conditions, however, changed when Maximilian, through jealousy of the House of Haps- burgh, was led in 1630 to seek the dismissal of the head of the imperial army, Wallenstein. The youthful Swedish king, Gustavus Adolphus, defeated Tilly, the veteran leader of the army of the League, at Breitenfeld (1631), and in a battle with Gustavus Adolphus near the Lech, 16 April, 1632, Tilly was again vanquished, receiving a wound from which he died two weeks later at Ingolstadt. Although the siege of this city by the Swedes was unsuccessful, Gustavus plundered the Bavarian towns and villages, laid waste the country around Munich.

Maximilian, who since 1623 had been both Elector and ruler of the Upper Palatinate, implored Wallenstein, now once more the head of the imperial forces, for help in vain until he agreed to place himself and his army under Wallenstein's command. The united forces under Wallenstein took up an entrenched posi-

Maximilian, who since 1623 had been both Elector and ruler of the Upper Palatinate, implored Wallenstein, now once more the head of the imperial forces, for help in vain until he agreed to place himself and his army under Wallenstein's command. The united forces under Wallenstein took up an entrenched posi-tion near Nuremberg where Wallenstein repulsed the Swedish attacks; by advancing towards Saxony he even forced them to evacuate Maximilian's territories. The relief to Bavaria, however, was not of long duration. After the death of Gustavus Adolphus at the battle of Lützen (1632) Bernhard of Weimar, unmo-
ested by Wallenstein, ravaged Bavaria until he re-

received a crushing defeat at the field of Nördlingen (6 Sept., 1634). Even in the last ten years of the war the country was not spared from hostile attacks. Consequently Maximilian sought by means of a truce with the enemy (1647) to gain for Bavaria an opportu-

ity to recover. The desired result, however, not being attained, he united his forces to those of the imperial army, but the all-out effort of Nördlingen to overthrow the confederated French and Swedes, and Bavaria once more suffered all the terrors of a pitiless invasion. The fighting ended with the capture of the Swedish generals, 6 Oct., 1648, and the Peace of Westphalia was signed at Munster, 24 Oct. of the same year. The material benefits derived by Maximilian from his attitude in politics were meagre: the Electoral digni-

MAXIMILIAN of Bavaria

Maximilian I of Bavaria

buried in the church of St. Michael at Munich. A fine equestrian statue, designed by Thorwaldsen and cast by Stiglmayer, was erected at Munich by King Louis I in 1839.

Although there was almost incessant war during his reign, and Bavaria in the middle of the seventeenth century was like a desert, nevertheless Maximilian did much for the arts, e.g. by building the palace, the Mariensäule (Mary's Column). Learning also, especially at the University of Ingolstadt, had in this era distinguished representatives. The Jesuit Balde was a brilliant writer both of Latin and German verse, and Father Scheiner, another member of the same order, was the first to discover the spots on the sun; historians also, such as Heinrich Canisius, Matthäus Rader, etc., produced important works of lasting merit.

Maximilian, however, gave far more attention to the advancement of religion among the people than to art and learning. He founded five Jesuit colleges: Amberg, Burghausen, Landshut, Mindelheim, and Straubing. Besides establishing a monastery for the Minims and one for the Carmelites at Munich, he founded nine monasteries for Franciscans and fourteen for Capuchins who venerate him as one of their greatest benefactors. He also founded at Munich a home for aged and infirm Court officials, and gave 30,000 guilders for the Chinese missions, as well as large sums to the Scotch-English college of the Jesuits at Liège.
His private charities among the poor and needy of all descriptions were unlimited. Maximiilill was also sincerely religious and rigidly moral in conduct; he even went beyond the permissible in his efforts to uphold and spread the faith. Maintaining like all princes of his time the axiom "Cujus regio ejus religio", he not only put down every movement in opposition to the Church in his own country but also exterminated Calvinists. Luther was his bitterest and most bitterest rival in the territory he had acquired. Where admonition and instruction were not sufficient the soldier stepped in, and the poor people, who had already been obliged to change their faith several times with change of ruler, had now no choice but return to the Church or exile. Maximilian, in addition, never lost sight of secular advantage, as shown by his numerous acquisitions of territory. Especially valuable was the purchase of two-thirds of the countship of Helfenstein, now a part of Württemberg, which as a Bavarian dependence was preserved to the Church and has remained Catholic up to the present time, notwithstanding its Protestant surroundings. Maximilian was twice married. His first marriage was childless. By his second wife Maria, daughter of the Emperor Ferdinand II, whom he married 15 July, 1635, he had two sons; the elder of these, Ferdinand Maria, as already mentioned, succeeded him.

Maximinus, Saint, Bishop of Trier, b. at Silly near Poitiers, d. there, 29 May, 352 or 12 Sept., 349. He was educated and ordained priest by St. Agrarius, whom he succeeded as Bishop of Trier in 332 or 335. At that time Trier was the government seat of the Western Emperor and, by force of his office, Maximinus stood in close relation with the Emperors Constantine II and Constans. He was a strenuous defender of the orthodox faith against Arianism and an intimate friend of St. Athanasius, whom he harboured as an honoured guest during his exile of two years and four months (353-355) at Trier. He likewise shared with him honours the banished patriarch Paul of Constantinople in 341 and effected his recall to Constantinople. When four Arian bishops came from Antioch to Trier in 342 with the purpose of receiving Maximinus in order to induce the emperor to reject their proposals. In conjunction with Pope Julius I and Bishop Hosius of Cordova, he persuaded the Emperor Constans to convene the Synod of Sardica in 343 and probably took part in it. That the Arians considered himself as one of their chief opponents is evident from the fact that they condemned him by name along with Pope Julius I and Hosius of Cordova at their heretical synod of Philippopolis in 343 (Mansi, „Sacrorum Conc. nova et ampl. Col.„, III, 136 sqq.). In 345 he took part in the Synod of Milan and is said to have presided over a synod held at Cologne in 346, where Bishop Euphrates of Cologne was deposéd on account of his leanings towards Arianism. [Concerning the authenticity of the Acts of this synod see the new French translation of Hefele's „Conc. Presbyter. et Conc. Antiqu. I“ (1906), p. 330-340.] He also sent Sts. Castor and Lucubius as missionaries to the valleys of the Mosel and the Lahn. It is doubtful whether the Maximinus whom the usurper Magnenius set as legate to Constantinople in the interests of peace is identical with the Bishop of Trier (Athanasius, „Apol. ad Const. Imp.„, 9). His cult began right after his death. His feast is celebrated on 29 May, and once a day his name still occurs in the Martyrology of St. Jerome, St. Bede, St. Ado, and others. Trier honours him as its patron. In the autumn of 353 his body was buried in the church of St. John near Trier, where in the seventh century was founded the famous Benedictine Abbey of St. Maximinus, which flourished till 1803.

Maximianus, Caius Valerius Daja, under his uncle Augustus Galerius, the Caesar of Syria and Egypt, from the year 305; in 307 following the example of Constantine, he assumed the title of Augustus. When Galerius died in 311, the Caesar, Licinius, set out for the Hellespont to besiege the provinces of the Near East. Maximinus obtained the sympathy of the population by granting indulgence to all Christians who would return to the threatened provinces; also, he had in his power Galerius' widow and Valeria, Diocletian's daughter. An agreement was made fixing the Ægean Sea and the straits between Europe and Asia as the boundaries of the dominions and as no new Caesars were appointed, there were three legal emperors. Thus Diocletian's plan of governing the empire was abandoned. Maximinus, a fanatical idolater and tyrant, continued the persecution of the Christians in his part of the empire with especial severity and persistency, even where the cruel Galerius had ceased. Besides sanguinary measures for the suppression of Christianity, he made attempts to establish in both Roman and country a heathen or Catholic Church. The emperor made the then high-priests and magicians of equal rank with the governors of provinces. His attempt to achieve renown by a war against the Persians in Armenia was frustrated by pestilence and bad harvests (Eusebius). When Constantine and Licinius published the edict of toleration for the Christians at Milan in 312, Maximinus was asked to promulgate it in his part of the empire, he did so, because he saw clearly that it was directed against his anti-Christian policy. When in the winter of 312 Constantine's Gallic troops were withdrawn from Italy, and Licinius was still at Milan, Maximinus pushed on his well armed marches towards the capital, Byzantium, and captured it together with his brother, who was at the court of Maximus. His news was taken by surprise, offered to make terms with him, which Maximinus trusting to gain an easy victory refused. Contrary to his expectation, and in spite of the superiority in numbers of his troops, he was defeated near Adrianople, 30 April, 313, and fled precipitately to Nicomedia there to endear himself to his army. Licinius harassing him incessantly, published an edict of toleration for the Christians of Nicomedia so that Maximinus was obliged to withdraw to the Taurus where he entrenched himself in the passes. He then tried to win the Christians by issuing an edict of toleration; but his military situation was hopeless and he took poison (313). Licinius exterminated the Jovian family, murdering all the relatives who were at the court of Maximus. The edicts of the deceased emperor were cancelled, and decrees favourable to the Christians were now promulgated in the East.

Maximinus Thrax, Caius Julius Verus, Roman Emperor 235-8, son of a Goth and an Albanic mother. When the Emperor Septimius Severus was returning
through Thrace in 202, Maximinus, a shepherd of enormous stature and strength, distinguished himself in a contest with the soldiers by such Herculean strength and bravery that the emperor enrolled him in the Roman body-guard. Refusing to serve under the worthless emperors, Macrinus and Heliogabalus, he withdrew from the army; but under the righteous Alexander Severus he was entrusted with the command of the newly raised Pannonian troops. Desiring a real warrior at their head instead of the youthful and timid Alexander, who was entirely subject to his mother Julia Mamaea, invested him with the purple at Mainz, in March, 235, at the same time proclaiming his son Maximus co-regent. The adherents of the former Syrian dynasty and of the senate tried unavailing to stop Maximinus. They were successful when Maximinus took the field with great energy and persistence against the Germans across the Rhine, regained the district of the Agricolae and then waged successful war against the Sarmatians and the Dacians on the Danube. Assuming the names of Germanicus and Sarmaticus, he proceeded with sentences of death and confiscation against the patrician Romans, who disliked him as a wild and uncultured barbarian; on the other hand he distributed the State revenues among the soldiers who were devoted to him. He had the bronze statues of the gods and their treasures melted down and coined; he plundered cities and temples, and caused so much confusion that a rebellion broke out in Pannonia, 238, among the partisans in Africa. The procurator and the octogenarian consul at Carthage were killed.

M. Antonius Gordianus and his son of the same name, were made co-regent emperors. The Roman senate willingly recognised them, because they promised, like the Antonines in former times, to forego most of the decisions; the people despairing Maximinus, who had never once set foot in the capital of the empire, agreed with the senate. Maximinus was outlawed, and his death was rumoured, but he sent Capellianus, Procurator of Numidia, against the adherents of the Gordiani, and in the struggle, the younger Gordian lost his life whereupon the senior handed himself in despair. Their reign had lasted little more than a month. The senate now decided to elect two emperors with equal authority, M. Clodius Pupienus Maximinus who was to exercise the military power de facto, and Decimus Ceilius Balbinus who was to direct the civil government in the capital. The Roman senate, intricately involved with this plan, had expected great advantages from the rule of the African emperors, raised to the rank of Caesars the elder Gordian’s twelve year old grandson (afterwards Gordian III), then residing in Rome. Severe street fighting occurred in Rome between the veterans of Maximinus and the people. Owing to scanty commissariat Maximinus could only move his troops slowly from Pannonia. Meanwhile the senate levied troops, constructed arsenals, and by creating twenty military districts, placed Italy in a satisfactory defensive position. When Maximinus arrived in Upper Italy, he could not at once cross the Isonzo on account of the floods and his attacks on the stronghold of Aquileia were repulsed. Under the foolish impression that his officers were the cause of his misfortunes, he had several of them executed, thereby arousing discontent among the soldiers, especially in the Second Parthian Legion whose wives and children were in the power of the Roman Senate at Albano. A mutiny suddenly occurring, Maximin and his son were murdered. Persecutions followed from Rome, who sentenced the troops liberally and administered to them the oath of fidelity on behalf of the three senator emperors resident in Rome.

Maximins, a titular see of Arabia, suffragan of Bostra. The true name of the city is Maximinoplis, and it so appears in the “Notitia episcopatum” of the Patriarch Anastasius in the sixth century (“Echos d’Orient”, X, Paris, 1907, 145). Pursuant to a decree of the Propaganda (1885), the title is to be suppressed in future; Torquato Armellini having confounded this town with Maximinoplis in Palestina Secunda (Catalogo dei vas. Istitut. Libr., Rome 1930, p. 203, index 5). Its last titular was consecrated in 1876. Two ancient bishops of this see are known: Severus, a signatory of the Council of Chalcedon in 451 (Mansi, “Coll. Conc.”, VII, 168), and Peter, known by an inscription (Waddington, “Inscriptions grecques et latines de Grèce et l’Asie-Mineure”, no. 2361). The name which has been supposed that of Maximinoplis is not known, and we are equally ignorant of its actual identification, though many authorities place it at Sheikh-Miskin, a locality in the Hauran, famous for the extent and beauty of its ruins, where an inscription has been found bearing the name of Bishop Thomas (“Bulleten de corresp. hellénique,” Paris, 1897, 52).

Maximus of Constantinople, Saint, known as the Theologian and as Maximus Confessor, b. at Constantinople about 580; d. in exile 13 August, 662. He is one of the chief names in the Monothelite controversy, one of the chief doctors of the theology of the Incarnation and of ascetic mysticism, and remarkable as a witness to the respect for the Church in his day. This great man was of a noble family of Constantinople. He became first secretary to the Emperor Heraclius, who prized him much; but he quitted the world and gave himself up to contemplation in a monastery at Chrysopolis, opposite Constantinople. He became abbot there; but seems to have left this retreat on account of its insularity from hostile attacks. He speaks of the Palestinian ascetic, St. Sophronius, afterwards Patriarch of Jerusalem, as his master, father, and teacher (Ep. 13), so that he probably passed some time with him, and he was with him in Africa with other monks during the preparations which issued in the “watery union” by which Cyrus the Patriarch reconciled a number of Monophysites to the Church by rejecting the doctrine of “two operations” in Christ (see Monothelitism). The first action of St. Maximus that we know of in this affair is a letter sent by him to Pyrrhus, then an abbot at Chry- sopolis, a friend and supporter of Sergius, Patriarch of Constantinople, the patron of the Monothelite expression of Monophysite. The two operations undertook a long voyage on the monks who carried it. St. Maximus was perhaps already in Africa when he wrote it. Pyrrhus had published a work on the Incarnation, for which St. Maximus gives him rather fulsome praise, as an introduction to the question (which he puts with much difference and many excuses) what Pyrrhus means by the hypostasis of the Person of Christ. Maximus is clearly anxious to get him to withdraw or explain the mistaken expression, without exasperating him by contradiction.

The Ectesis of Heraclius was published in 638, and Sergius and Pope Honorius both died in that year. A letter of Maximus tells us on the authority of his friends at Constantinople, that the Roman synod, who had come thither to obtain the emperor’s confirmation for the newly elected Pope Severinus, were met by the clergy of Constantinople with the demand that they should promise to obtain the pope’s signature to the Ectesis, otherwise they should receive no assistance in the matter for which they had made so long a journey. “Having discovered this movement, since by refusing they would have caused the first and Mother of Churches, and the city, to remain so long a time in widowhood, they replied quietly: We cannot act with authority in this matter, for we have received a commission to execute, not an order to
make a profession of faith. But we assure you that we will relate all that you have put forward, and we will show the document itself to him who is to be consecrated, and if he should judge it to be correct, we will ask him to append his signature to it. But do not therefore place any obstacle in our way now, or do violence to us by delaying us and keeping us here. For none has a right to use violence especially when faith is in question. For herein even the weakest waxes mighty and the meek becomes a warrior, and by combating his soul with the Divine Word, is hardened against the greatest attack. How much more in the case of the clergy and Church of the Romans, which from of old until now, as the elder of all the Churches under the sun, presides over all? Having surely received and preserved the light of the True Light as given to the Apostles, as from the princes of the latter, and being numbered in their company, she is subject to no writings or issues of synodical documents, on account of the eminence of her pontificate, even as in all these things they are all equally subject to her according to ecclesiastical law. And so when without fear but with all holy and becoming confidence, those ministers of the truly firm and immovable rock, that is, of the most great and Apostolic Church at Rome, had so replied to the clergy of the royal city, they were seen to have conciliated them and to have acted prudently, that the others might be humble and modest, while they made known the orthodoxy and purity of their own faith from the foundation of the Church. But the clergy of Rome, admiring their piety, thought that such a deed ought to be recompensed; and ceasing from urging the document on them, they promised by their diligence to procure the issue of the emperor's order with regard to the episcopal election. . . . Of the aforesaid document a copy has been sent to me also. They have explained in it that the universa fidei, or universal faith, in Christians our God, that is, in His natures, of which and in which He is believed to be; and how in future neither one nor two are to be mentioned. It is only to be allowed to confess that the divine and human (works) proceeded from the same Word of God incarnate, and are to be attributed to one and the same (person). This passage does not call the prohibition of "two operations" yet by the name of heresy, and does not mention the "one Will" confessed in the Euthemia. But it gives very clearly St. Maximus's view that the smallest point of faith is to be held at the risk of one's life, and it demonstrates the ample admission made at Constantinople, before the struggles began, of the Holy Roman Church.

When in 641 John IV wrote his defence of Pope Honorius, it was re-echoed by St. Maximus in a letter to Marinus, a priest of Cyprus. He declares that Honorius, when he confessed one will of our Lord, only meant to deny that Christ had a will of the flesh, of concupiscence, since He was made and born without sin. Maximus appeals to the writings of Abbot John Symposion, who wrote the letter for Honorius. Pyrrhus was now Sergius's successor, but on the accession of the Emperor Constans in 642 he was exiled. Maximus then sent a letter to the patrician Peter, apparently the Governor of Syria and Palestine, who had written to him concerning Pyrrhus, whom he now calls simply abbot. Pyrrhus, in his letter to Peter, had restrained him from putting forward his heretical views. Pyrrhus had declared that he was ready to satisfy Maximus as to his orthodoxy. The latter says he would have written to Peter before, "but I was afraid of being thought to transgress the holy laws, if I were to do this without knowing the will of the holy fathers; I wish therefore to write to the whole plentitude of the Catholic Church, and rule it with order according to the divine law." The new Euthymology is worse than the old heresies; Pyrrhus and his predecessor have accused Sophronius of error; they persuaded Heraclius to give his name to the Euthemist: "they have not conformed to the sense of the Apostolic see, and what is laughable, or rather lamentable, as proving their ignorance, they have not hesitated to lie against the Apostolic see itself. . . . but have claimed the great Honorius on their side. . . . What did the divine Honorius do, and after him the aged Severinus, and John who followed him? Yet further, what supplication has the blessed pope, who now sits, not made? Have not the whole East and West brought their tears, lamentations, obsequiations, deprecation, both before God in prayer and before men in their letters? If the Roman see recognizes Pyrrhus to be not only a reprobab but a heretic, it is certainly plain that everyone who anathematizes those who have rejected Pyrrhus, anathematizes the see of Rome, that is, he anathematizes the Catholic see. We hardly add that he excommunicates himself also, if indeed he be in communion with the Roman see and the Church of God. . . . It is not right that one who has been condemned and cast out by the Apostolic see of the city of Rome for his wrong opinions should be named with any kind of honour, until he be received by her, having returned to her, and to our Lord—by a pious confession and orthodox faith, by which he can receive holiness and the title of holy. . . . Let him hasten before all things to satisfy the Roman see, for if it is satisfied all will agree in calling him pious and orthodox. For he only speaks in vain who thinks he ought to persuade or entrap persons like myself, and does not satisfy, and in the Catholic see, the most holy Church of the Romans, that is, the Apostolic see, which from the incarnate Son of God Himself, and also by all holy synods, according to the holy canons and definitions, has received universal and supreme dominion, authority and power of binding and loosing over all the holy Churches of God which are in the whole world; in which dominion is the power of the celestial powers binds and looses in heaven also. For if he thinks he must satisfy others, and fails to implore the most blessed Roman pope, he is acting like a man who, when accused of murder or some other crime, does not hasten to prove his innocence to the judge appointed by the law, but only uselessly and without profit does his best to demonstrate his innocence to private individuals, who have no power to acquit him."

Pyrrhus thought he might regain his see by the help of the pope. He came to Africa, and in July, 645, a public disputation took place between him and Maximus, in the presence of the Governor of Cyrene, and a certain George in the MSS. of St. Maximus's works, as a friend and correspondent of the saint. The minutes are interesting. Pyrrhus argues that two wills must imply two Persons willing; Maximus replies that in that case there must be three wills in the Holy Trinity. He shows that the will belongs to the Nature, and distinguishes between will as a fact and will as the act of the will. Pyrrhus then admits two wills, on the account of the two natures, but adds that we should also confess one will on account of the perfect union. Maximus replies that this would lead us to confess one nature on account of the perfect union. He then cites many passages of Scripture for two wills and two operations. Pyrrhus puts forward Honorius and Vigilius. Maximus defends the former from the charge of teaching two wills, and denies that the latter ever received the letter of Mennas, the authenticity of which is assumed. He complains of the changeableness of Sergius. Lastly the famous "new theandric operation" of the Pseudo-Dionysius is discussed, and is explained and defended by St. Maximus. Pyrrhus gives in, and embarks to go to Rome, where in fact he condemned his former teaching, and was reconciled to the Church by the pope. But the revolt of Gregory, who made himself emperor in Africa, but was defeated in 647, brought Maximus into disfavour at court, and destroyed the hope of restoring Pyrrhus as
orthodox patriarch. After the Ecstasy had been withdrawn, and the Type, Tyros, substituted by the Emperor Constantine, St. Maximus was present at the great council held by St. Method at his instance in 649. He wrote from Rome (where he stayed some years): "The extremities of the earth, and all in every part of it who purely and rightly confess the Lord, look directly towards the most holy Roman Church and its confession and faith, as it were to a sun of un-failing light, awaiting from it the bright radiance of the sacred dogma of our Saviour, the gates of hell do never prevail against it, that it has the keys of a right confession and faith in Him, that it opens the true and only religion to such as approach with piety, and shuts up and locks every heretical mouth that speaks injustice against the Most High.

Maximus was dragged from Rome in 653, and died of ill treatment at Inkerman in March, 655. It was probably later in that year that an official named Gregory came to Rome to get Pope Eugene to receive the Type. He came to the cell of St. Maximus, who argued with him and denounced the Type. As the saint was recognized as the leader of the orthodox Fathers, he was sent to Constantinople in 655 (as is commonly stated, at the same time as St. Martin). He was now seventy-five years old. The acts of his trials have been preserved by Anastasius Bibliothecarius. He was accused of conspiring with the usurper Gregory, together with Pope Theodore, and it was said that he had caused the loss of the episcopal See. At least, as Anastasius, and others say, he refused to communicate with the See of Constantinople, "because they have cast out the four holy councils by the propositions made at Alexandria, by the Ecstasy and by the Type... and because the dogs which they asserted in the propositions they damned in the Ecstasy, and what they proclaimed in the Ecstasy they annulled in the Type, and on each occasion they deposed themselves. What mysteries, I ask, do they celebrate, who have condemned themselves, and have been condemned by the Romans and by the (Lateran) synod, and stripped of their sacerdotal dignity?" He disbelieved the statement made to him that the envoys of the pope had accepted the two wills on account of the union, and one will on account of the union", and pointed out that the union not being a substance could have no will. He wrote on this account to his disciple the Abbot Anastasius, who was able to send a letter to warn "the men of elder Rome firm as a rock" of the deceitful confession which the Patriarch Peter was despatching to the pope. On the day of the first trial, a council of clergy was held, and the emperor was persuaded to send Maximus to Byzia in Thrace, and his disciples, Abbot Anastasius and Anastasius the papal aposciasarius, to Perberis and Mesembria.

They suffered greatly from cold and hunger. On 24 September, 656, Theodosius, Bishop of Cesarea in Bithynia, visited Maximus by the emperor's command, accompanied by the consuls, Theodosius and Paul. The saint confounded his visitors with the authority of the Fathers, and declared that he would never accept the Type. The bishop then replied: "We declare to you in response to that if you will communicate, our master the emperor will annul the Type, he will have a synod down, had not been disowned, and that the canons of the Lateran Council must be formally accepted before he would communicate. The Byzantine bishop unblushingly urged: "The synod is invalid, since it was held without the Emperor's orders." Maximus retorts: "If it is not pious, but the order of the emperor that validates synods, let them accept the synods that were held against the Type, at Antioch, at Seleucia, and the Robber council of Ephesus." The bishop is ready to consent to two wills and two operations: but St. Maximus says he is himself but a monk and cannot receive his declaration; the bishop, and also the emperor, and the patriarch and his synod, must send a supplication to the pope. Then all arose with prayers and tears, and knelt down and prayed, and kissed the Gospels and the crucifix and the image of the Mother of God, and all embraced. But the consuls doubted: "Do you think," he said "that the emperor will make a supplication to Rome?" "Yes", said the abbot, "if he will humble himself as God has humbled Himself." The bishop gave him money and a tunic; but the tunic was seized by the Bishop of Byzia. On 8 September, the abbot was honourably sent to Rhegium, and next day two patricians arrived in state with Bishop Theodosius, and said the saint great honour if he would accept the Type and communicate with the emperor. Maximus solemnly urged to the bishop and remained at Rhegium of the day of judgement. "Whither will I go if the emperor took another view?" whispered the miserable man. The abbot was struck and spat upon. The patrician Epiphanius declared that all now accepted two wills and two operations, and that the Type was only a compromise. Maximus reiterated the Roman synods, that the pope at that time did not deny it. Next morning, 19 September, the saint was stripped of his money and even of his poor stock of clothes, and was conveyed to Saelambria, and thence to Perberis (Perbera).

Six years later, in 662, Maximus and the two Anastasi were brought to trial at Constantinople. They were condemned as heretics and with St. Sophronius. The prefect was ordered to beat them, to cut out their tongues and lap off their right hands, to exhibit them thus mutilated in every quarter of the city, and to send them to perpetual exile and imprisonment. A long letter of the Roman Anastasius tells us of their sufferings on the journey to Colchis where they were imprisoned in different forts. He tells us that St. Maximus foresaw in a vision the day of his death, and that miraculous lights appeared nightly at his tomb. The monk Anastasius had died in the preceding month; the Roman lived on until 666.

Thus St. Maximus died for orthodoxy and obedience to Rome. He has always been considered one of the chief theological writers of the Greek Church, and has obtained the honourable title of the theologian. He may be said to complete and close the series of patristic writings on the Incarnation, as they are summed up by St. John of Damascus. His style is unfortunately very obscure; but he is accurate in his thought and deeply learned in the Fathers. His exegetical works explain Holy Scripture allegorically. We have commentaries on Psalm lix, on the Lord's Prayer, and a number of explanations of different texts. These are principally intended for the use of monks, and deal much with mystical theology. More professedly mystical are his "Scholia" on Pseudo-Dionysius, his explanations of difficulties in Dionysius and St. Gregory Nazianzen and his "Ambigua" on St. Gregory. This last work was translated into Latin by Scutus Erigena at the request of Charles the Bald. The polemical writings include short treatises against the Monophytes, and a more important series against the Monothelites, beside which must be placed the letters and the epistles. Ecumenical councils have since that time shown these writings have always received great honour in Eastern monasteries. The best known is a beautiful dialogue between an abbot and a young monk on the spiritual life; there are also various collections of sentiment,
Ethical and devotional, for use in the cloister. The "Mystagogia" is an explanation of ecclesiastical symbolism, of importance for liturgical history. Three hymns, "S. Maximus," "S. Joseph," and "S. Gallus," published in Petavius' "Uranologiwm", Paris, 1630, and in P., G., XIX. Some writings exist only in MS. St. Maximus' literary labours had thus a vast range. He was essentially a monk, a contemplative, a mystic, thoroughly at home in the Platonicism of Dionysius. But he was also a keen dialectician, a scholastic theologian, a doctor of the church. His influence has been great. His main teaching may be summed up under two heads, the union of God with humanity by the Incarnation, and the union of man with God by the practice of perfection and contemplation. St. Maximus is commemorated in the Roman Martyrology on 13 August, and in the Greek Menma on 27 June and 12 April. His Greek office is given by Combes (P., G., XC, 206).

A complete edition of his works was begun by the Dominican Combes. Two volumes appeared (Paris, 1675), but the third is wanting. In the reprint by Migne (P., G., XCI) there is added the "De Locis dictis" and the "Ecclesii et Gregorii", from Oehler's edition (Halle, 1687), the "Practica" and the "Thesaurus Hymnologicum". III. Anastasius Bibliothecarius has preserved some letters and other documents in Latin in his "Collectanea" (P., L., CXXIX, and Mansi, X). The "Schola" on Dionysius the Areopagite are printed with the works of the latter (P., G., IV). The ancient "Vita et certamen" (P., G., Xc, SS., 13 August, and 9 August). For literature see Honorius I and Monothelitism; Acta SS., 13 August; Wagnerman and Serres in Realencyclopaedia, with a good account of M.'s theology; Dornen, "Person of Christ" (Edinburg, 1881); Bach, "Dogmenwesen des Mittelalters", I (Vienna, 1873); Ehrhard in Kehmacher, Gesch. der byz. Lit. (Munich, 1873); Schramm, "Mundus Cosmi"; Comtesse de la Concurrence; De la documentation et de la formation de l'ecriture (Paris, 1869); Pleydenwurff, "Maximi Conf. De Deo hominumse descriptio et doctrina adnotationes et observationes". Among his discourses on the Apocalypse, the "Deseo ad Deum" is the most interesting. In the "Deseo" the author, writing in Revue internat. de théol. (1902), 257. On the authenticity of the "Rahel Apocalyptica" see H. Holl, "Die Sacra parallela des Joh. v. Damascus in Text u. Untersuch. zur Gesch. der alchristl. Lit. (Leipzig, 1897); Iadem, Fragmenta vornichtzicher Väter, ibid. (1899); Ehrhard in Byzant. Zeitschr. (1901), 394.

John Chapman.

Maximus of Turin, Saint, Bishop and theological writer, b. probably in Rhetia, about 380; d. shortly after 465. Only two dates are historically established in his life. In 451 he was at the synod of Milan where the bishops of Northern Italy accepted the celebrated letter (epistola dogmatica) of Leo I, setting forth the orthodox doctrine of the Incarnation against the Nestorians (see Nestorius). In 453 (see Ambrose, "Ep. Ambr." VI, 143). Among nineteen subscribers Maximus is the eighth, and since the order was determined by age, Maximus must have then been about seventy years old. The second established date is 465, when he was at the Synod of Rome. (Mansi, VII, 959, 965 sq.) Here the subscription of Maximus follows immediately on that of Theodoret, a daughter of the Emperor of the Goths, a clever energetic woman, educated him in sentiments of devotion to the Catholic faith and of loyalty to the House of Stuart, for which his family was famous. When he was about twenty-three, Lord Nithsdale visited the French Court to do homage to King James, and there met and wooed Lady Winifred Herbert, youngest daughter of Willie, Lord of the Manor of Penrose. The marriage contract is dated 2 March, 1699. The young couple resided chiefly at Terregles, in Dumfriesshire, and here probably their five children were born. Until 1715 no special event marked their lives, but in that year Lord Nithsdale's principles led him to join the rising in favour of Prince James Stuart, and he shared in the disasters which attended the royal cause, being taken prisoner at Preston and sent to the Tower. In deep anxiety Lady Nithsdale hastened to London and there made every effort on behalf of her husband, including a personal appeal to George I, but no sort of hope was held out to her. She, therefore, with true heroism, planned and carried out his escape on the eve of his execution. Her plan was to have him suffraged where the saint was wont to pray. The clerical sudden-became so thirsty that he implored Maximus for help. A roe happened to pass which the saint caused to stop, so that the cleric could partake of its milk. This legend accounts for the fact that St. Maximus is represented in art as pointing at a roe.

Michael Ott.

Maxwell, William, fifth Earl of Nithsdale (Lord Nithsdale signed as Nithsalde) and fourteenth Lord Maxwell, b. in 1676; d. at Rome, 2 March, 1744. He succeeded his father at the early age of seven. His tutor was the poet Lord Douglas, a clever energetic woman, educated him in sentiments of devotion to the Catholic faith and of loyalty to the House of Stuart, for which his family was famous. When he was about twenty-three, Lord Nithsdale visited the French Court to do homage to King James, and there met and wooed Lady Winifred Herbert, youngest daughter of Willie, Lord of the Manor of Penrose. The marriage contract is dated 2 March, 1699. The young couple resided chiefly at Terregles, in Dumfriesshire, and here probably their five children were born. Until 1715 no special event marked their lives, but in that year Lord Nithsdale's principles led him to join the rising in favour of Prince James Stuart, and he shared in the disasters which attended the royal cause, being taken prisoner at Preston and sent to the Tower. In deep anxiety Lady Nithsdale hastened to London and there made every effort on behalf of her husband, including a personal appeal to George I, but no sort of hope was held out to her. She, therefore, with true heroism, planned and carried out his escape on the eve of his execution. Her plan was to have him suffraged where the saint was wont to pray. The clerical sudden-became so thirsty that he implored Maximus for help. A roe happened to pass which the saint caused to stop, so that the cleric could partake of its milk. This legend accounts for the fact that St. Maximus is represented in art as pointing at a roe.
The Maya Indians, the most important of the cultivated native peoples of North America, both in the degree of their civilization and in population and resources, formerly occupying a territory of about 60,000 square miles in the central part of Yucatan, Southern Mexico, together with the adjacent portion of Northern Guatemala, and still constituting the principal population of the same region outside of the larger cities. Their language, which is actually supplanting Spanish to a great extent, is still spoken by about 300,000 persons, of whom two-thirds are pure Maya, the remainder being whites and of mixed blood. The Mayan linguistic stock includes some twenty tribes, speaking closely related dialects, and (excepting the Huastec of northern Vera Cruz and south-eastern San Luis Potosi, Mexico) occupying contiguous territory in Tabasco, Chiapas, and the Yucatan peninsula, a large part of Guatemala, and smaller portions of Honduras and Salvador. The ancient builders of the ruined cities of Palenque and Copan were of the same stock. The most important tribes or nations, after the Maya proper, were the Quiché and Cakchiquel of Guatemala. All the tribes of this stock were of high culture, the Mayan civilization being the most advanced, and probably the most ancient, in ancient North America. They still number altogether about two million souls.

I. History.—The Maya proper seem to have entered Yucatan from the west. As usual with ancient nations, it is difficult in the beginning to separate myth from history, their earliest mentioned leader and deified hero, Itzamna, being considered by Brinton to be simply the sun-god common to the whole Maya stock. He is represented as having led the first migration from the Far East, beyond the ocean, along a pathway miraculously opened through the waters. The second migration, which seems to have been historic, was led from the west by Kukulcan, a miraculous priest and teacher, who became the founder of the Maya kingdom and civilization. Fairly good authorities, based upon study of the Maya calendar, place this beginning near the close of the second century of the Christian Era. Under Kukulcan the people were divided into four tribes, ruled by many kingly families: the Cocom, Tutul-xiu, Itzam, and Chébel. To the first family belonged Kukulcan himself, who established his residence at Mayapan, which he called after a nearby mountain; to the second, the Tutul-xiu held vassal rule at Uxmal, the Itzam at Chichen-Itzam, and the Chébel at Isamal. To the Chébel was appointed the hereditary high priesthood, and their city became the sacred city of the Maya. Each provincial king was obliged to spend a part of each year with the monarch at Mayapan. This condition continued to about the eleventh century, when, as the result of a successful revolt of the provincial kings, Mayapan was destroyed, and the supreme rule passed to the Tutul-xiu at Uxmal. Later on Mayapan was rebuilt and was again the capital of the nation until about the middle of the fifteenth century, when, in consequence of a general religious reaction against the reigning dynasty, it was finally destroyed, and the monarchy was split up into a number of independent petty states, of which eighteen existed on the peninsula at the arrival of the Spaniards. In consequence of this civil war a part of the Itzam emigrated south to Lake Petén, in Guatemala, where they established a kingdom despotic and strong, with their capital and sacred city on Flores Island, in the lake.

On his second voyage Columbus heard of Yucatan as a distant country of clothed men. On his fifth voyage (1503-04) he encountered, south-west of Cuba, a canoe-load of Indians with cotton clothing for barter, who said that they came from the country of Maya. In 1506 Pinzon sighted the coast, and in 1511 twenty men under Valdivia were wrecked on the shores of the sacred island of Cozumel, several being captured and sacrificed to the idols. In 1517 an expedition under Francisco de Cordova landed on the north coast, discovering well-built cities, but, after several bloody engagements with the natives, was compelled to retire. In 1518 Father Alonso de Molina, in charge of the settlement of the island, found opportunity at one landing to explore a temple, and bring off some of the sacred images and gold ornaments. In 1518 a strong expedition under Juan de Grijalva, from Cuba, landed near Cozumel and took formal possession for Spain. For Father Juan Diaz, who on this occasion celebrated Mass upon the summit of one of the temples, the honour is also claimed of having afterwards been the first to celebrate Mass in the City of Mexico. Near Cozumel, also, was rescued the young monk Aguilar, one of the two survivors of Valdivia's party, who, though nacked to the breech-cloth, still carried his Breviary in a pouch. Proceeding northwards, Grijalva made the entire circuit of the peninsula before returning, having had another desperate engagement with the Maya near Campeche. After the conquest of Mexico, in 1521, Francisco de Montejo, under commission as Governor of Yucatan, landed (1527) to effect the conquest of the country, but met with such desperate resistance that after eight years of incessant fighting every Spaniard had lost at least two lives. In the two months of the same desperate warfare, his son Francisco established the first Spanish settlement at Campeche. In the next year, in a bloody battle at Tihoo, he completely broke the power of Maya resistance, and a few months later (Jan., 1542) founded on the site of the ruined city the new capital, Mérida.
1546, however, there was a general revolt, and it was not until a year later that the conquest was assured. In the original commission to Montejo it had been expressly stipulated that missionaries should accompany all his expeditions. This, however, he had neglected to attend to, and in 1531 (or 1534), by special order, Father Jacobo de Testera and four others were sent to join the Spanish camp near Campeche. They met a kindly welcome from the Indians, who came with their children to be instructed, and thus the conquest of the country might have been effectuated by spiritual agencies but for the outrages committed by a band of Spanish outlaws, in consequence of which the priests were forced to withdraw. In 1537 five more missionaries arrived and met the same willing reception, remaining about two years in spite of the war still in progress. About 1545 a large number of missionaries were sent over from Spain. Several of these—apparently nine, all Franciscans—under the direction of Father Luis de Villalpando, were assigned to Yucatan. Landing at Campeche, the governor explained their purpose to the chiefs of St. Francis was dedicated on its present site, and translations were begun into the native language. The first baptized convert was the chief of Campeche, who learned Spanish and thereafter acted as interpreter for the priests. Here, as elsewhere, the missionaries were the champions of the rights of the Indians. In consequence of their repeated protests a royal edict was issued in 1540 prohibiting Indian slavery in the province, while promising compensation to the slaveowners. As in other cases, local opposition defeated the purpose of this law; but the agitation went on, and in 1551 another royal edict liberated 150,000 male Indian slaves, with their families, throughout Mexico. In 1557 and 1558 the Crown intervened to restrain the tyranny of the natives. Within a very short time Father Villalpando had at his mission station at Mérida over a thousand converts, including several chiefs. He himself, with Father Malchior de Benavente, then set out, barefoot, for the city of Maní, in the mountains farther south, where their success was so great that two thousand converts were soon engendering the conversion of the entire province. The progress of the missionaries was rapid. The conditions brought about another revolt in 1781, led by the chief Jacinto Canek, and ending, as usual, in the defeat of the Indians, the destruction of their chief stronghold, and the death of their leader under horrible torture.

In 1847, taking advantage of the Government’s difficulties with the United States, and urged on by their “unpeaasable hatred toward their rulers from the earliest time of the Spanish conquest”, the Maya again broke out in general rebellion, with the declared purpose of driving all the whites, half-breeds and negroes from the peninsula, in which they were so far successful that all the fugitives who escaped the wholesale massacres fled to the coastal towns where they were taken off by ships from Cuba. Arms and ammunition for the rising were freely supplied to the Indians by the British traders of Belize. In 1851 the rebel Maya
established their headquarters at Chan-Santa-Cruz in the eastern part of the peninsula. In 1853 it seemed as if a temporary understanding had been reached, but next year hostilities began again. Two expeditions against the Maya were mounted, but a few hundred stand of small arms was left behind by the Indians. In 1856, when the Mexican Colonel Acérate, with 3,000 men, occupied Chan-Santa-Cruz, but was finally compelled to retire after the loss of 1,500 men, and to abandon his wounded—who were all butchered—as well as his artillery and supplies, the town was burned and razed.

In 1858 the Indian burned and razed in every direction, nineteen flourishing towns being entirely wiped out, and the town in three districts being reduced from 97,000 to 35,000. The war of extermination continued, with savage atrocities, through 1864, when it gradually wore itself out, leaving the Indian still unsubdued and well supplied with arms and munitions of war from Belize. In 1868 it broke out again in resistance to the Juarez government. In 1871 a Mexican force again occupied Chan-Santa-Cruz, but retired without producing any permanent result.

In 1901, after long preparation, a strong Mexican force invaded the territory of the independent Maya both by land and sea. After a determined resistance, drove the defenders into the swamps. The end is not yet, however, for, even in this year of 1910, Mexican troops are in the field to put down a serious rising in the northern part of the peninsula.

II. INSTITUTIONS, ART, AND LITERATURE. — Under the ancient system the Maya Government was an hereditary absolute monarchy, with a close union of the spiritual and temporal elements, the hereditary high priest, who was also king of the sacred city of Iximul, being consulted by the monarch on all important matters, besides having the care of ritual and ceremonial. On public occasions the king appeared dressed in the robes of office, with his head and precious stones, bearing on his head a golden circlelet decorated with the beautiful guatex plumes reserved for royalty, and borne upon a capanelonquin. The provincial governors were nobles of the four royal families, and were supreme within their own governments. The rulers of towns and villages formed a local nobility which did not exercise any power, but usually acted on the advice of a council of lords and priests. The lords alone were military commanders, and each lord and inferior official had for his support the produce of a certain portion of land which was cultivated in common by the people. They received no salary, and each was responsible for the maintenance of the poor and helpless who received an allowance from their priestly house. The priests were not hereditary, but were appointed through the high priest. There was also a female priesthood, or velostal order, whose head was a princess of royal blood. The plebeians were farmers, artisans, or merchants; they paid taxes and military service, and each had his interest in the common land as well as in his private portion, which he devoted to agriculture and could not alienate. Slaves also existed, the slaves being chiefly prisoners of war and their children, the latter of whom could become freemen by putting a new piece of unoccupied ground under cultivation. Society was organized upon the clan system, with descent in the male line, the chiefs being rather custodians for the tribe than owners, and having no power to alienate the tribal lands. Game, fish, and the salt marshes were free to all, with certain portion to the lords. Taxes were paid in kind through authorized collectors. On the death of the owner, the property was divided equally among his nearest male heirs.

The more important cases were tried by a royal council presided over by the king, and lesser cases by the provincial rulers or local judges, whose importance, usually with the assistance of a council and

with an advocate for the defence. Crimes were punished with death—frequently by throwing over a precipice—enslavement, fines, or, rarely, by imprisonment. The code was merciful, and even murder could sometimes be punished by a fine. Children were subject to parents until an age to marry, which for boys was about twenty. The children of the common people were trained only in the occupation of their parents, but those of the nobility were highly educated, under the care of the priests, in writing, music, history, war, and religion. The daughters of nobles were strictly secluded, and the older boys in each village lived and slept apart in a public building. Birthdays and other anniversaries were the occasions of family feasts.

Marriage between persons of the same gens was forbidden, and those who violated this law were regarded as outcasts. Marriage within certain other degrees of relationship—such as among a brother and sister, or with a mother's sister—was also prohibited. Polygamy was unknown, but concubinage was permitted, and divorce was easy. Marriages were performed by the priests, with much ceremonial rejoicing, and preceded by a solemn confession and a baptismal rite, known as the "rebirth", without which there could be no marriage. Spanish-Christians required the consent of the chief of the district. Religious ritual was elaborate and imposing, with frequent festival occasions in honour of the gods of the winds, the rain, the cardinal points, the harvest, of birth, death, and war, with special honours to the deified national heroes Itzamna and Kukulcan. The whole country was dotted with stone-built pyramids, while certain places—as the sacred city of Iximul, the island of Cozumel—were places of pilgrimage. There was a special "feast of all the gods". The prevailing mildness of the Maya custom was in strong contrast to the bloody ritual of the Aztec. Human sacrifice was forbidden by Kukulcan, and the priests were not permitted to participate in frequent or prominent feature, excepting at Chichen-Itza, where it at least became customary, on occasion of some great national crisis, to sacrifice hundreds of voluntary victims of their own race, frequently virgins, by drowning them in one of the subterranean rock wells or cenotes, after which the bodies were drawn out and buried.

The Maya farmer cultivated corn, beans, caoca, chile, maguey, bananas, and cotton, besides giving attention to bees, from which he obtained both honey and wax. Various fermented drinks were prepared from corn, maguey, and honey. They were much given to drunkenness, which was so common as to be considered normal. Chocolate was the favourite drink of the upper classes. Caoca beans, as well as pieces of copper, were a common medium of exchange. Very little meat was eaten, except at ceremonial feasts, although the Maya were expert hunters and fishers. A small "barkless" dog was also eaten. The ordinary garment of men was a cotton breechcloth wrapped around the body, and attached to the head with a less shirt, either white or dyed in colors. The women wore a skirt belted at the waist, and plaited their hair in long tresses. Sandals were worn by both sexes. Tattooing and head-flattening were occasionally practiced, and the face and body were always painted. The Maya, then as now, were noted for personal neatness and the frequent use of both cold and hot baths. They were expert and determined warriors, using the bow and arrow, the dart with throwing-stick, the wooden sword edged with flints, the lance, aling, copper axe, shield of reeds, and protective armour of heavy quilted cotton. They understood military tactics and signaling with drum and whistle, and knew how to build barricades and dig trenches. Sometimes when we were so sacrificing to the gods, while those of ordinary rank became slaves. Their object in war
was rather to make prisoners than to kill. As the peninsula had no mines, the Maya were without iron or any metal excepting a few copper utensils and gold ornaments imported from other countries. Their tools were almost entirely of flint or other stone, even for the most intricate monumental carving. For household purposes they used clay pottery, dishes of shell, and gourds. Their pottery was of notable excellence, as well as their weaving, dyeing, and feather work. Along the coast they had wooden dugout canoes capable of holding fifty persons.

They had a voluminous literature, covering the whole range of native interests, either written, in their own peculiar “calcultur” hieroglyphic characters, in books of maguey paper or parchment which were bound in wood, or carved upon the walls of their public buildings. Twenty-seven parchment books were publicly destroyed by Bishop Landa at Maní in 1562, others elsewhere in the peninsula, others again at the storming of the Itzí capital in 1697, and almost all that have come down to us are four codices, as they are called, viz., the “Codex Troano”, published at Paris in 1689; another codex, apparently connected with the first, published at Paris in 1822; the “Codex Persiánus”, published at Paris in 1829–71; and the “Dresden Codex”, originally mistakenly published as an Aztec book, but by an Irish priest, “An Account of the Antiquities of Mexico” (London, 1830–48). Besides these pre-Spanish writings, of which there is yet no adequate interpretation, we have a number of later works written in the native language by Christianized Maya shortly after the conquest. Several of these have been brought together by Brinton in his “Maya Chronicles” (London, 1852), the series of which exceeded in elaboration that of the Aztec Zapotec, or any other of the cultured native races, has been the subject of much discussion. It was based on a series of “Katuns”, or cycles, consisting of 20 (or 24), 52, and 260 years, and by its means they carried their history down for possibly thirteen centuries, the complete register of each generation being noted on the insertion of a memorial stone in the wall of the great temples at Chichén-Itzá.

The art in which above all the Maya excelled, and through which they are best known, is architecture. The splendid ruins of temples, pyramids, and great cities—some of which were intact and occupied at the time of the Spanish conquest, and others covered with vine and embossed and adorned with cyclopean structures throughout the forests of Yucatan, have been the wonder and admiration of travellers for over half a century, since they were first brought prominently to notice by Stephens. Says Brinton: “The material was usually a hard limestone, which was polished and carved, and imbedded in a firm mortar. Such was also the character of the edifices of the Quichés and Cakchiqueles of Guatemala. In view of the fact that none of these masses knew the plumb-line or the square, the accuracy of the adjustments is remarkable. Their efforts at sculpture were equally bold. They did not hesitate to attempt statues in the round of life size and larger, and the façades of the edifices were covered with sculptured designs, and the faces of happy family life, and the features of dead kings, both high relief upon the stones. All this was accomplished without the use of metal tools, as they did not have even the bronze chisels familiar to the Aztec.”

The interior walls were also frequently covered with hieroglyphic inscriptions carved in the stone or wood, or painted upon the plaster. Among the most noted of these are the Palenque (in Chiapas), Uxmal, Chichen-Itzá, and Mayapan.

The Maya language has received much attention from missionaries and scientists from an early period. Of grammars the earliest is the “Arte y Vocabulario de la lengua de Yucatan” of Luis de Villalpando, published about 1555. Others of note are “Arte de la Lengua Maya” by Father Gabriel San Buenaventura (Mexico, 1684), and republished by the Abbé Brasseur de Bourbourg in volume two of the “Mission Scientifique au Mexique” (Paris, 1870); “Arte de el Idioma Maya” by Father Pedro de Santa Rosa María Beltran, a native of Yucatan and instructor in the Maya language in the Franciscan convent of Mérida (Mexico, 1836 and 1841), and Mérida, in the “A Arte de el Idioma Maya” by Father Joaquín Ruiz, of the Franciscan convent of Mérida, also a native of Yucatan and “the most fluent of the writers in the Maya language that Yucatan has produced” (Mérida, 1844), and republished in an English translation by the Baptist missionary, Rev. John England (Belize, 1847). Each of these writers was also the author of other works in the language.

Of published dictionaries may be mentioned: first and earliest, a “Diccionario”, credited to Father Villalpando (Mexico, 1571); then “Diccionario de la Lengua Maya”, by Juan Pérez (Mérida, 1806–77); and “Dictionnaire, Grammaire et Chrestomathie de la langue Maya”, by the Abbé Brasseur de Bourbourg (Paris, 1872). The most valuable dictionaries of the language are still in manuscript. Chief is the one known as the “Diccionario del Convento de Motul”, from the name of the Franciscan convent in Yucatan in which it was found; it is now in the Carter Brown library at Providence. It is beautifully written and is supposed to be a copy of an original written by a Franciscan missionary, “An Interview with a Maya priest, about the language, about 1590. "In extent the dictionary is not surpassed by that of any aboriginal language of America" (Bartlett). Other manuscript dictionaries are those of the Convent of Mérida (about 1640); of the Convent of Ticul (about 1890); and one by the Rev. Alexander Henderson, a Methodist missionary of the United States (1886–90), they are the property of the Bureau of American Ethnology. (See also Brinton, “Maya Chronicles”, and Maya titles in Pilling, “Bibliography, Proofsheets” [Washington, 1885].)

Physically, the Maya are dark, short, muscular, and broad-headed. Intellectually, they are alert, straightforward, reliable, of a cheerful disposition, and neat in their ordered habits. A war, however, with the utmost savagery, the provocation being as great on the other side. Their daily life differs little from that of the ordinary Mexican peasant, their ordinary dwellings being thatched huts, their dress the common white shirt and trousers, with sandals and straw hat, for men, and for women also of a brown bag. They still cultivate the ordinary products of the region, including sugar and henequen hemp, while the independent bands give considerable attention to hunting. While they are all now Catholics, with resident priests in all the towns, that fact in no way softens their animosity towards the conquering race. They still keep many of their ancient rites, particularly those relating to the planting and harvesting of the crops. Many of these survivals are described by Brinton in a chapter of his “Essays of an Americanist”. The best recent account (1894) of the independent Maya is that of the German traveller Sapper, who praises in the highest terms their honesty, punctuality, hospitality, and their industry. Their country is an interesting but work of the Bowditch collection. At that time the Mexican government officially recognized three independent Maya states, or tribes, in Southern and Eastern Yucatan, the most important being the hosts of the Chuncha-Cuca district, estimated at not more than 10,000 souls as against about 40,000 at the outbreak of the American War of 1847. These two groups are now numbered perhaps as many, having decreased in about the same ratio.
Mayew, Edward, b. in 1569; d. 14 Sept., 1625. He belonged to the old family of Mayew or Mayow of Winton, near Salisbury, Wiltshire, which had endured much persecution for the Faith. On 10 July, 1583, he entered, with his elder brother Henry, the English College at Reims, where he displayed copious talents, and rose to the top rank of his countrymen. After several years of exile, and being twice near death, he returned to England, and was admitted to the Gatehouse prison, Westminster, on 21 November, 1607. The old English congregation would thus have ended with Dom Buckley, had not Mayew and another secular priest, Father Robert Sadler, sought profession, thus preserving its continuity to the present day. Under these two new members the English congregation began to revive, and finally, in 1612, it was given an equal share in St. Lawrence's monastery at Dieulwart, Lorraine, henceforth the centre of the English congregation. Retiring from the English mission in 1613, Mayew took up his residence at Dieulwart, where he filled the office of prior from 1613 to 1620. The union of these three congregations, which had for some time been canvassed, and in 1617 Mayew was appointed one of the nine definitors to bring this about. That of the English and Spanish congregations was accomplished by the Apostolic Brief, "Ex incumbenti", of August, 1619, but the members of the Italian congregation refused to become united. The real foundation of the Benedictine Rule, so characteristic of Dieulwart, was in great part due to Mayew's religious earnestness and strength of character. From 1623 until his death he acted as vicar to the nuns at Cambrai. His remains lie in the parish church at St. Vedast. The most important of Mayew's works are: "Sacra Institutionis Benedictae etc. (Douai, 1604); "Tractatus de Groundes of the Olde and Newe Religion etc." (s. l., 1608); "Congregationis Anglicae Ordinis S. Benedicti Trophan" (2 vols., Reims, 1619, 1625).

James Mooney.

Mayew, Christian, Moravian astronomer, b. at Mederzenhi in Moravia, 20 Aug., 1719; d. at Heidelberg, 16 April, 1793. He entered the Society of Friends at the age of 26 Sept., 1745, and after completing his studies taught the humanities for some time at Aschaffenburg. He likewise cultivated his taste for mathematics, and later was appointed professor of mathematics and physics in the University of Heidelberg. In 1755 he was invited by the Elector Palatine Charles Theodorus, and after a few years was appointed conservator, and afterwards astronomical observatory at Mannheim. He was also at Schwetzingen, where he had also built an observatory, he carried on his observations which led to numerous memoirs, some of which were published in the "Philosophical Transactions" of London. One of his observations, recorded in the "Tables d'aberration et refraction" (Mannheim, 1775) of his assistant Messa, gave rise to much discussion. He claimed to have discovered that many of the more conspicuous stars in the southern heavens were surrounded by smaller stars, which he regarded as satellites. His contemporaries, including Herschel and Schröter, who were provided with much more powerful telescopes, failed to verify his observations. He extended their reality and replied to one of his critics, the well-known astronomer Father Höll, in a work entitled "Grundliche Vertheidigung neuer Beobachtungen von Fixsterr-planes, welche zu Mannheim auf der kurfürstl. Sternwarte endekett worden sind." (Mannheim, 1776). In the same year he published a Latin work on comets and cometary observa tions, which were made in good faith, were evidently due to an optical illusion. Mayew spent some time at Paris in the interests of his science, and visited Germany in company with Cassini. Upon the invitation of Empress Catherine of Russia, he went to St. Petersburg to observe the transit of Venus in 1769. Upon his return to a member of the Russian Academy of Sciences, including those of Mannheim, Munich, London, Bologna, Göttingen, and Philadelphia. He published a number of memoirs, among which may be mentioned "Basis Palatina" (Mannheim, 1763); "Expositio de transitu Veneris" (St. Petersburg, 1769); "Pantometrum Fasciculatum, seu instrumentum nornum pro eliciendo et quaestionum distante in urbe et vicinum" (Mannheim, 1762); "Nouvelle méthode pour lever en peu de temps et à peu de frais une carte générale et exacte de toute la Russie" (St. Petersburg, 1770); "Observations de la Comète de 1781" in the "Acta Acad. Petropolit." (1782), etc. Sommervoegel, Bibl. de la Comp. de Jésus, V, 794; Delambre in Biogr. Univers., s. v. Henry M. Brock.

Maynas. See Chachapoyas, Diocese of.
Mayne, Cuthbert, Blessed, martyr, b. at Youlston, near Barnstaple, Devonshire (baptized 20 March, 1543–4); d. at Launceston, Cornwall, 29 Nov., 1577. Mayne was a member of the controversial, schismatical priest, who had him educated at Barnstaple Grammar School, and he was ordained a Protestant minister at the age of eighteen or nineteen. He then went to Oxford, first to St. Albans's Hall, then to St. John's College, where he took the degree of M. A. in 1570. There he made the acquaintance of Blessed Edmund Campion, Gregory Martin, the controversialist, Humphrey Ely, Henry Shaw, Thomas Bramston, O.S.B., Henry Holland, Jonas Meredith, Roland Russell, and William Wiggs. The above list shows how strong a Catholic leaven was still working at Oxford. Late in 1570 a letter from Gregory Martin to Blessed Cuthbert fell into the Bishop of London's hands. He at once sent a pursuivant to arrest Blessed Cuthbert and others mentioned in the letter. Blessed Cuthbert was in the country, and being warned by Blessed Thomas Ford, he evaded arrest by going to Cornwall, whence he arrived at Douai in 1573. Having become reconciled to the Church, he was ordained in 1575; in Feb., 1575–6 he took the degree of S.T.B. at Douai, and was ordained in the English mission in the company of Blessed John Payne. Blessed Cuthbert took up his abode with the future confessor, Francis Tregian, of Golden, in St. Probust's parish, Cornwall. This gentleman suffered imprisonment and loss of possessions for this honour done him by our martyr. At his house our martyr was constantly entertained. Moreover, he was an intimate friend of Douai, who was knighted for the capture. He was brought to trial in September; meanwhile his imprisonment was of the harshest order. His indictment under statutes of 1 and 13 Elizabeth was under five counts: first, that he had obtained from the Roman See a "faculty", containing absolution of the queen's subjects; second, that he had helped in the escape of John Trenchard and Golden; third, that he had taught the ecclesiastical authority of the pope in Launceston Gaol; fourth, that he had brought into the kingdom an Agnus Dei and had delivered the same to Mr. Tregian; fifth, that he had said Mass.

As to the first and second counts, the martyr showed the "faculty" and "faculty" were merely a copy printed at Douai of an announcement of the Jubilee of 1575, and that its application having expired with the end of the jubilee, he certainly had not published it either at Golden or elsewhere. As to the third count, he maintained that he had said nothing definite on the subject to the three illiterate witnesses who accused him. As to the fourth, he urged that the fact that he was wearing an Agnus Dei at the time of his arrest was no evidence that he had brought it into the kingdom or delivered it to Mr. Tregian. As to the fifth count, he contended that the finding of a Missal, a chalice, and vestments in his room did not prove that he had said Mass.

Mayne, the president, found him guilty of high treason on all counts, and he was sentenced accordingly. His execution was delayed because one of the judges, Jeffries, altered his mind after sentence and sent a report to the Privy Council. They submitted the case to the whole Bench of Judges, which was divided in opinion, though the weight of authority inclined to Jeffries's view. Nevertheless, for motives of policy, the Council ordered the execution to proceed. On the night of 27 November his cell was seen by the other prisoners to be full of a strange bright light. The details of his martyrdom must be sought in the works hereinafter cited. It is enough to say that all agree that he was insensible, or almost so, when brought to the place of execution and that the martyr still exists; and portions of his skull are in various places, the largest being in the Carmelite Convent, Lanherne, Cornwall.
MAYNOOTH

posals had been considered, Maynooth was chosen, because it was considered favourable to the morals and studies of a college; also, because the Duke of Leinster, who had always been a friend of the Catholics, wished to have the new institution on his estate. The money granted by Parliament was voted for a Catholic college for the education of the Irish clergy; that was the express intention of the Government, but, as the Act was drawn in general terms, the trustees proceeded to erect a college for laymen in connexion with the ecclesiastical establishment. This college was suppressed by the Government in 1801. Another lay college was then erected in the immediate vicinity of the ecclesiastical college, and was continued up to 1817 under lay trustees. The establishment of various colleges in other parts of the country for the education of laymen made it unnecessary. Not long after the foundation of Maynooth, the whole country being convulsed by the rebellion of 1798, the general disturbance found an echo in the new institution. Of its sixty-nine students no fewer than eighteen or twenty were expelled for having taken the rebel oath.

A valuable endowment was obtained for the new college on the death of John Butler, twelfth Baron Dunboyne, who had been Bishop of Cork from 1763 to 1788. On the death of his nephew, Pierce Butler, the eleventh baron, the bishop succeeded to the title and estates. This temporal dignity, however, proved his undoing; he gave up his bishopric, abjured the Catholic Faith, and took a wife. In his last illness he repented and endeavoured to make reparation for his conduct by willing his property in Meath, valued at about £1,000 (about $5,000) a year, to the newly founded college. The will was disputed at law by the next of kin. The case of the college was pleaded by John Philpot Curran, and a compromise was effected by which about one half of the property was secured to the college. The income from the bequest became the foundation of a fund for the maintenance of a higher course of ecclesiastical studies in the case of such students as should have distinguished themselves in the ordinary course. This is still known as the "Dunboyne Establishment". After the union with Eng-

land the financial subsidy to Maynooth from the State underwent various changes and gave rise to debates of considerable acrimony in the House of Commons. In 1845, however, the government of Sir Robert Peel raised the grant from £8,500 (about $47,500) to £20,000 ($100,000) a year and placed it on the consolidated fund, where it formed part of the ordinary national debt and was free from annual discussion on the estimates. Sir Robert Peel also granted a sum of £30,000 (about $150,000) for suitable buildings; and it was then that the Gothic structure designed by Pugin, one of the handsomest college buildings in Europe, was erected. The disestablishment of the Irish Church by Mr. Gladstone in 1869, had serious financial results for Maynooth which was also disen-

St. Mary's, Maynooth College, Ireland

dowed; but a sum of about £370,000 (about $1,850,000) was given once for all to enable the college to continue its work. This sum was invested for the most part in land, and has been very ably managed by the trustees. Some of the most prominent Catholic laymen in the country, such as the Earls of Fingall and Kenmare, had acted as Trustees up to the date of the disendowment: from that time no further lay trustees were appointed.

Among the most distinguished of the past presidents of Maynooth were Hussey, Renehan, and Russell, a full account of whom is to be found in the College History by the Most Rev. Dr. Healy, Archbishop of Tuam. Dr. Hussey was the first president, and to his tact, judgment and skill the success of the original project was mainly due. Dr. Renehan was a distinguished Irish scholar, who did a great deal to rescue Irish manuscripts from destruction. Dr. Russell is chiefly known for his "Life of Cardinal Mezzofanti" and for the part he took in the conversion of Cardinal Newman. Amongst the most distinguished teachers and men of letters who shed lustre on the college during its first century were John MacHale, Paul O'Brien, Daniel Murray, Edmund O'Reilly, Nicholas Callan, Patrick Murray, Mathew Kelly, John O'Hanlon, William Jennings, James O'Kane, and Gerald Molloy. It is interesting to notice that, on the staff of the college in its early years, were four French refugees—the Rev
Peter J. Delort, the Rev. Andrew Darré, the Rev. Louis Delahogue and the Rev. Francis Anglade—all Doctors of the Sorbonne. On the original staff may also be found the name of the Rev. John C. Eustace, author of the well-known “Classical Tour in Italy”. Amongst the distinguished personages who have visited the college were Thackeray, Montalembert, Carlyle, Robert Southey, and Napoleon. The Empress of Austria, and King Edward VII. The college possesses several memorials of the Empress of Austria, who lived in the neighbourhood during her visits to Ireland. The Centenary of the foundation of the college was celebrated in 1895, on which occasion congratulations were sent from all the Catholic educational centres throughout the world. The college library contains upwards of 40,000 volumes. It possesses many rare and precious works and some very valuable manuscripts. The Aula Maxima which was opened about the year 1893 was the gift to his Alma Mater of the Right Rev. Mgr. MacMahon of the Catholic University at Washington, D. C., and previously of New York. The chapel which has just been completed is a work of rare beauty both in design and ornamentation. Maynooth has already sent out into the world upwards of 7,000 priests. Her alumni are in all lands and in almost every position that an ecclesiastical could occupy. The average number of students in recent years is about 600. The ordinary theological course is for five years. The college was burned in 1848 and re-established three years more. Students in arts and philosophy have to graduate in the National University of which Maynooth is now a “recognized College.”

J. F. Hogan.

Mayo, School of (Irish Magh Eo, which means, according to Colgan, the Plain of the Oaks, and, according to O’Donovan, the Plain of the Yews), was situated in the present parish of Mayo, County Mayo, almost equidistant from the towns of Claremorris and Castlebar. The founder, St. Colman, who flourished about the middle of the seventh century, was in all probability a native of the West of Ireland, and made his ecclesiastical studies at Iona during the abbacy of the renowned Seganisius. After the death of Finian, the second Bishop of Lismore, he was appointed to succeed him. His episcopate was much disturbed by a fierce renewal of the Easter Controversy. Colman vigorously advocated the old Irish custom, and cited the example of his predecessors, but all to no effect. At a synod specially summoned to meet at Whitby in 664, the Roman method of calculation triumphed, and Colman, unwilling to abandon the practice of the “Celtic Church of the Irish Church”, resolved to quit Lindsfarne forever.

In 688 he crossed the seas to his native land again, and in a remote island on the western coast called Inishbofin, he built a monastery and school. These things are clearly set out in the “Historia Ecclesiastica” of Bede, who then proceeds to describe how they led to the foundation of the school of Mayo. “Colman the Irish Bishop”, says Bede, “departed from Britain and took with him all the Irish that he had assembled in the Island of Lindsfarne, and also about thirty of the English nation who had been instructed in the monastic life... Afterwards he retired to a small island which is to the west of Ireland, and at some distance from the villages, where he built a monastery. Of the world, the Irish, Inishbofinde [island of the white cow]. Arriving there he built a monastery, and placed in it the monks he had brought with him of both nations.”

It appears, however, the Irish and English monks could not agree. “Then Colman sought to put an end to their dissensions, and travelling about at length found a place in Ireland fit to build a monastery, which in the language of the Irish is called Magh Eo (Mayo)”. Later on we are told by the same historian that this monastery became an important and flourishing institution, and even an episcopal see.

Though Colman, we may assume, lived mainly with his own countrymen at Inishbofin, we know that his principal interest in his later years was at Mayo—“Mayo of the Saxons”, as it came to be called. In the year 670, with his consent, its first canonical abbott was appointed. This was St. Gerald, the son of a northern English king, who, annoyed at the way Colman’s most cherished convictions had been slighted at Whitby, resolved to follow him to Ireland. The school remained notably in fame and learning under this youthful abbot. About 679 St. Adamnan, the illustrious biographer of St. Columba, visited Mayo and, according to some writers, ruled there for seven years after Gerald’s death. This latter statement is not, on the face of it, improbable if Gerald, as Colgan thinks, did not live after 697; but the Four Masters give the date of his death as 13 March, 726, and the “Annals of Ulster” put the event as late as 731. After Gerald’s death we have only the record of isolated facts concerning the school he ruled so wisely and loved so well, but we are often facts of considerable interest and importance. We read, for example, that the monastic buildings were “burnt and cast up” not only by the life of St. Gerald—that it was plundered by Turgesius the Dane in 818. That the monastic grounds were regarded as exceptionally holy we can gather from the entry that Domhnall, son of Torlough O’Connor, Lord of North Connacht, “the glory and the moderator and the good adviser of the Irish people” (d. 1176), was interred therein. That it housed the statue of an apostle, see long after the Synod of Kells (1152), is clear from the entry under date of 1200, recording the death of “Cele O’Duffy, Bishop of Magh Eo of the Saxons”.

Mayo, like the other ancient Irish monastic schools, suffered from the raids of native and foreigner, especially during the fourteenth century. But it survived them all, for the death under date 1478 is recorded of a bishop—“Bishop Higgins of Mayo of the Saxons”. The time at which the See of Mayo, on the ground that it contained not a cathedral but a parochial church, was annexed to Tuam, cannot with certainty be ascertained, but as far back as 1217, during the reign of Hugone de Mowbray, the see was refused to the episcopal authorities for discussion. It was probably not settled definitively for centuries after. James O’Healy, “Bishop of Mayo of the Saxons”, was put to death for the Catholic Faith at Kilmallock in 1579.

John Healy.

Mayo Indians.—An important tribe occupying some fifteen towns on Mayo and Fuerte rivers, southern Sonora and northern Sinaloa, Mexico. Their language is known as the Cahita, being the same as that spoken, with dialectic differences, by their neighbours, the Toluena and Yaqui, and belonging to the Piman branch of the great Shoshonean stock. The name Mayo is said by Ribas to be properly that of their principal river and to signify “boundary”. The known history of the tribe begins in 1532 with the naval expedition of Diego Hurtado de Mendoza, who landing at the mouth of the Fuerte went up the river and through the villages, where he built a small fortress and companions while asleep. In 1533 a land expedition under Diego de Guzman crossed through their country and penetrated to beyond the Yaqui river in the north. In 1609—10 they aided the Spaniards against the Yaqui, the two tribes being hereditary enemies,
and on the suppression of the revolt it was made a condition of the agreement that the Yaqui should live at peace with the Mayo. In 1613, at their own request, the first mission was established in their territory by the Jesuit Father Pedro Mendez, who had visited them some years before, over 3000 persons receiving baptism within fifteen days, in a population variously estimated at from nine to twenty thousand souls; and although these missions were built in as many towns of the tribe. This was the beginning of regular mission work in Sonora.

In 1740 the Mayo, hitherto friendly as a tribe, joined the Yaqui in revolt, apparently at the instance of Spanish officials jealous of missionary influence. The churches were burned, priests and settlers driven off; and although the rising was put down in the following year after hard fighting, it marked the beginning of the decline of the missions which culminated in the expulsion of the Jesuits in 1767. After their departure the Indians were for some time without religious teachers, but are now served by secular priests. In 1825-7 they again joined the Yaqui, led by the famous Bandera (or Samo), in revolt against Mexican aggression, and have several times since taken occasion to show their sympathy with their fighting kinsmen. The Mayo are sedentary and industrious farmers and mine laborers, and skilful artisans in the towns. They cultivate corn, squashes, beans, tobacco, cotton, and maguey, furnish them with the mesquite inti, and make tequila. Their houses are light structures of cane and poles, thatched with palm leaves. They are all Catholic and very much Mexicanized, though they retain their language, and have many of the old Indian ideas still latent in them. Their principal town is Santa Cruz de Mayo, and they are variously estimated at from 7000 to 13,000 persons. The most important study of their language, the Cahita, is a grammar (Arte) by an anonymous Jesuit published in Mexico in 1737.

**Mayoruna Indians.** A noted and savage tribe of Pancho's stock living in the forests between the Uacayal, the Yavarì and the Mañun rivers, in north-east Peru and the adjacent portion of Bolivia. From the fact that they are naked, with yellowish skin and wear beards, a legend has grown up that they are descended from Spanish soldiers of Urua's expedition (1569), but it is probable that the difference comes from later admixture of captive blood. As a tribe they are full-blooded and typically Indian. It has been suggested that the story may have originated from a confusion of "Mariachi" with the followers of Urua and Aguirre, with Mayorunas, which seems to be from the Quichua language of Peru. Markham interprets the name as "Men of Muuyu" (Muuyu-runa), indicating an ancient residence about Moyobamba (Muyumbaba), farther to the west. One of their subtribes is known as "Barbudo" (Spanish: Bárbaro) and the other as "Chiquinqui," Musquima, Uvarina. The Mayoruna tribes were among those gathered into the missions of the Mina province (see MAINA INDIANS) in the seventeenth and eighteenth centuries, being represented in the missions of San Joaquin (Mayoruna proper), Nuestra Senora del Carmen (Mayoruna proper), and San Xavier (Uvarina and Ituaca). By the repeated attacks of the Portuguese slave-hunters (see MAMELUCO) between 1680 and 1710, and the revolts of the mission Indians in 1695 and 1767 the Mayoruna were driven to take refuge in their forests and are now wholly savage and particularly hostile to either whites or Indians who enter their territory, even successfully repelling a governmental expedition. At present the person they are tall and well-formed, with rather delicate features, going perfectly naked, with flowing hair cut across the forehead. Instead of bows, they use spears, clubs and bow and arrows, and are famous for the strength of the deadly curari poison with which they tip their arrows. They avoid the river banks and do their canoe work. The Mayoruna cannibalism has not been proved. (See also PANO.)

**James Mooney.**

**Mayotte, Nossi-Bé, and Comoro, Prefecture Apostolic of (MAYOTTE, NOSSIBÉ, ET COMORE).—** Mayotte is the farthest south and most important of the group of Comoro Islands: Mayotte (Masto), Anjouan (Ansamali), Mohilla (Moheli), and Great Comoro (Komoro, i.e., where there is first or Angazidco). These islands, with Nosso-Bé (large island) and Santa Maria (Nossi Burai, Nossi Ibrahim), form the archipelago known as "the Satellites of Madagascar." The Comoro Islands, with their craggy evergreen shores, look like the cones of submerged groves separated from the mainland by deep abysses. The
summits are not all of the same altitude; the highest point of Mayotte is not over 1800 feet, whereas the highest peak of Anjouan is about 5000 feet, while the central cone of Great Comoro, whose volcanic activity is not yet exhausted, rises to over 7000 feet. Two monsoons, consequently two seasons, alternately affect the climate of the archipelago, which is sometimes visited by cyclones. The soil of these islands is very fertile, and produces in abundance vanilla, cloves, sugar-cane, coffee, etc. The total population is about 80,000, mostly African negroes, often erroneously called Makossa (a Mozambique tribe). There are also some Sakalavas from Madagascar, mostly former slaves freed when the islands were occupied by the French. This Comoro Archipelago was for many centuries in the hands of the Moros and in hostility with the Moris. As they navigated along the African coast, the merchants of Idumea and Yemen created a special and interesting type, the Comorinos. Commingled with these Arabian half-breeds, once the sole owners of the country, there are now Bajians from Cutch and Hindus from Bombay, who carry on almost the entire commerce. There are also a few European or creole planters and officials from Réunion or Mauritius. In 1843 the French Government, called in by the sultan, took possession of Mayotte, which became, with Nossi-Bé, a post of surveillance over Madagascar. All these islands now form a French colony. In 1844, Mayotte, Nossi-Bé, and the Comoros were made an Apostolic prefecture and confided to the Fathers of the Holy Ghost. In 1898, when the same missionaries were given the ecclesiastical administration of Northern Madagascar, these smaller islands and Santa Maria were attached to the Apostolic Vicariate at Diego Suárez. Santa Maria and Nossi-Bé have resident missionaries; the other islands are visited.

The population of these islands is largely Mohammedan and therefore strongly anti-Christian; for this reason little religious progress is made. In all of the islands there are hardly three or four thousand Catholics. There are no Protestants.

Missions Catholiques (Rome, 1907).

ALEXANDER LE ROY.

MAYR, Beda, a Bavarian Benedictine philosopher, apostolic, and poet, b. 15 January, 1742, at Daisting, near Augsburg; d. 28 April, 1794, in the monastery of Heiligenkreuz in Donauerwôrth. After studying at Scheyern, Augsburg, Munich and Freiburg im Breisgau, he was sent to the monastery of Heiligenkreuz on 29 September, 1792, studied theology at the common study-house of the Bavarian Benedictines in Benediktbeuern, was ordained priest on 6 January, 1766, taught mathematics, philosophy, rhetoric, theology and canon law at his monastery, where he was also librarian and, for some time, prior. The last 28 years of his life he spent in his monastery, with the exception of four years during which he was pastor of Mündling. He was an exemplary religious and a popular preacher, but, as a philosopher, he was imbued with the subjectivist criticism of Kant and, as a theologian, he was ironic beyond measure. In a letter to Henry Braun, superintendent of the Bavarian schools, he sets forth the opinion that a unification of the Catholic and the Protestant religion is possible. Mayr published this letter without the consent of the author under the title "Der erste Schritt zur künftigen Vereinigung der katholischen und evangelischen Kirche" (Munich, 1778). In consequence Mayr was censured by the Bishop of Augsburg and temporally forbidden to publish. His chief works were: "Ueber die Bedeutung der natürlichen 'christlichen und katholischen Religion nach den Bedürfnissen unserer Zeiten" (in parts; Augsburg, 1878-91), is equally ironic and permeated with the philosophy of Kant. It was placed on the Index in 1792 and ably refuted by the ex-Jesuit Hochhiebler (Augsburg, 1790). Lindner (infra) enumerates 58 literary productions of Mayr. They include 21 dramas, four volumes of sermons (Augsburg, 1777), numerous occasional poems, and various treatises on philosophical, theological, and mathematical subjects.

MICHAEL OTT.

Mayron (de Mayronis), Francis, b. about 1280, probably at Mayronnes, Department of Basses-Alpes, he entered the Franciscan order as the neighbouring Digne (or Sistéron), he had been teaching at the University of Paris for a long time as bachelor of theology, when, on 24 May, 1323, John XXII, at the request of King Robert of Naples, commanded the chancellor of the university to confer the degree of master of theology upon him. On 27 Sept., 1317, St. Elisear de Sabran died at Paris in Francis's arms. Francis was afterwards sent to Italy, and died at Piacenza, probably 26 July, 1327. It is generally accepted that Mayron introduced the famous "Actus Sorbonicus" into the University of Paris. This occurred at a disputaion lasting from 5 a.m. to 7 p.m., in which the advocate had to defend his theses against any and all opponents who might offer to attack them, without any assistance and without either food or drink. "Sermonum et Sententiarum" appeared in Venice, in 1507-8, 1519-20, 1520, 1526, 1556, 1567. The treatises added thereto, "De formalitatis", "De primo principio", "Explanatio divinorum terminorum", are not his, but have been collected from his teachings. The "De univocione entis", edited with other writings at Ferrara before 1490, is Mayron's. His work "Conflatus", on the sentences, appeared at Treviso in 1476; Baele, 1489, 1579(?); Cologne, 1610. Distinct from the latter are the "Conflatio", Lyons, 1579; "Passeus super Universalia", "Predicamenta", etc., Bologna, 1479, Lerida, 1485, Toulouse, 1490, Venice, 1489; "Sermones de temporum quandam in Universitatem Sententiarum" two volumes, probably Brussels, 1483, and Cologne, Venice, 1491; "Sermones de Sanctis", Venice, 1493, Basle, 1498 (with fourteen dissertations); "Tractatus de Concezione B.M.V.", ed. Alva and Astorga in "Monumenta Seraphica pro Immaculata Conceptione", Louvain, 1663; "Theologicae Veritatis in St. Augustinum de Trinitate", ed. Faivre, 1470, Toulouse, 1488, Venice, 1489(?); "Veritatis ex libris St. Augustini de Trinitate", Lyons, 1520. There are many other unedited writings on the works of St. Augustine, and philosophical and theological works, which testify to the extensive knowledge and the penetrating intellect of this eminent pupil of Duns Scotus. The treatise "De celebrations Misse", is also probably by him (cf. Ad. Franz, "Die Messe im deutschen Mittelalter", Freiburg, 1902, 403-5).  

RINCONI A P. Liber Conformitatis in Analect Franciscani, IV (Quaracchi, 1908), 339, 545, 544; WADING, Scrip torum et translationum literariae, Parisii, 1590, 193-5; EISEN, Bibliotheca sacra et ecclesiastica, v (Madrid, 1732), 405 sq.; GIBERT, La Faculté de Théologie à Paris, III, 323-30 (1844-5); SCHELDT, Geschichte der Theologie, i (Hamburg, 1885), 10, 32; RAOUL, Histoire de la Philosophie scolastique, II, 2 (Paris, 1860), 298 sq.; HUTTER, Nomenclator litterarum, II (Innsbruck, 1906), 429-25; CHAVRÈS, Répertoire de sources hist., II (Paris, 1907), 3271.

MICHAEL BEIL.
Mazarin, Jules, b. either at Rome or at Piscina in the Abruzzi, of a very old Sicilian family, 14 July, 1602; d. at Vincennes, 9 March, 1661. His father was major-domo to the Colonna family at Rome. One of his uncles, Giulio Mazarri (1544–1622), a Jesuit, enjoyed a great reputation in Italy, particularly at Bologna, as a preacher, and published several volumes of sacred eloquence. His youth was full of excitement: he accompanied the future Cardinal Colonna to Madrid; he was in turn a captain of pontifical troops and then a pontifical diplomat in the Valtelline War (1624) and the Mantuan War of Succession (1628–30). The truce which he negotiated (26 October, 1630) between the French, on one side, and the Spaniards and the Duke of Savoy, on the other, won for him the esteem of Richelieu, who was well pleased at his letter to Piguelo.

Mazarin continued Richelieu's policy against the House of Austria. Aided by the victories of Condé and Turenne, he succeeded in bringing the Thirty Years' War to a conclusion with the Treaties of Münster and Osnabrück (Treaty of Westphalia), which gave Alsace (without Strasbourg) to France; and in 1639 he ended the war in Spain in the Peace of Vellea, which gave to France the Rhineland and part of the Low Countries. Twice, in 1651 and 1652, he was driven out of the country by the Parliamentary Fronde and the Fronde of the Nobles, with the innumerable pamphlets (Mazarinades) which they published against him, but the final defeat of both Frondes was the victory of royal absolutism, and Mazarin thus prepared the way for Louis XIV's autocracy. Lastly, in 1658, he placed Germany, in some sort, under the young king's protection, by forming the League of the Rhine, which was destined to hold the House of Austria in check. Thus did he lay the foundation of Louis XIV's greatness. His foreign policy was, as Richelieu's had often been, indifferent to the interests of Catholicism: the Peace of Westphalia gave its solemn sanction to the legal existence of Calvinism in Germany, and, while the nuncio vainly protested, Protestant princes were rewarded with secularized bishoprics and abbeys for their political opposition to Austria. Neither did it matter much to him whether the monarchical principle was respected or not. He became, in a foreign sense, a Cromwellian. Towards the Protestants he pursued a hard-edged policy. In 1654 Cromwell opened negotiations with the Calvinists of the South of France, who, before the year, had taken up arms in Ardeche to secure certain liberties for themselves. Mazarin knew how to keep the Calvinists amused with fine words, promises, and regulated delays; for six years they believed themselves to be on the eve of recovering their privileges and in the end they obtained nothing. The cardinal well knew how to retain in the king's service valuable Protestants like Turenne and Gassion.

His personal relations with the Holy See were hardly cordial. He could not prevent Cardinal Pamphili, a friend of Spain, from being elected pope (15 Sept., 1644) as Clement X. He received in France, on the other hand, Cardinals Antonio and Francesco Barberini, nephews of the late pope, and the Bull of 21 February, 1646, fulminated against Innocent X against the cardinals, who were absenting themselves without authorization, (by the tenor of which Bull Mazarin himself was bound to go to Rome), was pronounced by Parliament "null and abusive". Mazarin obtained a decree of the Royal Council forbidding money to be remitted to Rome for expelling Bulls, there was a show of preparing an expedition against Avignon, and Innocent X, yielding to these menaces, ended by restoring their fall into the hands of the French. The Spaniards tried to injure him with Pope Urban VIII, but the influence of Cardinal Antonio Barberini and a letter from Richelieu saved him. He became canon of St. John Lateran, vice-legate at Avignon (1632), and nuncio extraordinary in France (1634). The Spaniards complained that in this last post Mazarin made it his exclusive business to support Richelieu's policy, and he was dismissed from the nunciature by Urban VIII (17 Jan., 1636). Soon after leaving the papal service, he went to Paris, placed himself at Richelieu's disposition, and was naturalized as a French subject in April, 1639. Richelieu commissioned him, late in 1640, to sign a secret treaty between France and Prince Thomas of Savoy, and caused him to be made a cardinal on 16 Dec., 1641. Shortly before Richelieu's death, Mazarin by a piece of clever management, had been able to effect the reoccupation of Sedan by French troops, and Richelieu on his deathbed (4 Dec., 1642) recommended him to the king. On the death of Louis XIII (14 May, 1642), Anne of Austria, leaving the Duc d'Orléans the shadowy title of lieutenant-general of the kingdom, gave the reality of power to Mazarin, who first pretended to be on the point of setting out for Italy, and then pretended that his acceptance of office was only provisional, until such time as the peace of Europe should be re-established.

But Mazarin, like Richelieu, was, in the event, to retain power until his death, first under the queen regent and then under the king after Louis XIV (q. v.) had attained his majority. His very humble appearance and manner, his gentle and kindly ways, had contributed to his elevation, and Anne's affection for him was the best guarantee of his continuance in office. The precise character of his relations with Anne of Austria is one of the enigmas of history. Certain letters of Anne of Austria to Mazarin, published by Cousin, and admissions made by Anne to Mme de Brénne and recorded in the Memoirs of Loménie de Brienne, prove that the queen regent was deeply attached to the cardinal. Still, "my sister played no part in it", she said to Mme de Brénne. Few historians give credence to Anne's assertion on this point, and some go so far as to accept the allegations of the Princess Palatine in her letters of 1717, 1718, and 1722, according to which Anne of Austria and Mazarin were married. M. Loiseleur, who has made a careful study of the problem, believes the Princess Palatine was mistaken; it is certain that he retained the title and insignia of a cardinal until his death; probably he was even a cardinal-priest, though he never visited Rome after his elevation to the purple and seems never to have received the hat. And in any case he held the title of Bishop of Męs from 1653 to 1658.

Tomb of Cardinal Mazarin
Coysevox, Louvre
property and dignities to Mazarin's protégés, the Bar-
berini. Following up his policy of bullying the pope, 
Mazarin was able to seize the Spanish presidios nearest to the papal fron-
tiers. Apart from this, he had no Italian policy, 
properly speaking, and his demonstrations in Italy 
had no other object than to compel Spain to keep her 
troops there, and to bring the pope to a complaisant 
attitude towards France and towards Mazarin's own 
relations. The elevation of his brother Michael Mazar-
in to the cardinalate (October, 1647) was one of his 
diplomatic victories.

Though not interested in questions of theology, 
Mazarin detested the Jansenists for the part taken by 
some of them—disavowed, however, by Antoine 
Arnauld in the Fronde, and for their support of Car-
din de Retz, who had recommended him to Louis 
XIV. July, 1653, and an assembly of bishops in May, 1655, 
over which Mazarin presided, gave executive force to 
the decrees of Innocent X against Jansenism. The 
order condemning Pascal's "Provinciales" to be burnt, 
the order for the dismissal of pupils, novices, and 
postulants from the two convents of Port-Royal, the 
laurel decoration of the Church against the "Augustinus" 
(1661), which formula all ecclesiastics had to sign—all these must be regarded 
as episodes of Mazarin's anti-Jansenist policy. On his 
dethroned he warned the king "not to tolerate the 
Jansenist sect, not even their name".

Having little by little become as powerful as God 
the "heavens and the earth" (Ps. cxli. 7), enjoying the 
revenues of twenty-seven abbeys, always ready to 
end his life by whatever means, and possessing a 
fortune equivalent to about $40,000,000 in twentieth-

In the same year (1647) the cardinal began his 
pilotage of the French fleet, and this was followed 
by Mazarin's intervention in the affairs of 
the Augustinian order, which had been opposed 
to his providential. His influence was strong enough 
to induce the pope to re-establish the order, and 
the French Augustinians were appointed 
over the English and Spanish. 

Mazarin's influence was also exercised in 
the affairs of the Church in England. He 
employed the means of the cardinalate, which 
was a source of much influence, to 
appoint his own men to high positions. 

He also took care to secure the 
support of the clergy, which was an 
important factor in the political life of 
the time. He was able to do this by offering 
the clergy various advantages, such as 
considerable sums of money and 
important positions in the Church. 

Mazarin's influence was also felt in 
the political affairs of the time. He 
was able to secure the support of 
the king and to exercise a great deal 
of control over the government. 

However, Mazarin's influence was not 
without its drawbacks. He was 
jealous of his position and sought 
to maintain it by any means 
possible. This led to his downfall, 
and he was eventually 
deposed from the position of 
prime minister. 

Mazarin's importance as a statesman 
has been widely recognized, and 
his influence has been studied by 
many historians. He is considered 
by many to be one of the most 
important figures in French 
history. 

In conclusion, Mazarin's 
influence has had a significant 
effect on the history of France, 
and his actions have had a lasting 
effect on the country. His 
impact on the political and 
religious life of the time cannot 
be underestimated, and his 
legacy continues to be felt 
in modern times.
fully dressed, the women being picturesque in shawls and gowns of their own weaving, decorated with ribbons and worked with human and animal figures, particularly that of the eagle. They have still their own calendar of thirteen months, with days bearing animal names. The second volume of Pimentel's "Cuadro" contains a sketch of the language. See also Zapotec.

**Mazaxil.** See Avesta, Thel.

**MazenoD.** CHARLES JOSEPH EUGENE DE, Bishop of Marseilles, and Founder of the Congregation of the Bishops of Mary Immaculate, b. at Aix, in Provence, 1 August, 1782; d. at Marseilles 21 May, 1861. De Mazenod was the offspring of a noble family of southern France, and even in his tender years he showed an unmistakable evidence of a pious disposition and a high and independent spirit. Sharing the fate of most French noblemen at the time of the Revolution, he passed some years as an exile in Italy, after which he studied for the priesthood, though he was the last representative of his family. On 21 December, 1811, he was ordained priest at Amiens, whither he had gone to escape receiving orders at the hands of Cardinal Lancre, who, acting on the advice of Paris against the wishes of the pope. After some years of ecclesiastical labours at Aix, the young priest, bewailing the sad fate of religion resulting among the masses from the French Revolution, gathered together a little band of missionaries to preach in the vernacular and to instruct the rural populations of France. He commenced, 25 January, 1816, his Institute which was immediately prolific of much good among the people, and on 17 February, 1826, was solemnly approved by Leo XII under the name of Congregation of the Bishops of Mary Immaculate.

After having aided for some time his uncle, the aged Bishop of Marseilles, in the administration of his diocese, Father De Mazenod was called to Rome and, on 14 October, 1832, consecrated titular Bishop of Icousium, which title he had, in the beginning of 1837, to exchange for that of Bishop of Marseilles. His episcopate was marked by measures tending to the restoration in all its integrity of ecclesiastical discipline. De Mazenod was successively a strong supporter of the Holy See and somewhat obdurate in France by the pretensions of the Gallican Church. He favoured the moral teachings of Blessed (now Saint) Alphonse Liguori, whose theological system he was the first to introduce in France, and whose first life in French he caused to be written by one of his disciples among the Oblates. At the same time he watched with a jealous eye over the education of youth, and, in spite of the susceptibilities of the civil power, he never swerved from what he considered the path of justice. In fact, by the apostolic freedom of his public utterances he deserved to be compared to St. Ambrose. He was ever a strong supporter of papal infallibility and a devoted advocate of Mary's immaculate conception, in the solemn definition of which (1854) he took an active part. In spite of his well-known outspokenness, he was made a Peer of the French Empire, and in 1851 Pius IX gave him the pallium.

Meanwhile he continued as Superior General of the religious family he had founded and whose fortunes were concerned in the article on the Congregation of Mary Immaculate. Such was the esteem in which he was held at Rome that the pope had marked him out as one of the cardinals he was to create when death claimed him at the ripe age of almost seventy-nine.

A. G. MORICE.
of the Academy of St. Thomas, and, at various times, prefect of the Congregations of the Index, of Studies, and of Rites.

TIMOTHY BROSNAN.

Mazzolini, Lodovico (also known as Mazzolino da Ferrara, Lodovico Ferrarese, and Il Ferrarese), Italian painter, b. in Ferrara in 1480; d. according to some account, in 1523, and to another, in 1530; place of death unknown. This artist is generally represented as having been a pupil of Lorenzo Costa, and as having come under the influence of Ercole Roberti, but should be more correctly described as a pupil of Panetti. Morelli called him "the Glow-worm," "der Glüh- wurm," from his brilliant gem-like colour and luminous glaucing quality, and he proved that Mazzolini was a pupil of Panetti rather than of Costa, for the form of the ear and hand in his paintings, by his landscape backgrounds with steep conical blue mountains and streaks of dazzling white, and by his scheme of colour. Comparing Lorenzo Costa with Perugino, Morelli compares Panetti with Pintorrichio, although he says as an artist the Perugian far surpassed the somewhat dry and narrow-minded artist of Ferrara, but it is perfectly clear that it was to this dry and so-called narrow-minded man that Mazzolini owed his excellent work. The architectural backgrounds of his pictures are their specially distinct feature, and notably the creamy-white marble. Attention should further be directed to the artist's unctuousness and personality, and to the power of imparting pleasure, as his gift was rather in the direction of genre than of historical painting, and to most observers there is something curiously Flemish about his work. There is a second important picture of his in Berlin, a Virgin and Child, two at the Louvre, one in Ferrara, three in the National Gallery, and three in Florence, other examples in Munich, and in various private collections. The chief work of his in England is one belonging to Lord Wimborne. He is also represented in the galleries of Turin, St. Petersburg, The Hague, and in the Capitoli at Rome, the Doria, and the Borghese.

GEORGE CHARLES WILLIAMSON.

Mazzoni (Mozzoli, also Prienias), Sylvester, theologian, b. at Prierro, Piedmont, 1480; d. at Rome, 1523—sometimes confounded with Sylvester Ferrarini (d. 1526). At the age of fifteen he entered the Order of St. Dominic. Passed brilliantly through a course of studies he taught theology at Bologna, Pavia (by invitation of the senate of Venice), and in Rome, whither he was called by Julius II in 1511. In 1515 he was appointed Master of the Sacred Palace, filling that office until his death. His writings cover a vast range, including treatises on the planets, the power of the demons, history, homiletics, the works of St. Thomas Aquinas, the primacy of the popes. He is credited with being the first theologian who by his writings attacked publicly the subversive errors of Martin Luther. John Tetzel's productions against the arch-reformer are called by Eccard scattered pages (politische Blättern) forth as the champion of the Roman Pontiffs against Luther. The heresiarch replied to Mazzolini's arguments; the latter published rejoinders, and there was a regular controversy between the innovator and the defender of the ancient Faith. The necessity of promptness in attack

MBAYA

and defence will account for defects of style in some of his writings. His principal works are: "De juridice et irrefragabili veritate Romane Ecclesiae Romane Ritus Pontificis" (Rome, 1520); "Epitoma responsionis ad Lutherum" (Perugia, 1519); "Errata et argumenta M. Lutheri" (Rome, 1520); "Summa Summarum, quae Sylvestrina dictur" (Rome, 1516), reprinted forty times; an alphabetical encyclopedia of theological questions; "Rosa aurea" (Bologna, 1510) an exposition of the Gospels of the year; "In thesauris planeta rum" (Venice, 1513).

D. J. KENNEDY.

Maccabell, Pietro Francesco (also known as Il Morazzone, Marrazzone, and Morazone), Milanese painter, b. at Morazone near Milan, either in 1571 or 1575; d. at Piacenza in 1626. In the early part of his life, this painter resided in Rome, where he painted various altarpieces, then he passed on to Venice, and made a profound study of the work of Titian, Tintoretto, and Paolo Veronese, so entirely altering his style and improving his scheme of colour, that the pictures he painted when he came to Milan, although representing subjects similar to those he had carried out in Rome, could hardly be recognized as having come from the same hand. He was patronized by Cardinal Borromneo, and from the Duke of Savoy received the honour of knighthood and the order of St. George. In 1626 he was called to Piacenza to paint the cupola of the cathedral, but was not able to finish this work, which he commenced in a grand and vigorous style, and died, it is believed, from an accident in connection with the scaffolding, in consequence of which Guercino was called in to complete the work. The chief painting by Maccabell is that in the church of San Giovanni at Como, and represents St. Michael and the angels.

Mazzuola, Francesco. See Parmigiano, Il.

Mbaya Indians (Guaycuru), a predatory tribe formerly ranging on both sides of the Paraguay River, on the north and northwest Paraguay frontier, and in the adjacent portion of the Province of Matto Grosso, Brazil. They are one of a group of equestrian warlike savages tribes, closely connected with the Guarani stock, the Guaycuran, formerly roving over Northern Paraguay and the upper Chaco region, and of which the best known are the Abipon, made famous by the missionary Dobrizhoffer, the Guaycurd proper, or Mbaya, the Mocobi and the still savage and powerful Toba. The Lenguas, sometimes included under the same name, are now known to be a branch of the Chiquito of Bolivia. The name, Mbaya, given to them by the more peaceful Guarani, signifies "terrible," "bad," or "savage." The name Guaycurd, now most commonly used, is said to mean "runner." They have also been called Caballeros by the Spaniards, on account of their fine horsemanship. According to Dr. Odero they had three main divisions, viz: Eguinu-yiqui (Eguinu-yiqui) in the North, Napin-yiquil in the West, and Taqui-yiqui in the South. Iolis, another authority, gives a different list of six divisions.

The Guaycurd were accustomed to prey upon the more sedentary and industrious Guarani tribes, making sudden raids, with quick retreats into their own country, where they afterwards made their camps out of the scamps made pursuit difficult and subjection almost impossible. In 1542, Alvar Nuñez Cabeza de Vaca, governor of Buenos Aires, with a detachment of Spaniards and a contingent of Guarani, inflicted upon them a signal defeat, chiefly by the terror of his field guns and horses, with both of which the Guaycurd
were still unacquainted. The acquisition of horses
soon transformed them into a race of expert and dar-
ing equestrians, and for two centuries they continued
their raids upon the Spanish settlements on the Para-
guay River and the neighbouring missions. As early
as 1610 the Jesuits unsuccessfully attempted their con-
version. About the middle of the eighteenth century
a peace was arranged, which, according to Dobrizhoff-
er, was faithfully kept by the Indians. The Jesuit
Joseph Sanches Labrador was then sent, at his own
request, to work among these Guaycurú, who had been
considered the wildest and most dangerous tribe of the
region. Having made good progress in their difficult
language, he established for them, in 1760, the mission
of Virgen de Belen (now Belen) east of the present
Concepción, Paraguay. Reversing the policy of the
missionaries of the Jesuit fathers, Dobrizhoffer,
"the rest did little else than wander over the plains",
the mission influence, however, effectually tamed their
ferocity. At the expulsion of the Jesuits, in 1767, the
Belen mission contained 260 Christian Indians, eight of
the nine bands still remaining in the forest.

In this same year was established by Father Manuel
Duran the last of the Paraguay Jesuit foundations,
the mission of San Juan Nepomuceno, on the east
bank of the river, among the Guana, or Chana, a
numerous agricultural and pedrestrian tribe of the same
territory, subject to the Mbaya. When the mission-
aries arrived in 1767, this mission contained 120
Indians. The conversion of the Guana had been under-
taken more than a century before by Father Pedro
Romero, who lost his life in 1645 at the hands of a
neighbouring wild tribe. Among the Guana, infantil-
cide, polygamy, and intoxication were unknown, and
men and women worked together in the fields. About
the close of the eighteenth century the Franciscans took
up the work begun by the Jesuits, and in the course of
the next fifty years gathered a number of the Guay-
curú and Guana into missions, which continued until
the tribes themselves declined or were assimilated.

Lieutenant Page, who commanded an expedition sent
by the United States Government to explore the Para-
guay River, gives an interesting and extended account
of his visit to one of these missions, Nossa Senhora de
Bon Conselho, near Albuquerque, Brazil, in 1853
(Page, "Report to the Secretary of the Navy", Wash-
ington, 1855). Here the Christian Guanas cultivated
vegetables for the market afforded by neighbouring
white settlements. Under the care, both temporal and
spiritual, of their father, the Franciscans, who,
only a few years earlier, had been wandering
savage, were now a remarkably neat, orderly, and
thriftily community of husbandsmen. Fronting upon
a public square, there stood the village church, the
schoolhouse, and a number of well-constructed
thatched dwellings, each dwelling having a frontage
of 20 feet, the interior partitioned with curtains and
fitted with raised platforms to serve either as tables
or as beds. Among the vegetables cultivated was a
native rice, which they harvested in canoes. Cotton,
too, was grown, spun, dyed, and woven by the women
of the settlement. The men wore trousers and
ponchos; the women, a chasmine girdled at the waist;
the boys were exercised in military tactics, and the
children in general were not only taught "the rudi-
ments of a common education, but made some progress
in music and dancing". A few of the Mbaya proper
still exist on the western bank of the Paraguay in
the neighbourhood of the town of Concepción. Other
bands known as Guaycurú roam over the adjacent dis-
trict, with 1500 souls as against an estimated 15,000 or
18,000 about a century ago. The Guana, on the
Faucari and Miranda Rivers in the same region, are
now labourers among the whites, although still
claimed as dependents by the Guaycurú.

In their primitive condition the men of the Guay-
curú went entirely naked, while the women wore only
a skirt. They trimmed their hair in a cir-
cular tuft. Girls had the head closely shaven. The
men painted their bodies, and wore rings in the lower
lip. Boys were painted black until about fourteen
years old, then red for two years, when they were
subjected to a painful ordeal, before taking their
manhood rite as was war. War was their chief business,
their weapons being the bow, club, and bone knife.
The children born of captives were sold as slaves.
Their chief tribal ceremony was in honour of the
Pleades, and was accompanied by a sham battle be-
tween the men and women, ending with a general in-
Toxication. They buried their dead in the ground,
and voluntary or involuntary victims were sacrificed when
a chief died. Polygamy was unknown, but separation
was frequent, and infanticide common. They sub-
sisted by fishing and hunting. Their villages con-
sisted each of a simple communal structure in three
large rooms, the middle of which was reserved for the
chief and head men, and for the storage of weapons.
The chief had great authority, and with his head men,
seems to have belonged to a different clan, or gens,
from the common warriors. Captives and their de-
dscendants constituted a permanent slave class. As a
people, they were tall and strongly built. Those still
remaining show the admixture of white captive blood
and are gradually assimilating to the settled popula-
tion.

Meade, John. See Almida, John.

Meagher, Thomas Francis, soldier, politician, b.
at Waterford, Ireland, 3 August, 1823; accidentally
drowned in the Mississippi River, U.S. A., 1 July, 1867.

Educated in the
Jesuit colleges of
Clongowes and
Stonyhurst, he
finished his college
career in 1843 with
a reputation for
great oratorical
ability. He
volunteered for service in the army immediately after
the secession of the southern states. After the battle of
Gettysburg, he was elected a member of the
departing House of Representatives from Colorado, and
was a prominent leader in the American
Reform
Movement. He died in 1877.

Thomas Francis Meagher.
New York, where his countrymen gave him a hearty welcome. His popularity as a lecturer was immediate; he also studied law and, admitted to the bar in 1855, started a paper called the "Irish News" (12 April, 1856), in which he published his "Personal Recollections". Two years later he undertook an exploring expedition to Central America; his narrative was published in "Harper's Magazine". Soon after he broke up the cause of the Union, raised a company of zouaves, went to the front with the Sixty-Ninth New York Volunteers, and participated in the first battle of Bull Run. He then organized the famous Irish Brigade, of which he was commissioned brigadier-general, and with it participated in the operations of the Army of the Potomac before the Battle of Fair Oak (1 June, 1862), the seven days' fight before Richmond, Antietam, Fredericksburg (13 Dec., 1862), where it was almost annihilated, and Chancellorsville (1863). He then resigned his command because, he said, it was perpetrating a public deception to keep up a brigade so reduced in numbers, and which he had been refused permission to withdraw from service and recruit. A command of a military district in Tennessee was at once given him, which he resigned after a short time. At the close of the war he was made (July, 1865) Territorial Secretary of Montana. During a trip made in the course of his administration of this office he fell from a steamer into the Missouri River at night and was drowned. His body was never found.

Thomas Francis Meagher (Worcester, Mass., 1882); Conti, The Irish Brigade and Its Campaigns (New York, 1887); Savage, '68 and '69 (New York, 1856); Duffty, Young Ireland (London, 1880); Four Years of Irish Life in London (London, 1857); Murphy, History of the Irish Volunteers (New York, 1887); Irish American (New York, 1868).

THOMAS F. MEANAN.

Meath, Diocese of (Midensis), in Ireland, suffragan of Armagh. In extent it is the largest diocese in Ireland, and includes the greater part of the counties Meath, Westmeath, King's, and a small portion of the counties Longford, Dublin, and Cavan. The present Dunleary Diocese of Meath, comprising the eastern half of the diocese, was united with the diocese of Ossory in 1727. The pope in 1763 finally exchanged the bishopric of Meath for the archbishopric of Cashel. It passed to the See of Clonard, founded in the middle of the sixth century by St. Finian, "Tutor of the Saints of Erin". The see was re-established in 1172, over which Cardinal Paparo presided as legate of Eugene III, it was decided that these sees be joined together. The united see was assigned as first bishop of Meath, and appointed to the see, after the metropolitan see in Ireland. In his "Hibernia Dominica" De Burgo says that Meath is the foremost suffragan of Armagh, and has precedence even though its bishop is the youngest of the Irish prelates in order of consecration. Meath being the country of the Pale, many Englishmen were appointed bishops of Meath, among them the notorious Staples, who apostatized in the reign of Edward VI, and was deposed in 1554. Dr. Walsh, a Cistercian monk, succeeded, and more than repaired the scandal caused by his recreant predecessor. This noble confessor of the Faith bravely withstood all the threats and blandishments of Queen Elizabeth and her agents. He spent thirteen years in a dungeon in Dublin Castle, and finally died an exile at Alcalá in Spain. His name is reckoned in more than one Irish Martyrology. Like honour is paid to him by his own order, and his Cistercian biographer contends that the martyr's crown is his as truly as if he had died in torments. The succession of bishops in the See of Meath has been completely interrupted only except during a few brief interregnums in the penal days. It is a noteworthy fact that, omitting Dr. Logan's short reign of a few years, but three bishops ruled the Diocese of Meath from 1779 to 1899, Drs. Plunket, Cantwell, and Nulty. Dr. Plunket, who had been professor and superior in the Irish College of the profound theologian and ardent student, he put before his priests a high intellectual standard: at the same time he did much to overthrow landlordism and to root the people firmly in their native soil.

The population of the Diocese of Meath at the last census (1901) was 143,634, of whom 132,992 were Catholics. Since 1871 the population of the diocese has decreased 27 per cent.; during the same period the non-Catholic population decreased 35 per cent. There are 144 churches and 66 parishes, 155 secular priests and 12 regulars, 3 monastic houses of men with 17 members, and 13 convents of nuns with 134 members. St. Finian's College, an imposing structure erected in Mullingar and opened in 1908, replaces the old "building in Navan, which had held, for more than one hundred years, an honoured place among the schools of Ireland. The new college, which cost over £40,000, has accommodation for 150 students and is intended both as a seminary to prepare priests for the diocese, and to impart a sound Catholic liberal education to those intended for worldly pursuits. There is a Jesuit novitiate and college at Tullamore, and a house of Carmelites Fathers at Moate. The Franciscans of the Irish province have a monastery and preparatory school at Multyfarnham, near the cathedral town of Mullingar. The Abbey of Multyfarnham has been in Franciscan hands since pre-Reformation times, and has witnessed the good and evil fortunes of the friars in Ireland. The Franciscan Brothers have a school at Clara, and the Christian Brothers have a school at Mullingar (500 pupils) and at Clara (200 pupils). At Rochfortbridge, St. Joseph's Institute for the Deaf and Dumb is conducted by the Sisters of Mercy. The Loreto Nuns have educational houses in Navan and Mullingar, which have won
favourable recognition. The Presentation Sisters have foundations in Mullingar and Rahan, where they have charge of the primary schools, while the Sisters of Mercy have orphanages at Navan and Kells, take care of the hospitals in Tullamore, Trim, Mullingar, Drogheda, and Navan, and at the same time conduct national schools in the principal towns of the diocese.

The Diocese of Meath, often called the “royal diocese”, is rich in historic associations, pagan and Christian. In Meath was Tara “of the kings”, the palace of the Ard-righ, whither came the chiefstains and princes, the bards and brehons of Erinn. The principal cemetery of the pagan kings of Ireland was at Brugh na Bóinne. St. Patrick, the first Christian King of Ireland, who refused to be buried in pagan Brugh, awaited the last summons. Uisneach in Westmeath, Tlachtga, or the Hill of Ward, and Teltown were celebrated for their royal palaces, their solemn conventions, their pagan games, and their druidic ceremonies, and in Christian times were sanctified by the labours of St. Patrick and St. Brigid. Slane reminds us of St. Patrick’s first Holy Saturday in Ireland, when he lit the paschal fire, symbolizing the lamp of Faith which has never since been extinguished. Trim, founded by St. Jude, is the first diocese of Ireland. The first diocese of St. Patrick retains in its many ruins striking evidences of its departed glories. Kells, with its round tower, its splendid sculptured crosses, and the house of Columcille, reminds us of that “Dove of the Irish Church”, whose memory is also cherished in his beloved Derryn. Finally, Meath is the birthplace of the Venerable Hugh de Lacy, and of St. Peregrine of Armathwaite, the last victim publicly sacrificed in England for the Faith.

COGAN, Dioceze of Meath (Dublin, 1862); HEATY, Ancient Schools of Ireland (Dublin, 1900); Irish Ecclesiastical Record (June, 1900); Irish Catholic Directory (Dublin, 1910).

PATRICK E. DUFFY.

MEATH, Diocese of (MELDENIUS), comprises the entire department of Seine and Marne, suffragan of Sens until 1622, and subsequently of Paris. The Concordat of 1801 had given to the Diocese of Meaux the department of Marne, separated from it in 1821 and 1822 by the establishment of the archiepiscopal See of Reims and the episcopal See of Châlons. The present Diocese of Meaux is made up of a larger part of the former Diocese of Meaux, of the whole of the Diocese of Sens, a part of the former Diocese of Paris, and a few parishes of the former Dioceses of Troyes, Soissons and Senlis. Hildegarde, who lived in the ninth century, says in his “Life of St. Faro” (Burgundofaro), that this bishop was the twelfth since St. Denis. According to the tradition accepted by Hildegarde, St. Denis was the first Bishop of Meaux, and was succeeded by his disciple St. Saintin, who in turn was succeeded by St. Antoninus; and another saint, named Rigomer, occupied the See of Meaux at the close of the fifth century. In 876 or 877, Hinemar showed Charles the Bald a document which he claimed had been found in a vassel, containing the names of St. Antoninus and St. Saintin, disciples of St. Denis, who brought to Pope Anacletus the account of the martyrdom of St. Denis, and on their return to Gaul had successively occupied the See of Meaux. (For these traditions see PARIS.)

According to Mgr. Duchesne, the first Bishop of Meaux historically known is Medocleveus, present at two councils in 549 and 552. Of the bishops of Meaux the following may be mentioned (following Mgr. Alou's chronology): St. Faro (626-72), whose sister St. Faro founded the monastery of Faremoutiers, and who himself built at Meaux the monastery of St-Croix; St. Hildes (972-68); St. Pathus, who died about 684 before being consecrated at St. Ebrisgillus (end of the seventh century); St. August (first half of the seventh century); Durand de St-Pourpain (1326-1334), commentator on the “Book of Sentences”, known as the “resolute doctor”; Philippe de Vitry (1351-1361), friend of Petrarch and author of the “Metamorphoses d'Ovide Moralisées”; Pierre Fresnel (1380-1409), several times ambassador of Charles VI; Pierre de Vercham (1433-1438), archbishop of Paris, commission by Eugene IV, and who, when commissioned by Charles VII in 1429 to examine Joan of Arc, had declared himself convinced of the Divine mission of the Maid of Orleans; Guillaume Brignon (1516-1534), ambassador of Francis I to Leo X, and during whose episcopate the Reformation was introduced by Farel and other Reformers. The first cardinal of Meaux was an archbishop of this diocese for the revival of studies; Cardinal Antoine du Prat (1534-1535), who had an active share in the drawing up of the concordat between Francis I and Leo X; the controversial writer and historian Jean du Tillet (1564-1570); Louis de Brézé, twice bishop, first from 1584 to 1594, then from 1570 to 1589, during whose episcopate the diocese was greatly disturbed by religious wars; Dominique Séguier (1637-1659), the first French bishop to establish “ecclesiastical conferences” in his diocese; the great Bossuet (1651-1704); Cardinal de Bissy (1705-1737), celebrated for his conflict with the Jansenists; De Barel (1802-1806), later Grand Almoner of Empress Josephine and Legate of the Pope, who was the author of the famous Treatise in 1810 and 1811 in the negotiations between Napoleon and Pius VII. In 1562 most of the inhabitants of Meaux had become Protestants, and Joachim de Montcuc, sent by the king, proceeded with rigour against them. They were still sufficiently powerful in 1567 to attempt to carry off, in the vicinity of Meaux, Catherine de’ Medici and Anne of Austria, whose horse had previously failed to carry them. After St. Bartholomew’s day, Charles IX ordered the massacre of the Protestants of Meaux. At the château of Fontainebleau, built by Francis I, was held the theological conference of 4 May, 1600, between the Catholics (Cardinal du Perron, de Thou, Pitou) and the Calvinists (du Plessis Mornay, Philippe Canayze, Isaac Cauzaouen).

A number of saints are found in the history of this diocese: St. Autharius, a relative of St. Faro, who received St. Columbanus in his domain at Usy-sur-Marne, and father of Blessed Ado, who founded about 630 the two monasteries of Jouarre, and of St. Ouen, who founded the monastery of Reims in 651 and frequently consecrated Bishops of Reims; the abbot St. Fère or Fiscare, and the missionary St. Chilien, both Irishmen, contemporaries of St. Faro (first half of the seventh century); St. Aile (Agilus), monk of Luxeuil, who became in 634 the first Abbot of Rebais; St. Telchilde, died about 660, first Abbess of Jouarre; St. Aguilberte, second Abbess of Jouarre, a sister of St. Ebrisgillus (end of seventh century); St. Bathilde, wife of Clovis II, foundress of the abbey of Chelles, died in 680; St. Bertille, first Abbess of Chelles, and St. Ethèria, first Abbess of Notre-Dame of Soissons (638), both of them pupils at the abbey of Jouarre; finally, St. Vincent Madelaigne (or Mauger), founder of the abbey of Jumieges, who first established the abbey of Waldetrude, foundress of the monastery of Monza; St. Aldegonde, sister of St. Waldetrude, first Abbess of Maubeuge; St. Landry, Abbot of Soignies, claimed by some as a Bishop of Meaux; St. Adeltrude and St. Malbette, nuns of Maubeuge, the last three being children of St. Vincent Madelaigne and St. Waldetrude (seventh century).

Eugen III stayed some days at Meaux in 1147. In 1664 Blessed Eudes preached for two months at Meaux. Mme Guyon passed the first six months of 1695 at the Visitation convent of Meaux, where Bossuet had frequent conferences with her, but failed to make her abandon her peculiar views. The celebrated Fère Lonquet (1757-1845) was superior from 1812 to 1814 of the preparatory seminary of Châlons, in the
Diocese of Meaux. The Paris massacres on 2 and 3 September, 1792, at the prisons of the Carmes and the Abbaye had their counterpart at Meaux where seven priests were massacred in prison on 4 September. The Abbey of Notre-Dame de Jour is the last secular church marked a pedagogical revolution: the Latin grammars written in Latin were abandoned and French textbooks were used in the study of the dead languages. The college became national property in 1791, and was re-purchased in 1796 by a few Oratorians; in 1826 by Salinis, future Bishop of Amiens and Soissons, chaplain-general of the university; in 1840 by the Abbé Bautain; finally, in 1867, the college returned into the hands of the new Congregation of the Oratory founded by the Abbé Pétetot. In the salon of the Abbé de Salinis, at Juilly, was established in December, 1830, the Agence générale pour la défense de la liberté religieuse. Lamen neaux recalled a few years later the editor of L’Avenir. It was at Juilly in 1836, that his half-brother, Gaspard, founded the review L’Université Catholique. Among the students at Juilly in the seventeenth century were the Mariads de Berwick and de Villars; in the nineteenth, Mgr de Mérode and the famous lawyer, Berryer.

A council convoked in 845 at Meaux by Charles the Bald adopted important measures for the re-establishment of discipline in the three ecclesiastical provinces of Sens, Bourges, and Reims. Other councils were held at Meaux in 962, 1062, 1204, 1229 (ended in Paris), where the Count of Toulouse was reconciled with the Church; in 1240 a council was held in which the bishop of Meaux, Urban, communicated his grievances against Frederick II by Joannes of Palestrina, legate of Gregory IX; there was held an important council in 1623. Four councils were held at Melun, in 1216, 1225, 1232, 1300. The city of Provins was famous in the Middle Ages for its burlesque ceremonies (fête de fous, fête de l’an, fête des Innocents) held in the church of St-Martin, a fine Gothic edifice begun about 1170. The church of Champigny has a magnificent crypt dating from the thirteenth century. The principal pilgrimages of the diocese are: Notre-Dame de Lagny, dating from 1128; Notre Dame du Chêne de Preuilly, dating from the foundation of the Cistercian Abbey (1118); Notre Dame du Chêne de Cournon (already completed in the beginning of the seventeenth century; Notre Dame de Bon Secours near Fontainebleau (the pilgrimage was established in 1661 by d’Auberou, an officier of the great Condé); Notre Dame de la Cave at Champigny; Notre Dame de Pétié at Verdelot; Notre Dame de Melun at Melun; Notre Dame du Puy at Sièges; Notre Dame de Vézelay, that long been the object of a pilgrimage, greatly furthered by the Jesuits in 1670; the cloak (chape) of St Martin of which a large portion is preserved at Bussy-Saint-Martin, also attracts pilgrims.

Before the application of the Associations Law of 1901 religious communities were represented in the diocese by the Lazarets, Oratorians, Little Brothers of Mary, Fathers and Brothers of St Mary of Tinchbray, School Brothers of the Christian Doctrine. Of the congregations of women the following may be mentioned: the Celestial Sisters, a teaching and nursing order founded in 1839 (mother-house at Provins); the sisters of St. Louis, a nursing and teaching order, founded in 1844 by the Bishop of Meaux at Juilly, the Congregation of Meaux, called Carmen of the Prophecy, founded 30 August, 1860. The Benedictines of the Sacred Heart of Mary, devoted to teaching and contemplation, restored in 1837 the ancient abbey of Jour. The religious congregations had under their care: 4 crèches, 52 day nurseries, 1 orphanage for boys, 15 orphanages for girls, 14 industrial schools, 10 hospitals, 26 hostels or asylums, 19 houses for the care of the sick in their own homes, 1 house of retreat. In 1908 the Diocese of Meaux had 361,939 inhabitants, 39 parishes, 402 succursal parishes, 8 vicariates.

Mecca, the capital of Arabia and the sacred city of the Mohammedans, is situated in the district of Hijaz about 21° 30' N. latitude and 40° 20' E. longitude, some seventy miles east of the Red Sea. It lies in a sandy valley surrounded by rocky hills from two hundred to five hundred feet in height, barren and destitute of vegetation. The birthplace of Mohammed and the seat of the famous Kaaba in pre-Islamic times as the chief sanctuary of the Arabs, and visited by numerous pilgrims and devotees. The city presents an aspect more pleasing than that of the ordinary Eastern town, with comparatively wide streets and stone houses, usually of three stories, and well aired and lighted. The inhabitants, numbering about 80,000, are with few exceptions of Arabian race, and are engaged in innkeeping, but under the immediate authority of the Sultan of Turkey (Hughes, "Dictionary of Islam", q. v.). Mecca is annually visited by some 80,000 pilgrims from all over the Mohammedan world. On their way the pilgrims pass through Medina, the second sacred town of Arabia, and on approaching Mecca they undress, laying aside their shoes and a piece of cloth over the left shoulder. Then they perform the circuit of the Kaaba, kiss the Black Stone, hear the sermon on Mount Arafat, pelt Satan with stones in the valley of Mina, and conclude their pilgrimage with a great sacrificial feast. In a year or two Mecca will be reached by the Hijaz Railway, which will make the journey of about two hundred and fifty miles from Damascus. From Medina to Mecca the distance is two hundred and eighty miles, and from Mecca to Damascus about one thousand and one hundred and ten miles. The railway passes through the old caravan route, Damascus, Mezzab, Maan, Medawara, Tebuk, Madain Saleh, El-Fula, Medina, and Yathrib.

The early history of Mecca is shrouded in obscurity, although Mohammedan writers have preserved an abundance of legendary lore according to which the city dates back to Abraham who is said to have there worshipped the true God. It is also stated that after the death of Abraham, the inhabitants of Mecca, owing to the evil influence of the heathen Amalekites, fell into idolatry and paganism, and the Kaaba itself became surrounded with their idols. Hundreds of these idols were destroyed by Mohammed on his entrance into the city at the head of a Moeslem army in the eighth year of the Hejira, or A. d. 629. During the century before Mohammed we find the tribe of Qurash in undisputed possession of the Kaaba, Aishah, acknowledged guardians of the Kaaba. The leading events in Mecca at that period, such as the Abyssinian expedition against Yemen and the utter defeat of
Mechanism.—There is no constant meaning in the history of philosophy for the word Mechanism. Originally, the term meant that cosmological theory which ascribes the motion and changes of the world to some external force. In this view material things are purely passive, while according to the opposite theory (i.e., that of the Kantian school) there is one certain source of energy which account for the activity of each and for its influence on the course of events. These meanings, however, soon underwent modification. The question as to whether motion is an inherent property of bodies, or has been communicated to them by some external agency, was very often ignored; a common number of cosmologists the essential feature of Mechanism is the attempt to reduce all the qualities and activities of bodies to quantitative realities, i.e., to mass and motion. But a further modification soon followed. Living bodies, as is well known, present at first sight certain characteristic properties which have no counterpart in lifeless matter. As Mechanists we ascribe these appearances to the fact that all "vital" phenomena as physical and chemical facts; whether or not these facts are in turn reducible to mass and motion becomes a secondary question, although Mechanists are generally inclined to favour such reduction. The theory opposed to this biological mechanism is no longer Dynamism, but Vitalism or Neobehaviourism, which says that vital activities cannot be explained, and never will be, by the laws which govern lifeless matter. As Mechanists profess to furnish a complete system of the world, its extreme partisans apply it to psychological manifestations and even to social phenomena, but here it is at best only tentative and the result very questionable. Its advocates merely a complex of more than thoroughly, psychological and social facts with the general laws or leading hypotheses of biology. It is preferable, therefore, in the present state of our knowledge, to disregard these features of mechanistic doctrine, which are certainly of a provisional character. In a word then, Mechanism in its various forms shows a tendency to reduce the higher and more complex forms of life to the lower and less complex, and to carry this reduction down to the simplest attainable forms, i.e., to those quantitative realities which we call mass and motion. Psychology and sociology derive their explanation from biology; biology derives its explanation from the physical and chemical sciences, while these in turn borrow their explanation from mechanics. The science of mechanics becomes by a very simple process a particular phase of mathematical analysis, so that the ideal of Mechanism is Materialism, that is to say, the representation of all phenomena by mathematical equations. Hence it is plain that Mechanism tends to eliminate from science and from reality all "vitalistic" aspects. "Forms," and "ends." We shall first state the arguments brought forward in support of the theory, and then subject it to criticism.

I. Arguments.—(1) Modern Mechanism, which unquestionably goes back to Descartes, arose, it is said, from a legitimate reaction against the errors of deistic and rationalistic thought, and to the old theory of forms and latent qualities. Whenever a phenomenon called for explanation, it was furnished by endowing the substance with a new quality; and, as Molière jestingly puts it, "the poppy made one sleep, because it has the sleep-inducing property." Each thing was what it was by virtue of an inherent or specific form; man by the human form, a pebble by its pebble form; and each thing performed its characteristic functions by some "virtue." Thus, it is alleged, all explanations fell into tautology, and science was doomed a priori to pursue a monotonous round in complete sterility. If Mechanism did nothing more than deliver us from this absurd locked system, it could possess at least a negative value, emphasizing by its opposition the weakness of qualitative explanations.

(2) The general laws of applied logic are cited in favour of the principles of Mechanism. The scientific fact is not the initial fact of observation. The scientist is not satisfied with seeing, he must understand; and in order to understand, there is but one conceivable method of explaining the new reality; the things which are not understood must be reduced to known antecedents. The barrenness of formal and final causes is, according to the Mechanists, at once manifest. The form is what makes a thing what it is, but the fact or thing which is to be explained does not become intelligible by reason of its being what it is. Therefore, to allege a cause or form of explanation is to explain a thing by itself. The interpretations based on "ends" are not more productive of scientific results. Aside from the anthropomorphic illusions to which such interpretations are liable, the ends help us no better than the forms to avoid tautology. The form is the principle, the end the goal which it tends, the term of its development. By this action and this term can be known only through further observation; they constitute new facts which require an explanation of their own. We learn nothing from these things to the nature of the original thing; they do not tell us how or by what internal factors it is what it is. Taking the eye by declaring that it was made to see, is to show that it is an eye but nothing more. To understand the eye it is necessary to know by what internal structure, and under what sort of stimulation the organ performs its visual functions.

Hence, say the Mechanists, all ends and final causes must be banished from scientific systematizations. The unknown can be explained only by reduction to the known, the new by reduction to the anterior, the complex by reduction to the simple. Now, if we look for the only genuinely scientific explanation, we cannot stop until we reach mass and motion. Such indeed is human intelligence, that we first grasp the most general and the simplest realities, and we grasp these the beings in terms of the familiar phenomenon of life. To explain it by a vital force or principle would simply be to not explain it at all. We must, if we would understand life, reduce it to something which is not life, to something simpler and better known. We must therefore, the Mechanist asserts, reduce to relations and chemical phenomena, and our understanding of life is explained by the possibilities of this reduction. It may be that we have not explained by this method everything connected with vital phenomena, since their reduction to physical laws is as yet incomplete: but this does not justify the assumption of a latent quality; it only means that our biological knowledge is far from perfect. Chemical phenomena, and the qualities they must likewise be accounted for. Under pain of fruitless tautology, we must reduce them to that which is already known. But we find here only quantitative matter and motion, realities which may be reduced to mathematical formulæ, thus bringing us to a practically pure idea of quantity. Beyond this we cannot go, for if we had an idea of quantity, we should have an idea of the real. It apparently follows that by the very requirements of logic, Mechanism alone has an indisputable claim to a place in the realm of science. Any other system, the Mechanists claim, must necessarily
MECHANISM

be provisional, tautological, and therefore misleading.

(3) There is another consideration which is said to outweigh all reasoning a priori: Mechanism succeeds. Its explanations, we are told, are clear and precise to a degree unattainable in any other theory, and they satisfy the mind with a synthetic view of reality. They alone have delivered us from an intolerable pluralism in the cosmic system, secured that unity of thought which seems to be an absolute need of our mind, and brought under control phenomena which had defied all analysis and which had to be accepted as primary data. Furthermore, the doctrines of Mechanism have enabled us to anticipate observation and to make forecasts which facts in nature have actually confirmed. Herein is a guarantee which, for the Mechanists, is not to be found in all the other systems of thought.

Such, in the main, is the line of reasoning followed by the adherents of Mechanism. That it is not conclusive will appear quite clearly from the following examination into its value.

Carriès.—It cannot be denied that mechanistic ideas have played a useful and creditable part in science. This is not to say that a resolution in the realm of philosophy, it has certainly stimulated research in the scientific field. This service cannot be overlooked, even though one be convinced of the inability of Mechanism to provide us with a formula of the universe. It is none the less true, however, that Mechanism as a cosmic theory may be possible.

(1) First of all, there is in the progress of natural phenomena a fundamental fact which Mechanism is unable to account for, the irreversibility of cosmic events. All motion is reversible: when a moving object has covered the distance from A to B, we at once understand that it can go back over the path from B to A. A inanimate motion, it is not clear why events in nature should not at times retrace their march, why the fruit should not return to the flower, the flower to the bud, the tree itself to the plant and finally to the seed. True, it is shown that this reversion, even in the mechanistic hypothesis, is exceedingly improbable, but it would not be impossible. Now such reversion, in the case of certain phenomena at least, is more than improbable; it is inconceivable, for instance, that our limbs should be bruised before the fall which causes the bruise. This irreversibility of cosmic processes is undoubtedly, as the Mechanists themselves admit, the chief difficulty against their system.

Next, then, within the field of biology, the difficulties against Mechanism multiply. Granted that this doctrine has served as a guide to many successful investigators, what have they attained in the last analysis? They have not advanced one step nearer to the "formula of life." All the biological facts so far examined and understood have been brought into the category of physical-chemical activities; that was expected; but that is not life. A particular phase is isolated for examination, and the characteristic mark of life is thereby destroyed. For that which characterizes life experimentally considered, is the unity, the solidarity of all these particular activities; all converge to one common purpose, the constitution of the living being in its undeniable individuality. A reproduction of forms and ends is found in disintegrating it by analysis. The conflict with Mechanism has now been carried into the experimental field, and the last few years have yielded an ever increasing number of observations which seem to defy all mechanistic reduction. These are chiefly concerned with abnormal conditions which are brought about during life. For example, sea urchin embryos, taken when they have progressed far enough to permit the determination of the normal growth of each part, and divided into two or three segments, produce as many animals as there were artificial segments. Must not the conclusion be that there exists in each embryo an entelechy as Driesch says, using Aristotle's term—which is one in the whole organism and is entire within each part? Is not this the very contrary of Mechanism which claims to reduce everything to the movements (interwoven of course, but really independent) of the parts? It is not surprising, therefore, that the adherents of neo-Vitalism should now be numerous, and that their ranks are growing fast.

(3) But it is principally before logical and philosophical criticism, that Mechanism seems to give way completely. Those very ideas on the nature of explanation, according to which it is attempted to reduce all reality to terms of the supposed primary notions of mass and motion, would be in ever attaining the whole of reality. The present must be reduced to the past, the new to that which is already known, the complex to the more simple; but this original datum remains, that the complex and the simple are not identical, that the new fact is not the fact which was already known. If we suppose all that was maintained in the above paragraphs to be resolved by analysis to simple elements already known, we have still to explain their combination, their unity in the complex; and it is just these that have been destroyed by the explanatory analysis. Given that there is something to explain, something unknown, it is clear that there is something beyond the known and the old, and there must inevitably be some means of bringing the numerous elements, which are the species or for the individual, may in a very broad sense be called the "form." Explanations based on analysis do not discover the form, because they begin by destroying it. It may be said, in a particular but entirely acceptable sense, that the "form" explains why because, to begin with, the form is by its very nature irreducible. But from this to the denial of form is a very far cry. The scholastics of the decadent period erred in regarding forms as explanatory principles, but Mechanism distorts the reality by reducing it to its "matter," by ignoring its specific and its individual unity. For the same reason, the mechanical interpretations of the dynamic aspect of things, that is to say of cosmic evolution, prove futile. It is of course instructive in the highest degree to know what previous state of the universe accounts for the present state of things; but to look on those anterior efficient causes of things as the adequate representations of their effects, is to lose sight of the fact that the anterior causes were causes; the consequence is an absolute "statism" and a denial of all causality.

Similar observations might be made on the subject of final causes. The meaning itself of the word finality has undergone singular changes since Aristotle and the thirteenth century. Let it suffice to note that finality has its basis in the intellectual nature of an efficient cause, or in the internal tendency of a form viewed from the standpoint of activity, of dynamism. The decadent Scholastics weakened their position when they relied on forms and ends only as means of scientific explanations strictly so called, while Mechanists are clearly in error when they seek in these same scientific explanations for an account of reality to the anterior causes were causes; the consequence is an absolute "statism" and a denial of all causality.

Similar observations might be made on the subject of final causes. The meaning itself of the word finality has undergone singular changes since Aristotle and the thirteenth century. Let it suffice to note that finality has its basis in the intellectual nature of an efficient cause, or in the internal tendency of a form viewed from the standpoint of activity, of dynamism. The decadent Scholastics weakened their position when they relied on forms and ends only as means of scientific explanations strictly so called, while Mechanists are clearly in error when they seek in these same scientific explanations for an account of reality to the anterior causes were causes; the consequence is an absolute "statism" and a denial of all causality.

Conclusion.—Mechanism is a cosmological theory which holds that all phenomena in nature are reduc-
liable to simple phenomena in such a manner that the ultimate realities of the material world are mass and motion, and not signal sense; it exhibits in great clearness the material causes or pheno-
omena; indeed, this explains why its formulae may, in exceptional cases, provide a formula applicable to some fact as yet unknown. But it is impossible to re-
gard Mechanism as a real representation of our uni-
verse. It wrought its own ruin when it claimed a scope and significance which are denied it by the reality of things and the exigencies of logic.

All general treatises on philosophy give at least a few pages to Mechanism. M. P. DE MUNNYCEN.

Mehitar (MEHTIAR, MEHITAR, MICHITAR or MOCHITAR, a word which means “Comforter”), is the name taken by Peter Manuk, founder of the religious order, who became a monk at the cen-
ter of Sebasta (Silvases) in Lesser Armenia, b. 7 Feb-
ruary, 1676, of parents reputed noble, he was left until the age of fifteen in the care of two pious nuns. There, the oldest of the cloister of the Holy Cross near Sebasta, and the same year (1801), was ordained deacon by Bishop Anahid. Shortly after, he was consecrated bishop by those who later became his monks. At this time, he left the cloister, not cutting off the habit or infringing his vows (the Eastern monk could, for a proper reason, lawfully leave the enclo-
sure) and set forth, in the company of a doctor of that city, for Etchmiadzin, the capital of Greater Armenia, persuaded that it was the centre of civiliza-
tion and the home of all the sciences. During his jour-
ney he met with European missionaries and a fellow Armenian, whose accounts of the wonders of the West changed the course of his life. Stirred with an admiration of Western culture and the desire to introduce it among his countrymen, he wan-
dered from place to place, earning a scanty living by teaching. After eighteen months he returned to Sebasta where he remained for some time, still ambiti-
ous to study Western civilization. Even then he had con-
ceived the idea of founding a religious society—
suggested, doubtless, by the well-intentioned but long
since suppressed association of the “United Brothers”—which would labour to introduce Western ideas and Westernmonoistic as the one at Ancusa. This would be a
formal union of the Armenian Church with Rome, and there would be an end of that wavering between Constantine and Rome, so injurious to the spiritual
and intellectual welfare of his country. At Sebasta, he devoted himself to the reading of the Armenian
sacred writers and the Syrian and Greek Fathers in translations, and, after a vain attempt to return to Eu-
rope from Alexandria, he was ordained priest (1696)
in his own city, and (1699) received the title and staff
of doctor (Vartabed). Then he began to preach, and
went to Constantineple with the intention of founding
an Armenian College. He continued his preaching there, generally in the church of St. George, gathered some disciples around him, and distinguished himself by his advocacy of union with the Holy See. Serious trouble ensued with a violent persecution of the Cathol-
ics by the Turks, excited by the action of Count Ferrol, minister of Louis XIV at Stamboul, who car-
ried off to Paris the anti-Catholic Patriarch of Con-
stantinople. Naturally, the fervour of Mehitar and his monks led to an attack of the Church on the Catholic Patriarch, which they combated with the Holy See. The two patriarchs, urged by a schismatic, Avedik, led the attack. Mehitar wisely dismissed his disciples and himself took refuge in a Capuchin convent under French protection. Pursued by his enemies, he es-
caped to the Morea, thence to Venetian territory, find-
ing shelter in a Jesuit house. He attributed his safety to St. Joseph, whose protector he was engaged to be on his return; and the Feast of his Nativity, he had solemnly placed himself and his society.

The Venetians kindly gave him some property at Modon (1701), where he built a church and convent, and laid the foundations of the Mechitarist Order. Clement XI gave it formal approval in 1712, and ap-
pointed Mehitar Bishop of Venice later that year; but between Venice and the Porte, and the new abbe
was in jeopardy. The abbot, leaving seventy of his monks behind, crossed over to Venice with sixteen companions with the intention of beginning a second foundation. It was well that he did so for the Vene-
tian government was deposed and the Morea was regained by the Turks. Modon was abandoned and the monks dispersed. The house renting at Ven-

ice proved too small and Mehitar exerted all his influence to obtain the gift of San Lazzaro, an island about two miles south-east of the city, not far from the Lido. His request granted, he restored the old ruined church, and a second time built a monastery for his monks. This was the present convent, now situated in the hands of the Mechitarists to the present day. At St. Lazzaro he devised many schemes for the regeneration of his country. An accusation brought against him at Rome—not a personal charge but one connected with the labours undertaken by the order—ended in 1716 in a bitter misunderstanding with the Holy See, and the personal friendship of Clement XI. He died at St. Lazzaro for thirty years, busy with his printing-
press and his literary labours, and died at the age of seventy-four, on 16 April, 1749. Since his death he is always spoken of by his children as the Abbas Pater, Abbad hairim (see Mechitarists). The most important works are the following: “Commentary on the Gospel of St. Ma-
thew” (1737); “Commentary on Ecclesiasticus” (Venice); “Armenian Grammar”; “Armenian Gram-
mar of the Vulgar Tongue”; “Armenian Dictionary” (1744, and in two volumes, Venice, 1749–69); “Ar-
menian Catechism”, both in the literary and vulgar
tongues; “A Poem on the Blessed Virgin”; “Ar-
menian Bible” (1734).

Vita dell’abbate Mehtiar (Venice, 1810); La vie du serviteur de Dieu Mehtiar, fondateur de l’ordre des moines arméniens chrétiens de Venise, ainsi que de deux siècles et les plus célèbres de la congrégation (Venice, 1901).

J. C. ALMOND.

Mechitarists. Armenian Benedictines, founded by Mechitar in 1712. In its inception the order was
looked upon merely as an attempted reform of Eastern
monachism. P. Filippo Bonanni, S.J., writes at Rome, in 1712 when the order received its approval,
of the arrival of P. Elias Martyr and P. Jaonnes Simon, two Armenian monks sent by Mechitar to Pope Clement XI to offer His Holiness the most
humble subjection of himself and convent (ut et si cum
suis religiosis humillime subjectet). There is no men-
tion, at the moment, of the Benedictine rule. The
monks, such as St. Anthony instituted in Egypt (quos
St. Antonius in Aegypto instituerat), have begun a
foundation in Modon with Mechitar (Mochtir) as
abbot.

After two years’ novitiate, they take the usual
vows, with a fourth in addition—"to give obedience to
the preceptor or master deputed by their superior to

teach them the dogmas of the Catholic Faith". Many
of them vow themselves also to missionary work in
Armenia, Persia, and Turkey, where they live on alms
and wear the habits of the Oriental Church beneath the tunic, a cross of red
cloth, on which are certain letters signifying their
desire to shed their blood for the Catholic Faith. They
promise on oath to work together in harmony so
that they may the better win the schismaticas back to
God. They elect an abbot for life, who has the power

to dismiss summarily any of his monks who should prove disorderly. They wear the beard, Oriental fashion; and have a black habit—white, cloak and hood. In the engraving attached to the description, the Mechitarist would be indistinguishable from a regular hermit of St. Augustine, except for his beard. When, however, Pope Clement XI gave them his approval, it was as monks under the rule of St. Benedict, and he appointed Mechitar the first abbot. This was an honor greater than the introduction of Western monasticism into the East. There, up to this time, a monk undertook no duties but to fill his place in the monastery. He admitted no vocation but to save his soul in the cloister. He had, in theory, at least, broken off all relations with the outside world. He had no idea of making himself useful to mankind, or of doing good while he preserved his duties, his prayers, his fasting, and the monastic obedience. He belonged to no religious order but was simply a monk. Now, as a Benedictine, he would be expected to devote himself to some useful work and take some thought of his neighbour. It is clear, from P. Bonanini's description, that Mechitar and his monks wished the same thing, and had a holy and pious conception of the monk's vocation. The adoption of the Benedictine rule, therefore, was merely a recognition of their desire to devote themselves to apostolic work among their schismatic brethren, to instruct their ignorance, exalt their devotion and bring them back into the communion of the one true Catholic and Apostolic Church. It is true that later, the monks' works the church, and they afterwards lapse into the apathy and inactivity associated in the Eastern mind with the life of the cloister. It is not quite accurate to speak of them as a Benedictine "Congregation", though it is their customary description. They are a new "Order" of monks living under the rule of St. Benedict, as distinct from the Orthodox and Greek and there the Oriental in the vestries, or Olivetans. Hence we do not find them classed among the numerous congregations of the Benedictine order.

Missionaries, writers, and educationists, devoted to the service of their Armenian brethren wherever they might be found, such were and are these Benedictines of the Eastern Church. Their subjects usually enter the convent at an early age, eight or nine years old, receive in it their elementary schooling, spend about nine years in philosophical and theological study, at the canonical age of twenty-five, if sufficiently prepared, are ordained priests by their bishop-abbot, and are then employed by him in the various enterprises of the Oriental Church, and in the conversion of the heathen, by priestly ministry to the Armenian communities settled in most of the commercial centres of Europe. With this is joined, where needed and possible, the apostolate of union with Rome. Next there is the education of the Armenian youth, and, associated with this, the preparation and publication of good and useful Armenian literature. The parent abbey is that of St. Lazzaro at Venice; next in importance is that at Vienna, founded in 1810; there is a large convent and college for lay-students at Padua, the legacy of a pious Armenian who died at Madras; in the year 1846 another rich benefactor, Samuel Morin, founded a similar establishment at Paris. Other houses are in Austria-Hungary, Russia, Persia and Turkey—fourteen in all, according to the latest statistics, with one hundred and fifty-two monks, the majority of whom are priests. Not a great development for an order two hundred years old; but its extension is necessarily restricted because of its exclusive devotion to persons and things Armenian. Armenian influence has been felt in that country, and has been not only directive in the way of holiness and true service to God and His Church, but creative of a wholesome national ambition and self-respect. Apostles of culture and progress, they may be said, with strict justice, to have preserved from degradation and neglect the language and literature of their country, and in so doing, have been the saviors of the Armenian race. Individually, the monks are distinguished by their linguistic accomplishments, and the Vienna establishment has attracted attention by the institution of a Literary Academy, which confers honorary membership without regard to race or religion.

In their one of their many undertakings their founder, Mechitar, personally showed them the way. To him they owe the initiative in the study of the Armenian writings of the fourth and fifth centuries, which has resulted in the development and adoption of a literary language, nearly as distinct from the vulgar tongue as Latin is from Italian. Thus the modern Armenian remains in touch with a distinguished and inspiring past, and has at its service a rich and important literature which otherwise would have been left, unknown or unheeded, to decay. Mechitar, with his Armenian "Imitation" and "Bible", began that series of translations of great books, which, continued unceasingly during two centuries, and ranging from the early Fa-

Missionary of the Church and the works of St. Thomas of Aquino (one of their first great Catholic authors) and the best known poets and historians of later days. At one period, in connexion with their Vienna house, there existed an association for the propagation of good books, which is said to have distributed nearly half a million volumes, and printed and published edicts and other works each year. To him also they owe the guidance of their first steps in the study of the history of learning in which they have won most distinction—and the kindred studies of the Liturgy and the religious history of their country. At S. Lazzaro he founded the printing press from which the most notable of their productions have been issued, and composed the translation of Armenian manuscripts for which their library has become famous. To the members of the order the history of the Mechitarists has been uneventful, because of the quiet, untiring, plodding along ancient, traditional paths, and the admirable fidelity to the spirit and ideals of their founder (see Mechitar).

It has been principally by means of the Mechitarists' innumerable periodicals, pious manuals, Bibles, maps, engravings, dictionaries, histories, geographies and other contributions to educational and popular literature, that they have done good service to the Armenian Church and nation. Following are the most valuable of their contributions to the common cause of religion.

First, in the 18th century, the famous Armenian translations, of some lost works of the Fathers of the Church. Among them may be noted "Letters (thirteen) of St. Ignatius of Antioch"; and a fuller and more authentic "History of the Martyrdom of St. Ignatius"; some works of St. Ephrem the Syrian, notably a sort of "Harmony of the Gospels" and a "Commentary on the Epistles of St. Paul"; an exceptionally valuable edition of "Eusebius's History". The publication of these works is due to the famous Mechitarist Dom J. B. Aucher, who was assisted in the last of them by Cardinal Mai. To Aucher also we are indebted for a German translation of the "Armenian Missal" (Tubingen, 1845) and "Dom Johannis philosophi Cenomenni Armenorum Catholici (a.p., 718) Opera" (Venice, 1534). Two original historical works may also be noted: "The History of Armenia", by P. Michel Tschantcheshian (1784-8); and the "Quadro della storia letteraria di Armenia" by Mgr. Pl. Sukias Somal (Venice, 1829).

