Sancho gave way for the moment, and peace was made, the king turning his arms against the Moors, but in an interval between his successful campaigns he became acquainted with a widow, Doña Mencia Lopes de Haro, whom he met during a visit to the Court of Castile, and under her influence his character deteriorated. The bishops renewed their complaints of the disorders in Portugal, and in 1245, by the Bull “Grandi nonimmerito”, Innocent IV committed the government to Sancho’s brother Alfonso, who was living in France. The latter undertook to remedy the ills of the kingdom and grievances of the Church, and on his arrival the greater part of the country accepted him for regent in accordance with the papal directions. Sancho, finding resistance hopeless, passed into Spain, where he died a year later. In the reign of Alfonso III (1248–79) Portugal attained its farthest European limits by the conquest of the Algarve from the Moors, but Alfonso X of Castile claimed the kingdom, and the Portuguese king was forced to recognize Castilian suzerainty and, though already married, to further purchase his possessions by agreeing to wed Beatrice, his brother monarch’s illegitimate daughter. Fortunately, the first wife of Alfonso III died shortly afterwards, and the king’s bigamous union with Beatrice and their issue were legitimated by Urban IV at the request of the bishops.

So far there had been peace between king and clergy, but the former did not intend to keep the promises on the strength of which he was placed on the throne, and the latter would not abate their claims. In 1258 Alfonso sent a commission of inquiry through the kingdom to determine the royal rights and the fiscal obligations of his subjects, and as a result he revoked, in 1266, many of the crown grants of land. Seven of the bishops took up the challenge, and in 1267 appealed to Clement IV. They alleged that the king, besides seizing their possessions, deprived them of their liberty of action, refused to pay tithes, exacted forced loans, compelled ladies to marry men of no birth, and men of family to wed for women, or those of Moorish or Jewish race. The abuses of civil administration were dealt with in five articles, ecclesiastical grievances occupied forty-three. The charges were true in the main, but the king met them by presenting to the pope a petition signed by all the canons. The king, on favours of his rule, and, to defeat the bishops by a policy of delay, he took the Cross for a crusade led by St. Louis, but never went. Moreover, the pope and some of the protesting bishops died, while certain abuses were remedied. Relying on his good fortune he became more oppressive than ever, usurping the revenues of fourths, and in 1273 Gregory X ordered the heads of the Franciscan and Dominican Orders in Lisbon to remonstrate with the king.

It was long before Alfonso would see them and then he assembled the Cortes at Santarem and had a committee appointed to correct everything done “without reason”. This committee was composed of his friends, and the concession was illusory. On hearing of the king’s duplicity, the pope sent him a strongly-worded Bull, dated 4 Sept., 1275, reminding him of what he owed the Church and requiring him to keep the agreement made in Paris under pain of censure and, in the last resort, of losing the realm.

Again, however, time favoured the king, for Gregory and his two successors all died in 1276, and, though the Portuguese John XXI took the matter up, the king would do nothing until the terms of Gregory’s Bull, which he called, or forced, or made, were softened. An interdict was therefore pronounced on the realm, and Alfonso’s subjects were absolved from their allegiance, but without effect, for the king had a stronger position than Sancho II. However, he relented when death approached; he promised restitution to the Church and made his heir swear to perform what he himself had promised. His understanding with the municipalities enabled Alfonso III to consolidate the power of the Crown by limiting that of the nobility, both lay and clerical, and even to brave the censures of the Church, which by constant repetition had lost some of their effect. Denis (1279–1325), a cultured man, abstained from foreign wars and devoted himself to developing the resources of the country, his care of agriculture win-
ning him the title of "the Cultivator". He favoured commerce, founded the royal navy, and above all gave peace to the Church. After long negotiations a concordat of forty articles was signed in 1269, and this was followed by two others. The beneficium regiæ, the income due to the king, was confirmed, the regalia of the crown restored to Alfonso III was restored, and the king bound himself to respect ecclesiastical privileges and immunities, and to observe the old laws and customs of the realm. The free election of bishops was secured, and the extortions practised by lay patrons of churches and monasteries were prohibited.

The long struggle between Church and Crown terminated; but if the first gained most of the points contended for, its commanding position ceased. The times were different. With the increasing weakness of the papacy, the clergy became more dependent on the monarch. Moreover, the complete nationalization of the military orders effected by Denis also tended to increase the central power, and it was said of him "that he did all he wished". On the initiative and at the expense of the Prior of Santa Cruz at Coimbra, St. Vicente at Lisbon, and Santa Maria at Guimaraens and the Abbots of Alcobasa, a university was established at Lisbon and confirmed, in 1290, by papal Bull, with faculties of arts, canon and civil law, and medicine, but not theology, which was studied at Coimbra. The king showed great liberality to the new foundation, which was subsequently, by papal permission, moved to Coimbra. When the Templars were suppressed, John XXII allowed their property to go to the new Order of Christ established in 1310.

If Denis proved wise and just ruler, some of the credit is due to his wife, St. Isabel. She intervened successfully more than once to end the rebellions of his son. Alfonso IV, (1325–87) continued his father's policy. He lived on good terms with the other kings of Spain, but when his daughter was ill-treated by her husband, Alfonso XI, he invaded Castile. Once more St. Isabel intervened. Leaving her convent of Poor Clares at Coimbra, she came between the opposing armies at Estremoz and settled the dispute so effectually that when, in 1340, the King of Morocco crossed into Spain to aid the King of Granada against the Christians, Alfonso IV obeyed the papal summons and led a contingent which helped Alfonso XI to win the great battle of the Salado. His later years were clouded by the Black Death and by the war against his son, Alfonso V, who, after his marriage, had become enamoured of the beautiful Doña Inés de Castro. To end this infatuation, Alfonso was unfortunately persuaded to consent to her assassination, whereupon the prince rose in arms against his father and devastated the country. Benedict XII exacted the payment of the tribute promised by Alfonso Henriquez and took measures against the incontinency of the clergy (a recurring evil in Portuguese history), while Clement VI answered the complaints of the Kings of Portugal and Castile by the appointment of foreigners to ecclesiastical benefices. The chief characteristic of Pedro I (1357–67) was the pleasure he took in seeking out and punishing law-breakers, whether laymen or clerics; hence his title, "the Doer of Justice". Allying himself with Pedro the Cruel of Castile, he took his revenge on the murderers of his mistress. He repressed the violence of the nobles and the usury of the Jews, and this with his generosity earned him the respect of the people, savage despot though he was. It is noteworthy that though an expected young adult as well as of witchcraft, he himself lived an immoral life and had several bastards, one of whom became King John I.

The chief ecclesiastical interest of this uneventful reign is centred in the Cortes of Elvas, in which the clergy submitted a list of thirty-three grievances, some of which received attention. As regards the admission of papal letters, the king promised to see them and order their publication in so far as was right. It was a shuffling reaffirmation of the beneficium regiæ. Ferdinand (1367–83) had his father's generosity wised; but his son, Alfonso V, though he deserves the credit for wise laws encouraging navigation and agriculture, and for the fortification of Lisbon, he fell a victim to animal passion and foolish ambition. His first attempt to win the throne of Castile against Henry of Trastamara failed, and in 1371 the Peace of Alcoutim was made under the auspices of Gregory XI. Ferdinand agreeing to marry Henry's daughter. But he could never keep a treaty, and, having fallen in love with Doña Leonor Telles, the wife of one of his nobles, he married her, notwithstanding the angry protest of the citizens of Lisbon. Moreover, he entered into an agreement to assist John of Gaunt, who claimed the crown of Castile. Henry thereupon invaded Portugal, in 1373, and would have captured Lisbon, had not Cardinal Guglielmo D'Onigo, the papal legate, forced him to retire and make peace with Ferdinand at Vallada. Leonor now entirely dominated her vassalizing and indolent husband, and by obtaining honours and lands for her kinsfolk and friends provided against the time when he should die. Losing all scruples, and the monarchy in the hands of his sister, and betrayed the king by an intrigue with the Galician noble, Andeiro, whom she persuaded him to create Count of Ourém. A few years later Lisbon was again besieged unsuccessfully by a Castilian army, and in 1381 Ferdinand undertook a war of revenge with the help of an English force under the Duke of Cambridge. He invaded Castile, but when in the presence of the enemy took fright and made peace with King John, one of the terms being that the latter should wed Ferdinand's heiress Beatrice, which would have led to the union of Portugal and Castile.

At the beginning of the Great Schism it was only the firmness of the bishops that kept Portugal true to Urban VI and prevented the king from offering his obedience to the anti-pope, Clement VII. The resistance of Lisbon to two Castilian sieges had saved Portuguese independence, and by a Bull of Boniface IX its see was raised to metropolitan rank. The people would not submit to a foreign king, and shortly after Ferdinand's death the citizens of Lisbon, drowning in the blood of their own slain, and John, Grand Master of Avis, illegitimate son of Pedro I, became defender of the realm. The King of Castile laid siege to Lisbon, but a pestilence compelled him to retire, and in April, 1385, thanks to the elopement of the great lawyer John das Regras, the Grand Master of Avis was elected king (1385–1433) at the Cortes of Coimbra. On 14 August he totally defeated the Castilians at Aljubarrota, and this, together with the victories gained by Nuno Alvarenga Pereira, "the Handsome Constable", secured Portuguese independence. The king erected on the field of battle the great monastery of Batalha and there he and his sons were buried. On 9 May, 1388, he made the Treaty of Windsor with England and, though a cleric, sealed the alliance by wedding Philippa, daughter of John of Gaunt. In 1391 Boniface IX legitimated the marriage. Portugal now turned her face to the ocean and prepared to become a great maritime power. The overseas conquest begun with the capture of Ceuta, in 1415, and under the auspices of the Navigator the voyages were organised which ultimately led to the discovery of the road to India round the Cape of Good Hope. The pope encouraged these efforts, which had for their object the spread of Christianity as well as of commerce, and, by a Bull of 4 April, 1418, continued to the king all the lands
he should take from the Moors. In the previous year Ceuta had been erected a diocese, and it was the first of the many sees erected in non-Christian countries where the Portuguese carried their faith and flag. John made two concordats with the Church, the first at the Cortes of Elvas, the second, in 1427, at the Cortes of Santarem, but he did not abandon the beneplacitum regnum. He had been compelled to make large grants of lands to the nobles as the price of their support in the War of Independence. One of the first acts of his son Edward (in Portuguese Duarte—1433-38) was to promulgate the "Lei Mental" which enacted that these properties should only descend in the direct male line of the grandees, on the failure of which they reverted to the Crown. The ill result of the expedition against Tangier, which was undertaken against the advice of Eugenius IV and ended in the captivity of the Infanta Ferdinand, hastened the end of the crowned philosopher, and Alfonso V (1438-81) succeeded to the throne in childhood. The people would not accept his mother, Queen Leonor, as regent, and that office was conferred on the Infanta Pedro, Edward's brother. The queen and her party never forgave this act; they stirred up Alfonso against his uncle, who was defeated and slain at the battle of Alfarreira. The authors of this tragedy were excommunicated by the pope, and relations between Portugal and Rome ceased, but were re-established in 1451, and from 1452 onwards became very close.

Alfonso, a typical medieval knight, full of the crusading spirit, was bent on fighting the Moors, and he received every encouragement. Nicholas V, by a Bull of 8 January, 1454, conceded to him all conquests in Africa from Cape Non to Guinnea, with power to build churches the patronage of which should be his, and prohibited any vessels from sailing to those parts without leave from the King of Portugal. By another Bull of the same date the pope extended Portuguese dominion over all the seas from Africa to India. A subsequent Bull granted to the Order of Christ authority in spirituals over the peoples subdued by the Portuguese as far as India, and provided that no one but the King of Portugal should be entitled to send expeditions of discovery to those parts. Finally, in 1481, Sixtus IV confirmed to the kings of Portugal all islands and territories discovered now or in the future from Cape Non to India. The voyages continued during Alfonso's reign, and the equal was passed in 1481 throughout most of the land conquests in North Africa, where he made three successful expeditions, and continued to covet the throne of the neighbouring country until he was defeated, in 1476, at the battle of Toro. His reign was rendered notable by the publication, in 1446, of the Alfeuine Code.

John II (1481-95) showed great energy in the work of discovery, which had been somewhat neglected since the death of Prince Henry, and under his auspices Bartholomew Dias passed the Cape of Good Hope in 1486, and in 1498 Vasco da Gama reached India. A firm believer in absolute government and a man of inflexible will, John broke the power of the nobility, which had become enormous through the unwise liberality of his father, following on the donations of John I. He deprived them of their right to administer justice on their estates, and when they resisted, led by the Duke of Braganza, the king had him arrested and beheaded, and completed his work by himself stabbing the Duke of Viseu and ordering the execution of the Bishop of Evora and others. A great confiscation of estates followed and enriched the Crown, which now became the one power of the realm. John maintained good relations with Castile and, in 1494, made the Treaty of Tordesillas, confirmed by the Bull of Alexander VI, by which the limits of the possessions of Spain and Portugal in the regions discovered by their seamen were fixed by an imaginary line drawn at 360 leagues west of Cape Verde, the Spaniards acquiring the right to all lands lying to the west and the Portuguese getting those to the east. Under this division of the world most of the coastline of Brazil found in 1500 fell to Portugal, and the rest of America and the West Indies to Spain.

Provincial and diocesan synods had become less frequent with each succeeding century (in the fifteenth century not one provincial synod was held) with the result that ecclesiastical discipline declined. The bishops of the best-endowed sees were almost invariably chosen from noble families and some of them lived away from their diocese. This was the case with those of Ceuta and Tangier. By a Brief of 13 October, 1501, issued at Bemfica, the bishops were ordered to fulfill their duty of visitation, which they seem to have generally neglected. From the beginning, the monastic orders and the chapters had attracted the best talents, and the parochial clergy were usually as ignorant as they were poor. Innocent VIII had to issue a Bull in 1486, providing that no one unable to construe Latin well should be ordained. The prevailing laxity had affected the monasteries, but the orders themselves responded to the desires of the king and the Holy See. A reform of the Dominicans was instituted at Bemfica and spread to the other houses. The zeal of the Franciscans was equally marked, no less than twenty-three convents of Observants were founded within a century, and these, despite the opposition of the Conventuals, restored the order to its pristine purity.

King Emanuel (1495-1521) reaped the harvest sown by his predecessors, and every year of his reign witnessed some new discovery, some great deed. The genius of Albuquerque gave him the maritime keys of Asia, and the monopoly of the Eastern trade made him the richest king in Christendom. In 1514 the monarch sent his splendid embassy to Rome to offer the tribute of India at the feet of Leo X, to urge the pope to proceed with the reform of the Church, and
to secure a league of Christian princes against the Turks. Though these objects failed, the king obtained many personal favours, including the amplification of his patrimony, the patronage of the churchees in non-Christian countries. The pope received the submission of the Abyssinian Church through Emanuel and, recognizing the king as the chief protector and propagator of the Faith, twice sent him the Golden Rose. Emanuel was especially anxious to add Castile to his world-wide dominions, and he made three marriages to that end, but all in vain. It was a condition of his first marriage (to the eldest daughter of Ferdinand and Isabella) that he should expel the Jews and unconverted Moslems. The Jews had enjoyed the protection of previous kings and had supplied them with trusted servants, but, as both the clergy and people hated them for their usury, and envied their talents and wealth, Emanuel sacrificed them, against the protests of some of his best councillors. They were given the choice of conversion or exile, and naturally, from worldly motives, the greater part accepted the former alternative and became known as "new Christians", intermarrying with old Christians. Many of these converts went back to Judaism and became the victims of bitter and continual persecution, when the Inquisition was established.

King Emanuel and his son, John III, were great builders; the former erected the Hieronymite church and monastery at Belem, to commemorate Vasco da Gama’s discovery, and the latter made great additions to the superb convent of Christ at Thomar.

Though the Golden Age apparently continued, Portugal began to decline in the reign of John III (1521-1557). Emigration drained the best blood of the country; the East corrupted, while it enriched its conquerors; the cultivation of the soil was left to slaves; commerce was blighted by the Inquisition, which drove capital abroad. The Government could not make both ends meet, and the wealth of the Hebrews invited their spoliation. The king, a serious, conscientious man, but of small education, satisfied the complaints of the people against that race by petitioning the Holy See in 1531 to establish the Inquisition.

After a twenty years’ struggle at Rome with the Hebrews, marked by disgraceful bribery on both sides, John forced the pope’s consent in 1547, and banished the bigoted Infanta Henry, afterwards king, became chief inquisitor. The tribunal was popular and practically destroyed Judaism, but its methods divided the nation into spies and victims, encouraged blackmail and false denunciations, and contributed to undignified characters. It put a weapon into the hands of the monarch, who now had no check on his rule, for the Cortes had lost their power by the end of the preceding century. In 1540 the first Jesuits came, and the king became a warm patron of that early missionary labours in the East. In addition to the ministry of the confessional and the pulpit, the Society devoted itself to teaching and opened colleges which were crowded by youths of the better classes. The university, which since its foundation had moved to and fro between Lisbon and Coimbra, was fixed at the latter place in 1537, and distinguished professors, Portuguese and foreign, raised its intellectual level. Experience proved however that their learning was superior to their orthodoxy and morals, and they were replaced by the Jesuits, who by degrees obtained that control of higher education which they held for two centuries.

John deserves credit for his policy of peace abroad and for the colonization of Brazil, in which he had the assistance of the Jesuits, who civilized the natives and taught them to farm. A number of new colonial dioceses were founded in this reign, and Portuguese theologians, among them Ven. Bartholomew of the Martyrs, took a prominent part in the Council of Trent. On John’s death, his widow became regent for her grandson Sebastian (1557-78), who was a minor. The latter grew up an exalted mystic and knight errant of the Cross, without interest in the work of government. Though pressed by St. Pius V, he refused to marry and obstinately insisted on attempting to conquer North Africa without sufficient men or money. His rout and death at the battle of Alcazar decided the fate of Portugal, for Cardinal Henry (1578-80) lived less than two years, and in 1580 Philip II of Spain claimed the throne as next heir. Partly by force and partly by bribery, he secured election as Philip I of Portugal (1580-98) at the Cortes of Thomar in 1581, and for sixty years the Crowns of Portugal and Spain were united. If Philip I and II (1589-1621) ruled well, the period was none the less a disastrous one from a religious, as from a political point of view, and Portugal suffered heavily in the duel between the Protestant Powers and Spain. Her Eastern possessions fell into the hands of the English and Dutch, and the latter seized a large part of the coastline of Brazil. The monetary exactions of Philip III (1621-40) and the determination of his minister, Olivares, to destroy the liberties of Portugal, aroused in all classes a fierce hostility to foreign rule. The lower clergy and religious orders embraced the popular cause. The tolerance shown to the Jews, who were permitted to return, and the expulsion of the papal nuncio, Castiglione, outraged their feelings, and the increasing burden of taxation pressed them hard, so that they encouraged their flocks to look for a deliverer in the Duke of Braganza and greatly contributed to the issue.

The revolution of 1640 raised John IV (1540-56) to the throne, and liberated Portugal and her remaining possessions from a foreign yoke, but it led to an exhausting war with Spain which lasted twenty-eight years. Moreover, owing to Spanish pressure, the popes refused to recognize the new monarch; see after see fell vacant and remained so, and ecclesiastical discipline became relaxed. These evils con-
continued during the reign of Alfonso VI (1055–83), an imbecile youth of criminal tastes, who was deposed in 1067, his brother Pedro becoming regent and, on the death of Alfonso VI in 1085, Pedro became King. The reign of Pedro (1085–1109) is marked by the discovery of gold in Brazil, by the signature of the Methuen Treaty with England, and by the participation of Portugal in the War of the Spanish Succession. During the reign of the Archduke John (1131–48) the Kingdom of Portugal was united with the Kingdom of Castile, and, after a conflict with the Dutch, the claim of Portugal to nominate prelates for all sees in the East was allowed.

In 1091 the Cortes met for the last time previous to the Revolution of 1092. The leading ecclesiastical figure of the age was Father Antonio Vieira, preacher, protector of the Indians of Brazil, and confidential agent of John IV. The relations between the Jesuits and the Inquisition had never been cordial, and the tribunal, aware of Vieira's sympathy for the converted Jews, who had returned to Judaism in 1706–08, was content to humiliate certain propositions taken from his writings, sentenced him to seclusion in a college, and deprived him of the right to address. Thereupon Vieira went to Rome and presented a memorial to the pope, who ordered the Inquisition into the country and suspended it until reforms should be introduced. It submitted after a struggle, and, when Innocent XI revoked the suspension in 1091, the tribunal had to adopt a milder procedure. The gold and diamonds of Brazil enabled John V (1706–50) to imitate Louis XIV in magnificence. To licentious habits he united a taste for ecclesiastical pomp. He displayed his piety by building an enormous pile, church, monastery, and palace in one, at Mafra, by providing the large sums required in connexion with the canonization of various saints, and by obtaining from the pope the elevation of the Archbishopric of Lisbon to the dignity of a patriarchate, together with the title, for himself and his successors, of "Most Faithful Majesty". Except in the case of the Lisbon convents, the country reaped small benefit from the vast sums expended by the artistic, pleasure-loving monarch; and if religion was outwardly honoured, the bad example set by John helped to lower the already impaired national standard of morals. Mafra, the monopoly by which the time ceased to visit their estates and degenerated into a race of money courtiers. The interests of the common people were neglected by the Government, almost their only friends being the religious orders. At the pope's bidding, John sent a fleet against the Turks which helped to win the battle of Matapán in 1717.

The reign of Joseph (1750–77) is made famous by the administration of the Marqués de Pombal, the real ruler of Portugal for over twenty years. The energy he displayed at the time of the great earthquake of 1755 confirmed his hold over the king, and with royal support he was able to use the alleged "Tavora Conspiracy" to humble the nobility and to continue the campaign he was directing against the Jesuits, whom he was determined to master. His accusations against them of sedition and conduct in the missions and of illicit trading were merely pretences. He had already dismissed them from Court, detained them to Rome and secured the appointment of a friend of his, Cardinal Saldanha, as their reformer, and when an attempt was made on the king's life he turned to Jesuit missionaries, to the property of the company in the Portuguese dominions and expelled the Portuguese Jesuits, retaining the foreigners in prison. The pope had refused to incriminate the whole company for the faults of individuals, and Pombal's reply was to dismiss the nunzio and break off relations with Rome. Henceforth the cardinal, who in 1756 was made a cardinal, became the real head of the Church in Portugal was the Minister. He heaped ignominy on the Jesuits by securing the burning of Father Malagrida by the Inquisition, and his work was completed when, under pressure from the Catholic Powers, Clement XIV suppressed the Society in 1773. Pombal's rule of the Foreign Missions was perhaps his greatest crime and was by no means compensated for by his abolition of slavery and of the distinction between old and new Christians. He undoubtedly made great and necessary reforms in internal administration and freed Portugal for the future from the dependence on Aleman influence, and government: but his commercial policy was a failure, and the harm he did far outweighed the good. Above all he forged those fetters for the Church which still paralyse her action.

The death of Joseph brought about the fall of the minister, but the new sovereigns Pedro and Maria (1777–1816), while opening the prisons which Pombal had filled with his opponents, left much of his work untouched. The king died early, the queen lost her reason, and their son John, a sympathizer with the Habsburgs, was named, conducted, and his government was the work of the Encyclopedists and of the Revolution—were kept out of the country as long as possible, but the ambition of Napoleon gave little hope of security to a small kingdom which was regarded as the dependent of England. The country was divided between France and Spain; the famous proclamation was issued, stating that the House of Braganza had ceased to reign, and Junot with a French army occupied Lisbon in 1807. The royal family fled to Brazil, and Portugal was governed from there until 1820. Queen Maria died at the close of the Peninsular War, which led to the overthrow of the Napoleonic power, and John VI (1816–26) came to the throne. The Revolution of 1820 forced him to return home, and he had to accept a constitution of a most radical character, for which the country was entirely unprepared. One calamity succeeded another. The opening of the ports of Brazil to foreign ships ruined Portuguese commerce, the separation of the colony diminished the prestige of the mother country, which was reduced to a miserable plight by the long war, and internal feuds were added to external troubles. On the death of John, his son Pedro IV gave a new constitution, called "the Charter", and then resigned the throne in favour of his infant daughter Maria II, naming his brother Miguel regent. The Conservative party opposed this, and even, who hated the Charter as the work of Liberals and Freemasons, desired him as king, and he summoned a Cortes of the old type which placed him on the throne in 1828. The Radicals and Chartists at once organized resistance to what they called the usurpation and, after a long civil war, were successful. By the Convention of Evora Monte, Miguel had to abandon his claims and leave the country. The victorious Liberals initiated an era of persecution and robbery of the Church, the effects of which are still felt. The religious orders were the first to go. The orders of men were suppressed, and their property confiscated, nominally to enrich the treasury, but private individuals reaped the benefit. The orders of women were allowed to die out, further professions being prohibited. The people, deprived of the monks and friars, who were their teachers, preachers, and confessors, gradually lost their knowledge of religious truths, because the secular clergy were unprepared to take the place of the orders; besides which, bishops and clergy were bound hand and foot to the State.

The last half-century of the Portuguese Monarchy, embracing the reigns of Pedro V (1853–61), Luis

CHOIR OF THE CATHEDRAL OF BRAGA (CARVED STALLS IN RENAISSANCE STYLE, XVII CENTURY)
I (1861-89), and Charles I (1889-1908), was one of internal peace and increased material prosperity. But only in the last few years has the Roman Catholic Church begun to emerge from a state of lethargy. Modern Portuguese statesmen, usually Catholic only in name, have interested themselves in ecclesiastical affairs to preserve old privileges, such as the Padrao in the East, but hardly ever to assist the Church in the performance of her Divine mission. The Concordat of 1886 regulated many of the disputes in the State and the bishops' decrees of 1890 authorized the existence of religious orders under certain conditions. The prospect of better conditions for the Church was definite under the coming of the Revolution in 1910, which drove the Braganza dynasty from the throne, and delivered Portugal into the hands of the Radicals, whose hostility to the Catholic religion was made evident by the adverse course of the Provisional Government set up by the Revolutionists. On 1 February, 1908, King Charles and the Crown Prince were assassinated in the streets of Lisbon. The murder was perpetrated by a man named Buica and several associates, and was applauded by the Republican press. The successor of the prince on the throne was as successor on the throne as Emanuel II. His reign was, however, brief. On 3 October, 1910, a revolution, which had been arranged for 10 October, broke out prematurely, and Emanuel fled from the capital to Gibraltar, where he died in exile in 1916. The new provisional government, republican in form, was proclaimed, with Theophilos Braga, a native of the Azores, as President. He immediately set to work to carry out the radical measures of the republican programme, the first of which was the summary and violent expulsion of the religious congregations, the seizure of their property by the State, the abolition of the Senate and all hereditary privileges and titles. The separation of Church and State was also arbitrarily decreed by the provisional government. On 20 April, 1911, a second decree, in 198 articles, was promulgated, regulating in detail the previously sweeping enactments. Article 38 of this decree prohibits any minister of religion, under the penalties of article 137 of the Criminal Code and the loss of the right to practice the profession, from criticizing "in the exercise of his ministry and on the occasion of any act of worship, in sermons or in public writings, the public authority or any of its acts, or the form of the government or the laws of the Republic, or defying or calling into question the rights of the State and the Constitution". Chapter IV devotes twenty-seven articles to the ownership and administration of church buildings and property. Churches, chapels, lands, and chateaux, hitherto applied to the public worship of the Catholic religion are declared property of the State, unless bona fide ownership by some private individual or corporation can be proved. Chapter VI, in twenty-four articles, provides for boards of laymen (after the manner of the French Law of Associations) to take charge of and determine the expenditures of all funds, but not yet utilized, whether in course of construction or completed; buildings which for a year have not been used for religious purposes and such as by 31 December, 1912, shall have no board of laymen to administer them, shall be taken by the State for some public purpose. Only Portuguese citizens who have made theological studies in Portugal may officiate. Chapter VII deals with the question of pensions for the ministers of the Catholic religion, and permits them to marry. Article 175, chapter VII, stipulates that "ministers of religion enjoy no privileges and are authorised to correspond officially by mail with the public authorities only, and not with one another".

A Constituent Assembly, elected early in the summer of 1911, on 10 June of that year formally decreed the abolition of the Portuguese monarchy.

III. CURRENT CONDITIONS.—A. Ecclesiastical Organizations.—By the Constitutional Charter Catholicism was, prior to the Republic, the religion of the State, but all other religions were tolerated, so long as they were not practised in a building having the exterior form of a church. Continental Portugal is divided ecclesiastically into three metropolitan provinces, containing two dioceses each. The Patriarchate of Lisbon has for suffragan sees Guarda and Portalegre; the Archbishopric of Braga has those of Bragança, Lamego, Coimbra, Oporto, and Viseú; the Archdiocese of Evora, those of Beja and Faro. The Patriarch of Lisbon is considered to be entitled to a cardinal's hat, and the archbishop of Braga bears the title of "Primate of the Spain", an honour which, however, is disputed by Toledo. The Azores and Madeira each contain an episcopal seat, and the colonies include the see of Cape Verde, Angola, and the Sáo Paulo (a patriarchate). The archbishops of Dâmão, Cochin, Mylapur, Macao, Mozambique, and St. Thomas (S. Thomé).

According to the Concordat of 1886, bishops were nominated by the Government, appointed by the Minister of the Interior, and paid by the State. In 1909, the bishops were nominated by the Pope, appointed by the minister of justice, after information as to their fitness supplied by the bishops, so that they were State functionaries, and often owed their positions to political influence. To qualify for any ecclesiastical post, they had to obtain a government license before taking orders. In the Islands the parish priests were paid by the State, but on the Continent their income was derived partly from a fund called Compra, which consisted of contributions levied on the parishioners, and partly from stole fees. There were twelve seminaries for the education of the clergy on the Continent, two in the Islands, and four in other colonies. There is also a Portuguese College in Rome and one for Foreign Missionaries in Portugal. The seminaries were supported by the contribution levied on the parishioners, and were divided into two faculties, the Junta Geral da Bulla da Cruzada, an ancient institution which derived its income from offerings made for dispensations, etc. The clergy were exempt from military and jury service, and were ineligible for any administrative position, except the Parish Council (Junta da freguesia), of which the priest is the president. These councils administered the property of the parish church and taxed the parishioners for the construction and repair of church and presbytery, the expenses of worship, church ornaments and vestments, etc. The ambrosias and imanunidades, which numbered about 9000, were independent bodies, ruled by their own statutes.

B. Religious Orders.—How the Jesuits were expelled by Pombal, and how, in 1834, the religious orders of men were suppressed and their property seized by the State, has been told above. At the same time the orders of women were prohibited from taking novices and were allowed to die out, after which their convents also passed to the State, but by the Decree of 15 April, 1901, religious congregations were permitted to exist when they were dedicated exclusively to instruction or good works, or to spreading Christianity and civilization in the colonies. Long before this decree, the Jesuits had returned and opened colleges for the education of youth, and a number of orders and religious institutions were eventually established in Portugal. These included Missionaries of the Holy Ghost, Benedictines, Francisians, Irish Dominicans, Little Sisters of the Poor, Sisters of the Third Order of St. Dominic,

C. Statistics of Population.—The population of Portugal, according to the census of 1900, was 5,423,132; the greater portion (68 per cent) being rural. The North is more thickly populated than the South, the maximum of density being reached between the rivers Douro and Ave. Emigration is increasing. In 1907, 45,000 individuals left their homes, 24,000 of these for Brazil and 6000 for North America.

D. Education.—The first modern law providing for the general instruction of the people was that of the Marquess of Pombal, dated 6 November, 1772. But this law remained a dead letter, and, though the Constitutional Charter guaranteed free primary instruction to all citizens, and a multitude of statutes dealing with the question have been subsequently passed, at least 70 per cent of the population can neither read nor write. The direction of primary education was formerly exercised by the University of Coimbra, but it now belongs to the Home Office, the cost being borne partly by the Concelhos, partly by the State. At the end of 1904 there were 4988 primary schools on the Continent and the adjacent islands, 2953 being for boys, 1549 for girls and 466 mixed, but some of these only exist on paper, and some hundreds of parishes have no school. Moreover, the conditions of a large proportion of the schools are not good, while the teachers are ill-prepared and ill-paid. The backward condition of Portugal is largely attributable to its lack of instruction, and in view of the want of interest shown by the Government in non-political questions, private societies are endeavouring to apply the remedy. Among these are the Moveable Schools which teach according to the methods of the poet João de Deus, the recently formed National League of Instruction and other bodies, most of which are Free-thinking in character.

Before the Revolution the Republicans had identified themselves with a movement for the introduction of instruction in their various centres had free schools attached, for the instruction of the children of their members. Secondary instruction is given in the lycées, which are found in all the principal towns, and in technical schools; but the boys of the better classes, prior to the Republic, were largely confined to the care of the Jesuits, and the girls to one of the many educational convents which then existed. There are also many private schools, some conducted by foreigners, where an ordinary education could be had. The religious instruction of the people was far from satisfactory, and since the advent of the Republic is less so. Catechism used to be included in the curriculum of the government primary schools, but under the Republican regime it is altogether excluded. There is no religious teaching in the lycées, which are day schools, without proper discipline or any attempt at the formation of character. Higher education is given in the University of Coimbra (with about 1450 students) and in various establishments of a special character, such as the Centro Superior das Laranjeiras, the Medical, Army, Navy, and Polytechnic Schools, in Lisbon and Oporto. The university has a theological faculty, but very few students, owing to its unorthodox character. Ignorance of religion and of church history, and the reading of bad literature go far to explain the anti-clerical feeling which prevails among the people generally in the towns, and especially in the capital. The Press is intellectually of little account, and its moral tone is low, especially in the case of the Republican organs, some of the most circulated of which are not read by women. The Catholic organs, "Portugal" of Lisbon and "Palavra" of Oporto, before they were suppressed by the Republic, enjoyed an increasing circulation, but an avowedly religious paper is suspected by the great majority of educated Catholics, who fear to be dubbed reactionaries. It is the commonest ambition to be considered Liberal, though the word is a misnomer in Portugal, where it stands for many ideas and aspirations essentially illiberal. The Republicans, though many of them profess Catholicism, have always been an anti-clerical party. They claim to defend the native secular clergy against religious orders who are mostly composed of foreigners, and especially against the Jesuits. They generally favour civil marriage, a divorce law, the abolition of religious processes in the streets etc. The Socialists go further and are frankly godless.

D. Laws Affecting Religion.—Previous to the Revolution of 1910, a testator might only dispose freely of a third part of his property by will; this is called the terço. The remaining two-thirds go to form the legitima of his heirs in the ascending and descending line. A testator may not bequeath more than a third of his terço to be spent in prayers and masses for his soul, and ecclesiastical corporations may not benefit under his will to an amount exceeding the third of his terço. The testamentary dispositions of a sick person in favour of his confessor, except such as are merely remunerative, are void if he dies of the illness during which he has made them. Professed religious women are not allowed to become secularized or their communities are suppressed, nor can they acquire anything by will, except by way of alimment, or money legacy, or other movables. The Civil Code makes no mention of men bound by religious vows, because the law does not know them.

There was, under the Monarchy, no divorce law.
in Portugal, but a marriage could be declared null for reasons approved by the Church. The canonical impediments were recognized by the Code. Civil marriages and interments were permitted, but made small headway, and the parish registers continued to be almost universally used, though there was a civil register of births, marriages, and deaths. The courts could decree separation of persons and goods (1) in case of adultery by the wife, (2) in case of disobedience and desertion by the husband, or public scandal; (3) when one of the parties was condemned to a life penalty, or (4) when one of the parties had been guilty to the other. Children born out of wedlock were legitimated by the subsequent marriage of their parents, when the latter formally recognized them, or when the children themselves obtained a judicial sentence in their favor.

Cemeteries were provided and controlled by the municipalities in the chief places of each district. Outside of these, they were established at the expense of the parishioners by the parish council, to which they belonged. The death penalty has long been abolished in Portugal, which may account in part for the large number of murderers. Criminals sentenced to long terms of imprisonment were sent to the Penitenciaria in Lisbon and there are cases de correção, or reformatories, for small boys and girls. Good Shepherd homes for fallen women existed in Lisbon and Porto, but were suppressed by the Provisional Government at the time of the revolution. Charitable institutions abounded, and Portugal had, under the Monarchy, some 370 Misericórdias and hospitals. In the various districts of Lisbon, the custódias económicas, an institution founded and largely supported by the late Duchess of Palmeira, provided cheap meals for the poor, and Queen Amélia's crusade against tuberculosis led to the establishment of free consulting hospitals and sanatoria in different parts of the country.

As a result of the encyclicals of Leo XIII on Christian democracy, the movement for the establishment of Catholic circles for workingmen was inaugurated in Portugal, and these mutual-aid societies existed in the principal centers of population, furnished education to the workmen and their children, and kept them in conferences, concerts, and excursions. The associations of Catholic youth in Lisbon and Porto also deserve mention. But the sweeping measures inaugurated by the Republican Government affected a complete rupture of the former relations between Church and State, and the status of the various Catholic organizations, and from the religious congregations (which were immediately dissolved), has become very uncertain.

EDGAR PRESTAGE.

PORTUGUESE LITERATURE.—The Portuguese language was developed gradually from the lingua rustica spoken in the countryside which formed part of the Roman Empire and, both in morphology and syntax, it represents an organic transformation of Latin without the direct intervention of any foreign tongue. The sounds, grammatical forms, and syntax, with a few exceptions, are derived from Latin, but the vocabulary has absorbed a number of Germanic and Arabic words, and a few have Celtic or Iberian origin. Before the close of the middle ages the language threatened to become almost as abbreviated as French, but learned writers, in their passion for antiquity, re-approximated the vocabulary to Latin. The Renaissance commenced a separation between literary men and the people, with the written and spoken tongue, which with some exceptions lasted until the beginning of the nineteenth century. Then the Romanticists went back to tradition and drew on the poetry and everyday speech of the people, and, thanks to the labors of such men as Almeida-Garrett and Camillo Castelo Branco, the literary language became national once again.

I. EARLY VERSE.—An indigenous popular poetry existed at the beginning of Portuguese history, but the first literary activity came from Provence. It was quickened by the accession of King Alfonso III, who had been educated in France, and the productions of his time are preserved in the "Cancioneiro de Ajuda," the oldest collection of peninsular verse. But the most brilliant period of Court poetry, represented in the "Cancioneiro da Vaticana," coincided with the reign of King Denis, a cultivated man, who welcomed singers from all parts and himself wrote a large number of erotic songs, charming ballads, and pastoral. This thirteenth century Court poetry, which deals intimately with love and satire, is usually copied from Provencal models and contributes to a popular form and origin, it gains in sincerity what it loses in culture. By the middle of the fourteenth century troubadour verse was practically dead, but the songs of some few bards have survived, among them Pero Peres de Camoens, ancestor of the great epic poet, and Macias "the enamoured." Meanwhile the people were elaborating a ballad poetry of their own, the body of which is known as the Romancero. It consists of lyric-poetic narratives of treating of war, chivalry, adventure, religious legends, and the sea, many of which have great beauty and contain traces of the varied civilizations which have existed in the peninsula. When the Court poets had exhausted the riches of Provençal lyricism, they imitated the poetry of the people, giving it a certain vogue which lasted until the Classical Renaissance. It was then thrust into the background, and though cultivated by a few, it remained unknown to men of letters until the sixteenth century, when Almeida-Garrett began his literary revival and collected folk poems from the mouths of the peasantry.

I. EARLY PROSE.—Prose developed later than verse and first appeared in the fourteenth century in the vane of short chronicles, lives of saints, and geological treatises called "Livros de Linhagens". The Portgal did not elaborate her own chansones de gestes, but five prose form to found the modern romance of romance adventure; for example, the "History of the Holy rul" and "Amadis de Gaul". The first three books of the latter probably received their present shape in the fourteenth century, though this original has been lost an only the Spanish version remains. The "Book of Eo" also belongs to this period. Though the cultivated taste of the Renaissance affected to despise e medieval stories, it adopted them with alterations as a homage to classical antiquity. Hence came the cycle of the "Palmerias" and the "Chronica do Emporior Clarimundo" of João de Barros. The medieval name of chivalry gave place to the pastoral note the first example of which is the "Sau-
dades" of Bernardo Ribeiro, followed by the "Diana" of Jorge de Montemor, which had a numerous progeny. Later in the sixteenth century Gonzalo fanes Trancoso, a fascinating storyteller, produced his "Historias de Proveito e Exemplos".

treatises, and an anonymous scribe told with charming naïveté the story of the hermit Nuno Álvares Pereira in the "Chronica do Condestável". The line of chroniclers which is one of the bests of Portuguese literature began with Fernão Lopes, who compiled the chronicles of the reigns of Kings Pedro, Fernando, and John I. He combined a passion for accurate state-ments with an especial talent for descriptive writing and portraiture, and with him a new epoch dawns. Azurara, who succeeded him in the post of official chronicler, and wrote the "Chronicle of Guinea" and chronicles of the African wars, is an equally reliable historian with a narrative style marked by pedantry and moralizing. His successor, Ruy de Pina, avoids these defects and, though not an artist like Lopes, gives a useful record of the reigns of Kings Duarte, Afonso V, and John II. His history of the latter monarch was appropriated by the poet Garcia da Resende, who adorned it, adding many anecdotes he had learned during his intimacy with John, and issued it under his own name.

B. Poetry.—The introduction of Italian poetry, especially that of Petrarch, into the peninsula led to a revival of Spanish verse which, owing to the superiority of its court authors, dominated Portugal throughout the fifteenth century. Constable Dom Pedro, friend of Marquis de Santillana, wrote almost entirely in Castilian and is the first representative of the Spanish influence which imported from Italy the love of antiquity and reverence for classical antiquity. The court poetry of some three hundred knights and gentlemen of the time of Afonso V and John II is contained in the "Cancioneiro Geral", compiled by Resende and inspired by Juan de Mena, Jorge Manrique, and other Spaniards. The subjects of these mostly artificial verses are love and satire. Among the few that reveal special talent and genuine poetical feeling are Resende's lines on the death of D. Inés de Castro, the "Pingamento de Amor" of Diogo Brandão, and the "Coplas" of D. Pedro. Three names appear in the "Cancioneiro" which were destined to create a literary revolution, those of Bernardo de Ribeiro, Gil Vicente, and Sá de Miranda.

IV. EARLY SIXTEENTH CENTURY.—A. Pastoral Poetry.—Portuguese pastoral poetry is more natural and sincere than that of other nations because Ribeiro, the founder of the bucolic school, sought inspiration in the national serranillas, but his eclogues, despite their feeling and rhythmic harmony, are surpassed by the "Cristal" of Christovão Falcão. These and the eclogues and sententious "Cartas" of Sá de Miranda and "Cartas de artificio" of Sá de Miranda medida velha (as the national metre was afterwards called to distinguish it from the Italian endecasyllable), continued to be used by Camoens in his social minor works, by Bandarra for his prophecies, and by Gil Vicente.

B. Drama.—Though Gil Vicente did not originate dramatic representations, he is the father of the Portuguese stage. Of his forty-four pieces, fourteen are in Portuguese, eleven in Castilian, the remainder bilingual, and they consist of autos, or devotional works, tristis, or comedies and farces. Beginning in 1510, religious pieces, conspicuous among them being "Auto da Alma" and the famous trilogy of the "Varcas", he soon introduces the comic and satirical element by way of relief and for moral ends, and, before the close of his career in 1536, has arrived at pure comedy, as in "Iñez Pereira" and the "Floresta de Enganos", and developed the study of character. The plots are simple, the dialogue spirited, the lyrics often of finished beauty, and while Gil Vicente appeared too early to be a great dramatist, his plays mirror to perfection the types, customs, and manners of his time.

The playwrights who followed him had neither superior talents nor court patronage and, attacked by the classical school for their lack of culture and by the Inquisition for their grossness, they were reduced to entertaining the lower class at country fairs and festivities.

V. THE RENAISSANCE produced a pleiad of distinguished poets, historians, critics, antiquaries, theologians, and moralists who made the sixteenth century a golden age.

A. Lyric and epie poetry.—Sá de Miranda introduced Italian verse and raised the tone of poetry. It was followed by Antonio Ferreira, a superior stylist, by Diogo Bernardes, and Andrade Caminha, but the Quinhentistas tended to lose spontaneity in their imitation of classical models, though the verse of Frei Agostinho da Cruz is an exception. The genius of Camoens (q. v.) led him to fuse the best elements of the Italian and popular muse, thus creating a new poetry. Imitators arose in the following centuries, but most of their epics are little more than chronicles in verse. They include three by Joenymo Corte Real, and one each by Pereira de Brandão, António de Andrade, Rodrigues Lobo, Pereira de Castelo, Sá de Meneses, and Garcia de Mascarenhas.

B. The classical plays.—Sá de Miranda endeavoured also to reform the verse and drain and shaping himself on Italian models, wrote the "Es- trangeiros", by Jorge Ferreira de Vasconcellos had produced in "Eu- rosina" the first prose play, but the comedies of Sá and Antonio Ferreira are artificial and stillborn productions, though the latter's tragedy, "Iñez de Castro", if dramatically weak, has something of Sophocles in the spirit and form of the verse.

C. Prose.—The best prose work of the sixteenth century is devoted to history and travel. João de Barros in his "Decadas", continued by Diogo do Couto, described with mastery the deeds achieved by the Portuguese in the discovery and conquest of the lands and seas of the Orient. Damião de Goes, humanist and friend of Erasmus, wrote with rare independence on the reign of King Manuel the Fortunate. Bishop Osorio treated of the same subject in Latin, but his interesting "Cartas" are in the vulgar tongue. Among others who dealt with the East are Castanheda, and Antonio Galvão, Gaspar Correia, Bras de Albuquerque, Frei Gaspar da Cruz, and Frei João dos Santos. The chronicles of the kingdom were continued by Francisco de Andrade and Frei Bernardo de Cruz, and Miguel Leitão de Andrade compiled an interesting volume of "Miscelâneas". The travel literature of the period is too large for detailed mention: Persia, Syria, Abyssinia, Florida, and Brazil were visited and described and Father Lucena compiled a classic life of St. Francis Xavier, but the "Peregrination" of Mendes Pinto, a typical Conquestador, is worthy of all our praise, as the story books put together for its extraordinary adventures told in a vigorous style, full of colour and life, while the "Historia Tragico- Maritima", a record of notable shipwrecks between 1532 and 1604, has good specimens of simple anony.
mous narrative. The dialogues of Samuel U sowie, a Lisbon Jew, also deserve mention. Religious subjects were usually treated in Latin, but among moralists who used the vernacular were Frei Heitor Pinto, Bishop Arraes, and Frei Thomé de Jesus, whose "Trabalhos de Jesus" has appeared in many languages.

VI. SEVENTEENTH CENTURY.—The general inferiority of seventeenth-century literature to that of the preceding age has been charged to the new royal absolutism, the Inquisition, the Index, and the exaggerated humanism of the Jesuits who opposed education; nevertheless, a man of genius appeared who would have overcome all obstacles. In fact letters shared in the national decline. The taint of Gongorism and Marinism attacked all the Seiscentistas, as may be seen in the "Penix Renascida", and rhetoric conquered style. The Revolution of 1640 liberated Portugal, but could not undo the effects of the sixty years' union with Spain. The use of Spanish continued among the upper class and was preferred by many authors who desired a larger audience. Spain had given birth to great writers, and the Portuguese forgot the earlier ones of their own land. The foreign influence was strongest in the drama. The leading Portuguese playwrights wrote in Spanish, and in the national tongue only poor religious pieces and a witty comedy by D. Francisco Manuel de Mello, "Auto de Fidalgo Aprendiz", were produced. The numerous Academies which arose with exotic names aimed at raising the level of letters, but they spent themselves in discussing ridiculous theses and determined the triumph of pedantry and bad taste. Yet though catalogismo and conceitismo infected nearly everyone, the century did not lack its big names.

A. Lyric Poetry.—Melodious verses relive the dullness of the pastoral romances of Rodrigues Lobo, while his "Corte na Aldeia" is a book of varied interest in elegant prose. The versatile D. Francisco Manuel de Mello, in addition to his sonnets on moral subjects, wrote pleasing imitations of popular romances, but is at his best in a reasoned but vehement "Memorial ao João IV", in the witty "Apologiau Dialogues", and in the homely philosophy of the "Carta de Guia de Casados", prose classics. Other poets of the period are Soror Violante de Coa, Frei Jeronimo Vahia, convinced Gongorists, Frei Bernardo de Brito with the "Sylvia de Lizardo", and the satirists, D. Thomas de Noronha and Antonio Serrão de Castro.