Mechlin (Lat. Mechinia; Fr. Malines), Archbishopric of (Mechlinensis), comprises the two Belgian provinces of Antwerp and Brabant. The diocese derives its name from the Latinisation of the French Concordat of 1801. The ecclesiastical province of Mechlin is coextensive with the Belgian Kingdom (suffragan bishoprics: Turnhout, Liège, Namur, Gand, Bruges); it extended to the Rhine under Napoleon I. The city of Mechlin, prior to 1559, belonged to the deanery of the abbey and to the archdeaconry of the same name in the diocese of Cambrai. Its importance ecclesiastically was due to the ancient Chapter of Canons of the collegiate church of St. Rombaut. Paul IV, by his bull “Super universi orbis ecclesiae” (12 May, 1559) created a new hierarchy in the Netherlands composed of three metropolitan (Mechlin, Cambrai, Utrecht) and fifteen episcopal sees. The Archbishop of Mechlin was raised to the dignity of primate by the Constitutions of Pius IV in 1560 and 1561. The Christian Faith was zealously preached in the present diocese during the seventh and eighth centuries. It is known that Antwerp was visited by St. Eligius, Bishop of Tournaí (d. 690), and by St. Amand, the Apostle of Flanders and Bishop of Mastricht (d. 679). The latter was succeeded by St. Lambert (d. about 700) and St. Hubert (d. 727) are said to have visited Mechlin and Brabant. This evangelical work was followed up by the Anglo-Saxon missionaries St. Willibrord (d. 738) and St. Rumold or Rombaut (d. about 775). St. Rombaut was martyred at Mechlin, and became the city’s patron saint, and subsequently the patron saint of the Netherlands. The church of the saints of this diocese are several members of Pepin of Landen’s family, his widow St. Itta, foundress of the Abbey of Nivelles, his daughters, St. Gertrude (d. 659) and St. Begga (d. 695); the two sisters St. Gudule (d. 712) and St. Rainilde; in the ninth century St. Liborius of Mechlin and St. Guidom of Anderlecht; St. Vivian of Louvain, in the tenth century, and St. Thomas Becket, St. Dymphna, St. Gertrude of Grand Bé (d. 1170); St. Albert of Louvain, Prince Bishop of Liège and martyr (d. 1192); St. Marie d’Orignies (d. 1232); St. Lutgard (d. 1246), and Blessed Alice (d. 1250), both Cistercian nuns, the former in Aywières, the latter at la Cambre; St. Boniface of Brussels, Bishop of Lausanne (d. 1265); Blessed Jeannette of Wavrin; the Reformed Martin, endaeal, because of his mystical writings known as the “divine and admirable doctor” (d. 1381); several priests put to death by the Calvinists at Gorecum (1572); the Jesuits, St. John Berchmans of Diest, patron of student youth (d. 1621), and Venerable Leonard Leys (Leissius) of Brecht, renowned for his penitential treatises (d. 1592).

It was at the beginning of the twelfth century that Tanchelm, a native of Zealand, became known, chiefly in Antwerp, for his violent attacks on the hierarchy, and the Sacraments, especially the Holy Eucharist. He shared the pernicious errors of the Adamites, and gave an example of the worst kind of debauchery. He was excommunicated by Nicolas of Cambrai and excommunicated Jonas, one of the promoters of Catharism in Brabant. A little later numerous Beghards and Beguines fell into the errors of the sect known as the Brothers of the Free Spirit. To this sect also belonged the nun, Sister Badewije (Hedwige) or Bloemardine, who gained numerous pupils in Brussels. Her writings were refuted by Jean de Ruysbroeck. Bloemardine died about 1336, but her followers lived on, and as late as about 1410 Pierre d’Ailly, Bishop of Cambrai, was compelled to take measures against them. The Black Plague of 1349 gave rise to the processions of Flagellants. These hailed from Germany and traversed the country with the savage violence of their name has arisen. The ecclesiastical authorities were obliged to intervene on behalf of the Jews detested by the Flagellants. On the other hand, religious sentiment manifested itself in numerous monastic institutions. Affligem, the principal Benedictine abbey, dates from 1098. The people of Antwerp, whom Tanchelm had fanned to a Christian mode of life, soon arose against Brabant many Premonstratensian abbots: St. Michel at Antwerp (1124), Tongerlo (1128), le Parc near Louvain (1129), Helysimis (1130), Grimbergen (1131), Averbode (1132), Dieghem and Postel (1140). Among other abbey for men may be mentioned: the Benedictine abbey of Vlierbeek (1182); the noble abbey of St. Gertrude at Louvain, belonging to the Augustinian canons; the Cistercian abbey of Villers (1147); and of St. Bernard (1237). Some of the numerous colleges of Austin Canons are: St. Jacques sur Caudenbarg at Brussels, Hanswijk at Mechlin, Corendonck, Groenendaal, Rougecoltre and Septfontaines, all three in the forest of Soigné. In most places of consequence Augustinians, Franciscans, Carmelites and Dominicans were established. The military orders were represented at the Teutonic Commandery of Pitsenburg in Mechlin and in Beequevoort. The leading abbies for women were: Grand Bégrad and Cortenberg (Benedictines); at Turnhout, Roeschtrasselaar, Blemieux; Onze-Lieve-Vrouwekerk; the semi-monastic institution of the Beguines (q. v.), small settlements in the heart of cities or just outside city walls, is a peculiar feature of religious life in the Netherlands. They were once numerous (the number of Beguines who went forth from Mechlin to greet Charles the Bold, on the occasion of his joyful entry in 1477, was unknown), but they were successively reduced in numbers, at Mechlin, Antwerp, Louvain, Diest, Lierre, Turnhout, Hoogstraten and Herenthals. The income of the secular clergy and its improved material conditions caused the chapters of Canons to grow in number, and eventually the collegiate churches of the diocese reached a total of twenty. The instruction in theology was given by college and chapter schools. Finally Martin V, by his bull of 9 December, 1425, erected a university at Louvain.

At the close of the Middle Ages, it is well known, both faith and morals suffered a notable decay. More or less rightly, Jean Pupper de Goch (d. 1475), superior of the Thabor Convent at Mechlin, has been styled the precursor of the first Lutero in the Low Countries. The parisiens in the diocese, especially at Antwerp where his Augustinian brethren declared in his favour. Protestantism, though vigorously opposed by Charles V, was again menacing at the end of his reign, when Lutheranism gave way to Calvinism. The creation in 1589 of new sees, though an indispensable measure, placed the diocese in a very critical situation. Philip II, by removing the first Archbishop of Mechlin, Cardinal de Granvelle, deprived the Catholic and monarchical cause of its ablest champion, and thereby hastened the impending revolution. In 1566 the iconoclastic mob put to death both religious and priests, and sacked the churches and monasteries. Disorder prevailed until the Council of Trent, summoned by Pope Pius V. The people remained loyal to Catholicism and the University of Louvain proved a valiant defender, though Protestant theories exercised at the university a certain influence, particularly on Baits and Jansenius. The Archbishop of Mechlin, Jacques Boonen (1621-55), evaded the publication of the constitution “In eminentibus”, by which Urban VIII condemned the “Augustinus”; he was even temporarily suspended by Innocent X. Boonen’s submission did not put an end to the Jansenistic quarrels in the diocese. Oratorians, brought in by him, were inclined to rigorism. They opened colleges for the education of youth, and found themselves both in this field, and in the whole system of instruction, already active in anti-Protestant controversy. The partisans and the adversaries of Jansenius took sides at once with one or other of the conflicting parties. The
firmsness of the archbishops at Precipiano (1690–1711) and of Cardinal d'Allese (1715–59) repelled Jansenism, which endured however in Josephism and Febronianism. Joseph II suppressed many convents (1783), and created the General Seminary of Louvain (1786), the doctrines of which were condemned by Cardinal de Frankenberg (1759–1801). Persecution broke out afresh in the wake of the French Revolution; Catholic instruction was abolished in the churches, and pillaged, a multitude of ecclesiastics exiled, among them Cardinal de Frankenberg. The anti-Concordat schism of the Stévenistes arose under Napoleon Bonaparte. Later, King William revived the General Seminary under the name of Philosophical College, but met with as much opposition as Joseph II. The Belgian Revolt; union of 1800 to 1830; introduction in the church of French was forbidden. For the later history of Mechlin see BELGIUM. The following archbishops of Mechlin were made cardinals: Antoine Perrenot de Granvelle, first archbishop (1560–83) and a remarkable statesman (q. v.); Thomas Philippe d'Allese (1716–59); Henri de Frankenberg (1759–1801); Engelbert Sierck (1852–67); Victor Arnould (q. v.); Augustin (1877–87); Pierre Lambert Goossens (1884–1906); Désiré Joseph Mercier (1906—), the chief originator of the neo-scholastic movement in Belgium.

Religious monuments: numerous edifices especially of Gothic style (Roman: St. Germain at Tirclemont, St. Gertrude at Nivelles). At Mechlin is the metropolitan church of St. Rombaut (thirteenth and fourteenth centuries), with a tower 318 feet high. There is also Notre Dame, and St. Pierre (Jesuit style). Principal other edifices: churches of Liere, Hoogstraeten, Tirclemont, Hal, Diest; and the ruins of the Abbey of Villers, the most striking monastic ruins in Belgium. The ornamentation has suffered greatly from the disorders of 1793, and particularly the organ gallery at Liere, the tabernacle at Leau, the tombs at Hoogstraeten and the stained glasses in Liere and Hoogstraeten. Of the paintings still preserved, many belong to the Antwerp School. At Mechlin there are works of Rubens in the churches of Notre Dame and St. Jean. See Antwerp, Brussels, Louvain. Pilgrimages: St. Sang at Hoogstraeten, St. Sauveur at Haekendorf (Tirclemont), Notre Dame at Maestruigh, at Hal, at Hanswyck (Mechlin). Population (1909): 24,500,680 inhabitants; 745 parishes; 51 deaneries; one theological seminary; 3 petits séminaires; 24 episcopal colleges; 108 convents for men, and 728 for women.

Mechtild is a monthly periodical founded in 1907. The "Theologia Mechilinensis" fundamental and sacramental theology, with treatises on virtues, indulgences, and reserved cases fills ten volumes; notable also are the "Scripture Commentary" of Ceulemans (nine volumes) on the Psalms and New Testament, and the work of Van der Steappen (five volumes) on Galatians. Christiana, V (Paris, 1721); Van Gent, Historia sacra et profana archiepiscopatus Mechilinensis (Le Havre, 1725); Clement, "Société de Meuse," II (1801); Godin, Malines judex et aujourd'hui (Mechlin, 1905); Foppens, Historia epiiscopatus Antverpiae (Brussels, 1717). A. Kempenaar.

Mechtild, Johann, chronicler; b. 1562 at Pfalz near Trier (Germany); d. after 1631, perhaps as late as 1653 at Trier. He is often named Pfalz after his native town where he first studied and then went to the university at Trier, conducted by the Jesuits, where the historian Christopher Brote acquired a lasting influence over him. After his ordination (about 1567), he was appointed pastor at Eltz, near Koblenz; in 1592 he became canon at Limburg and as such administered for two years the troublesome parish of Camburg. In 1604 he was appointed dean, but soon got into difficulties with his canons and finally, by request of the elector of Trier in order to restore peace, he resigned, and accepted the canonry at St. Paulinus in Trier. In Limburg as well as in Trier he studied history assiduously and carefully, and conscientiously collected documents and records, as well as inscriptions on monuments. Many of his sources are now lost therefore his works almost possess the value of originals for us. Of his writings may be mentioned: "Limburg Chronicle," the "Passio Lohenzehe," and the "Introduction in the church of Nettum." His chief work, the "Limburg Chronicle," was begun in 1610 and finished in 1612, but it was not edited until 1757 by Hornheim in his "Prodomus historiae Trevirensis," II, 1046–1166. This edition, marked by many mistakes and omissions, was published in its entirety by Knetisch in the "Publications of the Historical Commission of Nassau," VI (Wiesbaden, 1864). The revision and continuation of the old Limburg chronicle, begun by the town clerk, Tilemann, but utilizes also many other sources both printed and unprinted. His chronicle is of great value because Mechtle utilises various accounts which contain important information as to social conditions, the price of corn and wine, the cultivation of the vine, monastic conditions and wages. In treating German and early medieval history he does not rise above the level of the historians of the thirteenth and fourteenth centuries. Both his other works are as yet unpublished; Knetisch has their contents in his edition of the chronicle X–XVI. F. E. Rascher, Die Limburger Chronik des Johannes Mech- tel (Wiesbaden, 1909), I–XXXVII.}

PATRICIUS SCHLAGER.

Mechtilde (Matilda von Hackeborn-Wippra), Saint, Benedictine; b. in 1240 or 1241 at the ancestral castle of Helfsta, near Eisleben, Saxony; d. in the monastery of Helfsta, 19 Nov., 1298. She belonged to one of the noblest and most powerful Thuringian families, under whose dominion her father, Peter von Hackeborn, Lord of Helfsta, was a vassal of the Emperor. Gertrude of Hackeborn. Some writers have considered that Mechtilde von Hackeborn and Mechtilde von Wippra were two distinct persons, but, as the Barons of Hackeborn were also Lords of Wippra, it was customary for members of that family to take their name indifferently from either, or both of these estates. So fragile was she at birth, that the attendants, fearing she might die unchristened, hurried her off to the priest who was just then preparing to say Mass. He was a man of great sanctity, and after baptising the child, uttered these prophetic words: 'What do you fear? This child most certainly will not die, but she will become a saintly religious in whom God will work His wonders, and she will live to a good old age.' When she was seven years old, having been taken by her mother on a visit to her elder sister Gertrude, then a nun in the monastery of Rodardsdorf, she became so enamoured of the cloister that her pious parents yielded to her entreaties and, acknowledging the workings of grace, allowed her to enter the alumnage. There, being both of her mind as well as in bodi, she made remarkable progress in virtue and learning. Ten years later (1258) she followed her sister, who, now abbess, had transferred the monastery to an estate at Helfsta given her by her brothers Louis and Albert. As a nun, Mechtilde was soon distinguished for her humility, her fervour, and that extreme amiability which had characterized her from childhood and which, like piety, seemed hereditary in her race. While still very young, she became a valuable helpmate to Abbess Gertrude, who entrusted to her direction the aluminate and the choir. Mechtilde was fully equipped for her task when, in 1261, God committed to her prudent charge the business and the government of the monastery of Helfsta. This was that Gertrude who in later generations became known as St. Gertrude the Great. Gifted with a beautiful voice, Mechtilde also possessed a special talent for rendering the solemn and sacred music over which she presided as
DOMA CANTICA. All her life she held this office and trained the choir with indefatigable zeal. Indeed, Divine praise was the keynote of her life as it is of her book; in this she never tired, despite her continual and severe physical sufferings, so that in His revelations Christ was wont to call her His "nightingale". Richly endowed, naturally and supernaturally, ever gracious, she became a cause of great woe when the radiance and saintly and charming personality, there is little wonder that this cloistered virgin should strive to keep hidden her wondrous life. Souls thirsting for consolation or groping for light sought her advice; learned Dominicans consulted her on spiritual matters. At the beginning of her own mystic life it was from St. Gertrude that St. Mechtilde learned that her marvellous gifts lavished upon her were from God.

Only in her fiftieth year did St. Mechtilde learn that the two nuns in whom she had especially confided had noted down the favours granted her, and, moreover, that St. Gertrude had nearly finished a book on the subject. Much troubled at this, she, as usual, first had recourse to prayer. She had a vision of Christ holding in His hand the book of her revelations, and saying: "All this has been committed to writing by my will and inspiration; and therefore you have no cause to be troubled about it." He also told her that, as He had been so generous towards her, she must make Him a like return, and that the diffusion of these revelations would increase many in His love; moreover, He wished this book to be called "The Book of Special Grace", because it would prove such to many. When the saint understood that the book would tend to God's glory, she ceased to be troubled and even corrected the manuscript herself. Immediately after her death it was made public, and copies were rapidly multiplied, owing chiefly to the widespread influence of the Friars Preachers. Boccaccio tells how, a few years after the death of Mechtilde, the book of her revelations was brought to Florence and popularized under the title of "La Laud de donna Matelda". It is related that the Florentines were accustomed to repeat daily before their sacred images the praises learned from St. Mechtilde's book. St. Gertrude, to whose devotedness we owe the "Liber Specialis Gratiae" exclaims: "Never has there arisen one like to her in our monastery; nor, alas! I fear, will there ever arise another such!"—little dreaming that her own name would be inseparably linked with that of Mechtilde, for according even in St. Gertrude's life the name, St. Mechtilde most probably still reposes at Old Helfta though the exact spot is unknown. Her feast is kept 26 or 27 February in different congregations and monasteries of her order, by special permission of the Holy See. (For an account of the general life at Helfta and an estimate of the writings of St. Mechtilde, see GERTRUDE OF HACHEMBORN; GERTRUDE THE GREAT, SAINT.)

There is another honour, inferior certainly to that of sanctity, yet great in itself and worthy of mention here: the homage of a transcendent genius was to be laid at the feet of St. Mechtilde. Critics have long been perplexed as to one of the characters introduced by Dante in his "Purgatorio" under the name of Matelda. Speculation as to how much on each of which the process of purification is carried on, Dante, in Canto xxvii, hears a voice singing: "Vente, benedicti patris mei"; then later, in Canto xxxvii, there appears to him on the opposite bank of the mysterious stream a lady, solitary, beautiful, and gracious. To her Dante addresses himself, she is who initiates him on the road which it is his duty to traverse, and it is to her that Beatrice refers Dante in the words: "Entreat Matilda that she teach thee this." Most commentators have identified Matilda with the warrior-Cousin of Tuscany, the spiritual daughter and dauntless champion of St. Gregory VII, but all agree that beyond the name the two have little or nothing in common. She is no Amazon who, at Dante's prayer that she may draw nearer to let him understand her song, turns towards him "not otherwise than a virgin that droppeth her modest eyes". In more places than one the revelations granted to the mystics of Helfta seem in turn to have become the inspirations of the Florentine poet. All writers on Dante recognize his indebtedness to St. Augustine, the Pseudo-Philoenaus, St. Bernard, and St. Victor. These are precisely the writers whose doctrines had been most assimilated by the mystics of Helfta, and thus they would the more appeal to the sympathies of the poet. The city of Florence was among the first to welcome St. Mechtilde's book. Now Dante, like all true poets, was a child of his age, and could not but be aware that the work was so popular among his fellow-citizens. The "Purgatorio" was finished between 1314 and 1318, or 1319—just about the time when St. Mechtilde's book was popular. This interpretation is supported by the fact that St. Mechtilde in her "Book of Special Grace" (pt. i, c. iii) describes the place of purification under the same figure of a seven-turreted mountain. The coincidence of the simile and of the name, Matelda, can scarcely be accidental. For another among many points of resemblance between the two writers compare "Purgatorio", Canto xxx, where Dante is drawn by Matelda through the mysterious stream with pt. i, c. iv of the "Book of Special Graces". The serene atmosphere which seems to cling about the chaste and beautiful songstress, her virgin modesty and simple dignity, all seem to point to the recule of Helfta rather than to the stern heroine of Canossa, whose hand was thrice bestowed in marriage. Besides, in politics Dante, as an ardent Ghibelline, supported the imperial pretensions of the Empire, which was little inclined to sing the praises of the Tuscan Countess. The conclusion may therefore be hazarded that this "Donna Matelda" of the "Purgatorio" personifies St. Mechtilde as representing mystic theology.

St. MECHTILDE, Liber specialis gratiae; St. GERTRUDE, Legua divinae potentiae; Preface to Revolutionem (Gertrudiana) ed. J. J. Schwabacher, I. (Paris and Poitiers, 1875); IBIDEM, St. Gertrude (Paris, 1907); EISENBERGER, Frl. Ida. Bened. (Vienna, 1784); PASSERI, Deutsch. Mon. I (Leipzig, 1874); Revolutiones de S. Mechtilde (Paris and Poitiers, 1906).

GERTRUDE CANANOVA.

Mecthilde of the Blessed Sacrament. See ADORATION, PERPETUAL.

Mechtilde of Magdeburg, a celebrated medieval mystic, b. c. 1210; d. at the Cistercian nunery of Helfta near Eisleben, c. 1285. She experienced her first inspirations at the age of twelve, when, as herself states, she was greeted by the Holy Ghost. From that time, the greeting was repeated daily. Under this inspiration she desired to be despoiled by all without, however, desiring it, and for this purpose left her home, where she had always been loved and respected, to become a Beguine at Magdeburg in 1230. Here, under the spiritual guidance of the Dominicans, she led a life of prayer and extreme mortification. Her heavenly inspirations and ecstatic visions became more frequent and were of such a nature that they dispelled from the mind of her confessors and other persons of her order any doubt that, on her part, she had received her visions. Shortly after 1270 she joined the Cistercian nuns at Helfta, where she spent the remaining twelve years of her life, highly respected as one signally favoured by God, especially by her namesake St. Mechtilde of Hackeborn and by St. Gertrude the Great. Mechtilde left to the world a most wonderful work which she recorded by manifold inspirations and visions. According to her assertion, God ordered the title of the book to be "Vliessene dicht miner gotheit in allu die hersen die da lebent ane valsicht", i.e. "Light of my divinity, flowing into all hearts that live without guile". The work is commonly styled "Das fliessene Licht der Gottheit". She wrote her inspirations on separate
Mecklenburg, a division of the German Empire, consists of the two Grand Duchies of Mecklenburg-Schwerin and Mecklenburg-Strelitz.

History.—At the beginning of the Christian era, Mecklenburg was inhabited by Germanic tribes, but as early as the second century they began to leave the district; Slavonic tribes poured in, and by about A.D. 600 they had complete possession of the land. These Slavonic tribes were principally Wends, of whom the Obotrites occupied the western parts, the Lusici, or Wilsen, the eastern. Their chief occupations were forestry, cattle-raising, hunting, and fishing. Their religion was a mixture of the Teutonic and Aryan elements, and the first Christian to convert the Mazuric tribes of Mecklenburg was Radegast Zurasici, whose sanctuary at Rethra was the centre of his worship for the whole of Mecklenburg until it was destroyed in the twelfth century, and replaced by Svantevit, the "holy oracle", whose temple was at Arkona on the Island of Rügen. After Charlemagne had brought the Saxons into subjection, the Slavonic tribes of Mecklenburg became the neighbours of the Frankish Empire, with which an active trade soon sprang up. Commerce was still further developed under the Saxon emperors (919-1024), the most important mart for the Slavs being Bardowieck.

Charlemagne's conquests in this region were lost soon after his death. Henry I of Germany (916-36) was the first to force the Slavonic territory again to pay tribute (928); he also placed it under the jurisdiction of Saxon counts. With the domination of the Germans, Christianity found ingress into the land. Bishop Adalward of Verden brought the first Obotrite prince into the Church. Otto the Great (936-973) divided Mecklenburg between the two marquises he had formed. Ecclesiastically, the land belonged partly to the Dioceses of Havelberg and Brandenburg, partly to the Diocese of Oldenburg, that was erected in 968. However, there can hardly be said to have been a systematic attempt at conversion to Christianity, for the German author it had no secure foundation. The early successes in conversion to Christianity were swept away by an insurrection of the Slavs, after the defeat of the Emperor Otto II in Calabria in 928. The Obotrites under Mishtiwoi, who had previously accepted Christianity, plundered and burned Hamburg, ravaged the whole of North Albingia (Holstein), crossed the Elbe and advanced as far as Mülden. Every trace of Christianity was destroyed. There was much strife between German and Wend in the succeeding decades. It was not until the reign of Henry II (1002-1024) that the Lusici and Obotrites became allies of the German Empire against the Polish Duke Boleslaw. Towards the end of his life Mishtiwoi turned in repentance once more to Christian religion in Mülden, and ended his days in the monastery of Bardowieck.

Archbishop Unwans of Hamburg (from 1013) laboured with energy and success; but the Saxon dukes exacted a heavy tribute, which was the chief reason why the Christian teaching protected by them was regarded with little favour, even though the Wendic rulers Udo and Ratibor became Christians. Udo's son Gottschalk faithfully supported Archbishop Adalbert of Bremen, and frequently explained Christian doctrine at church to his people. Churches and monasteries rapidly appeared. New dioceses were founded in addition to the Diocese of Oldenburg, namely, Ratzeburg under Bishop Aristo, and Mecklenburg under Bishop John, a Scot. The conversion of the entire country to Catholicity seemed assured. But the fermentation of the old antagonism to the trade to the empire and the Saxon dukes led to a heated reaction. The first victim was Gottschalk himself, in 1066. On 15 July of the same year the twenty-eight monks of the Benedictine monastery at Ratzeburg were stoned to death. The seculars, Bishop John and many other Christians were slain, and in a few months the German supremacy was withdrawn. The Wends even plundered the Christian cities of Schleswig and Hamburg, the bishop of the latter being obliged to transfer his see to Bremen. The bloody national god Radegast of Rethra became once more dominant.

Michael Ott.
Cruto, Prince of the Island of Rügen, ruled the country for nearly thirty years. Finally in 1093, Cruto having been murdered, Gottschalk's son, Henry, was able to gain his inheritance. Although a Christian, he never attempted to force Christianity upon the Wends. Indeed, his only church in his capital, Lübeck, where St. Vicelin proclaimed the word of God from 1126. Soon after Henry's death (1126) his family became extinct, and the Emperor Lothair granted the vacant territory in fief to Henry's Danish cousin, Knut Laward, Duke of Schleswig. Claims were also made by Henry's nephew Pribislaw, and by Niklot, a Wodwotere noble. These two divided the rulerless land between them when in 1131 Knut Laward was killed by his cousin Magnus. Pribislaw, however, could not maintain himself long against the German advance. He was obliged to surrender in 1142 to Count Adolf of Schauenburg, who repelled the almost desolate territory with colonists from Flanders, Holland, Westphalia, and Friesia. Niklot, on the other hand, preserved his independence until, after a protracted struggle, he was subdued by Henry the Lion, Duke of Saxony. Upon agreeing to accept Christianity and to acknowledge German supremacy, Niklot was allowed to retain his possessions (1147). However, he subsequently headed a revolt, which ended with his capture and death by Henry the Lion. Pribislaw II, the ancestor of the reigning dynasty, had been baptized in the year 1167, he was established as ruler.

Hartwig of Stade, Bishop of Bremen, soon provided for the restoration of the former Wendi dioceses. In 1150 he consecrated Vicelin Bishop of Oldenburg, and Hermann Bishop of Schwerin. The Wends, however, now becoming the see of the latter. Hartwig had not waited to secure an endowment sufficient for them from the Saxon duke. Henry the Lion, therefore, was soon able to obtain for himself what otherwise only belonged to the emperor, the right of investiture for the Obotrite dioceses. This privilege was granted by the Pope in the year 1169. The new bishop, the son of Henry the Lion, who regarded Henry as one of the most trustworthy supporters of his power. At the same time Henry was empowered to found dioceses and churches in the region on the farther side of the Elbe and to endow them with imperial domains, which was what the conquered Slavonic territory was held to be. In 1154 Henry VII founded the Benedictine monastery of Dobberan, and in 1157 he consecrated the Abbot of Ebelaker. In 1167 Hartwig had appointed him as bishop of Evermod, cathedral provost of Magdeburg. A number of Christian Germans came into the region, and the Wends were brought to accept Christianity. The land was rapidly covered with churches, parishes, and monasteries. Besides the Cistercian monastery of Dobberan that Pribislaw endowed largely with lands, there were founded monasteries of Benedicites, Franciscans, Premonstratensians, of the religious orders of Knights Hospitalers, of St. Anthony, etc.

In 1170 Frederick Barbarossa raised Pribislaw to the dignity of a prince of the empire. On Pribislaw's death in 1178, however, domestic disputes broke out, and in 1180 Duke Henry Burwy II died. The Slavonic power in 1180 weakened German power in the northern part of the empire. Denmark was thus enabled to bring under its authority large portions of North Germany, Mecklenburg being obliged to recognize Danish supremacy in the reign of Henry Burwy I (1178-1227). In 1227 Henry Burwy, in conference with the Counts of Schwerin, the Archbishops of Bremen and the city of Lübeck, cast off the Danish yoke. Thereupon the influx of German colonists received a new impetus, and, in the first half of the thirteenth century, a German municipality had already developed there. After the death of Henry Burwy, the territory was divided (1229) into four principalities: Mecklenburg, Werle, Rostock, and Parchim. The two latter lines died out in 1514 and 1516 respectively; that of Werle flourished until 1436. The main branch of the Mecklenburg line was founded by John II (1226-64). One of its members, Henry the Pilgrim (1264-1302) was captured at Cairo in 1271, while on a crusade, and kept prisoner until 1297. His son, the Emperor Charles IV, granted the district of Stargard as a dowry with his wife, Beatrice of Brandenburg, and, on the Rostock line becoming extinct, forced the Danes to recognize him as the hereditary possessor of the city and territory of Rostock, then under Danish supremacy. Henry's two sons, Albert II (d. 1379) and John I (d. 1392), were made dukes and princes of the empire by the Emperor Charles IV. The partition of 1352 led to the founding of the Stargard line, which became extinct in 1471.

In 1358 Albert succeeded in obtaining the County of Schwerin by purchase; his scheme to place his eldest son, Henry III, on the Danish throne failed completely, but his second son, Albert III, was elected King of Sweden in 1363. However, soon after Albert III had succeeded his father in the government of Mecklenburg (1383), a rival claimant of the throne of Sweden appeared in the person of Queen Margaret of Denmark. In 1389 Margaret took Albert prisoner, and did not release him until, after six years of captivity, he renounced all claims to the Swedish throne. In 1409, Albert Viki, the younger of Albert's two sons, took the title of Duke of Pomerania and Warm, as cousin, Henry the Fat (1422-77), who, after the Stargard line—to which the foundation of a university at Rostock in 1418 is due—had become extinct, reigned over the whole of Mecklenburg, thus once more united under a single ruler (1417). Henry's successor, Magnus (1477-1503), was a very energetic prince. The cities had, under King Albert, grown too strong and insubordinate; Magnus directed his efforts towards bringing them under the control of the ruler and evolving a unified state out of a confused medley of districts, cities, and estates. For a time his sons, Henry V (1503-52) and Albert VII (1503-47), reigned jointly so as to maintain the country undivided. In 1536 the brothers divided their dominions, Henry becoming Duke of Schwerin and Albert Duke of Güstrow. The Reformation in Mecklenburg was entirely the work of the two joint rulers, Henry V and Albert VII. Even Protestant historians have testified that before the Reformation the country had excellent bishops, a pious clergy, and a genuinely Catholic population. Both duties were early won over to Luther's cause by the Humanist Konrad Pegel, whom Henry had called from the University of Rostock as tutor for his son Magnus, the postulated Bishop of Schwerin. The duke had permitted Pegel to go to Wittenberg, whence the latter returned an ardent adherent of Luther. Albert, indeed, soon abandoned the new doctrine and maintained the old faith in his part of the country. On the other hand, from 1524 Henry V had surrounded the new emperor's palace with a chapel of the castle at Schwerin, and protected the preachers even in his brother's domains. Henry's chief desire was to obtain the Bishopric of Schwerin. Its administrator, his son Magnus, who had married in 1543, died childless in 1550, and Henry saw to it that the chapter elected as successor his nephew Ulrich.

When after Albert's death in the year 1547 his son John Albert (1547-70) came to power, the Reformation was completely established. John Albert was first sole ruler in his father's dominions, then in 1552 he also succeeded his uncle in Schwerin, but he resigned the latter principality in 1555 to his brother Ulrich. In 1548 the joint diet at Sternberg proclaimed the Lutheran Faith to be the religion of the state, and from
1552 the monasteries were secularized, except Dobbedin, Malchow, and Ribnitz, which in 1572, in exchange for the ducal debts, were kept in existence for the unmarried daughters of the nobility, and have since continued to the present day. The administration of the few Protestant Dioceses of Schwerin and Ratzeburg was carried on by members of the ruling dynasty. The Mass, pilgrimages, vows of religion etc., were forbidden, and by a consistorial decree of 1570 the public profession of the Catholic Faith was prohibited.

After a brief reunion of the two principalities in 1610, they were again divided (1621) into Mecklenburg-Schwerin and Mecklenburg-Gustrow by John Albert's grandsons, Adolf Frederick I and John Albert II. They still retained, however, in common the diet (held now in Sternberg and now in Malchow), the University of Rostock, and the consistory. During the Thirty Years' War both dukes formed a brief alliance with King Christian IV of Denmark. For this they were placed under a ban by the Emperor Ferdinand IV in 1628, and their territories, from which they were expelled, were granted to Wallenstein in 1629 as an imperial fief. In 1631 Gustavus Adolphus restored them their lands, and in 1635, after the fall of Wallenstein, they were again recognized by the emperor. During the Thirty Years' War the oppression of both the Swedish and the imperial forces, and also from pestilence and famine. The Peace of Westphalia (1648) assigned the Dioceses of Schwerin and Ratzeburg as principalities to Schwerin, in return for which the city of Wismar and the districts of Poel and Neukloster were yielded to Sweden. Adolf Frederick II of Mecklenburg-Schwerin and Schwerin by Christian Ludwig (1558-92), who, both before and after his succession, lived mainly at Paris, where he became a Catholic in 1663. This step opened Mecklenburg once more to Catholics (see below), it gave them no secure legal footing even in Schwerin, while in Mecklenburg-Gustrow the most brutal toleration of everything Catholic continued to prevail.

When Christian Ludwig I died childless in 1692, his nephew Frederick William laid claim to the succession, and was opposed by Adolf Frederick II of Strelitz, the only brother of Christian then living. After a long dispute, the Hamburg Compact was made in 1693 which divided Schwerin and Leopold. Adolf Frederick II received the Principality of Ratzeburg, and other territories; the remaining territory (by far the greater part) was given to Frederick William. As the latter selected Schwerin for his residence, and Adolf Frederick Strelitz, the two ruling houses have since always been distinguished as Mecklenburg-Schwerin and Mecklenburg-Strelitz.

In Mecklenburg-Schwerin Frederick William and his successor Charles Leopold had to contend with the estates, especially with the landed proprietors (Ritter schaft), who since the Thirty Years' War had secured the farms of most of the peasants for themselves, and by oppression had forced the peasants into seridom. With the aid of the ducal estates the peasants were driven out of the country. These applied to the Emperor Charles VI for help; after the Russians withdrew, an imperial commission with an army to execute its demands entered the country, and the duke was forced in 1719 to flee. For many years war was waged in Mecklenburg between the imperial army and the duke, who was supported by Prussia and other powers. The estates, with the exception of the estates of the reign of Charles Leopold's successor Christian Ludwig II (1747-56), finally came to an agreement in 1755; this compact, still essentially the basis of the constitution of the country, gave the estates a large share in the enactment of laws and extensive rights in the voting of supplies. By this agreement feudalism won a complete victory over the power of the prince, in contrast to most of the other divisions of Germany, where at that era the absolutism of the ruler had retained its supremacy.

Christian Ludwig II's son Frederick (1756-85) improved the primary schools, strengthened the University of Rostock, founded the Polytechnic Institute (1782), and by the Peace of Teschen obtained the Privilegium de non appellando (i.e., there could be no appeal to the imperial curte), against which the landed proprietors vehemently protested. In 1803 his nephew, Frederick Francis I (1785-1835) received the city of Wismar and the counties of Neukloster from Sweden as pledges for a loan of 1,250,000 talers (approximately $937,500); in 1803 Sweden finally relinquished its right of redemption. At the dissolution of the Holy Roman Empire in 1806, the two dukes became independent sovereigns. In 1808 both princes entered the Confederation of the Rhine, but joined the Allies opposed to Napoleon in good time in 1813; in 1815 both took the title of grand duke and entered the German Confederation.

The movement of 1848 spread rapidly in both grand duchies, especially in the cities. A proclamation of 23 March, 1848, of Archduke Frederick Francis I of Mecklenburg-Schwerin (1842-83) acknowledged the necessity of a reform in the constitution, and an example was set by Dukes Frederick II of Schwerin and Christian Frederick II, the extraordinary diet (1848-9) drew up a liberal constitution, to which the Grand Duke of Schwerin swore in August, 1849, but against which the Grand Duke of Strelitz, the agnates of both houses, and also Prussia, on account of its rights of inheritance of 1442, protested. In September, 1850, a court of arbitration at the German Confederation decided in favour of the claimants, and on 14 September the Grand Duke of Schwerin annulled the new constitution and the old semi-feudal constitution came again into force. In the war of 1866 both princes sided with Prussia against Austria; on 21 August of the same year they signed the Prussian draft of the North German Confederation, and in 1867 joined this confederacy. In 1866 both states became members of the Customs Union, and in 1871 they became constituent parts of the German Empire. Since their union with the German Empire in 1871, unceasing efforts have been made for a reasonable reform of their obsolete constitution, which is no longer in accord with the new empire. So the estates, especially of the landed proprietors (Ritterschaft) who have held to their privileges with unusual obstinacy. The present Grand Duke of Mecklenburg-Schwerin is Frederick Francis IV, succeeded 1897; the Grand Duke of Mecklenburg-Strelitz is Adolf Frederick V, succeeded 1904.

Statistics.—Mecklenburg-Schwerin has an area of about 5068 sq. miles. In 1905 it had 625,045 inhabitants, of whom 609,914 were Lutherans, 12,835 Catholics, and 1482 Jews. Mecklenburg-Strelitz has an area of about 1131 sq. miles. In 1905 it had 103,451 inhabitants, of whom 100,314 were Lutherans, 2027 Catholics, and 298 Jews. Both grand duchies are hereditary monies; from 1802 they have had a common assembly or diet made up of the landed proprietors (Ritterschaft), and the burgomasters of specified towns (Landschaft). The Ritterschaft consists of about 750 owners, whether noble or not, of about 1200 landed properties which carry with them the right to a vote in the assembly. The Landschaft is composed of the burgomasters of the cities of Rostock and Wismar, and the municipal authorities of the forty inland cities of Schwerin and the seven inland cities of Strelitz. The principality of Ratzeburg, which has an assembly of estates of its own, is not represented in the general estates, neither are the city of Neustrelitz, nor the inhabitants of the crown domain (dominium), that is, the land personally owned by the ruler, in which he is still absolute.
sovereign in making laws and levying taxes. The crown domain includes about 43 percent of the area and about 32 percent of the inhabitants. The estates have an important share in legislation and a deciding vote in questions of taxation, and in all questions pertaining to their rights; in other matters their opinion has to be obtained.

The church has a consistorial constitution. The head of the church is the sovereign, who exercises his rights in Mecklenburg-Schwerin by means of an upper consistory; in Mecklenburg-Strelitz a by consistory. Mecklenburg-Schwerin is divided into 7 superintendencies and 36 provostships or deaneries: Mecklenburg-Strelitz into 1 superintendency, and Ludwigslust 1 consistory.

The Catholic Church in both grand duchies is under the supervision of the Vicar Apostolic of the Northern Missions, the Bishop of Osminbrück. After the Reformation Catholicism was almost extinguished in Mecklenburg, and its public exercise threatened with punishment. For nearly a hundred years it could only be practised in secret. The conversion of Duke Christian Ludwig I in 1663 produced the first change of conditions. Notwithstanding the protests of his ducal brothers and the estates, he called Catholic priests into the country and granted them the castle church at Schwerin for the celebration of Mass. The right to do this was confirmed to him in 1668 by the imperial Diet. Many of the chief nobility followed, at first, the example of the ducal house. They went to the Church of their forefathers, as the hereditary Marshal Joachim Christian Hahn, of the same family as that from which the convert Ida, Countess Hahn-Hahn, came.

The Catholic Faith, notwithstanding this, did not attain a legal position, and the duke never permitted a Catholic institution. The vicar of the apostolic of the Northern Missions, Nicholas Steno, who lived in Schwerin from 1685, made every exertion to gain his consent. Consequently, when Christian Ludwig died the Catholic services ceased. The only church services now allowed were held in the private chapel of the chancellor of the next duke, Count Horn, who had become a Catholic. With the death of the count this privilege expired. It was not until 1701 that the free exercise of the Catholic religion was again permitted, this time in the chapel of the imperial ambassador von Egk. In 1702, when the ambassador left Schwerin, Duke Frederick William transferred this right to a Catholic lady, Frau von Berlin, who received the mission. She, and her successor, trusted with the mission in Schwerin; from 1709 they established themselves here permanently. Father von Stöcken (1730-43) was able to bring about that in 1731 a house was secured for the mission, and that the church service, which up to then had been private, could be a public one. He also succeeded by unwearied efforts to get the building at Schwerin, where five to seven boys could be prepared for the Collegium Nordicum at Lins in Upper Austria.

From 1764 a priest from Schwerin was able to distribute communion to the Catholic soldiers at Rostock in the hall of the exchange, and to hold Mass for Catholics who attended the market there at Fentecost. Although Christian Ludwig II had granted permission for the building of a church, Frederick, who inclined to a rigorous pietism, forbade its erection. The preparatory school at Schwerin came to an end when the Emperor Joseph II suppressed the Collegium Nordicum. Frederick Francis I, two of whose children became Catholics, gave the money to build the Catholic church at Rostock, and with its endowments, the Confession of the Rhine, Frederick had agreed to place the exercise of the Catholic religion on a legal party with that of the Lutheran, and in 1811 this was done.

From that time on the Catholics in reality enjoyed complete freedom, and in the year 1842 for the first time since the Reformation a Catholic bishop, Lübecke von Osmarbrück, was able to hold a confirmation at Schwerin. However, the conversion, from 1848 onwards, of many important men, among them von Vogelsang, von Bülow, von der Kettenburg, Professor Maassen, etc., gave an opportunity to the intolerant parties, with whom the Catholic bishops, Ludwig von Neubrandenburg, had to draw the line before they would be induced to adopt any action both estates and Government gave their aid. In 1852 extension to other localities of the Catholic services was forbidden, also the coming into Mecklenburg of priests not natives of the country; these measures were so strictly enforced that the private chaplain of Herr von der Kettenburg was taken out of the boundary by gendarmes.

In 1857 permission was given to the dead according to the Catholic ceremonial, and the right to celebrate Mass publicly were limited to Schwerin and Ludwigslust. The Government of Mecklenburg-Strelitz was still more intolerant. For many years, even in the nineteenth century, no priest was permitted to have a permanent residence in its territory; all that was conceded was that the Catholic priest at Wittstock in Brandenburg could stay at Neustrelitz one week of each month for ecclesiastical functions. This persecution of Catholics was kept up, not by the rulers, who were generally well inclined, but by the narrow-minded estates. Public opinion, even outside of Catholic Germany, repeatedly arose against this persecution, and was often expressed in sharp protest in the German Diet.

The Governments of the two duchies were finally forced by pressure from the empire to grant the Catholics a certain, yet still entirely insufficient, amount of freedom. There is however no equality as there should be to bring Mecklenburg into accord with the constitution of the empire or the state. Although an ordinance of 5 January, 1903 granted to Catholics the public exercise of their religion everywhere, nevertheless the permission of the ruler is necessary for the erection and alteration of parishes, the building of churches and chapels, appointment of priests, for the settling in the country of orders and congregations, and for the holding of processions; nor have the Catholics any legal redress if this consent is refused.

Furthermore in regard to educational matters, Catholics are not on an equality with Protestants. They must indeed contribute to the expenses of the schools, but for their purely private Catholic schools they do not receive a subsidy. Often indeed they are not allowed to use the state schools for giving instruction. There is no higher Catholic education in either grand duchy. Mecklenburg-Schwerin has two Catholic parishes, one each at Schwerin and Ludwigslust, and dependent churches at Rostock and Wismar; the priests altogether number 8. Mecklenburg-Strelitz has one parish with 2 priests. The spiritual care of the summer farm-labourers presents great difficulties. These men, who number about 20,000-22,000, are chiefly Poles, sojourn in Mecklenburg annually from March until September in order to work on the farms and estates.

Faith, such as the Blessed Sacrament or the Divine Attributes), they are used to inculcate lessons of piety, are specially blessed to serve as badges of pious associations or to consecrate and protect the wearer, and finally are often enriched with indulgences.

In the Early Church.—It was at one time doubted whether anything in the nature of a purely devotional medal was known in the early ages of Christianity. Certain objects of this kind were described and figured by seventeenth-century writers on the Catacombs, and a few such were preserved in museums. All these, however, were regarded with much suspicion before the appearance of an epoch-making article by de Rossi in the "Bulletino di Archeologia Cristiana" for 1869, since which time the question has been practically set at rest and the authenticity of some at least of these specimens has remained undisputed. A moment’s consideration will establish the intrinsic probability of the existence of such objects. The use of amulets in pagan antiquity was widespread. The word amuletum itself occurs in Pliny, and many monuments show how talismans of this kind were worn around the neck by all classes. That the early Church should have found the abuse ineradicable and should have striven to counteract it by suggesting or tolerating some analogous practice of an innocent character, is in itself highly probable. Many parallel concessions of this kind might be quoted. The letter of Gregory the Great to St. Mellitus about the dedication of pagan temples, preserved to us by Bede (Hist. Eccl., I, xxx), supplies perhaps the most famous example. Moreover we know that the same St. Gregory sent to Theodolind, Queen of the Lombards, two phylacteries—the cases are still preserved at Monza—containing a relic of the True Cross and a sentence from the Gospels, which her child Adulovald was to wear around his neck.

This, however, and the practice of wearing "encolpia", little pectoral crosses, lent itself to abuses when pagan formalism began to gain ground among the followers of the new faith. Amulets, tokens bearing various Christian symbols, were often cast in metal for a similar purpose. In Africa (see "Bulletino di Arch. Crist.", 1891), the moulds have been found in which little crosses were cast with rings to hang them by. It follows therefore that certain coin-like objects, for which there exists good evidence of their being actually discovered in the Catacombs, must be regarded as genuine relics of the devotional practices of the early Church. Two or three of these are specially famous. One, which de Rossi attributes to the close of the fourth century, bears upon
both faces the legend SUCCESSA VIVAS, an "acclamation" which probably indicates that the medal was cast for a certain Successa to commemorate, perhaps, her dedication to God. On the tomb of St. Lawrence, while he is being roasted upon a gridiron in the presence of the Roman magistrate. The Christian character of the scene is shown by the chrisma, π the A and Ρ, and the martyr's crown. On the reverse is depicted a cancellated structure, no doubt the tomb of St. Lawrence, while a figure in one hand conducting a little child. The scene no doubt represents the consecration to God of the child as an oblate (q. v.) by his father before the shrine of the saint. A custom for which there is a good deal of early evidence. Other medals are much more simple, bearing only the chrisma with a name or perhaps a cross, often impressed with more complicated devices can only be dated with difficulty, and some are either spurious, or, as in the case particularly of some representations of the adoration of the Magi which seem to show a development of Byssus, clearly belong to a later epoch. Some of the medals or medallions reputedly Christian are stamped upon one side only, and of this class is a famous bronze medallion of very artistic execution discovered by Boldetti in the cemetery of Domitilla and now preserved in the Vatican Library. It bears two portrait types of the heads of the Apostles SS. Peter and Paul, and is ascribed by de Rossi to the second century. Other medallions with the (confronted) heads of the two apostles are also known and a lively controversy largely based on these medallic materials has been carried on regarding the probability of their having preserved the tradition of an authentic likeness. (See particularly Weisliersdorf, "Christus und Apostellbilder" p. 53 sq.) Certain supposed early medals with the head of our Saviour are distinctly open to suspicion.

How far the use of such medals of devotion extended in the early Church, it is not easy to decide. One or two passages in the works of St. Zeno of Verona have suggested that a medal of this kind was common, given as a memorial of baptism, but the point is doubtful. In the life of St. Geneviève, which, despite the opinion of B. Krusch, is of early date, we read that St. Germanus of Auxerre hung around her neck a perforated bronze coin marked with the sign of the cross, in memory of her having consecrated her virginity to God (Mon. Ger. Hist. Script. Merov., III, 217). The language seems to suggest that an ordinary coin was bored for the purpose, and when we recall how many of the coins of the late empire were stamped with the chrisma or with the figure of the Saviour, it is easy to believe that the ordinary currency may often have been used for similar purposes.

DURING THE MIDDLE AGES. — Although it is probable that the traditions formed by the class of objects which we have been considering, and which were equally familiar at Rome and at Constantinople, never entirely died out, still little evidence exists of the use of medals in the Middle Ages. No traces of such objects survive remarkable either for artistic skill or for the value of the metal, and to speak positively of the date of certain objects of lead and pewter which may have been hung round the neck with a religious intent, is not always easy. But in the course of the twelfth century, if not earlier, a very general practice grew up at well-known places of pilgrimage, of casting tokens in lead, and sometimes probably in other metals, which served the pilgrim as a souvenir and stimulus to devotion and at the same time attested the fact that he had duly reached his destination. These signacula (enseignes) known in English as "pilgrims' signs" often took a medallic form and were carried in a conspicuous way upon the hat or breast. Giraldis Cambrensis referring to a journey he made to Canterbury about the year 1180, ten years after the martyrdom of St. Thomas, describes himself and his companions returning to London "cum signacula Beati Thomae collo suspensis" [with the tokens of St. Thomas hanging round their neck] (Opera, Rolls Series, I, p. 53). Again the author of Piers the Plowman writes of his imaginary pilgrim:

An hundred of ampulles on his hat seten,
Signes of syse and shelles of Galice;
And many a crouche on his cloke, and keyes of Rome,
And the verniele biforn, for men shulde knowe
And see by his signes whom he sought hadde.

The "ampulles" probably represent Canterbury, but may have been tokens of the Holy Tear of Venefic. (See also a similar incident of Byssus, for which there stands for Assisi. The "shelles of Galice", i.e. the scallop-shells of St. James of Compostella; the crouche, or cross, of the Holy Land; the keyes of St. Peter; the "verniele", or figure of the Veronica, etc. are all very familiar types, represented in most collections of such objects. The privilege of casting and selling these pilgrim's signs was a very lucrative one and became a regular source of income at most places of religious resort.

Then, as manner and custom is, signes there they bought . . .

Each man set his silver in such thing as he liked, writes a fourteenth-century satirist of one of these shrines. Moreover we find that the custom was firmly established in Rome itself, and Pope Innocent III, by a letter of 18 Jan., 1200 (Potthast, "Regesta", n. 939), grants to the canons of St. Peter's the monopoly of casting and selling those "signes of lead or pewter impressed with the image of the Apostles Peter and Paul with which those who visit their thresholds [Koina] adorn themselves for the increase of their own devotion and in testimony of the journey which they have accomplished", and the pope's language implies that this custom had existed for some time. In form and fashion these pilgrim's signs are very various and a considerable literature exists upon the subject (see especially the work of Forgesis, "Collection de Plombs historiés", 5 vols., Paris, 1864). From about the twelfth century the casting of these devotional objects continued until the close of the Middle Ages.
and even later, but in the sixteenth or seventeenth century they began to be replaced by medals properly so called in bronze or in silver, often with much greater pretensions to artistic execution. With these leaders signs should be noted the custom of casting coin-like tokens for members of the clergy. (q.v.) It was a celebration of the Boy Bishop and the Innocents. The extant specimens belong mostly to the sixteenth century, but the practice must be much older. Though there is often a burlesque element introduced, the legends and devices shown by such pieces are nearly all religious; e.g., EX GREV INIFICUM PERPETVSTI LAVAND; IN MECTA, ne vitur a se (see Vanbehde, "Plommes des Innocents," Lille, 1877). Better deserving of attention are the vast collection of jetons and méreaux which, beginning in the thirteenth century, continued to be produced all through the Middle Ages and lasted on in some places down to the French Revolution. The jetons were strictly speaking counters, i.e., they were thin pieces of metal, mostly latten, a sort of brass, stamped on both sides with some device and originally used in conjunction with a comptoir (i.e., an abacus or counting board) to perform arithmetical computations. The name comes from jeter, through the form jectoir, because they were "thrown down" upon this board (see Rondot, "Médaillieurs Français," Paris, 1864, p. 48). It became a fashion for very many persons of distinction, especially those who had anything to do with finance, to have special jetons bearing his own device, and upon some of these considerable artistic skill was lavished. These pieces served various purposes besides that for which they were originally designed, and they were often used in the Middle Ages without a ticket or printed card. As might be expected, they tended to take a religious tone. Upon nearly half the medieval jetons which survive, pious mottoes are found and often pious devices (Rouyer, "Histoire du Jeton," p. 30). Among the commonest of these mottoes, which however vary infinately, we might name AVE MARIA GRATIA PLENA; AMES DIEI IO (i.e. aimez dieu et louez le); IHESUS NATUM DEO SOIT FAIT SI; VIRGO MATER ECCLESIE ETERNAE PORTA; DOMINE DOMINUS NOSTER, etc. Often these jetons were given as presents or "pièces de plaisir" especially to persons of high consideration, and on such occasions they were often specially struck in gold or silver. One particular and very common use of jetons was that of the magnates of the Church for their cathedral offices and meetings of various kinds. In this case they often carried with them a title to certain rations or payments of money, the amount being sometimes stamped on the piece. The tokens thus used were known as jetons de présence or méreaux, and they were largely used, especially at a somewhat later date, to secure the due attention of the canons at the cathedral offices, etc. What, however, specially justifies their mention in the present place is the fact that in many cases the pious device they bore was as much or even more considered than the use to which they were put, and they seem to have discharged a function analogous to the Child-of-Mary medals, the souvenirs of the Redemption of the Host, etc. One famous example is the "méreau d'estaing" bearing stamped upon it the name of Jesus, which the famous Frère Richard, whose name is closely if not too creditably associated with the history of Blessed Joan of Arc, distributed to his followers in Paris, 1429 (see Rouyer, "Le Nom de Jesus" in Revue Belge de Numismatique et d'Archéologie). These jetons, stamped A DI, IHS, which is only another way of writing the Holy Name, were very numerous and were probably closely connected with the apostolate of St. Bernardine of Siena. Finally it is to be noted that for the purpose of largesses at royal coronations or for the Maundy, pieces were often struck which perhaps are rather to be regarded as medals than actual money (see Mase

---

Medallion of Enamel Paste and Coloured Bone

From Armstrong, "Il cimitero di Santa Agnese" (c. 1390-1451), and its first developments were all Italian. These early Renaissance medals, magnificent as they are, belong to civil life and only touch upon our immediate subject, but though not religious in intent many of them possess a strong religious colouring. Nothing more devotional could be imagined than the beautiful reverse of Pisano's medal of Malatesta Novello, where the mail-clad warrior dismounting from his horse is represented as kneeling before the crucifix. So again the large medal, in the British Museum, of Savonarola holding the crucifix, probably executed by Andrea della Robbia, portrays with rare fidelity his deep-set glowing eye, his bony cheeks, the strong nose and protruding lips" (Fabricius, "Italian Medals," p. 135), while the reverse displays the avenging sword of God and the Holy Ghost hovering over the doomed city of Florence. Wonderful again in their religious feeling are Antonio Marescotti's (c. 1453) superb medals of San Bernardino da Siena, while among the series of early papal medals we have such masterpieces as the portrait of Sixtus IV by Andrea Guasalotti (1453-95). But it was long before this new art made its influence so far widely felt as to bring metal representations of saints and shrines, of mysteries and miracles, together with emblems and devices of all kinds, in a cheap form into the hands of the people. Undoubtedly the gradual subdivision of more artistic bronze and silver medals for the rude pilgrim's signs at such great sanctuaries as Loreto or St. Peter's, did much to help on the general acceptance of medals as objects of devotion. Again the papal jubilee medals, which certainly began as early as 1475, and which from the nature of the case were carried into all parts of the world, must have helped to make the idea familiar. But this was not all. At some time during the sixteenth century the practice was adopted, possibly
following an usage long previously in vogue in the case of Agnus Deis (q. v.), of giving a papal blessing to medals and even of enriching them with indulgences. On the other hand it is noteworthy that among the benediction-forms of the Middle Ages no single example is found of a blessing for sacramentaria, a pilgrim's "insignia" were often blessed no doubt, but by this term were only meant his scrip and staff (see Frans, "Kirchlichen Benedictionen im Mittelalter", II, 271-89), not the leaden tokens spoken of above. The story runs that the use of blessed medals began with the revolt of the Gueux in Flanders, a. d. 1566. A certain medal or rather set of medals bearing on the obverse the head of Philip II with the motto EN TOUT IDELES AU ROI and on the reverse a beggar's wallet and the words JUSQUE A PORTER LA RESACE, was used by the Gueux faction as a badge. To this the Spaniards replied by striking a medal with the head of our Saviour and on the reverse the image of our Lady of Hal, and Pius V granted an indulgence to those who wore this medal in their hats (Simonis, "Art du Medailleur en Belgique", 1904, II, pp. 76-80).

From this the custom of blessing and indulgencing medals is said to have rapidly extended under the sanction of the popes. Certain it is that Sixtus V attached indulgences to some ancient coins discovered in the tomb of the builder of the Scala Santa, which coins he caused to be richly mounted and sent to persons of distinction. Thus encouraged, and stimulated further by the vogue of the jubilee and other papal medals of which we have still to speak, the use of these devotional objects spread to every part of the world. Austria and Bohemia seem to have taken the lead in the use of papal medals in Eastern Europe, and some exceptionally fine specimens were produced under the inspiration of the Italian artists whom the Emperor Maximilian invited to his court. Some of the religious medals cast by Antonio Abondio and his pupils in Vienna are of the highest order of excellence. But in the course of the sixteenth and seventeenth centuries almost every considerable city in Catholic Europe came to have craftsmen of its own who followed the industry, and the tradition created by such Italian artists as Leone Leoni at Brussels, with men like Jongheinich and Stephen of Holland for his pupils, and John de Candida, Nicholas of Florence and Benvenuto Cellini in France, was bound to have lasting effect.

The number and variety of the religious pieces produced at a later date, as Domänig (Die deutsche Privat-Medaille, p. 29) is at pains to attest, defies all classification. Only one writer, the Benedictine L. Kuncse (in his "Systematik der Weihmünzen", Raab, 1885), seems to have seriously grappled with the task, and his success is very moderate. As an indication of the vast complexity of the subject, we may note that in the thirty-first of his fifty divisions, the section devoted to medals commemorative of churches and sanctuaries of the Blessed Virgin, he enumerates over 700 such shrines of which he has found some record—the number is probably immensely greater, while in connexion with the majority of these, suspicion may be entertained that they have at some time been struck, often, e. g. at Loreto, in an almost endless series. Under these circumstances, all that can be done is to point out a few illustrative groups rather apart from the common run of pious medals; those connected with places, confraternities, religious orders, saints, mysteries, miracles, foundations, &c., are types with which everyone is familiar.

(1) Plague medals struck and blessed as a protection against pestilence. The subjects are very various: e. g., the figure of St. Sebastian and St. Roch, and different shrines of the Blessed Virgin, often also with a view of some particular city. Round them are commonly inscribed mysterious letters analogous to those depicted on the famous medal of St. Benedict (q. v.). For example f, s, f, D. I. A. etc. These letters stand for "Crux Christi salva nos"; "Zelus domus Dei libera me"; "Crux Christi victat et regnat, per lignum crucis libera me Domine ab hac peste"; "Deus meus expelle pestem et libera me, etc." (See Beierlein, "Münze der Kaiser Siemens" of the Medailleurs in the German Register of Medals, Leipzig, 1885.)

(2) Medals commemorating Miracles of the Eucharist. There were a very large number of these struck for jubilees, centenaries, etc., in the different places where these miracles were believed to have happened, often adorned with very quaint devices. There is one, for example, commemorative of the miracle at Seefeld, upon which the story is depicted of a nobleman who demanded to receive a large host at communion like the priest's. The priest complied, but as a punishment for the nobleman's presumption the ground opens and swallows him up (see Pachinger, "Waffenmedaillen der Tirol", Vienna, 1908).

(3) Private medals. These forms a very large class, but particular specimens are often extremely scarce, for they were struck to commemorate incidents in the life of individuals, and were only distributed to friends. Baptisms, marriages, first communications, deaths formed the principal subjects. For striking these private medals. The baptismal or sponsor medals (pabris medaillen) are particularly interesting, and often contain precise details as to the hour of birth which would enable the child's horoscope to be calculated. (See Domänig, "Die deutsche Privat-Medaille", Vienna, 1893, 3, pp. 25-28.)

(4) Medals commemorating of special legends. Of this class the famous Cross of St. Ulrich of Augsburg may serve as a specimen. A cross is supposed to have been brought by an angel to St. Ulrich that he might bear it in his hands in the great battle against the Huns, a. d. 955. Freisenegger in his monograph "Die Ulrichs-kreuze" (Augsburg, 1895), enumerates 180 types of this object of devotion, sometimes in cross, sometimes in medal form, often associated with the medal of St. Benedict.

Papal medals do not immediately belong to this place, for they are not precisely devotional in purpose, but a very large number of these pieces are ultimately associated with ecclesiastical functions of various kinds, and more particularly with the closing of the Holy Door in the year of Jubilee. The series begins with the pontificate of Martin V, in 1417, and continues down to the present day. Some types professing to commemorate the acts of earlier popes, e. g. the Jubilee of Boniface VIII, are reconstructions (i. e. fabrications) of later date. Nearly all the most noteworthy actions of each pontificate for the past five hundred years have been commemorated by medals in this manner, and some of the most famous artists, such as Benvenuto Cellini, Caradoso, and others have been employed in designing them. The wonderful family of the Hamerani, who from 1605 down to about 1700 made a point of endowing many of the great churches of Italy with the greater proportion of their wealth, are an example of the material prosperity of that vast series, deserve to be specially mentioned for the uniform excellence of their work.

Other semi-devotional medals are those which have been struck by important religious associations, as for example by the Knights of Malta, by certain abbies in commemoration of their abbots, or in connexion with particular orders of knighthood. One of the most of these series of medals useful monographs have been written, as for example the work of Canon H. C. Schembri, or "The Coins and Medals of the Knights of Malta", (London, 1908). It has been said above that Agnus Deis seem to have been blessed by the popes with more solemnity than the other forms of benediction were used in connexion with the Golden Rose, the Sword and Cap, and other
objects given by the popes as presents. In the sixteenth century this practice was greatly developed. The custom grew up not only of bringing objects which had touched certain relics or shrines to the pope to be blessed, but also of the pontiff blessing rosaries, "grains", medals, etc., enriching them with indulgences and sending them, through his privileged missionaries or envoys, to be distributed to Catholics in England. On these occasions a paper of instructions was often drawn up, defining exactly the nature of these indulgences and the conditions on which they could be gained. Several papers of this kind—one in favour of Mary Queen of Scots (1576) and others for England—were prepared for the use of the clergy. Some have been preserved, emanating from Gregory XIII. One of these, by Knox in the "Douay Diaries", p. 367. The "Apostolic Indulgences" (see INDULGENCES, APOSTOLIC) attached to medals, rosaries and similar objects by all priests duly authorized, are analogous to these. They are imparted by making a simple sign of the cross, but for certain other objects, e.g. the medal of St. Benedict (q. v.), much special faculties are required, and an elaborate form of benediction is provided. Quite recently Pius X has sanctioned the use of a blessed medal to be worn in place of the brown and other scapulars. The concession was originally made for the benefit of the native Christians in the missions of the Congo. But Pius XI at the request of the French mission in the Congo was ready to grant to other priests who apply, the faculty of blessing medals which may be worn in place of the scapular (see "Le Canoniste Contemporain", Feb., 1910, p. 115).

Almost the only attempt at a systematic classification of devotional medals in general has been made by KONCHE, Systematik der Weihamägen (Raab, 1888), but the work is neither scholarly nor scientific. Much more satisfactory is the classification given by F. Fuchs in the Index muniturum of 1910, in which are the researches of FACCHINO, who has published a valuable study on "De praedestinatibus monachorum et ordinis religiosorum Medailionem of various districts. These are concerned with Bavaria (1904), Duchy of Austria (1904), Salzburg (1908), and the Tyrol (1909), with some other more general articles. Other miscellaneous works are CORNER, Numismatique Béarnaise (Rome, r. d.); IDEM, Numismatique et Iconographie maritales (Rome, r. d.); BLANCHET, Nouveau Manuel de Numismatique (Paris, 1860); a series of articles by ROUTZEL (especially in 1893-96) and by DE WITTE (especially 1900-1910) in the Revue Belge de Numismatique, especially 1902; FERKNER, Katalog der bayrischen Weihflur-Kloster- und Kirchen-Medailien (Munich, 1900); FERKNER, Catalogue des médailles pour l'office de S. Pierre (1933); this is a slender pamphlet on the classification of modern medals; KNOX, The History of Weihamägen and Weihamägen in papal and archiepiscopal Bavarian Staatshandbücher (Brum); IDEM, Medaille wie auf dem k. Wolfang (Brum, 1890); BERLINGER, Münstern der Bayerschen medaille (Munich, 1879-80)

Upon early Christian medals, see de ROMA's various articles in Bullettino di Archeologia Cristiana, especially in 1869, 1870, 1871, 1887, and "Omnium Catalogum d'un inventaire du Museo et de la Bibliothèque de la Commission de la Republique de Salentino, e. v. Anouletles: BARTINGH in Dict. of Christ. Ant., e. v. Money; and HEUSER in Realencyclopädie f. christ. Alterthum, e. v. Medailien, and various articles in the Romische Quartalschrift, particularly 1896. On the papal medals see particularly BOHNEK, Numismata Pontificum Romanorum (2 v., Rome, 1869); van Veen, Numismata Pontificum Romanorum, passim (Rome, 1744).

Dealing with the general history of Medals in modern times, but which also have many notices to the students of religious medals, are FORREN, Biographisches Dictionary of Medalists (c. 1910); H. de die Deutsche Kunst und Kunsthistorischer Hinsicht (Vienna, 1907). A work magnificently illustrated; HEUSER, Les Medailles de la Renaissance (Paris, 1911); IDEM, Les Medailleurs de la Renaissance (Paris, 1914); IDEM, Les Medailleurs et Orsateurs de Monnaies en France (Paris, 1904), with admirable illustrations. Several other works have been mentioned in the course of the article.

HERBERT THURSTON.

Miraculous Medal—The devotion commonly known as that of the Miraculous Medal owes its origin to an apparition made by the daughters of Charity of St. Vincent de Paul, known in religion as Marie Catherine, to whom the Blessed Virgin Mary appeared three separate times in the year 1830, at the motherhouse of the community at Paris. The first of these apparitions occurred 15 July, the second 27 November, and the third a short time later, in December. On the second occasion, Sister Catherine records that the Blessed Virgin appeared as if standing on a globe, and bearing a globe in her hands. As if from rings set with precious stones dazzling rays of light were emitted from her fingers. These, she said, were symbols of the graces which would be bestowed on all who asked for them. Sister Catherine adds that around the figure appeared an oval frame bearing in golden letters the words: "Pray for us who have recourse to thee"; on the back appeared the letter M, surmounted by a cross, with a crossbar beneath it, and under all the Sacred Hearts of Jesus and Mary, the former surrounded by a crown of thorns, and the latter pierced by a sword. At the second and third of these visions a command was given to have the straining effort which had been revealed, and a promise of great graces was made to those who wear it when blessed. After careful investigation, M. Aladel, the spiritual director of Sister Catherine, obtained the approval of Mgr de Queelen, Archbishop of Paris, and on 30 June, 1832, the first medals were struck, and with their distribution the devotion spread rapidly. One of the most remarkable facts recorded in connection with the Miraculous Medal is the conversion of a Jew, Alphonse Ratisbonne (q. v.) of Strasburg, who had resisted the appeals of a friend to enter the Church. M. Ratisbonne consented, somewhat reluctantly, to wear the medal, and being in Rome, he entered, by chance, the church of S. Maria Immacolata, and beheld in the Blessed Virgin ex-actly as she is represented on the medal; his conversion speedily followed. This fact has received ecclesiastical sanction, and is recorded in the office of the feast of the Miraculous Medal. In 1847, M. Etienne, superior-general of the Congregation of the Mission, obtained from Pope Pius IX the privilege of instituting a confraternity under the title of the Immaculate Conception, with all the indulgences attached to a similar society established for its students at Rome by the Society of Jesus. This confraternity adopted the Miraculous Medal as its badge, and the members, known as the Children of Mary, wear it attached to a blue ribbon. On 23 July, 1894, Pope Leo XIII, after a careful examination of all the facts by the Sacred Congregation of Rites, instituted a feast, with a special Office and Mass, of the Manifestation of the Immaculate Virgin under the title of the Miraculous Medal, to be celebrated yearly on 27 November by the priests of the Congregation of the Mission. This is a double class. For ordinaries and religious communities who may ask the privilege of celebrating the festival, its rank is to be that of a double major feast. A further decree, dated 7 September, 1894, permits any priest to say the Mass proper to the feast in any chapel attached to a house of the Sisters of Charity.

JOSEPH GLASS.

Medardus, Saint, Bishop of Noyon, b. at Salency (Oise) about 456; d. in his episcopal city 8 June, about 545. His father, Nectardus, was of Frankish origin, while his mother, named Protagia, was Gallo-Roman. It is believed that St. Gildardus, Bishop of Rouen, was his brother. His youth was entirely consecrated to the practice of Christian virtues and to the study of sacred and profane letters. He often accompanied his father on business to Vermand and to Tournai, and frequented the schools, carefully avoiding all worldly dissipation. His exemplary piety and his knowledge, combined with the value of his advice to his bishop of Vermand (d. 530) to confer on him Holy Orders, and caused him to be chosen as his successor. Forcible, in spite of his objections, to accept this heavy charge, he devoted himself zealously to his new duties, and to accomplish them in greater security, since Vermand and the northern part of France in general were then generally troubled by wars and
exposed to the incursions of the barbarians, he removed his episcopal see in 531 from Vermand, a little city without defence, to Noyon, the strongest place in that region. The year following, St. Eleutherius, Bishop of Tournai, having died, St. Medardus was invited to assume the direction of that diocese also. He refused, but being urged by Clotaire himself he at last consented. This union of the two dioceses lasted until 1146, when they were again separated. Clotaire, who had paid him a last visit at Noyon, had his body transferred to the royal manor of Crouy at the gates of the city of Soissons. Over the tomb of St. Medardus was erected the celebrated Benedictine abbey which bears his name. St. Medardus was one of the most honoured bishops of his time, his memory has always been popularly venerated in the north of France, and he soon became the hero of numerous legends. The Church celebrates his feast on 8 June.

LÉON CLUGNET.

Medea, a titular see of Thrace, suffragan of Heraclea. This name and the modern name (Midieh) are derived from the ancient Salmydessos or Almydessos. Herodotus (IV, 93) says that the inhabitants yielded to Darius after some resistance; Xenophon and his companions in arms subjugated it with much difficulty (Anab., VII, 5, 12). The city is also mentioned by Sophocles (Antig., 969), by Eschylus (Prom., 726), who places it wrongly in Asia, Diodorus Siculus (XIV, 37), Strabo (VI, vi; XII, iii; 3, i; 3, 7), Ptolemy (VII, xi, etc.), who all agree in locating its harbour on the coast, and the orators had it much exposed to the winds; moreover the shore was sandy and unfavourable for navigation. Theophrastes (Chronogr., an. m. 6255) mentions it under the name Medea in the year 763. The Emperor Joanna Cantacuzenus, having taken it in 1352, was almost killed there by the Turks (Histor., IV, 10); it is also frequently mentioned in official acts (M. Miller: "Acta patriarchatus Constantinopolitanii", Vienna, 1600). Medea is mentioned as a suffragan of Heraclia towards 900 in the "Notitia" of Leo the Wise (Gelzer, "Ungedruckte... Texte der Notitiae episcopatarum", 552); it is mentioned in the same way in the "Notitia" of Manuel Comnenus about 1170 and of Michael VIII about 1270 (Parthey, "Hieronys Syneclesemus", 104, 204). Shortly after, under Andronicus II, Medea was made an autocephalous archbishopric, and towards 1330 a metropolitan see (Gelzer, op. cit., 601). In 1623 the metropolitan see of Medea and Sozopolis were united, to be again separated in 1715. A little later Medea was united with Bisya, at least among the Orthodox Greeks, and it is so still. Le Quien (Oriens christiansus, I, 1143-1146) gives the names of five Greek metropolitan bishops: Zoë, Eubel (Hierarchia catholica medii secli. I, 355) mentions two Latin titularies of the fourteenth century. To-day Medea or Midieh is a part of the sanjak of Kirk-Kéliissi in the vilayet of Adrianople; there are two thousand Greeks and some Turks.

S. VAILLÉ.

Medellin, Archdiocese of (Medellinensis), in the Republic of Colombia, Metropolitan of Antioquia and Mani- sales, in the Departments of Medellin, Antioquia, and Manises. Prior to 1877 a new civil territorial division was adopted, the limits of the archdiocese were conterminous with the former Department of Antioquia (from native words meaning the "hill or mountain of gold") which lay in the basins of the Magdalena, Cauca, and Atro rivers, had an area of over 2,195,125 acres, and was divided into ten civil provinces, Aures (capit. Sonson), Centro (cap., Medellin), Fredonia (cap., Fredonia), Nordeste (cap., Sta. Rosa), Norte (cap., Yarumal), Occidente (cap., Antioquia), Oriente (cap., Maranilla), Sopetrán (cap., Sotetran), Sur (cap., Manises), Urrao (cap., Frontino). The territory of the archdiocese is comprised in the Andes region; means of communication are poor, owing to the mountainous nature of the country; a railway, however, is being built from Puerto Berrio to Medellin. The Catholic religion is universally professed, but the exercise of all cults not contrary to Christian morality is permitted. The language is Spanish, and the inhabitants are descend- ants of the Spanish conquistadores, of the mestizos and negroes. There is no race antagonism, chiefly because of the influence and teaching of the Catholic religion. The Indians of the Cauca valley were originally cannibals.

Education is gratuitous and as far as possible compulsory; there are 400 primary schools with 35,000 pupils, besides many schools conducted by religious. During the civil disturbances of the past, many of the monasteries were confiscated, and are still used as public buildings; but the relations between Church and State were amicably settled by the Concordat of 1857.

Previous to 1804, the region was within the jurisdiction of the Metropolitan of Bogotá. On 31
August, 1804, the See of Antioquia was erected, and on 4 February, 1868, the title of the diocese was removed from Antioquia to the growing town of Medellin. On 29 Jan., 1873, the See of Antioquia (Antioquensis) was re-established, and on 11 April, 1900, a portion of the Diocese of Medellin went to constitute the newly erected See of Manizales (Manizalensis). As the civil districts are now constituted, the Department of Antioquia embraces an area of 11,517 square miles with a population of 160,000; that of Medellin an area of 12,137 with a population of 275,000; that of Manizales an area of 4,439 with a population of 242,000 (The Statesman's Year-Book, 1910). There were about 5000 savage Indians scattered in these regions.

Medellin on the River Porce, 147 miles from Bogotá, and 4600 feet above sea-level, is the capital of the Department of Medellin. In 1910 it had a population of 60,000. It was named in 1575 after the Count of Medellin in Spain, but did not begin to prosper until the gold and silver mines were discovered in the neighbourhood early in the nineteenth century. It has 7 churches, 2 chapels, and a pro-cathedral; a new cathedral is being constructed in the Plaza de Bolivar. Among important institutions in the town are a seminary, a university, the College of St. Ignatius, under the Jesuite (founded by Father Friere in the eighteenth century), the University College of St. John, under the Christian Brothers. The Presentation Nuns conduct schools for girls; the Sisters of Charity have charge of a hospital; and the Discaled Carmelites have a convent. Among the periodicals published in Medellin are "Registro Oficial," "Cronica Judicial," "El Preceptor," "El Elector," and "La Consigna."

The See of Antioquia was raised to the rank on 24 Feb., 1902. The archdiocese has 363,710 inhabitants, 110 priests, 15 regulars, 75 churches and chapels, 141 Catholic schools, in which 16,035 pupils are being educated. The present archbishop is Mgr. Em. José de Cayezzo y Cuero, born in Bogotá, 16 Nov., 1850; chosen Bishop of Pasto, 11 Feb., 1892; transferred to Popayan, 2 Dec., 1895; made archbishop 14 Dec., 1901; and transferred to Medellin 14 Dec., 1905, to succeed Mgr. Pardo Vergara, the first Archbishop of Medellin.

Antioquia on the Cauca was founded by Jorge Robledo in 1542; until 1826 it was the capital of the Department of Antioquia. Its population is estimated at 1,000,000. The first written literature in the region was published at Antioquia under the auspices of Bishop Gomes Friar, of Popayan, and on 5 Feb., 1727, a royal charter was granted to the college, and the fathers were given charge of the church of St. Barbara. A few years later they opened a second college at Buga. Among the more important buildings of the city are the cathedral, the bishop's house, the Jesuit college, and a hospital. On account of malaria the seminary has been removed from Antioquia to San Pedro.

The diocese has a population of 211,315; 75 priests; 80 churches and chapels. The present bishop is Mgr. Em. Ant. Lopez de Mesa, born at Rio Negro in the Diocese of Medellin, 22 March, 1849, and succeeded Mgr. Rueda as Bishop of Antioquia, 2 June, 1902.

Manizales is about 100 miles from Bogotá and 7000 feet above sea-level. Founded in 1848 it has developed rapidly owing to the gold mining operations in the neighbourhood; population in 1905, 20,000. There it suffered severely from earthquakes in 1875 and 1878.

The Diocese of Manizales was created 11 April, 1900, from territory formerly belonging to the archdioceses of Popayan and Medellin. The cathedral is dedicated to the Blessed Virgin. The present and first bishop is Mgr. Gregory Hoyos, born at Vachos, 1 Dec. 1849; appointed 11 May, 1901.
disappear from the inscriptions, and in their place we find references to the kings of Anshan. The capital of the kingdom was Ecbatana (the Agamatanu of the Babylonian inscriptions) the building of which is attributed by the author of the Book of Judith (i, 1) to "Arphaxad, king of the Medes," and it is called Amadana in an inscription of Tiglath-Pileser I, its origin would go back to the twelfth century B.C. At variance with this, however, is the Greek tradition represented by Herodotus, who ascribes the origin of Ecbatana to Deioke (the Daiukku of the Assyrian inscriptions, about 710 B.c.), who is described as the first great ruler of the Median empire. The "building of the city" is, of course, a rather elastic expression which may well have been used to designate the activities of monarchs who enlarged or fortified the already existing stronghold; and it is scarcely necessary to recall that most of these ancient records, though containing elements of truth, are to a certain extent artificial. At all events, it is with the reign of Deioke that the Median empire emerges into the full light of history, and henceforward the Greek sources serve to check or corroborate the information derived from the native monuments.

According to the somewhat questionable account of Herodotus, Deioke reigned from 700 to 647 B.C. and was succeeded by Phraortes (646-625), but of the latter no mention is made in the inscriptions thus far discovered. His successor Cyaxares (624-585), after breaking the Scythian power, formed an alliance with the Babylonians, who were endeavouring to regain their long lost dominion over Assyria. In league with his father, King of Babylon, he captured and destroyed Nineveh (606 B.C.) and conquered all the northern portion of Mesopotamia. Enriched by the spoils of the great Assyrian capital, Cyaxares pushed his conquering armies westward, and soon the dominion of the Medes extended from the confines of Elam to the river Halys in Asia Minor. Astyages (584-550 B.C.) reigned over this vast empire, which maintained the friendly relations with Babylon, and when Nabonidus succeeded to the throne of the latter kingdom, the Medes and Babylonians were at war.

In the meantime a great internal movement was preparing the way for a change in the destinies of the empire. It was due to the rising influence of another branch of the Medes, the Saka, who are sometimes known as the transition from the Median to the Persian rule. At this distance both terms are rather vague and indefinite, but there is no doubt as to the advent of a new dynasty, of which by far the most conspicuous ruler is Cyrus, who first appears as King of Anshan, and who is later mentioned as King of Persia. Doubtless in the earlier part of his reign he was but a vassal king dependent on the Median monarch, but in 549 B.C. he vanquished Astyages and made himself master of the vast empire then comprising the kingdoms of Anshan, Persia, and Media. He is known to Oriental history as a great and brilliant conqueror, and his fame in this respect is confirmed by the many legends associated with his name by Greek and Roman writers. His power soon became a menace to all western Asia, and in order to withstand it a coalition was formed into which entered Nabonidus, King of Babylonia, Amasis, King of Egypt, and Croesus, King of Lydia. But even this formidable alliance was unable to check the progress of the Persians, who, after having subjugated the whole of the Median empire, led his forces into Asia Minor. Croesus was defeated and taken prisoner in 546, and within a year the entire peninsula of Asia Minor was divided into satrapies, and annexed to the new Persian empire. The west being fully subdued, Cyrus led his victorious armies against Babylonia. Belahazar, the son of the still reigning Nabonidus, was sent as general in chief to defend the country, but he was defeated at Opis. After this disaster the invading forces met with little or no resistance, and Cyrus entered Babylon, where he was received as a deliverer, in 539 B.C. The following year he issued the famous decree permitting the Hebrew captives to return to Palestine and rebuild the temple (I Esd., i). It is interesting to note in this connexion that he is often alluded to in Isaiah (xl-xlviii, passim), where according to the obvious literal meaning he is spoken of as the Lord's anointed. With the accession of the Achemenian dynasty the history of Media becomes absorbed into that of Persia (q. v.), which will be treated in a separate article.

JAMES F. DRISCOLL.

Mediator (Christ as Mediator).—The subject will be treated under the following heads: (1) Definition of the word mediator; (2) Christ the Mediator; (3) Christ's qualifications; (4) Performance; (5) Results.

(1) MEDIATOR DEFINED.—A mediator is one who brings estranged parties to an amicable agreement. In New Testament theology the term invariably implies that the estranged being is God and that what is appropriated to Christ, the One Mediator. When special friends of God—angels, saints, holy men—pledge our cause before God, they mediate "with Christ"; but their mediation is only secondary and is better called intercession (q. v.). Moses, however, is the proper mediator of the Old Testament (Gal., iii, 19-20).

(2) CHRIST THE MEDIATOR.—St. Paul writes to Timothy (I Tim., ii, 3-6) . . . "God our Saviour, Who will have all men to be saved, and to come to the knowledge of the truth. For there is one God, and one mediator of God and men, the man Christ Jesus: Who gave himself a redemption for all, a testimony in due times."

The object of the mediatorialship is here pointed out as the salvation of mankind, and the imparting of truth about God. The mediator is named: Christ Jesus; His qualification for the office is implied in His being described as man, and the performance of it is ascribed to God the Father. The mediatorialship is the truth. All this originates in the Divine Will of "God our Saviour, Who will have all men to be saved". Christ's mediatorialship, therefore, occupies the central position in the economy of salvation: all human souls are both for time and eternity dependent on Christ Jesus for their whole supernatural life. "Who [God the Father] hath delivered up us from the power of darkness, and hath translated us into the kingdom of the Son of his love, In whom we have redemption through his blood, the remission of sins; Who is the image of the invisible God, the firstborn of every creature . . . all things were created by him and in him. And he is before all, and by him all things consist. And he is the head of the body, the church: who is the firstborn of the dead; that in all things he may hold the primacy: Because in him, it hath well pleased the Father, that all fulness should dwell; And through him to reconcile all things unto himself, making peace through the blood of his cross, both as to the things that are on earth, and the things that are in heaven". (Col., i, 13-20).

(3) QUALIFICATIONS.—The perfection of a mediator is measured by his influence with the parties he has to reconcile, and this power flows from his connexion with both: the highest possible perfection would be reached if the mediator were substantially one with both parties. A mother, for instance, is the best mediator between her husband and her son. But the matrimonial union of "two in one flesh", and the
union of mother and child are inferior in perfection to the 
hypostatic union of the Son of God with human nature. 
Husband, mother, son, are three persons; Jesus Christ, God and man, is only one person, identical 
with God, identical with man. Moreover, the 
hypostatic union makes Him the Head of mankind, 
and, in this capacity, a mediator. It is the hu-
mankind origin Christ is a member of the human family, a 
partner of our flesh and blood (Heb. ii, 11-15); by 
reason of His Divine Personality, He is "the image 
and likeness of God" to a degree unapproached by 
either man or angel. The Incarnation establishing 
between the First-born and His brethren a real kin-
ship, or affinity, Christ becomes the Head of the 
human family, and the human family acquires a claim to 
participate in the supernatural privileges of their Head. 
"Because we are members of his body, of his 
flesh, and of his bones." (Eph. v, 30.) Such was the 
expressed will of God: "But when the fulness of the time 
was come, God sent his Son, made of a woman . . . . 
that we might receive the adoption of sons." (Gal. iv, 
4-5; also Rom., viii, 29.) The man Christ Jesus, 
therefore, who was designed by God to mediate be-
tween Him and mankind, and whose mediatorial 
was not accidental and delegated, but inherent in His 
very being, was endowed with all the attributes re-
quired in a perfect mediator.

Christ, the mediator necessarily proceeds from 
His human nature as principium quae operandis; 
yet it obtains its mediating efficacy from the Divine 
nature, i.e. from the dignity of the acting person. Its 
first object, as commonly stated, is the remission 
of sin and the granting of grace, whereby the friendship 
between God and man is restored. This object is at-
tained by the works of the Incarnate. Christ becomes the Head, a mediator to God by and through Christ. Christ, however, is 
mediator on the side of God as well as on the side of 
man: He reveals to man Divine truth and Divine 
commands; He distributes the Divine gifts of grace 
and rules the world. St. Paul sums up this two-sided 
mediation in the words: " . . . consider the apostle 
and high priest of our confession, Jesus" (Heb., iii, 
1); Jesus is the Apostle sent by God to us, the 
high priest leading us to God.

(4) Performance.—How do we benefit by Christ's 
mediation? Christ is more than an enlightening 
teacher and a bright example of holiness; He destroys 
sin and restores grace. Our salvation is not due ex-
clusively to Christ's human nature; it is due to the 
Gloriﬁed state in heaven; Christ administers in 
heaven the fruits of His work on earth (Heb., vii, 25). 
Scripture compels us to regard the work of the Media-
tor as an efﬁcient cause of our salvation: His merits 
and satisfaction, as being those of our representative, 
have obtained for us salvation from God. The oldest 
extension of the dogma in the Church formularies is 
in the Nicene Creed: "cruciﬁed also for us", "Victor-
ious satisfaction", a term now in vogue, is not found 
expressly in the Church formularies, and is not an 
adequate expression of Christ's mediation. For His 
mediation partly replaces, partly completes, partly 
renders possible and effective the saving work of 
man himself; it makes the latter more effective and 
it merits, the saving work of God. It begins with 
obtaining the goodwill of God towards man, with 
appeasing the offended God by interceding for man. 
This intercession, however, differs from a mere asking 
in this, that Christ's work has merited what is asked for: 
salvation is its rightful equivalent. Further: to effect 
man's salvation is possible only by one person. In the 
act of mediation Christ acts for himself and for 
Himself the sins of mankind and make satisfaction for 
them to God. But though His atonement gives God 
more honour than sin gives dishonour, it is but a step 
towards the most essential part of Christ's saving 
work—the friendship of God which it merits for man. 
Taken together, the expiation of sin and the meritings 
of Divine friendship are the end of a real sacrifi, i.e. 
of "an action performed in order to give God the 
honour due to Him alone, and so to gain the Divine 
favour" (St. Thomas, III, Q. xlviii, a. 3). Peculiar 
to Christ's sacrifice are the infinite holiness of the 
Sacrificer and the infinite value of the Victim, which 
give the sacrifice an infinite value as expiation and as 
messiah. Moreover, it is by His Divinity, His 
human origin Christ is a member of the human family, a 
partner of our flesh and blood (Heb. ii, 11-15); by 
reason of His Divine Personality, He is "the image 
and likeness of God" to a degree unapproached by 
either man or angel. The Incarnation establishing 
between the First-born and His brethren a real kin-
ship, or affinity, Christ becomes the Head of the 
human family, and the human family acquires a claim to 
participate in the supernatural privileges of their Head. 
"Because we are members of his body, of his 
flesh, and of his bones." (Eph. v, 30.) Such was the 
expressed will of God: "But when the fulness of the time 
was come, God sent his Son, made of a woman . . . . 
that we might receive the adoption of sons." (Gal. iv, 
4-5; also Rom., viii, 29.) The man Christ Jesus, 
therefore, who was designed by God to mediate be-
tween Him and mankind, and whose mediatorial 
was not accidental and delegated, but inherent in His 
very being, was endowed with all the attributes re-
quired in a perfect mediator.

HUMPHREY, The One Mediator (London). J. WILHELM.

Mediceus (de Medici), Hieronymus, illustratus as 
as a scholastic of acumen and penetration, b. at Camerino 
in Umbria, 1569, whence the surname de Medicis 
originates. He was educated with the nuns at Camerino 
but went to Paris, 1586. He first distinguished himself as 
as a professor of philosophy and theology in various houses of 
the Province of Lombardy, whence he was advanced to 
as a professorship in the more important theological school 
at Bologna. He was approved by the general chapter 
of his Order held at Paris, 1611, and raised to the 
mastership and doctorate. He was then performing 
the duties of general censor for the tribunal of the Inquisi-
tion established at Mantua, for which reason he is said 
eventually to have secured the transfer of his affiliation 
to the convent of that place (1618). His laborious 
and fruitful career closed in 1622. It had been 
marked by a studious application to the doctrines of 
St. Thomas. Just as a young man he had been 
endeavoured his intellectual ability, he completed the first 
part of the invaluable "Summa theologica S. Thomas 
Aquiniatis doctoris angelici formalis explicatio". In 
this work he puts into syllogistic form the whole 
Summa. Aiming primarily at the enlightenment of 
beginners, he contributes notably to the instruction of 
those more advanced. The first part was not published 
until the first section of the second part was 
ready (Venice), 1614. Three years later followed the 
second section, but it was not until 1622 that the third 
part appeared at Salo, instead of Venice. The 
Supplement preceded the third part by a year (Venice, 
1621); it was not published at Mantua in 1623. Other 
more correct editions have followed even as late as (Venice) 
1582-1866. It is to Jacobus Quatius that credit is due 
for having improved the original in accuracy. He 
reproduced the work in five tomes, folio (Paris), in 1657. 
The chief advantage to be derived from the arrange-
ment of St. Thomas in syllogistic form is a quickness 
of grasp with an easiness of assimilation not otherwise 
possible. The method of division he has adopted has 
been made which, although raising the value of the 
work as a manual, are outside the scope of the original. 
They serve as appendices to each question and, under 
the caption "Utilitas pro Ecclesia S. Dei", furnish the 
student with practical applications of the original 
material in view of dogmas subsequently developed or 
contemporary heresy.
master of Florence and her dominions, and, while continuing and developing the foreign and domestic policy of his grandfather, he greatly extended the Medicean influence throughout Italy. His skilful diplomacy was directed to maintaining the peace of the peninsula, and keeping the five chief states under the face of the growing danger of an invasion from beyond the Alps. Guicciardini writes of him that it would not have been possible for Florence to have had a better or a more pleasant tyrant, and certainly the world has seen no more splendid a patron of artists and scholars. The poets, Pulci and Poliziano, the philosopher and mystic, Giovanni Pico della Mirandola, and a whole galaxy of great artists, such as Botticelli and Ghirlandaio, abed glory over his reign.

Posterity has agreed to call Lorenzo "the Magnificent", but this, in part, a misunderstanding of the Italian title "magno", which was given to all the members of his family. Indeed, during the fifteenth century, applied to most persons of importance in Italy to whom the higher title of "Excellence" did not pertain. Lorenzo sums up the finest culture of the early Renaissance in his own person. Unlike many of the humanists of his epoch, he thoroughly appreciated the great values of the classics of the two preceding centuries; in his youth he wrote a famous epistle on the subject to Federigo of Aragon, which accompanied a collection of early Italian lyrics. His own poems in the vernacular rank very high in the literature of the fifteenth century. They are remarkably varied in style and subject, and the Petrarchan canzoni and sonnets, with a prose commentary in imitation of the "Vita Nuova", to the semiparody of Dante entitled "I Beoni". His canzoni a ballo, the popular dancing songs of the Florentines, have the true lyrical note. Especially admirable are his compositions in oltre rima: the "Caccia col Falcone", with its keen feeling for nature; the "Ambra", a mythological fable of the Florentine countryside; and the "Nencia da Barberino", an idyllic picture of rustic lovers. His "Altecrazioni", six cantos in terza rima, discusses the nature of truth and lies, and closes in an impressive prayer to God, somewhat Platonic in tone. To purely religious poetry belong his "Laude", and a presentation of Giovanni e san Paolo", with a curiously modern appreciation of the Emperor Julian. In striking contrast to these are his carnival-songs, canzil cascades, so immoral as to lend colour to the accusation that he strove to undermine the morality of the Florentines in order the more easily to enslave them.

At the close of his life, Lorenzo was brought into con-

LAURENTIAN LIBRARY, FLORENCE
dict with Savonarola, but the legend of the latter refus- ing him absolution on his deathbed unless he re- stored liberty to Florence is now generally rejected by historians. By his wife, Clarice Orsini, Lorenzo had three sons: Piero, Giuliano, and Giovanni, of whom the third rose to the papacy as Leo X. Although a man of immoral life, his relations with his family show him under a favourable aspect, and, in a letter from one of the ladies of the Mantuan court, a charming account is given of him, on his way to the congress of Cremona in 1483, Lorenzo visited the Gonzaga children and sat among them in their nursery.

Piero di Lorenzo, Lorenzo's eldest son, b. 1471, d. 1503, a licentious youth with none of his father's ability, proved a most incompetent ruler, and, on the French invasion of 1494, he was expelled from Florence by the people, led by the patriotic Piero Capponi. After several fruitless attempts to recover his position, he was drowned at the battle of the Garigliano while serving in the French army. On the restoration of the Medici in 1512, his son Lorenzo was made ruler of Florence. With him, in 1519, the legitimate male descent of Cosimo the Elder came to an end. By his wife, Madeleine de la Tour d'Auvergne, he was the father of Caterina de' Medici, afterwards Queen of France.

The Medici were again expelled from Florence, and the republic once more established, in 1527. But in 1530, after the famous siege, the city was compelled to surrender to the imperial forces, and Charles V made Alessandro de' Medici, an illegitimate son of the younger Lorenzo, hereditary head of the Florentine government. All republican forms and offices were swept away, and Alessandro ruled as duke until, in 1537, he was assassinated by his kinsman, Lorenzo di Pierfrancesco de' Medici, who fled to Venice without attempting either to assert his own claims to the succession or to restore the republican régime.

Cosimo de' Medici, usually known as Cosimo I, b. 1519, d. 1574, was the descendant of a brother of Cosimo the Elder and representative of the younger Medici line. He was the son of Giovanni delle Bande Nere, the great soldier, and Maria Salviati. On the murder of Alessandro, he came into Florence, and was formally recognized as head of the government both by the citizens and by the emperor. At the outset, with the aid of imperials, he was able to suppress the efforts of the republicans, who were led by Baccio Valori and Filippo Strozzi. Various constitutional checks were at first put upon him, but these he soon discarded, and openly used the title of Duke of Florence. Although ruthless and implacable, he proved himself the ablest Italian ruler of the sixteenth century, and not without a permanent form to the government of Florence; finally developing the shapeless remains of the fallen republic into a modern monarchical state. He thoroughly reorganized the laws and administration, created a small but efficient fleet to defend the shores of Tuscany, and raised a national army out of the old Florentine militia. He married a Spanish wife, the noble and virtuous Eleonora di Toledo, and in foreign affairs leaned to a large extent upon Spain, by which power, however, he was prevented from accepting the crown of Corsica. His great desire of absorbing the neighbouring republics of Lucca and Siena into his dominions was fulfilled only in the case of the latter state; he conquered Siena in 1555, and in 1557 received it in vassalage from the King of Spain.

Tradition has invested Cosimo's name with a series of horrible domestic crimes and tragedies, all of which have been completely disproved by recent research. After the death of Eleonora di Toledo in 1562, he appears to have abandoned himself to vice. A few years later he married his mistress, Camilla Martelli. In 1574 he was crowned in Rome by Pope Pius V as Duke of Tuscan, thereby taking place among the sovereigns of Europe. The title was confirmed to his son and successor, Francis I, in 1575, by the Emperor Maximilian II. Cosimo's descendants reigned as Grand Dukes of Tuscany in an unbroken line until 1737, when, on the death of Gian Gastone de' Medici, the Medici dominions passed to the House of Bourbon.

EDMUND G. GARDNER.

Medici, Maria de', Queen of France; b. at Florence, 26 April, 1573; d. at Cologne, 3 July, 1642. She was a daughter of the Grand Duke Francis I of Tuscany and the Archduchess Joan of Austria, and married Henry IV of France, 5 October, 1600. In March, 1610, Henry IV, who was preparing to lead an expedition against Germany, again visited France and, at the request of the republicans, appointed Maria de' Medici regent, with a council of fifteen; yielding to her insistence, he also caused her to be crowned queen on 13 May, 1610. Two hours after the assassination of Henry IV (14 May, 1610), the Duc d'Epernon went to the Parliament and had Maria de' Medici declared regent, the little Louis XIII being not yet nine years of age. Henry IV, who, had he lived, would have striven more and more to secure alliances with Protestant powers, was replaced by a Catholic policy, aiming at a Spanish alliance. The first act in this direction was the betrothal of Louis XIII to the Infanta Anna (afterwards known as Anne of Austria), and of Elisabeth of France to the Infant Philip (1613), with agitation among the princes and the Protestants. The States-General, convoked by the queen regent in 1614, as a
concession to the princes, was the last attempt under the old monarchy to associate representatives of the national government, and the attempt succeeded ill. Finally, defying the susceptibilities of Condé and the Protestants, Louis XIII married the Infanta Anna on 28 November, 1615, and the revolt of the princes, following on the arrest of Condé (1 Sept., 1616), was the cause of the queen regent's summoning Richelieu (q. v.), Bishop of Luçon, to her council, as minister of war. Public opinion, outraged by the influence which Maria allowed her lady-in-waiting, Leonora Galigai, and Leonora's Florentine husband, Concini, Maréchal d'Ancre, to obtain over her; Concini was assassinated, 24 April, 1617, and thenceforward the influence of Albert de Luynes, a favourite of the young king, predominated. Maria de' Medici had to leave Paris, 2 May, 1617, and it was through the intervention of Richelieu that she was allowed to establish her household at Blois.

The regency of Maria de' Medici is interesting from the point of view of religious history, because of the Gallican agitation which marked it. After the condemnation by the Parliament of Paris of Bellarmine's treatise on the temporal power of the pope (1610), Edmond Richer, syndic of the faculty of theology, developed, in his "Libellus de Ecclesiastica et Politica Potestate", the theory that the government of the Church should be aristocratical, not monarchical. Maria de' Medici decidedly opposed Richer, and, when he had been condemned by an assembly of bishops held at Sens under the presidency of Cardinal du Perron, she had him deposed, and a new syndic elected (1612). When Harlay had resigned the presidency of the Parliament, she refused to appoint in his place de Thou, a Gallican, and appointed instead Nicolas de Verdun, an Ultramontane. In the States-General of 1614, the Third Estate, through its spokesman, Miron, made a protestation of Gallican principles, and tried, with the support of the Protestant Condé, to introduce into its cahier an article on the power of kings, which aimed at the Ultramontanes; Maria de' Medici ended the business by ordering this article to be taken out of the cahier, and fortiifying any further discussion of the question. Another interesting event of this regency was the Assembly of Saumur (1611), in which the Protestants, anxious to preserve and develop the political privileges given them by the Edict of Nantes, set about organizing all over France a vast network of provincial assemblies to watch over the interests of Protestantism, and assemblies de cercles, combining several provinces, which would be able to impose their will on the State. It was thus that, through the initiative of Henri de Rohan, Sully's son-in-law, there began to form within the French State a sort of separate Protestant party, to which Richelieu was to put an end.

After 1617, Maria de' Medici lived, with many vicissitudes, in full of intrigue, which she sometimes carried to conspiracy. Escaping from Blois, 22 Feb., 1619, she made her way into Angoulême, and obtained from Luynes the government of Anjou, which became a rallying-point for malcontents. The troops who supported her met those of the king at Les Ponts de Cé and were beaten (August, 1620). On the death of Luynes (15 December, 1621), she regained some influence; she caused Richelieu to be admitted to the council (1624), and was even entrusted with the regency during the war in Italy. But as Richelieu's hostility to Spain became more marked, she sought his dismissal. Allying herself with Gaston d'Orléans, she once—"the Day of the Dupes", 12 November, 1630—thought herself successful, but was aroused by the influence of the cardinal. She was mistaken. Banished to Compiegne, in February, 1631, she vainly endeavoured to obtain admission to the stronghold of La Capelle, whence she might have dictated terms to the king. At last she went into exile, to wait for the triumph of Gaston d'Orléans: but Gaston was beaten, and Maria de' Medici was no more a queen in France. From 1631 to 1638 she spent her time in the Low Countries, sending across the French frontier manifestos which no one read. After that, taking refuge in England (1639-44), with her daughter Marie, she, as a Catholic an object of suspicion to the Protestants of that country. Last of all, she betook herself to Germany, where she died, a helpless onlooker at the triumph of the foreign policy and Church policy which was the exact opposite of what she had followed during her regency. The haughty queen, whose luxury and splendour had been blazoned in Rubens' immense canvases, possessed of a dignity at the time of her death.

GEORGES GOTAU.

Medicine, History of.—The history of medical science, considered as a part of the general history of civilization, should logically begin in Mesopotamia, where tradition and philological investigation have placed the cradle of the human race. But, in a condensed article such as this, there are important reasons which dictate the choice of another starting point. Modern medical science rests upon Greek foundation, and whatever other civilized peoples may have accomplished in this field lies outside our inquiry. It is certain that the Greeks brought much with them from their original home, and also that they learned a great deal from their intercourse with other civilized countries, especially Egypt and India; but the Greek medical mind was in fashion a fashion that its origin can rarely be recognized.

MYTHICAL, HOMERIC, AND PRE-HIPPOCRATIC TIMES.

—Greek medical science, like that of all civilized peo-
amples, shows in the beginning a purely theurgical character. Apollo is regarded as the founder of medical science, and, in popular Homer, his son Æsculapius, Homer's 'Therapeutes', is represented as the deity whose office it is to bring about man's restoration to health by means of healing oracles. His oldest place of worship was at Tricca in Thessaly. The temples of Æsculapius, of which those at Epi-
daurus and Cos are the best known, were situated in a healthy neighbourhood. The sick pilgrims went thither, that, after a long preparation of prayers, fasting and ablutions, they might, through the mediation of the priest, receive in their dreams the healing oracles. This kind of medical science already shows a rational basis, for the priest interpreted the dreams and prescribed a suitable treatment, in most cases purely dietetic. Important records of sickness were made and, as it were, written down in the temples. Side by side with the priestly caste, and perhaps out of it, there arose the order of temple physicians, who, as supposed descendants of the god Æsculapius, were known as the Asclepiades, and formed a kind of guild or corporation. This separation of offices must have occurred at an early time, for, even in Homer, we find the priestess of Æsculapius, Mashaon and Podalirius. In the vegetable drugs of Egyptian origin early recognized in Homer we recognize the early influence of the country of the Pharaohs upon Greek medical science. The schools of the philosophers likewise exerted no small influence upon its development, medical problems being discussed in the circle of the renowned Alexanders of Crotona, Parmenides of Elae, Heraclitus of Ephesus (sixth century B.C.), Empedocles of Agrigentum, and Anaxagoras of Clazomenae (fifth century B.C.). The earliest medical schools were at Cyrene in Northern Africa, Crotona, Chnidus, and Cos. From Cnidus came Euryphon and also Oesander. The latter was a pupil of Cleopatra, wife of the army of Cyrus and, after the battle of Cunaxa (401 B.C.), to Artaxerxes Memnon. Of greater interest is the medical school adjoining the shrine of Æsculapius at Cos, from it arose the man who first placed medicine upon a scientific basis, and whose name is even to-day well known to all physicians, Hippocrates.

Hippocrates and the So-called Corpus Hippocraticum. Tradition knows seven physicians named Hippocrates, of whom the second is regarded as the most famous. Of his life we know but little. He was born at Cos in 460 or 450 B.C., and died at Larissa about 379. How great his fame was during his lifetime is shown by the fact that Plato compares him with the ancient civilized and the 'Great' or 'the Divine'. The historical kernel is probably as follows: a famous physician of this name from Cos flourished in the days of Pericles, and subsequently many things, which his ancestors or his descendants or his school accomplished, were attributed to him as the hero of medical science. The same was true of his writings. What is now known under the title of 'Hippocratic Opera' represents the work, not of an individual, but of several persons of different periods and of different schools. It has thus become customary to designate the writings ascribed to Hippocrates by the general title of the 'Hippocratic Collection' (Corpus Hippocraticum), and to divide them according to their origin into the works of the schools of Chnidus and of Cos, and those of the Sophists. How difficult it is, however, to determine their genuineness is shown by the fact that even in the third century before Christ the Alexandrian librarians, who for the first time collected the anonymous scrolls scattered through Hellas, could not reach agreement upon the motion of the writing of these medical science it is of little consequence who composed the works of the school of Cos, for they are all more or less permeated by the spirit of one great master. The secret of his immortality rests on the fact that he pointed out the means whereby medicine became a science. His first rule was the observation of individual patients, a principle of principles were gradually derived from experience, and these, uniform, arranged, led by induction to a knowledge of the nature of the disease, its course, and its treatment. This is the origin of the famous 'Aphorisms', short rules drawn from experience, and at times conclusions drawn from the same source. They form the most valuable part of the Collection. The school of Cos and its adherents, the Hippocrates, looked upon medical science from a purely practical standpoint; they regarded it as the art of healing the sick, and therefore laid most stress on prophylactic and treatment by abstracts of nature through dietetic means, while the whole school of Cnidus prided itself upon its scientific diagnosis and, in harmony with the E. and adopted a varied medicinal treatment. The method which the school of Cos established more than 2000 years ago has proved to be the only correct one, and thus Hippocratic medical science established its reputation, Boerhaave at Leyden and subsequently with Gerhard van Swieten at Vienna. In his endeavour to attain the truth the earnest investigator often reaches an impassable barrier. There is nothing more tempting than to seek an outlet by means of reflection and investigation. Such a misfortune may easily become fatal to the physiologist, but a certain system, carried upon the results of speculative investigation, carries the germ of death within itself. The Dogmatic School. In their endeavour to complete the doctrine of their great master the successors of the Hippocrates fell victims to the snares of metaphysics. In spite of the qualifications bestowed, a so-called dogmatic school some fruitful investigation. Diciles Caryxius advanced the knowledge of anatomy, and tried to fathom the causal connexion between symptom and disease, in which endeavours he was imitated by Praxagoras of Cos, who established the diagnostic importance of the pulse. Unfortunately, there already began with Aristotle (384-22 B.C.) that tendency — later rendered so fatal through Galen's teaching — to regard organic structure and function not in accordance with facts but from the teleological standpoint. The Alexandrian Period. The desire to give to medicine a scientific basis found rich nourishment in the scientific civilization at Alexandria. Herophilus of Chalcedon (about 300 B.C. and Erasistratus of Iulis (about 330-240 B.C.) are mentioned in this connexion. As anatomists, they were the first systematic investigators, and, following Hippocrates, they tried to complete clinical experience by exact methods. This tendency was opposed by the empiricists, whose services lay solely in the field of drugs and toxicology. Erasistratus as well as Philinus, the empiricists attacked the doctrine of humors (humoral pathology), which developed out of the Hippocratic tendency. The former alone was a serious opponent, since, as an anatomist, he looked for the seat of the disease in the solid parts, rather than in the four fundamental humors (blood, mucus, black and yellow gall) and their different mixtures. The Methodizers. One of the opponents of humoral pathology was Asclepiades of Prusa in Bithynia (about 124 B.C.). He tried to utilize in medicine the atomistic theory of Epicurus and Heraclides of Pontus. He taught that health and disease depend upon the condition of the fine capillaries or pores, which, endowed with sensation, pass through the entire body. With Themison as their leader, the followers of Asclepiades simplified his doctrine by supposing disease to be only a contraction or relaxation,
and later only a mixed condition (partly contracted, partly relaxed) of the pores. This simple and convenient explanation of all diseases without regard to some natural and correct physiology, taken with its allied system of physical dietic therapeutic, explains why this doctrine enjoyed so long a life, and why the works of the methodist, Celius Aurelianus of Sicca in Numidia (beginning of fifth century A.D.), were diligently studied down to the seventh century.

Galen.—Departure from the Hippocratic observation of nature and physiology, to form numerous mutually opposing sects. A man of great industry and comprehensive knowledge, Galen of Pergamum (about A.D. 130-201), tried to rescue medical science from this labyrinth. He chose the path of eclecticism, on which he built his (as he thought) infallible system. Whatever sense-perception and clinical observation left obscure, he tried to partake of its systematic treatment. That this system of teaching could hold medicine in bondage until modern times shows the genius of the master, who understood how to cover up the gaps by brilliancy of style. Galen took the entire anatomical knowledge of his time, and out of it produced a work the substance of which was for centuries regarded as infallible. The anatomy was founded, not upon the dissection of mammals, especially of monkeys, and, like his physiology, was under teleological influence. His presentation of things lacks dispassionateness. Instead of explaining the functions of the organs on the basis of their structure, Galen chose the reverse method. His anatomy and physiology were the result of preconceived ideas, and the re-examination of these fields must necessarily have shaken his entire scheme of teaching. Galen expressed the greatest respect for Hippocrates, published his most important works with explanatory notes, but never entered into the spirit of the school of Cos, although he adopted many of its doctrines. Galen is the last point of transition, and the birth of modern medical science. In his vanity he thought he had completed all investigation, and that his successors had only to accept without effort what he had discovered. As will be shown in the following paragraph, his advice was, unfortunately for science, followed literally.

Pedanius Dioscorides from Anazarbe, who lived in the time of Nero and Vespasian, may be interpreted here as the most important pharmaceutical writer of ancient times. He simplified greatly the pharmacopeia, which had then assumed unwieldy dimensions, and freed it from ridiculous, superstitious remedies. Our modern pharmacology is based on his work, Távros, first written in Greek, and translated into Latin and Arabic.

Cornelius Celsus (about 25-30 B.C. - 45-50 A.D.) is the only Roman who worked with distinction in the medical field; but it is doubtful whether he was a physician. His work, De re medica libri viii, which is written in classical Latin, and for which he used seventy-two works lost to posterity, gives a survey of medical science from Hippocrates to imperial times. Very famous is his description of the operation of lithotomy. Celsus was altogether forgotten until the fifteenth century, when Pope Nicholas V (1447-55) is said to have discovered a manuscript of his works.

Byzantine Period.—In Byzantine times medicine shows but little originality, and is of small importance in the history of medical development. The works handed down to us are all compilations, but as they frequently contain excerpts from lost works, they are of some historical value. The notable writers of this period are: Oribasius (325-403), physician in ordinary to Julian the Apostate; and Actius of Amida, a Christian physician under Justinian (527-66). A liturgical dignity than the episcopate was shown by Alexander of Trolls (522-605), and Paulus Ëgineita of the first half of the seventh century, of whose seven books, the sixth, dealing with surgery, was greatly valued in Arabian medicine. Paulus lived at Alexandria, and was one of the last to come from its once famous school, which became extinct after the capture of the city by Omar in 640. At the time of the beginning of the eighth century there was no further development of medicine, not because it was especially productive, but because it preserved Greek medical science with that of its most important representative, Galen. It was, however, strongly influenced by oriental elements of later times. The adherents of the heretic Nestorius, who in 431 settled in Edessa, were the teachers of the Arab physicians. After their expulsion, these Nestorians settled in Khonismpasor in 489, and there founded a medical school. After the conquest of Persia by the Arabs in 650, Greek culture was held in great esteem, and learned Nestorian, Jewish, and even Indian physicians worked diligently as translators of Greek writings. In Arabic medicine the large extent of the translation of important physicians in the first period of Greek-Arabian medicine—the period of dependence and of translations—comes first the Nestorian family Bachtischus of Syria, which flourished until the eleventh century; Abu Zakariya Yahia ben Maseweih (d. 875), known as Joannes Damascenus; Mesue the Elder, a Christian, who lived in Alexandria, was a surgeon, and an independent work, and supervised the translation of Greek authors; Abu Yusuf Jacob ben Ishak ben el-Subbah el-Kindi (Alkindus, 813-73), who wrote a work about compound drugs; and the Nestorian Abu Zeid Ibin al-Ibn ben Soliman ben Ejjuh Ibn el-Ibbi (Joannitus, 809-875), a teacher in Baghdad and Dairs, who translated the works of Dioscorides, whose work "Isagoge in artem parvam Galeni" ("early translated into Latin, was much read in the Middle Ages. Wide activity and independent observation—based, however, wholly upon the doctrine of Galen—were shown by Abu Bekr Muhammad ben Zakariya er-Razi (Rhazes, about 850-923), whose chief work, however, "El-Hawi fi'Tib" ("Continues") is a rather unsystematic compilation. In the Middle Ages his "Kea alibi Almamurii" ("Liber medicinalis Almansoris") was well known and had many commentators. The most valuable of the thirty-six productions of Rhazes which have come down to us is "De variol et morbillis" in a book based upon the work of Galen. It is also to mention the medicinal writer Abu Jakub Ishak ben Soleiman el-Ismaili (Isaac Judeus, 830-932), an Egyptian Jew; the Persian, Ali ben el-Abbas Ala ed-Din el-Madshachi (Ali Abbas, d. 994), author of "El-Maliki" ("Regalis dispositio, Pantegnum"). Abu Dahafer Ahmed ben Ibrahim ben Abu Chalid Ibn el-Dahsaz (d. 1060) wrote about the causes of the plague in Egypt. A work on pharmacoe was written by the physician in ordinary to the Spanish Caliph Hisham II (976-1013), Abu Daut Soleiman ben Hasan Ibn Dabdichoehl.

Of the surgical authors, Abul-Kasim Chalafr ben Abd el-Zahawi el-Zahar near Cordova (Abul-kasem, about 912-1015) alone deserves mention, and he depends absolutely on Paulus Ëgineita. While he received scant attention at home, since surgery was little cultivated by the Arabs, his work, written in a clear and perspicuous style, became known in the West through the Latin translation by Gerardus of Cremona (1187), and was extensively used even in later days. Many cabalistic writings were also written with the Persian Abu Ali el-Hosein ben Abdallah Ibn Sina (Avicenna, 980-1037), who based his system entirely upon the teaching of Galen and tried in various ways to supplement the latter. His chief work.
“El-Kantin” (Canon Medicine), written in a brilliant style and treating all branches of medical science, soon supplanted in the West the works of the Greeks and, until the time of Ibn Rushd (Averroes, 1126–98), of Cordova, was regarded as the most important textbook for physicians; but in Arabic Spain his fame was small. One of his chief rivals was Abu-Merwan Abd al-Malik ben Abul-Ala Zohr ben Abd al-Malik Ibn Zohr (Avensoar, 1113–62) from the neighbourhood of Seville. His friend, the philosopher and physician Abul-Welid Muhammed ben Ahmed Ibn Rosbd el-Malik (Averroes, 1126–98), of Cordova, is regarded as the complement of Avensoa. His book was also popular in the West and bears the title “Kitab el-Kolijat” (Colliget). With the decline of Arabic rule began the decay of medicine. In the Orient this decline began after the fall of Bagdad in 1256, and in Spain after the capture of Cordova in 1236, the decay becoming complete after the loss of Granada in 1492. The predominance of Arabic medicine, which lasted scarcely three centuries, seriously delayed the development of our science. A brief survey of this period shows that the Arabs went in a slavish reverence before the works of Aristotle and Galen without examining them critically. Not one Greek physician obtained such a hold on the Arabs as Galen, whose system, perfect in form, pleased them just as that of Aristotle pleased them in philosophy. Nowhere did dialectics play a greater part in medicine than among the later followers in the West. Independent investigation in the fields of exact science, anatomy, and physiology was forbidden by the laws of the Koran. Symptomatology (semiotics) at the bedside, especially prognosis based on a pulse, the state of the urine, were developed by them with an equally exaggerated and fruitless subtlety. Much, and perhaps the only credit due to them is in the field of pharmacetics. We are indebted to them for a whole series ofsimples and drugs, the properties of oriental and Indian origin, previously unknown, and also for the polypharmacy of later times. Until the discovery of America the Venetian drug-trade was controlled by Arabian dealers.

Christianity’s Share in the Development of Medical Science.—As long as the cruel persecution of Christians which were taking place in the Roman Empire, it was impossible for Christians to take direct part in the development of medical science. But provision had been made for medical aid within the community, because the priest, like the rabbi of small Jewish communities in the late Middle Ages, was also a physician. This is clear from the history of the two brothers, Sts. Constantine and Dalmatian, who experienced medicine in Syria and were martyred under Diocletian. The exercise of practical charity under the direction of deacons of the churches gave rise to systematic nursing and hospitals. In recent times it has, indeed, been alleged that the existence of hospitals among the Buddhists, even in the third century before Christ, and their existence in ancient Mexico at the time of discovery is demonstrable, and that hospitals had their origin in general philanthropy; but nobody denies that the nursing of the sick, especially during epidemics, had never before been so widespread, so well organized, so self-sacrificing as in the early Christian communities. Christianity tended the sick and devised and executed extensively the care of destitute children (foundlings, orphans), of the feeble and infirm, of those out of work, and of pilgrims. The era of persecution ended, we find large alms-houses and hospitals like that of St. Basil in Cæsarea (370), those of the Roman Lady Fabiola in Rome and Ostia (400), that of St. Samson adjoining the church of St. Sophia in Constantinople in the sixth century, and the hospital of the Most Holy Name at Rome (512), and others. In 1198 Pope Innocent III rebuilt the pilgrims’ shelter, which had been founded in 726 by a British king, but had been repeatedly destroyed by fire. He turned it into a refuge for travellers and a hospital, and entrusted it to the Brothers of the Holy Ghost established by Guy de Montpellier. Mention must also be made here of the religious orders of knights and the houses for lepers of later times. The great hospitals of the Arabs in Dschondisapor and Bagdad were built after Christian models. The celebrated ecclesiastical writer Tertullian (born A.D. 160) possessed a wide knowledge of medicine, which, following the custom of his time, he calls a “sister of philosophy.” Clement of Alexandria, about the middle of the century, lays down valuable hygienic laws in his “Pedagogus.” Lactantius in the fourth century speaks in his work “De Opificio Dei” about the structure of the human body. One of the most learned priests of his time, St. Isidore of Seville (d. 636), treated medicine in the fourth book of his “Origines S. Etymologian.” St. Benedict of Nursia (480) made it a duty for the brothers of his order to study the sciences, and among them medicine, as aids to the exercise of hospitality. Olaus Murus gave his mine to the later followers in the West. Independent investigation in the fields of exact science, anatomy, and physiology was forbidden by the laws of the Koran. Symptomatology (semiotics) at the bedside, especially prognosis based on a pulse, the state of the urine, were developed by them with an equally exaggerated and fruitless subtlety. Much, and perhaps the only credit due to them is in the field of pharmacetics. We are indebted to them for a whole series of simples and drugs, the properties of oriental and Indian origin, previously unknown, and also for the polypharmacy of later times. Until the discovery of America the Venetian drug-trade was controlled by Arabian dealers.

How diligently medicine was studied in the monasteries is shown by the numerous manuscripts (many still unedited) in the old cathedral libraries, and by the large number of medical writers who were attached to the monasteries and are now to be found in the national libraries of various countries. Priests who possessed a knowledge of medicine served as physicians-in-ordinary to princes as late as the fifteenth century, although they were forbidden to practise surgery by the Fourth Synod of the Lateran (1213). Thus, Master Gerhard, parish-priest in Fribourg, founded the Hospital of the Holy Ghost at Vienna (1211), was physician-in-ordinary to Duke Leopold VI of Austria, and Sigismund Albicu, who afterward became Archbishop of Prague (1411), held the same office at the court of King Wenzel of Bohemia (1391–1411). From this time, we constantly meet with priests possessing a knowledge of medicine and writing on medical subjects. The popes, the most important patrons of all the sciences, were friendly also to the development of medicine. That they ever at any time forbade the practice of anatomical investigation is a fable. Pope Boniface VIII in 1299–1300 forbade the practice then prevalent of boiling the corpses of noble persons who had died abroad, in order that their bodies might more conveniently be transported to the distant ancestral tomb. This prohibitory rule had reference only to cases of death in Christian countries, while in the
Orient (e.g. during the Crusades) the usage seems to have been tacitly allowed to continue. In scholastic works, however, Moslems were considered inferiors. Having voluntarily undertaken the education of the young in all branches of learning, the monasteries were aided in their endeavours by both Church and State. The foundation of state schools is the work of Charlemagne (768–814), whose activity, especially in the Germanic countries, was stimulated by the decree of the Synod of Trier (788), that each monastery and each cathedral chapter should institute a school. According to the Capitulary of Charlemagne at Diedenhofen (Thionville) in 806, medicine was commonly taught in these schools. At the diocesan school in Reims, we find Gerbert d’Aurillac, later Pope Sylvester II (999–1003), long active as a teacher of medicine. Simultaneously with the rise of monasteries there sprang up higher municipal schools, as for instance the Burge- schule at St. Stephen’s in Vienna (about 1237). Out of the secular and religious schools, the curriculum of which institutions comprised the entire learning of the times, the first universities developed themselves, partly under imperial and partly under papal protection, according as they sprang from the lay and the cathedral schools, respectively.

School of Salerno.—This is regarded as the oldest medical school of the West. Salerno on the Tyrrhe- nian Sea, originally probably a Doric colony, was from the sixth to the eleventh century under the rule of the Lombards, and from 1075 to 1150 under that of the Norman kings. It was the beginning of the Kingdom of Naples and Sicily. The origin of the school is obscure, but, contrary to former belief, it was not a re- ligious foundation, though very many priests were engaged there as teachers of medicine. Women and even Jews were admitted to these studies. Salerno was destined to cultivate for a long time Greek medical science in undiminished purity, until the twelfth century. Then, as a fall away from the all-powerful Arab influence. One of its oldest physicians was Alphubhanus, later (1058–85) Archbishop of Salerno. With him worked the Lombard Gariopontus (d. 1050), whose “Passionarius” is based upon Hippocrates, Galen, and Celsius Aurelianus. Contemporary with him was the female physician Trotula, who worked also in the literary field, and who is said to have been the wife of the physician Joannes Platearius. Perhaps the best known literary work of this school is the anonymous “Regimen sanitatis Salernitanum”, a didactic poem consisting of 364 stanzas, which has been translated into all modern languages. It is said to have been dedicated to Prince Robert, son of William the Conqueror, and is thus entitled from Salerno in 1101. An important change in the intellectual tendency of the “Civitas Hippocratica”, as this school called itself, was brought about by the physician Constantine of Carthage (Constantinus Africanus), a man learned in the Oriental languages and a teacher of medicine at Salerno, who died in 1037, a monk of Monte Cassino. While hitherto the best works of Greek antiquity had been known only in mediocre Latin translations, Constantine in the solitude of Monte Cassino began to translate from the Arabic Greek authors (e.g. the “Aphorisms” of Hippocrates and the “Ars parva” of Galen), as well as such Arabic writers as were accessible to him (Isak, Ali Abbas). As late as the thirteenth century, the influence of these Arabic texts was felt. To the twelfth century, when Arabian polypharmacy was introduced, belong Nicolaus Prepositus (about 1140), whose “Antidotarium”, a collection of compounded pharmaceutical formulae, became a model for later works of this kind, and Matthias Platearius, chap- tery on the above-named “Antidotarium” (Glosses) and a work about simple drugs (Circum instans). Similar productions appeared from the hand of an otherwise unknown Magister Salernitanus. Maurus, following Arabian sources, wrote on uroscopy. Here must be also mentioned Petrus Musandinus (De cibis et medicinis) and Simon of Montpellier, who worked on the theory of the blood. Conversus of Corbeil (Egidius Corbélianus), who later became a canon and the physician-in-ordinary to Philip Augustus of France (1180–1223), and who even at this day began to complain about the decay of the school.

Its first misfortune dates from the death of King Roger III (1193), when the army of King Henry VI conquered the three republics. Then the University of Naples by Frederick II in 1224, the preponder- ance of Arabian influence, and the rise of the Mont- pellier school, all exerted so unfavourable an influence that by the fourteenth century Salerno was well-nigh forgotten. Salerno is the oldest school having a curriculum prescribed by the state. In 1140, King Roger II ordered a state examination for the first time. The University of Salerno was before this, and Frederick II in 1240 prescribed five years of study besides a year of practical experience. When we consider the proximitry of Northern Africa, that the neighboring Sicily had been under Saracenic rule from the ninth to the eleventh century, and that the Norman kings, and to a far greater degree Frederick II, gave powerful protection to Arabian art and science, it seems wonderful that this oasis of Greco-Roman culture endured so long. Down to the twelfth century this school was ruled by a purely Hippocratic spirit, especially in practical medicine, by its diagnosis and by the treatment of acute diseases dietetically. Arabian influence makes itself felt first in all in therapeutics, a fact which it is explained by the fact that in the eleventh and twelfth century the Arabian drug-dealers used to land. Local condi- tions (resulting from the Crusades) explain how sur- gery, especially the treatment of wounds received in war, was diligently cultivated. In Rogerius we find a Salernitan surgeon armed with independent experi- ence, but showing, nevertheless, reminiscences of Abulhusain. His “Practica Chirurgica” dates from the year 1180. Although Salerno finally succumbed to Arabian influences, this school did not hand down to us a knowledge of the best Arabic authors.

Spain as the Transmitter of Arabian Medicine.—Its focus was the city of Toledo, which was taken by the Moors in 1085, and which fell to the Christians under Alphonse VII. Here Archbishop Ramund (1130–50) founded an institution for translations, in which Jewish schol- ars were the chief workers. Here lived Gerard of Cremona (1114–87), properly Carmona, near Seville, the translator of Rhazes and Avicenna. A later trans- lator of Rhazes (about 1279) was the Jew Farsad ben Salem (Faragius), who was educated at Salerno.

The Scholastic Period.—When in the twelfth and thirteenth centuries all the Aristotelian works gradually became known, one of the results was the development of scholasticism, that logically arranged systematic treatment and explanation of rational truths based upon the Aristotelian speculative method. Even though this tendency led to the growth of many experiences in medicine and confirmed the predomin- ance of Galen’s system, also largely based upon specula- tion, it is wrong to hold Scholasticism responsible for the mistakes which its disciples made in consequence of their faulty apprehension of the system, because scholasticism, far from excluding the observation of nature, directly promotes it. In the thirteenth century it is the fact that the most important scholastic of the thirteenth century, Albertus Magnus, was likewise the most important physicist of his time. He thus imi- tated his model, Aristotle, in both directions. The
famous scholastic Roger Bacon (1214–94), an English Franciscan, lays chief stress in his theory of cognition upon experience as far as the natural sciences are concerned, with even greater emphasis than Albertus Magnus.

Albertus Magnus (Albert Count of Bollstädt, 1193–1280) was a Dominican. For medical science his works are about animals, plants, and minerals alone concern us. Formerly a work called “De secretis nullius” was wrongly attributed to him. Albertus’s most eminent service to medicine was in pointing out the way to an independent observation of nature. The following books were to a certain degree based upon the writings of Albertus: the encyclopedic works on natural history of the Franciscan Bartholomaeus Anglicus (about 1260), of Thomas of Cantimpré (1204–80), canon of Cambral, of Vincent of Beauvais (d. 1264), the “Bonum Naturae” by Kunrad von Menenberg (1307–74), canon of Ratisbon, and the natural history of Meinau composed towards the end of the thirteenth century at the Monastery of Meinau on the Lake of Constance. In the medical schools the influence of scholasticism made itself felt, but this influence was always far greater than that of the scholastic physician, the philosopher at the bedside, with his copious works of needy contents, with his endless game of question and answer, must not, however, be misjudged; he preserved interest in the observation of nature, which is as freely conceded, a skilful practitioner, although he laid excessive stress upon formalism, and medicine in his hands made no special progress.

Bologna was the principal home of scholastic medicine, and, as early as the twelfth century, a medical school existed there. The most famous physician there was Thaddeus Alderotti (Th. Florentinus, 1215–95), who even at that time gave practical clinical instruction and enjoyed great fame. Among his pupils were the four Varignana, Dino and Tommaso di Garbo, and Pietro Torrijano Rustichelli—later a Chartusian monk—all well-known exponents of the writings of Galen. Indirect disciples were Pietro di Tusigiana (d. 1410), who first described the baths at Bormio, and Bavarius de Bavariis (d. about 1480), who in 1426 was the first Pope Nicholas V.

Bologna and the Study of Anatomy.—Bologna has gained incomparable glory from the fact that Mondino de Liucei (about 1275–1326), the reviver of anatomy, taught there. Then, for the first time since the Alexandrian period (nearly 1500 years), he dissected a human corpse, and wrote a treatise on anatomy based upon his own observations, which, for nearly two and a half centuries, remained the official textbook of the universities. Although Mondino’s work, which appeared in 1316, contains many defects and errors, it nevertheless marked an advance and incited men to further investigation.

Padua, the famous rival of Bologna, received a university in 1222 from Frederick II. Just as the University of Leipzig originated in consequence of the migration of students and professors from the University of Prague in 1409, so Padua came into existence through a secession from Bologna. Bologna was soon surpassed by the daughter institution, and, from the foundation of the University of Vienna in 1365 until the middle of the eighteenth century, Padua remained a shining model for the medical school of Bologna. The first teacher of pharmacy was Pietro d’Abano (Petrus Aponensis, 1250—about 1320), known as the “great Lombard”—an honorary title received during his residence at the University of Paris. On account of his too liberalistic opinions and his derision of Christian teaching in his “Conciliorum Index,” in his chief medical work, he was accused of being a heretic. From this period also date the “Aggregator Brixiansis” of Guglielmus Corvi (1250–1326), a work in even greater demand in later times, and the “Consilia” of Gentile da Foligno (d. 1348), who, in 1341, performed the first anatomical dissection in Padua. The fame of the school of Padua was greatly advanced by the family of physicians, the Santa Sophia, which about 1292 emigrated from Constantinople, and whose most famous members were Marsilio (d. 1405) and Galeazzo (d. 1427). The latter, one of the first teachers in Vienna (about 1398–1407), and later professor at Padua, wrote in Vienna a pharmacopoeia which indicates absolutely independent observation; in the field of botany, his antithesis and contemporary was Giacomo dalla Torre of Forli (Jacobus Foroliviiensis, d. 1413), professor at Padua, known for his commentary on the “Ars parva” of Galen. Giacomo de Dondi (1298–1359), author of the “Aggregator Brixiansis,” tried to dig a salt from the thermal waters of Abano, near Padua. As anatomist and practitioner we must mention Bartholomaeus de Montagnana (d. 1460), and the grandfather of the unfortunate Savonarola, Giovanni Battista de’ Montefeltro (1390–1462), author of the “Practica Major,” who worked along the same lines.

Montpellier.—The earliest information about the medical school of this place dates from the twelfth century. Like Salerno, Montpellier developed great independence as far as the other schools were concerned, and laid the greatest stress upon practical medicine. With the decay of Salerno, Montpellier gained in importance. The chief representative of this school is the Spirid, Arnold de Villeneuve (about 1135–1235), about 1312). His greatest merit is that, inclining more towards the Hippocratic school, he did not follow unconditionally the teachings of Galen and Avicenna, but relied upon his own observation and experience, while employing in therapeutics a more dietetic treatment as opposed to Arabian tenets. To him we are indebted for the systematic use of hemorrhage, and for his great merit is his popularizing of alchemy, to the study of which he was very much devoted. Other Montpellier representatives of purely practical medicine are Bernard of Gordon (d. 1314; “Lilium medicinae”, 1305), a Scotchman educated in Salerno; Gerardus de Solo (about 1320; “Introductorium juvenum”); Johannes de Salerno (d. 1328); and the fourteenth century; “Clarificatorium juvenum”; and the Portuguese Valerius de Taranta (“Philonium pharmaceuticum et chirurgicum”, 1418). The medical school of Paris, founded in 1180, remained far behind Montpellier in regard to the practice of medicine.

Surgery in the Age of Scholasticism.—Surgery exhibited during this period in many respects a more independent development than practical medicine, especially in Bologna. The founder of the school there was Hugo Borgognoni of Lucca (d. about 1258). A more important figure was his son Teoforico, chaplain, penitentiary, and physician-in-ordinary to Pope Innocent IV, later Bishop of Cervia. In his “Surgery”, completed in 1266, he narrates the results of the treatment of wounds, fractures, and dislocations. Guilielmo Saliscito from Piacenza (Guil. Placentinus), first of Bologna, then at Verona, where he
completed his surgery in 1275, shows great individuality and a keen diagnostic eye. Similarly his pupil Lanfranchi strongly recommended the reunion of surgery and internal medicine. Lanfranchi, banished in 1250 from his native city, Milan, transplanted Italian surgery to Paris. There the surgery and physicians of the faculty, had, since 1260, been formed into a corporation, the Collège de St. Cosme (since 1713 Académie de Chirurgie), to which Lanfranchi was admitted. His “Chirurgia magna” (Ars completa), finished in 1296, is full of casuistic notes and shows the author as an equally careful and lucky operator. The first important French surgeon is Henri de Mondeville (1260-1320), originally a teacher of anatomy at Montpellier, whose treatise, although for the most part a compilation, does not lack originality and perspicuity. The culminating point in French surgery at this period is marked by the appearance of Guy de Chauliac (Chauliac, d. about 1370). He completed his studies at Bologna, Montpellier, and Paris; later he entered the ecclesiastical state (canon of Reims, 1358), and was physician-in-ordinary to popes Clement VI, Innocent VI, and Urban V. From him we have a description of the terrible plague which he witnessed in 1348 at Avignon. His “Chirurgia magna” treated the subject with a completeness never previously attained, and the author, in spite of his high rank of a first-class authority. Among contemporary surgeons in other civilised countries we must mention John Arderne (d. about 1399), an Englishman, who studied at Montpellier and lived subsequently in London, famous for his skill in operating for anal fistulae, and Jehan Ypman of the Netherlands (d. about 1420) who lived in Paris. Besides these, there were a number of itinerant practitioners who offered their services as experts, as specializing usually in certain operations, for their fees could not be compared with the salaries of physicians. The latter’s “Canon,” written in clear language and covering the entire field of medicine, became the gospel of physicians. The literature of these times is rich in writings but very poor in thought; for people were content when the long-winded commentaries gave them a better understanding of the texts, which they deemed infallible. A good many things were incomprehensible, first of all the names of diseases and drugs, which translators rendered incorrectly. A comparative investigation of the Greek authors was practically impossible, as both their works and a knowledge of the Greek language had disappeared from among the Romance nations. Thus it was quite natural, and be written which were learned foreign words and their meanings. The “Synonyma Medicinae” (Clavis sanationis) by the physician Simon of Genoa (Januensis, 1270-1303) and the “Pandectae medicinae” of Matthaeus Sylvaticus (d. 1342), both of which were alphabetically arranged, were much in vogue. Woe to the physicians who dared doubt the authority of the texts! Only men of strong mind could successfully carry out such a dangerous undertaking. The influence of scholasticism in medicine was manifold. It encouraged the observation of nature at the bedside and logical thinking, but it also stimulated the love of disputation, wherein the main object was to force a possibly independent view of the underlying logic of the ruling system, and thus avoid all imputation of medical heresy. Signs of improvement are first noticed in anatomy (Mondino) and subsequently in surgery, which is based upon it.

The impulse to follow a new path came, however, from without, first of all from a study of the Greek language, and, like the physicians of the faculty, had, since 1260, been formed into a corporation, the Collège de St. Cosme (since 1713 Académie de Chirurgie), to which Lanfranchi was admitted. His “Chirurgia magna” (Ars completa), finished in 1296, is full of casuistic notes and shows the author as an equally careful and lucky operator. The first important French surgeon is Henri de Mondeville (1260-1320), originally a teacher of anatomy at Montpellier, whose treatise, although for the most part a compilation, does not lack originality and perspicuity. The culminating point in French surgery at this period is marked by the appearance of Guy de Chauliac (Chauliac, d. about 1370). He completed his studies at Bologna, Montpellier, and Paris; later he entered the ecclesiastical state (canon of Reims, 1358), and was physician-in-ordinary to popes Clement VI, Innocent VI, and Urban V. From him we have a description of the terrible plague which he witnessed in 1348 at Avignon. His “Chirurgia magna” treated the subject with a completeness never previously attained, and the author, in spite of his high rank of a first-class authority. Among contemporary surgeons in other civilised countries we must mention John Arderne (d. about 1399), an Englishman, who studied at Montpellier and lived subsequently in London, famous for his skill in operating for anal fistulae, and Jehan Ypman of the Netherlands (d. about 1420) who lived in Paris. Besides these, there were a number of itinerant practitioners who offered their services as experts; as, specializing usually in certain operations (hernia- and lithotomy), they often possessed great skill, and their advice and assistance were sought by people of the upper classes.

The Black Death of the Fourteenth Century...
Concerning this terrible period we have reports from the jurist of Placentia, Gabriel de Mussia; from Can- tonous and Nicophas about the epidemic in Constantinople; from Boccaccio and Petrarch (Florence), from the physician Dionysius Colla of Belluno (Italy), the Belgian Simon of Covino (Montpellier), Guy de Chaumine (Avignon), and also from some Spanish physicians. Less voluminous accounts are to be found in the chronicles of the different countries. Europe has since been repeatedly visited by the plague, which has, however, never been so violent nor extended so widely. The last great epidemics occurred in Central Europe in 1679 and 1713.

**HUMANISM AND MEDICAL SCIENCE IN THE FIFTEENTH AND SIXTEENTH CENTURIES.**—The terror of the Plague, and the infection which it brought with it, showed the powerlessness of current medicine, undoubtedly helped to effect a gradual change. The greatest influence, however, was exerted by the humanistic tendency which had found many adherents, especially among physicians. The desire after general cultivation in the natural sciences was substantially promoted by the great voyages of discovery made towards the end of the fifteenth century. It is worthy of mention that, at a time when the gifted Christopher Columbus was still ridiculed as a dreamer by the learned, the Florentine astronomer and physician Vespucci and the house-physician of the Franciscan monastery of Santa Maria de Tabala, Garcia Fernandes, both heartily encouraged him and gave him material aid. The scientific endeavours for the reform of medicine are characterised by the activity of the translators, by the critical treatment and explanation of old authors, and by independent investigation especially in the field of botany. Concerning translations, those which had reference to the Hippocratic writings were of prime importance. Among the translators and commentators of these works we find Nicola Leoncino of Vicenza (1428-1524), the Spaniard Franciscus Valesius (end of the sixteenth century), the Frenchman Jacques Houiller (Holleri, 1498-1562), Johann Hagenbus of Saxony (Cornarz, 1550-58), the two Paris professors, Jean de Gorris Gomme and Pierre Ruzzenyi (1527-30), and Anthius Fossius (1528-9), a physician of Meta. As investigators of Pline there are Ermolaio Barbaro (1454-93), later Patriarch of Aquileia, and Filippo Veroaldo (1453-1505). Students of other authors were Giovanni Manardo of Ferrara (1482-1536; Galen, 1555), Achilleus (1463-1512) and Jacopo Berengario da Carpi (about 1470-1530). Anatomy made special progress because of the artists. Thus Raphael Sanzio (1488-1520) already makes use of the human skeleton when making his sketches, so as to give his figures the proper posture. We possess numerous anatomical dissections and sketches by Leonardo da Vinci (1452-1519); they were intended partly for an anatomy planned by Marcantonio della Torre (Turrianaus, 1473-1506), and partly for a work of his own. The great Michelangelo (1475-1564) left sketches of the muscles, and in 1495, in the monastery of Santo Spirito at Florence, made studies for a picture of the Crucified with cadavers as models.—As a sign of how much the physicians endeavoured to advance the study of anatomy, we may recall that the priest Gabriel de Zerbi for a time taught anatomy in Rome (towards the end of the fifteen century), that Paul III (1534-49) appointed the surgeon Alfonso Ferri to teach this subject at the Sapienza in 1535, that the physician-in-ordinary of Julius III (1550-57) Giovanni Battista Chimenti disposed of his anatomical studies by discovering the valves in the veins; that Paul IV (1555-9) called to Rome the famous Readol Colombo, the teacher of Michelangelo, and that Colombo's sons dedicated their father's work, "De re anatomica," to Pope Pius IV (1559-65). Foremost among the universities stood Padua, the stronghold of medical science, and the light which disclosed the weaknesses of Galen's system. In Padua, where Bartolomeo Montagna (d. 1460) performed no less than fourteen dissections, there existed since 1446 an anatomical theatre which...
in 1490 was rebuilt under Alessandro Benedetti (1460–1525). Of the anatomists who worked outside of Italy we may mention Guido Guidi (Vidius Vidius) of Florence (d. 1569), until 1531 professor at Paris; his successor François Jacques Dubois (Sylvius, d. 1551), and Günther von Andernach (1457–1574), professor at Louvain. The two latter were the teachers of the great form of anatomy. The perfection of Vesalius (v. v.), studied at Louvain, Montpellier, and Paris, and then became imperial field-surgeon. His eagerness to learn went so far that he stole corpses from the gallows to work on at night in his room. He soon became convinced of the weakness and falsity of the anatomy of Galen. His anatomical demonstrations on the human body, however, which he performed at public squares and cities which attracted attention, soon earned him a call to Padua where he had recently graduated and where, with some interruptions, he taught from 1539 to 1546. His chief work, "De corporis humani fabrical libri vii," which appeared at Basle in 1543, brought him great fame, but likewise aroused violent hostility, especially on the part of his former teacher, Sylvius. The supreme service of Vesalius is that he for the first time, with information derived from the direct study of the dead body, attacked with keen criticism the hitherto unassailable Galen, and thus brought out his overthrow, for soon after this serious weaknesses in other parts of Galen's medical science were also dis covered and firmly attacked by the founders of the anatomy and of the technique of modern dissection. Unfortunately, he himself destroyed a part of his manuscripts on learning that his enemies intended to submit his work to ecclesiastical censure. While engaged on a pilgrimage, he received word in Jerusalem of his re appointment as professor in Padua, but he was ship wrecked in Zant and died there in great need on 15 October, 1565.

The authority of Galen was, however, still so deep rooted among physicians that Vesalius found opponents even among his own more intimate pupils. Nevertheless, the path which he had pointed out was further explored and anatomy enriched by new discoveries. His immediate successors as teacher in Padua were, in 1546, Realdo Colombo (d. 1569), later professor in Rome, the discoverer of the lesser circulation of the blood (pulmonary circulation), d. 1569; from 1551 the versatile Gabriele Fallopio (1523–62), an admirer of Vesalius, who among other things described the organ of Fallopio, Fallopian tube; Franciscus Fabricius (Fabrizio, Fabrizio) Aquapendente (Fabrizio, Aquapendente, 1537–1619), who worked in the field of embryology and studied carefully the valves in the veins, and finally Giulio Casserio (1561–1619), who published a series of anatomical charts. A similar undertaking was planned by Bartolommeo Eustachi at the Sapienza in Rome, but he died before the completion of his work in 1574. Pope Clement XVI (1700–21) caused his physician-in-ordinary, Giovanni Maria Lancisi, to print the rediscovered copperplates and to supply them with an explanatory text. Adrian van den Spieghel of Brussels (Spiegellus, 1578–1625) worked on the anatomy of the liver and of the nervous system. In comparison with the excellent productions of Italy, the anatomy in Germanic countries appears slight. It was considered sufficient at the universities, if a surgeon now and then dissected a corpse, while a physician explained the functions of the different organs. The only lawful exceptions were two physicians who rendered services both to anatomy and botany—Felix Platter (1530–1607), at Basle, and Johann Bauhinus (1560–1624), the discoverer of the valve in the cecum named after him (Bauhin's valve).

The Opponents of Galen and the Arabs.—Violent attacks upon ancient medicine, but also found expression in the general upheaval and discovery of new countries, caused by Humanists, by the opening up of new sources of knowledge, by the dissemination of education through the invention of printing, and by the schism of the Church brought about by Luther. Authority, both ecclesiastical and civil, had been considerably weakened. The investigations of Vesalius probably dealt the most serious blow to the teaching of Galen, but it was neither the first nor the only one; nor had it been before Vesalius had attacked the theories of Galen and the Arabs, although not quite so energetically as the anatomists attacked them. The chief representatives of these times down to the end of the sixteenth century can be classed respectively into anti-Galenists or anti-Arabists and positive Hippocrates. The climax of this revolution was reached when the appearance of the Frenchman, André Vésale, Menestrier, and his adherents, although the Italian schools remained uninfluenced by this. The physician and philosopher, Geronimo Cardano of Milan (1501–76), attacked principally Galen's explanation of the origin of catarrhs of the brain, and also the validity of the therapeutical principle, Contraria contraria curant. Simler was the tendency shown by Bernardino Telesio of Piacenza (1508–88), Giovanni Argenterio of Piedmont (1513–72), and the chancellor of Montpellier, Laurent Joubert (1529–83), while Jean Fernel (1485–1558), made an attempt to modernise the system of Galen in accordance with the results of anatomical investigation. A lively exchange of opinions on the controversies on bleeding, which was begun by the Paris physician Pierre Brissot (1478–1522). Brissot assailed the Arabian doctrine that inflammatory diseases, especially pleurisy, should be treated by bleeding on the side opposite to the seat of inflammation, and favored the Hippocratic doctrine of bleeding as near as possible to it. The controversy was decided in favor of the Hippocrates, who did not discard the doctrines of Galen as long as they agreed with Hippocritean views, but rejected the principles of Galen as modified by the Arabs. This is clearly shown by the importance attached to the state of the pulse and of the urine, upon which the Arabs laid much more stress than the Greeks. Of the great number of positive Hippocrates let us call attention to the above-mentioned de Monte, who introduced clinical instruction in Padua; to his successors Vellore Trincavella (1496–1568), Albertino Bottini (d. about 1596), Marco degli Oddi (d. 1598), Giovanni Manardo (1492–1539), Prospero Alpini (1491–1554), Giovanni Casola (1510–about 1580), and Luis Mercado (1520–1606); to the Frenchman Guillaume Bailleau (Ballonius, 1538–1616); to the Netherlands, Peter Foreest (1522–97) and Jan van Heurme (1543–1601), who will be mentioned subsequently; Franz Emerich (1496–1560), the organizer of clinical instruction at Vienna; Johann Straut of Graz, and the Viennese physician and Johann Schenez von Graftenberg (1530–98). Epidemiological works were written by Antonio Brassavola (1500–55) on syphilis; Girolamo Fracastoro (1483–1553) on peste chial fever and syphilis; Girolamo Donzelli (d. 1558), and Alessandro Massaria (1510–98) on plague; Jan van den Kasteele (about 1529) on the English sweating sickness; and Thomas Jordanus (1540–55), on purple of peste chial fever.