B. PROSE.—The century had a richer output in prose than in verse, and history, biography, sermons, and epistolary correspondence all flourished. Writers on historical subjects were usually friars who worked in their cells and not, as in the sixteenth century, travelled men and eye-witnesses of the events they describe. They occupied themselves largely with questions of form and are better stylists than historians. Among the five contributors to the ponderous "Monarchia Lusitana", only the conscientious Frei Antonio Brandão fully realized the importance of documentary evidence. Frei Bernardo de Brito begins his work with the creation and ends it where he should have begun; he constantly makes mistake for fact, but was a patient investigator and a vigorous narrator. Frei Luiz de Sousa, a famous stylist, worked up existing materials into the classical hagiography "Vida de D. Frei Bertholomeu dos Martires" and "Anales del Reino de Portugal", among others. Manoel de Faria y Sousa, historian and arch-commentator of Camoens, by a strange irony of fate chose Spanish as his vehicle, as did Mello for his classic account of the Catalanian War, while Jacinto Freire de Andrade told in grandiloquent language the story of the justice-loving viceroy. D. João III's "Manuel de Castelo Branco", among other works, was an attempt to rewrite the history of Portugal. Ecclesiastical eloquence was at its best in the seventeenth century and the pulpit filled the place of the press of to-day. The originality and imaginative power of his sermons are said to have won for Father Antonio Vieira in Rome the title of "Prince of Catholic Orators" and though they and his letters exhibit some of the prevailing faults of taste, he is none the less great both in ideas and expression. The discourses and devotional treatises of the Oratorian Manuel Bernardes, who was a recluse, have a calm and sweetness that we need in the mission of a man of action like Vieira and, while equally rich, are purer models of classic Portuguese prose. He is at his best in "Lus e Calor" and the "Nova Floresta". Letter writing is represented by such master hands as D. Francisco Manuel de Mello in fanatical epistles, D. António das Chagas in spiritual, and by five short but eloquent documents of human affection, the "Cartas de Mariana Alcoforado".

VIII. EIGHTEENTH CENTURY.—Affectation continued to mark the literature of the first half of the eighteenth century, but signs of a change gradually appeared and ended in that complete literary reform known as the Romantic Movement. Distinguished men who fled abroad to escape the prevailing despotism did much for intellectual progress by encouraging and writing in a language reforming and obsolete educational methods and exposed the literary and scientific decadence in the "Verdadeiro Metodo de Estudar", while the various Academies and Arcadias, wiser than their predecessors, worked for purity of style and diction, and translated the best foreign classics.

A. The Academies.—The Academy of History, established by John V in 1720 in imitation of the French Academy, published fifteen volumes of learned "Memoirs" and laid the foundations for a critical study of the annals of Portugal. The academy, being Caetano de Sousa, author of the voluminous "Historia da Casa Real", and the bibliographer Barboas Machado. The Royal Academy of Sciences, founded in 1780, continued the work and placed literary criticism on a sounder basis, but the principal exponents of belles-lettres belonged to the Arcadias.

B. The Arcadias.—Of these the most important was the Arcadia Ulisseense established in 1756 by the poet Crus e Silva—"to form a school of good example in eloquence and in the mind"—and it included the most considered writers of the time. Quito composed the "Cantata de Dido", a classic gem, and many excellent sonnets, odes, and epistles. The bucolic verse of Quita has the tenderness and simplicity of that of Bernardino Ribeiro, while in the mock-heroic poem, "Hysope", Crus e Silva satirizes ecclesiastical jealousies, local types, and the prevailing gallomania with real humour. Intestine disputes led to the dissolution of the Arcadia in 1774, but it had done good service by raising the standard of taste and introducing new poetical forms. The Arcadiens and their adherents were too apt to content themselves with imitating the ancient classics and the Quinhentistas and they adopted a cold, refined style of expression, without emotion or colouring. Their whole outlook was painfully academic. Many of the Arcadias followed the example of a latter-day Mecenas, the Conde
de Ericeira, and endeavoured to nationalise the pseudo-classicism which obtained in France. In 1790 the “New Arcadia” came into being and had in Bocage a man who, under other conditions, might have been a great poet. His talent led him to react against the general mediocrity and though he achieved no noteworthy literary fame, his set of 36 sonnets, with the collaboration of Camoens. He was a master of short improvised lyrics as of satire, which he used to effect in the “Pena de Tábio” against Agostinho de Macedo.

This turbulent priest constituted himself a literary dictator and in “O Burro” surpassed all other bard in invective, more so as his Romea had surpassed the Lusiads by a tasteless epic, “Oriente.” He, however, introduced the didactic poem, his odes reach a high level, and his letters and political pamphlets display learning and versatility, but his influence on letters was harmful. The only other Arcadian worthy of mention is Curvo Senedo, but the “Dissidents,” a name given to those poets who remained outside the Arcadias, include three men who show independence and a sense of reality, José Anástacio da Cunha, Manuel de Arreiro, and Fernando de Miranda, a name bestowed upon them by Marcol, better known as Filinto Elytio. The first versified a philosophical and tender strain, the second sketched the customary and follies of the time in quintilhas of abundant wit and realism, the third spent a long life of exile in Paris in reviving the cult of the sick, in his Gallicisms and enriched it by numerous works, original and translated. Though lacking imagination, his contos, or scenes of Portuguese life, strike a new note of reality, and his blank verse translation of the “Martyrs” of Chateaubriand is a high performance. Shortly before his death he became a convert to the Romantic Movement, for whose triumph in the person of Almeida-Garrett he had prepared the way.

C. Brazilian Poetry.—During the eighteenth century the colony of Brazil began to contribute to Portuguese letters. Manoel da Costa wrote a number of Petrarchian sonnets, Manoel Ignacio da Silva Alvarenga showed himself an ardent lyricist and cultivator of form, Tomás Antonio Gonzaga became famous by the harmonious verses of his love poem “Marília do Direito,” while the “Poesias sacras” of Sousa Caldas have a certain mystical charm though metrically hard. In epic poetry the chief name is that of Basilio da Gama, whose “Uruguay” deals with the struggle between the Portuguese and the Paraguay Indians. In 1712 written in his last notable episodes. The “Caramuru” of Santa Rita Durão begins with the discovery of Bahia and contains, in a succession of pictures, the history of Brazil. The passages descriptive of native customs are well written and these poems are superior to anything of the kind produced contemporaneously by the mother country.

D. Prose.—The prose writing of the century is mainly dedicated to scientific subjects, but the letters of Antonio da Costa, Antonio Ribeiro Sanches, and Alexandre de Gusmão have literary value and those of the celebrated Cavalheiro d’Oliveira, if not so correct, are even more informing.

E. Drama.—Though a Court returned to Lisbon in 1640, it preferred, for one hundred and fifty years, Italian opera and French plays to vernacular representations. Early in the eighteenth century several authors sprung from the people vainly attempted to found a national drama. Their pieces mostly belong to low comedy. The “Operas Portuguezas” of Antonio José da Silva, produced between 1733 and 1751. Os Batuques and “O Sossego” are both notable. Though divided his attention between heroic comedies and comedies de capa e espada and, though wanting in ideas and taste, they enjoyed a long popularity. At the same time the Arcadians endeavoured to raise the standard of the stage, drawing inspiration from the contemporary French drama, but its members lacked dramatic talent and achieved little. Garção wrote two bright comedies, Quita some stillborn tragedies, and Manoel de Figueredo compiled plays in prose and verse on various subjects, in his 13 volumes, but he could not create characters.

IX. The Nineteenth Century.—A. Poetry.—The early nineteenth century witnessed a literary reformation which was commenced by Almeida-Garrett who had become acquainted with English and French literature, and with the national traditions. In the narrative poem “Camoês” (1825) he broke with the established rules of composition and followed it with “Flores sem Fruto” and a collection of ardent love poems “Folhas Caníadas,” while the clear elegant prose of this true artist is seen in a miscellany of romance and criticism, “Viagens na minha terra.” The poetry of the austere Herculano has a religious or patriotic motive and is reminiscent of Lamenais. The movement was continued by Marçal de Freitas with charming and Romantic with Castilho, a master of metre, who lacked ideas, and the verses of Joao de Lemos and the melancholy Soares de Passos record a limited range of personal emotions, while their imitators voice sentiments which they have not felt deeply or at all. The verses of Jácome de Albergaria, author of the “Brasileiro John J ayme” is sincere, but belongs to this same school which thought too much of form and melody. In 1865 some young poets led by Anheiro de Quental and Theophilo Braga rebelled against the domination over letters which Castilho had assumed, and, under foreign influences, proclaimed the alliance of philosophy with poetry. A fierce pamphlet war heralded the downfall of Castilho and poetry gained in breadth and reality, though in many instances it became non-Christian and revolutionary. Quental produced the best work, and the earlier verses of the “Campos de Flores” are marked, now by tender feeling, now by sensuous mysticism, all very Portuguese. Other true poets are the sonneteer Joao Penha, the Parnassian Gonçalves Crespo, and the symbolist Eugenio de Castro. The reaction against the use of verse for the propaganda of radicalism in religion and politics has succeeded and the most considered poets of to-day, Corrêa de Oliveira and Lope Vieira, are national singers with no extraneous purpose to serve. They have been much to value and in the “Ser” of Antonio Nobre, a book of true race poetry.

B. Drama.—After producing some classical tragedies, the best of which is “Cato,” Garrett undertook the reform of the stage on independent lines, though he learnt something from the Anglo-German school. Anxious to found a national drama, he chose subjects from Portuguese history and, beginning with “An Auto de Gil Vicente,” produced a series of prose plays which culminated in “Brother Luiz de Sousa,” a masterpiece. His imitators, Mendes Leal and Pré de Castro, are of limited strength. Fernando Caldeira and Gervasio Lobato wrote like and witty comedies and recently the regional pieces of D. João da Camara have won success, even outside Portugal. At the present time, with the historical and social plays of Lopes de Mendonça,
PORTUGUESE

PORTUGUESE

The Novel is really a creation of the nineteenth century and it began with historical romances in the time of Walter Scott by Heracleu, who succeeded Rebelo da Silva with "A Mocidade de D. João V", Andrade Corvo, and others. The romance of manners is due to the versatile Camillo Castello Branco, a rich impressionist who describes to perfection the life of the Baroque century in "Amor de Perdição", "Novellas do Minho", and other books. Gomes Coelho (Julio Diniz), a romantic idealist and subjective writer, is known best by "As Papilas do Sr Reitor", but the great creative artist was Eça de Queiroz, founder of the Naturalist School, and author of "Primo Basilio", "Correspondência de Fradique Mendes", "A Cidade e as Serras". His characters live and many of his descriptive and satiric passages have become classical. Among the lesser novelists are Pinheiro Chagas, Arnaldo Gama, Inés de Magalhães, Teixeira de Queiroz, and Malheiro Dias.

D. Other prose.—History became a science with Herculano whose "História de Portugal" is also valuable for its stylistic quality and Oliveira Martins made history as picturesque and satiric characters in "Os Filhos de D. João" and "Vida de Num Alvares". A strong gift of humor distinguishes the "Farpas" of Ramacho Ortigao, as well as the work of Fialho de Almeida and Julio Cesar Machado, and literary criticism had able exponents in Luciano Cordeiro and Moniz Barreto. The "Panorama" under the editorship of Herculano exercised a sound and wide influence over letters, but since that time the press has become less and less literary and now treats of little save politics.

X. BRAZILIAN LITERATURE.—The literature of independent Brazil really began with the Romantic Movement, which was introduced in 1836 by Domingos de Magalhães, whose "Suspiros Poéticos" reveal the influence of Lamartine. This religious phase was immediately followed by that of Indianism suggested by Chateaubriand and Penimore Cooper, which had its chief exponent in Gonçalves Dias, a melodious lyricist. Byron and Musset were the fathers of the next phase of Romanticism and its interpreters included Alvaras da Azevedo, the introducer of humour, and Malheiro de Abreu, two poets whose popularity has endured. Lucindo Rebelo belongs to the same epoch, but shows a more spontaneous inspiration, and the verse of Fagundes Varela forms a link with a new school in which the ardour and humanitarianism of Hugo inspired the patriotic muse of Tobias Barreto, an objective poet of wide sympathies, imagination, and feeling, and of Castro Alves, who sang the horrors of slavery while, later still, Parnassianism overran the whole of poetry.

Brazil has yet to produce drama, but in the romance she has acknowledged the great José de Alencar whose "Guaraní" and "Tragema" are standard books, and in the psychologist, Machado de Assis. The Romanticists mostly addressed themselves to the emotions rather than to the intelligence, but Machado de Assis rises to a more general conception of life, both in prose and verse. In "Bras Cubas" he has the irony of Sterne, and the pure, simple diction and distinguished style of Garrett, together with a reserve rarely found in a modern Latin writer. Brazil has now emancipated herself from mere imitation of foreign models, and in a large part of to-day show an originality and strength which promises for the future of a literature still in its youth.

PRESTAGE. Portuguese Literature to the end of the eighteenth century (London, 1907): IDEM. Portuguese Literature in the nineteenth century in Saintsbury, Periods of European Literature; IDEM, The
over the city but subordinate to the Patriarch of the East Indies at Goa. A force of 27,500 men of the first line form the colonial army and the policing of the rivers and harbours is done by fotillas of gunboats. The custom houses are subordinate to that of Lourenço Marques. Primary schools exist in the principal centres, but very little has been done for education.

EDGAR PRESTAGE.

Portuguese West Africa, the name usually given to the Province of Angola, has a coast line of 1015 miles from the Congo to the Cunene Rivers and an area of 490,525 sq. miles, including the territories of Cabinda, Molendo, and Massabi, on the coast north of the Congo. These are surrounded by the French Congo, while the rest of the province is bounded by Belgian, British, and German territory. The Congo was first entered by Diego Cam in 1454, who erected a pillar in token of occupation, and with him was Martin Behaim the cosmographer. Ever since it has belonged to Portugal, except for a period of Dutch occupation (1640-78), the Hollanders being expelled by Admiral Correia de Sá e Benevides. Only in recent years has this great territory been explored, and even now the whole of it is not effectively occupied, though military expeditions from the mother-country have conquered the most warlike tribes, and a chain of fortresses and posts have been established along the coast. The coast is low, and a sandy, barren plain stretches some way inland; beyond this the province is mountainous and very fertile. St. Paul de Loanda, the capital, has an anchorage ground of 1700 acres; Benguela, Mossamedes, and Porto Alexandre are good ports; while the only drawback to Lobito, the terminus of the new railway, is that it lacks potable water, as does the Bahia dos Tigres, which could otherwise shelter 5000 vessels in its 83,000 acres of water, as deep as 117 feet. The province is irrigated by the Rivers Chilosango, Congo, and Cuanza, while the Zambesi skirts its south-east frontier. The coast abounds in fish, and the territory in minerals, such as malachite, iron, petroleum, salt, lead, and sulphur, but its principal wealth lies in coffee (of which Loanda exported 4112 tons in 1894), indiarubber gum, wax, and ivory, which are sent to Portugal and exchanged for cotton and woolen goods and wine. Formerly Angola depended for its prosperity almost entirely on the slave trade, and during the seventeenth and eighteenth centuries many thousands of negroes annually were transported and the native population is reckoned at four millions; their religion is Fetishism, and they include a great variety of races. There is only a small proportion of whites.

For administrative purposes the province is divided into six districts, and then into concelhos. Their names are Congo, Loanda, Benguela, Mossamedes, Huilla, and Lunda. The governor-general possesses civil and military attributes and resides at Loanda, while each district has a subordinate governor. For purposes of justice there are five comarcas, each with a judge; and at every town, composed of five justices, a session sits at Loanda. Each comarca has a commercial tribunal of first instance, and each parish a judge of the people, appointed annually. The military establishment consists of an army of 3200 men, partly European, partly native. For ecclesiastical purposes the province is subject to the Bishop of Loanda, and belongs to the Lisbon Province.

The Province of Guinea, another West African possession of Portugal, comprising 4450 sq. miles, is surrounded by French possessions, and its coast is cut up by numerous inlets. It is a low-lying and well-watered territory, the chief rivers being the Cachoe, Mansoa, and Gb. The climate is unhealthy for Europeans. The soil is generally of great fertility, and the province is fit for plantations on a large scale. Its products are tobacco, sugar, indiarubber, wax, and leather, which are exported through the commercial centres of Gba, Assua, Farin, and Bolama.

The population numbers about 67,000 and belongs to ten races, subdivided into many tribes. There are only a few whites resident. The country has one constabulary, that of Boiana, the seat of government, and is divided into eight districts. The interior is generally in a state of war, the natives being turbulent. A vicar-general and six missionary rectors form the religious staff of the province, and these latter are also professors of primary instruction.

EDGAR PRESTAGE.

Port Victoria (Australia). See Northern Territory, Prefecture Apostolic of.

Port Victoria, Diocese of (Portus Victorii, Seychellearum), comprises the Seychelles Islands in the Indian Ocean. With their dependencies, these eighty-nine islands, the principal of which are Mahé, Praslin, Silhouette, Curieuse, and La Digue, cover an area of 148½ sq. miles. The French occupied the islands about 1742, but they were captured by the British in 1794, and were formally ceded to the British by Law in 1848. The British established Mahé and situated on the north-eastern side of the island, is the seat of the colonial government, the present governor being Walter Edward Davidson, C.M.G. In December, 1909, the estimated population of the islands was 22,490. Both Catholic and Church of England primary schools are aided by the State. The principal exports are vanilla, cocanuts, cocoa-nut oil, tortoise-shell, soap, and guano. The double cocoa-nut known as Coca de Mer is grown in Mahé and Praslin, while Aldabra, a dependency about 680 miles from Mahé, is famous for enormous land tortoises. By a Papal Decree of 26 November, 1852, the Seychelles were separated from the Diocese of Port Louis and made a prefeature Apostolic, to which a Decree of 6 December, 1854, joined the Amirantes and Agalega Islands, likewise separated from Port Louis. The first prefect Apostolic was the Right Reverend Jeremias Paglietti, who as a missionary had laboured successfully in the region for many years. In 1863 the mission was confided to the Capuchins, and was made an independent diocese on 31 Aug., 1868. As the Diocese of Port Victoria (erected 14 July, 1892), it was a suffragan of Colombo, Ceylon, but by a Decree of 3 June, 1899, it became directly subject to the Holy See. The present bishop is the Right Reverend Bernard Thomas Clarke, D.C.L., Cap. (b. at London, 1864; made titular Bishop of Tintagel, 19 March, 1902, and Vicar Apostolic of Arabia). On 10 June, 1910, he was transferred to Port Victoria, where he succeeded Bishop Marc Hudrissier (b. at Faverge, France, 27 July, 1848; became Bishop of Port Victoria, 21 July, 1892; d. Feb., 1910). Besides Capuchins there are in the diocese Marist Brothers and Sisters of St. Joseph of Cluny. There are 18 ecclesiastical residences, 18 churches or chapels, 1 infirmary, 24 schools with 2170 pupils, 2 colleges with 215 students, 2 orphanages with 67 orphans.

Missions Catholiques (Rome, 1907); Statesman's Year Book (1911); Battandier, Ann. pont (Paris, 1911).

Positivism, a system of philosophical and religious doctrines elaborated by Auguste Comte. As a philosophical system its best exponent, Positivism denies the validity of metaphysical speculations, and maintains that the data of sense experience are the only object and the supreme criterion of human knowledge; as a religious system, it denies the existence of a personal God and takes humanity, "the great
POSITIVISM.

being”, as the object of its observation and conduct. We shall give a brief historical sketch of Positivism, an exposition of its fundamental principles, and a criticism of them.

I. HISTORY OF POSITIVISM.—The founder of Positivism was Auguste Comte (b. at Montpellier, 19 Jan., 1798; d. at Paris, 5 Sept., 1857). He entered the École polytechnique at Paris in 1814, was a disciple of Saint-Simon until 1824, and began to publish his course of philosophy in 1826. About this period he became temporarily deranged (1826–27). After recovering, he was appointed instructor (1832–35) and examiner in mathematics (1834–44) at the École polytechnique, giving meanwhile a course of public lectures on astronomy. The unhappiness of his married life and his strange infatuation for Mme Clotilde de Vaux (1845–46) greatly influenced his naturally sentimental character. He realised that mere intellectual development is insufficient for life, and, having presented Positivism as the scientific doctrine and method, he aimed at making it a religion, the religion of humanity. Comte's chief works are his "Cours de philosophie positive" (1821–57), "Les systèmes de la nature" (1830), "La philosophie positive" (1830), "La philosophie constitutionnelle" (1837–38), "La philosophie politique" (1837–38), "La philosophie sociale" (1837–38), "La philosophie historique" (1839–43), "La philosophie de la science" (1842–44), and his "Cours de philosophie sociale" (1842–44). The fundamental principle of Positivism is, as already said, that sense experience is the only object of human knowledge as well as its sole and supreme criterion. Hence abstractions or general ideas are nothing more than collective notions; judgments are mere empirical propositions; reasoning is from sense experience to sense experience, and the syllogism: induction has for its conclusion a proposition which contains nothing more than the collection of a certain number of sense experiences, and the syllogism, taking this conclusion as its major proposition, is necessarily sterile or even results in a vicious circle. Thus, according to Positivism, science cannot be, as Aristotle conceived it, the knowledge of things through their ultimate causes, since material and formal causes are unknowable, final causes illusory, and efficient causes simply invariable antecedents, while metaphysics, under any form, is illegitimate. Positivism is thus a continuation of crude Empiricism, Associationism, and Rationalism. The arguments advanced by Positivism, besides the assertion that sense experiences are the only object of human knowledge, are chiefly two: the first is that psychological analysis shows that all human knowledge can be ultimately reduced to sense experiences and empirical associations; the second, insisted upon by Comte, is historical, and is based on his famous "law of the three stages", according to which the human mind in its progress is supposed to have been successively influenced by theological preoccupations and metaphysical speculation, and to have finally reached at the present time the positive stage, which marks, according to Comte, its full and perfect development (cf. "Cours de philosophie positive", II, 15 sqq.).

CRITICISM.—Positivism asserts that sense experiences are the only object of human knowledge, but does not prove its assertion. It is true that all our knowledge has its origin in experience, but it is not proved that knowledge stops there. Positivism fails to demonstrate that, above particular facts and contingent relations, there are not abstract notions, general laws, universal and necessary principles, or that we cannot know them. Nor does it prove that material and corporeal things constitute the whole order of existing beings, and that our knowledge is limited to them. Concrete beings and individual relations are not only perceptible by our senses, but they also have a certain existence and constitution; they are intelligible. These causes and laws pass beyond the particularness and contingency of individual facts, and are elements as fundamentally real as the individual facts which they produce and control. They cannot be per-
received by our senses, but why can they not be experienced by our intelligence? Again, immediate beings cannot be perceived by some experience, it is true, but their existence is not contradictory to our intelligence, and, if their existence is required as a cause and a condition of the actual existence of material things, they certainly exist. We can infer their existence and know something of their nature. They cannot indeed be known in the same way as material things, but this is no reason for declaring them unknowable to our intelligence (see AGRÉGÉS; ANALOGY). According to Positivism, our abstract concepts are the contrary, absolutely certain, and are the determinations, and may be applied identically to an indefinite number of objects of the same class. Collective images are more or less confused, and are the more so as the collection represented is larger; all are always class images, which we cannot imagine (e.g. a myriagon, a substance, a principle), and which we can nevertheless distinctly conceive. Nor is the general idea a name substituted as a sign for all the individual objects of the same class, as stated by Taine (De l'Intelligence, I, 227). If a certain perception, says Taine, always coincides with or follows another perception (e.g. the perception of smoke and that of fire, the smell of a sweet odour and the sight of a rose), then the one becomes the sign of the other in such a way that, when we perceive one, we instinctively anticipate the presence of the other. So it is, Taine adds, with our general ideas. When we have perceived a number of different trees, there remains in our memory a certain image made up of the characters common to all trees, namely the image of a trunk with branches. We call it "tree", and this word becomes the exclusive sign of the class "tree"; it evokes the image of the individual objects of that class as the perception of every one of these evokes the image of the sign substituted for the whole class. Taine remarks that this theory rests upon a confusion between experimental analogy and abstraction (Ctriéologique générale, I, III, c. iii, § 2, pp. 237 sqq.). Experimental analogy plays indeed a large part in our practical life, and is an important factor in the education of our senses (cf. St. Thomas, "Anal. post.", II, xv). But it should be remarked that experimental analogy is limited to the individual objects observed, to particular and similar objects; its generality is essentially relative. Again, the words which designate the objects corresponding to these objects, and which we cannot speak of "abstract names" when only individual objects are given. Such is not the case with our general ideas. They are the result of an abstraction, not of a mere perception of individual objects, however numerous; they are the conception of a type applicable in its unity and identity to an indefinite number of the objects of which it is the type. They thus have a generality without limit and independent of any concrete determination. If the words which signify them can be the sign of all of them, then some class of which that same class is abstract because they signify an abstract concept. Hence mere experience is insufficient to account for our general ideas. A careful study of Taine's theory and the illustrations given shows that the apparent plausibility of the theory comes exclusively from the fact that Taine unconsciously introduces and employs abstraction. Again, Positivism, and this is the point especially developed by John Stuart Mill (following Hume), maintains that what we call "necessary truths" (even mathematical truths, axioms, principles) are merely the result of a generalization of our experiences. We are conscious, e.g. that we cannot at the same time affirm and deny a certain proposition, that one state of mind excludes the other; then we generalize our observation and express it as a universal principle that a proposition cannot be true and false at the same time. Such a principle is simply the result of a subjective necessity based on experience. Now, it is true that experience furnishes us with the matter out of which our judgments are formed, and with the occasion to formulate them. But mere experience does not afford either the proof or the confirmation of our certitude concerning their truth. If it were so, our certitude should increase with every new experience, and such is not the case, and we could not account for the different certitudes by the same principle, nor for the identical application of this certitude to the same propositions by all men. In reality we affirm the truth and necessity of a proposition, not because we cannot subjectively deny it or conceive the contrary, but because it is indeed the case, that is, a universal, objective truth of the proposition, the source of our certitude, and the reason of the subjective necessity in us.

As to the so-called "law of the three stages", it is not borne out by a careful study of history. It is true that we meet with certain epochs more particularly characterized by the influence of faith, or metaphysical tendencies, or enthusiasm for natural science. But even then we do not see that these characteristics realize the order expressed in Comte's law. Aristotle was a close student of natural science, while after him the neo-Platonic School was almost exclusively given to metaphysical speculation. In the sixteenth century there was a great revival of experimental sciences; yet it was followed by the metaphysical speculation of the German idealistic school. The nineteenth century beheld a wonderful development of the natural sciences, but we are now witnessing a revival of the study of metaphysics. Nor is it true that these divers tendencies cannot exist during the same epoch. Aristotle himself manifests a remarkably keen spirit of psychological observation in his "Commentaries" and in his "Summa theologica"; especially in his admirable treatise on the passions. Finally, we see a harmonious combination of faith, metaphysics, reasoning, and experimental observation in such men as Kepler, Descartes, Leibniz, Paschal etc. The so-called "law of the three stages" is a gratuitous assumption, not a law of history.

The positivist religion is a logical consequence of the principles of Positivism. In reality human reason can prove the existence of a personal God and of His providence, and the moral necessity of revelation, while history proves the existence of such a revelation. The establishment of a religion by Positivism simply shows that for many religions is necessary...
POSSESSION

Der Possidnetium vom Tode A. Comte's is auf unsere Tage (Freiburg, 1900). Stoll, "Morgue-Marchots und einige Fa lli: RAVELSON, Le phile, en France, au XIXe Siecle (Paris, 1894); MEBERT, Psychologie (6th ed., Louvain, 1894); IDE, Connaissance des choses (Paris, 1890); FORLASS, Théorie des concepts (Paris, 1890); FOLL, L'idée (Paris, 1901); M. barriers, London, 1903); VALLE, Cursus Philosophiae Politicae (London, 1895); TURNER, The Theory of Philosophy (Boston, 1900); DEBRENE, A. Comte et son ouvre (Paris, 1900).

GEORGE M. SAUVAGE.

POSSESSION, DEMONICAL.—Man is in various ways subject to the influence of evil spirits. By original sin he brought himself into "captivity under the power of him who thence (from the time of Adam's transgression) hath dominion over those in whom he dwelleth, the devil (Council of Trent, Ses. V, de pecc. orig., 1), and was through the fear of death all his lifetime subject to servitude (Heb., ii, 15). Even though redeemed by Christ, he is subject to violent temptation: "for our wrestling is not against flesh and blood; but against principalities and powers, against the rulers of the world of this darkness, against the spirits of wickedness in the high places" (Eph., vi, 12). But the influence of the demon, as we know from Scripture and the history of the Church, goes further still. He may attack man's body from within, causing him to do things that he would not wish to do (possession). As we gather from the Fathers and the theologians, the soul itself can never be "possessed" nor deprived of liberty, though its ordinary control over the members of the body may be hindered by the obstructions of the soul ("De pace," c. 17); THOMAS, "In II Sent.," d. VIII, q. 1; RIETSCH, "L' mystique divine," Paris, 1883, pp. 190 sqq.

CASES OF POSSESSION.—Among the ancient pagan nations diabolical possession was frequent (Maspero, "Hist. anc. des peuples de l'Orient," 41; LENORMANT, "La magie chez les Chaldéens," as it is still among their successors (WARD, "History of the Hindoos," v., 1, 2; ROBERTS, "Oriental Illustrations of the Scriptures"; DOULTON, "Social Life of the Chinese"). In the Old Testament we have only one instance, and even that is not very certain. We are told that "an evil spirit from the Lord troubled" Saul (I Kings, xvi, 14). The Hebrew word רוח need not imply a personal influence, though, if we may judge from Josephus (Ant. Jud., vi, vii, 2; ii, 12), the Jews were inclined to give the word that meaning in this very case. In the New Testament times, however, the phenomenon had become very common. The victims were sometimes deprived of sight and speech (Matt., xii, 22), sometimes of speech alone (Matt., ix, 32; Luke, xi, 14), sometimes afflicted in ways not clearly specified. In the prominent part, while there is no mention of any bodily affliction beyond the possession itself (Matt., iv, 24; xvii, xv, 11; Mark, iv, 17; vii, 21; vii, 2). The effects are described in various passages. A young man is possessed of a spirit who, wheresoever he taketh him, dasheth him, and he foameth, and gasheth with his teeth, and pineth away, . . . and oftentimes hath he [the spirit] cast him into the fire and into waters to destroy him (Mark, ix, 17, 21). The possessed are sometimes gifted with superhuman powers: "a man with an unclean spirit, who had his dwelling in the tombs, and no man now could bind him, not even with chains. For having been often bound with fetters and chains, he had burst the chains, and broken the fetters in pieces, and no one could tame him (Mark, v, 2-4). Some of the unfortunates have been controlled by several demons (Matt., xii, 43, 45; Mark, xvi, 9; Luke, xi, 24-26); in one case by so many that their name was Legion (Mark, v, 9; Luke, viii, 30). Yet, evil as the possessing spirits were, they could not have power to hurt (Mark, viii, 29; Mark, i, 24, 34; iii, 12; v, 7; Luke, iv, 34, 41; viii, 29). And they continued to do so after His Ascension (Acts, xvi, 18-18).

The history of the early Church is filled with instances of similar diabolical agency. A quotation from Tertullian will suffice to give the prevalent notion that he is a god" (Apolog., tr. Edinburgh, p. 23). The facts associated with possession prove, he says, beyond question the diabolical source of the influence. What clearer result can this work like 1? Was there such a proof? The simplicity of truth is thus set forth: its own worth sustains it; no ground remains for the least suspicion. Do you say that it is done by magic or by some trick of the sort? You will not see anything of the sort if you have been allowed the use of your ears and eyes. For what argument can you bring against a thing that is exhibited to the eye in its naked reality? And the Christians expel by a word: "All the authority and power we have over them is from our naming of the name of Christ and the cross of Christ. It is not from our name, but it is thence that they are brought to Christ. They are brought to Christ at the hands of Christ as Judge and which they expect one day to overtake them. Fear Christ in God and God in Christ, they become subject to the servants of God and Christ. So at our touch and breathing, overwhelmed by the thought and realization of those judgment, few let them go the command the bodies they have entered." Statements of this kind embody the views of the Church as a whole. As is evident from the facts, that various councils legislated on the proper treatment of the possessed, that parallel with the public penances for catechumens and fallen Christians there was a course of discipline for the enervengens also, and, finally, that the Church established a special order of exorcists (cf. Martigny, "Dict. des antiqu. chrétien.").

Paris, 1877, p. 312.

All through the Middle Ages councils continued to discuss the matter: laws were passed, and penalties decreed, against all who invited the influence of the Devil or utilized it to inflict injury on their fellowmen (cf. the Bull of Innocent VIII, 1484; Julius II, 1504; and Adrian VI, 1523); and powers of exorcism were conferred on every priest of the Church. The phenomenon was accepted as real by all Christians. The records of criminal investigations alone in which charges of witchcraft or diabolical possession formed the chief object of the inquisition are voluminous. No one may consult such works as De Masseaux, "Pratiques des démons" (Paris, 1854), or Thiers, "Supplications," 1 or, from the Rationalistic point of view, Lecky, "Rise and Influence of Rationalism in Europe," 1, 1-138, and, for later instances, Constant, "Relation sur une épidémie d'hystéro-démomopatie" (Paris, 1863). And though at the present day among civilized races the cases of diabolical possession are few, the phenomena of Spiritism, which offer many striking points of resemblance, have come to take their place (cf. Pauvert, "La vie de N. S. Jesus Christ," I, p. 228; Raupert, "The Dangers of Spiritism," London, 1906; Lepicier, "The Unseen World," London, 1900; Miller, "Sermons on Modern Spiritualism," London, 1908). And if we may judge from the accounts furnished by the pioneers of the Faith in many of the ordinary countries, the territory of diabolical activity is there is no more apparent than it was in Galilee in the time of Christ (cf. Wilson, "Western Africa," 217; Waffelaert in the "Dict. apol. de la foi cathCHED" Paris, 1898, s. v. Possession diabol.).

REALITY OF POSSESSION DIABOLICUS. The question of the Infidel policy on the question is to deny the possibility of possession in any circumstances, either on the supposed position, that there are no evil spirits in existence,
or that they are powerless to influence the human body in the manner described. It was on this principle that, according to Lecky, the world came to disbelieve in witchcraft: men did not trouble to analyse the causes of evil cast out that could not be obvious, they simply decided that the testimony must be mistaken because "they came gradually to look upon it as absurd" (op. cit., p. 12). And it is by this same a priori principle, we believe, that Christians who try to explain away the facts of possession are unconsciously influenced. Though put forward once as a commonplace by leaders of materialistic thought, there is a noticeable tendency of late years not to insist upon it so strongly in view of the admission made by competent scientific inquirers that many of the manifestations of Spiritism cannot be explained by human agency (cf. Miller, op. cit., 7–9). But whatever view Rationalists may ultimately adopt, for a sincere believer in the Scriptures there can be no doubt that there is such a thing as possession possible. And if he is optimistic enough to hold that in the present order of things God would not allow the evil spirits to exercise the powers they naturally possess, he might open his eyes to the presence of sin and sorrow in the world, and recognize that God causes the sun to shine on the just and the unjust, and evil to proceed from His own hand for mysterious purposes (cf. Job, passim; Mark v, 19).

That mistakes were often made in the diagnosis of cases, and results attributed to diabolical agency that were really due to natural causes, we need have no hesitation in admitting. But it would be illogical to conclude that the whole theory of possession rests on imposture or ignorance. The abuse of a system gives us no warrant to denounce the system itself. Strange phenomena of nature have been wrongly regarded as miraculous, but the detection of the error has left our belief in real miracles intact. Men have been wrongly convicted of murder, but that does not prove that our reliance on evidence is essentially unreasonable or that no murder has ever been committed. A Catholic is not asked to accept all the cases of diabolical possession recorded in the history of the Church, nor even to form any definite opinion on the historical evidence in favour of any particular case. That is primarily a matter for historical and medical science (cf. Delrio, "Disq. mag. libri sex," 1747; Alexander, "Lectures," 307). As far as theory goes, the real question is whether possession has ever occurred in the past, and whether it is not, therefore, possible that it may occur again. And while the cumulative force of centuries of experience and the highly divergent views which are to be found in the action and teaching of Christ Himself as revealed in the inspired pages of the New Testament, from which it is clear that any attempt to identify possession with natural disease is doomed to failure.

In classical Greek δακτυλος, it is true, means "to be mad" (cf. Eurip. "Phem." 888; Xenophon, "Memor." I, i; i., ix; Plutarch, "Marc." xxii), and a similar meaning is conveyed by the Greek phrase δουλος εκατερω, when the Pharisees used it of Christ (Matt. xii), (John vii, 20; viii, 48); especially in John x, 20, where they say "He hath a devil, and is mad" (δουλος εκατερω, και μαρτηνω); δακτυλος, however, is not the word used by the sacred writers. Their word is δακτυλος, and the meanings given to it previously by profane writers ("to be subject to an appalled state"; "to be at a loss"; "to be confounded"; Sophocles, "Fr.", 180) are manifestly excluded by the context and the facts. The demoniacs were often afflicted with other maladies as well, but there is surely nothing improbable in the view of Catholic theologians that the demoniacs who were already diseased, or that the very fact of obsession or possession produced these diseases as a natural consequence (cf. Job, ii, 7; Goren, "Die christ. mystik", iv; Lesebre in "Dict. de la Bible", s. v. Demoniques). Natural disease and possession are in fact clearly distinguished by the Evangelists: "And when he was cast out (he came to his normal condition), the devil asked him (in the parable) if he were sick he healed" (Matt, viii, 16). "They brought to him all that were sick and that were possessed with devils . . . . and he healed many that were troubled with divers diseases; and he cast out many devils (Mark i, 33, 34); and the distinction is shown more clearly in the Greek: ταρσα τοις ασαδικοις εσται τοις δαιμονιασεσι.

A favourite assertion of the Rationalists is that lunacy and paralysis were often mistaken for possession. St. Matthew did not think so, for he tells us that "they presented to him all sick people that were taken with divers diseases [συνεληκτωρις και τορμές] and such as were possessed by devils [δαιμονιασατος], and lunsates [ευρωστοσ], and those who had the palsy [ευκλεμώνεος], and he cured them" (iv. 24). And the circumstances that attended the cures point in the same direction. In the case of ordinary diseases they were effected quietly and without violence. Not so always with the possessed. The evil spirits passed into lower animals with dire results (Matt., viii, 32), or cast their victim on the ground (Luke, iv, 35) or even killed them. If he went out of him, went out of him, and he became as dead, so that many said: He is dead" (Mark, ix, 25; cf. Vigouroux, "Les livres saints et la crit. rationaliste", Paris, 1891).

Abstraction altogether from the fact that these passages are themselves inspired, they prove that the Jews of the time regarded these particular manifestations as due to a diabolical source. This was surely a matter too closely connected with Christ's own Divine mission to be lightly passed over as one on which men might, without much inconvenience from the religious point of view, be allowed to hold erroneous opinions. If, therefore, possession were merely a natural disease and the general opinion of the time based on a delusion, we might expect that Christ would have proclaimed the correct doctrine as He did when His followers spoke of the sin of the man born blind (John, ix, 2, 3), or when Nicodemus misunderstood His teaching on the necessity of being born again in Baptism (ibid., iii, 3, 4). So far from correcting the prevalent conviction, He approved and encouraged it (John xx; 30). When the evil spirits, not their victims; told His disciples how the evil spirit acted when cast out (Matt., xii, 44, 45; Luke, xi, 24–26), taught them why they had failed to exorcise (Matt., xvii, 19); warned the seventy-two disciples against the main evil that was subject to them (Luke, x, 17–20). He even conferred express powers on the Apostles "over unclean spirits, to cast them out, and to heal all manner of diseases, and all manner of infirmities" (Matt., x, 1; Mark, vi, 7; Luke, ix, 1), and, immediately before His ascension, enumerated the thing which He had willed to order the truth of the revelation His followers were to preach to the world: "In my name they shall cast out devils; they shall speak with new tongues. They shall take up serpents; and if they shall drink any deadly thing it shall not hurt them; they shall lay hands on the sick and they shall recover" (Mark, xvi, 17–18). Thus does the expulsion of demons become so closely bound up with other miracles of the Christian dispensation as to hardly permit of separation.

The problem, therefore, that confronts us is this: If He believed as He did, and Christ's own mind with the mission He came to accomplish was based on a delusion, why did He not correct it? Why rather encourage it? Only two answers appear possible. Either He was ignorant of a religious truth, or He was deliberately misled through false—instructions that misled His followers, and that were eminently calculated, as indeed the issue proved,
to have very serious consequences, often of a most painful and deplorable kind, in the whole subsequent history of the Church. He founded. No Catholic can demand of admitting either of the explanations. His choice of accommodation for the sense of deliberative insinuation of religious error, we find it very hard to associate it with high moral principle, and entirely impossible to reconcile it with the sanctity of Christ.

Why possession should manifest itself in one country rather than another, why it should have been so common in the time of Christ and so comparatively rare in our own, why even in Palestine it should have been confined almost entirely to the province of Galilee, are questions on which theologians have speculated but on which no sure conclusion can ever be reached (cf. Delitzsch, "Syra der biblis. Psychol."). Leipzig, 1861; Lessître, op. cit.; Jeiler in "Kirchenlexikon" II, a. v. "Besessen"; St. Aug, X, xxii, De civ. Dei, 10, 22). The phenomenon itself is preternatural; a humanly scientific explanation is, therefore, impossible.

A humanly scientific explanation is, therefore, impossible.

Since Christ came to overthrow the empire of Satan, the efforts of the powers of darkness should have been concentrated at the period of His earthly life, and should have been felt especially in the province where, with the exception of a few brief visits to neighboring lands, His private and public life was passed. (See Exorcism, Exorcist.)

M. J. O'Donnell.

Possennisus, Antonius, theologian and papal envoy, b. at Mantua in 1533 or 1534; d. at Ferrara, 26 Feb., 1611. At sixteen years of age he went to Rome to study, familiarized himself with many languages, and became secretary to Cardinal Ercole Gonzaga. In 1559 he entered the Society of Jesus, and in 1560 was sent to preach against heresy in Savoy. Passing on to France, he was ordained priest in 1561, and preached in Paris and Lyons, and converted many Calvinists. He became rector of the colleges of Avignon and of Lyons, and in 1573 was secretary to the general of the Society, Everardo Mercuriano. Gregory XIII himself was among those who listened to his merits, when he occupied the last-named position. When John III of Sweden expressed his desire to become a Catholic, the pope, in 1577, made Possennisus his special legate to that Court, and Possennisus also had to negotiate with the Courts of Bavaria and Bohemia to secure support for Jesus in the event of political complications. The Jesuit envoy, attired as a secular, was received with great honour in Sweden, and the king made his profession of the Catholic Faith.

Many difficulties arose when measures for the conversion of Sweden were debated. Possennisus returned to Rome with proposals, some of which were judged inadmissible. Through his constant efforts several colleges (the German College at Rome, those of Brauneberg, Fulda, Olmütz, Prague, and others) received Swedish youths, with the object of forming a national Catholic clergy. At the close of 1578 he returned to Sweden as nuncio and Vicar Apostolic of Scandinavia. On his way, he again visited the Duke of Bavaria, the King of Poland, and the emperor. Discontented by the refusal of Rome to accept the King's terms, and the second part contains an examination of various sciences. (Several chapters of this book have been published separately.) Part of his letters were
published by A. M. Gratianus Borgo in "De scriptis ab Ant. Possessio ad Aloysianum fratrem litteris" (Florence, 1645–46).

Posidius, Saint, Bishop of Calama in Numidia, author of a short life of St. Augustine and of an indulcet or list of St. Augustine's writings. The date of his death is unknown; he was alive and in exile in 437 according to Prosper, who, in his "Chronicle," records that Possidius and two other bishops were persecuted and expelled from their sees by the Vandal king, Genseric, who was an Arian. Possidius (Vita S. Augustini, xxxi), after describing the death of St. Augustine, speaks of his unbroken friendship with him for forty years. He also, speaking of himself in the third person, lets it be known that he was one of the clergy of St. Augustine's monastery (ibid., xi). The date of his promotion to the episcopate is not known; according to Tertullian, about 357. He followed St. Augustine's example and established a monastery at Calama. At a council, held at Carthage, Possidius challenged Crispinus, the Donatist Bishop of Calama, to a public discussion which the latter declined. Shortly afterwards one of Crispinus's clergy, bearing the same name as his bishop, attempted to assassinate Possidius. Legal proceedings were instituted against Crispinus, the bishop, who refused to punish his presbyter. He was proved to be a heretic and was heavily fined, but the intervention of Possidius the fine was not exacted ("Vita," xii; St. Augustine, "Ep." cv., 4; "Contra Crescon." III, xvi). In 407, Possidius was exiled, and five other bishops, on a committee appointed to adjudicate upon some ecclesiastical matter, the particulars of which are not known. In 408 he heard of Augustine's life in a riot stirred up by the pagans at Calama (St. Augustine, "Epp.," x, xvi, xxiii). In 409 he was one of four bishops deputed to go to Italy to obtain the protection of the emperor against the Donatists. He was one of the seven chosen to represent the Catholic Church at the "Collatio" of 411 (see DONATISTS: The "Collatio" of 411). In 416 he assisted at the Council of Milevum, where fifty-nine Numidian bishops addressed a synodal letter to Innocent I, asking him to take action against Pelagianism. He joined with St. Augustine in the bishops of a further synod to Innocent on the same subject, and was at the conference between St. Augustine and the Donatist Emeritus. When the Vandals invaded Africa, he fled to Hippo and was present at the death of St. Augustine. His "Vita S. Augustini" composed before the capture of Carthage (439), is included in all editions of the works of St. Augustine, and also printed in Hurter's "Opp. Sac. Pat.". His indulcet will be found in the last volume of Migne's edition of the works of St. Augustine and in the tenth volume of the Benedictine edition.

F. J. Baccichus.

Postcommunion.—The Communion act finishes the essential Eucharistic service. Justin Martyr (I Apol., Ix-xvi), among nothing after describing the Communion, however, it was natural that the people should not be dismissed without a final prayer of thanksgiving and of petition, so every rite ends its liturgy with a short prayer or two and a blessing before the dismissal. The earliest complete liturgical extant, that of the "Apostolic Constitutions," VIII, contains two such prayers,—a thanksgiving (XV, ii–vi), and a blessing (XV, vii–ix). A significant resemblance between the Roman Rite and that of the "Apostolic Constitutions" is that at Rome, too, there were formerly at every Mass two prayers of the same nature. In the "Leonine Sacramentary" they have no title; their occurrence is obviously an effect of the liturgical development of the summer ember days may serve (ed. Feltoe, p. 51, "In jejunio"), the first Graecis tibi referimus, the second "Oculus tuae miserationis intende." The Gelasian Sacramentary calls the first postcommunion, the second "populum." In both sacramentaries these two prayers form part of the normal Mass said throughout the year, though not every Mass has both; the prayers "ad populum" in the later book are comparatively rare. They also begin to change their character. The former constant terms tuere, protege etc. are rarer; many are ordinary collects with no pronounced idea of prayers for blessing and protection. In the "Gregorian Sacramentary" the second prayer, now called Super populum, occurs almost only from Septuagesima to Easter; the first, Ad compendium, continues throughout the year, but it has a petrified and original character. The Ad compendium prayer (Postcommunion) has become a collect formed on the model of the collect at the beginning of Mass, though generally it keeps some allusion to the Communion just received. That is still the state of these prayers after the Council. The second, *Oro ad populum* is said only in ferial Masses in Lent. This restriction apparently results from the shortening of the Mass (which explains many omissions and abbreviations) and the tendency of Lent to keep longer forms. The Mass was shortened for practical purposes except (in many cases) during Lent, which keeps the long *preces* in the Office omitted at other times, sometimes more than two lessons at Mass, and so on. The medieval commentators (Amalarius, "De divinis officiis," III, xxvi; Durandus, "Rituale," II, xvi; Pierre de Ronsard, "Rituale," II, lix) explain this mystically; Honorius thinks the prayer to be a substitute for the Eastern blessed bread (*avribapso*). The *Oratio super populum* is now always the prayer at vespers on the same day. It has been suggested that its use at Mass in Lent may be a remnant of a custom, now kept only on Holy Saturday, of singing vespers at the end of Mass (Ghir, op. cit., 711). There remains the first prayer, called Ad compendium in the "Gregorian Sacramentary." Its name was uncertain through the Middle Ages. Durandus (op. cit., IV, xii) calls it merely *Oratio ad compendium*; the shorter "Postcommunion* for the Communion antiphon. The first "Roman Ordo* calls the prayer *Oratio ad compendium* (xxi); Rupert of Deutz calls it *Ad compendium* (De divinis officiis, II, xix). But others give it the name it had already in the Gelasian book, *Postcommunion* (Sicardus, "Mitrale," III, viii); so also many medieval missals (e.g., the Sarum). This is now its official name in the Roman Rite. The Postcommunion has lost much of its original character as a thanksgiving-prayer and has absorbed the idea of the blessing, though it is not adulated in the postcommunion, but the note of thanksgiving is often included (e.g. in the Mass Statut, for a confessor pontiff). It has been affected by the Collect on which it is modelled, though there is generally an allusion to the Communion. Every Postcommunion (and secret) corresponds to a collect. These are the three fundamental prayers of any given Proper Mass. The Postcommunion is said or chanted exactly like the Collect. First comes that of the Mass celebrated; then, if other Masses are sung, the Memorials, in the same order and with the same final conclusion as the collects. After the Communion, when the celebrant has arranged the chalice, he goes to the epistle side and reads the Communion antiphon. He then comes to the middle and says or sings *Domine Vobiscum*
Postulate

Postulate (Lat. *postulare*, to request)...