Theophratus Paracelsus. His Adherents and Opponents.—Theophratus Bombast of Hohenheim (Paracelsus), the son of a physician, was born near Einsiedeln, Switzerland, in 1493. In 1506 he went to the University of Basle; from Trithemius he learned alchemy, and from his father, chemistry; and he became a member of the religious houses at Schwaz (Tyrol), and he visited the principal universities of Italy and France. In 1526 he became town physician of Basle, and could as such give lectures. His first appearance is characteristic of him. He publicly burned the works of Avicenna and Galen and showed respect only to the "Aphorisms of Hippocrates. He was the first to give lectures in the Ger-
MAN LANGUAGE. But, as early as 1528, he was compelled, on account of the hostility he evoked, to leave Seville. After spending some years in Italy, he travelled through various countries working constantly at his numerous writings, until death overtook him at Salzburg in 1514. Paracelsus, like a blazing meteor, rose and disappeared; he shared the fate of those who have a violent desire to destroy the old without having any substitute to offer. Passing over his philosophic views, which were based upon Platonic and Pythagorean precepts, we find in his writings, among other things, a theory of the causes of disease (etiology), the introduction of chemical therapeutics, and his insistence on the uselessness of mineral waters and native vegetable drugs. He exaggerates indeed the value of experience. His classification and diagnosis of diseases was clear and accurate, and he passed on to the future the vital principles of physiology being wholly neglected. He thought that for each disease there should exist a specific remedy, and that to discover this is the chief object of medical art. With him diagnosis hung upon the success of this or that remedy, and because of this he aimed the diseases according to their specific remedies. He repudiated the idea of nature; the remedies were given to him by the Italians, and he also found numerous friends among the traveling physicians and surgeons. His settings met with the most hostile reception from the Paris faculty. Although the further progress of anatomy and physiology indicated clearly to physicians the right path, we meet them in the eighteen and nineteenth centuries with the attention they had to start directly from Paracelsus: Samuel Friedrich Hahnemann (1755–843), the originator of homoeopathy, and Johann Gottfried Rademacher (1772–1850), advocate of empiricism.

SURGERY IN THE SIXTEENTH CENTURY: AMBROISE PARÉ. The first fruits of the progress in anatomy were enjoyed by surgery, especially since most Italian anatomists were practical surgeons. After the introduction of fire-arms in war, the treatment of gunshot wounds was especially studied. While surgery had always enjoyed a high rank in Italy and France, in the sixteenth century it became important, especially in Austria and Germany. The first surgeons were well known; the first was Ambroise Paré (1510–90), the Frenchman who is known for his surgical skills and his teachings. He was the first to employ the ligature in the case of arterial hemorrhage. Next to him in importance stands Pierre Fracé (1580), known as the perfecter of the operation of amputation of the limbs. His method was used by the army of the Turks in the battle of Lepanto (1571) to improve the ancient plastic operations. In the sixteenth century the Cesarean operation (section cesareae, laparotomy) was performed on living persons.

DISCOVERY OF THE CIRCULATION OF THE BLOOD: WILLIAM HARVEY AND HIS TIME. Galen’s theory, according to which the heart is the seat of heat, and that contained air, the blood being generated in the liver, had long been regarded as improbable, but in spite of every effort no one had as yet discovered the truth about circulation. The solution of this problem, which brought about a complete fall of Galen’s system and a revolution in physiology, came from the English physician William Harvey (1578–1657), a pupil of Fabricius ab Aquapendente. Harvey’s discovery published in 1628, that the heart is the centre of the circulation of the blood and that all blood must return to the heart, at first received scant notice; but even directly opposed by Galen’s adherents; but further investigation soon made truth victorious. Harvey found the duct thoracicus and its opening into the circulation by Jean Pacquet (1622–74) and Johann van Horne (1621–70), and of the lymphatic vessels by Olaus Rudbeck (1650–1702) and Carolus Bartolinus (1616–80).

A new field of investigation was opened by the invention of the microscope, by which Marcello Malpighi (1628–94) discovered the smaller blood-vessels and the blood corpuscles. From Harvey’s time starts a series of the most important physiologists and physiologists, among them the Englishmen Thomas Wharton (1614–73; glands) and Thomas Willis (1621–75; brain); the Dutchers Peter Faas (1564–1617), his pupil Niels Petersen Tulp (1593–1675), both teachers of anatomy at Leiden; and Antony van Leeuwenhoek (1632–1723) and Johann Swammerdam (1647–80), microscopists; Reiner de Graaf (1641–73; ovary); Nikolaus Steno of Copenhagen (1638–86), and the Germans, Moriz Hofmann (1621–98) and George Wirsung, who investigated the pancreas.

IATROPHYSICISTS AND IATROCHEMISTS. The doctrine of the circulation is based on a large extent on the laws of physics. Consequently among a number of physicians, influenced by the works of Alfonso Borelli (1632–79) on animal motion, there was a marked effort to explain all physical processes according to the laws of physics (iatrophysicists). Opposed to them was a party, which, influenced by the progress in chemistry, sought to make use of it for explaining medical facts (iatrochemists). This tendency goes back to Paracelsus and his adherent Johann Baptist von Helmont (1578–1644). Helmont, who was an important chemist (the discoverer of carbonic acid), recognized the importance of anatomy, and desert for his work in therapeutics, although his failure to acquire the needs of his time prevented his doctrine from influencing the development of medicine. Iatrophysics was cultivated mainly in Italy and England; iatrochemistry in the Netherlands and Germany. The chief adherent of iatrochemistry in Italy was Giorgio Baglivi (d. 1707), professor at the Sapienza in Rome; in practical medicine, however, he held mainly to Hippocratic principles, while the Englishman, Archibald Pitcairn (1652–1713), tried to follow iatrochemistry to its utmost consequences.

Owing to the greater progress made in physics, iatrochemistry has now come to stay, and it is the service of the chief representative Frans de le Boë Sylvius (1614–72), who in 1658 became professor of practical medicine at Leyden. At the school there, founded in 1575, Jan van Heurne had
already tried to establish a clinic after the Paduan model, but it was not till 1637 that his son Otto was able to carry out his scheme. The immediate successors of the latter, Albert Kyper (d. 1658), and Ewald Schrevelius (1576–1646), continued this institution in the Hippocratic spirit. Before Sylvius began to teach there, the Leyden clinic had already gained a wide influence all over Europe. Of the first assistants of Harvey, Sylvius, depending in part on Paracelsus and Helmont, sought to explain physiological processes by suggesting fermentation (molecular motion of matter) and "vital spirits" as moving forces. Through "effervescence" acid and alkaline juices are formed, and through their abnormal mixture hyper- or hypochlorous (alcoholic fevers) are produced.

This simple doctrine, supported by the clinical activity of Sylvius, found numerous adherents especially in Germany; but it made just as many opponents among the iatrophysics, who were able to refute in part these untenable hypotheses. The two theories are, however, not absolutely opposed to each other, for both physics and chemistry offer the means necessary for an explanation of physiological processes, and may form the basis for the construction of an exact medical science. At this time, however, physics and chemistry (especially the latter) were still too little developed for this purpose, and therefore the endeavour to create a system was much more apparent than real.

Sylvius and his followers (such as Johann Baptista Borsieri (Burserius de Califeld, 1725–85), professor at Pavia; James Keill (1673–1718); Richard Mead (1673–1754); John Freind (1675–1728, smallpox); John Pringle (1707–82) and John Huxham (1694–1768), investigators in epidemiology; John Fothergill (1712–80); diaphoresis and inflammation of the lungs; or it might be learned by an important school in Göttingen as van Swieten had done in Vienna. The first members of the Göttingen school were: Paul Gottlieb Werholf (1699–1767; intermittent fever) and Johann Georg Zimmermann (1728–95).

ANATOMY IN THE EIGHTEENTH CENTURY.—During this period normal and pathological anatomy were more cultivated than microscopy. The greater number of investigators that we have to consider won fame in the field of surgery. Starting from the school of Leyden the following anatomists deserve mention: Govert Bidloo (1649–1713) and Bernhard Sigmund Albinus (1697–1770; anatomicalcharts); in Amsterdam the brothers Van Swieten (1729–33, larynx mucoses); and in London the temporary professor of anatomy at Oxford, John Hunter (1723–83) both known also as surgeons; finally in Germany, the anatomist, surgeon, and botanist, Lorenz Heister (1653–1738), Johann Friedrich Meckel (1724–74; nerves); Johann Gottfried Zinn (1727–59; eye); Johann Nathanael Lieberkühn (1701–85; intestine); Heinrich August Reissberg (1739–1806; larynx), and Samuel Thomas Sömmering (1755–1830). Abnormal anatomical changes in organs had been recorded since the time of Vesalius, but these were for the most part merely incidental observations, and nobody had tried to trace systematically the connexion between them and the diseases. Only in the last thirty years has the survey of the achievements of the earlier centuries is offered in Theophil Bonet's "Sepulchretum anatomici" (1709). As the scientific founder of pathological anatomy we must mention Giovanni Battista Morgagni (1682–1771), professor at Padua, whose famous work, "De sedibus et causis morborum" (1761), usually contains, besides the results of post-mortem examinations, a corresponding history of the disease. This field was cultivated in France especially by Joseph Lieutaud (1703–80) and Viec d'Asy (1748–94), and in Leyden by Eduard Sandfort (1742–1814). Germany had an important investigator in the days before Morgagni, viz., Johann Jakob Wefer in Schaffhausen (1630–80). In Vienna, autopsies on patients who died in the clinic were first regularly made by Anton de Haen. For a strictly systematic treatment of the whole field we are indebted to the London physician, Matthew Baillie (1761–1823), who published the first pictorial work on pathological anatomy.

SURGERY IN THE EIGHTEENTH AND EIGHTEENTH CENTURIES.—Surgical attempts of the seventeenth century are: Cesare Magatti (1579–about 1648), professor in Ferrara and later a Capuchin monk, who simplified the treatment of wounds; Marc' Aurelio Severino (1580–1658; treatment of abscesses, resection of ribs); the already mentioned anatomist, Fabrizio ab Aquapendente (re-introduction of tracheotomy,
improvement of herniotomy; Antonio Ciucci (about 1650; re-introduction of lithotripsy); in France, Bartholomeu Savidr (1650-1702; digital compression of arteries), Jacques Beaulieu (1651-1714), a traveling surgeon and later a hermit (Frère Jacques), who improved the method of lateral lithotomy, and helped people for a “God-bless-you”; in Amsterdam, Abraham Cyprianus (about 1695; lithotomy). The most important German surgeon was Wilhelm Fabry of Hilden (Fabricius Hildanus, 1580-1634; simplified treatment of wounds, amputation); next to him Johann Schultes (Schultetus, 1595-1646), author of “Arma mentarium chirurgicum”, and Matthias Gottfried Purmann (1648-1721; field surgery). Of English surgeons Richard Wiseman, (about 1652; amputation, compression of aneurisms), John Woodall (about 1613), and Lowdham (about 1679) are the most eminent.

In the eighteenth century surgery was essentially stimulated by the numerous wars; in France also through the establishment of an academy in 1731 by Georges Maréchal (1658-1736) and François Gigot de la Peyronie (1678-1747). Of Frenchmen we must also name Jean Louis Petit (1644-1750), the inventor of the screw tourniquet, Henri François le Dran (1685-1770; lithotomy, lacerations of scalp), Pierre Joseph Boucher (1715-93; amputation); Toyssaint Bordenave (1728-82; amputation), Antoine Louis (1723-92; operation for abscess, lithotomy, simplification of instruments), Pierre Joseph Desault (1744-93, founder of the Paris surgical clinic, ligature of vessels, treatment of aneurism, dislocations, fractures), François Chastard (1740-93; amputation), and finally the monk and lithotomist Frère Côme (Jean de St. Cosme, Baseliae, 1703-81), the inventor of the lithotome-caché. The founder of modern English surgery is William Cheselden (1688-1752; lateral lithotomy); Samuel Sharp (about 1700-78) wrote a text-book; William Bromfield (1712-92), invented an artery-retractor and the double gorgeret; and Percival Pott (1713-88) established the doctrine of arthroacae (malum poti). The most eminent and versatile surgeon is the already-mentioned John Hunter (treatment of aneurism, theory of the syphilitic ulcer, operation for gout). Surgery was on a much lower plane in the German-Italian. For the better training of the Prussian military surgeons and on the proposal of Surgeon-General Ernst Konrad Holtzendorff (1688-1751), there was founded in Berlin a Collegius medico-chirurgicum in 1714; later in 1726 the Charité school, and in 1795 the Prussian medical academy. Surgeons made great progress through Johann Zacharias Platner (1694-1747) at Leipzig; Johann Ulrich Bilguer (1720-96) and Christian Ludwig Murssina (1744-1833) at Berlin; Karl Kaspar Siebold (1736-1807) at Würzburg, and especially through August Gottlob Richter (1742-1812) at Göttingen (surgical library). A school for military surgeons was founded at Vienna in 1775 at the suggestion of Anton Störek (1731-1803); ten years later which was established the Josephinum academy, under the direction of the army Surgeon-in-chief Johann Alexander von Brambilla (1728-1800).

Study of Physiology: Albrecht von Haller and His Time. - The great discoveries in the field of gross and minute (microscopic) anatomy naturally impelled the surgeons to investigate the-resistances of the tissues, but the results of the efforts of both histrophysicists and interochemists were far from satisfactory, since scientific aid was sadly lacking. Physiology for the first time received systematic treatment at the hands of the versatile scholar, Albrecht von Haller of Bern (1708-77), professor in Göttingen, from 1737 to 1777. Haller, a pupil of Albinus and Boerhave, was the first to recognize the importance of experiments on animals. We are indebted to him for the best description of the vascular system and for studies in hemodynamics, in which field, however, the English clergyman, Stephen Hales (d. 1761), had already broken the soil. He correctly guessed the mechanism of respiration without being able to investigate its physiological importance (exchange of gases), since Joseph Priestley did not discover oxygen until 1774. He disproved the view that there was air between the lungs and the pleura by a simple experiment on animals. Haller became best known through the discovery of irritability and sensibility. When external stimuli are applied to tissues, especially muscles, the latter react either by contracting and moving (irritability), or by experiencing a sensation or sense of pain (sensibility), or at times by both. Sensibility disappears when the corresponding nerve is cut, while irritability persists indepen dent of the nerves and even continues some time after death. This theory met with great opposition, especially among the practical physicians (Anton de Haen), who did not, however, take the trouble to re-echo the experiments on animals. Even though Haller knew neither the central cause of the two phenomena, nor the correct structure of the tissues, he nevertheless stands to his eternal credit that he was the first to point out the facts and open up new roads for physiology. Haller's investigations were generously welcomed, especially in Italy by Abbate Lazzaro Spallanzani (1729-99), the first scientific opponent of spontaneous generation. His experiments along the lines of artificial fertilization of frogs' eggs, and concerning digestion are famous. Felice Fontana (1730-1805), repeating the experiments concerning irritability, reached the same results as Haller. William Henson (1729-74) studied the qualities of the blood (coagulation). The most important German physiologist after Haller is Kaspar Friedrich Wolff (1735-94), known for his investigations in the field of evolution and for pointing out the fact that both animals and plants are composed of the same elements, which he called little "bubbles" or "globules". Joseph Priestley's discovery of "dephlogisticated air" (1774), as oxygen was then called, was of the highest importance in the development of the theory of respiration, of the process of tissue-decomposition, of formation of the blood, and of metabolic phenomena.

Medical Systems in the Eighteenth Century. - The three great discoveries in the second half of the century (oxygen, galvanism, and irritability), contrary to what one might expect, led scientists astray, and gave rise to systems whose foundations were of a purely hypothetical nature. Especially interesting are the so-called "pathological" theories, which, to the extent with irritability. William Cullen (1712-90), accepting irritability as his starting-point, supposed a "tonus" or fluid inherent in the nerves (Newton's ether), whose stronger or weaker motions produce either a spasm or atony. In addition "weakness" of the brain and "vital power" played a great part in his explanation of diseases. Cullen (about 1735-88), modified this doctrine by explaining that all living creatures possess excitability, located in
the nerves and muscles, which are excited to activity by external and internal influences (stimuli). Diseases occur according to increase or diminution of the stimuli, corresponding to phenomena causing increased excitability (sthenia) and weak stimuli diminish excitation (asthenia). Death is caused either by an increase of excitability with a lack of stimuli, or by exhaustion of excitability from too strong stimuli. Brown's theory was little noticed in England and France, but in Germany it was highly lauded. Theophilus Girmanus (1760–1800) and Christian Gottlob Kratzer (1771–1842) spread its fame. Out of this Brunonianism Johann Andreas Röschaub (1768–1835) developed the so-called theory of excitability which was so energetically opposed by Alexander von Humboldt and Christian Wilhelm Hufeland (1762–1838). Giovanni Razzoli (1792–1837), building also on Brown's theory, developed and exemplified the doctrine of excitability, strong stimuli, namely that there are influences which directly diminish excitement (contra-stimuli) or remove existing stimuli (indirect contra-stimuli); he, therefore, distinguishes two groups of diseases—diathesis of the stimulus and that of the contra-stimulus.

The work of systematizers, the Vitalists, basing their views upon Stahl's doctrine of the soul (Animism) and Haller's irritability, consider vital energy to be the foundation of all organic processes. The chief representatives of Vitalism, a system developed especially in France and later predominant in Germany, are: Théophile Bordeu (1722–70), Paul Jean Baptiste Joseph Jacquelot (1773–1800) and Christian Gottfried Pelletier (1730–1826), Johann Friedrich Blumenbach (1752–1840), and Johann Christian Reil (1759–1813). But, while these physicians adhered to Hippocratic in practice and (e. g. Reil) were eminently active in developing anatomy and physiology, the same may not be said of the three Germans, Mesmer, Hahnemann, and Radehoffer, the last of whom is little known. The doctrine of animal magnetism (Mesmerism), established by Friedrich Anton Mesmer (1734–1815), is connected with Vitalism in so far as Mesmer presupposes a magnetic power to exist in the body, and accordingly tries, at first by means of magnets and later by touching and stroking the body, to effect an interchange of forces, a transfusion or cure. Mesmer, through his manipulations very likely induced real hypnotic sleep in many cases. His doctrine, however, which at first met with a sharp rebuff and was subsequently characterized in many circles as a fraud, was degraded by his immediate followers to somnambulism and clairvoyance, and in later times it became almost entirely discredited. As noted above, it is to-day completely discredited. Starting from the doctrine of nostrums of Paracelsus, he names the diseases according to the effective drug (e. g. nux-vomica strychnia, liver disease), and classifies diseases as universal and organic in accordance with universal and organic drugs. His therapeutic was a purely empirical one, un influenced by pathology or clinical diagnosis.

Some Special Branches of Medicine at the End of the Eighteenth Century.—Obstetrics.—Down to the sixteenth century obstetrics was almost exclusively in the hands of midwives, who were trained for it as for a trade. Only in rare cases was a surgeon called in. But with the advent of the mid eighteenth century and the rise of the practitioner, obstetrics has passed into the hands of quacks. Nevertheless, mesmerism forms a basis for hypnotism, which in 1841 was established by James Braid.

Homeopathy, founded by Samuel Friedrich Christian Hahnemann, seems to have the promise of a long lease of life. Hahnemann regards disease as a disturbance of vital energy. The latter itself has no power to heal, for a cure can take place only when a similar severer disease simultaneously occurs. The best way to produce such a disease is to give highly diluted drugs which are capable of producing a similar set of symptoms. The rest of this "drug-disease" is destroyed by the vital energy, which is possible only when the doses are small. As chief principle, therefore, Hahnemann sets up the doctrine that like cures like. Since he denies the possibility of investigating the nature of disease, and completely disregards pathological anatomy, it is necessary to know all simple drugs which produce a set of symptoms similar to those of the existing disease. With his pupils Hahnemann concerns himself with the task of finding simple drugs, but the result of this gigantic piece of work could not be absolutely objective, since it is based upon the purely subjective feeling of the experimentalists. Never before had a physician built a system upon so many purely arbitrary hypotheses as Hahnemann. Paracelsus also had declared war upon the old medicine, and had attributed little value to anatomical and physiological causes, and which, however, was still in its initial period of development; but, with his reverence for Hippocrates, he nevertheless ranks higher than Hahnemann, who is the representative of empiricism and the desirer of all the positive successes which medicine had previously attained. Hahnemann's most able pupils did not follow their master blindly, but investigated his method, and as that which under the most favourable circumstances it may be, viz., a purely therapeutic method that does not disregard clinical science. To this rational standpoint, together with eclecticism, homoeopathy owes its long life and wide dissemination. One service of physicians of this school is that they studied prescriptions, and appreciatively studied side effects, but nevertheless valuable vegetable drugs. Hahnemann's pupil, Lux, extended homoeopathy to therapeutics, which in modern times celebrated its renaissance in organotherapy. Widely removed from scientific progress was the "empirical medical doctrine of Paracelsus and Goebe;" Goebe Radehoffer (1730–1800), which is to-day completely discredited. Starting from the doctrine of nostrums of Paracelsus, he names the diseases according to the effective drug (e. g. nux-vomica strychnia, liver disease), and classifies diseases as universal and organic in accordance with universal and organic drugs. His therapeutic was a purely empirical one, uninfluenced by pathology or clinical diagnosis.
famous German midwife, published in 1690 a textbook based upon wide experience (Chur-Brandenburgische Hoff-Wehe-Mutter).

In the first half of the seventeenth century Hugh Chamberlen invented the obstetrical forceps, selling it to Dutch physicians about 1688. Jean Palfyn of Ghent (1650–1730) constructed independently a similar instrument (Main de Palfyn), which he submitted to the Paris Academy about 1723. After various improvements by Lorenz Heister, Dussé, and Grégoire, the forceps passed into general practice. The most important accoucheurs of the eighteenth century were: in France, André Levret (1705–1780; inclination of the pelvis, forceps, combined examination), François Irig on de Vaucanson (1737–72; mechanism of delivery), Jean Louis Baudeloque (1746–1810; pelvimetry), opponent of artificial premature delivery and symphysioteomy; in England, Fielding Ould (1710–89; mechanism of delivery, perforation), William Smellie (1697–1763; mechanism of delivery, use of forceps, pelvimetry), William Hunter (1718–93), opponent of the forceps and the Cesarean operation, Thomas Denman (1733–1815), the first to recommend artificial premature delivery, and William Osborn (1732–1805), opponent of symphysioteomy and of the Cesarean section. The well-founded and in former times many accoucheurs entertained concerning the Cesarean operation, led to so-called symphysioteomy (Jean René Siegualt, 1768), which by widening the pelvis would permit delivery of the fetus. This operation, which met with vigorous opposition in England, is now forgotten. The introduction of scientific obstetrics in Germanic countries was comparatively late. Special schools for midwives were instituted, in 1728 at Strasburg (Johann Jakob Fried, 1689–1769), in 1751 at Berlin (Johann Friedrich Meckel, 1724–74) and Göttingen (Johann Georg Röder, d. 1763), and in 1754 at Vienna (Johann Nep. Crantz, 1758; Valentin von Lebmacher, 1797; Raphael Steidele, 1816). While the Parisian midwives belonged to the Collège de S. Charité, the others received no medical training, those in Germany could receive only private instruction. Examination by physicians is mentioned at Ratzeben since 1555 and at Vienna since 1642.

Ophthalmology gained importance much later than obstetrics. In addition to inflammation of the eye and operations on the eyelid, the Hippocratic writings mention amblyopia, nystagmus, and glaucoma. Celsius describes an operation for cataract (sclerocitonyxis). Galen gives us the beginnings of physiological optics. The slight ophthalmological knowledge of the Greeks was borrowed by the Arabs, but their lack of anatomical knowledge prevented all progress. No improvement set in until after the rise of anatomy under Vesalius. Formerly, cataract was almost completely in the hands of travelling physicians (cataract operators), but henceforth surgeons with a fixed abode (e.g. Ambroise Paré, Jacques Guillemeau) began to turn their attention to it. In Germany Georg Bartisch (about 1535–1606), "Court eye specialist" at Dresden, wrote the first monograph on cataract; it was highly valued even in later days. Among other things he mentioned spectacles for cataract, squint, eye-glasses, and, among operations, is the first to describe extirpation of the pupil. The invention of convex spectacles is by some attributed to the Dominican Alexander da Spina (d. 1313), by others to Salvino degli Armati of Florence (d. 1317).

Concave glasses did not appear until the sixteenth century.

The foundations for further progress in ophthalmology were laid by the anatomists and physiologists of the seventeenth century. In the first group let us mention the works of Friedrich Ruysh (choroid), van Leeuwenhoek (lens), Heinrich Meibom (1678–1740; glands of the eyelids), and Stenon (lachrymal apparatus). Investigations of physiologists were of great importance, especially those of the two astronomers, Johann Keplcr (1571–1630) and the Jesuit Christoph Scheiner (1575–1659), concerning accommodation, refraction of light, and the retinal image; René Descartes (1596–1650; comparison of the eye with the camera obscura, accommodation) and Edmond Becquerel (d. 1684; blind spot, choroid); Isaac Newton (1642–1727; dispersion of light and origin of colours).

In the eighteenth century, besides anatomy and physiology, the practical side of ophthalmology was also cultivated. Among anatomists were Winthrop, Petit, Zinn, Demours (cornea and sclerotic); Buzzi and Sömmering (retina); La Hire, J. H. Camper, and Reil (lens). The theory of the sensibility of the retina to light, established by Haller, was further developed by Porterfield and Thomas Young (1773–1829). The latter also described astigmatism and colour-blindness, and the operation to correct accommodation depended upon a change in the shape of the lens. Boerhave was the first to give clinical lectures on ophthalmology. From him we have the exact definition of myopia and presbyopia. Gray cataract (cataracta vetusta) was first operated on by the lens by François Quarré and Remi Lasnier, a view which was corroborated by the anatomist, Werner Rolink (1590–1673). François Pourfour du Petit (1644–1741), Lorenz Heister, and others also worked on cataract. Jacques Daviel (1696–1782) performed the first operation for extraction of a cataract in 1745. Of other practitioners we must mention: Brissieu (theory of glaucoma), William Cheselden (1668–1752; artificial pupil), Baron Wenzel the elder (1780; iridectomy), Charles de St. Yves (ablatio retinae, aesthesia, staphyloma, strabismus, J. G. von Lindau (1729–99), operation to correct oblique vision, cataract). Dominique Anel (catetherism of the lachrymal fistula, 1713), G. E. Stahl, Boerhave, Jonathan Wathen, Lorenz Heister, Johann Zacharias Blatner (1691–1747), and August Gottlob Richter (studies on the lachrymal fistula).

Pharmacuetics, Mineral Waters, Cold Water Cures.—Pharmacy had remained the most backward of all the branches of medicine, for it was longest under the influence of the Arabs. A large part of the drugs came from the Orient to Venice and Flemish harbours. Besides simple drugs there were also a great many compound remedies. But, in the latter class, there was great confusion resulting from many adulterations, and from the fact that not only did individual authors give different compositions for the same remedy, but also under the same name an entirely different preparation was understood by different authors. The most famous panacea, which dated from Roman imperial times and was used as late as the eighteenth century, was the. mixture of numerous ingredients, among them being the flesh of vipers. This composition originally came from the Orient, but was made later at Venice, Augsburg, and Vienna. To get some order into the treasury of drugs and to enable apothecaries to compound their remedies, the college of physicians in Florence...
published a pharmacopoeia (Ricetopario) in 1498. The oldest work of this kind in Germany was written by Valerius Cordus, a Nuremberg physician (Dispensatorium, 1546); then followed the Dispensatorium of Adolph Oertern in 1564, written at the request of the city of Augsburg, the Dispensatorium of Cologne in 1565, and finally in 1572 a similar work in Vienna, which, however, was not printed. Not until 1618 did Vienna receive a dispensatorium prepared from that of Augsburg, which had become a model for all Germany.

The Oriental trade in drugs was greatly facilitated by the discovery of the sea route to the East Indies. Uninfluenced by exotic remedies of scholastic medicine, popular medicine offered poor people, in addition to repulsive and superstitious remedies, a series of valuable remedies derived from native plants and minerals. A long-known and popular remedy for syphilis was mercury, introduced into scientific therapeutics by Paracelsus. To his adherents we are indebted for the use of preparations of antimony and arsenic, a popular remedy for skin diseases since ancient times. The first-mentioned preparations gave rise to a violent struggle on the part of the Paris faculty, which opposed every form of progress. Guaiac wood, regarded as a specific remedy for syphilis, was brought from America in such quantities as to be necessary. The subsequent important drugs introduced in the seventeenth century were ipecacuanha and Peruvian bark. The latter, coming from Peru, became known in Europe between 1630 and 1640. No remedy has had such a beneficial effect, but none has met with such opposition on the part of many physicians as this, because its method of violent (not sublimated) purgation (intestinal evacuation) was a direct contradiction of Galenic doctrine. Peruvian bark was introduced generally into therapeutics only after a long struggle, principally because important men like Sydenham advocated it. The latter as well as the Leyden school under Boerhave discontinued to a large extent the old Ayurvedic method of purgation (ipecacuanha) for a corresponding dietetic treatment. Besides the improvement in lead preparations by Thomas Gouland (1750; aqua Goulardi), we may mention the pharmacological investigations of cornelion, aconite, stramonium, etc., by Anton Störek (1731–1803), in Vienna. Bahnemans’s services in investigating native medicinals are outstanding.

The impulse to study mineral springs was in modern times given by Paracelsus. The majority of the modern European watering places of world-wide fame were already known to the Romans, but their curative properties were too little valued during the Middle Ages. Petrus de Tussigmanna wrote, about 1336, concerning the famous thermal of Bormio; Giacomo de Dondi in 1340 about Abano; the Vienna physician, Wolfgang Windberger (Anemorius), in 1511, about the sulphur springs at Baden near Vienna; Paracelsus about Pfaffen, St. Moritz in the Engadine, Teplice. Karlsbad in Bohemia was much frequented towards the close of the sixteenth century, as were Vichy and Puteoli. Harzburg, which provided the existence of carbonic acid and of fixed alcalies, wrote about Spa. Highly meritorious also was the work in this field of Johann Philip Seip (Pyrmont) and of Friedrich Hoffmann, who wrote about Spa, Selters, Schwabach, and Karlsbad, and taught the preparation of Seidlitz salt (Bitterseife), artificial Karlsbad, and of artificial mineral waters.

Cold-water cures were introduced in ancient Rome for the first time by Asclepiades, but they were soon forgotten. In sporadic cases cold water was employed therapeutically in later times, e.g. by Rhazes for smallpox, by Edward Baynard in 1555 against the plague, by John Floyer (1640–1734) for mania, and by several waters was noted systematically until the eighteenth century. The brothers Johann Sigismund and Johann Gottfried, and their father Sigismund Hahn (1662–1742), who in 1737 made extensive experiments during an epidemic of pocky fever in Breslau, may be regarded as the founders of the cold water cure. The work of John Sigismund (Usterricht von der Kaffee und van der Kaffee, the best known, and laid the foundation of modern hydrotherapeutics. Towards the end of the eighteenth century Johann Dietrich Brandis obtained good results in the treatment of febrile diseases by means of tepid lotions. The subsequent development of hydrotherapeutics was largely influenced by the results obtained by William Withering (1755–1819), and James Currie (1756–1805) in the epidemics of pocky fever in the years 1787–92.

Vaccination. Edward Jenner.—Even in the oldest peoples people seem to have possessed an efficient preservative against one of the most destructive epidemics, smallpox (variola). From remote antiquity the Brahmins of Hindustan are said to have transferred the smallpox poison (secretion of the pustules) to healthy persons by incising the skin with the object of protecting them against further infection by causing a local illness. In China people stopped up their noses with the inoculations of smallpox. A peculiar transfer with a needle (inoculation) was in use among the English and other people since antiquity. The method became generally known in Constantinople towards the end of the seventeenth century, and was introduced into England by Lady Wortley Montague, wife of the English ambassador, who had had her own son successfully vaccinated in 1717. Despite the loud approval of the court and aristocracy, inoculation met with obstinate resistance. The death of BOHN, the surgeon, Carelessness, quackery, and its ill-repute caused the method to be forgotten, until in 1746 Bishop Isaac Madox of Worcester, by popular teaching and the establishment of institutions for inoculation, once more proclaimed its value. Among physicians who favoured inoculation were Richard Mead (1673–1754), who in 1729 inoculated Robespierre, and Thomas Dinsdale (1767), Théodore Tronchin (1709–1781), and Haller. In Austria it was introduced by van Swieten, at whose suggestion Maria Theresa, in 1768, called to Vienna the famous naturalist Jan Ingen-Housz (1730–99), in spite of the opposition of the clinical professor de Haen. In the meantime another century was passed. Blasius Muller sought in vain to be devoted to cattle-raising it was observed that those who came in contact with cows suffering from smallpox frequently fell sick and had pustules on their fingers, but such persons were immune against the human smallpox. This incited the physician Edward Jenner (1749–1823) to further experimentation, which he continued for twenty years. On 14 May, 1796, Jenner performed his first inoculation with the lymph of cowpox (vaccination), an experiment of world-wide importance. Jenner’s discovery was everywhere received with enthusiastic approval. The first vaccinations on the continent were performed at Vienna by Jean de Caro in 1795, and by his contemporaries Alois Careno and Johann Steiner (1791) and Friedrich Hoffmann, who wrote about Spa, Selters, Schwabach, and Karlsbad, and taught the preparation of Seidlitz salt (Bitterseife), artificial Karlsbad, and of artificial mineral waters.

Medicine in the Nineteenth Century.—The powerful political position of France in the first thirty years of the nineteenth century finds medicine in an especially high state of development in that country. After this period followed the golden period of the Vienna school and, in a wider sense, of German medicine. The work of medical men systematically to aid the welfare of all civilized nations; yet all will regard Rudolf Virchow unqualifiedly as the chief worker.
to encroach upon the domain of the special articles, let us summarize in a few brief words the most important achievements of recent times: in anatomy, theory of tissues—Bichat; in pathological anatomy and pathology cellular, pathology—Virchow; in physiology—Johannes Müller; in practical medicine, asepsis—Lebœuf, Skoda; in surgery, treatment of wounds—Joseph Lister; narcosis—Jackson, Simpson; obstetrics, cause of puerperal fever—Semmelweis; in ophthalmology—Albrecht von Grafe and (speculum oculi) Helmholz; in bacteriology and serotherapy—Pasteur, Koch, and Behring. The subject of skin diseases was most ingeniously elaborated by Ferdinand Hebra.

General Anatomy.—A splendid basis for the further development of modern medicine was laid by Marie François Xavier Bichat (1771–1802), through his investigation of the vital qualities of tissues. What Haller had tried to do for the muscles, Bichat attempted to accomplish for all the tissues of the body. Bichat was the first to promulgate the idea that each tissue might by itself become diseased, and that the symptoms of diseased organs depend upon tissue changes. Gilbert Breschet (1784–1845) worked on the lymphatic vessels and the history of development, and Isidore Geoffroy Saint-Hilaire (1772–1844) on comparative anatomy.

Of Italian and English anatomists are to be mentioned: Paolo Mascagni (1752–1815; lymphatic vessels; comparative anatomy), Antonio Scarpellini (1747–1832; anatomy of the bones, organs of sense); the brothers John and Charles Ball, the latter (1774–1842) known also as a physiologist (brain, nerves); and Robert Knox (1793–1862; comparative anatomy). Germany performed the greatest service in physiological and allied branches. The first to be named in this connection is Theodor Schwann (1810–82), the discoverer of the cell as the fundamental element of the body of plants and animals. Johann Ev. Purkyne (1787–1869) worked along the same lines, and his Aller Köcher (1817; pensioned 1901) followed close in their wake. Work in comparative anatomy was done by Johann Friedrich Blumenbach (1752–1840), Ignaz Blumenbach (1752–1850), Ignaz Döllinger (1770–1841), Karl Asmund Rudolphi (1771–1832), and Johann Friedrich Meckel (1781–1852). Friedrich Gustav Jakob Henle (1809–85), and Wilhelm Menke (1804–96) were prominent teachers of general anatomy and histology; Friedrich Tiedemann (1781–1861) was an eminent brain anatomist, while Nikolaus Rüdinger (1832–96; injection of carbolic for the preservation of corpses in the dissecting room), Friedrich Sigmund Merkel (b. 1845; topographical anatomy), and Wilhelm His (b. 1831; history of development), must also be mentioned.

Following the reform of studies under van Swieten in 1749, anatomy was cultivated in Vienna more than ever before. The more important men were Lorenz Gasser (professor 1757–65; trigeminus), Joseph Barth (technique of injection), George Prochaska (1749–1829; Linum) and Joseph Hyrtl (1811–94); technique of injection and corrosion, organ of hearing, comparative and topographical anatomy, known as a pre-eminent teacher, investigator, and a man of noble character.

Karl Langer (1819–87; mechanism of the joints), Carl Toldt (b. 1840; histology, anthropometry), and Karl Wedl (1815–91; normal and pathological histology) are others of this School. The professors at present teaching this subject in the Austrian universities still belong chiefly to the school of Hyrtl-Langer.

In North America anatomy was cultivated especially in Philadelphia, where, besides the school founded in 1764, there existed from 1820 to 1875 a private institution established by John Balentine O'Brien Lawrence (d. 1823), "The Philadelphia School of Anatomy". In 1775 Japan became acquainted for the first time with the anatomical knowledge of Europe through a translation of a work by the German Johann Adam Kulmus which had appeared in 1728. A diligent study of anatomy and of medicine in general began when the University of Tokio was established in 1871.

Pathological Anatomy was placed upon a new basis by Bichat's theory of the tissues, and it was later greatly advanced by physiology, physiological chemistry, and by improved means of investigation (compound achromatic objective lens of the microscope). The increased attention, which clinical physicians bestowed on this subject, increased the knowledge of its progress. Among these must be especially mentioned Laënnec, who defined tuberculosis and studied the pathological anatomy of lung diseases, especially of phthisis. Numerous though the able investigators were who performed meritorious services in perfecting this branch, the development of modern pathological anatomy will forever be intimately connected with the names of the pioneers, Rokitansky and Virchow. The first pathological procedure at Vienna was held by Alois Rudolph Vetter from 1796 to 1803, well known as the author of the first German work on pathological anatomy. In 1832, after the death of Joseph Wagner, Karl Rokitansky (1804–78; later Freiherr von) became professor and professor. He was educated in the views of Johann Friedrich Meckel (1781–1852), Friedrich Christian Freiherr Martin Lister (1777–1835), but particularly of Gabriel Andral of Paris (1797–1876), a leading representative of humoral pathology. Rokitansky's training was thus based upon the French school, but he subsequently brought about a still closer connexion between anatomical and physical diagnostics. His endeavour to become acquainted with the entire course of development of pathological changes was greatly assisted by the valuable material for dissecting which the metropolis afforded. His excellence is seen in his descriptions of pathological changes; he replaced the previous symptomatic pictures of disease by creating an anatomical pathology and anatomical types of disease. He was not so successful in establishing his doctrine of crisis based upon humoral pathology, and just here Virchow's fruitful activity begins.

Rudolf Virchow (1821–1902), professor in Berlin and a pupil of Johannes Müller and Johann Lucas Schönlein, early became acquainted with the cellular doctrine of Schwann and Schwann (1775–1828), the well-known phrenologist and founder of the theory of cerebral localization, and Joseph Berres (1796–1844; microscopical anatomy). The founder of the modern anatomical school of Vienna was the highly gifted Joseph Hyrtl (1811–94); technique of injection and corrosion, organ of hearing, comparative and topographical anatomy, known as a pre-eminent teacher, investigator, and a man of noble character.
Diseases thus represent a reaction of the sum of the cells when they are attacked by harmful influences, the causes of diseases. Virchow's chief work "Die Pathologie des menschlichen Körpers" appeared in 1856. Greater attention was now paid not only to pathological anatomy, but to its sister sciences, pathological chemistry, experimental pathology, and bacteriology. The chief representatives of experimental pathology were: in France, Claude Bernard (1813-78), Charles Edouard Brown-Séquard (1818-95), and Etienne Jules Marey (b. 1830); in Germany, Ludwig Traube (1818-76), and Julius Cohnheim (1839-94); in Vienna, Salomon Stricker (d. 1898) and Philipp Knoll (1841-1900). Experiments on animals are extensively made today in this field of investigation.

**Bacteriology, Theory of Immunity, Serotherapy, Disinfection.** The first to suspect that living beings invade the organism and exist in the blood and pus was the learned Jesuit Athanasius Kircher (1671), although there is no doubt that the "little worms" observed by him were really blood-corpuscles. With the help of his improved microscope Leeuwenhoek discovered a number of bacteria. The idea that infectious diseases were caused by a living contagion invading the body from without entered the first expressions of this idea into the Vienna physician Markus Antonius Plenica (d. 1786). Otto Friedrich Müller, in 1786, was the first to doubt that the microscopical living beings, then comprising under the name of *infusoria*, really belonged to the animal kingdom. In 1838, Christian Gottfried Ehrenberg gave a description of the finer structure of the "infusoria," and proved the materialistic view to be without foundation. What Plenica had only suspected was now clearly formulated by Henle, who defined the conditions under which bacteria are to be regarded as direct causes of disease. The unifying activity of Robert Koch (d. 1910) from about 1878 succeeded in bringing about a revolution in the understanding of the microbe, so that it could be made of service to practical medicine. Apart from ascertaining the bacterial origin of cholera and tuberculosis, Koch's greatest achievements are the improvement of the microscope (Abbé, Zeis), the method of colouration and pure cultures.

The success with the lymph of cowpox, a weakened poison as a protection against a full poison, as well as the old experience that those who had once recovered from an infectious disease usually became immune from new infection, led savants to look for the cause of the phenomena. In 1880 Pasteur, on the basis of his experiments concerning chicken cholera, located the specific poison in the blood serum of the chicken and proved that it was a bacteria of the body (theory of exhaustion), while Chauveau believed in a residue of metabolic products which prevented a new settlement of bacteria or new infection (retention theory). The investigation of Metchnikoff, and in 1889 of Buchner, advanced the idea that blood-serum possesses a certain hostility to bacteria. In 1880 Von Behring proved that the blood-serum of animals which has been made immune against diphtheria, if injected into another animal, would make the latter also immune against diphtheria. That element in the serum hostile to bacteria he called antitoxin. The introduction of antitoxin into the therapeutics of diphtheria was the greatest practical success of bacteriology. Efforts were naturally made to secure by similar methods protection against other infectious diseases, efforts only partly crowned with success (tetanus, plague, cholera, snake poison). Following Jenner's method of producing immunity by means of living, weakened causes of infection, Pasteur (1856) found a protection against lyses, while Haffkine, in 1887, made experiments not only with killed germs, but in 1897 similar experiments with the plague. From 1891 dates Koch's experiment with extracts of bacteria against tuberculosis. By means of preparations of pure bacteria-cultures, made according to Koch's method, it became possible to devise exact methods for destroying bacteria. In the field of the modern method of disinfection, Koch also worked as a pioneer, not only in precisely defining the difference between prevention of development and the killing of bacteria, but also by subjecting physical and chemical disinfectants to new tests. The modern steam sterilizers are based upon the discovery of Koch that steam under the ordinary pressure of the atmosphere is sufficient to kill even resistant lasting forms. He pointed out the ineffectiveness of alcohol, glycerine, and other substances upon the spores of anthrax, and the diminished effect of carbolic acid in an oily or alcoholic solution. Von Behring's experiments showed a diminution of power of some disinfectants in the presence of albumen, concerning which Krönig and Paul made experiments in 1887. The inoculation with the immortalized germ, Von Behring's experiments showed a diminution of power of some disinfectants in the presence of albumen, concerning which Krönig and Paul made experiments in 1887. The inoculation with the immortalized germ, an obsolete method of informing the body with its germs to develop a certain kind of immunity, was performed by Louis Pasteur, who made the first attempts in 1882. François Magendie (1783-1855), opposing Bichat (vitalism), maintained that there is no uniform vital energy, and that the vital qualities of the different organs are to be explained upon a physical and chemical basis and by means of experiments. His investigations in hemodynamics and the function of the nervous system (roots of the spinal cord, the ear) has been followed by work of the muscles, the discovery of muscular nerves, the chemistry of the bile and the urine, theory of diabetes mellitus, assimilation of sugar, atrophy of the pancreas, the power of the pancreatic juice to digest albumen, and the theory of animal heat. The physiology of the circulation was elaborated by Etienne Honne, who discovered the umbilical vein, the heart, and the invention of the sphygmograph. The relation of muscles and nerves to electricity was studied by Guillaume Benjamin Duchenne (1806-75), while Charles Edouard Brown-Séquard (1818-94), the founder of modern organo-therapeutics, investigated the reflex irritability of the spinal cord, the blood, respiration, and animal heat. In Great Britain were Marshall Hall (1780-1857; theory of reflex action), William Bowman (1816-92; structure of the striated muscles, and theory of the secretion of urine), Alfred Henry Garrod (1846-79; sphygmography, physics of the nerves), Augustus Volney Walker (1816-70; dis- pedia of the red corpuscles of the blood, studies of the nerve-fibres and degeneration) and William Prout (1785-1869; discovery of free hydrochloric acid in the gastric juice).
MEDICINE

1869) founded at Breslau the first German physiological institute. His most important studies were concerned with the physiology of the organs of sense, especially of sight, the physiology of the muscles and nerves, the ciliary movement of the epithelium of the mucous membrane, the structure of the nerve-fibre (artery-cells) and the human organs of walking (Wilhelm and Eduard), experiments in irritability by means of induction currents, and the irritation of the pneumogastric and sympathetic nerves and its influence upon the heart (Ernst and Eduard). Physiological chemistry is represented by Friedrich Tiedemann and Leopold Gemlin (1788-1853); digestion, absorption and assimilation, the importance of the lymphatic system for absorption, Friedrich Wöhler (1800-82; artificial preparation of urea), and Karl Bogislav Reichert (1811-83; crystallization of blood pigment). We must also mention the nervous physiologist R. F. Langenbecker (1805-64), discoverer of the tactile corpuscles. The greatest credit for developing modern physiology is due to the school of the versatile Johannes Müller (1801-58). Müller's importance, comparable to that of Aristotle, is due on the one hand to the results of his own investigations (studies on the physiology of the organs of sense, the sympathetic nervous system, the theory of reflex action, the production of voice in the larynx, and the description of the cartilage-nucleus), and on the other hand to his activity in all branches of physiology and in his grasp of the entire field of physiological knowledge. The most important investigators of the century in the domain of histology, physiological chemistry, and physics, were pupils of Müller. Besides the immediate disciples of Müller, such as Schwann, Kolliker, and Virchow, attention may be called to Robert Remak (1815-65; description of the marrowless nerve fibres, of the course of the fibres in the brain and spinal cord) and Heinrich Friedrich Bidder (1810-94; sympathetic nerve system, nerves of the heart, metabolism).

The doctrine of metabolism was advanced by the famous chemist, Justus Freiherr von Liebig (1803-73; excretion of nitrogen in the form of urea, importance of uric acid, albumen as a source of muscular strength), Theodor Ludwig Wilhelm Bischoff (1807-32; urea) and Karl von Voit (b. 1831; metabolism of nitrogen, organic albumen). The latter, together with Max von Pettenkofer (1818-1901), made numerous experiments in the change of gases in man during rest and work. Georg Meissner (b. 1829; origin of the constituents of urine, muscle sugar), Schwann (discoverer of peptin), Karl Gotthelf Lehmann (1812-65; pepton). The chemistry of the blood was investigated by Ernst Felix Josef Hoppe-Seyler (1825-93; blood pigment, blood corpuscles), Julius Robert Meyer (1814-78; mechanism of heat), Hermann Ludwig Ferdinand von Helmholtz (1821-94; physiological optics), and Émil du Bois-Reymond (1818-96; animal electrical phenomena, physics of the muscles and nerves). Just as versatile as Johannes Müller were Karl Friedrich Wilhelm Ludwig (1816-95; physiology of the circulation and excretions, theory of the functions of the kidneys, endoesthesia, discovery of the nerves of secretion) and Ernst Wilhelm Ritter von Brücke (1819-92; studies of the ciliary muscle as a muscle of accommodation, theory of colours, physiology of the voice, structure of the muscle-fibres, biliary capillaries, digestion, absorption). Karl von Voit (1815-92) worked on the chemistry of respiration and the counting of the blood corpuscles; Adolf Fick (1829-1901) with physiology of the muscles and nerves; Moritz Schiff (1823-96) with the nervous system, discovery of the harmful results of the extirpation of the thyroid gland, function of the base of the brain and the cerebellum; Rudolf Heidenhain (1834-97) with physiology of the glands; Alexander Rollett (b. 1834) with the glands of the stomach, blood; Eduard Friedrich Wilhelm Pfüger (b. 1829) with the gases of the blood, processes of oxidation in the body; Ewald Hering (b. 1834) with the theory of self-regulation of the act of breathing, sensitivity of retina to colours, and Theodor Wilhelm Engelmann (b. 1834), with electro-physiology, motion of the ciliary epithelium, physiology of the heart and of the organs of sense. The localization of the brain was investigated especially by Gustav Fritsch (b. 1838), Eduard Hitzig (b. 1838), Leschke (b. 1802), and Sigmund Exner (b. 1846). Of eminent physiologists outside of Germany we may mention the Dutchman Franz Cornelis Donders (1818-99; physiological optics, determination of refraction) and Jakob Moleschott (1819-94; metabolism and doctrine of foods).

Owing to the progress of the theoretical auxiliary sciences, practical medicine reached a high state of development, especially in diagnosis, but also to a certain extent in therapeutics. A general revolution was effected by the establishment of physiological diagnosis. Auenbrugger's epoch-making discovery, percussion (1761), passed over in silence by van Swieten and de Haen, the leading spirits of the Vienna school, and mentioned only in timid fashion by Maximilian Stoll, might have been forgotten. Further forgotten, but by Kurz, Corvisart de Marees (1755-1821), after an objective examination, had not translated Auenbrugger's "Inventum novum" into French, and published it in 1808 with a commentary. René Theophile Hyacinthe Laennec (1817-1826) enriched the physical method of examination by the invention of auscultation (noting the different tones and noises in the chest by placing the ear against it). His pupil Pierre Adolphe Pierry (1794-1879) perfected percussion (definition of the borders and outlines of the organs, invention of the plessimeter, improvement of the stethoscope). Laennec's invention attracted attention but slowly. His chief opponent was Francois Joseph Victor Broussais (1772-1838), but in England John J.充 (1787-1861) and William Stokes (1804-78), and in Germany, Christian Friedrich Nasse (1778-1851), Peter Krubenken (1787-1865), Johann Lukas Schönlein (1793-1864), and others assumed a friendly attitude. Auscultation and percussion came into general use in the Germanic countries much later than in England and France, but they were then brought into prominence by the Vienna physician Joseph Skoda (1805-81), who in 1839 treated physical diagnosis scientifically and fundamentally (auscultation and percussion). The new methods made possible the exact clinical diagnosis of diseases of the heart and the lungs to a degree never previously imagined. Besides Laennec and Skoda must be mentioned among the great number of bi-
vestigators: Jean Baptiste Bouillaud (1796–1881) and James Johnson (1777–1845), who investigated affec-
tions of the heart and rheumatism of the joints. August François Chomel (1788–1855; pericarditis and rheu-
matism), James Hope (1796–1841; certain arthriti-
s, including osteoarthritis), Hermann Lebert (1813–78), Johann Oppolzer (1808–91), Felix Niemeyer (1820–71), Ludwig Traube (1818–76), Heinrich von Bamberger (1822–58), and Adalbert Ducheck (1824–52).

Among therapeutic aids the introduction of digi-
tal purgatives by Traube deserves special mention. M. J. Oertel (d. 1897) tried to cure certain arthriti-
s (fatty degeneration of the heart, obesity) by means of
dietetic mechanical treatment (Terrainkur) and the
brothers August and Theodor Schott established the
so-called Nauheim method (carbonic acid baths and
gymnastics). Great credit in connection with the
diagnosis and treatment was due to M. Anton Winternitz (1812–82; pleuritis), Karl August Wurzlicher (1815–
78; range of temperature in pneumonia), Leon Jean
Baptiste Cruveilhier (1791–1875; pneumonia in chil-
dren), Theodor Jürgensen (infectious nature of pneu-
monia), Robert Bree (1807; bronchial asthma), Bier-
ner (1870), Leyden (1875; crystals of asthma), and
Czermich (1882; spinals). The subject of pulmo-

tary tuberculosis, profusely treated by Amand
Laurent Bayle (1774–1816; 1810 discovery of miliary
tuberculosis, tuberculosis a general disease); Virchow
developed the anatomic character of tuberculosis; Ville-
min in 1865–8 proved its contagiousness, and his ex-
periments were re-examined and confirmed among
others by Lebert (1903), Kiefer (1905), Baumann (1880).
Vieprey (1877), and Weichselbaum (1882).

With the discovery of the tubercle bacillus by R.
Koch in 1882, the path to the suppression of tuberculo-
sis was indicated. Cornet in 1888 showed the
danger of the aperient, which resulted in the prohibi-
tion of spitting and the placing of cuppidoirs with disinfec-
ting solutions. In 1890 Koch appeared with his discovery of
the tubercle bacillus, which he improved in 1897 and 1901.
In 1902 Behring began his experiments on cows to secure
immunity. Of late the treatment of tuberculosis is
chiefly dietetic. Diagnosis and therapeutics of the
diseases of the larynx were greatly advanced by the
invention of the laryngoscope in 1860 (Ludwig Türek
1820–83;便宜; and Johann Nepomuk Czernak, 1828–73).

The range of temperature, a diligent cultivation by de Haen and later by James
Currie (1733–1819), was systematically done for the
first time by Friedrich Wilhelm Felix von Bären-
 sprung (1822–64), Traube, and Wunderlich. In the

treatment of metabolic diseases we must mention the
notion of diabetic seal of Friedrich Theodor von Frerichs
(1819–85).

Diagnosis and therapeutics of diseases of the stomach
were advanced by the introduction of the stomach
pump invented by the English surgeon Bush in 1822, an
instrument recommended and used since 1809 by Adolf
Kussmaul (d. 1902), in enlargement of the stomach,
and for the examination of the stomach with the
symptomatic pump was employed by Karl Friedrich
Canstatt in 1846, Duchenne, and later by Kussmaul
(1877), the stomach catheter was used for diagno-
sic purposes by Wilhelm Leube in 1871.
The subject of typhlitis and perityphlitis was investigated among
others by Puchelt (1829), Burne, Smith, Bamberger, and
Oppolzer; diseases of the kidneys by Richard
Bright (1827), Pierre François Oliver Rayer (1793–
1867), Johnson (1852), Julius Vogel (1814–50), and
Herrmann Senator (1896); diseases of the bladder by
Josef Grünfeld (1872), Trouvé (1878), Max Nitze
(1879; endoecopy), Rovsing (1890, 1898), Kroglius
(1890, 1894), Guyon, Leube, and Robert Ullmann
(1888); diseases of veins by Richard Bright.
The development of modern diagnosis and the ther-
peutics of nervous diseases are connected with the
names of eminent physiologists and clinical physi-

Of the latter we may mention Moris Heinrich Romb-
berg (1795–1873), Wilhelm Griesinger (1817–68),
Duchenne, and the universal Jean Martin Charcot (d.
1893). Faradisation (1831), as a therapeutic means
specialized against lameness, was introduced by Duche-
ene in 1847. Among special studies of individual dis-

eas were: on tabes dorsalis by Romberg, Duchenne,
Armand Trouseau (1801–66), Nikolas Friedrich
(d. 1852), Leyden (d. 1910), Karl Friedrich Westphal
(b. 1833), Charcot, and Alfred Fournier, who in 1876
pointed out the connexion between tabes and diabe-
tes; on polyneuritis by Brouardel, Nauheim, Oppolzer, Friedrich
Westphal, Charcot. A peculiar complex of symptoms
was described for the first time by Robert James
Graves (d. 1853), later (1840) by Karl von Basedow
(Basedow’s Disease). The picture of neurasthenia
was given for the first time in detail in 1869 by Georg
Beard; Weir-Mitchell together with Playfair proposed for
it the so-called fattening cure.

As to progress in psychiatry, there is now a more
human conception of the care for the insane com-
pared with that obtaining in former times. This
movement originated principally in England (Thomas
Arnold, d. 1818; William Perfeet, b. 1740; Alexander
Fison, 1763–1865) and subsequently in France (b. 1755–1826; Jean Etienne Dominique Esquirol, 1772–
1840), and found in Italy in Vincenzo Chiariugi (d.
1822) and in Germany in Johann Christian Reil (1759–
1813), zealoussupporters. With this movement came a
general and profound study of the subject stimulated by
the results of pathological anatomy, especially judicious theo-
ry, proper physical occupation of the insane, and the
discontinuance of the isolation system. Special atten-

Modern Dermatology begins with the endeavours of
Johann Jakob Plenk (1738–1807) at Vienna to estab-
lish a classification of skin diseases on a basis of exter-
nal clinical appearance. Work of a similar nature was
done by Anna Maria Lorry (1777), Robert Wil-
ian (1795), Thomas Bateman (1815), all of whom
introduced simplification into dermatology. Con-
stant Belt (1781–1840), and Camille Melchior Gigot
(1797–1866). Jean Louis Albert (1766–1837) made
a classification according to pathological principles,
while Pierre François Oliver Rayer used anatomy and
physiology as a basis. The pathological-anatomical
method, introduced by Julius Rosenbaum (1807–74),
was established by Friedrich Wilhelm Felix von
Bärensprung (1822–64; eczema marginatum, erythema caused by fungus, and herpes
zosus) and his successor, Georg Lewin (1820–96; 

eczema). Pierre Antoine Ernest Nasin (1807–
78) worked along the same lines as Hebra (parasitcal
and constitutional skin-diseases, erythema indurata)
Hebra’s most important pupils are Heinrich
Becker (1835–86; of various skin disease).

The development of modern diagnosis and the thera-
peutics of nervous diseases are connected with the
names of eminent physiologists and clinical physicians.

For a number
of valuable special investigations we are indebted to Tilbury Fox (1836–78; impedigio contagioso, describes Stellwag. A letter to the Cataract, 1823–1904; deafness of accommodation, innervation of the iris), Julius Jacobson (1828–89; diphtheritis conjunctivae), Otto Becker (1828–90; pathological topography of the eye, lens), Josef Ritter von Haener (1819–92; forensic injury of the eye), Ludwig Mauhtemer (1840–94; optical defects of the eye, glaucoma), Albrecht Nagel (1819–87; strabismus, paracentesis of the cornea, corneal, the Russian Alexander Ivanov (1839–90; inflammation of the retina and the optic nerves, glass eye), and Victor Felix Szokalski (1811–91; textbook).

The introduction of local anesthesia by means of cocaine in 1854 by Rudolf Koller of Vienna, greatly facilitated operation on the eye.

Obstetrics. — One of the most eminent obstetricians was Lukas Johann Feuerer of Vienna (1751–1835), who upon the request of the emperor studied in Paris and London from 1785 to 1788. He represented the so-called "waiting method," using instruments as rarely as possible, taught rational dietetics during pregnancy and confinement, and was the first to employ electricity for reviving asphyxiated children. Work on the subject of his was done by Wilhelm Joseph Schmitt (1760–1824; forces operation in the longitudinal position, methods of examination, mechanism of parturition). In contradistinction to Boër, Friedrich Benjamin Osiander (1759–1822) represented the most extreme operative tendencies, while Adam Elias von Siebold (1775–1828) took a middle course. Modern obstetrics began in 1847 with James Young Simpson (1811–70), the manufacturer of the English forces and cranioclast; he was the first to employ narcosis (first with ether and in the same year also with chloroform) for women in labour, but at present this is done only in case of operations. Of far greater importance is the simultaneous discovery of anesthesiopnea (pyemia) by Ignaz Philipp Semmelweis of Vienna (1818–65). He introduced the practice of disinfecting hands and instruments with a solution of chloride of lime, and thereby reduced the mortality of lying-in women from 9:92 to 1:27 per cent. This most important discovery that external infection causes suppurative fever was utilized in general practice only by a later period. Propositions similar to Semmelweis had been made as early as 1843 by Oliver Wendell Holmes of Boston, but they were not known in Europe.

Important advances in modern times are marked by descriptions of the narrow pelvis by Gustav Adolf Michaelis (1798–1848) and Karl Konrad Theodor Litman in 1851, and of the oblique oval pelvis by Litman in 1854, and in 1836 in the case of such a pelvis by Spiegelberg in 1870; the manual removal of the placenta in 1853, and prophylaxis against blemorrhoea of the newly born by Credé in 1854; axial traction forces by Chassagen in 1861; combined turning by Braxton Hicks in 1860–3; the mechanism of delivery by Leishman and Hodge in 1861, placenta retention between the uterus and the cervix by Litman in 1853.
The classical Cæsarean operation, as previously performed, consisted in opening but leaving in the uterus, with great risk to life, the ovary. In 1783, after a successful operation at Pavia in 1785 performed it, therefore, with the subsequent removal of the uterus and ovaries, and thus obtained much more favourable results. With the perfection of antiseptic, or rather aseptic, treatment in modern times, the classical Cæsarean operation is being again performed. The total removal of the ovaries (ovotomy) on account of their degeneration was performed for the first time in 1809 by Ephraim MacDowell at Danville, Kentucky, the technique of the operation being perfected by Hutchinson in 1859, Spencer Wells and Marion Sims in 1873, Freund in 1878, and Cerny in 1879. Total extirpation of the uterus is performed especially in the case of cancer.

Of all the branches of obstetrics, gynecology, surgery made the greatest progress, first in France and England, later also in Germany. Side by side with the renowned surgeon-in-chief, of the Napoleonic armies, Jean Dominique Lenny (1766–1842), we have, as the most versatile, Guillaume Dupuytren (1777–1835); next to him Phillibert Joseph Roux (1780–1854); resection and transplants (1870–1871) in图形: Guérin-Dupuytren, Alfred Armand Louise Marie Velpeau (1795–1868), treatment of hernia by injection of iodine, Jacques Mathurin Delpech (1777–1832); studies about phage-denias, gangraena nosocomialis, tenotomy of the tendo Achilllis, Jean Zuléma Amussat (1796–1855, lithotripsy), Auguste Vidal (1803–56, varicocoele), Joseph François Nollet (1781–1821), fractures and subluxations, Auguste Nélaton (1807–73, lithotomy), Edouard Chassaignac (1805–79, écartement linéaire, drainage), and Charles Gabriel Pravaz (1791–1853, orthopedia, subcutaneous injection). Of English surgeons we must mention the brothers Bell, John (collateral circulation after ligation) and Charles (operative surgery); John (1749–1812); John Hunter (1728–1807); extirpation of the hip joint; the famous surgeon, Astley Paton Cooper (1768–1841; textbook), and William Lawrence (1785–1867). In America we may note the chief surgeon of the War of Independence, John Collins Warren (1773–1815), Philipp Syng Physick (1768–1837; new formations), Willard Parker (1800–84; cystotomy), and Frank Hastings Hamilton (1812–96; fractures and dislocations). Passing to the German surgeons let us mention first of all Vincenz von Kern of Vienna (1760–1829; open treatment of wounds), his successor, Joseph von Wattman (1789–1866; lithotomy), and Frans Schuh (1805–65; new formations, hernia); in Germany Louis Stroebel (1835–1915; tenotomy, resection); Johann Friedrich Diefenbach (1794–1847; plastic operations), and Albert Theodor Middeldorf (1824–68; galvanocautery).

A new epoch of progress begins in 1846 with the introduction of narcosis. The discoverer of the narcotic effect of ether is the American physician and chemist, Charles Jackson (1803–80), who, together with William Morton, made experiments upon his own person. The first narcosis was undertaken in 1846 by Warren, and in the same year in London by Robert Liston. Simpson first employed ether in an obstetric operation in 1847, but soon afterwards introduced into practice chloroform. In modern times a mixture of ether and chloroform is generally used. Both ether and chloroform are powerful analgesics (evaporation of ether, injection of cocaine, bromoethyl). Of still greater importance than narcosis was the treatment of wounds with carbolic acid by the Englishman Joseph Lister in 1867 (antiseptic treatment of wounds). In the course of time carbolic acid was replaced by other antiseptics, as salicylic acid, benzoic acid, and carbolic acid had to yield to the aseptic method (careful protection of the field of operation against infecting germs). A third achievement of modern times is operating with an artificial absence of blood (operations on the extremities), mentioned for the first time by Friedrich von Recklinghausen in 1873. Narcosis and antiseptics now make possible a series of daring operations, before impossible, with essentially better chances of success. In the recent development of German surgery Bernhard von Langenbeck (1810–87), known especially as a military surgeon, holds a leading position. Of his school we have among others Adolf von Bardeleben (1819–95), author of a textbook, Karl Thiersch (1822–95; transplantation), Johann Nepomuk von Nussbaum (1829–90; transplantation of bones, extension of nerves), Theodor von Bilroth (1829–94; extirpation of the larynx and struma, resection of the pylorus) and Richard von Volkmann (1830–89; surgery of the joints). A very important means of locating (e.g. pneumonia) the human body, and for the examination of fractures is the Röntgen rays discovered by William Karl Röntgen in 1895 (Röntgen photography).

LEOPOLD SENFELDER.

Medicine, Pastoral. See Pastoral Medicine.

Medicine and Canon Law.—In the early centuries the practice of medicine by clerics, whether secular or regular, was regulated by Church law. A secular clergy, who had the privilege of the Church, nor was it at all uncommon for them to devote a considerable part of their time to the medical avocation. Abuses, however, arose, and in the twelfth century ecclesiastical canons were framed which became more and more adverse to clerics practicing the art of medicine. The “Corpus Juris Canonici” contains a decree prohibiting secular clerics and regulars from attending public lectures at the universities in medicine and law (cap. Namagnopere, 3, Ne clericu aut manum). The reason adduced is, lest through such sciences, spiritual men be again plunged into worldly cares. They were not hereby forbidden to make private studies in medicine or to teach it publicly. The Council of Constance in issuing a similar prohibition, had especially in view monks, who left their cloisters under pretext of attending university lectures, and in this were imitated by secular priests, who thus violated their obligation of residence. This law was extended by Honoria III to all clerics having ecclesiastical dignities. It is not binding, consequently, on the lower clergy, or on those clerics who pursue the sciences or private studies. The penalty imposed for violation was excommunication ipso facto.

As to the practice of medicine by clerics, the Fourth Council of the Lateran (1215) forbade its employment when cutting or burning was involved. In the decree (c. Sententiam 9, Ne cler. vel mon., it is said: “Let no abbeys or convents mention medicine, and medicine which involves cutting or burning.” This was especially prohibited to regulars (cap. tua noe, 19, De Homioidlii), and they are also forbidden to exercise the science of medicine in any form (c. Ad aures, 7, de et. qual.). This general prohibition is extended to all clerics, inasmuch as the art of medicine is of its nature secular and is condemned by the Church, incurring an irregularity (c. 9, X, V, 12). Canonists, however, generally hold that in case of necessity and where danger to life is not involved, clerics can practice.
medicines through pity and charity towards the poor, in default of ordinary practitioners. The Sacred Congregations have on several occasions granted permission to priests to make and distribute medical concoctions, and allowed priests who had formerly been physicians to practice the art, but with the clause "gratis" and thereafter known as "the dispensers of the Slipper," however, shall be held accountable for the absence of other physicians." A clause is likewise sometimes added that they may accept recompense if spontaneously offered, but never from the poor. In cases where a cleric had formerly been a physician, he may not practise medicine except through necessity, without obtaining a papal indulgence. A physician is therefore bound to treat ecclesiastically gratis, though the bishop may allow them to make voluntary contributions. Likewise, the precept of charity binds medical practitioners to give their services to the poor free of charge. Physicians who prescribe remedies involving infractions of the Decalogue, are themselves guilty of grave sin. This is also the case if they experiment on a sick person with unknown medicines, unless all hope has been given up and there is at least a possibility of doing them good. Physicians are to be reminded that they have no dispensing power concerning the fast and abstinence prescribed by the Church. They may however give their prudent judgment as to whether a sick person who would obtain some convenience to his health, is obliged by the ecclesiastical precept. They are warned that, if they declare unnecessarily that a person is not obliged to fast, they themselves commit grave sin. They also sin mortally if they attempt, without being forced by necessity, to cure a serious illness, when they are aware that through their own fault and a false diagnosis they may be the cause of grave harm to the patient. Physicians who are assigned to the care of convicts of nuns should not be less than fifty years of age, and younger practitioners are not to be employed unless those of the prescribed age are not obtainable. When they have the ordinary care of nuns, they are made to have general license to enter the cloister, even at night in cases of great urgency. They are not, however, to be alone with the patient. Physicians who are not ordinary require special faculties to enter the cloister.

Regulars living in missionary countries have the privilege, especially by the Bull of Clement XII, "Cum Siecit," of practising medicine. To make use of this privilege, use of medical science in behalf of those patients who died under their treatment. According to the second decretal rule, all physicians and surgeons contract irregularity for possible future sacred orders if any of their patients die through want of proper diligence or of due study of the art of medicine on the part of the physician. Hence, Benedict XIV (De Syn. Dioc., I. 13, c. 10) declares that in general when physicians wish to enter the clerical state, a dispensation should be obtained ad cautelam, as they can never receive this privilege, unless they use means prescribed by medical science in behalf of those patients who died under their treatment. According to the second decretal rule, all are irregular who practise medicine or surgery rashly, through want of proper knowledge and experience, if they thus cause the death of another. Particularly as regards clerics, this irregularity is declared the more incurable by regulars who have received tonsure and by seculars in sacred orders who practise medicine in a forbidden manner, with burning and cutting, and thereby bring about a fatal result. Irregularity is also contracted by mutilation, which consists in the severing of any principal member of the body, that is, one having a distinct and peculiar function. Even if the incision or mutilation be done in the name of God for the healing of others, even if it be done through indirect zeal, incur canonical irregularity. As regards physicians and surgeons who are not clerics, they incur no irregularity for counselling or performing mutilation, because the canonical "defect of minlessness" (see Irregularity) does not apply to them. Should they afterwards wish to receive sacred orders, they should be dispensed ad cautelam.

The ecclesiastical canons contain many and various prescriptions concerning lay physicians, which are enumerated at length by Ferraris (op. cit. infra). Thus physicians are warned that they must endeavour to persuade their patients to make sacramental confession of their sins (cap. Cum Infinitas, 13, de poenit.).

St. Pius V decreted that no physician should receive the doctorate unless he took oath not to visit a sick person longer than three days without calling a confessor, unless there was some reasonable excuse. If he violated this oath, he fell under excommunication. Canonists and moralists (among them St. Alphonsus Liguori) however, declare that this is not unanimously held to be the general rule. The place where it never became an established usage. They also teach that even where it had been received, it applied only to cases of mortal sickness, or where there was danger that it might become mortal, and that it sufficed for the physician to give this warning by means of a third party. The canons also declare that when a sick person is bound to treat ecclesiastically gratis, though the physician is bound to correct ecclesiastical faults, the Church may allow them to make voluntary contributions. Likewise, the precept of charity binds medical practitioners to give their services to the poor free of charge.

William H. W. Fanning.

Medina, Bartholomew, Dominican theologian, b. at Medina, 1527; d. at Salamanca, 1581. With Domingo Soto, Melchior Canus, and Domingo Bañez he studied theology at the University of Salamanca under the celebrated professor Francis Vitoria. His life was devoted almost entirely to teaching theology at Sal-
MEDINA

Marina, first in the chair of Durandus, afterwards as principal professor. He was appointed to the "cathedra primaria" after a successful concursus, in public, against the learned Augustinian, John of Guevara. Although he was well versed in Greek anc. Hebrew, he loved theology more, and all his writings preserved are theological, being principally commentaries on the Summa of St. Thomas. He is usually called the Father of Probabilism. Writers speak of his teaching on this important question of moral theology. Some hold that he did not introduce, but merely formulated, Probabilism when he wrote: "It seems to me that if an opinion is probable, it may be followed, even though the opposite opinion be more probable," (I, II, q. xix, a. 6). Others say he proposed that probabilis intellectus (speaking of mind) should be in practice so that there was no departure from rules of conduct formerly followed. Others still, e. g. Echard, followed by Billuart, maintain that the system proposed by Medina differed greatly from Probabilism as it has been explained by its later defenders, and they cite its definition: "that opinion is probable which is held by wise men and is supported by first-class arguments". Hurter (Nomencl.) writes: "He seems to have led the way to Probabilism." Echard admits, with Vincent Baron, O. P., that Medina opened the way for a flood of probabilistic theories, and closes with the declaration: St. Thomas is our Master, others only in so far as they follow his teaching. Probabilism is not allowed to admit Medina against them; probabilists are lost to admit that he proposed a new doctrine, or do not wish to give to him all the credit of introducing a new system for forming the conscience in doubtful cases. The following is a list of his most important works: Commentaria in primam secundae (Salamanca, 1577), "Commentaria in tertiam secundae" (Salamanca, 1578), "Breve instruction de comose se administre el sacramento de la penitencia" (Salamanca, 1580).

Quèrt-Echard, SS. Ord. Pred., II, 258; Bourdon, Théories et systèmes des probabilités en théologie morale (Fribourg, 1894), 8.

D. J. Kennedy.

MEDINA, Miguel de, theologian, b. at Belalcázar, Spain, 1489; d. at Toledo, 1 May, 1578. He entered the Franciscan order in the convent of St. Maria de la Puerta at Hornachuelos, near Cordoba, on 1 January, 1510. Soon after, he was sent to the College of St. Idefonso at Alcalá, where he entered the order of St. Jerome on 11 October, 1512. In 1516, he was ordained a priest. He continued his studies and then returned to his first love, theology. He was appointed professor at the College of St. Idefonso in Alcalá, where he remained until his death. His teachings were highly respected, and he was known for his scholarship and piety.

Medina was a prolific writer, authoring many commentaries and works on theology. He is known for his contributions to the field of moral theology and his efforts to reconcile the works of St. Thomas Aquinas with contemporary theological thought.

In his Commentaries, Medina sought to provide a balance between the rigor of St. Thomas Aquinas and the more flexible approach of the probabilistic school. His works were influential in shaping the development of moral theology in the Catholic Church.

Medina's influence extended beyond academia, as he was known for his piety and dedication to his faith. He was a respected figure in the Franciscan order and was held in high esteem by his colleagues and students.

Gregory Cleary.
Medrano, FRANCISCO, Spanish lyric poet, b. in Seville, not to be confounded with Sebastian Francisco de Medrano who was also a poet and lived at about the same time. The dates of his birth and death are unknown, but he lived during the latter part of the sixteenth and the beginning of the seventeenth centuries. Little is known of his life except that he visited Rome. His works were published at Palermo (1617) as an appendix to the imitation of Ovid's "De Remedio Amoris" by Pedro Venegas, a poet of Seville. According to the Spanish critic Adolfo de Castro, Medrano is the best of the Spanish imitators of Horace, comparing favourably in that respect with Fray Luis de Leon. Endowed with literary taste, he writes in good Spanish, and his style is free from the gorgonism of his time. Among the odes of Medrano, his "La profecia del Tajo" is very similar to one of Fray Luis de Leon of the same title. Although both are based upon Horace's ode to Mark Antony in which he would separate him and Cleopatra, there is a great difference between them. Leon's ode departs from the original of Horace, while Medrano's is an imitation of the latter so close as to amount almost to a translation. The poems of Medrano are reprinted in "La Biblioteca de Autores Españoles, Vols. XXXII, XXXV, and XLI (Madrid, 1849-80)."

VENTURA FUENTES.

Medulic, ANDREAS, Croatian painter and engraver, called by Italian authors Medola, Medula, Schiavona, Schison, etc., b. at Sibenik, Dalmatia, 1522; d. at Venice, 1582. The son of poor parents, Andreas received instruction in engraving still early, and studied closely the pictures and woodwork on the walls of the public buildings and of his native town, and, on his return home, to sketch on paper all that he had seen. So tireless was his devotion to his drawing that his father took him to Venice, and there entrusted him to his godfather, Rosso, a painter of very little merit. Under Medulic's guidance Medola first discovered the secret power to make a wooden assistant, compelled to work from early morning till evening to procure bare nourishment and clothing, strive to perfect himself in his art. He began by studying and copying the works of the then renowned painter, Francesco Mazzola (known as Parmigianino), and the paintings of Titian. From those studies, the painters Medulic learned that the delicate lightness of touch, that animation of colour, which constitute the pre-eminent characteristics of his own pictures. While still young in years, chance procured for him the acquaintance of Pietro Aretino, commonly known as "the Divine" and the "accoutre of princes" (Flagellum principum), from whom Medulic received always a most friendly reception and much valuable instruction. About this time Medulic began to copy the engravings of Parmigianino, the first to execute pictures on copper with nitric acid. J. Paolo Lomazzo, contemporary painter and writer, states that Parmigianino was Medulic's instructor in this branch. Medulic was a most skilful imitator; the individual character of his painting gave rise to a special school in Venice, the "Scuola di Schiavone".

Tintoretto was not ashamed to work with the needy youth, to assist him, and even to study his beautiful style of colouring, recommending in writing all painters to study colour from Medulic's pictures, adding that "every painter is blazing with the history of the great masters, he possesses at least one picture of Medulic's in his studio." Among those who occasionally purchased his pictures and greatly prized them, was Titian himself who when commissioned by the Venetian Government to choose the best painters in Venice to decorate with mural paintings the public library of St. Mark, included Medulic among Veronese, Battista Zelotti, Giuseppe Salvati, and Battista Franco. Medulic retained lifetime great veneration for Titian and is indeed proclaimed by many authors (Filibeau, Ramdor, Nagler) his most celebrated imitator. For the Ruzzini family in Venice, Medulic painted the "Baptism of Jesus," but the subject of his artistic achievement, the well known "St. Cecilia Playing the Organ" (half length), with two attendant angels, and "Madonna Presenting her Son to Holy Simeon," in the house of the Priuli in the Via San Salvador, Medulic painted in fresco some scenes from the life of St. John; for the Foscarini the "Descent of the Holy Ghost." A great number of works, now scattered throughout the world, were painted for the churches of Venice and other cities and for individual collectors. On 22 May, 1563, the judges appointed from among the celebrated painters of Venice to decide the process of the brothers Zucchi were Titian, Jacob of Pistoia, Andrea Medulic, Paul Veronese, and Tintoretto. Medulic also worked with iron on copper, under the direction of authorities, was the first to engrave with a dry needle. His etchings are highly praised for their special elegance, beauty, and vigour; among his best works of this class may be mentioned, "Moses Saved by Pharaoh's Daughter," "Abduction of the Trojan Helen," "Sts. Peter and Paul," "Curing of the Lame Man" (after Rubens). Medulic died at an advanced age, and his talented assistant, to work from early morning till evening to procure bare nourishment and clothing, strive to perfect himself in his art. He began by studying and copying the works of the then renowned painter, Francesco Mazzola (known as Parmigianino), and the paintings of Titian. From those studies, the painters Medulic learned that the delicate lightness of touch, that animation of colour, which constitute the pre-eminent characteristics of his own pictures. While still young in years, chance procured for him the acquaintance of Pietro Aretino, commonly known as "the Divine" and the "accoutre of princes" (Flagellum principum), from whom Medulic received always a most friendly reception and much valuable instruction. About this time Medulic began to copy the engravings of Parmigianino, the first to execute pictures on copper with nitric acid. J. Paolo Lomazzo, contemporary painter and writer, states that Parmigianino was Medulic's instructor in this branch. Medulic was a most skilful imitator; the individual character of his painting gave rise to a special school in Venice, the "Scuola di Schiavone".

Tintoretto was not ashamed to work with the needy youth, to assist him, and even to study his beautiful style of colouring, recommending in writing all painters to study colour from Medulic's pictures, adding that "every painter is blazing with the history of the great masters, he possesses at least one picture of Medulic's in his studio." Among those who occasionally purchased his pictures and greatly prized them, was Titian himself who when commissioned by the Venetian Government to choose the best painters in Venice to decorate with mural paintings the public library of St. Mark, included Medulic among Veronese, Battista Zelotti, Giuseppe Salvati, and Battista Franco. lating from the Latin of Archdeacon John Lynch" (1848); "Lives of the most eminent Painters, Sculptors, and Architects, of the Order of St. Dominic, translated from the Italian of Vincenzo Marchese (1852), out of print; " Tales and Fortunes of the Lords of Tyrone and Tyrconnell" (1868); "Rise and Fall of the Irish Franciscan Monasteries and Memoirs of the Irish Hierarchy in the Seventeenth Century" (1870). These works, all published in Dublin, have earned renown, and, except those marked out of print, have gone through numerous revised editions. Father Meehan wrote "The Cysters of Ireland," and the others which he named "Flowers from Foreign Fields." He edited Davis's "Essays" (1883), Mangan's "Essays and Poems" (1884), and Madden's "Literary Remains of the United Irishmen" (1887). He also wrote some graceful verse, which is to be found in various anthologies.

SILLARD in Catholic World (Sept., 1890).

PETER A. SILLARD.

MEERSCHAERT, THEOPHILE. See OKLAHOMA.

Megara, a titular see, suffragan to Corinth, in Achaia. The city, which was built on an arid strip of land between two rocks, had two ports, on the Saronic Gulf and the Gulf of Corinth respectively. In the eighth and seventh centuries b.c., Megara became the metropolis of flourishing colonies, the chief of which were Megara Hyblea and Selinus, in Sicily, Selymbria, Chalcedon, Astakos, Byzantium, and the Athenians, who were excluded from Megara, and the Attic market by Pericles, in 432, was one cause of the Peloponnesian War. The Megarian territory, already very poor, was then ravaged year after year, and in 427 Nicias even established a permanent post on the island of Minoa over against Nisaea. Shortly before this Megara had become the birthplace of the Sophist, Euclides, a disciple of Socrates, who, about the year 400 b.c., founded the philosophic school of Megara, chiefly famous for the cultivation of dialectic. It subsequently shared the political vicissitudes of the other Greek cities. About the end of the fifth century after Christ, under the Emperor Anastasius I, its fortifications were restored. The names of some early Greek bishops of Megara are given in Le Quen, "Oriens Christianus," II, 205. In the "Notitia episcopatum" of Leo the Wise (c. 900), the earliest authority of the kind for this region, the name of Megara does not appear. Numerous Latin bishops in the Middle Ages are mentioned in Euelb, "Hierarchia catholica medii evi!", I, 348; II, 208. Megara is now a town of 6500 inhabitants, the capital of the same name. On Easter Sunday the women there perform an antique dance which comes from Athens to see. Not a vestige remains of the temples which Pausanias described. Efforts are made to locate the acropoles of Minoa and Nisaea on various little eminences along the coast.

BRUGMANN, Romain (Berlin, 1825): LAKE, Northern Greece, II, 388; SATURN, Dial. Greek and Roman Geo., II, 310-17. S. VAILHE.

MEGARIANS.—The Megarian School is one of the imperfectly Socratic Schools, so called because they developed in a one-sided way the doctrines of Socrates. The Megarians, of whom the chief representatives were Euclid, the founder of the school, and Stilpo, flourished at Athens, during the first half of the fourth century B.C. The Eleatics, coming from Parmenides, the doctrine that there is no change or multiplicity in the world, they combined this principle with the Socratic teaching that knowledge by means of concepts is the only true knowledge. It follows from this that the only reality is the unchangeable essential nature, that the world of our sense experience is mere shadow, and that there is nothing possible except what actually exists. The affirmation of the existence of "bodiless forms," which seems to have been the Megarian designation for the unchangeable essential nature of things, is the school's most important contribution to speculative thought. Its analogy with the Platonic doctrine of ideas is evident. In the formal logical portion of his system, they emphasized the supremacy of the notion of goodness. Knowledge, Socrates taught, is the only virtue; it is identical with moral excellence. The highest object of knowledge is the highest good. But, as the Eleatics taught, the highest object of knowledge is the highest reality, being. Therefore, the Megarians conclude, the highest good and the highest reality are one and the same. Whatever Parmenides predicated of being, namely oneness, immutability, etc., may be predicated of the good also. The good is insight, reason, God; it alone exists. In order to defend these tenets, which to the popular mind seemed not only untrue but absurd, the Megarians developed to a high degree the art of disputation. This art (the eristic method, or method of strife, as it was called in contradistinction to the heuristic method, or method of finding, advocated by Socrates), was introduced into philosophy by the Eleatic, Zeno, surnamed the Dialecticant. It was adopted in the Megarian School, and carried by its followers of Euclid to a point where it nearly served as a system of logic. To Euclid himself we owe the use of the method of argumentation known as the reductio ad absurdum, which consists in attacking, not the premises, but the conclusion, of the opponent's argument and showing the absurd consequences which follow if his contention is admitted. This method, however, was germinally contained in Zeno's method by which, in his fallacies, he had striven to show that motion, change, and multiplicity are illusions.

MEGE, ANTOINE-JOSEPH, a Maurist Benedictine, b. in 1625 at Clermont; d. 15 April, 1691, at the monastery of St.-Germain-des-Prés near Paris. On 17 March, 1643, he became a Benedictine at the monastery of Vendôme. In 1659 he taught theology at the Abbey of St. Denis and afterwards devoted himself to preaching. In 1681 he was made prior of the monastery at Retheil in Champagne. Towards the end of his life he withdrew to St.-Germain-des-Prés, where he divided his time between prayer and study. His most important literary production is "Commentaire sur la règle de S. Benoît," and a MS. history of the congregation of St. Maur from 1610 till 1653 (Paris, 1687). This commentary is an attack upon the rigorous interpretation of the rule by Abbot Rancé of La Trappe, and was forbidden in 1689 by a chapter of the Maurist superiors at the instance of Bossuet. His other works are a translation of St. Ambrose's treatise "On Virginity" (Paris, 1655), "La Morale chrétienne" (Paris, 1661), a few accessional writings and translations.

MICHAEL O'TOY.

MEGIDDO. See MEGADE.

MEHRAU, formerly a Benedictine, now a Cistercian Abbey, is situated on Lake Constance, west of Bregenz, in the district of Vorarlberg, Austria. The original monastery was founded by St. Columbanus who, driven from Luxeuil, settled about 611 at this spot and built a monastery after the model of Luxeuil. A convent for women soon arose near the monastery for men. Little has been preserved of the history of either foundation up to 1079. In this year the monastery was reformed by the monk Gottfried.
sent by Abbot William of Hirsau, and the Benedictine rule was introduced. It is probable that when the reform was effected the convent for women was suppressed. In 1097-98 the abbey was rebuilt by Count Ulrich of Bregenz, its secular administrator and protector. During the twelfth and thirteenth centuries the abbey acquired much landed property; up to the middle of the eighteenth century that date it had the right of patronage for sixty-five parishes. In the era of the Reformation the abbey was a strong support of the old Faith in Vorarlberg. In particular Ulrich Mütz, afterwards abbot, exerted much influence in Bregenserwald (a mountainous district of northern Vorarlberg) by preaching with great energy against the spirit of religious innovation. It was not until 1533 that it had the right of patronage for sixty-five parishes. During the Thirty Years War the abbey suffered from the devastation wrought by the Swedes, from the quartering upon it of soldiers, and from forced contributions; it was also robbed of nearly all its revenues. Nevertheless, it often offered a free refuge to religious expelled from Germany and Switzerland. At a later date it was once more in a very flourishing condition; in 1738 the church was completely rebuilt, and in 1774-81 the monastic buildings were also entirely reconstructed. The existence of Mehrerau was threatened, as was that of other religious foundations, by the attacks upon monasteries in the reign of the Emperor Joseph II. However what was saved, the Blessed Virgin obtained the withdrawal of the decree of suppression, although it had already been signed. The Peace of Presburg (1805) gave Vorarlberg, and with it the abbey, to Bavaria, which in April, 1806, took an inventory of the abbey. In reply to the last attempt to save the abbey, namely the offer to turn it into a training-school for male teachers, the State, declared in August, 1806, that on 1 September the monastic organization would be dissolved and the monks would have to leave the abbey. The valuable library was scattered, part of it was burnt. The forest and agricultural lands belonging to the monastery were taken by the State; in February, 1807, the church was closed, and the other buildings were sold at auction. In 1808-09 the church was taken down and the material used to build the harbour of Landau. When the district came again under the rule of Austria, the monastic buildings were used for various purposes. In 1853 they were bought from the last owner, along with some pieces of land connected with them, by the Cistercian Abbey of Wettingen, Switzerland (see Wettingen). This monastery had been forcibly suppressed by the Canton of Aargau in 1841, and for thirteen years the abbey had been seeking a new home; on 18 October, 1854, the Cistercian Abbey of Wettingen-Mehrerau was formally opened. In the same year a monastery school was started. In 1859 a new Romanesque church was built; its greatest ornament is the monument to Cardinal Hergenröther (d. 1890), who is buried there. About the middle of the last century, during the fifties and sixties, the buildings were gradually enlarged. In 1910 besides the abbey (from 1002 Eugene Notz) the abbey had 32 priests; including those that had been connected with the abbey but were church was built in work outside, 64 priests; in addition there were 5 clerics, 30 lay brothers, and 4 novices. The monastery has a house of studies and a college, in which some 200 pupils are taught by the monks of the abbey. The periodical "Cisterciensерchronik," edited by Father Gregor Müller, has been issued since 1889.

JOSEPH LINKE.

Meignan, Guillaume-René, Cardinal Archbishop of Tours, French apologist and Scriptural exegete, b. at Chauvigné, France, 12 April, 1817; d. at Tours, 20 January, 1896. Having ascertained his vocation to the priesthood, on the completion of his academic studies at the Angers lycée and at Château-Gontier, he studied philosophy in the seminary of Le Mans, where he received the subdiaconate in 1839. From this institution he passed to the Collège de Toulouse, was professor there of the Doctrine of Le Mans, where, while teaching in one of the middle grades, he continued his own ecclesiastical studies. All through his career he seems to have been blessed with the friendship and sympathetic counsel of the most eminent men among the Catholics of his time and country. The Abbé Bercy, an Orientalist of some distinction, who was attracted to Le Mans and later at Toulouse, advised him to make Scriptural exegesis his special study. Mgr Bouvier ordained him priest (14 June, 1840) and sent him to Paris for a further course in philosophy under Victor Cousin. Meignan made the acquaintance of Ozanam, Montalembert, and others like them, who urged him to prepare for the special controversial needs of the day by continuing his studies in Germany. Following this advice, he became the pupil at Munich of such teachers as Görres (q. v.), Döllinger, and Windschmann; and when his earlier attraction for Scriptural studies was thoroughly reawakened under the stimulus of the then fresh Tübingen discussions, he repaired to Berlin where he attended the lectures of Neander, Hengstenberg, and Schelling. In or soon after May, 1843, Meignan returned to Paris to be numbered among the clergy of the archdiocease, but was soon (1845) obliged to visit Rome for the good of his health, which had become impaired. He seemed to recover immediately, and was able to prosecute his sacred studies so successfully that he was made Doctor of Theology at the Sapienza (March, 1846). Here again he was helped by the friendly interest and advice of many eminent men of Pereone and Gerbet, as well as by the teaching of Passaglia, Patrizi, and Theiner. Between this period and 1861, when he became professor of Sacred Scripture at the Sorbonne, he filled various academic positions in the Archdiocese of Paris, of which Mgr Darboy made him vicar-general in 1863. In 1864 he was elevated to the Bishopric of Châlons, in 1882 transferred to the See of Arras, and in 1884 to the Archbishopric of Tours.

By the logic of circumstances he was one of the chief antagonists of Ernest Renan. In his work he aimed to enlighten the lay mind on current topics of controversy and, while giving a knowledge of the assured results of criticism, to supply his readers with the Christian point of view. His aggressive and triumphant career as an apologist began as early as 1856 with the publication of "Les prophéties messianiques. Le Pentateuque" (Paris). In 1860 appeared "M. Renan et le Cantique des Cantiques" (Paris); in 1863 "M. Renan et les prophéties messianiques. Le Pentateuque" (Paris); in 1864 "De l'irrédemption, ses influences actuelles" (Paris); in 1869 "Salomon, son règne, ses écrits" (Paris); in 1892 "Les prophéties d'Israël et le Messie" (Paris); in 1893 "Danilus" (Paris); in 1894 "Jean-Baptiste" (Paris). He wrote many other works on kindred topics. His treatment of Messianic prophecy extends far beyond mere verbal exegesis, and includes a critical examination of historical events and conditions. Like other great Catholic controversialists of his time, he had to suffer adverse criticism; these criticisms were finally refuted by the Pope in the bull In XIII, who raised him to the cardinalate, 15 Dec., 1892.

BOISSONNOT, Le cardinal Meignan (Paris, 1899).

E. MACHERSON.

Meiller, Jean-Baptiste, a French Canadian physician and educator, b. at Saint-Laurent, P. Q., 9 May, 1796; d. 7 Dec., 1878. He studied the classics at the
To defray the expenses of his buildings and charitable works, he made use of church festivals, social gatherings, and other occasions to call upon the generosity of kings and princes, of the rich and noble, of the clergy and of the laity. Frequently, he himself, relying upon his friendship and often appealing to his own labours for the state; but he also very liberally used his personal means for the benefit of the Church. Towards his subjects Meinwerk was frequently harsh, but kind at heart, and, if any serious offence had been given, he would conciliate the party by presents. Twice he visited Rome, the first time in 1014, to assist at the coronation of Henry II, then, in 1028, as companion of Otto III. On this trip he received from Wolfgang, Patriarch of Aquileia, the body of St. Felix for Abdinghof. Similarly he obtained for his diocese, entirely or in part, the relics of Sts. Valerian, Minias, Philip, Juvenal, and of the great martyr-bishop Blasius. His body was buried, according to his wish, in the crypt of the church of Abdinghof. Abbot Conrad von Allenhause raised the relics and 25 April, 1376, placed them in a beautiful monument in the sanctuary. This has been considered equal to a canonisation, but his feast is not in the Primum of Pacensis, nor in, the new, modified schema of the dioceses for 1909 show any church, chapel, or altar dedicated to his name. On the secularization of Abdinghof, 1803, the remains were brought to the church of Bussdorf. The "Vita" (Mon. Germ. SS., XI, 104), written anonymously by a monk of Abdinghof, soon after 1150, is a history, not a legend, though somewhat ornamented by legendary additions.

FRANCIS MERSHMAN.

Meissen, a former see of north-east Germany. The present city of Meissen, situated in the Kingdom of Saxony on both banks of the Elbe, owes its origin to a castle built by King Henry I about 928 to protect German colonists among the Wends. To insure the success of the Christian missions, Otto I suggested at the Roman Synod of 962 the creation of an archiepiscopal see at Magdeburg. To this proposal John XII consented, and, shortly before his death in 968, it was decided at the Synod of Ravenna (967) to create three other sees—namely Meissen, Mersburg, and Zeit— as suffragans of Magdeburg. The year in which the Diocese of Meissen was established is not known, the oldest extant records being forgeries; however, the record of endorsement by Otto I in 971 is genuine. The first bishop of Meissen was appointed in 968, and a foundation (monasterium) which in the course of the eleventh century developed a chapter of canons. In 1346 the diocese stretched from the Erzgebirge in the south to the mouth of the Neisse and to the Queis, on the east to the Oder, on the north to the middle course of the Spree. It embraced the five provovices of Glatz, Breslau, Kruszw, Wurzen, and Lebus. It included four archbishoprics of Nisani (Meissen), Chemnitz, Zschillen (Wechselburg), and Niederlausitz, and the two deaneries of Meissen and Bautzen. Poorly endowed in the beginning, it appears to have acquired later large estates under Otto III and Henry II.

The chief task of the bishops of the new see was the conversion of the Wends, to which Bishops Volkind (d. 992) and Eido (d. 1015) devoted themselves with great zeal; but the work of evangelization was slow, and was yet incomplete when the investiture conflict threatened to arrest it effectively. St. Benno (1066-1106), bishop at the time when these troubles were most serious, was appointed by Henry IV and appears to have been in complete possession until 1076; in that year, however, although he had taken no part in the Saxon revolt, he was imprisoned by Henry for nine months. Escaping, he joined
the Saxon princes, espoused the cause of Gregory VII, and in 1085 took part in the Gregorian Synod of Querlindburg, for which he was deprived of his office by the emperor, a more imperially disposed bishop being appointed in his place. On the death of Gregory, Benno made peace with Henry, and, being reappointed to his former see, undertook the peacemaker's work among the Slavs. Among his successors, Herrig. (d. 1119) sided with the pope, Godebold with the emperor. In the thirteenth century the pagan Wends were finally converted to Christianity, chiefly through the efforts of the great Cistercian monasteries, the most important of which were Dobrilugk and Neu- selitz. Among the converts of the House of Meissen, Mariental near Zittau, Marienstern on the White Elster, and Mühlberg deserve mention. Among the later bishops, who were after the thirteenth century princes of the empire, the most notable are Wittigo I (1268–93) and John I of Eisengen (1340–71). The former began the magnificent Gothic cathedral, in which are buried nine princes of the House of Wettin; the latter, as notary and intimate friend of the Margrave of Meissen, afterwards the Emperor Charles IV, protected the interests of his church and increased the revenues of the diocese. During the latter's administration, in 1344, Prague was made an archiepiscopal see. In 1455 Urban V appointed the Archbishop of Prague legatus natus, or perpetual representative of the Holy See, for the Dioceses of Meissen, Bamberg, and Regensburg (Ratisbon); the opposition of Magdeburg made it impossible to exercise in Meissen the privileges of this office, and Meissen remained, though under protest, subject to the jurisdiction of the Metropolitan of Magdeburg. John's successor, John Berno (1376–9), who resigned Meissen on his election to the See of Prague, Nicholas I (1379–92), John III (1393–8), and Thimo of Colditz (1399–1410) were appointed directly from Rome, which set aside the elective rights of the cathedral chapter. Thimo, a Bohemian by birth, neglected the diocese and ruined it financially. Margrave William I of Saxony prevailed on Boniface IX in 1405 to free Meissen from the authority of the metropolitan and to place it directly under the Holy See. The illustrious Bishop Rudolf von der Planitz (1411–27), through wise regulations and personal sacrifices, brought order out of chaos. The Hussite wars caused great damage to the diocese, then ruled over by the noble brothers Caspar (1451–63) and Dietrich of Schönberg (1461–76), it soon recovered, and on Dietrich's death there was a fund of 8800 gold florins in the episcopal treasury. John V of Weissenbach (1476–87) through his mania for building and his travels soon spent this money, and left a heavy burden of debt. In 1488–1518 further impoverished the diocese through his obstinate attempt to obtain full sovereignty over his see, which brought him into constant conflict with Duke George of Saxony; his spiritual administration was also open to censure. John VII of Schleinitz (1518–37) was a resolute opponent of Luther, whose restless career in the neighbourhood of Meissen and jointly with George of Saxony, endeavoured to crush the innovations. The canonization of Benno (1523), urged by him, was intended to offset the progress of the Lutheran teaching. John VIII of Maltitz (1537–49) and Nicholas II of Carlowitz (1549–55) were unable to withstand the ever-spreading Reformation, which, as the means of preserving faithfulness in Saxony and gained ground even among the canons of the cathedral, so that the diocese was on the verge of dissolution. The last bishop, John of Hauagwitz (1555–81), placed his resignation in the hands of the cathedral chapter, in virtue of an agreement with Elector Augustus of Saxony, went over to Protestantism, married, and retired to the castle of Ruhetal near Mögeln. The electors of Saxony took over the administration of the temporalities of the diocese which in 1666 were finally adjudged to them. The canons turned Protestant, and such monasteries as still existed were secularized, their revenues and buildings being devoted principally to educational works. (For the vicarates Apostolic of Lau- sitz-Meissen see Saxony.)

Urbundbuch der Hochstifts Meissen, ed. Gerhard (3 vols., Leipzig, 1884–97), in the Codex Diplomaticus Saxoniae Regni; v. Kastner, Gesch. der Bistümer des Freistaates Sachsen (Dresden, 1884); von Bruhn (von Kaufungen), Das Domkapitel von M. im Mittelalter (Meissen, 1905); Mitteil. des Vereins für Gesch. des Mittelalters M. Joseph Lins.

Meissonier, Ernest, French painter, b. at Lyons 21 February, 1815; d. at Paris, 31 January, 1891. If the Lyonnais genius in painting is found in such artists as Chenavard, Flandrin, Puvia de Chavannes, and in such landscape painters as Ravie, Meissonier does not belong to this family. At an early age his parents took him to Paris where they set up chemical works in the Marais. A family friend introduced him to the much frequented studio of Léon Cogniet (1794–1880). His first efforts date from 1831. These are portraits, generally busts, of the bourgeois of the neighbourhood (there is one at the Louvre), life-size, and somewhat wooden in composition in execution. At about this time appeared a more significant picture, the "Visit to the Burgomaster's", three middle-class Hollanders in eighteenth-century costume, seated at a table and smoking. Herein the painter for the first time attempted those small genre subjects in costumes of the past whose pleasing picturesque ness was to contribute so much to his fame. But fame was to elude him for ten years Meissonier had to earn his living by illustration; and so he made vignettes for a number of works, to-day much sought after as "romantic editions", "Paul et Virginie", Lamartine's "Chute d'un Ange" (1839), "Le Vicaire de Wakefield", and "Les Français peints par eux-mêmes" (1840–42). By degrees, however, the young artist attracted attention. Between the "classicists", or partisans of Ingres and the "romanticists" ardent followers of Delacroix, he found favour with a public rather indifferent to the quarrels of the schools and very willing to become acquainted with a style of art which did not require so much thought. In fact Meissonier seems to have quite escaped these greater controversies, many artistic controversies, e.g. the renovation of art by the school of Barbizon and the wonderful naturalistic revolution inaugurated by Paul Huet, Corot, and Rousseau, he seems a stranger to all these interests and passions.

There was on the other hand a small genre school, to-day somewhat forgotten, that of Eugène Isabey, Eugène Lami, Célestin Nanteuil, and the brothers Johannot, which was occupied with representing small scenes of manners in the quaint every-day costume of the Middle Ages or the Renaissance. They were pleasing extemporizers, skillful and brilliant storytellers who put on canvas, often with spirit, the history of Paris. Their popularity, after Scott, was a stroke of genius to choose as models these men who are among the best masters of painting, and this at a time when Romanticism had begun to overload its canvases with violence and excesses. Besides, these artists had been for a long time greatly esteemed by collectors, and by suggesting relationship with them Meissonier increased his chances of success with am-
ateurs. Moreover no other manner suited so well the special faculties of Meissonier, his extraordinary gift of observation and his almost absolute lack of imagination. But he was clever enough to restore genre painting and to blend imitation with invention; thus, for Dutch subjects he substituted those of the Regency or of the sixteenth century. Above all he excelled in microscopic canvases, wherein the wonderful reproduction of the minutest details is a perpetual source of astonishment. In painting, the "finished" product is always sure to appeal to the philistine, and when found together with smallness, and when to the pleasure of accuracy is joined that of a feat of skill, admiration knows no bounds. No more is needed to explain the incredible success of Meissonier.

In 1842 began that series of small thumb-nail pictures, the reputation of which so long outshone that of his larger works. First came "The Young Man playing the Bass-viol," then the "Painter in his studio" (1843), the "Guard-room", the "Readers", the "Smokers", the "Bravi" (1847), the "Reading at the House of Diderot", the "Bowling-party", "La Rixe" or "The Quarrel" (1855). This year, which marked the first Universal Exhibition, marked also the apogee of Meissonier's triumphs. He was already the favourite painter of his time; his career marked the most illustrious. He was compared with the classic artists and the masters of genre; this was an exaggeration, and to-day we find much to criticize in him. His art is by the what had been already observed. It is regrettable that he did not make better use of his own gifts of observation; that he did not take his subjects directly from life, as did Dau- nier, but by painting from memory he got a semblance of mere curiosity; that he did not create something "new" instead of giving us a modernized antique and giving his pictures the false appearance of a tableau de musee. This criticism is perhaps unjust; sixteenth-century scenes have nothing better to show than "La Rixe" and "The Bravi"; and neither Stendhal nor Morimée is reproached for his Renaissance style of composition. Nevertheless it is true that despite superficial resemblances Meissonier is far inferior to the Dutch masters. To compare him with Terborch is to pay him too great an honour. His sharp faceted drawing, engraved with painful precision (cf. Fromentin, "Les Maîtres d'autrefois", 1876, 256) of his painting, swimming with trifles, without aim or restraint, his indefinite analysis of a host of insignificant objects, all grouped in the compass of an amazingly small space, go to make up a series of quaint hash works, unattractive and useless, like those pieces of embroidery which distress us when we realize the immense waste of labour they give proof of. What is wanting in these pictures is that which constitutes the value of art, emotion and life.

In 1859 Meissonier was charged to paint the "Battle of Solferino" (Louvre). This was the beginning of a new series of works, which date from the Second Empire, and in which the artist undertook to celebrate the glories of the First Empire. Renouncing his small insect-like designs of fancy, he attempted historical and open air subjects, movements of crowds and armies, and set himself the task of painting the great scenes of the imperial épopée. In 1864 he submitted his "1814" (Louvre); in 1867 his "Deaix to the Rhine"; next came "1805", "1807" (Metropolitan Museum, New York), and a large number of other military incidents. To convey the impression of a broken road, he selected a corner of his garden, had it trampled by men and horses, had trucks and carts drawn over it, and sprinkled the whole with flour to imitate melting snow. To paint Napoleon, he made use of the grey cloak and the very hat that the emperor wore. But in spite of all he falls short of the lithographs of Raffet with their prodigious mystery and their breath of the heroic.

What will last of these curious pictures is the fabulous amount of studies and sketches accumulated by the painter in preparation of his pictures. One is filled with respect before the mass of observations; there are drawings, studies of soldiers, of equipments, of horses, which are priceless documents. It is never more than an ensemble study, there is never more than a detail, a gesture, a movement, a muscle, caught and reproduced with unheard-of precision and strength, as by the camera of the most infallible instruments. There is no other example—even if we count Menzel himself—of a similar power of analysis applied to the realm of facts. To unravel a detail from the confusion of painting Meissonier was without an equal. He had an eye constructed like the lens of a magnifying glass, or like the eye of a primitive man capable of registering thousands of sensations which our civilized retina no longer perceives. For example, he was successful in catching the movement of a running horse, which no one has been able to do since the caveman, and later the cinematograph confirmed the marvellous truth of his observations.

Only everything remained for him in a fragmentary state. His was the eye of a myopic, the eye of a fly, cut like a crystal into millions of facets, the most astounding instrument known for decomposing everything into its elements, for seeing distinctly into the world of the infinitesimal, but this prodigious power of decomposition left him incapable of putting anything together again.

It is not astonishing that his "1807" cost him fourteen years of labour; he was no longer able to weld together his scraps, his extracts from nature. He scrutinized, rummaged, ransacked to infinity, and found himself powerless to give life to anything. He spoke truly when he wished to do nothing but design and when he dreamed of a picture which should be no more than a collection of sketches, of fragments and disconnected events, like the "Pensees" of Pascal, yet giving at the same time the shock and the sensation of life. The difference was, however, that the "Pensees" were to become a book of his materials, never succeeded in producing a great work, and not even in giving the impression that he
had clearly conceived one. So this man loaded with honours, wealth and glory, was perpetually unhappy and discontented. His pride and his suspicious sensi-
tiveness were proverbial. This sickly self-love was the chief cause of the division among the French art-
ists. In 1889, when the traditional Salon reopened, he opposed the Salon of the “Champ-de-Mars” or of the
Société Nationale. This unreasonable scheme had regrettable consequences and introduced into the
school the anarchical system which for twenty years has gone on developing.

Such was this eminent and most unfinished of artists, assured by the deserting of the mark of hon-
or, paid him by erecting his statue in the Garden of the
Louvre, but still less deserving of the unjust criticisms
he has since had to bear in expiation of his great glory.
He was in reality the victim no less than the product of
a valuable faculty carried to hypertrophies and
monstrosity. He may perhaps be more equitably judged by the lesser known portions of his work, in which
his faculties for analysis and observation found their
true use, as in the small portraits such as that of
“The Younger Dumas” (Louvre), those of “Stan-
ford” or “Vanderbilt”, or again his small studies from
nature as in his “Views of Venice” at the Louvre, and
especially his peerless collection of drawings at the
Louvre: a collection which are at least as the materials,
the remains or the fragments thereof. On 13 October,
1838, he married Jenny Steinheil, who died in June,
1888; in August, 1890, he married Mlle Bezanson; he
died 31 January, 1891, and after a Requiem Mass at
the Madeleine, 3 February, 1891, he was buried at
Pontoise. After his death, a number of his portraits
GÉRARD, Moniteur (1897); GASTON, Les Beaux-Arts en
Europe, II (1859); Salons (not collected in vols.);
PLANCHERS, Salons (1855); CRÉMEL, Les
nouveaux mouvements de l’art (1868); MICHEL,
Nouvelles Notes sur l’art moderne (1896); BARTON,
Les peintres du siècle: ALEXANDRE, La Peinture miliaire en France; MÜHLE,
Der Jahrhundert französischer Maler (1901).

LOUIS GILLET.

Melanchthon, Philipp, collaborator and friend of Luther, b. at Bretten (in Unterpfalz, now Baden), 16
February, 1497; d. at Wittenberg, 29 April, 1560.

(1) His Rearing and Education.—Melanchthon
was of respectable and well-to-do parentage. His
father, Georg Schwarzerd (Schwarzerd) was a cele-
brated armorer, while his pious and intelligent
mother, Ursula Iringh, was a remarkable woman of
Bretten. He received his first instruction at home
from a private tutor, and in 1507 he went to Pforz-
heim, where he lived with his grandmother Elizabeth,
sister of the great humanist, Johann Reuchlin. Here
the Rector, Georg Simler, made him acquainted with
the Greek and Latin poets, and with the philosophy of
Aristotle. But of greater influence still was his inter-
course with Reuchlin, his grand-uncle, who gave
a strong impetus to his studies. It was Reuchlin also
who persuaded him to translate his name Schwarzerd
into the Greek Melanchothon, (written Melanthon after
1531). In 1509 Melanchothon, not yet 13 years of age,
entered the University of Heidelberg. This institu-
tion, which was one of the first universities in the
world, had two faculties, Rhetoric and Agricola (see
Humanism). It is true that Pallas Spangel, Melanchothon’s eminent teacher, was also familiar with humanists and humanism, but
he was none the less an able scholar and adherent of
Thomism. Melanchothon studied rhetoric under Peter
Günther, and astronomy under Conrad Helvetius, a pupil of Regiomontanus. He continued his theological
studies, reading the ancient poets and philosophers
and historians as well as of the neo-Latinus, grammar, rhet-
oric, and dialectics. He obtained the baccalaureate
in 1511, but his application for the master’s degree in
1512 was rejected because of his youth. He there-
fore went to Tübingen, where the scientific spirit was
in full vigour, and he became there a pupil of the cele-
brated Latinist Heinrich Bebel, and, for a second
time, of Georg Simler, who was then teaching humani-
ties in Tübingen, and was later professor of jurispru-
dence. He studied astronomy and astrology under
Johann Stöffler. With Franciscus Stadianus he
planned an edition of the genuine Greek text of Aris-
totle, but nothing ever came of this. His thirst for
knowledge led him into jurisprudence, mathematics,
and even medicine.

In 1514 he won the master’s degree as first among
eleven candidates, and was made an instructor in the
university. His subjects were Vergil and Terence;
later he was assigned the lectureship on eloquence and
expounded Cicero and Livy. He also became (1514)
press-corrector in the printing office of Thomas
Anshelm, pursued his private studies, and at last turned
to theology. For the antiquated scholastic methods of
this science as taught at Tübingen, and for Dr. Jacob
Lemp, who, as Melanchothon said, had attempted to
picture Transubstantiation on the blackboard, he had,
later on, only words of derision. He studied jurispru-
dence on his own account and took up the New Testament
in the original text, but did not at this time reach any
definite theological point of view; in this branch of
knowledge, as he himself afterwards repeatedly
declared, his intellectual father was Luther. He
naturally took Reuchlin’s part in the latter’s contro-
versy with the Council of Basle, and in 1515 he published,
and wrote in 1514 a preface to the “Epistola claram
virorum” ; but he did not come prominently to the
fore. His own earliest publications were an edi-
tion of Terence (1516), and a Greek grammar (1518).
In 1518 he was offered, on Reuchlin’s recom-
 mendation, a professorship of Greek at Wittenberg.
“I know of no other man who is so capable of
writing to him,” wrote Reuchlin to the Elector of Saxony,
“save only Erasmus Roterodamus, and he is a Dutch-
man.” The first impression made by the simple,
bashful and frail-looking youth was not favourable.
But his opening address: “De corrigendis adoles-
centibus studiis” (29 Aug., 1518), elicited enthusiastic
response. He extolled the mental and moral sources of genuine science as a signal merit of the new
humanistic and scientific spirit, and he promised to
apply this method to the study of theology.

(2) Melanchothon and the German Reformation.—Luther was a strong believer in making humanism
serve the cause of the “Gospel”, and it was not long
before the still growing Reformation took hold of
Bretten. He received his first instruction at home
from a private tutor, and in 1507 he went to Pforz-
heim, where he lived with his grandmother Elizabeth,
sister of the great humanist, Johann Reuchlin. Here
the Rector, Georg Simler, made him acquainted with
the Greek and Latin poets, and with the philosophy of
Aristotle. But of greater influence still was his inter-
course with Reuchlin, his grand-uncle, who gave
a strong impetus to his studies. It was Reuchlin also
who persuaded him to translate his name Schwarzerd
into the Greek Melanchothon, (written Melanthon after
1531). In 1509 Melanchothon, not yet 13 years of age,
entered the University of Heidelberg. This institu-
tion, which was one of the first universities in the
world, had two faculties, Rhetoric and Agricola (see
Humanism). It is true that Pallas Spangel, Melanchothon’s eminent teacher, was also familiar with humanists and humanism, but
he was none the less an able scholar and adherent of
Thomism. Melanchothon studied rhetoric under Peter
Günther, and astronomy under Conrad Helvetius, a pupil of Regiomontanus. He continued his theological
studies, reading the ancient poets and philosophers
and historians as well as of the neo-Latinus, grammar, rhet-
oric, and dialectics. He obtained the baccalaureate
in 1511, but his application for the master’s degree in
1512 was rejected because of his youth. He there-
fore went to Tübingen, where the scientific spirit was
in full vigour, and he became there a pupil of the cele-
brated Latinist Heinrich Bebel, and, for a second
time, of Georg Simler, who was then teaching humani-
ties in Tübingen, and was later professor of jurispru-
dence. He studied astronomy and astrology under
Johann Stöffler. With Franciscus Stadianus he
planned an edition of the genuine Greek text of Aris-
totle, but nothing ever came of this. His thirst for
knowledge led him into jurisprudence, mathematics,
and even medicine.

In 1514 he won the master’s degree as first among
eleven candidates, and was made an instructor in the
university. His subjects were Vergil and Terence;
later he was assigned the lectureship on eloquence and
expounded Cicero and Livy. He also became (1514)
press-corrector in the printing office of Thomas
Anshelm, pursued his private studies, and at last turned
to theology. For the antiquated scholastic methods of
this science as taught at Tübingen, and for Dr. Jacob
Lemp, who, as Melanchothon said, had attempted to
picture Transubstantiation on the blackboard, he had,
later on, only words of derision. He studied jurispru-
dence on his own account and took up the New Testament
in the original text, but did not at this time reach any
definite theological point of view; in this branch of
knowledge, as he himself afterwards repeatedly
declared, his intellectual father was Luther. He
naturally took Reuchlin’s part in the latter’s contro-
versy with the Council of Basle, and in 1515 he published,
and wrote in 1514 a preface to the “Epistola claram
virorum”; but he did not come prominently to the
fore. His own earliest publications were an edi-
tion of Terence (1516), and a Greek grammar (1518).
In 1518 he was offered, on Reuchlin’s recom-
 mendation, a professorship of Greek at Wittenberg.
“I know of no other man who is so capable of
writing to him,” wrote Reuchlin to the Elector of Saxony,
“save only Erasmus Roterodamus, and he is a Dutch-
man.” The first impression made by the simple,
bashful and frail-looking youth was not favourable.
But his opening address: “De corrigendis adoles-
centibus studiis” (29 Aug., 1518), elicited enthusiastic
response. He extolled the mental and moral sources of genuine science as a signal merit of the new
humanistic and scientific spirit, and he promised to
apply this method to the study of theology.
fended him, e. g. against the Italian Dominican, Thomas Radinus of Piacenza, and the Sorbonne in Paris (1521).

But he was not qualified to play the part of a leader and the turn of a troublous period. The life which he had fitted for was the quiet existence of the scholar. He was always of a retiring and timid disposition, temperate, prudent and peace-loving, with a pious turn of mind and a deeply religious training. He never completely lost his attachment for the Catholic Church and for many of her ceremonies. His limitations first became apparent when, during Luther's stay at the Wartburg, 1521, he found himself in Wittenberg confronted with the task of maintaining order against the Zwickau fanatics, with their wild notions as to the establishment of Christ's Kingdom upon earth, communism, and so forth. What Luther accomplished in a few days on the impossible to Melanchthon. On the other hand he showed his ability as an organizer when he undertook the reorganization of Church affairs in Saxony which then appeared to be in a very bad state. For the visitations ordered by the Emperor; Luther drew up the "Instructions for Visitors of the parochial clergy" (printed, 1528), which work is remarkable for its practical sense and simplicity. Here also appears the difference between Luther and Melanchthon, for Melanchthon warns pastors against reviling pope or bishop; whereas Luther remarks: "You must denounce vehemently the Papacy and its followers, for it is already God even as the devil and his kingdom." Melanchthon, it is true, preached the doctrine that faith alone justifies and that God will forgive sins for the sake of Christ, and without work. Yet, but he added: "We must, which God has commanded, and nevertheless do good works, excuted for his personal conduct in the Reichstag, for his apprehension and contempt, his dignified attitude against the Catholic party. He himself, one added, in justification of his course: "I know that the people de cry our moderation; but it does not become us to heed the clamour of the multitude. We must labour for peace and for the future. It will prove a great blessing for us all if unity be restored in Germany." He feared the chaos and bloodshed. Hence he made concessions to the Catholics at the subsequent conferences and debates on religion. He seems to have been lured by some dream of an Evangelical-Catholic Church. He thought it possible to remain within the Catholic Church, even with the new theology. But he was never a Crypto-Catholic, as has been laid to his charge, and while existing in every other way a spirit of submission, he held firm in the "purified doctrine," and repeatedly qualified as blasphemy the lending of a hand, even in the cause of peace, to any suppression of the truth.

The story that when his mother asked which was the better of the two religions, he replied that the modified one was the more feasible, while the brother who was the surer, is nothing but a ridiculous invention. His attempt to bring about a reconciliation between the two brought him, instead of thanks, only mortification and abuse. From the age of 30 to that of 50, Melanchthon was at the height of his career as spokesman and advocate of the Reformation, which, as had formerly been the case in Hesse and Prussia, was in-
produced under his guidance into Württemberg, Brandenburg, and Saxony. He never abandoned himself to the difficulties of the day, nor did he find himself differing from Luther on many points, for as time went on Melanchthon emancipated himself more and more from Luther’s teaching. More eventful still and more painful was the last portion of his life, following the death of Luther (1546). He rejected the Augsburg Interim (1548) which was to regulate Church polity and Luther attacked it, but the Interim was finally settled by the Council on the ground that it did not harmonize with Evangelical principles. On the other hand he was prevailed upon to take part in a conference for a modified Interim, the so-called Leipzig Interim, and he addressed on this occasion a letter (25 April, 1548) to Minister Carlwitz, of Saxony, which was once more published and Luther attacked it. The letter was held by the violence of Luther, and again showed himself favourable to the Catholic system of church organization and was even ready to accept Catholic practices, though he desired to hold fast to the “evangelical” doctrines.

The result of this was the Adiaphorism controversy, in which Melanchthon declared Catholic practices adiaphorous (indifferent things, neither good nor bad), hence permissible provided that the proper doctrine were maintained and its import made clear to the people. Matthias Flacius Iliiucus and other zealots objected that these practices had heretofore been the cause of great scandal and that Melanchthon was attacked and reviled by Flacius, Amsdorf, and the other “Gnesio Lutherans”, as a renegade and a heretic. The Lutheran theologians met at Weimar in 1556, and declared their adherence to Luther’s teaching as to good works and the Last Supper. Melanchthon participated in the religious discussion which took place in 1555 between the Lutherans and the Protestant theologians. His Lutheran opponents’ behaviour toward him here proved grossly insulting. The last ten years of his life (1550–60) were almost completely taken up with theological wrangles (adaphoristic, osiaristic, stankaristic, majoristic, Calvinistic and crumpeclaviniest) and with attempts to compose these various differences. He continued in spite of all to labour for his Church and for her peace. But one readily understands why, a few days before he died, he gave as a reason for not fearing death: “thou shalt be freed from the theologians’ fury (a rabie theologorum)”. His last wish was that the Churches might become reunited in Christ. He died praying, quite a Lutheran prayer.

(3) MELANCTHON AS A THEOLOGIAN.—Melanchthon considered it his mission to bring together the religious thoughts of the Reformation, to co-ordinate them and give them a clear and intelligible form. He did not feel himself called upon to seek out their original premises or to speculate on their logical results. His theology was the substantial impress of his humanistic thought, for he saw in ancient philosophy a precursor of Christianity and sought to reconcile it with Christian Revelation. Even in dogma he took up whatever adapted itself most easily to the general trend of humanistic religious thought, and his dogmatical departures from Luther were a softening of doctrine. His theological system is contained in the “Loci Communes”, as revised by him; in substance it was brought to completion by the edition of 1535. As late as 1531 he had upheld the harsh tenets of fatalism with regard to all events and of determinism with regard to the human will. He subsequently gave “Synergism” his support, as against the determinism of both Luther and Zwingli. His theological system is contained in the “Loci Communes”, as revised by him; in substance it was brought to completion by the edition of 1535. As late as 1531 he had upheld the harsh tenets of fatalism with regard to all events and of determinism with regard to the human will. He subsequently gave “Synergism” his support, as against the determinism of both Luther and Zwingli. His theological system is contained in the “Loci Communes”, as revised by him; in substance it was brought to completion by the edition of 1535.

Likewise he emphasized the necessity of good works from the practical, ethical standpoint. For Melanchthon, as for Luther, 1556, that good works are necessary for eternal life, inasmuch as they must necessarily follow reconciliation with God. This was again attenuated later on: what is necessary, he said, is a new spiritual life or sense of duty, i.e. a righteous conscience.

As years went by he even abandoned Luther’s doctrine as to the Last Supper, and looked on Christ’s spiritual communication of Himself to the faithful and their internal union with Him as the essential feature of the Sacrament; i.e. he inclined towards Calvin’s theory. In 1560 his teachings were introduced into all the churches of Saxony, through the “Corpus Philippicum” (a collection of Melanchthonian doctrinal writings). But the latter came a change fourteen years after his death. The Philippists or Crypto-Calvinists were thrown into prison and sent into exile. They subsequently identified themselves more and more with Calvinism, even on the question of predestination. Lutheranism, narrow and harsh, won the day with its Formula of Concord (1580). So strong indeed was the rejection of the doctrine of the security of the saints, than a Calvinist. From that time on until well into the eighteenth century, Melanchthon’s memory was assailed and reviled, even in Wittenberg. It is said that Leonard Hutter, the leading theologian there at the beginning of the seventeenth century, was so enraged by an appeal to Melanchthon as an authority, even in one of his writings, that he tore down the latter’s portrait torn down from the wall and trampled under foot before the eyes of all. It was not until the period of the Enlightenment that Melanchthon was again appreciated and recognized as the real founder of a German-Evangelical theology. Indeed, he carried his labours into all the other theological fields, in some of which he outshone all other theologians. He was only toiled at least as a contributor. He promoted the study of the Scriptures not only by his own active work thereon from first to last, but also by his teachings, and by his exhortations to the clergy. Like Luther, he laid particular stress on the necessity of a thorough philological training, as well as of a knowledge of history and archaeology, for the proper interpretation of the Bible. He assisted Luther constantly in his German translation of the Bible, and also, it is said, in the production of the Latin translation which appeared at Wittenberg, in 1529. In exegesis he stood out vigorously for one sense, and that the literal, (sermo literalis), as against the “four senses” of the scholastics, which was nothing to be sought in the words of the Bible save the dogmatic and practical application and development. His commentaries on the Old Testament are not as important as those which he wrote on the New. The most noteworthy are those on the Epistles to the Romans and the Colossians, which have been published repeatedly. These are largely given to the discussion of facts and of dogmatic and polemical matters, and they have exerted considerable influence on the history of Protestant doctrines. The impulse also which he gave to the study of theology by historical methods, was felt for a long time. In his handling of the Chronicle of Carlo he treated of the history of the Church jointly with that of the state, and thereby set an example which found many imitators. He was also the first to attempt a history of dogma, and led the way in Christian biography. In homiletics he was early recognized as the originator of a more methodical form of pulpit oratory, as contrasted with the “heroic” sermons of Luther. He did not himself appear as a preacher. The churchwardens made selections from the Gospel on Sundays and Feast days, in his house or in a lecture-hall, using for this purpose the Latin tongue for the benefit of the Hungarian students who did not understand the German
sermons preached in church. This was the origin of his "Postillen" (homilies). Finally, he was the author of the first Protestant treatise on the method of theological study.

(4) MELOCHTHON AS PROFESSOR AND PEDAGOGUE.

—Melanchthon was the embodiment of the entire intellectual culture of his time. His learning covered all the branches of knowledge as it then existed, and what is more remarkable, he possessed the gift of imparting his knowledge always in the simplest, clearest and most practical form. On this account the numerous manuals and guides to the Latin and Greek grammars, to dialectics, rhetoric, ethics, physics, politics, and history, which he produced in addition to his many editions of, and commentaries on, classical authors, were, when once translated, adopted, and were republished for more than a century. The exposition shows the utmost care; the style is natural and clear. In his academic teaching also, he disdained all rhetorical devices. His power lay not in brilliant oratory, but in clearness and in the choice of the most appropriate expression (proprietas sermonis). He did not look upon learning and literature as ends in themselves, but as means for inculcating morality and religion. The union of knowledge with the spirit of religion, of humanism with the "Gospel," was ever the keynote of his public activity, and through him it became for centuries the educational ideal of "Evangelical" Germany, even, in a certain sense, of Germany as a whole. It is not easy to estimate the full extent of Melanchthon's importance in this field. By this many-sided practical activity and his work as an organizer he became the founder of higher education in "Evangelical" Germany; the elementary school lay outside his sphere. Numerous Latin schools and universities owed to him their establishment or reorganization. And in numberless cases he must have been the first to call on competent instructors, to settle controversies, or to give his opinion on the advantage or necessity of courses of study. His ideas on teaching in the three-class Latin schools are more fully set forth in the "Unterricht der Visitatoren" (1528) already referred to, and in the "Wittenberger Kirchen-und Schul-ordnung" (1533). Their novelty lies partly in the selection of subjects, but chiefly in the method. Latin naturally holds the place of honour.

Melanchthon put an end to grammatical torture and the "Doctrinale" of Alexander de Villa Dei; grammar exercises were appended to the texts. He himself had a Latin school, the Statuariae Privata, in his house, in which he prepared a few boys for the university. In 1526, he founded a second grade of the more advanced school, the Obere Schule, in Nuremberg near St. Ägidien. He looked on this as a connecting link between the Latin school and the university. It comprised dialectics and rhetoric, readings from the classics, as well as mathematics, and Greek. This grade of school, however, did not meet with any great success. The reorganization of universities, as advocated by Melanchthon, affected chiefly the arts and theological courses. The faculty of Arts became wholly humanistic. Logic, till then dominant in education, gave way to the languages, and Greek and Hebrew assumed more prominence. As sources of philosophy the classic authors replaced the writers of the Middle Ages. For the scholastic study of the liberal arts a more simple and practical course in dialectics and rhetoric was substituted. Likewise in theology, Scriptural interpretation was brought to the fore. Dogmatic principles were developed by exegesis; to these there were gradually added special exegeses. This transition marks a decided return to original sources. This transformation was wrought not only in the University of Wittenberg, but also in that of Tübingen, where Melanchthon himself took part in the work of reform, in those of Frankfort, Leipzig, Rostock, and Heidelberg, where in 1557 he took part in the deliberations concerning the university statutes. Wherever he could not appear in person he sent his advice in writing, while his disciples, for whom he obtained professorships, taught in accordance with his ideals and his method. The new universities of Marburg (1527), Königsberg (1544), and Jena (1548), which were founded under the Reformation, also found in Melanchthon a guide and a counselor. Hence his title, "Preceptor Germaniae".

KLEMENS LÖFFLER.

Melanias, Saint (the Younger), b. at Rome, about 383; d. in Jerusalem, 31 December, 439. She was a member of the famous family of Valerii. Her parents were Publicola and Albina, her paternal grandmother of the same name is known as Melanias, Senior. Little is known of the saint's childhood, but after the time of her marriage, which occurred in her thirteenth year, we have more definite information. Through obedience to her parents she married one of her relatives, Pinianus a patrician. During her married life of seven years she had two children who died young. After their death, Melanias, inclined toward a celibate life reasserting itself, she secured her husband's consent and entered upon the path of evangelical perfection, parting little by little with all her wealth. Pinianus, who now assumed a brotherly position toward her, was her companion in all her efforts toward sanctity. Because of the Visigothic invasion of Italy, she and her children moved to Messina. For 10 years lived near Messina in Sicily. Here, their life of a monastic character was shared by some former slaves. In 410 she went to Africa where she and Pinianus lived with her mother for seven years, during which time she grew well acquainted with St. Augustine and his friend Alypius. She devoted herself to works of charity and piety, especially, in her zeal for souls, to the foundation of a nunnery of which she became superior, and of a cloister of which Pinianus took charge. In 417, Melanias, her mother, and Pinianus went to Palestine by way of Alexandria. For a year they lived in a hospice for pilgrims in Jerusalem, where she met St. Jerome. She again made generous donations, upon the advice of the saint, to her estates in Spain. About this time she travelled in Egypt, where she visited the principal places of monastic and eremitical life, and upon her return to Jerusalem she lived for twelve years, in a hermitage near the Mount of Olives. Before the death of her mother (431), a new series of monastic foundations had begun. Pinianus, ambassador at the Court of Theodosius II, and in the conflict with Nestorianism. An interesting episode in her later life is the journey of the Empress Eudocia, wife of Theodosius, to Jerusalem in 438. Soon after the emperor's return Melanias died.

The Greek Church began to venerate her shortly after her death, but she was almost unknown in the Western Church for many years. She received greater attention since the publication of her life by Cardinal Rampolla (Rome, 1903). In 1908, Pius X granted her office to the congregation of clergy at Somascha. This may be considered as the beginning of a zealous ecclesiastical cult, to which the saint's
Life and works have entitled her. Melania’s life has been shrouded in obscurity nearly up to the present time; many people having wholly or partially con-
found it. Before the accuracy of her life we owe to the dis-
covery of two MSS.; the first, in Latin, was found by
Cardinal Rampolla in the Escurial in 1884, the second,
a Greek biography, is in the Barberini library. Car-
dinal Rampolla published these important dis-
coveries at the Vatican printing-office. A new biog-
raphy (1903) by Georges Goyau is worthy of mention.

Archbishop Goold died, 11 June, 1880, there were
11,661 children receiving Catholic education without
costing a penny to the state, while their parents were
contributing their share as taxpayers to the state system.

(2) Most Rev. Thomas Joseph CArr, on the solid
foundation laid by his predecessor, the first Bishop
of Melbourne, has raised a stately and imposing ed-
ifice. The present archbishop was transferred from
the ancient see of Galway, and arrived in Melbourne
on the first anniversary of Dr. Goold’s death, 11 June,
1887. Three years after his arrival he undertook the
great task of completing St. Patrick’s cathedral. For
over forty years the building of this magnificent tem-
ple absorbed every thought of the first Vicar-General,
the Right Rev. John Fitzpatrick, D.D. Yet a sum of
one hundred thousand pounds was required to carry
out the original design, exclusive of the towers which
are still unfinished. On the death of Dr. Fitzpatrick
in 1889, the archbishop enlisted the practical symp-
athy and hearty co-operation of the clergy and laity of
the archdiocese in this large undertaking. On 31
October, 1897, the cathedral was consecrated, entirely
free from debt. The foundation stone was laid in April,
1890, to the day of dedication was two hundred and thirty thousand pounds.
No modern cathedral in Ireland approaches the Mel-
bourne see, and even the two ancient cathedrals,
Christ’s Church, and St. Patrick’s, Dublin, fall far
short in seating accommodation and massive beauty.
The episcopal silver jubilee of the archbishop was
celebrated 26 August, 1907, with unbounded enthusi-
asm, when over 10,000 found standing or sitting room
within the walls of the cathedral. The clergy and
laity took occasion of this celebration to mark their ap-
preciation of Archbishop Carr’s great services to the
Church in Australia during the twenty years of his rule.
Because of his short time in position the proposal in
testimonial, a debt of eight thousand pounds was
cleared off the cathedral hall and a thousand pounds
over-subscribed handed him for educational purposes.

In connexion with that event a review was made, and
official statistics compiled, of the growth and progress of
the Church during that period. The number of clergy had increased from 26 to 56. The
total cost in the erection of churches, schools, presbytery,
halls, educational and charitable institutions amounted
to an enormous sum (considering the population) of
£1,272,874.

The development of Catholic education and the in-
crease in the number of schools not only kept pace with
the general growth, but led the van of progress.
The archbishop adhered religiously to the principle of
his predecessor in his endeavour to provide as far as
possible, Catholic education for every Catholic child.
To make effectual and permanent provision in the de-
partment of education, new teaching orders were intro-
duced. In addition to those already fighting the edu-
cational battle the archbishop, within a few years,
had the Marist Brothers, the Sisters of Charity, the
Sacred Heart Sisters, the Sisters of Loreto, the Sisters
£500,000 was expended during these years on
school buildings and residences for religious engaged
in Catholic education. In 1887 the number of pupils
attending the Catholic schools of the archdiocese was
11,661 as compared with 25,369 at the close of 1908.

This building and maintaining of a separate school sys-
tem means a double tax on the Catholic community
as the payers they contribute the proceeds of State ed-
education, and as Catholics they pay for their own; and
count the cost as nothing compared with the eternal in-
terests at stake. When the purely secular system of
education was introduced into Victoria in 1872, some anti-Catholics leagued together, and declared that the new system would "rend the Catholic Church asunder". The opposite has been the result. The very sufferings and disabilities associated with the maintenance of their own schools have united solidly the Catholic body; while the absence of religion from the State schools has "sent aunder" Protestantism in producing a generation of non-believers. No review of the Archdiocese of Melbourne would be complete without reference to the growth of Catholic literature, particularly during recent years. To stem the tide of irreligious reading, splendid efforts have been made in Melbourne, with the Catholic press and with Catholic literature. When the archbishop came to Melbourne (1887) there was only one Catholic paper, the "Advocate" in Victoria. Since then a monthly magazine, the "Austral Light", under his direction (1892), a penny weekly paper, the "Tribune" (1900), and the Australian Catholic Truth Society (1904), have come into existence, and are doing great apostolic work in the diffusion of Catholic truth. The Catholics of the archdiocese are almost entirely Irish or of Irish origin. The priesthood was exclusively Irish till recent years, when vocations among the native born are rapidly on the increase. The religious, teaching in the schools or conducting the charitable institutions, were in the earlier years from Germany and France.

SUMMARY OF THE ARCHDIOCESE OF MELBOURNE.—

Disticts, 57; Churches, 168; Secular Clergy, 113; Regular Clergy, 38; Religious Brothers, 54; Nuns, 851; Superior Schools, for Boys, 8; for Girls, 28; number of pupils, 3443; Parochial Primary Schools, 107; number of pupils, 9,926; Total number of pupils in Parochial and Superior Schools, 16,362; Orphanages and Industrial Schools, for Boys, 1, for Girls, 1; Reformatory School for Girls, 1; Magdalen Asylums for Penitent Women, 2; Home for Neglected Children, 1; Home for the Poor, 1; Home for Women and Girls out of employment, 1; Foundling Hospital, 1; Receiving Home in connexion with Foundling Hospital, 1; Catholic population of the archdiocese according to Government census returns of 1901, 145,333.

PATRICK PHELAN.

Melchers, Paul, Cardinal, Archbishop of Cologne, b. 6 Jan., 1813, at Münster, Westphalia; d. 14 Dec., 1895, at Rome. He studied law at Bonn (1830-35), and held the presidency of the university at Bonn, and theology at Munich under Klee, Görres, Windsheim and Döllinger. Ordained in 1841, he was assigned to duty in the village of Halttern. In 1844 he became vice-rector of the diocesan seminary, rector (1851), canon of the cathedral (1852), vicar-general (1854). Pius IX appointed him Bishop of Osnabrück (1857) and Archbishop of Cologne (1866). Here he laboured zealously and, moreover, inaugurated (1867) at Fulda, those annual reunions of the German bishops which have since produced such excellent results. Though he had always accepted and taught the doctrine of papal infallibility, he regarded its formal definition as untimely, a conviction which he, with thirteen other bishops, expressed in a pastoral letter of 16 Sept., 1896. At the same time, however, the bishops, in a pastoral letter which they signed without exception, warned the faithful against reports unfavourable to the future (Vatican) Council and exhorted them to await calmly its decisions. In the Council itself Archbishop Melchers took a prominent part. At a session of the Council, 1870, he expressly negatively answered the question of papal infallibility; but he refused to sign an address in which fifty-five other members of the minority notified the pope of their immediate departure and reiterated their non placet. He left Rome before the fourth solemn session, giving as his reason the outbreak of the Franco-Prussian war, and declaring his readiness to abide by the decisions of the Council. On his return to Cologne he proclaimed in an eloquent address (24 July) the dogma defined 18 July. As a means of ensuring obedience to the Council, the bishops assembled by him at Fulda, published (1 Sept.) a joint letter which produced a deep and salutary impression, and for which Pius IX expressed (20 Oct.) his gratitude. In the first five paragraphs he eliminated the opposition of Bonn, the archbishop (20 Sept. and 8 Oct.) called on Professor Dieringer, Reusch, Langen and Knoedt to sign a declaration accepting the Vatican decrees and pleading conformity thereto in their teaching. Dieringer alone compiled; the others were suspended and eventually (12 March, 1872) excommunicated.

The encroachments and repressive measures of the Kulturkampf (q. v.) were firmly resisted by Archbishop Melchers. In June, 1873, he communicated two priests who had joined the Old Catholics; for this and for other administrative acts he was fined and imprisoned six months (12 March—9 Oct., 1874). On 2 Dec., 1875, the president of the Rhine Province demanded his resignation on pain of deposition; he refused, but learning that preparations were being made to deport him to Kuslbin, he escaped (13 Dec.) to Maastricht and took refuge with the Franciscans. From their monastery he administered his diocese during ten years. Knowing, however, the temper of the German government and feelings of the Roman Curia from his see would prove injurious to religion, he, on different occasions informed Leo XIII of his willingness to resign for the general good. The pope at last reluctantly consented, but called him to Rome and created him cardinal (27 July, 1885). In 1892 during a serious illness, he was received into the Society of Jesus and lived as a Jesuit until his death six years later. He was laid to rest in the cathedral of Cologne amid obsequies that attested the people's admiration and love. St. Paul's church in the same city, completed in 1908, fittingly commemorates Melcher's heroic struggle for the liberty of the Church.

His principal publications are: "Erinnerungen an die Feier des 50 jährigen Bischofs jubilium des h. Vaters Pius IX" (Cologne, 1876); "Eine Unterweisung über das Gebet" (Cologne, 1876); "Eine Unterweisung über das heilige Messopfer" (Cologne, 1879); "Das Sendschreiben des heiligen Vaters Papst Leo XIII über den Socialismus" (Cologne, 1880); "Die katholische Lehre vom Kirche" (Cologne, 1881); "Kapitel einer Einsamkeit" (Cologne, 1892); "Die canonic deciduæ diocesani visitatones" (Rome, 1892).

LUDWIG, Kardinal Erzbischof Dr. Paulus Melchers und die St. Pauluskirche in Köln (Cologne, 1899); GRANDERSHEIT- KIRCHNER, Geschichte des Vatikanischen Konzils, II. Teil (Freiburg, 1903-1906); GRANDERSHEIT, Acta et Decreta S. S. Conciliorum Recentiorum, tom. VII (Freiburg, 1890).

Melchisedech. See MELCHISADEK, SAINT, POPE.

Melchisedech [Gr. Μέλχισεδέκ, Heb. בֵּית־כַּבֵּד, "King of righteousness" (Gen. xiv, 18-20) who, on Abraham's return with the booty taken from the four kings, "brings forth bread and wine, for he was the priest of the most high God blessed him", and received from him the tithes of all" (v. 20). Josephus, with many others, identifies Salem with Jerusalem, and adds that Melchisedech "supplied Abram's army in a hospitable manner, and gave them provisions in abundance ... and when Abram gave him the tenth part of his prey, he accepted of the gift" (Ant., i, 2, 2). Cheyne says it is a plausible and puerile conjecture (Encyc. Bib., s. v.), which "plausible conjecture" Kaufmann, however, rightly condemns (Jew. Encyc., s. v.). The Rabbins identified Melchisedech with Sem, son of Noe, rather for polemic than historic reasons, since they wished to set themselves against what is said of him as a type of Christ "without father, without mother, without genealogy" (Heb., vii, 3).

...
Melchisdechians, a branch of the Monarchians, founded by Theodotus the banker. (See Monarchians.) Another quite distinct sect or party is refuted by Eusebius, who states that he had been a pupil of St. John Chrysostom. His book Επὶ τὸν Μοναρχίαν, or according to Photius "Against the Melchisdechians" (P. G., lxv, 1117), speaks of these new teachers as making Melchisdech an incarnation of the Logos. They were anathematized by the bishops, but would not cease to preach. They seem to have been otherwise orthodox (Ep. 72) refusing to make any accords with the heretics. They held the Saviour to be the head of the Hebrews or Gentiles. They keep the Sabbath, but are not circumcised. They will not touch any man. If food is offered to them, they ask for it to be placed on the ground; then they come and take it. They give to others with the same precautions. Nothing more is known of this curious sect.

For the Monarchian Melchisdechians the ancient authorities are Pseudo-Tertullian, Priscillian, Iliodorus, Florus, and the Apologie of Apollinaris; also see Origen, Marcus Brutus (Leipzig, 1808); Irenaeus, Against Heresies, v. (See Monarchians.).

John Chapman.

Melchites (Melchites). I. Origin and Name.—Melchites are the people in Syria, Palestine, and Egypt who remained faithful to the Council of Chalcedon (451) when the greater part turned Monophysite. The original meaning of the name therefore is an opposition to Monophysism. The Nestorians had their communities in eastern Syria till the Emperor Zeno (474-491) closed the last of them. In 496 they drove them over the frontier into Persia. The people of western Syria, Palestine, and Egypt were either Melchites who accepted Chalcedon, or Monophysites (called also Jacobites in Syria and Palestine, Copts in Egypt) who rejected it, till the Monothelete heresy in the seventh century further complicated the situation. But Melchite religion, as far as can be gathered from Scripture, was closely connected with the ancient doctrine of the western Church, and it was not until the middle of the seventh century that the Nestorian, Christian, Monophysite, and Monothelite Churches were finally divided.

The name "Melchite" is not a term of abuse, nor is it currently used by the Nestorians. The Nestorians called the Chalcedonians "Heretics," and the Chalcedonians called the Nestorians "Monophysites." The name was also used by the Nestorians in the East to designate the Chalcedonians, and they were called "Melchites" by the Nestorians in the West. The name was also used by the Nestorians to designate the Chalcedonians, and they were called "Melchites" by the Nestorians in the West.
dering disloyalty of these two provinces broke out in the form of rebellion against Chalcedon. For centuries (till the Arab conquest) Monophysism was the symbol of national sentiment, and the Patriarch of Antioch. The root of the matter was always political. The people of Egypt and Syria, keeping their own languages and their consciousness of being separate races, had never been really amalgamated with the Empire, originally Latin, now fast becoming Greek. They had a chance of political independence, their hatred of Rome found a vent in this national question. The cry of the faith of Cyril, "one nature in Christ," no betrayal of Euphrasius, meant really no submission to the foreign tyrant on the Bosphorus. So the great majority of the population in these lands turned Monophysite, rose in continual rebellion against the creed of the Empire, committed savage atrocities against the Chalcedonian bishops and officials, and in return were fiercely persecuted.

The beginning of these troubles in Egypt was the deposition of the Monophysite Patriarch Dioscur, and the election by the government party of Proterius as his successor, immediately after the council. The people, especially the lower classes, and the great crowds of monks, refused to accept Proterius, and began to make tumults and riots that 2000 soldiers sent from Constantinople could hardly put down. When Dioscur died in 454 a certain Timothy, called the Cat or Wesael (αλουρος), was ordained by the Monophysites as his successor. In 457 Proterius was murdered; Timothy drove out the Chalcedonian clergy and so organized Coptic (αλουρος) Church of Egypt. In Syria and Palestine there was the same opposition to the council and the government. The people and monks drove out the Orthodox Patriarch of Antioch, Martyrius, and set up one Peter the Dyer (γασφετος, fullo), a Monophysite, as his successor. John, the successor of Timothy, gave up his beseys by Chalcedon. When he came back to his new patriarchate he found the whole country in rebellion against him. He too was driven out and a Monophysite monk Theodocus was set up in his place. So began the Monophysite national churches of these provinces. Their opposition to the court and rebellion lasted two centuries, till the Turkish conquest (Syria, 637; Egypt, 641). During this time the government, realising the danger of the disaffection of the frontier provinces, alternated fierce persecution of the heretics with vain attempts to conciliate them by compromises (Zeno's Henotikon in 482, the Acacian Schism, 484–519, etc.). It should be realised that "Egypt was the last stronghold of Monophysites than Syria or Palestine. Egypt was much closer knit as one land than the other provinces, and so stood more uniformly on the side of the national party. (For all this see Monophysitism.)

Meanwhile against the nationalistic party stood the minority on the side of the government and the council. They were the Melchites. Why they were so-called is obscure, though they were the loyal Imperialists, the emperor's party. The name occurs first in a pure Greek form as Μελχηταί. Evagrius says of Timothy Sakaphiaklos (the Orthodox Patriarch of Alexandria set up by the government when Timothy the Cat was driven out in 460) that "some called him the Imperialist (γα Μελχητος της αυταρητης") (II. E., II, 11). These Melchites were naturally for the government officials, in Egypt almost entirely so, while in Syria and Palestine a certain part of the native population was Melchite too. Small in numbers, they were until the Arab conquest strong through the support of the government and the army. The contrast between Monophysites and Melchites (Nationalists and Imperialists) was vivid. When the Monophysites spoke the national language of the country (Coptic in Egypt, Syriac in Syria and Palestine), Melchites for the most part were foreigners sent out from Constantinople who spoke Greek. For a long time the history of these countries is that of a continual feud between Melchites and Monophysites; sometimes the one, sometimes the other, is persecuted, the patriarchate is occupied by a Melchite; then again the people get the upper hand, drive out the Melchite bishops, set up Monophysites in their place and murder the Greeks. By the time of the Arab conquest the two Churches exist as rivals with rival lines of bishops. But the Monophysites are much the larger party, especially in Egypt, and form the national religion of the country. The difference by now expresses itself to a great extent in liturgical language. Both parties used the same liturgies (St. Mark in Egypt, St. James in Syria and Palestine), but while the Monophysites made a point of using the national language in church (Coptic and Syriac), the Melchites generally used Greek. It is true, however, that this was less the case than has been thought; the Melchites, too, used the vulgar tongue to a considerable extent (Charon, "Le Rite byzantin", 26–29).

When the Arabs came in the seventh century, the Monophysites, true to their anti-imperial policy, rather helped than hindered the invaders. But they were punished in the same way by the conquerors as the usual terms granted to Christians; they became two sects of Rayas under the Moslem Khalifa, both were equally persecuted during the repeated outbursts of Moslem fanaticism, of which the reign of Al-Hakim in Egypt (996–1021) is the best known instance. In the tenth century Syria was more fully incorporated in the empire (Antioch captured in 968–969, lost again to the Seljuk Turks in 1078–1081). This caused for a time a revival of the Melchites and an increase of enthusiasm for Constantinople and everything Greek among them. Under the Moslems the characteristic notes of both churches became, if possible, stronger. The Monophysites and the 'Greek-speaking' Catholics of Damascus and other important local sects. On the other hand, the Melchite minorities clung all the more to their union with the great church that reigned free and dominant in the empire. This expressed itself chiefly in loyalty to Constantinople. Rome and the West were far off; the immediate object of their devotion was the emperor's court and the emperor's patriarch. The Melchite patriarchs under Moslem rule became insignificant people, while the power of the Patriarch of Constantinople grew steadily. So, looking always to the capital for guidance, they gradually accepted the position of being his dependents, almost suffragans. When the Bishop of Constantinople assumed the title of "Ecumenical Patriarch" (680), the Melchites followed him, including all who protested. This attitude explains their share in his schism. The quarrels between Photius and Pope Nicholas I., between Michael Cerularius and Leo IX. were not their affair; they hardly understood what was happening. But naturally, almost inevitably, when the schism broke out, in spite of some protests [Peter III. of Antioch (1053–1077) protested vehemently against Cerularius's schism: see Fortescue, "Orthodox Eastern Church", 189–192], the Melchites followed their leader, and when orders came from Constantinople to strike the pope's name from their diptychs they quietly obeyed.

III. FROM THE SCHISM TO THE BEGINNING OF THE UNION. — So all the Melchites in Syria, Palestine, and Egypt broke with Rome and went into schism at the command of Constantinople. Here, too, they justified their name of Imperialist. From this time to almost our own day there is little to chronicle of their history. They existed as a "nation" (millef) under the Khalifa; when the Turks took Constantinople (1453) they made the patriarch the head of that city's "nation" (Rum i.e., the Orthodox Church) for civil affairs. Other bishops, or even patriarchs, could only approach the government through him. This further increased his authority and influence over all the Orthodox in
the Turkish Empire. During the dark ages that follow, the Ecumenical Patriarch continually strove (and generally managed) to assert ecclesiastical jurisdiction over the Melchites (Orth. Eastern Ch., 240, 259, 295, 298, 310, etc.). Meanwhile the three patriarchs (of Alexandria, Antioch, and Jerusalem) found it necessary to do among their diminished flocks, for long periods, to live at Constantinople, idle ornaments of the Phanar. The lists of these patriarchs will be found in Le Quien (loc. cit. below). Gradually all the people of Egypt, Syria, and Palestine since the Arab conquest forgot their original languages and spoke only Arabic, as they do still. This further affected their liturgies. Little by little Arabic began to be used in church. Since the seventeenth century at the latest, the native Orthodox of these countries use Arabic for all services, though the great number of Greeks among them keep their own language.

But already a much more important change in the liturgy of the Melchites had taken place. We have seen that the most characteristic note of these communities was their dependence on Constantinople. That was the difference between them and their old rivals the Monophysites, long after the quarrel about the nature of Christ had practically been forgotten. The Monophysites, having taken the decision of Chalcedon, declared their loyalty to Alexandria and Antioch-Jerusalem pure. They still use these rites in the old languages (Coptic and Syriac). The Melchites on the other hand submitted to Byzantine influence in their liturgies. The Byzantine litanies (Synoptai), the service of the Ptolemaide and other elements were introduced into the Greek-Alexandrian Rite before the twelfth or thirteenth centuries. Greeks, in Syria and Palestine the Melchites admitted a number of Byzantine elements into their services (Chorun, op. cit., 9–25).

Then in the thirteenth century came the final change. The Melchites gave up their old rites altogether and adopted that of Constantinople. Theodore IV (Chronicle, p. 112, 113) marks the date of this change. The crusaders held Antioch in his time, so he retired to Constantinople and lived there under the shadow of the Ecumenical Patriarch. While he was there he adopted the Byzantine Rite. In 1203 Mark II of Alexandria (1195–c. 1210) wrote to Theodore asking various questions about the liturgy. Theodore II of Florence and Constantine VI (1214–1227) also wrote to Mark, and Mark undertook to adopt it (P. G., CXXXVIII, 953 sq.). When Theodorus IV of Antioch (1260–1276) was able to set up his throne again in his own city he imposed the Byzantine Rite on all his clergy. At Jerusalem the old liturgy disappeared at about the same time (At last, op. cit., 21, 23).

We have then for the liturgies of the Melchites these periods: first the old national rites in Greek, but also in the languages of the country, especially in Syria and Palestine, gradually Byzantinized till the thirteenth century. Then the Byzantine Rite alone in Greek in Egypt, in Greek and Syriac in Syria and Palestine, with gradual adoption of the Latin in 1272 to the twelfth century. Lastly the same rite in Arabic only by the natives, in Greek by the foreign (Greek) patriarchs and bishops.

The last development we notice is the steady increase of this foreign (Greek) element in all the higher places of the clergy. As the Phanar at Constantinople grew more and more powerful the Melchites, so did it more and more, in ruthless defence of the feeling of the people, send them Greek patriarchs, metropolitans, and archimandrites from its own body. For centuries the lower married clergy and simple monks have been natives, speaking Arabic and using Arabic in the liturgy, while all the prelates have been Greeks, who often do not even. Thus, in our own time, the native Orthodox have rebelled against this state of things. At Antioch they have now succeeded in the recognition of their native Patriarch, Gregory IV (Hadad) after a schism with Constantinople. The troubles caused by the same movement at Jerusalem are still fresh in everyone's mind. It is certain that as soon as the present Greek patriarchs of Jerusalem (Ignatius V) and Alexandria (Photios) die, there will be a determined effort to appoint natives as their successors. But these quarrels affect the modern Orthodox of these lands who do not come within the limit of this article, inasmuch as they are no longer Melchites.  

IV. Uniates.—We have said that in modern times since the foundation of Uniate (Byzantine) churches in Syria, Palestine, and Egypt, only these Uniates should be called Melchites. Why the old name is now reserved for them it is impossible to say. It is, however, a fact that it is so. One still occasionally in a western book finds all Christians of the Byzantine Rite in these countries called Melchites, with a further distinction between Catholic and Orthodox Melchites; but the present writer's experience is that this is never the case among themselves. The man in union with the great Eastern Church in those parts never called himself or allows himself to be called a Melchite. He is simply "Orthodox in Greek or any Western language, Rumi in Arabic. Everyone there understands by Melchite a Uniate. It is true that the term is not very commonly used. They are more likely to speak of themselves as rumi katholik or in French Grecs catholiques; but the name Melchite, if used at all, always means to Eastern people these Uniates. It is convenient for us too to have a definite name for them less entirely wrong than 'Greek Catholic' for the Greeks, in Syria and Palestine, the Uniates; and 'Melchite' at all. A question that has often been raised is whether there is any continuity of these Byzantine Uniates since before the great schism, whether there are any communities that have never lost communion with Rome. There are such communities certainly in the south of Italy, Sicily, and Corsica. In the case of the Melchites we find none. It is true that there have been approaches to reunion continually since the eleventh century, individual bishops have made their submission at various times, the short-lived unions of Lyons (1274) and Florence (1439) included the Orthodox of these countries too. But there is no continuous line; when the Union of Florence was made all the Orthodox Christians in the East fell away. The present Melchite Church dates from the eighteenth century.

Already in the seventeenth century tentative efforts at reunion were made by some of the Orthodox bishops of Syria. A certain Euthymius, Metropolitan of Tyre and Sidon, then the Antiochene Patriarchs Athanasius IV (1700–1726) and the famous Cyril of Bergaza (d. 1724), the rival of Cyril Lukaris of Constantinople, who for a time was rival Patriarch of Antioch) approached the Holy See and hoped to receive the pallium. But the professions of faith which they submitted were considered insufficient at Rome. The latinizing tendency in Syria was so well known that the cardinals of the Congregation for the Propagation of the Faith drew up and sent to the Antiochene bishops a warning letter with a list of Latin heresies (in Assemani, "Bibl. Orient.", III, 639). However, in 1724 Seraphim Tanas, who had studied at the Roman Propaganda, was elected Patriarch of Antioch by the latinizing party. He at once made his submission to Rome and sent a Catholic profession of faith. He took the name Cyril (Cyril VI, 1724–1759); with him begins the line of Melchite patriarchs in the new sense (Uniates). In 1728 the schismatics elected Sylvester, a Greek monk from Athos. He was recognized by the Phanar and the other Orthodox churches; through him the Orthodox line continues. Cyril VI suffered considerable opposition from the Catholic patriarchs, and he died in 1759. He was succeeded by the Catholic patriarch Ignatius I in 1759.
tional struggle against the Orthodox majority, he resigned his office. Ignatius Jauhar was appointed to succeed Cyril; he succeeded, but the appointment was rejected at Rome and Clement XIII appointed Maximus Hakim, Metropolitan of Baalbek, as patriarch (Maximus II, 1760–1761). Athanasius Dahan of Beirut succeeded by regular election and confirmation after Maximus's death and became Theodosius VI (1761–1764). In 1764 Ignatius Jauhar succeeded in being re-elected patriarch. The pope excommunicated him, and persuaded the Turkish authorities to drive him out. In 1773 Clement XIV united the few scattered Melchites of Alexandria and Jerusalem to the jurisdiction of the Melchite patriarch of Antioch. When Theodosius VI died, Ignatius Jauhar was again elected; he was confirmed, and took the name Athanasius V (1788–1794).

Then followed Cyril VII (Siage, 1794–1796), Agapius III (Matar, formerly Metropolitan of Tyre and Sidon, patriarch 1796–1812). During his time there was a movement of Josephinism and Jansenism in the sense of the synod of Pistoia (1786) among the Melchites, led by Germanus Adam, Metropolitan of Baalbe. This movement was in vain and was put an end to by the synod of the patriarch. The synod of 1806 held at Qarafa which approved many of the Pistoian decree.

The election of the patriarch was without authority from Rome in Arabic in 1810; in 1835 they were censured at Rome. Pius VII had already condemned and withdrawn Jansenism from the Melchites of Basalbek. Among his errors was the Orthodox theory that consecration is not effected by the words of institution in the liturgy. Eventually the Melchites (Agapius) and the other Melchite bishop were persuaded to renounce these ideas. In 1812 another synod established a seminary at 'Ain-Tras for the Melchites. The newly elected Ignatius IV (Sarruf, Feb.–Nov., 1812, murdered), Athanasius VI (Matar, 1813), Macarious IV (Tawil, 1813–1815), Ignatius V (Qattan, 1816–1833). He was followed by the famous Maximus III (Maslum, 1833–1855). His former name was Michael. He had been infected with the ideas of Germanus of Basalbek, and had been elected Metropolitan of Aleppo, but his election had not been confirmed at Rome. The synod renounced these ideas and became titular Metropolitan of Myra, and procurator of his patriarch at Rome. During this time he founded the Melchite church at Marseilles (St. Nicholas), and took steps at the courts of Vienna and Paris to protect the Melchites from their Oriental enemies.

Hitherto the Turkish government had not recognized the Uniates as a separate millet; so all their communications with the State, the berat given to their bishops and so on, had to be made through the Orthodox. They were still officially, in the eyes of the law, members of the rum millet, that is of the Orthodox community under the Patriarch of Constantinople. This naturally gave the Orthodox endless opportunities of annoying them, which were not lost. In 1831 Maslum went back to Syria, in 1833 after the death of Ignatius V he was elected patriarch, and was confirmed at Rome after many difficulties in 1836. His reign was full of disputes. In 1835 he held a national synod at 'Ain-Tras, which laid down twenty-five canons for the regulation of the rites of the Rite of the Latin Church; the synod was approved at Rome and is published in the Collectio Lacensis (II, 579–592). During his reign at last the Melchites obtained recognition as a separate millet from the Porte. Maximus III obtained from Rome for himself and his successors the additional titles of Alexandria and Jerusalem, which were previously reserved for the metropolitan of Sidon. In 1841 he held a synod at Jerusalem in which he renewed many of the errors of Germanus Adam. Thus he got into new difficulties with Rome as well as with his own people. But these difficulties were gradually composed and the old patriarch died in office in 1855. He is the most famous of the line of Melchite patriarchs. He was succeeded by Clement I (Bahus, 1856–1864), Gregory II (Yussef, 1865–1897), Peter IV (Jerajiri, 1897–1902), and Cyril VIII (Jeha, the reigning patriarch, who was elected 27 June, 1903, confirmed at once by telegram from Rome, enthroned in the patriarchal church at Damascus, 8 August, 1903).

V. CONSTITUTION OF THE MELCHITE CHURCH.—The head of the Melchite Church, under the supreme authority of the pope, is the patriarch. His title is "Patriarch of Antioch, Alexandria, Jerusalem, and all the East." "Antioch and all the East" is the old title used by all patriarchs of Antioch. It is less arrogant than it sounds; the "all" is in the original Roman Prefecture of the East (Prefectura Orientalis) which corresponded exactly to the patriarchate before the rise of Constantinople (Fortescue, "Orth. Eastern Church", 21). Alexandria and Jerusalem were added to the title under Maximus III. It should be noted that these come after Antioch, although normally Alexandria has precedence over it. This is because the patriarch is fundamentally of Antioch only; he trace his succession through Cyril VI to the old line of Antioch. He is in some sort only the administrator of Alexandria and Jerusalem until the number of Melchites in Egypt and Palestine shall justify the erection of separate patriarchates for them. Meanwhile he rules equally over his whole sees. This title is also a grander title used in Polychronis and for specially solemn occasions in which he is acclaimed as "Father of Fathers, Shepherd of Shepherds, High Priest of High Priests and Thirteenth Apostle".

The patriarch is elected by the bishops, and is nearly always chosen from their number. The election is not submitted to the pope. When elected he is immediately joined to Propaganda; it is canonical the patriarch-elect sends a profession of faith and petition for confirmation and for the pallium to the pope. He must also take an oath of obedience to the pope. If the election is invalid, nomination devolves on the pope. The patriarch may not resign without the pope's consent. He must make his visit ad limina, personally or by deputy, every ten years. The patriarch has ordinary jurisdiction over all his church. He confirms the election of and consecrates all bishops; he can translate or depose them, according to the canons. He founds parishes and (with consent of Rome) dioceses, and has considerable rights of the nature of dispensation from fasting and so on. The patriarch is the head of the patriarchal church at Damascus (near the Eastern Gate). He has also residences at Alexandria and Jerusalem, where he spends at least some weeks each year; he is often at the seminary at 'Ain-Tras, not far from Beirut, in the Lebanon.

The bishops are chosen according to the bull "Reversurus", 12 July, 1867. The other bishops in communion with the patriarch choose three names, of which the pope selects one. All bishops must be celibate, but they are by no means necessarily monks. Priests who are not monks may keep wives married before ordination, but as in all uniate churches celibacy is very common, and the married clergy are looked upon rather askance. There are seminaries at Beirut and at the College of St. Ann under Cardinal Lavigerie's White Fathers, Beirut, etc. Many students go to the Jesuits at Beirut, the Greek College at Rome, or St. Sulpice at Paris. The monks follow the Rule of St. Basil. They are divided into two great congregations, that of St. John the Baptist at Shuweir in the Lebanon and that of St. George, both in Beirut. The Shuweirites have a further distinction, i.e. of those of Aleppo and the Baladites. They also convents of Basilian nuns.

Practically all Melchites are natives of the
Arabs in tongue. Their rite is that of Constantino, almost always celebrated in Arabic with a few verses and a few eulogies (epithets, etc.) in Greek. But on certain solemn occasions the liturgy is celebrated entirely in Greek.

The sees of the patriarchate are: the patriarchate itself, to which is joined Damascus, administered by a vicar; then two metropolitan dioceses, Tyre and Aleppo; two archiepiscopates, Bosra with Hauran, and Homs and with Hantik; seven bishoprics, Sidon, Beirut (with Jebeil), Tripoli, Acre, Zehla, and the Beqaa, Paneas, and Baalbek. The patriarchates of Jerusalem and Alexandria are administered for the patriarch by vicars. The total number of Melchites is estimated at 130,000 (Silbermann) or 114,080 (Werner).

For the origin and history see any history of the Monophysite heresy. Neale, History of the Holy Eastern Church (London, 1847-1850), IV and V; The Patriarchate of Alexandria—supplementary volume: The Patriarchate of Antioch, ed. Williams (London, 1873); Charon, Histoire des Patriarcat Mélites (Rome, in course of publication), a most valuable work; Rauhut, Documenti inediti per servire a l'istoria del Christianismo in Orient (3 vols., Paris, 1897); Le Quien, Oriens Christianus Paris, 1690, 287-393 (Alexandrine Patriarchate), 690-730 (Jerusalem), II, 137-157 (Jerusalem).

Melchisedek. See Melchisedech.

Melénès Valdés, Juan, Spanish poet and politician, b. at Ribera del Fresno (Badajoz) 11 March, 1754; d. in exile at Montpellier, France 24 May, 1817. He studied law at Salamanca and while there, began his poetical career. In 1789, with the Batlle, he was appointed to the Spanish Academy for the best eulogies on the pleasures of life in the country. In 1781 he went to Madrid where he made the acquaintance of the minister and author, Jovellanos, whose favour he enjoyed, and who had him appointed to a chair in the University of Salamanca. In 1784 Mélenès was one of the 350 competitors for a prize offered by the city of Madrid for the best comedy of the generation. His comedy, "Las bodas de Camacho el rico" founded on the famous story of Cervantes, was awarded the prize and presented, but, as a stage production, it was not successful. This failure gave his detractors opportunity for much unfavourable criticism. Mélenès, enlisting by publishing in 1786 the first volume of his poems which made much of what it in that quickly ran through several editions and firmly established his literary reputation. He now entered upon a political career which was to prove his ruin. Through the favour of his friend Jovellanos, he obtained the posts successively of judge of the court of Saragos and of the court of Castile. He was residing at Madrid in 1791, and fiscal of the supreme court in Madrid in 1797. On the fall of Jovellanos, Mélenès was ordered to leave Madrid, and after brief stays in Medina del Campo and Zamora, he finally established his residence at Salamanca. After the revolution of 1808, Mélenès accepted from the government of Joseph Bonaparte the post of councillor of state and late that of minister of public instruction. This lack of patriotism naturally involved him in trouble with his countrymen, so that when the Spaniards returned to power in 1813, he was compelled to flee to France. Here he passed four years amid misery and misfortune, and died at Montpellier poor and neglected in his old age.

Though Mélenès cannot be considered a great poet, he was not lacking in talent. His poems are characterized by delicacy of expression and grace, rather than by vigour and great flights of fancy. He shows to best advantage in his eclogues and romances, which are distinguished for their easy flow and facility. In spite of the fact that he is but little read to-day, he undeniably exercised some influence in the literary restoration during the reign of Charles III, and has sometimes been called by admiring Spaniards "Restaurador del Parnaso" (Restorer of Parnassus). Besides the works already mentioned, Mélenès wrote a lyric poem on the creation, an epic entitled "La Calde de Lusbe", an ode to Winter, and a translation of the Iliad. Complete editions of the poems of Mélenès, with a life of the author by Quintana, were published in Madrid in 1820 (4 volumes), and in Barcelona in 1838. "La Biblioteca de Autores Españoles" (LXIII) reproduces the poems.

Meletion Schism. See MELETUS OF ANTIOCH; MELETUS OF LUCYPOLIS.

Meletius of Antioch, Bishop, b. in Melitene, Lesser Armenia; d. at Antioch, 381. Before occupying the see of Antioch he had been Bishop of Sebaste, capital of Partibria or Prima Antiochia, and was sent as a legate by Diocletian from Sebaste to Beroea and thence to Antioch; his elevation to Sebaste may date from the year 358 or 359. His sojourn in that city was short and not free from vexations owing to popular attachment to his predecessor Eustathius. Asia Minor and Syria were troubled at the time by the theological disputes of a new ascetic-Arian character. Under Eustathius (324-330) Antioch had been one of the centres of Nicene orthodoxy. This great man was set aside, and his first successors, Paulinus and Euaihlus held the see but a short time (330-332). Others followed, most of them unequal to their task, and the Church of Antioch was rent in twain by schism. The Eutychian controversy raged in the orthodox camp, but details of this division escape us until the election of Leontius (344-358). His sympathy for the Arian heresy was open, and his disciple Ætius preached pure Arianism which did not hinder his being ordained deacon. This was too much for the patience of the orthodox under the leadership of Flavius and Diodorus. Ætius had to be removed. On the death of Leontius, Eudoxius of Germanicia, one of the most influential Arians, speedily repaired to Antioch, and by intrigue secured his appointment to the vacant see. He held it only a short time, was banished to Armenia, and in 359 the Council of Seleucia appointed a successor named Ananias, who was at one time also exiled. Eudoxius was restored to favour in 360, and made Bishop of Constantinople, whereby the Antiochenepiscopal succession was re-opened. From all sides bishops assembled for the election. The Arians were the dominant party. Nevertheless the choice seems to have been a compromise. Meletius, who had resigned his see of Sebaste and who was a personal friend of Acacius, was elected. The choice was generally satisfactory, for Meletius had made promises to both parties so that orthodox and Arians thought him to be on their side.

Meletius doubtless believed that truth lay in delicate distinctions, but his formula was so indefinite that even to-day, it is difficult to seize it with precision. He was neither a thorough Nicene nor a decided Arian. Meanwhile he passed alternately for an Anomean, an Homoioan, an Homoian, or a Neo-Nicene, seeking always to remain outside any inflexible classification. It is possible that he was yet uncertain and that he expected from the contemporary theological ferment some new and ingenuous solution unsatisfactory to himself, but above all non-committal. Fortune had favoured him thus far; he was absent from Antioch when elected, and had not been even sounded concerning his doctrinal leanings. Men were wearing
Interminable discussion, and the kindly, gentle temper of Meletius seemed to promise the much-desired peace. He was no Athanasius, nor did unheroic Antioch wish for a man of that stamp. The qualities of Meletius were genuine; a simple life, pure morals, sincere piety and affable manners. He had no transcendent merit, unless the even harmonious balance of his Christian virtues might appear transcendent. The new bishop held the affection of the large and turbulent population he governed, and was esteemed by such men as St. John Chrysostom, St. Gregory Nazianzen, St. Gregory of Nyssa, St. Basil, and even his adversary St. Epi-
phanius. St. Gregory Nazianzen tells us that he was a very pious man, simple and without guile, full of godliness; peace shone on his countenance, and those who knew him best, Paulinus, and Faustus, were sure of his true character, and what he was called, and his Greek name revealed it, for there was honey in his disposition as well as his name. On his arrival at Antioch he was greeted by an immense concourse of Christians and Jews; every one wondered for which faction he would proclaim him- self, and already the report was spread abroad, that he was simply a partisan of the Nicene Creed. Meletius took his own time. He began by reforming certain notorious abuses and instructing his people, in which manner work he might have aroused enmity had he not avoided all questions in dispute. Emperor Constans, a militant Arian, called a conference calculated to force from Meletius his immost thought. The em-
peror's purpose was founded on a question, a text, upon the chief text in the Arian controversy. "The Lord possessed me in the beginning of His way" (Prov., viii, 22).

In the beginning Meletius was somewhat long and tedious, but exhibited a great Scriptural knowledge. He cautiously declared that Scripture does not contra-
dict the doctrine of the Incarnation; but not one word of explanation of the doctrine of God's only begot-
ten Son. One does not get beyond an approximation which permits us to understand to a certain extent, and which brings us gently and progressively from visible things to hidden ones. Now, to believe in Christ is to believe that the Son is like unto the Fa-
ter. His image. Who is in everything, creator of all; and not an imperfect but an adequate image, even as the effect corresponds to the cause. The generation of the only begotten Son, anterior to all time, carries with it the concepts of subsistence, stability, and exclu-
sivism. Meletius then turned to moral considera-
tions, but he had satisfied his hearers, chiefly by the repeated citation of Arian texts. One of the chief objects was to fortify the doctrine of the Holy Ghost in the face of heresy and error. The orthodoxy of the bishop was fully established, and his profession of faith was a severe blow for the Arian party. St. Basil wrote the hesitating St. Epiphanius that "Meletius was the first to speak freely in favour of the truth and to fight the good fight in the reign of Constans". As Meletius ended his discourse his audi-
cence asked him to add more of his teaching. He extended three fingers towards the people, then closed the rule and said, "Three Persons are conceived in the mind but it as though we addressed one only". This gesture remained famous and became a rallying sign. The Arians were not slow to avenge themselves. On vague pretexts the emperor banished Meletius to his native Armenia. He had occupied his see less than a month.

This exile was the immediate cause of a long and deplorable schism between the Catholics of Antioch, henceforth divided into Meletians and Eustathians. The churches remaining in the hands of the Arians, Paulinus governed the Eustathians, while Flavious and Thenius were the chiefs of the Meletian flock. In every family one child bore the name of Meletius, whose portrait was engraved on rings, reliefs, cups, and the walls of apartments. Meletius went into exile in the early part of the year 361. A few months later Emperor Constans died suddenly, and one of the first measures of his successor Julian was to revoke his pre-
ecessor's decrees of banishment. Meletius quite prob-
ably returned at once to Antioch, but his position was a difficult one in presence of the Eustathians. The Council of Alexandria (362) tried to re-establish har-
mony and put an end to the schism, but failed. Both parties were steadfast in their claims, while the vehe-
mence and iniquity of the orthodox mediatrix increased their dissension, and ruined what small prospects of peace. Though the election of Meletius was beyond contestation, the hot-headed Lucifer Cagliari yielded to the solicitations of the opposing faction, and instead of temporizing and awaiting Meletius's approaching return from exile, assisted by two confessors he has-
tily consecrated as Bishop of Antioch the Eustathian Paulinus, and by virtue of his grave, im-}
portancy, for it definitively established the schism. Me-
letius and his adherents were not responsible, and it is a peculiar injustice of history that this division should be known as the Melethon schism when the Eustathians or Paulinians were alone answerable for it. Meletius's return soon followed, also the arrival of Eusebius of Vercelli, but he could accomplish nothing under the circumstances. The persecution of Emperor Julian, whose chief residence was Antioch, brought new vex-
ations. Both factions of the orthodox party were equally harassed and tormented, and both bravely tried.

An unexpected incident made the Meletians prominent. An anti-Christian writing of Julian was an-
swered by the aforesaid Meletian Diodorus, whom the emperor had coarsely ridiculed. "For many years", said the imperial apostol of Hellenism, "his chest has been sunken, his limbs withered, his cheeks flabby, his countenance livid". So intent was Julian upon des-
cribing the morbid symptoms of Diodorus that he was frequently燎 to forget that he should be writing for a pope, less had no desire to draw attention and persecution upon himself, aware that his flock was more likely to lose than to gain by it. He and two of his chorosip-
copi, we are told, accompanied to the place of martyr-
dom two officers, Bonousus and Maximilian. Meletius also is said to have sent a convert from Antioch to Jerusalem. This, and a mention of the flight of all Antiochene ecclesiastics, led to the arbitrary supposi-
tion that the second banishment of Meletius came during Julian's reign. Be that as it may, the sudden end of the persecuting emperor and Jovian's accession must have greatly shortened the exile of Meletius. Jovian met Meletius at Antioch and showed him great kindness, and on the death of Constans, the order of the emperor, and expressed to Meletius his wish of entering into communion with him. Meletius, ill-advised, delayed answering him, and St. Athanas-
sius went away leaving with Paulinus, whom he had not yet recognized as bishop, the declaration that he admitted him to his communion. Such blundering resulted in sad consequences for the Meletian cause. The moderation constantly shown by Athanasius, who thoroughly believed in Meletius's orthodoxy, was not found in his successor, Peter of Alexandria, who did not conceal his belief that Meletius was an heretic. For a long time the position of Meletius was contested by the very ones who, it seemed, should have established it more firmly. A council of 26 bishops at Antioch pre-
sided over by Meletius was of more consequence, but a pamphlet ascribed to Paulinus again raised doubts as to the orthodoxy of Meletius. Moreover, new and unsuspected difficulties soon arose.

Jovian's death made Ariasianism again triumphant and a violent persecution broke out under Emperor Valens. At the same time the rivalry between Alexandria and Antioch helped the cause of Meletius. However illustrious an Egyptian patriarch might be, the Christian episcopate of Syria and Asia Minor was too national or racial, too self-
centred, to seek or accept his leadership. Athanasius,
Indeed, remained an authoritative power in the East, but only a bishop of Antioch could unite all those who were now ready to frankly accept the Nicene Creed. In this way the rôle of Meletius became daily more prominent. While in his own city a minority contested his right to the see and questioned his orthodoxy, his influence was at least received in the East and from various parts of the empire bishops accepted his leadership. Chalcedon, Ancrya, Melitene, Pergama, Cæsarea of Cappadocia, Bostra, parts of Syria and Palestine, looked to him for direction, and this movement grew rapidly. In 365 Meletius could count on 26 bishops, in 379 more than 150 rallied around him. Theologically his influence was at least received in Asia Minor. Meletius and his disciples, however, had not been spared by the Arians. While Paulinus and his party were seemingly neglected by them, Meletius was again exiled (May, 365) to Armenia. His followers expelled from the churches, sought meeting places for worship wherever they could. This new exile, owing to a lull in the persecution, was of short duration, and probably in 367 Meletius took up again the government of his see. It was then that John, the future Chrysostom, entered the ranks of the clergy. The lull was soon over. In 371 persecution raged anew in Antioch, where Valens resided almost to the time of his death. At this time St. Basil occupied the see of Cæsarea and was unfortunately his excommunication. With rare insight Basil thoroughly understood the situation, which made impossible the restoration of religious peace in the East. It was clear that the antagonism between Athanasius and Meletius protracted endlessly the conflict. Meletius, the only legitimate Bishop of Antioch, was the only acceptable one. Unfortunately he remained in exile for the third time. In these circumstances Basil began negotiations with Meletius and Athanasius for the pacification of the East.

Aside from the inherent difficulties of the situation, the slowness of communication was an added hindrance. Not only did Basil’s representatives have to travel from Cæsarea to Armenia, and from Armenia to Alexandria, he also had to go to Rome to obtain the sanction of Pope Damascus and the acquiescence of the West. Notwithstanding the blunder committed at Antioch in 363, the generous spirit of Athanasius gave hope of success, his sudden death, however (May, 373), caused all efforts to be abandoned. Even at Rome and at the West Basil and Meletius were received with disappointment. While they worked persistently to restore peace, a new Antiochene community, declaring itself connected with Rome and Athanasius, increased the number of dissidents, aggravated the rivalry, and renewed the disputes. There were now three Antiochene churches that formally adopted the Nicene Creed. The generous scheme of Basil for appeasement and union had ended unfortunately, and to make matters worse, Evagrius, the chief promoter of the attempted reconciliation, once more joined the party of Paulinus. This important conversion won over to the intruders St. Jerome and Pope Damascus; the very next year, and without any declaration of the see of St. Basil. Through disinterestedness, the latter did not entirely give up hope of bringing the West, especially the pope, to a fuller understanding of the situation of the Antiochene Church. But the West did not grasp the complex interests and personal issues, nor appreciate the violence of the persecution against which the orthodox parties were struggling. In order to enlighten these well-intentioned men, closer relations were needed and deputies of more heroic character; but the difficulties were great and the “status quo” remained.

After many disheartening failures, there was finally a glimpse of hope. Two legates sent to Rome, Dorotheus and Santichus, returned in the spring of 377, bringing with them the Bishop of Rome and a letter from Basil instantly proceeded to publish everywhere. These declarations pronounced anathemas against Arius and the heresy of Apollinaris then spreading at Antioch, condemnations all the more timely, as theological excitement was then at its highest in Antioch, and was gradually reaching Palestine. St. Jerome entered with their special gratitude, with which St. Basil instantly proceeded to appeal to Pope Damascus in a letter still famous, but which the pope did not answer. Discontented, Jerome returned to Antioch, let himself be ordained presbyter by Paulinus, and became the echo of Paulinist imputations against Meletius and his following. In 378 Dorotheus and Santichus returned from Rome, bearers of a formal condemnation of the error, hinted out by the Orientals; this decree definitely united the two halves of the Christian world. It seemed as though St. Basil was but waiting for this object of all his efforts, for he died 1 Jan., 379. The cause he had served so well was deemed worthy of a double death. The two months earlier warranted a hopeful outlook. One of the first measures of the new emperor, Gratian, was the restoration of peace in the Church and the recall of the banished bishops. Meletius therefore was reinstated (end of 375), and his flock probably met for worship in the “Palais” or old church. It was a heavy task for the aged bishop to re-establish the fortunes of the orthodox party. The most urgent step was the ordination of bishops for the sees which had become vacant during the persecution. In 379 Meletius held a council of 150 bishops in order to assure the triumph of orthodoxy in the East, and published a profession of faith which was to obtain the approval of the Council of Constantinople (382). The end of the schism was near at hand. Since the two factions which divided the Antiochene Church were orthodox there remained but to unite them actually, a difficult move, but easy when the death of either bishop made it possible for the survivor to exercise full authority without hurting pride or discipline. This solution Meletius recognized; but both the Eastern and Western conciliar and peace-making proposals were rejected by Paulinus who refused to come to any agreement or settlement. Meanwhile, a great council of Eastern bishops was convoked at Constantinople to appoint a bishop for the imperial city and to settle other ecclesiastical affairs. In the absence of the Bishop of Alexandria, the presidency rightfully fell to the Bishop of Antioch, whom the Emperor Theodosius received with marked deference, nor was the imperial favour unprofitable to Meletius in his quality of president of the assembly. It began by electing Gregory of Nazianzus Bishop of Constantinople, and to the great satisfaction of the orthodoxy it was Meletius who enthroned him. The Council immediately proceeded to confirm the Nicene faith, but during this important session Meletius died almost suddenly. Feeling his end was near, he spent his remaining days re-emphasizing his eagerness for unity and peace. The death of one whose firmness and gentleness had kindled great expectations caused universal sorrow. The following year, 381, Theodosius was present, took place in the church of the Apostles. The funeral panegyrics were touching and magnificent. His death blasted many hopes and justified grave forebodings. The body was transferred from Constantinople to Antioch, where, after a second and solemn funeral service, the body of the aged bishop was laid beside his predecessor St. Babylas. But his name was to live after him, and long remained for the
Eastern faithful a rallying sign and a synonym of orthodoxy.

to and Church", V, 5; Cavallera, "La schisma di Antiochia
in IV e V secolo" (Paris, 1953).

H. Leclercq.

Meletius of Lyopolis, Bishop of Lyopolis in Egypt, gave his name to a schism of short duration. There is uncertainty as to the dates of his birth, his death, and his episcopate. It is known, however, that he was bishop of the above-mentioned city as early as 303, since in a council held about 303 at Alexandria by Peter, archbishop of that city, Meletius was deposed for several reasons, among others for sacrificing to idols. Meager references by St. Athanasius were our only source of information until important documents were discovered in the eighteenth century by Scipio Maffei at Verona in a manuscript dealing with the Meletian schism in Egypt. The three documents preserved in Latin are undoubtedly authentic. There is first, a letter of protest by four Egyptian bishops, Hesychius, Pachomius, Theodore, and Phileas, dating at the latest from 307, from the very beginning of the schism of Meletius, and before the excommunication of the latter who was termed by the bishops, diabolicus conscriptus (a devilish imposter). "We have heard," said the bishops, "grievous reports regarding Meletius who is accused of troubling the divine law and ecclesiastical rules. Quite recently, a number of witnesses having confirmed the reports, we feel compelled to write this letter. Meletius is undoubtedly aware of the very ancient law which forbids bishops to ordain outside his own diocese. Nevertheless, without regard for this law, and without consideration for the great bishop and father, Peter of Alexandria, and the incarcerated bishops, he has created general confusion. To vindicate himself he will perhaps declare that he was compelled to act thus, as the congregations were without pastors. Such a defense would be in conflict with their names (cucumentes) had been appointed. Were they neglectful of their duties, their case should have been presented before the incarcerated bishops. If the latter had been martyred, he could have appealed to Peter of Alexandria, and thus have obtained the authority to ordain. Second, an anonymous note added to the following letter to the bishops of Egypt: "Meletius and his deacons received the letter and read it, paid no attention to the protest and presented himself neither before the incarcerated bishops, nor Peter of Alexandria. After all these bishops, priests, and deacons had died in their dungeons at Alexandria, he immediately repaired to the city. Among other intrigues there were some that certain Iosidors and one Arius, seemingly honourable, both of them desirous of being admitted to the priesthood. Aware of the ambition of Meletius and what he sought, they hastened to him, and gave him the names of the visitors (cucumentes) appointed by Peter. Meletius excommunicated them and ordained two others, one of whose names he retained, and provided for his mines." On learning this, Peter wrote to his Alexandria flock. Here comes the third document, in which occurs the phrase interpreted as follows: "Having heard," said Peter, "that Meletius, without considering the letter of the blessed bishops and martyrs, has intruded himself into my diocese, and deprived my deputies of their power, and consecrated others, I advise you to avoid all communion with him until I can bring him before me face to face in the presence of prudent men, and investigate this affair.""  

The conduct of Meletius was all the more reprehensible in as much as his insubordination was that of one in very high office. St. Epiphanius and Theodoret testify that the Meletians stood next in rank to Peter of Alexandria, after which they were basely endeavouring to supplant at the moment, when Peter was forced to flee from persecution and live in hiding. It was not only against Peter, but also against his immediate successors, Achillas and Alexander, that Meletius maintained his false position. This we know from St. Athanasius, an authoritative witness. Comparing the information given us by St. Athanasius with that furnished by the documents above, the date of the beginning of the Meletian schism may be determined with fair accuracy. It was evidently during the episcopate of Peter, who occupied the See of Alexandria from 300 to 311. Now St. Athanasius in his "Epistola ad episcopos" states positively that "the Meletians were declared heretical thirty-six years ago", i.e. at the Council of Nicaea (325). Apparently, therefore, Athanasius was writing in 361. If now we deduct fifty-five years, we have the year 306 for the condemnation of the Meletian schism; and as the persecution of Diocletian raged bitterly between 303 and 305, the beginnings of the schism seem to belong to the year 304, or 305. St. Epiphanius, Bishop of Salamis in Cyprus gives a circumstantial account (Haer. 113) in contradiction with the foregoing narrative. According to him, the schism arose from a dispute between Peter and Peter regarding the reception of certain of the faithful, particularly of ecclesiastics, who had abjured the Faith during the persecution. This account, preferred by some historians to the statement of St. Athanasius, is no longer credible since the discovery of the aforesaid documents by Maffei at Verona. Now, then, explain the origin of the sect, Meletianism, and their religious views. It seems to us to arise in this manner: after Peter's death Meletius was arrested and sent to the mines; on his way he stopped at Eleutheropolis, and there founded a church of his sect; Eleutheropolis being the native town of Epiphanius, the latter naturally came in contact with Meletians in his early days. They would of course represent a minor remnant of the origin of their sect; and thus their partial and misleading narrative was afterwards inserted by Epiphanius in his great work on heresies. Finally, the reference to the Meletian schism by Sozomen and Theodoret quite accord with the original documents discovered at Verona, and more or less with what St. Athanasius has said: the sects are designated by St. Athanasius merely mentions the schism in passing and very likely follows St. Epiphanius.  

The suppression of the Meletian schism was one of the three important matters that came before the Council of Nicaea. Its decree has been preserved in the synodices, two of which are given to the Egyptian bishops. Meletius, it was decided, should reunite to the pulpits of his own city of Lyopolis, but without exercising authority or the power of ordaining; moreover he was forbidden to go into the environs of the town or to enter another diocese for the purpose of ordaining its subjects. He retained his episcopal title, but the ecclesiastics ordained came to receive against his imposition of hands, the ordinations performed by him being therefore regarded as invalid. Throughout the diocese where they were found, those ordained by him were always to yield precedence to those ordained by Alexander, nor were they to do anything without the consent of Bishop Alexander. In the event of the death of a non-Meletian bishop or ecclesiastic, the vacant prelature might be given to a Meletian, provided he were worthy and the popular election were ratified by Alexander. As to Meletius himself, episcopal rights and prerogatives were taken from him owing to his incorrigible habit of everywhere exciting confusion. These mild measures, however, were in vain; the Meletians joined the Arians and did more harm than ever, being insectivorous with St. Athanasius. Referring to this attempt at reunion the latter said: "Would to God it had never happened."
MELITUS

About 325 the Melitians counted in Egypt twenty-nine bishops, Melitius included, and in Alexandria itself, four priests, three deacons, and one army chaplain. Conformably to the Nicene decree, Melitius lived first at Lygopolis in the Thebaid, but after Bishop Alexander's death he took a personal part in the negotiations which united his party to the Arians. The date of his death is not known. He nominated his friend, John, as his successor. Theodoret mentions very peremptorily Melitian monks who practised Jewish ablations. The Melitians died out after the middle of the fifth century.

H. LECLERCQ.

MELITUS and RAPOLLA, DIACOPE (MELEPHNESI ET RAPOLLENSIS), in the province of Potenza, in Basilicata, southern Italy. Meli is situated on a pleasant hill, on the slopes of Mt. Vulture. The origin of the city is not well known; but the town became famous in 1043, when it was chosen capital of the new military state created in southern Italy by the twelve Norman counts, founders of the Kingdom of Naples. Nicholas II made it a diocese immediately dependent on the Bishop of Salerno, whose seat was Baldisso. Its beautiful cathedral, a work of Bishop Roger, son of Roger Guiscard (1155), was destroyed by the earthquake of 1851. Among its other bishops, mention should be made of Fra Alessandro da San Elpidio, a former general of the Augustinians (1328), and a learned theologian. In 1528, Clement VII, in view of the scarcity of its revenues, united the Diocese of Rapolla to that of Meli, “seque principalius”. Rapolla is a site founded by the Lombards, on the banks of the Olivento River. The Normans took it from the Greeks in 1042, and fortified it with works still to be seen. The town, which has a beautiful cathedral, was an episcopal see, suffragan of Pistoia, in the time of Gregory VII. Other bishops were Cardinal Giovanni Vincento Acquaviva (1357), who gave a noble organ to the cathedral, and Lasso Caraffini (1622), founder of the seminary. Several councils were held at Meli: one in 1048; another 1059, under Nicholas II, important on account of the prohibition of the marriage of priests, on the deposition of the Bishop of Trani, on the removal of the imperial legate, and the investiture of Robert Guiscard of the Duchy of Apulia and Calabria; the council of 1087; the one of 1089, against simony and the concubinage of priests, and for the freedom of the Church; lastly, the council of 1100. The united sees have 14 parishes, with 40,000 inhabitants, 66 priests, 5 religious houses of women, and 1 school for boys and 1 for girls.

GAPPELLETI: Le Chiese d'Italia, XXXI (Venice, 1887); U. BENIGNI.

MELITUS, GIOVANNI, Sicilian poet, b. at Palermo, 4 March, 1740; d. 20 Dec., 1815. He was the son of a goldsmith of Spanish origin, and received his first education from the Jesuits. He afterwards studied natural science and medicine, and practised as a physician in the hamlet of Cinisi and later at Palermo itself, where for nineteen years he held the chair of chemistry at the university. Towards the end of his life he took minor orders. In childhood he had been led to poetry by reading Ariosto, and in poetical composition found relief from domestic unhappiness. His poems are written in the Sicilian dialect, and as a vernacular poet of this kind he has no rival in Italian literature. His longer works, "La Fata Galante", "Don Chisciotte e Sanci Fancas", "L'origini di lu Mumm", are fantastic pieces on subjects of popular tradition; "La Festa dell' Amapa", "La Melittonica", "La Florica", "L'Asino" are elegies and idylls of the four seasons of the year, is full of Sicilian colour, and has won him the title of "the modern Theocritus". Meli was a staunch supporter of the Bourbon regime, and among his lyrics "Anacreontiche" and "idi", is an ode in honour of Nelson, which however, he is said to have suppressed after the latter's execution of the Neapolitan patriots. His last work, the "Favuli morali", is a collection of Epispan fables in verse with an underlying allegorical or satirical meaning.

OPERA DI G. JOVANNI MELITUS (Palermo, 1837); La Bucolica, La Florica, Le feste Dell'Amapa, E l'Elegie di L'Asino e Melittonica, in italian in da AGOSTINO GALLO (Palermo, 1838); NAVANTI, Studio critico su Giovanni Meli (Palermo, 1904).

EDMUND G. GARDNER.

MELIUS, PIUS, Italian theologian, b. at Rome, 12 Jan., 1800; d. in London, June, 1883. He entered the Society of Jesus on 14 Aug., 1815, taught literature at Reggio, and afterwards was engaged in preaching. He left the Society, on the death of H. M. Benigno in 1823, "Alcune ragioni del P. Pio Melia della C. di G." (Lucca, 1847), a defence of the Society of Jesus, and "Alcune afirmazioni del Sig. Antonio Rosmini-Serbat" (Piss, a.d.), an attack upon Rosmini (q. v.). In his "Life of Rosmini", Father Lockhart merely declares that the latter work was written by a certain Italian Jesuit; the Jesuits, in "Matrice del Concilio di Trento" (1654), attributed it to Passaglia, but his "Bibliothèque de la Compagnie de Jésus", re-edited by Sommervogel, follows Beorchia, who attributes it to Melia. Melia, who attacked especially Rosmini's doctrine on original sin, was answered by Rosmini (Milan, 1841) and Pagani (Milan, 1842); then followed a bitter controversy which had to be ended by a direct command of Pius IX.

WM. T. TALLON.

MELISSUS OF SAMOS, a Greek philosopher, of the Eleatic School, b. at Samos about 470 B. C. It is probable that he was a disciple of Parmenides, and that he is identical with Melissus, who according to Plutarch (Pericles, 26) commanded the Samian fleet which defeated the Athenians off the coast of Samos in 442. He wrote a work which is variously entitled υπο το κοσμο κοσμον υπο φωτεινο, etc., and of which only a few fragments have come down to us. In attempting to combine the doctrines of Parmenides with those of the earliest philosophers (the Academy and the SCHOOL OF PHILOSOPHY), Melissus, though he fell into many contradictions, forestalled, in a sense, Aristotle's more successful effort to define the infinite and the incorporeal. Like Parmenides, he depreciated sense-knowledge, and held that change, motion, and multiplicity are illusions. At the same time, he was influenced by the Ionian philosophers, and in a manner attached value to the question of origins. He definitely predicates infinity of being, and asserts that reality "has no body". By the infinite he understands "that which has neither beginning nor end", and in his conception of "that which has no body", he does not, as Aristotle points out (Metaph. 1, 6, 86b b.) attain a logically consistent understanding of the transcendental doctrines ascribed to Melissus by Philonousus, Stobaeus, Epiphanus, and others do not seem to have been held by him. There is, however, a possibility that, as Diogenes Laertius informs us, Melissus avoided all mention of the gods because we can know nothing about them. Like Plato, Aristotle, and some of the other Greek philosophers, he probably thought it wisest to take refuge in a profession of ignorance regarding the gods, so as to avoid the imputation of hostility to the popular mythology.

FAIRBANKS, FIRST PHILOSOPHERS OF GREECE (New York, 1869), 120 sqq., gives fragments of Melissus's work, with translations of references to him in Aristotle, Epiphanus, etc.; PARRAB, DE MELISSIUS fragmentis (Bonn, 1880); KERN, Zur Woürdung des MEISSIUS (Stuttgart, 1880); W. A. ALLEYN, I (London, 1881), 527 sqq.; TANNERY, Pour l'histoire de la science hellene (Paris, 1887), 282 sqq.; TURNER, HISTORY OF PHILOSOPHY (Boston, 1903), 84 sqq.

WILLIAM TURNER.
MELITENE, residence of an Armenian Catholic see, also a titulary archbishopric. According to Pliny (Nat. Hist. VI, 3), the city was founded by Queen Semiramis at a little distance from the Euphrates; the earliest mention of it is found in Tacitus, Ann. IV, 21; and Strabo (XII, 3, 4; see also XI, xii, 2; XI, xiv, 2) make it one of the ten provinces of Cappadocia. Justinian fortified it and filled it with magnificent monuments (Procopius, De Aedificiis, III, 4), which have all disappeared. In 577 the Romans gained a great victory over the Persians in the vicinity of Melitene; two years before the city had been burned by the Shah Choerosoe. Towards the middle of the seventh century Melitene again became Byzantine; it was afterwards taken by the Arabs and later recaptured by Emperor Constantine Copronymus in 751. The latter transported the Christian population to Thrace, dispersed the Musulmans of the province, destroyed the city and burnt the walls; the Persians took possession of it and restored it to something of its former importance. In the tenth century the Byzantines re-established their domination and in 965 the Emperor Nicephorus Phocas successfully undertook to colonize the region. The Greek Government had faithfully promised not to molest the Monophysites, and after first promising to leave them in peace, it promulgated a decree (972) that they should be expelled from the city, and this decree was carried out in 977. The Monophysites had at that time seven sees in the vicinity of Melitene (Barhebrues, H. E. II, 460). The city fell afterwards into the power of the Seljuk Turks of Iconium; then of the Mongols in 1235; of the Osmanlis in 1396; of Timur in 1401; then of different Turkish princes. Finally, at the beginning of the 15th century it was annexed to the Ottoman Empire, of which it is still a part. Christianity seems to have reached Melitene very early. The Roman soldier, St. Polyeuctus, immortalized by Corneille, was martyred there in 254 or 259. Another third century martyr is known, St. Eudoxius, whose relics were found in 966, and inscribed with this inscription carved on the door of a church. St. Melitius, the celebrated Bishop of Antioch, was a native of Melitene, as was also Saint Euthymius, to whom was chiefly due the organization of monastic life in Palestine during the fifth century. A council against the Arians was held there in 363. Le Quien (Oriens Christianus, 461) gives a list of bishops, the last of whom belongs to the year 1193. Among them are St. Acacius, who died about 438; and Saint Domitian, first cousin to the Emperor Maurice, who played a most important rôle in the religious and political life of the second half of the sixth century. For its Jacobite bishops see Le Quien (II, 1451–58) and "Revue de l'orient chrétien" (VI, 201). To-day the city of Malatia forms a sanjak of Mamuret-ul-Aziz; it numbers about 30,000 inhabitants of whom 16,000 are Turks; 4500 Kurds, 6500 Kiril Bach (a Musulman sect); and about 3000 Armenians. Among the last mentioned are 800 Catholics. The Capuchins have established there a mission, and a correctional asylum. The city, which was disturbed by an earthquake in 1893, was still more sorely troubled by the massacres of 1895, during which 500 houses were burned and 1000 Christians massacred. About five miles from Malatia is the village of Esli-Malatia on the site of the ancient Melitene; a part of the walls is still preserved. The whole region is like an immense fruit garden in a delightful climate and a well-watered land. The Catholic Armenian diocesan numbers 5100 souls, 9 priests, 10 churches and chapels, 7 stations, 9 primary schools, and an establishment of Armenian Sisters of the Immaculate Conception. The schismatic Armenian diocese is under the Catholicos of Sis. There is also established there a Protestant mission.

S. VAILLÉ.

MELITO, Saint, Bishop of Sardis, prominent ecclesiastical writer in the latter half of the second century. Few details of his life are known. A letter of Polycrates of Ephesus to Pope Victor about 194 (Eusebius, "Hist. Eccl.", V, xxiv) states that "Melito the eunuch (this is interpreted "the virgin") by Rufinus in his translation of Eusebius), whose whole walk was in the Holy Spirit", was interred at Sardis, and had been one of the great authorities in the Church of Asia. He held the title of the archdeacon. He is also cited in the "Labyrinth" of Hippolytus as one of the second-century writers who taught the duality of natures in Jesus. St. Jerome, speaking of the canon of Melito, quotes Tertullian's statement that he was esteemed a prophet by many of the faithful.

Of Melito's numerous works almost all have perished. It is thought that the name of the majority and given a few extracts (Hist. Eccl., III, xii, xxvi). They are (1) "An Apology for the Christian Faith", appealing to Marcus Aurelius to examine into the accusations against the Christians and to end the persecution (written apparently about 172, or before 177). This is a different work from the Syriac apology attributed to Melitene by Cureton from a British Museum MS. The latter, a vigorous conflation of idolatry and polytheism addressed to Antoninus Pius, seems from internal evidence to be of Syrian origin, though some authorities have identified it with Melito's Epis to the Christian in Asia. (2) "Epist o to the Christians in Asia". A fragment of it is preserved in the so-called "Melitinae clavini sanctae scrip turum" which is now known to be an original Latin compilation of the Middle Ages. (5) "Epist o to the Christians in Asia", on the cor pority of God, of which some Syriac fragments have been preserved. It is referred to by Origen (In Gen., 26). Melito's list of the sacred books is identical with that of the Marcionites. Routh (see below) has published four scholia in Greek from a Catena on the Sacrifices of Isaac as typifying the Sacrifice of the Cross, probably taken from a corrupt version of the "Exeget arum". Four Syriac fragments from works on the Body and Soul, the Cross, and Faith, are apparently composed by Melito, though often referred to Alexander of Alexandria. Many spurious writings have been attributed to Melito in addition to the "Melitinae clavini sanctae scrip turum" already mentioned—e. g., a "Let
MELK

MELLERAY

acter to Eutrepian", "Catena in Apocalypse", a manifest
forsery compiled after A.D. 1200; "De passione
Joannis Evangelista" (probably not earlier than the
seventh century), "De transitu Beatae Marie Virgini-
" (see Apocrypha in I, 607). Melito's feast is celebrated
Barthélemy, "Melline," tr. S. ABAYAN (St. Louis, 1908), 62-3,
contains a bibliography of the printed fragments: Salmon in

A. A. McCauley.

MELK (MOLCK, MELLICM), ABBEY AND CONGREGATION OF.
Situated on an isolated rock commanding the Danube, Melk has been a noted place since the days of
the Romans. A Slav settlement, Magaliacha, replaced the
Roman fort, and in its turn was destroyed by a
Magyar invasion about 955, when it received the name
Eisenburg. The Magyars, however, were driven out
by Luitpold the Illustrious, first Margrave of Austria,
who here fixed his capital and founded a church for
secular canons. These having become lax, were replaced
by twelve monks of Subiaco, whom Luitpold II
appointed, Lambert and Stilicho, as their abbot and
in 1089. Melk was much favored by St. Luitpold
III, and the new foundation rapidly grew and flourished,
its corn tithes being so abundant that the
famil name for Melk was "at the full bushel." It became
a place of pilgrimage to the shrine of St. Coloman, and
was famed for its great relic of the Holy Cross. By
the fifteenth century immense observance at Melk had
begun to decline, and in 1418, at the request of
Albert V, Archduke of Austria, Martin V sent the
Ven. Nicholas of Magen with five other monks of
Subiaco from the Council of Constance to begin a
reform of the monasteries of Lower Austria. The
Abbot of Melk, John of Flemming, voluntarily resigned,
and Nicholas, elected in his stead, soon reformed
the observance in accordance with the constitutions of
Subiaco that the abbey became a model for other houses
in Austria. Several monasteries followed its
example, among them Obenburg, Salzburg, Marizell,
the Scottish abbey at Vienna, Kremsmunster, Ratis-
bon, and Tegernsee. All these houses followed the
system of Subiaco, and were called Observant Abbey of
Melk. They in no way depended, however, on
Melk, nor had they any general superior, soliciting
visitors when needful from the pope. The Abbey of
Melk continued in its first fervour of reform, and
several attempts were made from 1460 onwards to
effect a more formal union. In 1470 seventeen ab-
bots of various neighbouring dioceses met at Erfurt
and decided to establish in their monasteries the com-
mon observance and ceremonial of Melk. Nothing
more definite occurred until Gaspar, Abbot of Melk, in
1618 invited the abbots of Austria to meet at Melk and
form a congregation. The negotiations continued un-
til 1623, when the Abbots of Melk, Kremsmunster,
Gosau, and Stiftsamt were flourishing, they
Gottweich and Marizell signed the constitutions
agreed upon for the new congregation. These were
confirmed by Urban VIII in 1625. In addition the
congregation included the houses of Lambach, Monee,
Leitnstenaden and Kleinck. It was governed by a
superior general, elected every two years, who acted as
visitor and domeect the house. Each province also had its own visitor. In 1630
there was an attempt to form a united congregation of
all the monasteries of the empire, but the Swedish in-
vasion frustrated this project, though many of the
German monasteries thereon observed the con-
stitutions of Melk. In the fourteenth century Melk,
by permission of Duke Frederick I, had been fortified,
and was thus able to resist successive sieges by Matthias
Corvinus, by the revolted peasantry, by the Prot-
Protestant States of Austria and by the Turks, though on
each occasion the property of the abbey suffered.
Great losses, too, were sustained at the hands of Na-
poleon's troops. In 1809 the Abbey of Melk was ini-
tially occupied by Leo XII and later by Pope Pius
on the Immaculate Conception. In 1905 the congrega-
tion numbered 85, of whom 75 were priests. The
present abbot, Joseph Charles (b. 1824, appointed 1875),
exercised jurisdiction over 29 parishes, with
45,145 souls.

MELLERY (MELLERIUM), situated in Brittany
(Loire-Inférieure), Diocese of Nantes, in the vicinity of
Chateaubriand, was founded about the year 1134.
Foulques, Abbot of Pontron, in Anjou, founded from
Melk (a daughter of Chateaubriand) the abbey of
foundation of a monastery in Brittany. They were
welcomed with the solitude of a place near Old Meller-
ay, shown them by Rivallon, pastor of Auvonc,
which Alain de Moisdon, proprietor of the place,
donated to them. Guitern, the first abbot, erected
the original monastery in 1145, but the church was not
completed until 1183, under Geoffroy, the fourth
abbot. Melleray, a small monastery built for about
twelve religious, remained regular until during the
sixteenth and seventeenth centuries, when relaxa-
tion prevailed as a result of the acquisition of great
wealth and the introduction of the system of com-
mendatory abbots. But so successful was the
monastery, and so perfect was the system, that it was
the first commendatory abbey, and from his time
both spiritual and temporal welfare declined, until
about the middle of the eighteenth century when,
through the efforts of Dom Jourand, vicar-general of
the order, the rule of St. Bernard was reintroduced,
and the monastic buildings restored. In 1791 it was
abolished, and its property was divided among the
wealthy of Laval. This, however, was not the end of Melleray.
The Trappists, expelled from France, took refuge at Val
Sainte, Switzerland; from there, urged by their rapid
increase, and for fear of the spread of the revolution,
Dom Augustine de Lestrade established them in
various parts of the world. Through the generosity of
Sir Thomas Weld, a wealthy English Catholic, the
father of Cardinal Weld, they settled (1795) at Lul-
worth, Dorsetshire, England. Their monastery was
soon created an abbey, and Dom Antoine was elected
the first abbot (1813). In 1817, with changed condi-
tions and the restoration of the Bourbons, the monks
of Lulworth returned to Melleray. The restored ab-
by was dedicated in 1830, with five hundred and
ninety-two members in twelve years. During the Revolution of 1830 they were again perse-
cuted, especially those of foreign birth, of whom they
had a great number. To make homes for these they
founded Mount Melleray (1833) in Ireland and Mount
Saint Bernard (1836) in England. Dom Antoine (d.
1839) was succeeded by Dom Melleray, second Dom Antoine, and finally by Dom Eugène
Vachette, the present abbot. Under Dom Antoine II
several monasteries were established, among them
Gethsemani, in the United States. Dom Eugène,
elected in 1875, was for many years the vicar-general of
the Congregation of La Grande Trappe, and was
instrumental in effecting the union of the three con-
gregations into one order (1892). Since then he has
been vicar to the Most Reverend General of the Reformed Cistercians. Recently he has established an annex to his monastery in Woodbarn, Diocese of Plymouth, England.

MELLERAY, Mont.—Situated on the slopes of the Knockmealdown Mountains, near Cappoquin, Diocese of Waterford, Ireland, was founded in 1833. Father Vincent Ryan was chosen leader of the religious sent by Dom Antoine, Abbeth of Melleray, for this foundation. After many efforts to locate his community he accepted the offer of Sir Richard Keane, of Cappoquin, to rent a tract of barren mountain waste, some five hundred acres, subsequently increased to seven hundred. In the work of reclaiming the soil, they were assisted by the country folk; entire parishes, led by their pastors, came, each in turn, to give free a full day's work. In 1833 the corner-stone was laid by Sir Richard Keane, in the presence of the bishop and a large concourse of clergy and people. In 1835 the monastery was created an abbey, and Father Vincent, unanimously elected, received the abbatial blessing from Dr. Abraham, bishop of the diocese, this being the first abbatial blessing in Ireland since the Reformation. Abbeth Vincent vigorously undertook the work of completing the abbey, but died 9 Dec., 1845. Under the short rule of his successor, Dom M. Joseph Fagan, Venerable Malachi Keane, a prior, ruled for only two years. To Dom Bruno Fitzpatrick, who succeeded as abbeth in September, 1848, it remained to consolidate and perfect the work so well begun. He also founded, in 1849, the monastery of New Melleray, near Dubuque, Iowa, U. S. A., and, in 1875, Mount Saint Joseph, Rosera, Co. Tipperary, Ireland. But the most conspicuous of Abbeth Bruno's labors was the founding of the Ecclesiastical Seminary of Mount Melleray. Originating in a small school formed by Abbeth Vincent in 1843, it was developed by Abbeth Bruno and his successors, until it attained its present rank. Abbeth Bruno died 4 Dec., 1893, and was succeeded by Dom John, Cartha, D.D., Canadian, Ireland. On 5 Jan., 1894, and presided over Mount Melleray for thirteen years; his successor, Dom Maurus Phelan, solemnly blessed by Dr. Sheahan, Bishop of Waterford, 15 Aug., 1908, is the present abbeth. The community numbers thirty-eight choir religious (of whom twenty-nine are priests) and twenty-nine lay brothers. When a grand gathering in having Josaphat in its crowded, it was decided to attempt a new foundation. While plans were being discussed, Bishop Loras, of Dubuque, Iowa, visited the abbey (1849). He expressed a strong desire to have a colony of Trappists in his diocese, and offered a tract of land about twelve miles from Dubuque. Abbeth Bruno immediately sent two of his religious to inspect the land, and receiving a favourable report, he accepted the offer. Later in the same year he laid the foundation of New Melleray Abbey, appointing, as its first superior, Father James O'Gorman (later consecrated first Bishop of Omaha, Nebraska). Father Clement Smyth, the third superior, was also elected bishop, bishop-elect in charge of the Diocese of Dubuque. In 1859 the monastery was made an abbey, and Father Ephraim McDonald elected its first abbot. The second abbeth, still in office, is Dom Alberic Dunlea, whose community now numbers thirty-six members.

MELLITUS, Saint, Bishop of London and third Archbishop of Canterbury, d. 24 April, 624. He was the leader of the second band of missionaries whom St. Gregory sent from Rome to join St. Augustine at Canterbury in 601. Venerable Bede (Hist. Eccl., II, vii) describes him as of noble birth, and as he is styled abbot by the pope (Epp. Gregori, xi, 39), it is thought he may have been Abbeth of the Monastery of St. Andrew on the Celian Hill, to which both St. Gregory and St. Augustine belonged. Several commendatory epistles of the pope recommending Mellitus and his companions to various Gallic bishops have been preserved (Epp., xi, 54-62). With the band he sent all the Vulgate in book form to Dublin, where it was used in the Church's service, viz., sacred vessels and altar cloths, vestments for priests and clerics, and also relics of the

MELLITUS, Abbay of, three miles from Drogheda, Co. Louth, Diocese of Armagh, was the first Cistercian monastery established in Ireland. In the year 1140, St. Malachi, en route for Rome, visited St. Bernard at Clairvaux, and was so edified that he resolved to establish a similar monastery in his own diocese, Armagh. He therefore left several of his companions at Clairvaux, to make their novitiate under the direction of St. Bernard. In 1142 they returned to found Mellifont under Christian O'Conarchy, who had been Archdeacon of Down, and who became the first abbot. A French monk, Father Robert, an able architect, directed the building of the church, according to the plans of the Abbey of Clairvaux. The consecration of the church in 1157 was the occasion of great religious celebrations. So numerous were the postulants that six important monasteries were founded during the first ten years: Bective (1146); Boyle (1148); Monasterernagh (1149); Ballyling (1149); Schrule (1150); Newry (1150). In 1150 the venerable Abbath Christian was appointed Bishop of Lismore, and Pope Eugene III, who had been his fellow-novice at Clairvaux, named him legate for Ireland. Soon after his death (1186) his name was inscribed in the calendar of the saints, and he has long been venerated as one of the most powerful protectors of his country. Under his brother, the Abbot Mathew, the abbey was still further extended in size and sanctity, succeeded him. For sixty years Mellifont rejoiced in greater prosperity, and when the English invaded Ireland there were already twenty-five great Cistercian abbeys. During the thirteenth and fourteenth centuries the rivalries between the English and Irish exerted a baneful influence, pues, gaining to disband the monasteries, and in 1310 the general chapter, and even the sovereign pontiff, were forced to intervene. Not until the fifteenth century did Mellifont regain its ancient prestige, which was maintained until its suppression by Henry VIII on 23 July, 1539, when one hundred and fifty monks were compelled to leave it. Richard Coxour, the last Abbeth, died in 1550. The king seized the treasures of the abbey, and the annals were either lost or destroyed, and with them the names of many remarkable men. Several religious continued to live in the environs, which explains why, in 1623, the title of Abbeth of Mellifont was granted, by Apostolic Brief, to Patrick Barnewall, who was called Dom, and by papal Bull, to Drogheda. In 1566 the abbey, with its dependencies, was given to Edward Moore, chief of the family Drogheda, and passed, in 1727, to Balfour of Townley Hall, during whose term of ownership all fell to the speedy decay and desolate ruin of the present day.

EMOND M. OBRECHT.
holy apostles and martyrs, with many books" (Bede, "Hist. Eccl.", I, 29).

The consecration of Mellitus as bishop by Augustine took place soon after his arrival in England, and his first missionary efforts were among the East Saxons. Their king was Sabert, nephew to Ethelbert, King of Kent, and who, by his will, had established his see in London, the East Saxon capital, and build there the church of St. Paul. On the death of Sabert his sons, who had refused Christianity, gave permission to their people to worship idols once more. Moreover, on seeing Mellitus celebrating Mass one day, the young princes demanded that he should give them also, because he had been wont to give their father. When the saint answered them that this was impossible until they had received Christian baptism, he was banished from the kingdom. Mellitus went to Kent, where similar difficulties had ensued upon the death of Ethelbert, and thence retired to Gaul about the year 616.

After an absence of about a year, Mellitus was recalled to Kent by Laurence, Augustine's successor in the See of Canterbury. Matters had improved in that kingdom owing to the conversion of the new king Eadbald, but Mellitus was never able to regain possession of his own See of London. In 619 Laurence died, and Mellitus was chosen archbishop in his stead. He appeared at the synod at Dium, which had been called for five years—a fact which may account for his not consecrating any bishops. During this time he suffered constantly from ill-health. He consecrated a church to the Blessed Mother of God in the monastery of SS. Peter and Paul at Canterbury, and legend attributes to him the foundation of the Abbey of St. Augustine's Canterbury; but this is almost certainly incorrect. Among the many miracles recorded of him is the quelling of a great fire at Canterbury which threatened to destroy the entire city. The saint, although too ill to move, had himself carried to the spot where the fire was raging and, in answer to his prayer, a strong wind arose which bore the flames southwards away from the city. Mellitus was buried in the monastery of SS. Peter and Paul, afterwards St. Augustine's, Canterbury. Some relics of the saint were preserved in London in 1298. The most reliable account of his life is that given by Bede in "Hist. Eccl.", I, 29, 30; II, 3, 7. Elmhirst in his "Historia Monasterii S. Augustini Canterbury," edited by Hare, with a valuable appendix, adds that the authenticity of these is more than questionable. His feast is observed on April 24.

G. Roger Huddleston.

**Melo, DIOCESE OF, in URUGUAY.** It was decided in 1897 to erect two sees suffragan to Montevideo, one of which was to be Melo, but, owing to political causes, no appointments have been made as yet. However, negotiations for a renewal of diplomatic relations between the Republic and the Holy See are now in progress, and as the recognition of the new diocese is in the hands of this resurrection, this probably will be shortly accorded. The Diocese of Melo is to embrace the north-eastern part of Uruguay and so will include, in part or in whole, the Departments of Cerro Largo, Rivera, Tacuarembó, and Treinta y Tres. This region has an area of about 19,600 square miles; the population, practically all Catholic, barely numbers 145,000 (1906). The district is very fertile, but there is little agriculture, most of the inhabitants, a large and the most important element of whom are Brazilians, being engaged in cattle breeding. The town of Melo, founded in 1798, is the capital of Cerro Largo and contains about 7,000 persons. It is situated near the Tacumari River about 315 miles north of Montevideo. It has a fine church and also a pretty chapel of our Lady of Mt. Carmel. Artigas (2,500 inhabitants) lies 60 miles north of Melo, on the Brazilian frontier. San Fructuoso, the capital of Tacuarembó, has about 3,000 inhabitants. The other centres of population are little more than hamlets.

**Melos, a titutar see, suffragan of Naxos in the Cyclades.** The name seems to have been derived from a Phoenician navigator, Mêsos, though others ascribe it to its rounded or apple shape, Melos. The island has had different names: Zephyris, Membris, Mimallia, Siphis, Acyton, Byblis, etc. The Phoenicians seem to have been the first to colonize the island; then came the Dorian from Laconia in the twelfth century B. c. This Doric colony lasted for seven hundred years, when the Athenians, jealous of their facility to the west, expelled the Greeks, took possession, and founded Melos in 596 b. c. All the men were massacred and replaced by five hundred Athenian colonists; the women and children were carried captive to Attica. Later on, when these children were grown, they returned to occupy the island. Melos then passed under the domination of the Macedonians, then under that of the Romans, and finally under that of the Byzantines, who retained possession of it until 1297, when Marco Sanudo annexed it to the Italian Duchy of Naxos. In 1537 it was taken by the corsair Barbarossa and joined to the Ottoman Empire. The island continued to prosper, serving as a market and even as a refuge to the corsairs of the West, especially the French; it was so long until the island began to decline because of a volcano which arose in the vicinity. From 20,000 inhabitants the population decreased to about 2000; united to Greece in 1827 the island now contains 5000 souls. The chief town, called Plaka, possesses a very fine harbour; nearby are the ruins of ancient Melos, with a cemetery, two citadels, a temple of Demeter, and a theatre. Near the theatre was found in 1820 the celebrated Venus of Melos, now at the Museum of the Louvre at Paris, the work of a sculptor of Antioch on the Meander, in the second century B. c. The earliest known Bishop of Melos, Eutychius, assisted at the Sixth Ecumenical Council in 681. Le Quien (Orient Christ., 141, 145) would have given this see to a Greek titular, especially at the beginning of the sixteenth century, after the expulsion of the Venetians. The Greek diocese was a suffragan of Rhodes. A very long list of the Latin residential or titular bishops is found in Le Quien, op. cit., III, 1055-56, and in Eutël, "Hierarchia Catholica mediæ ævi", Munich, I, 355; II, 211. Melos had Latin bishops until 1700, in which year John Anthony de Camillis died. The see was then joined to that of Naxos until 1830, when the island was made a part of the Diocese of Santorin. The Bishop of Santorin now ministers to the few Catholics who live there.

**Melozzo da Forli, an Italian painter of the Umbrian School, b. at Forli, 1438; d. there 1494. Lanzi's suggestion that Melozzo studied under Antonio da Forli appears to rest on no foundation. Little is known of this Melozzo, save the slight part he took in the frescoes of the Eremitani Chapel at Padua, which were finished prior to 1460. He would thus have brought to his pupil the teachings of Mantegna, but it
is more probable that Melozzo fell under no influence other than that of Piero della Francesca. Piero was always engrossed with perspective, and has even left us a treatise on it; therefore it is to him that Melozzo owes his mastery of the subject, as well as his love for large tableaux and the heroic character of his work. Melozzo was the artist who was introduced to the Court of Urbino by the magnificient Signor Federigo da Montefeltro, to whom perhaps he was Giovanni Santi, the father of Raphael. None of the work he did there has reached us. However, the Barberini Palace (Rome) contains a part of the Urbino series, and among them a few pictures that seem to suggest, like the inscriptions, date from 1476.

The "Federigo in armour, with his Son Guidobaldo" is attributed to Melozzo. A charming bust "Guidobaldo, when a child", in the Colonna Palace, is attributed by some to Giovanni Santi, but Berenson thinks it a Melozzo, (two paintings in Berlin and two in London) and the busts of the "Philosophers" (in the Louvre and in the Barberini), formerly in Federigo's palace, are probably not by Melozzo but by the Fleming, Justus of Ghent. It was doubleness through Federigo that the artist was recommended to Sixtus IV. The importance of this pope's part in the history of art is well known, for he was the first of the Renaissance popes, the herald of Julius II and Leo X, and the founder of the Sixtine Chapel and the Vatican Library. Melozzo became more or less his official painter. With him he opened the Academy of St. Luke.

The Sixtine chapel was already decorated when Melozzo arrived, but the pope associated him with two other great undertakings. In 1477 he ordered him to paint a picture commemorating the inauguration of the Vatican. This fresco, now in the Pinacoteca of the Vatican, shows the jurisconsult Platina venerating before the pope and receiving from him the keys of the library. Grouped around are the pope's four nephews, among whom are the prothonotary, Giulio Riairo, in a monk's robe, and Cardinal Giuliano della Rovere, the future Julius II. The scene is set in a hall of marvellous Renaissance style. The beauty of the architecture, the splendour of the decoration, the vigour of the portraits, the calm and dignity of the composition, and the importance of the persons it deals with, make this magnificent work an incomparable page of history.

Art has no creation of more unconstrained majesty, so realistical and nobly alive. It is a perfect picture of the papacy of those days, a vision of the court life of the pontiff, who was the first to make Rome the capital of the arts, and the intellectual metropolis of the world, to crown it with the sciences and the masterpieces of art and to invent nepotism. Sixtus IV also commanded Melozzo to paint an "Ascension" for the ceiling of the Church of the Sacred Wells. It was a remarkable painting and Vasari speaks admiringly of it, but unfortunately it was destroyed in 1711 when Clement IX enlarged the choir. He was unwilling, however, that such a work of art should be completely lost, so a few detached figures from the group were saved, of which that of "Christ Triumphant" may be seen on the Quirinal staircase. It is one of the earliest examples of perspective applied to the human figure on roof or ceiling decoration; that is to say, a figure viewed from below. This foreshortened method, a great novelty at that time, has been surpassed a hundredfold, and by third-rate painters, since the day of Correggio.

Melozzo's chief merit is that he created a type of supple and nobly sensuous juvenile beauty, and gave expression to it with inspired ease and lyric swing. This quality stands out more prominently in other fragments of the same fresco, preserved in the larger sacristy at St. Peter's, especially in the choral angels, whose faces are irresistible. No artist of that period, and very few since, would have been able to conceive these poetical and vigorous forms, in which womanly charm blends with virile strength, which are so full of health, joy of life, movement, and passion. This wonderful work was executed in 1482. A less important one (1478), of "Christ as Judge of the World", can be seen in the Minerva. This power of giving pleasing expression to a life full of richness and harmony, this incomparable gift of plasticity, claims for Melozzo a place apart. Not so great and, especially, not so profound as Mantegna or Signorelli, he has nevertheless a true Italian character, and a style which is a synthetic product of the two masters, in which the other two masters are lacking. This charm he knew how to utilize even in depicting the everyday occurrences of life. To illustrate this, Vasari cites in the fresco work of the church of Forlì which shows a druggist's apprentice ("Pesto, Pepe") pounding sugar in a mortar. Never was the joy of living expressed in such bewitching a manner. The paintings in the Treasury Chapel at Loretto were merely outlined and begun by Melozzo; their execution is almost entirely the work of his pupil Palemezzano.

Melrose, Abbey of, in Roxburghshire, founded in 1136 by King David I, was the earliest Cistercian monastery established in Scotland. Its first community came from Rievaulx, the Yorkshire house colonised from Citeaux. In less than ten years St. Mary's Abbey, Melrose, had been completely built. It stood in a broad glen south of the Tweed, two miles distant from the Celtic monastery of Old Melrose, where St. Cuthbert had lived five centuries before. The abbey suffered greatly from hostile incursions of more than one English monarch; the soldiers of Edward II desecrated, pillaged, and burned the church; Richard II in 1385 laid waste the surrounding country and set fire to the abbey. Mainly through the generosity of Robert Bruce, a more stately church was begun in 1326, and scarcely completed by the sixteenth century.

Melrose Abbot

Cruciform in shape, built in English Perpendicular, Decorated, and Flamboyant styles, two hundred and fifty feet in length, Melrose was distinguished for the fairy-like lightness of its carvings and window-tracery, finished with exquisite care. Not only the royal founder, but succeeding sovereigns, and countless benefactors, nobles and commoners, so richly endowed Melrose with lands and possessions that its annual revenue is computed at one hundred thousand pounds of present money value. One example of the application of such revenues is told in twelfth century records. During a time of famine four thousand starving people were fed by the monastery for three months. Many of the abbots were men of distinction: Abbot Waltheof (1148), stepson of David I, and honoured as a saint; Abbot Jocelin, afterwards Bishop of Glasgow (1175), took a prominent part in the erection of the fine cathedral of that city, as a shrine for the body of St. Mungo; Abbot Robert (1268) had been formerly Chancellor of Scotland; Abbot Andrew (1449) became Lord High Treasurer; many others were raised to the episcopate. The English troops of Henry VIII burned Melrose in 1544. Although the monks once numbered two hundred, and there were one hundred and thirty as late as twenty years before the Reformation, eleven only received pensions at the dissolution, so quickly must they have been dispersed. After many vicissitudes, the possessions of the abbey came finally to the Buccleuch family. The ruins were further devastated by a fanatical mob in 1569, when statues and carvings were ruthlessly destroyed; but more wanton still was the subsequent carting away of the sacred stones in great numbers to serve as building materials. The result is seen in the carved religious emblems still appearing upon surrounding houses. The ruins of the once noble abbey form a strikingly beautiful picture from the North British Railway, about thirty-seven miles south of Edinburgh.

Michael Barrett.

Melrose, Chronicle of (Chronica de Mailros).—It opens with the year 785, ends abruptly in 1270, and handwriting show that it is generally, if not always, contemporaneous. The Manuscript, now in the British Museum, was probably carried off from Melrose at the time of the Reformation. It was edited in 1835 by J. Stevenson, S.J., for the Bannatyne Club. The Oxford edition issued in 1884 by Fulman is by no means satisfactory, as the editor had no opportunity of collating the Oxford transcript with the original. Besides its chronicle, Melrose has handed down hundreds of charters and royal writs, dating from the reign of David I to that of Bruce, and forming a most valuable collection, rich in illustrations of the social life and economy of the period. They were edited by Cosmo Innes.

Stevenson, Chronica de Mailros (Edinburgh, 1835); Innes, Liber de S. Marie de Melros (Edinburgh, 1837); Douglas, History of Roxburghshire.

Melzi, Francesco, b. at Milan, about 1490; d. 1568. He was a mysterious personage. He was a friend of Leonardo da Vinci, and Vasari tells us that he was a Milanese nobleman, an exceedingly handsome young man, and that he possessed the principal part of the anatomical drawings of Leonardo. He inherited Leonardo's manuscripts, instruments, books, and drawings; he furnished both Vasari and Lomazzo with
princesses. He endows them with slender figures, white and graceful necks, sweet and long profiles, long drooping eyelashes, pure brows and clear temples, with that immaterial something which tolerates in its vicinity only virginal dreams and chaste thoughts. Whatever is too worldly in their grace he corrects by an ideal but natural atmosphere, by the serenity of their looks, all the grace of nature. A delicate symmetry lends a mysterious rhythm to these peaceful compositions and dominates them with the harmony of unheard music. Angel lute players with blue and rose-coloured wings seem the expression of this unuttered song, the personified voice of the choir. Grace of figures, nobility and richness of decorativeness, serenity of demeanours, of his highest art. A melody of colours, lines, and sentiment all unite to produce a masterpiece of mystical poetry, pious romance, and supernatural beauty.

But all these things, it must be repeated, are almost inexplicable in the Flemish school, at once the most natural and the most commonplace. These characteristics have their origin elsewhere, and the very legend concerning Memling, the story of a man coming as a stranger to art by a special vocation, is an unhistorical attempt to account for this singularity. Mr. James Weale had already conjectured that Memling's name contained the key to the enigma and concealed the clue to the painter's origin; he then proceeds to show the connection of the language of the Middle Ages, the name of a country. As a matter of fact there was a borough called Memelynck near Alkmaar in Holland, and in the neighbourhood of Aschaufenburg in Germany there was another called Mummel or Mömling. For a time it was difficult to decide which of these two was the painter's birthplace, but by an amusing process of elimination Weale's hypothesis has carried out all uncertainty. The solution of the problem is that Memling was a German from Mains, as is shown by his exclusively German Christian name, Hans. Before taking up his residence at Bruges he studied art at Cologne for northern Europe the home and fatherland of Christian art. Vasari and Guicciardini relate that Memling was the pupil of Roger Van der Weyden, but the only work of Memling's with a trace of Roger's influence is after a Pietà in a church of Cologne. His "Reliquary of St. Ursula" again proves that he lived a long time in that city; the views of Basle and Rome are fancifully depicted, whereas in those of Cologne the slighting of the central then the external is in evidence. In connexion with the German spirituality with Flemish technic, this infusion of soul, of the spiritual, the immaterial, into the school best able to paint the real, constituted the genius and the rôle of Memling. Through him the Flemish school was rescued from the shallow naturalism where for fifty years it had grown barren. Memling's influence on his contemporaries was immense. When we compare the early works of Gérard David so harsh and brutal, such as the "Justice of Otto" and the "Marriage of Cana" of the Louvre, with those which were later executed under Memling's influence, we can estimate the service which the stranger, the "duischer Hans", rendered to the country of his adoption. There is no doubt that he owes it to a practical skill which he would not otherwise have had, but in return he brought it the spirit which revived it. The works of the next generation show this more clearly; the "Mystical Marriage" of the Museum of Brussels and the "Deposition" of Antwerp by Quentin Metsys. And when we remember that of all the masters of his country it was Metsys whom Rubens esteemed most, the change which Memling brought about in the spirit of the rôle played in the destinies of the Flemish school by the young painter from Aschaufenburg who taught him poetry and idealism.

Memmi, Simone. See Martini, Simone.

Memory (Lat., memoria), is the capability of the mind, to store up conscious processes, and reproduce them later with some degree of fidelity. Strictly speaking, however, a revived conscious process is not remembered, unless it is, at the same time, recognized as something which occurred before. Memory, therefore, involves recognition. Conscious reproduction of mental processes is frequently spoken of as recollection, and involuntary, as recall.

Divisions of Memory.—St. Thomas distinguishes two kinds of memory, sensory and intellectual. He excludes, however, from the former the function of merely storing up the mental image; this he assigns to imagination. Sensory memory preserves that which can not be received by the special senses and yet is individual, and therefore does not belong to the intellectual memory, which takes cognizance of nothing but the universal. For instance, the utility of an object and its setting in past time; by the utility of an object must not be understood any abstract concept of its purpose, but only the sensory experience which all animals acquire, that certain things are beneficial or harmful. Sensory memory is located by St. Thomas in the bodily organism (I, lxxviii, a. 4). The intellectual memory receives and stores up the abstract and universal. Its seat is the passive intellect, a division, or perhaps only an aspect of the faculty of understanding. The operation of the passive intellect is the intellectus agens, which is conceived of as actively working over the data of sense, abstracting from them the universal (species intelligibilia) which they contain and impressing it on the passive intellect. St. Thomas argues that there must be an intellectual memory, because that which is acted upon must retain the effect of the agent all the more perfectly in proportion to its own stability. Since the impressions of sense leave lasting traces on the bodily organism, which is subject to decay,—a fortiori the universal must, in some way, be stored up in the passive intellect, which is a spiritual faculty, permanent as the soul itself (I, Q. lxxix, a. 6-7).

This argument assumes that there are cognitive processes specifically different from those of sensation, a doctrine which has received scant recognition in modern psychology until quite recently. The tacit or expressed assumption of many experimental psychologists has been the very opposite, viz.: that all our cognitive processes are sensations or sensory complements. Recently, the hypothesis has been made to demonstrate experimentally the existence of abstract thought, totally distinct from mental imagery (phantasms). Along with this admission of a difference between sensation and thought, and experimental psychology is beginning to emphasize the distinction between sensory and intellectual memory.
Sensory memory has long been subdivided by psychologists into several "types", chief among which are the auditory, visual, and motor. Anyone may remember at times by visual, auditory or other sensory impressions; but there is evidence to show that it is in part determined by anatomical or physiological conditions of the brain. "This, however, does not exclude the modification of images by any exercise of memory in which they function; for the type is quite elastic" (Watt, "Experimentelle Beiträge zu einer Theorie des Denkens" in "Archiv für die Ges. Psychol.", 1905, IV, 367-8).

Besides sensory and intellectual memory, a third division, affective memory, is often mentioned. Meumann ("Vorlesungen zur Einführung in die experimentelle Pädagogik", I, 174) recognizes it as a distinct form, because in children under thirteen, it is but little developed; whereas other forms of memory are already far advanced. Meumann's view is based on the experiments of Netsechajev and Lobatsch. Ribot, who was the first to make a special study of affective memory, maintained that to the visual, auditory, and motor types, we must add another, which is just as well developed, the "affective type" ("Phren. review", IV, 1895), objected to the type theory of affective memory, on the ground that affections, unlike mental images, are recalled in company with ideational mental processes. They are not independent but dependent mental processes, and cannot be attended to, or recalled independently of the representative processes of which they are but qualities or tones. Conclusive evidence is at present lacking to decide whether or not feelings are dependent or independent processes. But the settlement of this problem is not necessary for the recognition of an affective memory of some kind. The expression "affective memories" is less significant, because the processes are distinct from sensory and intellectual.

The Development of Memory.—The growth of memory from childhood to maturity is dependent upon the development of many mental faculties, and is therefore a very complex affair. It is a growth of many memories, rather than of a single faculty. For purposes of discussion, the forms of memory have been distinguished: (1) memory for special sensations, (2) for impressions of space and time, (3) for numbers and abstract concepts, (4) for emotional states of mind. Each shows a period of rapid growth, followed by a standstill or even a retardation. The forms of memory which throughout childhood are especially unfavourable for the development of all kinds of memory. The order in which these forms of memory undergo their period of rapid development, is for boys: (1) external objects, (2) words of visual content, (3) words of auditory content, (4) tones, (5) touch and sensations of movement, (6) numbers and abstract concepts, (7) emotions of the body. For girls, the order is: (1) words of visual content, (2) words of auditory content, (3) emotions of the body, (4) numbers and abstract concepts, (5) touch and sensations of movement. It is not true that the memory of children is better than that of adults. Except for a retardation at the ages of fourteen and fifteen, memory grows continuously, reaching a maximum between twenty and twenty-five. After that, for those in learned pursuits, it declines very slowly, until about the fiftieth year, when it commences to fall off more rapidly. Ebbinghaus, who made continual tests of his powers of retention, could say at the age of eighty, "I cannot climb up the depths of consciousness unless it is by the aid of memory."

The Method of Memorizing.—The experimental study of memory has not been barren in results of practical value. It is now possible to give suggestions for the practical work of memorizing that are based upon very definite data. These suggestions refer primarily to the mechanical part of memory. Practical experience tells us that if we want to memorize or construct any kind of connected narrative, we are greatly helped if we first analyse its logical sequence of thought. Memory systems for translating dates into words and memorizing the words which can be re-translated into dates, are so cumbersome that their value is doubtful. The results of experimental work aid us chiefly in the drudgery of memorizing—just when we conjecture about the best method is most likely to fail. In learning a poem by heart, the usual method would be to read the first few lines several times, then read from the beginning on down a few lines further and so, little by little, commit the whole to memory. Another method would be to read it each time, from beginning to end, until it was perfectly memorized. Although there is a prejudice in favour of the first method, it is the one that consumes the greatest amount of time.

Several pieces of experimental work have shown that memorizing by reading from beginning to end, is the quicker and more permanent method. The reason is to be sought in the mechanics of association, which one word more makes the memory of the one word before it more sure. When a series of words is memorized, it may be shown that a word is not merely associated with the one that precedes and the one that follows it, but also with every other word of the series. Consequently the "total" method, avoids the trouble of connecting the separate sections of the partial method, makes the association of the parts and gives to all the parts a certain equality of value by which the whole is better united. (Steffens, "Experimentelle Beiträge, etc." Ch. iii.) One will, of course, combine at times the two methods. When certain portions of a piece present special difficulties, these parts will be more deeply impressed by a few more careful readings. Finally, the "free" method of memorizing. It is better to read half aloud than entirely to oneself. In memorizing poetry, it should be read with the rhythmical swing of the metre. As to the rate of reading, it has been found that, if one wants to learn a piece so as to be able to repeat it, as soon as he has memorized it, he will save time by reading it slowly. But he who wants to learn a piece for reciting, he may read leisurely. Since one generally wants to remember what he has learned for some hours at least, it is better to read through the material at a leisurely rate. Meumann recommends that in the first part of the memorizing, one should read slowly, and more rapidly later on, as the material becomes familiar.

As a physiological process, memory includes three elements: (1) retention, (2) reproduction, (3) recognition. The process of recognition is usually treated more or less as a separate problem, so that the discussion of the theory of memory has centred around the question, how it is possible for ideas to be retained and reproduced. What becomes of the idea, after it has left consciousness? Does it continue to exist, preserving its own peculiar being, somewhere in the depths of the mind, and reappear when the occasion is propitious? Such was the opinion of the German philosopher and pedagogue Herbart (1776-1841). This would only be possible, if the idea were a substantial being, which rose up from the depths of consciousness whenever the mind became aware of it, disappearing when it was forgotten—a theory more picturesque than true. If the idea is not a substantial entity, it must be a kind of accident—a transient something that continues to exist only in the traces that it leaves in passing. This is the common theory of memory, which takes on clearer forms, as more facts are explained. Desretes located the trace primarily in the bodily organism. In remembering, the soul has
to drive the “animal spirits” hither and thither in the brain, till they encounter the trace of the idea it wishes to recall. But, besides the cerebral traces, there are also, according to Descartes, vestiges left in thought itself. Leibnitz located the trace in the monad of the soul and conceived of it as becoming vanishingly small, but never equal to zero. For others again, the trace is entirely material. Some even go so far as to locate each image in a special ganglion cell of the cortex. On account of its definite character and picturesqueness, this theory has found many popular expositions. But there are facts that seem to make it untenable. For instance, disturbances of vision caused by unilateral lesion in one visual area of the cortex of a dog, wear off after about six weeks. This was noticed by Opposing traces are deposited in the surrounding area. But it was shown by Loeb, that when dogs are kept in complete darkness after the operation (so that the acquisition of new visual images would be impossible), on being released after a period of six weeks, they are, nevertheless, entirely normal (Loeb, op. cit. infra, xvii).

More recently, it has been maintained (Robertson, “Sur la dynamique du Système nerveux etc.”, 438), that the trace is a chemical condition left in the brain by the passing activity of the original impression. This contention is not pure speculation, but is based upon experiments which aim to show that sensory processes are connected with the liberation of acids in the cerebro-spinal fluids. It leads to the assumption that “the extent of the memory-trace is proportional to the amount of material transformed in a self-catalysed chemical reaction, that the number of syllables memorized must be connected with the number of repetitions (or time of learning) according to the following function: \( \log n = K + b \), where \( n \) is the number of repetitions, \( K \) and \( b \) are constants, and \( K \) is not varying when \( n \) and \( r \) vary” (“Monist”, 1909, XIX, 383). The quantity \( a \) also corresponds to the amount of substance transformed in the chemical reaction, and \( r \) to the time during which it goes on. Calculations based on this equation, compared with observed results, gave very small percentages of error: 0.46 per cent. to 2.5 per cent. Such results seem to indicate that the term “sensory trace” will eventually receive a definite explanation, but they are far from affording us the basis of a complete explanation of memory. The insufficiency lies in the fundamental defect of all materialistic theories. They fail short of that which they set out to explain: the nature of memory. It is not sufficient to show that there are cerebral traces. This has long been a priori evident, and it is to be supposed that such traces will obey a definite law. Over and above this, a complete theory of memory must show how these cerebral traces recall definite conscious processes. This problem remains a fact which must be taken account of in any theory of memory. St. Thomas postulated the existence of physiological traces in the organism. But he also pointed out that there must be some kind of residue of the ideas left in the soul itself. Since the ideas are but acts of intelligence, and not intelligent substances—transient activities of the soul—some fault may be age a long time to survive, they can only live on, as dynamic traces in the passive intellect, awaiting the time when they will exert their influence on some future process of thought—apparently rising from the depths of consciousness, in the act of memory.

The function of memory is furthermore said to evidence for the substantial nature of the soul. Since ideas are transient processes, there must be a permanent something in the mind to account for their retention and reappearance; and since they are recognized as ideas that were formerly in consciousness there must be something that identifies them and that consequently persists during their absence from consciousness (see the discussion of sense-perception by means of psychical dispositions distinct from cerebral traces, is obviously futile unless it postulates a substance of mind in which such dispositions are preserved.

Thomas V. Moore.

Memphis, ancient capital of Egypt; diocese of the province of Arcadia and Heptanomos, suffragan of Oxyryinus. Memphis was called in Egyptian Menophir, “the good place”. This name, at first reserved to the pyramid of Pharaoh Pepi I (sixth dynasty) afterward passed to the surrounding quarter, and then to the name of the city itself. It is common to give it other names, several of which properly indicate quarters of the city. It is called Aneb or Aneb-ub, “the city of the wall” or “of the walls”; Aneb-hadj, “the white wall”, an appellation properly signifying the citadel (Herodotus, III, 91); Hā-ka-Ptah, “the dwelling of the person of Ptah”, an expression first applied to the temple of Ptah, then to the city and which according to certain authors became in the Greek tongue Ἀγωντες, Egypt; Kha-nofer, “the good crown”; Khu-to-ui, “the light of the two countries”, i.e. of Upper and Lower Egypt; Hā-ka-knum-nuteru, “the house of the worship of the divine architect”; Mā-kha-to-ui, “the balance of the two countries”, i.e. the dividing point between Upper and Lower Egypt. Memphis is considered to have been founded by Menes, a native of Thinis (Herodotus, II, 99; Diod. Sic., I, 50, 51, 67). It was the capital of several dynasties (third, fourth, sixth, eighth, twenty-fourth). It was after Thes, says Brugsch, the city “concerning which the epi-graphical monuments and the papyri have most to teach us”. Of all the Egyptian cities, it alone remained in the Bible under the name of Mōf or Nōf (Oese, ix, 6; Is., xix, 13; Jer., ii, 16; xlv, 14, 19; Eschel., xxx, 13, 16). The Prophets predicted in strong terms the destruction of this city, and the prophecies were so well fulfilled that the scholars of the French expedition could scarcely discover the true site of Memphis. Memphis has often been identified with the ancient Cairo, the Babylon of Egypt. It is now certain that Memphis extended into the plain where stand the villages of Bedrawit and Mit-Rabiet, on the west bank of the Nile, about twelve and a half miles from Cairo. Its size must have been considerable. In this plain are sometimes exhume some of its ancient buildings. It is still to be identified with the ancient Cairo, the Babylon of Egypt. It is now certain that Memphis extended into the plain where stand the villages of Bedrawit and Mit-Rabiet, on the west bank of the Nile, about twelve and a half miles from Cairo. Its size must have been considerable. In this plain are sometimes exhume some of its ancient buildings.
his own poem "La Coronacion". His minor lyricism was found in the Cancionerios of slight importance.

**Menaeon** (μεναίον) was the name of**

**Menaeon** (μεναίον) was the
days, the days of the ecclesiastical year turning around Easter (proprium de tempore); overlying this, as it were, are the feast days of our Lord, the Blessed Virgin, and the Saints that are fixed on certain days of the month of the civil year. The offices for these feast days are contained in the menaia, which therefore correspond to the proprium sanctorum in the Roman breviary.

The origin is first compilation of the menaia is obscure. Apparently the various elements that make up the collection were put together gradually. It is said that the Synaxarium (now called the menaia) was compiled first. The Synaxarium contains only short accounts of the saints' lives, the history of the feast and so on, like the lessons of the second nocturn in the breviary. These lives of saints are attributed to Symeon Metaphrastes (q. v.). The menaia include the Synaxarium and supply also all the other texts and poems (the Canon, their heirloom, troparia, stickers, kontakia, and so on) required to complete the office. A great part of these poems are ascribed to Romano, the chief hymn-writer of the Byzantine Church (fifth century). The menaia do not affect the holy liturgy (which is hardly influenced by the calendar), being used only in the Divine Office. The Byzantine ecclesiastical matter is not gotten. They are found in the other books (Triodion, Parakletike, Oktoechos).

The churches of the Byzantine rite that do not use Greek liturgically have translations of the menaia with additional offices for their special feasts and any other modifications they may have introduced. The Slavonic name for the book is mineja, Arabic, Muwadna. These books were translated into Syriac by the Melchites during the time that they used that language (a list in Charon: "Le Rite byzantin dans les Patriarchats melkites", Rome, 1908, pp. 33–44). The whole has not been translated into Arabic. The Orthodox and Melchites of Egypt and Syria use instead a selection from them called in Greek Προεκλησία (but "minor ecclesiastical calendar or a kind of Synaxarium. The first printed edition of the menaia was made by Andrew and James Spinelli at Venice (1528–1536), and reprinted (1596–1607). The latest Greek editions were published at Venice, in 1873 (Orthodox), and at Rome, in 1888 (Uniate).

**ALLATIUN, De libris eccles. Graecorum (Paris, 1645 and 1649); KRAUSCHER, Gesch. der byzant. Lit. (Munich, 1897), 655–659; NIKLE, Kalendarii mensuales (2nd ed., Innsbruck, 1899); MALLI,
MÉNARD, LÉON, writer, b. at Tarrascon, 12 Sept., 1706; d. in Paris, 1 Oct., 1767. When he had completed his humanities under the Jesuits at Lyons, he studied jurisprudence at Toulouse and became counsellor at the Superior Court of Nimes. From 1747 he was busied with Eastern research. His first work concerned the history of his native city and its bishops, and was entitled "Histoire des Évêques de Nîmes" (2 vols., The Hague, 1737). Later he enlarged this work, and between 1750 and 1758 he published at Paris the "Histoire Civile, Ecclesiastique et Littéraire de la ville de Nîmes" in seven volumes with illustrations. An abridgment appeared at Paris in 1790, and one at Nîmes in 1831-33. He also wrote: *Les Amours de Callisthène et de Chariclée*, The Hague, 1740, Paris, 1753 (also Paris, 1765, under the title of "Callisthène ou le modèle de l'amour et de l'amitié"); *Mœurs et usages des Grecs* (Lyons, 1749), a widely-read work which became the model of similar productions. In addition he wrote articles for periodicals, especially on detached subjects of the history of France in Roman times. In 1762 the Magistracy of Avignon sent for him and confined to him the task of writing a history of that city. But after two years of work he was constrained by ill-health to leave it unfinished. He was a member of the Académie des Inscriptions, and several other learned bodhis.

Le Beau, Éloge de Ménard in Mém. de l'Acad. des Inscrip., XXXVI.

PATRICIUS SCHLAGER.

MÉNARD, NICOLAS-HUGUES, of the Congregation of St. Maur, b. in Paris, 1585; d. 21 Jan., 1644. His father was private secretary to Catherine de Medici, his mother was a native of Blois. After a liberal education Ménard entered the Order of St. Benedict on 5 Feb., 1607, at St. Denis, and made his religious profession 10 Sept., 1612. In the next year he joined the reform movement of St. Vannes in Verdun which some years later developed into the Congregation of St. Maur; and he became one of its main helpers. After some time he was called to Paris, where he soon became an important factor in the community and one of the principal pupitars. For sixteen years he taught rhetoric at the College of Cligny. By word and deed he sought to induce his fellow religious to unite an exemplary life with love for study especially of Church history and patrology. On account of failing health he was placed by his superiors in the abbey of St. German des Prés, where he lived in great seclusion in his small circle of intimate friends the Jeu St. Simon stood foremost. Ménard is much praised for his profound learning, his great modesty and his wonderful memory.

Works: "Martyrologium Sanctorum ordinis St. Benedictii", to which he added several biographies and explanatory notes, which formed the nucleus of the work (Paris, 1629); "Concordia regularum, auctore St. Benedicto Aniane abbate", from a manuscript found in the Abbey of Fleury, which is supplemented by a life of St. Benedict of Aniane (Paris, 1638); "St. Gregorii I Papae Libri Sacramentorum", from a manuscript Missal of St. Eligius (Paris, 1642). This also contains the Gregorian Roman chant of the Litany of the Rosary composed in the year 1705. The commentary on the book is highly praised by Muratori (Dissert. de rebus liturgicis, ch. 6), who states that Tommasi and Mabillon would have preferred the text of Pamelius, but the Maurists, when publishing the notes of Ménard had also to use his text "De unico Dionysio Areopagi Athenarum et Parisi- rum episcopo", a defence of the identity of the Areo-

pagan and first Bishop of Paris, written (at first anonymously) against Launoy, in defence of Millet (Paris, 1643); "S. Barnabæ Apostoli ut tertur Epistolæ Catholica, ab antiqua olim ecclesie patribus sub ejusdem nomine laudata et usurpata" (Paris, 1645). The Greek text had been found by Sirmond at Rome, and Ménard discovered a Latin translation at the Abbey of Corvey.

Kirchenlexikon, s. v.: TAMAR, Congr. von St. Maur (Frankfort, 1773), 1, 27; Theologische Quellenbibliothek, XV, 391, 421; HUNTER, Nomencl. (Innsbruck, 1907), 377.

FRANCIS MERRISHAW.

MÉNARD, RENÉ, missionary, b. at Paris, 1604; d. about 10 Aug., 1661, in what is now Wisconsin. After the usual course of studies he set out from Dieppe in the beginning of May, 1640. Arriving at Quebec he was assigned to work among the Hurons, labouring first, however, among the Nippisians. After the destruction of the Huron missions he went to Three Rivers, and on 17 May started for the Iroquois country. He was sent to the Cayugas, where for the first two months he was brutally treated, but after that he won the affection of the savages. When the Iroquois missions were interrupted, he again went to Three Rivers, but in 1659 started with 300 Ottawas for the Far West. He was then fifty-five years of age. In all probability the post he endeavoured to establish was at Keweenaw, one hundred leagues west of Sault Ste. Marie. The story of his sufferings there forms one of the most pathetic pages of the "Recit de...". For a long while he set out to reach the Dacotahs, who, according to a letter written by him in July, 1661, lived three hundred leagues farther on. With him was a single Frenchman, not Guérin the famous "Donné", but an armourer or blacksmith. They became separated in the forests, and Ménard was never heard of again. He was probably murdered at the first rapid of the Menomonees.

T. J. CAMPBELL.

MENAS, SAINT, martyr under Diocletian, about 295. According to the Greek Acts, published with Latin translation in "Analecta Bollandiana", III, 238 (Surius, XI, 241), Menas, a Christian, and an Egyptian by birth, served in the Roman army under the tribune Firmian. Returning from the eastern campaigns he presented himself to the Emperor Diocletian, and Menas hearing of the impious edicts issued against the Christians by the Emperors, Diocletian and Maximian, left the army, retired to a solitude in the mountains and served God by fasting, vigils, and prayer. During the celebration of a great festival Menas appeared in the midst of the populace in the temple, and fearlessly professed his faith. He was led before the prefect Pyrrhus, cruelly scourged, put to torture, and finally beheaded. His body was brought to Egypt and the martyr was soon invoked in many needs and afflictions. The fame of the miracles wrought, spread far and wide, and thousands of pilgrims came to the grave in the desert of Marotis between Alexandria and the river Nile. In the four centuries Bumma (Karm-Abum-Abu Mina) was a national sanctuary and grew into a large city with costly temples, a holy well, and baths. A beautiful basilica was erected by the Emperor Arcadius. The cult was spread into other countries, perhaps by travelling merchants who honoured him as their patron. As a result of various vicissitudes, the doctrinal disputes and the conquest of Egypt by the Arabs under Omar in 641, the sanctuary was neglected and ultimately forgotten. During 1905 Mr C. M. Kaufmann of Frankfurt led an expedition into Egypt which made excavations at Bumma. He found in a vast field of ruins, the grave, the well and thermal, the basilica, the monastery, numerous inscriptions on the
MENCCIUS

MENDAÑA

wails imploring aid through the intercession of the saint, and thousands of little water pitchers and oil lamps. The rich finds are partly in the Museum of Alexandria and Cairo, and partly in Frankfort and Berlin. The monsignor published an official report of his expedition in 1908, "La découverte des Sauvages dans le désert de Mareotis". His feast is celebrated on 11 November.

Several saints of the name Menas were highly honored in the ancient Church about whose identity or divinity much dispute is raised. Delahaye (Anal. Boll., XXIX, 117) comes to the conclusion that Menas of Mareotis, Menas of Coteysne, and Menas of Constanti-

nople, mentioned in Kallikles, are one and the same person, that he was an Egyptian and suffered martyrdom in his native place, that a basilica was built over his grave which became one of the great sanctuaries of Christendom, that churches were built in his honour at Coteysne and Constantiopon, and gave rise to local legends.

Mencius (Latinized form of Chinese Meng-Tze, i.e. Meng the Sage), philosopher, b. 371 or 372 B.C. He was a disciple of the grandson of Confucius, and ranks next to the great master as an exponent of Confucian wisdom. His work, known as the "Book of Menci-

us", or simply, "Mencius", is one of the four Shuh, or books, given the place of honour in Chinese literature after the "Kung", or classics. Of Mencius' life only a meagre account has been handed down, and this is so like the story of Confucius in its main outlines, that one is tempted to question its strict historical character. He is said to have lived to the advanced age of eighty-four years, being thus a contemporary of the great Greek philosophers, Plato and Aristotle. His father died when he was very young. The care of his training was thrown upon his mother, and so well did she fulfill her task that she has been honoured ever since, among the Chinese of all classes, as the pattern of the true mother. After a thorough instruc-

tion in the doctrine of Confucius, Mencius was honoured with the position of minister of state to one of the feudal princes, Hsuan. But after some years, see-

ing that the prince was not disposed to follow his counsels, he resigned his charge, and for years went about from court to court, explaining the principles of Con-

cfucius. At last he was kindly received by Prince Mencius, and was instrumental in promoting the welfare of his people through his wise measures of reform. After the death of the prince he retired to private life, and spent his last years instructing his disciples, and pre-

paring with them the book that bears his name.

The "Book of Mencius" consists of seven parts or books, and treats of the proper regulation of human conduct from the point of view of society and the state. Religion as a motive of right conduct seems to have concerned him much less than it did Confucius. He is interested in human conduct only in so far as it leads to the highest common weal. One of his recorded sayings is: "The gods come second; the sovereign is of heavier weight." His work abounds in sententious utterances. If we may trust the records, he knew how to speak plainly and strongly. To Prince Hui, whom he found living in careless luxury, while his people were suffering for lack of economic reforms, he said: "In your kingdom there is fat meat, and in your stables are sleek horses, while famine sits upon the faces of your people, and men die of hunger in the fields. This is to be a beast and prey on your fellow men."

Mencius was a staunch champion of the Confucian principle that human nature tends to what is morally good, and only runs to evil by reason of the perverse influences of external environment. His treatise is one of the most noteworthy attempts to teach mortal-

ity independently of religion. The "Book of Mencius" is generally accepted as genuine, though the evidence of its Mencian authorship is of a kind that would not be judged sufficient if it fell within the scope of modern historiographic criticism. In a Chinese history dating from 100 B.C., a short account of Mencius is given, in which he is declared to be the author of seven books that bears his name. There are extant portions of literary works composed as early as 186-178 B.C., containing quotations from the "Book of Mencius". There remains still, somewhat more than a century to bridge over, but the reputation for accuracy of the Chinese annals is taken as a warrant that the work goes back to the days of Mencius and issued from his pen.

A partial acquaintance with the teachings of Menci-

us was obtained by European scholars through the writings of the Jesuit missionaries to China in the eighteenth century. The "Book of Mencius" was translated into Latin by Stanislaus Julien in the early part of the last century. English readers have ready access to the sayings of Mencius in the admirable edition and version of the "Chinese Classics", by J. Legge.

Charles F. Aiken.

Mendaña de Neyra, Alvaro de, a Spanish navigator and explorer, b. in Saragossa, 1541; d. in Santa Cruz, Solomon Islands, 18 October, 1568. Little is known of his early years, but about 1563 he went to Lima upon invitation of his uncle, Lope García de Castro, who was then Viceroy of Peru. At that time the Spaniards were well aware that the Pacific offered an extensive field for exploration and discovery, and García de Castro, wishing to explore that vast region, equipped an expedition of two ships at the head of which he placed his nephew Mendaña. This expedition set out from Callao in November, 1567. In the course of about a year they discovered several islands of Oceania, and returned to Peru in 1568. Mendaña's travels did not awaken much interest at first, so he gave an elaborate and glowing description of the archipelago to which he gave the name of Solomon islands, as it was supposed to be an island state. Mendaña had obtained the gold with which he had adorned the temple at Jerusalem. These reports of the wealth of the islands, some years later, caused the fitting out of a second expedition for the purpose of colonizing them. By order of Philip II, Mendaña was placed in command, and the expedition sailed 11 April, 1565. Several groups of islands were discovered, among them the Marquesas Islands which he so named in honour of the wife of García de Mendoza, Marquís of Cañeque, who was at the time Viceroy of Peru. The explorer Cook, in 1774, gave the name of Nukahiva to this group, that being the native name of the largest island of the archipelago. The expedition continued westward, visiting several of the other groups of islands, but Mendaña died before he reached the end of the voyage. Before his death, he delegated his powers to his wife in whom he had great confidence and who was with him on the voyage. The widow, a very resolute woman, took charge, and led the expedition into Manila, where they arrived safely in February, 1568. Mendaña left behind him a describing both maps and charts, but only four pages of one of his manuscripts were selected after his death by the historian Pedro Gómez de Victoria under the title of "Derrotero de Mendaña de Neyra". The manuscript is now in the National Library in Paris.

Ventura Fuentes.
Mende, Diocese of (Mimatrensis), includes the department of Lozère, in France. Suffragan of Bourges under the old régime, it was re-established by the Concordat of 1801 as a suffragan of Lyons and united with the department of Ardèche. The See of Mende lost this second department in 1822 by the creation of the Diocese of Viviers and became a suffragan of Albi. According to local legends belonging to the Limousin cycle of legends relating to St. Martial, he passed through the territory of the Gabali (Gévaudan) of which Mende is the capital, and appointed as its first bishop, St. Severian his disciple, about the beginning of the first century. (See St. Martial.) The first bishop known by his name is St. Privatus, who according to Gregory of Tours, died in a grotto of Mount Mimat, a victim of the ill treatment he suffered at the time of the invasion of the Alamanni under their king Chroccus. Gregory of Tours places this event about 260; though Fredegarius puts the invasion of Chroccus at 407. Mgr. Duchesne places the invasion of Chroccus and the death of St. Privatus at the beginning of the reign of Constantine, perhaps before the Council of Arles. It is certain that there was an organized church in the country of the Gabali from about 314, since in that year it was represented at the Council of Arles. We do not know the exact date of the diocese of Mende, except from the chronicles of Mende and other church records. The first bishop of the Gabali, who doubtless resided at Javouls, near Mende, was Saint Hilary, present at the Council of Avernæ in 535, and founder of the monastery of Canourgue, and whose personality has been wrongly described in certain traditions concerning Saint Iller, and St. Fréjal of Canourgue (nineteenth-century) assassinated, it is said, under Louis le Débonnaire.

Towards the year 1000 Mende became the seat of the bishopric. Under Venerable Aldebert III (1151–88), Alexander III passed some days at Mende in 1162; Aldebert wrote two works, on the passion and on the miracles of St. Privatus, whose relics were discovered at Mende in 1530 by M. Le Lètoup, and has been esteemed as one of the oldest historians of the diocese. Mende became the see of a bishop, Guillaume Durand (1285–96), the author of “Speculum juris,” and of the “Rationale divinorum officiorum,” who was secretary of the general council of Lyons in 1270, and his nephew, Durand le Jeune (1295–1298), who, by the act of the chapter in 1371, was named dean of M. Le Lètoup. His work, “De bel, definitively settled in Gévaudan the respective rights of king and bishop, and who left a work on the general councils and on the reform of abuses. Guillaume de Grimoard, born about 1260 at the castle of Grisac near Mende, was sickly and deformed, but was restored at the prayer of his godfather, St. Eligier de Sabran, who had come to baptize him. Elected pope in 1362 under the name of Urban V, he administered the Diocese of Mende himself from 1368 to 70, as it had been left vacant by the removal of his nephew to the See of Avignon.

Among the bishops of Mende were: Guillaume de Chanae, who occupied the see but a few months, when he was killed in 1371; his nephew of Sixtus IV and a cardinal; Giuliano della Rovere (1478–83) later pope under the name of Julius II; and his nephews, Cardinal Clement della Rovere (1483–1504) and Francesco della Rovere (1504–24); Castellane (1586–92) massacred at Versailles, 9 Sept., 1793.

Urban II visited the Diocese of Mende in 1095 and had consecrated in his presence the church of the monastery of Saint Sauveur de Chirac or of Monastier founded in 1062 and dependent on the Abbey of Saint Victor. Mende was captured for the first time by the Huguenots in 1562; the celebrated adventurer Merle from 1573–81 led into the region bands of Protestants who were masters of Mende for eighteen months, and destroyed a great part of the cathedral. Urban V had caused to be rebuilt. The Diocese of Mende was one of the regions where the insurrection of the Camisards (q. v.) broke out at the beginning of the eighteenth century. Cardinal Dominique de la Rochefourcauld, Archbishop of Rouen, who presided in 1771 over the last assembly of the clergy of France, was born in 1712 at Saint-Cély d’Ancher, in the diocese. The chemist Chartal (1756–1832) was one of the last of those who profited by the scholarships founded by Urban V for twelve young students at Montpellier.

The following saints are specially venerated in the diocese: St. Louis (thirteenth century); the preacher St. Verain, Bishop of Cavailly, St. Severian of Gévaudan (sixth century); St. Lupentius, abbott of the basilica of St. Privatus, beheaded by order of Brunehaut whom he reproached for the irregularities of her life (sixth century); the nun St. Enimie, daughter of Ciotarie II and sister of Dagobert (seventh century), foundress of a monastery of Benedictine nuns in the present St. Enimie. The principal pilgrimages of the diocese are: at Mende itself, Notre Dame de Mende where the statue of the Black Virgin was brought, perhaps in 1213, by the Crusaders of Gévaudan, and the hermitage of St. Privatus; Notre Dame de la Carce, the origin of the city of Marvejols; Notre Dame de Quincoces, a church in the city of Mende; and Our Lady of Les Vaux de Cernay founded about 1030. Urban V founded a chapter-house of eight canons, and Our Lady All-powerful, at Langogne. There were in the diocese, before the application of the law of associations of 1901, various teaching orders of brothers and several teaching orders of nuns of a local origin: the Sisters of Christian Unity (Union chrétienne), founded in 1896 (monastery of Quincoces); the Order of the Sisters of the Holy Family, founded at Falher in 1750, transferred to Mende in 1824; the Sisters of Christian Doctrine (mother-house at Meyruies) founded in 1837. The religious congregations in 1900 directed in the diocese fifteen infant schools, one orphan asylum for boys, four orphan asylums for girls, nine hospitals and almshouses, twelve religious houses for the care of the sick. In 1905 at the end of the régime of the Concordat, the diocese had 128,866 inhabitants, 26 parishes, 191 succursal churches, and 135 vicarages, supported by the state.

Georges Goyau.

Mendel, Mendelism.—Gregor Johann Mendel (the first name was taken on entrance to his order), b. 22 July, 1822, at Heinzendorf near Odran, in Austrian Silesia; d. 6 January, 1884, at the Augustinian Abbey of St. Thomas, Brunn. His father was a small peasant-farmer, and the pecuniary resources of the family were very meagre, as is shown by the fact that a slave bought (1813) for 15 florins left a debt of 4 florins, and gave up a large part of her dowry in order that the plans which his family had formed for his education might be carried out. The debt was afterwards repaid, and more than repaid, by Mendel. After a period of study at the school of Leipnik, Mendel distinguished himself so much that his parents made a great effort and sent him to the gymnasium at Trepau, and subsequently, for a year, to Olmutz. At the former place one of his teachers was an Augustinian, and, whether post or propter hoc, at the end of his period of study at the gymnasium Mendel applied to be admitted as a novice in the Abbey of St. Thomas at Brunn, commonly known as the "Königskloster". This was in 1843, and in 1847 he was ordained priest and seems to have occupied
himself in teaching until 1851, when he was sent, for a two years’ course of study in physics, mathematics, and the natural sciences, to the University of Vienna. When this course terminated, in 1853, he returned to his abbey, and was appointed a teacher, principally of physics, in the Realschule. He continued in this position for three years and a half, but he had been genuinely devoted to teaching and to have gained the reputation of being extraordinarily successful in interesting his pupils in their work. In 1858 he was obliged to relinquish his educational labours on assuming the position of abbot of his monastery, to which office he was then elected.

When appointed to his important post, Mendel, already engrossed with his biological experiments, hoped that he might have more time for his researches than was possible in the midst of his labours at the Realschule. But this was not to be. The jurisdiction and privileges of the abbey are somewhat extensive, and its abbot must, in ordinary times, find himself with plenty of occupation. Mendel, however, in addition to the multiplicity of his duties as abbot, became involved in a lengthy controversy with the Government which absorbed his attention and em- bittered the last years of his life. The Government had imposed special taxes on religious houses, and these Mendel refused to pay, alleging that, as all citizens were not exempt from the law, it was unjust to ask one kind of institution to pay a tax from which another kind was free. At the commencement of the struggle several other monasteries sided with him, but one by one they submitted, until at last Mendel was left alone in his opposition to the tax. Great efforts were made to induce him to yield, but he refused, and even alleged the right of the abbey to be distrained upon rather than submit. In the end—though not till after Mendel’s death—the obnoxious tax was repealed. The result of all this strain, as may easily be understood, was a complete cessation in Mendel’s scientific work. His appointment as abbot may have been an excellent thing for the monastery, but it cannot be denied that it was a great misfortune for science. The latter years of his life were rendered unhappy, not only by constant strife with the Government, and by the racial controversies which tore that part of Austria at the time in question, but also by constant ill-health due to the chronic nephritis of which he ultimately died.

For the next twenty years, Mendel’s business was to change that sunny cheerful nature, which had secured Mendel many friends, into a somewhat morose disposition and suspicious attitude of mind. A public monument to his memory was unveiled at Brunn, 2 October, 1910.

Mendel’s experiments, on which his fame rests, were commenced while he was still a novice, and carried out in the large gardens attached to his monastery. Dissatisfied with the Darwinian views, then commencing to be known, he undertook a series of experiments on peas which occupied his spare time for eight years. The results of these observations were published in the “Transactions” of the Brunn Natural History Society in 1866, and a further paper on Hieracium appeared in the same periodical in 1869. Two short papers of less importance were published during the period of study at Vienna, and this seems to complete the list of the communications which he gave to the world, with the exception of his annual meteorological records, also published by the society. In 1890, after he had devoted himself to various lines of investigation, bestowing much labour on the heredity of bees. He collected queen bees of all attainable races, European, Egyptian, and American, and made many crosses between the various races. Unfortunately, the notes which he is known to have made on this subject have completely disappeared, and it is not impossible that he may have destroyed them himself in some of the dark hours which he was called upon to endure during the last years of his life.

The Brunn Society was not a wholly unknown organization, but its Journal was scarcely one which could be expected to give the widest publicity to a new discovery of the magnitude of the doctrine. It is to be feared that account that Mendel’s views seemed for a third of a century to have been still-born. Bateson, however, thinks that this would not so long have delayed his recognition, but that “the case is unquestionably to be found in that neglect of the experimental study of the problem of Species which supervised almost the whole of the Darwinian doctrine and Bateson’s opinion, that of the man who has done more than any other to make Mendel’s views known, is worthy of all consideration. Whatever may have been the cause, the fact remains that Mendel’s work was unrecognized until, in 1899, three men of science—de Vries in Holland, Correns in Germany, and Tschermak in Austria—almost simultaneously called attention to his publications and started the interest in his line of investigations which has steadily continued to grow and increase since that date. Mendel himself, though grievously disappointed at the neglect of his views, never lost confidence in them, and was wont to exclaim in his few words: “Meine Zeiten kommen.” Mendel was abundantly justified in his belief.

It now remains to give some account of the theory put forward by Mendel and the influence of his work during the past ten years. Mendel himself confined his experiments to plants, and his most important observations were made on the garden pea, Pium sativum. The peas have developed, not only a large number of other members of the vegetable kingdom, but also with a variety of animals, using that word in the widest possible sense. With the details of their publications it is not possible here to deal, but a short account of Mendel’s own work will suffice to show the lines of his theory. He did not, as others had done and have since done, direct his attention to the entire group of characteristics making up the individual, but concentrated his attention on certain pairs of opposed features observable in certain plants. In the case of the pea, he observed that some were tall, some dwarf in habit; some had round seeds, others wrinkled; some had green endosperm, others yellow. The next step was to select seven such characters and studied their behaviour under hybridization. From what occurred he was led to believe that the progeny of the various crosses behaved in regard to these characters, not in a haphazard manner, but in one which was reducible to the terms of a so-called “Natural Law.” One instance given by Bateson will explain what happens: there are tall and short (or “Cupid”) sweet peas, and in them we have plants showing a pair of marked and easily recognizable opposite characters. The tall and short forms are crossed with one another, and the seeds collected and sown. The resultant plants will be found to belong entirely to the tall variety. If, on the other hand, we have a cross between the short and the tall, if, however, this generation of seeds is sown and the flowers of the resultant plants be self-fertilized the result is that, when their seeds are sown, and have sprung up into plants, it is found that these are mixed, and mixed in definite proportions, for, on the average, it will be found that there are three tall forms for every one of the short. This tallness was not wiped out, but that it was temporarily obscured in the second generation, though present all the time potentially. To the character which alone appears in the first cross is given the name dominant (in this instance tallness is dominant), and to the hidden character that of recessive (dwarfiness, in the example). When the tails and dwarfs of the
third generation are allowed to be self-fertilized, it is found that all the recessive (dwarfs) breed true and, what is more, will go on breeding true as long as uninterfered with. Not so the dominants, which, after self-fertilization, produce both tall and dwarf. Some of the tall and dwarf generation will breed true and continue to breed true; others will not, but will produce a mixed progeny. Hence, out of the first plants, seventy-five will be tall (dominants), and twenty-five dwarfs (recessives), these last being pure. Of the seventy-five tall, twenty-five will be pure and will go on producing tall; fifty will be mixed, and their progeny will consist of pure dominants, mixed dominants, and recessives, as has been stated above.

Davenport thus enunciates the laws underlying these facts: "Of the two antagonistic peculiarities possessed by two races that are crossed, the hybrid, or mongrel, exhibits only one; and it exhibits it completely, so that the mongrel is not distinguishable as regards this character from one of the parents. Intermediate conditions do not occur. Second: in the formation of the pollen, or egg-cell, the two antagonistic peculiarities are segregated; so that each ripe germ-cell carries either one or the other of these peculiarities, but not both. It is a result of the segregation of the genes in the second generation mongrels each of the two qualities of their grandparents shall crop out on distinct individuals, and that the recessive quality shall appear in twenty-five per cent of the individuals, the remaining seventy-five per cent having the dominant quality. Such recessive individuals, crossed inter se, should never produce a mongrel, and any mongrel that does prove to be of the pure recessive variety."

Such, in brief, are the main outlines of Mendel's theory; but in the few years which have elapsed since it first engaged the attention of the scientific world, there has grown up an enormous literature on the subject which has much added to the complexity of the minor developments of the laws above given, and has made more difficult the difficulty of the terminology of Mendelism. With these developments it is impossible to deal here: they will be found very fully treated in Bateson's work (see below). It would, however, be negligent to omit all mention of the estimation in which the theory itself is held by men of science of Dr. Bateson, whose book on "The Science of Life," and whose revision of "The Origin of Species" will doubtless be acknowledged by all students of the subject to be an admirable and exhaustive treatise on the subject of evolution.

As above stated the papers in which Mendel's theories were made public are contained in the "Proceedings" of the Brünn Society. They have been made available for English readers by the translation which appears in Bateson's work (see bibliography below).

Bateson, Mendel's Principles of Heredity (Cambridge, 1909) (this is the most important of the English translations), contains a translation of Mendel's papers and a biography as well as a full account of all recent work on Mendelian lines; Punnett, Mendelism (Cambridge, 1903), a good brief account of the subject; Lock, Recent Progress in the Study of Variation, Heredity and Evolution (London, 1908); Walshe, Catholic Churchmen in the Evolution of Science (New York, 1907);—all these books are from foreign periodical literature on the subject will be found.

B. C. A. WINDLE.

Mendes de Silva, João, better known as Amadeus of Portugal, b. 1420, d. at Milan, 1482, began his religious life in the Hieronymite monastery of Notre-Dame de Guadalupe (Spain), where he spent about ten years. Desirous of joining the Franciscans, he went to Italy, where after some delay he was received into the order and, living in various convents, chiefly at Milan, attracted attention by his virtue and miracles. Under the protection of the Archbishop of Milan, he established the convent of Notre-Dame de Guadalupe in 1469 which became the centre of a Franciscan reform. The minister general of the order, Francesco della Rovere, later pope under the name of Sixtus IV, extended his protection to him. Other foundations were made in Italy, among them one at Rome. Supernatural favours obtained through his intercession aided in the spread of his cult, and the Bollandists testify to the authenticity of the title "Blessed" bestowed on him. He composed a yet unpublished treatise entitled "De revelationibus et prophetiis," two copies of which are mentioned by Nicholas Antonio. The work of another Amadeus, "Homilies on the Blessed Virgin", has been erroneously attributed to him. The controversies he founded between the Scolastics and the Franciscans, the friars of his order, led to the loss of the benefices of the Franciscans; the friars were called the Amadeans or Amadists, and they had twenty-eight houses in Italy, the chief one, Saint Peter de Montorio, in Rome. Innocent VIII gave them the convent of Saint Genesio near Cartagena in Spain (1493). The successors of Blessed João, Georges de Val-Camonom, Gilles de Monfray, Jean Allemand, and Charles de Coigny, preserved his foundation in its original spirit until Saint Pius V suppressed it along with similar branches of the Franciscan Order uniting them into one great family of Friars Minor Observants (1668).

Méndez and Gualaquiza, Vicariate Apostolic or, established by Leo XIII on 3 February, 1893, in the southern part of the province of Oriente, Ecuador. It depends directly on the Congregation of Extraordinary Ecclesiastical Affairs. The vicar Apostolic is Mgr Giacomo Costamagna, Salesian, titular Bishop of Colonisa, elected, 18 March, 1893. The mission was entrusted to the Chane, who sent his three fathers, two scholastics, and one catechist. They were all expelled under the anti-clerical regime in 1895. The province of Oriente is populated almost exclusively by Indians of the Jibaro (q. v.) stock. In the eighteenth century many of the tribes had been converted by the Jesuits, but on the expulsion of the Jesuits in 1767 the foundations of the missions were neglected, and the little that remained was lost when the Maximilian regime came to an end. The converts were not gathered under the Church, but rather under the tutelage of the mission, and the Church began to work for the conversion of the natives. The mission was reestablished in 1867, and the natives were gathered into the missions. The number of the natives was estimated to be 150,000 Indians.

A. A. MacEwan.

Mendiburu, Manuel de, b. at Lima, 29 October, 1805; d. 21 January, 1885. He was educated in the University of S. Marcos del Rímae under the direction of Dr. Javier de Llama Pizarro, and in 1818 was appointed assistant of the College of San Martín. Upon the declaration of Peruvian independence he entered the army as an ensign and was afterwards promoted by General San Martín to the rank of lieutenant. Having been present at the battles of Calana, Locucuba, Tocanca, and Miquesuca, captured by the Spaniards, and then set at liberty, he rose to be captain in 1830. A year later he was sent on special commissions to Brazil and thence to Spain. Early in 1834 he became known in politics, and in 1851 was promoted to brigadier general. After serving as prefect of several departments in succession, he was appointed in 1870 director of the School of Arts and Trades at Lima. He also held at various times the portfolio of agriculture, foreign affairs, war, and marine, served several terms as a member of the Chamber of Deputies, became general-in-chief of the army, vice-president of the constituent Assembly, and diplomatic representative of Peru in Great Britain, Bolivia, and Chile, in which last post he won general esteem by his uprightness and kindness. More intrusted to mental work, the "Distintivo histórico biográfico del Perú", a model of its kind in America, cost him long years of constant labour. It relates the principal achievements of those who did good service to Peru, and is an historical thesaurus of great utility to those engaged in the special study of Peruvian history during the rule of the Incas and the Inca period. He also reorganized the library and national archives at Lima.

Dicc. Enciclop. Hispano-Americana, IX (Barcelona, 1892).

Camillus Crivelli.

Mendicant Friars are members of those religious orders which, originally, by vow of poverty renounced all proprietorship not only individually but also (and in this differing from the monks) in common, relying for support on their own work and on the charity of the faithful. Hence the name of begging friars. The friars are divided into three main groups: (1) the Mendicant orders, recognized as such by the Second Council of Lyons, 1274, Sess. 23 (Mansi, XXXIV, 96), the Order of Preachers, the Friars Minor, the Carmelites, and the Hermits of St. Augustine. Successively other congregations obtained the privilege of the mendicants. The Council of Trent (Sess. XXV, cap. iii) granted to all mendicants the right to beg. Thus do the Friars Minor and the Capuchins, the liberty of corporate possession (see Friar). The object of the present article is to outline I. the origin and characteristics of the mendicants; II. the opposition which they encountered.

1. Historical reasons for the origin of the mendicants are obvious. Since the struggle regarding investitures a certain animosity against church property had remained. Arnold of Brescia (q. v.) preached that monks and clerics who possessed property could not be saved. A little later John Valdes founded the "Poor Men of Lyons", soon followed by similar sects. The movement thus started in France and Italy had spread among the richer classes at the beginning of the thirteenth century and threatened to become dangerous. For this reason the Church decided to inhibit the orders and to induce the new mendicant orders to yield to the Church the possession of property. Thus the mendicants are characterized by an utter poverty, and the entire subjection towards the Church, St. Francis became with St. Dominic the bulwark of orthodoxy against the new heretics, and the two orders of Friars Minor and Preachers proved themselves a great help both to the inner and to the external life of the Church. Nor was absolute poverty the only characteristic of the mendicants. They were not formed to the sanctification of their own members; their maxim was non sibi soli vivere sed et alia proficere (not to live for themselves only, but to serve others). At once contemplative and active, to the complete renunciation of all things they joined the exercise of the apostolic ministry, devoting themselves to the evangelization of the masses, and thus introducing another element into monastic life. A necessary consequence of their close contact with the people, the converts of the mendicants, unlike those of the Benedictines, Cistercians and of the monks generally, were situated in the towns, in which, at the beginning of the thirteenth century, communal life was rapidly developing. The work of the mendicants in the pulpit, in the confessionals, in the service of the sick and the socially weak, in the foreign missions, had no parallel in the Middle Ages. This same apostolical activity had two consequences which form further characteristics of the mendicant friars, a new organization of confraternal life and the adoption of a special means of providing subsistence. The mendicants, unlike the monks, were not bound by a votum stabilitatis (vow of permanency) to one convent but enjoyed considerable liberty. Not only could they be called to other countries but also within the limits of a province, but, with permission of the general, they could be sent all over the world. The form of government itself was rather democratic, as for the most part the superiors were not elected for life and were subject to the General Chapter. From their apostolical ministry the mendicants derived the right of support from all Christian apostolic work: dignus est operarios mercede sua. (The labourer is worthy of his hire.) It was only just that having left everything in the world in obedience to Christ's counsel (Matt., xix, 21; xvi, 24; Luke, i, 1-6) in order to devote themselves to the well-being of the people, they should look to the people for their support. And in fact those alms were regarded as the fruits of their work within the limits of a province, but, with permission of the general, they could be sent all over the world. The form of government itself was rather democratic, as for the most part the superiors were not elected for life and were subject to the General Chapter. From their apostolical ministry the mendicants derived the right of support from all Christian apostolic work: dignus est operarios mercede sua. (The labourer is worthy of his hire.)
others, even Catholic countries, it is forbidden by law, as in some parts of Austria-Hungary.

II. This new form of conventual life was not introduced without opposition. With what feeling, the older orders occasionally regarded the rapid spread of the mendicants may be gathered from the bitter words of Matthew of Paris, "Chronica majora," ed. Luard, IV, London, 1877, 279, 50; "ad. an. 1246," ibid., 511-17. Still it is well known that St. Francis was indebted to the Benedictines for the "Fortunian," the first church of his order. The chief opposition came from elsewhere; from the universities and from the bishops and secular clergy. 

The mendicants did not confine themselves to the sacred ministry, but had almost from the beginning learned members who claimed equality with other doctors at the universities. The Dominicans were the first religious order to introduce the higher studies as a special point in their statutes and if they probably owe their mendicancy to the influence of St. Francis over St. Dominic, the Friars Minor are probably indebted for their higher studies to the influence or at least to the example of the Preachers. On the other hand the Church appreciated the work of the new order, bestowed them the rights of jurisdiction over the bishops, granting them extensive faculties for preaching and hearing confessions, together with the right of burial in their own churches, rights reserved hitherto to the secular clergy. It should be stated here that this opposition was not inspired merely by envy or other mean motives, but rather from a feeling that the mendicants were encroaching in great part for their income on the offerings of the faithful, which threatened to diminish through the great popularity enjoyed by the mendicants. On the whole it might be said that the Church protected the regulars against unjust attacks, while on the other hand she found means to redress abuses, tending to replace the real interest of the Church with the mendicants. The opposition to the mendicants was particularly strong at the University of Paris, and in France generally, less violent at the University of Oxford and in England. Isolated cases are to be found also in other countries. As early as 1231-2 Gregory IX had to protect the mendicants against the pretensions of the University of Salamanca, who, in the name of Joachinite errors, to their jurisdiction like the ordinary faithful. See different forms of the Bull "Nimis iniqua" (Bull. Franc. I, 74-77), repeated by Innocent IV, 1245 (op. cit., 388). Although this Bull speaks in a general way and is addressed to different countries, the abuses denounced by it were probably of local character.

The cause of the mendicants broke out in Paris, where the Dominicans had opened their schools (1229-30) and erected two chairs of theology; the Friars Minor followed them (1231). At first (1252) the opposition was directed against the Dominicans, the university wishing to grant them only one professorship. Denifle, "Chartularium" (see below), I, 226. The university sought allies, and drew the secular clergy into the struggle (Chartularium I, 252), with the result that Innocent IV, at first favourable to the mendicants (Chartularium I, 247), took away their privileges with regard to preaching, confession, and burial rights in the Bull "Esti animorum," 21 Nov., 1254 (Chartularium I, 1267). This sudden change of attitude towards the mendicants in Innocent IV has not yet been sufficiently explained. The first step of Alexander IV was to suspend the dispositions of his predecessor, Bull "Nec insolitum," 22 Dec., 1254 (Chartularium I, 276), in which he promised new dispositions and forbade meanwhile to act against the mendicants. In these critical circumstances it was naturally unfortunate that Gerard of Borgo S. Donnino should publish his book "Introductorius in Evangelium eternum" (1254), which, besides many other Joachinite errors, attributed to the mendicants a special vocation, to take the place of the secular clergy in the near future (1260). The answer was not long delayed. William of St. Amour, the leader of the opposition against the mendicants, publicly attacked the treatise in his sermon "Qui amat" (ed. Brown, "Fasciculus rerum expetendarum", London, 1690, II, 51; Guil. A.S. Amore, "Opera omnia," Constancia, 1632, 491). It has been made evident of late that the professors extracted from Gerard's treatise and from Joachin's "Concordia" the thirty-one propositions, partly falsifying them, as Martin Parsimons, first ed., VI, London, 1882, 339-39; "Chartularium," I, 272), and denouncing with them the book to Innocent IV. William went farther and wrote his famous treatise against the mendicants. "De periculis novissimorum temporum" ("Opera om.", op. cit., 17-72; Brown, op. cit., II, 18-41, here under a false title). The author starts from II Tim. iii, 9 etc., and sets the fulfillment of those words in the rise of the mendicant friars, who however are not specified, though everybody knew the significance. The whole list of woes enumerated by the apostle is applied to the mendicants, whom William blames on all the points which formed their characteristic note. The danger, he goes on, is not at present, but a future danger, and in order that some impostors and pseudo-preachers may be the more easily detected, William draws up forty-one signs, by which they are to be recognized. This treatise made an enormous impression.

Alexander IV, however, in the Bull "Quæsi ligum" 24 Apr., 1255 ("Bull. Franc.", II, "Bull. Tred.", I, 275), etc., condemned the propositions and questions at issue between the university and the mendicants, independently of the case of Gerard di Borgo S. Donnino. The pope annulled the statutes of the university against the mendicants, who were authorized to continue their public schools, even with the two chairs of the Dominicans, as a part of the university. The secular clergy of the Dominicans wrote from Milan, May, 1255, to his brethren to be careful and not to provoke the secular clergy against the order ("Chartularium," I, 259; Reichert, "Monumenta Ord. Frat. Predicatiorum," V, Rome, 1900, 21). At the same time the common interest of the Preachers and Friars Minor inspired the beautiful letter of a count of Joldi to the mendicants, granting them, in the spirit of the Bull, "Liber de anti christo et eiusdem ministri") (ed. under a false name by Marténe-Perand, "Vet. Scriptor. amplissima collectio," IX, Paris, 1733, 1271). This redoubtable attack against the mendicants, conducted by the most famous university, was met by the ablest writers from among the friars. St. Thomas Aquinas wrote "Contra impugnantes Dei cultum"; St. Bonaventure, "Questio disputata de paupertate" (Opera omnia, ed. Quarcoci, V, 1255); "Apologia pauperum" (VIII, 223), "De tribus questionibus" (VIII, 331). Directly against William's "De periculis" another Franciscan, Bertrand of Bayonne, or perhaps Thomas of York, wrote the treatise, " Against Gerard of Bordeaux" ("Chartularium," I, 415). John of Peckham, later Archbishop of Canterbury, took part in the controversy with his "De perfectione evangelica," partly ed. by Little in
"Fratis Johannis Pecham... tractatus tres de paupertate" (British Society of Franciscan Studies, II, Aberdeen, 1910). The seculars continued the fight, even with popular compositions, of which the best known is the "Roman de la Rose". At the second Council of Lyons near Genoa attempted to appeal to the example of the friars. Several bodies, some of which were of objectionable form, as the "Apostolica" and the "Friars of the Sack" (Saccati) (see Salimbene, "Mon, Germ, Hist. Script.", XXXII, 245 sqq.) All mendicants were abolished, but the four great orders were excepted on account of the manifest good they wrought. Martin IV, in 1256, extended to the Dominicans and Franciscans the privilege of preaching, confessions, censures, a measure which caused much opposition among the bishops and clergy, especially in France. Only in late years have we come to know of the existence of a great transaction on this subject, at Paris, 1250, where Cardinal Gaetano, later on Boniface VIII, skillfully defended the regulars (see bibliography). Boniface VIII revised the legislation regarding the privileges of the mendicants in favour of the clergy. His Bull "Super Cathedram", 18 Feb., 1300 (c. 2 in "Clem.", III, 7; "Extravag. com.", cap. 2, III, 6; "Bull Franc.", IV, 498) is in substance even now.

The controversies between the mendicants and the secular priests in England and Ireland took an acrimonious form in the fourteenth century. We have a peculiarly interesting instance of this in the case of Richard Fitzralph, Archbishop of Armagh (q. v.), who preached seven or eight times in London against the mendicants, partly because of their poverty and their privileges interfering with parochial rights. Denounced at the papal court of Avignon, he was cited by Innocent VI and defended himself in a treatise, which he read in a public consistory, 8 Nov., 1357, printed under the title "Defensiorium Curatorum" in Goldast, "Monarchia S. Romani Imperii..." II, Frankfort, 1614, 1391-1410, and in Brown, "Fasciculus rerum" II, 466-487. There is a compendium of the nine propositions in Old English in Howlett, "Monumenta Franciscana", II, 76-77. This curious document might be called a negative exposition of the Rule of the Friars Minor. An English Franciscan, Richard Conway, defended the friars in a treatise entitled "Super Cathedram" in Goldast, op. cit., II, 1410-44. Innocent VI gave a Bull, 1 Oct., 1358, in which he stated that a commission had been appointed to examine the differences between the Archbishop of Armagh and the mendicants and forbade meanwhile the prelates of England to hinder the four mendicant orders from exercising their rights. Bull Franc., III, 606; cf. Wielif, the following year a Bull requiring the observance of the Decretal "Super Cathedram" of Boniface VIII was directed to different bishops of the continent and to the Archbishop of York, 26 Nov., 1359 (Bull. Franc., VI, 322).

Towards the end of the fourteenth century the mendicants in England were attacked more fiercely and on a broader scale by the English Friars. If in France, at first, was not on bad terms with the friars; his enmity was confined to the last few years of his life. While Wielif had only repeated the worn-out arguments against the mendicants, his disciples went much farther and accused them of the lowest vices. Nor did they confine their calumnies to learned treatises, but embodied in popular poetry. The first great English treatise which we have any examples in the two volumes published by Wright (see bibliography). The chief place of controversy was Oxford, where the friars were accused even of sedition. On 18 Feb., 1382, the heads of the four mendicant orders wrote a joint letter to John of Gaunt, Duke of Lancaster, protesting against the calumnies of the Wieliffs and stating that their chief enemy was Nicholas Hereford, Professor of Holy Scripture, who in a sermon announced that no religious should be admitted to any degree at Oxford. This letter is inserted in Thomas Netter's "Fasciculi zianiorum magistri Joh. Wyclif" (ed. Waddington, Ret. Brit. Script., London, 1588, 292-300). There are in the later centuries many other instances of hostility with which the friars, especially the Minorites, were regarded by the University of Oxford. Though the Black Death and the Great Schism had evil effects on their general discipline, the mendicants, thanks to the rise of numerous branches of stricter observance, on the whole, continued to flourish, especially in the South. The heavy losses sustained during that period, the mendicants have nevertheless continued to take their part, and that a considerable one, in the life of the Church down to the present day.

LIVIARIUS OLIVER, MENDIETA, JERONIMO, Spanish missionary; b. at Vitoria, Spain, 1525; d. in the City of Mexico, 9 May, 1604. While still a youth he took the habit of St. Francis at Bilbao, and arrived in New Spain at the end of 1545. Being desirous of helping in the conversion of the Indians, he applied himself with zeal to study the Mexican language, and it is said that, although a natural defect interfered with his speaking Castilian and kept him from preaching to Spaniards, yet, when he mounted the pulpit to address the Indians in their language, he spoke clearly and without stammering. At Taxco he probably had for his father guardian F. Toribio de Motolinia, the last superior of the first band of Franciscans in Spain so highly esteemed in his province that the provincials, Diego de Olarte and Miguel Navarro, took him with them on their visitation of the convents and the Indians, while the entire province, assembled in chapter, judged him capable of selecting at his own individual discretion all the provincial officers, a selection which in the event proved satisfactory to all.