Postulate: Nicholas, Venerable, English martyr, b. at Kirkdale House, Egton, Yorkshire, in 1596 or 1597; d. at York, 7 August, 1679. He entered Douay College, 11 July, 1621, took the college oath, 12 March, 1623, received minor orders, 25 December, 1624, the subdiaconate, 18 December, 1627, the diaconate, 1628, and the priesthood two years later. He was sent to the mission, 29 June, 1630, and laboured in his native country with great benefit to hundreds of souls. Thomas Ward, who later wrote about him, knew him well. He was apprehended by the exciseman Reeves, at the house of Matthew Lyth, of Sleights, Little Beck, near Whitby, and was condemned under 27 Elizabeth, c. 2 for being a priest. His quarters were given to his friends and interred. One of the hands was sent to Douay College. His portable altar-stone is now venerated at Dodding Green, Wombourne.

J. B. N. W. M.

Postulant—Postulancy is a preliminary stage to the novitiate existing from the institution of monasticism. (1) In the East, the would-be monk had to submit to many rebuffs, and, while he continued to pray for some time, was discouraged in various ways. The hardships of religious life being exaggerated to test the sincerity of his intentions and the reality of his vocation. From the East this custom passed into the West. Cassian recommends it in his "institutions." "Let not the newly arrived candidate be admitted too easily, but let care be taken, as the Apostle St. John advises, to try the spirits if they be of God: therefore after the aspirant has repeated his request for admission, if for four or five days he seems to bear patiently the rebuffs given him, and the difficulties put in the way of his entrance, and still persists in his attempt, let the door be opened to him." This period of trial used to last in the different orders from three to ten days. After this, in the older orders, followed the novitiate of one, two or three years, postulat included rather as a preparation for, than a first period of the religious life. Thus, after his reception, the candidate returned to the world with unlimited leave of absence and liberty to re-enter when he thought fit. In the Custody of St. Victor, xxiv (see Martire, "De sanctis ecclesiae ritibus," Appendix, p. 265), this practice is mentioned as common to many monasteries; and, although it is not altogether condemned, it is shown to have had many disadvantages, for, in this way it was made easy for undesirable persons to place themselves under the protection of the Church.

(2) This system of outside probation has long been abolished. In most orders, however, the candidate, when admitted to the religious life, is not allowed at once to mingle with the other novices, but receives separately a preliminary initiation, more or less prolonged. This is called asceticism, or as the "period of postulation." The time occupied in this initiation is sometimes, but not always, reckoned as part of the novitiate.

(3) According to existing law, persons who aspire to the religious life, but have not yet been admitted into any particular order, must be regarded as postulants in the wider sense of the word; such as are Postulants of the normal school, or persons who, having decided to enter the religious state, remain as guests in the monastery, while waiting for their admission. Postulants, in the strict sense of the word, are those who are taking their first steps in the religious life, without having yet received the habit. Common law forbade regulars to receive as postulants in the wider sense of the word young persons under twenty years of age (see the decree of Clement X dated 18 May, 1675), and postulant lay-brothers could not be received before the age of nineteen full years (see Clement VIII, "Cum ad regularum", 19 March, 1603; this constitution has not been everywhere carried into effect). No general law compels religious to observe a period of candidacy. However, by the recent decree of 1 Jan., 1911, in orders where lay brethren take solemn profession, the general may, in individual cases, allow provincials to receive candidates for the grade of lay brother, after they have completed their seventeenth year; moreover, for valid profession, lay brothers must have made a postulature of two years (or longer, if the Constitutions so require). The same Decree prescribes that postulants shall be placed under the direction of a virtuous and experienced father. Nuns under solemn vows (at least in Italy) are ordered by the decree of the Sacred Congregation of Religious to begin their postulature of ten days before receiving the habit. The Regulations (Norme) of 1901 require that sisters shall remain as postulants for a period varying from six months to a year. The superior-general may extend the time fixed for the Congregation for not more than three months. The time of the postulant's probation is most conveniently passed in the novitiate house, but may be spent elsewhere.

For bibliography see Notice.

A. V. VERMESSER.
Potawatomi Indians, an important tribe of Algonquian linguistic stock, closely related dialectically to the Ojibwa and Ottawa, and living when first known to the French (about 1640) on and about the islands at the mouth of the Genesee River, Lake Michigan, having recently been driven from their homes in the lower peninsula by the Iroquoian tribes living toward the east. At a later period and until their removal to the west (about 1835-40) they held both shores of Lake Michigan from about Manitowoc (44°) on the west around to about Grand River (43°) on the east, and southward to the Wabash, comprising territory in Wisconsin, Illinois, Indiana, and Michigan, with some fifty villages, including those on the sites of Milwaukee, Chicago, South Bend (St. Joseph), and Gary, which is the site of the Lake Michigan port held earlier by the Illinois and Miami. According to tradition, which seems corroborated by linguistic evidence, the Potawatomi were originally one people with the Ojibwa and Ottowa, and derived their name, present in pluperfect, from the fire-angle of the fire place or fire makers from having moved off to the southward and kindled a new fire, i.e., formed a separate government for themselves. The three tribes have always been known as close confederates. It is very probable that the "Prairie Band," or the Miami or southern Miwaw, are identical with the ancient Mascoutens, the so-called "Fire Nation."

The Potawatomi were first met by the adventurous French explorer Jean Nicolet, the first white man in Wisconsin (1634-5). In 1641 they appear to have been present at the "feast of the dead" attended by the Jesuits at Michilimackinac and Joupes in the Huron country. In 1654-5 the explorers Radisson and Groselliers, on their own invitation, spent the winter among them on Green Bay. They were occasional visitors at the mission of Saint-Denis at Porte-aux-Choisins (now Bayfield, Wis.) on Lake Superior, founded by Allouez in 1665, and in December, 1669, the same devoted Jesuit, having established the mission of Saint Francis Xavier near the head of Green Bay, made an attempt to replace the Potawatomi, Sank, Foxes, and Winnebago, with visiting stations in their various villages. The war between the French and Iroquois, beginning about ten years later, gave temporary check to all the missions, and in 1687 the Green Bay mission was burned by the pagan Indians while the resident priest, Fr. Jean Enjahan, was absent with Denonvilliers' troops. On his return the next year it was restored, and a second mission, St. Joseph, was established by Allouez for the same tribe, on the river of that name, near the present South Bend, Ind. This mission continued with one long interruption until the removal of the tribe to the West, when the missionaries accompanied the Indians and re-established work in the new field. Political changes of administration, the rising struggle with England for control of the West, and a long war with the Foxes (1712-48) conspired to discourage the mission work. In 1721 the Jesuits left the mission at Green Bay, then under Fr. J. B. Chardon, devoted chiefly to the input and while that on St. Joseph River was occupied jointly by Potawatomi and Sauk and Fox, the suppression of the Jesuits in the French colonies in 1762 closed all their missions and for thirty years there was no priest west of Detroit, while the almost continuous wars for forty years—French and Indian, Pontiac's, the Revolution, and later to the Greenville treaty in 1795—our the population has been made must signify within a month his willingness to accept the dignity offered.

Laurentius, Institutiones Juris Canonici (Freiburg, 1603); Ferrari, Bibliothecae Canonicae, VI (Rome, 1800), a. v. Potawatomi.

William H. W. Fanning.
claimed twelve hundred Catholic Indians, principal among whom were the chiefs Pokagan and Bourassa, with thirteen flourishing schools, conducted jointly by the Jesuit and the Santa Heart.

The official Indian report for 1855 contains an interesting account of this mission by Fr. J. B. Duerinck, then in charge. It was then the only mission existing in the tribe, the Baptist work having been abandoned. Concerning Saint Mary's the agent in charge says (Ind. Rept. for 1855): "The missionary labors at Saint Mary's are divided into two establishments. The boys are under the charge of the 'fathers' of the institution, whilst the girls are under the kind care of the 'Ladies of the Sacred Heart.'"

Under these terms the girls were taught the practical and useful departments of farming, gardening, etc. Mr. Duerinck is a man of great energy and business habits, united with a devotion to the welfare of the Potawatomi Indians, to whom he has promised a father, a husband, and a friend, and by whom he is highly esteemed. His report is a bold expression of my conviction that this institution is of great service to these Indians. This influence is seen in the neat cottages and little fields of the 'Mission Indians' and the air of comfort and order apparent throughout the neighborhood."

Owing to friction between the progressive element and the conservative Prairie Band, the former were segregated in 1861 and took lands in severalty under the name of the Citizens Potawatomi. In 1868 they removed to Oka or Kansas, where they now reside. About three hundred are rated as Catholic, with two prosperous mission schools at Sacred Heart, St. Mary's (girls) in charge of the Sisters of Mercy, and St. Benedict's (boys) in charge of the Benedictines. The rest of the tribe, for whom no religious statistics are given, is still in Kansas or in the Mississippi Valley. The whole tribe originally may have numbered 5000 souls. In 1855 they were officially estimated at about 4000, of whom about 3700 were in Kansas. They number now in round numbers about 3000: Othallan (Citizen), 1800; Kansas (Prairie), 725; Wisconsin (no agent), 440; Michigan (including "Hu- ron" band), 450; Waipole Island, Ontario, Canada (Methodist), 225. The linguistic material of Potawatomi is meager, consisting chiefly of a few printed or manuscript vocabularies, the latter with the Bureau of Ethnology. They together with the small publications by the Baptist mission board, at Shawnee Mission, Kansas (about 1837). The Potawatomi were organized upon the clan system, having, according to Morgan, 15 gentes: Wolf, Bear, Beaver, Elks, Louis, Eagle, Bear, Porcupine, Car, Bald Eagle, Thunder, Rabbit, Crow, Fox, Turkey, Black Hawk. Like most of the Algonquin tribes of the central area they were semi-sedentary and semi-agricultural, but subsisted also largely by hunting and fishing, as well as by the gathering of wild rice and the preparation of maple sugar. They built communal bark-covered lodges, and buried in the ground or in hollow logs, excepting the Rabbit gens, which practiced cremation. They sacrificed chiefly to the sun, and each man had also his personal tutelary, which was chosen at their great "dream feast." Their ordinary dress was of buckskin, but the men frequently went almost naked excepting for the breechclout. Their primitive weapons were the bow, tomahawk, and knife; they fought generally on foot. Polygamy was common, but the women were noted for their reserve, as well as for their humanity and refined disposition as compared with other tribes. They were also experts in the athletic game of lacrosse. The majority of the tribe are now fairly prosperous farmers.

Pothier, Robert Joseph, a celebrated French lawyer, b. at Orleans, 9 January, 1859; d. there, 2 March, 1772. His father was a judge of the petty court, a position later filled by the son (1750), who at the same time was professor of French law at the University of Orleans (1750). His life, devoted to teaching and the administration of justice, was not marked by any important events; his considerable influence was exercised in his lectures and his works. Of an austere life, modest, disinterested, and profoundly religious, he was a characteristic representative of the legal profession under the ancien regime. His principal work was rather an arrangement of the texts of the Roman Law: "Pandectae Justinianae in ordinem digerentes," 3 vols. (Paris, 1748-52). Several times re-edited, and published under the patronage of the Chancelior d'Aguessseau, who offered him a professorship after the appearance of the first volume. Having written in collaboration with Prévost de la Jannes and Jousse, a remarkable "Introduction à la coutume d'Orléans" (Orléans, 1740), he published "Les Coutumes d'Orléans" (1770). He is especially known for a series of reprints on law, sales, constitution of rents, exchange, hiring, leases, leasing of cattle, contracts of beneficence, contracts alfactory, contracts of marriage, the community, dowry, law of habitation, tenure of the estate, possession, and title; they were published between 1761 and 1772; all collected in his "Traité sur différentes matières du droit civil" (Orléans, 1781). Other essays left in manuscript, principally on fiefs, successions, donations, civil and criminal procedure, were published between 1776 and 1778. His chief work in plain clear compilation, perfectly planned, were in the hands of the jurists who edited the new French Civil Code (Code Napoléon). As the editors took into account both the Roman and the common law, Pothier's writings were exceedingly useful for the purposes of the new codification which owed considerable to them, especially as regards questions of duties and contracts. See Thésard, "De l'influence des travaux de Pothier et du Chancelier d'Aguessseau sur le droit civil moderne" (Paris, 1866). Pothier's most interesting work, from a religious point of view, is his "Traité du contrat de mariage," in which he exposes in all their fullness the current Gallican doctrines. According to French lawyers, not only is the marriage contract distinct from the sacrament, and becomes such only through the nuptial benediction, but it is subject to the authority of princes, who can legislate on the marriages of their subjects, remove obstacles, and regulate the formalities; thus marriages of minors contracted without the consent of their parents are declared null and void. Further, marriage matters, not alone of separation from divorce, remain under the secular tribunals. In this way he was a forerunner of the secularization of marriage, and the establishment of civil marriage (Emsen, "Le mariage en droit canonique" Paris, 1891, I, 33 sqq.).

Deruy, " Dissertation sur la vie et les écrits de Pothier" (Orléans, 1828); Fraumont, " Vie de Robert Joseph Pothier" (Orléans, 1850).
Pothinus, Saint. See Gaul, Christian.

Pouget, Jean-François-Albert du, Marquis de Nadaillac, b. in 1817; d. at Rougemont, Clowns, 1 October, 1904; the scion of an old French family, and one of the most distinguished among modern men of anthropologic science. He devoted his earlier years to public affairs, and served in 1871 and 1877 respectively as prefect of the Departments of Basse-Pyrénées and Indre-et-Loire, proving himself an able and sympathetic administrator. On completing his term of office he retired into private life and devoted himself to scientific research, chiefly in the lines of paleontology and anthropology, giving particular attention to American questions on which he was a leading authority. He had much to do with the exploration of the caves of southern France, being especially interested in the evidence of artistic development in the primitive occupants. He was probably the foremost authority on cave drawings. He studied deeply the relation of science to faith, and was one of the first to warn the French nation of the impending danger of race suicide. To a dignified presence he united an exquisite politeness which sprang from a kind and tender spirit. A learned and earnest Catholic. He died at his ancestral chateau of Rougemont, near Clloys, Department of Eure-et-Loir, in his 87th year, and, as officially announced, "fortified by the sacraments of the Church", combining in himself the highest type of Christian gentleman and profound scientist. He was a member of learned societies in every part of the world, including several in the United States, and he held decorations from half a dozen Governments, besides being a chevalier of the Legion of Honour. He was also a correspondent of the Institute of France.

His published volumes and shorter papers cover a remarkably wide range of interest. In this country he is probably best known for his great work on Prehistoric America (in French), published in Paris in 1889, and in English at New York in 1884. Among other important papers may be noted those on "Tertiary Man" (1885); "Decline of the Birthrate in France" (1886); "The Glacial Epoch" (1886); "Manners and Monuments of Prehistoric Peoples" (Paris, 1888); "Origin and Development of Life upon the Globe" (1888); "Prehistoric Discoveries and Christian Beliefs" (1889); "Most Ancient Traces of Man in America" (1890); "The First Population of Europe" (1890); "The National..." (1890); "The Progress of Anthropology" (1891); "The Influence and Instinct" (1892); "The Depopulation of France" (1892); "The Lacustrine Population of Europe" (1894); "Faith and Science" (1895); "Evolution and Dogma" (1896); "Unity of the Human Species" (1897); "Man and the Ape" (1898); "Painted or Inscribed Figures... of Prehistoric Caverns" (1904). Most of these appeared first, either in the journal of the Institute or in the Revue des Questions Scientifiques of Louvain and Brussels.

James Mooney.

Pound, Thomas, lay brother, b. at Beaumont (or Belmont), Farlington, Hampshire, 29 May, 1538 or 1539; d. there, 26 Feb., 1512-13; eldest son of William Pound, esq., and of Eila of Wriothesley, Earl of Southampton. He is reported to have been educated at Winchester College. He was admitted to Lincoln's Inn 16 Feb., 1559-60, and his father dying in the same month, he then succeeded to Beaumont, and soon after was appointed esquire of the body of the king of France. He acted the part of Mercury in Gascoignes Masque, performed before the queen at Kenilworth in 1565. During the revellies of Christmastide, 1569, after dancing before the queen, he received a public affront from her, which induced him to retire from the court.

Shortly afterwards he was reconciled to the Church, probably by Father Henry Alway, and after some time of seclusion at Beaumont, began an active career as proselytizer. He was in the Marshalsces for six months in 1574; in Winchester Gaol for some months in 1575-76, and in the Marshalsces again from 9 March, 1575-76, to 18 Sept., 1580, being made a Jesuit lay-brother by a letter dated 1 Dec., 1578, from the Father-General Mercurian, sent at the instance of Father Thomas Stevens, S.J., the first Englishman to go to India. From the Marshalsces Pounte was removed to Bishop's Stortford Castle, and thence to Wisbech. Then he was in the Tower of London 13 Aug., 1581, to 7 Dec., 1585. He was in the White Lion, Southwalk, from 1 Sept., 1586, till he was sent back to Wisbech in 1587, where he remained nearly ten years. He was again in the Tower of London from Feb., 1596-7, to the autumn of 1598, when he was again committed to Wisbech. From Wisbech he was relegated to the Wood Street Counter, where he remained for six weeks from 19 Dec, 1598. After that he was in the Tower again until 7 July, 1601. He was then in Framlingham Castle, from which he was in Newgate, and in the following year he was indicted at York. Afterwards he was in the Gatehouse, Westminster, for some time, then in the Tower (for the fourth time) for four months, and lastly in the Fleet for three or four years. He did not leave the Fleet in 1604 or early in 1605, having spent nearly thirty years in prison. These facts are but the dry bones of the career of an heroic man, whose real biography has yet to be written. The "life" by Father Matthias Tanner, S.J., is full of inaccuracies.

Pousin, Nicolas, French painter, b. at Les Andelys near Rouen in 1594; d. at Rome, 19 November, 1666. His early history is obscure; his father had been a soldier, his mother was a peasant. In 1612, Varin, a wandering painter, was at Paris, where he experienced great distress. In despair he tried his fortune in the provinces but nothing remains of what he did at that time in Poitou and later with the Capuchins at Blois, as well as the six pictures painted in eight days for pupils in the College of Orleans in 1613. He studied under Varin, Lallemant, and Perrin and Dele, but they had no share in his development. The French school was then in a languid condition. The religious wars of the time rendered abortive the attempt of Francis I to inaugurate the Renaissance, and Henry IV had other things to engage his attention besides the arts. His successor sought rather such foreign artists as John of Bologna, Pourbus, and Rubens. At this juncture Pousin learned some engravings by Marc Antonio after Giulio Romano and Raphael. This was his road to Damascus. Antique beauty was revealed to him through the works of these sons of Italy and thenceforth he lived in the past. All modern civilization seemed barbarous to him. His experience was an illumination, a veritable conversion. Henceforth he had no rest until he found the fatherland of his heart and his ideas; he attempted to make Rome famous. Compelled to return to Paris he there encountered Marini, the famous author of the "Adonis", who contracted a warm friendship for the enthusiastic boy: "Che ha", said "una fanciulla..." in a letter to the Pope, "che arriva a Roma in 1624; ma Marini died within a few months and Pousin was alone in a strange city, help-
less, ill, without means, and reduced to doing hack work. The poor artist then met a countryman, the cook Duchet, who took pity on him, sheltered and cured him, and whose daughter he married (1629).

At the time of his arrival at Rome the school was divided into two parties, that of the manierists who followed Guido, and that of the brutal naturalists who followed Caravaggio, both in Poussin's opinion quackery, equally dishonest and remote from reality. He detested the affected airs of the fashionable painters, their sentimentality, their insipidity, their ecstacy. Nor was he less hard on the affectation of the "naturalists and their partiality for ugliness and vulgarity." He called Caravaggio's art "painting for lackeys", and added: "This man is come to destroy painting". Both schools sought to execute more beautifully or more basely than nature; Art was endangered for lack of rule, conscience, and discipline. It was time to escape from caprice and anarchy, from the despoticism of tastes and temperaments. This was what Poussin sought to achieve by his doctrine of "imitation". To imitate the antique was to approach nature, to learn conformity with reality, to recover life in its most lasting, noble, and human forms. Such at least was the doctrine and faith which he practised unceasingly in his works and letters. For this he became an archaeologist, a numismatist, a scholar. He used scientific thing too literary or too rationalistic which seems to us foreign to the genius of painting. But that this was relished by the French of the seventeenth century is shown by their commentaries on these works. The description of the two pictures, "Eliezer" and the "Manna", fills forty quarto pages in Félibien. Apart from these historical scenes which "relate" and "prove" there is a purely lyric side. In it evident the wonderful skill of the designer and the poet, detached from any attempt at anecdote or "illustration". Such were the "Bacchanalia", the "Triumph of Flora", the "Childhood of Jupiter", which do little more than repeat the theme of the joy and beauty of living. Here Poussin's genius found new restraint can only be compared to that of great musicians such as Rameau or Gluck. Properly speaking it is the genius of rhythm. This is his true sphere, as original as that of any master, and the inexhaustible source of his emotion and poetry. In a sense his work may be considered as a ballet. This was his idea in his famous letter on the modes of the ancients, who distinguished as many as seven, the Dorian, Phrygian, Lydian, Hystylian, etc. "Desire", he added, "before another year to compose a picture in the Phrygian manner. This phrase would have aroused less surprise if Whistler's works, with his "symphonies", "harmonies", "nocturnes", and "sonatas", had been known. But this music of painting which Whistler made chiefly a matter of colour seemed to Poussin a question of
POVERTY

movement. For it meant life understood as a dance which the Greeks made a science.

Finally the landscape becomes more and more important in this lyrical or poetical side of his work. Nature accompanies with its profound harmony the human sentiments which transpire on its surface, the persons are merely a melodious figure outlined against the chorus of things. As a landscape artist he is without a peer, unless it be Titian. Constable finds something in his landscape, in fact when the poet Heine (St. Petersburg) wrote his "Polyphemus" or his "Cacus," it is easy to understand (what no one since Virgil has felt) the naturalistic and mysterious origin of myths. Beyond doubt this is something far more profound than it at first seems. He finds expression in the "Canticle of creatures"; it is rather the religion of Epicurus or Lucretius, which teaches conformity with the ends of the universe and as supreme wisdom counsels harmony with the rhythm of nature. Towards the end of his life Poussin seems to have renounced the personal or dramatic element. His last works, the "Four Seasons" of the Louvre (1664-65), are simply four landscapes which please by variety of sense. Like the ancient sage the master leaves history and psychology, and devotes himself simply to nature. Between 1625 and 1641 he was absent from Rome only once (1641-2) at the command of Richelieu, who summoned him to Paris to superintend the work at the Louvre with the title of painter to the king. This journey was otherwise unfortunate for his work; he was splintered by the painters, who soon succeeded in driving him away. All that remains of this period are two large pictures, a "Last Supper," very mediocre, painted for St. Germain en Laye, a "Miracle of St. Francis Xavier," painted for the Jesuit novitiate, and a "Annunciation," painted for Richelieu's chateau at Rueil. These three canvases are at the Louvre. On his return to Rome Poussin found his authority much increased by his official title. He lived not far from the Trinité de Monti in a little side street where he had as neighbours Claude Lorrain and Salvator. Among artists he exercised a singular influence. Nearly all the Frenchmen who came to Rome to study, from Mignard to Le Brun and Sebastien Bourdon, not to mention his brother-in-law Gaspard Dughet (called "Guaspere"), admired him and claimed that he had learned something of them understood him. In his century he was an isolated genius, but his glory has not been useless to us: it alone more brilliantly in the decadence of the Italian school and it gave to the French school which it had hitherto lacked the levity.

LOUIS GILLET.

POVERTY.

I. The Theological Doctrine of Poverty.

—Jesus Christ did not condemn the possession of worldly goods, or even of great wealth; for He himself had rich friends. Patristic tradition condemns the opponents of private property; the texts on which such persons rely, when taken in connexion with their context and the historical circumstances, are capable of a natural explanation which does not at all support their argument. Nevertheless it is true that Christ constantly pointed out the danger of riches, which, He says, are the thorns that choke up the good seed of the word (Matt., xiii, 22). Because of His poverty as well as of His constant journeying, necessitated by the nature of His mission, He could say (Matt., xii, 46), "My friends are the poor holes, and the birds of the air nests; but the son of man hath not where to lay his head" (Matt., viii, 20), and to the young man who came to ask Him what he should do that he might have life everlasting. He gave the counsel, "If thou wilt be perfect, go sell what thou hast, and give to the poor" (Matt., xix, 21). The renunciation of worldly possessions has long been a part of the practice of Christian asceticism; the Christian community of Jerusalem in their first fervour sold their goods "and divided them to all, according as every one had need" (Acts, ii, 45), and those who embraced the state of perfection understood from the first that they must choose poverty.

Does this mean that poverty is the object of a special virtue? Gury (Theolog. morals II, i, 155) answers the question in the affirmative; and many religious writers favour the same opinion, which is supported by the ordinary convenantual and ascetical literature; what is prescribed by the vow of poverty is compared therein with the virtue of poverty, just as we compare the vows of obedience and chastity with the corresponding virtues. Between these two, however, the object for the object of a virtue must be something honourable or praiseworthy in itself; now poverty has no intrinsic goodness, but is good only because it is useful to remove the obstacles which stand in the way of the practice of the monastic vow. Poverty is not, as in the ascetics, "Gentes," III, cxxxiii; Suarez, "De religionibus," tr. VII, i, viii, c. i, n. 6; Bucercone, "Inst. theol. mor.," II, 75, n. 31). The practice of poverty derives its merit from the virtuous motive ennobling it, and from the virtues which we exercise in regard to the privations and sacrifices accompanying it. As every vow has for its object the worship of God, poverty practised under a vow has the merit of the virtue of religion, and its public profession, as enjoined by the Church, forms a part of the ritual of the Catholic religion.

The ancients understood the nobility of making themselves independent of the fleeting things of earth, and certain Greek philosophers lived in voluntary penury; but they prided themselves on being superior to the vulgar crowd. There is no virtue in such poverty as this, and when Dioscorides trampled Plato's carpet, saying as he did so, "This is the abode of Plato's pride," "Yes," answered Plato, "but only through your own pride." Buddhism also teaches the contempt of riches; in China the tenth precept of the monks forbids them to touch gold or silver, and the second precept of female nuns forbids them to possess anything of their own; but their ignorance of a personal God prevents the Buddhist monks from having any higher motive for their renunciation than the natural advantage of restraining their desires (cf. Wiegner, "Buddhisme chinois," pp. 155, 158, 158). If voluntary poverty is endorsed by the Church, which inspires it, the poverty which puts aside temporal possessions for the service of God and the salvation of souls is the most noble of all. It is the apostolic poverty of the Christian religion, which is practised in the highest degree by missionaries in pagan countries, and to a certain degree by all priests: all these voluntarily give up certain possessions and advantages in order to devote themselves entirely to the service of God.

Voluntary poverty is the object of one of the evangelical counsels. The question then arises, what poverty is required by the practice of this counsel or, in other words, what poverty suffices for the state of perfection? The renunciation which is essential and strictly required is the abandonment of all that is superfluos and is not necessary. It should take up the ownership of all property, but a man must be contented with what is necessary for his own use. Then
only is there a real detachment which sufficiently mortifies the love of riches, cuts off luxury and vain glory, and frees from the care for worldly goods. 

Cupidity, it is true, is still capable even in those who are vouchsafed a state of perfection. According to St. Thomas, the three obstacles which riches put in the way of acquiring perfection (Summa, II-II, Q. clxxxviii, a. 7). This abandonment of superfluities was the only way in which voluntary poverty could be understood before the introduction of the common life. The state of perfection, understood in its proper sense, requires also that the renunciation should be of a permanent character; and in practice this stability follows as the result of a perpetual vow of poverty. The warnings and counsels of Jesus Christ are applicable even to those who are vouchsafed a state of perfection. They teach men to moderate their desire for riches, and accept cheerfully the loss or deprivation of them; and they inculcate that detachment from the things of this world which our Lord taught when He said, "Every one of you that doth not renounce all that he possesseth, cannot be my disciple" (Luke, xiv, 33).

II. THE CANONICAL DISCIPLINE OF POVERTY.—

Among the followers of perfection, the spirit of poverty was manifested from the first by giving up temporal possessions. The goods of men as private property was strictly forbidden, being contrary to that common life which the patriarchs of monasticism, St. Pachomius and his disciple Schéonoudi, St. Basil, and St. Benedict, imposed upon their followers. But there was at that time no express vow of poverty, and no legal disability; the monastic profession required nothing but the rigorous avoidance of all that was unnecessary (cf. De Buck, "De sollemnitate votorum, praecipue paupertatis religioso epistola", x). Justinian ordained that the goods of religious should belong to the monastery (Novell. 5, iv sqq.; 123, xxxviii and xlii). This law gradually came into force, and in time created a disability to acquire property, although in the twelfth century, and even later, there were religious in possession of property. The rule of French law, under which a religious was considered as civilly dead, contributed to establish a necessary connexion between the vow of poverty and the idea of disability. The express vow of renunciation of all private property was introduced into the profession of the Friars Minor by the decrees of the Council of Paris. But the admission of another class of mendicants took place; hitherto no limit had been placed on the common possessions of religious, but the mendicant orders in the thirteenth century forbade the possession, even in common, of all movable property distinct from the convent, and of all revenues; and the Friars Minor of the strict observance, desiring to go one step further, assigned to the Holy See the ownership of all their property, even the most indispensable. Following the example of St. Francis and St. Dominic, many founders established their orders on a basis of common poverty, and the Church saw a large increase in the number of the mendicant orders until the foundation of the clerks regular in the sixteenth century; even then, many orders united common poverty with the regular clerical life: such were the Theatines (1524), whose rule was to live on alms and contributions spontaneously given; and the Society of Jesus (1540). It soon became evident that this profession of poverty which had so greatly edified the thirteenth century was exposed to grave abuses, that a certain state of destitution created more cares than it removed, and was conducive or tendency to introduce a strict observance; and that mendicity might become an occasion of scandal. Consequently the Council of Trent (Sess. XXV, c. iii, de reg.) permitted all monasteries, except those of the Friars Minor Observantines and the Capuchins, to possess immovable property, and consequently a productive income derived therefrom; but the Carmelites and the Society of Jesus, in its professed houses, continue to practise the common poverty which forbids the possession of assured incomes.

Congressions with simple vows were not bound by the canonical law forbidding the private possession or acquisition of property by members of approved orders: the disability of private possession was thus considered as an effect of the solemn vow of poverty; but this bond between the incapacity to possess and the solemn vow is neither essential nor indissoluble. So far as the effect of the vow on private possession is concerned, the vow of poverty taken by the formed confratres of the Society of Jesus has the same effect as the solemn vow of the professed fathers. St. Ignatius institutes in his order a simple profession preparatory to the final one with an interval between them during which the religious retains his capacity to possess property. A similar rule has been extended to all orders of men by Pius IX and to orders of women by Leo XIII (see PROFESSION, RELIGIOUS). On the other hand, since the Decretal of the Penitentiary of 1 Dec., 1820, confirmed by the declaration to the bishops of Belgium dated 31 July, 1878, the solemn profession of religious in Belgium (and Holland appears to enjoy the same privilege) does not prevent them from acquiring property, or keeping and administering it, or disposing of it; they are, however, in the exercise of their rights, to observe the submission they owe to their legitimate superiors.

The Vow of Poverty in General.—The vow of poverty may generally be defined as the promise made to God of a certain constant renunciation of temporal goods, in order to follow Christ. The object of the vow of poverty is anything visible, material, appreciable at a money value. Reputation, personal services, and the application of the mass, do not fall under this vow; relics are included only on account of the relicary which contains them, and (at least in practice) manuscripts, as such, remain the property of the religious. The vow of poverty entirely forbids the independent use, and sometimes the acquisition or possession of such property as falls within its scope. A person who has made this vow gives up the right to acquire, possess, use, or dispose of property except in accordance with the will of his superior. Nevertheless certain acts of abdication are sometimes left to the discretion of the religious himself, such as the gift and donation of his personal property, or even the legation of his income which professed religious under simple vows are required to make; and the drawing up of a will, by which the religious makes a disposition of his property to take effect after his death, may be permitted without any restriction. This license with regard to wills is of great antiquity. The simple fact of refusing to accept, for example, a personal legacy, may be contrary to charity, but cannot be an offence against the vow of poverty. The vow of poverty does not debar a religious from administering an ecclesiastical office which is conferred upon him, accepting sums of money to distribute for pious works, or assuming the administration of property for the benefit of another person (when this is consistent with his religious state), nor does it in any way forbid the fulfilment of obligations of justice, whether they are the result of a voluntary promise—for the religious may properly engage to offer a Mass or render any personal service—or arise from a fault, since he is bound in justice to repair any wrong done to the reputation of another person.

Submission to a superior (as we call the person whose permission, by the terms of the vow, is required for all acts disposing of temporal goods) does not necessarily call for an express or formal permission. A tacit permission, which may be inferred from some act, or attitude and the expression of some other wish, or even a reasonable presumption, will be sufficient. There is no violation of the vow, when...
POVERTY

the religious can say to himself, "the superior, who is acquainted with the facts, will approve of my acting in this way without being informed of my intention."

The case is more difficult, when he knows that the superior would expect to be informed, and asked for permission, even though he would willingly have given his consent: if it seems probable that he regards the request for permission as a condition of his approval, the inferior offends against the vow of poverty, if he acts without asking leave; but there is no offence if he knows that the superior and himself are agreed as to the essential nature of the act; and the question whether the act involves a certain loss or other harm may depend on the customs of different orders, the importance of the object, the frequent necessity of the act, the age and prudence of the inferior, his relations with his superior, the facility of obtaining access to him, and other similar considerations. Any admission of luxury or superfluity in daily life is derogatory to the religious state and the first conception of voluntary poverty; but it is not clear that this want of strictness is necessarily contrary to the vow. To decide this, regard must be had to the manner in which each particular vow, with all its circumstances, is generally understood.

A sin against the vow of poverty is necessarily an offence against the virtue of religion, and when committed in connexion with religious perfection it is even a sacrilege. It may be a grave matter, and, when the matter is grave, causes great difficulty to moral theologians; and while some regard the approbation of one franc as a grave matter, others are more lenient. Most theologians are inclined to compare the sin against the vow of poverty with the sin of theft, and say that the same amount which would make theft a mortal sin would, if appropriately contrary to the vow, constitute a grave offence against poverty.

With the exception of Palmieri (Opus morale, tr. IX, c. i, n. 123) and Génicot (Theol. mor., II, n. 98) moralists admit that, as in the case of sins against justice, so here circumstances may be considered. While many persons consider the importance and the wealth or poverty of the community in which the offence is committed, we are of opinion that it is rather the extent of the vow that should be considered, since the act is not a sin as such, but results from the causes, but by its being a forbidden appropriation. If the fault is aggravated by injustice it must, as an unjust act, be judged according to the usual rules; but when considered as an offence against the vow, its gravity would therefore be judged by the superior, who commits it. Thus a sum which would be very large for a beggar will be insignificant for a man who had belonged to a higher class. The social position should be considered; is it that of the poor or mendicant class? One cannot, without grave fault dispose independently of a sum which without grave fault one could not take away from a beggar. For many existing congregations, the matter will be that of a mortal sin of theft committed to the detriment of a priest of honourable condition. It follows that in such cases we must consider the economical value of the act in question; whether, for example, it is an act of simple use of administration; and when the religious does nothing but give away honourably goods of which he retains the ownership, the amount must be very large before the reasonable degree of it can be regarded as a grave sin for want of the required authorization. If the sin consists, not in an independent approbation, but in a life of too great luxury, it will be necessary to measure the gravity of the fault by the opposites between luxury and the poverty which is promised by vow.

Variety in the Vows of Poverty. — The vow of poverty is ordinarily attached to a religious profession; a person may however bind himself to a modest and frugal life, or even to follow the direction of an adviser in the use of his property. The vow may be perpetual or temporary. It may exclude private possession, or even to a certain point possession in common. It may entail legal disability or be simply prohibitive. It may extend to all goods possessed at present, or expected in the future; or it may be limited to certain classes of property; it may require the complete renunciation of rights, or simply forbid the application to personal profit, or even the independent use of the property. According to the present discipline of the Church, the vow of poverty taken by religious always involves the renunciation of rights: the religious is understood to give up to his order for ever the fruit of his work or personal industry, stipends of Masses, salary as professor, profits of any publication or invention, or savings from money allowed him for personal expenses. The independent disposal of any of these would be contrary not only to the vow, but also to justice. We have, moreover, to distinguish in the religious life between the solemn vow of poverty and the simple vow. The latter may be a step towards the solemn vow, or it may have a final character of its own.

The Solemn Vow of Poverty. — The solemn vow by common law has the following special characteristics: it extends to all property and rights; it renders one incapable of possessing property, and therefore of transferring it; it makes all gifts and bequests to religious incapable of being received, as well as the fruits of his own work, the property of the monastery; and in case property is inherited, the monastery succeeds in place of the professed religious, in accordance with the maxim: Quicquid monachus acquirit monasterio acquiri. Some orders are incapable of inheriting on such occasions, e.g., the Friars Minor Observantines, the Capuchins, and the Society of Jesus. The inheritance then passes to those who would succeed under the civil law in default of the professed religious. Sometimes before solemn vows are made by a religious, his monastery gives up its right of inheritance by arrangement with the family, and sometimes the religious is allowed to dispose of his share in anticipation. (As to these arrangements and their effect, see Vermeersch, "De relig. inst. et pers.", II, 4th ed., suppl. VI, 70 sqq.) As a consequence of this the monastery which inherited in place of the professed monk was the house to which he was bound by his vow of stability; but in more recent orders, the religious often changes his house, and sometimes his province, and his province, and his province, and sometimes his province, and sometimes the entire order; in such cases, the monastery according to the common usage is the whole order, unless some arrangement is made for partition among provinces or houses. (See Sanchez, "In decalogum, VII, xxxi sqq.; De Lugo, "De iustitia et iure," d. iii, nn. 25 sqq.) We have already said that the religious of Belgium preserve their capacity to acquire property and dispose of it: their acts therefore are valid, but they will only be licit if done with the approval of their superior. It will be the duty of the latter to see that the religious does not by this concession gain a monopoly in the country for the exclusive use of his own religious life do not suffer by this concession, which is, indeed, in other respects most important for their own civil security.

The Simple Vow of Religious Poverty. — The simple vow of poverty has these common characteristics: it leaves the capacity to acquire intact, and permits the religious to retain certain rights of ownership. In exceptional cases the simple vow may involve incapacity, as is characteristic of the last simple vows of the Society of Jesus. We have now to distinguish between the simple vow which is merely preparatory to the solemn vow, and the final simple vow.

(a) The simple vow in preparation for the solemn vow. — The Decree "Sanctissimus" of 12 June, 1858, with the subsequent declarations, constitutes the
POVERTY

Poverty and Pauperism.—In a legal and technical sense, pauperism denotes the condition of persons who are supported at public expense, whether within or outside of almshouses. More commonly the term is applied to all persons whose existence is dependent on any considerable period upon charitable assistance, whether this assistance be public or private. In the popular and press it frequently means the condition of poverty among a large group of persons. Thus, we speak of the pauperism of the most abject classes in the large cities. Poverty is even less definite, and more relative. In Catholic doctrinal and ascetical treatises and usage, it indicates merely renunciation of the right of private property, and the vow of poverty, or the poverty of the poor in spirit recommended in the Sermon on the Mount. Apart from this restricted and technical signification, poverty means in general a condition of insufficient subsistence, but different persons have different conceptions of sufficiency. At one extreme poverty includes paupers, while its upper limit, at least in common language, varies with the plane of living which is assumed to be normal. As used by economists and social students, it denotes a lack of some of the requisites of physical efficiency; that is, normal health and working capacity. Like pauperism, it implies a more or less prolonged condition; for to be without sufficient food or clothing for a few days is not necessarily to be in poverty. Unlike pauperism, poverty does not always involve the receipt of charitable assistance. As the definition just given sets up a purely material and utilitarian standard, namely, productive efficiency, we shall in this article substitute one that is more consonant with human dignity, yet which is in the highest degree content to the economic conception.—Poverty, then, denotes that more or less prolonged condition in which a person is without some of those goods essential to normal health and strength, an elementary degree of comfort, and right moral life.

One question which at once suggests itself is: whether the amount of poverty and pauperism existing to-day is greater or less than that of former times. No general answer can be given that will not be misleading. Even the partial and particular estimates that have been made are not always made in the light of the illuminating. Economic historians like Rogers and Gibbins declare that during the best period of the Middle Ages—say, from the thirteenth to the fifteenth century, inclusive—there was no such grinding and hopeless poverty, no such chronic semi-starvation in any class, as exists to-day among large classes in the great cities (cf. "Six Centuries of Work and Wages", and "Industry in England"). Probably this is true as regards the poorest of the poor at these two periods. In the Middle Ages there was no class resembling our proletarians, so called. In reality, no definite place, no certain claim upon any organisation or institution in the socio-economic organism. Whether the whole number of persons in poverty in the earlier period was relatively larger or smaller.

than at present, we have no means of knowing. The proportion of medieval persons who lacked what are to-day regarded as requisites of elementary comfort was probably larger, while the proportion that had to go without adequate food and clothing for long periods of time was not improbably smaller. One of the most satisifying economic indices of employment, of residence, and of shelter—was certainly much less frequent in the older time. If we compare the poverty of to-day with that of one century ago, we find all authorities agreeing that it has decreased both absolutely and relatively. Against this general fact, however, we must note one or two circumstances that are less gratifying. Both the intensity and the extent of the lowest grade of poverty are probably quite as great now as they were at the beginning of the nineteenth century; and there are some indications that the improvement occurring during the last twenty-five years has been less than in the preceding half-century.

Owing to lack of statistical data, it is impossible to estimate, even approximately, the proportion of the total population that is poor on the basis of unemployment statistics, eviction statistics, cases of charity relief, and other evidences of distress, Robert Hunter declared that the number of persons in poverty in the United States in 1804 was ten million; but it is clear that they were "much of the time unfed, poorly clothed, and improperly housed" ("The New Encyclopedia of Social Reform", 940; cf. also his work on Poverty). Ten millions represented at that time about one-eighth of our total population. Professor Bushnell estimated the number of persons known to be in receipt of public or private relief at three millions (Modern Methods of Charity, 385-90). Of course the total number of persons who received charitable aid was much larger, for a large proportion of such cases do not come to the knowledge of the statistics. On the other hand, not all who are charitably assisted are paupers, nor strictly speaking in poverty. Mr. Hunter's estimate is perhaps too high. After a very careful and thorough investigation of the poor in London, completed in 1902, Charles Booth found that nearly thirty-one per cent of the people of that city were in poverty (cf. "Life and Labor of the People in London"). This estimate was fully and remarkably confirmed by the studies of Seebom Rowntree in York, where the proportion of inhabitants in poverty appeared as twenty-eight per cent (cf. "Poverty: a Study of Town Life"). There are good reasons for thinking that both these estimates are under-estimates, if poverty be understood according to the definition adopted in this article. For example, Rowntree placed above the poverty line all persons who were in a condition of present physical efficiency, even though many of them were unable to make any outlay for carfare, amusement, recreation, newspapers, religion, societies, or insurance against old age. Evidently, physical efficiency in such circumstances can be maintained only for a few years. At any rate, this condition is not elementary comfort nor decent existence. Since wages and their purchasing power are quite as high in England as in any other country of the world, the proportion of poverty is probably as great in the latter as in the former.

The causes of poverty are very numerous and very difficult to classify satisfactorily. While the division of them into social and individual causes is useful and not insufficiently rigorous, for each of these is often to some extent responsible for the other. Where both causes affect the same person, it is frequently impossible to say which is the more important. A better classification is that of immediate and original causes and of remediable and non-remediable, which is the true original cause, nor how many of the intermediate causes have operated as mere instruments, and contributed no special influence of their own. As a rule, each case of poverty is due to more than one distinct factor, and it is not possible to measure the precise contribution of each factor to the general result. In any particular situation, the method is to assign the chief causes and to state which seems to be the most potent. Professor Warner applied this method to more than 110,000 cases which had been investigated in London, in five American cities, and in seventy-six German cities ("American Charities", 1st ed., 22-58). He found the principal cause to be: in 21.3 per cent of the whole number of instances, misconduct, such as drink, immorality, inefficiency, and a roving disposition; in 74.4 per cent, misfortune, under which head he included such factors as lack of normal support, matters of employment, and individual incapacity as distinguished from individual fault. Misfortune was, therefore, the predominant cause in three and one-half times as many cases as misconduct. Among the particular chief factors the disease of the individual, with employment with 17.4, no male support with 8, sickness or death in family with 23.6, old age with 9.6, insufficiency of employment with 6.7, poorly paid employment with 4.4, and inefficiency and shiftlessness with 8.28. In a great many of the cases of the contention of Dr. E. T. Devine, that poverty is economic, the result of maladjustment, that defective personality is only a halfway explanation, which itself results directly from conditions which society may largely control" (Misery and its Causes, 11).

It must be noted, however, that Professor Warner aims to state the immediate causes only. In a large proportion of cases these are the result of some other cause or causes. Thus, disease, accident, or unemployment might be due to immorality or intemperance in the more or less distant past, and what is now classified as culpable inefficiency or shiftlessness might be ultimately traceable to prolonged unemployment. The important lesson conveyed by this and every other attempt to estimate the comparative influence of the various causes of poverty is that we must never regard our estimates as more than very rough approximations. Certain factors are known to be very important everywhere. They are: intemperance, sexual immorality, crime, immorality, and unemployment; on the other hand, it often appears as the effect of these. Almost all of the other factors may properly be regarded in the same light, as causes and as effects reciprocally.

Among the principal effects of poverty are physical suffering, through want of sufficient sustenance, through sickness, and other forms of disability; moral degeneration and immorality in many forms; intellectual defects and inefficiency; social injury through diminished productive efficiency, and unnecessary expenditures for poor relief; finally, more poverty through the vicious circle of many of the effects just enumerated. For example, intemperance, improvidence, sickness, and inefficiency are at once effects and causes. In a word, the effects of poverty are not cumulative to the extent necessary to elicit the fervent wish that this condition might be totally abolished.

The relief of poverty, especially under the direction of the Church, has been discussed at length in the earlier chapters. We may note the fact that the poor are now assisted by the
POVERTY

The public authorities, by churches, by religious and secular associations, and by private individuals. All these are subject to a necessity, but all are necessary. In many countries old-age pensions and insurance, housing activities, and insurance against sickness and other forms of disability, prevent a considerable amount of poverty, and thus relieve it in the most effective fashion. At present, poor-relief is much greater in extent caused by the Church, and to a much less extent by the Church, than in the period before the Protestant Reformation. The remedies and preventative of poverty are as numerous and various as the causes. Persons who attribute it almost wholly to the extent sickness produce, and that, time, and to the use of one-sided and inefficient methods of dealing with poverty. While a large proportion of the individual causes of poverty are: ultimately traceable to social causes, to: important defects in social order, and the measures taken to deal with poverty are, nevertheless, an original and independent influence. This is clearly seen in the case of two persons who have precisely the same opportunities, environment, and natural endowments, only one of whom is in poverty. For such causes individual remedies are obviously indispensable. On the other hand, it is only the crassly ignorant who can honestly think that all poverty is due to individual defects, whether culpable or not. Individual remedies, such as: regeneration of character, cannot lift out of poverty the wage-earner who is without employment. Individual and social causes originate, produce respectively their own specific influences, and can be effectively counteracted only by measures that affect them directly.