In 1569 Mendieta accompanied Miguel Navarro on his way to the general chapter in France, and while on his journey he remained in his native town, Vitoria. Here he put himself in communication with Juan de Ovando, the distinguished magistrate of the Council of the Inquisition, who had been appointed visitor of the Council of the Indies and was
afterwards its president. Ovando no doubt already knew Mendieta by name, through his letters written from New Spain in 1562 and 1565 to the commissary, Bustamante, and to King Philip II. The questions propounded to Mendieta by Ovando concerned the civil as well as the religious administration, the two being, in consequence of the existing relations between Catholicism and Crown, very closely interwoven; and Mendieta’s replies revealed not merely opinions but a fairly complete and systematic theory of government. In his view the authority of the Viceroy of New Spain should be increased; that of the Audienza diminished, and limited exclusively to judicial matters. In the administration of justice, except in criminal cases, he solemnly desire separate tribunals for Spaniards and for Indians, which were set up in 1572. At the same time he cried out against the possession of land. As to the question of compulsory Indian labour, in agriculture and mining, he was perplexed. The difficulty was a serious one: if the Indians were not compelled to work, then, perhaps content with their land and what little they obtained from it, they would not assist the Spaniards, and these latter could not by their own unaided efforts provide for themselves and for the other Spaniards who inhabited the cities, nor could they, without the Indians, derive from the mines the profit which they looked for. Lastly, however, Mendieta pointed out that in some cases the Indians voluntarily entered into contracts to perform hard work, and that he sought, to be well encouraged at face value. His letters to the Indians impelled him to speak unfavourably of the Spanish colonists. He advocated complete separation of the two races in different towns and villages, saying that the Spaniards ought to have only such settlements as might be necessary to secure the country against forced United States, and that he would not permit any Spanish settlements situated on the borders of the Chichimecas and the savage tribes, with the sole object of guarding the frontier. The Indians, he said, ought all to be confined to certain towns chosen by themselves, and some of these towns ought to be transferred from their actual sites to more suitable. To Ovando’s inquiry, by what means the friars and the bishops could be made to dwell together in peace, his answer clearly betrays his fiery character and the partiality of his views. He suggests the appointment of two bishops in each diocese, one for the Spaniards and one for the Indians, clearly giving it to be understood, at the same time, that the bishops ought all to be chosen from the same order, and that the various diocesan churches were to be treated without either mercy or justice, although it appears from the testimony of Bishop Montufar that at that time they were performing their duties correctly, that they knew the language of the aborigines, and were on good terms with the friars. Mendieta concluded by proposing that a commissary-general of the Indies should be appointed with residence at Seville, who should arrange all the affairs of his order with the Council of the Indies. This last was the only one of his suggestions which met with approval, the first commissary-general appointed being Francisco de Guzman, in 1572, to whom Mendieta immediately wrote his congratulations.

On 26 June, 1571, his general ordered him back to New Spain, asking permission, as was usual, from the Council of the Indies. Jerónimo de Albornoz, Bishop of Tucuman, a member of the council, opposed the granting of the permission, but these difficulties were overcome in 1573, when Mendieta set out, taking with him several religious of his order. In 1575 and 1576 he was confessor of Xochimilco; in 1576 he was at Tlatelolco; and in 1585 was superior of the convent of Tlaxcala. Soon after this he accompanied the commissary, Alonso Ponce, on visitsations, and by his admirable tact and prudence kept himself out of these troubles which arose within the order from the opposition of the provincial and his partisans to Ponce’s execution of his commission. In 1591 he was guard- dian in Santa Ana of Tlaxcala, and in 1597 of Xochimilco. He was buried in the convent of Mexico.

Having undertaken to write the history of the Indies on his return from Spain, he was delayed in executing the work for twenty-five years by the large number of duties which he had to discharge, and, in addition, the consultations and negotiations with which he was occupied, he violated opinion, and was not, even known, for instance, that, while he was guardian at Tlaxcala, he was busy with the work of removing four hundred families of Christian Indians, to colonize among the Chichimecas. Mendieta’s principal work is his "Historia Eclesiastica Indiana". The general, Cristoval de Capitanfum, gave him the command to write it in 1572. He continued the work until 1596. He sent it immediately to Spain, as he had been ordered to do, and never had any further knowledge of it. No writer later than Torquemada ever quoted it, until, through the exertions of Senor Joaquin Garcia Icascalinda, the manuscript, acquired at Madrid, was printed in Mexico in 1870. It is divided into five books. The first book, consisting of seventeen chapters and a prologue, treats "Of the introduction of the Gospel and the Christian religion in the islands of Espanola and the neighbouring regions which were first discovered". The second, containing forty-one chapters and a prologue, tells "Of the rites and ceremonies of the Indians of New Spain and their infidelity". The third, containing sixty-six chapters and a prologue, treats "Of the manner in which the Faith of Our Lord Jesus Christ was introduced and planted among the Indians of New Spain". The fourth, containing forty-six chapters and a prologue, treats "Of the improvement of the Indians of New Spain and the progress of civilization of these conversions". The fifth book is divided into two parts: the first contains fifty-eight chapters, and "There are related the lives of the noble men, apostolic workers of this new conversion, who have ended in peace with a natural death"; the second part, only ten chapters, treats "Of the Friars Minor who have died for the preaching of the Gospel in this New Spain". In this work he displays, without fear or human respect, and even exaggerates at times, the vices, disorders, abuses, tyrannies, and wrongs done by the colonists; he goes so far as to flout the Government, not excepting the sovereign himself. The lofty spirit of rectitude and justice which dominates the work enhances the value of its simple, terse narration, full of information, which with which it is written, as well as its clarity and propriety of language, render it pleasing to the reader.

CAMILLUS CRIVELLI.

Mendoza, Diego Hurtado de, a Spanish diplomat and writer, and one of the greatest figures in the history of Spanish politics and letters; b. in Granada, of noble parentage, about 1503; d. in Madrid, 1575. He received his early education under private tutors and later at the University of Salamanca. A powerful personality, he was a man who carried to a successful termination whatever he undertook. He was destined originally for the Church, and acquired much knowledge suited to further his ecclesiastical advancement, both at home, where he learned to speak Arabic fluently, and at Salamanca, where he studied Latin, Greek, philosophy, civil and canon law. But he had a predilection for 15ics and a marked taste for books, and the notice of Charles V, who sent him in 1530 as ambassador to the Republic of Venice. In 1543 the emperor sent him as one of his representatives to the Council of Trent, where he successfully sustained the imperial interests. While at the Council he was appointed in 1547 special ambassador to Rome and
days he lived a life of laxity, but, during the twenty-
two years of his chancellorship, he used his great in-
fluence for the good of the Church and his country,
being one of the few great men of Spain who advocated
the cause of Columbus. His great revenues were
consumed in the erection of magnificent churches and
charitable institutions; at Valladolid he erected
at his own expense the College of Santa Cruz for poor
students, and at Toledo a hospital of the same name
for foundlings. To the latter he bequeathed his en-
tire fortune of 75,000 ducats. On his death-bed he
recommended the great Ximenes as his successor.

Meneses, Osorio Francisco, Spanish painter, b. at
Seville, 1630; d. probably in the same place, 1705. It is
extraordinary that so very little is known of his history.
He was not only a pupil of Murillo, but by far the
most perfect of his imitators, and undoubtedly many of the
works commonly attributed to the master came from
the brush of his pupil. The few that are known to
have been painted by Murillo as his friend, that he was an intimate ac-
quaintance of Juan Garzon, with whom he worked,
that he was at one time secretary, and later on presi-
dent of the Academy of Seville, and that while in that
city he had a high reputation, not only for his skill, but
also for his personal devotedness. This reputation, it
seemed, was somewhat discounted after his death, be-
dcause it was considered that some of his copies of
Murillo's works were so accurate that he should have
signed the master's name. It was in fact suggested that
two of his copies had been accepted as genuine works
by Murillo. On the other hand, these statements are
declared by one Spanish author to have been made
only with a view of discrediting Meneses. His prin-
cipal work was painted for the church of Saint Martin
in Madrid, and represents the Prophet Elijah. There is a
fine work by him in the museum at Cadiz, and in the
museum at Seville, a picture dealing with the Order of St.
Francis. A work representing St. Catherine, which
is preserved at Cadiz, is said to have been commissed
by the same Murillo. Meneses died in 1705, and his
devotion for St. Philip Neri, and to have been buried
in the church dedicated to that saint.

GEORGE CHARLES WILLIAMSON.

Menevia, Diocese of (Menevensis).—Menevia
is said to be derived from Menapia, the name of an an-
cient Roman settlement supposed to have existed
in Pembrokeshire, or Hen Meneu (vetus rubus) where St.
David was born. From the time of the establishment
of the four vicars Apostolic in England, in 1688, Wales
belonged to the Vicariate of the Western District. In
1840 it was made a separate vicariate by Gregory XVI:
in 1850 the Catholic hierarchy was re-established, and
Wales was divided between the Dioceses of Shrewsbury
and Newport. In 1895 the principality, with the excep-
tion of Glamorganshire was again formed into a
separate vicariate Apostolic. Right Rev. Francis
Joseph Mostyn, son of Sir Pyers Mostyn, eighth baron-
et, of Talacre in North Wales, was appointed first
vicar Apostolic, his see being拒绝 Ace romant. In 1898 he was transferred to Menevia when the vicariate
was made a diocese by Leo XIII. The Bishop of Menevia is the only member of the hierarchy who holds
one of the ancient titles of pre-Reformation times.
The diocese is under the patronage of Our Lady Help of
Christians, St. David, and St. Winefride, patrons of
Wales. It covers 6500 square miles of country, most of which is rugged and mountainous; there are no large towns, so that the Catholic population of some 8500 souls is much scattered in country districts. To meet the spiritual needs of this little flock there are forty-three public churches, chapels, and stations, besides twelve chapels belonging to religious communities. The number of priests (in 1910) is eighty-two, twenty-eight regulars and fifty-four lay-sisters; more than half this number of regulars is accounted for by the monastery of Breton Benedictines, at Caermaria, near Cardigan, the convent of Franciscan Capuchins at Pantasaph, and St. Beuno’s College, the theologue of the English Jesuits. These religious, as well as Oblates of Mary Immaculate and Passionists, serve various missions in the diocese. There are convents of nine congregations of nuns, the Sisters of the Holy Ghost (White Sisters) having no less than seven. The church of Our Lady of Dolours, Wrexham, serves as pro-cathedral; on 10 August, 1909, a cathedral chapter, consisting of a provost and four canons, was erected.

The diocese is rich in relics of the Ages of Faith, thickly strewn as it is with churches once Catholic, but now used for Protestant worship, and with ruins of ancient Catholic churches and monasteries named after the countless saints of the British Church. Most famous of these is the holy well of St. Winefrid (q. v.), at Holywell, which is and always has been in Catholic hands.

This miraculous well has been a centre of pilgrimage from the earliest days of authentic Welsh history, and the saint still attracts her votaries to the shrine, and dispenses her miraculous favours even in this unbelieving age. The beautiful building which stands over the well was erected towards the close of the fifteenth century. The mission has been served by the Society of Jesus since about 1600. St. Mary’s College is a small episcopal college in the town, for the education of boys to supply priests for the diocese; the Welsh language is a prominent feature in the curriculum. The Diocese of Menevia is the restoration of the ancient Catholic Diocese of St. David’s, the foundation of which, in the latter half of the sixth century, is traditionally attributed to that saint. The contention of recent historians that there were no territorial bishops in Wales at so early a date, but only monastic bishops without sees, is considered baseless by Dr. Zimmer, no partisan authority. “Though monasticism was strong in it, it did not impart to the (Welsh) Church either its character or its form” (Realeencyklopadie, X. 224). The four independent Welsh sees were co-extensive with the four independent principalities that had come into being during the sixth century; Menevia with Dyfed, Llandaff with Gwent, St. Asaph with Powys, Bangor with Gwyneudd.

The records of the history of the diocese before Norman rule are very fragmentary, consisting of a few chance references in old chronicles, such as “Annales Cambriae” and “Brut y Tywysogion” (Rolls Series). Originally corresponding with the boundaries of Dyfed (Demetia), St. David’s eventually comprised all the country south of the River Dovey and west of the English border, with the exception of the greater part of Glamorganshire, in all some 3800 square miles. Though it was never an archbishopric, it is far from clear when St. David’s came definitely under the metropolitan jurisdiction of Canterbury. About 1115, however, Henry I intruded a Norman, Bernard (1115–1147), into the see. Bernard’s rule was wise and vigorous; but on the death of Henry he claimed Metropolitan jurisdiction over Wales, and presented his suit unsuccessfully before six successive popes. This claim was afterwards revived in the time of Giraldus Cambrensis (q. v.). Among the more famous bishops who held the see before the Reformation may be mentioned Peter de Leia (1176–1203), who began the building of the present cathedral of St. David’s; Henry Gower (1328–47); and Edward Vaughan (1509–20), who made considerable additions to the same; the learned John Thorsby (1347–50) served the see up to the Archbishopric of York; Henry Chicheley (q. v.) (1408–14), afterwards Archbishop of Canterbury; and the notorious William Barlow (1536–48), the so-called consecrator of Archbishop Parker in 1559. The last Catholic bishop, Henry Morgan (1554–59), was, like the rest of the Catholic bishops, deprived of his see by Elizabeth, but was saved by death from the imprisonment for the Faith.

The oldest portions of the cathedral, dating from 1180, belong to the period of transition from the Early to the Decorated style of architecture; the additions of Bishop Gower, including the beautiful stone rood screen, are excellent examples of the Decorated style, while to the north of the cathedral are the ruins of his magnificent episcopal palace. In 1862 a partial restoration of the cathedral was begun by Sir G. G. Scott. The shrine of St. David in the cathedral was a famous place of pilgrimage; it is said that by favour of Calistus II, who canonized the saint, two pilgrimages to St. David’s were to be accounted equal to one to Rome:—

Menevian pete bis, Roman adire si vis;  
Merces asqua tibi redditur hic et ibi;

Roma semel, quantum dat bis Menevia, tantum  
(anient lines found at the shrine by Archbishop Peckham, 1240–92).

Kenele Digby Beste.

Mengarini, Gregorio, pioneer missionary of the Flathead tribe (q. v.) and philologist of their language, b. in Rome, 21 July, 1811; d. at Santa Clara, California, 23 September, 1886. He entered the Jesuit novitiate in 1828, when barely seventeen, and later served as instructor in grammar, for which his philological bent particularly fitted him, at Rome, Modena, and Reggio. While studying at the Roman College in 1839, a letter from Bishop Rosati of St. Louis, voicing the appeal of the Flatheads for missionary priests, was read out in the refectory, and Mengarini was at
Mengs moved to volunteer for the work. Ordained in March, 1840, he sailed with Father Cotting, another volunteer, from Leghorn on 23 July, and after a tedious nine weeks' voyage landed at Philadelphia. From Baltimore the missionaries found their way to the University of Georgetown, District of Columbia, and a little later to St. Louis, where it was decided Father Cotting should remain. Mengarini was chosen for the distant mission of the upper Missouri, partly on account of his voice and knowledge of music—possessions of no little value in Indian mission work. On 24 April, 1841, Fathers De Smet, Mengarini, and Point, with the lay brothers Specht, Huett, and Classens, and nine other companions, began the long journey by river and overland trail to Fort Hall, Idaho, and thence to Flathead country. On the Feast of the Assumption (15 August), and found a party of Flatheads waiting to conduct them to their final destination. It was nearly a month later when they arrived at the chosen site on St. Mary's river, Montana, in the Flathead country, and began the foundations of the log mission, the missionaries themselves leading the work of cutting the frozen earth with axes. The church and house were of logs plastered between with clay, and were thatched with reeds, the rooms being partitioned with curtains of deerskin and thin scraped deerskin being used in lieu of glass for the windows. The winter cold was so intense that the buffalo-skin robes in which they were arrived, were found to be thawed out each morning. To the native of sunny Italy these early winters in Montana mountains were among the most vivid recollections of later years.

The missionaries at once began the study of the language, translating into it simple prayers and hymns. Mengarini's diligence and success in this work, which was the standard for the cognate dialects. He taught the children to sing in Salish hymns of his own composition, and even trained an Indian band for service on feast days. The work progressed until 1849, when, in consequence of the irruptions of the Blackfeet and the defection and lapse of a large part of the Flathead tribe under a rival claimant for the chiefship, it was decided to close the mission, and Mengarini was summoned to join Father Accolti, the superior of the north-western Jesuit missions, in Oregon. About a year later, on request of Archbishop Alemany of San Francisco for Jesuit workers, he was sent to aid in a mission being fitted up at the Columbia City mission which was the nucleus of the present college. In the meantime the repentant Flatheads had sent to Oregon to ask for his return. They were told this was impossible as he was then assigned to another station, but on their urgent desire the Flathead mission was re-established at St. Ignatius in 1851. Mengarini remained at Santa Clara for the rest of his life, acting for thirty years as treasurer or vice-president, until a stroke of apoplexy and failing sight caused his retirement from active duties. The hardest trial came when his eyes became too weak to allow him to read Masse. A third stroke of apoplexy ended his life work in his seventy-sixth year.

Mengarini's principal contribution to philology is his "Salish or Flathead Grammar; Grammatica lingua Selica"—published by the Cramoisy Press (New York, 1861) from the third manuscript copy, the first two, laboriously written out by him, having been lost by Indian carelessness or accident. Originally intended solely for the use of the missionaries, it was written in Latin, and he himself always said that the first draft was the most correct. He also furnished vocabularies of the cognate Salish languages—of Shwomyel (Colville), S'chitsui (Cœur d'Alene), and Salish proper (Flathead) in Powell's "Contributions to North American Ethnology", I (Washington, 1877), and of the Santa Clara dialect of California in Power's "Tribes of California", volume III of the same series, published in the same year. He contributed some linguistic notes in the "Journal of the Anthropological Institute of New York", I (1871-2). His interesting personal memoir, "The Rocky Mountains", published in the Woodstock Letters for 1888, was dictated a few months before his death.

In addition to the memoir "Obituary Notice in Woodstock Letters, XVI (Woodstock, Maryland, 1887); SOMMERVOGEL, Bib. de l. C. de J., Bibliogr. V (new ed., Brussels and Paris, 1894); FILLING, Bibliography of the Salishan Languages in Brit. Amer. Ethnology (Washington, 1883); SHEA, Catholic Missions (New York, 1884), JAMES MOONEY.
MENNAS

extraordinary merit, and his original pictures are ec-
estic in their composition and technique, correct in
design, smooth in execution, but somewhat too sweet,
and a trifle insipid. As a portrait painter, he had
great success, and his works in pastel and crayon are
amongst his finest creations. There are some
copies of his miniatures in Berlin, and there
are numerous engravings of his paintings
in Dresden and Vienna, and in the former
city are some excellent miniature portraits and some
carved pictures. The result was the painting of the
 Ecclesiastic of the Artillery of the East
(London, 1848); HUGARD, Vie Complexe des Peintres Espagnols
(Paris, 1839).

GEORGE CHARLES WILLIAMSON.

Mennas, Patriarch of Constantinople from 536 to
552. Early in 536 Pope St. Agapetus came to
Constantinople on a political mission forced on him by the
Gothic King, Theodahad. Anthimus, Archbishop of
Trebizond, had just been transferred to Constantinople
through the influence of the Empress Theodora, with
whose Monophysite leanings he was in sympathy.
Agapetus promptly deposed Anthimus and he conse-
crated Mennas patriarch. Anthimus was deposed partly
because his transfer from one see to another
was uncanonical, and partly on account of his doubts
as to the validity of the question of the ancient
liturgical divisions, which should be allowed to return to his old see.
Agapetus was preparing to deal with this question when he died.
Mennas proceeded with the affair at a synod held in
Constantinople the same year, 536, presiding over it,
the place of honour on his right hand being assigned to
five Italian bishops who represented the Apostolic See,
resulting in the removal of Anthimus, who failed to ap-
pear and vindicate his orthodoxy, was excommunicated
together with several of his adherents. In 543
the Emperor Justinian acting with the approval, if not
under the prompting of Mennas and the Roman rep-
resentative, Pelagius, issued his celebrated edict against
the teaching of Origen, at the same time directing
Mennas to proceed to consider the question.
No record of this synod has been preserved, but Hefele
states it to be more than probable that the
celebrated fifteen Anathemas of Origen, mistaken-
ly ascribed to the Fifth Ecumenical Council, were
there promulgated. We now come to the part played
by Mennas in the initial stage of the Three Chapters
controversy in the Constantinople Council of 541,
first from whom the emperor Justinian demanded sub-
scription to the edict anathematizing the Three Chap-
ters. He hesitated, but eventually gave
way on the understanding that his subscription should be
returned to him if the pope disapproved. Later on
he compelled his suffragans to subscribe. Many of them
complained to the papal legate Stephen of the
constraint put upon them. Stephen broke off con-
munion with Mennas. When Pope Vigilius arrived
at Constantinople in 547, he cut Mennas off from
Church communion for four months. Mennas re-
torted by striking the pope's name off the diptychs.
The pope, listening to his "Jews and Idiots", the two were
reconciled. In 551 Mennas was again excommunicated.
When Vigilius and Justinian came to terms,
Mennas once more made his peace with the former,
asking pardon for having communicated with those
whom the pope had excommunicated. He died in
August, 552.

Mennonites, a Protestant denomination of Europe
and America which arose in Switzerland in the six-
teenth century and derived its name from Menno
Simons, its leader in Holland. Menno Simons
was born in 1492 at Wittumser in Friesland. In 1515 or
1516 he was ordained to the Catholic priesthood
and appointed assistant at Pingen not far from Wittum-
ser. Later (1532) he was named pastor of his native
place, but 12 January, 1536, resigned his charge and
became an Anabaptist elder. The rest of his life was
devoted to the interests of the new sect which he had
joined. Though not an imposing personality he ex-
ercised no small influence as a speaker and more par-
cipant. As such he was held in esteem by the leaders
of Anabaptist views. His death occurred 13 January,
1559, at Wustenfelde in Holstein. The opinions held
by Menno Simons and the Mennonites originated in
Switzerland. In 1525 Grebel and Manz founded an
Anabaptist community at Zürich. Persecution fol-
lowed upon the very foundation of the new sect, and it
was exercised against its members until 1710 in vari-
ous parts of Switzerland. It was powerless to effect
suppression and a few communities exist even at pres-
ent. About 1620 the Swiss Mennonites split into
Amish or Upland Mennonites and Lowland Mennon-
ites. The former differ from the latter in the belief
excommunication dissolves marriage, in their re-
jection of buttons and of the practice of shaving.
During Menno's lifetime his followers in Holland di-
vided (1554) into "Flemings" and "Waterlanders",
on account of their divergent views on excommunica-
tion. The former subsequently split up into different
parties and dwindled into insignificance, not more
than three congregations remaining at present in Hol-
land. Division also resulted in the division in Germany
until in 1811 they united, dropping the name of Mennon-
ites and called themselves "Doodsgesinde" (Baptist
persuasion), their present official designation in Hol-
land. Menno founded congregations exclusively in
Holland and Northwestern Germany. Mennonite
communities existed at an early date, however, in
South Germany where they were connected on the
west with the Swiss movement, and are found at
present in other parts of the empire, chiefly in eastern
Prussia. The offer of extensive land and the assur-
ance of religious liberty caused a few thousand Ger-
mann Mennonites to emigrate to Southern Russia
(1779). This emigration movement continued until
1824, and resulted in the foundation of comparatively
important Mennonite colonies. In America the first
congregation was founded in 1683 at Germantown,
Pennsylvania. Subsequently immigration from Ger-
mans, Holland, Switzerland, and since 1870 from Rus-
 sia, considerably increased the number of the sect in
North America. There are twelve different branches
in the United States in sects whose combined membership does not reach 1000.
Among the peculiar views of the Mennonites are the following: repudiation of infant
baptism, oaths, law-suits, civil office-holding and the bearing of arms. Baptism of adults and the Lord's
Supper, in which Jesus Christ is not really present, are retained, but not as sacraments properly so-called.
The necessity to witness against wrong is important and an extensive use is made of excommunication.
All these views, however, are no longer universally held. Some Mennonites now accepting secular
offices. The polity is congregational, with bishops, elders, and deacons.
The aggregate membership of the Mennonites is now usually given as about 250,000; of these there are
some 60,000 in Holland; 18,000 in Germany; 70,000 in Russia; 1500 in Switzerland; 20,000 in Canada, and
according to Dr. Carroll (Christian Advocate, New York, 27 January, 1910), 55,007 in the United States.

N. A. WEBER.

Mechnochio, Giovanni Stefano, Jesuit Biblical
scholar, b. at Padua, 1575; d. in Rome, 4 Feb., 1655.
He entered the Society of Jesus, 25 May, 1594. After the usual years of training and of teaching the classics, he became master of sacred scripture and then of sacred theology at Milan; thereafter began his long life of superintendence. He was successively superior of Cremona, Milan, and Genoa, rector of the Roman College, provincial of the provinces of Milan and Rome, assistant of Italy, and admonitor to the Fathers-General Carafa and Piccolomini. The exegetical work of Menochio is still deservedly famous. His first essay in this line was a politico-Biblical study: "Hieropolitici, sive Institutiones Politicae et Sacrae Scripturis depromptae", 956 pages (Lyons, 1625). This book on theocratic politics was dedicated to Cardinal Alessandro Osini. A second edition (Cologne, 1628) was dedicated to Ferdinand III. The Jesuit poet Sarbiewski made this study the subject of an ode (see "Lyrica", II, n. 18).

The next year there appeared an economic study of the Bible: "Institutiones Economicae ex Sacra Liternis depromptae", 543 pages (Lyons, 1627). The author translated into Italian these lessons on the care of one's own household; this translation was a success, and a new edition appeared in 1653, 542 pages (Venice, 1656). The work by which Menochio lives and will live is his "Brevis Explicatio Sensus Litteralis Sacre Scripturae optimus quibusque Autoribus per Epitomen Collecta", 3 vols., 115 pages, 449, 549 + 29 (Cologne, 1630). Many other editions of this commentary have been published in many languages, usually in two parts, but sometimes bound in three, form an office-book, which in the Greek Church, corresponds, though very roughly, to the Proprium Sanctorum of the Breviary. They include all the movable parts of the services connected with the commemoration of saints and in particular the canons sung in the Orthros, the office which corresponds in our Book of Synaxaria, i.e. the historical notices regarding the saints of the day, which are always inserted between the sixth and seventh odes of the canon. The Synaxaries are read in this place very much as the Martyrology for the day is interpolated in the choral recitation of Prime in the offices of Western Christendom.

Men of Understanding (Hominem Intelligendi), name assumed by a heretical sect which in 1410–11 was cited before the Inquisition at Brussels. Its leaders were Egidius Cantorius, an illiterate layman, and the Carmelite William of Hildernis, near Bergen-op-Zoom. The sect was doctrinally related with the earlier Brethren of the Free Spirit. It taught the essential being of all was the living and ever-changing demons, maintained that the soul of man cannot be defiled by bodily sin, and believed in a mystical state of illumination and union with God so perfect, that it exempted from all subjection to moral and ecclesias-

cal laws and was an infallible pledge of salvation. Both teachings girded in the view that man was the creature he has been favoured. Cantorius in a moment of religious exaltation went so far as to run nude through the streets of Brussels declaring himself the saviour of mankind. About 1410 Peter d'Ailly, Bishop of Cambrai, seems to have taken the first steps towards the suppression of the heresy. William of Hildernis consented to a retraction of the sincerity of which appeared doubtful. In 1411 a second investigation resulted in another retraction, but also in a sentence compelling William to return permanently to an extra-diocesan Carmelite monastery after three years' detention in one of the episcopal castles. No information has reached us respecting the result of the inquisitorial procedure against the other members of the sect.

Menologium.—Although the word Menologium (in English also written Menology and Menologe) has been in some measure, as we shall see, adopted for Western use, it is originally and in strictness a name describing a particular service-book of the Greek Church. From its derivation the term Menologium \( \mu \varepsilon \nu \lambda \gamma \omega \lambda \iota \gamma \iota \mu \alpha \) from \( \mu \nu \nu \pi \tau \alpha \eta \) "a month" means "month-book," in other words, a book arranged according to the months. Like a calendar, it is a religious almanac, e.g. lectionary (q. v.), the word has been used in several quite distinct senses by writers of authority, and the main purpose of the present notice must be to try to elucidate this confusion.

(1) In the first place Menologium is not unfrequently used as synonymous with Menason (\( \mu \varepsilon \nu \lambda \gamma \omega \lambda \iota \gamma \iota \delta \alpha \nu \) \( \mu \varepsilon \nu \lambda \gamma \omega \lambda \iota \gamma \iota \mu \alpha \)). The Menason is a collection of both Church and world events but sometimes bound in three, form an office-book, which in the Greek Church, corresponds, though very roughly, to the Proprium Sanctorum of the Breviary. They include all the movable parts of the services connected with the commemoration of saints and in particular the canons sung in the Orthros, the office which corresponds in our Book of Synaxaries, i.e. the historical notices regarding the saints of the day, which are always inserted between the sixth and seventh odes of the canon. The Synaxaries are read in this place very much as the Martyrology for the day is interpolated in the choral recitation of Prime in the offices of Western Christendom.

(2) Secondly and more frequently, the term Menologium is used to denote the bare collection of those historical notices just mentioned, without the odes and the other matter of the canon in which they are inserted. Such a collection, consisting as it does purely of historical matter, bears a considerable resemblance, as will be readily understood, to our Martyrology, although we differ in method. It is, however, the most part considerably larger and fuller than those found in our Martyrology, while on the other hand the number of entries is smaller. The "Menology of Basil", a work of early date often referred to in connection with the history of the Greek Offices, is a book of this class.

(3) Thirdly, it frequently happens that the tables of scriptural lessons, arranged according to months and saints' days, which are often found at the beginning of manuscripts of the gospels or other lectionaries, are described as menologe. The saints' days are briefly named and the readings indicated beside each; thus the document so designated corresponds much more closely to a calendar than anything else of Western use to which we can compare it.

(4) Lastly the word Menologium is very widely applied to the collections of long lives of the saints of the Greek Church, whenever these lives, as commonly happens, are arranged according to months and the days of the month. This arrangement has always been a favourite one also in the great Legendaria of the West, and it might be illustrated by the "Acts of Thomas", the well-known Lives of the Saints by Surius. The Greek compilers however regard September as the first and August as the last month of the ecclesiastical year.
As for propriety of usage it must be confessed that the question is primarily one of convenience; but on the whole it seems desirable that the term Menologium should be limited to the fourth acceptance among those just given. One of the most important collections of this kind is that made by a writer in the second half of the tenth century known to us as Symeon Metaphrastes. Subsequently it was adopted by Father Delahaye and Professor Albert Ehrhard working independently succeeded for the first time in correctly grouping together the works which are really attributable to this author, but great uncertainty still remains as to the provenance of his materials, and as to the relation between this collection and certain contracted biographies of which existence among the manuscripts of our great libraries. The synaxaries, or histories for liturgical use, are nearly all extracted from the older Menologias, but Fr. Delahaye who has given special attention to the study of this class of documents, considers that the authors of these compendia have added, though sparsely, materials of their own, derived from various sources. (See Delahaye in his preface to the “Synaxarium Eccles.” C.p., published as a Propylleum to the “Acta SS.” for November, lix–lxxxvi.)

Menologies in the West.—The fact that the word Martyrology (q. v.) was already consecrated to a liturgical or quasi-liturgical compilation arranged according to the anniversaries and days and the canonized saints and festivals universally received, probably led to the employment of the term Menologium for works of a somewhat analogous character, of private authority, not intended for liturgical use and including the names and agnia of persons in repute for sanctity but not in any sense canonized Saints. In most monastic orders it is the custom to commemorate the memory of their dead brethren specially renowned for holiness or learning. In more than one such order during the seventeenth and eighteenth centuries, the collection of these short eulogistic biographies was printed under the name of Menologium and generally so arranged as to form a selection for each day of the year. Since they were made by private authority which could not pronounce judgment on the sanctity of those so commemorated, the Church prohibited the reading of these compilations as part of the Divine Office; but this did not prevent the formation of such menologies for private use or even the reading of them aloud in the chapter-houses and refectories of the monastery. Thus the collection in 1833 by the Franciscan Fortunatus Huber of the abbreviated lives of those of the Friars Minor who had died in the order of sanctity, printed in 1691 under the title of “Menologium Franciscanum,” was evidently intended for public recitation. In lieu of the concluding formula “Et alibi aliorum” “et ceterum,” the Roman Martyrology, the compiler suggests “as the feria tomentaria ciusuacumque diei the three verses of the Apostles’ Creed,” perhaps to substitute “Post hoc vidi turbam magnam.” The earliest printed work of this kind is possibly that which bears the title “Menologium Carmelitanae” compiled by the Carmelite, Saracenus, and printed at Bologna in 1657; but this is not arranged by day in the order of the ecclesiastical year, and it does not include members of the order yet uncanonized. A year or two later, in 1630, Father Henriquez published at Antwerp his “Menologium Cisterciense.” That no general custom then existed of reading the Menology at table appears from his remark: “It would not appear unsuitable if it (the Menologium) were read aloud to the guest (if not or at least in the refectorry at the beginning of dinner or supper).” Again quite a number of works have been printed under the name Menologium by Fathers of the Society of Jesus, one or other of which it has been and still is the custom of the order to read aloud in the refectories during part of the evening meal, though Fathers Nuremberg and Nadaud compiled collections of a similar character, they did not bear the name Menologium. The earliest Jesuit compilation which is so styled seems to have been printed in the year 1669. A more elaborate Menologium was that compiled by Father Patrignani in 1730; and great collections were made during the last century by Father de Guerry for the publication of a series of such menologies, divided according to the groups of provinces of the Society called “Assistencies.” The author did not live to complete his task, but the menologies have been published by other hands since his death. The term Menologium is also loosely used for any calendar divided into months, as, for example, the “Anglo-Saxon Menologium” first published by Hickes.

Herbert Thurston.

Menominee Indians, a considerable tribe of Algonquian linguistic stock, formerly ranging over north-eastern Wisconsin to the west of Menominee River and Green Bay, and now occupying a reservation in Shawano including the Menominee forest, and districts in the territory. The name by which they are commonly known (translated Folles Avoines by the French) is taken from their term for the wild rice, menomia, Lat. Zizania aquatica, which grows abundantly in the small lakes, and forms a staple food of the tribes of that region. Before their first contact with the whites the Menominee may have numbered about 3000 souls; in 1879 they were officially reported at 1487. The earliest known explorer among the Menominee was Champlain’s interpreter, Jean Nicolet, who visited the tribes about Green Bay in 1634, being probably the first white man within the present State of Wisconsin. In 1640 they are mentioned under the name of Maroons, and in the Jesuit’s Journal of the Jesuit Le Jeune, as one of the tribes without missionaries. In the “Relation” for 1657–8 they are spoken of as Maluminek, allied with the Nookack and Winnebago and “reaping without sowing” a wild rye considered superior to corn, the first notice of the now well-known wild rice.

In May, 1670, the Jesuit explorer Claude Allouez visited them near the mouth of the Menominee River. They were then greatly reduced by wars, probably with their hereditary enemies, the Sioux. They listened to his teaching and asked him to remain. A small mission, St. Michel, was established, and placed under the jurisdiction of the central Potawatomie mission of St. Francis Xavier at Green Bay. In 1673 the Jesuit Louis André arrived and ministered for several years both to the Menominee and to other tribes, travelling in summer by bark canoe and in winter over the ice. Soon after his arrival he found set up an image of the sun, with a number of net flosters attached, as a sacrifice to the sun for a prosperous fishing season, their exertions having been thus far disappointing. After explaining that the sun was not a god, he persuaded them to allow him to substitute a crucifix. The next morning the fish entered the river in such abundance that the Indians, firmly convinced of the efficacy of his teaching, crowded to be instructed every evening on their return from their fishing grounds. Flokta or gills being worn by them to abandon their superstitious dream ceremonies on setting out against the Sioux, although apparently he was unable to prevent the expedition. Among his converts was a principal medicine-man, who claimed the thunder spirit as his special medicine, and was accustomed to invoke it with songs and naked
In 1847 he was succeeded by Father F. J. Bonduel, who added another school, and who in turn was succeeded in 1852 by Fr. Otho Skolla, the first of the Franciscans, to whom the care of this mission has since been committed. Two years later FatherAndre's cabin, with all that it contained, was burned by an Indian whose two small children, after one had been baptized, had been killed by an enemy, the grief-stricken father, in Indian fashion, attributing his misfortune to the ceremony. The Menominee mission grew and flourished until the outbreak of the long war in 1812, which continued for thirty years, and resulted in the almost complete destruction of the Fox tribe and the ruin of the Wisconsin missions. Close upon this came the seven years' French and Indian War (1754—60); the Pontiac war (1763—4); the Revolution and its Indian war of 1778 and 1779; and finally Tippecanoe and the War of 1812 (1811—15). In all of these the Menominee, like the Sauk and Fox tribes of the central region, had their part, fighting on the French side until the fall of Quebec and afterwards supporting the English against the United States. In 1817 they made their peace with the United States, and by various subsequent treaties, have disposed of all of their ancient territory excepting their present reservation of about 360 square miles.

In 1762 the Jesuit missions had been suppressed by the French Government, and "for thirty years there was no priest west of Detroit." (Shea quoting McCabe.) Deprived of their teachers and for sixty years compelled to make almost constant war against the advancing whites, a large part of the former missions was taken by the Menominee in all the tribes relaxed into paganism, while still cherishing an affection for their former friends. In 1823 the Ottawa tribe of lower Michigan addressed to Congress two remarkable petitions asking to have Jesuit missionaries again sent among them. No response came, but in 1825 Father J. V. Badin made a tour of the lake tribes, in 1827 Father Dejean visited the Ojibwa at Mackinaw and in 1829 founded the new Ottawa mission at Arbre Croche (HARBOR Springs, Michigan), and in 1830 Father Samuel Massuchelli established a school and church among the Menominee at Green Bay, for which the Government, in accordance with the policy at that period, made an appropriation. Soon afterwards Father Massuchelli extended his labours to the Winnebago. A church for the few white residents had already been begun by Father Gabriel Richard in 1823. Father Massuchelli was assisted in the school by two sisters and by Mrs. Rosalie Dousman (1831), who continued in the work for a number of years. Later missions of the same period were Fathers Simon Sander, Redemptorist, and T. J. Van den Broeck. In 1827 an Episcopal mission was started, but was discontinued in 1838 owing to non-attendance of the Indians. In 1844 Fr. Van den Broeck established a second mission, St. Francis, at Lake Powahogan on the Wolf River, which within a short time had 400 Indians.

In 1847 he was succeeded by Father F. J. Bonduel, who added another school, and who in turn was succeeded in 1852 by Fr. Otho Skolla, the first of the Franciscans, to whom the care of this mission has since been committed. Two years later Father Andre's cabin, with all that it contained, was burned by an Indian whose two small children, after one had been baptized, had been killed by an enemy, the grief-stricken father, in Indian fashion, attributing his misfortune to the ceremony. The Menominee mission grew and flourished until the outbreak of the long war in 1812, which continued for thirty years, and resulted in the almost complete destruction of the Fox tribe and the ruin of the Wisconsin missions. Close upon this came the seven years' French and Indian War (1754—60); the Pontiac war (1763—4); the Revolution and its Indian war of 1778 and 1779; and finally Tippecanoe and the War of 1812 (1811—15). In all of these the Menominee, like the Sauk and Fox tribes of the central region, had their part, fighting on the French side until the fall of Quebec and afterwards supporting the English against the United States. In 1817 they made their peace with the United States, and by various subsequent treaties, have disposed of all of their ancient territory excepting their present reservation of about 360 square miles.

In 1762 the Jesuit missions had been suppressed by the French Government, and "for thirty years there was no priest west of Detroit." (Shea quoting McCabe.) Deprived of their teachers and for sixty years compelled to make almost constant war against the advancing whites, a large part of the former missions was taken by the Menominee in all the tribes relaxed into paganism, while still cherishing an affection for their former friends. In 1823 the Ottawa tribe of lower Michigan addressed to Congress two remarkable petitions asking to have Jesuit missionaries again sent among them. No response came, but in 1825 Father J. V. Badin made a tour of the lake tribes, in 1827 Father Dejean visited the Ojibwa at Mackinaw and in 1829 founded the new Ottawa mission at Arbre Croche (HARBOR Springs, Michigan), and in 1830 Father Samuel Massuchelli established a school and church among the Menominee at Green Bay, for which the Government, in accordance with the policy at that period, made an appropriation. Van den Broeck established a second mission, St. Francis, at Lake Powahogan on the Wolf River, which within a short time had 400 Indians.
on the language, all still in manuscript. His present successor at the mission, Father Blase Krake of the same order, is also a master of the language, of which he has written a manuscript grammar and dictionary. A vocabulary of some thirty pages accompanies Hoffman’s monograph.

JAMES MOONEY.

Mensa, Mensal Revenue (Lat. Mensa, table).—The Latin word mensa has for its primitive signification "a table for meals," it designates by expropriation the expenses, or better, the necessary resources of subsistence, and generally, all the resources for personal support. He who lives at the expense of another, and at his table, is his "commensal." In ecclesiastical language, the mensa is that portion of the property of a church which is appropriated to defraying the expenses of the prelate or other clergy who administers it. The property of the church is divided between the two, and is administered at the will of the one or the other. Thus, in a cathedral, to which both the bishop and the chapter belong, the bishop's mensa is distinct from that of the chapter, the former consisting of property the revenues of which are enjoyed by the prelate, the latter by the chapter. The objection is raised that the church has neither individual nor corporate property, for the primitive mensa of the chapter has almost everywhere been divided among the canons, each of whom has his personal share under the designation of a "prebend." Similarly, in the case of abbeys given in commendam (cf. c. ÉDOERIC, 21, De rescriptio), the abbatial mensa, which the abbot enjoys, is distinct from the canonic mensa, which is appropriated to the maintenance of the religious community. The curial mensa, which is of later origin, is of the same nature: the property reserved for the personal maintenance of the parish priest, as distinct from that applied to the expenses of worship or to the support of other clergy, has been regarded as curial mensa. To constitute a mensa curial a canonical seal is required. The reason is enough that a certain portion of church property be appropriated to the maintenance of the clergy (for in that case every benefice would be a mensa, which is untrue); it is necessary that there be a partition made in the property of one particular church so as to appropriate certain property to the maintenance of the clergy, or of the clergy subject to him; it follows, therefore, that the administration of this property belongs to those who enjoy it.

Thus the bishop, the secular abbot, the chapter, the religious community, administer, each within appropriate limits, the property of their respective mensae, without being liable to any accounting for the employment of the same; but this is the case only who has a curial mensa. The other resources of the cathedral or parish church, or monastery, destined for religious worship, pious works, the maintenance of buildings, etc., are subject to the general or special rules for the administration of church property, whether this be done by church committees, trustees, or other administrative organ, or by the rector of the church as sole administrator; in all cases an accounting is due to the bishop and, in general, to the ecclesiastical authorities, for the administration of such property and for the use to which all the revenues and resources accruing may have been put, whereas no one is accountable for the use of his mensal property. There are however some exceptions to this principle; the mensa, particularly episcopal mensa, are legal entities, property and foundations have in the course of centuries often been annexed to them for purposes other than the maintenance of prelates; these properties or foundations may be real "opera pia" or pious works in the canonical sense. In this way some episcopal mensae are larger than the property of the bishop himself, the property of aged or infirm priests, also for educational and other establishments; to some curial mensae schools or hospitals are attached, and for these various good works administrative rules may be provided at the time of their foundation. But such cases it is easily seen are later extensions, foreign to the primary and chief aim of the mensa. Even in respect to these properties the old rule applies, in the sense that they are not common ecclesiastical possessions and are not administered as such, but after the manner of mensal property.

Although appropriated to the maintenance of certain definite persons, mensal property is nevertheless church property, and its administrator is bound to observe the canonical rules concerning it. As to the administration strictly speaking, he must keep the property in good condition and execute all works expedient to that end; in short, he must act like a good head of a household. But he cannot do anything that would infringe upon proprietary rights, for he is not the property owner: any annuities or other endowments regarded as similar to alienation, is forbidden him, excepting under prescribed juridical formalities, under pain of excommunication (Extrav. Ambit. De reb. eccl. non alienandis; see also BENEFICE; PROPERTY, ALIENATION OF CHURCH). The chief of these prescribed formalities is the Apostolic authorization, which in every individual case is to be obtained. For the alienation or similar contract is to the advantage of the Church. For the alienation of mensal property, or for making any similar contract, the bishop is, in particular, bound to safeguard himself with the consent of the chapter (S. C. Concilii, 25 July, 1891).

HISTORY.—Like all ecclesiastical institutions, the mensa has its appropriate history, and the result of various modifications. In the first ages, all the church property of a diocese formed but one mass connected, like everything else, with the principal, or cathedral church. The administration of it belonged to the bishop alone, who administered it himself or through his ecclesias or his deacons. The clergy benefited accordingly in the form of a mensa, sometimes fixed (one-fourth in Italy, one-third in Spain; see the collected texts, c. 23-30, C. XII, q. ii; c. 1-3, C. X, q. iii), sometimes left to the equitable decision of the bishop. Soon the churches outside of the episcopal city had distinct administrations of their own, and the wealth appropriated to religious worship or to the support of the clergy was given to each in the same way. After the fifth century we find bishops granting to certain clerics church property, by way of "precarium," i. e. property revocable at will, which such clerics used for their own support. So long as the bishop, the abbot, or the rector of the church remained faithfully in residence and discharged his ecclesiastical functions, the property in question, both to the inferior clergy, or the monks, a part of the ecclesiastical wealth that they might thence draw their support. But when the early Carolingians, especially Charles Martel, habitually gave abbey and churches to their companions in arms, and when bishops nominated by royal favour ceased to reside habitually at their sees, there arose a kind of division and opposition between the prelate, abbot, or bishop and the community of monks or clerics, who were on more than one occasion left in want by greedy or negligent superiors. The remedy for this was the institution of mensae.

To secure what was necessary to the community, the mensae were compelled to reserve for its use a sufficient portion of the property of the church or monastery. Thus the superior's administration was made lighter for him, while he could enjoy in peace and quiet
MENSING

the balance of the property reserved for his own proper use (indominicatum); on the other hand the community gained, besides material security, a renovation of very fostered material life (via coenobii) being a cause of relaxation of discipline. The Carolingian reforms, notably those of Louis the Pious, were chiefly responsible for the establishment of menas properly imposed and regulated in regard to monasteries; as to cathedrals the menas was more commonly a benevolent concession on the part of the bishop, who in this way fostered communal life (via coenobii) among his clergy. This community life becoming more and more rare after the end of the ninth century, each canon received his own share of the mensal revenues—his "prebend". Later on, indeed, the canons often had the separate administration of their respective properties, either as the result of partition or, more particularly, in pursuance of provisions made in the foundation. The menes, of whatever character, were legally capable of acquiring additions. It was through them that church property, intended, as before the division, not only for the support of the clergy, but for all religious and charitable works, was re-established.

A. BOUDINHON

Mensing (Mensing), John, theologian and celebrated opponent of Luther, b. according to some at Zutphen, Holland, but more probably at Magdeburg, Saxony, date unknown; d. about 1541. In 1495 he entered the Dominican Order and made part of his theological studies in the studium of his province. Matriculating at the university of Wittenberg in 1515, he became a doctor of divinity that year and the following year received in Frankfort-on-the-Oder the doctorate in theology from the hands of the general of his order. According to the Dominican historian, Quétif, he taught theology in 1514 in the monastery at Ulm, but it is highly improbable that Mensing, belonging to the province of Saxony, should have acted as a doctor of divinity in a German university in 1514 and 1515. He was also in the studium of his province, Mensing zealously entered into all the controversies with the sectaries. From 1522 to 1524 he occupied the pulpit in the cathedral of Magdeburg, where he also composed his first apologetic works on the Sacrifice of the Mass. Notwithstanding his efforts, the boldness of the enemy forced him to leave and seek other means of restriction. Under the influence of Princess Margaretha von Anhalt, who ruled during the minority of her son, he proceeded to Dessau to support her in her efforts against heresy in her territory. In 1529 he was professor in the University of Frankfort-on-the-Oder and preacher in the cathedral. The following year he attended, as theologian to the Elector Joseph von Anhalt, the Diet of Augsburg, and secured from Charles V a renewal of the letter of protection for the Dominican Order in Germany which Charles IV had granted them in 1355 and 1359. In 1534 he was elected provincial of his own province, but before the termination of his office Paul III made him suffragan Bishop of Halberstadt. In 1540 and 1541 he asserted against them in a sermon the principle, which the Jesuits taught at Ratisbon, where with Eck, the vice-chancellor of the University of Ingolstadt, and Pegasus, he took a leading part in the deliberations. His vast theological knowledge and remarkable command of the German language made him one of the foremost controversialists of the first half of the sixteenth century. A complete list of his works, all of which bear a polemical tinge, is given by Strebler in the "Kirchenlexikon". Quétif-Eichard, SS. Ord. Praed., II, 84; Paulus, Die deutschen Dominikaner im Kampf gegen Luther (Freiburg, 1903), 18-45; Paulus, Katholik (Freiburg, 1903), 11, 21-36, 120-125.

JOSEPH SCHROEDER.

Mental Reservation, the name applied to a doctrine which has grown out of the common Catholic teaching about lying (q. v.) and which is its complement. According to the common Catholic teaching it is never allowable to tell a lie, not even to save human life. A lie is something intrinsically evil, and as evil may not be done that good may come of it, we are never allowed to tell a lie. However, we are also under an obligation to keep our own faithfully, and in sometimes the easiest way of fulfilling that duty is to say what is false, or to tell a lie. Writers of all creeds and of none, both ancient and modern, have frankly accepted this position. They admit the doctrine of the lie of necessity, and maintain that when there is a conflict between justice and veracity it is justice that should yield to veracity. The common Catholic teaching has elaborated the theory of mental reservation as a means by which the claims of both justice and veracity can be satisfied. The doctrine was broached tentatively and with great difficulty by St. Raymund of Pennafort, the first writer on casuistry. In his "Summa" (1235) St. Raymund quotes the saying of St. Augustine that "One must not say lies, but one should not preserve the life of another, and that it would be a most perilous doctrine to admit that we may do a less evil to prevent another doing a greater. And most doctors teach this, he says, though he allows that others teach that a lie should be told when a man's life is at stake. Then he adds: "I believe, as at present standing, that when justice is disputed, and one is taking the life of someone hiding in the house whether he is in, no answer should be given; and if this betrays him, his death will be imputable to the murderers, not to the other's silence. Or he may use an equivocal expression, and say 'I am not at home', or something like that. And this can be defended by a great number of examples." St. Raymund then says that he may say simply that he is not there, and if his conscience tells him that he ought to say that, then he will not speak against his conscience, nor will he sin. Nor is St. Augustine really opposed to any of these methods." Such expressions as, "I am not at home", were called equivocations, or amphibilologies, and when such a words was good, rather than for the speaker to lie, and was admitted by all. If the person inquired for was really at home, but did not wish to see the visitor, the meaning of the phrase, "He is not at home", was restricted by the mind of the speaker to this sense, "He is not at home for you, or to see you". Hence, equivocations and amphibilologies came to be called "false" or "equivocal" statements. St. Raymund admitted that an equivocal expression need not necessarily be used when the words of the speaker receive a special meaning from the circumstances in which he is placed, or from the position which he holds. Thus, if a confessor is asked about sins made known to him in confession, he should answer: "I do not know", and such words as those when use "I do not know apart from confession", or "I do not know as man", or "I have no knowledge of the matter which I can communicate". All Catholic writers were, and are, agreed that when there is good reason, such expressions as the above may be made use of, and that they are not lies. Those who hear them may understand that they are not lies, and such deception may be permitted by the speaker for a good reason. If there is no good reason to the contrary, veracity requires all to speak frankly and openly in
such a way as to be understood by those who are addressed. A sin is committed if mental reservations are used without just cause, or in cases in which the question has a right to the naked truth. In the sixteenth century a further development of this commonly received doctrine began to be admitted even by some theologians of note. We shall probably not be far wrong if we attribute the change to the very difficult political circumstances of the time due to the wars of religion. Martin Aspilcueta, the "Doctor Navarrus," as he was called, was one of the first to develop the new doctrine. He was nearing the end of a long life, and was regarded as the foremost authority then living on canon law and moral theology, when he was consulted on a case of conscience by the Fathers of the Jesuit college at Valladolid. The case sent to him for solution was drawn up in these terms: "Titius, who privately said to a woman, 'I take thee for my wife,' without the intention of marrying her, answered the judge who asked him whether he had said those words, that he did not say them, understanding mentally that he did not say them with the intention of marrying the woman." Navarrus was asked whether Titius told a lie, whether he had committed perjury, or whether he committed any sin at all. He drew up an elaborate opinion on the case, and dedicated it to the reigning prince of Portugal. It was published in 1582, and maintained that Titius neither lied, nor committed perjury, nor any sin whatever, on the supposition that he had a good reason for answering as he did. This theory became known as the doctrine of strict mental reservation, to distinguish it from wide mental reservation with which we have thus far been occupied. In the strict mental reservation the speaker mentally adds some mental qualification to the words which he utters, and the words altogether with the mental qualification make a true assertion in accordance with fact. On the other hand, in a wide mental reservation, the qualification comes from the ambiguity of the words themselves, or from the circumstances of time, place, or person, in which they are uttered. The opinion of Navarrus was received as probable by such contemporary theologians of different schools as Salom, Sayers, Suarez, and Lessius. The Jesuit theologian Sanchez formulated it in clear and distinct terms, and added the weight of his authority on the side of its defenders. Laymann, however, another Jesuit theologian of equal or greater weight, rejected the doctrine, as did Anger, S.J., the Dominicans Novalis and Soto and others. Laymann shows at considerable length that such reservations are lies. For that man tells a lie who makes use of words which are false with the intention of deceiving another. And this is what is done when a strict mental reservation is made use of. The words uttered do not express the truth as known to the speaker. They are at variance with it and therefore constitute a lie. The opinion of Navarrus was freely debated in the schools for some years, and it was acted upon by some of the Catholic confessors of the Faith in England in the difficult circumstances in which they were frequently placed. It was, however, condemned as formulated by Sanchys by the Council of Trent (1563, xi, 17; xxvii, 179), and as propounded by Laymann in 1631.

St. Raymund, Summa de Fidelitate (Rome, 1666) and Aspilcueta, Oratio omnina (Venice, 1618); Sanchez, In Declaratum (Antwerp, 1631); Laymann, Theologia moralis (Munich, 1834); Slater, Manual of Moral Theology (New York, 1905).

Mentelin (Mention), Johannes, b. c. 1410; d. 12 Dec., 1478; an eminent German typographer of the fifteenth century, and the first printer and bookseller at Strasbourg (Alsace). He belonged to a respected family at Schlettstadt. After 1447 he was a "goldschreiber" (illuminator) at Strasbourg, where he became a burgess and member of the painters' and goldsmiths' guilds. It was as an illuminator that he became connected with printing; and he received his printer's training at Mainz; he began printing at Strasbourg before 1460. His establishment at once developed great activity; in a few years it produced quite a large number of immense folio volumes, and a number of smaller books. He also procured the sale of his prints by means of printed catalogues. These "publisher's catalogues" have proved a very valuable means of identifying and ascertaining facts about Mentelin's prints, because he usually appended neither name, place nor date to his works. His type is nearly always conjectural, and the name is not mentioned in the catalogues; this is the minuscule used in the books of the period. Though they cannot compare either in design or technical finish with those of Gutenberg and Schöffer, they are not without some original features especially in the capital letters, which occur both in flourishing Gothic and in the simple Roman laciary style. Of his larger printed works, about 30 in number, including at least 35 large folio volumes, the following are the most conspicuous: the Latin edition of the Bible of 1460, and 1463; the German Bible, about 1466; also the first editions of the writings of St. Augustine, St. Chrysostom, St. Jerome, Aristotele, Isidore, and the "Canon of Avizoneo." The business was managed by the brothers Mentelin, and afterwards by Dolf Ruysch and afterwards by Johann Prüs. Although Mentelin cannot be reckoned the inventor of the art of printing books, as his grandson Johann Schott claimed in 1521, he was nevertheless one of the most skilful of the early typographers.

Heinrich Wilh. Wallau.

Menzini, Benedetto; priest and poet, b. at Florence, 1646; d. at Rome, 7 Sept., 1704. His family being poor, he early gave himself up to teaching, becoming a professor of belles-lettres at Florence and at Prato. He was already in Holy Orders. In 1681 he failed to obtain the chair of rhetoric in the University of Pisa partly because of the jealousy of other clerics, and partly because of the acrimony constantly shown by him in his words and acts. In 1685 he went to Rome and enjoyed the favour of Queen Christina of Sweden, until her death in 1689. Pope Innocent XII then gave him a canonry, and appointed him to a chair of rhetoric in one of the institutions of the city of Rome. Following the models provided by the poems of Chiarattus and Tevera, and also by Pietro "Cansoni eroiche e morali" (1674-80). These observe the Greek division—strophe, antistrophe, and epode, and deal with subjects that were also engaging the attention of the contemporary poet Filicaja, e.g., the freeing of Venice, the taking of Budapest. Some seventeen of his elegiac treat of matters of various interest. The poem "Il Paradiso terrestre" is almost a continuation of the "Mondo creato" of Tasso, Menzini's favourite poet. In the "Academie Tusculana," in mingled prose and verse, he introduces leading spirits of the time, who discuss subjects of many sorts. The pastoral note was struck by him with no little success in his "Sonetti pastorali," and in his "Camerieta anacreontica," a number of graceful little lyrics. Perhaps the most famous work of Menzini is his satires, some thirteen in number, in which he assails in acrid terms the hypocrisy prevailing in Tuscany in the last years of the Medici rule. In like fashion he lashes in his "Arte poetica" the artificiality and the uncouthness of the versifiers of the time.

Opere (4 vols., Florence, 1731); Satira (Amsterdam, 1729) and Borghini, III (1785); Paolucci, Vita di Benedetto Menzini (Florence, 1723); Maggioli, Studio critico su Benedetto Menzini (Naples, 1865); Tonchini, Benedetto Menzini e le sue opere (Cairo, 1903). For more recent edition of his work see Satira, rime e lettere scolice di Benedetto Menzini (Florence, 1874).

J. D. M. Ford.
Mercadé, Eustache, French dramatic poet of the fifteenth century. The dates of his birth and death are not known. In 1414 he was official of the Abbey of Corbie near Amiens. According to a document that has been discovered quite recently, he was removed from his office in 1427 but was reinstated in 1437, in accordance with a decision of the court of the Châtelet which was ratified by the Parliament of Paris on 2 May, 1439. Martin Franç, or “le Franc”, who wrote in the middle of the fifteenth century, mentions Mercadé as one of the most famous “rhetoricians” of the time. In the “Mystery” that he composed, the author is mentioned on the back of the last but one sheet: Ustasse Merchide, Docteur en decret, Bachelier en le Droit, et Renommé Poète, auteur du presente Paris en la Mystery to which he has attached his name: “La Vie, la Passion et la Vengeance de Jésus Christ.” It is kept in the library of Arras under No. 625; the last part only, or the Vengeance, should be considered as the work of Mercadé. It contains 312 characters, of whom 112 have a speaking part.

P. J. Marique.

Merkator, Marius. See Marius Mercator.

Mercedarians (Order of Our Lady of Mercy), a congregation of men founded in 1218 by Peter Nolasco, at Mas-des-Saintes-Puelles, Department of Aude, France. Joining Simon de Montfort’s army, then attacking the Albigenses, he was appointed tutor to the young king, James of Aragon, who had succeeded to the throne after the death of his father, Pedro II, killed at the battle of Muret. Peter Nolasco followed his pupil to his capital, Bell to his arms, in 1218. The town of Albi, 1192 ecclesiastics of the city had formed a confraternity for the purpose of caring for the sick in the hospitals, and also for rescuing Christian captives from the Moors. Peter Nolasco was requested by the Blessed Virgin in a vision to found a religious order especially devoted to the ransom of captives. His confessor, St. Raymond of Penafort, then canon of Barcelona, encouraged and assisted him in this project; and King James also extended his protection. The noblemen already referred to were the first monks of the order, and their headquarters was the convent of St. Eulalia of Barcelona, erected 1232. They had both religious in holy orders, and lay monks or knights; the choir monks wore white or ermine; the supernumeraries white or ermine with red sleeves and chasuble. These religious followed the rule drawn up for them by St. Raymond of Penafort. The order was approved, first by Honorius III and then by Gregory IX (1230), the latter, at the request of St. Raymond Nonnatus presented by St. Peter Nolasco, granted a Bull of confirmation and prescribed the Rule of St. Augustine, the form of his order, forming the constitutions (1235). St. Peter was the first superior with the title of Commander-General; he also filled the office of Ransomer, a title given to the monk sent into the lands subject to the Moors to arrange for the ransom of prisoners. The holy founder died in 1256, seven years after having resigned his superintendence; he was succeeded by Guillaume Llorens, the third commander-general (1271), codified the decisions of the general chapters. In the fourteenth century, disputes arising from the rivalry between the convents of Barcelona and Puy, and from the discord between the priests and knights, which ended in the latter’s suppression, disturbed the peace of the order. Christopher Columbus took some members of the Order of Mercy with him to America, where they founded a great many convents in Latin America, throughout Mexico, Cuba, Brazil, Peru, Chile, and Ecuador. These formed no less than eight provinces, whereas they only had three in Spain and one in France. This order took very active part in the conversion of the Indians. At the beginning of the seventeenth century Father Gonzales, who had made his profession at the convent of Olmedo in 1573, conceived the idea of a reform, at that time necessary. The commander-general, Alfonso de Montoy, at first supported this scheme, but ended by opposing it. In 1605 he undertook Gonzales was excommunicated by the Countess of Castellana, who obtained for him the necessary authorization from Clement VIII, and presented him with three convents for his reformed monks (at Vigo, Diocese of Seville; Almoragha, Diocese of Cadiz; Ribas). The reform was confirmed at the provincial chapter of Guadalajara in 1603. Father Gonzales took the name of John Baptist of the Blessed Sacrament, and died at Madrid in 1618. Pius V approved his reform in 1606; in 1621 Gregory XV declared it independent of the monks of the Great Observance. Their convents formed two provinces, with houses at Madrid, Salamanca, Seville, and Alcalá, with a few foundations in Sicily.

Father Antonio Velasco founded a convent of nuns of Our Lady of Mercy at Seville in 1568, of which the first superior was Blessed Anne of the Cross. This foundation had been authorized by Pius V. The reformed branch also established houses of barefooted nuns, or Nuns of the Recollection, at Lura, Madrid, Santiago de Castile, Fuentes, Thoro, and elsewhere. The female tertiaries were founded in 1571 (1265). Two widows of Barcelona, Isabel Berti and Eulalia Peins, whose confessor was Blessed Bernard of Corbario, prior of the convent there, were the foundresses. They were joined by several companions, among them St. Mary of Suecor (d. 31 Decemb., 1281), the first superior of their community. Blessed Mary Anne of Jesus (d. 1624), founded another community of tertiaries, under the jurisdiction of the reformed branch. The Order of Mercy of late years has much decreased in membership. The restoration of the reformed convent at Thoro, Diocese of Zamora, Spain, is worthy of note (1888). At present the order has one province and one vice-province in Europe, and smaller establishments in America, with thirty-seven convents and from twelve to八十 members. The Mercedarian convents are in: Perma; Spain; Venezuela (Caracas, Maracaibo); Peru (Lima); Chile (Santiago); Argentina (Cordova, Mendosa); Ecuador (Quito); and Uruguay. The Mercedarians of Cordova publish “Revista Mercedariana”.

Besides the founder of the order, the following illustrious members of the order may be mentioned: St. Raymond Nonnatus (d. 1240), the most famous of the monks who gave themselves up to the work of ransoming captives; Blessed Bernard of Corbario, already mentioned; St. Peter Paschal, Bishop of Jaen, who devoted all his energies to the ransom of captives and the conversion of the Muslims, martyred in 1300; St. Raymond was a cardinal, as also were Juan de Luto and Father de Salazar. It is unnecessary to enumerate the archbishops and bishops. Writers were numerous, especially in Spain and Latin America in the seventeenth century. To mention only a few: Alfonso Henrique de Almendares, Bishop of Cuba, who had founded a convent for his order, from whom Philip III received an interesting report on the spiritual and temporal condition of his diocese in 1623; Alfonso de Monroy, who drew up the constitutions of the reform, and was a bishop in America; Alfonso Ramón, theologian, preacher, and annalist of his order; Alfonso Velagas de Miranda (1661), who
Mercier, a French Canadian statesman, b. 15 October, 1840, at Iberville, Quebec, of a family of farmers; d. 30 October, 1894. He received his classical education at the Jesuit college, Montreal, and prepared for the Bar in the employ of a prominent lawyer. He was called to the Bar in 1862, when only 22, as editor of "Le Courrier de St-Hyacinthe". His views were then opposed to the federation of the provinces, which he considered as the death-blow to French Canadian influence. In his later years he inclined towards annexation to the United States. In 1873 Rouille county elected him for the Federal Parliament; and, in 1881, St-Hyacinthe returned him to the local House of Assembly, Quebec. The general indigence caused among the Canadians of French origin by the execution of the half-breed leader, Louis Riel, at Regina, an act rightly attributed to Orange fanaticism and vindictiveness, provided Mercier with the opportunity of founding the National League (1886) which comprised elements from both Liberals and Conservatives. It was during his premiership (1887 to 1892), that was passed the famous Jesuit Estate Bill, partly indemnifying the Society for the properties confiscated by the British Crown after the cession of Canada. It was Mercier's honour and right to have brought to a successful conclusion the negotiations to that effect pursued under his predecessors in office—an event almost unparalleled in modern legislation, and to which the Ottawa Federal Parliament, with its conservative majority, lent its concurrence. His devotedness in behalf of the interests of his former teachers proved his fidelity and attachment to his Alma Mater. In recognition of this act of justice, he was knighted by Leo XIII. A vigorous and redoubtable debater rather than an eloquent orator, Mercier spoke with great clearness and force. He possessed a remarkable talent of exposition and argumentation, which gave him a prominent rank in the Canadian Bar. Certain utterances in some of his speeches unfortunately betray the influence of a reprehensible school of thought and too great intimacy with the literature of its representative minds. The Legislature of Quebec has voted (1910) a monument to his memory.

LIONEL LINDSAY.

Mercurialis, Geronimo, better known by his Latin name Mercurialis, famous phiologist and physician, b. at Forli, 30 September, 1530; d. there, 13 November, 1606. His preliminary studies and some of his medical courses were taken at Bologna, but he received his degree at Padua and then settled down to practice in Forli. He was sent by his townfolk on a political mission to Paul IV and made such good friends at Rome that he was persuaded to take up his residence there. He studied the old classic medical writers for some seven years and then wrote his "De arte gymnastica", in which he gathered all that the ancients had taught with regard to the use of natural methods for the cure of disease. This gave him a great reputation; the emperor, in person, sent for it by the Venetian senators led to his call to the chair of medicine at Padua in 1569. Here he devoted himself to the critical study of the works of Hippocrates. His exhaustive monograph, "Censura et dispositio operum Hippocratica" (Venice, 1583), enhanced his reputation and he began the preparation of a great reprint of the Hippocratic works. He died on 25 April, 1611. The complete edition of it by the Venetian senators, known as Merc. 2 volumes (1599); GAREY, Emile, Bibliotheque medecinale (Barcelona, 1875); HÉLOT, Histoire des ordres monastiques, 111, 266-296; CURRIER, Hist. of Religious Orders (New York, 1896). J. M. BESSE.

MERCY, BROTHERS OF OUR LADY OF, founded at Mechlin in 1839 by Canon J. B. Cornelius Schepers for the instruction and care of prisoners and of the sick. They were invited to S. Babina at Perugia by Cardinal Peci, afterwards Leo XIII, who had witnessed their work while he was nuncio at Brussels. It was at his instance that Pius IX confirmed the constitution of the Brothers in 1854. In 1855 Cardinal Manning invited them to London, where they have undertaken the care of the prisoners in Catholic institutions, and are also occupied with the education of the children of poor. They are under simple vows and the term of the novitiate is one year. They wear a black habit and scapular with a brown cross on the breast.

HEINRICH, Die Orden und Kongregationen, III, 361; SPEKEL, Monasteries and Religious Houses of Great Britain (London, 1903), 51.

BLANCHE M. KELLY.

MERCY, CORPORAL AND SPIRITUAL WORKS OF.—Mercy as it is here contemplated is said to be a virtue influencing one's will to have compassion for, and, if possible, to alleviate another's misfortune. It is the teaching of St. Thomas Aquinas that although mercy were the spontaneous action of charity, yet it is to be reckoned a special virtue adequately distinguishable from this latter. In fact the Scholastics in cataloguing it consider it to be referable to the quality of justice mainly because, like justice, it controls relations between distinct persons. It is as they say ad afferen. Its motive is the misery which one discerns in another, particularly in one's own charity. It is to be reckoned, in some sense at least, involuntary. Obviously the necessity which is to be succored can be either of body or soul. Hence it is customary to enumerate both corporal and spiritual works of mercy. The traditional enumeration of the corporal works of mercy is as follows: (1) To feed the hungry; (2) To give drink to the thirsty; (3) ...
Mercy, established the Order of Our Lady of Ransom. Both of these communities had as their chief scope the recovery of Christians who were held captive by the infidels. In the religious body which owes its origin to St. Peter Nolasco, the members took a fourth vow to surrender their own persons in place of those whom they were not otherwise able to redeem from slavery.

JOSEPH F. DE LAUNAY.

Mercy, Sisters of, a congregation of women founded in Dublin, Ireland, in 1827, by Catherine Elizabah McAuley, b. 29 September, 1787, at Stor- manstown House, County Dublin. Descended from an ancient and distinguished Catholic family, she was the eldest of three children. At a time when Catholicism was crushed, Mrs. McAuley strove as much as was possible to keep the faith alive in those who had so many inducements to relinquish it, and engaged in many charitable works. In these he was little assisted by Mrs. McAuley, whose charm and accomplishments attracted the attention of better sorts. After McAuley's death (1794) the pecuniary affairs of the family became so involved that the widow sold Stor- manstown House and removed to Dublin. Here the family came so completely under the influence of Protestants fashionable society that all, with the exception of Catherine, became Protestants. She remained a Catholic, and her education was such that she was not only capable of taking care of herself, but was able to give employment to several of the orphans who came to her. She was too young to be induced by threats or promises to join in Protestant worship, for she clung with strange pertinacity to the very name Catholic; but having no one to consult in her doubts, she finally became unsettled in her religious ideas. Precocious and serious beyond her years, she grew daily more Alive to the insecurity of her spiritual position, and finally to the necessity of a return to the Church. The friends who were the most confidential and on whom she drew for advice and counsel were the two sisters, who, on her advice, left the Protestant Church and entered the Roman Catholic Church. Her name is described as being beautiful, her complexion was fair, her eyes blue, and her hair golden; her nature was singularly unselfish, amiable, and affectionate. Though several advantages were proposed, nothing could induce her to marry.

More and more attracted to the faith of her father, Catherine became acquainted with the works of Charity, and joined James' Church, Dublin, and Dr. Betagh, whose friendship greatly aided her. About this time a distant relative of her mother, returning from India, purchased Coolock House, a few miles from Dublin, and being attracted by Catherine's appearance, desired to adopt her; consequently, in the year 1805 Catherine removed to her new and beautiful home. Catherine's interior life was now made up of the simple devotions which she determined to follow the dictates of her conscience. She sought an interview with Rev. Dr. Murray, afterwards Archbishop of Dublin, and shortly after was received into the Church. Her kind guardians allowed her to practise the charitable works to which she felt inclined and even provided her with the necessary means; but they were opposed to every appearance of Catholicism that they would not allow a crucifix,

religious picture, or any pious article in the house, nor did they make any provision for fast days. Her successor, Rev. Dr. Blake and Rev. Dr. Armstrong, were rewarded by the deposition of Mrs. Callahan, on her death bed; and in 1822 Mr. Callahan also, when dying, was duly reconciled. To Catherine he left his entire fortune. She immediately devised a system of distributing food and clothing to the poor who flocked to Coolock House, and her time was fully devoted to these works of charity, to visiting the sick and to instilling the poor. When Catherine came into full possession of her property, she felt that God required her to do something permanent for the poor, and she was now able to carry out her early visions of founding an institution in which women might, when out of work, find a temporary home. In this undertaking Rev. Dr. Blake and Rev. Dr. Armstrong undertook to assist her, but the work was to be completed by her. After some deliberation, these clergymen selected a site for the new building at the junction of lower Baggot and Herbert Streets, Dublin, and in June, 1824, the corner-stone was laid by the Rev. Dr. Blake.

As Dr. Blake was called to Rome soon after, the Rev. Edward Armstrong undertook to assist her, but the work was to be completed by her. After some deliberation, these clergymen selected a site for the new building at the junction of lower Baggot and Herbert Streets, Dublin, and in June, 1824, the corner-stone was laid by the Rev. Dr. Blake.

On the 22 December, 1843, the sisters opened the first house of the congregation in the United States. In 1844, M. Agatha O'Brien, a native of Ireland, entered the Congregation, and was made superior of the second house of the congregation, which was moved after the patronage of St. Charles Borromeo, the Apostle of Charity, and adapted the rules and constitutions drawn up by Père Épiphanie Louys, Abbé of Estival and Vicar-General of the Reformed Premonstratensians. By the middle of the eighteenth century the congregation was in charge of numerous hospitals, and shortly afterwards took up as an additional task the Christian education of children. During the Revolu-
tionary period the members, although dispersed and deprived of their garb, continued their work so heroically as to win the encomiums of their persecutors. On 22 July, 1804, they reasserted their religious habit, obtained the approval of Napoleon, and were soon in a flourishing condition. Their rule, based on that of St. Augustine, received papal approva-
bation in 1859, and additional constitutions were confirmed by Leo XIII in 1892. Their work includes the direction of all manner of charitable institutions, such as domestic and trade schools, homes for first-com-
unicants, protectories, poor-houses, homes for de-
fectives, and female reformatories, as well as the care of the sick. They have thirty-seven houses for schools, including a number of normal institutes in Austria. Candidates must spend one year as postu-
lates and from three to four and a half years as nov-
ces before being admitted to the congregation. The auxiliary sisters for the care of the sick renew their vows annually.

There are several entirely independent branches of Borromean Sisters. In 1838 one was established by Aloysius Joseph Freiherr von Schrenk, Prince-Bishop of Prague (d. 1849), which was confirmed as a separate congregation in 1841, and now numbers 900 members in 140 houses, chiefly in Bohemia, Moravia, and Upper and Lower Austria. In 1849 Melchior Freiherr von Schrenk, Bishop of Prague Borromeans to found a house at Neisse, which, in 1857, was raised to the rank of the mother-house of a separate congregation. Later the mother-house was transferred to Trebnitz, and temporarily, during the Kulturkampf, to Teschen, where a provincial house for Austria was later established (1859). A house of the congregation for the ancient Order of Alcolumbia, founded in 1894, made a provincial mother-house and a novitiate for the Orient, with the direction of schools, an asylum for the aged, and a hospice for German pilgrims. Affiliated foundations have been made at Jerusalem (1886), Haifa (1888), Cairo (1904), and Emmaus. The members of the Trebnitz congregation number 1,200, while the house of America was made from Nancy to Trier, whence the congregation spread to other cities of Western Germany. In 1849 a provincial house was erected at Trier, which, by decree of Pius IX (18 September, 1872), was made the mother-house of an independent congregation. A famous Borromean institution is St. Hedwig's Hos-
ital at Berlin, founded in 1846 by Archibald Eck-
weiler. The Trier branch comprises over 1,200 sisters in 70 houses. A foundation was also made at Maastricht in 1837 by Peter Anton van Baer.

Meredith, Edward, English Catholic controversialist, b. in 1648, was a son of the rector of Landulph, Cornwall. He studied with distinction at Westminster School and in 1665 was elected to a scholarship at Christ Church, Oxford. In 1668 he went to Spain as secretary of the ambassador, Sir William Godolphin, and while residing there embraced the Catholic faith. He returned to England after three years and engaged in a religious controversy with Stillingfleet (8 August, 1671). In this discussion, an account of which he pub-
ished in 1864, he was aided by Edmund Coleman, who was executed seven years later for alleged complicity in the Titus Oates plot. In 1862 Meredith wrote a reply to one Samuel Johnson, who had libelled the Duke of York in a work entitled "Julian the Apostle". On 7 September, 1864, he entered the Jesuit novitiate at Watton, Flanders, under the name of James, a supernaturally merited, in a few years to England, where he published several controversial pamphlets. On the fall of James II, he withdrew to Saint-Germain. He was resident in Rome during the years 1700 and 1710; the year of his death is uncertain, but his will, dated 1715, is said to be preserved in the archives of the English College, Rome. The following, in the Consolamenta Latin, a devotional work under the title "A Journal of Meditations for every day of the year" (London, 1887).

Mérida (Emeritensis in India), Diocese of, a suffragan see of Santiago de Venezuela or Caracas, consecrated by Lope of Legazpi, and part of the province of Zamora. It lies in the north-western portion of the republic, to the south of Lake Maracaibo. Until 17 Jan., 1905, it included the territory of the Goejira. Mérida was first erected into a bishopric on 17 Feb., 1777. Its first bishop, Juan Ramos de Lora, a Franciscan, b. at Palacios y Villafranca, Diocese of Seville, in Langue, was nominated in the Consolamenta Latin, a devotional work under the title "A Journal of Meditations for every day of the year" (London, 1887).

Mérida.—By merit (meritum) in general is understood that property of a good work which entitles the doer to receive a reward (premium, merces) from him in whose service the work is done. By antonomasia, the word has come to designate also the good work itself, in so far as it deserves a reward from the person in whose service it was performed. In the theological sense, a supernatural merit can only be a salutary act (actus salutaris), to which God in consideration of his infallible promise owes a supernatural reward, consisting ultimately in eternal life, which is the beatific vision in heaven. As the main purpose of this article is to vindicate the Catholic doctrine of the meritoriousness of good works, the subject is treated under the following heads: I. Nature of Merit; II. Existence of Merit; III. Conditions of Merit, and IV. Objects of Merit.

I. Nature of Merit.—(a) If we analyse the definition given above, it becomes evident that the property of merit can be found only in works that are positively good, whilst bad works, whether they benefit or injure a third party, contain nothing but demerit (demeritum) and consequently deserve only punishment. Thus the good workman certainly deserves the reward of his labour, and the thief deserves the punishment of his crime. From this it naturally follows that merit and reward, demerit and punishment, bear to each other the relation of deed and reward; they are correlatives of the same kind, of which one is due to the other. The former is due to merit, and the reward is in proportion to the merit. This leads to the third condition, viz., that merit supposes two distinct persons, the one who acquires the merit and the other who rewards it; for the idea of self-reward is just as contradictory as that of self-punishment. Lastly, the relation between merit and reward furnishes the basis of the justice, the service and its remuneration the guiding norm can be only the virtue of justice, and not disinterested kindness or pure mercy; for it would destroy the very notion of reward to conceive of it as a free gift of bounty (cf. Rom., xi, 6). If, however, salutary acts can in virtue of the Divine justice give the right to an eternal reward, this is possible only because they themselves have their root in gratuitous grace, and consequently are of their very nature dependent ultimately on grace, as the Council of Trent emphatically declares (Sees. VI, cap. xvi, in Denzinger, 10th ed., Freiburg, 1908, n. 810): "the Lord ... whose bounty towards all men is so great, that He will have the things, which are known gifts, be their own merit.

Ethics and theology clearly distinguish two kinds of merit: (1) condign or merior in the strict sense of the word (meritum adequantum sive de condigno), and (2) congruous or quasi-merit (meritum inadequatum sive de congruo). Congruous merit supposes an equality between service and return; it is measured by comparative justice (justice comparationis), and thus gives a real claim to a reward. Congruous merit, owing to its inadequacy and the lack of intrinsic proportion between the service and the recompense, claims a reward only on the ground of equity. This early-scholastic distinction and terminology, which is already recognized in concept and substance by the Fathers of the Church in their controversies with the Pelagians and Semi-pelagians, were again emphasized by Johann Eck, the famous adversary of Martin Luther (cf. Greving, "Joh. Eck als junger Gelehrter," Münster, 1906, pp. 153 sqq.). The essential difference between meritum de condigno and meritum de congruo is based on the fact that, besides those works which claim a recompense under penalty of denial of grace (as in contracts between employer and employee, in buying and selling, etc.), there are also other meritorious works which at most are entitled to reward or honour for reasons of equity (ex equitate) or mere distributive justice (ex iustitia distributiva), as in the case of gratuitities and military decorations. From
an ethical point of view the difference practically amounts to this, that if the reward due to condign merit be withheld, there is a violation of right and justice and the consequent obligation in conscience to make restitution, while, in the case of congruous merit, to withhold the reward involves no violation of right and no obligation to restore, it being merely an offence against what is fitting or a matter of personal discrimination (acceptio personarum). Hence the reward of congruous merit always depends in great measure on the kindness and liberality of the giver, though not purely and simply on his good will.

In applying these notions of merit to man's relation to God it is especially necessary to keep in mind the fundamental truth that the virtue of justice cannot be brought forward as the basis of a real title for a Divine reward either in the natural or in the supernatural order. The simple reason is that God, being self-existent, absolutely independent, and sovereign, can be in no respect bound in justice with regard to his creatures. Properly speaking, man possesses nothing of his own; all that he has and all that he does is a gift of God, and, since God is infinitely self-sufficient, there is no advantage or benefit which man can by his services confer upon him. Hence on the part of God there can only be question of a gratuitous promise of reward, by which work of perfection he owes to himself the promised reward, not in justice or equity, but solely because he has freely bound himself, i.e., because of His own attributes of veracity and fidelity. It is on this ground alone that we can speak of Divine justice at all, and apply the principle: Do ut des (cf. St. Augustine, Serm. civii. e ii, in F. L., XXXVIII, 903). For this reason the difference between merit and satisfaction; for a meritorious work is not identical, either in concept or in fact, with a satisfactory work. In the language of theology, satisfaction means: (1) atoning by some suitable service for an injury done to another's honour or for any other offence, in somewhat the same fashion as in modern dueing outrageous honour is satisfied by compensations to swords or pistols; (2) paying off the temporal punishment due by sin by salutary penitential works voluntarily undertaken after one's sins have been forgiven. Sin, as an offence against God, demands satisfaction in the first sense; the temporal punishment due to sin calls for satisfaction in the second sense (see Pex- Ammer, 62). Hence in concept and in fact the Son of God by His death on the cross has in our stead fully satisfied God's anger at our sins, and thereby effected a reconciliation between the world and its Creator. Not, however, as though nothing were now left to be done by man, or as though he were now restored to the state of original innocence, whether he was it or not; on the contrary, God and Christ demand of him that he make the fruits of the Sacrifice of the Cross his own by personal exertion and co-operation with grace, by justifying faith and the reception of baptism. It is a defined article of the Catholic Faith that man before, in, and after justification derived from the infinite treasure of merits which Christ gained for us on the Cross (cf. Council of Trent, Sess. VI, cap. xvi; Sess. XIV, cap. viii).

The second kind of satisfaction, that namely by which temporal punishment is removed, consists in this, that the penitent after his justification gradually conforms himself by the faithful devotion, either ex opere operato, by conscientiously performing the penance imposed on him by his confessor, or ex opere operantis, by self-imposed penances (such as prayer, fasting, almsgiving, etc.) and by bearing patiently the sufferings and trials sent by God; if he neglects this, he will have to give full satisfaction (apotlanto) in the pains of purgatory (cf. Council of Trent, Sess. XIV, can. xiii, in Denzinger, n. 923).

Now, if the concept of satisfaction in its twofold meaning be compared with that of merit as developed above, the first general conclusion will be that merit constitutes a debtor who owes a reward, whilst satisfaction supposes a creditor whose demands must be met. In Christ's work of redemption satisfaction materially coincides almost to their full extent, since as a matter of fact the merits of Christ are also works of satisfaction for man. But, since by His Passion and Death He truly merited, not only graces for us, but also external glory for His own Person (His glorious Resurrection and Ascension, His sitting at the right hand of the Father, the glorification of His name of Jesus, etc.), it follows that His personal merit extends further than His satisfaction, as He had no need of satisfying for Himself. The substantial and conceptual distinction between merit and satisfaction holds good when applied to the justified Christian, for every meritorious act has for its main object the increase of grace and of eternal glory, while satisfactory works have for their object the removal of the temporal punishment still due to sin. In practice and generally speaking, however, merit and satisfaction are found in every salutary act, so that every meritorious work is also satisfactory and vice versa. It is indeed also essential to the concept of a satisfactory work that it be suitable to the perfection of which qualities are not connoted by the concept of merit; but since, in the present state of fallen nature, there neither is nor can be a meritorious work which in one way or another has not connected with it difficulties and hardships, theologians unanimously teach that all our meritorious works without exception are to some extent not wholly satisfactory, while in a manner of course, they are all simultaneously works of satisfaction. Against how many difficulties and distractions have we not to contend even during our prayers, which by right should be the easiest of all good works! Thus, prayer also becomes a penance, and hence confessors may in most cases content themselves with imposing prayer as a penance. (Cf. De Lugo, "De poenitentia," Disp. xxv, sect. 1.)

(c) Owing to the peculiar relation between and material identity of merit and satisfaction in the present economy of salvation, a twofold value must in general be distinguished in every good work: the meritorious and the satisfactory value. But each preserves its distinctive character, the one being the inalienable nature of the act, the other in this, that the value of merit as such, consisting in the increase of grace and of heavenly glory, is purely personal and is not applicable to others, while the satisfactory value may be detached from the meriting agent and applied to others. The possibility of this transfer rests on the fact that the residual punishments for sin are in the nature of a debt, which may be legitimately paid to the creditor and thereby cancelled not only by the debtor himself but also by a friend of the debtor. This consideration is important for the proper understanding of the usefulness of suffrages for the souls in purgatory (cf. Council of Trent, Sess. XXV, Decret. de purgat., in Denzinger, n. 985). One may not, however, apply the purely meritorious quality of his work, because the increase of grace and glory accures only to the agent who merites. But it has pleased the Divine wisdom and mercy to accept the satisfactory quality of one's work under certain circumstances as an equivalent of the temporal punishment still to be paid by the faithful deceased, just as if the latter had themselves performed the work. This is one of the most beautiful and consoling aspects of that grand social organization which we call the "Communion of Saints" (q. v.), and moreover affords us an insight into the nature of the "heroic act of charity" approved by Pius X, whereby the faithful deceased, but of heroic charity for the souls in Purgatory, voluntarily renounce in their favour the satisfactory fruits of all
their good works, even all the suffrages which shall be offered for them after their death, in order that they may thus benefit and assist the souls in purgatory more quickly and more efficaciously.

The efficacy of the prayer of the just, be it for the living or for the dead, calls for special consideration. In the first place it is evident that a prayer has a profoundly meritorious work has in common with other similar good works, such as fasting and almsgiving, the twofold value of merit and satisfaction. Because of its satisfactory character, prayer will also obtain for the souls in purgatory by way of suffrage (per modum suffragii) either a diminution or a total canceling of the time of their purgatorial pains. Prayer has, however, the characteristic effect of impetnation (effectus impetrorius), for he who prays appeals solely to the goodness, love, and liberality of God for the fulfilment of his desires, without throwing the weight of his own merits into the scale. He who prays fervently and unceasingly gains a hearing with God because he prays, even should he pray with empty hands (cf. John, xiv, 13 sq.; xvi, 23). Thus the special efficacy of prayer for the dead is easily explained, since it combines efficacy of satisfaction and impetration, and this twofold efficacy is enhanced by the personal worthiness of the one who, as a friend of God, offers the prayer. (See F. X. Fries, p. 73.) In fact, a salutary effect of the meritoriousness of good works supposes the state of justification, or, what amounts to the same, the possession of sanctifying grace, supernatural merit is only an effect or fruit of the state of grace (cf. Council of Trent, Sess. VI, cap. xvi). Hence, it is plain that this whole article is really only a continuation and a completion of the doctrine of sanctifying grace (see Grace).

II. THE EXISTENCE OF MERIT.—(a) According to Luther justification consists essentially in the mere covering of man's sins, which remain in the soul, and in the external imputation of Christ's justice; hence his assertion that even "the just sin in every good work" (see Ephes. ii, 10). Still, it is possible that the just work of the just is worthy of imputation (damnabilis) and a mortal sin [peccatum mortale], if it be considered as it is really in the judgment of God" (see Möhler, "Symbolik", 22). According to the doctrine of Calvin (Instit., III, ii, 4) good works are "impurities and defilements (inquinamenta et sordes), but God covers them that he may not be found without grace. Each merit of Christ, and imputes to them the predestined as good works in order that He may require them not with life eternal, but at most with a temporal reward. In consequence of Luther's proclamation of "evangelical liberty", John Agricola (d. 1566) asserted that in the New Testament it was not allowed to preach the "law", and Nicholas Amador (d. 1565) maintained that good works were positively harmful. Such exaggerations gave rise in 1527 to the fierce Antinomian controversy, which, after various efforts on Luther's part, was finally settled in 1540 by the condemnation forced from Agricola by Joachim II of Brandenburg. Although the doctrine of modern Protestantism attempts to cover up the difficulties, it teaches generally speaking that good works are a spontaneous consequence of justifying faith, without being of any avail for life eternal. Apart from earlier dogmatic declarations given in the Second Synod of Orange of 529 and in the Fourth Lateran Council of 1215 (see Denzinger, 191, 498), the Council of Trent defended against the justifications of the meritoriousness of good works by insisting that life everlasting is both a grace and reward (Sess. VI, cap. xvi, in Denzinger, n. 809). It condemned as heretical Luther's doctrine of the sinfulness of good works (Sess. VI, can. xxv), and declared a dogma that the just, in return for their good works in God through the merits of Jesus Christ, should obtain an eternal reward (loc. cit., can. xxvi).

The doctrine of the Church simply echoes Scripture and Tradition. The Old Testament already declares the meritoriousness of good works before God. "But the just shall live for evermore: and their reward is with the Lord" (Wis., v, 16). "Be not afraid to be justified even to death: for the reward of God continue for ever" (Eccles., xviii, 22). Christ Himself adds a special reward to the good works of the Eight Beatitudes, and he ends with this fundamental thought: "Be glad and rejoice, for your reward is very great in heaven" (Matt., v, 12). In His description of the Last Judgment, He makes the possession of eternal bliss depend on the practice of the corporal works of mercy (Matt., xxv, 34 sqq.). Although St. Paul insists on nothing but faith as the ground of justification, in his letter to the Ephesians he recognizes that Christian grace, still he acknowledges merits founded on grace and also the reward due to them on the part of God, which he variously calls "prize" (Phil., iii, 14; I Cor., ix, 24), "reward" (Col., iii, 24; I Cor., iii, 8), "crown of justice" (II Tim., iv, 7 sq.; cf. James, i, 12). It is worthy of note that in these and many others, good works are not represented as mere adjuncts of justifying faith, but as real fruits of justification and the fruit of our eternal happiness. And the greater the merit, the greater will be the reward in heaven (cf. Matt., xvi, 27; I Cor., iii, 8; II Cor., ix, 6). Thus the Bible itself refutes the assertion that "the idea of merit is foreign to the faith" (Reuss, "Handbuch für praktische Theologie", XX, 3rd ed. Leipzig, 1908, p. 501). That Christian grace can be merited either by the observance of the Jewish law or by mere natural works (see Grace), this alone is foreign to the Bible. On the other hand, eternal reward is promised in the Bible to those supernatural works which are performed in the state of grace, and that because they are meritorious (cf. Matt., xxv, 34 sqq.; Rom., ii, 6 sqq.; II Cor., v, 10).

Even Protestants concede that, in the oldest literature of the Apostle Fathers and Christian Apologists, "the idea of merit was read into the Gospel," and that Tertullian by defending "merit in the strict sense" gave the key to his doctrine of Catholicism" (Reaencyclopdie, pp. 601, 602). He was followed by St. Cyprian with the declaration: "You can attain to the vision of God, if you deserve it by your life and works" ("De op. et elemos.", xiv, ed. Hartel, i, 384). With St. Ambrose (De offic., i, 87) and St. Augustine (De morib. eccl., i, xxv), the other Fathers of the Church completed the dogma of the merit of works in their teaching, especially in their homilies to the faithful, so that uninterrupted agreement is secured between Bible and Tradition, between patristic and scholastic teaching, between the past and the present. If therefore "the reformation was mainly a struggle against the doctrine of merit" (Reaencyclopdie, loc. cit., p. 596) this only proves that the Council of Trent defended against unjustified innovations the old doctrine of the meritoriousness of good works, founded alike on Scripture and Tradition.

(b) This doctrine of the Church, moreover, fully accords with natural ethics. Divine Providence, as the supreme lawgiver, owes it to itself to give efficacious sanctions to the incentives of natural law with their many commandments and prohibitions, and to secure their observance by holding out rewards and punishments. Even human laws are provided with sanctions, which are often very severe. He who denies the meritoriousness of good works performed by the just must necessarily also deny the responsibility and the desirability of the virtue which holds that sins remain without punishment, and that the fear of hell is both groundless and useless. If there be no eternal reward for an upright life and no eternal chastisement for sin, it will matter little to the majority of people whether they lead a good or a bad life. It is true that, even if there were neither reward nor punishment, it would be contrary to natural nature to lead an immoral life; for the moral obligation
to do always what is right, does not of itself depend on retribution. But Kant undoubtedly went too far when he repudiated as immoral those actions which are performed with a view to our personal happiness or to that of others, and proclaimed the “categorical imperative,” i.e., frigid duty clearly perceived, as the only means of moral conduct. For, through this so-called “autonomy of the moral will,” may at first sight appear highly ideal, still it is unnatural and cannot be carried out in practical life, because virtue and happiness, duty and merit (with the claim to reward), are not mutually exclusive, but, as correlatives, they rather condition and complete each other. The one may be perfect only when the other is taken into account as well. The faithful performance of duty is an unsought-for reward of our action and an interior happiness of which no calamity can deprive us, so that, as a matter of fact, duty and happiness are always linked together.

(c) But is not this continual acting with one eye on heaven, with which Professor Jodl reproaches Catholic moral teaching, the meanest “mercenary spirit” and greed which necessarily vitiate to the core all moral action? Can there be any question of morality, if it is only the desire for eternal bliss or simply the fear of hell that determines one to do and avoid evil? Such a disposition is certainly far from what the Church professes to teach. On the contrary, the Church proclaims to all her children that pure love of God is the first and supreme commandment (cf. Mark, xvi, 30). It is its highest ideal to act out of love. For he who truly loves God would keep His commandments, even though there were no eternal reward in the next life. Nevertheless, the desire for heaven is a necessary and natural consequence of the perfect love of God; for heaven is only the perfect possession of God by love. As a true friend desires to see his friend without thereby sinking into egotism so does the loving soul ardently desire the Beatific Vision, not from a craving for reward, but out of pure love. It is unfortunately too true that only the best of Christians, and especially the great saints of the Church, reach this high standard of morality in everyday life. The great majority of ordinary Christians must be deterred from sin principally by the fear of hell and spurred on to good works by the thought of an eternal reward, before they attain perfect love. But, even for those souls who are not of the meritoria of Christ, they still have when only the thought of heaven and hell keeps them from falling. Such a disposition, be it habitual or only transitory, is morally less perfect, but it is not immoral. As, according to Christ’s doctrine and that of St. Paul (see above), it is legitimate to hope for a Heavenly reward, so, according to the same doctrine of Christ (cf. Matt., x, 28), the fear of hell is a motive of moral action, a “grace of God and an impulse of the Holy Ghost” (Council of Trent, Sess. XIV, cap. iv, in Denzinger, n. 989). Only that desire for remuneration (amor mercenarius) is reprehensible which would content itself with an eternal happiness without God, and that “doubly servile fear” (amor servilis) disregard to proceed from a mere dread of punishment without at the same time fearing God. But the dogmatic as well as the moral teaching of the Church avoids both of these extremes (see ATTENTION).

Besides blaming the Church for fostering a “craving for reward,” Protestants also accuse her of teaching “justification by works.” External virtues, they allege, such as fasting, almsgiving, pilgrimages, the recitation of the rosary etc., make the Catholic good and holy, the interior intention and disposition being held to no account. “The whole doctrine of merit, especially as explained by Catholics is based on the erroneous view which places the essence of morality in the non-action itself, in the mere regulation of the interior disposition as the habitual direction of the personal will” (Realencyclopaedie, loc. cit., p. 508). Only the grossest ignorance of Catholic doctrine can prompt such remarks. In accord with the Bible the Church teaches that the external work has a moral value only when and in so far as it proceeds from a right interior disposition and intention (cf. Matt., vi, 3, seq.; Mark, x, 31, seq.; Cor., x, 31, etc.). As the body receives its life from the soul, so must external actions be penetrated and vivified by holiness of intention. In a beautiful play on words St. Augustine says (Serm. iii, n. xi): Bonos more faciant boni amores. Hence the Church urges her children to form each morning the “good intention,” that they may keep to it and perform not only the各项工作, but also the indifferent actions of their exterior life serve for the glory of God; “all for the greater glory of God,” is the constant prayer of the faithful Catholic. Not only does the moral teaching of the Catholic Church attribute no moral value whatever to the mere external performance of good works without a corresponding good intention, but it detests such performance as hypocrisy and pretence. On the other hand, our good intention, provided it be genuine and deep-rooted, naturally spur us on to external works, and without these works it would be reduced to a mere semblance of life.

Against the Catholic doctrine on merit is summed up in the word “self-righteousness,” as if the just man utterly disregarded the merits of Christ and arrogated to himself the whole credit of his good works. If any Catholic has ever been so pharisaical as to hold and practise this doctrine, he has certainly set himself in direct opposition to what the Church teaches. The Church has always proclaimed St. Augustine’s words: “Non Deus coronat merita tua tanquam merita tua, sed tanquam dona sua” (De grat. et lib. arbitrio, xv), i.e., God crowns thy merits, not as thine earnings, but as His gifts. Nothing was more strongly and frequently inculcated by the Council of Trent than the proposition that the faithful owe their capability of meriting and all their good works solely to the infinite merits of the Redeemer Jesus Christ. It is indeed clear that meritorious works, as “fruits of the justification,” cannot be anything but merits due to grace, and not merits due to nature (cf. Council of Trent, Sess. VI, cap. xvi). The Catholic certainly must rely on the merits of his Redeemer to gain salvation on his own righteousness, he must acknowledge in all humility that even his merits, purchased with the help of grace, are full of imperfections, and that his justification is uncertain (see GRACE). Of the satisfactory works of penance the Council of Trent makes this explicit declaration: “Thus, man has not wherein to glory, but all our glorying is in Christ, in whom we live, move, and make satisfaction, bringing forth fruits worthy of penance, which from Him have their efficacy, are by Him offered to the Father, and through Him find with the Father acceptance” (Sess. XIV, cap. viii, in Denzinger, n. 904). Does this read like self-righteousness?

Conduproduction of Merit.—For all true merit (mera mereri; Council of Trent, Sess. VI, can. xxxiii), by which is to be understood only meritum de condigno (see Pallavicini, “Hist. Concil. Trident.,” VIII, iv), theologians have set down seven conditions, of which four regard the meritorious work, two the agent who merits, and one God who rewards.

(a) In order to be meritorious a work must be morally good, morally free, done with the assistance of actual grace, and inspired by a supernatural motive. As every evil deed implies derelict and deserves punishment, so the very notion of merit supposes a morally good work. St. Paul teaches that “whatsoever good thing (bonum) any man shall do, the same shall receive his reward” (Rom. xiii, 8). Not only are more perfect works
of supererogation, such as the vow of perpetual chastity, good and meritorious, but also works of the first class, as the ten commandments. Christ Himself actually made the attainment of Heaven depend on the mere observance of the ten commandments when he answered the youth who was anxious about his salvation: "If thou wilt enter into life, keep the commandments" (Matt., xix, 17). According to the authentic declaration of the Fourth Lateran, until (1215), the married state is also meritorious for heaven: "Not only those who live in virginity and continence, but also those who are married, please God by their faith and good works and merit eternal happiness" (cap. Firmiter, in Densinger, n. 430). As to morally indifferent actions (e.g., exercise and play, recreation derived from reciting the Veni, amen; St. Augustin) the Scotists hold that such works may be indifferent not only in the abstract, but also practically; this opinion, however, is rejected by the majority of theologians. Those who hold this view must hold that such morally indifferent actions are neither meritorious nor demeritorious, but become meritorious in proportion as they are morally good or bad. This may be called "the ethical intention". Although the voluntary omission of a work of obligation, such as the hearing of Mass on Sundays, is sinful and thereby demeritorious, still, according to the opinion of Suarez (De gratia, X, ii, 5 sqq.), it is more than doubtful whether conversely the mere omission of a bad action is in itself meritorious, since the eternal good or evil that is done in the act of omission just as it is in the act of commission. Since this struggle is a positive act and not a mere omission. Since the external work as such derives its entire moral value from the interior disposition, it adds no increase of merit except in so far as it reacts on the will and has the effect of intensifying and sustaining its action (cf. De Lugo, "De potentia potestatis," sect. 6).

As to the second requisite, i.e., moral liberty, it is clear from ethics that actions, due to external force or internal compulsion, can deserve neither reward nor punishment. It is an axiom of criminal jurisprudence that no one shall be punished for a misdeed done without free will; similarly, a good work can only then be meritorious and deserving of reward when it proceeds from a free determination of the will. This is the teaching of Christ (Matt., xix, 21): "If thou wilt be perfect, go sell what thou hast, and give it to the poor, and thou shalt have treasure in heaven." The necessity of the third condition, i.e., of the influence of actual grace, is clear from the fact that even the natural just as heaven itself is supernatural, and that consequently it cannot be performed without the help of prevenient and assisting grace, which is necessary even for the just. The strictly supernatural destiny of the Beatific Vision, for which the Christian must strive, necessitates ways and means which lie altogether beyond what is purely natural (see Grace).

Finally, a supernatural motive is required because good works must be supernatural, not only as regards their object and circumstances, but also as regards the end for which they are performed (ex fine). But, in assigning the necessary qualities of this motive, theologians differ widely. While some require the motive of faith (motivum fidei) in order to have merit, others demand in addition the motive of charity (motivum caritatis), and thus, by rendering the conditions more difficult, considerably restrict the extent of meritorious works (as distinguished from merely good works). Others again set down as the only condition that the good work of the just man, who already has habitual faith and charity, be in some form with the Divine law and require no other special motive. This last opinion, which is in accordance with the practice of the majority of the faithful, is tenable, provided faith and charity exert at least an habitual (not necessarily virtual or actual) influence upon the good work, which influence essentially preserves the prevenient of his conversion makes an act of faith and of love of God, thereby knowingly and willingly beginning his supernatural journey towards God in heaven; this intention habitually retains its influence as long as it has not been revoked by mortal sin. And, since there is a grave obligation to make acts of faith, hope, and charity from time to time, these two motives will thereby occasionally renewed and revived. For the controversy regarding the motive of faith see Chr. Pecht, "Prelat dot. mag." V, 3rd ed. (1908), 225 sqq.; on the motive of charity, see Pohle, "Dogmatik" II 4th ed. (1909), 565 sqq.

(b) The agent who merits must fulfil two conditions: he must be in the state of pilgrimage (status viae) and in the state of grace (status gratiae). By the state of pilgrimage is to be understood our earthly life; death, as a natural (although not an essentially necessary) limit, closes the time of meriting. The time of sowing is confined to this life; the reaping is reserved for the next; when no man will be able to sow either wheat or tares. Only a man of the time of grace and of the time of death at midnight, says Christ: "The night cometh, when no man can work" (operari) (John, ix, 4; cf. Eccl., xi, 3; Ecclus., xiv, 17). The opinion proposed by a few theologians (Hirscher, Schell), that for certain classes of men there may still be a possibility of conversion after death, is contrary to the incontestable judgment (judicium particulare) determines instantly and definitively whether the future is to be one of eternal happiness or of eternal misery (cf. Kleutgen, "Theologie der Vorzeit"). II, 2nd ed., Münster, 1872, pp. 427 sqq.). Baptized children, who die before attaining the age of reason, are admitted to heaven without the merits of this life (titulus mercedis); in the case of adults, however, there is the additional title of reward (titulus mercedis), and for that reason they will enjoy a greater measure of eternal happiness.

In addition to the state of pilgrimage, the state of grace (i.e., the possession of sanctifying grace) is required for meriting, because only the just can be "sons of God" and "heirs of heaven" (cf. Rom., viii, 17). In the parable of the vine Christ expressly declares the "abiding in him" a necessary condition for "bearing fruit": "He that abideth in me, and I in him, the same beareth much fruit" (John, xv, 5); and this constant union with Christ is effected only by sanctifying grace. Consequently the majority of theologians are of opinion that one who is holier will gain greater merit for a given work than one who is less holy, although the latter perform the same work under exactly the same circumstances and in the same way. The reason is that a higher degree of grace enhances the godlike dignity of the agent, and this dignity increases the value of the merit. This explains why God, in consideration of the greater holiness of some saints specially dear to Him, has deigned to grant favours which otherwise He would have refused (Job, xlii, 8; Dan., iii, 35).

(c) Merit requires on the part of God that He accept (in actu secundo) the good work as meritorious, even though the work in itself (in actu primo) and previous to its acceptance by God, be already truly meritorious. Theologians, however, are not agreed as to the necessity of this condition. The Scotists hold that the entire condignity of the good work rests exclusively on the gratuitous promise of God and His free acceptance, without which even the most heroic act and its devoi do of the first class, and naturally good works may become meritorious.

Other theologians with Suarez (De gratia, XIII, 30) maintain that, before and without Divine acceptance, the strict equality that exists between merit and re-
ward forwards a claim of justice to have the good works rewarded in heaven. Both these views are extreme. The former until death, the latter, until the dignity which belongs to the just as "adopted children of God", and which naturally impresses on their supernatural actions the character of meritoriousness; Suarez, on the other hand, unnecessarily exaggerates the notion of Divine justice and the con dignity of merit, for the abyss that lies between human service and Divine remuneration is so great that there could be no obligation of bridging it over by a gratuitous promise of reward and the subsequent acceptance on the part of God who has bound himself by his own fidelity. Hence we prefer with Lessius (De perfect. moribusque div., Xll, ii) and De Lugo (De incarnat. disp. 3, sect. 1 sq.) to follow a middle course. We therefore conclude that the spiritual reward owes its origin to a twofold source: to the intrinsic value of the good work and to the free acceptance and gratuitous promise of God (cf. James, i, 12). See Schiini, "De gratia divina" (Freiburg, 1901), pp. 418 sqq.

IV. THE OBJECTS OF MERIT.—Merit in the strict sense (meritum de condigno) gives a right to a threefold reward: increase of sanctifying grace, heavenly glory, and the increase thereof; other graces can be acquired only in virtue of congruous merit (meritum de congruo).

(a) In its Sixth Session (can. xxxiv), the Council of Trent declared: "If any one saith . . . that the justified man by good works . . . acquires . . . some increase of grace; eternal life; and the attainment of that eternal life—if so be, however, that he depart in grace—and also an increase in glory; let him be anathema." The expression "vere mereri" shows that the three objects mentioned above can be merited in the true and strict sense of the word, viz., de condigno. Increase of grace (momentum gratiae) is termed in the first place to exclude the first factor of justification concerning which the council had already taught: "None of those things, which precede justification—whether faith or works—merit the grace itself of justification" (Sess. VI, cap. viii). This impossibility of meriting the first habitual grace is as much a dogma of our Faith as the absolute impossibility of meriting the first actual grace (see GRACE). The growth in sanctifying grace, on the other hand, is perfectly evident from both Scripture and Tradition (cf., Ecclus., xviii, 22; II Cor., ix, 10; Apoc., xxii, 11 sqq.). To the question whether the right to actual graces needed by the just be also an object of strict merit, theologians have answered in the affirmative. The increase of habitual grace, merely sufficient graces may be merited de condigno, but not efficacious graces. The reason is that the right to efficacious graces would necessarily include the strict right to final perseverance, which lies completely outside the sphere of condign merit although it may be obtained by prayer (see GRACE). Not even heroic acts give a strict right to graces which are always efficacious or to final perseverance, for even the greatest saint is still obliged to watch, pray, and tremble lest he fall from the state of grace. This explains why the Council of Trent purposely omitted efficacious grace and the gift of perseverance, when it enumerated the objects of merit.

Life everlasting (viae aeterna) is the second object of merit; the dogmatical proof for this assertion has been given above in treating of the existence of merit. It still remains to inquire whether the distinction made by the Council of Trent between viae aeterna and viae aeterna consecutio is meant to signify a twofold reward, "life everlasting" and "the attainment of life everlasting", and hence a twofold object of merit. But theologians rightly deny that the council had this in view, because it is clear that the right to a reward coincides with the right to the payment of the same. Nevertheless, the distinction was not useless or superfluous, because, notwithstanding the right to eternal glory, the actual possession of it must necessarily be dependent on the man's perfect condition: "Sicut enim in gravioribus" (provided he depart in grace). With this last condition the council wished also to inculcate the salutary truth that sanctifying grace may be lost by mortal sin, and that the loss of the state of grace ipso facto entails the forfeiture of all merits however great. Even the greatest saint, should he die in the state of mortal sin, arrives in eternity as an enemy of God with empty hands, just as if during life he had never done anything, meritorious. All his former rights to grace and glory are cancelled. To make them revive a new justification is necessary. On this "revival of merits" (reviviscenra meritorum) see Schiini, "De gratia divina" (Freiburg, 1901), pp. 418 sqq.; this question is treated in detail by Pohle, "Dogmatik", III (4th ed., Paderborn, 1910), pp. 440 sqq.

As the third object of merit the council mentions the "increase of glory" (groria augmentum) which evidently must correspond to the increase of grace, as this corresponds to the accumulation of good works. At the Last Day, when Christ will come to judge the world, "He will render to every man according to his works [secundum opera eiu]" (Matt., xvi, 27; cf. Rom., ii, 6). And St. Paul repeats the same (I Cor., iii, 8): "Every man shall receive his own reward, according to his own labour [secundum suum laborum]." This explains the inequality that exists between the glory of the different increase.

(b) By his good works the just man may merit for himself many graces and favours, not, however, by right and justice (de condigno), but only congruously (de congruo). Most theologians incline to the opinion that the grace of final perseverance is among the objects of congruous merit, for which grace of merit above, is not and cannot be merited condignly. It is better, however, and safer if, with a view to obtaining this great grace on which our eternal happiness depends, we have recourse to fervent and unremitting prayer, for Christ held out to us that above all our spiritual needs he would infallibly hear our prayer for this great gift (cf. Matt., xxii, 22; Mark, ii, 24; Luke, xi, 9; John, xiv, 13, etc.). For further explanation see Bellarmine, "De justif.", V, xxix; Tepe, "Insti. theol.", III (Paris, 1896), 258 sqq.

It is impossible to answer with equal certainty the question whether the just man is able to merit in advance the grace of conversion, if perchance he may, by his good works, meritoriously gain the grace of merit for that grace. Most theologians deny this absolutely: "Nullus potest sibi mereri reparationem post lapsum futurum neque merito condigno neque merito congrui."

But because the Prophet Jephthah declared to Josephat, the wicked King of Juda (cf. II Par., xix, 2 sqq.), that God had regard for his former merits, almost all the other theologians consider it a "pious and probable opinion" that God, in granting the grace of conversion, does not entirely disregard the merits lost by mortal sin, especially if the merits previously acquired surpass in number and weight the sins, which, perhaps, were due to weakness, and if those merits are not crushed, as it were, by a burden of iniquity (cf. Suarez, De gratia, XII, 38). Prayer for future conversion from sin is indeed morally good and useful (cf. Ps., lxx, 9), because the disposition by which we sincerely wish to be freed as soon as possible from the state of enmity with God cannot but be pleasing to Him. Temporal blessings, such as health, freedom from extreme poverty, success in one's undertakings, seem to be objects of merit in some way, and therefore the refusal of which is conducive to eternal salvation; for only on this hypothesis do they assume the character of actual graces (cf. Matt., vi, 33). But, for obtaining temporal favours, prayer is more effective than meritorious works, provided that the granting of the petition be not against
the designs of God or the true welfare of him who prays. The just man may meriti de congruo for others (e.g. his own relatives, and friends), whatever is able to merit for himself: the grace of conversion, final perseverance, temporal blessings, nay even the very first prevenient grace (gratia prima praevenientia), (Summa Theol., I-II, Q. cxxiv, a.6) which he can in no wise merit for himself. St. Thomas gives a reason for this the intimate bond of friendship which sanctity of degrees implies between the just man and the God. These effects are immeasurably strengthened by prayer for others; as it is beyond doubt that prayer plays an important part in the present economy of salvation. For further explanation see Suarez, “De gratia,” XII, 38. Contrary to the opinion of a few theologians (e.g. Biatiart), we hold that even a man in mortal sin, if he is indeed joined with the grace of conversion, is able to merit de congruo by his supernatural acts not only a series of graces which will lead to conversion, but finally justification itself; at all events it is certain that he may obtain these graces by prayer, made with the assistance of grace (cf. Ps., 1, 9; Tob., xii, 9; Dan., iv, 24; Matt., vi, 14).

Mermillod, GASPARD, Bischof von Lausanne und cardinal, b. at Carouge, Switzerland, 22 Sept., 1824; d. in Rome, 23 Feb., 1892. He studied at the Jesuit College at Freiburg, Switzerland; became a priest in 1847, and was soon after a curate in Geneva, where he established two periodicals, “L'Observateur Catholique” and “Les Catholiques”. In 1862 he became parish priest of Geneva and at the same time Vicar-General of the Bishop of Lausanne for the canton of Geneva. The splendid edifice of Notre-Dame, still the principal church of Geneva, was built by him from 1851 to 1859. The funds were subscribed from all parts of Christendom. In 1864 he became titular Bishop of Hebron, and auxiliary of the Bishop of Lausanne for the canton of Geneva, with residence at Geneva. For seven years he pursued without hindrance his episcopal functions, and was especially active for Catholic education, founding with Marie de Sales Chappuis the female Oblates of Saint Francis of Sales at Troyes for the protection of poor working girls. When the Holy See made him independent Administrator of Geneva, the Radical Government of the canton protested, and a long and serious conflict ensued. He was at first forbidden to exercise any episcopal functions whatever, and later was declared deposed even as regarded his functions as a parish priest. When the Bishop of Lausanne renounced unconstitutionality of the Swiss and appointed Mermillod to be Vicar-Apostolic of Geneva. The City Council, then, caused his expulsion from Switzerland, whereupon he repaired to Ferney, in French territory, from which place he governed his diocese as best he could. At the cessation of the religious conflict Leo XIII made the newly elected Bishop of Lausanne also Bishop of Geneva, without, however, depriving Mermillod of his office. The Government did not, however, alter its tactics, and Mermillod could return to Switzerland only after the death of the bishop whose successor he became. The conflict was, however, by no means at an end, for the canton of Geneva refused to recognize him as bishop, and normal relations were resumed only when Mermillod became cardinal in 1890. Cardinal Mermillod was one of the great preachers of modern times. In his far-sighted policy he founded in 1885 the “Union Catholique d'études sociales et économiques”. His “Lettres à un Prostestant sur l'autorité de l'Église et le schisme” (Paris, 1860) made a great impression. Another important work was his “Histoire du nom de Jésus” (Paris, 1865; Rome, 1881). His collected works were edited by Grospeller (Paris, 1893) in three volumes.

Patricius Schläger.
MÉRODE, a Belgian prelate and statesman, b. at Brussels, 1820; d. at Rome, 1874. The son of Félix de Mérode, Westerloer who held successively the portfolios of foreign affairs, war, and finances under King Leopold, and of Rosalie de Grammont, he was allied to the best names of France.—Lafayette, Montmorency, Clement-Lyonnerre, etc.; the Mérode family claimed saints like Ethelbert and Etheldreda, and one of them married the offspring of Schwartzzenbroch, and a long line of captains from that Raymond-Bérenger who took the cross at St. Bernard’s call, to Frédéric, Xavier’s grandfather, who gave his life for the autonomy of Belgium. Bereft of his mother at the age of three, Xavier was brought up at Villerscel, in French pensions on the Moselle. After attending for a time the Jesuit College of Namur, then entered the Collège de Jullie presided over by de Salinis, whence he passed (1839) to the Military Academy of Brussels. Graduating with the rank of second lieutenant, after a short service at the armory of Liège, he joined (1844) as foreign attaché the staff of Marshal MacMahon, himself a brilliant part in the most daring engagements and winning the cross of the Légion d’honneur. In 1847, he abruptly resigned the military career and went to study for the priesthood in Rome, where he ordained (1849). Assigned, after his ordination, as chaplain to the French garrison of Viterbo, he was being pressed by his family to return to Belgium when Pius IX, with a view to attach him permanently to his court, made him cameriere segreto (1850), an office which entitled the direction of the Roman prisons. The excellent work done by de Mérode for the material, moral, and religious betterment of the penitentiary system in Rome is described by Lebreton (Des établissements charitables de Rome, p. 1445). ambassador to the Vatican, Its Ruler and Institutions, p. 238); de Rayneval, the French envoy at Rome, praised it in an official report to his government (see “Daily News,” 18 March, 1848); Joachim Pecchi, Archbishop of Perugia, wanted the young cameriere to inaugurate similar work in his metropolis, and the Piedmontese, despite their bias against every foreign not only to change in the regulations introduced by de Mérode. In 1860, when it became evident that the insinuance policy Napoleon III was a poor safeguard against the greed of Piedmont, de Mérode, much against the views of the Roman Freiheit, headed by Cardinal Antonelli, persuaded Pius IX to form a papal army and succeed in enlisting the services of Lamoricière (q.v.) as commander-in-chief and was himself appointed minister of war. The task assumed by de Mérode and Lamoricière was difficult and well-nigh impossible; yet, the disasters of Castelfidardo and Ancora were due, not to the incompetence of the chiefs, nor solely to the hereditary nature of the recruits and the lack of proper supplies, but to the treachery of the Piedmontese and to the demoralization of the army, who, while feigning to curb the Carabidalian bands, led them to the assault of the Papal States.

The ensuing years of comparative quiet de Mérode spent in various public works; the building at his own expense of the campo pratorio outside the Porta Pia, the clearing of the approaches of Santa Maria degli Angeli, the opening of streets in the new section of Rome, the sanitation of the old quarters by the Tiber, etc. His impetuous temperament and progressive views made him enemies among the old traditional Roman element just as the vehemence with which he branded the French Emperor’s duplicity turned against him the heads of the French army of occupation, Lamoricière’s death (162 Sept., 1866) became the signal of open hostility. Pius IX was forced to discharge his minister whose continuance in office, it was freely asserted, meant the withdrawal of the French troops. Reduced to a simple cameriere, de Mérode was not forgotten by Pius IX on Hohenlueh’s promotion to the cardinalate, he was given the vacant title of papal almoner’s death (162 Sept., 1866) became the signal of open hostility. Pius IX was forced to discharge his minister whose continuance in office, it was freely asserted, meant the withdrawal of the French troops. Reduced to a simple cameriere, de Mérode was not forgotten by Pius IX on Hohenlueh’s promotion to the cardinalate, he was given the vacant title of papal almoner’s death (162 Sept., 1866) became the signal of open hostility. Pius IX was forced to discharge his minister whose continuance in office, it was freely asserted, meant the withdrawal of the French troops. Reduced to a simple cameriere, de Mérode was not
publishing a number of works on mathematical sciences. His chief merit, however, is rather the encouragement which he gave to scientists of his time, the interest he took in their work, and the stimulating influence of his suggestions and questions. Gassendi and Galileo were among his friends; but, above all, Mersenne is known to-day as Descartes's friend and adviser. In fact, when Descartes began to lead a free and dissipated life, it was Mersenne who brought him back to more serious pursuits and directed him toward philosophy. In Paris, Mersenne was close to the stimulating and various correspondent, auxiliary, and representative, as well as his constant defender. The numerous and vehement attacks against the "Meditations" seem, for a moment, to have aroused Malebranche's suspicions; but Descartes's answers to his critics gave him full satisfaction as to his friend's orthodoxy and sincere Christian spirit. Mersenne asked that, after his death, an autopsie be made on his body, so as to serve to the last the interests of science.

Mersenne's works are: "Questiones celeberrimae in Gencisa" (Paris, 1623), against Atheists and Deists; a part only has been published, the rest being still in manuscript, as also a "Commentary on St. Matthew's Gospel" (1625), "Les Dialogues des Savants" (1634), "Geometriae Gallicae" (Paris, 1634), a translation from the Italian; "Harmonie universelle, contenant la theorie et la pratique de la musique" (Paris, 1636-7); "Nouvelles decouvertes de Galilée" and "Nouvelles pensées de Galilei sur les mécaniques" (Paris, 1639), both translations; "Cogitatio physico-mathematica" (Paris, 1644); "Euclidis elementorum libri XII" and "Sereni de dianothe et psiche libri quinque." (Paris, 1626), selections and translations of ancient mathematicians, published again later with notes and additions under the title, "Universe geometriae mixtœque mathematicæ synopsés" (Paris, 1644).

Messa (Gr., Μοῖρα; Moabite Stone, נשת; Heb., נשת, meaning "deliverance" according to Gesenius), a King of Moab in the ninth century B.C., whose history is given in IV Kings, iii. He paid tribute to Ahab, King of Israel, "and gave tribute yearly and hired armed thousand rams with their fleeces" (verse 4). This seems to have been paid annually, and was possible since Moab was rich in pastures; accordingly, Messa is styled "מָיוֹר, which, though left untranslated in the Greek text, means "sheep-owner" (Gesenius). After Ahab's death, Moab refused to pay tribute, on which account of Moab's King Joram and King of Edom entered into an alliance against him. They went by the southern route passing through an arid country, where they would have perished of drought, had not the prophet Elisha miraculously supplied them with water. The ditches they had dug by command of the prophet were filled, and at a distance the Moabites "saw the waters over against them red, like blood" (verse 22). Thinking their enemies had killed one another, they rushed to the camp with the cry "Moab to the spoils" (verse 23), only to be driven back with great slaughter. The allies followed. Messa having tried, with seven hundred warriors, to cut his way through the besiegers and failed, took to flight, and, in the sight of all, put him to death. "There was great indignation in Israel", so that, for reasons not given in detail, "they departed from him."
France 27 Nov., 1887, the delegate Apostolic, Mgr. Alt-
mayer, received the title of Archbishop of Babylon or
Bagdad, but continued to reside at Mossul. In 1902 he
resigned and was replaced in the See of Bagdad by a
Carmelite, Mgr. Drue, who on 5 March, 1904, received
the title of delegate Apostolic of Mesopotamia and still
bears it. He usually resides at Mossul. The Delega-
tion Apostolic of Mesopotamia has almost the same
boundaries as the Archdiocese of Bagdad, but comprises
part of the mission of Greater Armenia and the Ne-
torians of Turkish Kurdistan, which mission is confided
to the Dominicans of Mosul. (See BAGGAD; MOSSUL.)

Mesrobo, also called Mashtots, one of the greatest
figures in Armenian history, b. about 361 at Hassak
in the Province of Taron; d. at Valarsabard, 441. He
was the son of Vartan of the family of the Mamikon-
ians. Gorun, his pupil and biographer, tells us that
Mesrobo received a liberal education, and was versed
in the Greek, Syrian, and Persian languages. On ac-
count of his piety and learning Mesrobo was appointed
secretary to King Chosroes III. His duty was to
write in Greek, Persian, and Syrian characters the
decrees and edicts of the sovereign, for, at this time,
there was no national alphabet. But Mesrobo felt cal-
ced to leave behind him a body of literature. To serve
the service of God, he took Holy orders, and withdrew
to a monastery with a few chosen companions. There,
says Gorun, he practised great austerities, enduring
hunger and thirst, cold and poverty. He lived on
vegetables, wore a hair shirt, slept upon the ground,
and often spent whole nights in prayer and the study of
the Scriptures. After a few years, preparing himself
for the great work to which Providence was soon to call him. Indeed both
Church and State needed his services. Armenia, so
long the battle-ground of Romans and Persians, lost
its independence in 387, and was divided between the
Byzantine Empire and Persia, about four-fifths being
given to the latter. Western Armenia was governed
by Greek generals, while an Armenian king ruled,
but only as feudatory, over Persian Armenia. The
Church was naturally influenced by these violent politi-
cal changes, although the loss of civil independence
and the partition of the land could not destroy its
organization or subdue its spirit. Persecution only
quickened its activity. Through the labors of bringing
the clergy, the nobles, and the common people closer
together. The principal events of this period are the invention of the Armenian alphabet,
the revision of the liturgy, the creation of an ecclesias-
tical and national literature, and the readjustment of
hierarchical relations. Three men are prominently
associated with this stupendous work: Mesrobo, Patri-
arch Isaac, and King Vramshapuh, who succeeded his
brother Chosroes III in 394.

Mesrobo, as we have noted, had spent some time in a
monastery preparing for a missionary life. With the
support of Princes Shampit, he preached the Gospel
in the district of Goitn near the Araxes, converting
many heretics and pagans. But he encountered great
difficulty in instructing the people, for the
Armenians had no alphabet of their own, but used the
Greek, Persian, and Syrian scripts, none of which was
well suited for representing the many complex sounds
of their native tongue. Again, the Holy Scriptures
and the liturgy, being written in Syriac, were, to a
large extent, beyond the comprehension of the
people. It was necessary to translate these into an
alphabet which would be more easily understood.

To this end, Mesrobo invented an alphabet which
he proposed to call the "Mesrobo Alphabet." The
names of the first five letters were: Abo, Abah, An,
Afall, and Aboz. The letters were arranged in the
same order as in our alphabet, and the names of the
letters were given to each letter in accordance with
the way in which the letter was pronounced.

Mesrobo's alphabet was 수가 introduced into the
region of Armenia, where it was used for several hun-
tred years. It was adopted by the Armenian Church
and became the official alphabet of Armenia. The
alphabet was used for a variety of purposes, including
writing religious texts, official documents, and
cultural and scholarly works. It was a major
achievement in the history of Armenian culture and
language, and it played a significant role in the
development of the Armenian nation.

In conclusion, Mesrobo's invention of the Armenian
alphabet was a significant event in the history of
Armenian culture. It represented a major advance in
the field of language and writing, and it paved the
way for the later development of national literature
and education in Armenia. Mesrobo's contribution to
this field was a testament to his dedication and
vision, and it continues to be an important legacy for
the Armenian people.

The invention of the alphabet (406) was the begin-
ing of Mesrobo's work on the alphabet, and it
represented a major step forward in the development
of the Armenian language. Through his efforts, Mesrobo
made a significant contribution to the history of
Armenian literacy and culture, and his work contin-
ues to be an important part of the Armenian
heritage. His dedication to the cause of literacy and
education was a testament to his commitment to the
benefit of his people, and his legacy continues to
inspire future generations of Armenians.
He survived his friend and master only six months. The Armenians read his name in the Canon of the Mass, and celebrate his memory on 19 February.

dota Graeca”, III, 182). In Armenia in the middle of the fifth century strict decrees were issued against them, and they were especially accused of immoralit; so that their very name in Armenian became the equivalent for “filthy”. The Nestorians in Syria did their best to stamp out the evil by legislation; the Messalians ceased to exist under that name, but re-appeared under that of the Bogomili. In the West they seem hardly to have been known; when the Manicians, who held somewhat the same tenets as the Messalians, were mentioned to Gregory the Great, he pressed never to have heard of the Marcian heresy.

Messene, a titular see, suffragan to Corinth, in Achaia. Under this name at least, the city dates only from the fourth century B.C. When Epaminondas had crushed the Spartans at Leuctra, he recalled the scattered Messenians and caused them to build, on the slopes of Mount Ithome, a new capital which they called Messene (370 B.C.): the walls of this city were over five and a half miles in length, and were accounted the best in Greece. The portion of them which still remains justifies this reputation. Christianity early took root there, though only a few of its bishops are known (Le Quien, “Orients christians”, II, 195). At the beginning of the fourth century the “Notitiae episcopatuum” of the Wise gives Messene as an independent archbishopric (Gelzer, “Ungedruckte ... Texte der Notitiae episcopatum”, 551); and the same is true for the beginning of the fourteenth century (op. cit., 612). As this diocese does not figure in the “Notitiae” of the fifteenth century, it must be assumed that it ceased to exist. The little village of Mavromati, with a population of 600, the capital of the Deme of Ithome, now stands upon the ruins of ancient Messene.

Messias.—The name Messias is a transliteration of the Hebrew, מֶשֶׁא, “the anointed”. The word appears only twice of the promised prince (Dan., ix, 26; Ps. ii, 2); yet, when a name was wanted for the promised one, who was to be at once King and Saviour, it was natural to employ this synonym for the royal title, denoting at the same time the King’s royal dignity and His relation to God. The full title “Anointed of Jehovah” occurs in several passages of the Psalter and the Apocalypse of Baruch, but the abbreviated form, “Anointed” or “the Anointed”, was in common use. When used without the article, it would seem to be a proper name. The word Xpārtos so occurs in several passages of the Gospels. This, however, is no proof that the word was generally so understood at that time. Bishop of Antioch, tried to suppress them in his city about 376. By feigning sympathy he made Adelphius disclose his real doctrines; and then he banished him and his followers. They then wandered to the south-east of Asia Minor. Amphilochoi of Icornium were induced by them to be once again condemned at the Synod of Side (388-390). They were once again condemned at the Synod of Ic. And the local council at which Amphilochoi of Side presided. Yet the sect continued to exist. At first it included only laymen. Lampetius, one of the leaders after the middle of the fifth century was a priest, having been ordained by Alypius of Cesarea. He was degraded from his priesthood on account of unpiety, and composed a book bearing the title “The Testament of Solomon” to this work of Lampetius (Wolf, “Anec-

Messianus.—The name Messias is a transliteration of the Hebrew, מֶשֶׁא, “the anointed”. This, however, is no proof that the word was generally so understood at that time. Bishop of Antioch, tried to suppress them in his city about 376. By feigning sympathy he made Adelphius disclose his real doctrines; and then he banished him and his followers. They then wandered to the south-east of Asia Minor. Amphilochoi of Icornium were induced by them to be once again condemned at the Synod of Side (388-390). They were once again condemned at the Synod of Ic. And the local council at which Amphilochoi of Side presided. Yet the sect continued to exist. At first it included only laymen. Lampetius, one of the leaders after the middle of the fifth century was a priest, having been ordained by Alypius of Cesarea. He was degraded from his priesthood on account of unpiety, and composed a book bearing the title “The Testament of Solomon” to this work of Lampetius (Wolf, “Anec-
not pass from Judaea until he comes to whom it belongs”—taking שַׁלַּח as standing for שָׁלַח, and of David (II Kings, vii, 11-16). It is sufficiently established that this last passage refers at least typically to the Messias. His kingdom shall be eternal (II Kings, vii, 13), His sway boundless (Ps. lxxi, 8); all nations shall serve Him (Ps. lxxi, 11). In the type of prophecy we are considering, the emphasis is on His position as a national hero. It is to Israel and Judah He will bring salvation (Jer. xxvi, 6), triumphing over their enemies by force of arms (cf. the warrior-king of Ps. cv). Even in the latter part of Isaiah there are passages (e.g. lxi, 5-8) in which other nations are regarded as sharing in the kingdom rather as servants than as heirs, while the function of the Messias is to lift up Israel and Judah to glory and lay the foundations of an Israelitic theocracy.

But in this part of Isaiah also occurs the splendid conception of the Messias as the Servant of Jehovah. He is a chosen arrow, His mouth like a sharp sword. The Spirit of the Lord is poured out upon Him, and His word is put into His mouth (xiii, 1; xiv, 1 sq.). The instrument of His power is the word of God. The nation waits on His teaching; He is the light of the Gentiles (xiii, 6). He establishes His Kingdom not by manifestation of material power, but by meekness and suffering, by obedience to the command of God in laying down His life for the salvation of many. "If he shall lay down his life for sin, he shall also rise again for the justification of God's elect." (Rom. vi, 7). He shall divide the spoils of the strong, because he hath delivered his soul unto death, and was reputed with the wicked" (lii, 12). His Kingdom shall consist of the multitude redeemed by His vicarious satisfaction, a satisfaction confined to the elect, who are justified and made perfect alike. (For the Messianic application of these passages, especially Is., lii, 13-14, cf. Condamine or Knabenbauer, in loc.) "Therefore will I divide him very many, and he shall divide the spoils of the strong, because he hath delivered his soul unto death, and was reputed with the wicked" (lii, 12). His Kingdom shall consist of the multitude redeemed by His vicarious satisfaction, a satisfaction confined to the elect, who are justified and made perfect alike. (For the Messianic application of these passages, especially Is., lii, 13-14; cf. Condamine or Knabenbauer, in loc.) In spite, however, of Justin's use of the last-mentioned passage in "Dial. cum Tryphone", xxxix, it would be rash to affirm that its reference to the Messias was at all widely realized among the Jews. In virtue of his prophetic and priestly offices the title of "the Anointed" naturally belonged to the promised one. The Messianic priest is described by David in Ps. cix, with reference to Gen., xxv, 14-20. That this psalm was generally understood in a Messianic sense is not disputed, while the universal consent of the Fathers puts the matter beyond doubt. The testimony of its Divine authorship, the arguments impugning it afford no warrant for an abandonment of the traditional view. That by the prophet described in Deut., xviii, 15-22, was also understood, at least at the beginning of our era, the Messias is clear from the appeal to his gift of prophecy made by the pseudo-Messias Theudas (cf. Josephus, Antiquities, xvi, 220), and the use made of the passage by St. Peter in Acts, iii, 22-23.

Special importance attaches to the prophetic description of the Messias contained in Daniel, vii, the great work of later Judaism, on account of its paramount influence upon one line of the later development of Messianic doctrine. In it the Messias is described as "like to a Son of Man," appearing at the right hand of Jehovah in the clouds of heaven, inaugurating the new age, not by a national victory or by vicarious satisfaction, but by exercising the Divine right of judging the whole world. Thus, the emphasis is upon the personal responsibility of the individual. The consummation is not an earth-born ascendency of the Messias, but the triumph of God's righteous will on earth; not a vindication of the holy by the solemn judgment of Jehovah and his Anointed One. Upon this prophecy were mainly based the various apocalyptic works which played so prominent a part in the religious life of the Jews during the last two centuries before Christ. Side by side with all these prophecies speaking of the establishment of a kingdom under the sway of a Divinely-appointed legate, was the series foretelling the future rule of Jehovah himself. Of these Is., xl, may be taken as an example: "Lift up thy voice with strength thou that bringest good tidings to Sion: lift it up, fear not. Say to the cities of Judah: Behold your God. Behold the Lord your God shall come with strength and his arm shall rule." The reconciliation of these two series of prophecies was before the Jews in the passages—noticeably Ps. lii and Is., vii-xi—which clearly foretold the Divinity of the promised legate. "His name shall be called Wonderful, Counsellor, God the Mighty, the Father of the world to come, the Prince of Peace. All the ends of the earth shall fear him." (Is., xi, 2-3). The state of the Universe is all used elsewhere to glorify himself (cf. Davidson, "O. T. Prophecy", p. 367). But there seems to have been little realization of the relation between these two series of prophecy until the full light of the Christian dispensation revealed their reconciliation in the mystery of the Incarnation.

II. MESSIANIC DOCTRINE IN LATER JUDAISM (see APOCRYPHA).—Two quite distinct and parallel lines of messianism are discernible in the later development of Messianic doctrine among the Jews, according as the writers clung to a national ideal, based on the literal interpretation of the earlier prophecies, or an apocalyptic ideal, based principally on Daniel. The national ideal looked to the establishment on earth of the Kingdom of God under the rule of God's Anointed One (Daniel, 7, 9, 14, 18, 26, 27), the reconstruction of the temple, the rebuilding of Jerusalem, and the temple, and the gathering in of the Dispersed. The apocalyptic ideal drew a sharp distinction between αἰων ὑπερῶν and αἰων μελλόν. The future age was to be ushered in by the Divine judgment of mankind preceded by the resurrection of the dead. The Messias was one existing from the beginning of the world, and is the "first-born among many brethren," and shall appear at the consummation of all things, and then shall be also manifested the heavenly Jerusalem which was to be the abode of the blessed.

National Ideal.—The national ideal is that of official Pharisaism. Thus, the Talmud has no trace of the apocalyptic ideal. The scribes were mainly busy with the Law, but side by side with this was the development of the hope of the ultimate manifestation of God's Kingdom on earth. Pharisaic influence is clearly visible in vv. 573-808 of Sibyl. III, describing the national hopes of the Jews. A last judgment, future happiness, or reward are not mentioned. Many marvels are foretold of the Messianic wars which are described as "days of light and darkness, of mourning and rejoicing, of come from heaven, the darkening of the sun, the falling of meteors—but all have for end a state of earthly prosperity. The Messias, coming from the East, dominates the whole, a triumphant national hero. Similar to this is the work called the Psalms of Solomon, written probably about 40 B.C. It is really the prototype of apocalyptic against the later Zealotism. The Pharisees saw that the observance of the law was not of itself a sufficient bulwark against the enemies of Israel, and, as their principles would not allow them to recognize in the secularized hierarchy the promised issue of their troubles, they looked forward to the miraculous intervention of God through the agency of a Davideic Messias. The seventeenth Psalm describes his rule: He is to conquer the heathen, to drive them from their land, to allow no injustice in their midst; His trust is not to be in armies but in God; with the word of his mouth he is to slay the wicked. Of earlier date we have the description of the final glories of the holy city in Tobit (c. xiv), where, as well as in Ezekiel, there is a portrays the future gathering in of the Dispersion. These same nationalistic ideas reappear along with a highly developed system of eschatology in the apocalyptic works written after the destruction of Jerusalem, which are referred to below.
Apocalyptic Ideal.—The status of the apocalyptic writers as regards the religious life of the Jews has been keenly disputed (cf. Sanday, "Life of Christ in Recent Research", pp. 49 sqq.). Though they had small influence in Jerusalem, the stronghold of Rabbinism, they probably both influenced and reflected the religious aspirations of the Jews at large. Thus, the apocalyptic ideal of the Messias would seem not to be the sentiment of a few enthusiasts, but to express the true hopes of a considerable section of the people. Before the Asmonean revival Israel had almost ceased to be a nation, and thus the hope of a national Messias had grown very dim. In the earliest apocalyptic writings there is nothing said of the Messias. In the first part of the Book of Hencoh (i-xxxvi) we have an example of such a work. Not the coming of a human prince, but the descent of God upon Sinai to judge the world divides all time into two epochs. The just shall receive the gift of wisdom and become sinless. They will feed on the tree of life and enjoy a longer span than the Patriarchs.

The Machabean victories roused both the national and religious sentiment. The writers of the earlier Asmonean times, seeing the ancient glories of their race reviving, could no longer ignore the hope of a personal Messias to rule the kingdom of the new age. The problem arose how to connect their present deliverance with the Messianic promises. Leviticus, in the Massoretic text of Lev., 18:30, is the authorized text of Jewish tradition. Lev. 23:36 is the promise of a king, Lev. 26:43 the promise of a son of David, and Lev. 23:51 the promise of the city of Jerusalem. It is evident that the going version of the book was the one that was finally approved by the body of the tribe of Judah. The Messias is but a vague figure, and little stress is laid on the judgment. The Testament of the Twelve Patriarchs is a composite work. The foundation portion, conspicuous from its glorification of the priesthood, dates from before 100 B.C.; there are, however, later Jewish additions, hostile in tone to the priesthood, and numerous Christian interpolations. Controversy has arisen as to the principal figure in this work. According to Charles (Testaments of the Twelve Patriarchs, p. xcvi) there is pictured as the Messias a son of Levi who realizes all the lofty spiritual ideals of the Christian Saviour. Lagrange on the other hand (Le Messiasime ches les Juifs) finds the type of the Messias in Moses in the Exodus. In this case, the portrait is the result of Christian interpolations; these removed, there remains only a laudation of the part played by Levi, in the person of the Asmoneans, as the instrument of national and religious liberation. A conspicuous instance in point is Test. Lev., Ps. xviii. While Charles says this ascribes the Messianic characteristics to the Levites, Lagrange and Bousset deny that it is Messianic at all. Apart from the interpolations, is merely natural praise of the new royal priesthood. There can be no question indeed as to the pre-eminence of Levi; he is compared to the sun and Judia to the moon. But there is in fact a description of a Messias descended from Juda in Test. Juda. There is much in the original of the tradition of the three of them and the foundation part of the book. He appears also in the Testament of Joseph, though the passage is couched in an allegorical form difficult to follow. The vision of Weeks of Hencoh, dating probably from the same period, differs from the last-mentioned work principally in its insistence on the judgment, or rather judgment and blessing. The three chapters that are devoted to the foundation part of the book. Messianic times again open with the prosperity of Asmonean days, and develop into the foundation of the Kingdom of God.

Thus, the Asmonean triumphs had produced an eschatology in which a personal Messias figured, while the present was glorified into a commencement of the days of Messianic blessings. Gradually, however, the deepest religious sentiment of the nation became alienated from the Machabean dynasty, and, when the last of the line fell in 27 B.C., it was realized that a different interpretation of the promises was called for. In the new apocalyptists the Messias was not merely the central figure of the age to come: He is already existing in the hearts of the Jewish nation, and will appear at the end of this order, after other... The oppressors of Israel were now the Romans. The ultimate failure of the Machabeans had shown the uselessness of human efforts at liberation, and the Jews could now only await the miraculous intervention that should usher in the Kingdom. To this era belongs the Assumption of Moses. In it, its writing was ascribed to Moses, it set forth a just and unjust. Israel is to be saved by a sudden and marvellous manifestation of Divine power. There is no gradual evolution of this age into the next: men will be transported in an instant to the already existing Kingdom of Heaven. Similar is the book of the Similitudes of Hencoh, where the Messias is called in the first parable "the Elect", and in the following ones sometimes "the Elect", and sometimes "the Son of Man". Lagrange considers the passages giving this latter title interpolations, whether the work of Christians or of Jews of the Christian era. Charles, however, considers them genuine, believing Christ's use of the title occasioned by its anterior use as indicating the presence of the Messiah. The genius of the author's mind on the Messias in the certainly authentic picture of "the Elect". No longer the son of David, he presides over the upper world, the abode of the saints, while the earth is under the domination of the wicked. This order will be terminated by the judgment, when the elect shall sit on his throne in glory and judge the nations of men. This is a marked opposition between the Messias and the Messiah. The whole concept bears the stamp of loftiness. The resurrection of good and wicked alike marks the passage from the order of sin to that of absolute justice.

We may regard this as the culmination of the apocalyptic ideal. After the fall of Jerusalem the apocalyptic writers returned to more directly national hopes; the Messias must play some part in the temporal state of the kingdom. But the Messias must not be expected to appear in the Sibyline Book. The Messias comes from Heaven, and establishes the reign of Israel in peace and holiness at Jerusalem, rebuilds the holy city and the Temple. There is no universal dominion and the rest of the world is almost ignored. IV Esdras is a work on a much grander scale. The writer combines a temporal Messianism with a most advanced eschatology. He sees the whole world corrupted, even the chosen seed of Abraham, among whom, as among the Gentiles, many transgressors may be found. The name of God has thus lost that honour which is due to it. The world, therefore, must be destroyed to be replaced by a better world. But the Mediator's part must first be played in this world, which shall witness the victory of the Messias over the Roman Empire, the rebuilding of Jerusalem, and the union of all Israel in the Holy Land. The Messias, conceived as existing from the beginning of the world, comes in the clouds up from the sea, not down from heaven, and by the breath of His mouth causes the mouth of all who denounce Him. Then there appears the holy city, before invisible. At the end of time, however, the Messias saves merely Israel upon earth. He has no concern with the ultimate salvation of the just. After accomplishing His work of national restoration He disappears, and the final judgment is the work of the Most High Himself. It is purely individual, not national. Thus this work combines the
national and apocalyptic ideals. The Apocalypse of Baruch, written probably in imitation, contains a similar picture of the Messianas. This system of eschatology finds reflection also in the chiliasm of certain early Christian writers. Transferred to the second coming of the Messianas, we have the reign of peace and happiness of a thousand years. The just are transported to their eternal home in heaven (cf. Papias in Eusebius, "Hist. eccl.", III, xxxix).

III. The Vindication of the Messianic Dignity by Christ.—This point may be treated under two heads (a) Christ's explicit claim to be the Messianas, and (b) the implicit claim shown in His words and actions throughout His life.

Under the first of these two headings we may consider the confession of Peter in Matt., xvi, and the words of Christ before his judges. These incidents involve, of course, far more than a mere claim to the Messiahship; taken in their setting, they constitute a c'aim to the Divine Sonship. The words of Christ to St. Peter are too clear to need any comment. The silence of the other Synoptists as to some details of the incident concern the proof from this passage rather of the Divinity than of Messianic claims. As regards Christ's claim before the Sanhedrin and Pilate, it might appear from the narratives of Matthew and Luke that He at first refused a direct reply to the high priest's question, "Art thou the Christ, the Son of the living God?" For those who, before the time of our Lord's revelation, sought to interpret the ancient prophecies, some single aspect of the Messianas sufficed to fill the whole view. We, in the light of the Christian revelation, see realized and harmonized in Our Lord all the conflicting Messianic hopes, all the visions of the prophets. He is at once the Suffering Servant and the King, the true Son of Man and God with us. On Him is laid the iniquity of us all, and on Him, as God incarnate, rests the Spirit of Jahveh, the Spirit of Wisdom and Understanding, the Spirit of Counsel and Fortitude, the Spirit of Knowledge and Piety, and the Fear of the Lord.

Messina, Antonello da, b. at Messina, about 1430; d. 1497. After studying for some time in Sicily he crossed over to Naples, where, as we are told, he became the pupil of an unknown artist, Antonio Cocelantio. It was here, according to Vasari, that Messina, on seeing a painting of John Van Eyck, belonging to Alphonson of Aragon, determined to devote himself to the study of the Flemish masters. It would seem too soon to set off for Bruges with this purpose; others, however, maintain that he need not have left Italy to ground himself in the new technic as several Flemish artists of renown had already, through the patronage of the princes René of Anjou and Alphonson of Aragon, won for themselves a reputation. The question will remain a debated point until the discovery of some authentic document shall decide definitively whether the Sicilian painter did or did not sail for Flanders. It is certain, however, that he mastered perfectly the methods followed by the Flemings in oil-painting, methods that had eclipsed all the efforts made by the Italian school. On his return to Messina, Antonello evinced remarkable skill in handling oils in a triptych, unfortunately destroyed in the recent earthquake, representing the Blessed Virgin with St. Gregory and St. Benedict on either side and two angels holding a crown over Our Lady's head. Later, Messina went to Venice, where in 1473 he executed an altar screen, no

GASTON SORTAIN.

**Messina, Archidiocesi di (Messinizia), in Sicily.**

The city is situated, in the shape of an amphitheatre, exactly on the slope of Mount Catania, about a mile from the sea at the Strait of Messina, which separates Sicily from the peninsula. Its harbour, with its size and fine situation, is one of the most important in Italy after those of Genoa and of Naples. Nevertheless, the hopes entertained for its commerce, in view of the opening of the Suez Canal, were disappointed, for, between 1857 and 1884, the commerce of Messina decreased from 940,000 tons to 350,000 tons; still, in 1908, it grew again to 551,000 tons. The neighbouring seas are rich in coral, molluscs, and fish; and from the mountains are obtained calcio sulphate, alabaster, sulphates of argentiferous lead, antimony, iron, and copper. Messina is said to have been founded by Gorgos, a son of King Ar芝麻enes, the brave but unfortunate defender of the Messenians against the Spartans. Therefore, the population of the city was increased by fugitives from Chalcis, Corcyra, and Euboia, who had escaped from the Persian invasion; they became preponderant in the town and made it join the Ionian League. In 493 B.C. Anaxilas, tyrant of Rhegium, also a Messenian colony, drove the Samians from Zancle, took the town, and called it Messana (the α of the Doric dialect, which becomes η in the Ionic, coming later to be pronounced as English e). In 426 the city was retaken by the Ionians under the Athenian Laches, who, however, lost it in 415; an attempt of another Athenian, Nicias, to recover it failed. In consequence of the rivalry of the Athenians and the Carthaginians for the possession of Sicily, Messina was pillaged and destroyed by the Carthaginians in a Cyprian expedition, and in 312 the town was taken by Agathocles, and at his death the Campanian mercenaries of his army, called Mamertines, took possession of the city, and established there a military republic; having been defeated by Hiero II near Mylai (Milazzo) in 269, and then besieged in the town itself, a part of them sought the assistance of the Carthaginians, and a part that of the Romans. The Carthaginians under Hanno were the first to arrive, but in 264 the consul, Appius Claudius Caudex, took the city, compelling the Carthaginians and Syracusans. This brought about the Punk Wars. Other events of the pre-Christian history of Messina are the victory of Piso over the slaves in 353; and the massacre of the inhabitants by Agathocles in 276. The Gothic wars Messina had a considerable part; while, in 831, it fell into the hands of the Arabs. In the Norman conquest of Sicily, Messina was naturally the basis of operations. In 1038 the Byzantine general, George Marascia, assisted by the Normans, captured the town, but it was lost again, on the recall of that general. In 1062 Count Roger, after a siege of 13 days, took the town, and in the following year was master of Messina, which from that time followed the fortunes of the Kingdom of Naples. There was a serious revolt against Frederick II in 1232; and in 1282 Messina also had its "Vespres", and on that account was besieged by King Charles II, who, however, compelled to retreat, and left Sicily to the King of Aragon. In

MESSINA (1907)
PIAZZA AND CATHEDRAL (XI CENTURY)
BAPTISMAL FONT AND PULPIT, THE CATHEDRAL
1676, the Messenians rebelled against Spanish domination, and were assisted by a French fleet, sent by Louis XIV; Viscount Duquesnes obtained a naval victory over the Spanish, but lost his life in the battle. The French made a foray into the city, captured Messina, and destroyed Messina almost entirely. The most beautiful of the palaces and of the churches were overthrown, among them the cathedral, a structure of three naves, containing six great columns of Egyptian marble that came from the ruins of Cape Faro (the ancient Pelorum Fromontorum); the chief entrance of this temple was a masterpiece of Roman art, rich in little columns, pilasters, spirals, bas-reliefs, and statuettes; the marble pulpit, a work of Gagini, was in the shape of a chalice; the tribune was adorned with mosaics of the time of Frederick II; and the walls were decorated with frescoes and oil paintings of great masters. The residence of the cardinals, and the sacristy also, had paintings by Anguissola, Tiepolo, Tiepolo, Lanfranco, Pozzo, Guglielmone, Catalano, Albrianti, Fiammingo, etc. On the cathedral square, before the façade of the Franciscan convent, was a monumental fountain, the work of Gian Angelo da Montorsoli (1551). The most beautiful church of Messina is that of the Madonna di Montevergine; other interesting churches are those of San Domenico, San Domenico, San Domenico, San Domenico, San Domenico, and San Giorgio with pictures by Guerino and others; Santa Maria dell' Alto where is preserved the only known picture by Cardinali (about 1200); the church of San Francesco d' Assisi, built in the Gothic style, but disfigured in 1721; lastly, the churches of San Domenico, San Domenico, and San Domenico, the latter, according to the mausoleum of the family of Cicala by Montorsoli, and a fine Pietà in marble. The episcopal palace, spared by the last earthquake, and the adjoining seminary, are interesting buildings; likewise, the city hall, with its Fountain of Neptune by Montorsoli, and the university dating from 1549, which had a most valuable library of 3000 editions princeps, 241 manuscripts, and 10 parchments with miniature paintings, a gallery of pictures, and a collection of coins, all of which is yet buried under the ruins. The hospital of La Pietà and the fortifications, constructed mostly under Charles V, were ornaments of the city.

According to the legend, Christianity was brought into the city by a little Perugian, and there is still preserved at Messina a letter attributed to the Blessed Virgin, which, it is claimed, was written by her to the Messenians when Our Lady heard of their conversion by St. Paul. St. Bachiri or Bachiul is venerated as the first Bishop of Messina. There is record of several bishops of Messene in the fourth and fifth centuries, but it is not known whether he was Messene, or Messene in Greece, to which reference is made; Eucaropus, a contemporary of Pope Symmachus (498), is the first Bishop of Messina of known date; the bishop who are known to have followed him were Felix (about 600), Peregirus (649), Benedict (682), Gaudioso (787), and Gregory (868); the latter was for some time a follower of Plotinus. Nothing is known of the episcopal see during the time of the Saracen occupation. In 1090, Roger established there, as bishop, Robert, who built the cathedral. Under Bishop Nicholas (1186) Messina was made a bishopric. Among other bishops of this see may be mentioned the Englishman, Richard Palmer (1182); Archbishop Lancelo (1277), to the dignity of cardinal; Cardinal Antonio Cerdani (1447); and Cardinal Antonio Cerdani (1447); in 1473 the chapter elected the Bishop of Archimandrite, Leontius, and he not being acceptable to the pope or to the king, the friar, Jacobo da Santa Lucia, was appointed in his stead, but was not consecrated as such. Cardinal Antonio Cerdani (1510), who had served on several occasions as pontifical legate; Cardinal Innocenzo Cibo (1538); Cardinal Gianandrea de Mercurio (1550), who had a controversy with the Greek bishop, Pamphilus, the latter claiming jurisdiction over the Greek priests of the archiepiscopate; Andrea Mastelli (1618), convoked many synods, and rebuilt the episcopal palace and the seminary; the Dominican, Tommaso Montada (1743), who at the same time was the patriarch of Jerusalem. The Archbishop of Messina is also Archimandrite of San Salvatore; this convent of Greek Monks of St. Basil was founded by Count Roger in 1094, and its archimandrite had jurisdiction over all the Basilian monasteries of the kingdom, of which there were forty-four, as well as over many parishes. In 1421, the archimandrite was secularized and was given in commendam to secular prelates, of whom Bessarion was one. In time the monastery fell into decadence; a fortification was erected on its site (1538), and the monks moved to the church of La Misericordia. Urban VIII transferred the archiepiscopal residence of St. Agostino to the convent, which was subsequently subject to the Holy See, and Leo XIII in 1883 united it with the Archdiocese of Messina. The collegiate church of Santa Maria del Graffeo, called the "Cattolica," is noteworthy in Messina: the so-called Greco-Latin Rite is used there, its characteristics being a combination of Latin vestments, unbleached bread, and the Gregorian chant, as well as the elevation of the Eucharist and the Gospel are read, first in Latin and then in Greek. In certain functions, the canons of the cathedral and those of the "Graffeo" officiate together, either at the latter church or at the cathedral. The clergy of the "Graffeo" have at their head a protopope who is under the jurisdiction of the archbishop. For the Greek Rite in use in Messina, the Annunciation, on the Feast of the Epiphany and the Office of the Epiphany, and the Mass on the Feast of the Epiphany, and the Mass on the Feast of the Epiphany, and the Mass on the Feast of the Epiphany, and the Mass on the Feast of the Epiphany, and the Mass on the Feast of the Epiphany, are celebrated. The liturgy of the Greek Church, which is used in Messina, introduced there probably during the Byzantine domination. The archiepiscopal and the Abbey of San Salvatore together had 179 parishes, with 250,000 inhabitants, 22 religious houses of men, and 26 of women. The seminary was uninjured by the earthquake, and since then the Jesuits reopened a college. There is a Catholic college which appears to have been opened within the year. Within the territory of the archiepiscopal is the praetorium nullius of Santa Lucia del Molo, which has 7 parishes, with nearly 15,000 inhabitants. The suffragan sees of Messina are those of Lipari, Nocera, and Patti.

Messingham, Thomas, Irish hagiologist, b. in the Diocese of Meath, and studied in the Irish College, Paris, proceeding to the degree of S.T.D. Among the Franciscan MSS. in Dublin is an interesting tract sent by David Rothe, Vice-Primate of All Ireland, addressed to my "loving friend Mr. Thomas Messingham at his chambers in Paris," dated 1615. It is evident that at this date Messingham was one of the staff of the Irish College in that city, and was commencing his studies on Irish saints. In 1620 he published Offices of SS. Patrick, Brigid, Columba, and other Irish saints; and in the following year was appointed rector of the Irish College, Paris, in succession to his friend and dean, Thomas Dease, who was promoted to the Bishopric of Meath, on 5 May, 1621. Messingham was honoured by the Holy See, and was appointed to the dignity of cardinal. He then acted as agent for many of the Irish bishops. Though diligent in the quest for materials with a view to an ecclesiastical history of Ireland, Messingham proved a most able and judicious rector of the Irish College, and
he thoroughly organized the course of studies with a view of sending forth capable missionaries to work in their native country. He gave the college affiliated with the University of Paris, and in 1632, with the approval of the Archbishop of Paris for the rules he had drawn up for the government of the Irish seminary. In 1624 he published, at Paris, his famous work on Irish saints, "Florilegium Insulae Sanctorum," containing also an interesting treatise on St. Patrick's Purgatory, in Lough Derg. In the same year he was appointed by the Holy See to the Deanship of St. Patrick's Cathedral, Dublin, in succession to Henry Byrne, but this position was merely honorary, inasmuch as all the temporalities were enjoyed by the Protestant dean, by patent from the Crown. Messingham had a lengthy correspondence with Father Luke Wadding, O.F.M., and was frequently consulted by the Roman authorities in the matter of selecting suitable ecclesiastics to fill the vacant Irish sees. On 15 July, 1630, he wrote to Wadding that he feared it was in vain to hope for any indulgences in religious disabilities from King Charles I. Between the years 1632 and 1635 he laboured for the Irish Church in various capacities, but his name disappears after the latter year. We may conclude that he either resigned or died in 1638.

Messemer, Sebastian Gerard. See Milwaukee, Archdiocese of.

Metal-Work in the Service of the Church.—From the earliest days the Church has employed utensils and vessels of metal in its liturgical ceremonies. This practice increased during the Middle Ages. The history of the metal-work of the Church in the Middle Ages is far from being clear. The art of metal-working in general, and this not only because the Church was the foremost patron of such works and because almost all the works that have been preserved from the Middle Ages are ecclesiastical in character, but also because until the twelfth century the works of the goldsmith were also almost exclusively manufactured by nobles and clerics. With the Renaissance also the manufacture of church metal-work formed a very important branch of the goldsmith's art, and even in our own day these works are counted among those in the production of which that art can be most profitably developed; but not only the goldsmith's art, that is the artistic treatment of the precious metals, but also the vessels for which the service of the Church, the base metals also, especially iron, bronze, and brass, have been largely utilized. As we are dealing, however, with the historical development of the metal-work in the service of the Church, we shall confine ourselves more particularly to works in the precious metals, without however entirely excluding those in the inferior metals from our consideration.

Antiquity.—Beginning with antiquity, we must first prove that the Church did in fact make use of valuable works of metal in the most ancient times. Honorius of Autun (d. 1145) makes the remark that the Apostles and their followers had employed wooden chalices in the celebration of the Holy Mass, but that Pope Zephyrinus had ordered the use of glass and Pepe Urban I of silver and gold vessels (Gemma amicis, P. L., CLXXII, 573). This opinion seems to have been widely disseminated during the Middle Ages; it is nevertheless untenable. Recourse to chalices must have been at some other cheap material wood, undoubtedly often aaved in the service of the persecutions, but this custom cannot have been general. If the earliest Christians believed in the real presence of Christ in the Eucharist, and of this there can be no doubt, they assuredly also made offering of their most precious vessels in general, and, the Sacred Mysteries might be worthily celebrated.

The earliest positive notices of the use of metal-work in the service of the Church date from the third and fourth centuries. It is especially the "Liber pontificum," which is now accessible in the critical editions of Duchesne and Mommsen (see Liber Pontificalis), from which we derive the most interesting information concerning the subject under discussion. Here we first meet with the statement that Pope Urban had the sacred vessels made of silver, which does not by any means imply that before that time they were all made of glass. Of greater importance are the accounts of the magnificent donations of valuable works in metal made by Emperor Constantine to the Roman basilicas. It would take up too much space to enumerate them all, and we shall content ourselves with mentioning a few examples. To the Vatican basilica he presented seven large chalices (acrophi) of the purest gold, each of which weighed ten (Roman) pounds; furthermore forty smaller chalices of pure gold, each weighing five pounds. The Emperor also presented a chalice of solid gold weighing ten pounds, five silver chalices of ten pounds each, and two silver patens of thirty pounds each. The metal plates for the Eucharistic bread (patens) are often mentioned in connexion with the chalices; thus the Lateran basilica received seven gold and sixteen silver patens of thirty pounds each. Although certainly not a universal custom, the other churches also were in possession of valuable metal-work for the liturgical service. The Church of Carthage, according to the testimony of Optatus, possessed so many valuable vessels of gold and silver, that it was no easy matter to remove or hide them at the time of the persecutions (Contra Parmen., lib. II, cap. 21). In the Bishopric of Edessa, the Council of Chaledon (451) of having purloined a valuable chalice set with precious stones, which a pious man had presented to the church.

As to the various kinds of metal-work used in the Church, the "Liber pontificalium" mentions the following in addition to chalice and paten as in use in the time of Pope Sylvester I: a crown of gold, a censer, which was intended for the reception of the chrism at baptisms and confirmations, a silver baptismal vessel of twenty pounds, a golden lamb weighing thirty pounds, which was set up in the baptistery beside the Lateran, seven silver stags that quenched water, each of which weighed eighty pounds, and especially numerous were the golden and silver vessels and altars. Various metal vessels, as altars, were also used, two specimens of the purest gold, each of a weight of fifty pounds. Of importance to us also is the statement that beside the golden lamb just mentioned there stood silver statues, five feet in height, of the Redeemer and St. John, weighing 180 and 125 pounds respectively. Furthermore mention must be made of the metal caskets in which the models of covers, which were likewise made either entirely or in part of precious metal. With this enumeration the number of metallic utensils employed in Christian antiquity is by no means complete. The centre of Christian worship is the altar and the altar; for this reason it was early made of valuable material, at least equal to it. Metal statues were furthermore used to adorn the confession (q. v.) and the immediate surroundings of the altar. Great wealth of the precious metals was spent upon the superstructure of the altar, or ciborium, which was decorated with metal statues, with chalices and votive crowns. When Leo III had the church of St. Peter restored, he employed for that work 27041 pounds of silver. A large amount of metal was also used for the iconostasis, a screen connecting from two to six columns; thus Leo III had the iconostasis in
the church of St. Paul re-covered at an expenditure of 1452 pounds of silver.

A large amount of metal-work is also required for the illumination of the basilica. Constantine alone presented to the Lateran church 174 separate articles of the greatest variety intended for this purpose. It is sufficient here to make mention merely of the chandeliers, or lustres (corona), the candelabra, and lamps; they were made of bronze, silver, or gold. The Lateran church received among the rest a chandelier with fifty lamps of the purest gold, weighing 120 pounds, and a candelabrum of the same material, with eighty lamps. Even the vessels for storing the oil were sometimes made of precious metal. The Lateran basilica was the owner of three such vessels of the price of 100 pounds silver worth nothing; however, all of these treasures has come down to us; only a few small chandeliers of bronze, dating from the fifth to the eighth centuries, have been found, most of them in Egypt. There remains one more article of metal that was much used in the service of the Church from the earliest centuries, the censer. According to the "Liber pontificalis" the baptistery of St. John at the Lateran had a censer of gold weighing fifteen pounds, which was ornamented with green precious stones. If we take account of all these articles, the conclusion naturally follows that the use of articles of metal in the service of the Church had attained extraordinary proportions in Christian antiquity.

More difficult than the enumeration of the works in metal is the description of their decoration and the technical processes employed in their manufacture, because on this point our literary sources are almost wholly silent, while of the old Christian works, which might enlighten us, but very few are extant. We must therefore, in this case also, confine ourselves particularly to the statements of the "Liber pontificalis". Here we find numerous references to images (imagines) of Christ, the Blessed Virgin, the Angels, and Apostles, in most cases it is impossible to determine whether the works were carved or cast, certain it is that both methods were employed. The statues of Christ and the Apostles on the ciborium presented by Constantine to the Lateran church were undoubtedly carved. In some cases the core of the statues was of wood which was overlaid or covered with silver or gold. Painted images also were sometimes decorated with reliefs of silver or gold. Gregory III, for example, employed five pounds of pure gold and precious stones in the decoration of a statue of the Madonna in St. Maria Maggiore. Precious stones in particular were a favourite form of decoration for articles made of metal; golden statues were at times completely covered with them. When Sixtus I provided the confession of the Vatican basilica with costlier furnishings, Valentine presented a tablet in relief with the images of Christ and the Apostles, which was studded with precious stones. The baptistery too beside the Lateran church possessed a censer made of metal; golden statues were at times completely covered with them. Thus the chapels of St. John received doors with silver ornamentation. This was probably a kind of niello (cf. Rosenberg, "Niello", Frankfort, 1908). To obtain colour effects enamel and verroterie cloisonnées were likewise employed; of these a more detailed account will be given later. We shall call attention here only to the best-known specimen that has been preserved, the pentaptych in the treasury of Milan cathedral; the central division of this is ornamented by this process with the paschal lamb and the cross.

Finally, as to the workshops from which the Church derived its metal-work, there can be no doubt that they existed in all the larger cities of the civilized countries of ancient Christendom; but the cities of the Eastern Roman Empire, and especially Byzantium, seem to have been pre-eminent. There is a tendency even at the present day to consider almost all of the larger works that have been preserved as products of Eastern art. In fact a large number of works in metal were brought from the Greek and Byzantine countries. We mention here only a reliquary cross in St. Peter's at Rome, a present of the Byzantine emperor Justin II (cf. Beissel, "Verwendung edler Metalle zum Schmucke römischer Kirchen vom 5.-9. Jahrh." in "Zeitschrift für christl. Kunst," Düsseldorf, IX (1896), 331 sq.).

II. MIDDLE AGES.—A.—We begin the Middle Ages with the Byzantine metal-work, in order to remove at the outset the impression that the term Byzantine is used to express a definite period of time; it is rather to denote a definite geographical circle of art and culture, that is to say, Byzantium with its immediate and more distant surroundings. There were two factors that exerted a powerful influence upon the Byzantine works; first, the almost boundless extravagance which prevailed at the imperial Court, and which, as a result of the intimate relations existing between State and Church, made itself felt also in the latter; second, the close contact with the art of the inland provinces, particularly with Persian art. The Persian, or, to use a more general term, the Oriental, influence gave rise to an extravagant seeking after colour effects in the art of metal-working accompanied by a suppression of gold and the production of plastic works.

To understand the latter change, we must briefly explain a few technical terms.

To give artistic form to the shapeless mass of metal the processes employed are casting and hammering, or chiselling. In the former process the metal is brought to a liquid state and poured into a hollow form, which has previously been prepared by pressing a solid model into a yielding mass. Although casting must be regarded as the original mode of treating metals, nevertheless, so far as giving artistic form to gold and silver is concerned, hammering was of greater importance. By means of hammers the sheet of metal is hollowed out and in this way given plastic form. Very closely connected with hammering is the art of engraving; this consists in directing the blow of the hammer not directly upon the metal but transmitting it by means of small steel chisels. It is these two latter processes that we have chiefly in mind when we speak of the goldsmith's art. By means of these and the Occidental art of niello the most beautiful works in metal. A different state of affairs existed in the Orient, and particularly in the home of the Mesopotamia-Persian and Syrian art, where, so to say, the hand had less plastic training than the eye a gift for colour. The glittering gold here received
additional decoration by means of coloured enamels. This preference for coloured representation instead of white metal was transmitted to Byzantium also. But it will always remain to the credit of the Byzantine goldsmith's art that it produced magnificent works in metal for the service of the Church. The process employed in the Orient and Byzantium is known as cloisonné enamel (émail cloisonné); it consists in soldering very thin strips of gold on the gold base-plate so as to form cells into which the coloured enamel-paste is pressed and fused in place, the enamel combining with the metal during fusion.

In Byzantium cloisonné enamel forced the art of hammering and chiselling into a very subordinate position; enamel was used to decorate secular articles, such as bowls and swords, but especially the metalwork of the Church. One of the rarest and most beautiful articles of the Church is a reliquary in the crown-treasures at Budapest (1076-77). The terrible pillaging of the capital by the western crusaders, 1204, dealt the deathblow to this flourishing art.

Although the examples of Byzantine metal-work described with enamel are by far the most numerous, specimens of hammered work are not entirely lacking. In the first place we may mention two architectural relic-cases which are in the form of a central structure surmounted by a dome (at Aachen and Venice). The reliquary tablets with carved reliefs are either in the form of a small folding-altar or of a cross, which often bears the portrait of the emperor, Constantine, and his mother on the obverse, and on the reverse, the crucifixion. A distinct type of the Greek goldsmith's art are the icons; one of the most valuable is in the Swengorodskoi collection (St. Petersburg). A rare specimen with excellent chasing, a gilded silver pyx with the crucifixion of Christ, is in the cathedral at Erfurt; another, of the ninth century, in the collection of the Royal Irish Academy, Dublin, and in the British Museum, London. When we consider that these works extend over a period of more than four centuries and are the products of several races it is at once apparent that we can give but a faint intimation of the character and decoration of the metalwork of the Church among barbarian nations.

The material used in the manufacture of these works is almost exclusively gold, while their artistic decoration consists for the most part of the so-called verroterie cloisonné, a glass mosaic. The process employed in this decoration is akin to that of cloisonné enamel; the setting of the semi-precious stones or paste gems is done. At only one place in the West is it possible at the present day to get an idea of the magnificence and costliness of the Byzantine metal-work, in the treasures and library of St. Mark's at Venice, which still possesses a portion of the booty of the year 1204 (cf. Kondakoff, "Gesch. und Denkmäler des byzant. Emailz", Frankfort on the Main, 1892).

B.—Though the manufacture of artistic metal-work for the Church was accompanied by no difficulties in the countries of the older civilization, conditions were much more unfavourable among the barbarian nations which embraced Christianity. Nevertheless we know that among them articles of metal were much used in the form cells into which the coloured enamel-paste is pressed and fused in place, the enamel combining with the metal during fusion. In Byzantium cloisonné enamel forced the art of hammering and chiselling into a very subordinate position; enamel was used to decorate secular articles, such as bowls and swords, but especially the metalwork of the Church. One of the rarest and most beautiful articles of the Church is a reliquary in the crown-treasures at Budapest (1076-77). The terrible pillaging of the capital by the western crusaders, 1204, dealt the deathblow to this flourishing art.

Although the examples of Byzantine metal-work described with enamel are by far the most numerous, specimens of hammered work are not entirely lacking. In the first place we may mention two architectural relic-cases which are in the form of a central structure surmounted by a dome (at Aachen and Venice). The reliquary tablets with carved reliefs are either in the form of a small folding-altar or of a cross, which often bears the portrait of the emperor, Constantine, and his mother on the obverse, and on the reverse, the crucifixion. A distinct type of the Greek goldsmith's art are the icons; one of the most valuable is in the Swengorodskoi collection (St. Petersburg). A rare specimen with excellent chasing, a gilded silver pyx with the crucifixion of Christ, is in the cathedral at Erfurt; another, of the ninth century, in the collection of the Royal Irish Academy, Dublin, and in the British Museum, London. When we consider that these works extend over a period of more than four centuries and are the products of several races it is at once apparent that we can give but a faint intimation of the character and decoration of the metalwork of the Church among barbarian nations.

The material used in the manufacture of these works is almost exclusively gold, while their artistic decoration consists for the most part of the so-called verroterie cloisonné, a glass mosaic. The process employed in this decoration is akin to that of cloisonné enamel; the setting of the semi-precious stones or paste gems is done. At only one place in the West is it possible at the present day to get an idea of the magnificence and costliness of the Byzantine metal-work, in the treasures and library of St. Mark's at Venice, which still possesses a portion of the booty of the year 1204 (cf. Kondakoff, "Gesch. und Denkmäler des byzant. Emailz", Frankfort on the Main, 1892).
BRONZE DOORS, RAVELLO (1179)
EXECUTED BY BARIFANO OF TRANI
mentation on the other hand is of rarer occurrence; it is found in a crude fashion on the Hereford reliquary. That this art was of Northern European origin is proved by the chaîne in Kremmünster, a present of Tassilo, Duke of Bavaria (about 780). In Irish art filigree also found a very delicate development; one of the most valuable examples, one that displays a concentration of all the processes with which the native masters were conversant, is the chalice of Ardagh, one of the folding-doors of the cathedral with crude reliefs, a column, which is patterned after Trajan's Column in Rome, and two candle-sticks belong to this period. In France scarcely a single work of any size has been preserved; in Italy several bronze doors, for instance, those of the basilica at St. Paul at Rome (1070) and Monte Cassino (1070), are noteworthy, because they were procured from Byzantium and show the influence of the Byzantine art.

C.—The second period embraces the age of the Carolingian and Othoman emperors, i. e., in round numbers a period of 200 years. While it can hardly be said that this period added anything essentially new to the metal-work of the previous centuries, it is nevertheless true that it gave new forms and a further development to many of the articles already in use. We know also more frequently with works cast in bronze, whereas in the so-called "style of the period of migrations" of the preceding age it was not necessary even to mention them. With the increase in the wealth of the Church, there arose also the necessity for an increased amount of valuable metal-work. This period included many of the churches which counted among their own members metal-workers of great artistic skill. The manufacture of the metal-work for the Church during the tenth and eleventh centuries was in fact so largely in the hands of the monks that this entire period has been designated as the period of monastic art. While Philistine as a result of the development of the religious and social life, from the tenth century it gradually fell behind Germany. One of the causes that helped to bring about this result was the lively interest which several of the prominent ecclesiastical princes took in the art of metal-working as developed within the Church; the most deserving of mention in this connection is the Archbishop Siegfried of Mainz. But the most important of the metal-workers of the period was the master who worked for the Bishops Meinwerk of Paderborn and Bernward of Hildesheim. In France the art of metal-working flourished especially in Reims, but also in Corbie, Tours, and Metz. In Germany the centres of the goldsmith's art of the Church were, besides Trier, especially the monasteries at Ratisbon, Reichenau, Essen, Hildesheim, and Hemershausen.

The characteristic feature of the art of the period of migrations, the verroterie cloisonnée, gradually disappears and yields precedence to the Byzantine cloisonné enamel which flourished especially at Trier and Reichenau. The revival of the plastic tendency in metal-working was of greater importance in Italy, where there was a lively art at this day several altar-decorations and book-covers with figural representations, which reveal a truly amazing skill in metal-hammering; such is the valuable antipodium of Henry II from Basle. The primitive method of covering a wooden core with thin sheets of metal was also still practised. A Madonna in the collegiate church at Essen (Reviers) and an image of St. Fides (Foy) at Conques, France, are the two best known examples of this art. In Italy the most important work of this period is the decoration of the high altar in the Church of St. Ambrose in Milan, the work of Wolvinus, executed under Archbishop Angelbert II (824–60). Prominent examples of the French metal-work are the portable altar, shaped like a ciborium, and the binding of a copy of the Gospels in the royal jewel-room at Munich, which were probably made at Reims and were brought to Germany as early as the reign of King Arnulf (d. 899). Germany possesses, as evidence of a more advanced art of metal-working, four crosses in the collegiate church at Essen, which are distinguished by a number of elements from the Byzantine art. Closely connected with Essen are the school of the monastery at Hildershausen, where the monk Rogerus wrote the first hand-book of the industrial arts, "Schedula diversarum artium," and the school of Hildesheim, which through the activity of Bishop Bernald became the centre of the metal-worker's art. The folding-doors of the cathedral with crude reliefs, a column, which is patterned after Trajan's Column in Rome, and two candle-sticks belong to this period. In France scarcely a single work of any size has been preserved; in Italy several bronze doors, for instance, those of the basilica of St. Paul at Rome (1070) and Monte Cassino (1070), are noteworthy, because they were procured from Byzantium and show the influence of the Byzantine art.

D.—The golden age of the metal-work of the Church is the Romanesque period (1050–1250). We have already, it is true, mentioned above several works belonging to this age, because the various styles of art often overlap, and sharp distinctions can be drawn only by force. The characteristic which at once distinguishes the metal-works of the Romanesque period from the older works, is their large size; this distinction is most noticeable in the reliquaries. For, while the receptacles for relics had up to that time been uniformly of small dimensions, they grew in the Romanesque period to such an extent that only three or four men were necessary. Several new varieties of metal-work also were added to the old, especially the aguamanile, i. e., a vessel in the form of an animal, used for washing the hands, and the metal structures placed upon the altar; other articles assumed new forms. These changes are in many cases due to the development of the liturgy. Almost to the close of the tenth century, for instance, neither a cross nor candle-stick was permitted upon the altar, only small reliquary caskets being tolerated; the altar itself up to this time had preserved the shape of a table or sarcophagus. As soon as these regulations were broken, the candle-stick, cross, and superfrontal found a place upon the altar. These articles have a strong influence upon the manufacture and decoration of the articles mentioned.

The material employed in the manufacture of the metal-work of the Church also experienced a change, as copper took the place of gold. Furthermore the cloisonné enamel was supplanted by the champlèvre. The champlèvre enamel differs from the cloisonné by the small cells intended to receive the enamel not being made in the Byzantine fashion by means of strips of flat gold wire soldered to the gold plate, but by being dug out of the plate with a burin. A peculiarity of the workshops of Limoges (France) was the affixing of the heads of persons or even of the entire figure in high relief. The ornamentation increased in size at this time, as the area of the panel was filled in with coloured enamel. A second difference consists in the more frequent occurrence of plastic ornamentations in silver. Of course plastic decorations, as we have already seen, were not lacking in the earlier periods, but the Romanesque period gave a mighty impulse to this branch of the metal-work, and many extraordinary productions, for instance on the shrine of the Three Kings at Cologne. Lastly, a third difference is apparent in the ornamentation, in that secular types of decoration are now more and more used on articles intended for the Church. On a reliquary at Sieburg (near Cologne), for example, axes, deer, dogs, and naked men are represented; the well-known fabulous creatures of the Romanesque art also win a place for themselves in the art of metal-working.

The evolution in style may be briefly characterized as follows: the monastic art of the previous period with its Byzantine tendencies is subdued but not entirely supplanted by the popular tendency; the two types enter into a fusion which forms the Romance art. Monuments of the Romanesque art in metals still exist in large numbers; but these are almost exclusively works of ecclesiastical origin. This is due not merely to the fact that
churches, which have been correctly called the oldest museums, have guarded their treasures more carefully than the worldly owners; it is rather to be ascribed to the fact that at that time the metal-work for secular purposes was practically negligible. We must not infer from this, however, that in the Romanesque period, as in the preceding, it was monks and clerics who were the principal manufacturers of the metalwork for the Church. During this period the art of metal-working, as well as the plastic arts in general, gradually passed into the hands of the laity. A number of Benedictine monasteries, it is true, still clung to the old traditions of the order, and remained centres of artistic pursuits.

By far the largest amount of ecclesiastical metalwork of the Romanesque period is to be found in Germany, where the art of metal-working created magnificent works in the districts bordering on the Rhine and the Meuse. On the Rhine the Benedictine monks Eilbert (1130) and Friedericus (1180) of the Benedictine monastery of St. Pantaleon produced several reliquaries and portable altars which they decorated for the most part with enamel. They were far surpassed by the laymen Godefroi de Claire and Nicholas of Verdun, who combined plastic ornamentation and enamelling with amazing perfection. They are the creators of the two most beautiful reliquaries of this whole period; Godefroi wrought the shrine of St. Heribert at Deutz (1185), and Nicholas the shrine of the Three Holy Bachelors. In France likewise the art of enamelling was zealously cultivated, especially in Limoges, where small articles of metal for church use were manufactured in large quantities and exported all directions.

The art of casting also can show several famous names such as Reinhard Huy, who cast the well-known baptismal font at Liège, and Riquinus of Magdeburg in whose workshop the great cathedral at Noyon was probably manufactured (1150). All these works are surpassed by the beautiful baptismal font at Hildesheim, the work of an unknown master. Italy has almost nothing to show from this period, except a few bronze doors, which enlighten us as to the position of casting in bronze which are the doors of Barifano of Trani in Ravello (1179) and Monreale (1180) of Bonano at Pisa (1180). (Cf. Falke and Fraubergen, “Deutsche Schmelzarbeiten” , Frankfurt, 1904; Neumann, “Der Reliquienchats des Hauses Braunschweig-Lüneburg” , Vienna, 1891.)

E. - The Gothic epoch (1250–1500) brought numerous changes and new requirements, also in church metalwork. In this period the feast of Corpus Christi was first introduced (1312), and thereby a new metal vessel, the monstrance or ostensory, made necessary. For this purpose a vessel was employed like those which up to that time had been in general use for exhibiting relics. Another vessel, which came into use at this time and upon whose manufacture great stress was laid, is the “pax”, or “ossulatorium” (instrumentum pacis). The growing veneration of saints and relics required an increase of reliquaries. One of the results of this was that these were no longer made as large and costly as in the Romanesque epoch. Combined with this was the striving for constantly new forms for the reliquaries, among which busts in particular now became very popular. The lofty Gothic altars with double folds or wings became in fact small galleries of busts of the saints. The number of cast statues of the saints and of the Blessed Virgin also increases very considerably from the fourteenth century. The material as well as the technique and decoration of the works of the goldsmith again experience a change. Copper, which has been almost a necessity for the bulky Romanesque reliquaries, now gives way to silver; this is employed especially for the figures in relief which were then much used, and which served more frequently than in the Romanesque period as statuettes for the decoration of shrines.

Very intimately connected with this change of material was an alternation in the mode of ornamentation. The cham- ployed enamels had lost its power of attraction, and indeed it could not be applied upon the thin sheets of silver; translucent enamel therefore took its place; this was applied by cutting the relief-like representation in the silver ground and pouring a transparent enamel over the relief, so that the different parts according as they are higher or lower produce the effect of light and shade in their various gradations. Siena has long been regarded as the starting-point of this new mode of ornamentation, because a chalice in Assisi made by the Siennese Guecco Manaja about 1290 is the oldest example of this process. From Italy it early spread to Germany where it flourished especially on the Upper Rhine, and to France.

The features of the religious metal-work of this age that more than any other distinguish it from the earlier productions are the superstructure and construction. The same difference prevails as between a Romanesque and a Gothic church. The ponderous Romanesque style is replaced by a pleasing lightness and mobility of form. However in the art of metalworking as in the other arts we must carefully distinguish within this period between the early Gothic work and the late. Of the former the work may be described as possessing, so to say, an aristocratic character, a certain ideal striving after the sublime; like the fairest period of chivalry, however, this striving lasts but a short time; it soon gives way to the homely and real actuality. The late Gothic metal-work throughout lacks the idealism of the early Gothic. This is due to a certain decadence of cultural development. The common people, who had grown in power, took pride, as the nobility had done before, in securing for themselves a lasting memorial by means of religious foundations and presents to churches. To dedicate magnificent, artistically executed works, however, their means were in many cases insufficient, thus giving rise to many works in metal of poor workmanship, especially chalices, mon-
metals, and reliquaries. So far as lightness of the structure in particular is concerned, this peculiarity is again best recognised in the reliquary and also in the monstrance. Very frequently since the fourteenth century the form chosen is that of two angels kneeling upon a base-plate and supporting the reliquary, sometimes holding it in a horizontal position as a casket, sometimes vertically as a tower. In Germany there are extant examples of this inversion of position, two reliquaries in the cathedral treasuries of Aachen, which are constructed in the form of chapels with towers abounding in open-work, and are borne by saints. Reliquaries in general assumed the form of churches in miniature; gabled hood-mouldings, pinnacles, finials, crockets, rampant arches and buttresses, in fact every form of Gothic cathedral are found in the shrines, of which the most important is the reliquary of St. Gertrude in Nivelles, the work of Nicholas in Douai and Jacquemart de Nivelles (1295). The same is true of the remaining works in metal.

The architectural ornaments forced themselves also upon artificers on which we would not expect them; thus the knob (node) of the chalice often became a small chapel with many sharp corners and edges, making the handling of the chalice more difficult. Likewise, the popular plastic figures were placed upon articles of use that require a heavy formation, such as book-covers. A beautiful silver book-cover from the Benedictines of St. Sava in the Black Forest is executed in this way with numerous figures of saints; they are found even upon the smaller articles of use, as upon a cloak-clasp in the cathedral of Aachen. The manufacture of the religious works is taken more and more out of the hands of the monks and clerics, who now furnish only the ideas, and gradually pass the work over to the hands of the lay gilds. By this statement of course we do not wish to imply that there were not individual artists still active in the convents, for that remains true even to the present day, but for the development of an entire period they are of no moment.

Among the few works of France, that have been preserved, the so-called "golden horse of Altötting" attained great fame; it is a half-worldly, half-religious ornament representing the veneration of the Madonna by King Charles VI, whose horse in the lower part of the picture is held by a squire (1404). In Germany we can find no evidence of such exactly defined schools of art as in the Romanesque age; the works still in existence are exceedingly numerous and form an extended series. In contrast with the preceding epochs Italy now took a pronounced lead in the execution of artistic metal-work for the Church; the Italian works are compact, they favour a strong substructure, which permits the application of the favourite translucent enamel; there is evident also a tendency to excessive ornamentation, when fixed forms are attained. Among the schools of Italy Siena was at first pre-eminent; from this city the goldsmith Boninsega was called to Venice in 1345 to make repairs there to the Pala d'Oro of St. Mark's. Siennese masters also began in 1287 the silver altar in the cathedral at Pistoia, which was finally completed in 1399 by Florentine goldsmiths and is the largest piece of work of the kind in the world. In the Florentine school, the silver altar of the baptistery, was begun in 1366 by Leonardo di Ser Giovanni and Berto di Gerti; this too was not completed until one hundred years later, when the Renaissance had already fully entered into Italian art.

Bronze casting also continued to produce numerous works of art in this period of the Church. North Germany and the Netherlands (Dinant) were most prominently active in this field. Here we must mention first of all the numerous baptismal fonts of bronze, which are decorated on their outer sheathing with representa-

tions in relief and architectural ornaments, next the seven-armed candelabra, door-knobs, water-vessels (aquamanile), lecterns, especially the beautiful eagle-lecterns. In Germany the names of many of the masters have been handed down; in Wittenberg, Wilkin (1342), in Eibing, Bernhuser, and in Lubeck and Kiel, Hans Apengeter. Lastly mention should be made of the bells which were also cast in bronze. While Germany distinguished itself by its religious works cast in bronze, it was surpassed by France in another branch of the metal-worker's art. Here in the beginning of the thirteenth century the art of the smith passed through its first period of full vigour. At that time, thanks to the highly developed technical processes, France produced metal-work for the doors of churches such as have never been produced since. Germany, England, and the Netherlands felt the favourable influence of the French art, which produced its magnificent works on the cathedrals at Rouen, Sens, Noyon, and especially on the cathedral at Paris. Here every wing of the folding doors has three iron bands, that serve also as hinges, divided into a thousand branches and decorated with birds of every kind and fantastic creatures. In addition to the metal-work of the doors the blacksmith furnished the Church with artistic chandeliers, railings, pedestals for the Eucharist candle, lamps, and lecterns. The first place in the manufacture of artistic railings undoubtedly belongs to Italy, where the high perfection attained by the art of the Italian blacksmiths may best be seen in Florence (San Croce), Verona, and Siena.

III. RENAISSANCE.—While the religious metal-work in the Gothic style had increased in quantity and especially at the expense of quality, a decided retrogression in respect to quantity is noticeable during the Renaissance. This is especially true of Germany. The distinguishing religious aspirations, the defection of many from the old religion and increasing indifference to religious faith had the effect of reducing the production of articles for church use to very small proportions. In Italy, it is true, we know the names of numerous artist goldsmiths—there are about 1000 of them—but there also the number of religious works of the Renaissance is very small. At the head of the new movement in metal-work for the Church we find the most distinguished sculptors, in fact the leading masters of the Renaissance preferred to execute their work in metal (bronze); we need mention here only the names of Ghiberti and Donatello, the former the creator of the famous bronze doors of the baptistery at Florence, the latter the maker of the high relief in bronze in Lucca; these works however belong to the domain of sculpture we must leave them out of consideration here.

The changes in style follow the course of the general evolution in art. The vertical forms of the Gothic...
style give way to the horizontal tendency, the forms become more vigorous and compact, the vessels acquire a more flexible silhouette. However, the early Renaissance left the forms of the commonest vessels, the chalices and crosses, almost untouched, inasmuch as the tradition of a thousand years made them appear sacred; we have numerous chalices of the Renaissance, the base of which shows the Moorish and Gothic foils and the trefoil knop, mentioned already. Not until the late Renaissance were the circular forms and volutes generally employed. In other respects the customary Renaissance ornaments, which are by no means the least charm of this style, are employed in ecclesiastical and worldly articles indifferently. Putti, hermae, caryatides, gargoyles, grotesques, acanthus leaves, funereal monuments, and grotesquely designed window tracings, such as columns, pillars, capitals, entablatures, balusters form an inexhaustible source of constant change.

Silver during the Renaissance no longer maintains the position it won for itself during the Gothic period. Several distinguished religious works in silver have been preserved, but they are far surpassed both numerically and artistically by the works in gold; the latter is covered with silver or gold. The artistic ornamentation of both ecclesiastical and secular metal-work consists especially of delicately executed representations in relief, which at first appear in moderation at the more important points, but later presupsumptuously cover the entire surface. At the same time, enamel was very frequently employed, sometimes in the pattern already mentioned tray enamel, which completely covers the portions in relief with a coloured surface, sometimes also the Venetian enamel, which flourished from about 1500-1550. It was used to coat jugs and bowls, candlesticks, candelabrum, and ciboria. Another favourite form of decoration consisted in the combination of metals and crystals; this type of decoration occurred occasionally, but was more systematically and artistically carried out in the Renaissance. The art of gem-engraving likewise was again practiced after ancient models upon cameos and gems. The ecclesiastical works of the Renaissance therefore often represent an enormous value. We need mention here only the value of a few papal tiaras. A tiara, which Sixtus IV had made by the Venetian goldsmith Bartolomeo di Tomaso, was valued at 110,000 ducats. Julius II confided to the Milanese jeweller Caradosso the making of a tiara valued at 200,000 ducats (nearly 200,000 dollars). Hardly any works of really marked importance. If we except the previously mentioned altar in Florence and Pisa, where the gilding of wood falls in the Renaissance. We may again mention a few reliquaries at Siena, which reveal a pronounced change compared with the monumental shrines of the Romanesque and Gothic periods. They are silver caskets with sides in openwork, permitting a view of the relics. The use of crystals is exemplified in a beautiful pax from Montecassino (now Berlin).

Elsewhere the influence of the Renaissance upon church metal-work was early apparent. In the beginning only the non-essentials were borrowed from the Italian Renaissance; it was the ornament that was copied; the fundamental forms long remained Gothic. Of the above-mentioned types the Germans added especially the scroll-work, which was by preference combined with the Moresco and then served as a pattern for the surface; it is not unknown in Italy, but in Germany it held almost undisputed sway for about thirty or forty years. In Germany during the sixteenth and seventeenth centuries the above-mentioned types the extraordinary fame by the manufacture of artistic metal-work; their products were eagerly sought after throughout the entire world. The Augsburg goldsmith, George Seld, in 1492 furnished one of the first Renaissance works in Germany, a silver altar in the Reichen Kapelle at Munich; here we find nude putti, flowers growing out of acanthus leaves, friezes and panels which breathe wholly the spirit of the Italian Renaissance. A goldsmith of Nuremburg, Melchior Bayo, in 1538, by order of King Sigismund I of Poland, made an altar of chased silver which is in the chapel of the Jagellons in the cathedral of Krakow. Besides these there are no flights of fancy in metal-work from this period. As is proved by the "Buch der Kühlen Gebeine" of Cardinal Albrecht of Mayence, a few predates indeed were intent on increasing the treasures of their churches in the new style, but as a rule the exigencies of the times did not permit the manufacture of larger works in metal. So far as the smaller vestments are concerned, we generally find in the middle of the sixteenth century, still show Gothic forms, as, for instance, a chalice of the well-known Gebhard von Mansfeld, Archbishop of Cologne, in the "grünen Gewölbe" at Dresden (about 1560). All the works of this period are surpassed by the productions which the goldsmith Anton Eisenhoit made about the year 1540 for Theodor von Pustettenberg, Prince Bishop of Paderborn; these are a chalice, a ciborium, book-cover, and a vessel for holy water. The articles are most exquisitely ornamented with noble Renaissance forms done in flat chasing. The most beautiful works of the Renaissance in Southern Germany, reliquaries, chalices, monstrances, etc., are in the Reichen Kapelle at Munich. French, like Italy, has a large amount of documentary evidence of the manufacture of metal-work for the Church, but the endless wars of Louis XIV and the Revolution consigned them almost without exception to the melting-pot. A chalice in the church of St-Jean-du-Doigt (about 1540), which has a stout knob transformed into a chapel, and the cup and base bend downward in the shape of clayey tendrils, is the only work which we are able to recognize.

 Besides the works of the goldsmith's art, the productions in base metal do not remain entirely unnoticed. These came not rarely from the workshops of the goldsmiths. The most important foundries were in Florence and Padua. It is not always easy to distinguish between the works of sculpture and those of the industrial arts. Certainly a large number of magnificent bronze railings belong to the latter— the most beautiful is in the cathedral at Prato, the work of Bruno di Ser Lapo Mazzei (1444)—as do also the candelabra, which, because of their elegance of form and delicate ornamentation, are very effective. The best known specimen is that in Florence at the Orsanmichele, II Santo at Padua, the remarkable piece of Riccio (1516). From bronze there were also manufactured for the service of the Church Sanctus bells, candlesticks, vessels for holy water, hanging lamps, about the services of which we need not here concern ourselves. We merely add that the works in iron are confined more particularly to the railings and side-chapels of the larger churches; they are of no interest, however, from the standpoint of the history of art.

The last periods of church metal-work can be concisely described. Like the whole of the baroque art, the metal-work of the Church of this epoch, when compared with the delicately balanced regularity of the Renaissance, shows a certain coarseness and unrest, which in the rococo develops onediesidedly into absolute irregularity, to be changed in the Classicism which followed, into the exact opposite, a pedantic, inflexible rigidity. These peculiarities of the new styles do not, of course, find expression in the goldsmith's art to the same extent as in the plastic arts. Nevertheless, the baroque becomes evident even in the smaller church utensils; it may, for instance, be clearly observed in the chalice, which in the baroque style is overloaded with broad, clumsy ornaments; in the rococo the forms became more deli

X.—15

METAFFRATES

METAFFRATES

Symeon (Συμεών ὁ μεταφράτης), the principal compiler of the legends of saints in the Menologion of the Byzantine Church. Through the importance of this collection his name has become one of the most famous among those of medieval Greek writers. The epithet Metaffrastes may be rendered Compiler; it is given to him from the usual name for such arrangements of saints’ lives (sermons, compila- tions). Little is known for certain about his life. His period is the latter half of the tenth century. In one of his leg- enes (the Life of St. Samson) he tells of the saint’s miracles continued down to his own time; that time is the reign of Romanos II (959–63) and of John I Tzimiskes (967–76). Michael Psellus (1018–78), who wrote in the life of St. Symeon (526–97) on the other saints in the collection, says he was a Logothete. In this case it means one of the Secretaries of State with the title Magister. Psellus also tells us that Symeon was a favourite of the emperor, at whose command he made his collection of legends. Ehrhard says that this emperor was Constantine VII (Porphyrogenetos, 912–59) who organized a compilation of all kinds of learning to form a kind of universal encyclopedia by the scholars of his Court (Krumbacher, "Byz. Lit.", 200). Ehrhard (loc. cit.) and most au- thorities now identify the Metaffrastes with Symeon Magister the Logothete, who wrote a chronicle under Nicephorus Phocas (963–9). Besides the identity of the author (as against the title), it is suggested that the two works (Chronicle and Legends) for this. A certain Arab chronicler, Yahya ibn Said of Antioch, in the eleventh century refers to "Simon, Secretary and Logothete, who composed the stories of the saints and their feasts" (Delahaye in "Revue des questions hist.", X, 84). Another point that fixes his time as the latter half of the tenth century is the fact that when the improved, the speech made by Constantine VII at the translation of the portrait of Christ from Edessa on 16 August, 944, is contained in Symeon’s part of the Menology ("Die Legendarissammlung," etc., pp. 48, 73). Formerly his period was generally thought to be earlier. In his life of St. Theoctistus of Lesbos he gives what seems to be a passage about the expedition of Amphilochius the elder, of which he says that he took part in the expedition of Admiral Himerios to Crete in 902. It is now proved that Symeon simply copied all this life, including the autobiographical note, from an earlier writer, Niketas (Ehrhard, "Byz. Lit.", p. 200).

Symeon’s chief work was a collection to which he owes his great reputation in the Byzantine Church, is the collection of Legends. But it is not easy to say how much of the Menology was really composed by him. On the one hand, in many cases he simply copied existing lives of saints; on the other, the collection has grown considerably since his time and all of it without discrimination goes by his name. Leo Allia- tius (op. cit.) ascribes 122 legends only to Symeon. Delehaye ("Les ménonologie grecs" in the "Analecta Bollandiana", XVI, 311–29), thinks that 148 or 150 are authentic and original. It may be noticed that the authentic ones are chiefly those in the early months of the year, from September (the Byzantine Calendar begins in September; the saints in the Menologies are arranged as their feasts occur). It is certain, that a number of these legends were written by Symeon from such sources as he found (partly oral tradition). The sitting of these from the rest still needs to be done (Ehrhard, I. c., 201–2). His reputation as an author has been restored by the latest students. At one time his name was a byword for absurdity in the art of metal-working. Whether this is to be crowned with lasting success, is a question for the future to decide.
has often been compared to the great Western compiler, Jacobus de Voragine (d. 1298). Some (Kondakov, Historia de l'art byzanțin, "Paris, 1888, 7, 66) prefer to make Bon Becke's continuator, Bonn, 1829, 603–760), reprinted in P. G., CIX, 633–632; also an Epitome of Canons (P. G., CXIV, 236–292), collections of maxims from St. Basil (P. G., XXXII, 1116–1381) and Macarius of Egypt (P. G., XXXIV, 841–965), some prayers and poems (P. G., CXIV, 209–225) and nine letters (P. G., CXIV, 282–236). Symeon Metaphrastes is a saint in the Orthodox Church. His feast is 28 November.

Adrian Fortescue.

Metaphysics, that portion of philosophy which treats of the most general and fundamental principles underlying all reality and all knowledge.

I. The name.—The term metaphysics is derived from the Greek μετά τὰ φυσικά, a title which, about the year 70 B.C., was prefixed by Andronicus of Rhodes to that collection of Aristotelian treatises which since the time of Aristotle had been preserved in the schools of the East, because he believed that that part of the Aristotelian corpus came naturally after the physical treatises, he entitled it "after the physics". This is the historical origin of the term. However, once the name was given, the commentators sought to find intrinsic reasons for its appropriateness. For instance, it was understood that after "the science of the world beyond nature" that is, the science of the immaterial. Again, it was understood to refer to the chronological or pedagogical order among our philosophical studies, so that the "metaphysical" sciences would mean, those which we study after having mastered the sciences which deal with the physical world (St. Thomas, "In Lib. Metaph. IV, 11). Indeed, an erroneous use of the term in current popular literature, there is a remnant of the notion that metaphysical means ultraphysical: thus, "metaphysical healing" means healing by means of remedies which are not physical.

II. Definition.—The term metaphysics, as used by one school of philosophers, is narrowed down to mean the science of mental phenomena and of the laws of mind. In this sense, it is employed, for instance, by Hamilton ("Lectures on Metaph.", Lect. VII) as synonymous with psychology. Hamilton holds that empirical psychology, or the phenomenology of mind, treats of the facts of consciousness, rational psychology, or the nomology of mind, treats of the laws of mental phenomena, and second psychology, or the treatises of the results derived from the study of the facts and laws of mind. This use of the term metaphysics is unfortunate because it rests on Descartes's false assumption that the method in metaphysics is subjective, in other words, that all the conclusions of metaphysics are based on the study of subjective, or mental, phenomena.

Taking a wider view of the scope and method of metaphysics, the followers of Aristotle and many who do not acknowledge Aristotle as a leader in philosophy define the science in terms of all reality, both objective and subjective. Here five forms of definition are offered, which ultimately mean one and the same thing: (1) Metaphysics is the science of being as being.—This is Aristotle's definition (συνοικὰ φύσεως ὑποκείμενον—Met., VI, 1026 a, 31). In this definition metaphysics is placed in the genus "science". As a science, it has, in common with other sciences, this characteristic that it seeks a knowledge of things in their causes. What is peculiar to metaphysics is the difference "of being as being". In this phrase are combined the material object and the formal object of metaphysics. The material object is being—the whole world of reality, whether subjective or objective, possible or actual, abstract or concrete, immaterial or material, infinite or finite. Everything that exists comes within the scope of metaphysical inquiry. Other sciences are restricted to only a part of this field. Metaphysics has its limited field of inquiry, mathematics is concerned only with those things which have quantity. Metaphysics knows no such restrictions. Its domain is all reality. For instance, the human soul and God, because they have neither colour nor weight, thermic nor electric properties, do not fall within the scope of many physicist's investigations. But then, the operations of quantity, they do not come within the field of inquiry of the mathematician. But, since they are beings, they do come within the domain of metaphysical investigation. The material object of metaphysics is, therefore, all being. As Aristotle says (Met., IV, 1004 a, 34): "It is the function of the philosopher to consider the nature of each formal object is also "being" or "beings." The formal object of any science is that particular phase, quality, or aspect of things which interests that science in a specific way. Man, for instance, is the material object of psychology, ethics, sociology, anthropology, physiology, and various other sciences. The formal object is not the same for all sciences. If the different sciences of the formal object of psychology is mental phenomena and the subject of them; the formal object of ethics is man's relation to his ultimate destiny; that of sociology is man's relation to his fellow-men in institutions, laws, customs, etc.; that of anthropology is the origin of man, distinction of races, etc.; that of philosophy is the world as a whole. Thus, for the physicist, the physical group generally is the so-called physical properties of bodies, such as light, sound, heat, molecular constitution, atomic structure, vital phenomena in general, etc. The formal object of the mathematical group is quantity; what interests the mathematician is not the colour, heat, etc., of an object, but its quantity. As Aristotle says (Met., VI, 1026 a, 31), it is considered in a specific way neither in the physical nor the mathematical qualities of things, but in their entity or beingness. If, then, physics is the science of being as affected by physical properties, and mathematics is the science of being as possessing quantity, metaphysics is the science of being as being. Since the material object of metaphysics is all being, the metaphysician is interested in everything that is or can be. Since the formal object of his study is again, being, the point of view of metaphysics is different from that of the other sciences. The metaphysician studies all reality; still, the resulting science is not a summing up of the departmental sciences which deal with portions of reality but a science of being as such, i.e., independent from that of the student of the departmental sciences. (2) Metaphysics is the science of immaterial being.—"The first science", says Aristotle (Met., VI, 1026 a, 31).
16), "deals with things which are both separate (from matter) and immovable". In this connexion the scholastics (cf. St. Thom., ibid.), distinguished two kinds of immaterial: (a) immaterial *quodae esse* or immaterial *esse*, such as God and the human soul, which exist without matter; (b) immaterial *quodae conceptum*, or concepts, such as substance, cause, quality, into the comprehension of which matter does not enter. Metaphysics, in so far as it treats of immaterial beings, is called special metaphysics and is divided into rational psychology, which treats of the human soul and the animal soul, and the metaphysics of the existence and attributes of God, and cosmology, which treats of the ultimate principles of the universe. Metaphysics, in so far as it treats of immanent concepts, of those general notions in which matter is not included, is called general metaphysics, or ontology, that is, the science of Being. Taking the term now in its widest sense, so as to include both general and special metaphysics, when we say that metaphysics is the science of the immaterial, we mean that whatever exists, whether it is an immaterial being or a material being, so long as it offers to our consideration immanent concepts, such as substance or cause, is the object of metaphysical investigation. In this way, it becomes evident that this definition concides with that given in the preceding paragraph.

(3) *Metaphysics is the science of the most abstract conceptions.*—All science, according to the scholastics, deals with the abstract. The knowledge of the concrete individual objects of our experience, with their ever changing qualities and the particular individuating characteristics, makes us what we are (for instance, the knowledge of this tree, of that flower, of this particular animal or person) may be very useful knowledge, but it is not scientific. Scientific knowledge begins, when we abstract from what makes the thing to be individual, when we know it in the general principles that constitute it. The first degree of abstraction consists in the purest of pure sciences, in the definition or in the problem, which abstract merely from the particularizing, individuating characteristics, and consider the general laws, or principles, of motion, light, heat, substantial change, etc. The mathematical sciences ascend higher in the scale of abstraction. They leave out of consideration not only the individuating qualities but also the physical, ethical, and metaphysical, and on quantity and its laws. The metaphysical sciences reach the highest point of abstraction. They precede, or abstract, not only from those qualities which physics and mathematics abstract from, but also leave out of consideration the determination of quantity. They consider only Being and its highest determinations, such as substance, cause, quality, action, etc. "There is a science", says Aristotle (Met. IV, 1003 a, 21) "which investigates being as being, and the attributes which belong to this in virtue of its own nature" (*tis ta uteiwmata kath' akrivem*). The objection therefore, that metaphysics is an abstract science, would, in the estimation of the scholastics, militate not against the identity of metaphysics with the sciences as well. The peculiarity of metaphysics is not that it is abstract, but that it carries the process of abstraction farther than do the other sciences. This, however, does not make it to be unreal. On the contrary, what is left out of consideration in metaphysics, namely individuating qualities, physical movement, and specific quantity, derive whatever reality they have as conceptions from the concept, Being, which is the object of metaphysics. Metaphysics, in fact, is the most real of all the sciences precisely because, by abstracting from everything else, it has centred, so to speak, its thought on Being, which is the source and root of reality everywhere else in the other sciences.

(4) *Metaphysics is the science of the most universal conceptions.*—This would follow from the considera-

*---*
matter and manifestations of matter, and then the assertion is merely of biographical interest; or it is an assertion, as being possible, but an expression of the impossibility of immaterial existence, and in that sense it is a statement which in itself has a metaphysical import. Materialism is, in fact, a metaphysical theory of reality and is a contribution to the science which it professes to reject. Philosophical agnosticism, which is derived ultimately from Kant, is doctrine of the unknowability of noumenal reality (Ding an sich), rejects metaphysics on the ground that while the immaterial does, indeed, exist, it is unknown and must remain unknowable to the speculative reason. Kant (see Kant) maintained that all metaphysical reasoning, since it attempts by means of the speculative reason to go beyond experience, is liable to fall into the trap of philosophy, in which the understanding imposes on the empirical data of knowledge the quality of that knowledge by making it to be transcendent, but do not extend it beyond the realm of actual sense experience. The followers of Kant stigmatise as intellectual formalism the view that the speculative reason does actually attain extrascientific knowledge. This is the contention of the modernists and other Catholic writers who are more or less influenced by Kant. These decay rational metaphysics and offer as a substitute a metaphysics based on sentiment, vital activity, or some other non-rational foundation.

The rejection of metaphysics by the materialist and the Kantian agnostic does not meet the full approval of all Kantians. The philosophy of the republic of the sciences, the idealist, having deprived it of its scientific character, elevates it to the rank of aesthetic pre-eminence side by side with poetry. He considers that it furnishes a point of view from which to contemplate the beauty, harmony, and value of those things which science merely explains. He holds that it is not the province of metaphysics to assign reasons or causes, but to furnish motives for action and enhance the value of reality. For him, its uplifting and regenerating function is entirely independent of its alleged ability to explain: he considers metaphysics to be, not an ontology, or science of reality, but a teleology, or application of the principle of purposiveness, which is a tendency of the human mind one will deny. It is only one function, however, and unless the doctrine of final causes has its foundation in a doctrine of formal and efficient causes, teleological metaphysics is a castle in the air. Finally, the positivist, and the scientist whom the positivist has influenced, reject metaphysics because all our knowledge is confined to facts and the relations among facts. To attempt to go beyond facts and the succession or concomitance of facts is to essay the impossible. Causes, essences, and so forth, are terms which clothe in fictitious garb our ignorance of the real scientific explanation. The whole gist of positivism is contained in Hume's verdict that "it is impossible to go beyond experience". This psychological dictum is accepted by the philosophical positivist, as the death sentence of metaphysics. With the scientist, however, other considerations weigh more than the psychological argument. The scientist points to the present condition of metaphysics; he calls attention to the fact that, while the physical sciences have advanced by leaps and bounds, the metaphysical sciences have made no progress at all, and are still beset with the most fundamental problems and has not even settled the questions on which its very existence depends.

The condition of metaphysics is, indeed, such as to invite the contempt and provoke the disdain of the scientist; the fault, however, may lie not so much in the claims of metaphysics as in the vagaries of the metaphysicians.

V. Relation of Metaphysics to Other Sciences.—The consideration of the relation in which metaphysics stands, or ought to stand, to the other sciences should result in a refutation of the positivist contention that metaphysics is useless. In the first place, metaphysics is the natural co-ordinating science which crowns the unifying efforts of the other sciences. It occupies in the highest place of knowledge the process of unification towards which the human mind tends irresistibly. Without it, the explanations and co-ordinations attained in the lower sciences would be, perhaps, satisfactory within the limits of those sciences, but would fail to meet the requirements of that unifying instinct which the mind tends to apply to the knowledge of the universe. So long as the mind of the knower is one, it is impossible not to attempt to bring under the most general conceptions and principles the conclusions of the various sciences. That is the task of metaphysics. Whenever we look around among the contents of the mind and try to discover order and hierarchical arrangement among them, we are attempting a system of metaphysics. In the next place, the process of explanation which belongs to each of the lower sciences, if pursued far enough, brings us face to face with the demand for a metaphysical explanation. Thus, the chemical problem of atomic or proto-atomic constitution of bodies leads inevitably to the question, What is matter? Likewise, the problem of the nature and origin of life brings us to the point where it is imperative to answer the query, What is life? The questions: What is substance? What is a cause? What is quantity? Are additional examples of problems to which physics, mathematics, etc., finally lead. Indeed, the world of science is completely surmounted by the process of metaphysical investigation. Each of these problems of investigation brings us to a highroad of inquiry which sooner or later crosses the border and leads us into metaphysics. When therefore, the scientist rejects metaphysics, he suppresses a natural and ineradicable tendency of the individual mind towards unification and, at the same time, he tries to put up in every highway and byway of his own science a barrier against further progress in the direction of rational explanation. Besides, the cultivation of the metaphysical habit of mind is productive of excellent results in the sphere of general culture. The faculty of appreciating principles as well as facts is a quality which cannot be absent from the mind without detriments to the formation of a comprehensive and full culture. The scientist who objects to metaphysics, rightly condemns the metaphysician who disdains to consider facts. He himself, unless he cultivate the metaphysical powers of his mind, is in danger of reaching the point where he is incapable of appreciating principles. Both the empirical talent for ascertaining facts and the metaphysical grasp of principles and laws are necessary for the rounding out of man's mental powers, and there is no reason why they should not both be cultivated.
neither express its premises nor deduce its conclusions in a scientific manner. Again, theology relies on metaphysics to prove certain truths, called the _principles_, which are not revealed but are nevertheless profound. This theme has been discussed in the context of the philosopher's work. It is only natural, therefore, that metaphysics and theology should have many points of contact, and that the latter should rely on the former. Finally, since all truth is one, both in the source from which it is derived, and in the subject, the human mind, which it adorns, there must be a kinship between two sciences which, like theology and metaphysics, treat of the most important conceptions of the human mind. The difference in the manner of treatment, theology relying on revelation, and metaphysics on reason alone, does not affect the unity of purpose and the final harmony of the conclusions of the two sciences.

But, while theology thus derives assistance from metaphysics, metaphysics, on the other hand, has derived advantages from its close association with theology. Pre-Christian philosophy failed to arrive at metaphysical determinations of the notions of substance and person. This defect was corrected, in part at least, by Origen, Clement, and Athanasius, and in part by their successors, the scholastics, by the impulse instilled into them to philosophize in the light of the requirements of theological speculation concerning the Blessed Trinity. Pre-Christian philosophy failed to give a coherent, satisfactory account of the origin of the world: Plato's myths and Aristotle's doctrine of the eternity of matter could not long continue to satisfy the Christian mind. It was, once more, the Albigenses who, in their investigation of the Holy Scriptures, elaborating the Biblical conception of creation _Ex nihilo_, gave an explanation of the origin of the universe which is satisfactory to the metaphysicist as well as to the theologian. Finally, the Catholic doctrine of Transubstantiation, as discussed by the scholastics, gave occasion for a more defined and detailed discussion of the nature of accident in general and of quantity in particular.

VI. THE METHOD OF METAPHYSICS.— Among the objections most frequently urged against metaphysics, especially against scholastic metaphysics, is the unsound character of its method. The metaphysicist, we are told, pursues the a priori path of knowledge; he neglects or even condemns the use of the a posteriori empirical method which is employed with so much profit in the investigation of nature; he spins, as Bacon says, the threads of his metaphysical fabric from the contents of his own mind, as the spider spins her web from the substance of her body, instead of gathering it from every source in the world around him. It is the duty of the metaphysicist to look beyond metaphysical principles, as the bee gathers nectar from the flowers and elaborates it into honey. In order to clear up the misunderstanding which underlies this objection, it is necessary to remark that there are three kinds of method: (1) the a priori, which, assuming certain self-evident postulates, maximums, and definitions to be true, proceeds deductively to draw conclusions implied in those assumptions; (2) the subjective a posteriori method, which, from an examination of the phenomena of consciousness, builds up empirically, that is, inductively, conclusions based on those phenomena; (3) the objective a posteriori method, which builds on the facts of experience in general in the same way as the objective science builds on the facts of introspection. The second method is pre-eminently the method of the Cartesians, who, like their leader, Descartes, strive to build the whole edifice of philosophy on the foundation furnished by reflection on our thought-processes: _Cogito, ergo sum_. It is also the method of the Kantians, who, rejecting the psychological basis of metaphysics as unsubstantial, build on the moral basis, the categorical imperative: their line of reasoning is "I ought, therefore I am free", etc. The third is the method of those who, rejecting the Aristotelian conceptions, essence, substance, cause, etc., substitute so-called empirical conceptions of force, mass, and so forth, under which they attempt to subsume the core of metaphysical metaphysics or the conceptions peculiar to the various sciences.

The first method is admittedly unsound (in the popular sense of the word) and is adopted only by those philosophers who, like Plato, consider that the true source of philosophical knowledge is above us, not in the world around and beneath us. If the formula _universalia ante rem_ (see _Universalia_) is taken in the exclusive sense, then we may not look to experience, but to intuition of a higher order of truth, for our metaphysical principles. It is a calumny which originated in ignorance perhaps, more than in prejudice, that the scholastics followed this a priori method in metaphysics. True, the scholastic philosopher _quidquid recipitur per modum recipientis recipitur_, etc., and therefrom deduces metaphysical conclusions. If, however, we examine more closely, if we go back from the "Summa", or text-book, where the adage is quoted without proof, to the "Commentary on Aristotle", where the axiom is first introduced, we shall find that the truth is, that the scholastic argument, and is therefore, a legitimate premise from which to deduce other truths. In point of fact, the scholastics use a method which at once a priori and a posteriori, and the latter both in the objective and the subjective sense. In their exposition of truth they naturally use the a priori, or deductive, method. In their treatment of the substance of truth, they naturally both the world of mental phenomena within us, and the world of physical phenomena without us, for the purpose of building up inductively those metaphysical principles from which they proceed. It may be conceded that many of the later scholastics are too ready to invoke authority instead of investigating; it may be conceded that the scholastics were too dependent on books, especially on Aristotle's works, for their knowledge of nature. But, in principle, at least, the best representatives of scholasticism recognized that in philosophy the argument from authority is the weakest argument, and if the circumstances in which they lived and wrote made it imperative on them to master the contents of Aristotle's writings on natural science, it must, nevertheless, be granted by every fair minded critic that metaphysics at least they improved on the doctrines of the Stagirite.

VII. HISTORY OF METAPHYSICS.—The history of metaphysics naturally falls into the same divisions as the history of philosophy in general. In a brief outline of the course which metaphysical speculation has followed, it will be possible to consider only the principal stages, namely (1) Hindu philosophy, (2) Greek philosophy, (3) Early Christian philosophy, (4) Medieval philosophy, (5) Modern philosophy.

(1) Hindu Philosophy.—Of all the peoples of antiquity, the Hindus were the most successful in rising immediately from the mythological explanation of the universe to an explanation in terms of metaphysics. Apparently without passing through the intermediary stage of scientific explanation, they reached at once the heights of the metaphysical point of view. From polytheism or henotheism they proceeded very early to monotheism, and found that to the mind or central conception of reality. Their starting point was the realization that man is born into a state of bondage
and that his chief business in life is to deliver himself from that condition by means of knowledge. The knowledge, they taught, which avails most in the struggle for freedom is this: the world of sense phenomena is an illusion (mythos), all truths, the reality, is one supreme substance, the soul is part of this real substance, and will ultimately return to the Whole. The real substance is, as Max Müller remarks, spoken of as a neuter, and in this doctrine "is contained in a whole system of philosophy" ("Six Systems of Indian Philosophy", London, 1899, p. 60). The first, and most important of all truths, then, is that reality is one, and that each of us is identical with the All: "That art thou" is the highest expression of self-knowledge, and the gate to all salutary truth. Thus, the Hindus, actuated by an ethical, or ascetic, motive, attained a metaphysical formula to which they reduced all reality.

(2) Greek Philosophy. — The first Greek philosophers were students of nature. They were actuated not by an ethical motive, but by a kind of scientific curiosity to know the origins of things. There was no metaphysician among the Ionians (see IONIAN SCHOOL OF PHILOSOPHY). Out of the problem of origins, however, the metaphysical problem was developed by the Eleatics and the Stoics. These philosophers considered that the explanations of the Ionians — that the world originated from water or air — were too naive, relied too much on the verdict of the senses. Consequently, they began to contrast the real truth which the mind (soul) sees, and the illusory truth (phantasma) which appears to the senses. The Eleatics, on the one hand, asserted that the only real element, which they called Being, is alone exists, and that change, motion, and multiplicity are illusions. Heraclitus, on the other hand, reached the conclusion that what mind reveals is change, which alone is real, while permanency is only apparent, is, in fact, an illusion of the senses. Thus, these thinkers thrust into the forefront the problem of change and permanency, and the problem of reality, wholly free from the limitations which confined the earlier Ionians to a physical view of the problems of philosophy. They formulated metaphysical principles of reality, but both in the language which they used and in the mode of thought which they adopted, they seemed to be unable to rise above the consideration of material, and physical, all. Socrates, however, did immense service to metaphysics by bringing out clearly the problem of change.

Socrates was primarily an ethical teacher. Still, in laying the foundation of ethics he formulated a theory of knowledge which had immediate application to the problem of metaphysics. He taught that the contrast and apparently irreconcilable contradiction between the verdict of the mind and the deliverance of the senses disappear if we determine the scientific conditions of true knowledge. He held that these conditions are summed up in the processes of induction and definition. His conclusion, therefore, is, that out of the data of the senses, which presents the only reality, we may form concepts, which are the elements of true scientific knowledge. He himself applied the doctrine to ethics.

Plato, the pupil of Socrates, carried the Socratic teaching into the region of metaphysics. If knowledge through concepts is the only true knowledge, it follows, says Plato, that the concept represents the only reality, and all the reality, in the object of our knowledge. The sum of the reality of a thing is, therefore the Idea. Corresponding to the internal, or psychological, world of our concepts is not only the world of our sense experience (the shadow-world of phenomena), but also the world of Ideas, of which our world of concepts is only a reflection, and the world of sense phenomena, a shadow. That which corresponds to what it is, the essence, we should call it, is the Idea of that thing existing in the world above us. In the

"thing" itself, the phenomenon presented by the senses, there is a participation of the Idea, limited, disfigured and debased by union with a negative principle of limitation called matter. The metaphysical conceptions of reality also, that were the Ideas, are positive factors and this negative principle. From the Ideas come all that is positive, permanent, intelligible, eternal in the world. From the negative principle come imperfection, negation, change, and liability to dissolution. Thus, profiting by the epistemological doctrines of Socrates, without losing sight of the antagonistic teachings of his master, Heraclitus, Plato evolved his theory of Ideas as a metaphysical solution of the problem of change, which had baffled his predecessors.

Aristotle also was a follower of Socrates. He was influenced, too, by the theory of Ideas advocated by his master, Plato. For, although he rejected that theory, he did so after a study of it which enabled him to view the problem of change in the light of metaphysical principles. Like Plato, he accepted the Socratic doctrine that the only true knowledge is knowledge of concepts. Like Plato, too, he inferred from this that the concept must represent the reality of a thing. But unlike Plato, he made at this point an important distinction. Plato said that what a concept represents is in the thing which it constitutes, not as an Idea, but as an essence. He considers that the Platonic world of Ideas is a meaningless duplication of things: the world of essences is in, not above, nor beyond, the world of phenomena: there is, consequently, no contradiction between sense-experience and intellectual conceptions. The apprehension of a plurality of things is known by abstraction from those individuating qualities, which are presented in sense-knowledge; the knowledge of them is ultimately empirical, and not to be explained by an intuition which we are alleged to have enjoyed in a previous existence. In the essence of material things Aristotle could distinguish number, form, and matter. He distinguished the principle of form, which is the source of perfection, determinateness, activity and of all positive qualities, and the Matter, which is the source of imperfection, indetermination, passivity and of all the limitations and privations of a thing. Coming now to the orderland of metaphysics and physics, Aristotle defined the nature of being: being is a subject of reality, and of all the principles of cause, Material, Formal, Efficient and Final (see CAUSE). In addition to these contributions to the solution of the problem of change, which had, by historical evolution, become the central problem of metaphysics, Aristotle contributed to metaphysics a discussion of the nature of Being in general, and drew up a scheme of classification of things which is known as his system of Categories. He is least satisfactory in his treatment of the problem of the existence and nature of God, a question in which, as he himself admits, all metaphysical speculation culminates.

After the time of Aristotle, philosophy among the Greeks began to become more and more interested in science and human conduct. The Stoics and the Epicureans, who were the chief representatives of this tendency, devoted attention to questions of metaphysics, only so far as they considered that such questions may influence human happiness. As a result of this subdivision of metaphysics to ethics, the pantheistic materialism of the Stoics and the materialistic monism of the Epicureans fall far short of the perfection which the doctrines of Plato and Aristotle attained. Contemporaneously with the Stoic and Epicurean schools, a new school of Platonism, generally called Neo-Platonism, interested itself very much in problems of asceticism and mysticism, and, in connexion with the problems of the ancient pagans, gave a new turn to the drift of metaphysical speculation. The Neo-Platonists, influenced by the monism of the Orientalists, and, later by that of the Christians, took up the task of explaining how
the manifold, diversified, imperfect world originated from the One, Unchangeable, and Perfect Being. They exaggerated the Platonic doctrine of matter to the point of maintaining that all evil, moral as well as physical, originates from a material source. At the same time, they identified the spiritual world which they called *duales* (spirits) all actuality, intelligence, and force in the whole universe. These intelligences were derived, they said, from the One by a process of emanation, which is akin to the "streaming forth" of light from the illuminating body. This system of metaphysics teaches, therefore, that the One, and intelligences derived from the One, are the only positive principles, while matter is the only negative principle of things. This is the system which was most widely accepted in pagan circles during the first centuries of the Christian era.

(3) Early Christian Philosophy.—The first heretics among the Christian thinkers were influence in their philosophy by Neo-Platonism. For the most part, they adopted the Gnostic view (see Gnosticism) that in the last appeal, the test of Christian truth is not the official teaching of the Church or the exoteric doctrine of the gospels, but a secret gnostos, a body of doctrine imparted by Christ to the chosen few. This body of doctrine was in reality a modified Neo-Platonism. Its more specific tenet was that evil was the work of the devil. The problem of evil thus came to occupy an important place in the philosophical systems of orthodox Christian thinkers down to the time of St. Augustine. Other problems, too, claimed special attention, notably the question of the origin of the universe. From the theological controversies concerning the mysteries of the Trinity and the Incarnation, arose the discussion of the meaning of nature, substance, and person. From all these sources sprang the Christian Neo-Platonism of the great Alexandrian School, which included Clement and Origen, and the later phase of Christian Philosophy of the fourth and fifth centuries. In the philosophy of St. Augustine we have the greatest constructive effort of the Christian mind during the Patristic Era. It is a philosophy which centres in the problems arising from the nature of evil, and the nature and destiny of the human soul. The most crucial of these problems is that of the existence of evil. How can it be explained? Man is to be considered as an animal, and in the nature of things, evil exists. This problem was not discussed by the Later Schoolmen. The problem of evil is justified by the gradation of beings which results from the existence of imperfection, and which is essential to the harmony and variety of the universe in general. Another question which attends a good deal of prominence in St. Augustine's metaphysics is that of the origin of the world. All things, he teaches, were created at the beginning, material creatures as well as abstract. On the one hand, Buent and other scholastics, and men in a chronological series is merely the development in time of those "seeds of things" which were implanted in the material world at the beginning. However, St. Augustine is careful to make an exception in the case of the individual human soul. He avoids the doctrine of pre-existence which Origen had taught, and maintains that the individual soul originates at the same time as the body, although he is not prepared to decide definitively whether it originates by a distinct creative act or is derived from the souls of the child's parents (see Traducianism).

(4) Medieval Philosophy.—The first scholastic philosophers devoted their attention to the discussion of metaphysics and its problems. They used the metaphysical system which was studied in the schools, such as Porphyry's "Isagoge", and Boethius's translation of portions of Aristotle's "Organon". From these discussions they passed to problems of psychology, but it was not until the end of the twelfth century, when Aristotle's metaphysical treatise and his works on psychology became accessible in Latin, that scholastic metaphysics rose to the dignity and proportions of a system. By way of exception, John the Scot (see Eriugena), as early as the first half of the ninth century, developed a highly wrought system of metaphysical speculation characterized by idealism, pantheism, and Neo-Platonic mysticism. In the eleventh century the school of Chartres, under the influence of Platonism, discussed in a metaphysical spirit the problems of the nature of reality and the origin of the universe.

The philosophy of the thirteenth century, represented by Alexander of Hales, St. Bonaventure, Roger Bacon, Albert the Great, St. Thomas, and Duns Scotus, accorded to metaphysics its place as the science which completes and crowns the efforts of the mind to attain a knowledge of things human and divine. It acknowledged the importance of the relation which metaphysics bears, on the one hand, to the other portions of philosophy, and, on the other hand, to the science of theology. Fundamentally Aristotelian in its conception, the metaphysics of the golden age of scholasticism departed from Aristotle's teaching only to supply the defects and correct the faults which it detected in Aristotle's philosophy. Thus, it worked out on Aristotelian lines the problems of person and nature, substance and accident, cause and effect; it took up and carried to higher stages of development St. Augustine's recalculation of evil with the goodness of God; it elaborated in detail the question of the nature of matter and the origin of the universe by God's creative act. At the same time, the metaphysics of the schools was obliged to face new problems which were thrust on the attention of the schoolmen by the exegetical and educational activity of the universities. The line of distinction between Theism and Pantheism, discussed the question of fatalism and free will, and rejected the Arabian interpretation of Aristotle which jeopardized the doctrine of personal immortality. Towards the end of the scholastic period the appearance of the anti-metaphysical nominalism of Ockham and the scepticism of Descartes led the later schoolmen to adopt an extremely a priorism in philosophy, which more than any other single cause contributed to bring about the antagonism between metaphysics and natural science, which marks the era of scientific discovery. This condition, though widespread, was not, however, universal. Men like Suarez and other great commentators continued down to the seventeenth century to present in their metaphysical treatises the best traditions of the scholasticism of the thirteenth century.

(5) Modern Philosophy.—At the beginning of the modern era we find a divergence of opinion concerning the scope and value of metaphysical speculation. On the one hand, Descartes, and other metaphysicians, used metaphysics to designate the science of the essential properties of bodies, is opposed to the metaphysical philosophy of the scholastics, and chiefly because that philosophy gave too much prominence to final causes and the study of the mind. On the other hand, Leibniz, declaring that "philosophy is a tree, which has metaphysics for its root", understands that the science of metaphysics is based exclusively on the data of the subjective consciousness. Spinoza accepts this restriction, implicitly at least, although his explicit aim in philosophy is ethical, namely to present that view of reality which will lead to the deliverance of the soul from bondage. Leibniz takes a more open attitude towards metaphysics, and it is a metaphysics which will reconcile the idealism of Plato with the results of scientific research, and he aims at harmony.
the materialism of the atomists with the spiritual-ism of the scholastics. Locke, by limiting all our knowledge to the two sources, sensation and reflection, precludes the possibility of metaphysical speculation beyond the facts of experience and of consciousness: in fact, he maintains (Essay, IV, B) that all metaphys-ical discussion is “merely a word-twisting and, therefore “trifling”, have only a hypothetical value. This line of thought is taken up by Hume, who emphatically declares that “it is impossible to go beyond experience”, and by Mill, who maintains the hypothetical nature of all so-called necessary truth, mathematical as well as metaphysical. The same position is taken by the school of the “Neoclassical” school of the eighteenth century. Berkeley, although his professed aim was merely “to remove the mist and veil of words” which hindered the clear vision of the truth, passed from empirical materialism to a system of Platonic mysticism based on the metaphysical principle of causality.

Beginning with Kant, the question of the existence and scope of metaphysical science assumes a new phase. Metaphysics is now the science which claims to know things in themselves, and as Kant sees it, all post-Cartesian metaphysics is wrong in its starting-point. Kant holds that both the empiricist’s rejection of metaphysics and the dogmatist’s defence of it are wrong. The empiricist is wrong in supposing that we cannot go beyond experience: the dogmatist is wrong in affirming that we can go beyond experience by means of the theoretical reason. The practical reason, the faculty of moral consciousness, can alone take us beyond experience, and lead us to a knowledge of things in themselves. Practical reason, therefore, or the moral law, of which we are immediately conscious, is the only foundation of metaphysical science. The successors of Kant, namely, Fichte, Schelling, Hegel, Schopenhauer, and Von Hartmann, no matter how much they may differ in other respects, hold that the aim of metaphysics is to attain the ultra-empirical, or absolute, reality, whether this be called self (Fichte), the absolute, spirit or Idea (Hegel), the Will (Schopenhauer), or the Unconscious (Von Hartmann). Another group, the empirico-critics, who also acknowledge their dependence on Kant, assign to metaphysics the task of discussing the fundamental principles of knowledge by means of a critical examination of experience. Finally, there is the school of the Schellingian, which, in the only way, an inclination to use the word metaphysics to designate any view of reality which, transcending the limits of the particular sciences, strives to combine and relate the results of those sciences in a synthetic formula (Weltanschauung).

English philosophers either define metaphysics in terms of mental phenomena, as Hamilton does, or restrict its field of inquiry to the problem of the value of knowledge, thus confounding it with epistemology, or go over to the Hegelian point of view that metaphysics is the science of the genesis and development of dynamic categories of reality. The evolutionist school, represented by Herbert Spencer, while they deny the completeness, all rationality, attempt a general synthesis of all truth under the evolutionist formula, which is in reality metaphysics in disguise. Their effort in this direction is, at least, an acknowledgement of the justice of the scholastic claim that there must be a hegemonic science which unifies and co-ordinates in an articulated system the conclusions of all sciences, all reasoning, all tendencies of those sciences towards specialization which ends in fragmentation.

In so far as pragmatism, represented by James, Dewey, and Schiller, rejects absolute truth, it may be said to cut the ground from under metaphysics. Nevertheless, the latest phase of pragmatism, in which interest is shifted from the epistemological problem to the question, What is reality? is manifestly a step towards a rehabilitation of metaphysics. An analysis of reality is followed inevitably by an attempt to synthesize. The pragmatic synthesis, naturally, will have for its foundation neither the law of identity, that being is being, nor the law of contradiction, that two opposite terms cannot be simultaneously true, nor the law of the excluded middle, akin to that of the Woth-Theoris of Lotze. Of quite special interest is the attempt on the part of Professor Royce to interpret reality in terms of “loyalty”. With the exception, then, of Trendelenburg’s “Studies” and critical expositions of the text of Aristotle, the only philosophical literature in recent times which attempts the restoration of the nature and scope of metaphysics, is that which has come from the pens of the Neo-Scholastics. The Neo-Scholastic doctrine on at least one point in metaphysics is given in the following paragraph.

VIII. Doctrine of Being.—The three ideas which are most important in any system of metaphysics are Being, Substance, and Cause. These have a decisive influence, and may be said to determine the character of a metaphysical system. Substance and Cause are treated elsewhere under separate titles (see Cause and Substance). It will, therefore, be sufficient here to give the outlines of the scholastic doctrine of Being, which, indeed, is the most fundamental of the three, and decide what the scholastics teach regarding Substance and Cause.

(1) Description of Being.—Being cannot be defined: (a) because a definition, according to the scholastic formula, must be “by proximate genus and ultimate difference”, and Being, having the widest extension, cannot be included in any genus; (b) because a definition is the analytico-comprehensive of the concept. The scholastics teach regarding Being, having the least comprehension, is, as it were, indivisible in its comprehension, resisting all efforts to resolve it into simpler thought elements. Nevertheless, Being may be described. The word “Being”, taken either as a participle or as a noun, has reference to the “act” of existence. Whatever exists, therefore, is a Being, whether it exists in the mind or outside the mind, whether it is actual or only potential, whether it requires a subject in which to inhere or is capable of subsisting without a subject of inherence. Thus, the broadest division of Being is into, notional, which exists only in the mind (ens rationis), and, real, which exists independently of the created mind (ens rei). Realities of the real, or potential, are potential and the actual. This is an important point of scholastic teaching, which is sometimes overlooked in the exposition and still more in the criticism of scholasticism. For the scholastics, the real world extends far beyond the actual world of our experience or even of possible experience. Beyond the realm of actually existing things there are not merely tendencies, potentials, and possibilities which are truly real. The oak is really present, though only potentially, in the acorn; the painting is really, though only potentially, present, in the mind of the artist; and so, in every case, before the effect becomes actual it is really present in the cause in the measure in which its actual existence depends on the ex.
dent, body, plant, tree, etc. In the first place, the predicate being is never univocally affirmed of lower concepts, because it is not a genus. Neither is it predicated equivocally, because its meaning when predicated of substance, for example, is not entirely distinct from anything distinct from being added to being, what is added is "nothing", and there is no addition. The schoolmen, therefore, teach that the lower concept simply brings out in an explicit manner a mode or modes of being which are contained implicitly but not expressed in the higher concept, Being. The comprehension, for example, of substance is greater than that of being. Nevertheless it is not correct to say that, Substance = Being + a, for if a is distinct from the term Being, to which it is added, it must be Nothing. The truth, then, is that Substance brings out explicitly a mode (namely the power of existing without a subject in which to inhere) which is neither explicitly affirmed nor explicitly denied but only implicitly contained in the concept of Being.

(3) Being and Nothing.—Being, therefore, has a comprehension, which, though it is the least of all comprehensions, is definite. It is not a bare, empty concept, and, therefore, equal to "nothing", as the Hegelians teach. This doctrine of the scholastics is the line of demarcation between Aristotelianism on the one hand and Hegelianism on the other. Hegel denies that the concept of Being has a definite comprehension, that, therefore, the fundamental law of thought as well as the basic principle of reality is the identity of Being with itself: Being = Being. A is A, or Everything is what it is. Hegel does not deny that this Aristotelian principle is true. He holds, however, that Being has an indepen-dent comprehension, a comprehension, a concept, dynamic or, as it were, fluent. Therefore, he says, the principle Being = Being. A is A, or Everything is what it is, is only part of the truth, for Being is also equal to Nothing, A = not.-A, Everything is its opposite. The full truth is: Being = Becoming; no static or fixed formula is true; everything is constantly passing into new analogies and consequences which result from this fundamental divergence of doctrine regarding Being are enormous. Not the least serious of these is the Hegelian conclusion that all reality is dynamic and that God Himself is a process.

(4) Being, Existence, and Essence.—As wisdom (sapience) is that by which a person is wise (sapere), so essence (essentia) is that by which a thing is (esse). If one inquires what is the intrinsic cause of a person being wise, the answer is, wisdom; if one asks what is the intrinsic cause of existence, the answer is, essence. Essence, therefore, is that by which a thing is what it is. It is the source of all the necessary and universal properties of a thing, and is itself necessary, universal, eternal. The act of being, in other words, refers to existence, in the same way as the act to which wisdom refers, is the exercise of wisdom (sapere). Both existence and essence are realities, the one in the ontitative order, the other in the qualitative order. Of course, the existence of a notional being (ens rationis) is only notional; its essence, too, is notional. But in the case of a real, created by God, the existence is one kind of reality, a real actuality, and the essence is another kind of reality, a reality in the potential order. This doctrine of the real distinction between essence and existence in real created beings is not admitted by all scholastic philosophers. Suarez, for instance, and his school, hold that the distinction is only logical or notional; the Scotists, too, maintain that the distinction in question is less than real. The Thomists, on the contrary, hold that in God alone essence and existence are identical, that in all creatures there is a real distinction, because in creatures existence is participated, diversified, and multiplied, not by reason of itself but by reason of the essence which it has. The question of the nature of the question itself, but also concerning the interpretation of the words of St. Thomas, although there seems very little ground for denying that in the work "De Ente et Essentia" the Angelic Doctor holds a real distinction between essence and existence.

(5) Transcendental Properties of Being.—Equally extraneous with the concept of Being are the concepts good, true, one, and beautiful. Every being is good, true, one, and beautiful, in the metaphysical sense, or as the scholastics expressed it, Being and Good are convertible, Being and True are convertible, etc. (Bonum et ens convertuntur, etc.). Goodness, in this sense, means the fullness of entity or perfection which belongs to each being in its own, New York (1887). Translation. (Oxford, 1908); commentaries by St. Thomas, S. Metastasio, Pietro, Italian poet, b. at Rome, 1698; d. at Vienna, 1782. Of humble origin, his father, once a Papal soldier, was later a pork-butcher; Metastasio was placed in the shop of a goldsmith to learn his craft. By some chance he attracted the attention of the jurist, liltterateur, Vincenzo Gravina, who took him in charge, and Grezizing his name of Trapassi, into the syndic, he gave him a solid education. At his death in 1718 he left to his protegé a considerable sum of money, which the latter soon dissipated. Then he was compelled to apprentice himself at Naples to a lawyer, who, however, found the apprentice more prone to write verses than to study legal codes. The beginning of Metastasio's real career is marked by the composition, at the request of the Vicerey of Naples, of his musical drama, the "Orti Espe- ridi", which had signal success. The leading part therein was played by the famous actress, la Romanina (Mariana Benti-Bulgarelli). She at once became attached to the young poet, commissioned him to write a new play, the "Didone abandona", had him taught music by a noted teacher, and took him to Florence and Venice with her on her professional tours.

At Vienna the Italian melodramatist, Apostol Zeno, was about to relinquish his post as imperial poet, and in 1730 he recommended that Metastasio be appointed his successor. With this recommendation and with the aid of the Countess of Althann, who remained his patroness during her lifetime, he obtained the appointment. Thereafter, and especially during the decade between 1730 and 1740, Metastasio was engaged in the composition of his many melodramas (over seventy in number), his oratorios, cantate, canzonette, etc. Among the most noted of his melodramas—which announce the coming opera—are: "Endimione", "Orti Espe-ridi", "Galatea", "Angelica", "Didone", "Siroe", "Ca-tone", "Artaserse", "Adriano in Ven-" ice with her on her professional tours.

Metallopolis, a titular see of Phrygia Pacatiana, in Asia Minor. The inscriptions make known a Phrygian town named Motella, which name is connected with the Phrygian feminine proper name Motalis and the Cilician masculine Momales, as also with Mutulis, or Mt'lli, the king of Commagene, and with the Greek Comagene.

Some of these inscriptions were found in the village of Medea, in the vilayet of Brousse, which evidently preserves the ancient name. Motella seems to be the town which Hierocles (Synedemus, 668, 6) calls Pulcherianopolis; it may be supposed to have been raised to the rank of a bishopric by the Byzantine Patriarch, 414-52, and its suffragans in 553, Justinian raised Hieropolis to metropolitan rank, and attached to it a certain number of suffragans sees previously dependent on Laodicea. Among these are the "Notitiae Episcopatum" mention, from the ninth to the twelfth or thirteenth century, this same Motella, which they call Metallopolis, and even once Metallopolis. An inscription informs us of Bishop Michael, in 596, and another, of Bishop Cyriacus, perhaps in 667. At the Council of Nicea, 787, the see was represented by Eudoxius, a priest and monk. Bishop Michael attended the two councils of Constantinople in 869 and 879.

Petitred. Metempsychosis (Gr. μεταμόρφωσις. Lat. metempsychos-is: Fr. metempsycose: Ger. seelenwanderung), in other words the doctrine of the transmigration of souls, teaches that the same soul inhabits in succession the bodies of different beings, both men and animals. It was a tenet common to many systems of philosophic thought and religious belief widely separated from each other both geographically and historically. Although in modern times it is associated among civilized races almost exclusively with the countries of Asia and particularly with India, there is evidence that at one period or another it has flourished in almost every part of the world; and it still prevails in various forms among savage nations scattered over the globe. This universality seems to mark it as one of those spontaneous or instinctive beliefs by which man's nature responds to the deep and urgent problems of existence; whilst the numerous and richly-coloured forms in which it assumes is a reflection of the mind and the many-coloured mythology in which it has clothed itself, show it to be capable of powerfully appealing to the imagination, and of adapting itself with great versatility to widely different types of mind. The explanation of this success seems to lie partly in its being an expression of the fundamental belief in-
mortality, partly in its comprehensiveness, binding together, as for the most part it seems to do, all individual existences in one single, unbroken scheme; partly also in the unrestrained liberty which it leaves to the mythologising fancy.

History.—Egypt. Herodotus tells us in a well-known passage that the Egyptians were the first to assert the immortality of the soul, and that it passes on the death of the body into another animal; and that when it has gone the round of all forms of life on land, in water, and in air, then it once more enters a human body born for it; and this cycle of the soul takes place in three thousand years" (ii. 123). That the doctrine first originated that the Egyptians are unlikely. It also most certainly passed from Egypt into Greece, but the same belief had sprung up independently in many nations from a very early date. The accounts of Egyptian metempsychosis vary considerably: indeed such a doctrine was bound to undergo modifications according to changes in the national religion. In the "Book of the Dead," 3 it is connected with the notion of a judgment after death, transmigration into infra-human forms being a punishment for sin. Certain animals were recognized by the Egyptians as the abode of specially wicked persons and were on this account, according to Plutarch, preferred for sacrificial purposes. In Herodotus' account given above, this ethical note is not made. The form of Egyptian immortality is an elaborate and necessary cosmic process. Plato's version mediates between these two views. He represents the Egyptians as teaching that ordinary mortals will, after a cycle of ten thousand years, return to the human form, but that an adept in philosophy may hope to accomplish the process in three thousand years. There was also a higher form of Egyptian immortality, the individual being regarded as an emanation from a single universal principle to which it was destined to return after having completed its "cycle of necessity." There are traces of this doctrine of a cosmic cycle in the Fourth Eclogue of Vergil. It has been thought that the custom of embalming the dead was connected with this form of the doctrine, the object being to preserve the body intact for the return of the soul. It is probable, indeed, that the belief in such a return helped to confirm the practice, but it can hardly have provided the sole motive, since we find that other animals were also frequently embalmed.

India.—The doctrine of transmigration is not found in the oldest of the sacred books of India, viz., the Rig-Veda; but in the later works it appears as an uncontradicted dogma, especially in the Upanishads, in which it is one of the two great religions of India. (1) Brahmans. In Brahmans, we find the doctrine of world-cycles, of annihilations and restorations destined to recur at enormous intervals of time; and of this general movement the fortunes of the soul are but an incident. At the same time, transmigrations are determined by moral worth. Every act has its reward in the next life. By irresistible law, evil deeds beget unhappiness, sooner or later; these, indeed, are nothing else but the slowly-ripened fruit of conduct, which every man must eat. They thus explain the anomalies of experience presented in the misfortunes of the good and the prosperity of the wicked. Each is "eating the fruit of his past actions." Actions done perhaps in some far-remote existence. Such a belief may tend to patience and resignation in present suffering, but it has a distinctly unpleasant effect upon the Brahmanical outlook on the future. A pious Brahman cannot assure himself of happiness in his next incarnation; there may be the penalty of great unknown sin still to be faced. But gratitude is union with the Divine, born from the series of births, but no degree of actual holiness can guarantee this, since one is always exposed to the danger of being thrown back either by sin past or sin to come, the fruit of which will have to be eaten, and so on, we might be tempted to imagine, ad infinitum. Hence a great fear of re-incarnation prevails.

(2) Buddhism.—Brahmanism is bound up with caste, and is therefore strongly aristocratic, insisting much on innate superiorities. Buddhism, on the contrary, cute through caste-divisions and asserts the paramount importance of "works," of individual effort, though always with a background of fatalism which the denial of a personal Providence entails. According to the Buddhist doctrine, the ambition to rise to the summit of existence must infallibly be fulfilled; and the mission of Guatama was to teach the way to its attainment, i.e., to Buddha-ship and Nirvana. It is only through a long series of existences that this consummation can be reached. Guatama himself had as many as five hundred and fifty transmigrations in the Buddhist chronology in the Bennurahuc 4.

The characteristic feature in Buddhist metempsychosis is the doctrine of Karma, which is a subtle substitute for the conception of personal continuity. According to this view it is not the concrete individuality of the soul that survives, and migrates into a new life, but only the karmas, or action, i.e., the sum of the man's deeds, his merits, the ethical resultant of his
previous life, its total value, stripped of its former individuation, which is regarded as accidental. As the karma is greater or less, so will the next transmigration be a promotion or a degradation. At times this degradation may be so extreme that it was embodied in an inanimate form, as in the case of Gautama's disciple who, for negligence in his master's service, was reduced after death to the form of a broomstick.

Later Jewish Teaching.—The notion of soul-wandering is familiar to the Jewish Rabbis. They distinguish two kinds of sin: (1) Guf, the body, in which the soul was tied down to a life-tenancy of a single body; (2) Ibbur, in which souls may inhabit bodies by temporary possession without passing through birth and death. Josephus tells us that transmigration was a doctrine of the Pharisees, who taught that the righteous should be allowed to return to life, while the wicked were to be doomed to eternal imprisonment. It was their gloomy conception of Sheol, like the gloomy Greek conception of Hades, that forced them to this shift for a compensation to virtue. On the other hand some of the Talmudists invoke endless transmigration as a penalty for crime. The description of the soul's journeys over land and sea are eloquent of a wealth of imagery verging on the grotesque. The retributive purpose was rigorously maintained. "If a man hath committed one sin more than his good works, he is condemned to transformation into some shape of lower life." Not only so, but if his guilt had been extreme, he might be doomed to an inanimate existence. The following is an extract from the "guiltiest of the guilty". "The dark tormentors rush after them with goads and whips of fire; their chase is ceaseless; they hunt them from the plain to the mountain, from the mountain to the river, from the river to the ocean, from the ocean round the circle of the earth. Thus the tormented fly in terror, and the tormentors follow in vengeance until the time decreed is done. Then the doomed sink into dust and ashes. Another beginning of existence, the commencement of a second trial, awaits them. They become clay, they take the nature of the stone and the mineral; they are water, fire, air; they roll in the thunder; they float in the cloud; they rush and fly. Bodily existence, according to the Gnostics, is the gullet of the guilty." The dark tormentors rush after them with goads and whips of fire; their chase is ceaseless; they hunt them from the plain to the mountain, from the mountain to the river, from the river to the ocean, from the ocean round the circle of the earth. Thus the tormented fly in terror, and the tormentors follow in vengeance until the time decreed is done. Then the doomed sink into dust and ashes. Another beginning of existence, the commencement of a second trial, awaits them. They become clay, they take the nature of the stone and the mineral; they are water, fire, air; they roll in the thunder; they float in the cloud; they rush and fly. Bodily existence, according to the Gnostics, is the gullet of the guilty.

Advocates of metempsychosis have not been wanting in modern times, but there is none who speaks with much conviction. The greatest name is Lessing, and his critical mind seems to have been chiefly attracted by the doctrine, from a point of view into which it had fallen, and the inconclusiveness of the arguments used against it. It was also maintained by Fourier in France and Soame Jenyns in England. Leibnitz and others have maintained that all souls were created from the beginning of the world; but this does not involve migrations.

Savage Races.—Savage races is a touchy word very briefly on the abundant data furnished by modern anthropological research. Belief in transmigration has been found, as stated above, in every part of the globe and at every stage of culture. It must have been almost universal at one time among the tribes of North America, and it has been found also in Mexico, Brazil, and in the various parts of the American continent; it has also been found among the aborigines of Australia and New Zealand, in the Sandwich Islands and many parts of Africa. It often takes the form of a belief in the return of long-departed ancestors, and thus provides a simple explanation of the strange facts of heredity. On the birth of a child this parents eagerly believe to be the reincarnation of its identity, which, when discovered, will determine the future of the child and its place in their affections. Sometimes the mother is informed beforehand in a dream which ancestor of the house is about to be born of her. The belief in the soul as an independent reality is common among savage races. The departed soul was thought to have walked through the world and then a time after death. Hence, e. g., among the Algonquins, if a speedy return was desired, as in the case of little children, the body was buried by the roadside that it might find a mother in some of the passers-by. A curious freak of superstition is the belief in many of the dark races, e. g., in Australia, that their fair-skinned brethren from the other world are men of their own race. Among the uneducated classes of India, as Sir A. Lyall tells us, the notion that witches and sorcerers, living or dead, have the power of possessing the bodies of animals still prevails. A similar idea prompted the Sandwich Islanders to throw the bodies of their dead to the sharks in the hope of thus rendering them less hostile to mankind. Combined with this, there is the imperative moral demand for an equitable future retribution of rewards and punishments in accordance with good or ill conduct here.
The doctrine of transmigration satisfies in some degree both these virtually instinctive faiths. (3) As mentioned above, it offers a plausible explanation of the phenomena of heredity. (4) It also provides an explanation of some features of the infra-rational creation which seems to ape in so many points the good and evil qualities of human nature. It appears a natural assumption to adopt the view that whatever a human being sins are, in fact, nothing else than embodiments of the human characters which they typify. The world thus seems to become, through and through, moral and human. Indeed, where the belief in a personal Providence is unfamilial or but feebly grasped, some form of metempsychosis, understood as a kind of ethical egoism in the very concrete and almost materialistic sense, assumed as a necessary making good of the doctrine of the unity in the universe is at least an organic and necessary closing up of the whole system.

MICHAEL MAHER.

Methodism, Sir Thomas, knight, confessor of the Faith, d. in York Castle, 1573. He was eldest son of Thomas Metham, of Metham, Yorkshire, and Grace, daughter of Thomas Pudsey, of Barford, and was twice married, first to Dorothy, daughter of George Darcy and Meinnell, and then to Edith, daughter of Nicholas Palmes of Naburn. He was a devoted youth of the knight of the carpet, 2 Oct., 1553, the day after Queen Mary’s coronation. Through his second son by his first wife, George, he was grandfather of Father Thomas, of Metham, the Ditch. By 1 Aug., 1565, he and his second wife had been sent to gaol “for contempt of Her Majesty’s ordinances concerning the administration of divine service and the sacraments.” On 6 Feb. 1569-70 an unknown correspondent writes to Sir William Cecil from York—

“We have here Sir Thomas Metham, a most wifful papist, who utterly refuses to come to service, receive the Communion or read any books except approved by the Church of Rome, or to be conferred with at all. He refuses to be tried before the Commissioners for cause ecclesiastical; he uses the corrupt Lutonvaine books, and maintains at Lutonvaine two of his sons, with whom he corresponds. It is four years since he and his wife were first caught, and since he was committed to ward, since which he has daily grown more wealthy and wifful, and now seems utterly incorrigible. He does much hurt here, and is reverenced by the papists as a pillar of their faith. I caused him to be committed to the Castle, where he remains and does harm, yet would have done more if he had lived at large. If you would be a man of his removal, you would take away a great occasion of evil in these parts.” In 1587 Lady Metham was still a recusant.

JOHN B. WAINWRIGHT.

Methodism, a religious movement which was originated in 1739 by John Wesley in the Anglican Church, and subsequently gave rise to numerous separate denominations.

General Position and Peculiarities.—The fact that John Wesley and Methodism considered religion primarily as practical, not dogmatic, probably accounts for the absence of any formal Methodist creed. The “General Rules,” issued by John and Charles Wesley on 1 May, 1743, stated the conditions of admission into the societies organized by them and known as the “United Societies”. They bear an almost exclusively practical character, and require no doctrinal test of the candidates. Methodism, however, developed its own theological system as expressed in two principal standards of orthodoxy. The first is the “Twenty-five Articles” of religion. They are an abridgment and adaptation of the Thirty-nine Articles of the Established Church of England and form the only doctrinal standard strictly binding on American Methodists. Twenty-four of these articles were prepared by John Wesley for the Church in America and adopted at the Conference of Baltimore in 1784. The article which recognizes the political independence of the United States (Art. XXIX) was added in 1804. The second standard is John Wesley’s published sermons and his “Notes on the New Testament”. These writings were imposed by him on the British Methodists in his “Deed of Declaration” and accepted by the “Legal Hundred”. The American Church, while not strictly bound to them, highly esteems and extensively uses them. More fundamental for all Methodists than these standards are the inspired Scriptures, which are declared by them to be the sole and sufficient rule of belief and practice. The dogmas of the Trinity and the Divinity of Jesus Christ are upheld. The universality of original sin and the consequent partial deterioration of human nature find their efficacious remedy in the universal distribution of grace. Man’s free co-operation with this Divine gift is recognized. The power of sin, which is offered to all, may be freely rejected. There is no room in Methodism for the rigorous doctrine of predetermination as understood by Calvinism. While the doctrine of justification by faith alone is taught, the performance of good works enjoined by God is commended, but the doctrine of works of supererogation is completely repudiated.

Only two sacraments are admitted: Baptism and the Lord’s Supper. Baptism does not produce sanctifying grace in the soul, but strengthens its faith, and is the sign of a regeneration which has already taken place in the recipient. Its administration to infants is commanded because they are already members of the Kingdom of God. The Eucharist is a memorial of the Passion and Death of Jesus Christ, who is not really present under the species of bread and wine, but is received in a spiritual manner by believers. The sacrament is administered under both kinds to the laity. The “witness of the Spirit” to the individual believer is the guarantee of the communion. These are distinctive doctrines of Methodism. This assurance is a certainty of present pardon, not of final perseverance. It is experienced independently of the sacraments through the immediate testimony of the Holy Spirit, and does not preclude the possibility of future transgressions. Transgressions of an involuntary character are also compatible with another characteristic doctrine of Methodism that of perfection or complete sanctification. The Christian, it is maintained, may in his life reach a state of holiness which excludes all voluntary offence against God, but still admits of growth in grace. It is therefore a state of perfectibility rather than of stationary perfection. The invocation of saints and the veneration of relics and images are rejected. While the Eucharist is denied in the Twenty-five Articles (Art. XIV), an intermediate state of purification, for persons who never heard of Christ, is admitted to-day by some Methodists. In its work of conversion Methodism is aggressive and largely appeals to religious sentiment; camp-meetings and revivals are important forms of evangelism. At least in America, the religious service which Wesley imposed upon his followers were the strict observance of the Lord’s Day, the use of few words in buying and selling, and abstinence from all intoxicating drinks, from all purely worldly amusements, and from costly apparel. The church service which
he prepared for them was an abridgment and modification of the Book of Common Prayer, but it never came into universal use, sentiment among Methodists being rather unfavourable to any set form of liturgy. In America the minister is divided into two classes: (a) two 'pastoral sessions', which settle clerical and disciplinary questions, and in which laymen are excluded; (b) the 'representative session', in which clergy and laity discuss financial and external administrative questions. In the American Methodist Episcopal Church the administrative system is organized as follows: (1) the 'Quarterly Conference', similar in composition to the circuit-meeting. It controls the affairs of every individual church, and holds its deliberations under the direction of the 'district superintendent' or his representative; (2) the 'Annual Conference', at which several 'districts' are represented by their itinerant preachers under the presidency of the bishop. It elects preachers, pronounces upon candidates for ordination, and enjoys disciplinary power; (3) the 'Quadrennial General Conference', endowed with the highest legislative and judicial authority and the right of episcopal elections. In recent years the holding of General Methodist conferences has been inaugurated. They are representative assemblies of the various Methodist denominations, but have no legislative authority. The first section of the conference was held in London in 1850, the second met in Washington in 1891, and the third again in London in 1901. Toronto, Canada, will be the meeting-place of the fourth conference in 1911.

III. History. — (1) In the British Isles. — The names of three ordained clergymen of the Anglican Church are prominent in the early history of Methodist movement. John Wesley was the founder, organizer, and propagator of the movement; John and Charles Wesley were his brothers, the hymn-writer, and George Whitefield, the eloquent preacher and revivalist. John and Charles Wesley were born at Epworth, Lincolnshire, the former on 17 June, 1703, and the latter on 18 December, 1707 (O. S.). In 1714 John began his theological studies at Oxford. In 1720 he went to Oxford to continue his studies. He was ordained to the diaconate in 1725, and chosen fellow of Lincoln College, Oxford, in the following year. His ordination on 22 September, 1728, was both preceded and followed by a period of ministerial activity in his father's parish at Epworth. In February, 1728 (or 29), he joined the little band of students organized by his brother Charles for the purpose of studying the Scriptures, and practising their religious duties with greater fidelity. John became the leader of this group called in derision by fellow-students 'the holy club', 'the Methodists'. It is to this that Methodism owes its name, but not to the association of John Wesley; it was disband ed. John and Charles Wesley proceeded to London where they received a call to repair as missionaries to the Colony of Georgia. They sailed from Gravesend on 21 October, 1735, and on 5 February, 1736, landed at Savannah. The deep religious impression made upon John by some Moravian fellow-townsmen at the meeting of the General Conference (Spanenberg) in Georgia went not without influence on Methodism. Returning to England in 1738, whither his brother had preceded him, he openly declared that he who had tried to convert others was himself not yet converted. In London he met another Moravian, Peter Böhler, attended the meetings of the Moravian Fetter Lane Society, and was converted (i.e., obtained and experienced saving faith) on 24 May, 1738. He then proceeded to Herrnhut in Saxony to make a study of the chief settlement of the Moravians. In 1739 Wesley organized the first Methodist Society, laid the foundation of the first separate place of worship at Bristol, and also opened a chapel (The Foundery) in London. As the pupils of the Established Church were chidden with Whitefield, the latter took the decisive step of preach-
methwism almost immediately followed his example. At the very inception of the Methodist movement an important doctrinal controversy arose between Whitfield and John Wesley regarding predestination. The former held Calvinistic views, believing in limited election and salvation, while the latter emphasized the doctrine of universal redemption. This difference in opinion placed a permanent characteristic doctrinal difference between Arminian Methodism and the Calvinistic Methodist Connexion. Whitfield gave his support to the latter movement which owed its name to the protection and liberal financial assistance of the Countess of Huntingdon (1707–91).

Although Wesley always intended to remain within the Church of England, circumstances gradually led him to give his evangelical movement a separate organization. The exclusion of his followers from the sacraments by the Anglican clergy in 1740 overcame his hesitation to administer them in his own meeting-rooms. The increase in the number of Societies led the following year to the institution of the lay preachers, who became an important factor in the success of the Methodist propaganda. The year 1742 saw the first Annual Conference held. Ten years later the first annual conference was held. Desirous of ensuring the perpetuation of his work, he legally constituted it his successor in 1784. By a deed of declaration filed in the High Court of Chancery, he vested the right of appointing ministers and preachers in the conference composed of one hundred preachers. This "Legislated" enjoyed, in respect to the conference, the power of filling vacancies and of expelling unworthy members. On the refusal of the Bishop of London to ordain two ministers and a superintendent for America, Wesley, convinced that bishop and presbyter enjoyed equal power in the matter, performed the ordination himself (1784).

Important problems calling for solution arose immediately after Wesley's death. In the first place the want of his personal direction had to be supplied. This was effected in 1791 by the division of the country into districts and the institution of the district conferences. Wesley's disciples finally acquired power under the jurisdiction of the conference. As the administration of the sacraments by Methodist clergymen had not yet become the universal rule, the churches that did not enjoy this privilege insisted upon its concession. The question was permanently settled by the "Plan of Pacification" in 1798. It granted the right of administering the sacraments to all churches in which the majority of the trustees, stewards, and leaders pronounced in favour of such practices. The insistent demand of Alexander Kilham (1762–98) and his followers for more extensive rights for the laity received a temporary and partly favourable answer at the important conference of Leeds in 1797. The establishment of an organ in Brunswick Chapel at Leeds (1828) and the foundation of a theological school for the formation of young preachers (1834) were merely occasions which brought to a head the growing discontent with Bunting and the central authority. The controversies which resulted in these two cases were of but minor importance; they were overshadowed by events in the years 1849–56. This period of strife witnessed the circulation of the so-called "Fly-Sheet", directed against Bunting's personal rule, the expulsion of the persons responsible for their publication, and the loss of at least 100,000 members to the Wesleyan Methodist Connexion. Some of these affiliated with minor branches, but the majority was part of the Methodist Church.

The controversies were followed by a period of peaceful evolution extending to our own day. The increase in the number of theological seminaries among British Methodists has emphasized the distinction between clergy and laity and points to more complete internal organization. A fact which reveals a similar tendency is the institution of deaconesses. They were introduced in the Wesleyan Methodist Church in 1890.

(2) Methodism in the United States.—The history of Methodism in the United States does not date back to the visit of John and Charles Wesley to Georgia, but begins only in 1766. In that year Philip Embury, a local preacher, at the request of Mrs. Barbara Heck, delivered his first sermon in his own house at New York. They had both come to America in 1760 from Ireland, whither their Palatine ancestors had fled from the devastating wars of Louis XIV. Only four persons were present at the first sermon, but the number soon increased, especially after the arrival of Captain Thomas Webb, another local preacher. The latter displayed a stirring zeal, and in 1768 the first Methodist church in the country was organized. Almost simultaneous with this introduction of Methodism into New York was its planting in Maryland. Webb introduced it in Philadelphia, and it spread to New Jersey and Virginia. In 1769 Wesley, in response to repeated appeals for helpers, sent over two preachers, Joseph Filmoor and Richard Boardman. The latter was ordained at Philadelphia (1771) and Thomas Rankin (1772). The first conference convened at Philadelphia in 1773, recognized the authority of John Wesley, and prohibited the administration of the sacraments by Methodist preachers. The total membership reported was 1160. An increase was recorded in the two following conferences, also held at Philadelphia, in 1774 and 1775 respectively. But the Revolution impeded the progress of Methodism. Owing to the nationality of most of its preachers and to the publication of Wesley's pamphlet against the independence of the colonies, it was looked upon as an English product and treated accordingly. Coke arrived in New York in November, 1784, and that same year what has become known as the Christian conference was convened at Baltimore. From it dates the organization of the Methodist Episcopal Church. Wesley's plans and instructions were laid before this assembly, and his articles of faith and his liturgy adopted. As Abury refused to be ordained without previous election and a unanimous choice, a title for which, against Wesley's will, that of bishop was substituted in 1788. The rapid increase of the denomination about this time is indicated by the membership of 66,000 reported to the conference of 1792. The growth of the Church continued with the increase in population; but questions of expediency, race, and government caused secessions. The slavery agitation especially resulted in momentous consequences for the denomination. It began at a very early date, but reached a crisis only towards the middle of the nineteenth century. At the general conference held in New York in 1844, Bishop J. O. Andrew was suspended from the exer-
slave-holding states from the general body now appeared unavoidable, and a "Plan of Separation" was elaborated and accepted. The Southern delegates held a convention at Louisville, Kentucky, in 1845, at which the "Methodist Episcopal Church, South" was formed. The new organization, after a period of progress, suffered heavily during the Civil War. Some branches of Methodism in the Northern States and some Southern branches of Episcopalian Methodism have assumed a very friendly character. There is a large measure of cooperation particularly in the foreign mission field. A joint commission on federation is in existence and in May, 1910, it recommended the creation of a federal council (-i.e., a joint court of law) for the federation in the conference of the Methodist Episcopal Church, South.

(3) Methodism in Other Countries.—(a) American.—The first apostle of Methodism in Newfoundland was Lawrence Coughlan, who began his work there in 1765. It was only in 1785, however, that the country received a regular preacher. The evangelization of Nova Scotia, where the first Methodists settled in 1771, was begun later (1781), but was carried on more systematically. In the year 1786 a provincial conference was held at Halifax. In spite of their early relations with American Methodism, Newfoundland and the eastern provinces of Canada were after 1799 supplied with preachers from England, and came under English jurisdiction. In 1835 the connexion held a conference, the Wesleyan Methodist Conference of Eastern British America. The Provinces of Ontario and Quebec received Methodism at an early date from the United States. Philip Embury and Barbara Heck moved to Montreal in 1774, and William Losee was in 1790 appointed preacher to these provinces. The War of 1812-4 interrupted the work undertaken by the Methodist Episcopal Church in this section. The settlement of numerous English Methodists in these provinces after the restoration of peace brought about difficulties respecting allegiance and jurisdiction between the English and American branches. The result was that the Methodist Episcopal Church organized its congregations into a separate conference in 1824, and two years later granted them complete independence. Immigration also brought members of the minor Methodist bodies to Canada: the Wesleyan New Connexion, the Bible Christians, and the Primitive Methodists. But in 1874 the Wesleyan Methodist Church of Canada and the Primitive Methodist Church of Canada were combined. The other separate bodies joined the union a little later (1883-4), thus forming the "Methodist Church of Canada," which includes all the white congregations of the Dominion. The "British Methodist Episcopal Church," which still maintains a separate existence, has only coloured membership. It was formerly a part of the Methodist Episcopal Church, and gained complete independence in 1886. Bermuda, where George Whitefield preached in 1748 and J. Stephenson appeared as the first regular preacher in 1799, forms at present a district of the Methodist Church of Canada. South America was entered in 1835, when the Rev. F. E. Pitts visited Rio de Janeiro, Buenos Ayres, and other places, and organized several societies. The special Southern American Conference was established in 1893, and supplemented in 1897 by the Western South American Mission Conference. Missionary work was inaugurated in Mexico in 1873 by William Butler.

(b) European.—Methodism was introduced into France but it has never succeeded in getting a strong foothold there. In 1852 France was constituted a separate conference affiliated to British Methodism. In 1907 the American Church organized a conference there. From France Methodism spread to Italy in 1852. Some years later (1861) two missionaries, Green and Piggott, were sent from England to Florence and founded several stations in Northern Italy. The Methodist Episcopal Church started a missionary enterprise in Italy in 1871, but has never attained great success. The first Methodist missionary to Germany was G. Müller. He started his preaching in 1830 and gained some adherents mainly in Württemberg. Methodist missions are maintained also in Switzerland, Scandinavia, Russia, Bulgaria, Spain, and Portugal.

(c) Australasian, Asiatic and African.—Methodism has had considerable success in Australasia. It appeared at an early date, not only on the Australian continent but also in some of the South Sea Islands. The first class was formed in Sydney in 1812, and the first conference in the colony was held in 1813. The Church spread to Tasmania in 1820, to Tonga in 1822, to New Zealand in 1823, and in 1835 Cargill and Cross began their evangelistic work in the Fiji Islands. In 1854 Australian Methodism was formed into an affiliated conference of England, and in 1876 became independent.

The foundation of the first Methodist missions in Asia (1814) was due to the initiative of Thomas Coke. Embarking on 30 December, 1813, at the head of a band of six missionaries, he died on the voyage, but the undertaking succeeded. The representatives of English Methodism were joined in 1856 by William Butler of the Methodist Episcopal Church. In 1817 this same Church sent J. D. Collins, M. C. White, and Matthew Machin to China. The Church of the Methodists was founded in the Philippine Islands and in Japan, where the Methodist Church of Japan was organized in 1907.

George Warren left England for Sierra Leone in 1811. The American Church entered the field in 1833. South Africa, where Methodism is particularly well represented, was erected in 1882 into an affiliated conference of the English Church.

IV. Other Methodist Bodies.—Secessions from the main bodies of Methodism followed almost immediately upon Wesley's death. The following originated in England:

(1) The Methodist New Connexion was founded at Leicester in 1797 by Alexander Kilham (1762-98); hence its members are also known as "Kilhamites." It was the first organized secession from the main body of English Methodism, and started its separate existence with 5000 members. Its foundation was occasioned by the conference's refusal to grant laymen the extensive rights in church government claimed for them by Kilham. The sect never acquired any considerable body of followers.

(2) The Primitive Methodists, who met with greater success than the New Connexion, were organized in 1810. Camp-meetings had been introduced into England from America, but in 1807 the conference pronounced against them. Two local preachers, Hugh Bourne and William Clowes, disregarding this decision, publicly held meetings and were expelled. They then established this new body, characterized by the preponderating influence it grants laymen in church government, the admission of women to the pulpit, and great simplicity in ecclesiastical and private life. According to the "Methodist Year-book" (1910) it has 219,343 members.

The Irish Primitive Wesleyan Methodists must not be confounded with the "Primitive Methodists" just spoken of. The former were founded in 1816 by Adam Averell, and in 1878 again united with the Wesleyan Methodists.

(3) The Bible Christians, also called Brynites from the name of their founder William O'Bryan, were organized as a separate body by C. H. Cowell in 1816. Like the Primitive Methodists, they gave great influence in church affairs to laymen and liberty of preaching to women. Although they spread from England to the colonies, their aggregate membership was never very large.

(4) The Wesleyan Reform Union grew out of the
pastoral supervision of the Methodist Episcopal Church, but in 1820 formed an independent Church differing but little from the parent body (commun. 545,681).

(8) The Union American Methodist Episcopal Church, organized in 1813 at Wilmington, Delaware, had for its founder the coloured preacher, Peter Spencer (membership, 18,500).

(9) The African Methodist Episcopal Church has existed as an independent organization since 1816. Its foundation was due to a desire for more extensive privileges and greater freedom of action among a number of coloured Methodists of Philadelphia. It does not differ in important points from the Methodist Episcopal Church (membership, 452,126).

(10) The African Union Methodist Protestant Church also dates back to 1816; it rejects the episcopacy, itinerancy, and a paid ministry (membership, 4000).

(11) The Zion Union Apostolic Church was founded in Virginia in 1869. In its organization it closely resembles the Methodist Episcopal Church (communicants, 3059).

(12) The Coloured Methodist Episcopal Church is merely a branch of the Methodist Episcopal Church, South, organized on a Separate Church basis in 1870 for negroes (membership, 233,911).

(13) The Congregational Methodists, Coloured, differ only in race from the Congregational Methodists (communicants, 319).

(14) The Evangelist Missionary Church was organized in 1856 in Ohio by members of the African Methodist Episcopal Church (membership, 500), but the Bible, and inclines to the admission of only one person in God, that of Jesus Christ.

V. Educational and Social Activities.—The founders of Methodism had enjoyed the advantages of a university training, and must have realized the priceless value of education. The fact, however, that the early Methodists overlooked the educational element in religion tended to make a deep and extensive knowledge of doctrinal principles seem superfluous. The extraordinary success of his preaching which urgently demanded ministers for the ever-increasing number of his followers, led to the appointment, in the early history of Methodism, of preachers who might be able to command the people and be remarkable for their theological learning. Indeed, for a comparatively long period, the opposition of Methodists to schools of theology was pronounced. The establishment of the first institution of the kind in 1834 at Haxton, England, caused a split in the denomination. At the present day, however, the need of systematic theological training is supplied by numerous schools. In England the chief institutions are located at Richmond, Didsbury, Headingly, and Handsworth. American Methodists founded their first theological school in 1841 at Newbury, Vermont. It was removed to Concord, New Hampshire, in 1847, and has formed since 1867 part of Dartmouth College. From these institutions were subsequently added, among them Garrett Biblical Institute (1854) at Evanston, Illinois, and Drew Theological Seminary (1867) at Madison, New Jersey. While Methodism has no parochial school system, its first denominational institution of learning dates back to 1740, when John Wesley took over a school at Kingswood. It was not until the beginning of the nineteenth century, however, that a vigorous educational movement set in to continue up to the present day. An idea of the efforts made in this direction by Methodists may be gained by a reference to the statistics published in the "Methodist Year-Book" (1910), pp. 108–13. According to the reports there given, the Methodist Episcopal Church (one of the other branches also support their schools) maintains 197 educational institutions, including 50 colleges and universities, 47 classical seminaries, 8 institutions ex-
exclusively for women, 23 theological institutions (some of them forming part of the universities already mentioned), 63 foreign mission schools, and 4 missionary institutes and Bible training schools. An educational program for young men had been launched, but all the branches of American Methodism, is the exclusively post-graduate "American University". A site of ninety-two acres was purchased in 1890 in the suburbs of Washington, D. C., and the university was organized the following year. It is not to be opened in any of its departments until its endowment "be not less than $500,000". The two-acre "College estate". The dissemination of religious literature is obtained by the foundation of "Book Concern" (located at New York and Cincinnati for the Methodist Episcopal Church; at Nashville, Tennessee, for the Methodist Episcopal Church South) and a periodical press, for the publications of which the title of "Advocates" is particularly popular. The young people are banded together for the promotion of personal piety and charitable work in the prosperous Epworth League founded in 1889 at Cleveland, Ohio, for the Methodist Episcopal Church, and organized in the Methodist Episcopal Church, South, in 1891. In the second half of the nineteenth century, the denomination extended its social work considerably by the founding of orphanages, and coal and gas hospitals were introduced in 1881 with the incorporation of the Methodist Episcopal Hospital at Brooklyn.

VI. General Statistics.—According to the "Methodist Year-book" (New York, 1910) the Wesleyan Methodists have 520,808 church members (including probationers) in Great Britain, 29,531 in Ireland, 143,467 in the foreign missions and 117,146 in South Africa. The Australasian Methodist Church has a membership of 150,751, and the Church of Canada one of 333,892. In the United States Methodism (all branches) numbers, according to Dr. Carroll, 6,477,224 communicants. Of these 3,159,913 belong to the Methodist Episcopal Church and 1,780,778 to the Methodist Episcopal Church South.

N. A. WEBER.

Methodius, Saint. See Cyril and Methodius, Saints.

Methodius I, Patriarch of Constantinople (842-846), defender of images during the second Iconoclast persecution, b. at Syracuse, towards the end of the eighth century; d. at Constantinople, 14 June, 846. The son of a rich family, he came, as a young man, to Constantinople intending to obtain a place at Court. But having entered a monastery. Under the Emperor Leo V (the Armenian, 813-820) the Iconoclast persecution broke out for the second time. Themons were nearly all staunch defenders of the images; Methodius stood by his order and distinguished himself by his opposition to the Government. In 815 the Patriarch Nicephorus I (806-814) was deposed and then restored through the influence of the Iconoclast laws; in his place Theodotus I (815-821) was intruded. In the same year Methodius went to Rome, apparently sent by the deposed patriarch, to report the matter to the pope (Paschal I, 817-824). He stayed in Rome till Leo V was murdered in 820 and succeeded by Michael II (820-829). Hoping for better things from the new emperor, Methodius then went back to Constantinople bearing a letter in which the pope tried to persuade Michael to change the policy of the Government and restore the Patriarch Nicephorus. But Michael only increased the ferocity of the persecution. As soon as Methodius had delivered his letter and exorted the emperor to act accordingly, he was arrested, his property was plundered (with 70 stripes), taken to the island Antigoni in the Bosporus, and there imprisoned in a disused tomb. The tomb must be conceived as a building of a certain size; Methodius lived seven years in it. In 828 Michael II, not long before his death, mitigated the persecution and proclaimed a general amnesty. Profiting by this, Methodius was set free, and on his return to Constantinople almost worn out by his privations. His spirit was unbroken and he took up the defence of the holy images as zealously as before.

Michael II was succeeded by his son Theophilus (829-842), who caused the last and fiercest persecution of image-worshippers. Methodius again withheld the emperor to his face, was again scourged and imprisoned under the palace. But the same night he escaped, helped by his friends in the city, who hid him in their house and bound up his wounds. For this the Government confiscated their property. But seeing that Methodius was not to be overcome by punishment, the emperor tried to convince him by argument. The result of their discussion was that Methodius was summoned to render the reasons of the profession of faith towards the end of the reign the persecution was mitigated. Theophilus died in 842 and at once the whole situation was changed. His wife, Theodora, became regent for her son Michael III (the Drunkard, 842-867). She had always been an image-worshipper in secret, but now that she had the power she at once began to restore images, set free the confounded Methodius, and bring back everything to the conditions of the Second Nicene Council (787). The Patriarch of Constantinople, John VII (832-842), was an Iconoclast set up by the late Government. As he persisted in his heresy he was deposed and Methodius was made patriarch in his place (842-846). In these he successfully resisted his expressed resolution in his restoration. He summoned a synod at Constantinople (842) that approved of John VII's deposition and his own succession. It had no new laws to make about images. The decrees of Nicæa II that had received the assent of the pope and the entire Church as those of an Ecumenical Council were put in (New York, 1892); ALEXANDER, Hist. of the Methodist Episcopal Church South in American Church Hist. Series, XI (New York, 1894); DRINQUE, Hist. of Methodist Reform (Baltimore, 1890); SUTHERLAND, Methodist in Canada (London, 1905).
Theophilius out of hell. It is told in the Synaxarion for the feast of Orthodoxy.

St. Methodius is reputed to have written many works. Of these only a few sermons and letters are extant (in Migne, P. C., 1272-1325). An account of the martyrdom of Denis the Areopagite by him is in Migne, P. C., 1325-1333. While Methodius was Bishop of Lycia in N. C. Falconius, "S. Nicolai acta primigenia" (Naples, 1751), 39-74. For other fragments and scholia, see Krumbacher, "Byzantinische Litteratur" (Munich, 2nd ed., 1897), 167.

ADRIAN FORTESECUE.

Methodius of Olympus, Saint, Bishop and ecclesiastical author. Date of birth unknown; d. a martyr, probably in 311. Concerning the life of this first scientific opponent of Origen very few reports have been handed down; and even these short accounts present many difficulties. Eusebius has not mentioned him in his "Church History", probably because he opposed various theories of Origen. We are indebted to St. Jerome for the earliest accounts of him (On the Perfection of the Reader, xi). Another author, Methodius was Bishop of Olympus in Lycia and afterwards Bishop of Tyre. But the latter statement is not reliable; no later Greek author knows anything of his being Bishop of Tyre; and according to Eusebius (Hist. Eccl., VIII, xiii), Tyranno was Bishop of Tyre during the Diocletian persecution and died a martyr; after the persecution methodius was elected Bishop of Tyre. Jerome further states that Methodius suffered martyrdom at the end of the last persecution, i. e., under Maximinus Daja (311). Although he then adds, "that some assert", that this may have happened under Decius and Valerian at Chalcis, this statement (ut ali affirmant) is adduced by Eusebius as uncertain, is not to be accepted. Various attempts have been made to clear up the error concerning the mention of Tyre as a subsequent bishopric of Methodius; it is possible that he was transported to Tyre during the persecution and died there.

Methodius had a very comprehensive philosophical education, and was an important theologian, as well as an prolific and polished author. Chronologically, his works can only be assigned in a general way to the end of the third and the beginning of the fourth century. He became of special importance in the history of theological literature, in that he successfully combated various erroneous views of the great Alexandrian, Origen. He particularly attacked his doctrine that man's body at the resurrection is not the same body as he had in life; also his idea of the world's eternity and the erroneous notions it involved. Nevertheless he recognized the great services of Origen in ecclesiastical theology. Like him, he is strongly influenced by Plato's philosophy, and uses to a great extent the allegorical explanation of Scripture. Of his numerous works only one has come down to us complete in a Greek text, viz., the dialogue on virginity, under the title: "Symposium, or on Virginity" (Συμπόσιον ἐν τῇ νυφίᾳ) in P. G., XVIII, 27-220. In the dialogue, composed with reference to Plato's "Banquet", he depicts a festive meal of ten virgins in the garden of Adonis, in which each of the participants proclaims the ideals of Christian virginity and its sublime excellence. It concludes with a hymn on Christ as the Bridegroom of the Church. Larger fragments are preserved of several other writings in Greek; we know of other works from old versions in Slavonian, though some are abridged.

The following works are in the form of dialogue: (1) "On Free Will" (ἐν τῷ ἀλλοθρεύσει), an important treatise attacking the Gnostic view of the origin of evil and in proof of the freedom of the human will; (2) "On the Resurrection" (Σύμποσιον ἐν τῇ αναστάσει), in which the doctrine that the same body that man has in life will be awakened to incorruptibility at the resurrection is specially put forward in opposition to Origen. While others in the Greek text of both these writings are preserved, we have only Slavonian versions of the four following shorter treatises: (3) "De vita", on life and rational action, which exhorts in particular to contentedness in this life and to the hope of the life to come; (4) "De cibis", on the discrimination of foods (among the Jews, and on the consumption of meat); (5) "De lepore", an etiological explanation of the Old Testament food-legislation and the red cow (Num., xix); (6) "De sanguisuga", on the leech in Proverbs (Prov., xxx, 15 sq.) and on the text, "the heavens show forth the glory of God" (Ps. xviii, 2). Of other writings, no longer extant, Jerome mentions (loc. cit.) a voluminous work against Porphyry, the Neoplatonist who had published a book against Christianity; a treatise on the "Pythonissa" directed against Origen, commentaries on Genesis and the Canticle of Canticles. The latter authors a work "On a dialogue "Xenon" are attributed to Methodius; in the latter he opposes the doctrine of Origen on the eternity of the world. New editions of his works are: P. G., XVIII; Jahn, "S. Methodii Opera et S. Methodii Platonis" (Halle, 1865); Bonwetsch, "Methodius von Olympus: I, Schriften" (Leipzig, 1891).

Methodius of Olympus, Bishop of Olympus in the Komolou (1887; issued in book form, Mainz, 1888): BONOVENTA, Die Methodius von Olympus (Berlin, 1903); FISCHER, Methodius von Olympus und M. der Kadous (Freiburg, 1905); FENDT, Sünde und Busse in den Schriften des Methodius von Olympus in der Katalikos, 7 (1897); HAMM, Die Vater des christlichen Exegeten (Freiburg i. J. P. KIRCH.

Methuselah. See Mithusalea.

Methyyna, a titular see in the island of Lesbos. It was once the second city of the island, and enjoyed great prosperity. In the Peloponnesian War it played an important rôle (Thucydidcs, III, ii, 18; vi, 85; vii, 57; Xenophon, Hellen., I, vi, 14), and in Christian times it similarly distinguished itself in its resistance to the Turks. The ancient poets praise the excellence of Methymna (Virgil, Georgics, II, 90; Ovid, Am., I, 57; Horace, Sat., II, 8, 50; Odes, I, 17, 21). Methymna was the birthplace of the poet Arion and probably also of the historian Myrillus. For a list of the bishops of Methymna see Le Quien, "Orients Christi", I, 961-964. One of them, Gabriel, in the seventeenth century united with Rome (Allatius, De ecclesiis consensione, I, 7). The town is mentioned by the "Enthosis" of pseudo-Epiphanius as an autoclerical archdiocese, and about 1084 was made a metropolitana see under Alexius I Comnenus. It has retained this rank in the Orthodox Church, though for Catholics it is now a mere titular archdiocese. To-day it bears the name of Molivo, and with the places dependent upon it numbers 37,000 inhabitants, of whom 29,000 are Orthodox Greeks, 9000 Musalmans, and 40 Catholics. The last named are dependent on the Diocese of Smyrna. Molivo is a kastri of the sanjak of Metelin in the vilayet of Rhodes. Situated at the southern extremity of the island of Mitylene, nearly thirty miles from Metelin and five naval miles from the Asiatic continent, Molivo is a barren site on the slope of a hill formed of basaltic rocks.

S. SALAVILLER.
Metrophanes of Smyrna, leader of the faithful Ignatian bishops at the time of the Photian schism (867). Baronius (Ann. Eccl., ad an. 843, 1) says that his mother was the woman who was bribed to bring a false accusation of rape against the Patriarch Methodius I (842-846) during the reign of Michael III. If this be true he was a native of Constantinople. In 857, when Ignatius was deposed, Metrophanes was already Metropolitan of Smyrna. He was strongly opposed to Photius. For a short time he wavered, as Photius promised not to attack Ignatius' rights, but, as soon as he had gained the slightest indication that Photius would renounce the claims to Constantinople, went back to his former attitude, from which nothing could make him wavering again. Metrophanes was the leader of the bishops who excommunicated Photius in 858; they declared themselves excommunicate if ever they recognized him. This somewhat rash pledge explains his attitude later. He was chained and imprisoned, then sent into exile by the Government. After Photius' first fall (867) Metrophanes came back to his see. He was present at the eighth general council (Constantinople, IV, 869), opened the session with a speech and was one of the judges who condemned Photius. When Ignatius died in 877 and Photius succeeded lawfully with the consent of John VI, Metrophanes still refused his recognition, which conduct he was again banished. At the Photian Synod of 879 a certain Nicetas appears as Metropolitan of Smyrna; meanwhile Metrophanes lay sick at Constantinople. In 880 as he still refused to have anything to do with Photius he was excommunicated by the papal legates. After that he disappears. It is uncertain whether he still retained his see at Photius' second fall or whether he died in exile. A letter of his to a patriarch, Manuel, is extant, written in 870, in which he gives his reasons for his opposition to Photius (in Manni, XIV, 414). Other works attributed to him but strongly Photian in tone ("Against the New Manicheans", i.e., the Latins, and "On the Procession of the Holy Ghost from the Father alone") are certainly apocryphal.

See Fabricius-Harles, Bibliotheca Graecae (Hamburg, 1790-1809), XI, 700.
Her Genrother, Photius (Regensburg, 1867), vol. I and II, passim.

ADRIAN FORTEUECE.

Metrople, a titular episcopal see and suffragan of Ephesus. Strabo (XIV, 1, 2; XV, 1, 5), who speaks of its celebrated wines, places this city between Ephesus and Smyrna, at one hundred and twenty stadia (nearly fourteen miles) from the former. It is first mentioned in Pliny, "Historia Naturalis", V, 29, and in Ptolemy (V, ii, 14) unless here the reference be to Metrople in Phrygia. A similar allusion is made in "Corpus inscript. Latin," (III, 79, 91), and in Quen (Oros, I, 709) indicates only two of its bishops: Marcellinus at the Council of Chalcedon in 451 and John at the pseudo-Council of Ephesus in 878, but from the "Notitia episcopatuum" we know that in the fourteenth century the diocese was still in existence. Metrople is now completely destroyed, its ruins being visible in a place called Tra-tsa in the nahié of Torbali and the vilayet (Turkish province) of Smyrna, quite close to the river Cay-trus. The neighbouring village of Torbali has been built up with stone once used in the structures of ancient Metrople and, at Tratse, there may still be seen a portion of its wall, also its theatre and acropolis, the latter formed of huge blocks, while the olive groves are dotted with architectural ruins. This Metrople, however, must not be confounded with two cities of the same name, one of which was in Phrygia and the other in Iberia.

S. VAILLÉE.

Metropolitan, in ecclesiastical language whatever relates to the metropolis, the principal city, or see, of an ecclesiastical province; thus we speak of a metropolitan church, a metropolitan chapter, a metropolitan official, etc. The word metropolitan, used without any qualifying, means the bishop of the metropolitan see, now usually styled archbishop. The term metropolitan (Métopolitain, Metropolita) is also employed, especially in the Eastern Churches (see Archbishop). The entire body of rights and duties which canon law attributes to the metropolitan, or archbishop as such, i.e., not for his own diocese, but for those suffragans to him and forming his ecclesiastical province, is known as metropolitan jurisdiction. The effective authority of metropolitan bishops over their provinces has gradually diminished in the course of centuries, and they do not now exercise even so much as was accorded them by the Council of Trent; every bishop being more strongly and more directly bound to Rome is so much the less bound to his province and its metropolitan. The jurisdiction of the latter over his suffragans dioceses is in a sense ordinary, being established by law; but it is mediate and restricted to the objects provided for by the canons. Since the Council of Trent the rights of the metropolitan have been reduced to the following:

(1) He convokes and presides at the provincial council, at which all the suffragans must appear, save legitimate excuse, and which must be held every three years (Conc. Trid., sess. XXIV, c. ii, De ref.). The same holds for other provincial meetings of bishops.

(2) He retains, in theory, the right of canonical visitation of his suffragan dioceses, but on two conditions which make the right practically inoperative: he must not act personally in the visitation of a suffragan diocese, and the visitation must be authorized by the provincial council. In the course of this visitation, the metropolitan, like the bishop, has the right of "proclamation", i.e., he and his retinue must be received and entertained at the expense of the churches visited. Moreover, he can absolve "in foro conscientiae" (ibid., iii).

(3) He is exhorted (Exh. 11) to visit his suffragans dioceses, and the visitation must be authorized by the provincial council. In the course of this visitation, the metropolitan, like the bishop, has the right of "proclamation", i.e., he and his retinue must be received and entertained at the expense of the churches visited. Moreover, he can absolve "in foro conscientiae" (ibid., iii).

The metropolitan has no judicial authority over his suffragans, major or minor, but that reserved to the Holy See, and minor ones to the provincial council (Cass. XXIV, c. v.; but he is still the judge of second instance for causes, civil or criminal, adjudicated in the first instance by the officials of his suffragans and appealed to his tribunal. Hence results a certain inequality for matters adjudicated in the first instance in the archdiocese, and to redress this various concessions have now been provided. But the nomination of two officials by the archbishop, one diocesan, the other metropolitan, with appeal from the one to the other, is not admissible. This practice was used in France under the old regime, but was not general, and even the Gallicans held it to be "an innovation with canonic law and the ecclesiastiques de France", E. V, 13). On this principle the nullity of Napoleon's marriage was decided by the diocesan and the metropolitan officials of Paris, 1810 (Schnitzer, "Kathol. Ehrehe", Freiburg, 1898, 660). The metropolitan tribunal may also try as at first instance cases not terminated within two years by a bishop's tribunal (Cass. XXIV, c. xx).

In regard to devotion (q. v.), the metropolitan may nominate the vicar capitular of a vacant diocese, if the chapter has failed to nominate within eight days (Cass. XXIV, c. xvi). In like manner he has the right to fill open benefices (i.e., those of free collation) which his suffragans have left unfilled after six months; as a canonically institute candidate presented by patrons if the bishop allows two months to pass without instituting.
Metropolitanum. See Metropolitan.