Of the individual causes that must be prevented in whole or in part by individual regeneration, the principal are: immorality, indolence, and improvidence. All these would be responsible for many cases of poverty even if the environment and the endowments were ideal. Each of them is, indeed, frequently affected by social forces, and consequently is prevented to some extent by social remedies. Thus, immorality can be diminished by a better regulation of the liquor traffic, and by every measure that makes better provision for food, clothing, housing, security, and opportunity among the poor. Immorality can be lessened by more stringent and effective methods of detection and punishment. Indolence can be discouraged and to some extent prevented by compulsory labour colonies, as well as by penalties inflicted upon persons who refuse to provide for their natural dependents. Imprisonment can be greatly lessened by laws providing larger economic opportunities, insurance against disability, and better methods of saving. Yet, in every one of these cases, the remedy which aims at improvement of character will be beneficial: and in many cases it will be indispensable. The chief causes of poverty to be removed by social methods are: unemployment, low wages, sickness, accident, old age, improper woman labour and child labour, unviability, the refusal of head of family to provide for support of family, and industrial inefficiency. The necessary social remedies must be applied by individuals, by voluntary associations and by the State; and the greater part of them will fall under the general head of larger economic opportunity. If this were attempted, if the poverty line would enjoy adequate incomes and better conditions of employment generally, and thus would be enabled to protect themselves against most of the other causes of poverty which have just been enumerated. In great part, this larger economic opportunity will have to come through legislation directed towards a better organization of production and distribution, and towards an efficient system of industrial education. Legal provision must also be made for insurance against unemployment and old age, and for the coercion and punishment of negligent husbands and fathers. Since, however, many of these social causes of poverty are frequently due, in part at least, to individual delinquencies, they are curable to a considerable extent by individual remedies. Sickness, accident, inefficiency, and unemployment are often the results of intemperance, immorality, and indolence. Whenever this is the case, the reformation of character must enter into the remedy. In a word, we may say that the corrigibles of some causes of poverty are in the individual, others in the community, and others in both individual and community; but that in nearly all cases both methods will be to some extent effective.

The abolition of all poverty which is not due to individual faults of character, is no desideratum; but the abolition of poverty is one of the ideals of contemporary philanthropy and social reform. It is a noble aim, and it ought not to be impossible of realization. Against it are sometimes quoted the words of Christ: "The poor you have always with you", but I am inclination in the present sense, and it is obvious addressed to the Disciples, not to the world. Until the words have been authoritatively given a universal application, the repetition of them as an explanation of current poverty, or as an argument against the abolition of poverty, will be neither convincing nor edifying. Equally irrelevant is the fact that poverty is highly honoured in ascetical life and literature.

In the first place, there is question here of the abolition of the poverty that is involuntary, not that which is freely embraced. In the second place, religious poverty generally includes those things the lack of which makes the other kind of poverty so undesirable, namely, the requisites of elementary health and comfort, and decent living. Nor should we oppose the abolition of poverty on the ground that this would lessen the opportunities of the poor to practise humility, and of the rich to exercise benevolence. At present the majority of the people are not in poverty, yet no one urges that they should descend to that condition for the sake of the greater opportunity of humility. There would still be an abundant room for the exercise of both these virtues after all involuntary poverty had disappeared, for there would be no lack of suffering, misfortune, and genuine need. On the other hand, those who had escaped poverty or been lifted out of it, would be better able to practise many other virtues more beneficial than compulsory humility.

Poverty has, indeed, been a school of virtue for many persons who otherwise would not have reached such heights of moral achievement, but these are the exceptions. The vast majority of persons are better off, physically, mentally, and morally, when they are above the line which marks the lower limit of elementary health, comfort, and decency. For the great majority, the wish of the Wise Man, "neither poverty nor riches", is the most desirable condition for right and reasonable life. If any person sees in poverty better opportunities for virtuous living, let him embrace it, but no man ought to be compelled to take this course. After all, the proposal
to abolish involuntary poverty is merely the proposal to enable every person to have a decent livelihood, and enjoy that reasonable and frugal comfort which lessened and diminished the number of weary wage-earner, and which, consequently, is the normal condition of every human being. It merely seeks to lift the lowest and weakest classes of the community to that level which Father Pesch believes is both degrading and injurious to national security. These living conditions which are in conformity with the contemporary state of civilization, and in this sense worthy of human beings" (op. cit. infra., II, 276).

JOHN A. RYAN.

POWEL, PHILIP, VENERABLE (alias MORGAN, alias PROSSER), martyr, b. at Tralon, Breconshire, 2 Feb., 1594; d. at Tyburn 30 June, 1646. He was the son of Roger and Catharine Powel, and was brought up to the law by David Baker, afterwards Dom Augustine Baker, O.S.B. At the age of sixteen he became a student in the Temple, London, but went to Douai three or four years later, where he received the Benedictine habit in the monastery of St. Gregory (now Downside Abbey, Bath). In 1618 he was or- dained priest and in 1622 left Douai for the English mission. About 1624 he went to reside with Mr. Powyns of Leighland, Somersetshire, but, when the Civil War broke out, in 1645, retired to Devonshire, where he stayed for a few months with Mr. John Trevelyan of Yarncombe and then with Mr. John Coffin of Parkham. Powlyn, afterwards served for six months as chaplain to the Catholic soldiers in General Goring's army in Cornwall, and, when that force was disbanded, took ship for South Wales. The vessel was captured on 22 February, 1646; Father Powel was recognized and denounced as a priest. On 11 May he was ordered to London by the Earl of War-wick, and confined in St. Catherine's Gaol, Southwark, where the harsh treatment he received brought on a severe attack of pleurisy. His trial, which had been fixed for 30 May, did not take place till 9 June, at Westminster Hall. He was found guilty and was hanged, drawn and quartered at Tyburn. At the instance of the Common Council of London the head and quarters were not exposed, but were buried in the old churchyard at Moorfields. The martyr's crucifix, which had formerly belonged to Feckenham, is kept at Westminster, is preserved at Downside, with some of his hair and a cloth stained with his blood.

G. ROGER HUDLESTON.

POWELL, EDWARD, BLESSED. See THOMAS ABEL, BLESSED.

POYNTON, WILLIAM, b. 20 May, 1782, at Peters- field, Hants; d. 26 Nov., 1827, in London. He was educated at the English College at Douai, where he was ordained in 1786. He remained as professor, and afterwards prefect of studies till the college came to an end during the 2 years 1796-1798. After undergoing eighteen months imprisonment, he was set free, and returned to England in March, 1795. Poynton with the students from the South went to Old Hall, where he took a leading part in the foundation of St. Edmund's College, being first vice-president, then (1801-1813) president. In 1803, Bishop Douglass of the London district being in declining health, Dr. Poynton was consecrated his coadjutor, remaining at the same time president of the college. On the death of Bishop Douglass in 1812, Bishop Poynton succeeded as vicar Apostolic. His position was rendered difficult by the persistent attacks of Bishop Milner in pamphlet and even in his past- orals (see MILNER, JOHN). Dr. Poynton endured all Milner's accusations in silence, having the support of all the other English and Scotch bishops; but when in May, 1814, on the issue of the famous Quanrantotti Rescript, which sanctioned all the "security" and restrictions, Milner went to Rome to obtain its re- versal, Dr. Poynton followed him there and wrote his "Apologetical Epistle" defending himself to Propaganda. Quanrantotti's Rescript was with- drawn, and in its place was substituted a "Letter to Dr. Poynton", dated from Genoa, where the pope had taken refuge. A limited veto was sanctioned, but the exequatur was refused. Milner was directed to abstain from publishing pastoral or pamphlets against Dr. Poynton. He obeyed this injunction, but continued his attacks in leading to the "London Journal" until he was peremptorily prohibited by order of the pope, under pain of being deposed. During his episcopate Dr. Poynton paid four visits to Paris of several months each (1814, 15, 17, and 22), with the object of reconciling the colleges at Douai and elsewhere, which had been con- fiscated during the Revolution. He received the support of the Duke of Wellington and Lord Castle- ritch, and of the British commissioners appointed to deal with the claims. He succeeded eventually in recovering the colleges themselves at least, and a sum of £20,000 which had been kept in the names of the bishops, but the main claim amounting to £120,000 was lost. The French indeed paid it to the British commis- sioners, but these refused to hand it over, on the plea that it would be applied to purposes considered by English law as "superstitious". The final de- cision was given in November, 1825. It is said that the disappointment of the failure of his long labours notably shortened the bishop's life. His principal works are: "Theological Encyclopaedia of the Banbanus" (London, 1811); "Epistola Apologetica", tr. by Butler (London, 1820), also appeared in Butler, "Hist. Mem."; 3rd edition; "Prayerbook for Catho- lical Sailors and Soldiers" (London, 1858); "Evidences of Christianity" (London, 1827); "New Year's Gift", in Directories (1813-1815); "Catholic Pastoral, pastors etc. There is a portrait of him by Ramsay (1803) at St. Edmund's College, another in "Catholic Directory" for 1829; also a bust by Turnerelli and another at Moorfields.

BERNARD WARD.

POXIO (PUTTEUS), ANDREAS, Italian painter and architect of the Baroque period, b. at Trent, 1642; d. at Vienna, 1709. The greater part of his life was spent at Genoa, Rome, Turin, and Vienna. After his literary studies, he devoted himself to painting, and at twenty-four entered the Society of Jesus as a lay brother. After his death he was commemorated by a memoir and a medal. Poxio was an unrivalled master of perspective: he used light, colour, and an architectural background as means of creating illusion. In the Baroque period, instead of employing...
POZZONI, Domenico. See Hong-Kong, Vicariate Apostolic of.

POZZUOLI, Diocese of (Puteolana).—The city of Pozzuoli in the province of Naples, southern Italy, on the gulf of the same name, was founded by the Cumesans, whose port it became, under the name of Dicearchia. It was used by the Carthaginians in the Second Punic War. The Romans took possession of it, fortified it, and gave it the name of Puteoli. Hannibal sought in vain to take this place, which became a Roman colony in 194 B. C. and was thereafter the most important port of Italy, enjoying exceptional municipal liberties. The harbour was set off from the sea by a line of pilasters supporting a long arcade, which was restored later by Antonius Pius. Caligula connected the ports of Pozzuoli and of Baiae with a pontoon bridge. In the third century Pozzuoli fell into decay. In 410, it was besieged and sacked by Alaric, in 544 by Gotila, and in 716 by Grimoaldo II, Duke of Benevento, who, however, did not succeed in taking it from its Byzantine masters; in the tenth century, it was several times the object of Saracen incursions. In 1014 Pozzuoli was taken by the Neapolitans, and later passed, with Naples, into the King-

dom of the Two Sicilies. In 1448 and 1558, it suffered from severe earthquakes; in 1550 the Turks landed and wrought frightful havoc in the town. Abundant ruins of villas and temples attest its ancient splendour. Among the temple ruins, the most important are those of the Temple of Serapis and of the Serapeum. The last was destroyed in 1843 and an establishment of therapeutic baths; there remain the cells and many of its columns, also sixteen bath-rooms for baths in the mineral water that flows near by. The work of excavation (1838) exposed the remains of an amphitheatre that had a capacity of 30,000; there are also the ruins of a theatre, and of thermes or hot baths, where was found, among other objects, the Venus Anadyomene of the Naples Museum. The object of greatest interest at Pozzuoli, however, are the sulphur caves, the "forum Vulcain" of the ancients, which, through crevices in the earth, exude sulphuretted hydrogen and sulphuric acid. In 1199 there was a severe volcanic eruption from these caves. There are also four mineral springs, and two caverns, known as the "Grotta del Cané", which exude carbonic acid, and the "Grotta dell' Ammoniaca".

On his voyage to Rome in 1721, Pope Benedict XIII, where he met some "brothers" (Acts, xxviii, 13, 14), and among these Jews there may have been Christians; no doubt the Apostle took advantage of the opportunity to preach to his countrymen the mystery of the Christian religion. That is why St. Paul, a disciple of St. Paul, was first Bishop of Pozzuoli and is a fabrication of the notorious Dositheos; on the other hand, the Bishops St. Celsus and St. Joannes governed the diocese before the fourth century. Proculus, Aetius, Eutyches, and St. Artemas were martyrs of Pozzuoli, and St. Januarius of Benevento and his companions suffered martyrdom here. In the fourth century the bishop of this see was Florentius, against whom Pope Damasus was compelled to seek the assistance of the emperors. Bishop St. Theodorus died in the civil wars of 316, in the form of a fake, and was buried in the basilica of St. Peter. The first Bishop, St. Celsus, was Bishop of Epeius in 449; the Bishop Stephanus, who Cappelletti names at this period, should be referred to the seventh century, or later. Other bishops were Gaudioso (580); St. Leo (about 530), later a hermit; Ludovico of Costanzo, who, with the assistance of Alfonso of Aragon, was at first a usurper of this see, but was later recognized by Nicholas V; Carlo Borromeo (1537), a relative of the saint of the same name; Gian Matteo Castaldi (1542), who rebuilt the cathedral; Lorenz Mongvio (1617), a godfather, formerly Auxiliary Bishop of Sirmium, and later Bishop of Valencia (he was a Franciscan), unjustly accused, and held prisoner in Castel Santi' Angelo; Martin Leon y Cardenas (1619), to whom a public monument was erected, in recognition of his many merits. The cathedral rises on the ruins of the Temple of Augustus; it contains some good pictures, among them the Martyrdom of San Gennaro by Guido Reni. The churches of Santa Maria delle Grazie and of Santa Croce are worthy of note. The diocese is a suffragan of Naples; it has 50 parishes, with 57,100 inhabitants, 1 religious house of men, and 3 of women, and 1 educational establishment for girls.

CAPPELLETTI, Le Chiese d'Italia, XX.

U. BENIGNI.

Prades, Jean-Martin de, theologian, b. about 1720 at Castelsarrasin (Diocese of Montauban), d. in 1782 at Glogau, famous through an irreligious thesis. Having finished his preliminary studies, he went to Paris, where he lived in many seminaries, especially in that of St.-Sulpice, where he became acquainted with the principal publishers of the "Encyclopédie", and supplied them with the article on "Certitude". About the end of 1751, he presented himself for the doctorate, driven, as a mémoire of that time says, "by the incredulous, who, in order to justify his blasphemies, wanted to have his doc-
trine approved by the Faculty". Prado wrote a very long thesis, which the examiners accepted without reading. The defence, which took place on 18 November, was very sharp, and the scandal broke out. On 15 December following, the Faculty declared that the passions of justice and charity were in harmony with the decisions of the faculty and rulers. On 1 January following, the censure was published. According to Abbé de Prades, the soul is an unknown substance; sensations are the source of our ideas; the origin of civil law is from God; from which are derived the notions of just and unjust; of nature and evil; natural law is empirical; revealed religion is only natural religion in its evolution; the chronology of Moses's books is false; the healings operated by Jesus Christ are doubly miraculous, since those operated by Eusebius present the same characteristics. The archbishop of Paris and several bishops approved the censure; afterwards, on 2 March, Benedict XIV condemned the thesis; at last the Parliament of Paris issued a decree against the author; further, Stanislas, Duke of Lorraine, incited the Faculty against the Abbé.

The latter found a refuge in Holland, where he published his "Apology" (1752). It consists of two parts: a third part containing "reflections upon the Pastoral Letter of the bishop of Montauban and the Pastoral Instruction of the bishop of Auxerre" as written by De Bonneville, Brother of the Apology of the Abbé de Prades" (1753). The question is whether the Abbé de Prades is not the author of an "Apology of the Abbé de Prades" in verse. Upon the recommendation of Voltaire and of the Marquis of Argens, the Abbé became lector to Frederick of Prussia and went to Berlin. Frederick gave him a pension and two canonsries, the one at Oppeln, the other at Glogau. From the year 1753, negotiations were entered upon between the Abbé de Prades and the Bishop of Breslaw, Philip de Sermont, with a view to receive at Berlin Frederick himself induced the Abbé to return to "the bosom of the Church". Benedict XIV and the Cardinal of Vencin wrote the formula of recantation which was signed by the Abbé. In 1754, the Faculty of Paris again inscribed the Abbé upon the list of bachelors. The Abbé de Prades became the archdeacon of the Chapter of Glogau, and died in that town in 1782.

Besides the works quoted, he left an "Abrégé de l'histoire ecclésiastique de Fleurie", tr. Berne (Berlin, 1747), II; "Thymin avec une viole anticlitique par voie de prêtres" by Frederick II. This would make us doubt the sincerity of the recantation of the Abbé de Prades. To him is generally ascribed "le Tombeau de la Sorbonne" translated from Latin (1782). According to Quérard, he left in manuscript a complete translation of Taucius, which remains unpublished.

What has become of the manuscript is unknown. It is said also that he worked, before leaving France, on a Treatise on "the Truth of Religion".

JOSEPH DÉDIEU,

Prado, JEROME DE, exegete, b. at Beza in Spain, 1547; d. at Rome, 13 Jan., 1595. He entered the Society of Jesus in 1572; taught literature; and then filled the chair of Scripture in Cordova for sixteen years. His great work is "Tomus primus in Ezechiel" (fol. pp. 360; Rome, 1596). After sixteen years spent on this tome he died at Rome, where he was seeking illustrations for it. He had reached the third chapter of the remainder of Ezechiel, as interpreted by John Baptist Villalpando S.J., of Cordova, who added two volumes: Of these the second is in two parts: I. "Explicationem Ezechielis prophetae, paras prima, in tredecim capita sequentia" (fol. pp. 104; Rome, 1604); II. "De postrema Ezechielis prophetae visione" (fol. pp. 655; Rome, 1606). This second part of the second volume goes into a detailed archeological study of the Temple. The third volume of this commentary on Ezechiel is entitled "Apparatus urbis ac templi Hierosolimitani" (fol. pp. vii, 603; Rome, 1604). There are two parts to the volume, and the work of Prado is the third volume of the series. Prado published various Commentaries on Isaías, Zachary, Micheas, the Epistle to the Hebrews, together with a book on Biblical chronology and the MSS. works left by Prado, several of which are in the National Library of Madrid. Three volumes published by Vives and Sanchell, and a fourth by Philip II, at whose request and cost the work begun by Prado was brought to a successful completion. These three volumes have been highly esteemed for their thorough and scientific study of Jewish coins, weights, and measures; likewise for the care with which the Temple and City of Jerusalem are reconstructed from the very few data then at hand. Cardinal Wiseman found the work of Prado to be "still the great repertory to which every modern scholar must recur, in explaining the difficulties of the book" (Science and Revealed Religion, II, London, 1851, 199). The younger Rosenmüller calls these "a work replete with varied erudition, and most useful to the study of antiquity" ("Ezechielis Vaticina", I, Leipzig, 1828, 32, in Wiseman, I. e.). Among those whom Prado inspired with his thoroughness may be mentioned his pupils who were his pupils John Pineda and Louis de Alcalá.

Hetzer, Nomenclator, I (Innsbruck, 1892), 84; SOMMERVOOG, Bibliothèque de la Compagnie de Jésus, VII, 1149.

WALTER DRUM.

Praelatus Nullius (i.e. Diœceseœ), a prelate who exercises quasi-episcopal jurisdiction in a territory not comprised in any diocese. The origin of such prelates must necessarily be sought in the Apostolic privileges, for only he whose authority is superior to that of bishops can grant an exemption from episcopal jurisdiction. Such exemption, therefore, comes only from the pope. The rights of prelates nullius are quasi-episcopal, and these dignitaries are supposed to have any power that a bishop has, unless it is expressly denied to them by canonical law. When they have not received episcopal consecration, such prelates may not confer sacred orders, but they have the privilege (and they are subject to the power of a bishop) to ordain priests and presbyters and to invest them with the tonsure and minor orders. If not consecrated episcopally, they have not the power to exercise those functions of consecrating oils, etc., which are referred to the episcopal order only analogously. Praelates nullius may take cognizance of all temporal causes, but within the same limits as a bishop; they may dispense from the proclamation of matrimonial banns, grant faculties for hearing confessions and preaching, reserve certain cases to themselves, publish indulgences and jubiles, exercise full jurisdiction over the enclosure of nuns, and invite any bishop to confirm in their quasi-diocese. These prelates may not, however, without special permission of the Holy See, convoké a synod or institute synodal examiners. Neither may they confer parochial benefices. They are not allowed to grant indulgences, or absolve from the sacraments and secret irregularities whose absolution is restricted to the pope primarily, but allowed to bishops by the Council of Trent; nor promote secular clerics to orders, nor grant dispensatory letters for ordination, nor exercise jurisdiction over regulars as Apostolic delegates. Praelates nullius may reside, if necessary, in the territories of the church of the Abyssinian, where the church of the Babylonian, where the church of the Maryhelp, Belmont, North Carolina. (See Abbot.)

Prætestatus, Catacomb of. See Cemetery, subtitle, Early Roman Christian Cemeteries.

Pragmatic Sanction (pragmatica sanctio, iux. jusio, also pragmatica or pragmaticum) meant in the latter period of the Roman Empire an edict formally issued by the emperor. They were called pragmatic, from pragma, the affair or matter of sanction. In later times the best known are:

I. The Sanctio Pragmatica said to have been issued by St. Louis IX of France in 1269.—Its purpose was to oppose the extension of papal power, the demand of the French church points out the existence of papal reservations in regard to the filling of offices. The rights of prelates, patrons, and the regular collatorals of benefices were protected against papal collation of benefices. Free elections, promotions, and collations were guaranteed to the cathedrals and other churches. This was directed against the papal right of reservation and presentation, not against the filling of offices by the king. It was further laid down that all promotions, collations, and bestowals of Church offices must be in accordance with the common law, the early councils, and regulations. It was also provided that papal taxes and imposts were permitted only in case of necessity, and with the permission of the king and the French Church. The liberties and privileges granted to churches, monasteries, and priests by the kings were guaranteed. The investigations of Thomasm (1844), Gérin (1869), Viollet (1870), and Scheffer-Bochorst (1887), have proved that it is a forgery which appeared between 1438 and 1452.

II. The Pragmatic Sanction of Bourges.—The Council of Basle (1431–7) had issued many useful decrees concerning reform, but finally came into conflict with Eugenius IV and was suspended by him. Both parties, pope and council, now sought the support of the secular powers. It was to the interest of these to prevent a new schism and not to permit the complete failure of the reforms of Basle. The position of France in regard to these questions was to be discussed at a national council that King Charles VII commanded to meet at Bourges in May, 1438. This council declared itself neutral in the dispute between the pope and the synod, but accepted the greater part of the Basle decrees on reform, modifying some of the more stringent conditions in France; these changes were made with the expectation that the council would ratify the modifications. On 7 July, 1438, the king issued a decree, the Pragmatic Sanction, in which he accepted the Basle decrees in the modification provided by the council. Essentially it contains the tenets of the supremacy of an ecumenical council over the pope, of the regular holding of general councils, and of the limitation of papal reservations and demands of tribute. The suppression of annates by the Council of Basle was added, but with the modification that a fifth of the former tax was conceded to the papal see.

By this edict the French king issued a law of the secular legislative authority in purely ecclesiastical affairs. The recognition of the authority of the Council of Basle was only formal, for the validity of its decisions in France rested solely upon the edict of the king. As the law was recorded in the Parliament there, especially the Parliament of Paris, received the right of interfering in the internal affairs of the Church. In addition, no attention had been paid to the pope, consequences on the existence of the church. In 1464–68, the king set aside. Pius II (1458–64) declared it an infringement of the rights of the papal see, and called upon the French bishops to aid in its suppression. Charles VII appealed against this to a general council. His successor, Louis XII repeated the Pragmatic Sanction, but the Parliament of Paris and the university resisted, and the king let the matter drop. In 1499 Louis XII by explicit declaration renewed the enforcement of the sanction. Leo X effected its annulment by means of a Concordat made with Francis I in 1516.

III. The German Pragmatic Sanction of 1449.—At the Diet of Frankfurt held in March, 1438, the German ruling princes also declared their neutrality in the struggle between Eugenius IV and the Council of Basle. A new diet was held for further discussion of the matter in March, 1439, at Mainz, and this diet also accepted a series of the Basle decrees of reform with modifications in individual cases. The diet reserved to itself the right to make other changes, and at a convenient time the council was to pass decisions consistent with the substance of "Inscriptionem actuum" of 26 March, 1439. The designation pragmatic sanction is, however, misleading, for it was not confirmed by the emperor.

IV. The Pragmatic Sanction of the Emperor Charles VI.—This edict, issued by the last German male member of the House of Hapsburg regulating the succession to his hereditary lands, was read 19 April, 1713, before the ministers and councillors, but was temporarily kept secret. The law ordained that all the Austrian hereditary lands should always remain in the house of Hapsburg, and that they should pass to the daughters that might be born to the emperor; and not until their descendants died out should the right of succession revert to the daughters of his brother, the Emperor Joseph I (1705–11), and to their male and female descendants. This pragmatic sanction was accepted by the crown of the Austrian lands in 1720–4; then in the course of time it was also recognized and guaranteed by the powers of Europe, so that after the death of Charles VI his daughter Maria Theresa could succeed.

V. The Pragmatic Sanction of Charles III of Spain.—Charles III was King of Naples and Sicily until he succeeded his brother Ferdinand upon the throne of Spain in 1759. The pragmatic sanction that he issued 6 Oct., 1759, before he left Naples, is also an edict of succession. As earlier treaties forbade the union of Spain and Naples, he transferred Naples and Sicily to his third son Ferdinand. Up to Ferdinand’s sixteenth year Naples was to be administered by a regency. The eldest son, Philip, was weak-minded; the second son was to receive Spain. Charles III also provided that in the event Ferdinand’s line should become extinct his brothers Philip and Louis were to have the succession. The union of Naples and the Two Sicilies was expressly forbidden in the edict.

The Pragmatism, as a tendency in philosophy, signifies the insistence on usefulness or practical consequences as a test of truth. In its negative phase, it opposes what it styles the formalism or rationalism of Intellecutal philosophy. That is, it objects to the view that concepts, judgments, and reasoning processes are representative of reality and the processes of reality. It considers them to be merely symbols, hypotheses and schemata devised by man to facilitate or render possible the use, or opinion, of reality. This use, or experience, is the true test of real existence. In its positive phase, Pragmatism sets up as the standard of truth some non-rational test, such as action, satisfaction of needs, realization in conduct, the possibility of being lived, and judges reality by this norm to the exclusion of all others.

Klemens Lößfler.
movement. Nevertheless, it is clear that Kant, who is held responsible for so many of the recent developments in Pragmatism, did, in fact, have a direct influence on the origin of Pragmatism. Descartes, by reason of the emphasis he laid on the theoretical consciousness, "I think, therefore I exist," may be said to be the father of Intellectualism. From Kant's substitution of moral for theoretical consciousness, from his insistence on "I thought" instead of "I think," came a whole progeny of Voluntaristic or non-rational philosophers, especially Lotze's philosophy of "value instead of validity," which were not without influence on the founders of Pragmatism. Beside the influence of Kant's considerations of the trend of animal life to rational thought during the last half of the nineteenth century. In ancient and medieval times the scientist aimed at the discovery of causes and the establishment of laws. The cause was a fact of experience, ascertainable by empirical methods, and the law was a generalization from facts, representing the real course of events in nature. With the advent of the evolution theory it was found that an unproved hypothesis or hypothetical cause, if it explains the facts observed, fulfils the same purpose and serves as the same end as a proved and verified law. Indeed, if evolution is accepted as a hypothesis, explains the facts observed in plant and animal life, or if a hypothetical medium, like ether, explains the facts observed in regard to light and heat, there is no reason, say the scientists, why we should consider the ether any more than the force of evolution or the existence of ether. The hypothesis functions satisfactorily, and that is enough. From this equalization of hypothesis with law and of provisional explanation with proved fact arose the tendency to equalize postulates with axioms, and to regard as true any principle which works out well, or functions satisfactorily. Moreover, evolution had familiarized scientists with the notion that all progress is conditioned by adjustment to new conditions. It was natural, therefore, to consider that a problem presented to the thinking mind calls for the adjustment of the previous content of the mind to the new experience in the problem pondered. A principle or postulate or attitude of mind that would bring about an adjustment would satisfy the mind for the time being, and would, therefore, solve the problem. This satisfaction alone, consequently, can be considered a test of truth. This account, however, would be incomplete without a mention of the temperamental, rational, and, in a sense, the environmental determinants of Pragmatism. The men who represent Pragmatism are of the motor-active type; the country, which has flourished most is pre-eminent a country of achievement, and the age in which Pragmatism has appeared is one which bestows its highest praise on successful endeavour. The first of the Pragmatists declares that Pragmatism rests on the axiom "the end of man is action," an axiom, he adds, which does not recommend itself to him at sixty as forcibly as it did when he was thirty.

II. THE PRAGMATICISTS.—In a paper contributed to the "Popular Society Monthly" in 1878 entitled "How to make our Ideas clear," M. C. S. Peirce first used the word Pragmatism to designate a principle put forward by him as a rule to guide the scientist and the mathematician. The principle is that the meaning of any conception in the mind is the practical effect it will have in action. "Consider what effects which might conceivably have practical bearings we consider the object of our conception to have. Then our conception of these effects is the whole of our conception of the object. This rule remained unnoticed for twenty years, until it was taken up by Professor William James in his address delivered at the University of California in 1898. "Pragmatism," according to James, "is a temper of mind, an attitude; it is also a theory of the nature of ideas and truth; and finally, it is a theory about reality" (Journal of Phil., V, 85). As he uses the word, therefore, it designates (a) an attitude of mind towards philosophy, (b) an epistemology, and (c) a metaphysics. James's epistemology and metaphysics will be described in sections III and IV. The attitude which he calls Pragmatism he defines as follows: "The whole function of philosophy ought to be to find out what definite difference it would make to you and me, at definite instants of our lives, if this world-formula or that world-formula be the true one" (Pragmatism, p. 50). Thus, when one is confronted with the evidence in favour of the formula "the human soul is immortal", and then turns to the considerations presented by the trend of recent biological thought towards the formula "the human soul is not immortal", what is he to do? If he is a Pragmatist, he will not be content to weigh the evidence, to compare the case for with the case against immortality; he will not attempt to fit the affirmative or the negative into a "closed system" of thought; he will work out the consequences, the definite differences, that follow from each alternative, and decide in that way which of the two "works" better. The alternative which works better is true. The attitude of the Pragmatist is "the attitude of looking away the first principles of categories, supposed necessities; and of looking towards last things, fruits, consequences, facts" (op. cit., 55).

This view of the scope and attitude of philosophy is sustained in Professor Dewey's numerous contributions to the literature of Pragmatism (see bibliography), in lectures, articles, and reviews which obtained for him the distinction of being the most thorough-going and the most eminent, if not the most logical, of the Pragmatists. Next in importance to James is Professor John Dewey, who in his "Studies in Logical Theory", and in a number of articles and lectures, defends the doctrine known variously as Instrumentalism, or Immediate Empiricism. According to Dewey, we are constantly acquiring new items of knowledge which are at first unrelated to the previous contents of the mind; or, in moments of reflection, we discover that there is some contradiction among the items of knowledge already acquired. This condition causes a strain or tension, the removal of which gives satisfaction to the thinker. An idea is "a plan of action", which we use to relieve the strain; if it performs that function successfully, that is, satisfactorily, it is true. The adjustment is not, however, one-sided. Both the old truths in the mind and the new truth that has just entered the mind must be modified before we can have satisfaction. The new truth is the absolute truth; there are truths, and these are constantly being made true. This is the view which, under the names Personalism, and Humanism, has been emphasized by Professor F. S. Schiller, the foremost of the English exponents of Pragmatism. "Humanism", and "Studies in Humanism", are the titles of his principal works. Pragmatism, Schiller thinks, "is in reality only the application of Humanism to the theory of knowledge" (Humanism, p. xxi), and Humanism is the doctrine that there is no absolute truth, but only truths, which are constantly being made true by the mind working on the data of experience.

On the Continent of Europe, Pragmatism has not attained the same prominence as in English-speaking countries. Nevertheless, writers who favour Pragmatism see in the teachings of Mach, Ostwald, Avenarius, and Simmel a tendency towards the Pragmatic definition of philosophy. James, for instance, quotes Ostwald, the illustrious Leipsig chemist, as saying, "I am accustomed to put questions to my classes in this way: in what respects would the world be different if this alternative or that were true? If I can find nothing that would become different, then the alternative has no sense" (Pragmatism, p. 48). Avenarius's "Criticism
of Experience”, and Simmel’s “Philosophie des Geldes” tend towards establishing the same criterion. In France, Renouvier’s return to the point of view of practical reason in his neo-Criticism, the so-called “new philosophy” which minimizes the value of scientific categories as interpretations of reality, and which has its chief representative in Poincaré, who, as James says, “was a Pragmatist in the true sense of the term”, begins to be called “skepticism of a hair”, and, finally, Bergson, whom the Pragmatists everywhere recognize as the most brilliant and logical of their leaders, represent the growth and development of the French School of Pragmatism. Side by side with this emphasis on the practical test of the concept, and not the traditional one, is the school of Catholic Immanent Apologists, beginning with Ollé-Laprune and coming down to Blondel and Le Roy, who exalt action, life, sentiment, or other non-rational elements into the sole and supreme criterion of higher spiritual truth. In Italy, Giovanni Papini, author of “Introduzione al pragmatismo”, takes his place among the most advanced exponents of the principle that “the meaning of theories consists uniquely in the consequences which those who believe them true may expect from them” (1900). When he tells us that he is not as American and English Pragmatists, when, for instance, in the “Popular Science Monthly” (Oct., 1907), he writes that Pragmatism “is less a philosophy than a method of doing without philosophies”. III. PRAGMATIC THEORY OF KNOWLEDGE.—In fairness to the Pragmatists it must be recorded that, when they claim to shift the centre of philosophic inquiry from the theoretical to the practical, they explain that by “practical” they do not understand merely the “bread and butter” consequences, but include also among practical consequences such considerations as logical consistency, intellectual satisfaction, and harmony of mental content; and James expressly affirms that by “practical” he means “particular and concrete”. Individualism or Nominalism is, therefore, the starting-point of the Pragmatist. Indeed Dr. Schiller assures us that the consequences which are the test of truth must be the consequences to some one, for some purpose. The Intellectualism against which Pragmatism is a revolt recognizes logical consistency among the tests of truth. But while Intellectualism refers the truth to be treated to universal standards, to laws, principles, and to established generalizations, Pragmatism uses a standard which is particular, individual, personal. Besides, realistic Intellectualism, such as Schiller and by the Scientific Method, order of real things, independent of the mind, not made by the mind, but given in experience, and uses that as a standard of truth, conformity to it being a test of truth, and lack of conformity being a proof of falseness. Pragmatism regards this realism as naive, as a relic of primitive modes of philosophizing, and is obliged, therefore, to test newly-acquired truth by the standard of truth already in the mind, that is, by personal or individual experience. Again, there underlies the pragmatic account of knowledge a Senecan psychological hypothesis, so far as the problem of the Pragmatist is concerned. For the Pragmatist, although he does not affirm that we have no knowledge superior to sense knowledge, leaves no room in his philosophy for knowledge that represents universally and necessarily and, at the same time, validly.

Knowledge begins with sense-impressions. At this point the Pragmatist falls into his initial error, an error, however, of which the idealistic Intellectualist is also guilty. What we are aware of, say both the Pragmatist and the Idealist, is not a thing, or a quality of a thing, or a state of condition, the “sensation of whiteness”, the “sensation of sweetness” etc. This error, fatal as it is, need not detain us here, because, as has been said, it is common to Idealists and Pragmatists. It is, in fact, the luckless Cartesian legacy to all modern systems. Next, we come to percepts, concepts, or ideas. Incidentally, it may be remarked that the Pragmatist, in common with the Sensist, this time, fails to distinguish between a percept, which is particular and contingent, and an idea or concept, which is universal and necessary. Let us take the word concept, and use it as he does, without distinguishing its species meaning. What is the value of the concept? The Realist answers that it is a representation of reality, that, as in the case of the impression, so here, too, there is a something outside the mind which the concepts represents and which is the content of the concept. The Pragmatist rejects the notion that concepts represent reality. However the Pragmatists may differ later on, they are all agreed on this point: James, Schiller, Bergson, Papini, the neo-Critics of science and the Immanentists. What, then, does the concept do? Concepts, we are told, are tools fashioned by the human mind for the manipulation of experience. James, for example, says: “The notions of one Time, one Space . . . . the distinctions between thoughts and things . . . . the conceptions of classes with subclasses within them” (p. 22). It followed, he goes on to assert, that once definite conquests made at historic dates by our ancestors in their attempts to get the chaos of their crude individual experiences into a more shareable and manageable shape. They proved of such sovereign office in the name of Deskmittet that they are the very structure of our mind” (Meaning of Truth, p. 62).

A concept, therefore, is true if, when we use it as a tool to manipulate or handle our experience, the results, the practical results, are satisfactory. It is true if it functions well; in other words, if it “works”. For Schiller expresses the same notion in almost identical words. Concepts, he tells us, are “tools slowly fashioned by the practical intelligence for the mastery of experience” (Studies in Humanism, p. 64). They are not static but dynamic; their work is never done. For each new experience has to be subjected to the process of manipulation, and this process implies the readjustment of all past experience. Hence, as Schiller says, there are truths but there is no truth; or, as James expresses it, truth is not transendent but ambulatory; that is to say, no truth is made and set aside, or outset of experience can ever be verified definitely and irrevocably; it is verified provisionally now, but must be verified again to-morrow, when I come to a new experience. Veriety and fullness of verification is the test of experience; and, therefore, the function of the concept, of any concept or of all of them, goes on indefinitely.

Professor Dewey agrees with James and Schiller in his description of the meaning of concepts. He appears to differ from them only in the greater emphasis he lays on the strain or stress which the concept relieves. Our first experience, he says, is not knowledge properly so-called. When to this is added a second experience there is likely to arise in the mind a sense of contradictions, or at least, a consciousness of the lack of co-ordination, between the first and the second. Hence arises doubt, or uneasiness, or strain, or some other form of the throes of thinking. We cannot rest until this painful condition is remedied. Therefore we inquire, and continue to inquire until we obtain an answer which satisfies by clearing up the inconsistency which existed, or by bringing about the adjustment which is required. In this inquiry we use the concept as a “plan of action”; if the plan leads to satisfaction, it is true, if it does not, it is false. For Dewey, as for Jevons, “a perception is coherent orintegrative or mediating; it means a going over and a doing over of all the previous contents of experience, or, at least, of those contents which are in any way relevant or referable to the newly-acquired item. Here, therefore, we have once
more the doctrine that the concept is not static but dynamic, not fixed but fluent; its meaning is not its content but its function. The same doctrine is brought out very forcibly by Bergson in his criticism of the categories of science. The reality which science attempts to capture must be ambiguous like a living organism than a mineral substance. Truth in the mind of the scientist is, therefore, a vital stream, a succession of concepts, each of which flows into its successor. To say that a given concept represents things as they can be true only in the fluent or functional sense. A concept cut out of the continuum of experience at any moment no more represents the reality of science than a cross-section of a tissue represents the specific vital function of that tissue. When we think we cut our concepts out of the continuum: to use our concepts as they were intended to be used, we must keep them in the stream of reality, that is, we must live them.

If we pass now from the consideration of concepts to that of judgment and reasoning, we find the same contrast between the intellectual Realist and the Pragmatist as in the case of concepts. The intellectual Realist defines judgment as a process of the mind, in which we pronounce the agreement or difference between two things represented by the two concepts of the judgment. The things themselves are the standard, not the agreement. What, as in scientific truth, does not appeal to experience at the moment of judging, but perceives the agreement or difference after an analysis of the concepts. Sometimes, as in empirical judgments, we turn for experience to the evidence that enables us to judge. Self-evident truths are axioms of necessity, and universal, such as "All the radii of a given circle are equal," or "The whole is greater than its part." Truths that are not self-evident may change, if the facts change, as, for instance, "The pen I hold in my right hand has six inches of there are no truths, which are a legitimate standard by which to test new truths; and there are truths of fact, which, as long as they remain true, are also legitimate tests of new truth." Thus, systems of truth are built up, and part of the system may be axiomatic truths, which need not be re-made or made over when a new truth is acquired.

All this is swept aside by the Pragmatist with the same contempt as the naive realism which holds that concepts represent reality. There are no necessary truths. Concepts can be changed with new axioms, that only postulates. A judgment is true if it functions in such a way as to explain our experiences, and it continues to be true only as long as it does explain our experiences. The apparent self-evidence of axioms, says the Pragmatist, is due, not to the clearness and cogency of the evidence arising from an analysis of concepts, much less is it due to the cogency of reality; it is due to a long-established habit of the race. The reason why I cannot help thinking that two and two are four is the habit of so thinking, a habit begun by our ancestors before they were human and indelibly in all of us by all their descendants ever since. All truths are, therefore, empirical: they are all "man-made"; hence Humanism is only another name for Pragmatism. Our judgments being all personal, in this sense, and based on our own experience, subject to the limitations imposed by the habits of the race, it follows that the conclusions which we draw from them when we reason are only hypothetical. They are valid only within our experience, and should not be carried beyond the region of verifiable experience. Pragmatism, as a form of representation, is an independent system, not a set of hypotheses, premises, systems, but forward to consequences, results, fruits. In point of fact, then, we are, if we believe the Pragmatist, obliged to subscribe to the doctrine of John Stuart Mill that all truth is hypothetical, that "can be" and "ought to be" have meaning only in our experience, and that, for all we know, there may be in some remote region of space a country where two and two are five, and a thing can be and not be at the same time.

IV. PRAGMATIC THEORY OF REALITY.—The attitude of Pragmatism towards metaphysics is somewhat ambiguous. The doctrine of John Stuart Mill (Sec. II) is saying that Pragmatism is "finally, a theory of reality." Schiller, too, although he considers metaphysics to be "a luxury," and believes that neither Pragmatism nor Humanism necessitates a metaphysics, yet decides at last that Humanism "implies ultimately a voluntaristic metaphysics." Papini, as is well known, puts forward the "corridor-theory," according to which Pragmatism is a method through which one may pass, or must pass, to enter the various apartments indicated by the signs "Materialism," "Idealism," etc., although he confesses that the Pragmatist "will have an antipathy for all forms of Monism" (Introduction, p. 29). As a matter of fact, the metaphysics of the Pragmatist is distinctly anti-Monistic. It denies the fundamental unity of reality and, adopting a word which seems to have been first used by Wolff to designate the doctrines of the Atomists and the Monadists of Leibniz, it styles the Pragmatic view of reality Pluralistic. Pluralistic, the doctrine, namely, that reality consists of a plurality or multiplicity of real things which cannot be reduced to a single metaphysical substance; it is the most consistent solution of the three important problems in philosophy. These are: (1) The possibility of a real change; (2) the possibility of real variety or distinction among things; and (3) the possibility of freedom (see art. "Pluralism" in Baldwin, "Dict. of Philosophy and Psychology"). It is true that Monism fails on these points, since, (1) it cannot consistently maintain the reality of change; (2) it tends to the Pantheistic view that all distinctions are merely illusions; and (3) it is inevitably Determinist, excluding the possibility of true individual freedom (see art. Monism).

At the same time, Pluralism goes to the opposite extreme, for: (1) while it explains one term in the problem of change, it eliminates the other term, namely the original causal unity of all things in God, the First Cause; (2) while it accounts for variety, it cannot consistently explain the cosmic harmony and the multitudinous resemblances of things; and (3) while it strives to maintain freedom, it does not distinguish from the Plagmatist care between freedom and causality. James, the chief exponent of Pragmatic Pluralism, contrasts Pluralism and Monism as follows: "Pluralism lets things really exist in the each-form or distributively. Monism thinks that the all-form or collective-uniform form is the only form that is rational. The all-form allows of no taking up parts, of dropping of connections, for in the 'all' the parts are essentially and externally co-implicated. In the each-form, on the contrary, a thing may be connected by intermediate things with a thing with which it has no immediate or essential connection. . . . If we take the each-form to be the eternal form of reality no less than the form of temporal appearance, we still have a coherent world, and not an innarate incoherence, as is charged by so many absolutists. Our 'multiverse' still makes a 'universe'; for every part, though it may not in actual or immediate connexion, is nevertheless in some possible or medial connexion with every other part, however remote" (A Pluralistic Universe, 324). This type of union James calls the "strung-along type," the type of continuity, contiguity, or sequence, as Ward defines it, by which the integration type of unity advocated by the absolute Monists. If one prefers a Greek name, he says, the unity may be called synecidism. Others, however, prefer, to call this tychism, or mere chance succession. Peirce, for instance, holds that the impression of novelty which a new occurrence produces is explicable.
only on the theory of chance, and Bergson seems to be in no better case when he tries to explain what he calls the "devenir reel." Pragmatism is that "Things are 'with' one another in many ways, but nothing includes everything or dominates over everything." (ibid., p. 321). One of the consequences of this view is that, as Schiller says ("Personal Idealism," p. 60), "the world is what we make it." "Sick souls," and "sensitized" people, as well as those of absolute content, must take their places in a world already made according to law, divided off into categories by an Absolute Mind, and ready to be represented in the mind of the beholder, just as it is. This is the point of view of the Monist. The "world of atoms" and the "感触 mind" will not be content to take a ready-made world as they find it; they will make it for themselves, overcoming all difficulties, filling in the gaps, so to speak, and smoothing over the rough places by establishing actual and immediate connections among the events as they occur in experience. The Monist view, James confesses, has a majesty of its own and a capacity to yield religious comfort to a most respectable class of minds. "But, from the human (pragmatic Pluralist) point of view, no one can pretend that we are left thereby from the problem of scope and abstractness. It is eminently a product of what I have ventured to call the Rationalistic temper. . . ." It is dapper, it is noble in the bad sense, in the sense in which it is noble to be inapt for humble undertakings. But, the real "world of atoms" and the "感触 mind," it seems to me that when I view a world of things is 'noble', that ought to count as a presumption against its truth, and as a philosophic disqualification." (Pragmatism, pp. 71 and 72). Moreover, Monism is a species of spiritual laziness, of moral cowardice. "They [the Monist] mean that we have a right over and anon to take a moral holiday, to let the world wag its own way, feeling that its issues are in better hands than ours and are none of our business." (ibid., p. 74). Pragmatic strenuousness suffers no such restraints; it recognizes no obstacle that cannot be overcome. The test of its audacity is its treatment of the idea of God. For the Pluralist, "God is not the absolute, but is Himself a part. . . . His functions can be taken as not wholly dissimilar to those of the other smaller parts—as similar to our functions, consequently, having an essential rationalistic mingling in time, like us, just like ourselves. He escapes from the foreignness from all that is human, of the static, timeless, perfect absolute" (A Pluralistic Universe, p. 315). God, then, is finite. We are, indeed, internal parts of God, and as portions of God, not the whole of God, of the universe, but a limited, conditioned, part of it. We have here a new kind of Pantheism, a Pantheism of the "strung-along" type, and if James is content to have his philosophical democratic strenuousness judicious by this result, he has very effectively condemned his own case, not only in the estimation of aristocratic Absolutists but also in that of every Christian philosopher.

V. PRAGMATISM AND RELIGION.—It has been pointed out that one of the secrets of the popularity of Pragmatism is the belief that in the warfare between religion and Agnosticism the Pragmatists have, somehow, come to the rescue on the side of religious truth (Pratt, "What is Pragmatism," p. 175). It should be admitted at once that, by temporal disposition, rather than by force of logic, the Pragmatists have endeavored to hold the written and the importance of positive religious faith. For him, religion is not a mere attitude of mind, an illumination thrown on facts already ascertained, or a state of feeling which dispenses one to place an emotional value on the truth of perception in science. It brings forward new truths which make a difference, and lead to differences, especially in conduct. Whether religions are proved or not, they have approved themselves to the Pragmatist (Varieties of Religious Experience, p. 331). They should be judged by their interest and not merely by their content. James says expressly: "On Pragmatic principles, if the hypothesis of God works satisfactorily in the widest sense of the word, it is true" (Pragmatism, p. 299). This is open to two objections. In the first place, what functions do "works satisfactorily" have? Is it not the existence of God, but belief in the existence of God, that gives the struggle with Agnosticism and religious scepticism the task of the Christian apologist is not to prove that men believe in God but to justify that belief by proving that God exists; and in this task the assistance which he receives from the Pragmatist is of doubtful value. In the second place, it will be remembered that the Pragmatist makes experience synonymous with reality. The consequences, therefore, which follow from the "hypothesis of God" must fall within actual or possible human experience, not of the inferential or deductive kind, but experience direct and intuitive. But it is clear if that we attach any definite meaning at all to the idea of God, we must mean a Being whose existence is not capable of direct intuitive experience, except in the supernatural order, an order which, from the very definition of Pragmatism, cannot exist. We do not need the Pragmatist to tell us that belief in God functions for good, that it brings order into our intellectual chaos, that it sustains us by confidence in the rationality of things here, and eternally, above all things of the things that are beyond. What we need is assurance in the tenacity of showing that that belief is founded on inferential evidence, and that the "hypothesis of God" may be proved to be a fact.