Metternich, Klemens Lothar Wenzel, Prince von, statesman; b. at Coblenz, 15 May, 1773; d. at Vienna, 11 June, 1859; son of Count Georg, Austrian envoy of the Court of Vienna at Coblenz, and Maria Beatrix, née Countess von Kagenke. He studied philosophy at the University of Strasburg, and law and diplomacy at Mainz. A journey to England completed his education. Metternich began his public career as Austrian ambassador to the Court of Dresden. Though he had for several years prepared himself for a diplomatic career, he was especially fortunate in being immediately appointed to so prominent a position. Only two years later he was made ambassador to Berlin. The emperor considered it very important to have a minister at Berlin who could gain the favour of the Court and the principal Prussian statesmen, and who knew how to combine "great powers of observation with a moderate and agreeable manner". Metternich had already proved that he possessed these qualities. Napoleon was then emperor with the new empire at the zenith of its power. The Emperor Francis needed his ablest ambassador at Napoleon's Court, and in May, 1806, he sent Metternich to Paris. Metternich found himself in the difficult position of representing Austria in the face of the overweening threats and ambitious plans of Napoleon at the height of his power. He did so with dignity and firmness, as his report of his important audience with Napoleon on 15 August, 1808, shows. The year 1809 is marked by the great war between Austria and France. The German States were called upon to join her, but only the Tyrol responded. On 13 May Vienna was besieged by the French, but eight days later Napoleon was defeated by the Archduke Charles at Aspern. Metternich, treated as a prisoner of state by Napoleon, was finally released in July in exchange for members of the French nobility. After the battle of Wagram Austria's position was hopeless. Its army was cut off from Hungary and compelled to retreat to Moravia and Bohemia. A great statesman was needed to save the situation. On 4 August the Emperor Francis appointed Metternich as minister of state to confer with Napoleon, and on 8 October, minister of the imperial household. For the Treaty of Schönbrunn (14 October), Austria was greatly reduced in size, and reached the greatest depths of its humiliation. But the moment of its degradation saw the beginning of its rise. The two-headed eagle soared to the loftiest heights, and it was Metternich who gave it the strength for its flight. For nearly forty years he directed Austrian foreign policy, and established tolerable relations with the French Emperor. Napoleon desired by means of a new marriage to ally himself with one of the old European dynasties in the hope to raise himself and to provide an heir for the imperial throne. He obtained a divorce from Josephine of Austria. Though at present it seems to become more and more probable that Napoleon's union with Josephine was a valid marriage, nevertheless it is certain that when Napoleon wedded Maria Louise (11 March, 1810) the Court of Vienna and the Paul Curius were absolutely convinced of the unlawfulness of Napoleon's first alliance. Napoleon's connexion with the imperial family of Austria had no influence on politics. Fate led the French Emperor, after ruining so many others, to ruin himself. At Schönbrunn he pronounced the temporal sovereignty of the Roman See to be at an end, and in reply to the pope's excommunication he remarked: "This will not cause the arms to drop from the hands of my grenadiers." Although he imprisoned the pope, in the Russian campaign on the Bresina the arms did drop from the frozen hands of his grenadiers. As the crisis approached the decision lay with Austria. From a quarter past eleven in the morning until half past eight in the evening Metternich was closeted with Napoleon (Dresden, 26 June, 1813). "Our conference consisted of the strangest farrago of heterogeneous subjects, characterized now by extreme friendliness, now by the most violent outbursts of fury". Napoleon raged, threatened, and kept up like a chafed lion. Metternich remained calm. Napoleon let his hat, which he was holding under his arm, drop to the floor. Metternich did not stoop to pick it up. The emperor also tried persuasion. "Your sovereigns," he said, "who were born to their thrones cannot comprehend the feelings that move me. To them it is nothing to return to their capitals defeated. But I am a soldier. I need honour and glory. I cannot reappear among my people devoid of prestige. I must remain great, admired, covered with glory." For that reason, he said, he could not accept the proposed conditions of peace. Metternich replied, "But when will this condition of things cease, in which defeat and victory are alike reasons for continuing these dismal wars? If victorious, you insist upon the fruits of your victory; if defeated, you are determined to rise again." Napoleon made various offers for Austria's neutrality, but Metternich declined all bargaining, and Napoleon's oft-repeated threat, "We shall meet in Vienna", was his farewell to Metternich. Metternich gave the signal for war, and Schwechat and the decisive battle of Leipzig. The Emperor Francis raised his "beloved Count Metternich" to the rank of Austrian prince. "Your able efforts in conducting the department with which I entrusted you in difficult times are now, at a moment highly decisive in the world's destiny, happily crowned with success."

Klemens Lothar Wenzel von Metternich

Painting by Sir Thomas Lawrence
It constantly required all of Metternich's most brilliant qualities to preserve harmony. One of his favourite means was to provide festivities of all sorts. They have often been criticised as if they had been the object of the congress, and not a means to attain its end. Metternich succeeded finally in bringing every difficulty. The Emperor Francis expressed his satisfaction with Metternich's services in securing peace and order in Europe, and especially in restoring to Austria its ancient pre-eminence. The rearrangement of German and Italian affairs gave but little satisfaction to either side, but henceforth Metternich was the leading statesman of Europe. For the settlement of questions still pending and other difficulties that arose, the following congresses were held: Aix-la-Chapelle, 1818; Karlsbad (a conference of ministers), 1819; Vienna, 1820; Troppau, 1820; Laibach, 1821; and Verona, 1822. The Congress of Aix-la-Chapelle, at which the monarchs of Austria, Prussia, and Russia were personally present, devoted its attention to the adjustment of the relations of the powers to France, though Metternich also emphasised the dangers arising from demagogic agitation, and expressed his suspicions that its focus was in Germany. When, not long after, the Russian Councillor, Kolombe, was assassinated by the student, Sond, Metternich in two succeeding congresses of German states took measures to put an end to the political troubles in Germany. All publications of less than twenty folios were to be subject to censorship; government officers were to be placed at the universities to supervise them; in the several states the constitutions providing for diets in accordance with ancient usage were suppressed; representatives of German states not represented at Karlsbad took measures to put an end to the political troubles in Germany. Since England's and Russia's resistance, Metternich at the two succeeding congresses successfully carried his proposition to intervene in behalf of the Italian states, which were threatened and hard pressed by the revolution. This measure brought upon Austria the hatred of the Italian people, and especially of Naples. Napoleon I, on the occasion of freeing Greece from the Turkish yoke, Austria showing herself to be a decided friend of the Turks. The result was a blow to Metternich's policy. He had dropped from the high-water mark of his influence. Thereafter Russia's influence increased.

Since the death of Prince Kaunitz (1794) the position of the German chancellor had been vacant, but in 1821 Metternich was invested with that office. "Your deserts have been increased by the uninterrupted seal, the ability and fearlessness with which, especially in the last two years, you devoted yourself to the preservation of general order and the triumph of law over the disorderly doings of disturbers of the peace in the states at home and abroad." Under the Emperor Ferdinand I after 1835, the direction of affairs, after the emperor himself, was in the hands of a council consisting of the Archduke Ludwig (uncle of the emperor), the state chancellor Metternich, and the court chancellor Kolowrat. Metternich's influence over Austria's internal affairs was less than is generally supposed. In 1835, one of his ministers, John Legros (Geschichte der Revolution, p. 19): "In matters of internal administration the prince was seldom heard, and was purposely kept away from them." In this department after 1826, it was the minister Count Kolowrat whose influence was decisive. Many envied Metternich his pre-eminence. The aristocracy always saw themselves in him, and the nobles looked with resentment upon the preference shown foreigners in the state chancery (Friedrich Gents, Adam Müller, Friedrich Schlegel, Jarka). Grillparzer, director of archives in the Hofkammer, expressed himself very harshly on that point in 1839, though it must be noted that Grillparzer had been highly incensed. In all these matters Kolowrat had the advantage of Metternich. He was even considered capable of granting, or, at least, of preparing a constitution, and was thought to be inclined to do so.

As time passed, "the Metternich system" came to be held more and more responsible for everything unpleasant, and its author to be hated and attacked, mainly in Britain and France. In regard to his "Political Testament": "To me the word freedom has not the value of a starting-point, but of an actual goal to be striven for. The word order designates the starting-point. It is only on order that freedom can be based. Without order as a foundation the cry for freedom is nothing more than the endeavour of some party or other for an end it has in view. When actually carried out in practice, that cry for freedom will inevitably express itself in tyranny. At all times and in all situations I was a man of order, yet my endeavours were always for true and not for pretended liberty." These words are the key to the understanding and appreciation of Metternich's actions.

Two more passages characteristic of the great statesman's temper of mind may be cited: "Admirers of the press honour it with the title, 'representative of public opinion', though everything written in the papers is nothing but the expression of those who write. Will the value of the expression of public opinion be increased if we place the European Governments, even of a Republican Government? Surely not! Yet every obscure journalist claims this value for his own products. What a confusion of ideals!" No less just and important a remark is the following on state religion: "The downfall of empire always directly depends upon the spread of unbelief. But it is the union of true virtue and religious belief, the first of virtues, is the strongest power. It alone curbs attack and makes resistance irresistible. Religion cannot decline in a nation without causing that nation's strength also to decline, and the fall of states does not proceed in arithmetical progression according to the law of falling bodies, but rapidly leads to destruction." These two passages show the strength of his character and his abiding belief in the soundness of the old political order in Vienna, the state chancellor, who preferred to sacrifice himself rather than others, immediately resigned his position. He went to England, Brussels, and Schloss Johannisberg. From the last place he returned to Vienna in 1851, and eight years later died in his palace on the Rennweg at the age of eighty-six. When Napoleon I came to Austria in 1848, he found him in a storm of revolution. Engaged in Vienna, the state chancellor, who preferred to sacrifice himself rather than others, immediately resigned his position. He went to England, Brussels, and Schloss Johannisberg. From the last place he returned to Vienna in 1851, and eight years later died in his palace on the Rennweg at the age of eighty-six. When Napoleon I came to Austria in 1848, he found him in a storm of revolution. Metternich's influence increased.

C. WOLFBOURGER.

Metz, town and bishopric in Lorraine.

I. THE TOWN OF METZ.—In ancient times Metz, then known as Divodurum, was the capital of the Celtic Mediomatrici, and at the beginning of the Christian era was already occupied by the Romans. As the junction of several military roads, and as a well-fortified town, it soon became of great importance. One of the earliest strongholds to surrender to the Germans, it survived the attacks of the Huns, and finally passed, about the end of the fifth century, through peaceful negotiations into the hands of the Franks. Theodoric of Austrasia chose it in 511 as his residence; the reign of Queen Brunhild reflected great splendour on the town. Though the first Christian churches were to be found outside the city, the existence in the fifth century of the oratory of St. Stephen within the city walls has been fully proved. In the beginning of the seventh century the oldest monastic establishment, the monastery of St. Gereon and St. Placidus (now the Peter and Paul) under the Carolingians, the town preserved the good-will of the rulers, whose family seat was near by; Charles the Bald was crowned in the Basilica, and here Louis the Pious and his son Drogo are buried. In 843 Metz became the capital of the Kingdom of Lorraine, and several diets and councils were held there. Not far from the church of St. Victor, the product of the Metz schools of writing and painting, such as the famous “Trier Ada” manuscript and the Sacramentary of Drogo (now at Paris), are evidence of the active intellectual lives that were led.

In 870 the town became part of the East Frank kingdom, and belonged (911–25) as part of Lorraine to the empire, to liquidate the power of the bishops in the city became greater when Adalbert I (928–62) obtained a share of the privileges of the counts; until the twelfth century, therefore, the history of the town is practically identical with that of the bishops (see below). In 1039 a splendid edifice was built to take the place of the old church of St. Stephen. In the 13th century the cathedral was raised. In 1207 the clergy rebelled against the bishop, who had also a controlling influence in the selection of the presiding officer of the board of aldermen, which first appears in the eleventh century. The twenty-five representatives sent by the various parishes held an independent position; in judicial matters they helped the Tredcem jurati and formed the democratic element of the system of government. The other municipal authorities were considerable in importance, and were represented by the crier, who held a vote, and the head of the organization, who had no vote. The head-alderman was selected from distinguished families to protect the interests of their relatives. The other body of burgesses, called a Commune, also appears as a Parage from the year 1297; in the individual offices it was represented by double the number of members that each of the older families possessed. Making common cause with the family unions and the Commune the burgesses found it advantageous to gradually increase the powers of the city as opposed to the bishop, and also to keep the control of the municipal government fully in their hands and out of that of the powerful growing guilds, so that until the sixteenth century Metz remained a purely aristocratic organization. In 1300 the Parages gained the right to fill the office of head-alderman, during the fourteenth century the right to elect the Tredcem jurati, and in 1383 the right of coinage. The guilds, which during the fourteenth century had attained great independence, were completely suppressed (1383), and the last revolutionary attempt of the artisans to seize control of the city government (1405) was put down with much bloodshed.

The city had often to fight for its freedom; from 1324–27 against the Dukes of Luxembourg and Lorraine, as well as against the Archbishop of Trier; in 1363 and 1365 against the band of English mercenaries under Arnold of Cervola, in the fifteenth century France and the Duke of Burgundy, who sought to annex Metz to the lands of at least wanted to exercise a protectorate. Nevertheless it maintained its independence, even though at great cost, and remained, outwardly at least, part of the German Empire, whose ruler, however, concerned himself very little with this important frontier stronghold. Charles IV in 1354 and 1356 held brilliant diets here, at the latter of which was promulgated the famous statute known as the “Golden Bull.” The town therefore felt that it occupied an almost independent position between France and Germany, and wanted most of all to evade the obligation of imperial taxes and attendance at the diet. The estrangement between it and the German States daily became wider, and financial affairs came to be in a crisis. In 1552 the political and religious troubles of 1552 the Protestant party in Germany betrayed Metz to France. By an agreement of the German princes, Moritz of Saxony, William of Hesse, John Albrecht of Mecklenburg, and George Frederick of Brandenburg, with Henry II of France, ratified by the death of King Charles (1515), Metz was formally transferred to France, the gates of the city were opened (10 April), and Henry took possession as vicarius sacri imperii et urbis protector (18 April). The Duke of Guise, commander of the garrison, restored the old fortifications and added new ones, and successfully resisted the attacks of the Habsburgs (1556–61). Metz remained French. The recognition by the empire of the illegal surrender came at the conclusion of the Peace of Westphalia. By the construction of the citadel (1555–62) the new government secured itself against the citizens, who were discontented with the turn of events. Important internal changes soon followed. Paris took over the authority of the French king, whose representative was the governor. The head-alderman, now appointed by the governor, was replaced (1640) by a Royalist mayor. The aldermen were also appointed by the governor and henceforth drawn from the whole body of burgesses; in 1633 the judgeship passed to the Parliament. The powers of the Tredcem jurati were also restricted, in 1634 totally abolished, and replaced by the Bailliage royal.

Among the cities of Lorraine, Metz held a prominent position during the French occupation for two reasons: in the first place it became one of the most important fortresses through the work of Vauban (1674–1707), and became the capital of the temporal province of the three bishoprics of Metz, Toul, and Verdun, which France had seized (1552) and, by the Peace of Westphalia, retained. In 1633 there was created for this “Province des trois évêchés” (also called “Généralité des trois évêchés” or “Intendance de Metz”), a supreme council to act for the purpose of the archbishop and the Parliament. In 1681 the Chambre Royale, the notable Assembly chamber, whose business it was to decide what fees belonged to the three bishoprics which Louis XIV claimed for France, was made a part of this Parliament, which lasted, after a temporary dissolution (1771–75), until the final settlement by the National Assembly in 1789, whereupon the division of the land into departments and districts followed.
Mets became the capital of the Department of Moselle, created in 1790. The revolution brought great calamity upon the city. In the campaigns of 1814 and 1815 the German army of investment was commanded by Prince Frederick Charles of Prussia; as the few sorties of the garrison were unable to break the German lines, Mets was forced to surrender (27 October), with the result that 6000 French officers and 170,000 men were taken prisoners. By the Treaty of Frankfort, Mets became once more a German city, and since then has been made a most important garrison and a first-class fortress. The city, after the levelling of the fortifications on the south and east (1899), secured space for growth and development. In 1905 the city had 60,419 inhabitants, of whom 43,082 were Catholics, 15,556 Protestants, and 1691 Jews; by 1910 the number of inhabitants, through the absorption of the adjacent district, increased to 64,247. Since these quarrels between the emperor and the bishop, but Stephen once more restored the sovereignty of the bishops. Bishop Bertrand (1179-1212) gave the city the system of government described above. Under his successor Conrad I of Scharfenberg (1212-24) the first settlements of the new orders of Mendicant Friars, the Franciscans outside the city walls of the city, as well as the homes of numerous mendicants, were made in the city. With John of Assenmont (1224-38), the first bishop to be elected solely by cathedral chapter, and Jacob of Lorraine (1239-60), who once more upheld the rights of the bishops against the city, the development of the temporal possessions of the bishopric came to a halt. These temporal possessions of the bishopric, the so-called Tanzmesser, the land and buildings, were in the hands of the Carolingians, always friendly to Mets. In 770 it received full rights over the property of the Senones Abbey under Drogo, over the Mauritius Abbey, in 923 over Zabern, in 931 over Saarburg, and many others. On the dissolution of the old countships in the tenth century, the bishopric, subject only to the imperial government, took over the ecclesiastical acquisitions in the old District of Moselle, in the Saar District, and in the Blies District. The most important acquisitions at that time and later were Rémy (984), Saarbrücken (998), the lordship of Pütlingen (1135), and Lützelburg (1143), the see of the countship of Dagsburg (1225), the lordship of Frankrey (1228), and the patrimony of the Abbey of St. Stephen. Throughout the thirteenth and fourteenth centuries began the decline of these possessions, principally on account of the quarrels of almost all the bishops; namely, Rainald of Bar (1302-16), Adhemar of Monteil (1327-61), under whom the present cathedral was begun, Dietrich IV Bayer of Boppard (1365-84) with the Dukes of Lorraine, the Archbishops of Mayence, and Luxembourg. During the thirteenth century sovereignty over the city of Mets and its environs (the pays Messin) was lost; the continual need of money by the bishops and the cathedral chapter forced them to pledge the title deeds of their domains, feuds, and taxes to the Dukes of Lorraine, the Counts of Bar, the city of Metz, and even to the burgesses. Another element was the fact that during the great Western Schism, for a long time two bishops had made the diocese a scene of strife, until Rudolf of Coucy received general recognition (1387-1415). His successors Conrad II Bayer of Boppard (1415-59), and George I of Bavaria (1459-84) were the last German bishops of the old see, and once more the city took on the maintenance of a loyal sentiment in the city and see. With Henry II of Lorraine (1484-1505) began and continued during the next one hundred and twenty years,
the long line of bishops of the ducal house of Lorraine which had incessantly aimed to increase its domains at the expense of the bishopric and was well supported therein by the kindred bishops through the transcription of bishops appointed by the Cardinal of Lorraine, retained only the temporal administration of the bishopric, and appointed in succession as bishops for the spiritual government, Cardinal Robert of Lenoncourt (1551–55) who after the reversion of the city of Metz to France tried to enforce the bishops' claim to sovereignty over the city and declared himself Prince and Seigneur de la ville, Francis de Beauquere de Pégullion (1555–68), and Cardinal Louis of Lorraine (1568–78). Others who also worked conscientiously, by furthering the internal reforms in conformity with the decrees of the Council of Trent, were Charles II of Lorraine (1578–1607); Cardinal Anna von Glivy (1608–12), and Henry of Bourbon, duke of Anjou and brothers; 13 bishops of the see the see was transferred to France in accordance with the Peace of Westphalia. Through sales, mortgages, and loans, the temporal property had become very much dismembered; but France wanted as far as possible to re-establish a complete district out of the transferred district Metenais. The Assembly Civil of the mother-house at the time determined that the churches, parishes and benefices had belonged to the newly acquired district, and confiscated a considerable number owing to the frivolous Assembly quarrel. The Province des Trois évêchés (see above) was formed out of the territorial provinces of the bishoprics of Metz, Toul, and Verdun, also out of lands relinquished by the Spaniards.

In 1711, the cardinals of the right of the episcopal see at once broke out, which right Louis XIV claimed and in 1664 obtained from Alexander VII. As a general rule the crown nominated worthy prelates for the bishopric; George II of Aubusson (1668–97), Henri Charles du Cambout (1697–1732) and Claude de Rouvray Saint-Simon (1733–90) who died 1793. The last prince-bishop, Cardinal Louis de Montmorency-Laval (1761–1902) fled to Germany on the outbreak of the French revolution (d. 1805 at Altona). The Revolution and the Constitution civile du clergé broke up the old organization of the dioceses and installed a constitutional bishop, who, however, in 1793, was thrown into jail. The Concordat between the pope and Napoleon (1801) restored the bishopric with a different diocese, the three Departments of Moselle, Ardennes, and Forêts were allotted to it, and it was placed under the jurisdiction of the Archbishop of Besançon. Peter Francis Bienaimé (1802–09), the first bishop of the new diocese, divided the diocese into 123 parishes and 319 churches. In 1817 that portion of the Departments of Ardennes and Forêts which became Prussian territory was separated (the bishop was Joseph Jauffret, 1806–23) and in 1821 the remainder of Ardennes and Forêts, so that Metz had only 30 parishes and 418 subordinate parishes. After Jauffret, who instituted the yearly diocesan synod, came in 1841 Jean-François Besançon (1841–62), then Paul George Marie Dupont des Loges (1843–86), founder of the boys' training school in Montigny near Metz. In 1871 the diocese became part of the German Empire, and the new Lorraine became also the boundaries of the bishopric. In 1874 it was separated from the Metropolitane province and placed immediately under the Holy See. The Kulturkampf destroyed many institutions in Mosels founded by the Catholics and bishops of that city. On the death of Dupont des Loges, who on account of his outspoken French opinions, was always at loggerheads with the German Government, succeeded in 1886 Ludwig Fleck, coadjutor bishop from 1881, and after him the present Abbot of Maria-Laach (b. 16 October, 1855).

The present Diocese of Metz comprising the District of Lorraine covers an area of 2400 square miles and on 1 December, 1905, numbered 533,389 Catholics, 74,167 Protestants, 10,600 Dissenters, and 7165 Jews. The see is divided into 4 archidioceses, and 36 eparchies besides 233 missions; 903 secular, and 36 regular, priests. The bishop has 3 vicars-general. The Cathedral Chapter consists of 9 titular and 24 honorary canons. The diocesan institutions are the seminary for priests at Metz with 10 professors, the small seminary at Montigny near Metz, the cathedral school of St. Arnulf at Metz, and St. Augustine's Institute at Bitsch. The following orders and congregations had houses in 1910 in the diocese: the Conventuals, 1 house with 7 fathers, and 7 brothers; the Franciscans, 1 house, 4 fathers, and 6 brothers; the Redemptorists, 1 house, 11 fathers, and 4 brothers; the Fathers of the Holy Ghost, 1 house, 6 fathers, 2 brothers; the Missionary Brothers of St. Mary of the Holy Angels, 1 house, 20 brothers; the Brothers of Mercy, 3 houses, and 13 brothers. Orders of nuns: the Benedictine Abbey at Oriocourt, 36 sisters; 21 Barefoot Carmelites of Metz; 37 Sisters of the Visitations of Metz; 554 Sisters of Sainte Chrétienée, the mother-house at Metz, and 25 convents; 715 Sisters of Providence, with the mother-house at Metz, and 93 convents; 581 Sisters of Divine Providence with the mother-house at Metz, and 116 convents; 96 Sisters of Christian Doctrine, 4 convents; 40 Sisters of Compassion with 1 branch; 62 Sisters of the Good Shepherd, 2 houses; 25 Sisters of the Poor Child Jesus at Plappeville; 14 Sisters of the Sacred Heart of Mary at Vic; 47 Dominicans, 5 houses; 124 Sisters of the Maternity, 6 houses; 144 Sisters of St. Vincent de Paul, 17 branches; 77 Sisters of Charity, the mother-house at Strasbourg, 11 houses; 81 Borromees, 9 convents; 20 Little Sisters of the Poor at Metz; 23 Sisters of Hope at Metz; 18 Sisters of the Divine Saviour, 3 houses; 80 Servants of the Sacred Heart of Jesus, 5 branches; 73 Franciscans of the Holy Hearts of Jesus and Mary; 67 Sisters of St. Francis of Assisi from the mother-house at Luxembourg in Retel; 13 Tertiaries of St. Francis, 3 houses, 2 servants of Mary from the mother-house of St. Firmin at Nancy, 1 house. The most important churches of the dioceses are the cathedral of St. Stephen, a magnificent Gothic structure, the main parts of which were built in the fourteenth century; it was completed in 1346 and in 1875 it was completely restored; the Gothic churches of Metz, St. Vincent (thirteenth and fourteenth centuries), St. Martin (twelfth and thirteenth centuries), St. Segolana (thirteenth and fourteenth centuries), the collegiate church at Gorze (twelfth century), the late Gothic parish church at Mörchingen, the church of St. Peter at Pont Fesquet.

MEXICO

(Mexico, or Meun.), Jean Clopinel de, French poet, b. c. 1260 in the little city of Meung-sur-Loire; d. at Paris between 1305 and 1320. He took the name of his native city, but received from his contemporaries the nickname Clopinel (dopirin, to limp) because he was lame. Such nicknames were very common in the Middle Ages and were used in lieu of patronymics, the custom of which was not yet established. Jean de Meun's condition has been a much debated question. It seems certain today that he was born of well-to-do parents, received a very good education, and, about 1300, was a wealthy burgess of Paris, a steady and pious man who enjoyed the esteem of his fellow citizens and the friendship of many a noble lord. He translated the "De rerum natura" of Vergil, and composed in French verses a Testament in which he reproves women and the friars. His fame rests on a work of his earlier years, the completion of the "Roman de la Rose", which had been left unfinished by Guillaume de Lorris. As it stood, the latter's work was a sort of didactic poem in which he used allegorical characters to describe the forms, the phases, and the progress of love. His aim seemed to have been to compose a treatise on the art of loving for the use of the noble lords and ladies of the thirteenth century. To the 4669 verses of his predecessor, Jean de Meun added more than 18,000 and made the poem a sort of cyclus. He added 5200 of his own. He quoted, translated, and imitated all the writers then known: Plato, Aristotle, Cicero, Virgil, Ovid, Augustine, Juvenal, Livy, Abelard, Roger Bacon. Of the 18,000 verses which he has written, it has been possible to assign 12,000 to their authors. All the characters became so many pedants who discoursed on all sorts of remote and remote subjects: the origin of the state, the origin of the royal power, instinct, justice, the nature of evil, marriage, property, the conflict between the regular and the secular clergy, between the friars and the university, etc. The book is full of attacks on all classes and duties of society: the magistrates, the soldiers, the nobles, the monks, tithes, feudal rights, property. De Meun's talent is vigorous, but his style is often cynical and reminds the reader of the worst pages of Rabelais.

PARIS, Jean de Meun in Hist., litteraire de la France, XXVIII (Paris, 1890); A. Chabot de Ch. de Meun et de la Rose: 9 Formes de Bibl. de l'ecole des chartes (Paris, 1860); LANGLIAUX, Origines et sources du Roman de la Rose (Paris, 1890).

PIERRE MARIQUE.

Mexico.—GEOGRAPHY.—The Republic of Mexico is situated at the extreme point of the North American continent, bounded on the north by the United States, on the east by the Gulf of Mexico, the Caribbean Sea, British Honduras, and Guatemala, and on the south and west by the Pacific Ocean. It comprises an area of 767,000 square miles, with a population of 12,604,000, of whom 2,062,000 are whites or creoles, 7,380,000 half-breeds or mestizos, 4,082,000 Indians, and about 80,000 negroes. Among the whites there are approximately 60,000 foreigners, the greater number being North Americans, Central Americans, Spaniards, French, Italians, etc. The form of government is republican; its head is a president, who is elected every six years; the legislature consists of two bodies, senate and chamber of deputies; and there is a supreme court. The republic is composed of twenty-seven states, three territories, and a federal district. The territory of Quintana Roo, created in 1902, was a part of the State of Yucatan. The names of the states, with population, area in square miles, capital, and number of people, are given in the accompanying table.

The Cordillera of the Andes which crosses the narrow isthmus that unites the Americas, branches out into two ranges when it reaches the peak of Zapotepeque (10,000 feet), in the State of Oaxaca; the eastern branch terminates at the Rio Bravo (or Rio Grande), in the State of Coahuila, and the western branch extends through the States of Chihuahua and Sonora and merges into the Rocky Mountain system in the United States. In the Mexican territory the two ranges are so closely united as to form almost a compact whole, occupying nearly all the region from ocean to ocean, forming the vast tablelands that extend from Oaxaca and Coahuila, leaving but a narrow strip of land along the coast line. On the eastern coast the land slopes almost imperceptibly to the Gulf, whereas on the western the descent is sharp and abrupt. This accounts for the few good ports on the Gulf side, and the abundance of harbours and sheltered bays on the Pacific shore. The highest peaks of these vast mountain ranges are: Popocatepetl (17,800 feet), Citaltepetl, or Peak of Orizaba (17,000 feet), Ixtaccihuatl (16,100 feet). To this physical configuration of the land, the absence in Mexico of any water systems of importance, is due to the principal rivers, none of which carries a great volume of water, are the Bravo, Pánuco, and Grijalva, emptying into the Gulf of Mexico; while the Rio Grande, the Rio Mayo, and Yaque, emptying into the Pacific. Very few islands are to be found on the eastern coast of Mexico, quite unlike the Pacific shore, which along the coast of the peninsula of Lower California is dotted with small islands. The four seasons of the year, common to most countries, are unknown in Mexico, owing to the entirely different climate of the regions. Common usage has divided the year into two distinct seasons, the rainy and the dry season, the former extending from May to October. During this entire time there are daily showers, which not infrequently are heavy downpours. The other six months are dry, not a drop of rain falling, at least on the tablelands. The climate of the coast region is always very warm, while that of the tablelands is temperate. The phenomenon of frost in December and January on the tablelands of Mexico, Puebla, and Toluca, situated at an altitude of more than 6000 feet above the sea level, is due not so much to extremes of climate as to the rarity of the air causing a rapid condensation of the vapours. Collection of the tables is not possible yet because the time of the Conquest are still in existence; the principal ones are: the Mexicana, Asteca, or Nahoa, in the States of Mexico, Morelos, Jalisco; the Tarasca, or Michoacana, in the State of Michoacan; the Otomi in San Luis Potosi, in Guanajuato and Querétaro; the Opata-Pima, in Sonora, Chihuahua, and Durango; the
Mixteco-Teototec in Oaxaca; the Mixe, or Zoque, in parts of Oaxaca, Vera Cruz, and Chiapas; the Chontal and Huave, in Tabasco, Oaxaca, and Chiapas; the Maya in Yucatan. Among the less important races are the Tarascans, Michoacane, and the Cuitlatecos, or Cuitlapecas, Tamaulipas, the Totonaca in the center of the State of Vera Cruz, the Matalsinca in the State of Mexico, and the Guaycurue and Laimones in Lower California. Remarkable ruins, found in many parts of the republic, bear witness to the degree of civilization to which these nations had attained. Chief among these may be mentioned those of Uxmal, Sacbe, and Tamoanchan, Yucatan (Maya nation), those of Palenque and Milla in Oaxaca (Teotopotec nation), the baths of Netzahucayotl in Texcoco (Chichimeca-Nahoe nation), and the pyramids of Teotihuacan (Tolttec nation). The separation of Church and State has been established by law, but the religion of the country is Catholic, there being actually very few who profess any other. Railroads, 14,857 miles; telegraph lines, 40,640 miles. In 1907 the product of the mines amounted to $33,078,500, $42,723,500 of this being gold, $19,048,000 silver, and $12,404,000 copper. In 1908 $12,001,000, $3,300,000 gold and $3,701,000 silver, was minted. The principal products besides minerals are corn, cotton, agave plant (henequen), wheat, sugar, coffee, cabinet woods, tobacco, and hides.

History.—Pre-Cortés Period.—The chronology and historical documents of the Aztecs give us a more or less clear account of their history for eight centuries prior to the conquest, but these refer only to their own history and that of the tribes living in close proximity to them, little or nothing being said of the origin of the Otomies, Olomecs, Cuitlatecos, and Michoacane. According to Clavijero the Toltecs came to Mexico about A.D. 648, the Chichimecs in 1170, and the Aztecs in 1196. That their ancestors came from other lands, is asserted by all these tribes in their traditions, and the north is generally the direction from which they say they came. The lands of the Aztecs and the first immigrants to Mexico came from Asia, either by way of Behring Strait, or across the Pacific Ocean. The theory that these people had some close connection with the Egyptians and other peoples of Asia and Africa has some substantiating evidence in the ruins still extant, the pyramids, the exact and complicated method of computing time, the cryptoglyphs, and conchoidal flint (with those of the ancient Egyptians), seen in the mural paintings in the ruins of Chichen-Itza. It seems that the Otomies were the oldest nations of Anahuac, and the Itzacs of Yucatan. These were followed by the Mayas in Yucatan, and in Anahuac the Toltecs, the Chichimecs, and Nahoaes, with their allies from the Tepanecas, Chichimecas, Tepecanes, Acolhuas, Tlahuicas, Tlaxcaltecos, and Aztecs. The last-named founded the city of Tenochtitlan, or Mexitli, in 1325, and gradually, overpowering the other tribes, extended their empire north as far as the Kingdom of Michoacan, and the domain of the savage Otomies, east to the Gulf, west to the Pacific, and south to Nicaragua. This was the extent of the Aztec empire at the time of the Spanish invasion in 1519.

Language and religion.—Nahuatl, or Aztec, somewhat modified in the region of the central tableland, was the official language of the empire, but many other dialects were in use in other sections. The principal ones were: Tarascan in Michoacan, Mayan in Yucatan, Otomian in the northern limits of the empire, Mixteco-Teototec and Chontal in Oaxaca, and Chiapanecan and Tzental in Chiapas and Tabasco. The religion of all these nations was a monstrous polytheism. Human sacrifice was a feature of the worship of nearly all the tribes, but in none did it assume the proportions of the Aztecs. Among the Aztecs, their great teocalli, or temple, at the capital. Father Motolinia in his letter of 2 January, 1553, to the Emperor Charles V, speaking of the human sacrifices with which the Emperor Ahuitzotl (1486-1502) celebrated the opening of the great temple in Mexico, says: "In a sacrificial service lasting three or four days 80,400 were sacrificed. This was in the temple of Tlacochcalco, four streets walking single file until they reached the idols." Father Duran, speaking of this same sacrifice and of the great number of victims, adds: "Which to me seemed so incredible, that, if history and the fact that I found it recorded in many places outside of history, both in writing and pictorially represented, did not compel me to believe it, I very much not dare to assert it." The Vatican and Tellerian manuscripts give the number of victims as 20,000; this number seems more probable.

Upon this occasion victims were simultaneously sacrificed in fourteen principal temples of the city. In the great teocalli, there were four groups of sacrifices, and the same was probably the case in other places; the time for the sacrifices was from sunrise to sunset, about thirteen hours, each victim required about five minutes, so that computing by this standard the number of victims might easily reach the above-mentioned number. Father Mendietz, as well as Father Motolinia and other authorities, agree in affirming that the number of victims annually sacrificed to Huitzilopochtli, by the Aztecs, was in the year of sacrifice 1519, reached the number of 15,000 to 20,000. To the student of Aztec history this will not appear unlikely, for they kept up a continuous warfare with their neighbours, not so much to extend their empire as for the avowed purpose of securing victims for the sacrifices. Indeed, their idea was not so much to kill as to take their prisoners, to sacrifice them. In the meantime, the Kingdom of Michoacan and the Republic of Tlaxcala, situated in the very heart of the Aztec empire, only a few miles from the capital, owed their independence, and the Spaniards many of their victories. Hernan Cortes may for this reason have escaped death under the Indians by the number of victims and the siege of the capital. Notwithstanding the hideous form of worship and the bloody sacrifices, the peoples of ancient Mexico preserved a series of traditions which may be classified as Biblical and Christian; the Biblical traditions are undoubtedly the remnants of the religious beliefs of the first races who migrated to these shores: this is true while the origin of the Christian traditions will be explained later.

Biblical Traditions. — (1) Idea of the Unity of God.—The Aztecs gave the name of Teotl to a supreme, invisible, eternal being, whom they never attempted to portray in visible form, and whom they called Toque-Nahuaque, Creator of all things, Ipameomani, He by whom all things we live. This god was called Chihua, Chihua, Hunab, and the second woman, the woman was called Cihuacohuatli, the snake woman. (2) Creation.—Among the Aztecs the idea of the creation had been preserved. They believed that Toque-Nahuaque created a man and woman. Then came the flood, and the sun and the moon; the woman was called Cihuacohuatli, the snake woman. (3) Deluge.—Among the Michoacans we find traditions of the Deluge. Tespi, to escape from drowning in a terrible deluge that occurred, embarked in a boat shaped like a box, with his wife and children, many species of animals, and provisions of grain and seeds. When the rain had abated and the flood subsided, he liberated a bird called an aura, a water bird, which did not return. Then others were released, and all but the humming bird failed to return. The illustration on the following page of an Aztec hieroglyphic taken from the Vatican manuscript represents the Deluge as conceived by the Aztecs. The god of the earth was the house with the head and hand of a woman projecting to signify the submersion of all dwellings and their in—
habitants. The two fish swimming in the water signify, besides the fact that they were saved, that all men were transformed into Tlacaminchic, fish-people, according to the Aztec tradition. In the midst of the waters floats a hollow wooden canoe, Acalitl, occupied by a man and woman, the only privileged pair to escape the disaster. The goddess Chalchihuitlicue, as though descending from the heavens in a flash of lightning, surrounded by her symbols of rain and water, presides over the scene. The date of the Deluge is marked at the right with the sign Matlactliatl of the month Atemoatli (3 January); the duration of the flood is marked by the sign to the left. Each major circle finished with a feathered end, equals 400, and each minor circle indicates a unit, so that together they equal 4008 years.

(4) Tower of Babel.—In the commentary on the Vatican manuscript mention is made of the epoch after Atonatiuh, that is the Deluge, when giants inhabited the earth, and of the giant Xelhus, who, after the waters had subsided, went to Cholollan, where he began to build the great pyramid out of huge bricks of sun-baked clay (adobes), made in Tlatmanalco at the base of the Cocotl mountain, and conveyed to the site of the pyramids by hand. A line of men extended from place to place, and the bricks were passed from hand to hand. The gods, seeing that the pyramid threatened to touch the sky, were displeased and rained down fire from the heavens, destroying many and dispersing the rest. (5) Confusion of Tongues. —Tecunicalli and Yoquicheztal, the man and woman who were saved from the flood, according to the Aztec tradition, landed on the mountain that had been a sea. They had many children, but they were all dumb until a dove from the branches of a tree taught them to speak. Their tongues, however, were so diverse that they could not understand one another.

Christian Traditions.—In the history of the nations of ancient Mexico, the coming of Quetzalcoatl made a great stir. He was said to have come from the Province of Pánuco, a white man, of great stature, broad brow, large eyes, long black hair, rounded beard, and dressed in a tunic covered with black and red crosses. Chaste, intelligent, and just, a lover of peace, versed in the sciences and arts, he preached by his example and doctrine a new religion which inculcated faith in the one God, love and reverence for the Divinity, practice of virtue, and hatred of vice. He predicted that in the course of time white men with beards, like himself, would come from the East, would take possession of their country, overthrow their idols, and establish a new religion. Expelled from Tollan, he sought refuge in Cholollan, but, being pursued even here by the Tollans, he passed on to Yucatan, where, under the name of Kukulcan, he repeated the predictions he had made in Anahuac, introduced the veneration of the Cross, and preached Christian doctrine. Later he set sail from the Gulf of Mexico, going towards the East, to his own land, as he himself said. The opinion of ancient writers that this person was the Apostle Thomas is now universally rejected, and the most probable explanation of the identity of Quetzalcoatl is that he was an Icelandic or Norse priest of the tenth or eleventh century, who, on one of their bold voyages of adventure, accidentally discovered this new land or, shipwrecked in the Gulf, drifted to the coast of Panama. Christian traditions, above all that of the veneration of the Cross, date in Anahuac and Yucatan from the coming of Quetzalcoatl. In Yucatan the followers of Francisco Hernández de Córdoba found crosses which were the object of adoration. With regard to the Cross of Cosumel, the Indians said that a man more resplendent than the sun had died upon it. The Mayas preserved a rite suggestive of baptism and confession, and among the Totonacos an imitation of communion was practised, the bread which was used was called Toyolliaitlacual, i.e., food of our soul. Crosses were also found in Querétaro, Tepic, Tongoistetec, and Metztitlan.

No better authority can be cited, in connexion with the famous Cross of Palenque, which is herewith reproduced than the learned archaeologist, Orozco y Berra. He says: "The civilization indicated by the ruins of Palenque and of Yucatan, differs in every respect, language, writing, architecture, dress, customs, habits, and theogony, from that of the Aztecs. If there are some points of resemblance they can be traced to the epoch of Kukulcan, when there was some intercourse between the two nations. There is also historical proof that the Cross of Palenque is of much more ancient origin than that of the Toltecs. From this it may be inferred that the Cross of Palenque does not owe its origin to the same source as the crosses of Mexico and Cozumel, that is, to the coming of Kukulcan, or Quetzalcoatl, and consequently has no Christian significance such as those of other Mexican Indians."
Colonial Period — (1) Conquerors and Conquered. —
With the capture of Cuaxhutemotzin, 13 August, 1521, the Aztec empire came to an end, and with it Nahoa civilization, if such may be called the attainments of a nation which, although preserving in some of the branches of human knowledge remnants of an ancient culture, lacked nevertheless many of the essentials of civilization, practised human sacrifice, polygamy, and slavery, and kept up an incessant warfare with their neighbours for the avowed purpose of providing victims to be sacrificed in a fruitless endeavour to satiate the thirst for blood of their false gods. Most historians attribute the victories of the Spanish conquerors to the firearms they carried, the horses they rode, the horse being entirely unknown to the Indians, the steel armour they wore, and the help of the Indian allies. No doubt all these contributed in a measure, but not as much as is represented. Of the 500 or 600 men that composed the first expedition, only thirteen carried firearms, and these were heavy, cumbersome pieces, hard to manage as were all the firearms of that time. The artillery train was primitive, and its capacity limited, and always accompanied the main column. The detachments which were sent out to subjugate or pacify the villages, and which had sharp encounters, could not hamper their movements in this way. The horsemen were but sixteen in all, and after their first astonishment, not unmixed with awe, the natives soon learned that they could be felled by a single blow. Except officers, few of the Spaniards wore armour, the majority had quilted cotton suits, and for arms the sword and buckler; the horsemen were armed with lances.

As to weapons, the Indians were quite as well provided as the Spaniards; thick wooden helmets covered with leather protected the head, and all carried the chimaotl, a strong shield large enough to almost cover the entire breast. The allies no doubt helped, but in the stubbornly fought battles with the Tlaxcallaces, the Spaniards won singlehanded; their Indian allies in the very heat of battle thinking more of pillage than of fighting, during the siege, when the Spanish cause seemed doomed, the allies forsook them. When later they returned they were such a hindrance on the narrow causeway, that in order to fight freely, the Spaniards were obliged to send them to the rear. The Spanish victories were due more to the mode of Indian warfare and in some cases, as in that of Otumba, to Cortés’s indomitable courage and strategy. As has already been said, the Indians did not fight to conquer but to take their enemies prisoners, and the battles after the first assault became a series of confused hand-to-hand fights without order or harmony on the part of the Indians, whereas the Spaniards preserved their unity and fought under the direction of their leader. Valour was not wanting on either side, but the Indians yielded to the temptation of an easy flight, while the Spaniards fought with the courage of desperation; knowing well that the sacrificial stone was the fate that awaited the prisoner, with them it was to conquer or to die. Historians have been so carried away with the military exploits of Cortés that the men who fought with him, sharing all his dangers, have been overlooked. Greed for gold was not the sole dominant motive of their actions, as has been so persistently asserted; it was a strange mixture of indomitable cour-

Pre-Christian Cross of Palenque
Of Buddhist origin according to Orozco y Berra

age, harshness, tireless energy, cupiditis, licentiousness, Spanish loyalty, and religious spirit. Some of those who had fought most valiantly and who received their share of the spoils, judging their gains ill gotten, laid aside their worldly possessions acquired at such a high price, and embraced the religious life. Later they emerged from the cloister transformed into missionaries, full of zeal and bringing to the arduous task of evangelizing the Indians, the same valour, disregard of fatigue, and untiring energy they had previously displayed in the army of discovery and conquest.

With the fall of the great Tenochtitlan, the first period may be said to close. This was followed by many expeditions of discovery and conquest, ending for the most part in the founding of colonies. Alvarado penetrated as far as Guatemala; Cristóbal de Olid reached Honduras, Montejo, father and son, accomplished the conquest of Yucatan; Cortés went as far as Lower California. Nuño de Guzmán, the conqueror of Michoacan (or Tarasco Kingdom) and the founder of the city of Guadalajara, whose career might have been so distinguished for glory, allowed his cruel, avaricious disposition to overrule all his actions. Fleeing from Mexico to avoid the storm that his evil deeds had brought upon him, he encountered Tarag...
axan II, alias Calzontain, the King of Michoacan; he seized him, plundered his train, tortured and finally put him to death. Pursuing his way he left a trail of ashes and blood through the whole Tarasco Kingdom. The saintly Vasco de Quiroga, first Bishop of Michoacan, with difficulty effaced the traces of this bloody march. Nuño penetrated beyond Sinaloa, suppressing with an iron hand the discontent in his mixed troupe. Retracing his steps, he founded the city of Guadalajara. At enmity with Cortés, unrecognized by the Audiencia and the viceroy, cursed by his victims, he returned to Mexico, to be seized, imprisoned, and transported to Spain, where he died in poverty and want. Nuño was succeeded by the mild, winning Cristóbal de Olarte. By the close of the sixteenth century the conquest from Guatemala to New Mexico had been practically accomplished.

In New Spain, no Sayri Tupac nor Tupac Amaru ever arose to attempt to overthrow the Spaniards, as in Peru. The Indians conquered by Cortés and the commanders who followed him remained submissive.

There were occasional uprisings among the Northern Indians, but never serious enough to affect the peace of the colony in general. Neither had the Government to contend with any disloyalty among its own subjects; the Spaniards of New Spain never belied the proverbial Spanish loyalty. The king received from the hands of Cortés and those who continued his work a vast empire almost free of expense to the royal exchequer. All that was required seemed to be to take possession of the new territories added to the Crown; but the situation was not without its difficulties. For the conquest a military commander had been sufficient; the new empire would require a Government. In the methods employed to organize this new empire, Spain has frequently been charged with cruelty. There was cruelty, and at times extreme cruelty, cannot be denied. The execution of Cuahutemoc and the horrible death of Tongoaxan II will ever disgrace the memory of Cortés and Nuño de Guzmán. The slavery to which the Indians were reduced during the early years of the conquest, their distribution among the plantations, the contemptuous disregard of the conquerors for the lives of Indians, looking upon them at first as irrational beings, are blots which can hardly be effaced from the history of the Spanish conquest in America. But the impartial historian may well call attention to certain facts and thus enable the reader, viewing the question from every aspect, to form a correct historical opinion.

Neither the home Government nor the Spanish nation was ever an accomplice in these deeds of cruelty of the Spaniards in New Spain. Spain, it is true, rewarded the conquerors of Mexico just as nations to-day honour the victorious generals who have left in their wake devastated lands and battlefields staining the dead. These expeditions of conquest were the natural outcome of circumstances; they were carried out under royal command, and were no more piratical expeditions than they would be now. Spain did not fail to demand a strict account from all who, after the submission of the people, exceeded the limits of their authority, and she used every measure within her reach, though not always successfully, to obtain fair treatment for the conquered Indians. Innumerable royal decrees and laws enjoining just and equitable treatment for the Indians, were issued to the viceroys and governors of America. Through the aid of the missionaries, the Spanish Government obtained from Paul III (17 June, 1537), the Bull which gave to the Indians equal rights, treating them like the white man, and proclaimed them capable of receiving the Christian faith and its sacraments, thus destroying the pernicious opinion that they were irrational beings. Severe laws were promulgated against those who should attempt to enslave the Indians, and the Government ordered that slaves should be brought from Africa (as was the custom of the period), rather than that Spanish subjects should become slaves.

With regard to encomiendas (a system of patents involving virtual enslavement of the Indians) no one who has read the life of Fray Bartolomé de las Casas can be ignorant of the earnest effort made by the Government to do away with them, and as this was impossible, and as the attempt was creating disorder (in Ulúa), the Government tried by every means to alleviate the condition of the Indians, and to save them as much as possible from harsh treatment by their masters. If the excesses of some of the conquerors stood out in such bold relief, it is because of the unceasing protests of the many Spaniards who were not their partisans. The most vehement accusers of the Spaniards base their assertions on the writings of Spaniards themselves, particularly those of the fiery Las Casas, to whom the Government appears to have allowed free speech. The missionaries were equally vehement, often making unreasonable demands, and showing themselves more bitter towards their own countrymen than the Indians had been. Even Philip II suffered in silence this torrent of complaint and abuse of his Government, and tolerated charges which, in similar circumstances, in the realm of the haughty Elizabeth would have been dearly paid by those complaining. A laudable sentiment of fairness and compassion towards the vanquished race inspired these writings, and their very nature and purpose precluded all mention of any deeds of kindness and humanity. The gruesome picture that has resulted from this makes it appear that in that army of conquerors and colonizers there was not a single one who was a Christian and a man. In their zeal for justice the Spaniards have really cast dishonour on their country, and this must ever redound to their glory.

(2) Evangelization and Conversion of the Indians.—In the ranks of the Spaniards there were several priests, but little could be done during the first stormy period. When the conquest had been effected, and order restored, the Franciscans were the first to offer themselves for the work. Three Franciscans, among them the famous lay brother Peter of Ghent (Pedro de Gante), kinsman of the Emperor Charles V, had preceded the first twelve Franciscans who formally took possession of the missions in 1524. Upon the arrival of the latter, they joined their ranks, and
the superior, Fray Martín de Valencia, appointed them to various places near the City of Mexico, where they begazed on the council, to test the presch. At first, especially among the adults, little could be accomplished, as they did not know the language, so they turned their attention to the children. There their zeal was rewarded with more success, the children being more docile and less imbued with the effects of idolatrous worship. By degrees they gained ground, and before long the world, to test for baptism, the number increasing daily until within a few years the greater portion of the inhabitants of the newly conquered territory had received baptism. The apparition, in 1531, of Our Lady of Guadalupe to the Indian Juan Diego had a powerful effect, the increase in conversions being very noticeable after that time.

In some respects it may not be without interest to note the particular bias which the religion of the Indians assumed. Thus, for example, the Christianity of the Indian is essentially sad and sombre. This has been attributed to the occasion on which Christianity was introduced among them, to racial traits, to the impression indelibly imprinted upon them by their ancient rites, and to the fact that the Indian sees in the crucifix the actual evidences of insult and abuse, of suffering and dejection. The crucifixes in the Indian churches are repulsive, and only in rare instances have the priests succeeded in improving or changing these images. Devotion to some particular saint, above all to the Apostle St. James, may also be noted. Their ancient polytheism had taught them that the favour of each god who possessed special prerogatives was to be sought, which explains the many and varied propitiatory sacrifices of their religion, and the new converts probably did not at first understand the relative position of the saints, nor the distinction between the adoration due to God and the reverence due to the saints. Hearing the Spaniards speak constantly of the Apostle St. James, they became convinced that he was some sort of divine protector of the conquerors, to be justly feared by their enemies, and that it was therefore necessary to gain his favour. Hence the great devotion that the Indians had for St. James, the numerous churches dedicated to him, and the statues of him in so many churches, mounted on a white horse, with drawn sword, in the act of charging.

A much debated question at that time was whether conquest should precede conversion, or whether the
efforts of the missionaries alone would suffice to subjugate and bring the Indians to a Christian and civilized mode of life. The former theory had been applied to the first nations, which the missionaries found conquered and pacified when they began their work among them. The question presented itself when expeditions against the Indians of the northern part of Mexico were being planned. The independent state of these tribes was a constant menace to the peace and progress of the colony in the south, and the rich mines known to exist there were also an inducement. The system adopted, which seems to have been enjoined by royal mandate, was to send armed expeditions, accompanied always by several missionaries, to take possession of the territory and to establish garrisons and forts to hold it. By this arrangement the cross and the sword went hand in hand, but the missionaries of through the efforts of Father Salvatierra, and to him and the famous Father Kino is due the discovery that Lower California was a peninsula, and not an island, as had been supposed during a century and a half. When the Jesuits were expelled from all the Spanish colonies by Charles III, many of their missions were abandoned, others were taken in charge by the missionaries of the College of Our Lady of Guadalupe in Zacatecas; Towards the close of the eighteenth century the Franciscans, handicapped for so many years by the advantages and discensions of the era, returned with renewed life and vigour to the work of the missions, and took charge of many of the deserted missions of California. They sent many worthy successors of the first Franciscans, among them the well-known Fray Junipero Serra, founder of the missions of Upper California.

(3) The Destruction of the Aztec Hieroglyphics.—The general opinion of the ordinary student of Mexican history, after reading the works of Prescott, Bancroft, Robertson, and others, is that the first missionaries and the first Bishop of Mexico, Juan de Zumárraga, were responsible for the destruction of the hieroglyphic annals of the Aztecs. Expressions such as the following, occur frequently: "The fanaticism of the first missionaries"; "the Omar of the new continent". If we look carefully into the sources from which these opinions have been taken we shall see that these charges are entirely unfounded or, at least, greatly exaggerated. To make this point clear, we shall at the beginning set aside such writers as Prescott, H. H. Bancroft, Lucas Alamán, Humboldt, Clavigero, Robertson, Gemelli, Siguenza, Herrera, and others, who, although learned men, from the very circumstances of having written at a time far removed from the era of the conquest and evangelization of Mexico, perhaps never having visited the country itself, have necessarily confined themselves to repeating tales which others have with greater or less accuracy related. Aside these, there still remain thirteen writers, some of them contemporary with the conquest and others practically contemporaneous, who have seen the work of the missionaries and witnessed the events immediately following the conquest. Of these, thirteen, six may still be eliminated as treating purely of the destruction of idols and sculptural arts, and three more, who concerned themselves with manuscripts and hieroglyphics. These are Fray Martín de Valencia, Superior of the first Franciscans, Fray Pedro de Gante, Fray Toribio de Benavente, Fray Jerónimo de Mendibérica, the letter of the bishops to the Emperor Charles V (1537), and his reply. Of the seven remaining authors five wrote at the end of the sixteenth century and the beginning of the seventeenth, such as Sahagún (1550-80), Torquemada (his works were published in 1615), Durán (1519-80), Ixtlilxochitl (1600-15), and J. B. Pomar (1582). Two authorities of the time of the conquest are the codex called "Libro de Oro" (Golden Book), 1530-34, and the letter of Bishop Zumárraga to the General Chapter of Tolosa, written at the end of the year 1531.

Before treating each of these authorities separately it may be as well to establish some important facts. According to Sahagún, in the time of the native Mexican King Itzcóatl (1427-40) a number of paintings had been burnt to keep them from falling into the hands of the conquerors, who might have treated them with disrespect. This may be called the first destruction. Ixtlilxochitl (Fernando de Alba) asserts that when the Tlaxcaltecs entered Tecoaco in company with Cortés (31 December, 1520) they "set fire to everything belonging to King Netzahualpilli, and thus burnt the royal archives of all New Spain" (second destruction). Mendibérica, in alluding to the burning of the Spaniards many paintings were hidden and locked up, to save them from the ravages of war; the owners dying or moving away, these papers were
lost (third destruction). Hernán Cortés, in order to take the City of Mexico, had to demolish almost the whole of it, including the Teocalli; many writings must have been destroyed then (fourth destruction).

All this was previous to the coming of the first missionaries. No evidence is to be found in any of the writers of the period that either the missionaries or Bishop Zumarraga burnt anything in Mexico, Texcoco, or Atzcapotzalco, that might even remotely be called a literary monument. On the contrary, Fray Jerónimo de Mendiesta, one of the first Franciscans, in the prologue of the second volume of his "Historia Eclesiástica Indiana" states that far from the first friars destroying Indian manuscripts, their superior, Fray Martín de Valencia, and the president of the Second Audiencia, D. Sebastián Ramírez de Fuen Leal, commissioned Fray Andrés del Olmo, in 1533, to write a book on Indian antiquities. This he did having seen "all the pictures representing ancient rites and customs, owned by the caciques and other persons of importance in these provinces," and having received ready answers and explanations from all the oldest inhabitants whom he questioned. Moreover, in 1533 or 1534, the painting to which the name of Codex Zumárraga has been given was being studied and explained, notwithstanding the horror it must have inspired from being stained with human blood. At Bishop Zumárraga did not reach Mexico until 1528, he cannot be blamed or held responsible for what had happened previously. In the years 1529 and 1530 he had more than enough to do in opposing the excesses of the First Audiencia, and anyone who is familiar with the history of this period will know that he had other matters than the burning of manuscripts to worry about. It is nothing of entire archives, as some writers assert—to occupy him. At the close of the year 1531 he was recalled to Spain, and did not return until late in the year 1534. At this time no hieroglyphic records were destroyed, but, as we have already stated, they were being collected and interpreted. This being the case, let us now examine the testimony which has been quoted against the missionaries and Bishop Zumárraga.

J. B. Pomar, who, like Ixtlilxochitl, was a descendant of the kings of Texcoco, may be set aside at once. He states that in Texcoco the Indians themselves burnt the paintings that had earlier escaped the incendiary of the Tlaxalttecas, for fear Bishop Zumárraga might attribute to them idolatrous worship, because at that time D. Carlos Ometochtinz, son of Netzahualpilli, was accused of idolatry. It was not, therefore, a question of an act of Bishop Zumárraga, but of a fear, well or ill-founded, on the part of the Indians. The Texcocanos, seeing that their lord was indicted for idolatry, and fearing that the investigations might incriminate them, and find them altogether faultless, hastened to shield themselves by burning some paintings, the character of which is not known. They may in reality have been representations of idolatrous and superstitious rites, and not annals of historic value. As regards other authors who were almost contemporary with the conquest, it must be noted that within a few years they began investigations concerning Indian antiquities and naturally turned to the hieroglyphics that had been preserved, seeking explanations from the Indians who were most versed in deciphering these. But they had already lost in great part the knowledge of the meaning of these figures, which had been transmitted by tradition only. Ixtlilxochitl asserts that out of a gathering of the principal Indians of New Spain, who had a reputation for knowing their history, he found only two who had full knowledge and understanding of the paintings and signs. Urged by the interpreters to explain certain points which they did not understand, they felt great repugnance in confessing their ignorance, and in order to confound them, it had recourse to the convenient alternative of laying the blame on the scarcity of pictures. Their desire to shield their ancestors for their failure to record some facts of importance induced them to exaggerate the part taken by Bishop Zumárraga and the missionaries.

Fray Durán, the cautious Fray Sahagún, and Ixtlilxochitl do not accuse Bishop Zumárraga, but attribute everything to the missionaries. Fray Torquemada blames the missionaries and Bishop Zumárraga, pointing to the archives of Atzcapotzalco as destroyed by him. This, however, appears utterly unlikely as no former writer ever mentioned the archives of Atzcapotzalco, and it is quite possible no such archives ever existed. Moreover, had there been any truth in this accusation, Ixtlilxochitl, who was in search of these proofs, would have related it in his works; as it is, he does not even mention it. Finally, it must be borne in mind that Torquemada only gathered together the writings of the early missionaries, and interwove his works with fragments of these writings. He could not find such a charge against Bishop Zumárraga because it was not there. As regards the first missionaries, we have already mentioned the value they placed upon the pictures and the use they made of the hieroglyphics. Two documents of the time of the Conquest may be cited in this connexion: the "Libro de Oro" (Golden Book) and the letter of Bishop Zumárraga to the Chapter of Tolosa. In the "Libro de Oro", which is the work of the first Franciscans, and which has been very badly edited, some phrases being almost unintelligible, we find the following words: "As we have destroyed and burnt the books and all that pertains to ceremonial or is suspect, and threatened them if they do not reveal them, now when we ask for books, if any have them they tell us they are burnt, and ask why we want them. There are books among them that are not prohibited, such as give the computation of the months, years, and days, and there is always something that is suspect. Besides, there are others which are prohibited, treating of idolatry and dreams." The only thing that can be
proved as certain from this document is that the missionaries burnt books of heathenish and idolatrous ceremonies; the distinction between these and books of annals being clearly drawn; the one prohibited, the other not. As the accusation is principally based on the burning of historical hieroglyphics, we see from this document that there is no foundation for it.

There remains the famous letter of Bishop Zumárraga to the Chapter of Tolosa, written in 1531. As there have been twenty-one editions of this celebrated letter, there are some variations; the quotation is given as it is found in the oldest edition, which says: "Baptizata sunt plausum ducenta quinquaginta millia hominum, quingenta deorum templas sunt destructa, et plausum viesces mille figurae daemonum, quas adorabant, frataque combustae." The accusation as a mark of indignity, and then broken up. This, in all probability, is the meaning of the words in Bishop Zumárraga’s letter.

Briefly, then, the preceding facts show: (a) That before the coming of the first missionaries many hieroglyphic paintings had been destroyed. (b) That the missionaries who came in 1524, and who wrote histories, speak of idols and temples destroyed, but say nothing of writings being burnt, and as early as 1530 they began to distinguish between prohibited and non-prohibited paintings; in 1533, by order of the superior, they collected these writings to compile a history of the Indians. (c) That the charge of having destroyed the historical hieroglyphics of the Indians, practically null in the beginning, has grown in proportion as the writers are farther removed from the time of the conquest. (d) That, even granting that there ever was such a destruction, it could not have been so great, for from 1568 to 1580 the viceroy D. Martin Enríquez ordered that the paintings of the Indians be brought together in order to rewrite their history, and many were brought from Tula, Texcoco, and Mexico, and in the eighteenth century the celebrated writer and collector Boturini found many more.

(4) Public Instruction During the Earliest Colonial Period.—When the first band of twelve Franciscans arrived at Tlaxcala in 1524 they found there Father Tecto, who had come two years before. Seeing that he and his companions had not made much progress in the conversion of the natives, Fray Martín de Valencia asked the reason, and what they had been doing in the time they had been in the colony: “Learning a theology unknown to St. Augustine (namely), the language of these Indians,” replied Father Tecto. Once established, the missionaries devoted themselves to building churches and convents to which a school was always attached. In the large court of the convent catheria was taught early in the morning to the adults and to the children of the macehualitl (workmen) in order that they might then go to their work. The school was reserved for the children of the nobles and persons of prominence. As the Indians did not at first realize the importance of this instruction, the schools were not well attended, and the missionaries had to ask the aid of the civil authorities to compel parents to send their children to be instructed. Many of the nobles, not wishing to entrust their children to the new apostles, but not daring to disobey, sent as substitutes the children of some former dependent, passing them off as their own, but soon seeing the advantages of the education imparted by the friars sent their own children on the being admitted to the schools. Some of these schools were so large that they accommodated from 800 to 1000 children. The older and more advanced pupils taught the labourers, who came in large numbers in their free hours to be instructed.

At first, when the missions were not fully conversant with the language, they taught by means of pictures, and the Indians, accustomed to their own hieroglyphic figures, understood readily. In making copies the Indians inserted Aztec words written in European characters, originating a curious mixed writing of which some examples are still preserved. As soon as the missionaries mastered the language they turned their attention more especially to the children of the nobles, since the children of the working class did not need so thorough an education. According to the custom of the times, they would not be called to rule, and the sooner their course of instruction was completed the sooner they would be free to help their parents. The same reasons did not hold for the girls, and no distinction was made, pupils sitting together, at first in the patios and later in the homes built for them. Bishop Zumárraga founded eight or nine schools for girls in his diocese, and at his urgent solicitation, in 1530, the empress
six women teachers, and in 1534 he himself brought six more. Later on, the viceroy, D. Antonio de Mendoza, founded an asylum for half-caste girls, which at first was hampered by lack of funds, but the king endowed it and declared that those who wished to marry the girls should be provided with employment.

When the missionaries landed, in 1524, they did not find a single Indian who could read; nothing had been done in this direction for them by the army of conquest. Twenty years later, 1544, Bishop Zumárraga wanted to have the catechism of Fray Pedro de Cór- doba translated into the Indian tongue, which was finally done, as he believed so much good would result from it, "for", as he said, "there are so many who know how to read". Contemporary writers bear witness to the rapid progress of the Indians in writing, music, and even in Latin. The one who distinguished himself most in teaching the Indians was the lay brother Pedro de Gante, kinsman of the Emperor Charles V. He gathered together about a thousand children in the conven of San Francisco of Mexico and taught them, besides their religion, music, singing, and Latin. He also started a school for adults and founded a school of fine arts and crafts. With no resources but his indomitable energy, born of his ardent charity, he raised from the foundations and sustained for many years, a magnificent church, a hospital, and a great establishment which was at one and the same time a primary school, a college for higher studies, and an academy of fine arts and crafts—in short, a centre of civilization.

Bishop Zumárraga, who aspired always to higher things for the Indian, managed to open for them the famous college of Santa Cruz, at Tlaltetelco, on 6 January, 1534. This foundation began with sixty students, the number rapidly increasing. Besides religion and good habits, they were taught reading, writing, Latin grammar, rhetoric, philosophy, music, and Medicine. The college of Tlaltetelco sent forth native governors and mayors for the Indian towns, teachers for the Indians, and at times for the young Spaniards and creoles. Some of them were a great help to the missionaries in their philological work. In 1553 there were in Mexico three principal colleges: the one at Tlaltetelco for the Indians, San Juan de Letrán for the mestizos, both under the care of the Franciscans, and another for the Spaniards and creoles who did not wish to mingle with the others. This last was under teachers with bachelors degrees from Spain, until the Augustinians founded their great college of San Pablo, 1575. They were the first to establish a school to be frequented by both creoles and Indians. Shortly afterwards the Jesuits founded the college of San Ildefonso in Mexico with the same idea in view. For all higher studies, however, students had to go to the universities of Spain, as the Mexican schools afforded no facilities for taking university courses. To remedy this the colonial authorities determined to establish a local university.

University of Mexico.—The governor, D. Antonio de Mendoza (1535-50), to whom New Spain owed so much for his interest in public instruction, petitioned the Emperor Charles V for the establishment of a university suitably endowed. The petition, supported by the city, the prelates, and the religious orders, was favourably received, and although D. Antonio de Mendoza had resigned the governorship of New Spain in 1550, to assume that of Peru, the credit of having begun the work is due to him. The university was founded during the term of his successor, D. Luis de Velasco (1550-64). The decree of foundation signed by the prince who later reigned as Philip II, was issued by the emperor at Toro on 21 August, 1551, and the university was opened 3 June, 1553. A yearly endowment of one thousand pounds in gold from the mines was conferred upon it, and all the faculties and privileges of the University of Salamanca. The university was founded, with their respective professors, as follows: Theology, Fray Pedro de la Peña, Dominican; afterwards Bishop of Quito, whose successor in the Faculty was the learned Juan Negrete, professor of the University of Paris; Sacred Scripture, Fray Don Jesus de la Veracruz; Canon Law, Dr. Morones, fiscal of the Audiencia; Civil Law, Dr. Melgarro; Institutes and Law, Licentiate Fray Toribio de Bandera; Anatomy, Dr. Cervantes Salazar; Grammar, Blas de Bustamante. Some years later the chairs of medicine and of the Otomic and Mexican languages were added. At first there was only one chair of medicine, but towards the close of the sixteenth century the division known as prima and secon was introduced, the former including anatomy and physiology, the latter, pathology and therapeutics.

The title of Royal and Pontifical was conferred on the new university and all the doctors then in Mexico, including Archbishop Montúfar, were attached to it. The professorships were divided into temporary and perpetual; the first were for four years, the second were affected only by the death or resignation of the incumbent. When a chair was won by competition the recipient paid the fees or dues, swore to fulfill his duties well, and promised to take no part in plays, theatres, or public demonstrations. According to the instructions left by the Duque de Lerma, the award of professorships was voted on by the senior auditor representing the Audiencia, the dean as representative of the Church, an official of the Inquisition, the dean and the rector of the university, the magister scholarum and the archbishop, who presided and in whose house the voting took place. So much was the influence that in the private instructions which the Marqués de Amarrillas brought from Madrid he was directed to consider the
advisability of adding to the statutes of the university a clause to the effect that the degree of theology should not be conferred on those who did not know the Mexican language, and fixing a special hour for its study by the students of philosophy, either before or while they were studying classics.

In the famous instruction which the second Conde de Revillagigedo left to his successor the Marqués de Braniforte, we find that by a royal decree of 11 June, 1792, all members of the university were obliged to obtain the viceroy's permission to marry. The viceroy, who was the vice-patron of the university, was to appoint the rector in case the election did not give a decisive plurality to any candidate. Towards the end of the eighteenth century a course of botany was introduced. The viceroy, Conde de Revillagigedo, declared that reforms were needed in the methods of study and in the manner of conferring degrees, that little attention was given to the classics, that there was no apparatus for the study of modern experimental physics, and that there were few modern works in the library. We know, however, that D. Manuel Ignacio Beye de Cisneros, who was rector in 1760, built the library and drew up regulations for it, which were confirmed by the king in 1761. It contained more than 10,000 volumes, many of them rare and valuable, especially regarding the history of Mexico, and it was open to the public morning and afternoon, two librarians with the degree of doctor being in charge.

At first the university was governed by provisional statutes drawn up by the viceroy and the Audiencia, modifying those of Salamanca as the circumstances of the country required. The Auditor Farfan amended these in 1550, and in 1583 still further revision was made by Archbishop Moya de Contreras. In 1645, D. Juan de Palafox, who was appointed visitor, compiled new statutes which, when approved by the king, were to supersede all previous enactments. Never-
inces or creating new ones, founding of new convents, sending visitors general or provincials, journeys of the religious, naming of presidents for chapters, any instructions from the superiors not directly connected with the ordinary government of the order, as well as the patents which revoked any concessions previously granted, had to be presented to the Council of the Indies. All Bulls and Briefs from Rome, instructions from generals and other religious superiors, had to go through the Council of the Indies, and without its seal no use could be made of them. The records of provincial councils and synods in the colonies, their constitutions and decrees, and those of the chapters and assemblies of the regulars, could not be published until revised and examined by the Council. The Briefs of the Congregation of the Propaganda appointing missionaries for the Indies carried no weight whatsoever if not accompanied by permission from the king or the Council of the Indies.

In order to form a new mission, province, or seminary for missionaries it was necessary to go through all these proceedings. The province or house soliciting this permission appointed a commissioner who personally or through his superiors made his request to the viceroy or governor, to the Audiencia of the place, and to the bishop, all of whom were obliged to submit their respective reports. The commissioner, supplied with the necessary permits of the viceroy or governor and of his superiors, sailed for Spain, and at the Court the matter was laid before the commissioner general of the Indies. When all this was done, and not before, the petition could be presented to the Supreme Council of the Indies, together with the documents which certified to the necessity for the new foundation. The permission having been obtained, the Council named the religious in which the religious should be drawn, and if the Council failed to do so the commissioner general did it, sometimes leaving it to the choice of the aforesaid religious commissioner. The selection having been made and the new missionaries gathered together, he could now embark with all the necessary authorization of superiors and council, and go to the Indies, whence he was obliged to report to the authorities who had given him permission to go to Spain. If a religious wished to leave the Indies and return to Spain, the permission of the father general, the commissioner general, or of the pope himself (royal decree of 29 July, 1584) did not suffice, it was necessary to obtain the consent of the king or the Council of the Indies. Sometimes the permission of the bishops of the province was sufficient, the viceroy, president, or governor having being first consulted; they were obliged to report to the council the reasons for giving the permission.

When the chapters of the religious orders were held in places where the viceroys or governors did not reside, the latter had to write to the assembled religious admonishing them to the strict observance of their rule and constitution; and if the chapter met where the viceroy or governor lived, he was obliged to be present, and in case he noted disorders, relaxation, monopolies, and partnerships indicative of simony and abuse, and fraternal correction proved insufficient to restore order, the culpable ones were either deprived of the visitation by the visitor, provincial, prior, guardian, or prelate who might be named or elected in the Indies, was obliged before exercising his office to notify the viceroy, president, Audiencia, or governor then in supreme power in the province, showing his letters of nomination and election, in order to obtain the protection and help necessary for the exercise of the duties of his office in the province (royal decree, 1 June, 1654). In the same decree it was ordered that "the provincials of all orders residing in the Indies shall each and every one have always ready a list of the monasteries and houses under their control and the control of their subjects in the province, also all the religious, giving each one's name, age, qualifications, the office or ministry each one exercises; and this shall be given each year to our viceroy, Audiencia, or governor, or to the person exercising the supreme government of the province, adding or subtracting the names of the religious who have been admitted to the communities or who have left. The provincials of the orders, each and every one, shall make a list of the religious who are engaged in the work of teaching catechism to the Indians, administering the sacraments, and acting as parish priests where the principal monasteries are situated, and this shall be given each year to our viceroy, Audiencia, or governor, who will give it to the bishop, so that he may know what persons are engaged in administering the sacraments and doing the work of parish priests . . . . ."

From this and much more that might be added if space permitted it may be seen that the civil power had almost absolute control in the religious life of the colonies, including those of New Spain. Some of these privileges had been usurped by the kings, and others had been granted by the Holy See. To have a proper understanding of the reason of these concessions, which now seem to us excessive, we must bear in mind all that the Spanish kings did for the cause of religion in America. They erected and endowed all the churches in the New World, defrayed the traveling expenses of the religious and bishops until they reached their posts; they had assigned different amounts, by way of alms, to churches of religious orders, in order that these might be supplied with oil, lights, wine, altar breads, and other requisites for Divine worship. The building of new churches and cathedrals, the foundation of missions, depended largely on the royal bounty. When some church, especially in the Indian towns, needed repairing, the citizens could easily, on application, be freed from the tribute which was paid to the king, in order to devote the money to the needs of the church. Although the Bull of Alexander VI conferred the titles of all villages and kingdoms on condition that he should endow the churches and provide an adequate maintenance for their ministers, the kings nevertheless rarely availed themselves
of the grant, but donated to the bishops, dioceses, clergy, churches, and hospitals in the Indies a great part of what was due them from this source.

In so far as the royal patronage in New Spain is concerned, it must be admitted, in deference to the truth, that if in some instances royal decisions were oppressive and little in accordance with the liberty of the Church; the royal supervision in many other respects was beneficial. In illustration of the first may be cited the case of the bishop who, without reflecting that he had not the authorization of the Council of the Indies, and that he ought to advise the viceroy, solemnly promulgated the decree which Clement X issued when he ascended the pontifical throne, granting a general jubilee to all the faithful who should pray to the Divine Majesty that he might be granted the

and monasteries that were built in New Spain, it will be seen that the king, instead of using their royal prerogatives to hinder these foundations, did all in their power to spread and encourage them.

The much vexed question of alternate rule, which caused much dissension in the religious orders, moved Pope Innocent XII to decree that in the provinces of such religious in America as had Europeans and Indians in the communities, the prelacies should be conferred alternately, sometimes on the one and sometimes on the others. When the king heard that the papal order was not being carried out in Mexico, he required the viceroy, D. Antonio Sebastian de Toledo, Marques de Mancera, by official decree of 25 November, 1667, to investigate the matter thoroughly, and to have the orders of the Holy Father carried out. Although at first owing to the scarcity of secular priests, it was permitted religious to hold parishes, later, learning that it was the cause of relaxed discipline among them, of exemption from episcopal visitation, and sometimes of unfairness and abuse of the Indians, they did everything within their power to have these religious replaced by secular priests. As to the intervention of the viceroy in these religious orders, it is known that the part taken by the Conde de Revillagigedo, viceroy from 1746-55, in the chapter of the Carmelites, to settle the question of admitting a visitor, was most beneficial, as well as other regulations among the Franciscans, Augustinians, and Brothers of St. John of God. In the instructions given by Ferdinand VI, 1755, to D. Antonio de Ahumada y Villalón, Marques de las Amarillas, who was leaving for his post as Viceroy of New Spain, the following is found: “See that the bishops, the secular and religious clergy, receive all the support they need from the civil courts, to uproot idolatry; that those having Indians, negroes, or mulattos in their homes as servants send them daily to the Christian classes, and that those working in the fields be given the same opportunity on Sunday and other days of precept, not occupying them in other things until they have learned the catechism; and that if they do not comply they shall be fined. All priests who are to work among the Indians should know their languages, and it is necessary that they should study these languages. The condition of the Indians in all New Spain should be investigated to see if they are oppressed by those whose duty it is to teach them, and in case such conditions are found to exist, they are to be reported to the bishop, and with his help measures must be taken to eradicate the evil.”

The Inquisition in New Spain.—For some writers the Spanish Inquisition in Mexico has always been a particularly alarming subject, the exaggerated accounts of its atrocities and the number of its victims verging on the ridiculous. It has even been said that if the Spaniards abolished the human sacrifices of the ancient Aztec régime, they more than replaced them in the benefices of the Inquisition. Here, however, the truth is that when Viceroy Antonio de la Valenca, when he arrived in Mexico in 1524, bore the title of Commissioner General of the Inquisition in New Spain, but judgment of offences of a grave nature was reserved to the Inquisitor of the Islas y Tierra Firme, who resided in the Island of San Domingo. Fray Martin was to hold this office until some Dominicans on whom the official charge of Inquisitor had been conferred should arrive in Mexico. And in fact, when the first Dominicans reached Mexico in 1526, their superior, Fray Tomas Ortiz, became commissioner of the Inquisition. He returned almost immediately to Spain, and Fray Domingo de Betanzos succeeded him. In 1528 the new superior of the Dominicans, Fray Vicente de Santa Maria, was sent to the Indies. At the time of the second Audiencia, of which the eminent D. Sebastian de Fuen Leal was president, a meeting was held, attended by Bishop Zumärnga, Cortés, and several of the most influential men of the
capital, at which it was decided "that on account of the intercourse with foreigners, and because many privateers that cruised along the coasts might introduce evil customs and habits among the natives and this, by the grace of God had been preserved from the taint of heresy, it was necessary to establish the Holy Office of the Inquisition".

It was no doubt in consequence of this resolution that on 27 June, 1535, Bishop Zumárraga was appointed inquisitor, with ample faculties, including that of turning over the offender to the secular arm and of excommunicating the Holy Office, but he did not establish the tribunal, but it is known that he tried and condemned to be burnt a Texocan noble accused of having sacrificed human beings. After this it was forbidden by the royal decree of Charles V, of 15 October, 1538, to try cases against the Indians before the Holy Office, and that in matters of faith the bishop should be their judge. Since then there is no record of a single Indian having been tried before the tribunal of the Inquisition. In 1554, Archbishop Montós, a Dominican and prior of the Inquisition in Granada, though not bearing the title of inquisitor, proceeded as though thus empowered, no doubt because of the ordinary jurisdiction possessed by the bishop in matters of faith, and passed the autos of 1555 and 1558. Cardinal Diego de Espinosa, Bishop of Sigüenza, and Grand Inquisitor of Spain, appointed as inquisitor for Mexico D. Pedro Moya de Contreras, also two lawyers, Juan Cervantes and Alonso Fernández de Bonilla. Their jurisdiction extended over all of New Spain, Guatemala, and the Philippines. The royal decree of 16 August, 1570, commanded that the City of Mexico was to aid and respect the inquisitors, and on 2 November, 1571, the tribunal was established with all due solemnity. It exercised its authority in Mexico until 8 June, 1813, when the decree of the Spanish Cortes suppressing it was published. On 21 January, 1814, it was re-established, and in 1820 definitively abolished.

In New Spain the Tribunal of the Inquisition was composed of three Apostolic inquisitors and a treasurer, each with a salary of three thousand pesos, paid three times a year in advance by the canons of the cathedrals of their respective districts. There was also a head constable, a trustee, treasurer, three secretaries, several consultors, qualificators, and lay officials. The tribunal had authority to pass general and particular autos de fe. What the viceroys of Mexico thought of this tribunal may be gathered from the many instructions which by order of the king each vicerey had to leave for his successor in the government of the colony. And it may be noted that these instructions, coming from men who were laying down the reins of government, speak with perfect freedom, not hesitating to censure what was considered worthy of censure. From these instructions it is evident that the authority of the tribunal was as absolute as it is generally supposed. The Marqués de Mancera, in the instructions left 22 Oct., 1673, for his successor the Duque de Veragua, says: "The Tribunal of the Holy Office is the best of the jurisdiction and feared and respected with all due reverence in these provinces, knowing full well that, owing to its reverence and vigilance, they find themselves by the grace of God free from the errors and abominations which at different times the common enemy has sought to sow in their midst", adds, "but, as its jurisdiction so absolute, the tribunals do not always keep as it should within its proper limits, nor do the viceroys, governors, or Audiencias take it upon themselves to hold it within bounds, except in cases of the most urgent necessity; nevertheless, when the excesses are notably prejudicial to the respect due the royal representation, to its jurisdiction, or its exchequer, or for any other cause, there is special authority for applying a suitable remedy, and I made use of this faculty at the close of the year 1666", etc. The Duque de Linares says in his instruction to the Marqués de Valero, in 1716, speaking of the inquisitors of his time: "Of the inquisitors I should inform Your Excellency that I am indebted to them not only for a just respect, esteem, and appreciation for my official character, but their mildness and prudence have been such that when the apparent zeal of some of the ministers has attempted to enkindle some sparks, I have been able to extinguish them owing to the consultations and the mutual confidence which have always existed between us.

For the sake of clearness, the persons condemned by the Inquisition may be placed under three heads: relajados (delivered to the secular arm for execution of sentence) in person or effigy, reconciliados (reconciled), and penitentes (penitents). The relajados in person were burnt, either alive or first garroted. On the way to the place of execution they were clothed in the samarra, a sort of seapular of cloth or cotton, yellow or red, upon which dragons, demons, and flames were painted, among which could be seen the picture of the criminal. The head was covered with a species of mitre called coroza, covered with the same devices. The relajados in effigy were those who, having escaped or died, were burned in effigy, sometimes together with their bones and bodies. This was done with those who died or who committed suicide during the process. It sometimes happened that a criminal attempted to commit suicide; if before dying he begged pardon and retracted his errors, he was reconciled in effigy. Such was the case of the French physician, Etienne Morel, whose auto de fe was carried out 9 August, 1795. The reconciliados were those who, recognizing their offences and errors, retracting and asked pardon. They were not condemned to death, but were obliged to submit to various punishments. One was, to wear the San Benito, called fuego revolto or revuelto, a garment similar to that worn by the relajados, with a corresponding coroza, only that in this the flames pointed downwards to show that by their repentance they had escaped the capital punishment. Other forms of punishment were inflicted according to the gravity of the offence—exile, the galleys, whipping, imprisonment, certain
prayers and psalms to be recited on certain days of the year, carrying green candles, confiscation of property, etc.

The ordinary penitents were those whose faults did not merit the death sentence. They wore the plain San Benito, that is, similar in form to the other, but decorated with the cross of St. Andrew, and they wore no coroza. Various punishments were imposed on them, always less than those of the reconciliados, and at times almost grotesque, e.g., the case of the criminal condemned on 7 December, 1664, of whom it is recorded, “The sentence having been read, he was taken out into the court of the convent, placed on a scaffold, and stripped to the waist. Indians then smeared him with honey, feathered him, and left him in the sun for four hours.” From the list made by D. José Punatorio of the Oratory of St. Philip Neri, who copied every tablet in the transept of Mexico cathedral, we see that the crimes usually condemned by the Inquisition were heresy and Judaism. Many were condemned for blasphemy, bigamy, perjury, forgery, and witchcraft, as idolators, Illuminati, Freemasons, and apostates; for having heard confessions and said Mass without His Holiness’s leave; for lying, with intent to deceive, received Holy orders before attaining the prescribed canonical age, for rebaptizing, abetting polygamy, and feigning revelations (autos de fe 21 June, 1789 and 8 August, 1795).

A résumé of the autos de fe from the figures of Fr. Richardo, supplemented by others, gives the following result:—

This number can be increased, as the autos from 1703 to 1728 (except 1715) are not included, although during this period cases were rarely turned over to the secular arm. And even allowing for this it is evident that the number of victims commonly attributed to the Inquisition in New Spain is greatly exaggerated.

From this it may be seen how erroneous it is to denounce the Inquisition as one of the greatest blots of the Spanish domination in Mexico. The Inquisition existed in Spain and it was nature that it should be established in the new colonies. As the Indians were exempt from its jurisdiction, the full measure of its severity fell upon the Spaniards and heretics, pirates or otherwise, of other nations who infested the coasts of New Spain. In fact, in the autos de fe the greater number of the condemned were Portuguese, for extending its jurisdiction far beyond the confines of the Aztec empire, barely reached fifty victims. The Inquisition pardoned readily, and those who recognized their errors and repented it easily reconciled. When it found or thought it found (for this tribunal like every other human tribunal made its mistakes) a criminal, it was turned over to the secular authorities, whose less lenient justice, which passed and executed the sentence. In fact the Inquisition did no more nor less than the jury of to-day. It is true that it made use of the torture, but this was a practice common to all tribunals of that time. It also made use of the secret process—a method not unlikely to be productive of errors—but it is impossible to set aside the laws on the ground that it mitigated by repenting if one were guilty, or by finally professing the Catholic Faith if one were not. Nor can the Inquisition be blamed for judging heresy a crime punishable by death; it was so held by all the civil courts of the times, and not without reason, because the heretics of those days were the initiators of rebellion in Catholic countries. At the same time people could not be held to be Catholics in England to be a Catholic was a crime punishable by death (see Penal Laws). Judged impartially, the Inquisition in New Spain appears as a tribunal which shares, it is true, the defects of contemporary methods, subject to mistakes like all other human institutions, more merciful than any other court under similar circumstances, above all if the relative number of death sentences and the large number of reconciles be taken into consideration, as well as the glory of having accomplished at the cost of a small number of lives, what the nations of Europe could not achieve even through the medium of long, bloody, fratricidal wars, the unity of religion and the preservation of the faith. As regards the auto de fe of 27 November, 1815, which condemned D. José María Morelos, the principal leader of the war of independence, see Morelos.

(7) The Spanish Government and the Colony.—Mexico having been conquered, Cortés, in virtue of the famous election of Vera Cruz and through force of circumstance, became the viceroy. However, Charles V realized the importance of the conquest without deposing Cortés, he began sending over other officials who, it may be said, were not very wisely chosen. Cortés, though outwardly complying, did not receive them well, doubtless because he foresaw that they would be a disturbing element in the recently conquered territories. When, however, he started on his famous expedition of the Iberians, he showed equality little tact in selecting the men he left to fill his place. In the selection of the first Audiencia (1528-31), composed of Nuño de Guzmán, Juan Ortiz Matienzo, and Diego Degadillo, the emperor was even more tactless. The excesses and injustices of these judges were innumerable, and the entire colony suffered. Nothing changed under the government of the second Audiencia (1531-35), composed of Bishop Sebastián Ramírez de Fuen Leal, D. Vasco de Quiroga, D. Francisco Ceinos, and D. Juan Salmerón. Beginning the work of reconstruction with zeal and perfect integrity, they met at the very outset with an obstacle that greatly hindered legislation destroyed by the conquest had not been replaced by any other, while the Spanish code was entirely inadequate for the new dominions. To meet this situation, Spanish kings began formulating and
sending over a multitude of royal decrees, applicable sometimes to only one province or relating to some particular question, frequently conflicting and contradictory because the sovereigns were working in the dark, deciding questions as they presented themselves, often upon the basis of an exact opinion of the matters involved. So numerous were the decrees that the collection formed a library of documents, notwithstanding which many cases remained unprovided for, and could only be settled by special decisions. These, however, ran the risk of royal disapproval, and the viceroy and governors rarely cared to assume the responsibility of understanding the beneficial effects of such a system; it is only necessary to picture a person, ruled by the changeable mind of a sovereign 2000 leagues away, and requiring years to investigate and report on questions submitted. When reference is made to the famous "Recolección de Indias," many imagine that it was some code of very early date, promulgated in the sixteenth century, whereas it did not go into effect until the end of the seventeenth century, about midway in the period of Spanish domination. Whatever honour redounds to Spain from this code is diminished by the tardiness of its execution.

The Spanish Government is reproached for having isolated Mexico and hindered foreign commerce. The immense extent of the colony of New Spain, the extensive sea routes on all sides, the scanty population, the fatal and insupportable climate in certain sections, the deserts, the impenetrable forests, the gigantic mountain ranges, made communication and defence against foreign aggression extremely difficult. The envy and covetousness of other nations, chafing under the sting of having rejected the offer of the discovery, were a constant source of menace to these over-sea possessions. Strangers could select her weakest point of attack; Spain had to defend all sides. Means of communication, established with difficulty, were constantly being interrupted; foreign nations, without distinguishing between times of war and times of peace, kept up a continuous piratical warfare, sacked the commerce, and seized the cargoes of the ships. While this state of continual aggression and menace delayed and impeded the development of the colony, those responsible for it were the very ones to bring forward this charge against Spain. To allow such people to enter freely, even under the pretext of trade, was very dangerous. A foothold once established, it would not have been difficult for them to overawe the entire country. But it was precisely to avoid this that it was necessary to wage incessant war. This is amply proved by the results attending the concession granted the English to cut timber in Yucatan, which ended in the absorption by the English Government of the entire strip of Mexican territory now known as British Honduras. It was therefore imperative to isolate the colony in order to keep it, without, however, for this reason oppressing it.

One cannot brand as stupid and blind a state policy that without any great armed force maintained for three hundred years, submissive and peaceful, extensive distant territories, the object of universal envy. It is true that the individual may lose liberty of the press, but this was the case also in many European countries, and notwithstanding this, in Spain as well as in Mexico and through all America, the writings of Las Casas, which almost questioned the legitimacy of the conquest of the Indies, circulated freely. The first printing machine was brought to the New World during the lifetime of this man, for the personal advantage of any individual, but through the paternal solicitude of Bishop Zumarraga and the Viceroy D. Antonio de Mendoza. Public instruction, good or bad, according to individual opinion, was on an equality with that of Spain, and to the universities founded in Mexico, which were of the same rank as those of Spain, many noted professors were sent. The
taxes were not onerous, and if at times these were excessive it did not arise from insupportable exactions, but from the methods of administration. Many of the mistakes noted to-day, and so easily censured, were due to the impossibility of one man alone attending to all the details of so complicated a piece of machinery, above all to the great distance of the central government. Scattered through all the ancient documents may be found complaints attributing many of the troubles affecting the Indies to "the cursed distance that prevents their enjoying the presence of their king." The truth, though sought in all earnestness, came to the royal knowledge late, and after many difficulties; it was therefore natural that the remedies for evils should be almost always late.

The motives and intentions of the Spanish kings could not have been better; at times they bordered on the Utopian, but it was humanly impossible that among so many officials all should have been exemplary. As the king was obliged to act through them, it was unavoidable that his wishes should often be either intentionally or unintentionally ignored. The wealth of the country excited envy; and its great distance mitigated fear. The Juicio de Residencia, totally unknown to-day, did not always prove efficacious, yet its establishment shows the earnest desire of restricting the prerogatives of the administration, and at times it proved a strong controlling force that made itself felt. It is, therefore, a vulgar error to believe that the Spanish Government was mercifully towards the Colony of Mexico. Like all nations, Spain sought revenue from her colony (disinterestedness and charity are not governmental virtues), but she did not exhaust its resources. If at times special restrictions were imposed, they were the outcome of circumstances and of the not unnatural desire to retain possession of the colony.

Foremost among the public works undertaken by the vice-regal Government was the draining of the Valley of Mexico. The decree authorising this work is dated 23 October, 1607, and the funds for the work were raised by a tax of 1 per cent. levied on all the

CATHEDRAL OF CHIHUAHUA
Showing transept door
residencies of the city, seeing that their owners would profit most directly by the improvement. The Indians engaged upon this work were paid 5 reales (63 cents) per month for a daily ration of 1 pound of meat, peppers, wood, and other provisions. A hospital was founded at Huesquetoca for the benefit of disabled workmen, ground being broken on 28 November, 1607, by the Viceroy D. Luis de Valasco, who dug the first sod, after Mass had been said in the village of Nochistongo. Father Juan Sánchez, S. J., and the cosmographer, Enrique Martín (Martínez), were placed in charge of the work. Later Father Sánchez retired, leaving Martín in full charge. This vast work employed the labour of 471,154 men. The Nochistongo tunnel measured over four miles long, with a section measuring 11 feet 6 inches by 13 feet 7 inches. The work was finished on May 30, 1608, and a report made by the Viceroy. It is stated that only 50 of the workmen had died, and of these 10 were accidentally killed. It is true that this great work did not give the expected results, but it nevertheless remains to the credit of the Government that undertook it for the welfare of the people. Finally, it may be noted that in examining the list of the first 200 named Mexican nobles, the desire of the Spanish monarchs that the persons entrusted with this charge should be persons of importance, is very evident, and if there were some who proved unworthy of the duty entrusted to them, oppressing the people and furthering their own private interests, there were many others, like Menéndez, Vázquez de Espinosa, Villavicencio, Rivera, Juárez, Arredondo, Buclare, the second Conde de Revillagigedo, and others who proved themselves upright and prudent governors, and merited the gratitude of the colony.

Independent Mexico.—The revolt of the English colonies in America, the troubles of the French Revolution, the proclamation of Joseph Bonaparte as King Joseph, the uprising in Spain against Napoleon, and old racial antipathies, are the causes to which the independence of Mexico is usually attributed. This was doubtless precipitated by the fact that Miguel Hidalgo y Costilla, parish priest of Dolores, discovered that his plot was on the point of being betrayed, and on 16 September, 1810, raised the standard of independence. From the little city of Dolores he marched with an ill-assorted, badly armed company of Indians to the very capital itself, but, not daring to attack it, retraced his steps to Guadalajara. At the bridge of Calderón he was defeated, and pursued as he fled through Acapulco de Bajan; he was captured and executed at Chihuahua, 30 July, 1811. His head was cut off by the young Maria Morelos, parish priest of Caracuaro, and upon his death by the Spaniard Mina. When Mina was captured and put to death, almost all hope of gaining independence seemed lost. D. Vicente Guerrero, entrenched in the mountains, kept up a desultory warfare until negotiations were opened with the royalist general, D. Agustín de Itur- barri. The Viceroy then, on the advice of the insurgent leaders, arrived in the town of Iguála, by which Mexico was to be independent, its government a constitutional monarchy, and the Roman Catholic religion the only one recognized and tolerated. Fer- dinand VII was chosen as sovereign or, in his default, one of his brothers or some member of the reigning house who should be chosen by the Congress. The secular and regular clergy were to be maintained in all their former privileges and pre-eminence.

Gradually both royalists and insurgent began to support this plan, and on 24 August, 1821, by the Treaty of Córdoba, even the Viceroy D. Juan O'Don- ojo, who had just landed at Vera Cruz, signed his consent. On the same day 21 the army of las tres garantías (three guarantees), as it was called, entered the City of Mexico. At the beginning of 1822 it became known that the Spanish Government refused to ratify the treaty, and the partisans of Iturbide, taking advantage of this, proclaimed him emperor. Owing, however, to the difficulties and opposition per week, the ministering year, and withdrew to Leghorn, Italy. In 1824, hoping once more to be of service to his country, and without knowing that he was under sentence of death by the Government, he returned to Mexico. He was arrested on his arrival, condemned, and put to death on 19 July, 1824. Freemasonry, so actively promoted in Mexico by the first mission of the United States, Joel R. Poinsett, began gradually to lessen the loyalty which, in accordance with the plan of Iguála, both the rulers and the government had manifested towards the Church. Little by little laws were enacted against the Church, curtailing its rights, as, for example, in 1833, the exclusion of the clergy from the public schools, notwithstanding the fact that at the time the president, D. Valentín Gómez Farías, claimed for the Republican Government all the privileges of the royal patronage, with the power of filling vacant seats and other ecclesiastical benefices.

General Antonio López de Santa Anna dominated the scene for almost fifty years, but he was a man without principle, and his policy was weak and vacillating. Whatever services he rendered his country were more than outweighed by the many evils of his administration. From 1824 to 1846 the nation was embroiled in an interminable series of revolutions, having to face at the same time some serious national issues. Guate- mala, Yucatán, which had seceded from the empire, was never reunited; the French invaded the country; Yucatan separated from the central government for several years, and the independence of Texas brought on the war with the United States. The North American troops were in possession of the capital, and, to establish peace, it was necessary to cede to the conquerors all the territories south of the Rio Grande, besides California, Arizona, and New Mexico. And then, when peace was most necessary for the healing of the nation's wounds, there came, instead, civil wars and bloodshed. In 1851, Pius IX sent Monsignor Luis Clementi to settle some religious questions. He was officially received by the president, Señor Arista, but not formally granted the law and return to Rome without having accomplished anything. Dissensions continued, and in 1857 the famous Constitution, which is still in force in the republic, was promulgated by the president, Ignacio Comonfort. His successor, Benito Juárez, issued a series of laws against the Catholic religion. At this time an attempt was made to carry a Catholic bishop to Mexico. Plans were made by the secret societies, as well as other anti-Catholic associations of reformers, to induce President Juárez to declare that the Mexican nation separated herself from communion with Rome, and establish a national religion whose first pontiff, named by the Government, should be Sr. Pardo, formerly parish priest of Zotzila in Yucatan, who had frequently obtained a Bull from Gregory XVI consecrating him titular Bishop of Germanopolis and auxiliary to D. Jose María Guerra, Bishop of Yucatan. The sudden death of Sr. Pardo, in May, 1861, ended this abortive attempt.

This was followed by the French intervention, the empire, and the tragedy of Corredor Las Campanas in June, 1867. In 1861, while Maximilian was emperor, the papal nuncio, Monsignor Meglia, visited Mexico, but he did not obtain anything from the emperor, as Maximilian declared that the "Reform Laws", with regard to laicization of church property, would be upheld. Juárez died in 1872, and was succeeded by D. Sebastián Lerdo de Tejada. The latter was overthrown by Porfirio Díaz, who became president. He has filled this office until the present time (1910), with the exception of one term from 1880 to 1884. His concili-
ty policy, the encouragement, protection, and support of industries, the opening of ways of communication, have developed the rich resources of the country, and given Mexico an epoch of much needed peace.

Constitution of 1857 and Laws of Reform. - From 1872, when the law was issued permitting the Government to take possession of the Philippine mission property, and of revenues from pious foundations which were not to be spent within the limits of the Mexican Republic, to the law of 23 November, 1855, Article 42 of which abolished all ecclesiastical jurisdiction in civil matters, a series of laws were enacted by Congress and the legislatures of the states clearly showing the anti-religious spirit of those who framed them. This spirit was at its height from 1857 to 1874. During the presidency of D. Ignacio Comonfort the famous Constitution of 1857, decreeing the separation of Church and State, was promulgated, and in the years following Benito Juárez framed innumerable laws systematizing the provisions of the Constitution and enforcing the separation, and in 1874 President D. Sebastian Lerdo de Tejada raised many of the Reform Laws framed by Juárez to constitutional statutes.

(A) The Church and her Privileges. —

Law of 11 August, 1859, Art. 3.—All laws, circulars, and ordinances of any kind whatsoever, established by public authority, by last will and testament, or by custom, which require officials to attend public religious functions, in a body or separately, are repealed. Law of 4 December, 1860: Art. 8.—Right of asylum in churches is abolished, and force may and should be employed in whatever measure it may be deemed necessary to arrest and remove according to law a declared or suspected criminal or enemy of the ecclesiastical authorities having a right to intervene. Art. 17.—Official recognition formerly given to various ecclesiastical persons and corporations is withdrawn. Art. 18.—The use of church bells is to be regulated by police ordinance. Art. 24.—Public officials are forbidden in their official capacity to assist at any religious ceremony, or entertain in honour of a clergyman, however high in rank he may be. Troops of soldiers are included in the foregoing prohibition.

Law of 13 May, 1873, only article. —No religious rite or demonstration of any kind whatsoever may take place outside of the church building in any part of the Republic. Law of 14 December, 1874, Art. 3. —No official, official corporation, or body of troops may attend in an official capacity religious services of any kind whatsoever, nor shall the Government recognize in any manner whatsoever religious solemnities. All days, therefore, that do not commemorate some exclusively civil event cease to be holidays. Sundays are set apart as days of rest for offices and public institutions. Art. 5. —No religious rite may take place outside the church building, neither shall the ministers of religion or any individual of either sex, of any denomination whatsoever, wear in public a special dress or insignia which would characterize him in any way, under penalty of a fine of ten to two hundred dollars.

(B) Religious Orders. —Constitution of 1857, Art. 5. —The State cannot allow any contract, pact, or agreement to go into effect that has for its object the im-

The Mexican Labourer's Brush Shack. -

In the sierras colinenses of the coast.

The law does not recognize monastic orders, nor can it permit their establishment, whatever be their designation or object. Art. 27. —Religious institutions or corporations, whatever their character, name, period of existence, and object, and such civil institutions as are under the patronage, direction, or administration of these, or of the ministers of any religious denomination, shall have no legal right to acquire title to or administer any property, but such buildings as are destined for the immediate and direct use of said corporations and institutions. Neither shall they have the right to acquire or manage revenues derived from real estate.

Law of 12 July, 1859, Art. 5.—All the male religious orders which exist throughout the republic, whatever their name or the purpose of their existence, are hereby suppressed throughout the whole republic, as also all archiconfraternities, confraternities, congregations, or sisterhoods annexed to the religious communities, cathedrals, parishes, or any other churches.

Art. 6.—The foundation or erection of new convents of regulars, archiconfraternities, confraternities, congregations, or sisterhoods, under whatever form or name is given them, is prohibited, likewise the wearing of the garb of the suppressed orders. Art. 7.—By this law the ecclesiastics of the suppressed orders are reduced to the condition of secular clergy, and shall, like these, be subject as regards the exercise of their ministry to the ordinances of their respective dioceses. Art. 12.—All books, printed or manuscript, paintings, antiquities, and other articles belonging to the suppressed religious communities shall be given to the national archives, libraries, and other public establishments. Art. 13. —All members of the suppressed orders who fifteen days after the publication of this law in their respective localities shall continue to wear the habit or live in community shall forfeit the right to collect their quota as assigned by Article 8, and if after the term of 15 days designated by this Article they should reunite in any place and appear to follow their community life, they shall immediately be expelled from the country. Art. 21.—All novitiates for women are perpetually closed. Those at present in novitiates cannot be professed. Law of 26 Feb., 1863, Art. 1. —All religious communities of women are suppressed throughout the republic. Law of 25 September, 1873, Art 5. —The law does not recognize monastic orders, nor can it permit their establishment, whatever their name or the object for which they are founded.

Law of 4 Dec., 1873, Art. 19. —The State does not recognize monastic orders nor can it permit their establishment, whatever their name or the object for which they are founded. Any orders that may be secretly established shall be considered unlawful assemblies which the authorities may dissolve should the members attempt to live in community, and in all such cases the superiors or heads shall be judged criminals, infringing on individual rights according to Article 97 of the Penal Code of the District, which is declared in force in all the republic.
(C) Church Property.—Law of 12 July, 1859, Art. 1.—All property which under different titles has been administered by the secular and regular clergy, whatever law of proper purpose it may have been enjoyment, and becomes the property of the State. Law of 5 February, 1861, Art. 100.—The government hands over all parochial residences, episcopal palaces, and dwellings of the heads of any denomination, declaring them inalienable and free from taxation as long as they are set apart from any other institution, and the law of 28 September, 1873, Art. 3.—No religious institution may acquire property nor the revenue derived from property. Law of 10 Oct., 1874, Art. 16.—The direct ownership of the churches nationalized according to the law of 12 July, 1859, and left for the maintenance of Catholic worship, as well as those which have since been turned over to any other institution, continues to remain in the nation; but their exclusive use, preservation, and improvement, as long as no decree of consolidation is issued, remains with the religious institutions to which they have been granted. Art. 17.—The buildings mentioned in the preceding article will be exempt from taxation, except when they have actually or nominally passed into the hands of individuals or religious corporations under the title without transmitting it to a religious society; in such cases the property shall be subject to the common law.

(D) Legacies and Gifts.—Law of 14 December, 1874, Art. 8.—Legacies made in favor of ministers of religion, of their relatives to the fourth degree, and in favor of religious corporations, shall be exempt from the taxes which the law imposes for this privilege of exemption.

(E) Civil Marriage and Divorce.—Law of 23 July, 1859, Art. 1.—Marriage is a civil contract that can directly and validly be contracted before the civil authority by the parties, having complied with the formalities of the law, present themselves before the proper authority, and freely express their desire of being united in marriage. Law of 4 December, 1860, Art. 20.—The civil authorities shall not interfere in the religious rites and practices concerning marriage, but the contract from which marriage results in law is slavery to the laws. Any other marriage that is contracted in the republic without observing the formalities prescribed by these laws is null, and therefore ineffectual to produce any of the civil ends which the law grants only to a lawfully contracted marriage. Law of 10 December, 1874, Art. 23.—All decisions regarding marriage or divorce, subject to the law to the marriage laws, must be tried before the civil tribunals which will determine the law without taking into consideration any resolutions on this subject that may have been provided by the ministers of religion.

(F) Cemeteries and Graves.—Law of 31 July, 1859, Art. 1.—The intervention of the clergy, secular or religious, in religious cemeteries, whether within or outside the parishes, to the extent that until the present time has been in force, ceases throughout the republic. Law of 4 December, 1860, Art. 21.—The governors of states, districts, and territories shall exercise the strictest vigilance for the enforcement of the laws in regard to cemeteries and burial grounds, and in no place shall decent burial be refused the dead no matter what may be the decision of the priests or their respective churches.

(G) Hospitals and Charitable Institutions.—Law of 2 February, 1861, Art. 1.—All hospitals and charitable institutions which up to the present time have been under ecclesiastical authority and managed by religious corporations or committees of the Government are secularized and placed under the immediate supervision of the civil authorities. Law of 28 February, 1861, Art. 1.—All hospitals, asylums, houses of correction, and charitable institutions are prohibited in all federal, state, and municipal schools. Morality will be taught in all of the schools when the nature of their constitutions permits it, but without reference to any form of religion. The instruction of this article will be punished by a fine of from 25 to 200 pesos, and dismissal from office if the offense is repeated.

(H) Oaths.—Law of 25 September, 1873, Art. 21.—The simple promise to speak the truth and to fulfill the obligations it entails, shall take the place of the religious oath with its consequences and penalties.

(I) Instruction.—Law of 4 December, 1874, Art. 4.—Religious instruction and the exercises of any form of religion are prohibited in all federal, state, and municipal schools. Morality will be taught in all of the schools when the nature of their constitutions permits it, but without reference to any form of religion. The instruction of this article will be punished by a fine of from 25 to 200 pesos, and dismissal from office if the offense is repeated.

(J) Public Office.—Constitution of 1857, Art. 56.—No member of the ecclesiastical body can be elected a congressman or appointed by the law of 4 December, 1874, Art. 58.—Nominations for senator are subject to the same conditions as those for congressman.

Ecclesiastical Organization.—There is no doubt that the See of Yucatan, with the title of Carolensis, under the patronage of Nuestra Senora de los Remedios, was the first bishopric erected in Mexico; the see of San Cristobal de las Casas, on January, 1518, proves this. The erection of this diocese followed the first reports of the discovery of the peninsula, and by the Bull we see that Yucatan was still thought to be an island. However, as soon as more definite information was received concerning Mexico after the conquest, establishing the fact that Yucatan was not an island, the erection of the diocese were suspended, especially as the Spaniards, diverted by other enterprises, gave little thought to Yucatan, and when it was abandoned by D. Francisco de Montejo, in 1527, they did not return until 1542. It may also be noted that when Clement VII named Fray Julian de Garces first Bishop of Oriente from Tlaxcalan, in 1543, the see of Yucatan was still used, and the Emperor Charles V, using the faculties granted him by the popes of assigning the limits of new dioceses, says in the royal decree which accompanied the Bull: "We declare, assign, and determine as the limits of the Bishopric of Yucatan and Santa Maria de los Remedios the following lands and territories . . .". As Tlaxcalan had a greater population and was nearer the capital, Bishop Garces established the episcopal residence there, from whence it was afterwards moved to Puebla.

Up to 1544 the dioceses in New Spain were:—Puebla, erected in 1526 at Tlaxcalan, translated to Puebla, 1539; Guatemala, 1530; Oaxaca, 1538; Michoacan, erected in 1536 at Tlaixmantlan, translated at the time to Patzcuaro, and from there to the new city of Valladolid, now Morelia; Chiapas, 1546. They were all suffragans of the Archdiocese of Seville in Spain. Yucatan, though erected first, never had any resident bishop until Law of 31 January, 1545, at the solicitation of Charles V, the Holy Father, Paul III, separated these dioceses from the metropolitan See of Seville and erected the Archdiocese of Mexico, with

Capitals of States and Territories: 🌉
the above-mentioned dioceses for suffragans. Before
the end of the sixteenth century the ecclesiastical
Province of Mexico included, besides those already
mentioned, the Diocese of Comayagua in Honduras, erected
1539; Guadalajara, 1548; Verapaz in Guatemala,
erected in 1556, suppressed 1605; Manila in the Philip-
pine Islands, erected 1581.

At the close of the eighteenth century all the dioces,
ses situated in the Mexican territory had been
separated to form new ecclesiastical provinces, and
Chiapas, which from 1743 had belonged to the Arch-
dioce of Guatemala, was not reunited to the ecclesi-
astical Province of Mexico until the middle of the
nineteenth century. Other new dioceses had been
formed: Durango, 1620; Monterey, with the title of
Lima; Guadalajara, the episcopal residence of eight
different cities at various epochs, Arizpe, Alamus, Cu-
lican, and at Hermosillo when the Diocese of Sinaloa
was erected. In the nineteenth century, Mexico
being still the only archdiocese, the Dioceses of S.
Francisco de California, erected 1840, and S. Luis
Potosi, erected 1854, were added. Fius IX, in the
secret consistory of 16 March, 1863, established the Dioceses of Chilapa, Tulancingo, Vera Cruz, Zacatecas,
León, Querétaro, Zamora, and the Vicariate Apostolí
to of Tamaulipas (created a bishopric in 1869), and raised
to archiepiscopal rank the episcopal Sees of Guadalaj-
ara and Michoacán. From 1869 to 1891 the Vicari-
te Apostolique of Lower California (1872), the Dioceses of Taba-
baj, Tepic, Chihuahua, and Colima (1881), were
established. In 1891, Leo XIII, by the Bull "Illud in primis",
erected the new Dioceses of Cuernavaca, Tepic, Tehu-
antepa, Saltillo, and Chihuahua, and raised the Sees of
Oaxaca, Monterey, and Durango to archiepiscop-
al rank. In 1895 the Diocese of Campeche was
erected, and in 1899 that of Aguascalientes. In 1903
the new Diocese of Guadalajara was erected, for
Puebla raised to the rank of an archdiocese, and in
1907 Yucatan was made an archdiocese. At the present
time the ecclesiastical provinces of Mexico are
constituted as follows:

<table>

**México, Archidiócesis de (Méxicana).—** The boundaries of the Diocese of Mexico were at first not
well defined. When Cuba was discovered three sees
were erected, but when the prelates arrived, their
episcopal sees had been destroyed, and the inhabitants
had fled. In order to avoid such mistakes, the Holy
See allowed the kings of Spain to fix the boundaries
of the new dioceses erected on the American continent,
still considered a part of Asia. From 1500 to 1863
the Diocese of Mexico extended from the Atlantic to
the Pacific, namely from Tampico to Acapulco. At
the present time it is limited to the States of Morelos, Mexico, and part of Hidalgo. The first bishop,
Zumarraga, came to Mexico when Clement VII had just been released from the prison in Castel Sant’ Angelo, where he was kept by Charles V for
several months after the sack of Rome by Bour-
bon’s army. Strange as it may seem, he was, even
obliged to found a college and to accept the consec-
rination, governed the diocese without any papal
appointment, and styled himself "Omnimoda potes-
tate Antistes". He returned to Spain, received his
Bulls, and was consecrated six years after his first
arrival on the American continent. He has been
falsely accused of having destroyed most valuable
monuments: he ought not to be blamed for having
burnt the idols, temples, and hieroglyphics which
prevented the conversion of the aborigines. In his time
the Blessed Virgin, according to Mexican tradition,
appeared to the neophyte Juan Diego, and became
the patroness of America. He introduced the first print-
ing office in the New World, published many books,
encouraged many schools and colleges, gave the German,
a faithful follower of St. Francis of Assisi, to whom
his order belonged. He ruled over the diocese,
raised before he died to the rank of an archdiocese,
from 1529 to 1548.

Five provincial councils have been held in the city
of Mexico. The first and second under the second
archbishop, Alonso de Montúfar, the third was presi-
dered over by the third archbishop, Pedro Moya de
Contreras. The twenty-fourth archbishop, Francisco
Antonio de Lorenzana assembled and presided over
the fourth provincial council in 1770. Prospero
Alarcón, thirty-second archbishop, was the presi-
dent of the fifth and last provincial council in 1894. The
most important of all was the third council, which has
been for centuries the code of ecclesiastical law for
the Mexican Church. Archbishops Moya de Con-
teras, García Guerra, Palafax, Osorio, Ortégas, Haro y
Peralta, and Lisana y Beaumont were also viceroys
and captains-general of New Spain, and were able
to brandish the sword in defense of the church. The
bishop Labastida was regent of the short lived empire
of Maximilian. He was the last prelate to be invested
with any political authority. The most distinguished
of the line was Francisco Antonio de Lorenzana, trans-
ferred to Toledo, and created cardinal by Clement
XIV. He published several important books,
founded many institutions both in New and Old Spain, helped with his own means Pius VI when he was sent to France as a prisoner by Napoleon, and largely contributed to the support of the cardinals assembled in Venice, in the concclave that elected Pius VII. A few years after the conquest, viz., in the beginning of the sixteenth century, the Archdiocese of Mexico already possessed over a university, equal to that of Salamanca, several colleges, and numberless schools. Their number went on increasing, until all religious progress was stopped by the War of Independence and the civil wars that followed. All were destroyed by law and in reality under President Juárez. President Días has treated the question of the restoration of the universities, and his law has been repealed. The present archbishop, Mgr Mora y del Río was born at Pueblencan, 24 Feb., 1854; studied at Zamora and Rome; was ordained, 22 Dec., 1877; consecrated Bishop of Tehuantepec, 19 Jan., 1893; and promoted to the See of Mexico, 2 Dec., 1908 in succession to Mgr Alarco. The population almost entirely Catholic is about 750,000.

MEZGER, FRANCIS, JOSPEH, AND PAUL, three brothers, learned Benedictines of the monastery of St. Peter in Salzburg, and professors at the University of Salzburg.

FRANCIS, the oldest of the three, b. at Ingolstadt, 25 October, 1832; d. at Salzburg, 11 December, 1701. He took vows in 1851; was ordained priest in 1857; taught philosophy at the University of Salzburg in 1869; became regent of the convicuts and secretary of the University in 1861; taught philosophy again from 1865 to 1865; and then moral theology until 1868. From 1869 to 1888 he taught various branches at the Bavarian monastery of Ettal and at his own monastery. From 1888 until his death he was master of novices and director of clerics at his monastery. He wrote the following philosophical treatises: "Philosophia rationalis rationibus explicata" (Salzburg, 1660); "Anima rationibus philosophiae animata et explicata" (ib., 1661); "Philosophia naturalis rationibus rationibus naturalibus elucidata" (ib., 1661); "Manuale philosophicum" (ib., 1665); "Homomicrocosmus" (ib., 1665). The following are some of his translations: "Philosophia sacra" (ib., 1678), from the French of Capuchin Ivo; "Heiligknighter" (2 volumes, Munich, 1690), from the Latin; "Dioptria politice religionis" (Salzburg, 1694), and "Exercitia spiritualia" (ib., 1693), both from the French of the Maurist Le Contat; "Succinctae meditaciones christiane" (4 vols., ib., 1695), from the French of the Maurist Claude Martin; "A vis regia studiis juvenvalia ad eremae spatio" (Frankfort, 1696) from the Italian; and a few others of less importance.

JOSPEH, b. 5 September, 1635, at Eichstätt; d. 26 October, 1638, at the monastery of St. Gall, while on a pilgrimage to Einsiedeln. He took vows at the same time with his brother Francis in 1651; was ordained priest in 1659; taught poetry in the gymnasium of Salzburg in 1660; was master of novices and sub-prior in his monastery in 1661; taught philosophy at the University of Salzburg, 1662-4; apologists and polemics, 1665-7; canon law, 1668-73; he was prior of his monastery and taught hermeneutics and polemics, 1673-8, when he was appointed vice-chancellor of the university. He was an intimate friend of Mabillon, with whom he kept up a correspondence. He who in his "Iter Germanicum" calls him "Universitatis Salzburgensis precipuam ornamentum" (Vetra Analecta, 1, xi). His chief work is "Historia Salzburgensis" covering the period from 562 to 1687, of which work he, however, had written only the first four books (582-1565) when he died, leaving the remainder to be completed by his two brothers. In 1664 he published at Salzburg his four philosophical treatises: (1) "Considerationes de scientiis et de modis scientii in genere"; (2) "Axiomata physicae questionis problematica distincta"; (3) "Quaestionis naturae esse, vivere, sentire, intelligere"; (4) "Unitas et distinctio rerum questionibus philosophici explicata". His two brothers, in their "successiones ecclesiasticas tam ex testamento quam ab intestato" (Salzburg, 1670); "Panaceae juris" (ib., 1673); "Lapis mysticus et corruv parvulum Daniellia" (ib., 1677, 1682); "Institutiones in sacra scriptura" (ib., 1680); "Assertio antiquitatis ecclesiae metropolitane Salisburgensis et monasterii S. Petri, O. Ben."

PAUL, the most celebrated of the three brothers, b. 23 November, 1637, at Eichstätt; d. 12 April, 1702, at Salzburg. He took vows in 1653; was ordained priest in 1660; taught at the gymnasium of Salzburg, 1660-4; was master of novices and director of clerics, 1664-6; taught philosophy, first at the University of Salzburg, 1666-70; then at the monastery of Götweig, 1671-2. Returning to the University of Salzburg, he taught theology, 1673-88; exegesis and polemics, 1689-1700. In 1683 he had succeeded his deceased brother Joseph as vice-chancellor. His chief production is: "Theologia scholasticae ac vitium et doctrina D. Thomae" (4 volumes, Augsburg, 1686-1719), probably one of the most complete and comprehensive theologies that has been produced by a German Benedictine. It is especially noteworthy that the author's treatment of the immaculate conception and of papal infallibility is in exact accordance with the definitions of 1864 and 1870. His other works are: "Somnia philosophorum de possibilibus et impossibilibus" (Salzburg, 1669); "Ecclesiologiae et magnae urbis celestis et elementariss" (ib., 1670); "Mecurierius logicus" (ib., 1671); "De gratia Dei" (ib., 1675); "Allocutiones de mediis pietatis Mariana" (ib., 1677); "Orationes partheni, miscellaneous, sacroprofane, problemata inauguralia seu orationes academica" (ib., 1699-1700); "Sacra historia de gentis hebraicae ortu" (Dillingen, 1700; Augsburg, 1715). Concerning all three see SATTLER, Collect. El=liste zur Gesch. der ehemaligen Benediktiner-Universität Salzburg (Kempten, 1890), 212-218; LINDER, Probesch. der Benediktiner Abt S. Peter in Salzburg (Salzburg, 1806), 63-58, 65-68. For Joseph and Paul see STEINER, Viz scripturae traditiones ac pietatis insignes, quos gentum soli alius (Eichstätt, 1767), 427-428.

MIZZOFANTI, GIUSEPPE, cardinal, the greatest of polyglots, b. 19 September, 1774; d. 15 March, 1849. He was the son of a poor carpenter of Bologna. In the Scuole Pie, besides the classical languages, he learned Spanish, German, Mexican, and some South American dialects from ex-Jesuits who had been expelled from America. To his great love of study he added a prodigious amount of work. At the age of twelve he was able to begin the three years course of philosophy, which he closed with a public disputation. His theological studies were completed with no less distinction, at an age at which he could not yet be ordained; consequently he devoted himself to the study of Oriental languages; and in 1797 he was appointed to the chair of Hebrew at the University of Bologna, and ordained a priest. When the Cisalpine Republic was established, he refused to take the oath of allegiance to it, lost his chair at the university, and was compelled to give private lessons in order to support himself. After the battles of 1799 and of 1800, the hostile state of Bologna, which was sick of almost all the nationalities of Europe, and Messzofanti in giving religious assistance to the unfortunate seized the opportunity of perfecting his knowledge of the languages which he had already studied, as well as of learning new ones. In 1803 he was appointed assistant in the library of the Institute, and later, professor of Hebrew and of Greek at
the university, which relieved him financially. In
1806, he refused an invitation of Napoleon to es-

tablish himself at Paris. In 1808, the chair of Oriental
languages was suppressed, and Mezzofanti received, in
compensation, a pension of 1000 lire; but, in 1815, he
became librarian of the deputies who went to ask
the pope's forgiveness, in the name of the city of
Bologna, for the rebellion of that year, and the
pope, repeating Pius VII's invitation of 1814, re-
qusted Mezzofanti to remain at Rome and place his
learning directly at the service of the Holy See, an
invitation which the modest priest, this time, accepted,
after long resistance; soon he received the title of Do-

mestic Prelate, and a canony at Santa Maria Mag-
giore, which was changed, later, for one at St. Peter's.
At Rome, also, he took advantage of opportunities to
practice the languages that he had acquired, and to
master new ones and in order to learn Chinese he
went to the Chinese College for foreign missions at
Naples. In 1833, he was named Custodian-Chief of
the Vatican Library, and Consultor of the Congrega-
tion of the correction of the Liturgical Books of Ori-
ental Rites, of which he became Prefect. On 12 Febru-
ary, 1838, he was created cardinal under the title of St.
Onofrio al Gianicolo; he was also a member of the con-

congregations of the Propaganda, of Rites, of the Index,
and of the Examination of Bishops. The events of
1848 undermined his already enfeebled health, and a
combination of pneumonia and gastric fever put an
end to his life. He was buried without pomp in a
modest tomb of his titular church, over which a monu-
ment was raised in 1885.

As a moderate, Cardinal Mezzofanti spoke
perfectly thirty-eight languages, among which were:

biblical and rabbinic Hebrew, Arabic, Chaldean, Coptic,
Armenian, ancient and modern, Persian, Turkish, Al-
banian, Maltese, Greek, ancient and modern, Latin,
Italian, Spanish, Portuguese, French, German,
English, Illyrian, Russian, Polish, Bohemian, Magyar,
Czeck, Gothic, Latin, Greek, Basque, Wallachian, and Californian; he spoke thirty
other languages, less perfectly, and fifty dialects
of the languages mentioned above. His knowledge of
these languages was intuitive, rather than analytic,
and consequently he left no scientific works, although
some studies in comparative linguistics are to be
found in his works. A work of his, published in 1833,
to the municipal library, and in part to the library of
the University of Bologna.

(Lon-
don, 1859).

U. BENIGNI.

MIAMI Indians, an important tribe of Algonquian
stock formerly claiming prior dominion over the
whole of what is now Indians and western Ohio, includ-
ing the territories drained by the Wabash, St. Joseph,
Maumee, and Miami rivers. They were closely con-
nected, both linguistically and politically, with their
western neighbours, the Illinois, the two tribe-groups
speaking dialects of the same language. The Miami,
however, were of more independent and warlike char-
acter. The tribal name, properly pronounced as in
Latin, Me-ah-me (whence Maumee), and in the full
plural form Ou-miami-wek, is of uncertain meaning
and derivation. They were called by the early Eng-
lish writers Twightee, a corruption of their Iroquois
name, which is variously spelled. The Miami, in 1885
the French recognized six bands, or subtribes,
in the tribe, consolidated at a later period into three,

namely: Atchatchakougan, "crane people"; or
Miami proper; Ouiautan, "whirlpool people"; or
Wea; and Pianiguia, "separatores" (?), or Pianki-
shaw. By the United States Government these were
recognized as three distinct tribes. Altogether they
may have numbered over 6000 souls and it is possi-
ble that Nicolet in 1634, and Radisson and Groseilliers in 1658-60 may have met in their Wiscon-
sin journeys in the Miami, but this is not known.
They are first mentioned by the Jesuit Dreuillettes in
1658 as a tribe recently discovered, under the name of
Oumamik, living south-west from Green Bay, Wis.
The estimate of 24,000 souls is an evident exagger-
ation. About 1668 and again in 1670 they were
visited by Perrot. In the latter year the Jesuit Father
Claude Allouez found them, or a part of the tribe,
living with the Mascoutens in a palisaded town, in
which he established the mission of Saint-Jacques,
about the head of Fox river in south-east Wisconsin
(see Mascoutens). He describes them as gentle,
affable, and sedate, while Dablon, his companion, calls
them more civilized than the lake tribes. Apparent-
ly these were only a part of the tribe, the main body be-
ing farther south, although all the bands were repre-

resented. They listened eagerly to the missionary's
instruction and to satisfy them Allouez was obliged to
set up a large cross that he let the village as well as in that occupied by the Mascoutens.

In 1673 Allouez, who had learned the language,
reports good progress, and that they now hung their
offerings upon the cross instead of sacrificing to their
heathen gods, chief among which was the Sun.
There was however a strong opposition party. In June of
this same year the priest went out for Fr. Allouez
stopped at the village and procured Miami guides for
his voyage down the Mississippi. He describes the
Miami as the most civilized, liberal, and shapely of
the three tribes then assembled in the town. They
were their hair in two long braids down their breasts,
were accounted brave and generally successful war-
riors, lived in cabins covered with rush mats, and
were so eager to listen to Fr. Allouez that they left him
little rest even at night. The cross was decorated with
Indian offerings, and one chief who had recently died
at a distance had asked to have his bones brought
for interment beside it, which was done. But despite
this the mission was afterwards abandoned, partly on
account of lack of missionaries and partly on account of the disturbed
conditions growing out of the inroads of the Iroquois,
who, having destroyed the Hurons and others in the
east, had now turned upon the Illinois and others of
the west, and latterly (1682) upon the Miami. The
papal missionary Lambert de l'Hermitte went to the
Miamis and gives a graphic account of the wholesale butcheries and
horrible tortures of prisoners of which he was witness.
The Iroquois, it must be remembered, were well armed
with guns from Dutch and English traders, while the
remote western tribes had only the bow. Shortly
after the building of La Salle's temporary fort on the
St. Joseph river, near the Miami, a band of a Miami
moved down and formed a village near to the same
spot, while some Potawatomis also settled near them.
Allouez followed them and, probably about 1685, estab-
lished the mission of Saint Joseph, where he continued until his death in 1689.
In 1692-3 Fr. Gravier wintered with the Miami, prob-
ably in Illinois. In 1694 we find the Miami in a village
where Chicago now is. In 1721 Fr. Charlevoix visited
the St. Joseph village, where he found nearly all of
both tribes nominally Christian, but, from long
absence of a missionary, "fallen into great disorders".
Soon afterwards this matter was remedied and in
1750 the mission was in flourishing condition. At the
time Fr. Pingeon was in charge of it and he then resided at Wes Creek on the Wabash, near the
present Lafayette, Ind. A third Jesuit mission ex-
ated among the Piankeshaw, who had their principal village lower down the Wabash, adjoining the present town of Vincennes, founded in 1702. After the suppression of the Jesuits in New France in 1762, the missionaries continued their work, as seculars, as well as was possible, until their deaths, Father Pierre Potier, "the last Jesuit in the west," dying at Detroit in 1811.

Through the influence of English traders a large part of the tribe had become hostile to the French and under the head chief "La Demoiselle" had removed about 1748 from the neighbourhood of the French post at the head of the Maumee (now Fort Wayne, Ind.) to a point on the Miami near the present Piqua, Ohio, and established there a town called Piankashaw, which in size and became a centre of English trading influence. After repeated refusal to return, a party of northern Indians, led by a French trader, Langlade, in June, 1752, attacked and burned the town, killing and eating La Demoiselle, and carrying the traders to Canada. By this time the whole tribe was settled along the Wabash and the upper Maumee. They generally sided with the French in the French and Indian and Pontiac's wars, and with the English against the Americans in the later wars. Their great chief, Mishikinakwa, or Little Turtle (1732-1812), led the allied Indian forces which defeated Harmar in 1790 and St. Clair in 1791, but was himself defeated by the Americans in 1794, retiring in the vicinity of Greenville in the next year, by which the Indians surrendered the greater part of Ohio. After the close of the war of 1812, in which again they fought on the English side, the Miami began a series of treaty sales culminating in 1840, by which they sold all their territory excepting a small tract of about ten square miles along the western boundary of the State of Ohio. The final removal to Kansas was made by the main Miami band under military pressure in 1846, the Wea and Piankeshaw having preceded them by a number of years. The main emigration in 1846 numbered about 650. The small reserved tract in Indiana was allotted in severity to its owners in 1872 and their tribal relations were dissolved. In 1854 the united Wea and Piankeshaw were officially consolidated with the Peoria and Kickapoo, the remnant of the ancient Illinois, and in 1867 they removed altogether to their present lands under the Quapaw agency in north-east Oklahoma (Indian Ter.). In 1873 the remnant of the emigrant Miami, having sold all in Kansas, followed their kindred to the same agency.

After the withdrawal of the Jesuits various secular priests ministered as best they could to the Indians within reach of the frontier settlements, notably Fr. Gibault about Detroit and Fort Wayne, and Father Rivet at Vincennes (1795-1804), the latter devoting himself particularly to the Piankeshaw, Wea, and Kickapoo. In 1804 the Friends established an industrial farm on the upper Wabash, where for several years they instructed Miami, Shawnee, and others until forced to withdraw to Ohio by the opposition of the Shawnee prophet, brother of Tecumseh. In 1818 the Baptist minister, Rev. Isaac McCoy, began a work among the Wea and Miami which continued for four years and was then discontinued. In 1833 another Baptist minister, Rev. Jotham Meeker, assisted by Rev. David Lykins, began work among the Wea and Piankeshaw, already in Kansas for some years, and built up a flourishing school with corresponding good effect upon the tribe. The main body of the Indians was thus left at Miami for some years after their removal in 1846 were entirely neglected; without either religious or educational work, they sank to the lowest depths through dissipation, and were rapidly and constantly diminishing by intemperance and drunken murders. In 1841 their agent reported that "more than half the adults who die perish by the hands of their fellow Indians." A notable exception was their chief, Richardville, of mixed blood, who died in the same year, a consistent Catholic, whose "stern honesty and strict punctuality, as well as dignified bearing, commanded universal respect." In the meantime the restored Jesuits had again taken up the western mission work in 1842. In 1856 Frs. Charles F. van den Bergh and Henry Seton began a series of visits to the Kickapoo, Wea, Piankeshaw, Potawatomi, and other removed and native tribes in Kansas which resulted in the establishment of a successful mission among the Potawatomi (St. Mary's) to which the other tribes were contributors. In 1847 a mission was started among the removed Miami, who had made offices of their old forts. When it was discontinued two years later, probably because of the utter unworthiness of the Indians, who are officially described in the same year as "a miserable race of beings, considering nothing but what contributes to the pernicious indulgence of their depraved appetites for whiskey.

The picture in 1849 is in even darker colors—"destroying themselves by liquor and extensively murdering one another," the lowest in condition of all the removed tribes, and reduced in three years by more than one half. In 1855 we bear of the first improvement, through the temperance efforts of the French half-breeds in the tribe. The Quapaw mission of St. Mary's, Okla., charge of a lay priest assisted by a layman. But the Denver Times of October 24, 1886, reports that new evidence now cares for 276 Indians of the associated remnant tribes, including about 40 of Miami kinship. Of an original 4000 or more there are left now only about 400, namely—Indians, 243; Miami in Okla., 128; Wea and Piankeshaw, with Peoria, in Okla., about 40. A new and vigorous effort is now making to re-establish the customs or general ethnology of the Miami. They were organized upon the clan system, with, according to Morgan, ten gentes. One of their dances has been described, the feather dance, in which the performers, carrying feathered wands, imitated the movements of birds. They had a cannibal society—or possibly a clan—upon which devolved the obligation of eating the body of a prisoner upon occasion of certain great victories. Such ceremonial cannibalism was almost universal among the northern and eastern tribes. Their chief deities seem to have been the Sun and Thunder. They buried in the ground, under small log structures upon the surface of the ground, or in large logs split and bowed over for the purpose. Of the language nothing of importance has been published beyond a Wea Primer, by the Baptist mission in 1837, although considerable manuscript exists with the Bureau of American Ethnology. It is still spoken by a large proportion of the survivors.

Michael, see Micah.

MICHAEL, MILITARY ORDERS OF SAINT.—(1) A Bavarian order, founded in 1721 by Elector Joseph Clemens of Colognce, Duke of Bavaria, and confirmed by Maximilian Joseph, King of Bavaria, 11 Sept., 1808. Fias VII, 5 February, 1802, granted to priests dedicated with this order all the privileges of domestic prelates. Under Louis I it was made an order of merit (1837), and under Otto I was reorganized (1887).

(2) An order founded in 1469 by Louis XI, the chief military order of France until the institution of the Knights of the Holy Ghost, after which the two together formed the ordre du rost, the reception of the
cross of the former being made a condition to membership in the latter. After the Revolution the order was revived in Constantinople in A.D. 1261 but was to be found serviced by those who had accomplished notable work in art or science, or who had performed extraordinary services for the state. In 1825 there was a solemn reception into the ordres du roi, which did not, however, survive the Revolution of 1830.

(3) Knights of St. Michael's Wing, founded in the Cistercian monastery of Alcobaca, about 1171, by Alphonso I, King of Portugal, in commemoration of a victory over the Moors, in which, according to tradition, he was assisted by St. Michael in person. The knights were placed under the jurisdiction of the Abbot of Alcobaca and were pledged to recite the same prayers as Cistercian lay brothers. The order was in existence but a short time and was at first suppressed.

Florence Rudol McGahan.

Michael Cerularius (Μιχαήλ Κερωλάριον), Patriarch of Constantinople (1043–58), author of the second and final schism of the Byzantine Church, date of birth uncertain, death in 1058. Although the schism of Photius (d. 891), there remained at Constantinople an anti-Latin party that gloried in the work of that patriarch, honoured him as the great defender of the Orthodox Church, and waited for a chance of renewing his quarrel. The only explanation of Michael Cerularius's conduct is that he belonged from the beginning to that party, and had always meant to break with the pope as soon as he could. Belonging to one of the great families of Constantinople, he held in his youth some place at the Court. He began his public career by plotting with Constantine Monomachus, the future emperor, to depose Emperor Michael I (1042–41). Both conspired to depose him, but their scheme failed, and Monomachus formed the friendship to which Cerularius owed his later advancement. Cerularius was known as a dangerous person, so the Government tried to stop his political career by making him a monk. At first he refused; then suddenly the suicide of his brother caused his conversion, and he voluntarily entered a monastery. In 1042 Monomachus became emperor peaceably by marrying Zoe, a descendant of Basil the Macedonian (Basil I, 867–86) and widow of both Romanus III (1028–34) and Michael IV. He remembered his old friend and fellow-conspirator and gave him an ambiguous place at court, described as that of the emperor's "friend and guardian" (Psellus, "Enkomion", I, 324). As Cerularius was not ordained a priest, any further advancement must be that of an ecclesiastical career. He was therefore next made synkellos (that is, secretary) of the patriarch, Alexius (1025–34). The synkellos was always a bishop, and held a place in the church second only to that of the patriarch himself. In 1034 Alexius died, and Constantine appointed Cerularius as his successor. There was no election; the emperor "went like an arrow to the target" (Psellus, ibid., p. 326). From this moment the story of Cerularius becomes that of the great schism.

The time was singularly unpropitious for a quarrel with the pope. The Normans were invading Sicily, enemies of both the papacy and the Eastern Empire, from whom they were conquering that island. There was every reason why the pope (St. Leo IX, 1048–54) and the emperor should keep friends and unite their forces against the common enemy. Both knew it, and tried throughout to prevent a quarrel. But the papal legates were embittered by the outrageous conduct of the patriarch. Suddenly, after no kind of provocation, in the midst of what John Bucceu describes as "perfect peace" between the two Churches (L. Allatius, "Grecia orthod.", I, 37), Cerularius sent a declaration of war against the pope and the Latins. His agent was Leo, Metropolitan of Achiudia in Bulgaria. In 1053 this latter sent a letter to Bishop John of Corinth in Achaia whose conduct had been reproved by the emperor. John of Corinth sent the letter on to Cardinal Humbert of Silva Candida, who translated it and showed it to the pope. Cerularius then sent to the other patriarchs a treatise written by Nicetas Pectoratus (Niketas Stethatos in Greek), a monk of Studion, against "asymme bread, fasting on Saturday, and celibacy. Because of these "horrible infirmities", Nicetas describes Latins as "bad workers, bad husbandmen, and liars" (Will, op. cit., 127–36). Cerularius's third move made it plain that he meant war to the knife. Still entirely unprovoked, he closed all the Latin churches at Constantinople, including that of the papal legate. His chancellor Nicephorus burst open the Latin tabernacles, and trampled on the Holy Eucharist because the schism was "besiege that God had worked some new and wonderful things" (Nicetas, "Epistolae", 141; Will, op. cit., 127–36).

The pope then answered the letter of Leo of Achiudia. Knowing well whence it came, he addressed his answer in the first place to Cerularius. It is a dignified defence of the customs attacked and of the rights of the Holy See. He points out that no one thought of attacking the many Byzantine monasteries and "Churches in the West" (Psellus, "Enkomion", I, 324). Cerularius seems to have wavered in his plan because of the importance of the pope's help against the Normans. He writes to Peter III of Antioch, that he had for this reason proposed an alliance with Leo (Will, 174). Leo answered this proposal resenting the stupendous arrogance of Michael's tone, but still held out a hope of peace, as his letter of 1055 shows. Cerularius then wrote a very friendly letter to the emperor, and sent both documents to Constantinople by three legates Cardinal Humbert, Cardinal Frederick (his own cousin and Chancellor of the Roman Church, afterwards Stephen IX, 1057–58), and Archbishop Peter of Amalfi. The emperor, who was exceedingly annoyed about the whole quarrel, received the legates with honour and lodged them in his palace. Cerularius, who had now quite given up the idea of his alliance, was very indignant that the legates did not give him precedence and prostrate before him, and wrote to Peter of Antioch that they were "insolent, boastful, rash, arrogant, and stupid" (Will, 177). In a few weeks a peace was arranged. In May, 1055, Cardinal Humbert wrote defences of the Latin customs, and incidentally converted Nicetas Pectoratus (Will, 93–128, 136–50). Cerularius refused to see the legates or to hold any communication with them: he struck the pope's name from his diplomas, and so declared open schism. The legates then prepared the Bull of excommunication against him, Leo IV, "Orthodox Eastern Church", 186–7. Cerularius, when this attempt failed, sent an account of the whole story to the other patriarchs so full of lies that John of Antioch answered him: "I am covered with shame that your venerable letter should contain such things. Believe me, I do not know how to explain it for your own sake, especially if you have written it to the other most blessed patriarchs" (Will, 190).

After the schism Cerularius became for a time the strongest man at Constantinople. He quarrelled with his former patron, Constantine IX, who appeased him.
by abject apologies. He became a kind of kingmaker. When Theodora succeeded (1055-6), he “tried to rule over the empress” (Psellus, “Enkomion”, 357). Michael VI (1056-7) was not sufficiently submissive, so Cerularius worked up a revolution, deposed him, went himself to cut off his hair, and shut him up in a monastery. In his place he set up Isaac I (1057-87). Isaac never did very well to whom he owed his place and was at first very docile. At this time Cerularius reached the height of his power. He appointed all the officers of state, and was the real sovereign of the empire. So little did he disguise this fact that he began to wear the purple shoes that were always the prerogative of the emperors. “Losing all shame, he defaced his own image, and, joined royalty and priesthood in himself; in his hand he held the cross while imperial laws came from his mouth” (in Bréhier, op. cit., 275). Then Isaac got tired of being the patriarch’s puppet and wanted to reign himself. So once again Cerularius worked up a revolution. This time he meant to have himself crowned emperor. But Isaac was too quick for him; he had him arrested at once and tried for high treason. Michael Psellus was employed to bring the charge against him. He was accused of treason, paganism, and magic; he was “impious, tyrannical, murderous, sacrilegious, unworthy”. He was condemned to banishment at Madytus on the Hellespont. On the way there the shipwrecked of the effects of which he died (1059).

As soon as he was dead his apotheosis began. The emperor professed much regret for what had happened; his body was brought back to Constantinople and buried with great pomp in the church of the Holy Angels, Psellus, who had brought the charges against him, was passed as a paragon in his honour, describing him as the best, wisest, holiest, most misunderstood of men (this “Enkomion” is published by Sathas; see bibliography). It seems that, as soon as he was dead and therefore no longer dangerous, the Government found it more prudent to pretend to share the popular enthusiasm for him. From Psellus’s text accounts (the indictment at the trial and the funeral oration) it is not difficult to form an opinion about Cerularius’s character. He was by far the strongest man in the Eastern Empire during a time of its general degradation, far more capable than the contemptible emperors he set up and deposed. His life was austere. He had unbounded ambition, but he did not disgrace himself by anything dishonorable.

It is said at the time that he never forgave an injury. He was not a scholar, nor in any way so great a man as his predecessor and model, Photius. It seems that his breach with Rome was a part of a general scheme. He wanted to make himself autocrat of at least Eastern Europe. He could easily cow the feeble church, but he could and did do nothing more momentous; he founded the schismatical Byzantine Church.

Michael de Sanctis (DE LOS SANTOS), Saint, b. at Vich in Catalonia, 29 September, 1591; d. at Valladolid, 10 April, 1625. At the age of twelve years he came to Barcelona, and asked to be received into the monastery of the Trinitarians, in which order, after a three years’ novitiate, he took vows in the monastery of St. Lambert at Saragossa, 5 Sept., 1607. When one day a Discalced Trinitarian came to St. Lambert’s to receive Holy orders, Michael felt himself drawn to this more austere congregation. After mature deliberation, and with the permission of his superiors, he entered the novitiate of the Discalced Trinitarians at Madrid, and took vows at Alcalá; he became priest and was twice elected superior of the monastery at Valladolid. He lived a life of prayer and great mortification, was especially devout towards the Holy Eucharist, and is said to have been rapt in ecstasy several times. He was tonsured as a Fransican by Pius VI, 24 May, 1779 and canonised by Pius IX, 8 June, 1862. His feast is celebrated on 5 July. He is generally represented kneeling before an altar where the Blessed Sacrament is exposed.

MICHAEL OTT.

Michael of Cesena (MICHELE FUSCHI), Friar Minor, Minister General of the Franciscan Order, and theologian, b. at Cesena, a small town in Central Italy, near Forli, about 1230. Nothing of his early life is known. Having entered the Franciscan Order, he studied at Paris and took the doctor’s degree in theology. He taught theology at Bologna and wrote several commentaries on Holy Scripture and the “Sentences” of Peter Lombard. At the general chapter of Naples (31 May, 1316) he was elected minister general and went at once to Assisi, where he convoked a chapter to consider the revision of the Constitutions of the order. Returning to Bologna, he issued the document, “Gravi qua prae” (21 Aug., 1316), which, together with several other ordinances regarding the matter of poverty, induced John XXII to publish the Bull, “Quorumadum exiguit” (7 Oct., 1317), whose purpose was to explain the decreets of Nicholas III, “Exit qui seminat” (13 Aug., 1279), and of Clement V, “Exivi de paradiso” (6 May, 1312). As it concerned the principal chapter of the Franciscan Rule, this action caused no little disturbance within the order. The Bull was warmly opposed by Michael and his party, who claimed that it was adopting the errors which had been insisted in his letters, they were following the example and teaching of Christ and His Apostles. Thus the controversy finally shifted to a speculative theological question: whether or not it was consonant with Catholic Faith to hold that Christ and the Apostles had no property individually or in common; and while in the famous dispute at Naples in 1321 the inquisitor, John of Belna, claimed that it was heretical, Bergengario of Perlignan declared it a Catholic dogma in perfect accordance with the decreets of Nicholas III and Clement V. The matter having been brought before John XXII, a further attempt to settle the controversy was made by distinguishing between dominion and simple use, so that both propositions, Christ and the Apostles had no property, i.e., dominion of property, and Christ and the Apostles possessed property, i.e., the use of property, were true. In the Bull “Quia nonnullam” (26 March, 1322) the pope declared that he intended merely to explain the decrees of his predecessors, and excommunicated anyone who adhered to the proposition that Christ and His Apostles had no property, i.e., dominion of property. The question of the Constitution “Quorumadum exiguit”. In June of the same year a general chapter of the order was convoked at Perugia and decided that to assert that Christ and His Apostles possessed no earthly goods was not only not heretical, but sound and Catholic doctrine. At the same time Bonagratis of Bergamo was comn-
sioned to represent the chapter before the papal Curia at Avignon. The controversy continued unabated until, in 1327, Michael was summoned to appear be- fore the emperor. He feigned illness and delayed; but obeyed a subsequent order to do the pope under pain of grave censure to leave Avignon. He was thus unable to attend the chapter held at Bologna in May of the following year (1328); yet despite his absence and the protest of the papal legate, he was re-elected minister general, the chapter deeming his charges against him insufficient to deprive him of office. Several prelates and princes wrote to the pope in Michael’s behalf; but before these letters or the result of the chapter could reach Avignon, Michael, with William of Occam and Bonagratia of Bergamo, who were also retained by the pope at Avignon, fled by night (25 May) to a galley sent them by Louis of Bavaria.

At Pisa, where they were triumphantly received by the party of Louis and were joined by a number of other schismatics, the deposed minister general published a solemn appeal from the pope to a council (12 Dec., 1328), posted it on the door of the cathedral, and the next day read to the assembled multitude a decree of the Emperor Louis deposing John XXII. The pope issued a new edict, but not about this time. It is the faithful against Michael; and the latter answered in his "Ad perpetuum rei memoriam innoenscat quod ego, Fr. Michael" (25 Nov., 1330) and in "Christiane fidei fundamentum", in which he accused the pope of heresy in the three Bulls, "Ad Conditorem Canonum" and "Cum inter nonnullulos", and "Quia quorumdam", "Ques. et Litterarum magisterum", and "Testa Solomonum", which Michael wrote in his own defence, are contained in Occam’s Dialogue.

The general chapter of Paris (11 June, 1329), at which Cardinal Bertrand presided, condemned the conduct and writings of Michael and all who took part with him against John XXII; and elected Gerard of Luxembourg minister general of the order. The next year (1330) Michael and other schismatics followed Louis to Bavaria. The chapter of Perpignan (25 April, 1331) expelled Michael from the order and sentenced him to perpetual imprisonment. During the latter years of his life he was abandoned by nearly all his sympathizers, but it is probable that he died repentant. His remains were translated in 1377, and since then reprinted eight times in various languages; (2) "Astronomia", still in MS., in the Bodleian Library; (3) "Liber Introductorius"...; and in MS., ibid.; (4) "Liber Luminis Luminarum", in a MS., of the Riccardi coll., Florence; and (5) "De Alchemia", in MS., in Corpus Christi College, Oxford. Besides the translations mentioned above, a Latin version of Aristotle’s "Meta" was printed in Venice, 1477, and since then reprinted eight times. The Greek text is sometimes attributed to Michael Scot.