VI. ESTIMATE OF PRAGMATISM.—In a well-known passage of his work entitled "Pragmatism," Professor James sums up the achievements of the Pragmatists and outlines the future of the school. "The centre of gravity of philosophy must alter its place. The earth of things, long thrown into shadow by the glories of the upper ether, must resume its rights. It will be an alteration in the 'seat of authority' that reminds one almost of the Protestant Reformation. And as, to papal minds, Protestantism has often seemed a mere mess of anarchy and confusion, such, no doubt, will Pragmatism often seem to ultra-Rationalistic minds, as we come, if the present revolution is much trash, philosophically. But life wags on, all the same, and compasses its ends, in Protestant countries. I venture to think that that philosophical Protestantism will compass a not dissimilar prosperity" (The Principles of Psychology, p. 123). It is possible to judge the accuracy of this prophecy. Meanwhile, to minds papal, though not ultra-Rationalistic, the parallel here drawn seems quite just, historically and philosophically. Pragmatism is Individualistic. Despite the disclaimer of some of its exponents, it sets up the Pragmatic principles: "Man is the measure of all things." For if Pragmatism means anything, it means that human consequences, "consequences to you and me", are the test of the meaning and truth of our concepts, judgments, and reasonings. Pragmatism is Nominalistic. It denies the validity of content of universal concepts, and scornfully rejects the mere possibility of universal, all-including or even many-including, reality. It is, by implication, Sensistic. For in describing the functional value of concepts it restricts that function to immediate experience. It is, in a sense, Anarchistic. Discarding Intellectualistic logic, it discards principles, and has no substitute
for them except individual experience. Like the Reformers, who misunderstood or misrepresented the theology of the Schoolmen, it has never grasped the true meaning of Pragmatic Realism, always confusing it with Intellectual Realism of the Absolutist type. Finally, by bringing all the problems of life within the scope of Pragmatism, which claims to be a system of philosophy, it introduces confusion into the relations between philosophy and theology, and still worse confusion into the relations between philosophy and religion. It consistently appeals to future prosperity as a Pragmatic test of its truth, thus leaving the verdict to time and a future generation. But with the elements of error and disorganization which it has embodied in its method and adopted in its synthesis, it has done much, so the Intellectualist thinks, to prejudice its case.

WILLIAM TURNER.

PRAHCE, ARCHDIOCESE OF (PRAGENSIS), in Bohemia. From about the middle of the sixth century Slavonic tribes advancing into Bohemia drove the Marcomanni to the borders of the country. The Slavs soon came under the influence of the Carolingian civilization. In 843 the Czech princes and their wives appeared at the Court of Louis the German at Ratisbon, where they were baptized on the octave of Epiphany (January 13) by the Bishop of Ratisbon. Although many German priests now came into Bohemia to spread the Gospel and the land was gradually brought under the dominion of Moravia, which was naturally followed by the appearance of Slavonic priests from Great Moravia. It is supposed, though it cannot be proved, that the Bohemian Duke Bohemwald was baptized by Methodius, the apostle to the Slavs. The first Duke of Bohemia on whom there is historic certainty that he was a Christian is Bohemwald's son, Spittigniew, who in 895 allied himself to Carllmann's son, Arnulf of Carinthia. Spittigniew's brother and successor, Wratislaw I, built the church of St. George upon the Hradchin (castle hill) at Prague. His wife Drahomira, who belonged to a pagan Slavonic family, though probably baptized, was not Christian at heart. Their sons, St. Wenceslaus and Boleslaw I the Cruel, were still minors at the death of their father. The Marcomanni in the history of Bohemia played at this time was the opposition between the pagan or national party and the Christian or German party. Wenceslaus hoped to gain everything from the Germans. Desiring to build a church upon the Hradchin he requested permission from the diocesan bishop to the effect that this church should be dedicated to St. Vitus, as Henry I the Saxon of Germany had sent a present of a precious relic of this saint. The struggle between pagan and Christian divided even the ducal family. On 28 September, 935, Wenceslaus was murdered by his brother Boleslaw and his accomplices at the door of the church in Alzunzlan. Yet Boleslaw found himself obliged to rule in a manner favourable to the Christian-German party. Much was done for the Christian civilization of Bohemia by his children, Boleslaw II the Pious, Milada, and Dubravka. Boleslaw II desired to be independent of Germany in ecclesiastical matters and sought to have Prague made a bishopric. Otto II of Germany aided this effort, for he regarded it as a protection against Hungary. John XIII consented on condition that the Latin Rite should be used. Milada, sister of the duke, who lived in a Benedictine abbey at Rome, was appointed by the pope under the name of Maria abbess of the Abbey of St. George on the Hradchin, the first monastic foundation in Bohemia. Bohemia then formed a part of the Diocese of Ratisbon, suffragan of Salzburg. St. Wolfgang drew up the charter for the new diocese and it was made a suffragan of Mainz.

Thietmar, a monk from Magdeburg who had a thorough knowledge of the Slavonic language, was appointed (973) the first Bishop of Prague. The new diocese included: Bohemia, Silesia including Cracow, and Lusatia; Moravia, western Hungary as far as the Waag and Danube Rivers; Lower Austria between Taja and Kamp. In Moravia, Vracoen was appointed bishop. St. Adalbert, second Bishop of Prague, appointed by Otto II at Verona, was consecrated by Willigis of Mainz. He proved in Bohemia and Moravia a stern censor of morals, striving to suppress concubinage among the clergy, polygamy, and heathen practices, but, obliged to withdraw, took refuge in a monastery at Rome. At the request of the Bohe- mians he returned with twelve monks from Monte Cassino, among them Christinus, Benedictus, and Matthaeus. In 983 Adalbert founded for these monks the first monastery for men in Bohemia, that of Brezno, near Prague (St. Margaret), and appointed his teacher Radis (Anastasius) abbot. Two years later Adalbert was again obliged to flee. The
Pope now dissolved his connexion with Prague and Adalbert died (997) a martyr in Prussia. Severus, the successor of Prague was one of the benefactors of Duke Břetislav Achilles, who brought (1036) the relics of St. Adalbert from Gnesen to Prague. The ambitious Břetislav wished to be independent of Germany. It was his intention to make use of the Benedictine monastery of Sasawa, founded in 1037, with a Greek- Slav rector. The remains of St. Adalbert the duke and bishop became involved in his investigation and they were condemned to found a monastery as penance. Břetislav established the collegiate chapter of Altzundlau in 1096 and two years later founded Raiger, the first monastery in Moravia. Raiger was united with Břeewnau. The next duke, Spithniew, founded (1058) the collegiate church of St. Stephen at Leitmeritz. The Slavonic monks, who were replaced by Latin monks, were transferred to the monasteries of Vespur, Vyšehrad, Česánad, and Arad. Nicholas II granted a part of the monasteries (a deal) for an annual payment of one hundred marks; this honour was regarded as a sign of royal dignity. Spithniew's brothers, Wratislau II, who succeeded him, and Jaromír (Gebhard), who was appointed Bishop of Olmütz, were men very different in character. In 1063 the duke gave his consent to the establishment of the Diocese of Olmütz. The Bishop of Prague received compensation for what he lost in tithes and fees, and a monk named John, belonging to the monastery of Břeewnau, was appointed first Bishop of Olmütz. The new bishop had much to suffer from Jaromír, who attacked and ill-treated him in his episcopal residence. Alexander II sent to Prague the legate Rudolphus, who held there a synodal diet at which, however, Jaromír did not appear. Jaromír was declared to be deposed; Gregory VII summoned the contending bishops to Rome. At the Easter synod of 1074, Jaromír expressed his regret for his ill-use of John but was unwilling to yield the fief of Podvin. The pope now wrote to Wratislav that if necessary he should drive Jaromír away by force.

In the struggle over Investitures Wratislau II and Jaromír supported Henry IV. After the death of Bishop John, Jaromír secured the union of Olmütz with Prague (1085-91), as his brother had received the imperial crown. The people consented entirely on the king's side. Wratislau soon deserted the emperor and gave Olmütz to his court chaplain Wezel (Andreas I), who was made bishop. Jaromír died at Gran, where he was preparing to fight his rival. After Wezel's death Henry IV invested the canon Andreas at Mantua with the ring and crozier, but he was not consecrated until two years later. At Easter (1138) Bishop Henry of Olmütz, called Zdik after his native town, entered the Premonstratensian Order in the church of the Holy Sepulchre at Jerusalem. On his return, he persuaded the Bishop of Prague, John I, to bring Premonstratensians from Steinhof near Cologne and establish them at Strahov. Bitter contention arose between Zdik and his clergy when the princes of Moravia rebelled against Wladislaw II, Duke of Bohemia. Zdik adhered to the duke, and was, therefore, obliged to flee to Prague; after giving warnings in vain he placed the rebels and the land under ban and interdict, which were later removed by the legate Guido. He deposed ecclesiastics who had been acquainted with the queen; the coadjutor on definite conditions. Wladislaus supported the legate so vigorously that it was said of him that he had enforced clerical chastity throughout Bohemia. Wladislaus also granted Podvin in perpetuity to the bishop and bestowed on him the right to have a mint. Lucius II invited Zdik to Rome. On the way he was attacked and robbed near Boscowics, and escaped to Lomborsch. In 1143, Bishop Ottokar I of Prague, a brother of the Conrades from Walchsee at Sedlitz. When the Second Crusade was preached Bishop Henry of Olmütz was the subdelegate of St. Bernard for Bohemia and Moravia. Henry himself went to Pomerania, but was returned uninjured. In 1140, the settlement of St. John of Jerusalem was introduced in the hospice of St. Mary near the Prague bridge. Frederick I Barbarossa in 1158 made Wladislaus a king in return for his aid against Lombardy. The right to crown the king was assigned to the Bishops of Prague and Olmütz. The Bohemian king and Bishop Daniel I supported Frederick in his bitter struggle with Alexander III. The king and bishop were excommunicated and when in 1167 the bishop died the clergy of Prague refused to recite the Office for the Dead. It was during the quarrel between Duke Premysl Ottokar I and Bishop Henry Břetislav that Kacím, Bishop of Olmütz, ordained deacons and priests at Prague in 1193 but forgot the laying on of hands. Two years later his successor, Engelbert, performed the rite; the cardinal legate, however, suspended the ordination and in 1197 the entire ordination had to be repeated. At the renewed ordination the cardinal legate insisted positively upon the vow of chastity. The candidates rebelled at this and Peter had to leave the church. Not long after, the legate succeeded in making a synod pass his demands and the prosperity of the Bohemian Church rapidly increased. About this time St. Hrozata founded the Premonstratensian Abbey of Tepl, which he entered. Premysl Ottokar I made Bohemia a hereditary kingdom, and independent of Germany; hence the bishops of Prague and Olmütz no longer received investiture from the emperor but from the King of Bohemia. The cathedral chapter was to elect the bishop. Ottokar wished to make Prague an archbishopric with Olmütz as its suffragan. Innocent III, however, had all the less reason to be gracious to the Bohemian king as Ottokar had just changed his political adherence from Otto IV to Philip of Swabia, against the wishes of the pope. The first king who received Bohemia by investiture was Henry II, who was not interested in the community of the clergy and take the church tithes for himself, while Bishop Andreas wished to enforce the decrees of the fourth Synod of Laberno. The king would not permit this. Andreas placed Bohemia under an interdict, the king cut off all the bishops and priests of Bohemia. The people consisted of the bishops and Olmütz, who, in spite of the interdict, had celebrated Mass at Prague, should be punished. With the aid of a legate a fairly satisfactory agreement was reached (Concord of Škodnice, 1220). One of Ottokar's daughters, St. Agnes, corresponded with St. Clare of Assisi, and founded the convent of St. Clare, called later St. Agnes, in 1234 at Prague; as soror major Agnes was the head of it. She also aided the foundation of the Order of the Knights of the Cross of the Red Star at Prague. While residence was joined to annull and St. Hyacinth brought Dominicans to Prague, who established themselves in the monastery of St. Clement. Wenceslaus granted to the Franciscans the monastery of St. James in the Altstadt, Prague. Bohemian nobles who went to France became acquainted there with the Knights Templars. They introduced them into Bohemia and the order flourished to such extent that in 1240 Bohemia became a national priory and Prague had two commanderies the Temple and St. Laurence. Church life flourished in Bohemia at the permission of the king, who "breathe nothing but holiness". King Wenceslaus remained a firm adherent of Frederick II even after his deposition by the Council of Lyons. An interdict was pronounced over Bohemia and Bishop Nicholas
of Bohemia was suspended. Mass was only celebrated in the monasteries and there behind closed doors without the ringing of bells. For some time, the Teutonic Knights had been fighting against the monastery of Prague. Pernštejn, the Bohemian archbishop, invited them to come to Rome and to take the cross; he wished to gain the favour of the pope and Christendom. The name of the city of Königberg preserves the memory of the king, who was called not only the Golden but also the Iron. About this time (1256) the first bearer appeared in Prague of the apostolic flagellant from Germany (see Flagellants). In gratitude for the successful issue of his struggle with Böla IV (battle of Kressenbrunn) Preysyl Ottokar II in 1263 founded the Cistercian monastery of Goldenkron, so named because of a relic of the Crown of Thorns set in gold that had been given by St. Louis. Ottokar's viceroy in Austria, Peter of Rosenberg, founded the monastery of Hohenfurt in expiation of his sins and for the salvation of the souls of his ancestors. Bishop John III of Bohemia attended the Council of Vienna in 1378, which had been summoned by the king. The council's nineteen canons treat of the behaviour of the clergy, of the penal power of bishops and abbots, and the relations between Christians and Jews. The Jews were to be distinguished by pointed hats, and on Good Friday they were to appear in public. The Olmuits had brought to Ottokar from the Council of Lyons a letter written by the pope calling upon him to support the election of Rudolph of Hapsburg as Emperor of Germany. When Ottokar recommenced, he was excommunicated; consequently it was not until eighteen years after he had been killed in battle that he was buried in consecrated ground in the Cathedral of Prague. During this time, it is said, there were not less than twenty-one thousand Beghards in Bohemia. The country was also disturbed by off-shoots of the Waldenses, who called themselves "Apostolic Brethren" and "Brethren of the Holy Spirit". They even wished to have wives and property in common and sought to live underground. They claimed that God did not trouble Himself about what happened under the earth and so have been called Grubenheimer.

Bishop John IV of Prague had taken part in preparing the decrees concerning the dispute between the Mendicant Orders and the secular priests, which were drawn up at the Council of Pisa. After Pisa he executed these decrees. The Mendicants were only to preach in their own churches and not there during the service at the parish church; they were not in any way to encroach upon the pastoral work, and must have episcopal authority to hear confessions. The bishops were required by the council and by Pisa to uphold a loud complaint that the bishop denied the validity of confessions heard by them. The parish priests of Prague announced that they would publish the decisions of the Council of Vienna in their churches. The Mendicants, also misled by their preparations, Bishop John established the Court of the Inquisition as the council had desired. When in the course of a year, however, this court delivered to the State fourteen heretics who were burned at the stake, the bishop sent the Inquisitors away and opened their prisons. Complaint having been made against him, he had to go to Avignon, and after an investigation of eleven years he finally returned home. After the suppression of the Knights Templar, their lands were given by King John of Luxemburg to other orders of knights, and his religious houses were founded by him. He also established the first Carthusian monastery in Bohemia, Maria Garten am Smíchov, and at Raudnitz a monastery of Augustinian Canonics. The increasing prosperity of the Church reached its most flourishing period during the reign of Charles. The latter was educated at the French court; his teacher and friend Peter de Rosières was now Clement VI. It was, therefore, not difficult for Charles to obtain from him in 1344 a Bull raising Prague to an archbishopric, with the suffragan Dioceses of Olmütz and of the newly founded Leitomischl. Charles endeavoured to civilize the Bohemian kings; thus he was the Primate of Bohemia. The first archbishop was St. Ernst of Pardubitz, the advisor of Charles IV in his great undertakings. Charles brought Matthias of Aras from Avignon to Prague so that, with the mind of Peter of Linz and of Gumbrecht (in Susa), he might build the beautiful Cathedral of St. Vitus, the corner-stone of which was laid by the emperor's father. It is yet unfinished. The emperor even included his crown among the treasures with which he thought to enrich the cathedral; from that time it adorned the head of St. Wenceslaus. The crown jewels were kept in the Castle of Karlstein built by Aras. The chapel of Castle Karlstein was built in the shape of a cross; its walls were inlaid with Bohemian garnets on a gold ground, so that the lights of the altar were reflected many hundred times. At Emaus Charles founded an abbey for Benedictines, who were to use the Glagolitic Liturgy in celebrating Mass. The foundation in which Charles was most interested was the University of Prague, established in 1348, the oldest German university. The archbishop who was the Imam Proetorale (the Vice Chancellor or Cancellarius). In 1349 Archbishop Ernst held the celebrated provincial synod that defined the rights and duties of the clergy. Correctores Cleri were provided who were to supervise the carrying out of the Statuta Ernesti and to supply what was lacking.

Now began a religious movement that plunged Bohemia and the surrounding countries into war, seriously retarded the growth of the Church, and left the See of Prague vacant for one hundred and forty years (1421-1561). For details of this period, see Church History: Councils of Prague: III. The Repression of Heresy. These hundred years of religious unrest had prepared a fruitful soil for the Reformations. Matthias preached Luther's doctrines openly on the public roads; Thomas Münzer and Gallus Caebra preached there in Prague. King Ferdinand, who had taken up his residence on the Hradcham, checked the growth of Protestantism, but the war over the Hungarian throne and the struggle with the Turks impeded his efforts. The Utraquists continued to thrive in Prague, but the Emperor Maximilian was an Ultraquist, and the king was even inclined to Lutheranism. During the Smalkaldic war the Bohemian Brethren united with the Protestants. After the battle of Mühlenberg (1547), the religious reformers, driven out of the cities of Bohemia, went to Poland and Prussia, which were now united, and then returned to Bohemia and Moravia. The greatest aid received by the Catholic Church came from the Jesuits. In 1560, Peter Canisius brought the first twelve Jesuits to St. Clement's at Prague; their college there, called Clementinium, ranked with the Carolinum. In 1561, Prague again received an archbishop, Anton Brue of Mühlitz in Moravia. At the Council of Trent the archbishop sought to gain the cup for the laity, which Piš IV granted in 1567 for the countries ruled by Ferdinand. As, however, the result expected from this concession did not appear, the Ultraquists becoming more largely Lutheran, Pfius V recalled the permission. Maximilian II was more favourable to Protestantism. In 1567 he annulled the Compacta for the benefit of the Utraquists. Not only the Utraquist but also the Ultraquists (Protestants) were to be tolerated. At the Diet of Prague they demanded the introduction of the Augsburg Confession. The "Bohemian Confession" was drawn up in twenty-five articles; it maintained Luther's teachings, but was signed by the emperor. The administrator of the consistory was to ordain their priests as also, while fifteen defenders were to be added

to the consistory. Thus the imperial cities which had been Utraquistically rapidly became Lutheran. At Prague three Lutheran parishes were soon formed. When Rudolph II shut himself up in the castle on the Hradcany the Archbishops of Austria met Matthias as King of Bohemia, elected a directory and raised an army. They remained indeed loyal to Rudolph, but forced him in 1609 the royal charter (Hajestisbriefe), which confirmed the Bohemian Concession, opened the university to the evangelical estates, granted them the right to elect defenders, and also permitted the three secular estates of lords, knights, and imperial cities to build Protestant churches and schools. Rudolph finally abdicated and in 1611 Cardinal Dietrichstein of Olmutz crowned Matthias King of Bohemia (1611–9).

Contrary to the regulations of the royal charter granted by Rudolph, subjects of the Archbishop of Prague built a Protestant church at Klostergrab and subjects of the Abbot of Braunaun one at Braunaun. The archbishop commanded these to be closed, and when the Emperor Matthias sanctioned this order the result was the Third Defenestration of Prague, with which the Thirty Years’ War began. A government of thirty directors was formed, and the head of the Protestant Union and of the German Calvinists, Frederick V, the Palatine, was elected King of Bohemia. The Cathedral of Prague was arranged for Calvinistic services; altars were torn down, pictures and statues destroyed. The court preacher Scultetus drew up an independent liturgy for Bohemia.

A sovereign has seldom begun his reign under greater difficulties than Ferdinand II (1619–37). The insurgents under Thurn were at the gates of Vienna; within the city the non-Catholic estates made common cause with the besiegers. Ferdinand, however, never yielded. After the defeat of the White Mountain (1620) he imposed more severe measures against the disturbers; they were driven out of the country, the royal charter that had been the source of so much disorder was annulled, and a system of government introduced in 1627 that among other things made the clergy the first estate. It granted the bishops, prelates, and abbots seats and votes in the diet (the ecclesiastical bench) and the title of Primas regni to the archbishop. Only the Catholic religion was to be permitted. An imperial commission of reform (‘dragonades’, ‘saviours’) was to traverse the land, and books, hymnals, and schoolmasters and books. Thirty-six thousand families were welcomed in neighbouring countries, but with all this the country was not made thoroughly Catholic. Many confounded only externally and the varying phases of the Thirty Years’ War, for which in the end religion was merely the excuse, constantly favoured Protestantism. In the Peace of Westphalia (1648), however, Ferdinand III did not allow himself to be dictated to. During the period when princes were absolute rulers, events protected the Church against fresh attacks. Pastoral care, instruction, and ecclesiastical administration were improved. The Montserratines, Piarists, Theatines, and Ursuline nuns were introduced into the country, the clerical seminary was founded, and the new Dioceses of Leitmeritz (1665) and Königgrätz (1665) were erected. The old University of Prague and the Clementinum, the Jesuit college, were united into the Caroline-Ferdinand University. The tax of fifteen kreuzers on salt, either mined in Bohemia or imported, was applied to Church purposes, the St. Wenceslaus fund was used to distribute bread and the Emperor employed to aid poor priests. For two years from 1712 the churches even in Prague were closed on account of the plague. In 1729 the canonization of St. John Nepomucene was celebrated with great festivities. The position of the sovereign and the sovereignty of the Church was introduced by Protestantism. The Catholic rulers at first only assumed this position as regards their Protestant subjects. In the course of time, however, they began to exercise this power also as regards their Catholic subjects. As the maintenance of religion (the Counter-Reformation) was their work and they obtained the chief management of the State, the Church was the natural consequence. Even in the reign of Maria Theresa edicts were issued concerning ecclesiastical matters. No one could take the vows of an order until fully twenty-four (1770); monastic prisons were to be suppressed (1771). As the basis of theological instruction were to be used: Sagan’s Catechism (1772), Rieger’s ‘Institutiones jurisprudentiae ecclesiasticae’, and Rautenstrach’s ‘Synopsis juris ecclesiastici’. Trumpets and drums could no longer be used in the churches; in the lessons of the Breviary for the feast of St. Gregory VII the places concerning the power of the pope to depose kings were to be omitted. Parish priests were expressly forbidden to speak abusively of the laws of the country. Within ten years Joseph II issued sixty-two hundred laws, orders of the court, and ordinances. Even what was good showed marks of haste; laws and ordinances contradicted one another. When in 1781 the patent of toleration was issued quite a number who had been Protestants in secret now appeared as such openly. The Bull ‘In eccaus, Dei facta et migrans’ were to be suppressed, and the right to worship at Rome, Roman dignities and titles could only be assumed after obtaining permission of the ruler. A general seminary was established at Prague, where both secular priests and candidates for the orders were to be educated. Even the number of masses to be held in a church and the number of candles that could be used at such services were prescribed by law; the litany of the Trinity was forbidden “on account of various additions”. Many monasteries were suppressed, the remnants of the State, and fell into decay. One good measure of the emperor was, that he formed a fund for the maintenance of religion from the property of the suppressed monasteries and used it to increase the number of parishes. In this way Joseph II founded eighty-one parishes and three hundred and fourteen dependent churches in Bohemia. He also established the Diocese of Budweis.

Joseph’s brother Leopold II soon changed conditions. The general seminaries were abolished, there was no further soaring, but monasteries were to be children for theological instruction were submitted to the censorship of the bishop. Francis II was a pious ruler, who took a serious view of his duty in regard to conscience and religious duties, but for nearly a generation the war with France claimed all the strength and energy of the Government. In the meantime both laity and clergy grew more and more accustomed to the Josephine reforms of the Church. Were any ecclesiastical concessions made the Josephinists raised a cry over the unjustifiable demands of the Church and the unheard of concessions of the Government. One of the results of the French war was the demand of the Government for the silver plate in 1800, 1809 etc., when all the Church silver not absolutely necessary went to the mint. In return, the churches received from the Government an acknowledgment of the indebtedness. During this period the priest, Bernhard Bolzano, a philosophical writer and professor of theology at the University of Prague, wrote: ‘Lehrbuch der Religionswissenschaft’ (4 vols.); ‘Wissenschafts-Schreiber’; ‘Logic’ (4 vols.); ‘Athanasian, die Gründe für die Unverbürliehkeit der Seele’; ‘Erziehung zur akademische Jugend’ (4 vols.); ‘Zu der Welt der Katholizismus’. The authorities were suspicious of him on account of his teachings, but his archbishop, Prince von Salz, protected him. In 1826 he was removed from his professorship and died in 1848. In 1848 Alois, Freiherr von
Schrenk became Prince Archbishop of Prague. On 15 March, the emperor announced his intention of granting a constitution. Schrenk may have thought that "freedom is a great good for those who know how to use it." On 25 March, forgetting their sacred calling, turned the pulpit into a political platform. The freedom gained should rather be the signal for greater activity. His address at the Easter festival, posted on the streets in Czech and German, sought to ally the hostility to the Jesuit colleges, of which the Archbishop of Bohemia, parish priests, members of orders, cathedral canons, professors, and prelates, called together without asking the consent of the archbishop by F. Nahlowycz, principal of the seminary for Wends, Upper Lusatia, was held at the seminary on 13 and 24 February. In his letter, he expressed his opinion concerning the unsuitability of the unessential system of celibacy; the monasteries should be thoroughly reformed. The proceedings of this assembly even appeared in print. Naturally both the archbishop and Bishop Hille of Leitmeritz, of which diocese Nahlowycz was a priest, expressed "their deep sorrow". Late in August the pamphlet issued by the Bohemian episcopate appeared. The contents discussed the two questions: What is the position of the Church towards the State in general and what are the special rights of the Church in dogma, liturgy, and administration. The strain he had undergone shattered the health of the archbishop and he died in March, 1849, at the age of forty-seven. His successor was Cardinal Schwarztenberg. The present prince archbishop is Leo Cardinal von Riedenburg.

The Archdiocese of Prague (1911) has a population of 2,228,750 Catholics, 63,475 Protestants, 51,016 Jews. There are: 570 parishes; 1348 secular, 238 regular priests; 1517 nuns in 76 orders. (See Bohemian Church.)

C. WOLFGANGEBICHER.

UNIVERSITY OF PRAGUE, founded by Charles IV with the consent of the Estates on the model of the universities of Paris and Bologna and confirmed at the emperor's request by Clement VI as Studium generale. It was established by the Golden Bull of 7 April, 1345, and received imperial sanction 14 September, 1349. Archbishop Ernst of Pardubitz took an active part in the foundation by obliging the clergy to contribute. Its official title is "Imperial and Royal Franz Ferdinand University"; at the present time it is divided into two completely separated universities, one German and the other Bohemian or Czech, each having four faculties (namely, theology, jurisprudence, philosophy, and medicine), each rector and four professors. Both universities are national and are under the immediate control of the Imperial and Royal Ministry of Education at Vienna. All professors are appointed by the State, even the theological professors; these latter are appointed in consultation with the Prague, who is Chancellor of both theological faculties.

I. HISTORY.—From the time of its founding the University of Prague was equipped with four faculties, of which each came gradually to elect its dean for one half-year, and jointly the rector, at first for a year, then later for a half-year. On account of a dispute about an inheritance the faculty of law separated from the rest of the university in April, 1372, and from that time on, with the consent of the king, formed what might be called an independent university under its own dean, as such, professor, forgetting their sacred calling, turned the pulpit into a political platform. The freedom gained should rather be the signal for greater activity. His address at the Easter festival, posted on the streets in Czech and German, sought to ally the hostility to the Jesuit colleges, of which the Archbishop of Bohemia, parish priests, members of orders, cathedral canons, professors, and prelates, called together without asking the consent of the archbishop by F. Nahlowycz, principal of the seminary for Wends, Upper Lusatia, was held at the seminary on 15 and 24 February. In his letter, he expressed his opinion concerning the unsuitability of the unessential system of celibacy; the monasteries should be thoroughly reformed. The proceedings of this assembly even appeared in print. Naturally both the archbishop and Bishop Hille of Leitmeritz, of which diocese Nahlowycz was a priest, expressed "their deep sorrow". Late in August the pamphlet issued by the Bohemian episcopate appeared. The contents discussed the two questions: What is the position of the Church towards the State in general and what are the special rights of the Church in dogma, liturgy, and administration. The strain he had undergone shattered the health of the archbishop and he died in March, 1849, at the age of forty-seven. His successor was Cardinal Schwarztenberg. The present prince archbishop is Leo Cardinal von Riedenburg.

The Archdiocese of Prague (1911) has a population of 2,228,750 Catholics, 63,475 Protestants, 51,016 Jews. There are: 570 parishes; 1348 secular, 238 regular priests; 1517 nuns in 76 orders. (See Bohemian Church.)

C. WOLFGANGEBICHER.

UNIVERSITY OF PRAGUE, founded by Charles IV with the consent of the Estates on the model of the universities of Paris and Bologna and confirmed at the emperor's request by Clement VI as Studium generale. It was established by the Golden Bull of 7 April, 1345, and received imperial sanction 14 September, 1349. Archbishop Ernst of Pardubitz took an active part in the foundation by obliging the clergy to contribute. Its official title is "Imperial and Royal Franz Ferdinand University"; at the present time it is divided into two completely separated universities, one German and the other Bohemian or Czech, each having four faculties (namely, theology, jurisprudence, philosophy, and medicine), each rector and four professors. Both universities are national and are under the immediate control of the Imperial and Royal Ministry of Education at Vienna. All professors are appointed by the State, even the theological professors; these latter are appointed in consultation with the Prague, who is Chancellor of both theological faculties.

I. HISTORY.—From the time of its founding the University of Prague was equipped with four faculties, of which each came gradually to elect its dean for one half-year, and jointly the rector, at first for a year, then later for a half-year. On account of a dispute
system of the country. In the meantime the Emperor Ferdinand I had called the Jesuits to Prague, in 1556, and thence had opened an academy near St. Clement’s, the imperial letter of foundation being dated 1562. This academy comprised a gymnasia of arts and a philosophia as an institute of theology and philosophy arranged according to the "Plan of Study" (RATIO STUDIORUM) of the Society. At first there was only one teacher for each of the two departments of theology and philosophy. In addition, a college was built near St. Clement’s, which on this account was called the Clementins or, after its founder, the Ferdinandana. The right of giving degrees, which it received from the emperor in 1562, was sharply contested by the old university, the Carolina.

After the battle of the White Mountain, the Jesuits, who had been expelled in the years 1618–21, came to have a predominant influence over the emperor in matters concerning instruction on account of their "Plan of study", and the great work they did for Catholicism. An imperial decree of 19 September, 1622, gave them the supreme control of the entire school system of Bohemia, Moravia, and Silesia. In November of the same year, after the resignation of the remaining four professors, they were also given control of the Carolina together with nine colleges, and all the colleges and the faculties of the university were rector of the Jesuit college was the future rector of the Carolina-Ferdinandana. The right of giving degrees, of holding the chancellorship, and of appointing the secular professors was also granted to the Jesuits. Cardinal Erasmus von Harrach, who opposed this union of the university with another institution and the withdrawal of the archiepiscopal right to the chancellorship, prevented the drawing-up of the imperial Golden Bull for the confirmation of these grants. He also founded a society of his own, the Collegium Adalbertinum, in order to secure his influence over the students in training for the priesthood. In 1638 Ferdinand III limited the monopoly of teaching enjoyed by the Jesuits by taking from them the rights, properties, and archives of the Carolina, the faculties of law and medicine, and making these once more independent under an imperial protector. During the last year of the Thirty Years' War the Karl's Bridge of Prague was courageously defended against the Swedes by the students of the Carolina and the Adalbertinum under the leadership of the Jesuit Father George Pachiý. After this war the university received its permanent constitution and by a formal ceremony (4 March, 1654) the Carolina-Ferdinandana was again united and placed under a chancellor, the Archbishop of Prague, and an imperial superintendent. The Jesuits retained all the professorships in the philosophical and theological faculties up to 1757, when a Dominican and an Augustinian were also appointed to give theological instruction. In the two secular faculties the number of lay professors increased after the abolition, in 1612, of the obligatory celibacy of the professors. The secular professors were appointed by the emperor, the Jesuit professors were merely presented to him. They held closely to the Ratio studiorum of the Society and, in regard to discipline and jurisdiction, they were entirely their own masters. The theological faculty had four regular professorships; that of law, four to six; the philosophical, three to five; the medical, five.

The dilapidated Carolina was rebuilt in 1718 by the order of Ferdinand I of the State. The university was strictly Catholic: the profession of faith that had to be made on receiving a degree before the chancellor, the Archbishop of Prague, excluded non-Catholics from the professorships; the rector granted the degrees for the ecclesiastical chancellor (pro cancellario). The laws of the university prescribed that the whole teaching corps should receive Communion on Maundy Thursday, and (after 1602) should take part as a body in the Corpus Christi procession. From 1650 those who received degrees took an oath to maintain the Immaculate Conception of the Blessed Virgin Mary as an institution of theology and philosophy, and this oath was annually renewed on 8 December by all the civis academici. Such, on the whole, was the status which continued until the bureaucratic reform of the universities of Austria in 1752 and 1754. This reform deprived the universities of many of their corporate rights, and rectors appointed by the State were placed at the head of the faculties; as neither the rectors nor the deans so appointed were professors, the Senate was little more than an ornamental body. Matters remained thus until 1849. A great change was brought about in the entire school system of Austria by the suppression of the Jesuits in 1773: secular priests now received positions in the theological faculty, and laymen were appointed to the philosophical faculty. In 1781 the prevailing Josephinism opened academic offices to non-Catholics, and this was followed, in 1785, by the appointment of the first Protestant as professor in the philosophical faculty; in 1781 Jews were permitted to study at the university, and in 1790 they were allowed to receive degrees. The Juramentum de Immaculata conceptione was abolished, and the number of required courses for a degree were dropped in 1782. The new regulations concerning studies (1784) increased the number of professorships and teaching positions in all the faculties; German was made the language of instruction, only pastoral theology and obstetrics were taught in Czech. In 1784 the professors dropped the dress peculiar to the university, which has been retained to the present only by the five proctors, the upper proctor and the proctors for the four faculties. The university was completely under the guardianship of the state, which prescribed the themes for dissertation, semi-annual examinations and fees; in making all these changes, practical training was kept in view. It was not until the revolutionary year of 1848 in which the students of the University of Prague took up arms that a radical change was made.

The "regulation respecting study" of 1 October, 1850, is based upon freedom of teaching and learning. By this law and that concerning the organization of the academic body under the rectorship of the Jesuit Father George Pachý, the university with its independent election of rectors and deans was restored. The religious limitations upon academic degrees and positions were to be entirely removed; although as late as 1863 a Protestant elected dean of the philosophical faculty failed of confirmation by the State. Since that time the election of non-Catholics as deans and rectors has been of common occurrence. Jews, also, have held the office of dean, but not, so far, that of rector, two who were elected having declined the position. Great difficulties have arisen from the national conditions. One indication of the constitutional tendency was a constant development of the national and political consciousness of the Czech majority of the Bohemian people. The university recognized this to a limited degree by founding parallel Czech professorships. Thus, in 1863, out of 187 lecture courses 22 were in Czech; the number was increased but even this did not satisfy the Czechs. Consequently, after long negotiations, the Carolina-Ferdinandana was divided into a German and a Bohemian part, the latter, the "French" one, by the law of February, 1882. The academic authorities and institutions of each section are entirely independent of the other section; only the author in the Carolinum and the university library are in common. The separation came into effect in the winter semester of 1882-83, but it did not include the theological faculty.
where lectures are generally given in Latin, on account of the opposition of Cardinal Schwarzenburg. Under Schwarzenburg's successor, Schöner, the university faculty was also divided in the winter semester of 1891–2, while the archiepiscopal seminary for priests remained mixed in nationality. The sum of 93,000 kronen is required for the maintenance of the 150 students of this seminary — i.e., about 620 kronen piece (a krone is twenty cents) — of this amount 32,043 kronen come from the revenues of the seminary; the rest is granted by the State. The separation and the constantly increasing needs of the work of teaching make new buildings necessary.

Two new university buildings that were plans of inadequate size are in course of construction.

II. Present Condition. — In the winter semester of 1907–1908 the German Karl-Ferdinand University had 1778 students; these were divided into: 58 theological students, for both the secular priesthood and religious orders; 753 law students; 376 medical; 589 philosophical. Among the students were about 80 women. The professors were divided as follows: theology, 7 regular professors, 1 assistant professor, 1 docent; law, 12 regular professors, 2 assistant professors, 4 docents; medicine, 12 regular professors, 19 assistant, 30 docents; philosophy, 30 regular professors, 8 assistant, 19 docents, 7 lecturers. The budget for the year (not including building expenses) was: 1,612,246 kronen ($322,450) for regular expenses, 94,534 kronen for extraordinary expenses. The following are copied from those in the German Empire, are highly developed. The principal ones are: the "Reading and Debating Club of the German Students," founded in 1848, with about 500 members; the "Germania," founded in 1892, with 600 members (both Liberal associations); the Catholic association, "Academia," founded in 1907, with over a hundred members. In the face of over twenty student corps which have colours of their own and favour dressing, the three Catholic corps with about a hundred active members have a difficult position; yet they continually increase in number. In aid of the students there is a German students' home with a hundred rooms and a students' commons. The Bohemian Karl-Ferdinand University in the winter semester of 1907–1908 included 4519 students; of these 313 were theological students belonging both to the secular and regular clergy; 1962 law students; 857 medical; 1539 philosophical; 256 students were women. The professors were divided as follows: theological faculty, 8 regular professors, 2 docents; law, 12 regular, 7 assistant professors, 24 docents; medicine, 16 regular professors, 22 assistant, 24 docents; philosophy, 29 regular, 16 assistant, 35 docents, 11 lecturers. The annual budget amounts to 1,763,700 kronen ($353,750) for regular expenditures, and 117,700 kronen for extraordinary expenditures, without including building expenses. The theological faculty is temporarily housed in a private residence. The "Academic Reading Society" (Akademický čtenářský spolek) is Liberal in religion, the "Svaz cesko-slovenského studentstva" is more radical still. In comparison with these the Catholic associations are comparatively weak. They are: "Družstvo Arnčtoa a Pardubice" (100 to 200 members), "Česka akadémická Liga," and the Slavonic "Daš." In addition to the Hlaska house of studies for students, there is a Catholic house for students founded by Ernest von Fárdulits. The library common to both universities, and to which the public is also admitted, contains 375,630 volumes; among these are 3921 manuscripts, and 1523 early printed books. The expenses of the library for 1910 were 17,353,700 kronen.

Praxeis, an early anti-Montanist, is known to us only by Tertullian's book "Adversus Praxean". His name in the list of heresies appended to the "De Preseptionibus" of that writer (an anonymous epistle of the lost "Syntagma" of Hippolytus) is a correction made by some ancient diatretes for Noetus. Praxean was an Asiac, and was excommunicated with prayer Tertullian, out of deference of the Faith because he had been for a short time in prison. He was well received at Rome (c. 190–200) by the pope (Victor, or possibly Zephyrinus). The latter pope had decided to acknowledge the prophetic gifts of Montanus, Prisco, and Maximilla (if we may believe Tertullian). The intention had been sufficiently public to bring peace to the Churches of Asia and Phrygia — so much depended on the papal sanction; but Praxean prevailed upon the pope to recall his former decision. He came to Carthage, and Tertullian renounced the Catholic communion (c. 200–6). He taught Monarchian doctrine there, or at least a doctrine which Tertullian regarded as Monarchian: "Patrem cruci fixit; Paracletum fugavit" — "Having driven out the Paraclete [Montanus], he now crucified the Father". He was excommunicated by Tertullian himself, and gave an explanation or recantation in writing, which, when Tertullian wrote several years afterwards, was still in the hands of the authorities of the Carthaginian Church, the "earnal", as it affects to call them. When Tertullian, as Tertullian himself was not longer in the Church; Monarchism had sprung up again, but he does not mention its leaders at Rome, and directs his whole argument against his old enemy Praxean. But the arguments which he refutes are doublets those of Epiphan and Clemens. There is little reason for thinking that Praxean was a heresiarch, and less for identifying him with Noetus, or one of his disciples. He was very likely merely an adversary of the Montanists who used some quasi-Monarchian expressions when at Carthage, but afterwards withdrew them when he saw they might be misunderstood.

For bibliography see Monarchians; also D'Albis, La théologie de Tertullien (Paris, 1868).

John Chapman.

Praxedis and Pudentiana, martyrs of an unknown era. The seventh-century itineraries to the graves of the Roman martyrs mention in the catacomb of Priscilla two female martyrs called Potentiana (Potentiana) and Praxedis (Praxidia). They occupied adjoining graves in this catacomb (De Rossi, "Roma sott.", I, 176–7). Of the various MSS. of the "Martyrologium Hieronymianum" only the Echternach Codex (Cod. Eptern.) gives the name of St. Praxedis on 21 July ("Martyro. Hieronym."), ed. De Rossi, /Echernae, 94), but it looks like a late addition, and not as if it came from the fourth-century Roman Martyrology. St. Potentiana's name is found under 19 May in the Martyrology of Reichenau. Praxedis and Pudentiana were venerated as martyrs at Rome. Later legends connect them with the founder of the old title-church of Praxedis at Porto Pichiana, also called "ecclesia Pudentiana". Legend makes Pudenta a pupil of St. Peter, and Praxedis and Potentiana, his daughters. Later Potentiana became customarily known as "Pudentiana", probably because the "ecclesia Pudentiana" was the church of St. Pudenta, sanctae Pudentiae", and Potentiana was identified with Potentiana. The two female figures offering their crowns to Christ in the mosaic of the ape in St.
Pudenziana are probably Potentians and Praxedes. The veneration of these martyrs therefore was in the fourth century, and it is not surprising that the Titulus Pudentis. About that time a new church, called Titulus Praxedis, was built near Santa Maria Maggiore, and the veneration of St. Praxedis was now especially connected with it. When Paschal I (817-824) rebuilt the church in its present form he translated to it the bones of St. Praxedis, Potentiana, and other martyrs. St. Praxedis’s feast is observed on 19 May, St. Praxedes’s on 21 July.

J. P. KIRSCH.

FRAY. GEORGE, abbot, canon, librarian of the University library of Buda, and important Hungarian historian, b. at Ersekujvar, 11 Sept. 1723; d. in Pesth, 23 Sept., 1801. His family came from the Tyrol. He studied in Pozsony, entered the Society of Jesus in 1745, spent two years in the Jesuit college (St. Ann’s) in Lemberg, and was then placed in the college at Grein in Styria. He taught at Nagy-Várad, Trencsén, Nagy-Szombat, and Pozsony. In 1754 he was ordained and continued teaching in Pozsony and in the Theatrum at Vienna, where he was professor of political science and, at the same time, tutor to the Princes of Salm. He was professor in Győr (1758), Nagy-Szombat (1759), and Buda (1760), where, among other subjects, he lectured on moral theology. After the suppression of the Jesuits (1773) he went to the Archdiocese of Gran, and Maria Theresa appointed him imperial historiographer, with a yearly income of 400 florins. When the University of Nagy-Szombat was transferred to Pesth (1777), Pray was given charge of the library; he resigned this position in 1780, but resumed it in 1784. During this year he surrendered his manuscripts and collection of documents to the university library for a life annuity of 400 florins. He became canon in Grosswardein (1790), and was sent by the chapter as its representative to the Hungarian Reichstag. Later he became Abbot of Tormowa. His literary activity embraced the history of Hungary, especially the earlier centuries, the history of the Catholic Church in Hungary, and editing the sources of Hungarian history. He was the first to draw attention to the oldest coherent text in the Hungarian language, 'Oratio funebra', dating probably from 1199, which was called after him "Hírjegy" (Kronicle). He was recognized: "Annales veteres Hunorum, Avarorum et Hungarorum, 210 ad 997" (Vienna, 1761); "Annales regum Hungaricae, 997-1564" (5 vols., Vienna, 1763-70); "Vita S. Elisabethae" (Vienna, 1770); "Specimen Hierarchiae Hungariae" (2 vols., Pressburg, 1776-9).

A. ALDAST.

PRAYER, APOSTOLICSHIP OF. See Apostleship of Prayer.

PRAYER (Gr. σεβασμός, Lat. preces, Fr. prière, to plead, to beg, to ask earnestly), an act of the virtue of religion which consists in asking proper gifts or graces from God. In a more general sense it is the application of the mind to Divine things, not merely to acquire a knowledge of them but to make use of such knowledge as a means of union with God. This may be done by acts of praise and thanksgiving, but petition is the principal act of prayer. The words used to express it in Scripture are: to call upon (Gen., iv, 26); to intercede (Job, xxii, 10); to meditate (Is., lxxiv, 14); to beseech (Rom., i, 16); to implore (Ex., xxxii, 11); and, very commonly, to cry out. The Fathers speak of it as the elevation of the mind to God with a view to asking proper things from Him (St. John Damascene, "De fide," III, xxiv, in P. G., 100, 30); conversing with God (St. Gregory of Nyssa, "De Divina Præcepta," II, 10, in P. G., XLIV, 1125); talking with God (St. John Chrysostom, "Hom. xxx in Gen.", n. 5, in P. G., LIII, 280).

It is therefore the expression of our desires to God whether for ourselves or others. This expression is not intended to instruct or direct God what to do, but to appeal to His goodness for the things we need; and the appeal is necessary, not because He is ignorant of our needs or sentiments, but to give definite form to our desires, to concentrate our whole attention on what we have to say to Him, and to help us appreciate our close personal relation with Him. The expression need not be external or vocal; internal or mental.

By prayer we acknowledge God’s power and goodness, our own neediness and dependence. It is therefore an act of the virtue of religion implying the deepest reverence for God and habituating us to look to Him for everything, not merely because the thing asked be good in itself, or advantageous to us, but chiefly because we wish it as a gift of God, and not otherwise, no more at our own pleasure than it seems to us. Prayer presupposes faith in God and hope in His goodness. By both, God, to whom we pray, moves us to prayer. Our knowledge of God by the light of natural reason also inspires us to look to Him for help, but such prayer lacks supernatural inspiration, and though it may avail to keep us from losing our natural knowledge of God and trust in Him, or, to some extent, from offending Him, it cannot positively dispose us to receive His graces.

Objects of Prayer.—Like every act that makes for salvation, grace is required not only to dispose us to pray, but also to aid us in determining what to pray for. In this the spirit helpeth our infirmity. For we know not what we should pray for as we ought; but the Spirit himself asketh for us with unspeakable groanings (Rom., viii, 26). For certain objects we are always sure we should pray, such as our salvation and the general means to it, resistance to temptation, practice of virtue, final perseverance; but constantly we need light and the guidance of the Spirit to know the special means that will most help us in any particular need. That there may be no possibility of misjudgment on our part in such an essential obligation, Christ has taught us what we should ask for in prayer and also in what order we should ask it. In response to the request of His disciples to teach them how to pray, He may be reported to have spoken of as the Lord’s Prayer (q. v.), from which it appears that above all we are to pray that God may be glorified, and that for this purpose men may be worthy citizens of His kingdom, living in conformity with His will. Indeed, this conformity is implied in every prayer: we should ask for nothing that be not in strict accordance with Divine Providence in our regard. So much for the spiritual objects of our prayer. We are to ask also for temporal things, our daily bread, and all that it implies, health, strength, and other worldly or temporal goods, not material or corporal only, but mental and moral, every accomplishment that may be a means of serving God and our fellow-men. Finally, there are the evils which we should pray to escape, the penalty of our sins, the dangers of temptation, and every manner of physical or spiritual affliction, so far as these might impede our service in God’s service.

To whom may we pray.—Although God the Father is mentioned in this prayer as the one to whom we are to pray, it is not out of place to address our prayers to the other Divine persons. The special appeal one does not exclude the others. More commonly the Father is addressed in the beginning of the prayers of the Church, though they close with
the invocation, “Through Our Lord Jesus Christ Thy Son who with Thee liveth and reigneth in the unity of the Holy Ghost, world without end;” or, “Who with Thee livest and reignest in the unity, etc.” Prayer may be addressed to Christ as Man, because He is a Divine Person, not however to His human nature as such, precisely because prayer must always be addressed to a person, never to something impersonal or in the abstract. An appeal to anything impersonal, as for instance to the Heart, the Wounds, the Cross of Christ, must be taken figuratively as intended for Christ Himself.

Who can pray.—As He has promised to intercede for us (John, xiv, 16), and is said to do so (Rom., viii, 34; Heb., vii, 25), we may ask His intercession, though this is not customary in public worship. He prays in virtue of His own merit; the saints intercede for us in virtue of His merits, not their own. Accordingly when we pray to them, it is for their intercession in our behalf, not to expect that they can benefit us by virtue of their own merit. They pray in virtue of their own merit. Even the souls in purgatory, according to the common opinion of theologians, pray to God to move the faithful to offer prayers, sacrifices, and expiatory works for them. They also pray for themselves and for souls still on earth. Thus it is that we do not believe the saints know many future things, does not prevent them from praying. As they foresee the future, so also they foresee how its happenings may be influenced by their prayers, and they at least by prayer do all in their power to bring about what is best, though those for whom they pray may not dispose themselves for the blessings thus invoked. The just can pray, and sinners also. The opinion of Quesnel that the prayer of the sinner adds to his sin was condemned by Clement XI (Denzinger, 10 ed., n. 1409).

Though there is no supernatural merit in the sinner’s prayer, it may be heard, and indeed he is obliged to make it just as before he sinned. No matter how hardened he may become in sin, he needs and is bound to pray to be delivered from it and from the temptations which beset him. His prayer could offend God only if it were hypocritical, or presumptuous, as if he should ask God to suffer him to continue in his evil course. It goes without saying that in hell prayer is impossible; neither devils nor lost souls can pray, or be the objects of it.

For whom we may pray.—For the blessed prayers may be offered not with the hope of increasing their beatitude, but that their glory may be better esteemed and their deeds imitated. In praying for another we assume that God will bestow His favours in consideration of those who pray. In virtue of the solidarity of the Church, that is, of the close relations of the faithful as members of the mystical Body of Christ, any one may benefit by the good deeds, and especially by the prayers of the others as if particularly addressed to him. This is the reason why we desire that supplications, prayers, intercessions, and thanksgivings be made for all men (Tim., ii, 1), for all, without exception, in high or low station, for the just, for sinners, for infidels; for the dead as well as for the living; for enemies as well as for friends. (See COMMUNION OF SAINTS.)

Effects of Prayer.—In hearing our prayer God does not change His will or action in our regard, but simply puts into effect what He had eternally decreed in view of our prayer. This He may do directly without the intervention of any second person; He may do anything, even those things which are contrary to parts to us some supernatural gift, such as actual grace, or indirectly, when He bestows some natural gift. In this latter case He directs by His Providence the natural causes which contribute to the effect desired, whether they be moral or free agents, such as men; or some moral and others not, but physical and not free agents, such as nature is free. Finally, by miraculous intervention, and without employing any of these causes, He can produce the effect prayed for.

The use or habit of prayer redounds to our advantage in many ways. Besides obtaining the gifts and graces we need, the very process elevates our mind and heart to a knowledge and love of Divine things, greater confidence in God, and other precious sentiments. Indeed, so numerous and so helpful are these effects of prayer that they compensate us, even when the special effect we request is not granted. Often they are of far greater benefit than what we ask for. Nothing that we might obtain in answer to our prayer could exceed in value the familiar converse with God in which prayer consists. In addition to these effects of prayer, we may (de congruo) merit by it restoration to grace, if we are in sin; new inspirations of grace, increase of sanctifying grace, and satisfy for the temporal punishment due to sin. Signal as all these benefits are, they are only accidental to prayer; it is its impecunious power based on the infallible promise of God, “Ask, and it shall be given you; seek, and you shall find: knock, and it shall be opened to you” (Matt., vii, 7); “Therefore I say unto you, all things whatsoever ye ask when ye pray, believe that ye shall receive” (Mark, x, 11). And also Luke, xi, 6; John, xvi, 24, as well as innumerable assurances to this effect in the Old Testament.

Conditions of Prayer.—Absolute though Christ’s assurances in regard to prayer would seem to be, they do not exclude certain conditions on which the efficacy of prayer depends. In the first place, its object must be worthy of God and good for the one who prays, spiritually or temporally. This condition is always implied in the prayer of one who is resigned to God’s will, ready to accept any spiritual favour God may be pleased to grant, and desirous of temporal ones only in so far as they may help to serve God. Next, faith is needed, not only the general belief that God is capable of answering prayer or that it is a powerful means of obtaining His favour, but also the implicit trust in God’s fidelity to His promise to hear a prayer in some particular instance. This trust implies a special act of faith and hope that if our request be for our good, God will grant it, or something else equivalent or better, which in His Wisdom He deems best for us. To ask as if one had a binding claim on God’s goodness, or title of whatever colour to obtain some favour, would not be prayer but demand. The parable of the Pharisee and the Publican illustrates this very clearly, and there are innumerable testimonies in Scripture to the power of humility in prayer. “A contrite and humble heart, O God, thou wilt not despise” (Ps. 1, 19). “The prayer of him that humbleth himself shall pierce the clouds” (Eccl., xxxv, 21). Without sacrifice of humility the answer may not be sure that our conscience is good, and that there is no defect in our conduct inconsistent with prayer; indeed, we may even appeal to our merits so far as they recommend us to God, provided always that the principal motives of our confidence are God’s goodness and the merits of Christ. Sincerity is another necessary quality of prayer. It would be idle to ask favour without doing all that may be in our power to obtain it; to beg for it without really wishing for it; or, at the same time that one prays, to be inconsistent with God’s will. Earnestness or fervour is another such quality, precluding all lukewarm or half-hearted petitions. To be resigned to God’s will in prayer does not imply that one should be indifferent in the sense that one
does not care whether one be heard or not, or should as lif not receive as receive; on the contrary, true reverence is felt when, even though we are not desired and earnestly expressed our desire in prayer for such things as seem needful to do God’s will. This earnestness is the element which makes the persevering prayer so well described in such parables as the Friend at Midnight (Luke, xi, 5-8), or the Widow (Luke, xvii, 7), and the just Judge (Luke, xviii, 1-8), and which ultimately obtains the precious gift of perseverence in grace.

Attention in Prayer.—Finally, attention is of the very essence of prayer. As an expression of sentiment and devotion in our intercourse with the Deity, it requires their application, i.e. attention. As soon as this attention ceases, prayer ceases. To begin praying and allow the mind to be wholly diverted or distracted to some other occupation or thought necessarily terminates the prayer, which is resumed only when the mind is withdrawn from the object of distraction. To admit distraction is wrong when one is obliged to apply oneself to prayer: when there is no such obligation, one is at liberty to pass from the subject of prayer, provided it be done without irreverence; but when the subject be in our own words; whereas all that is needed for usual form of the intention of using them in prayer. So long as this intention lasts, i.e. so long as nothing is done to terminate it or wholly inconsistent with it, so long as one continues to repeat the form of prayer, with proper reverence in disposition and outward manner, with only this general purpose of praying according to the prescribed form, so long one continues to pray, and no thought, or external act can be considered a distraction unless it terminate our intention, or by levity or irreverence be wholly inconsistent with the prayer. Thus, one may pray in the crowded streets where it is impossible to avoid sights and sounds and consequent imaginations and thoughts.

Provided one repeats the words of the prayer and avoids wilful distractions of mind to things in no way pertaining to prayer, one may through mental infirmity or inadvertence admit numerous thoughts not connected with the subject of prayer without irreverence. It is true, this amount of attention does not enable one to derive from prayer the full spiritual advantage it should bring; nay, to be satisfied with it as a rule would result in admitting distractions quite as wrong as any thought, of which one is advised not only to keep the mind bent on praying but also to think of the purport of the prayer, and as far as possible to think of the meaning of some at least of the sentiments or expressions of the prayer. As a means of cultivating the habit, it is recommended, notably in the spiritual exercises of St. Ignatius, often to recite certain familiar prayers, the Lord’s Prayer, the Angelical Salutation, the Creed, the Confiteor, slowly enough to admit the interval of a breath between the principal words or sentences, so as to leave time to reflect on the meaning and to feel one’s heart the appropriate emotions. Another practice strongly recommended by the same author is to take each sentence of these prayers as a subject of reflection, not delaying too long on any one of them unless one finds in it some suggestion or helpful thought or sentiment, but then stopping to reflect as long as one finds profit, imagination, or emotion, and, when one has dwelt sufficiently on one, proceeding to finish the prayer without further deliberate reflection (see Distractation).

Necessity of Prayer.—Prayer is necessary for salvation. It is a distinct precept of Christ in the Gospel (Matt., vi, 5-8; Luke, xvii, 7; James, i, 5), and it is necessary we should pray according to the bishops and destines of the Church. It is a part of the Church’s mission, and is a means of salvation to all according to their different states in life, especially on those who by virtue of their office, of priesthood, for instance, or other special religious obligations, should in a special manner pray for their own welfare and for others. The obligation to pray is incumbent on us at all times. "And he spoke also a parable, to them that we ought always to pray, and not to faint" (Luke, xviii, 1); but it is especially pressing when we are in great need of prayer, when without it we cannot overcome some obstacle or perform some obligation; when other parts of charity, we should pray for others; and when it is specially implied in some obligation imposed by the Church, such as attendance at Mass, and the observance of Sundays and fast-days. This is true of both vocal prayer, and as regards mental prayer, or meditation, this, too, is necessary so far as we may need to apply our mind to the study of Divine things in order to acquire a knowledge of the truths necessary for salvation.

The obligation to pray is incumbent on us at all times, not that prayer should be our sole occupation, as the Euchites, or Messalianists (q. v.), and similar heretical sects professed to believe. The texts of Scripture bidding us to pray without ceasing mean that we must pray whenever it is necessary, as it so frequently is necessary; that we must continue to pray until we shall have obtained what we need. Some writers speak of a virtuous life as an uninterrupted prayer, and appeal to the adage "to be is to pray" (laborare est orare). This does not mean that virtue or labour replaces the duty of prayer, since it is not possible either to practise virtue or to labour properly without frequent use of prayer. The Wycliffists and Waldenses, according to Suarez, advocated what they called vital prayer, consisting in good works, to the exclusion even of all vocal prayer except the Our Father. For this reason Suarez does not approve of the expression, though St. Francis de Sales uses it to mean prayer reinforced by work, or rather work which is inspired by prayer. The practice of the Church, devoutly followed by the faithful, is to begin and end the day with prayer; and though morning and evening prayer is not of strict obligation, the practice of it so well satisfies our sense of the need of prayer that neglect of it, especially for a long time, is regarded as more or less sinful, according to the need of it, which is commonly some form of sloth.

Vocal Prayer.—Prayer may be classified as vocal or mental, private or public. In vocal prayer some outward action, usually verbal expression, accompanies the internal act implied in every form of prayer. This external action not only helps to keep us attentive to the prayer, but it also adds to its intensity. Examples of it occur in the prayer of the Israelites in captivity (Ex., ii, 23); again after their idolatry among the Chanaanites (Judges, iii, 9); the Lord’s Prayer (Matt., vi, 5); and to prayer psalms, suggestive Lazarus (John, xi, 41); and the testimonies in Heb., v, 7, and xii, 15, and frequently we are recommended to use hymns, canticles, and other vocal forms of prayer. It has been common in the Church
from the beginning; nor has it ever been denied, except by the Wycliffites and the Quietists. The former objected to it as unnecessary, as God does not need our words to know what goes on in our souls, and prayer being a spiritual act need be performed by the soul alone without the body. The latter regarded all external action in prayer as an unfounded distraction of the mind, and deny the passivity of the soul required, in their opinion, to pray properly. It is obvious that prayer must be the action of the entire man, body as well as soul; that God who created both is pleased with the service of both. When the soul is united to God and helps instead of interfering with one another's activities. The Wycliffites objected not only to all external expression of prayer generally, but to vocal prayer in its proper sense, viz. prayer expressed in set form of words, excepting only the Our Father. The use of a variety of such forms is sanctioned by the prayer over the first-fruits (Deut., xxvi, 13). If it be right to use one form, that of the Our Father, why not others also? The Litany, Collective and Eucharistic prayers of the early Church were surely set up in the family and in the Church, the Our Father, Hail Mary, Apostles' Creed, Confiteor, Acts of Faith, Hope, and Charity, all attest the usage of the Church in this respect and the preference of the faithful for such approved forms to others of their own invention.

Postures in Prayer.—Postures in prayer are also an evidence of the tendency in human nature to express inward sentiment by outward sign. Not only among Jews and Christians, but among pagan peoples also, certain postures were considered appropriate in prayer, as, for instance, standing with arms raised among the Romans. The Orante (see Orans) indicates the postures favoured by the early Christians, standing with hands extended, as Christ on the Cross, according to Tertullian; or with hands raised towards heaven, with bowed heads, or, for the faithful, with eyes raised towards heaven, and, for catechumens, with eyes bent on the earth; prostration, kneeling, genuflection (q. v.), and such gestures as striking the breast are all outward signs of the reverence proper for prayer, whether in public or private.

Mental Prayer.—Meditation is a form of mental prayer consisting in the application of the various faculties of the soul, memory, imagination, intellect, and will, to the consideration of some mystery, principle, truth, or fact, with a view to exciting proper spiritual emotions, and that each act of action regarded as God's will and as a means of union with Him. In some degree or other it has always been practised by God-fearing souls. There is abundant evidence of this in the Old Testament, as, for instance, in Ps. xxxviii, 4; lii, 7; lxvi, 13; cxviii throughout; Eccles., xiv, 22; Is., xxvi, 9; Ivii, 1; Jer., xii, 11. In the New Testament Christ gave frequent examples of it, and St. Paul often refers to it, as in Eph., vi, 18; Col., iv, 2; I Tim., iv, 18; Cor., xiv, 15. It has always been practised in the Church. Among others who have recommended it to the faithful are Chrysostom in his two books on prayer, as also in his "Hom. xxx in Gen.", and "Hom. vi. in Isaiah"; Cassian in "Conferences ix"; St. Jerome in "Epistula 22 ad Duestochum"; St. Basil in his "Homily on St. Lucilla, M.", and "In regula breviori", 301; St. Cyril, "In expositione orationis dominicalis"; St. Ambrose, "De sacramentis", VI, iii; St. Augustine, "Epist. 121 ad Probalium", CC. vi, vii, Boethius, "De spiritu et anima", xxiv; St. Athanasius, "De unitate Dei", II, "De consecratione", I, vii; St. Thomas, II-II, Q. lxxiii, a. 2.

The writings of the Fathers themselves and of the great theologians are in large measure the fruit of devout meditation as well as of study of the mysteries of religion. There is, however, no trace of methodical meditation before the fifteenth century. Prior to that time, even in monasteries, no regulation seems to have existed for the choice or arrangement of subject, the order, method, and time of the consideration. From the beginning, before the middle of the twelfth century, the Carthusians had times set apart for mental work, as appears in God's "Consuetudinary", but no further regulation. About the beginning of the sixteenth century one of the Brothers of the Common Life, Jean Mombser of Brussels, issued a series of subjects or points for meditation ruled and arranged in order, times for common prayer, usually the recitation of the Office, leaving it to the individual to ponder as he might on one or other of the texts. Early in the sixteenth century the Dominican chapter of Milan prescribed mental prayer for half an hour morning and evening. Among the Franciscans there is record of methodical mental prayer about the middle of that century. Among the Carmelites there was no regulation for it until Saint Theresa introduced it for two hours daily. Although Saint Ignatius reduced meditation to two periods a day, and Saint Joseph drew up a plan of daily meditation and exercises, it was not made part of his rule until thirty years after the foundation of the Society. His method and that of St. Sulpice have helped to spread the habit of meditating beyond the cloister among the faithful everywhere.

Methods of Meditation.—In the method of St. Ignatius the subject of the meditation is chosen beforehand, usually the previous evening. It may be any truth or fact whatever concerning God or the human soul, God's existence, His attributes, such as justice, mercy, love, wisdom, His law, providence, revelation, creation and its purpose, sin and its penalties, death, judgment, hell, redemption, etc. The precise aspect of the subject should be determined very definitely, otherwise its consideration will be general or superficial and of no practical benefit. As far as possible its application to one's spiritual needs should be foreseen, and to work up interest in it, as one retires and rises, one should recall it to mind so as to make it a sleeping and a waking thought. When ready for meditation, a few moments should be given to recollecting what we are about to do so as to begin with quiet of mind and deeply impressed with the sacredness of prayer. A brief act of adoration of God naturally follows, with a petition that our intention to honour Him in prayer may be sincere and persevering, and that one act of the power of the interior, may contribute to His service and praise. The subject of the meditation is then recalled to mind, and in order to fix the attention, the imagination is here employed to construct some scene appropriate to the subject, e. g. the Garden of Paradise, if the meditation be on Creation, or the Fall of Man; the Valley of Jehosaphat, for the Last Judgment; or, for Hell, the bottomless and boundless pit of fire. This called the composition of place, and even when the subject of meditation has been practised, the imagination can always devise some scene or sensible image that will help to fix or recall one's attention and appreciate the spiritual matter under consideration. Thus, when considering sin, especially carnal sin, as enshrining the soul, the Book of Wisdom, ix, 15, suggests the similarity of the body to the prison house of the soul: "The corruptible body is a load upon the soul, and the earthly habitation presseth down the mind that useth upon many things."

Quite often this initial step, or preamble as it is called, might either be done at the entire time set apart for meditation; but ordinarily it should be made in a few minutes. A brief petition follows for the special grace one hopes to obtain and then the meditation proper begins. The memory recalls the subject as definitely as possible, one point at a time, repeating
it over if necessary, always as a matter of intimate personal interest, and with a strong act of faith until the intellect naturally apprehends the truth or the import of the fact under consideration, and begins to conceive it as a matter for careful consideration, reasoning about it and studying what it implies for one's self or others, and in all, and all, is aroused in these reflections, until, with faith quickening the natural intelligence, one begins to perceive applications of the truth or fact to one's condition and needs and to feel the advantage or necessity of acting the main obligation one's reflections are to have charity as their aim and norm. They should be few, if possible, one only of such simplicity and intensity that it can inspire the soul to act on the conclusion derived from the consideration and resolve to do something definite in the service of God. To seek too many affections only distracts or dissipates the attention of the mind and weakens the resolution of the will. If it be difficult to limit the emotions to one, it is not well to make much effort to do so, but better to devote our energies to deriving the best fruit we can naturally get, and naturally can, from our mental reflections. As a means of keeping in mind during the day the uppermost thought or motive of the meditation we are advised to cull a spiritual nosegay, as it is quaintly called, with which to refresh the memory from time to time.

Meditation carefully followed forms habits of recalling and reasoning rapidly and with some ease about Divine things in such a manner as to excite pious affections, which become very ardent and which attach us very strongly to God's will. When prayer is made up chiefly of such affections, it is called by Alvarès de Paz, and other writers since it is called, affective prayer, to denote that instead of having to labour mentally to admit or grasp a truth, we have grown so familiar with it that almost the mere recollection of it fills us with sentiments of hope, charity, and light to perceive and appreciate them and to know the means of obtaining them. This general process is subject to variations according to the character of the matter under consideration. The number of preludes and colloquies may vary, and the time spent in reasoning may be greater or less according to our familiarity with the subject. There is nothing mechanical in the process; indeed, if analysed, it is clearly the natural operation of each faculty and of all in concert. Roothaan, who has prepared the best summary of all these meditations without preparatory rules for it, so as to know whether we are properly disposed to enter into meditation, and, after each exercise, a brief review of each part of it in detail to see how far we may have succeeded. It is also strongly advised to select as a means of recalling the leading thought or motive or affection some brief memorandum, preferably couched in the words of some text of Scripture, the "Imitation of Christ", the Fathers of the Church, or of some accredited writer on spiritual things. Meditation made regularly according to this method tends to create an atmosphere or spirit of prayer.

The method in vogue among the Sulpicians and followed by the students in their seminars is not substantially different from this. According to Chenuart, companion of Olier and for a long time director of the Seminary of St. Sulpiece, the meditation should consist of three parts: the preparation, the prayer proper, and the conclusion. By way of preparation we should begin with acts of adoration of Almighty God; the prayer proper is a petition to be directed by the Holy Spirit in our prayer to know how to make it well and obtain its fruits. The prayer proper consists of considerations and the spiritual emotions or affections that result from such considerations. Whatever the subject of the meditation may be, it should be considered as it
tion is held steadfast by the firm and ardent affection it excites. St. Ignatius and other masters in the art of prayer have provided suggestions for passing from meditation proper to these further degrees of prayer. In the 'Exercises' of St. Ignatius, the first minutes of prayer consorts in affective prayer, and the exercises of the second week, the contemplations of the life of Christ, are virtually the same as the prayer of simplicity, which is in its last analysis the same as the ordinary practice of contemplation. Other meditation prayers are described under Contemplation; Quiet, Prayer of.

The classification of private and public prayer is made to denote distinction between the prayer of the individual, whether in or out of the presence of others for his or for others' needs, and all prayer offered officially or liturgically whether in public or in secret, as when a priest recites the Divine Office outside of choir. All the liturgical prayers of the Church are public, as all are the prayers which one in sacred orders offers in his ministerial capacity. These public prayers are usually offered in places apart for this purpose, in churches or chapels, just as in the Old Law they were offered in the Temple and in the synagogue. Special times are appointed for them: the hours for the various parts of the daily office of prayer: Matins and Lauds, Prime, Tierce, Sext, None, Vesper, and Compline; and various of special need, affliction, thanksgiving, jubilee, on the part of all, or of large numbers of the faithful. (See Union of Prayer.)

BERNARD, Scala coelestis, attributed to St. Augustin, v. 106, p. 353, quoting a work on the visions of the Blessed Herman of Thuringia. (Cf. LUTHER, Einleitung in die Enzyklopädie der theologischen Literatur der Kirche, 1903, p. 101.) CARRÉ AND DONOVAN (Dublin, r.d.) and HOUZE, The System of Ignatian Prayer, 1901, pp. 33-42; SEBRELT, De la liturgie de St.-Louis; LUKE, The Art of Prayer (London, 1885); XAVIER, Les dix commandements de Dieu. (Cf. XIII, p. 225.)

Some few of these psalter prayer-books have been happily preserved to us, probably on account of their illuminations, annotations, or binding, while the plainer copies belonging to less exalted owners have entirely perished. The psalter of the Emperor Lothair (c. 845) is one of the earliest and most famous of these, but there is also a similar manuscript which belonged to Charles the Bald, now preserved in Paris and two very fine psalters of St. Gall, one of them known as the "psalterium aureum," the work of the famous scribe Sindicum and belonging to the beginning of the tenth century. Similar books of devotion are to be found in English libraries. The ancient psalter in the British Museum (Cotton M.S. Vespasian, A. 1), formerly supposed to be one of the books brought by St. Augustine from Rome but really written in England about 700, is probably to be accounted liturgical. It is not a manual for private devotion, although the collection of various hymns, psalms, and prayers of non-liturgical prayers were added to it. On the other hand, the volume in the same collection, known as King Athelstan's psalter (ninth century), seems to have been intended for a prayer-book, being small in size and supplemented with a later but tenth-century script. And here be it said that down to the time of the invention of printing, the Psalter, or at least a volume containing psalms and portions of the Office with a supplement of miscellaneous prayers, remained the type of the devotional prayer-book most favoured by the laity. After King Alfred, at the age of twelve or thirteen (861), as Asser tells us, had learned to read, "he carried about with him everywhere, as we ourselves have often seen, the daily Office (cursum diurnum), that is, the celebrations of the hours (celebrationes horarum), and next certain psalms and a number of prayers, all collected into one book which he kept as an inseparable companion in his bosom to help him to pray amid all the contingencies of life". Similarly we read in the Life of Eadmer that King Henry I carried about with him, even when he was on the field of battle, the so-called "dog-eared prayer-book" (codicellum manuale frequentia rugosum) which he carried about with him while he continuously recited the Psalms and other prayers. These descriptions seem to apply accurately enough to a number of devotional manuals still surviving in the tenth century, though often through the whole Psalter was transcribed and not merely select
portions of the Office. Many of those thus preserved must have been intended for the use of great personages and, like the famous "Utrecht Psalter" for example, in the ninth century, or the psalter of Archbishop Egbert of Trier (d. 904), were elaborately illustrated as in the best case, at least, considerably enlarged by devotional additions. At least five psalters of this kind are still in existence, which seem to have belonged to St. Louis of France, more than one of them being clearly of English workmanship, while in the twelfth and thirteenth centuries was very famous. One of these, now preserved at Leyden, was used by the saint in his boyhood as an elementary reading-book, a fact which brings us very near the origin of the English name "primer." Moreover, to pass from the complete book of psalms to a collection of offices, of which the principal was the Little Office of Our Lady, was the most natural of transitions, and we thus arrive at the manual which is universally recognized as being the great prayer-book of the laity during the close of the Middle Ages (see Primers, Text). The psalter type, however, was not the only form of manual of private devotions which existed in the Carlowingian period. Several collections of miscellaneous prayers, often with extracts from the Gospels and personages, the especially sacred to the four Evangelists, still survive from the eighth and ninth centuries. The codex known as "The Book of Cerne," written apparently for Bishop Ædelulwic of Lichfield (818-30) and now preserved in the University Library, Cambridge, is one of the most famous of these, and it has recently been rendered accessible, with valuable notes by Mr. Edmund Bishop, in the edition of Dom Kuyppers (Cambridge, 1902). The traces of Celtic influences and, as Mr. Bishop points out, of "Spanish symptoms," are very marked, but it is difficult not to admit that such a prayer as the "Lorica" (breastplate), which, while resembling that attributed to St. Patrick, is different from it and ascribed to a certain Loding, partsake in some respects of the nature of an incantation. There are also in the "Book of Cerne" and some similar collections forms of general accasation for confession, embracing almost every imaginable crime, which were probably intended to help the penitent, much as a modern examination of conscience might do. In France, the "Book of Cerne" of the eighth century is the eighth-century Book of Nunnaminster (MS. Harl. 2965). This also contains the Passion according to the four Evangelists and a miscellaneous collection of non-liturgical prayers (many of them connected with the Passion of Christ), and also the "Lorica," the "Pater Noster" is also preserved, and the supplementary matter exhibited a constant tendency to increase in bulk and we may add also in extravagance. In Germany the book known as the "Hortulus Animae" (the little garden of the soul), which seems first to have appeared in 1498, enjoyed most popularity. But though the "Horne" and the "Hortulus" were apt to differ somewhat in arrangement, their contents in substance were identical, and, more particularly after the "Hortulus" was brought out at Lyons in 1504, the various publishers of the one book made no scruple about appropriating any feature in the other which took their fancy. Both in the "Horne" and the "Hortulus" we find, at any rate in the later copies, almost without exception, after the Calendar, the Office of the Blessed Virgin, the Office of the Seven Last Words (either as an appendix or the narratives of the Passion), the Penitential Psalms, the Litany of the Saints, a long series of prayers to the Holy Trinity and the Divine Persons, to Our Lady and to different saints, mostly with an antiphon, versicle, and response, and, in the later books, also prayers for the principal feasts borrowed from the Missal, and particularly the Office for the
Dead and prayers for the dying. Both the "Hors" and the "Hortulus" appeared in innumerable editions. Even as early as the period 1487 to 1498 more than sixty-five editions of the different "Hors" are known to have been printed in France alone. For the adornment of these volumes, which were often printed upon vellum, the best art of the wood engraver was called into requisition. The editions of the "Hors" by Du Pré, Vérard, Pigouchet, and Geoffrey Torr, especially those produced between 1488 and 1502, may rank among the most beautiful specimens of the printing press in the first hundred years of its existence, while the German cuts of the engravers Schaufelein and Springklee have also a charm of their own. It was also a common practice to employ hand illumination to add further lustre to many of the copies printed upon vellum. In regard to the contents, the devotional extravagance of the age and the competition between publisher and publisher to push their wares and attract purchasers led to many regrettable abuses. Spurious indulgences and fantastic promises of all kinds abound, and even prayers which in themselves are full of piety and absolutely unobjectionable—for example the prayers in honour of the Passion preserved to us by the said first scribed books of Bridget and were known in England as the "Fifteen O's"—are not exempt from these disfigurements. A deplorable example of such extravagance is presented by a Sarum "Hors" of Thielman Kerver printed at Paris in 1510, in which we find such assertions as the following: "Alexander the VI pope of Rome hath granted to all them that say this prayer devoutly in the worship of St. Anne and Our Lady and her Son Jesus V thousand years of pardon for deadly sins and XX years for venial sins toties quotidie", or again, "This prayer our lady showed to a devout person, saying that this golden prayer is the most sweetest and acceptablest to me, and in her appearing she had this salutation and prayer written with letters of gold on her breast" (Hoskins, "Horse", 124-5). Again, for a certain prayer to be said before a picture of Christ crucified, Pope Gregory III (I) is declared to have granted an indulgence of so many days as there were wounds in our Saviour's sacred Body. In another supposed grant of Boniface VIII an indulgence of eighty thousand years is mentioned. In the prayer and the devotion which the pious sentiments are cast, all is aimed at the devotion of the pious sentiments of the masses, so that if he performs them he shall not die without confession, that Our Lady and her Divine Son will come to warn him before his death, etc. Of course it must be remembered that, practically speaking, this was a time of great encouragement to the growth of the Church during the sixteenth century. The Congregation of the Index did not come into existence until after the Council of Trent. Hence the booksellers in pre-Tridentine days were free to publish almost any extravagance which might help to sell their wares. After Trent things, however, were very different.

Besides the "Horse" and the "Hortali" a few collections of private prayers, generally connected with some special subject, also saw the light before Reformation times. There were books on the art of how to die well, books on the Rosary copiously interspersed with meditations and prayers (of these the volumes of the Dominican Castillo, with a picture for each of the one hundred and fifty Hail Marys, is perhaps the best known), books on various forms of devotion to the Passion, for example, the seven Days' devotion and the "Hors" of the seven Days' grimages which eventually took a more permanent shape in the exercise of the Stations of the Cross. A more important work, issued about 1498, was the collection of prayers called "Paradusus Animae". In England the printed editions evidence the change of the English Catholics' forerunners in the days of persecution under the name of "The Jesus Psalmist" was printed and sold separately as early as 1620, though no copy is now known to survive. The author of this most touching prayer is believed to have been Richard Whithof, the Briggite monk who loved the English "Hors", and who, according to the legend, left a spiritual little volume compiled for the use of communicants, and has been sometimes named as the true author of "The Fryste of Redemcyon", a collection of prayers which professes to have been composed by "Simon the Anker [Anchoret] of Lon- don Wall". But this last work is a dull performance and quite unworthy of Whithof. In all probability there must have been many more of these devotional books than our libraries have preserved traces of, for such works when they are not protected by the abundance or beauty of their illustrations (as was the case with many of the "Horse") are apt to disappear completely without leaving any trace. The preface of an early "Reforming" English prayer-book (Certeine Prayers and godly meditacyon, 1538), while speaking contemptuously of this devotional literature, implies that even in England it was large and varied. "These bokes, (though they abounded in every place with infinite errors and taught prayers made with wicked folyshenesse both to God and also to man) are intermixed with joyful and gracious meditations and praysers, with glorious tytles and with redde letters, with praisynge moche grace and pardon (though it were but vanyte) have sore decayed the unlerned multyde. One is called the Garden of the Soule, another the Paradise of the Soule, and by cause I will be short, loke thou the styfe which thy dyes and tryfeling names be gyven vnto them."

We are not concerned here with the prayer-books of the Reformers, but it may be worth while to notice that, just as in Germany the Lutherans produced a modified version of the "Hortulus Animae", so in England it was the first care of Henry VIII and his vicar-general, Thomas Cromwell, after the breach with Rome, to bring out a new set of primers adapted to the new condition of things. Indeed even in 1532 Sir Thomas More in his "Confutacion of Tyndale's Answer" could write of the devotional works produced by heretics: "And lest we should lack prayers, we have the Primer and the Ploughman's Prayer and a book of other small devotions and then the whole Psalter too". These, however, we cannot consider in the present connexion. The liturgical Primers of Marshall and Hilsie (1534 and 1538), followed in 1545 by "The King's Primer", which Henry VIII supervised himself. Of course the great bulk of this material was entirely Catholic and im- mediately afterwards, in the early years of the sixteenth century, the Congregation of the Index did not come into existence until after the Council of Trent. Hence the booksellers in pre-Tridentine days were free to publish almost any extravagance which might help to sell their wares. After Trent things, however, were very different. Besides the "Horse" and the "Hortali" a few collections of private prayers, generally connected with some special subject, also saw the light before Reformation times. There were books on the art of how to die well, books on the Rosary copiously interspersed with meditations and prayers (of these the volumes of the Dominican Castillo, with a picture for each of the one hundred and fifty Hail Marys, is perhaps the best known), books on various forms of devotion to the Passion, for example, the seven Days' devotion and the "Hors" of the seven Days' grimages which eventually took a more permanent shape in the exercise of the Stations of the Cross. A more important work, issued about 1498, was the collection of prayers called "Paradusus Animae". In England the printed editions evidence the change of the English Catholics' forerunners in the days of persecution under the name of "The Jesus Psalmist" was
last fifteen years of Henry's reign accustomed the people to pray in English, and under Mary we have printed Catholic Primers both in Latin and English, and in English alone. It may probably be said that from this time forth the uneducated laity, even though Catholic, prayed almost exclusively in English.

Although a similar change in the direction of the vernacular, due in large measure to the same cause, i.e. the influence of the Reformers, was taking place in Germany, France, and the Netherlands, until the most widely known and popular prayer-books introduced in the sixteenth century made their appearance first in Latin. The reforms initiated by the Council of Trent took practical effect in the Bull of St. Pius V, 11 March, 1564, which enjoined a rigorous censorship of the "Hosanna" and "Hortulli" containing the Office of the Blessed Virgin, forbade the extravagant accretions and spurious indulgences often found in these books, prescribed a uniform text for the Office itself and forbade it to be printed in the vernacular. We may suppose that this action, while occasioning the publication of revised and corrected editions (though these do not seem to have been numerous), also occasioned or at least marked a certain revulsion of feeling against the type of service which thus came in to the fore.

In the course of this period we note the appearance at this same period of a number of new prayer-books, which seem in several cases to have been designed to serve as manuals for the sodalities of the Blessed Virgin which were now springing up in Germany and elsewhere as one of the first fruits of the Counter-Reformation and the educational activity of the Society of Jesus. With this new type of prayer-book must be connected in the first place the name of Blessed Peter Canisius. His activity in this matter cannot be discussed in detail here (it is treated of in pp. 727 sq.), but we may note that to his widely popular short Catechism a collection of prayers was appended, that he produced in 1566 his "Lexiones et praelectiones ecclesiasticae" for the use of students, and in 1587 his "Manuale Catholicorum." Other books of prayers specially intended for the use of sodalists were published by Fathers Sally and Veron, S.J., and they have since been often reprinted and imitated. A similar purpose seems to have been dominant in the mind of Simon Verepeus, a priest of Heidelberg, who published in 1580 the "Precationum pluram Enchiridion" founded in part upon materials left by Cornelius Lidanus. Veregpeus's "Enchiridion" was frequently reprinted and several editions appeared in German. Of other foreign works it will be sufficient to mention here two famous prayer-books of German origin both belonging to the seventeenth century and both appearing in the vernacular before they were published in Latin editions.

The earlier of these was the "Paradisus Animae" compiled by Merlo Horstius, a parish priest of Cologne, the first (German) edition of which appeared in 1644. The later was the still more famous collection of Father William Nakatenus, S.J., known as the "Coelesti Palmetum". In the case of both of these works their popularity seems to have been largely due to the very wide range of devotions which they included, adapted to every occurrence of life and including many litanies, little offices, and pious instructions. In France during the seventeenth century we may note the introduction of the "Paroissien," a book containing a large proportion of liturgical texts compiled with a view to use for the Sundays and fasts, as also the Epistles and Gospels, and often a great deal of musical notation, but not excluding private devotions, methods of hearing Mass, preparation for Confession and Communion etc. The popularity of this work (though its contents have varied) has had a good deal at different periods and in different localities) has lasted on down to modern times.

For the use of English Catholics during the days of persecution two forms of prayer-book long held an unchallenged supremacy. The first of these was simply a revision of the Catholic Primer. An important edition of this, the first since Queen Mary's time, was issued by that energetic scholar Richard Verstegen at Antwerp in 1599 "for the more utility", as he said, "of such of the English nation and others using our language as understand not the Latin tongue." With this object the Office of the Blessed Virgin was printed both in Latin and English and the book contained a selection of hymns rather rudely translated into English verse probably by Verstegen himself. In other respects the main features of the old Primer reappear. We have the Office for the Dead, Offices of the Holy Cross and of the Holy Ghost, the Litanies of the Saints, Seven Penitential Psalms etc., but the extravagant prayers of the early editions were eliminated and devotions of a more practical kind, e. g. for Confession and Communion etc., substituted in their place. A considerable number of editions appeared subsequently and the book was in favour down to the close of the eighteenth century. Another noteworthy revision under the title of "Anglicae Ritu Mentalis" appeared later in 1706 the rude renderings of the hymns were replaced by a version perhaps executed by John Dryden. The other prayer-book was the "Manual of devout Prayers and Exercises, collected and translated out of divers authors", which seems to have been printed for the first time in 1555. If we may accept the conclusions of Mr. Joseph Gillow (The Ushaw Magazine, 1910) this book also was translated by Verstegen and then printed by Flinton at Father Persons' press at Rouen. The original work upon which it was based was, Mr. Gillow thought, "The Primo vero de Virgine Maria" by Vereneus, from which it borrowed its arrangement according to the seven days of the week. This compilation became very popular. Already in 1584 we find it mentioned among a list of Catholic books seized at Hoxton, and it seems to have been reprinted with certain modifications in 1595, 1596, 1599, and 1604. The history of the subsequent impressions has been minutely traced by Mr. Gillow, who claims to have identified seventy-two different editions, but whose list is nevertheless not entirely exhaustive. An important edition of the work appeared under Jesuit auspices in 1652 (St. Omer's) and another published by command of His Majesty, James II, in 1686. In 1729 it came out in London in two parts, and in 1744 an edition was printed which professed to have been corrected and enlarged by Bishop Challoner, but the changes made were merely slight. It appeared also in 1811 and 1819 and for the last time in 1847. The attraction of the book appears to have lain in the variety of its contents, and in the course of years it departed a good deal from the type of a collection of extracts from the Fathers and other devout writers, which was its leading characteristic in the sixteenth century.

Still more famous than the "Manual of Prayers" is the work compiled by Bishop Challoner in 1740 under the title of "The Garden of the Soul". The purpose aimed at in this new work is indicated in its subheading "a Manual of Spiritual Exercises and Instructions for Christians who, living in the World, aspire to devotion", and although, as Dr. Burton notices (Life of Challoner, I, 127), the book "after five years lay out and was at length reprinted, its popularity was originally acquired while it still remained a 'brief guide to the spiritual life, containing not prayers only, but information, instructions, and much practical advice'”. The seventh edition of "The Garden of the Soul", which appeared in 1787, was "corrected and enlarged by the Author".
PRAYER

and this is the final shape in which he left it; im-
measurable modifications to which it has since been
subjected have been made entirely according to the
caprice of the different publishers. Both before and
after the issue of "The Garden of the Soul", a large
number of other Catholic manuals of devotion have
enjoyed more or less popularity. In 1617 and 1618
we have "A New Manual of Old Christian Catholic
Meditations and Prayers" and "A Manual of Prayers
used by the Fathers of the Primitive Church", both
compiled by Richard Broughton, a divine of Douai.
The "Devotions in the Ancient Way of Offices" was
drawn up by John de Valerianus before 1670, and
had the compliment paid it of being imitated and prac-
tically pirated by Anglicans. The "Libellus Prettum"
was a work produced by the English Jesuits in the
eighteenth century for the use of the sodalists in
their colleges and has continued in use down to the present
day. Of the crowd of works bearing such titles as the
"Key of Heaven", "The Path to Paradise", the
"Golden Manual", the "Path to Heaven" etc.,
some of them reproducing names already in use in
the seventeenth century, it would be impossible to state
with precision the censorship of prayer books, something has already been said of the Motu
Proprio of St. Pius V (11 March, 1571). The most
important legislation since then is that of the Con-
stitution "Officiorum et Munerum", 25 Jan., 1897
(Conspectus Librorum, Paragraphe 20). The document in very concise terms enacts that no one is to publish "libros vel libelles precum" (prayer-
books or booklets) as well as works of devotion or
religious instruction etc., even though they may seem
calculated to foster piety, "without the permission
of lawful authority", a somewhat vague phrase
which is generally interpreted to mean without the
imprimatur of the ordinary: "otherwise" adds the
decree, "such a book must be held to be forbidden".
Special restrictions have also been imposed in the
same Constitution (§ 19) upon the publication of new
litanies without the revision and approbation of the
ordinary. Moreover, it has since been decided that
even then litanies which have only an episcopal
approval of this kind cannot be used for public
devotions in churches (see Hilgers, "Der Index der
verbotenen Bücher", Freiburg, 1904; Vermersch,
"De prohibitione et censura librorum", 4th ed.,
Tournai, 1906). Beattie in Summen aus Maria-Laach LXXVII (July to October 1909), 130 sq.; Gillow in The Tablet (27 Dec., 1884; 10 Jan.,
1892; 26 May, 1893) and może in Monatshefte (1910); Lindars in the Catholic
Miscellany (1830); Kupfers and Bishop in The Book
of Cerne (Cambridge, 1900).

HERBERT THURSTON.

Prayer of Christ, Feast of the, occurs on the
Tuesday after Septuagesima (double major). Its
object is to commemorate the prolonged prayer which
Christ offered in Gethsemane in our behalf in prepara-
tion for His Sacred Passion. The Office insists on the
great importance of prayer. The feast is placed at
the beginning of Lent to remind us that the penitential
season is above all a time of prayer. The Office pro-
claims the sacrifice of Jesus as the supreme model
and source of prayer in the suggestion of St. Paul of the Cross (d. 1773), and,
together with the other six offices by which the mys-
teries of Christ's Passion are celebrated (see PASSION
OF CHRIST, FEAST OF THE), was approved by Pius VI.
The hymns were composed by Patali (Schulte, "Hymn
collected Rite of Brev."). Outside of the Congregation of St.
Paul this feast was adopted later than any of the other
feasts of the Passion. It is not found in the proprium of
Salerno (1793) nor in that of Livorno (1809). Other
dioceses took it up only after the city of Rome had
sanctified it (1831). It has not yet been inserted in the
Baltimore Ordo.

Prayers for the Dead. See DEAD, PRAYERS FOR
THE; PURGATORY.

Preacher (Concionator). See ECCLESIASTES.

Preacher Apostolic, a dignitary of the pontifical
household. As a regular function, under papal
eractions, this office was established by Pius IV in 1555, and formed a part of the great scheme of
reforms which that pope was anxious to carry out.
The innovation was somewhat unpopular among the
prelates, as the preacher Apostolic had to expound
some of the most sacred truths before the papal Court, and render them of their respective duties. Before 1555 several
members of the regular clergy, especially of the
Franciscans, had preached in presence of the Roman
Court. In the period following, among those who
filled the office of preacher Apostolic were Alonso
Salmeron, companion of Saint Ignatius, Francis
Toleti, S.J., who held the position during seven
pontificates; Anselmus Marsatti, Francis Cassini,
and Bonaventure Barberini, Minor Capuchins;
Toleti, Marsatti, and Cassini were elevated to the
Cardinalate. By the Brief of 29 March, 1735 directed
to Father Michael Angelo Franceschi, then preacher
Apostolic, Benedict XIV conferred the said dignity
in perpetuum upon the Capuchin Order, because of
the example of Christian piety and religious per-
fection, the splendor of the Apostolic "seal" to be found in their institute. Two of the
preachers Apostolic during the past century deserve
special mention: Lewis Micara of Frascati, who
became Cardinal-Vicar of Rome, and Lewis of Trent,
chosen to deliver the discourse at the first session of
the Vatican Council. At present the office is held
by Father Luke of Padua, the former titular, Father
Pacific of Seiano, having been elected Minister
General of the order.
The preacher is chosen by the pontiff, though gen-
erally presented by the predeceased by the su-
perior general of the Capuchins. He is notified by a
Rescript of the Cardinal of the Apostolic Palace;
and becomes ipso facto a Palatine prelate and a member of
the papal household, enjoying all the privileges at-
ached to his title. The sermons are delivered in Advent on the Feasts of St. Andrew, St. Nicholas, St.
Lucy, and St. Thomas; and on Fridays in Lent, except
in Holy Week, when the Passion Sermon is preached
on Tuesday.
The papal Court meets in the throne-room in the
Vatican; the pulpit occupies the place of the throne.
Beside it is placed the bussola, a perforated wooden
partition, covered with silver hangings, behind which
is the seat of the pontiff. On the appointed day,
the preacher with his "socius" is taken to the Vatican
in a pontifical carriage, and enters the throne-room;
when notified by the master of ceremonies, he draws
near the bussola, takes off his mantle, asks the pope's
blessing, and ascends the pulpit. The sermon begins
with an "Ave Maria", recited aloud and answered by
the audience. The pontiff is assisted by his major-
dominus and the master of ceremonies, who occupy the
front seats: behind them are the bishops, prelates,
and general heads of the Mendicant Orders. Nobody else is admitted without a special permission
of the pope. At the close of the sermon, the preacher
returns to the pontiff, kisses his feet, takes leave of
him, and is driven back to his convent.

Pallavicino, Hist. conc. Triv.

F. CANDIDE.

Preachers, Order of.—As the Order of the
Priests Preachers is the principal part of the entire
Order of St. Dominic, we shall confine ourselves under
this title the two other parts of the order: the Dominican
Sisters (Second Order) and the Brothers of Penitence
of St. Dominic (Third Order). First, we shall study the
legislation of the three divisions of the order;
and the nature of each. Secondly, we shall give an historical survey of the three branches of the order.

I. LEGISLATION AND NATURE.—In its formation and development, the Dominican legislation as a whole is closely bound up with historical facts relative to the origin and progress of the order. Hence successive laws are numerous, and this matter has not been sufficiently studied. For each of the three groups, constituting the ensemble of the Order of St. Dominic, we shall examine: A. Formation of the Legislative Texts; B. Nature of the Order, resulting from legislation.