Michael the Archangel (Hebr. הכדש, "Who is like God?"). SAINT, one of the principal angels; his name was the war-cry of the good angels in the battle fought in heaven against Satan and his followers. On a certain occasion, when the archangel Michael, in his chariot, approached the inhabitants of the Universities of Oxford and Paris. At the last mentioned place he was known as "the mathematician," which implies that he studied in the Faculty of Arts. It is probable that he studied theology also. At any rate, he was beyond doubt a cleric. It seems likely that, on leaving Paris, he visited the University of Bologna, then a focus of Jewish learning, and was there at the time of Frederick II. This occurred about 1208. At Palermo, he joined the circle of learned men who surrounded the emperor; by some, indeed, he is said to have been elevated to the rank of imperial tutor, although the MSS., as a rule, entitled him "astrologer to the Lord Emperor Frederick". In 1209 he went to Toledo, made the acquaintance of several of the distinguished Arab scholars and wrote his "Abreviatio Aviscumn", the MS., of which bears the date 1210. He also took up the study of astronomy and alchemy, and translated from the Arabic several works on works on these subjects. That he was interested in the philosophy of the Arabs is evident from the fact that he translated several philosophical works of several of the Arab scholars. After his return to Palermo, about 1220, Michael devoted special attention to the science and practice of medicine. He received several signs of pontifical as well as imperial favour. By Pope Honorius III he was offered several ecclesiastical benefices, among them being the Archipresbyter of Caesal, in Ireland. He was also offered the Archipresbyter of Canterbury, in England. He was also offered the benefice of Canterbury, in England.

STEPHEN M. DONOVAN.

MICHAEI 275

Michael Scotus (Scot or Scot), a thirteenth-century mathematician, philosopher, and scholar. He was born in Scotland, about the year 1175. The con- tention that he was an Irishman seems to be disposed of by his being at Bologna, 1223, which places his nativity about 1175. The Archbishop of Caesal, he declined on the ground that he was ignorant of the Irish language. It is not clear whether "Scotus" indicates merely a native of Scotland, or one of the clan Scott, or Scot, which was very numerous in the Scottish lowlands. There is a tradition to the effect that he studied first at the cathedral school of Durham, and afterwards at the Universities of Oxford and Paris. At the last mentioned place he was known as "the mathematician," which implies that he studied in the Faculty of Arts. It is probable that he studied theology also. At any rate, he was beyond doubt a cleric. It seems likely that, on leaving Paris, he visited the University of Bologna, then a focus of Jewish learning, and was there at the time of Frederick II. This occurred about 1208. At Palermo, he joined the circle of learned men who surrounded the emperor; by some, indeed, he is said to have been elevated to the rank of imperial tutor, although the MSS., as a rule, entitled him "astrologer to the Lord Emperor Frederick". In 1209 he went to Toledo, made the acquaintance of several of the Arab scholars and wrote his "Abreviatio Aviscumn", the MS., of which bears the date 1210. He also took up the study of astronomy and alchemy, and translated from the Arabic several works on subjects. That he was interested in the philosophy of the Arabs is evident from the fact that he translated several philosophical works of several of the Arab scholars. After his return to Palermo, about 1220, Michael devoted special attention to the science and practice of medicine. He received several signs of pontifical as well as imperial favour. By Pope Honorius III he was offered several ecclesiastical benefices, among them being the Archipresbyter of Caesal, in Ireland. He was also offered the Archipresbyter of Canterbury, in England. He was also offered the benefice of Canterbury, in England.

WILLIAM TURNER.
tion of Moses (Orig., "De principiis", III, 2, 1). St. Michael concealed the tomb of Moses; Satan, however, by the command of God, appeared to the Jewish people as the sin of hero-worship. St. Michael also guards the body of Eve, according to the "Revelation of Moses" ("Apocryphal Gospels", ed. A. Walker, Edinburgh, p. 647). (d) Apocalypse, xili, 7, "And there was a great battle in heaven, Michael and his angels fought against the dragon. St. John speaks of the great power that was tried of the people, and a fragment also of the battle in heaven at the beginning of time. According to the Fathers there is often question of St. Michael in Scripture where his name is not mentioned. They say he was the cherub who stood at the gate of paradise, "to keep the way of the tree of life" (Gen., iii, 24), the angel through whom God published the Decalogue to Moses. The third of the twelve founders of the Church was in the way against Balaam (Numbers, xxiii, 22 sqq.), the angel who routed the army of Sennacherib (IV Kings, xix, 35), etc. Cf. P. Bonaventura da Sorrento ("Micheel", Naples, 1892).

Following these Scriptural passages, Christian tradition gives to St. Michael four offices: (1) To fight against Satan; (2) To vouch for the souls of the faithful from the power of the devil, especially at the hour of death. (3) To be the champion of God’s people, the Jews in the Old Law, the Christians in the New Testament; therefore he was the patron of the Church, and of the order of knights during the Middle Ages. (4) To call away from sin and saving men, or to accuse judgment (signs for St. Michael represented in luxem sanctum). Offert. Miss. Defunct. "Constituit eum principem super animas suscipiendas", Antiph. off. "Cui, "Hermas", Pastor, I, 3, Simil. VIII, 3). Regarding her rank in the celestial hierarchy opinions vary; St. Basil (Hom. de angelis) and other Greek Fathers, also Salmeron, Bolland, etc.; they believe he is the prince of the other angels; others (cf. P. Bonaventura, op. cit.) believe that he is the prince of the seraphim, the first of the nine angelic choirs. But according to St. Thomas (Summa, I, Q. xxii, a. 3) he is the prince of the last and lowest choir, the angels. The Christian Liturgy seems to follow the Greek Fathers; it calls him "Principes militiae celestis quem honorificant angelorum civium". The hymn of the Mozarabic Breviary places St. Michael even above the Twenty-Four Elders. The Greek Liturgy styles him "Αρχηγός τῶν μαθητῶν", "highest general" (cf. Menæa, 8 Nov. and 6 Sept.).

FEAST.—It would have been natural to St. Michael, the angelic Bishop, to be the champion also of Christians, giving victory in war to his clients. The early Christians, however, regarded some of the martyrs as their military patrons: St. George, St. Theodore, St. Demetrius, St. Sergius, St. Procopius, St. Mercurius, etc.; but to St. Michael they gave the care of their sick. At the place where he was first venerated in Phrygia, his name as an angelic healer obscured his interposition in military affairs. It was from early times the centre of the true cult of the holy angels, particularly of St. Michael. Tradition relates that St. Michael in the earliest ages caused a medicinal spring to spout at Chairetopia near Colossae, where all the sick who bathed there, invoking the Blessed Trinity and St. Michael, were cured. Still more famous are the springs which St. Michael is said to have drawn from the rock at Colossae (Chome, the present Khomas, on the Lycus). The pagans directed a stream against the sanctuary of St. Michael to destroy it, but the archangel split the rock by lightning to give a new bed to the spring. St. Michael is said also to have come from the gorge. The Greeks claim that this apparition took place about the middle of the first century and celebrate a feast in commemoration of it on 6 September (Anacletica, VIII, 285–285). Also at Sipytha in Bithynia and elsewhere in Asia the hot springs were dedicated to St. Michael. At Constantinople likewise, St. Michael was the great heavenly champion and the patron of Armenian, Coptic Churches adopted it also; it is now the principal feast of St. Michael in the Orient. It may have originated in Phrygia, but its station at Constantinople was the Chairetopia of Armenia, and in the "Epistula Michaelis" (No. 8 Nov.). Other feasts of St. Michael at Constantinople were: 27 Oct., in the "Promotu" church; 18 June, in the Church of St. Julian at the Forum; 10 Dec., at Athaea (Maximilian, Liturgia Orientalis, Freiburg, 1908).

The Christians of Egypt placed their life-giving river, the Nile under the protection of St. Michael; they adopted the Greek feast and keep it 12 Nov.; on the twelfth of every month they celebrate a special commemoration of the archangel, but 12 June, when the river commences to rise, they keep as a holiday of obligation the feast of St. Michael "for the rising of the Nile", κύριὰ ἐν τῷ τέμενος Αγιορείτου καὶ Πασχαλίου (N. Nilus, "Kal. muni.", II, 702, Innsbruck).

At Rome, the Leonine Sacramentary (sixth cent.) has the "Natale Basilica Angeli via Salaria", 30 Sept.; of the five Masses for the feast three mention St. Michael. The Gelasian Sacramentary (seventh cent.) gives the first Mass of St. Michael's Archangels and the Gregorian Sacramentary (eighth cent.), "De sacrificio Basilionis St. Angeli Michaelis", 29 Sept. A manuscript also here adds "via Salaria" (Ebner, "Miss. Rom. Iter Italicum", 127). This church of the Via Salaria was six miles to the north of the city: in the ninth century it was called Basilica Archangeli in Septimo (Armillinii, "Chiuse di Roma", p. 856). It disappeared a thousand years ago. At Rome also the protect of heavenly physician was given to St. Michael. According to an (apocryphal?) legend of the tenth century he appeared over the Moes Hadrianis (Castel di S. Angelo), in 950, during the procession which St. Gregory held against the pestilence, putting an end to the plague. The bishop consecrated the Moes Hadrianis in honour of him, a church, which was styled St. Michaelis inter nubes (in summata circi).

Well known is the apparition of St. Michael (a. 494 or 530–40), as related in the Roman Breviary, 8 May, at his renowned sanctuary on Monte Gargano, where his original glory as patron in war was restored to him. To his intercession the Lombards at the time of Sipontum (Manfredonia) attributed their victory over the Greek Neapolitans, 8 May, 663. In commemoration of this victory the church of Sipontum instituted a special feast in honour of the archangel, on 8 May, which has spread over the entire Latin Church and is now called (since the time of Pius V) "Apparitio S. Michaelis", although it originally did not commemorate the apparition, but the victory.

In Normandy St. Michael is the patron of mariners in his famous sanctuary at Mont-Saint-Michel in the Diocese of Coutances. He is said to have appeared there, in 708, to St. Aubert, Bishop of Avranches. In Normandy his feast, "S. Michaelis in periculo maris" or in Monte Turm, "in Monte Turm, apparivit mortem" celebrated on 18 Oct., the anniversary of the dedication of the first church, 16 Oct., 710; the feast is now confined to the Diocese of Coutances. In Germany, after its evangelization, St. Michael replaced for the Christians the pagan god Wotan, to whom many mountains were
sacred, hence the numerous mountain chapels of St. Michael all over Germany.

The hymns of the Roman Office are said to have been composed by St. Rabanus Maurus of Fulda (d. 855). In art St. Michael is represented as an angelic warrior, fully armed with helmet, sword, and shield (often the shield bears the Latin inscription Quo ut Deus, standing over the dragon, whom he sometimes pierces with a lance. He also holds a pair of scales in which he weighs the souls of the departed (cf. Rock, "The Church of Our Fathers," III, 160), or the book of life, to show that he takes part in the judgment. His feast (29 Sept.) in the Middle Ages was celebrated as a holy day of obligation but devotion to St. Michael was considered the most powerful of the saints, and several other feasts it was gradually abolished since the eighteenth century (see Feasts). Michaelmas Day, celebrated in England and other countries, is one of the regular quarter-days for settling rents and accounts; but it is no longer remarkable for the hospitality with which it was formerly celebrated. Stubble-goose being esteemed in perfection about this time, most families had one dressed on Michaelmas Day. In some parishes (Isle of Skye) they had a procession on this day and baked a cake, called St. Michael's bannock. (Hampson, "Medii Evici Calendarium," London, 1841, I, 348 sqq.)

MICHEAS

FREDERICK G. HOLWEC K.

MICHEAS. See MICHEAS.

MICHAUD, JOSEPH-FRANCOIS, historian, b. at Albens, Savoy, 1767; d. at Passy, 30 Sept., 1839. He belonged to an ancient family of Savoy. Educated at the College of Bourg at Gresse, in 1786 he entered a publishing house at Lyons, but left it after a few years to take up journalistic work at Paris, where, during the Revolution, he defended the royalists and without the risk of the royal. Arrested on 13 Vendémiaire, 1795, he succeeded in escaping and resumed the journalistic war. Under the Consulate he wrote several pamphlets in which appeared criticisms of Napoleon that led to his imprisonment in the Temple for a time. After his release from prison he decided to abandon politics for literature. In 1808 he published the first volume of the "History of the Crusades". In the same year he founded with his brother the "Biographie Universelle." Elected to the French Academy in 1814, he was, under the Restoration, deputy editor of "La Quotidienne," and then lecturer to Charles X. In May, 1830, he undertook a voyage to the East and the Holy Land in order to study phases of Eastern life and thus impart more realistic colour to the accounts of his "History of the Crusades." He was unable to complete the final edition.

MICHAUD's most important work is his "History of the Crusades" (1st ed., 3 vols., Paris, 1812-17; 6th ed., Poujoulat, 6 vols., Paris, 1841). In his choice of the subject and the manner in which he treated it MICHAUD was an innovator; his work was one of the first productions of the historical school which, inspired by the works of Chateaubriand, restored the Middle Ages to a place of honour. To-day the value of this work seems questioned, but "Michaud's" approach appears insufficient and the romantic color is often false. It was none the less the starting point of studies relating to the Crusades, and it was under the influence of this publication that the Academy of Inscriptions in 1841 decided to publish the collection of Historians of the Crusades. MICHAUD had accompanied his work with a bibliography of "De croisades" (Paris, 1829, 4 vols., 129), which contained French translations of the European and Arabic chronicles relating to the Crusades. Besides, he directed the publication of the "Biographie Universelle" (2nd ed., 45 vols., Paris, 1843), and in collaboration with Poujoulat that of the "Collection des Mémoires pour servir a l'histoire de France depuis le 13e siècle jusqu'au 18e" (32 vols., Paris, 1836-44).

SAINT-CHRISTIAN, CAUSERIES DU LUNDI, VII, 20-41.

LOUIS BRÉHIER.

MICHEAS (MICHAUS).—In Hebrew the complete form of the name is Mikhâyêhûh or Mikhâyêhûh (contracted into Mikhâhêhûh? II Paral., xviii, 14; Mikhâhûh, elsewhere Mikhah); a resident of the hill-country of Ephraim who founded an independent kingdom. As he restored to his mother the 1100 pieces of silver which he had stolen from her, she devoted 200 therobur with to make an idol which was set up in the house of MICHAUS. In addition, MICHAUS made an ephod and teraphim. He first appointed as priest his son, but afterwards engaged a Levite of Bethlehem, Jona-than, a descendant of Moses by Geramah. The Dan- ites, passing by whilst on a migration, took with them the Levite Jonathan and the objects of the idolatrous worship belonging to MICHAUS, in spite of the latter's protests, and set them up in the sanctuary which they established in the town of Dan, so called after their name. See the commentaries on Book of Judges, by B. F. Moore (1843); Payn Terlaine's Boek van Daniel (Tringen, 1897); Hummelauer (Paris, 1888); Lagrange (Paris, 1903); etc.; cf. A. Van Hoonacker, "Le Sacerdote Lévitique" (London and Louvain, 1889), 22, 227, 230, 234, 244, and 372.

II. MICHAEW, son of Jemla (Hebr., Mikhâyêhûh; II Paral., xvi, 14; Mikhâhûh; ibid., verse 8; Mikhâhêh; etc.), a prophet of the kingdom of Samaria, contemporary with Elisha and Eileuous. It is related in III Kings, xxiii (cf. II Paral., xviii), that Achaeb, King of Israel (c. 873-852 B.C.), allied to Josaphat, King of Judah, having obtained from 400 prophets assurance that his intended expedition against Ramoth-Galaad, a town which he wished to recover from the Sidonians, would succeed, engaged at the earnest request of Josaphat the Prophet MICHAUS, son of Jemla, although the latter, he asserted, had always proved to him a prophet of evil. MICHAUS, in his first answer, foretold the success of the enterprise, but his words were probably spoken in an ironical tone, for Achaeb adjured him in the name of the Lord to speak the truth. MICHAUS then announced the defeat of the two kings. He added that he had seen in a vision a spirit promise Yahweh to deceive Achaeb by his prophets. Whereupon one of these prophets, Sedeqias, son of Chanaan, struck him on the face. Achaeb ordered the imprisonment of MICHAUS till the day when he should return in peace. "If thou return in peace," said MICHAUS, "the Lord hath not spoken by
me." In the ensuing battle Achab was severely wounded by a chance arrow and died the same day. See the commentaries on the Books of Kings by Skinner in "The Cambridge Bible for Schools and Colleges" (C. H. Gordon, 1906); Kettel (Gottingen, 1906); Klostermann (Munich, 1887); cf. W. R. Harper, "Comm. on Amos and Hosea" (Edinburgh, 1905), iv sq.

III. Micheas (Hebr. Mkhah; Jer., xxvi, 18: Mkhâ- yah keih.), the author of the book which holds the sixth place in the collection of the Twelve Minor Prophets, was born at Môræthoth (Mich., i, 1; Jer., xxvi, 18), a locality not far from the town of Geth (Mich., i, 14). Jerusalem was the scene of his minis- try, and it occurred, as we learn from the title of his book, under the Kings Joathan (c. 740-735 n. c.), Achaz (735-727?), and Eschecias (727-708?). We do not, however, appear to possess any of his addresses prior to the reign of Eschecias. He was thus contemporaneous with the Prophet Issias. His book falls into three parts: (1) The first part consists of chapters i-iii. Micheas begins by announcing the impending destruction of Samaria as a punishment for its sins, and Jerusalem also is threatened. In chapter ii the prophet develops his threats against the Kingdom of Judah; his reasons for them are uttered in a reproach with greater distinctness against the chief culprits: the prophets, the priests, the princes, and the judges. Because of their transgressions, Sion shall be ploughed as a field, etc. (iii, 12). This passage was quoted by the defenders of Jeremias against those who wished to punish with death the boldness with which priests and scribes of a later day uttered reproach: Micheas of Morasthi was not punished with death, but, on the contrary, Eschecias and the people did penance and the Lord withdrew his threat against Jerusalem (Jer., xxvi, 18 sq.). There is a general consensus of opinion to attribute to the Prophet Micheas the authorship of this part of the book; serious doubts however have been raised only against ii, 1. Chapters i-iii must have been composed shortly before the destruction of the Kingdom of Samaria by the Assyrians (722 b. c.).

(2) In the second part (iv-v), we have a discourse announcing the future conversion of the nations to the law of Yahweh and describing the Messianic peace, an event which Micheas foretold in connection with his enemies, symbolized by the Assyrians. In v, 1 sq. (Hebr., 2 sq.), the prophet introduces the Messianic king whose place of origin is to be Bethleem-Ephrata; Yahweh will only give up his people "till the time wherein she that travailleth shall bring forth," an allusion to the well-known passage of Is., vii, 14. Similar in spirit but more clearly and closely in line with the ideas of Micheas is vii, 14 sq. Chapters iv-v, either wholly or in part, are of post-exilic origin. But their arguments, principally based on considerations inspired by certain theories on the history of the Messianic doctrine, are not convincing. Neither is it necessary to suppose that in iv, 8, the comparison of the cedars of Sion with the "cove of the flock" and the cedars of Jerusalem with Sion is a reminiscence of Judges and Jerusalem at the time of the composition of the address; this comparison merely refers to the moral situation held towards the rest of the country by the capital, whence Yahweh is presumed to keep watch. The connexion of ideas, it is true, is interrupted in iv, 10, and in v, 4-5 (Vulg. 5-6), both of which may be later additions. A characteristic trait of Micheas's style in chapter iv is found in the puns on the names of localities, and it is noticeable that an entirely similar pun can be seen in vi, 1 (Hebr., iv, 14), particularly when the LXX version is taken into account. The reading supposed by the LXX suggests a very satisfactory interpretation of this difficult passage. "And now, surround thyself with nets," (qodesh, Bethania). The tone and contents clearly show that iv-v must have been composed in other circumstances than i-iii. They probably date from shortly after the fall of Samaria in 722 b. c. in i-iii Micheas had expressed the fear that the conquest of Samaria the Assyrian army would invade Judea; but Yahweh withdrew His purpose (Jer., ii, 19, 40) because the people can expiate their sins (vi, 6-7). The prophet answers that Yahweh claims the observance of the moral law rather than sacrifices (vi, 8). But this law has been shamefully violated by the nation, which has thus brought on itself God's punishment (vi, 9 sqq.). The present writer has suggested ("Les Douze Petit Prophetes", Pans, 1908, 405) that this passage vii, 11-13, seems transposed as to follow vii, 6; in this way the justification of the punishments assumes a connected form in vii, 9-11, 6+11b-13. The rest of chapter vii (7-11a + 14 sqq.) contains a prayer in which the fallen city expresses hope in a coming restoration and confidence in God. "The opinions of critics are much divided on the composition of these chapters. Several consider them a mere collection of detached fragments of more or less recent origin; but the analysis just given shows that there is a satisfactory connexion between them. The chief reason why critics find it difficult to attribute to Micheas the authorship of chapters vii, or at least parts of it, is the difference of a large extent in the prophet's style: Micheas of Morasthi was not punished with death, but, on the contrary, Eschecias and the people did penance and the Lord withdrew his threat against Jerusalem (Jer., xxvi, 18 sq.). There is a general consensus of opinion to attribute to the Prophet Micheas the authorship of this part of the book; serious doubts however have been raised only against ii, 1. Chapters i-iii must have been composed shortly before the destruction of the Kingdom of Samaria by the Assyrians (722 b. c.).

(3) Chapters vi-vii, which form the third part, are cast in a dramatic shape. Yahweh interpellates the people and reproaches them with ingratitude (vi, 3-5). The people respond with explanations that offerings they can expiate their sins (vi, 6-7). The prophet answers that Yahweh claims the observance of the moral law rather than sacrifices (vi, 8). But this law has been shamefully violated by the nation, which has thus brought on itself God's punishment (vi, 9 sqq.). The present writer has suggested ("Les Douze Petit Prophetes", Pans, 1908, 405) that this passage vii, 11b-13, seems transposed as to follow vii, 6; in this way the justification of the punishments assumes a connected form in vii, 9-11, 6+11b-13. The rest of chapter vii (7-11a + 14 sqq.) contains a prayer in which the fallen city expresses hope in a coming restoration and confidence in God. "The opinions of critics are much divided on the composition of these chapters. Several consider them a mere collection of detached fragments of more or less recent origin; but the analysis just given shows that there is a satisfactory connexion between them. The chief reason why critics find it difficult to attribute to Micheas the authorship of chapters vii, or at least parts of it, is the difference of a large extent in the prophet's style: Micheas of Morasthi was not punished with death, but, on the contrary, Eschecias and the people did penance and the Lord withdrew his threat against Jerusalem (Jer., xxvi, 18 sq.). There is a general consensus of opinion to attribute to the Prophet Micheas the authorship of this part of the book; serious doubts however have been raised only against ii, 1. Chapters i-iii must have been composed shortly before the destruction of the Kingdom of Samaria by the Assyrians (722 b. c.).

Micheil, Jean, a French dramatic poet of the fifteenth century, who revised and enlarged the mystery of the Passion composed by Arnoul Gréban. There are three Micheils mentioned in connexion with this work. Some consider Bishop Jean Micheil of Angers as its author, but this opinion can hardly be maintained. None of his biographers speak of his contributions to the mystery of the Passion; moreover, he died in 1447 and therefore could not have revised the work of Gréban, which first appeared about 1450. A catalogue containing the names of the counsellors of the Paris Parliament mentions a "Maistre Jehan Micheil," first physician of King Charles VIII, who was made a counsellor in 1491. We also read in "Le Verger d'Honneur," by Nicholas de La Vigenère, an "un M. Micheil," who died at Chieri (Piedmont) Maistre Jehan Micheil, first physician of the king, most excellent doctor in medicine." The third Jean Micheil, also a doctor, was the physician.
of the young dauphin, son of Charles VIII. His name appears several times in the cartulary of the University of Angers, and in the books of the medical faculty which was founded in 1501. He died in 1506. It is probable that his author was the third Jean Michel, but the fact has not been proved.

Besides his contributions to Gréban's Passion, Jean Michel composed another mystery, a Resurrection, which was played at Angers on the occasion of King René's visit to that city. Jean Michel has not the dryness of his predecessor; on the other hand he lacks his accuracy. He incorporates into his mysteries the most extravagant legends and the fantastic information found in the apocryphal writers. He delights in pictures of low city life in the fifteenth century, and his language is often realistic in the extreme.

Michelangelo Buonarroti. See BUONARROTI.

Michelians, a German Protestant sect which derives its name from "Michel", the popular designation of its founder Johann Michael Hahn, b. of peasant parentage, 2 February, 1758, at Altorf near Stuttgart; d. at Sindlingen near Herrenberg in Württemberg, 20 January, 1819. Naturally aumpy and light-hearted disposition, he claimed to have been favored at the age of seventeen with a vision lasting for the space of three hours. From that time on he led a strictly retired life and was a regular attendant at the meetings of the Pietists. His peculiarities drew forth the energetic disapproval of his father, who even resorted to physical violence against him but in vain, as parental opposition served in doing the son from home without changing his manner of life, it was soon abandoned as useless. After a seven weeks' vision, alleged to have occurred in 1780, Hahn began to proclaim his beliefs through speech and writing. Large audiences flocked to his preaching and both the ecclesiastical and the civil authorities instituted proceedings against him. He sought quiet in foreign lands, notably in Switzerland, where he met Lavater. From 1794 until his death, he devoted his time, undisturbed, to religious propaganda, living on the estate of Duchess Frances at Sindlingen. While he entertained for some time the idea of establishing a distinct community, a plan which he had formed in Konstanz near Stuttgart, after his death, neither he nor his followers ever succeeded completely and permanently from the state Church. The Bible, interpreted not in a literal but a mystical, allegorical sense, occupies, in his religious system, the position of supreme guide in matters of faith. The Trinity of Persons in God is replaced by a threefold manifestation of one and the same deity. A double soul of man is admitted, for Adam fell first in seeking a consort for the multiplication of the human species, and again in yielding to her suggestion of disobedience. Hence the necessity of redemption by Jesus Christ, a redemption which is understood mainly in a physical sense, in as much as the Redeemer exudes, in his bloody sweat, the coarse, sensual elements in man to whom he restores a spiritualized body. A second and proximate advent of Christ is taught; also the ultimate universal salvation of all beings, the fallen angels included. Among the sources of his belief Hahn mentions only the Bible and special personal illumination; his ideas, however, are undoubtedly related to the views of his friend Oelgoag. His followers, found chiefly among the rural populations, are scattered over Württemberg, Baden, and the Palatinate. Their approximate number is 15,000 souls divided into 26 districts, each of which holds semi-annual conferences. The works of Hahn, comprising 15 volumes, were published posthumously at Tübingen, 1819 sqq.

N. A. WEBER.

Michelis, Edward, theologian, b. in St. Mauritius, 6 Feb., 1813; d. in Luxemburg, 8 June, 1855. After his ordination, in 1830, he was appointed private secretary to the Archbishop of Cologne, Clemens August von Droste-Vischer, whose imprisonment he shared, first in the fortress of Minden (1837), and later at Magdeburg and Erfurt. On his release in 1841 he returned to St. Mauritius, where, the following year, he established the Sisters of Divine Providence, whom he placed in charge of an orphanage he had also founded. In 1844 he was made professor of dogmatic theology in the seminary at Luxemburg, where he remained until his death. Among his published writings are: "Völker der Südasien u. die Geschichte der protestantischen und katholischen Missionen unter denselben" (Munster, 1847); "Lieder aus Westfalen", edited by his brother Friedrich in 1857; "Das heilige Messopfer und der christliche Weltfrieden. Für die Bedeutung" (Erfurt, 1841). He was also the founder of the "Münstersche Sonntagsblatt" and co-founder and editor-in-chief of "Das Luxemburger Wort" (1848).

LAUCHERT in Buchberger, Kirchliche Handlex.; Konversations-Lex.

FLORENCE RUSCHE McGAHAN.

Michelozzo di Bartolommeo, architect and sculptor, b. at Florence c. 1391; d. 1472. He exercised a quiet, but far-reaching, influence during the early Renaissance, and for more than a decade worked with Donatello, to whom several of Michelozzo's works have been erroneously attributed. The Ara Magna monument in the cathedral at Montepulciano and the Brancacci tomb at Naples are the work of Michelozzo alone, whilst he assisted Donatello in the execution of the tomb of John XXIII. He also modelled several pieces in brass for Donatello, with whom he collaborated on a pulpit for the cathedral of Prato. Giberti received important assistance from him on his "Matthew" and the bronze sacratory door of the cathedral of Florence. Later on, he made bronze casts of some of Luca della Robbia's designs. Among other works at Florence, a silver figure of St. John, a larger group of which was afterwards made in clay, is certainly the work of Michelozzo alone, while other pieces are ascribed to him with more or less probability. In San Giorgio Maggiore, at Venice, there is still preserved a wooden crucifix by him. That Michelozzo was influenced by Donatello in his plastic work, cannot be denied; but his own style was not devoid of originality. As an architect, it is sufficient to say of him that he was certainly worthy to be compared with Brunelleschi. Being court architect at Florence after 1435, he built the Medici chapel in the church of Santa Croce and undertook the rebuilding of the convent of San Marco, in which the cloister and the hall of the library are his work. He also built the façade of the church of Sant' Agostino in Montepulciano. In these buildings he manifested a certain preference for antique forms, though there are also traces of the Gothic influence which was then passing away. Probably his greatest work was the palace of the Medici (afterwards in the possession of the Riccardi), which lost much of its fine balance of mass when it was enlarged. Between this edifice and Brunelleschi's Patti Palace there is a great resemblance, though the Pitti may be a work of later date. Still Brunelleschi retains the superiority by virtue of his Palazzo di Parte Guelfa. A peculiarity of the Riccardi (Medici) Palace is the gra-
dation of bossage from the base upwards through two stories, after which come smooth stone blocks. The plan, moreover, was afterwards generally imitated. Not very large, but imposing in effect, it presents, below, a colonnade, above, between bold cornices, a wall decorated with antique reliefs, and then an upper story with semicircular, double-light, windows similar to those of the facade. The composite capital used here was afterwards generally adopted as a decorative element.

To Michelozzo are also due a court in the Palazzo Vecchio, and another in the Palazzo, as well as a palace built for the Medici in Milan, of which only a small part has been preserved. In this, as also in a palace at Ragusa by the same master, the upper floor had windows with the pointed arches of an earlier style. At Milan his Portinari chapel is still to be seen in Sant' Eustorgio. As compared with Donatello and Brunelleschi, Michelozzo is given the higher place by some critics, though others rank him lower.

G. GIEBMANN.

MICHIGAN.—The State of Michigan is bounded on the north by Lake Superior, on the east by Canada, Lake Huron and Lake St. Clair, on the south by Ohio and Indiana, and on the west by Lake Michigan and the State of Wisconsin. It has an area of 58,915 square miles.

Geography.—Michigan consists of two distinct parts separated by the Straits of Mackinac and known respectively as the Lower and Upper Peninsula. The Lower Peninsula, the most important part, consists of agricultural lands including the “Mittag Belt” about thirty miles wide, extending along the shore of Lake Michigan, in which all fruits of the northern states flourish and all the general farming crops of the northern states are grown. Some large tracts, formerly covered with pine, are sandy and of small value, but the greater part of the land is fertile. There are salt works and mineral and agricultural lands.

Seal of Michigan

The state of Michigan has the largest fresh water fisheries in the United States, the catch for the year amounting to $688,375 in the Great Lakes in the last statistical year 1903.

Communications.—Steam vessels and vessels of all kinds navigate the Great Lakes, except during two or three of the winter months. There are 3723 miles of steam railroads and 930 miles of electric roads exclusive of city street railroads.

The state of Michigan has the largest fresh water fisheries in the United States, the catch for the year amounting to $688,375 in the Great Lakes in the last statistical year 1903.

The state of Michigan has the largest fresh water fisheries in the United States, the catch for the year amounting to $688,375 in the Great Lakes in the last statistical year 1903.

The state of Michigan has the largest fresh water fisheries in the United States, the catch for the year amounting to $688,375 in the Great Lakes in the last statistical year 1903.
by portage to Lake Nipissing and so by Georgian Bay to their destination. This route was evidently selected through fear of the Iroquois, usually hostile to Canadians, on the shore of Lake Ontario. These pioneers were soon followed and aided by the Jesuit Fathers Allouez, Marquette, and others. Detroit was first settled by Antoine De La Motte Cadillac (1701), and the French Canadians who followed him formed the earliest farming population, settling on the shores of Detroit River. Until the country fell into the hands of the British (1760) there were no settlers of any other nationality, and during the British occupation and afterward, until after the close of the war of 1812, there were but few. Indian troubles and the unsettled state caused by war were so prejudicial to immigration that when Michigan was organized as a territory (1805) its population did not exceed 4,000 persons. But when the public lands were offered for sale (1818) a tide of settlers at once set in from New England, New York, Ohio, and other states, besides emigrants from Ireland, Great Britain, and Germany. Later there was also large emigration from Holland, and later still from Poland, Sweden, Italy, and in short from every European nation, as well as some from Turkey, Syria, Armenia, and Russia. Michigan is invited to the twenty-sixth state of the Union, 26 Jan., 1837. It adopted a constitution on being admitted as a state. In 1850 a second constitution materially changing the former one was framed and adopted, and (1909) a third constitution, better suited to the needs of the state, was prepared, adopted by popular vote, and went into force. The entire region was taken in the name of the King of France at Sault Ste. Marie (1672). In 1701 Antoine De La Motte Cadillac founded Detroit, naming it Fort Pontchartrain. In 1760 Michigan came under British rule. In 1796 the United States took possession, and Michigan became a part of the Northwest Territory. In 1805 it was admitted to the Union, Michigan being the first organized territory in 1805. Father Gabriel Richard of Detroit was elected territorial delegate to Congress (1823), being the only Catholic priest who ever had a seat in that assembly. There arose a dispute with Ohio as to the boundary line near Toledo. Michigan adopted a constitution and took the lead and held the issue to arbitration, but was prevented from doing so by reason of the Ohio dispute, which was settled by the boundary line being determined in favour of Ohio, and by Michigan obtaining instead the Upper Peninsula. It was then allowed to enter the Union (1837). The capital was removed from Detroit to Lansing (1847), then back again to Detroit by an act of 4 May, 1849. By this act there are 24,000 inhabitants. A colony of Mormons took possession of Beaver Island in Lake Michigan, from which they were forcibly expelled by armed fishermen from the mainland in 1856. The Republican party was organized "under the oaks" at Jackson, Michigan. Up to that time the Democrats were in possession into the Union, but ever since the Republicans have had a large majority of the voters. This state sent 93,700 men to the Civil War, of whom 14,855 died in the service. Michigan furnished five regiments, of 1026 officers and men each, for the Spanish War (1898), of which three regiments went to Cuba. Laws and Religion—The constitution provides that "Every person shall be at liberty to worship God according to the dictates of his own conscience. No person shall be compelled to attend, or against his consent, to contribute to the erection or support of any place of religious worship, or to pay tithes, taxes, or other rates for the support of any minister of the gospel or church, nor shall any money shall be appropriated or drawn from the treasury for the benefit of any religious sect or society, theological or religious seminary; nor shall property belonging to the state be appropriated for any such purpose. The civil and political rights, privileges and capacities of no person shall be diminished or enlarged on account of his religious believes." Tax laws are such that the payment of a fine of $10 the keeping open of any workshop or place of business; transaction of any business; all work and labour; attendance at dance, public diversion; show or entertainment; taking part in any sport, game, or play, on Sunday; works of necessity and charity are excepted. All persons are also prohibited from attending any public assembly, except for religious services or concerts of sacred music. The sale of intoxicating liquors on Sunday is made a misdemeanour, punishable by fine and imprisonment. Disturbing religious meetings on Sunday is made a misdemeanour, punishable by fine and imprisonment. Oaths are administered by the person who swears holding up his right hand, except in cases where he, in the face of particular mode which he considers more binding. The form in general use is "You do solemnly swear that . . . So help you God." Blasphemy and profanity are punished by fine and imprisonment. There are no laws concerning the use of prayer in the Legislature. The custom is that at the first session of each house some minister of the Gospel is invited to read a prayer. Christmas Day and New Year's Day are recognized as holidays, but business and work are not prohibited on those days, which are on a par with Independence Day, etc. Seal of Confession.—"No minister of the Gospel or priest of any denomination whatsoever shall be allowed to disclose any confessions made to him in his professional character of confessor, by oath or otherwise, joined by the rules or practice of such denomination." And all ministers of the Gospel are exempt from serving on juries, and from military duty. Church Property.—Any five adult persons may become incorporated as a religious society by executing and acknowledging Articles of Association in triplicate, and filing them with the Secretary of State, who shall register the names and residences of the original incorporators, and the period for which it is incorporated. One of the triplicates must be filed with the Secretary of State, and one with the County Registrar of Deeds. Such corporation may make its own by-laws, which must be recorded by the Registrar of Deeds, and is entitled to own and hold real and personal property by purchase, gift, or bequest and may sue or be sued. There is no restriction as to number or nomenclature of officers. Religious bodies such as dioceses, synods, conferences, and the like may obtain corporate powers to hold property, sue and be sued, etc., by electing not less than three or more than nine trustees and filing articles of such associations, by which they are to be known with the Secretary of State and County Clerk. Religious corporations organized without capital stock are not limited as to duration of time. All houses of public worship with their furniture and pews and parsonages owned by religious societies are exempt. Also all property owned by charities, hospitals, and personal property by institutions incorporated under laws of the state. Sales of Liquor.—A tax of $500 per year is imposed. Dealers must furnish bonds in not less than $3000. Selling to minors, intoxicated persons, or habitual drunkards is prohibited, also selling on Sundays, holidays, and election days. Dealers and their bondsmen are liable to fines and fines and for injuries caused by intoxication by liquors furnished by them. Saloons must be closed at certain hours. Heavy penalties are provided for violations of the law. Any county may by a majority vote absolutely prohibit the manufacture and sale of liquor within its limits. Will and Testaments may be made by any of full age and sound mind, and attested by two witnesses executed or in presence of two witnesses who must sign at request and in presence of the testator. Bequests to a witness are void. A widow may elect to take her
statutory allowance and dower instead of a bequest. There is no limitation as to charitable bequests.

Public Institutions.—Aside from the state institutions already mentioned, there are four insane asylums, a home for the feeble-minded and epileptic, and a home for indigent aged persons. The Industrial School for Boys at Lansing and the Industrial School for Girls at Adrian are reformatories.

Prisons and Reformatories.—There are two state prisons, at Jackson and at Marquette, a reformatory for male offenders at Ionia, and a house of correction for females at Detroit. The Industrial School for Boys at Lansing and the Industrial School for Girls at Adrian are reformatories.

Cemeteries may be established by municipalities or by private corporations or private citizens. The only limitation as to locality is in cases where it would create a nuisance.

Marriage and Divorce.—Marriage is a civil contract in law; males of the age of eighteen and females of the age of sixteen are competent to contract. First cousins as well as nearer relatives are forbidden to marry. Females under eighteen must have the written consent of one parent or of a guardian. A licence is required which is issued by the county clerk.

According to the new justice of the peace, judges of probate and of municipal courts, and by resident ministers of the Gospel. All marriages must be recorded by the county clerk. No particular form is prescribed, but the parties must take each other as husband and wife. Two witnesses are required besides the magistrate or minister. Divorce from the bonds of matrimony is granted for adultery, impotence, imprisonment for three years or over, desertion for two years, habitual drunkenness. Divorce “from bed and board” is granted for extreme cruelty, and where the husband being of sufficient ability fails to provide a suitable maintenance for his wife; but the court may grant an absolute divorce for either of these causes. A sentence to the state prison for life dissolves the marriage without any judicial divorce.

Ecclesiastical Statistics.—This state comprises the Dioceses of Detroit, Grand Rapids, Sault Sainte Marie, and Marquette. It has 3 bishops, 406 priests, 412 ecclesiastical students, 306 churches, 193 missions, 208 schools, 246 church organizations, 4 orphan asylums, 1 infant asylum, 45,039 young people are Catholic care as pupils, orphans and dependents, 2 industrial schools for girls, 13 hospitals, 1 home for the feeble-minded, 1 home for aged poor, and a Catholic population of 489,451. Michigan was under the control of the See of Quebec until the formation of the Diocese of Detroit (1839), under which it remained until it was included in the Diocese of Bardstown (1808), and later, when the new Diocese of Cincinnati was created, Michigan was made a part of its territory.

The descendants of the original French Canadians are numerically inferior to the descendants of the later Irish immigrants, who form the largest part of the Catholic population. There are Germans, Poles, some Lithuanians, Bohemians, Flemings, Italians, Syrians, and a few Indians. When Bishop Fenwick of Cincinnati visited Michigan in 1832 he confirmed 142 Indians at L’Arbre Croche. These now belong to the Diocese of Grand Rapids, which contains in all eighteen Indian missions with a population of 375 families, and three schools, two of which are taught by religious, the third by a lay teacher. The Diocese of Sault Sainte Marie and Marquette contains about 2000 Catholic Indians in 12 Indian missions, attended by the Jesuit Fathers at Sault Sainte Marie, L’Anse, and elsewhere. There are few Catholic Indians left in the Diocese of Detroit. About the families of the three parishes of Fowatamies, at Basket Lake, in Berrien County are all that remain of the old mission of St. Joseph.

Catholics distinguished in Public Life.—Reverend Gabriel Richard and Timothy E. Tarasney were representatives in Congress. The following were members of the Territorial Legislative Council: Laurent Durocher, Henry Conner, John McDonnell, Charles Moran.

State Senators: Edward H. Leonard and John Corliss, both of whom were members of Congress; James Caplis, Peter Doran, Joseph Nagel, and Michael Moriarty, state senators; Circuit Judge Alfred J. Murphy; members of the state House of Representatives John C. Donnelly, John Donevan, Charles Wheelan; and William T. McCarron, Brigadier General of the Michigan National Guards; also Judge of Recorder’s Court in Detroit, James Phelan, and Probate Judge of Ottawa County, Edward P. Kirby.

FRANCIS A. STACE.

MICHOCAN, ARCHIDOCESE OF (MICHOCANENSIS), in Mexico.—The Diocese of Michoacán was established in 1536 by Pope Paul III at the instance of the Emperor Charles V, its boundaries to coincide with those of the ancient Kingdom of Michoacán. In 1568 it became an archdiocese. Under the Bishops López, Quintero, and Zamora for suffragans, its limits being at the same time greatly reduced. Its population is about one million, and the principal cities are Morelia, Zitácuaro, Maravatio, Pátzcuaro, Purúándiro, and Piedad in the State of Michoacán, and Acámbaro, Salvatierra, Celaya, Salamanca, and Pénjamo in the State of Guanajuato. The first bishop was the eminent Spaniard D. Vasco de Quiroga (1538–65), one of the greatest missionaries to the Mexican aborigines.

Among other bishops of the Spanish period, the following were distinguished for their learning and virtues: Ramírez del Frado, who has been compared to Charles Borromeo; and Ponce de León, who was the compiler of the conciliar (seminario tridentino) for the diocese in 1770; Fray Antonio de San Miguel, builder of the great aqueduct of Morelia and commonly spoken of as the father of his people. Of the bishops who have governed the Diocese of Michoacán only two have been natives of Mexico, Portugal and Munigua. The latter was named archbishop in 1855. Portugal was the first American ecclesiastie to be named a cardinal by the pope, although he died before philosophy, the cardinal’s hat. Munigua was the author of some very excellent books on law and philosophy, and lived up to his motto: “Give wealth, but save principles.” D. Ignacio Areiza and D. Atencio Sánchez, who was bishop of the See of San Luis Potosí, did much for the education of the Indians, in the epoch of peace which the republic has since enjoyed, have achieved some notable results.

The library of the Seminary of Morelia numbers 76,000 volumes; there is also a physical laboratory and valuable astronomical apparatus. In every one of the 64 parishes and the 18 succursal parishes of the archdiocese there is at least one school for boys and another for girls. At Morelia the schools are very numerous, the attendance being over three thousand, boys and girls. Celaya, Salvatierra, and Piedad have four parochial schools each, and several other parishes have two. Several charitable institutions are admirably maintained by the clergy. In times of scarcity, when the price of corn goes up, the example of the great Bishop San Miguel, who, in 1785, with the consent of the cathedral chapter, expended

MICMACS

280,000 pesos for the relief of the people—an enormous sum for those days. During the two last episcopates the improvement has been notable, the number of priests increasing to 548. The Jesuits, who, we are told, had deserted him, returned. When in Italy he wrote very little, but returned to the fervent practice of the Catholic religion, which he had before neglected. In 1831 the Polish insurrection broke out; Mickiewicz attempted to return to Poland, but was stopped at the Prussian frontier. He then went to Dresden, where he wrote the third part of the "Dziady." It deserves special notice as containing, besides the expression of that revolt against God which some Poles felt after the loss of their independence, a mistaken attempt to explain their country's fate as that of a Christ-like victim slain for the sins of other nations; it offers also a key to Mickiewicz's own spiritual life. In 1832 he went to Paris, and there wrote (in Biblical prose) his "Book of the Pilgrimage," in which he treats the Polish refugees as apostles and sowers of the Word among the nations. Later, in 1834, he published his long poem "Pan Tadeusz," a marvellously lively and faithful portrait of Lithuanian life in the first years of the nineteenth century. Plot, development, characters, and language are of the highest excellence: it is a high-water mark in Polish poetry, one of the world's masterpieces. After this achievement Mickiewicz gave up poetry: his sole aim was henceforth to work out Poland's regeneration by serving God. "An order of Poles," he said, "was needed to bring the nation back to God." From this idea, which he advocated widely, the Order of the Resurrection may be said to have sprung.

In 1835 he married, and was afterwards in constant pecuniary straits. For some time he gave lessons in Latin literature at the Academy of Lausanne (1838–9); he was then named professor in the Collège de France, and his French work, "A Course of Slav Literature," was received with good. But the strain of his poetic creations in two volumes (Vilna, 1822–3). These included:

(a) "Dziady" (The Ancestors), which, besides its artistic lyricism, marks the first appearance of romanticism in Poland. His hero Gustav is rather of the morbid Werther type; (b) many ballads and romances, setting forth Lithuanian folklore with great power and skill; most, though not all, of these are visibly influenced by Goethe, Schiller, and Bürger; (c) "Grażyna," in form like the "Dziady," his best and most mature. Towkawska had won him over to his wild theory of Messianism, already foreshadowed in several of Mickiewicz's poems. He eagerly embraced the idea of a faith that should be to Christianity what the latter was to Judaism. Such a change, though it readily accounts for his melancholy results, Mickiewicz was condemned; Mickiewicz became the apostle of a false doctrine, and lost his chair of literature. He subsequently submitted (1848), but still continued to dream of a great regeneration of peoples, brought about by revolution. When the Crimean War came, he hoped for an invasion of Poland, and even offered his services for that purpose. He died there of cholera. His body was taken to Paris, and thence (1890) to the cathedral of Krakow, where it now reposes. Mickiewicz has much in common with Schiller; he is also like Byron, but above him both in moral tone and in objectivity, in which he recalls Goethe. He was a great superior to all of them as a fervent believer in Christ. Since Mickiewicz, Poland can boast of having one of the world's great literatures, while all of Polish poets he is the most talented, the most intensely patriotic, and the most potent factor in the national life of Poland.

In 1829, after a stay at St. Petersburg, Mickiewicz obtained his great desire—leave to go abroad. On his way to Rome he passed through Weimar, and visited Goethe, who, we are told, told him, "It deserves special notice as containing, besides the expression of that revolt against God which some Poles felt after the loss of their independence, a mistaken attempt to explain their country's fate as that of a Christ-like victim slain for the sins of other nations; it offers also a key to Mickiewicz's own spiritual life. In 1832 he went to Paris, and there wrote (in Biblical prose) his "Book of the Pilgrimage," in which he treats the Polish refugees as apostles and sowers of the Word among the nations. Later, in 1834, he published his long poem "Pan Tadeusz," a marvellously lively and faithful portrait of Lithuanian life in the first years of the nineteenth century. Plot, development, characters, and language are of the highest excellence: it is a high-water mark in Polish poetry, one of the world's masterpieces. After this achievement Mickiewicz gave up poetry: his sole aim was henceforth to work out Poland's regeneration by serving God. "An order of Poles," he said, "was needed to bring the nation back to God." From this idea, which he advocated widely, the Order of the Resurrection may be said to have sprung.

In 1835 he married, and was afterwards in constant pecuniary straits. S. TARNOWSKI.

Miacmacs (Souriquois of the early French), the easternmost of the Algonquin tribes and probably the first visited by a white man, formerly occupied what is now Nova Scotia, Prince Edward Island, and Cape Breton, as well as part of New Brunswick, Quebec, and south-western Newfoundland. According to their traditions they held third rank in the original distribution of land among the confederation of the
eastern Algonquins. The first place belonged to the “father” of that nation, namely, the Ottawa tribe, which received as its share the “land of origins”; the second, called Wapanakiag, the “country of the dawn”, fell to the lot of the Abenakis, while the third province, known as Migmagig, was allotted to the Micmacs. Until the arrival of the white men, an annual

Halifax, exasperated them, but on the fall of Canada, Abbé Maillard (1735-62) succeeded in reconciling them to the new order. Several chiefs made their formal submission (1761), and ever since, though more in sympathy with the French, the Micmacs have remained loyal to the British Crown. In 1778 the United States endeavoured to incite them to revolt, but Father Bourg, at the request of the colonial authorities, restrained them from the war-path.

The Micmacs originally dwelt in the ordinary conical wigwams common to most Algonquin tribes; their garments were of dressed leather and ornamented with an abundance of fringe; their government resembled that of the New England aborigines; and their main occupation was fishing. Except in the case of the chiefs, polygamy was not general. There is an old tradition, related by an Abenaki of Oldtown (Nicolar, “Life and Traditions of the Red Men”, 1893), that the Indians came from the West while the white men originated in the East. The Micmacs are remarkable for the fact that they are the only Canadian tribe which ever used hieroglyphics, or ideograms, as a means of acquiring religious and secular knowledge. These were invented in 1677 by Father Leclercq, who took the idea from the rude signs he one day saw some children draw on birch bark with coal, in their attempt to memorize the prayers he had just taught them. They consisted of more or less fanciful characters, a few of which, such as a star for heaven and an orb for the earth, bore some resemblance to the object they represented. A number of manuals were composed which remained in manuscript until 1866, when Father Kau- der, a Redemptorist who for some time ministered to them, had type bearing the ideograms cast in Austria, with which he printed a catechism and prayer book. Though the hieroglyphics are still known by the Micmac, for all general purposes Roman type has been substituted, in which a little newspaper is published monthly in their own language at Restigouche, Que- bec. In the autumn of 1849 the Protestants formed a Micmac Missionary Society, which commenced work the following year and made a few proselytes in the vicinity of Charlottetown. Rev. Silas Rand, a great linguist and prolific writer, was the principal agent. The Indians, almost without exception, have remained steadfast in their fidelity to the Church of their first

Who made you? the Great God indeed made me What for the Great God made you He wanted indeed that I know Him I pray to Him I love Him I serve Him so that to Heaven I will go who were they created men(Indians) they were created indeed all perhaps to Heaven will go such as indeed are baptised are wise those only to Heaven will go who then is wise he that indeed greatly loves the Creator moreover also tries to fulfill as he is commanded and his neighbour he loves him

MICMAC IDEOGRAPHS FROM FATHER KAUNDER'S "CATECHISM"

ceremony long recalled this compact. There is a probability that the Micmacs were visited by Sebastian Cabot (1497) and by Cortereal (1501). They welcomed the French and their religion, preached to them by secular priests and Jesuits, as well as by Recollects and Capuchins. Father Biard (1611) has left us an interesting account of this tribe, which he characterized as mild and peaceful in temperament. He estimated its numbers at three thousand or three thousand five hundred. The Capuchins even opened for it and the white settlers the first high school within the limits of New France, and a report of the Micmac missions sent to Rome (1633) located one of them in Porto Regio. Father Leclercq, a French Recollect who did much for their instruction, called them Cas- pesians, probably because he had first landed (1675) on the Gaspe peninsula, where he successfully laboured for about twelve years. It was not until 1693 that these aborigines became officially known under their true name. Quick to appreciate the religion of the French, the Micmacs were no less faithful to the flag which to them symbolized it. Though not given to the cruel practices of the Iroquois and other eastern tribes, they proved their bravery by their active share in the French and English wars, and their lasting hostility to the colonization schemes of England. The erection of forts on the coast, especially the one at

missionaries. Another point for which the Micmacs may be said to be remarkable is the manner in which their population holds its own in spite of many diffi- culties, such as the bad example given by the whites and the facility with which they can procure intox- icants. In 1891 they had increased to 4108; and in 1894, a careful census taken by one of the Capuchins, living among them since 1894, showed that they numbered 3850 in Canada and 200 in Newfoundland. The Blue Book of the Canadian Government for 1909 sets down their numbers at 3961 within the Dominion alone, practically all of whom are Catholics. All the

Indians of Nova Scotia and Prince Edward Island (respectively 2073 and 274) are Micmacas.

Micrologus either a "synopsis" or a "short explanation", and in the Middle Ages used as an equivalent for "Manual". The best known of several is "Micrologus do celestiae observantiae" or explanation of the liturgy of the Holy Sacrifice of the Mass, and of the ecclesiastical year; first edited at Paris, in 1510, and handed down in a number of manuscripts (P. L., CLI sqq.). This comprehensive work, of importance for both the history and the adequate understanding of the liturgy of the Mass and of the ecclesiastical year, is divided into three parts.

The author treats first of the Mass (chap. i–xxiii) in relation to its historical development; second, of the liturgy of the ember days (chap. xxiv–xxix); and third, of the whole of the ecclesiastical year, with observations on the offices of the feasts and holidays (chap. xxx–lxxi). In chapters xxiv–xxv the writer emphasizes the liturgical See in Latin America, and describes liturgical questions, and mentions Gregory VII in such a manner as to show that he was an adherent of that pope, although Gregory was dead at the time the author wrote; he also refers to Anselm of Lucca in such a way as to infer Anselm's being alive at that time (chap. xvii), hence we may conclude the work to be between 23 May, 1085, and 31 December, 1086, the death of Anselm of Lucca. Ivo of Chartres was generally held to be the author of the "Micrologus", but investigations of Dom Morin and Dom Bäumer point to Berold of Constance, a monk of the abbey of St. Blasien (d. 1100), as the author.

Another well-known treatise, edited under the title "Micrologus de disciplina artis musicae", is by the famous Guido of Arezzo, and is one of the most important writings of that teacher of ecclesiastical music (P. L., CXLI, 379 sqq., ed. Hermersdorf, Trier–1876). Morin, Quelques observations de Jean de Sacqueville (1891), 385–85; Bächler, Der Musikprinzip in J. J. Faust: "Werk Bernolds von Konstanz in Neues Archiv", XVIII (1898), 525; Dvalkhvirdi, "Handbuch der katholischen Liturgik", I (2nd ed. Freiburg, 1898), 80–81.

J. P. Kirsch.

Middendorp, Jakob, theologian and historian; b. about 1537 at Oldenzaal, or, according to others, at Ootmarsum, Overijssel, Holland; d. at Cologne, 13 Jan., 1611. He calls himself Ottersenis on the title-page of his work, "De celebritioribus Academicis". He studied the humanities at the Fraterherren gymnasium of Zwolle, philosophy and jurisprudence at Cologne University, where he became doctor of philosophy and licentiate of theology; he also taught peripatetic philosophy at the Montanum gymnasium there. He remained in Westphalia during the troubles in the Archdiocese of Cologne in the time of Archbishop Gebhard Truchseß von Waldburg, and was professor at various foreign academies; afterwards he returned to Cologne, where he passed the greater part of his life. In 1580 he became dean of St. Maria ad gradas, Cologne, in 1596 dean of St. Andreas, and in 1601 canon of the cathedral chapter. Rector of Cologne University 1580–81 and 1602–04, he was appointed vice-chancellor by the coadjutor, Ferdinand of Bavaria, in 1602. He lies buried in the church of St. Andreas. As an author he can be regarded as "author of the orbis Academis, libri II" (Cologne, 1567, 1572, 1594, and lastly 1602), considerably enlarged, in two volumes, under the title "Academicarum celebritum universal terrarum orbis libri VIII locupletatis". He also published: "Officiorum scholasticorum libri duo, quorum prior tam juventutis quam populi Christiani magistrorum, qui divinas et humanas litteras publicae quam privatae legi docent, minus edisherit, posterior vero praecipius auditorum populique officia complectitur" (Cologne, 1570); "Historiam Arianae versae per LXX interpretetum Scripturæ sacrae ex MS. codicibus Grecicis et Latinos restituit et commentario illustravit" (Cologne, 1578); "Imperatorum, regum et principum clarissimorum virorum quorundam quaestiones theologicae, ut et doctrinae et politicae cum pulcherrimis responsis" (Cologne, 1603); "Historia monastica, qua religioso et solitario vitae origine, progressiones, incrementa et naturam ex Scriptura Sacra, ex pontificio et casaroe jure, ex antiquissimis historis, ex veterum Patrum et librorum scriptis demonstrat" (Cologne, 1603).

Friedrich Lauchert.

Middle Ages. A term commonly used to designate that period of European history between the Fall of the Roman Empire and about the middle of the fifteenth century. The precise dates of the beginning, culmination, and end of the Middle Ages are more or less arbitrarily assumed according to the point of view adopted. The period is usually considered to open with those migrations of the German Tribes which led to the destruction of the Roman Empire in the West in 375, when the Huns fell upon the Gothic tribes north of the Black Sea, and forced the Visigoths over the boundaries of the Roman Empire on the lower Danube. A later date, however, is sometimes assumed, viz., when Odosacer deposed Romulus Augustulus, the last of the Roman Emperors of the West, in 476. Others, again, hold the beginning of the Middle Ages with the opening years of the seventh century and the death (590) of Venantius Fortunatus, the last representative of classic Latin literature. The close of the Middle Ages is also variously fixed; some make it coincide with the rise of Humanism and the Renaissance in Italy; in the fourteenth century; with the Fall of Constantinople, in 1453; with Columbus's discovery of America in 1492; or, again, with the great religious schism of the sixteenth century. Any hard and fast line drawn to designate either the beginning or close of the period in question is arbitrary. The widest limits given, viz., the irritation of the Visigoths over the boundaries of the Roman Empire, for the beginning, and the middle of the sixteenth century, for the close, may be taken as inclusively sufficient, and embrace, beyond dispute, every movement or phase of history that can be claimed as properly belonging to the Middle Ages.

A great part of The Catholic Encyclopedia is devoted to the movements, ecclesiastical, intellectual, social, political, and artistic, which made up European history during this important period. There is little difficulty in determining whether sacred or profane. Under the titles covering the political divisions of Europe, past and present (e.g., Alsace-Lorraine; Anhalt; Austria-Hungarian Monarchy; Baden; Bavaria; Belgium; Bohemia; Bremen; Bulgaria; Castile and Aragon; Croatia; Denmark; England; France; Germany; Greece; Hamburg; Hesse; Hungary; Ireland; Italy; Karinthia; Kraib; Liegn; Lübeck; Luxemburg; Mecklenburg; Monaco; Montenegro; Navarre; Netherlands; Norway; Oldenburg; Papal States; Portugal; Reuss; Rome; Rumania; Russia; Saxen-Altenburg; Saxen-Coburg and Gotha; Saxen-Meiningen; Saxen-Merania; Saxony; Schleswig-Holstein; Schwäbisch-Rudolstadt; Schwarmburg-Sondershausen; Scotland; Servia; Sicily; Spain; Sweden; Switz-
MIDDLESBROUGH

ERLAND; VENICE; WALDECK; WALES; WURTTEMBERG, are given in detail their respective political and religious developments throughout the Middle Ages. Under articles of a wider scope (e.g., EUROPE; CHRISTENDOM; POPE) is found a more general and synthetic treatment. Particular aspects and movements peculiar to different portions of it are found in such articles as CHIVALRY; CRUSADES; ECCLESIASTICAL ART; FEUDALISM; GOTHIC ARCHITECTURE; INQUISITION; INVESTITURES; CONFLICT OF; LAND-TENURE IN THE CHRISTIAN ERA; MONasticISM; MUSIC; ECCLESIASTICAL; PAINTING; PILGRIMAGES; SCULPTURE; in the articles upon the great religious orders, congregations, and institutions which then came into existence: in the biographies of the popes, rulers, historical personages, scholars, philosophers, poets, and scientists whose lives fall within this period; in the accounts of the universities, cities, and dioceses which were founded and developed throughout Europe from the fall of the Roman Empire to the time of the Reformation, and in innumerable minor articles throughout the work.

Middlesbrough, Diocese of (Middlesburringis).—In medieval history it was known as Myddilburga or Middilburga, with many other variations of form.

There is an old tradition that a church in honour of St. Hilda was dedicated by St. Cuthbert at Middlesbrough about 686, but the earliest positive reference to Middlesbrough in ecclesiastical history goes to show that in the beginning of the twelfth century it was the site of a church dependent on the Abbey of St. Hilda at Whitby. At that time the church of "St. Hilda at Middlesbrough" was given by Robert de Brus of Skelton Castle, founder of Guisborough Priory, to the Black Monks of St. Benedict at Whitby, on condition that there should always be some monks at Middlesbrough serving God and St. Hilda; and there seems to have been a clause binding the monks to distribute twelve pence per week in alms to the poor of Middlesbrough for the soul of the said Robert de Brus. In the plunder of the religious houses the "Cell of Middlesbrough" was granted by Queen Elizabeth to one Thomas Reeve on 4 February, 1563. From that date there is no evidence to show that Mass was ever celebrated there, until in 1848 a private room in North Street was used for this purpose. A little later a modest chapel was erected and a resident priest placed in charge. Two causes concurred in the formation of a large Catholic congregation, namely, the Irish immigration and the rapid development of the ironworks in the Cleveland region. In 1872 Rev. Richard Lacy was entrusted with the charge of the Middlesbrough Mission. In August, 1878, St. Mary's church (rebuilding the original modest chapel) was opened with great solemnity by Cardinal Manning and Bishop Cornthwaite of Beverley. In December of the same year, St. Mary's became the cathedral of the new Diocese of Middlesbrough. The Diocese of Beverley, conterminous with Yorkshire, was, by Apostolic Letter of 17 January, 1878, divided into the Dioceses of Leeds and Middlesbrough, Bishop Cornthwaite (formerly of Beverley, henceforth of Leeds) being ad interim named administrator of the new Diocese of Middlesbrough. It was not until 11 December, 1879, that the papal Brief was received notifying the appointment of the Rev. Richard Lacy, whose consecration took place in his own cathedral on 18 December, 1879, at the hands of Cardinal Manning, assisted by Bishop Cornthwaite of Leeds and Bishop O'Reilly of Liverpool. The chapter of the new diocese, consisting of a provost and ten canons, was erected by a decree of Leo XIII on 13 February, 1881. Our Lady of St. Peter in Beverley is the cathedral patroness of the new diocese and titular of the cathedral; Sts. Wilfrid and John of Beverley are its secondary patrons. Besides these there are many others who have shed the lustre of their sanctity on northern Yorkshire: St. Hilda, Abbess of Whitby (scene of the famous Synod of Whitby in 664); St. John of Bridlington; St. William of York; St. Everilda of York; Blessed Thomas Percy, Earl of Northumberland; the Venerable Nicholas Postgate, and many others.

Notwithstanding the fact that the ecclesiastical division of Yorkshire met with adverse criticism at the hands of several leading members of both clergy and laity, moved by sentiment rather than a profound knowledge of the needs of religion, a few statistics demonstrate both how groundless were the fears then entertained, and how accurately the situation had been gauged by the ecclesiastical authorities. In 1839 the Catholic population of Yorkshire was 13,000; in 1909 it was 167,027. In 1839 there could hardly be 3000 Catholics in what is now the Diocese of Middlesbrough; in 1909 they numbered 86,000. The total number of priests in the Diocese of Middlesbrough was 54; in 1909 they numbered 113 (76 seculars and 37 regulars). In 1879 the churches and chapels were 38; in 1909 they were 67. In 1879 the schoolchildren numbered 3135; in 1909 they numbered 10,060. In 1879 there were 17 elementary schools; in 1906 there were 43. There are 23 elementary schools and 14 middle-class schools conducted by religious; two orphanages, one for boys under the Sisters of Charity of St. Vincent de Paul at Hull, and the other for girls under the Poor Sisters of Nazareth at Middlesbrough; one reformatory for boys under the Fathers of Charity at Market Weighton; two pupil teachers' centres, one at the Sisters of Nazareth at Hull, and the other at the Faithful Companions of Jesus at Middlesbrough; one training college for teachers, under the Sisters of Mercy, at Hull; two colleges for boys, one under the Marist Fathers, at Middlesbrough, the other under Benedictine monks, in connexion with the well-known Abbey of Ampleforth.

Bishop Lacy was born at Navan, Meath, Ireland, 16 January, 1841, studied at Ushaw College (Durham) and at the English College in Rome, where he was ordained 21 December, 1867.

MIDRASH. — The term commonly designates ancient rabbinical commentaries on the Hebrew Scriptures. It is the plural form of the word מִֽדְרָשׁ, Midrash which is found only twice in the Old Testament (II Par. [Chronicles], xiii, 22; xxiv, 27), where it is rendered by liber (book) in the Vulgate, and by

Whitby Abbey, Yorkshire, England

Richard Lacy.
"commentary" in the Revised Version. In rabbinical
practice, Midrash has the abstract and general
sense of study, exposition of Scripture, while Mid-
 rashim are primarily the free and artificial explanations
of the Sacred Text given by jurists or expositors, and
secondarily the collections of such explanations in
the shape of commentaries on Holy Writ.

ORIGIN AND KINDS OF MIDRASHIM.—After the re-
turn from Babylon, the Law was the centre of the life
of the Jews at home and abroad. Henceforth, the
one concern of the Jewish authorities was to make sure
that the Mosaic precepts be scrupulously observed by
all, and under all circumstances, and it is from this
practical standpoint that the Scribes and after them
the Rabbis studied and expounded the contents of
their sacred writings. A part of these contents, viz.,
the enactments of the Mosaic Law, made of course
directly for the purpose of promoting legal righteous-
ness in Israel; yet, as these laws had been framed in
view of concrete circumstances of the past, they had to
be explained in a more or less artificial way to make
them fit the altered circumstances of Jewish life, or
serve as a Scriptural basis or support of the various
traditional observances which made up the oral law.
All such artificial explanations of the terms of the
Mosaic Law are part of expositions of the Midrashim.
Distinct from this general kind of Midrashim are those
called homiletical, or Hagadic, which embrace the in-
terpretation, illustration, or expansion, in a moralizing
or edifying manner, of the non-legal portions of the
Hebrew Bible. As the object of this latter kind of
Midrashim was not to determine the precise require-
ments of the Law and the traditional asceticism con-
cerning angels, demons, paradise, hell, Messias, Satan,
feasts and fasts, parables, legends, satirical assaults
on the heathen and their rites, etc. —could render their
participation of those portions of the Sacred Text
more instructive or edifying. Both kinds of Mid-
rashim were at first preserved only orally; but their
writings were multiplied and extended, and in our
era, and they now exist in the shape chiefly of
exegetical or homiletical works on the whole or parts
of the Hebrew Bible.

PRINCIPAL MIDRASHIM.—The three earliest and in
several respects most important Midrashim collections are:
(1) the Meikhtta, on a portion of Genesis, containing
embryology the tradition of the School of Rabbi Ishmael (first century); (2) the Siphra, on
Leviticus, embodying the tradition of Rabbi Agiba
with additions from the School of Rabbi Ishmael; (3)
the Siphra, on Numbers and Deuteronomy, going
back mainly to the same two Rabbis. These three works are used in the Gemara,
the Rabbinic commentaries, a large collection of
ten Midrashim on the Pentateuch and Megilloth,
which bear the respective names of: (a) Bereishith
Rabbba, on Genesis (mainly from the sixth century); (b) Shemoth Rabbba, on Exodus (eleventh or twelfth
century); (c) Wayyiqra Rabbba, on Leviticus (middle of seventh century); (d) Bamidbar Rabbba, on
Numbers (twelfth century); (e) Debarim Rabbba, on
Deuteronomy (tenth century); (f) Shir Ashashirim
Rabbba, on Canticle of Canticles (probably before middle of ninth century); (g) Ruth Rabbba, on Ruth
(same date as foregoing); (h) Echa Rabbba, on Lamentations (seventh century); (i) Midrash Qoheleth,
on Ecclesiastes (probably before middle of ninth cen-
tury); (j) the Prophets, on the Prophets (ninth century). Of these Rabbith, the Midrashim on Exodus, Leviticus,
Numbers, and Deuteronomy are chiefly made up of
homilies on the Scripture sections for the Sabbath
or festival, while the others are rather of an exegetical
nature. (5) The Pesiqta, a compilation of homilies on
special Pentateuchal and Prophetic lessons (early
seventh or early eighth century), a Midrashic narrative of the more
important events of the Pentateuch; (7) Tanchuma
or Yelammedenu (ninth century) on the whole Pen-
tateuch; its homilies consist of a Halachic introduction,
followed by several proems, exposition of the opening
verses, and the Messianic conclusion; (8) Midrash
Shemuel, on the first book of Kings (1, II Sam-
uel); (9) Midrash Tehillim, on the Psalms; (10) Mid-
rash Mishle, on Proverbs; (11) Yalqut Shimeoni,
a kind of catena extending over all the Hebrew
Scriptures.

IMPORTANCE OF MIDRASHIM.—At first sight, one
might think that such farrago as the Midrashic litera-
ture could be of interest and value only to a Jew as
Jew, inasmuch as the Midrashim are thoroughly
steeped in the spirit of Judaism, bear distinct witness
to the laws, customs, doctrines, aspirations of the Jew-
ish race, and record the noblest ideas, sayings, and
teachings of the Jewish sages in early times. The
more, however, he examines the contents of these
Midrashim, the more he finds that they are an invaluable
source of information to the Christian apologist,
the Biblical student, and the general scholar as well.
In this body of ancient literature, there is much in the line of ideas, expres-
sions, reasonings, and descriptions, which can be used
to illustrate and confirm the inspired records of Chris-
tianity, and the traditions of the early Church;
notably concerning the passages of the Old Testa-
ment to be regarded as Messianic. The Biblical stu-
dent will at times notice in the oldest parts of the
Midrashim, Scriptural readings anterior to those
embodyed in the Massoretic text. Again, "when it is
borne in mind that the annotators and punctuators of
the Hebrew text, and the translators of the (most
ancient versions, were Jews impregnated with the
theological opinions of the nation, and prosecuted
their Biblical labours in harmony with these opinions
the importance of the Halachic and Hagadic
exegesis to the criticism of the Hebrew text, and to a
right understanding of the Greek, Chaldee, Syriac, and
Arabic versions, can hardly be exaggerated," says
Lastly the philologist, the historian, the philosopher,
the jurist, and the statesman, will easily find in the
Midrashim remarks and discussions which have a direct
bearing on their respective branches of study.

MIDWIVES 287  MIDWIVES

Midwives come under the canon law of the Church
in their relation towards two of the sacraments,
baptism and marriage. As regards marriage, their
tradition is frequently required in cases de non
consummate matrimonio, whether owing to the
impediment of impotency or because a dispensation is
asked super matrimonio ratio tanti. In such cases the
testimony of three midwives is held sufficient in
practice, since the number seven mentioned in the "Cor-
pus Juris Canonici" (c. 4, de Probat,) is not considered
to be obligatory in law, though some older canonists
insisted on the necessity of having the testimony of
seven midwives. As regards the sacrament of bap-
tism, the office of midwives is of the highest impor-
tance. On them frequently devolves the duty of
conferring this sacrament, under circumstances where
no other person’s ministiration is possible. Hence, the Church has always been most solicitous concerning the character of midwives and their instruction in religion and morals. Indeed, the former are reminded that, as midwives in conferring baptism act in place of the parish priest, he is strictly bound to inform himself whether they have sufficient knowledge to administer the sacrament validly. Some diocesan synods require that midwives, before being approved for duty, take an oath that they will labour to procure the spiritual safety of infant and mother. When a new-born child has been baptized by a midwife, the parish priest must inquire carefully whether she had the proper intention and administered the rite according to the prescriptions of the Church. If there is any reason for doubt, the baptism is to be repeated conditionally (Catech. Rom., II, ii, § 49); but if it be proved that the ceremony was solemnly performed (Catech. Rom., II, III, iii, § 41), it may not be repeated (c. Maiores, 3 de bapt.; Conc. Trid. Sess. VI, can. ix), and only the other ceremonies are to be supplied by the parish priest. Finally, it is likewise necessary that midwives be well informed on the Church’s teaching concerning the performance of abortion.

William H. F. Fanning.

Gregori, Christoph Anton, Cardinal, Prince Archbishop of Vienna, b. 1714, in the Tyrol, d. 14 April, 1803, at Vienna. At nine years of age he entered the school of the Jesuits at Passau, and even then was v. O. of the residence of Prince Cardinal Lamberg at Passau, who later proposed him for admission to the Collegium Germanicum in Rome. At the age of twenty-two he returned to the Tyrol and devoted himself to the study of civil and canon law. Cardinal Lamberg took him as confidant and secretary of the Congregation of the Conclave of 1740, whence Benedict XIV came forth pope, and to him the Cardinal Lamberg repeatedly recommended his favourite Gregori. The latter remained at Rome “in order to quench my thirst for the best science at its very source”. By this he meant philosophy as proved by his words spoken about this time; “Without a knowledge of philosophy wit is merely a light fraction without soul; and reason, founded on false logic, makes man unable to leave any mark of its passage, consuming everything without itself deriving any benefit therefrom.” In 1745 he was appointed auditor of the Rota for the German nation. Owing to the special friendship of Benedict XIV, he was able to conclude several difficult transactions to the entire satisfaction of the Empress Maria Theresa, who in return appointed him in 1751 coadjutor to the aged Archbishop of Mechlin. Thereupon consecrated bishop, he was soon removed to Madrid as ambassador. A treaty which he concluded pleased the empress so much that she appointed him coadjutor of Count Bishop Althan of Waitzen (1756); but as Althan died before his arrival, and the Prince Archbishop Trantson also died in Vienna, the empress named Gregori his successor. In 1761 Maria Theresa made him administrator for life of the See of Waitzen, and at the same time obtained the purple for him from Clement XIII. It is true that Maria Theresa in possession of the sees, the revenues of which he applied to their improvement. In Waitzen he erected the cathedral and episcopal palace and founded the “Collegium pauperum nobilium” and the convent. Indeed he built almost an entire new quarter in that town; it was therefore, to say the least, hard and mortifying when, after twenty-five years of administration the “Concilium locum tenens regnum” was bestowed upon him if the taxing of his benefices in session of two benefices or offices, as in that case it was the emperor’s pleasure (Joseph II) that one of them should be given up. Gregori was forced to resign from Waitzen.

As Archbishop of Vienna time brought him many sorrows. Fious and devoted to the Church as Maria Theresa had been, yet during her reign in Austria the so-called Enlightenment (Aufklärung) developed inevitably. Its followers imagined that they could remedy all the evils of the times and promote in every way the prosperity of mankind. The representative and the literature of the new movement were everywhere in evidence. Its opponents were denounced as stupid, obnoxious and delusive. “The Masonic lodge of the Three Canons” was printed at Vienna in 1742, and at Prague in 1749 that of the “Three Crowned Stars and Honesty”. In a memorial to the empress written in 1769 the archbishop designated as the primary causes of current evils the spirit of the times, atheistic literature, the activists, the publishing of works which undermined the power of the censorship, contemporary literature, the contempt of the clergy, the bad example of the nobility, the conduct of affairs of state by irreligious persons, and neglect of the observance of holy days. Upon each of these disorders he spoke in noble terms of prophetic truth. The situation was all the more critical for the Church since the dignity of the hierarchy was diminishing, her enemies were gaining adherents. Meanwhile Clement XIV suppressed the Society of Jesus, but Gregori endeavoured to save it for Austria. He wrote to the empress, “If the members of the order are dispersed, how can their places be so easily supplied? When a minister is entailed and how many clerics must pass before the honour of a vacant See can be occupied by the departure of these priests can be restored?” Just twenty years later the cardinal wrote to Emperor Francis, “Even the French envoy who was last here, did not hesitate, as I can prove to your Majesty, to say that if the Jesuits had not been suppressed, France would not have experienced that Revolution so terrible in its consequences.” The Church was opposed as far as they were anticlerical, the government monopoly of educational matters, the “enlightened” theology, the “purified” law, the “enlightened” literature, “tolerance” and encroachment on purely religious matters. He also founded the “Inspiration of the Roman,” an establishment for the better preparation of young priests for parochial work. At Rome he was influential enough to obtain for the Austrian monarch the privilege of being named in the Canon of the Mass, Gregori lived to see the election of three popes. Maria Theresa and Kaunitz took a lively interest in his accounts of what transpired in the Conclave (23 Nov., 1775–16 Feb., 1776) which elected Pius VI, who subsequently visited Vienna during the reign of Joseph II. He owed his election to Gregori, leader of the Royalist party. How the empress appreciated Gregori is sufficiently proved in a letter he wrote to him during the Conclave, “I am as ill-humoured as though I had been three months in Conclave, I pray for you; but I am often amused to see your surprise and.”

When Frederick II heard of the death of the empress he wrote, “Maria Theresa is no more. A new order of things will now begin.” Joseph II during his ten years’ reign published 6200 laws, court ordinances, and decrees affecting the Church. Even what is judicial in them generally bears the stamp of habitation. The first means levelled against ecclesiastical jurisdiction, created dissatisfaction as encroachments on the rights of the Church. The number of memorials addressed by Cardinal Gregori to Joseph
IT and the government was astonishingly large. He opposed all the Josephist reform decrees injurious to the Church. The "simplified and improved studies", the new methods of ecclesiastical education (general seminaries), interference with the constitutions of the emperor, the suppression of the academic freedom of the universities, and violations of her rights and interference with the matrimonial legislation of the Church, called for vigorous protests on the cardinal's part; but though he protested unceasingly, it was of no avail. To be sure, matters did not culminate in a rupture with Rome, and by his visit to Vienna in 1781 he somewhat impressed upon the emperor, and the Holy See pronounced no solemn condemnation of Josephinism. On 12 March, 1790, Leopold, Grand Duke of Tuscany, arrived in Vienna, as successor of his brother Joseph, and as early as 21 March, Migazzi presented him with a memorial concerning the sad condition of the Austrian Church. He mentioned thirteen "grievances," and pointed out for each the means of redress: laxity in monastic discipline, the general seminaries, marriage licenses, and the "Religious Commission," which assumed the position of judge of the bishops and their rights. Finding his wishes only partly fulfilled, Migazzi repeatedly expressed his dissatisfaction.

Emperor Francis II, a Christian whose faith and conduct helped his people with fatherly care. In spite of this he confirmed the Josephist system throughout his reign. For nearly a generation the French wars absorbed his attention, during which time the aforesaid "Religious Commission" paid little heed to the representations of the bishops. The cardinal insisted on its abolition. "I am in all things a subject of the Holy See, and in all matters the shepherd must say fearlessly that it is a scandal to all Catholics to see such fetters laid upon the bishops. The scandal is even greater when such power is vested in worldly, questionabie, even openly dangerous and disreputable men." Age did not diminish his interest even in matters apparently trivial, nor did his speech suffer from it. "The diurnal outlook of the Church in your Majesty's dominions is all the more grievous from the fact that one must stand by in idleness, while he realizes how easily the increasing evils could be remedied, how easily its Majesty's conscience could be calmed, the honour of the Almighty God preserved for the Faithful, the honour of God preserved for the right-thinking of the priesthood set free, and religion and virtue restored to the Catholic people. All this would follow at once, if only your Majesty, setting aside further indecision, would resolve generously and perseveringly to close once for all the sources of so great evils." The emperor in fact made henceforth greater and numerous concessions, each of which was greeted by Migazzi with satisfaction. When the pilgrimage to Mariazell, the most famous shrine in Austria, was once more permitted, the cardinal in person led the first procession. During his long life Migazzi strove with unceasing activity for the welfare of the Church; and he died full of years and of merits. He lies buried in the church of St. Stephen in Vienna.

C. WOLFSBERGER.

Mignard, Pierre, French painter, b. at Troyes, 7 November, 1612; d. at Paris, 30 May, 1695. Though destined for the medical profession, Pierre gave early signs of his true vocation. For one year he studied at Bourges, under a teacher of the name of Boucher, then for two years at Fontainebleau, where, thanks to the works of Primatice and Rosso, and the collections formed there by Francis I, there had been for sixty years a sort of national school. The Marshal of Vitry, after Mignard had painted the chapel of his country seat at Coubert, took him to Paris and obtained for him admission to the most celebrated atelier of the time, that of Simon Vouet. But the one place which more than all others attracted painters was Rome, where a throng of foreign artists were at that time living, among them Poussin and Claude Lorrain, who had settled there for life. Mignard was a member of this colony for twenty-two years. Here he found Dufresnoy (1611-65), who had been his comrade at Vouet's and with whom he formed a close friendship, and together they copied Caracci's famous frescoes in the Farnese Palace. But Dufresnoy was before all things a critic, and his best known work is not a painting, but a book, "De arte graphica," a manual written in extremely elegant Latin verse, published after his death with notes by De Piles, and reprinted for a hundred years as a masterpiece. This rare a masterpiece wielded a great educational influence over Mignard, and made him acquainted with Venice and its incomparable school, which our classic art had professed to despise. Mignard was above all an adroit, industrious workman, who knew well how to flatter public taste and thus secure his own advancement. He soon made for himself a position as portrait-painter unique in Roman society; his patrons were princesses, cardinals, and three successive popes—Urban VIII, Innocent X, and Alexander VII.

At the same time he produced many religious works, countless oratory pictures, chiefly those Madonnas which came to be known as "mignardes". That they were intended at the time to be eulogistic, seems to us the best possible criticism of a type of work marked by a certain conscious grace and preciseness. One feels a delicacy about saying positively that these Madonnas are not devotional, since they satisfied the pious instincts of whole generations of devout persons; but it is impossible in our time not to perceive in them a singular meanness, artificiality, and pureility of feeling. But in the midst of all these labours, the artist found time for such large compositions as the frescoes in the church of S. Carlo alle quattro fontane. He thus attained an unquestionable eminence in fresco painting, that pre-eminently Italian medium so little employed by French painters.

For ten years these works were widely exhibited in Rome, where he was compared to Guido and to Pietro of Cortona. During his travels through Upper Italy (1654) he was everywhere received with the greatest distinction, and painted Cardinal Sforza's portrait and those of the Princesses Isabella and Maria of Modena. On his return to Rome (1655) he married Anna Avolar, an architect's daughter, whose beauty was perfect and who posed for his Madonnas. The reputation of "Mignard the Roman," as he was called, to distinguish him from his brother, "Mignard of Avignon", had spread to France, where Louis XIV was beginning his personal reign, inaugurating that system which relied upon the glory of the arts no less than the glory of arms for the exaltation of the monarchy. Mignard was summoned back to France,
and reached Paris (1658), where he met Molière, and formed his famous friendship with that poet.

He found awaiting him in France the same exceptional position that he had enjoyed in Italy. Hardly had he arrived when he executed portraits of Louis XIV and other members of the royal family. His reply to detractors, who questioned his talent for great works, was the decoration of the Hôtel d'Epernon, soon followed by that of the cupola of the Val-de-Grâce. The latter, said to be the largest frescoed surface in the world, comprising two hundred colossal figures, represents Paradise. In pursuance of the formula dear to the Roman decorator, the throng of celestial personages is here displayed around the Blessed Trinity—the Virgin, the Apostles, the Evangelists, virgins, and confessors, founders of orders, holy kings like Constantine, Charlemagne, and St. Louis, and, finally, Anne of Austria, kneeling, offering the model of the church dedicated by her to Jéau Nascenti Virginique Matris. This style of apostolies, already trite in Italy, still possessed the merit of novelty in France. The immense composition, having cost its author only eight months' work, suffers the penalty of its hurried creation. The composition lacks inspiration, the colouring is feeble and neutral rather than bright, yet it was a very celebrated work in its time, because it flattered the megalomania and the chauvinism of the public; France no longer need envy Italy; Rome was no longer at Rome, it was in Paris. In this way Mignard's cupola took on the character of a national victory, as Molière said in his famous poem "La Gloire du Val de Grâce"; thus this very modern type of painting, so honourable at its birth by the most popular and "national" of French writers. Whether from policy or from inclination, Mignard belonged to the social circle of Racine, Boileau, and La Fontaine, at a time when artists in France associated but little with any but their professional brethren. Thanks to these concomitants, Mignard has the benefit of what literature has most to say. Saccorn and La Bruyère acclaimed his greatness, and as he had the knack of turning his literary friendships to his account, he was able to maintain for thirty years his curious squabble with the Academy. This body, after a series of difficulties, had been definitely organized by Colbert under a code of laws that Colbert, a sincere and a real friend of Mignard, would not recognize. The whole of the court faction which opposed Colbert naturally took sides with Mignard, who, without any official position, was clever enough to keep up his reputation as "premier painter", and to add to it that spicy opposition which in France always serves to carry an artist's reputation farther. The list of portraits executed by Mignard in the second period of his life includes all French society of that time. The young queen, the Duc d'Enghien, the Princess Palatine, Chancellor Séguier, the Duc de Beaufort, Bossuet, le Tellier, Turenne, Villars, le Reyne, the Contesse de Grignan, the Duchesse de Châtillon, Molière, the famous Ninon de Lenclos, and the like. He visited Louis XIV ten times, and on the last occasion the king said to him, "Mignard, you find me changed", "True, sire", said the painter; "I see a few more campaigns on Your Majesty's brow". He used for his women models a rather gaudy style, in which the draperies were somewhat overdrawn, and a system of half-mythological emblems and allusions which faithfully reflect the ideals of the court of Louis XIV. Hence these portraits have the same historical value as those of Lely or Kneller at the court of James II, while some of them possess an unquestionable attractiveness. But this was only one part of Mignard's work. He decorated many residences, public buildings, and churches, and the "Apollo" ceiling in the castle of Ballardey (Manche). However, we know by engravings that these works were good, according to the taste of the period, imitated from Caracciolo and from Guido's mythologies, artificial, pleasing, facile, somewhat heavy and weak in style. The best of his religious pictures is the "Visitation" in the Museum of Orleans. At last, Le Brun having died (1691), Mignard, at the age of eighty, succeeded to all his offices, was solemnly received into the Academy, and in one session elected to all its degrees, including that of president. Louvois having consulted him on the project of decorating the cupola of the Invalides, the main painter saw this Museum of Orleans the dignity of crowning his career with an exceptional performance, but Louvois died, the work was delayed, and the artist lost all hope of realising his last dream. He died, it may almost be said, with his brushes in his hand, at the age of eighty-four. His last work is a picture in which he himself appears as "St. Luke painting the Blessed Virgin".

Mignard (Amsterdam, 1731); Lepicier, Notice in Mémoires inédits sur les Membres de l'Académie de Peinture, II (Paris, 1854); Bulte, Mémoires sur l'Académie de Peinture (Paris, 1854); Courtaul-de-Bâline, Éloge de Mignard (Troyes, 1781); Blang, Histoire des Peintres, etc., 1ère série (Paris, 1834); Le Brun, Éloge de Mignard (Paris, 1875); Courajod, Le Bateau de F. Mignard au Louvre (Paris, 1884).

Louis Gillet.

Migne, Jacques-Paul, priest, and publisher of theological works, b. at Saint-Flour, 25 October, 1800; d. at Paris, 24 October, 1875. After completing his college courses, he devoted himself to the study of theology in Orleans, and while a student there filled, for a time, the position of professor in the fourth class of the college of Châteaudun. He was ordained priest in 1824, and in the following year was made pastor of Puisieux, in the Diocese of Orleans. He published a pamphlet: "De la liberté", which brought him into conflict with his bishop, Brunault de Beauregard, in consequence of which he resigned his parish, and went to a settlement of almost solitary life at "l'Univers Religieux", later "l'Univers", a journal intended by him to be free from any political tendency, and concerned with Catholic interests alone. He edited this paper until 1836, and contributed to it a very great number of articles. Meanwhile, he had conceived the plan of publishing for the use of the clergy, at a very reasonable price, important, older and modern theological works, at so moderate a price that they might meet with a wide circulation, and thus further an earnest and scientific study in ecclesiastical circles. For this purpose he founded in the suburb Petit-Montrouge a large printing house, with all the necessary departments, the Imprimerie Catholique, where he employed more than three hundred workmen. From 1836 he devoted his energies exclusively to this great and important undertaking, which made him universally known. Within a relatively short time he succeeded in publishing many volumes of the older theological literature, and partly because of the moderate cost, he obtained for them a wide circulation. Migne also edited "Scriptores Ordinarii Completus" (28 vols., 1840–45), with excellent commentaries of older and newer writers on each of the Books of Scripture; "Theologica Cursus Completus" (28 vols., 1840–45), with treatises of many earlier writers supplementing the main articles; "Démonstrations Evangéliques" (20 vols., 1842–53), in which are gathered together the Ecdysiologic writings of over one hundred authors from every epoch of church history; "Collection Intégrale et Universelle des Orateurs Sacrés" in two series (102 vols., 1844–66), containing the works of the best pulpit orators of the preceding centuries; "Summa Aurea de Laudibus Beate Marie Virginis, coll. J. J. Bourasse" (13 vols., 1862–63); "Ecclesiologia" (1868–69). He also carried on an extensive collection of works of reference, alphabetically arranged, and not confined to theological matters.
alone, but including a number of auxiliary sciences, such as philosophy, geography, history, natural history, and the like. The compilation consists of a series of 171 volumes, 1844–66. Several of the dictionaries of the collection are of unequal value, and may be considered as out of date.

The most important and meritorious of his publications is the "Patrologia," in two collections: "Patrology Latinus Cursus Complectus," in two series (217 vols. in all, 1844–55), with four volumes of indexes (vols. 218–221, 1852–64), and "Patrologia Graecae Cursus Complectus," of which one series contains only Latin translations of the originals (81 vols., 1856–61). The second series contains the Greek text with a Latin translation (166 vols., 1857–66). To the Greek Patrology there was no index, but a Greek, D. Soehner, added a list of the authors and indexes (Athens, 1879) and began a complete table of contents (Athens, 1883). The Patrologia Latina contains all the attainable published writings of Latin ecclesiastical authors from the earliest known to Pope Innocent III (d. 1216). The Patrologia Graeca includes the printed works of Greek Christian writers down to 1559. The publisher's intention was to choose for the new issues the best editions of each author, with suitable introductions and critical additions, which plan, unfortunately, was not always realized. The printing, too, was frequently unsatisfactory, and in most of the Migne reprints we find a number of misprints and errata. The great interest in fact is that at a moderate cost and in a handy form a great work of reference was produced, and a whole series of rare and scattered writings were gathered together, and made easily accessible to the learned world. The collections had a large circulation, and are widely used as works of reference. Besides these great collections, Migne printed less important theological authors, in complete editions, e.g., Saint Thomas Aquinas, Saint Teresa, Cardinal Bérulle; the great pulpit orators Bourdaloue, Bossuet, Massillon, Fléchier; the writers Lefranco de Pomigian, de Frezay, Régnier, Thibault, du Voisin, de Maisstre, and others. Up to 1856, Migne was also proprietor of a journal "La Vérité," which gathered articles from papers of every tendency, and republished them as aids to a comprehensive induction on current ideas and facts. In connexion with his Imprimerie Catholique were established workshops for the production of religious objects, such as pictures, statues, and organs. In 1866 a great conflagration broke out in the presses, and the bookshop itself in the midst of the town. The thiebault establishment, destroying almost entirely the work of years, and the valuable stereotype plates of the Patrologia. The loss was over six million francs, but Migne did not lose courage, and began at once to rebuild. But difficulties accumulated. The Archbishop of Paris was adverse to the commercial elements in the work, forbade the continuance of the business, and, finally, suspended the publisher from his priestly functions. The Franco-German war of 1870 inflicted great losses; then from Rome came a decrete condemning the misuse of Mass stipends for the purchase of books, and Migne was especially named in connexion with this abuse. He died without ever having regained his former prosperity, and his business passed into the hands of Garnier Frères.

J. P. KRASCH.

Migration.—The movement of populations from place to place is one of the earliest social phenomena recorded in the Bible. The earliest migration recorded in the Bible was when, after the confusion of tongues, men wandered over the face of the earth (Gen., xi, 8) under conditions only vaguely known to-day. The Book of Exodus more clearly describes the withdrawal of the Hebrew tribes from the land and rule of another race, and in this connection the migration was the separation of Abraham and Lot, when the latter gathered his substance and set his face towards Sodom, while Abraham took his way to the plains, founded a nation, and went into history as the Father of the Mighty. Of the Greeks, too, it may be said that the dominant fact of their leading epoch was the wandering of the race, until its narrow borders widened out into Magna Graecia. Throughout early Latin literature runs the same story of the migrations and conquests of the Latin race, reaching a climax in the colossal structure of the Roman Empire. Modern writers have discussed the fall of that structure and the building of that strange conglomerate of races and European, of Germanic and Romance elements, till a new, and greater, Europe arose from the old.

General movements of population are termed migrations. It is a general term indicating a permanent change of habitat, i.e. a more or less serious intent to take up permanent residence in the new country. The terms invasion and conquest are reserved respectively for the entry into and the departure from any given country. Generally speaking, immigration presents more serious problems than emigration, though certain dangers do arise from an excess of emigration. Many problems grow out of immigration, and to these, legislators and rulers have turned their attention.

Migrations have taken place under a variety of conditions. In general they have been voluntary: peoples have come and gone of their own free will. But forced migrations have not been unknown in history, as when a conquering people has expelled, killed, or sold the conquered into slavery. The rule, however, is that immigration has usually been accompanied by conditions more or less severe. The latest principle, dominant among Western nations, is to disturb the population as little as possible, either in their person or property. The right to exile a people has been abandoned, and the noted case when England transported the Acadians in 1755 marks the date when sentiment turned against it and practice rapidly followed; transferred to a new authority, as the Filipinos were, the people do not migrate. Indeed, in the treaties transferring territory to new hands, the inhabitants are sometimes expressly guaranteed against expulsion, as in the Louisiana Purchase Treaty of 1803. Enforced migration has taken other forms. It has rarely been a direct result of the growth of a nation as seen in Tasmania. It has been practised by Russia in the attempt to settle Siberia. While compulsory migration has not played a great part, assisted migration has been a large factor in either inducing or directing the movement of population. Assistance may be given either by the land which gives or that which receives the emigrant. An illustration of the former is the aid given to emigrants from Prussia to Argentine and to the Kamerun region. In times of colonial expansion this method has been especially effective. Prospective colonists have been given bonuses in the form of tax-exemptions and liberal grants of land; the last mode is best illustrated in the grants in the London charter of 1605–12. Liberation from civil and criminal persecution was also an effective means to induce migration; this was used in England when the jails were emptied, and debtors flocked to Georgia, and when the courts offered the choice of self-imposed exile to accused and condemned persons. Cases are not wanting where countries have attracted immigrants themselves in various ways. A conspicuous example was the United States, where for decades "contract labour" supplied the market and made it possible for absolutely infamous labourers to migrate to America. So extensive had this assistance
become that Congress has for many years legislated
with the view of preventing further aid of this kind.
Migrations also involve many important part-
tics from those of earlier times. Down to a quite
recent date peoples moved as tribes, nations, or races,
moving and settling en masse. Taking forceful pos-
session of extended areas, they maintained their in-
dividuality either under colonial systems or as sepa-
rate groups; they finally established nations. With
these migrating groups were brought in all such conse-
quences, language, religion, industrial methods, and poli-
tical and legal systems. Usually they moved into unin-
habited or sparsely settled areas, where no question of
amalgamation could arise. With certain exceptions,
the Roman Empire being the most noted, migrations
have entailed the settling of a highly cultured people
among those of a lower culture. In such cases, migra-
tion en masse the native habitat was forever abandoned,
and the migrating tribes, thoroughly equipped, entered a new environment and yielded enti-
tirely to new influences. In these particulars different
conditions now obtain: migration is effected by fam-
ilies and individuals. These go from dense and highly
cultivated populations to wide expanses of sparsity
and poverty, by reason of a thousand causes, with
very close, taking few possessions with them; their
language survives during their own generation, and
in the succeeding one is exchanged for the language
of the adopted country, though they usually retain their
religion. They must fit into a new industrial system,
however, unlike their own. As a rule, they renounce
their natural political and economic structures, poli-
tical independence, abandoning the relations attaching
to their former status and assuming new political and
contractual relations. Such migration means to the
emigrants the death of a nation, so far as concerns
them, while to their new country it brings a serious
modification, the extent of which depends upon the
manner in which the new country is organized and
sown, and upon the history of the people which the
new country has received into its fold.
These characteristics of modern migrations have
given rise to a threefold movement. In certain lands,
as Germany, where migration to America means a loss
to German citizenship, attempts have been made to
colonize, and thus save the migrating persons to Ger-
man citizenship and culture. Those nations, more-
over, which they enter look with increasing caution
and suspicion on the numbers and character of the
incoming population. When once admitted, the
problem presents itself of granting them citizenship.
To what extent shall the immigrant assume the rights
and duties of an acquired nationality? The problem
of migration is thus inextricably bound up with a
political question.

CAUSES OF MIGRATION.—The primary cause of the
migration of peoples is the need for larger food sup-
plies. From the time when nomadic peoples were
constantly migrating down to the present westward
movements, one principle has been uniformly fol-
lowed—they have gone from areas of low, to areas
of high food-supply. This has been a constant impel-
lung and expelling power. In the last analysis,
migration results when the forces of increasing popula-
tion and decreasing food supply are not in equilibrium,
and it tends to equilibrate of forces among societies
of men: equilibration of food in relation to population;
equilibration of rights as related to authority; equili-
bration of industrial energy as between labour and capi-
tal. These express in the most general terms the
meaning of migration. First came the tribal migra-
tions, such as the exodus of Lot and Abraham towards
Zoar and their subsequent separation in search of
richer pastures. The nomad tribes on the steppes of
Asia take up the journey to the waterways to find
richer pastures for their herds. The Germans, Slavs, and similar nations came later, and,
pushed on by the same inexorable necessity, they moved south from the Caspian and Baltic regions,
overrunning Rome, and taking possession of Gaul and
Britain. With the industrial changes in England,
when the modern age dawned, lessening supplies of
food were a menace beyond the seas. In more modern
times the hunger-stricken peoples of Europe have
come to the new parts of the world, to America,
North and South; to Australia and South Africa; from
Russia they have pushed into Asia, while Japan lays
hold of outlying islands where congested population
may find room for expansion. Moreover, there are
the various causes which drive them back and forth with vary-
ing degrees of force and effectiveness. These causes
operate temporarily though powerfully. They usually
act reciprocally in the different countries, and, like
the sun and moon affecting the tides, now oppose each
other, now act in conjunction.
At the close of the eighteenth century a change in
the condition of the principal governments resulted in
greater freedom for those who wished to migrate.
During the first half of the nineteenth century the laws
limiting or prohibiting emigration were gradually
modified or repealed. At this time most countries, es-
specially those of the Western world, favoured immi-
gration, and few limitations existed checking the flow
of these people. The agitation was thus directed to social,
political, and economic conditions. The effect of the
flow of immigrants to the United States illustrate with
special clearness the operation of these causes. From
1820 to 1833 the number of immigrants gradually
increased, but as hard times began here, culminating
in the panic of 1837, immigration fell off. More
serious for the United States were the effects of economic conditions from 1846 till 1857. During that period the ac-
tivity showed itself in the United States. Under the
influence of Clay's tariff measures, manufactures had
grown, creating an enlarged demand for labour, which
was not forthcoming from the native population.
The opening of Western lands absorbed much of the
work that had been given over to the European immi-
gration, and also drew on foreign sources for increased supply.
The greatest impulse, however, was given by the dis-
covered gold in California in 1848. Not only was there
a great demand for labour on the Pacific Coast;
the effects of the discovery of gold were more far-
reaching. Prices were high, money plentiful, business,
so sensitive to these influences, was greatly stimulated,
and a heavy demand for labour was created. By an
interesting coincidence European economic conditions
also favoured a heavy migration. With bad crops
and sunless summers throughout Europe, the climax
was reached in the potato famine of 1847 in Ireland.
This destructive calamity occasioned a heavy migra-
tion from Ireland to the Western States. There was,
noting must be found. At the same time certain political causes operated in
Europe. Notable among these causes was the over-
throw of the attempted revolutions in the German
states, especially Prussia; large numbers of the Liberal
Party left Germany. The results of the Crimean War
were less easily measured, though it probably sent a
certain number to our shores. The operation of these
causes may be read clearly in the following statistics:
in 1844, 78,615 persons came to our shores; in 1845,
114,371; in 1846, 154,416; in 1847, 234,968; in 1848,
226,527; in 1854 the high-water mark was reached
when 427,833 immigrants landed here.

Equally forceful were the causes of immigration
which manifested themselves at the close of the Civil
War. Checked by the war, industry advanced by
leaps and bounds at its conclusion, and men and capi-
tal were in abnormal demand. Immigration increased
from 72,183 in 1862, when the national disaster was
at its worst, to 458,403 in 1873. During the mili-
tary years the number fell (in 1873) to 138,469. In the eighties bad economic
conditions again somewhat influenced migration to the
United States, when it fell from 788,992 in 1882
to 334,203 in 1886. The panic of 1907 and the
subsequent hard times are clearly recorded in the attenuated immigration to this country in 1808; when the population was nearly a million and a quarter, in 1808 and 1809 the figures amounted to only three quarters of a million.

Among the motives other than economic which prompt emigration is the desire to escape military service. This has been especially operative in such military countries as Germany. This cause is much more powerful during a war. In 1872-73 there were 10,000 processes for desertion on this account alone and in great part due to emigration. Again migration because of religious persecution has been historically of great importance. In past centuries thousands went from the Continent to England, from Ireland and England to the Continent and to the New World, till they might escape from a war. In recent years these influences have been most powerful in Russia and Turkey, whence persecutions affecting the Jews and the Greek Christians have sent large numbers of refugees, especially of the former class, to the United States. Another cause, difficult to measure, but of great influence, is the solicitation of relatives and freedmen. Once these small instances relatives plan to bring those left behind, secure places for them, aid them in coming, and in general form a centre of attraction in the new land, drawing powerfully on those beyond the sea. Along with this is the fear, periodically recurring with the agitation for restriction, that further immigration may be a menace to the country. Often the intentions are not seen. This was particularly noticeable before the American legislation of 1903.

A phase of this subject which cannot be overlooked and which is of increasing importance in the United States is the commercial. On the one hand is an employing class, eager for cheap foreign labour; on the other there is the Government's ability to control transportation of goods and people. As the main profits of, say, the steamship companies come from the immigrants who travel in the steerage, the reason is clear to the line of action which they follow. Everywhere, in lands where migration originates, is the ubiquitous immigration agent. His business is to induce people to migrate. Exaggerated reports, sometimes amounting to actual misrepresentation, are too often resorted to. On this legislation has had its important bearing. The greatest influence exerted by the employing class is by means of contract labour. At first generally desirable, when labour was scarce, this has since become most unpopular, and through law and popular opinion is now of comparatively little importance.

Immigration to the United States.—The many varied problems of immigration are best illustrated by its history in the United States. Perhaps no more composite nation has existed since the Roman Empire engulfed the various nationalities of Western Europe. At a very early period in the history of the American Colonies, the Negro was introduced—a race so remote, anthropologically, from the first colonists as to be impossible of assimilation. The American Indians, isolated from the first, have ever since been tending to extinction, and hence need not be considered, as a possibility in the problem of national and social composition. As time passed, other races came to still further complicate the problem. Besides these distinct racial elements must be reckoned an infinite number and variety of nationalities marked by lesser differences and capable of assimilation.

The settlers of the original Thirteen Colonies, while fairly homogeneous, yet presented some diversity. There were English, at first the dominant element, Irish, and Scotch, and persons of mixed British origin. There were a goodly number of Germans in Pennsylvania and remnants of the Dutch settlement in New York and New Jersey. A few Swedes had come to Delaware and a sprinkling of Finns. The French were represented by the Hurongis in Canada, the Carolinas. It has been estimated that the population of one million in 1750 had developed from an original migration of 80,000. Additional racial modification resulted from the annexation of new territories of alien population. In 1803, by the treaty with France, Louisiana was added, with some accessions of population. Just before the war in 1860 there were a few Spaniards, although their influence is negligible. The enlargement westward, from 1845, when Texas was admitted, till 1848, when the Mexican Treaty of Guadalupe Hidalgo brought a new immigration of Spaniards, Mexicans and half-breeds. Following upon the Spanish War of 1898, which resulted in an accession of nearly 8,000,000 of alien, mainly Far-Eastern, races, the extension of American dominion into the Pacific has vastly complicated the problem of nationalisation, at the same time rendering more difficult the control of immigration from these sources.

The beginning of migration to the English Colonies in America was the Jamestown settlement of 1607. In New England the first real migration of any extent was the company that reached Salem, Mass., under John Endicott in 1632. Figures on the subsequent arrivals, while not certainly accurate, are nevertheless very interesting. The discussion of the times, however, was not so marked, though there was some variation. The early German immigrants were mostly Protestants. Maryland was settled by Catholics. Into the South drifted a large number of Huguenots. In New England there was a strong Separatist element. The formation of the State of Pennsylvania by Quakers gave it a high proportion of open immigration.

The beginning of immigration into the United States (i.e. of post-Revolution immigration) dates from 1789. Before that time it is more proper to speak of colonists than of immigrants. Statistics as to the aliens coming to, or returning from, the United States are inaccurate and incomplete from 1789 till 1820. Not only are the absolute figures unsatisfactory, but no distinction was made between newcomers and returning Americans; nor was any attention paid to the returning immigrant. Roughly speaking, about 250,000 immigrants landed here from 1789 to 1820. From these figures recorded any analysis is imperfect. The dominant elements were English, Scotch, and Irish. These are the figures as immigrants, from 1820 to 1910, a grand total of more than 28,000,000. The numbers by decades were as follows:

<table>
<thead>
<tr>
<th>Decade</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>

The figures given for the last decade are, of course, partly conjectural. The statistics recently issued for the year ending 30 June, 1910, give a total of 1,041,570 immigrants to the United States for that year: 786,038 males, 305,532 females. These included 192,673 Italians; 128,348 Poles; 84,260 Jews; 71,380 Germans; 53,486 English. These are the largest numbers of immigrants known for any year so far. Except the years 1907 (1,285,349) and 1906 (1,100,735) it will be seen, too, that the last decade shows a very large number of immigrants as contrasted with any previous decade. These figures are only absolute. It is in
relative statistics that meaning lies. From the standpoint of social significance, the relation between the influx of population and the native population is the important concern. This is true, considered from the country giving or the country receiving the immigrants. The following figures show the percentages of the native and of the alien population for a series of decades:

<table>

</table>

In 1890 there were 17,314 foreign born to each 100,000 native; in 1900 the proportion was 15,386 to 100,000. The largest proportion of foreign-born is in North Dakota, which in 1890 had 42.7 per cent; in 1900, 35.4 per cent foreign-born. In 1900 there were seven states with more than 25 per cent foreign-born. North Carolina had in 1900 the lowest percentage of foreigners, two-tenths of one per cent, the average in the Southern states being below 5 per cent. From these figures it is clear that the effect of immigration is not materially changing.

So also regards emigration. Not the absolute numbers leaving, but the migration relative to the total, and again to the annual excess of births over deaths, is significant. A very large migration from a country with a very high birth-rate probably has no effect, or only a slight effect. When a million a year leave a country like China, it merely means that famine, disease, infanticide, etc., are less important factors in keeping down population; the greater the migration, the less burden the sending population must bear. In many Western countries this is not the case when heavy emigration takes place. The nation may be materially weakened either for war or peace. The following figures illustrate this condition: out of every 1000 inhabitants of Italy 6.87 migrated in 1888; from Great Britain and Ireland, 7.46; from Scotland 8.88; from Ireland 15.06; from Sweden 9.86; from Germany only 2.10. Most remarkable has been the effect upon Ireland, where so great has been the emigration since the potato famine that the population is now less than the half what it then was, this being about the decrease which would be produced by an emigration of 15 in 1000 during a generation.

Emigration statistics are no exception to the rule, and much meaning may be drawn from them by proper analysis. Immigrants are not merely so many units, so many homogeneous things to be blocked off in columns of hundreds, thousands, and millions, and then abandoned. Immigrants are human beings, statistics must be dealt with in the light of that fact, and the careful account must be taken of all the conditions to which their lives are subject. These cover age, sex, training, traditions, and property. Of these the most obvious and significant are age and sex. As to age, immigration to the United States has always been heavily upon adult life, the mass of immigrants coming to the United States during their productive period. Of German immigrants up to 1884, upwards of 60 per cent were between the ages of fifteen and forty-five. Of all immigrants to the United States in 1887, 70.51 per cent were between fifteen and forty. In 1909, out of 751,786 immigrants admitted, 624,576 were between 14 and 44 years of age; 88,393 were under 14, and 15,517 were 45 or older. These figures indicate the normal conditions of immigrants coming to the United States, serving to emphasize the large amount of ready labor brought in, and the large addition to the labor force of the country at a very slight cost. Caution is needed, however, in calculating the value of this influx of foreign labor. Some have taken the average cost of raising a laborer to the productive stage; others have estimated what value of goods this foreign labor would produce. The better way is to reckon the profit attributable to immigrant labor in excess of their expense to the new country; this would give the actual value accruing from the immigration.

As regards sex among immigrants, males have always far exceeded females. This is illustrated by the statistics of 1900: out of the total arrivals of 751,786 during that year, 519,969 were males and 231,817 (somewhat less than one-third) were females; again, in 1910, out of 1,041,570 immigrants, 736,038 were males. This tends to destroy the equilibrium between the sexes in the countries concerned. It leads in many instances to a large withdrawal of money from the United States to the home country. The interest of the immigrant in his native land, and leads many to return to families from which they have only temporarily separated. It increases that shifting population, especially in the large cities, and greatly augments the numbers of the "birds of passage." On the whole, the results are unfortunate. The condition is far more marked with certain nationalities. The characteristic feature of Chinese immigration to the United States has been the absence of women. The tendency among Italians to leave their families at home is strong. Of 163,248 immigrants from the South of Italy in 1909, there were 135,080 males and 30,168 females. From Northern Italy the proportion was somewhat more equalized: 18,844 males and 6,306 females. From Austria-Hungary, Ireland came 15,785 males and 15,400 females. In the case of the Japanese more women than men migrated to the United States.

Statistics of departing emigrants have not been kept with accuracy and completeness; hence it is difficult, if not impossible, to know just how many foreigners annually reside in the United States. In 1907 it is estimated that there entered the country 782,870 immigrant aliens. The same year saw 395,072 depart. These figures for that year show a net gain of 387,797, a rather small number. Of course, this number of departures was exceptional—resulting from the panic of 1907.

Out of a total of 751,786 landing in 1909, as many as 225,802 departed, leaving a net increase of 525,984.

The study of illiteracy in connexion with immigration reveals the foreigners to us, enlarges our knowledge of the countries from which they come, and helps to explain the conditions of literacy or illiteracy in the United States. Moreover, as it is strongly urged that illiteracy should be excluded in the admissions as to foreign education will help to set the limits to this form of regulation. The statistics on this phase of the subject are kept fairly constant by the shifting of the sources of migration from the north to the south of Europe. As education of the masses has not advanced as rapidly in the countries now supplying the immigrant and countries further north, so the percentage of illiteracy does not fall with the general advance of education. In 1909, out of a total immigration of 751,786, the totally illiterate numbered 191,049. This number takes in only those over 14 years of age; but, as the great majority of those coming are over 14, and those under that age are, probably, more generally educated, they may be neglected. The percentage of illiteracy of all over 14 years in 1909 was 29; in 1907 it was 30; in 1906 it was 28. There is, then, no general diminution in illiteracy among immigrants to the United States. The degree of illiteracy among those from Southern Europe is considerably above the average; among those from Northern Europe a good deal below.

Migration as Affecting Other Countries.—The last quarter of the nineteenth century saw a large migration to South America. The Argentine Republic has presented interesting phases of the subject. For half a century immigration has been an object of public attention and statistical record. There are
about 200,000 immigrants annually, and about 80,000 emigrants. In 1907 there were 209,103 immigrants and 90,190 emigrants. Of the immigrants there were 90,282 Italians, 86,606 Spaniards, and sprinklings of other nationalities. In 1909 there entered Argentina 125,497 Spaniards and 93,479 Italians, with small numbers of Portuguese and Scandinavians. The balance of immigrants against emigrants has been 2,550,197. There have migrated to Brazil since the records were kept, 2,723,964. In 1908 Brazil received 94,695 immigrants. In 1909 there migrated from the German Empire 24,921, of whom 19,930 came to the United States. Italy in 1908 lost 486,674 emigrants and received back 3,000, leaving a net loss of about 386,528 in 1907, of whom 352,983 went to the United States. In 1902, 55,366 Russians emigrated to the United States; in 1903, 68,105; in 1904, 80,892; in 1905, 72,475; in 1906, 112,764.

LEGAL CONTROL OF MIGRATION.—The legal control of migration began when it ceased to be collective and began to be individual. Laws have been passed preventing people from leaving their native land, and also, by the country of destination, forbidding or regulating entrance thereto. Extensive regulation has been found necessary applying to transportation companies and their agents, the means of transportation, treatment *en route* and at terminal points. The joint action of the national and dependent governments, particularly the right of a nation to control the variations of its own population. The greatest necessity is that arising from war: on this ground nations almost universally regulate very closely the movements of population, forbidding emigration, that they may not lose their soldiery, and guarding immigration as a military precaution. The means of transportation are thus justly regarded as the ground of health and morals, and on the general ground that a national family has a right to say who shall join it. Historically speaking, the right of the individual to emigrate is of rather recent date. The old theory was that a man may not leave his native land without the consent of the ruler. This situation arose from a variety of causes. After the dissolution of the feudal system, the population carried some of the advantages and some of the incumbrances of that system over into the monarchical state. One of its leading principles was the fixedness of the mass of the people to the soil. Again, in England, after the ravages of the Great Plague in 1351, laws were enacted requiring that the right of emigration be confined to the landless. As time passed, and the industrial revolution brought its changes, this legislation still farther limited freedom of movement. Furthermore, when the patriarchal idea of the State gave way to the military, the personal bond of national unity yielded to the impersonal, but the obligation of the subject as a member of this new national family did not weaken, the presumption being that no one could abrogate this allegiance. The opposition to emigration was based upon military necessity, upon the desire to maintain a strong industrial population at home, upon the jealousy existing among the nations, and upon the desire to keep the nation intact. Generally this attitude toward migration was abandoned. The Treaty of Westphalia extended the right to migrate for religious reasons. The great migrations westward, as discovery and the settlement of new lands became a dominant interest, did much to break the crust of conservatism and allow life to operate in ways that were free. The development of means of transportation made trans-continental migration possible, leading immigrants into new and unoccupied areas. The growth of a colonial system under which the mother country reaped large profits broke down the narrow policies and removed the old prejudices, and migration to the colonies was encouraged—in some instances enforced. Along with these changed conditions came the radical philosophy of the eighteenth century, the teaching of natural rights and an insistence upon the individual's privilege to go to, and remain in, that part of the world which best suited his fancy. Thus was a condition reached when limitations could be removed. In England, in 1824, the law limiting emigration was repealed. In Continental Europe the same has been true in the United States, Russia, in European Turkey, and in certain Oriental lands the old policy is still partially prevalent, though in these countries more liberal measures are being adopted. But, generally, there is no longer question of prohibiting emigration, but rather of encouraging it, and always of making regulations for the control of emigration. The governments have undertaken this control partly on their own account, partly in co-operation with the United States. The fortunate sentiment constantly grows stronger that joint action is necessary to successful regulation.

France is the country where emigration plays the smallest part. With a birth-rate in some years above, in others slightly below, the death-rate, she has no surplus population. It has been truly said that Germany has population to spare, but no territory; England has an excess of both people and territory; but France has no surplus people and little vacant land. The annual emigration from France is 6,000. The French government has undertaken to control the emigration. The regulations in France deal almost exclusively with the means of transportation, the condition of ships, waiting-room inspection, the health and morals of the emigrant, etc. There are no general legal barriers to free migration. The same thing may be said of Belgium and Holland. The emigration law of Italy of 1901 is most thorough enactment among the laws of the European states: it places matters concerning emigration under the Foreign Office; all persons leaving Italy must register with the Government; persons under 14 years may not leave alone; parents and guardians must leave their children or wards in competent hands. Strict care is taken that persons shall not take passage who will be liable to return under foreign immigration tests. A fund has been created with which to care for those who are forced to return. These countries, constantly losing population, have so far had few problems connected with immigration. Immigration into them is practically unrestricted. In Germany, on the contrary, very minute and effectual regulations are intended and carried into effect. Germany possesses their general practice of close public regulation, certain special conditions urge such a course. Germany is, of all lands, most completely organized for military purposes; a vigorous attempt is constantly made, therefore, to prevent desertion from the military forces, whether with the colours or in the Reserves. Hence their laws relating to the emigration of eligibles are very strict, and treaty rights for such persons who go to foreign countries are very uncertain and imperfect. Again, up to a recent date Germany has been of all lands the point of departure, not only of her own, but of the emigrants of other European states. Germany has been compelled to guard, not only her own emigrants, but, what has perhaps been a more pressing necessity and more difficult task, the inspection of the alien emigrant. The many trans-German emigrants are subjected to two, and also some cases, as the first line of inspection, before they finally embark. Of such persons the Russians are the most rigorously dealt with: they must have Russian passports and tickets through to their destination and their baggage must be examined and disinfected.

In the United States immigration problems have developed, demanding, and finally receiving, minute
and comprehensive regulation. As the subject has such important international bearings, the treaties covering the subject demand attention. The most notable among these deals with the immigration of Chinese, was the famous Burlingame Treaty of 1868, between the United States and China. In this treaty the contracting parties freely and fully recognize the inalienable right of people everywhere to migrate. They also recognize that migration should be voluntary, and they agree to allow such migration to their respective countries. In 1882 a second treaty between the United States and China reversed the previous policy, and allowed each country at its option to prohibit further immigration, a provision upon which the United States acted in 1882. The last treaty (upon which subsequent legislation touching Chinese immigration has been based) was signed in 1894. A treaty signed to the Burlingame Treaty was concluded between the United States and Japan in 1894. This agreement gives to the subjects of either contracting power the right to enter, and reside in, the country of the other power. A treaty granting privileges of immigration to Italians was signed by the United States and Italy in 1871. This treaty marks the beginning of the immigration from the Italian states to the United States. Through treaties a certain amount of control has been exercised over immigration. But the problem of controlling immigration into the United States has been complicated by the dual system of government, state and national. Until the adoption of the Constitution of 1787 the matter rested primarily with the state governments. In this instrument no direct grant of power is made to the Federal Congress for the exclusive control of immigration. It was only after considerable litigation, and several decisions by the Supreme Court, that Congress was, in 1876, given exclusive jurisdiction. Among the earlier attempts to regulate the matter were laws passed by the states, particularly New York and Massachusetts. In 1824 New York passed a law covering many details of registration, reports, head tax, etc. This act went on appeal to the Supreme Court, which voided the law as conflicting with the authority of Congress to control international relationships. Other acts touching certain phases of immigration were all declared null by the court, and the exclusive jurisdiction lies to-day in the Federal Congress.

The activity of the Federal Congress dates from 1819, and was called forth, not by any desire to limit the quantity or quality of the immigration, but by the necessity of checking the brutal agencies engaged in taking advantage of some of the states, particularly California, in matters concerning the interior of the country. The first statute covering this was passed by Congress in 1819. It limited the number of persons any one ship could bring; at first only two persons per ton, and later only one person per two tons, of the ship's displacement. Subsequent acts made provision for more sanitary ships, better food, and more space to each immigrant. During the last quarter of the century there was serious opposition to immigration, and to the immigrant as such. Beginning in 1844, at the rise of the Know-Nothing Party, a new attitude was taken by many. This party grew strong, especially in the South, and from 1844 to 1856 it carried many states. It elected members to Congress and to local assemblies, and governors of states. One of its tenets was opposition to immigration, and as a party strong in the Southern states it did much to determine that antipathy of the South to immigration which was maintained for many years. The close of the Civil War marks a new attitude towards the immigrant. It was a period of rapidly expanding industries and there was an increased, indeed an alarming, demand for labour. An act passed by Congress, in 1864, which greatly encouraged the importation of labour, really authorizing contract labour. This Act was operative till 1868. Under its influence and other favourable conditions there was a vast increase in immigration by 1866. From 72,183 in 1862, the numbers sprang up to 332,577 in 1866. In the early seventies sentiment began to revert to foreign immigration to a certain degree, partly due to the organization of the labour movement. It was more largely due to a vast increase of Oriental migration. Acts were passed prohibiting the equipping of ships to carry on the trade in coolies. A system of coolie labour had developed amounting practically to slavery. In 1875 any person contracting for coolie labour was liable to indictment for felony. From 1877 on, an opposition, centered on the Pacific Coast, developed against the further immigration of Chinese labour, and this first took shape in the treaty of 1880 mentioned above. On 6 May, 1882, an Act was passed by Congress for excluding the admission of Chinese labour for ten years. This Act, with certain changes, has been continued to the present day. No Chinese labourer may now enter the United States. No Chinese may become a citizen unless he be born here, in which case citizenship is secured to him by the Fourteenth Amendment of the Constitution. These restrictions, both as to entry and naturalization, have been from time to time extended till they apply to the whole of China. The following table shows the growth of Chinese immigration to the United States in sixteen typical years:

It will thus be seen that the Chinese Immigration Law has been fairly successful as a measure of exclusion.

The first statute covering the general question of immigration was enacted by Congress on 3 August, 1882. The purpose of this and subsequent legislation has been twofold. It was necessary to provide for a more effective administration of matters of immigration. This involved the increased power of the federal hands and the creation of a fund for this purpose. The Act of 1891 gave the control of immigration to the Federal Government exclusively, doing away with concurrent administration. The Act of 1882 had begun the formation of a fund by imposing a head-tax of $0.50 on each alien immigrant entering a port of the United States; this tax was afterwards (1903) raised to $2 per head, and it now produces enough to carry on the department and leave a slight surplus.

The law of 1891 created the office of superintendent of immigration, later changed to commissioner-general of immigration. The Act of 1903 added much to the needed control. It created a number of excluded classes, which may be grouped under two general heads: those physically, those mentally, and those morally diseased. Under the general head of physically unsound are many excluded classes, the most stringent rules covering those having loathsome and contagious diseases, especially trachoma and tuberculosis. Idiots and lunatics are excluded. Among those regarded by the Act as morally defective or "the anti-social class", are Anarchists and those accused of plotting against government, all criminals and fugitives from justice, all women immigrating for immoral purposes, all prostitutes and procurers of girls or women for purposes of prostitution. There is provision for excluding paupers and those who are likely to become a public charge. All those are excluded who have come under contract to labour, or who have their expenses paid by another, except that immi-
grants’ relatives may send money to aid them. Certain of these cases are made criminal: importation of women for lewd purposes, preparing passages under contract to labour, promising employment to aliens through advertising, bringing diseased aliens in by other than regular routes—all these are criminal offences against the United States.

The Act of 20 February, 1907, is the latest statute of the United States dealing comprehensively with immigration. It constitutes the proceeds of the head-tax a permanent immigrant fund (changed by the Act of 20 February, 1907, so that these funds go to the general fund. This law of 1907 still further extends the limits of the excluded classes. It makes the prohibition of contract labour stricter, as well as the exclusion of lewd women and girls, and of the procurers of such. It forbids the advertising by anyone for purposes of securing labour to come to this country; limiting such advertisement to furnishing necessary data of sailing, rates, etc. This Act also requires that a list and full descriptions of the aliens coming with each ship shall be furnished. Provision is also made for deporting such persons as may be illegally landed, the time for legal deportation being extended from one year to three years. The Circuit and District Courts are given full power in this matter, and all matters under the immigration laws. The Act further enacts a provision for the calling of an international conference to discuss matters relating to immigration. Some details are relegated to be dealt with by the Department of Commerce and Labor.

**Effects of Legislation in the United States.**—Results of legislation show its results in these: the number of immigrants debarked and returned immediately on attempting to land; the number subsequently apprehended and deported; the number of those stopped at the port of departure. Figures are obtainable on the first and second of these classes; they are only conjectured as to the last. It is, however, unfair to measure the effects of legislation by these tests alone; the deterrent influences are more powerful. During the past seventeen years about one per cent of all those coming to the ports of the United States have been either debarked from or deported after entering. The following table shows approximately the percentage of immigrants debarked or deported for all reasons in certain typical years during that period:

<table>

</tbody>
</table>

Of the 10,411 excluded in 1909, 4401 were likely to become public charges; 2084 had tuberculosis; 1172 were contract labourers, while 402 were sent back as immoral. Although a larger number of Chinese have been excluded regular students of that nation, they have also been deported. There are, of course, many obvious difficulties in the way of enforcement. Many of the reasons for debarring are difficult to establish—such as many forms of disease, various types of immorality, and weak physical condition with no real organic ailment. Again, the contract labour law is hard to enforce because of these many effective means of evasion. Among these the most serious has been the increased immigration through Canada, which results either in smuggling pure and simple—or by means of a year’s residence in Canada—in the evasion of certain regulations—e. g. the head-tax. However, the laws as at present administered, especially with the cooperation of foreign governments, are at least pointing in the right direction and supplying the country with a better selected body of immigrants.

**Distribution of Immigrants in the United States. —A. As to Origin.**—There have been several changes in the origin of migration to the New World. In the Southern Europe—Italy, Spain, and Portugal—it began when the Americans were new. In the northern states, it was a hardy venture. It then shifted northward till the peoples of northern countries began to send many colonists out to America. After the formation of the Republic, its immigrant population came chiefly from northern Europe and so continued well into the nineteenth century. One of the most striking features of migration to America has been the latest change in the sources of the stream, which now flows more strongly from the South and East. This change has been very marked. From 1841 to 1850 45-57 per cent of the immigration to the United States was from Ireland; from 1871 to 1880 only 15-1 per cent. From Germany between 1861 and 1885 there came 25-6 per cent; from 1861 to 1870, 36-65 per cent; from 1871 to 1880, 25-74 per cent, while in 1900 Germany furnished only 8-5 per cent, and Ireland 4-3 per cent of the immigration. From 1820 to 1902 Germany sent 21-98 per cent of all the immigrants, and Italy had sent 26-60 per cent; in 1903 Italy sent 26-91 per cent. In 1907 Italy sent 28-22 of the total, while Germany, Scandinavia, and the United Kingdom combined furnished only 20-1 per cent; in 1910 Italy sent 223,431 immigrants; Germany, 71,380; England, 53,418; there were also 123,348 Poles and 52,037 Scandinavians. In 1880 Italy and Austria-Hungary sent 11,756 immigrants; in 1907 these two countries sent 624,184, about one-third more than the total immigration in 1877. From 1872 to 1900 there came to the United States 356,062 Italian immigrants; from 1890 to 1900, 655,888. These figures illustrate what might be much further amplified; the change in source of the immigration to the United States in the last few decades. Further analysis would show many minor divergences. From Italy come two different types: northern Italy—furnishes one; southern Italy and Sicily another. These vary widely in mental characteristics, in industrial habits, and in wealth. They furnish needed elements to our population, lending colour and vivacity to the American nationality. Equally clear are the types of Jews now coming in such numbers. In earlier times there were the Russian and Portuguese Jews. Later, the migration of Jews had its origin in Germany. Here as it was the rule. The great majority of Jews who now migrate to the United States are of Russian origin. There has also been a change in the Irish immigrant. At first the Irish migration was largely from the North, contained a large admixture of Scotch blood, was Protestant in religion, and agricultural in pursuit. The centre of migration from agrarian to industrial. During this transition a large number of persons were left without occupation, as the older order broke up, and many of these migrated. The stream of migration from Ireland was necessarily checked as that population became more and more seriously depleted, falling to about one-half its number between 1860 and 1870. During this period there was an increase of population in the southern and southeastern countries, and owing to various causes a high birth-rate has been accompanied by a low death-rate. A surplus of population resulted, and migration from those countries was the consequence. Low industrial organisation there, high industrial demand here, and labour naturally flowed into the area of high demand.
A feature less fundamental is the development of the means of transportation to and from southern ports. In interesting contrast to the earlier domination of the Italian cities by their maritime power in the sixteenth and seventeenth centuries into Dutch and English, and, later, into German, hands. This led to a marked neglect of southern ports, and not till a generation ago did the merchantmen begin to reorganize the lines to tap southern countries and call at southern ports. The Italian lines sailing from southern ports doubled in tonnage, and the construction of ships in those ports, for Italian and Austrian trans-Atlantic traffic, became a flourishing industry. Gradually the southern harbours became active in a trade the most important item of which was the transportation of immigrants to the United States.

Typical of this change was the growth of the cities of Genoa, Naples, and Trieste. The growth also of the German lines must also be considered. These, together with the extension of railway lines leading to the harbours, have done much to develop the migration from southern and southeastern countries. From 1850 to 1890, Germany sent to the United States 1,432,977 persons; during the 17 years following 1890, she sent 2,372,576. In 1899 Germany sent 58,534, while Italy sent 190,498. Germany formerly supplied one-third of the immigration to the United States; now, less than one-tenth is from that source. Between 1860 and 1870, the British Isles, Germany, Scandinavia, and Canada together supplied 90 per cent of the total immigration to the United States; in 1880 and 1890 the percentage was 41 per cent. In 1869 Austria-Hungary, Italy, Poland, and Russia together supplied only 1 per cent; in 1902, the same group of countries supplied 70 per cent.

B. As to Destination.—The distribution of the immigrant population in the United States may be considered as showing the following trends.

(1) Geographically.—The most obvious distinction is between North and South. From the beginning of the Republic until 1866 there was practically no immigration into the southern States. While slavery existed, the South had no immigrant problem, the only foreigners entering that section being those brought in by the slave trade. The North, being considered as the home of the immigrant, the North Atlantic States stood first in percentage of foreign-born. In 1903, according to Dr. Hall, 22.6 per cent of the population in the North Atlantic States were aliens; 13.8 per cent in the North Central; 20.7 per cent in the Western; only 4.6 per cent in the South Central and South Atlantic. In 1880, 50 per cent of the aliens in the country resided in the North Atlantic States; of these, New York was the choice of 220,865; Pennsylvania of 112,402; Massachusetts of 61,187; New Jersey of 41,907. New York received 75,988 Italians—somewhat less than one-half their total number; Pennsylvania took 33,000 Italians. The marked change in the percentage since 1850 are in the North Atlantic States, which received 59 per cent of the immigration then and now receive about 50 per cent; and in the Western States, which in 1850 had 1.2 per cent, 8.2 per cent in 1900, and in 1906 6.5 per cent of all the new arrivals. In 1900, one-eighth of the whole population was foreign-born; in 1905, aliens formed one-tenth of the rural and one-fourth of the urban population.

(2) As to Occupation.—The rapid development of industrialism in the United States has a marked selective effect on a population that is unsettled. That it should act with increasing power on a drifting immigrant population is to be expected; as the century advanced the effect shown in a great increase of urban immigration. A corresponding lessened interest in agriculture is due partly to the growth of manufactures, partly to the changed nature of population. On the other hand, the important mining industries still draw very heavily on the immigrant for their labour.

The tendency, therefore, is for an ever-increasing percentage of the people to settle in the large cities. According to Professor Smith, in 1880 the cities took 45 per cent of the Irish immigrants; 38 per cent of the German, 30 per cent of the English and Scotch, and 60 per cent of the Italian. In 1900 the cities took 75 per cent of the population, and 80 per cent of the foreign-born; 80 per cent of the foreign-born lived outside the cities. In the South Atlantic States 9.2 per cent of the urban population and 1.1 per cent of the rural were foreign-born; in the North Central, 25.4 per cent of the urban and 12.9 per cent of the rural; in the Western, the percentages were 27.2 and 18.5 per cent. There are 86 cities in which at least 20 per cent of the population is foreign-born, and 27 cities in which they form more than one-third of the total population.

The attitude of the United States at the present time (1910) towards foreign immigration is one of caution. Actual and projected legislation aims, not at exclusion, but at selection. It is recognized that the assimilation and integration of the alien is the ultimate limit. Legislation must, by the application of rational principles, eliminate those incapable of assimilation to the general culture of the country.

Great care is, of course, necessary in determining and applying these principles of selection: an educational test, for instance, while it would exclude much ignorance, would also exclude many industrious and of high character and solid worth. It is probable that a more vigorous system of inspection of immigrants at points of entry will be put in force, while a stricter control will be exercised over the steamship companies. At the same time, the co-operation of foreign governments is needed, if the exclusive measures designed for the protection of the United States are to be effective. The American immigration are to be made thoroughly effective.

Mijes. See MIXX.

MILAN, ARCHIEPISCOPATE OF (MEDIOLANENSIS), in Lombardy, northern Italy. The city is situated on the Orona River, which, with three canals, the Naviglio Grande (1257-75), the Naviglio Martesana (1457), and the Naviglio di Pavia (1567-9), is the highway of the commerce of this great industrial centre, called the moral capital of Italy. The soil is very fertile and there is extensive cattle-raising and manufacturing throughout the province. The name of Milan is probably derived from the Celtic melian, which means "in the middle of the plain". The city was founded in 39 b.c. by the Romans, on the site of the city of Mediolanum and became the chief centre of the Cisalpine Gauls. After the defeat of the Gauls near Clastidium, Mediolanum was taken by the consul Lucius Scipio (221) and be-
same a Roman municipium. In 45 B.C. it obtained Roman citizenship, and under the emperors it had famous schools and was a flourishing city, the Emperor Adrian having made it the seat of the praefectus Ligure and Constantine, of the vicarius Italiae. After A.D. 296 it was several times the capital of the emperors of the West (Maximian Herulius, Valentinian I, his sons Gratian and Theodosius I), and later, of Ricimer and of Odoacer. The edict of toleration of Constantine and Licinius (313) was agreed on and published at Milan. In 452 the town was besieged by Attila, and in 538 destroyed by Uraia, a nephew of Vitiges, King of the Goths, with a loss, according to Procopius, of 300,000 men. Perchance for this reason the Lombard kings did not thereafter come from Milan, though in 896-97 they did so during the brief division of the kingdom between the sons of Gundobad (661). After Charlemagne, Milan was the seat of counts, whose authority however, was overshadowed by the prestige of the archbishops, foremost among whom was Ansaperto da Bisoseo (869-91), who fortified the town and adorned it with beautiful buildings. In 896-97 it endured a severe siege by the Hungarians, and a century later Otto II transferred the title of count to the archbishops. The most distinguished of these was Ariberto (1018-45), who induced Conrad II to take the crown of Italy. With the assistance of the people he made war on Pavia and Lodi (1027), on which account he obtained the presidency of the ducal feudal lords, whom he exiled, but who, leagued together, defeated the archbishop at Campo Malo (1035), and returning to the city, called Conrad to their assistance; the latter, however, besieged Milan in vain (1037). Though the struggle continued, a noble, Lanzano, and no longer Ariberto, headed the popular party. Finally, not having been able to subdue the city, this intermingling of the classes brought the commune into existence. At the same time tradesmen, the industries (especially wool), and commerce flourished. As the power of the burghers grew, that of the archbishops waned, and with it the imperial authority which the prelate represented, so that Milan in 1110, refused to pay tribute to Henry V, who had come into Italy. In 1116 the public authority passed entirely into the hands of consuls elected by the people. Milan made war on cities faithful to the empire: Pavia, Cremona, Lodi (destroyed 1111), and Como (destroyed 1127). Frederick Barbarossa wished to remedy these evils, and in 1129 obliged Milan to swear allegiance to him and to receive a imperial podestà. This power was soon driven from the city, but in 1162 after a long siege, Milan was again reduced to obedience, and in part destroyed. The battle of Legnano (1176) secured their rights to the Lombard cities, and to Milan its consular government; but on many occasions the authority of a foreign podestà was substituted for the native consuls. The long period of peace was favourable to agriculture (greatly furthered by the Cistercians), also to the wool and silk industries, in the former of which, throughout Milanese territory, 60,000 men were employed, while the silk industry supported 40,000 persons. The struggle against the empire was renewed under Frederick II, who regained the rights won at the peace of Constance. A second league was formed, which Frederick defeated at Courtenova, though he did not succeed in his ulterior purpose. Thereafter Milan entered into further wars with Ghibelline cities, especially with Pavia. The nobility remained favourable to Frederick and to his successors, and assisted internal strife in Milan, and the creation of a new office, that of capitano del popolo, which was first held it was Pagano della Torre, elected in 1240 by the Credenza di San Ambrogio, the executive branch of the city government, composed of twelve members representative of the three orders of citizens. The legislative power was exercised by the General Council, the number of whose members was variable. The capitano del popolo was hated by the nobles, and when Pagano della Torre was succeeded (1247) by his nephew Martino, under the title of ansiato della Credenza, the nobility sought the assistance of Esselino da Romano; but Martino overcame the resistance of the nobles, and also defeated Esselino, introduced reforms into the public administration, and distributed the public offices with equity. A new civil war was prevented by the "peace of St. Ambrose" (1258), at which the equality of nobles and people was agreed on. As conflicts continued, Martino called to his assistance Oberto Pelaviccino, a well-known soldier with whose help Martino had finally vanquished Esselino da Romano. In 1263 Filippo, brother of Martino, was real papal legate at Milan, and the city was granted the title, and as other cities—Como, Lodi, Novara, Vercuri, also La Valtellina, were subject to Milan, he may be called the founder of the duchy. His nephew Napoleone, under the title of ansiato del popolo, exercised supreme power (1265-77), and in his later years was imperial vicar for Italy, notwithstanding the fact that he was a Guelph. The archbishop Otone Visconti, who since 1262 had been prevented from taking possession of his see, organized the nobles exiled from Milan, and after several battles, succeeded in capturing Napoleone and his relatives, whom he locked up in cages at Como. The archbishop then caused himself to be proclaimed perpetual lord, thus putting an end to the Republic of Milan and founding the power of the Visconti, which at the conquest of the entire peninsula, though its real domain was limited by the Alps, the river Sesia, and the Po, while the east extended as far as Brescia, conquered in 1337. From 1302 to 1311, Ferrara Torre were again in power, Guido of that family having Dutch and Flemish support. When the latter returned, he was made imperial vicar by Henry VII, and devoted himself to driving the leaders of the Guelph party from the Lombard cities. On this account John XXII declared war, and sent Cardinal Bertrand du Puyet against Matteo. Galeazzo, Matteo's son, continued the war against the legate and the Guelphs, and adhered to the party of Louis of Bavaria. His son Azzo (1329-59) contributed to the ruin of the Scaligers, obtained Brescia, and was succeeded by his sons Luchino (1339-49), famous for the refinement of his cruelty, and Giovanni II (1349-54), Archbishop of Milan, who obtained possession of Genoa and Bologna, though unable to hold either of these towns, or the cities of Ferrara and Mantua. At the death of Giovanni, Milan was divided between three brothers, his nephews: Matteo II, who died in 1355; Galeazzo II (1354-78), and Bernabò (1354-85) all patrons of literature and of the arts, but odious through their cruelty, misgovernment, and exorbitant taxes. Accordingly, a strong league was formed against them in 1367. The state of the Visconti was thus united again and in 1385, Giovanni Galeazzo received the title of duke. In 1387 he had conquered Verona and Vicenza. During his reign the duchy of Milan was at the height of its power, and contained the following cities: Pavia, Bergamo, Brescia, Cremona, Como, Novara, Vercuri, Alessandria, Valenza, Tortona, Piacenza, Genoa, Reggio, popes of Rome, Belluno, Fies, Siena, and Perugia. Giovanni Galeazzo so wavered in his devotion to good and evil; the Carthusian monastery of Pavia is a witness of his religious transformations and of his taste for the arts. The power of the duchy of Milan reached its height, but,
Giovanni Maria having been assassinated in 1412, Filippo Maria remained sole duke, and with the assistance of Carmagnola, retook a great portion of the lost territory. The offensive proceeding of Filippo Maria caused the fall of the Este and Fe, and compelled the community to form a league against him, which led to a long war; in the course of it, several famous battles were fought, among them that of, Macloedo (1427), by which the Duke of Milan lost Bergamo and Brescia, and the naval battle of Portofino (1431) disastrous to the Genoese allies of Milan. The peace concluded in 1435 was favourable to Venice. The war broke out again, and continued until the death of Filippo Maria, in 1447, when the Ambrosian Republic was proclaimed (1447-50).

For military reasons, Francesco Sforza was made capitanio del popolo, and succeeded in taking possession of the fortress and in having himself recognised duke (1450). This event led to a new war with Venice and the King of Naples, closed by the peace of Lodi in 1454. Francesco was succeeded in 1466 by his son Galeazzo Maria, who, hated by his subjects, was stabbed to death in 1476. His son Giovanni Galeazzo had as regent, first his own mother, and then (1480) his ambitious uncle Ludovico il Moro, who succeeded his nephew, at the latter's death in 1494. Louis XI, with a view to gain over the Kingdom of Naples for the advantage of the French, attempted to renew the compact with Venice for the division of the duchy. Ludovico il Moro attempted to resist them, but was constrained to seek refuge in Germany, and Milan came under the power of the French. In 1500, Duke Ludovico returned to his dominions for a time, but other French troops were sent against him, and he died a prisoner in France. The expulsion of the French from Italy ensued upon the death of Gaston de Foix, the victor of Ravenna (1512), and Milan was given to Maximilian Sforza, a son of Ludovico il Moro, although the Spaniards were its real masters. After the battle of Marignano, Maximilian surrendered Milan at the end of a brief siege, and remained a prisoner in France. The expulsion of the French from Italy by the League of Cambrai (1517) was followed by the deposition of the French king Francis II, a brother of Maximilian, who was succeeded by Charles V, who returned to Milan and re-established himself in the Spanish throne. The peace of Utrecht (1713) gave Milan to Austria, which power had occupied the duchy since 1706. In 1708, the war of Succession between Austria’s dominion over Milan was interrupted for a time (1745), and France even offered the duchy to Savoy. Maria Theresa and Joseph II much were done for the prosperity of the Milanese, and civil and ecclesiastical reforms were also introduced. In 1766 Milan became the capital of the Cispadian Republic, soon transformed into the Cispalian Republic, and (1805) into the Kingdom of Italy; the Cispadian Republic was supported entirely by French arms, which checked by Austria (1799), returned victorious, after Bamberg. In 1814 the Austrian domination was re-established, and lasted until 1859. Encouraged by the revolution of Vienna in 1848, Milan revolted, in an effort to throw off the foreign yoke; and the Austrian government (18 to 22 March of that year) remained famous; a provisional committee was formed and the Austrians were compelled to retreat; but the consequent war, Piedmont having taken up the cause of Italy, was disastrous to the insurgents; and Milan (with Lombardy) again became subject to Austria. The war of 1859, however, decided the final annexion of Lombardy to the King of Sardinia.

Milan is an archiepiscopal see. According to an eleventh-century legend the Gospel was brought there by St. Barnabas, and the first Bishop of Milan, St. Anasthalm, was a disciple of that apostle. But a diocese cannot have been established there before 200, and possibly not till much later, for the list of the bishops of Milan names only five predecessors of Merocles, who was at the Council of Rome (313). During the persecutions several Christians suffered martyrdom at Milan; among them Sainta Gervasia and Protastia (first persecution of Diocletian), St. Victor (304), Sta. Priscilla (304), St. Faustina (304), and St. Fe. Among its bishops should be named St. Eustorgius, St. Protasius, and St. Dionysius, who firmly opposed the Arian emperor Constantius, and was exiled to Caesarea (355), while the Arian Auxentius was put on the episcopal throne of Milan. But the people remained faithful to the Catholic religion. At the death of St. Austro, the great St. Ambrose was elected bishop (375-97), vanquished pagan and Arianism, and was the guide of those good princes Gratian, Valentinian II, and Theodosius. He was succeeded by St. Simplicianus (397), and Venerius (400); Lusaratus (438-49) appears to have amplified the Ambrosian rite of Milan; Laurentius (490-512) presided over the Roman curia in the cause of Pope Symmachus; St. Datius (550-54), lived almost always in exile at Constantinople, on account of the Gothic War; Vitalis (652) adhered to the schism caused by the “Three Chapters”, but Auxanus (656) re-established the union of the diocese with Rome. Honoratus (568) sought refuge in Genoa, with a great number of his clergy, during the siege of Milan by the Lombard Alboin. He died at Genoa, and was deposed and exiled to France, and succeeded him Laurentius II, while Frontino (elected at Milan) was not recognized. When Laurentius died, King Agilulfus wished to secure the election of an Arian bishop, in which, however, he was thwarted by the vigilance of St. Gregory the Great, and both at Genoa and at Milan, Constantius was elected to the vacant see; under his successor, the clerical spirit of Genoa and Milan became Catholic, and the conversion of the Lombards to the Faith was begun, while the episcopal palace was again taken up at Milan. The first prelate of this diocese who bore the title of archbishop was St. Petrus (784), but it is certain that. St. Ambrose had already exercised metropolitan jurisdic tion over the diocese of Milan. The title of Patriarch was conferred on the Frankish king Clovis by St. Ambrose in Milan, and the Frankish king Childebert gave to Bishop Laurentius II the title of Patriarch. St. Petrus established an asylum for foundlings, one of the first institutions of its kind in Europe. Mention has been made above of Ansepto da Biassono.