A. Forma et Legislatio Texti.—In regard to their legislation the first two orders are closely connected, and must be treated together. The preaching of St. Dominic and his first companions in Languedoc led up to the pontifical letters of Innocent III, 17 Nov., 1205 (Poitiers, "Reg. Pont., Rom.", 1912). They created for the first time in the Church of the Middle Ages the type of apostolic preachers, patterned upon the teaching of the Gospel. In the same year, Dominic founded the Monastery of St. Saviour in Paris, in the presence of the women whom he had converted from heresy, and he made this establishment the centre of union of his missions and of his apostolic works (Balme-Lefalier, "Cartulaire ou Histoire Diplomatique de St. Dominique", Paris, 1888, I, 190 sq.; Guerard de l'Abbat. de Notre Dame de St. Dominique, "St. Dominique", I, 1, CCCXX.); St. Dominique gave to the new monastery the Rule of St. Augustine, and also the special Institutions which regulated the life of the Sisters, and of the Brothers who lived near them, for the spiritual and temporal administration of the community. The Institutions are edited in Balme, "Cart.", II, 425; "Bull. Ord. Pred.", VII, 410; Duelliut, "Misc.", bk. I (Augsburg, 1723), 169; "Urkundenbuch der Stadt.", I (Fribourg, Leipzig, 1883), 605. On 17 Dec., 1219, Innocent III granted a view to the religious of the Eternal City, granted the monastery of the Sisters of St. Sixtus of Rome to St. Dominic, and the Institutions of Prouille were given to that monastery under the title of Institutions of the Sisters of St. Sixtus of Rome. With this designation they were granted subsequently to other monasteries and congregations of religious. It is also under this form that we possess the primitive Institutions of Prouille, in the editions already mentioned. St. Dominic and his companions, having received from Innocent III authorization to have a view to the approbation of their order, adopted in 1218, that of St. Augustine, and added thereto the "Consuetudines", which regulated the ascetic and canonical life of the religious. These were borrowed in great part from the Constitutions of Prémontré, but with some essential features, adapted to the purposes of the new Preachers, who also renounced private possession of property, but retained the revenues. The "Consuetudines" formed the first part (prima distinctio) of the primitive Constitutions of the Order (Quétel-Écard, "Inedita Ordinis Praedicatorum", L 12-13; Denifle, "Archiv. f.ür Literatur und Kirchengeschichte", I, 194; Balme, "Cart.", II, 18). The order was solemnly approved, 22 Dec., 1216. A first letter, in the style of those granted for the foundation of regular canons, gave the order canonical existence; a second determined the special vocation of the Order of Preachers as vowed to teaching and defending the truths of faith. "Nos attendantes fratres Ordinis tui futuro pugiles fidei et vera mundi mundificato invenio", wrote the General Ordinum, "Romae", II, 71-88; Potthast, 5402-5403. (Expecting the brethren of your order to be the champions of the Faith and true lights of the world, we confirm your order.)

On 15 Aug., 1217, St. Dominic sent out his companions from Prouille. They went through France, Spain, and Italy, and established as principal centres, Toulouse, Paris, Madrid, Rome, and Bologna. Dominic, by constant journeyings, kept watch over these new establishments, and went to Rome to confer with the Sovereign Pontiff (Balme, "Cart.", II, 131; "Annales Ord. Pred.", Rome, 1756, p. 411; "Premier Chapitre de l'Ordre de St. Duno""); on 15 May, 1220, St. Dominic held at Bologna the first general chapter of the order. This assembly drew up the Constitutions, which are complementary to the "Consuetudines" of 1216 and form the second part (secunda distinctio). They regulated the organization and life of the order, and formed the canonical and original basis of the Dominican legislation. In this chapter, the Preachers also gave up certain elements of the canonical life; they relinquished all possessions and revenues, and adopted the practice of strict poverty; they rejected the title of abbey for the convents, and substituted the rochet of canons for the monastic scapular. The regime of annual general chapters was established as the regulative power of the order, and the source of legislative authority; ("Serouse, Introd. au Centre de l'Ordre des Prendre de l'âme") ("Ann. Archiv.", I, 212; Balme, "Cart.", III, 575). Now that the legislation of the Friars Preachers was fully established, the Rule of the Sisters of St. Sixtus was found to be very incomplete. The order, however, supplied what was wanting by compiling a few years later the Statuta which rule the regular sisters of the Observations of the Friars, whatever might be useful in a monastery of Sisters. We owe the preservation of these Statuta, as well as the Rule of St. Sixtus, to the fact that this legislation was applied in 1232 to the Penitent Sisters of St. Mary Magdalen in Germany, who observed it without further modification. The Statuta are edited in Duelliut, "Misc.", bk. I, 182. After the legislative work of the general chapters had been added to the Constitution of 1216-20, without changing the general order of the original text, the necessity was felt, a quarter of a century later, of giving a more logical distribution to the legislation in its entirety. The great canonist Raymond of Penafort, on becoming master general of the order, devoted himself to this work. The general chapters, from 1239 to 1241, accepted the new text, and gave it the force of law. In this form it has remained to the present time as the official text, with some modification, however, in the way of suppressions and especially of additions due to later local chapter-charters in France, Italy, and Spain, in Denifle, "Archiv.", V, 553; "Acta Capitulorum Generalium", I (Rome, 1898), II, 13, 18, in "Monum. Ord. Pred. Hist.", bk. III.

The reorganization of the Constitutions of the Preachers called for a corresponding reform in the legislation of the Sisters. In his letter of 27 Aug., 1257, Alexander IV ordered Humbert of Romans, the fifth master general, to unify the Constitutions of the Sisters. Humbert remodelled them on the Constitutions of the Brothers, and put them into effect at the General Chapter of Valence, 1260. The Sisters were henceforth characterized as Sorores Ordinis Pradicatorum. The Constitutions are edited in "Anaelecta, Ord. Pred.", (Rome, 1897), 338; Finke, "Ungedruckte Dominikanerbriefe des 13. Jahrhunderts" (Paderborn, 1891), p. 33; "Litterae Encyclis magistriorum generalium" (Rome, 1900), in "Mon. Ord. Pred. Hist.", p. 513. To this legislation, the provinces of Germany, who had a large number of religious convents under their care, added a certain number of regulations, minutely settling the Constitutions of the Sisters. They seem to be the work of Herman of Minden, Provincial of Teutonia (1268-90). He drew up at first a concise admonition (Denifle, "Archiv.", II, 549); then other series of admonitions, more important, which have not been edited (Rome,
Archives of the Order, Cod. Ruten, 130–139). The legislation of the Friars Preachers is the firmest and most complete among the systems of law by which institutions of this sort were ruled in the thirteenth century. In the correct ascertainment of the Dominicans the title of the religious orders of the thirteenth century should have followed quite closely the Dominican legislation, which exerted an influence even upon institutions very dissimilar in aim and nature. The Church considered it the typical rule for new foundations. Alexander IV thought of making the legislation of the Order of Preachers into a special rule known as that of St. Dominic, and for that purpose commissioned the Dominican cardinal, Hugh of St. Cher (3 Feb., 1255), but the project encountered many obstacles, and nothing came of it. (Potthast, n. 1566; Humberti de Romanis, "Opera de vita regulari," ed. Berthier, I, Rome, 1888, p. 43).

B. Nature of the Order of Preachers. (1) Its Origin. The Order, who are to visit and preach to the faithful, is given to the work of St. Dominic by the Church, is in itself significant, but it indicates only the dominant feature. The Constitutions are more explicit: "Our order was instituted principally for preaching and for the salvation of souls." The end or aim of the order then is the salvation of souls, especially by means of preaching. For the attainment of this purpose, the order must labour with the utmost zeal.—"Our main efforts should be put forth, earnestly and ardently, in doing good to the souls of our fellow-men." (2) Its Organization. The aim of the order and the conditions of its environment determined the form of its organization. The first organic group is the convent, which may not be founded with less than twelve religious. At first only large convents were allowed and these were located in important cities (Mon. Ger. Hist.: SS. XXXII, 233, 236), hence the saying:

Bernardus valles, montes Benedictum amabant,
Oppida Franciscus, celebres Dominici urbes.

The foundation and the existence of the convent required a prior as governor, and a doctor as teacher. The Constitution prescribes the dimensions of the church and the master's cell but these should be quite plain. But in the course of the thirteenth century the order erected large edifices, real works of art. The convent possesses nothing and lives on alms. Outside of the choral office (the Preachers at first had the title of canonicus) their time is wholly employed in study. The doctor gives lectures in theology, at which all the religious, even the preaching, must be present, and which are open to secular clerics. The religious vow themselves to preaching, both within and without the convent walls. The "general preachers" have the most extended powers. At the beginning of the order, the convent was called predicatio, or sancta predicatio. The convents divided up the territory in which they were established, and sent out on preaching tours religious who remained for a longer or shorter time in the province or in one of the respective districts. The Preachers did not take the vow of stability, but could be sent from one locality to another. Each convent received novices, these, according to the Constitutions, must be at least eighteen years of age, but this rule was relaxed by the Pope. Among the novices the first among religious orders to suppress manual labour, the necessary work of the interior of the house being relegate to lay brothers called conversi, whose number was limited according to the needs of each convent. The prior was elected by the religious, and the doctor was appointed by the provincial chapter. But the chapter, when it saw fit, relieved them from office.

The grouping of a certain number of convents forms the province, which is administered by a provincial prior, elected by the prior and two delegates from each convent. He is confirmed by the general chapter, or by the master general, who can also remove him when it is found expedient. He enjoys in his province the same authority as the master general in the order; he confirms the election of conventual priors, visits the province, sees to it that the Constitutions and the ordinances are observed and presides at the provincial chapters. The provincial chapter, which is held annually, discusses the interests of the province. It is composed of a provincial prior, priors from the convents, a delegate from each convent, and the general preachers. The capitulants (members of the chapter), choose from among themselves, four counsellors or assistants, who, with the provincial, regulate the affairs brought before the chapter. The chapter appoints those who are elected each year. The provinces taken together constitute the order, which has at its head a master general, elected by the provincial priors and by two delegates from each province. For a long time his position was for life; Pius VII (1804), reduced it to six years, and Pius IX (1862) fixed it at twelve years. At first the master general had no permanent residence; since the end of the fourteenth century, he has lived usually at Rome. He visits the order, holds it to the observance of the laws, and corrects abuses. In 1309, he was granted two associates (consilii); in 1732, four; in 1910, five. The general chapter is the supreme authority within the order. From 1370, it was held every two years; from 1553, every three years; from 1625, every six years. In the eighteenth and at the beginning of the nineteenth century, chapters were rarely held. At present they take place every three years. From 1228, for two years in succession, the general chapter was composed of deponents or delegates from the provinces, each province sending one delegate; the following year it was held by the provincial priors in the mountains. From 1289, it was composed of the constitutions, but to become law they must be accepted by three constitutive chapters. The chapter deals with all the general concerns of the order, whether administrative or disciplinary. It corrects the master general, or in his absence, substitutes for him. From 1220 to 1244, the chapters were held alternately at Bologna and Paris; subsequently, they passed round to all the principal cities of Europe. The generalissimo chapter acknowledged by the Constitution and composed of two deponents from each province,缺席 of provinces, i. e. equivalent to three consecutive general chapters, was held only in 1228 and 1236. The characteristic feature of government is the elective system which prevails throughout the order. "Such was the simple mechanism which imparted to the Order of Friars Preachers a powerful and regular movement, and secured them for a long time a real preponderance in Church and in State" (Delisle, "Notes et extraites des mss. de la Bibl. Nat., Paris, xxvii, 1896, 2nd part, p. 312. See the editions of the Constitutions mentioned above: "Const. Ord. Fr. Pred.," Paris, 1888; "Acta Capit. Gen. Ord. Fr. Pred.", ed., Reichert, Rome, 1898, sq. 9 vols.; Lo Cicero, Const., "Declar. et Ord. Capit. Gen. O. P.", Rome, 1892; Humberti de Romanis, "Opera de vita regulari," ed. Reichert, Rome, 1888; Rensch, "Feind und Geschäftsaufsicht der provincialkapitel des Dominikanerordens im 13 Jahrhundert" in "Römische Quart.", 1903, p. 101."
(3) Forms of its Activity.—The forms of life or activity of the Order of Preachers are many, but they are essentially disengaged from the secular world. The ancient forms of the religious life, the monastic and the canonical, but it made them subservient to the clerical and the apostolic life which are its peculiar and essential aims. The Preachers adopted from the monastic life the three traditional vows of obedience, chastity, and poverty; to form the ascetic element known as monastic observances; perpetual abstinence, fasting from 14 Sept. until Easter and on all the Fridays throughout the year, the exclusive use of wool for clothing and for the bed, a long hermit girdle commonly donned by the perpetual in their houses, public acknowledgment of faults in the chapter, a graded list of penitential practices, etc. The Preachers, however, did not take these observances directly from the monastic orders but from the regular canons, especially the reformed canons, who had already adopted monastic rules. The Preachers received from the regular canons the choral Office for morning and evening, but chanted quickly. They added, on certain days, the Office of the Holy Virgin, and once a week the Office of the Dead. The distinctive dress of the regular canons, is a white tunic and a black cloak. The rochet, distinctive of the regular canons, was aban- doned by the Preachers at the General Chapter of 1220, and replaced by the scapular. At the same time, they rejected the two or three various coverings which they had retained up to that period. They sup- pressed in their order the title of abbot for the head of the convent, and rejected all property, revenues, the carrying of money on their travels, and the use of horses. The title even of canon which they had borne from the beginning tended to disappear at the middle of the thirteenth century, and the General Chapters of 1240–1251 substituted the word clericus for canonicus in the article of the Constitutions relating to the admission of novices; nevertheless the designation, “canon,” still occurs in some parts of the Constitutions. The Preachers, in fact, are primarily and essentially clerics. The pontifical let- ter of foundation said: “These are to be the champions of the Faith and the true lights of the worldly life. They could apply only to clerics. The Preachers consequently made study their chief occupation, which was the essential means, with preaching and teaching as the end. The apostolic character of the order was the complement of its clerical character. The Friars had as their object the salvation of souls through the ministry of preaching and confession, under the conditions set down by the Gospel and by the example of the Apostles: ardent zeal, absolute poverty, and sanctity of life.

The ideal Dominican life was rich in the multiplicity and change of its elements, and was thoroughly unified by its well-considered principles and enactments; but it was none the less complex, and its full realization was difficult. The monastic-canonical element tended to dull and paralyze the intense activity demanded by a clerical apostolic life. The legatini ward off the difficulty by a system of dispensations, quite peculiar to the order. At the head of the Constitutions the principle of dispensations appears jointly with the very definition of the order’s purposes and is placed before the text of the laws to show that it controls and tempers their application. “The superior in each convent shall have authority to grant dispensations whenever he may deem it expedient, especially in regard to what may hinder study, or preaching, or the profit of souls, since it cannot be forbidden by the law the freedom of preaching and the salvation of souls,” etc. The system of dispensation thus broadly understood, while it favoured the most active element of the order, displaced, but did not wholly eliminate, the difficulty. It created a sort of dualism in the interior life, and permitted an arbitriness that might easily destroy order. Sensing this, the generality of the superiors. The order warded off this new difficulty by declaring in the generalissimo chapter of 1236, that the Constitutions did not oblige under pain of sin, but under pain of doing penance (Acta Cap. Gen. I., 8). This measure, however, was not entirely successful in depriving (Humberti de Romanis, Op., II., 46), nevertheless it stood.

This dualism produced on one side, remarkable apostles and doctors, on the other, stern ascetics and great mystics. At all events the interior troubles of the order, the difficulty of maintaining the nice equilibrium which the first legislators established, and which was preserved to a remarkable degree during the first century of the order’s existence. The logic of things and historical circumstances fre- quently disturbed this equilibrium. The learned and active members tended to exempt themselves from monastic observance, or to moderate its strict- ness; the ascetic members insisted on the monastic life, and in pursuance of their aim, suppressed at different times the practice of dispensation, sanctified by the legatini, etc., the most famous of which are the Constitutions (“Constat. Ord. Pred.”), passim; Denile, “Die Const. des Predigerordens” in “Archiv. f. Litt. u. Kirchengesch.” I., 165; Mandonnet, “Les Chanoines-Pécheurs de Bologne d’après les textes des différentes époques de leur existence”, 2 vol.; Perrin, “La vie monastique et l’hôtel-dieu de Fribourg”, bk. VIII., 15; Lacordaire, “Mémoire pour la restauration des Frères Pécheurs dans la Chrétienté”, Paris, 1852; P. Jacob, “Mémoires sur la canonicité de l’institut de St. Dominique”, Béatrix, 1750, tr. into Italian under the title: “Difesa del canonicato del FF. Predicatori”, Venice, 1758; Labertoni, “Exposé de l’état, du ré- gime, de la législation et des obligations des Frères Pécheurs”, Versailles, 1677 (new ed., 1872.).

(4) Nature of the Order of the Dominicans.—We have indicated above the various steps by which the legislation of the Dominican Sisters was brought into conformity with the Constitutions of Humbert of Romans (1259). The primitive type of religious established at Prouille in 1205 by St. Dominic was not affected by successive legislation. The Dominican Sisters are strictly cloistered in their monasteries; they take the three religious vows, recite the canonical Hours in choir and engage in manual labor. The eruditio litterarum inscribed in the Constitutions of St. Sixtus of 1256 is confirmed by the Constitutions drawn up by Humbert of Romans. The ascetic life of the Sisters is the same as that of the Friars. Each house is governed by a prioress, elected canonically, and assisted by a sub-prioress, a mistress of novices, and various other officers. The monasteries have the right to hold property in common; they must be provided with an income sufficient for the existence of the community; they are independent and are under the jurisdiction of the provincial prior, the master general, and of the general chapter, not affected by successive legislation; they deal with the various phases of the question as to the rela- tion existing between the Sisters and the Order of Preachers. Whilst the Institutions of St. Sixtus provided a group of brothers, priests, and lay servants for the spiritual and temporal administration of the monastery, the Constitutions of Humbert of Romans were silent on these points. (See the legislative texts relating to the Sisters mentioned above.)

(5) The Third Order.—St. Dominic did not write a rule for the Tertiaries, for reasons which are given in the first chapter of this book. However, a large body of the laity, vowed to piety, grouped themselves about the rising Order of Preach- ers, and constituted, to all intents and purposes, a Third Order. In view of this fact and of some cir-
MEMBERS to be noted later on, the seventh master general of the order, Munio de Zamora, wrote (1285) a rule for the Brothers and Sisters of Penitence of St. Dominic. The privilege granted the new fraternity, 26 Jan., 1286, by Honorius IV, gave it a canonical existence (1286), though it was not entirely original; some points being borrowed from the Rule of the Brothers of Penitence, whose origin dates back to St. Francis of Assisi; but it was distinctive on all essential points. It is in a sense truly a religious order. The Brothers and Sisters are grouped in different fraternities; their government is immediately subject to ecclesiastical authority; and the various fraternities do not form a collective whole, with legislative chapters, as was the case among the Brothers of Penitence of St. Francis. The Dominican fraternities are local and without any bond of union other than that of the Preaching Brothers who govern them. Some characteristics of these fraternities may be gathered from the Rule of Munio de Zamora. The Brothers and Sisters, as true children of St. Dominic, should be, above all things, truly zealous for the Catholic Faith. Their habit is a white tunic, with black cloak and hood, and a leathern girdle. After making profession, they cannot return to the world, but may enter a religious community. They may receive a certain number of Pateras and Aves, for the canonical Hours; receive communion at least four times a year, and must show great respect to the ecclesiastical hierarchy. They fast during Advent, Lent, and on all the Fridays during the year, and eat meat only three days in the week, Sunday, Tuesday, and Thursday. They are allowed to carry arns only in defence of the Christian Faith. They visit sick members of the community, give them assistance if necessary, attend the burial of Brothers or Sisters and perform with their prior. A spiritual director is a priest of the Order of Preachers, whom the Tertiaries select and propose to the master general or to the provincial; he may act on their petition or appoint some other religious. The director and the older members of the fraternity choose the prior or prioresse, from among the Brothers and Sisters, and their office continues until they are relieved. The Brothers and the Sisters have, on different days, a monthly reunion in the church of the Preachers, where they attend Mass, listen to an explanation of a chapter of the Rule, the prior and the director can grant dispensations; the rule, like the Constitutions of the Preachers, does not oblige under pain of sin.

II. HISTORY OF THE ORDER.—A. The Friars Preachers.—Their history may be divided into three periods: (1) The Middle Ages (from their foundation to the beginning of the sixteenth century); (2) The Modern Period up to the French Revolution; (3) The Contemporaneous Period. In each of these periods we shall examine the work of the order in its various departments.

The Middle Ages.—The thirteenth century is the classic age of the order, the witness to its brilliant development and intense activity. This last is manifested especially in the work of teaching. By preaching it reached all classes of Christian society, fought heresy, schism, paganism, heresy, and spread the Seigneur, the north of Europe, to Africa, and Asia, passed beyond the frontiers of Christendom. Its schools spread throughout the entire Church; its doctors wrote monumental works in all branches of knowledge, and two among them, Albertus Magnus, and especially Thomas Aquinas, founded a school of philosophy and theology which was to rule the ages for centuries. At the same time the number of its members held offices in Church and State—as popes, cardinals, bishops, legates, inquisitors, confessors of princes, ambassadors, and pacifici (enforcers of the peace decreed by popes or councils). The Order of Preachers, which should have remained a select body, developed beyond bounds and absorbed some elements unifted to its form of life. A period of relaxation ensued during the fourteenth century owing to the general decline of Christian society. The weakening of doctrinal activity favoured the development here and there of the ecstatic and contemplative life and there sprang up, especially in Germany and Italy, an intense and exuberant mysticism with which the names of Master Eckhart, Suso, Tauser, St. Catherine of Sienna are associated. This movement was the prelude to the reforms undertaken, at the end of the century, by Raymond of Capua, and continued in the following century. It assumed remarkable proportions in the congregations of Lombardy and of Holland, and in the refos of Savoy. The order, whose name it had received, was in that order the form it found itself face to face with the Renaissance. It struggled against pagan tendencies in Humanism, in Italy through Dominici and Savonarola, in Germany through the theologians of Cologne; but it also furnished Humanism with such scholars as Hr. Colonna (Poliphile) and Matthew Brandello. Its members, in great numbers, took part in the artistic activity of the age, the most prominent being Fra Angelico and Fra Bartolomeo. (a) Development and Statistics.—From St. Dominic, in 1216, named head of the order, to the time of the first reform, the Order of Preachers numbered over thirteen. At the general Chapter of Bologna, 1221, the year of St. Dominic's death, the order already counted some sixty establishments, and was divided into eight provinces: Spain, Provence, France, Lombardy, Rome, Teutonia, England, and Hungary. The Chapter of 1228 added four new provinces: the Holy Land, Greece, Poland, and Dacia (Denmark and Scandinavia). Sicily was separated from Rome (1235), Aragon from Spain (1236), and Lombardy was divided into Upper and Lower Lombardy; Provence into Toulouse and Provence; Saxony was separated from Teutonia, and Bohemia from Poland, thus forming eighteen provinces. The order, which in 1277 counted 494 convents of Brothers, in 1303 had reached its height during the Middle Ages; new houses were established during the fourteenth and fifteenth centuries, but in relatively small numbers. As to the number of religious only approximate statements can be given. In 1250, according to the confession of the members granted by Humbert of Romans to St. Louis, the order numbered about 5000 priests; the clerks and lay brothers could not have been less than 2000. Thus towards the middle of the thirteenth century, it must have had about 7000 members (de Laborde, "Layette du trésor des chartes", Paris, 1875, III, 304). According to Sebastien de Olmeda, the Preachers, as shown by the census taken under Benedict XII, were close on to 12,000 in 1337. (Pompa, "Monumenta Dominicana", Rome, 1674, pp. 207-8). This number was the highest reached in the course of the Middle Ages; the Great Plague of 1348, and the general state of Europe preventing a notable increase. The reform movement begun in 1390 by Raymond of Capua established the principle of a simplified government and the order of provinces. The new reform was undertaken from its respective provinces, but with the founda-
tion of the congregation of Lombardy, in 1459, a new order of things began. The congregations were more or less self-governing, and, according as they developed, overlapped several provinces and even several nations. There were established successively the congregations of Burgundy, Flanders, Holland (1430), Aragon, and Spain (1468), St. Mark in Florence (1439), France (1497), the Gallican (1514). About the same time some new provinces were also established: Scotland (1481), Ireland (1484), Béthique or Andalusia (1514), Lower Germany (1515). (Quétif-Édouart, "Histoire de l'Ordre Fraternel," I, p. 15; Anal. Ord. Praed.;" 1893, passim; Mortier, "Histoire des Maîtres Généraux," I-V, passim).

(b) Administration.—The Preachers possessed a number of able administrators among their masters general during the Middle Ages, especially in the thirteenth century. St. Dominie, the creator of the institution (1206-1221), showed a keen intelligence of the needs of the age. He executed his plans with sureness of insight, firmness of resolution, and tenacity of purpose. Jordan of Saxony (1222-1237) sensitive, eloquent, and endowed with rare powers of persuasion, attracted numerous and valuable recruits. St. Raymond of Penaforta (1238-1240), the greatest canonist of the age, ruled the order only long enough to reorganize its legislation. John the Terrible, bishop and linguist, who was associated with the greatest personalities of his time, pushed the order forward along the line of development outlined by its founder. Humbert of Romans (1254-1263), a genius of the practical sort, a broad-minded and moderate man, raised the order to the height of its glory, and wrote manifold works, setting forth what, in his eyes, the Preachers and Christian society ought to be. John of Vercelli (1264-1283), an energetic and prudent man, during his long government maintained the order in all its vigour. The superior of the province of Venice did their utmost in the discharge of their duty, and in meeting the situations which the state of the Church and of society from the close of the thirteenth century rendered more and more difficult. Some of them did no more than hold their high office, while others had not the genius of the masters general of the golden age [Balmes-Lelaïdier, "Carte de St. Dominie"; Guéraud, "St. Dominie" (Paris, 1890); Mothon, "Vie du B. Jourdain de Saxe" (Paris, 1858); Reichert, "Das Itinerar der Kommissare des Dominikaners in Rom" (Freiburg, 1897), 153; Mothon, "Vita del B. Giovanni da Vercelli" (Vercelli, 1903); Mortier, "Histoire des Maîtres Généraux," I-V). The general chapters which wielded supreme power were the great regulators of the Dominican life during the Middle Ages. They are usually remarkable for their spirit of decision, and the firmness with which they ruled. They appeared even imbued with a severe character which, taking no account of persons, bore witness to the importance they attached to the maintenance of discipline. (See the Acta Cap. Gen. already referred to.)

(c) Modification of the Statute.—We have already spoken of the chief exception to be taken to the Constitution of the order, the difficulty of maintaining an even balance between the monastic and canonical observances and the clerical and apostolical life. The primitive régime of poverty, which left the convents without an assured income, created also a permanent difficulty. Time and the modifications of the state of the world, society, and asceticism, introduced new points. Already the General Chapters of 1240-1242 forbade the changing of the general statutes of the order, a measure which would indicate at least a hidden tendency towards modification (Acta, I, p. 14-40). Some changes seem to have been contemplated also by the Holy See when Alexander IV,

4 February, 1255, ordered the Dominican cardinal, Hugh of Saint Cher, to rescate the entire legislation of the Preachers into a rule which should be called the Rule of St. Dominic (Potthast, 156-69). Nothing came of the project, and the question was not raised again. In 1270 (Bochart, "Opera," I, p. 43). It was during the pontificate of Benedict XII, (1334-1342), who undertook a general reform of the religious orders, that the Preachers were on the point of undergoing serious modifications in the secondary elements of their primitive statute. Benedict, desiring to give the order greater efficiency, sought to impose a régime of property-holding as necessary to its security, and to reduce the number of its members (12,000) by eliminating the unfit etc.; in a word, to lead the order back to its primitive concept of a select apostolic and teaching body. The order, ruled at that time by Hugh de Vansseman (1333-41), resisted with all its strength (1337-40). This was a mistake (Mortier, op. cit., III, 115). As the situation grew worse, the order was obliged to petition Sixtus IV for the right to hold property, and this was granted 1 June, 1475. Thenceforward, the convents could acquire property, and perpetual rentals (Mortier, IV, p. 495). This was one of the causes which quickened the vitality of the order in the sixteenth century.

The reform projects of Benedict XII having failed, the master general, Raymond of Capua (1390), sought to restore the monastic observances which had fallen into decline. He ordered the establishment in each province of a convent of strict observance, hoping that as such houses became more numerous, the reform would eventually permeate the entire province. This was not usually the case. These houses of the observance formed a confederation among themselves under the jurisdiction of a special vicar. However, they did not cease to belong to their original province in respect of their constitution, and this naturally gave rise to numerous conflicts of government. During the fifteenth century, several groups made up congregations, more or less autonomous; these we have named above in giving the statistics of the order. The scheme of reform proposed by Raymond and adopted by nearly all who subsequently took up with his ideas, insisted on the observance of the Constitutions ad usum, as Raymond, without further explanation, expressed it. Besides this, his followers were convinced that only by an internal discipline, understood the suppression of the rule of dispensation which governed the entire Dominican legislation. "In suppressing the power to grant and the right to accept dispensation, the reformers inverted the economy of the order, setting the part above the whole, and the means above the end" (Lacordaire, "Mémoire pour la restauration des Frères Prêcheurs dans la châtérénité," new ed., Dijon, 1852, p. 18). The different reforms which originated within the order up to the nineteenth century, began usually with principles of asceticism, which exceeded the letter and the spirit of the original constitutions. This initial exaggeration was, under pressure of circumstances, toned down, and the reforms which endured, like that of the congregation of Lombardy, turned out to be the most effectual. Generally speaking, the reformed communities slackened the intense devotion to study prescribed by the Constitutions; they did not produce the great doctors of the order, and their literary activity was directed preferably to moral theology, history, and theology of poverty, and asceticism. Towards the end of the fifteenth century many holy men (Thomas Antonii Senezis, "Historia disciplinae regularis instaurata in Canonibus Venetis Ord. Prad." in FL. Cornelius, "Ecclesia Veneta" VII, 1749, p. 167; Bl. Raymond of Anjou, "Opuscula et Littera" Rome, 1757; "Ritus der Reformation Frudigerordens" in "Quellen und
Forschungen zur Geschichte des Dominikanerordens in Deutschland", II, III, Leipzig, 1908-9; Mortier, "Hist. des Maîtres Généraux", III, IV.

(d) Preaching and Teaching. — Independently of their official title of Order of Preachers, the Roman Church invested the Friars with the office of preaching. It is in fact the only order of the Middle Ages which the popes declared to be specially charged with this office (Bull. Ord. Pred., VIII, p. 798). Conformably to its mission, the order displayed an enormous activity, working especially in thirteenth (1200) and fourteenth centuries (1300). (Lives of the Brothers) informs us that many of the brothers refused food until they had first announced the Word of God (op. cit., p. 150). In its circular letter (1250), the Master General Humbert of Romans, in view of what had been accomplished by his religious, could well make the statement: "We teach the people, we teach the prelates, we teach the wise and the unwise, religious and seculars, clerics and laymen, nobles and peasants, lowly and great." (Monum. Ord. Pred. Historia, V, p. 33). Rightly, too, it has been noted: "Science on one hand, numbers on the other, placed them [the Preachers] ahead of their competitors in the thirteenth century" (Lecoy de la Marche, "La chaire française au Moyen Age", Paris, 1896, p. 31). The order maintained this position in the entire thirteenth Age (I. Pfieger, "Zur Geschichte des Predigtwesens in Strassburg", Strassburg, 1907, p. 26; F. Josset, "Zur Geschichte der Mittelalterlichen Predigt in Westfalen", Münster, 1885, p. 10). During the thirteenth century, the Preachers in addition to their regular apostolate, worked especially back to the Church heretics and renegade Catholics. An eye-witness of their labours (1233) reckons the number of their converts in Lombardy at more than 100,000 ("Annales Ord. Pred.", Rome, 1756, col. 128). The friars carried the situation by-ear: they scarcely believe their eyes, as Humbert of Romans (1255) informs us (Opera, II, p. 493). At the beginning of the fourteenth century, a celebrated pulpit orator, Giordano da Rivalto, declared that, owing to the activity of the order, heresy had almost entirely disappeared from the Church ("Prediche del Beato Fra Giordano da Rivalto", Florence, 1831, I, p. 239).

The Friars Preachers were especially authorized by the Roman Church to preach crusades, against the Turks, the Albigenses, against Livonia and Prussia, and against Frederick II, and his successors (Bull. O. P., XIII, p. 637). This preaching assumed such importance that Humbert of Romans composed for the purpose a treatise entitled "Tractatus de predicandis controversiis infra infideles et paganos" (Tract on the preaching of the Cross against the Saracens, infidels and pagans). This still exists in its first edition in the Paris Bibliothèque Mazarine, incunabula, no. 299. Lecoy de la Marche, "La prédication de la Croisade au XIIIe siècle" (New Revue de Histoire et de littérature religieuse", 1896, p. 5). In certain provinces, particularly in Germany and Italy, the Dominican preaching took on a peculiar quality, due to the influence of the spiritual direction which the religious of these provinces gave to the numerous convents of women confided to their care. It was a mystical preaching; the specimens which have survived are in the vernacular, and are marked by simplicity and strength (Denife, "Über die Anfänge der Predigtweisen der deutschen Mystiker in der ersten Hälfte des 13. Jahrhunderts", II, p. 646; Pfeiffer, "Deutsche Mystiker des vierzehnten Jahrhunderts", Leipzig, 1845; Wackernagel, "Altdutsche Predigten und Gebete aus Handschriften", Basle, 1870). Among these preachers may be mentioned: St. Dominic, the founder and model of preachers (1170); St. James the Elder (1211); Giordano da Pisa, Turin, 1899; Johann Eckhart of Hochheim (d. 1327), the celebrated theorist of the mystical life (Pfeiffer, "Deutsche Mystiker", II, 1857; Buttnin, "Méister Eckarts Schriften und Predigten", Leipzig, 1838; Henri Suse (d. 1386), the poetical lover of Divine wisdom (Bihlmeyer, "Heinrich Suse Deutsche Schriften", Stuttgart, 1907); Johann Tauler (d. 1361), the eloquent moralist ("Johann Taurers Predigten", ed. T. Harsberger, Frankfort, 1894); Venturino da Bergamo (d. 1345), the fiery popular agitator (Clementi, "Un Santo Patriota, Il B. Venturino da Bergamo", Rome, 1909); Jacopo Passavanti (d. 1357), the noted author of the "Mirror of Penitence" (Carmini di Pietro, "Contributo alla Biografia di Jacopo Passavanti in Giornale storico della letteratura italiana", XLVII, 1901, p. 1); Giovanni Dominici (d. 1419), the beloved orator of the Florentines (Gallette, "Una Raccolta di Prediche volgari del Cardinale Giovanni Dominici" in "Miscellanea di studi critici pubblicati in onore di M. Giacomo Mazzone", III, d'Arco, 1843; d. 1475), the Apostle of the Rosary (Script. Ord. Pred., I, p. 849); Savonarola (d. 1498), one of the most powerful orators of all times (Luotto, "Il vero Savonarola", Florence, p. 68).

(e) Academic Organization. — The first order instituted by the Church with an academic mission was the Preachers. The decree of the Fourth Lateran Council (1215) requiring the appointment of a master of theology for each cathedral school had not been effectual. The Roman Church and St. Dominic met the needs of the time. The friars gave a real impulse to the teaching of the sacred sciences. To attain their purpose, the Preachers from 1220 laid down as a fundamental principle, that no convent of their order could be founded without a doctor (Const., Dist. II, cog. 1). From their first foundation, the bishops, likewise, welcomed them with expressions like those of the Bishop of Muts (22 April, 1221): "Cohabitatio ipseorum non tantum laicos in predicationibus, sed et clericis in saecro lectionibus esse plurimum profutura, exemplo Domini Papae, qui in urbe Romae domum suam contra Livionam et Prussionem, et contra Frederickum II, et suos successores (Bull. O. P., XIII, p. 637). This is the reason why the second master general, Jordan of Saxony, defined the vocation of the order: "honeste vivere, disserre et docere", e. upright living, learning and teaching (Vita Fratrum, p. 138) and one of his successors, John the Teuton, declared that he was "ex ordine Predicatorum, quorum proprium esset docendi munus" (Annales, p. 644). (Of the Order of Preachers, whose proper function was to teach.) In pursuit of this aim the Preachers established a very complete and thoroughly organized scholastic system, which has caused a writer of our own time to say that "Dominic was the first minister of public instruction in modern Europe" (Larousse, "Grand Dictionnaire Universel du XIXe Siècle", Vol. IV, art. "Teuton").

The general basis of teaching was the conventual school. It was attended by the religious of the convent, and by clerics from the outside; the teaching was public. The school was directed by a doctor, called later, though not in all cases, rector. His name is connected with the expression "teaching which he interpreted, and in connexion with which
he treated theological questions. The "Sentences" of Peter Lombard, the "History" of Peter Comestor, the "Sum" of cases of conscience, were also, but secondarily, used as texts. In the large convents, which were not called studia generalia, but were in the language of the time schools for the clergy, the teaching staff was more complete. There was a second master or sub-lector, or a bachelor, whose duty it was to lecture on the Bible and the "Sentences". This organization somewhat resembled that of the studia generalia, in which masters held public disputations every fortnight. Each convent possessed a magister studentium, charged with the supervision of the students, and usually an assistant teacher. These masters were appointed by the provincial chapters, and the visitors were obliged to report each year to the chapter on the condition of academic work. Above the conventual schools were the studia generalia. The first studium generale which the order possessed was that of the Convent of St. Jacques at Paris. In 1229 they obtained a chair incorporated with the university and another in 1231. Thus the Preachers were the first religious order that took part in teaching at the University of Paris, and the only one possessing two schools. In the thirteenth century the order did not recognize any mastership of theology at the Sorbonne in 1234, it was stated that all the schools of theology outside the Sorbonne did not teach for any length of time. After receiving their degrees, they were assigned to different schools of the order throughout the world. The schools of St. Jacques at Paris were the principal scholastic centres of the Preachers during the Middle Ages.

In 1248 the development of the order led to the erection of four new studia generalia—at Oxford, Cologne, Montpellier, and Bologna. When at the end of the thirteenth and the beginning of the fourteenth century the general provinces of 1265 and 1281 were divided, other studia were established at Naples, Florence, Genoa, Toulouse, Barcelona, and Salamanca. The studium generale was conducted by a master or regent, and two bachelors who taught under his direction. The master taught the text of the Holy Scriptures with commentaries. The works of Albert the Great and St. Thomas Aquinas show us the nature of these lessons. Every fifteen days the master held a debate upon a theme chosen by himself. To this class of discourses belong the "Questiones et Gratiae" of St. Thomas and the "Quodlibet". These represent extraordinary disputations which took place twice a year during Advent and Lent, and whose subject was proposed by the auditors. One of the bachelors read and commented the Book of Sentences. The commentaries of Albert and Thomas Aquinas on the Lombard are the fruit of their two-year baccalaureate course as sententiarist. The biblicus lectured on the Scriptures for one year before becoming a sententiarist. He did not commentate, but read and interpreted the passages which preceding ages had added to the Scriptures for a better understanding of the text. The professors of the studia generalia were appointed by the general chapters, or by the master general, delegated for that purpose. Those who were to teach at Paris were taken indiscriminately from the different provinces of the order.

The conventual schools taught only the sacred sciences, i.e. Holy Scripture and theology. At the beginning of the thirteenth century neither priests nor laymen were considered as orthodox scholars. As it could not set itself against this general status, the order provided in its constitutions, that the master general, or the general chapter, might allow certain religious to take up the study of the liberal arts. The object of the study of theology was to make the whole subject entirely individual. As numerous masters of arts entered the order during the early years, especially at Paris and Bologna, it was easy to make a stand against this private teaching. However, the development of the order and the rapid intellectual progress of the thirteenth century soon caused the organization—for the use of religious only—of regular schools for the teaching of sacred sciences, in the middle of the century the provinces established in one or more of their convents the study of logic; and about 1260 the studio naturalium, i.e. e. courses in natural science. The General Chapter of 1315 commanded the study of moral sciences to all the religious of their convents; i.e. on the ethics, politics, and economics of Aristotle. From the beginning of the fourteenth century we find some religious who gave special courses in philosophy to secular students. In the fifteenth century the Preachers occupied in several universities chairs of philosophy, especially of metaphysics. Coming in contact as it did with barbaric peoples—principally with the Greeks and Arabs—the order was compelled from the outset to take up the study of foreign languages. The Chapter Generalissimo of 1236 ordered that in all convents and in all the provinces the religious should learn the languages of the neighbouring countries. The following year Brother Philippe, Provincial of the Holy Land, wrote to the preachers that the study of the languages was necessary to the people in the different languages of the Orient, especially in Arabic, the most popular tongue, and that the study of languages had been added to their conventual course. The province of Greece furnished several Hellenists whose works we shall mention later. The province of Spain, whose population was a mixture of Jews and Arabs, opened special schools for the study of languages. About the middle of the thirteenth century it also established a studium arabicum at Tunis; in 1250 one at Barcelona; between 1267 and 1281 at Valencia. The same province also established some schools for the study of Hebrew at Barcelona in 1281, and at Jativa in 1291. Finally, the General Chapter of 1310 commanded the master general to establish, in several provinces, schools for the study of Hebrew, Greek, and Arabic, to which every province of the order should send at least one student. In view of this fact a Protestant historian, Molinier, in writing of the Friars Preachers, remarks: "They were not content with professing and teaching all the divisions of science, as was the case in the orders of the Dominicans and the Franciscans, but added an entire order of studies which no other Christian schools of the time seem to have taught, and in which they had no other rivals than the rabbis of Languedoc and Spain" ("Guillem Bernard de Galliac et l'enseignement chez les Dominiques", Paris, 1884, p. 30).

This scholastic activity extended to other fields, particularly to the universities which were established throughout Europe from the beginning of the thirteenth century; the Preachers took a prominent part in university life. Those universities, like Paris, Toulouse etc., which from the beginning had chairs of theology, incorporated the Dominican conventual school which was patterned on the schools of the studia generalia. When a university was established in a city—it was usually the case—after the foundation of a Dominican convent, which always possessed a chair of theology, the pontifical letters granting the establishment of the university made no mention whatever of a faculty of theology. The latter was created by the Archbishop of the city. The Preachers and others of the mendicant orders, who followed the example of the Preachers. For a time the Dominican theological schools were simply in juxtaposition to the universities, which had no formal chair of theology. However, when the Preachers petitioned the Holy See for a faculty of theology, and their petition was granted, they usually incorporated
the Dominican school, which thus became a part of the theological faculty. This transformation began towards the close of the fourteenth and lasted until the first years of the sixteenth century. Once established, this state of things lasted until the Reformation. 

The archbishops, who according to the decree of the Fourth Lateran Council (1215) were to establish in each metropolitan church a master of theology, considered themselves dispensed from this obligation by reason of the creation of the Dominican schools open to the secular clergy. However, when they thought it their duty to apply the decree of the council, or when later they were obliged by the Roman Church to do so, they frequently called in a Dominican master to fill the chair of their metropolitan school. Thus the metropolitan school of Lyons was instructed to the Preachers, from their establishment in that city until the beginning of the sixteenth century (Forest, "L’Ecole cathédrale de Lyon", Paris-Lyon, 1885, pp. 238, 368; Beyssac, "Les Prieurs de Notre Dame de Confort", Lyons, 1909; "Chart. Univer. Paris", III, p. 28). The same arrangement, though not so permanent, was made at Toulouse, Bordeaux, Tarentaise, Vézelay, Urgell, etc. These places, which had previously been theoretically or morally obliged to set an example regarding the execution of the scholastic decree of the Lateran Council, usually contented themselves during the thirteenth century with the establishment of schools at Rome by the Dominicans and other religious orders. The Dominican masters who taught at Rome or in other cities where the sovereign pontiffs took up their residence, were known as lectores curia. However, when the popes, once settled at Avignon, began to require from the archbishops the appointment of a master of theology, they instituted a theological school in their own papal palace; the initiative was taken by Clement V (1305-1314). At the request of the Dominican, Cardinal Nicolaus Alberti de Prato (d. 1321), this work was permanently intrusted to a preacher, bearing the name of Magister Sacri Palatii. The first to hold the position was Pierre Godin, who later became cardinal (1312). The office of Master of the Sacred Palace, whose functions were successively increased, remains to the present day the special privilege of the Order of Preachers ("Chart. Magistro Sacri Palatii Apostolicii", Rome, p. 175).

The teaching activity of the order and its scholastic organization placed the Preachers in the forefront of the intellectual life of the Middle Ages. They were the pioneers in all directions as one may see from a subsequent paragraph relative to their literary productions. We speak of the formation of scholastic philosophy and of theology created by them in the thirteenth century which has been the most influential in the history of the Church. At the beginning of the thirteenth century philosophical teaching was combined with the logic of Aristotle and theology, and was under the influence of St. Augustine; hence the name Augustinism generally given to the theological doctrines of that age. The first Dominicans, who came from the universities into the order, or who taught in the universities, adhered for a long time to the Augustinian doctrine. Among the most celebrated were Roland of Cremona, Hugh of Saint Cher, Richard Fitzsaer, Meneg of Cremona, Peter of Tarentaise, and Robert of Kilwardby. It was the introduction into the Latin world of the great works of Aristotle, and their assimilation, through the teaching activity of Albertus Magnus, that opened up in the Order of Preachers a new line of philosophical and theological investigation. The work begun by Albertus Magnus (1240-1250) was carried on by his disciple, Thomas Aquinas (q. v.), whose systematic teaching was completed in the last years of his life (1245-1274). The system of theology and philosophy constructed by Aquinas is the most complete, the most original, and the most profound, which Christian thought has elaborated, and the master who designed it surpasses all his contemporaries and his successors in the grandeur of his creative genius. The Thomist School developed rapidly both within the order and without. The fourteenth and fifteenth centuries witnessed the rise of the so-called School of the Lateran and School of the Blood of Christ, of doctrine. The Council of Vienne (1311) declared in favour of the Thomistic teaching, according to which there is but one form in the human composition, and condemned as heretical any one who should deny that "the rational or intellectual soul is per se and essentially the form of the human body". This is also the teaching of the Fifth Lateran Council (1515). See Ziziara, "De Mente Concilii Vienensis", Rome, 1878, pp. 88-89.

The discussions between the Preachers and the Fathers on the poverty of the Church and the Apostles was also settled by John XXII in the Thomistic sense ([12 Nov., 1323], Ehrle, "Archiv. l. Litt. u. Kirchengesch.", III, p. 517; Tosco, "La Questione della povertà nel Secolo XIV", Naples, 1910). The question regarding the Divinity of the Blood of Christ, separated from His Body during His Passion, raised for the first time in 1351, at Barcelona, and taken up again in Italy in 1463, was the subject of a formal debate before Pius II. The Dominican opinion prevailed; although the pope reserved a sentence propria so-called (Mortier, "Hist. des Maitres Généraux", III, p. 287, IV, p. 413; G. degli Agostini, "Notizie storico-critiche intorno la vita e le opere degli scrittori Vinziani"), Venice, 1752, I, p. 401. During the fourteenth and fifteenth centuries the Thomist School had to make a stand against Nominalism, of which a Preacher had been one of the protagonists. The repeated sentences of the universities and of princes slowly combated this doctrine (De Wulf, "Histoire de la philosophie médiévale", Louvain, Paris, 1905, p. 45 Paris).

The Avroerism against which Albert the Great, and especially Aquinas had fought so energetically did not disappear entirely with the condemnation of Paris (1277), but survived under a more or less attenuated form. At the beginning of the fourteenth century the debates were revived, and the Preachers found themselves actively engaged therein in Italy
where the Averroist doctrine had reappeared. The General of the Dominicans, Thomas de Vio (Cajetan), had published his commentaries on the "De Anima" of Aristotle (Florence, 1500), in which he abandoned the position of St. Thomas, he contended that Aristotle had not taught the individual immortality of the soul, but affirming at the same time that this doctrine was philosophically erroneous. The Council of Jerusalem by its Decree, 19 March, 1513, not only condemned the Averroistic teaching, but exacted still further that professors of philosophy should answer the opposing arguments advanced by philosophers—a measure which Cajetan did not approve (Manzi, "Cursors", I, 32, col. 842). Pietro Pomponazzi, however, at Venice, 1519, declared the immortality of the soul as the Averroistic sense, while making an open profession of faith in the Christian doctrine, raised numerous polemics, and was held as a suspect. Chrysostom Javelli, regent of the Calcedonian Church at the Convent of St. Dominic in agreement with the ecclesiastical authority, and at the request of Pomponazzi, sought to extricate him from this difficulty by drawing up a short theological exposition of the question which was to be added in the future to the works of Pomponazzi. But this discussion did not cease all at once. Several Dominicans entered the lists. Girolamo de Fornerisi subjected to examination the polemic of Pomponazzi with Augustin Nif (Bologna, 1519); Bartolomeo de Spina attacked Cajetan on one article, and Pomponazzi in two others (Venice, 1519); Ludovicus de Islambus also wrote on the immortality of the soul (Milan, 1520); Lucas Bettini took up the same theme, and Pico della Mirandola published his treatise (Bologna, 1523); finally Chrysostom Javelli himself, in 1525, composed a treatise on immortality. Javelli refuted the point of view of Cajetan and of Pomponazzi (Chrysostomi Javelli, "Opera", Venice, 1577, I, 35, p. 52). Cajetan, becoming cardinal, not only held his position regarding the idea of Aristotle, but further declared that the immortality of the soul was an article of faith, for which philosophy could offer only probable reasons ("In Ecclesiasten", 1534, cap. iv; Fiorentino, "Pietro Pomponazzi", Florence, 1888). (f) Literary and Scientific Productions.—During the Middle Ages the order had an enormous literary output, its activity extending to all spheres. The works of its writers are epoch-making in the various branches of human knowledge.

(i) Works on the Bible.—The study and teaching of the Bible were foremost among the occupations of the Dominicans and they regarded the Bible and the other sacred books as the source of all knowledge. The first step of the Dominicans in this direction was the production of concordances. The English Dominicans of Oxford, apparently under the direction of John of Darlington, made more simplified concordances in the third quarter of the thirteenth century. At the beginning of the fourteenth century a German Dominican, Conrad of Halberstadt, simplified the English concordances still more; and John Fokwich of Ragusa, at the time of the Council of Basle, caused the insertion in the concordances of elements which had not hitherto been incorporated in them. The Dominicans produced numerous concordances and numerous commentaries on the books of the Bible. That of Hugh of Saint Cher was the first complete commentary on the Scriptures (last ed., Venice, 1754, 8 vols. in fol.). The commentaries of Bl. Albericus Magnus and especially those of St. Thomas Aquinas are still famous. With St. Thomas the interpretation of the text is more direct, simply literal, and theoretically conclusive. These great Scriptural commentaries represent theological teaching in the studia generalia. The lecture on the text of Scripture, also composed to a large extent by Dominicans, represent Scriptural teaching in Christendom; notably St. Thomas undertook an "Expositio continuata" of the four Gospels now called the "Catena aurea", composed of extracts from the Fathers with a view to its use by clerics. At the beginning of the fourteenth century Nicholas of Trevet did the same for the books of the Bible. The Preachers were also engaged in translating the Bible into the vernacular. In all probability they were the translators of the French Parisian Bible during the first half of the thirteenth century, and in the fourteenth century they took a very active share in the translation of the celebrated Bible of King John The name of a Catalan Dominican, Rumeu of Sabruguera, is attached to the first translation of the Scriptures into Catalan. The names of Preachers are also connected with the Castilian translation, and still more with the Italian (A. F. Manioci, "Intorno a un volgarizzazione della Bibbia attribuita al B. Jacopo da Voragine" in "Giornale storico e letterario della Liguria", V, 1904, p. 96). The first pre-Lutheran German translation of the Bible, except the Psalms, is due to John Reisch, beginning after the middle of the fifteenth century. Finally the Bible was translated from Latin into Armenian about 1330 by B. Bartolommeo Parvi of Bologna, missionary and bishop in Armenia. These works enabled Vercellone to write "To the Dominican Order belongs the glory of having first renewed in the Church the illustrious example of Origen and St. Augustine by the ardent cultivation of sacred criticism" (P. Mandonnet, "Travaux des Dominicains sur les Saintes Ecritures" in "Dict. de la Bible", II, col. 1453; Saal, "Das Bibelstudium im Predigerorden" in "Der Katholik", 82 Jahrg., 3 f., XXVII, 1902, a repetition of the foregoing article).

(ii) Philosophical works.—The most celebrated philosophical works of the thirteenth century were those of Albertus Magnus and St. Thomas Aquinas. The former compiled on the model of Aristotle a vast scientific encyclopedia which exercised great influence on the last centuries of the Middle Ages ("Alberti Magni Opera", Lyons, 1851, 20 vols. in fol.; Paris, 1850), or the "Siger de Brabant" (I, 37, n. 3). Thomas Aquinas, apart from special treatises and numerous philosophical sections in his other works, commented in whole or in part thirteen of Aristotle's treatises, these being the most important of the Stagirite's works (Mandonnet, "Des feires authentiques de St. Thomas d'Aquin", 2nd ed., p. 104, Opera, Paris, 1889, XXII-XIX). Robert of Kilwardby (d. 1279) a holder of the old Augustinian direction, produced numerous philosophical writings. His "De ortu et divisione philosophiae" is regarded as the most important introduction to Philosophy of the Middle Ages (Baur, "Dominicus Gundissalinus De divisione philosophiae", Münster, 1903, 368). At the end of the thirteenth and the beginning of the fourteenth century, Dietrich of Vierling left an important philosophical and scientific work (Krebs, "Meister Dietrich, sein Leben, seine Werke, seine Wissenschaft", Münster, 1906). At the end of the thirteenth and the beginning of the fourteenth century the Dominicans composed numerous philosophical treatises, some of them bearing on the Thomistic School was attacked by its adherents ("Archiv f. Litt. und Kirchengesch.", II, 226 sqq.).
(iii) Theological works. In importance and number theological works occupy the foreground in the literary activity of the order. Most of the theologians composed commentaries on the "Sentences" of Peter Lombard, which was the classical text in theological schools. Besides the "Sentences" the usual work of bachelors in the Universities included "Dialogus" and "Quodlibet", which were selections from the writings of masters. The theological "summares" set forth the theological matter according to a more complete and well-ordered plan than that of Peter Lombard and especially with solid philosophical principles and the books of the "Sentences" were wanting. Manuals of theology and more especially manuals, or "summare", on penance for the use of confessors were composed in great numbers. The oldest Dominican commentaries on the "Sentences" are those of Roland de Cromena, Hugh of Saint Cher, Richard Fitzsazure, Robert of Kilwardby, and Albertus Magnus. The series begins with the year 1230 if not earlier and the last are prior to the middle of the thirteenth century (Mandœnet, "Siger de Brabant," I, 50). The "Summa" of St. Thomas (1265-75) is the masterpiece of these intellectual works of Albertus Magnus is unfinished. The "Summa de bono" of Ulrich of Strasburg (d. 1277), a disciple of Albert, is still uncodified, but is of paramount interest to the historian of the thought of the thirteenth century; (Grabmann, "Die Werkzeugkultur der Dominikaner-Theologen des 13. Jahrhunderts", "Zeitschrift für Missionswissenschaft", I, 1911, 137). The theological summa of St. Antoninus is highly esteemed by moralists and economists (Jghner, "Die Volkswirtschaftlichen Annahmen Antonius von Florenz", Paderborn, 1904). The "Compendium theologicae veritatis" of Hugh Ripelin of Strasburg (d. 1268) is the most widespread and famous manual of the Middle Ages (Mandœnet, "Des écrits authentiques de St. Thomas", Fribourg, 1910, p. 88). The chief manual of confessors is that of Paul of Hungary composed for the Brothers of St. Nicholas of Bologna (1220-21) and edited without mention of the author in the "Bibliotheca Casinensis" (IV, 1888, 191) and with false assignment of authorship by R. Duelli, "Miscellanz. Libr." (Augsburg, 1723, 59). The "Summa de Penitentia" of Raymond of Pannafort, composed in 1235, was a classic during the Middle Ages and was one of the works of which the MSS. were most multiplied. The "Summa Confessorum of John of Freiburg (d. 1329) is the only one of the most precious products of this class of literature. The Pisan Bartholomew of San Conrado has left us a "Summa Casum" composed in 1338, in which the matter is arranged in alphabetical order. It was very successful in the thirteenth and fourteenth centuries. The manuals for confessors of John Nieder (d. 1438), St. Antoninus, Archbishop of Florence (d. 1459), and Girolamo Savonarola (d. 1498) were much esteemed in their time (Quétif-Echard, "Script. Ord. Præd.", I, passim; Hurter, "Nomenclator literarum; sita medii sæculi," 1886, p. 21); F. von Schiller, "Gesch. der Quellen und Literatur des canonischen Rechts", Stuttgart, II, 1877, p. 410 sqq.; Dietterle, "Die Summe confessorum . . . von ihren Anfängen bis zu Silvester Priores" in "Zeitschrift für Kirchengesch.", XXIV, 1903, XXVII, 1907). (iv) Apologetic works.—The Preachers born amid the Albigenians heresy and founded especially for the defence of the Faith, bent their literary efforts to reach all classes of dissenters from the Catholic Church. They produced by far the most powerful works in the form of apologetics contra Catharos et Waldenses" (Rome, 1743) of Moñeta of Cremona, in course of composition in 1244, is the most complete and solid work produced in the Middle Ages against the Cathari and Waldenses. The "Summa contra Gentiles" of St. Thomas Aquinas is one of that master's strongest creations. It is the defence of the Christian Faith against Arabian philosophy. Raymond Marti in his "Pugio fidei", in course of composition in 1278 (Paris, 1642; 1651; Leipzig, 1687), measures arms with Judaism. This work, to a large extent based on Rabbinic literature, is the most important medieval monument of Orientalism (Grabmann, "Die Missionsidee bei den Dominikanern des 13. Jahrhunderts", "Zeitschrift für Missionswissenschaft", I, 1911, 137). (v) Educational literature.—Besides manuals of theology the Dominicans furnished a considerable literary output with a view to meeting the various needs of all social classes, whether educational or practical literature. They composed treatises on preaching, models or materials for sermons, and collections of discourses. Among the oldest of these are the "Distinctiones" and the "Dictionarium pauperum" of Nicholas of Bariard (d. 1261), the "Tractatus de diversa materis predictable" of Stephen of Bourbon (d. 1261), the "De eruditione predicatorium" of Humbert of Romans (d. 1277), the "Distinctiones" of Nicholas of Goran (d. 1295), and of Maurice of England (d. circa 1300; Quétif-Echard, "Script. Ord. Præd.", II, 908; 970; Lecoy de la Marche, "La chaïre française au moyen-âge", Paris, 1886; Crane, "The exempla or illustrative stories from the 'sermones vulgares' of Jacques de Vitry", London, 1890). The Preachers led the way in the composition of comprehensive collections of the lives of the saints or legends, writings at once for the use and edification of the faithful. Bartholomew of Trent compiled his "Liber epilorum in Gestis Sancutorum" in 1240. After the middle of the thirteenth century, they composed a collection of "Vita Sancutorum" (Madrid, University Library, cod. 146). The "Abbreviatio in gestis et miracula sanctorum", composed in 1243 according to the "Speculum historiale de Vincent de Beauvais, is the work of Jean de Mailly. The "Legenda Sanctorum" of Jacques de Voragine (Vor- azs) called also the "Golden Legend", written about 1260, is universally known. "The success of the book," writes the Bollandist, A. Poncelet, "was prodigious; it far exceeded that of all similar compilations." It was being translated into all the vernaculars of Europe. The "Speculum Sanctorale" of Bernard Guidonis is a work of much more scholarly character. The first three parts were finished in 1234 and the fourth in 1239. About the same time Peter Calo (d. 1548) undertook under the title of "Legenda sanctorum" an "immense compilation" which aimed at being more complete than its predecessors (A. Poncelet, "Le légendier de Pierre Calo" in "Analecta Bollandiana", XXIX, 1910, 5-116). Catechetical literature was also early taken in hand. In 1299 he "founded" and issued his "Explanatio symboli ad institutionem fidelium" ("Revue des Bibliothèques", VI, 1846, 32; March, "La 'Explanatio Symboli', obra inedita de Ramon Marti, autor del 'Pugio Fidei'", in "Anuario de los Institutos de Estudios Cataláns", 1908, and Barcelona,
1910). Thomas Aquinas wrote four small treatises which represent the contents of a catechism as it was in the Middle Ages. "De cœptis et lege amoris", "Expositio symboli Apostolorum", "De decem preceptis et lege amoris", "Expositio orationis dominicæ". Several of these writings have been collected and called the catechism of St. Thomas. (Fortassin-Kuns, "Katechismus des hl. Thomas von Aquino"., Loci 1900.) In 1277 Laurent d'Orléans composed at the request of Philip the Bold, whose confessor he was, a real catechism in the vernacular known as the "Somme le Roy" (Mandonnet, "Laurent d'Orléans l'auteur de la Somme le Roy"., Paris, 1900). The beginning of the fourteenth century Bernard Guiodis composed an abridgment of Christian doctrine which he revised later when he had become Bishop of Lodève (1324-31) into a sort of catechism for the use of his priests in the instruction of the faithful ("Notices et extraits de la Bib. Nat." XXVII, Paris, 1879, 2nd part, p. 362; C. Douais, "Un nouvel écrit de Bernard Gui. Le synodal de Lodève"., Paris, 1944, p. viii.). During the pontificate of Gregory XII John Dominici wrote copious memoranda in defence of the rights of the legitimate pope, the two most important being still unedited (Vienna, Hof-bibliothek, lat. 510Z, fol. 1-24). About the middle of the fifteenth century John of Torquemada wrote the "Liber de Statu et Decretis" of St. Raymond de Penafort (1235 ed. in Boavies, "Annales ecclesiae" ad ann. 1235; "Monum. Ord. Pred. Hist." IV, fasc. II, 41; "Le Moyen Âge", 2nd series III, 305). The "Liber inquisitionis" of C. Douais, Paris, 1906, p. 275. About 1244 another directory was composed by the inquisitors of Provence ("Nouvelle revue historique du droit français et étranger"., Paris, 1853, 670; E. Vercardt, "L'Inquisition"., Paris, 1907, p. 314). But the two classical works of the Middle Ages on inquisitorial law are that of Bernard Guiodis composed in 1321 under the title of "Directorium Inquisitionis hereticæ pravitatis" (ed. C. Douais, Paris, 1886) and the "Directorium Inquisitorum" of Nicholas Saxo (1490) ("Uber Kirchenrecht und Kirchengeschichte"., Grafit, "El inquisidor F. Nicholas Eymerich", Girona, 1878; Schulte, "Die Gesch. der Quellen und Literatur des Canonischen Rechts" II, passim). (vii) Historical Writings.—The activity of the Preachers in the domain of history was considerable during the Middle Ages. Some of their chief works incline to be real general histories which assured them great success in their day. The "Speculum Historiale" of Vincent of Beauvais (d. circa 1264) is chiefly, like the other parts of the work, of the nature of a documentary compilation, but he has preserved for us sources which we could never otherwise reach (E. Boutaric, "Examen des sources du Speculum historiale de Vincent de Beauvais", Paris, 1863). Martin the Pardoner in the second half of the fourteenth century in the third quarter of the thirteenth century composed his chronicles of the popes and emperors which were widely circulated and had many continuators ("Mon. Germ. Hist.: Script." XXIII). The anonymous "Regus chroniciæ Cordani" of the latter thirteenth century have left us valuable historical materials which constitute a sort of history of contemporary civilization ("Mon. Germ. Hist.: Script." XVII). The chronicle of Jacopo da Voragine, Archbishop of Genoa (d. 1298) is much esteemed ("Bib. Ital. Script." Marucchi, "La Cronaca di Jacopo da Voragine", Genoa, 1904). Ptolemy of Lucca and Bernard Guiodis are the two great ecclesiastical historians of the early fourteenth century. The "Historia ecclesiastica nova" of Martin of Fano is the "Poelemum de sordibus pontificum romanorum" of the latter contain valuable historical information. But the historical activity of Bernard Guiodis far exceeded that of Ptolemy and his contemporaries; he is the author of twenty historical publications, several of which, such as his historical compilation on the Order of Preachers, are very important in value and extent. Bernard Guiodis is the first medieval historian who had a wide sense of historical documentation ("Ber. Ital. Script." XI; Krüger, "Des Ptolemy's Werke", Göttingen, 1874; D. König, "Ptolemäus von Lucca und die Flosse Chroniconum des B. Guidonis"., Würzburg, 1875; Idem, "Tolomeo von Lucca", Harburg, 1878; Disile, "Notice sur les
manuscrites de Bernard Gui" in "Notices et manuscrits de la Bib. Nat.", XVII, pt. II, 168-455; Douais, "Un nouveau manuscrit de Bernard Gui et de ses chroniques des papes d'Avignon" in "Mém. soc. Archéol. Midi.", XIV, 1889, p. 417, Paris, 1889; Arbolet, "Etude biographique et bibliographique sur saint Bernard de Clairvaux" (Paris, 1896), the fourteenth century beheld a galaxy of Dominican historians, the chief of whom were: Francesco Pipini of Bologna (d. 1320), the Latin translator of Marco Polo and the author of a "Chronicon" which began with 1260, the year of the Franciscan; Franzo Francesco Pipini of Bologna, storico, geografo, viaggiatore del sec. XIV., Bologna, 1896; Nicholas of Butrinto (1313), author of the "Relatio de Henrici VII imperatoris itinere italico" (ed. Heyck, Innsbruck, 1888); Nicholas Trever, compiler of the "Annales sex regum Angliae" (ed. T. Hodgdon, London, 1845); Jacopo di Acqui and his "Chronicon imaginis mundi" (1330); Monumenta historie patriae, script. III, Turin, 1848; Galvano Fiamma (d. circa 1320) composed various works on the history of Milan (Berrani, "Storia delle diottriche di Galvano Fiamma" in "Bullettino dell'Istituto Storico Italiano", Rome, 1891); John of Colonna (c. 1336) is the author of a "De viris illustribus" and a "Mare Historiarum" (Manzonnet, "Des écrits authentiques et apocryphes de Branciforti", Rome, 1874); T. Hodgson (ed. 1910, p. 97). In the second half of the fourteenth century Conrad of Halberstadt wrote a "Chronicon" sumnorum Pontificum et Imperatorum romanorum (Menzel, "Die Chronographia Konrads von Halberstadt" in "Forsch. deutsch. Gesch.", XX, 1880, 279); Henry of Hervord (d. 1376), wrote a "Liber de rebus memorabilibus" (ed. Potthast, Göttingen, 1859); Stefano da Vicenceto is the author of the rhythmic poem "De gestis in civitate Mediolani" (in "Script. Rer. Ital."); L. Maufler, "Amico, pietà e amore della vocazione spirituale" (ed. passo del poema "De gestis in civitate Mediolani" di Stefano" in "Misc. Ceriani", Milan, 1910). At the end of the fifteenth century Hermann of Lerbeke composed a "Chronicon comitum Schaunenburgiensem" and a "Chronicon episcoporum Min- densium" (Eckmann, "Hermann von Lerbeke mit besonderer Berücksichtigung seines Lebens und der Abfassungszeit seiner Schriften" (Ham, 1879), Hermann Korner left an important "Chronica minor" ed. J. Schwalm, Göttingen, 1885; cf. Waits, "Ursprung der Historica Libri Chronikon", Göttingen, 1851). The "Chronicon" or "Summa Historialis" of St. Antoninus, Archbishop of Florence, composed about the middle of the fifteenth century is a useful compilation with original data for the author's own times (Schab, "Die Quellen der Weltchronik des heil. Antonin, Erzbischofs von Florens" Hirschberg, 1880). Felix Fabri (Schmid, d. 1602) left valuable historical works; his "Evagatorium in Terra Sancte, Arabie et Egypti peregrinationem" (ed. Hassel, Stuttgart, 1843) is the most instructive and important work of this kind during the fourteenth century. He is also the author of a "Descriptio Sueviae" ("Quellen zur Schweizer Gesch.", Basle, 1884) and a "Tractatus de civitate Ulmense" (Litterarischer Verein in Stuttgart, no. 186, Tübingen, 1889, ed. G. Wessmeyser; cf., under the names of these writers, Quétif-Echard, "Script. Ord. Pred.", Chevalier, "Répertoire...du moyen-âge; Bio-Bibl.", Paris, 1907; Potthast, "Bib. Hist. Medii Evii", Berlin, 1896; Hurter, "Nomenclator historiae", II, 1906, p. 311). (viii) Miscellaneous works.—Being unable to devote a section to each of the different spheres wherein the Preachers exercised their activity, we shall mention here some works which obtained considerable influence, and are particularly worthy of attention. The "Specula" ("Naturales", "doctrinale", "historica"); the "Speculum morale" is apocryphal) of Vincent of Beauvais constitute the largest encyclopedia of the Middle Ages and furnished materials for many subsequent writers (Vogel, "Literar-historischen Notizen über den mittelalterlichen Gelehrten Vincens von Beauvais", Freiburg, 1845; Bourgeat, "Études sur le V. de B., Paris, 1871). The work of the Flemish humanist of the time, Hubert of Romans, "De tractandis in concilio generali", composed in 1273 at the request of Gregory X, and which served as a programme to the General Council of Lyons in 1274, contains the most remarkable anticipation of the reforms to be undertaken (Mortier, "Hist. des Maîtres généraux de l’ordre des Frères Prêcheurs", I, 88). The treatise is edited in full only in Brown, "Appendix ad fasc. rerum expectandarum et fugendarum" (London, 1690, p. 185). Burchard of Mount Sion with his "Descriptio Terrae Sanctae" written about 1283, became the classic geographer of Palestine during the Middle Ages (J. C. M. Laurent, "Peregrinatores medii avvi quatuor", Leipzig, 1873). William of Moerbeke, who died as Archbishop of Canterbury about 1296, left valuable transalations of Aristotle from the Greek and the translator of portions not hitherto translated. To him also are due translations of numerous philosophical and scientific works of ancient Greek authors (Manzonnet, "De libris quinque"). The text of the Genoese John Balbus, completed in 1285, is a vast treatise on the Latin tongue, accompanied by an etymological vocabulary. It is the first work on profane sciences ever printed. It is also famous because in the Mainz edition (1460) John Gutenberg first made use of movable type ("Incumnabula xylo- graphica et typographica" 1455-1500, Joseph Baer, Frankfort, 1900, p. 11). The "Philobiblon" edited under the name of Richard of Bury, but composed by Robert Holcot (d. 1349), is the first medieval treatise in which the history of the printed book is considered (Thomas, London, 1888). John of Tambach (d. 1372), first professor of theology at the newly-founded University of Prague (1347), is the author of a valuable work, the "Consolatio Theologica" (Desnié, "Magister Johann von Dambach" in "Archiv für Litt. u. Kirchengesch." III, 640). Towards the end of the fifteenth century Federico Frezzi, who died as Bishop of Foligno (1416), composed in Italian a poem in the spirit of the "Divina Commedia" and entitled "Il Quadrirregio" (Foligno, 1725). (cf. Conti, "Il Quadrirregio" Venetia, 1889). The edition of the text ("Le edizioni del Quadrirregio" in "Bibliolilly", VIII, Florence, 1907). The Florentine Thomas Sardi (d. 1517) wrote a long and valued poem, "L’alnima peregrina", the composition of which dates from the end of the fifteenth century (Sangi, "Il propugnatore", XVIII, 1885, pt. II, 289). (ix) Liturgy.—Towards the middle of the thirteenth century the Dominicans had definitely established the liturgy which they still retain. The final correction (1256) was the work of Humbert of Romans. It was divided into fourteen sections or volumes. The prototype of this monumental work is preserved at Rome in the general archives under the title ("Script. Ord. Pred.", I, 143; "Zeitschr. f. Kathol. Theol.", VII, 10). A portable copy for the use of the master general, a beautiful specimen of thirteenth-century book-making, is preserved in the British Museum, no. 23,935 (J. W. Llegg, "Tracts for the Mass", Bradshaw, 1905, p. 144). A copy of the chant liturgique dans l’Ordre de Saint-Dominique" (in "L’Année Dominicaine", Paris, 1908, 27; Gagin, "Un manuscrit liturgique des Frères Précheurs antérieur aux règlements de Humbert de Romans" in "Revue des Bibliothèques", 1898, p. 163). Idem, "Dominicains et teutoniques, confid attribution du Liber
Choralei", no. 182 du catalogue 120 de M. Ludwig Rosenthal in "Revue des Bibliothèques", 1908. Jerome of Moravia, about 1250, composed a "Tractatus de Musica" (Paris, Bib. Nat. lat. 16,683), the most important theoretical work of the thirteenth century, "De musica," a compendium of church music which were placed as preface to the Dominican liturgy of Humbert of Romans. It was edited by Coussemaker in his "Scriptores de musica medii aevi II" (Paris, 1864). (Cl. Kornmuller "Die alten Musiktheoretiker XX. Hieronymus von Mähren in "Kirchenmusik. Wissenschaft Jahrbuch", IV, 189, 14.) The Paraclete also left numerous liturgical compositions, among the most renowned being the Office of the Blessed Sacrament by St. Thomas Aquinas, one of the masterpieces of Catholic liturgy (Mandronet, "Des écrits authentiques de St. Thomas d'Aquino", 2nd ed. p. 127). Armand du Prat (d. 1306) is the author of the beautiful Office of St. Louis, King of France. His work, selected by the Court of Philip the Bold, came into universal use in France ("Script. Ord. Pred.", I, 499; "Notices et extraits des manuscrits de la Bib. Nat.", XXVII, 11th pt. 369, n. 6). The "Dies Irae" has been attributed to Cardinal Latino Malabranca who was in his time a famous composer of ecclesiastical chants and offices ("Scritti vari di Filologia", Rome, 1801, p. 488). This painted influence on the choral is commonly thought the influence of Humanism, and furnished it with noteworthy contributions. This influence was continued during the following period in the sixteenth century and reacted on its Biblical and theological compositions. Leonardo Giustiniani, Archbishop of Mytilene, in 1449, composed against the celebrated Poggio a treatise "De vera nobilitate", edited with Poggio's "De nobilitate" (Avellino, 1857). The Sicilian Thomas Schifaldo was named on Poggio's list of the "Cornici" and in Horace in 1476. He is the author of a "De vera illustris ordinis Preceptorum" written in humanistic style, and of the Office of St. Catherine of Siena, usually but incorrectly ascribed to Pius II (Cosruli, "Tommaso Schifaldo umanista siciliano del sec. XV", Palermo, 1897, in "Documenti per servire alla storia di Sicilia", VI). The Venetian Francesco Colonna is the author of the celebrated work "The Dream of Poliphilus" ("Poliphili Hypnerotomachia, ubi humana omnia non nisi somnium esse docet"), Aldus, Venice, 1499. "Histoire du 15e siècle" ou hypnerotomachia de Frère Francesco Colonna", Paris, 1880). Colonna's work aims to condense in the form of a romance all the knowledge of antiquity. It gives evidence of its author's profound classical learning, and passionate love for Greek and Roman culture. The work, which is accompanied by the most perfect illustrations of the time, has been called "the most beautiful book of the Renaissance" (Ilg, "Ueber den kunsthistorischen werth der Hypnerotomachia Poliphili", Vienna, 1872; Ehrhurst, "Éludes sur le songe de Poliphile" in "Bulletin de la Bibliophilie", 1887; Paris, 1888; Dore, "Des origines de la diffusio du songe de Poliphile" in "Revue des Bibliothèques", VI, 1896, 239; Gnoli, "Il sogno di Polifilo" in "Biblia Magna", 1900, 190; Fabrini, "Indagini sul Polifilo" in "Gior. Storico della letteratura italiana", XXXV, 1900, I; Poppelreuter, "Der anonyme Meister des Poliphilo" in "Zur Kunstd. des Auslandes", XX, Strassburg, 1904; Molmenti, "Alcuni documenti concernenti l'Archivio dei storici (Hypnerotomachia Poliphili)". Venice, 1908; V, XXXVIII (906, 291). Tommaso Radini Todeschi (Radinus Todsichus) composed under the title "Callipycha" (Milan, 1511) an allegorical romance in the manner of Apuleius and inspired by the "Dream of Poliphilus". The "Verona" - "Polifilo" by Pietro Lorenzani Sebenico, commented the eight parts of the dance of Donatus and the Ethics of Seneca the Younger (Perugia, 1517; Milan, 1520; Venice, 1522) and composed "Grammatices historice, methodice et exegeticæ" (Perugia, 1518). The Bolognese Leandro Alberti (d. 1550) was an elegant Latinist and his "De mos rimorum occidentalis quae in etiam utique annis aetatis summae" (Milan, 1517), written in the humanistic manner, is a beautiful specimen of Bolognese publishing ("Script. Ord. Pred.", II, 137; Campori, "Sei lettere indicate di Fra Leandro Alberti" in "Atti e memorie della Deput. di Storia patria per le prov. Modenesi e Emiliane", I, 1889, p. 413. Finally Matteo Bandello (d. 1555), who was called the "Dominican Boccaccio", is regarded as the first novelist of the Italian Cinquecento and his work shows what an evil influence the Renaissance could exert on churchmen (Masi "Matteo Bandello o vita italiana in un novelier del cinquecento", Bologna, 1900). (g) The Preachers and Art.—The Preachers hold an important place in the history of art. They contributed in many ways to the artistic life of the Middle Ages and the Renaissance. Their churches and convents offered an extraordinary field of activity to contemporary artists, while a large number of the Preachers themselves did important work in the various spheres of art. Finally by their teaching and religious activity they often exercised a profound moral influence on the followers of their preachers. Primarily established under a regime of evangelical poverty, the order took severe measures to avoid in its churches all that might suggest luxury and wealth. Until the middle of the thirteenth century its constitutions and general chapters energetically legislated against anything tending to suppress the evidence of poverty ("Archiv. f. Litt.-und Kirchgesch.", I, 225; "Acta Cap. Gen.", I, passim). But the order's intense activity, its establishment in large cities and contact with the general movement of civilization triumphed over this state of things. As early as 1250, churches and convents appeared called opus sumptuosum (Finke, "Die Freiburger Dominikaner und der Münsterbau", Freiburg, 1801, p. 47; Potthast, op. cit., 22,426). They were, however, encouraged by ecclesiastical authority and the order eventually relinquished its early uncompromising attitude. Nevertheless ascetic and morose minds were scandalized by what they called royal edifices (Matthews, "Mysticism in Art", Fribourg, 1897; Spigelium, Paris, 1723, II, 634; Cochez, "Philobiblion", Paris, 1856, p. 227). The second half of the thirteenth century saw the beginning of a series of monuments, many of which are still famous in history and art. In the Dominican Cloister of San Cesare Cantù, "soon had in the chief towns of Italy magnificent monasteries and superb temples, precious wondrous of art. Among others may be mentioned: the Church of Santa Maria Novella, at Florence; Santa Maria sopra Minerva, at Rome; St. John of St. Paul, at Venice; St. Nicholas, at Treviso; St. Dominic, at Naples, at Perugia, at Prato, and at Bologna, with the splendid tomb of the founder, St. Catherine, at Pisa; St. Eustorgius and Sta Maria delle Grazie, at Milan, and several others remarkable for a rich simplicity and of which the architects were mostly monks" ("Les Héritiques de l'Italie", Paris, 1869, I, 165; Berthier, "L'église de Sainte Sabine à Rome", Rome, 1910; Mullooly, "St. Clement, Pope and Martyr, and his Basilica in Rome", Rome, 1873; Nolan, "The Basilica of St. Clement in Rome", Bologna, 1910; Brown, "The Church of Santa Maria Novella at Florence, An historical, architectural and artistic study", Edinburgh, 1902; Berthier, "L'église de la Minerve à Rome", Rome, 1910; Marchese, "San Marco convento dei Padri Celestini in Firenze", Firenze, 1925; Malanap, "La chiesa e il convento di S. Domenico a Bologna"

Many were followed in Italy's footsteps. Here mention must be made of the Jacobins of Toulouse (Carrière, "Les Jacobins de Toulouse", 2nd ed., Toulouse, a.d.); St. Jacques de Paris (Millin, "Antiquité nationales", Paris, 1790, III, 1); St. Maximin in Provence (Roeten, "Notice sur l'église de Saint-Maximin", Brignoles, 1859); Notre-Dame-de-Confort at Lyons (Cormier, "L'ancien couvent des Dominicains de Lyon", Lyons, 1898). A comprehensive account of the architectural work of the Dominicans in France may be found in the magnificent "Eet d'architecture des Dominicains, Les couvents de Saint-Dominque en France au moyen-âge" (Paris, 1903, 2 vols. in 4°). Spain was also covered with remarkable monuments: St. Catherine of Barcelona and St. Thomas of Madrid were the dominant figures. S. Paolo at Salerno, S. Pablo and S. Gregorio at Valladolid, Santo Tomas at Avila, San Pablo at Seville and at Cordova. S. Crux at Granada, Santo Domingo at Valencia and Saragossa (Martínez-Vigil, "La orden de Predicadores", Barcelona, 1886). Portugal also had beautiful buildings. The church and convent of Batalha are perhaps the most splendid ever dwelt in by the order (Murphy, "Plans, elevations, sections and views of the Church of Batalha", London, 1795; de Conceição, "O mosteiro de Batalha em Portugal", Paris, 1892; Vascularles, "Batalha. Convento de Santa Maria da Victoria", Porto, 1905). Germany had beautiful churches and convents, usually remarkable for their simplicity and the purity of their lines (Scherer, "Kirchen und Kloster der Franziskaner und Dominikaner in Thüringen", Jena, 1910; Schneider, "Die Kirchen und Klöster der Franziskaner und Karmeliten" in "Mittelalterliche Ordensbauten in Mains", Mainz, 1879; "Zur Wiederherstellung der Dominikanerkirche in Augsburg" in "Augsburger Postzeitung", 12 Nov., 1900; "Das Dominikanerkloster in Frankfurt a. M." in "Frankfurter Zeitung"). Notice sur l'église et le couvent des Dominicains de Colmar, Colmar, 1894; Bureckhardt-Riggenbach, "Die Dominikaner Klosterkirche in Basel", Basle, 1855; Stammler, "Die ehemalige Predigerkirche in Bern und ihre Wandmalereien" in "Bernner Kunstdenkmäler", III, Bern, 1908).

Whatever may be said to the contrary the Dominicans as well as other mendicant orders created a special architectural art. They made use of art as they found it in the course of their history and adapted it to their needs. They added to it and assisted in its diffusion, but they accepted the art of the Renaissance when it had supplanted the ancient forms. Their churches varied in dimensions and richness, according to the exigencies of the place. They built a number of churches with double naves and a larger number with open roofs. The distinct characteristic of their churches resulted from their sumptuary legislation which excluded decorated architectural work, save in the choir. Hence the predominance of single lines in their buildings. This explains the great number of churches which for the sake of the art, the division of capitals on the columns, gives great lightness and elegance to the naves of their churches. While we lack direct information concerning most of the architects of these monuments, there is no doubt that many of the men who supervised the construction of the churches and convents must have been outside the order and they even assisted in works of art outside of the order. Thus we know that Brother Diemar built the Dominican church of Ratibon (1273-77) (Sighart, "Gesch. d. bildenden Künste im Kgl. Bayern", Munich, 1862). Brother Volmar exercised his activity in Austria about the same time and especially at Colmar (Ingold, op. cit.). Brother Humbert was the architect of the church and convent of Bonn, as well as of the stone bridge across the Aar, in the Middle Ages the most beautiful in the Rhine region (Hoidew, "Das Domstift St. Peter in Bonn von 1269-1400", Bern, 1857). In Italy architects of the order are known to fame, especially at Florence, where they erected the church and cloisters of S. Maria Novella, which epitomize the whole history of Florentine art (Davidsohn, "Forshungen zur Gesch. von Florenz", Berlin, 1885, 486; Marchese, "Memorie dei più insigni pittori, scultori e architetti dominicani", Bologna, 1878, 1). At first the order endeavoured to banish sculpture from its churches, but eventually accepted it and set the example by the church of St. Dominicus at Bologna, and of St. Peter of Verona at the Church of St. Eustorgius at Milan. A Dominician, William of Piss, worked on the former (Berthier, "Le tombeau de St. Dominique", Paris, 1855; Kemper, "Zur Geschichte", Basle, 1855; "Basilica di Sant' Eustorgio in Milano" in "Archivio storico dell' arte", V, 1892). Brother Paschal of Rome executed interesting sculptural works, e.g. his sphinx of Viterbo, signed and dated (1256), and the paschal candlestick of Sta. Maria in Cosmedin, Rome ("Römische Quartalschrift", 1893, 20). There were many miniaturists and painters among the Preachers. As early as the thirteenth century Hugh Ripelin of Strasbourg (d. 1298) was renowned as a painter (Mon. Germ. Hist.: SS., XVII, 23). But the lengthy list is dominated by two masters who overshadow the others, Fra Angelico and Fra Bartolommeo. The work of Fra Giovanni Angelico da Fiesole (d. 1455) is regarded as the highest embodiment of Christian inspiration in art (Marchese, "Memorie", I, 245; Tumiati, "Frate Angelico", Florence, 1897; Sani, "Fra Bartolommeo Angelico", Florence, 1898; Langton Douglas, "Fra Angelico", London, 1900; Wurm, "Meister und Schülerarbeit in Fra Angelico Werk", Strasbourg, 1907; Cochlin, "Le Bienheureux Fra Giovanni da Fiesole", Berlin, 1893; "Fra Angelico da Fiesole", Stuttgart and Leipzig, 1911 (Fr. ed., Paris, 1911). Fra Bartolommeo belongs to the golden age of the Italian Renaissance. He is one of the great masters of drawing. His art is scholarly, noble, and simple and imbued with a tranquil and restrained piety (Marchese, "Memorie", II, 1; Frans, "Fra Bartolommeo della Porta", Ratisbon, 1879; Gruyer, "Fra Bartolommeo della Porta et Mariotto Alberinelli Paris-London, a.d.; Knapp, "Fra Bartolommeo della Porta und die Schule von San Paolo in Mailand", Halberstadt, 1893). He also produced remarkable painters on glass: James of Ulm (d. 1491), who worked chiefly at Bologna and William of Marcell (d. 1529), who in the opinion of his first biographer was perhaps the greatest painter on glass who ever lived (Marchese, "Memorie", II; Mandini, "Guglielmo di Marcelli francese insperato pitore sul vetro", Firenze, 1909). As early as the fourteenth century Dominicans and convents began to be covered with mural decorations. Some of these murals are of the finest sanctuaries as the ark of St. S. Maria Novella and S. Marco of Florence. But the phenomenon was general at the end of the fifteenth century, and thus the order received some of the works of the greatest artists, as for instance the "Last Supper" of
Leonardo da Vinci (1497-98) in the refectory of S. Maria delle Grazie at Milan (Boeri, "Del censacolo di Leonardo da Vinci", Milan, 1910; Sant'Ambrogio, "Note epigrafiche ed artistiche intorno alla sala del Censacolo ed al tempio di Santa Maria delle Grazie in Milano", 1911). Some say that the Lateran, S. Maria in Trastevere, and S. Maria Maggiore. The Preachers exercised a marked influence on painting. The order infused its apostolic zeal and theological learning into the objects of art under its control, thus creating what may be called theological painting. The destruction of the famous frescoes of Pietro da Cortona in the church of St. Cecilia by Emperor Napoleon, and the famous frescoes of Tiepolo, Guardi, and Canaletto are but a few of the many works of art destroyed by the French, who were the agents of the papacy; nevertheless the papal requests of it a universal co-operation. Matthew Paris states in 1250: "The Friars Preachers, impelled by obedience, are the fiscal agents, the nuncius and even the legates of the pope. They have turned their pontifical munificence, of the pontifical money by their preaching and their crusades and when they have finished they begin again. They assist the infirm, the dying, and those who make their wills. Diligent negotiators, armed with powers of every kind, they turn all to the profit of the pope." (Matthew Paris, "Hist. Angl., III, 317, in Reform. Med. Ev. Script."). But the commissions of the Church to the Preachers far exceeded those enumerated by Matthew Paris, and among the weightiest must be mentioned the visitation of monasteries and dioceses, the administration of a large number of convents of nuns and the inquisitorial office. The order attempted to withdraw from its multifarious occupations, which distracted it from its chief end. Gregory IX partially yielded to their demands (1225-1229), but the pope issued a new general chapter (1229, 10,504), but the order never succeeded in wholly winning that favor (Fontana, "Salmo Oratorium Dominicum", pt. II, De S. R. Ecclesiae Officinalibus, Rome, 1660; Bull. Ord. Pred. I-II, passim; Potthast, "Regest. Pont. Rom.", Papal Register of the XIII. cent. in "Bib. des Ecoles Francaises d' Athénes et de Rome").

The Dominicans gave to the Church many noted personages: among them during the Middle Ages were two popes, Innocent V (1276) and Benedict XI (1303-4); three cardinals; (Liberti, "Möttlin, dissertationes sui iuris"); themes for works of art. They also opened up an important source of information to art with their sanctoriaux and their popularizing writings. Artistic works such as the dances of death and symms allied with the prophets are greatly indebted to them (Nicolai, "L'art religieux du XII s. siècle", Paris, 1910; Idem, "L'art religieux de la fin du moyen-âge en France", Paris, 1910). Even the mystical life of the order, in its way, exercised an influence on contemporary art (Peltzer, "Deutsche Mystik und deutsche Kunstrecht", 1910; Liberti, "Drei Einfluss des mystischen auf die ältere Kölner Malerschule", Breslau, 1901). Its saints and its confraternities, especially that of the Rosary, inspired many artists (Neumark, "Die Verherrlichung des hl. Dominicus in der Kunst", 1906).

(h) The Preachers and the Roman Church. —The Order of Preachers is the work of the Roman Church. She found in St. Dominic an instrument of the first rank. But it was she who inspired the establishment of the order, who bestowed on it privileges, directed its general activity, and protected it against its adversaries. From Honorius III (1216) till the death of Honorius IV (1287) the papacy was most favourable to the Preachers. Innocent IV's change of attitude at the end of his pontificate (10 May, 1244), caused by the recriminations of the clergy and perhaps also by the adhesion of Arnold of Trier to Frederick II's projects of anti-ecclesiastical reform, was speedily repaired by Alexander IV (22 Dec., 1254; "Chart. Univ. Paris", I, 255, 276; Winckelmann, "Prætis Archiepiscopii et Cardinalis Johannis de Doni"); to the pontificate of Alexander IV, 1833; "Script. Ord. Pred.", II, 821 b). But a general thing during the fourteenth and fifteenth centuries the prelates remained much attached to the order, displaying great confidence in it, as is made manifest in the "Bullarum recensiones". No other religious order, it would seem, ever received eulogies from the papacy like those addressed to it by Alexander IV, 23 May, 1257 (Potthast, op. cit., 16,847). The order co-operated with the Church in every way, the popes finding in its ranks assistants who were both learned and devoted. Beyond doubt through its own activity, its preaching and its distressing works, it was a powerful agent of the papacy; nevertheless the papal requests of it a universal co-operation. Matthew Paris states in 1250: "The Friars Preachers, impelled by obedience, are the fiscal agents, the nuncius and even the legates of the pope. They have turned their pontifical munificence, of the pontifical money by their preaching and their crusades and when they have finished they begin again. They assist the infirm, the dying, and those who make their wills. Diligent negotiators, armed with powers of every kind, they turn all to the profit of the pope." (Matthew Paris, "Hist. Angl., III, 317, in Reform. Med. Ev. Script."). But the commissions of the Church to the Preachers far exceeded those enumerated by Matthew Paris, and among the weightiest must be mentioned the visitation of monasteries and dioceses, the administration of a large number of convents of nuns and the inquisitorial office. The order attempted to withdraw from its multifarious occupations, which distracted it from its chief end. Gregory IX partially yielded to their demands (1225-1229), but the pope issued a new general chapter (1229, 10,504), but the order never succeeded in wholly winning that favor (Fontana, "Sacro Teatrum Dominicum", pt. II, De S. R. Ecclesiae Officinalibus, Rome, 1660; Bull. Ord. Pred. I-II, passim; Potthast, "Regest. Pont. Rom.", Papal Register of the XIII. cent. in "Bib. des Ecoles Francaises d'Athenes et de Rome").

The Dominicans gave to the Church many noted personages: among them during the Middle Ages were two popes, Innocent V (1276) and Benedict XI (1303-4); three cardinals; (Liberti, "Möttlin, dissertationes sui iuris"); themes for works of art. They also opened up an important source of information to art with their sanctoriaux and their popularizing writings. Artistic works such as the dances of death and symms allied with the prophets are greatly indebted to them (Nicolai, "L'art religieux du XII s. siècle", Paris, 1910; Idem, "L'art religieux de la fin du moyen-âge en France", Paris, 1910). Even the mystical life of the order, in its way, exercised an influence on contemporary art (Peltzer, "Deutsche Mystik und deutsche Kunstrecht", 1910; Liberti, "Drei Einfluss des mystischen auf die ältere Kölner Malerschule", Breslau, 1901). Its saints and its confraternities, especially that of the Rosary, inspired many artists (Neumark, "Die Verherrlichung des hl. Dominicus in der Kunst", 1906).

(h) The Preachers and the Roman Church. —The Order of Preachers is the work of the Roman Church. She found in St. Dominic an instrument of the first rank. But it was she who inspired the establishment of the order, who bestowed on it privileges, directed its general activity, and protected it against its adversaries. From Honorius III (1216) till the death of Honorius IV (1287) the papacy was most favourable to the Preachers. Innocent IV's change of attitude at the end of his pontificate (10 May, 1244), caused by the recriminations of the clergy and perhaps also by the adhesion of Arnold of Trier to Frederick II's projects of anti-ecclesiastical reform, was speedily repaired by Alexander IV (22 Dec., 1254; "Chart. Univ. Paris", I, 255, 276; Winckelmann, "Prætis Archiepiscopii et Cardinalis Johannis de Doni"); to the pontificate of Alexander IV, 1833; "Script. Ord. Pred.", II, 821 b). But a general thing during the fourteenth and fifteenth centuries the prelates remained much attached to the order, displaying great confidence in it, as is made manifest in the "Bullarum recensiones". No other religious order, it would seem, ever received eulogies from the papacy like those addressed to it
est defenders of the pontifical rights at the time of the Council of Bologna. Lederer, "Johan von Torquemada, sein Leben und seine Schriften", Freiburg, 1879; Hefele, "Conciliengesch.", VIII.

Many important officials were furnished to the Church: Masters of the Sacred Palace (Catalanus, "De magistro sacri patetii apostolorum, Rome, 1751"); papal legates ("Litaniae Ecclesiasticae, Romae, domini").470; 431; "Bull. O. P."); VII, 765. Pienentiarii; Goller, "Die päpstlichen Pontentiarii von ihrem Ursprung bis zu ihrer Umgestaltung unter Pius VII.", Rome, 1907-11; and especially pontifical inquisitors. The excommunication of the bishops and the suppression of heresy is essentially an apostolic and pontifical work. The Preachers also furnished many delegates judges holding their powers either from the bishops or from the pope, but the order as such had no mission properly so called, and the legislation for the repression of heresy was in particular absolutely foreign to it. The extreme dangers run by the Church at the beginning of the thirteenth century, owing to the progress of the Albigenians and Cathari, impelled the papacy to labour for their repression. It was the business of the bishops to obtain the appearance of synodal witnesses was destined to make their mission more effective, but the insufficiency of this arrangement induced Gregory IX to advise the bishops to make use of the Preachers and finally, declared that the Inquisition was to be employed by many bishops, to create an inquisitorial judge by pontifical delegation. The Preachers were not chosen de jure, but de facto and successively in the various provinces of the order. The pope usually charged the Dominicans with the nomination of inquisitorial officers whose jurisdiction ordinarily coincided with the territory of the Dominican province. In their office the inquisitors were removed from the authority of their order and dependent only on the Holy See. The first pontifical inquisitors were invariably chosen from the Order of the Preachers, the reason being the scarcity of educated and zealous clerics. The Preachers, being vowed to study and preaching, were alone prepared for a ministry, which required both learning and courage. The order received this, like many other pontifical commissions, only with regret. The master general, Humbert of Romans, declared that the friars should flee all odious offices and especially the Inquisition (Opera, ed. Berthier, II, 360).

The same solution to remove the order from the odium of the inquisitorial office impelled the provincial chapter of Paris (1241) to accede to the friars from the administration of the Inquisition, that the order might not be slandered. The provincial chapter of Bordeaux (1257) even forbade the religious to eat with the inquisitors in places where the order had a convent (Douais, "Les Frères Prêcheurs en Gascong", Paris-Auch, 1885, p. 64). In countries where heresy was powerful, for instance in the south of France and the north of Italy, the order had much to endure, pillage, temporary expulsion, and assassination of the inquisitors at Avignonet (28 May, 1242) and the assassination of St. Peter of Verona (29 April, 1242) ("Vita fratrum", ed. Reichart, 231; Perein, "Monumenta Conventus Tolsani", Toulouse, 1693, II, 198; Acta SS, 29 April) the order, whose administration had much to suffer from this war against heresy, immediately requested to be relieved of the inquisitorial office. Innocent IV refused (10 April, 1243; Potthast, 11,083) and the following year the bishop of Paris (Denifle of France, 1687) that he would retain the Preachers in the Inquisition ("Hist. gén. du Languedoc", III, ed. in folio, proof CCLX, Vol. CCCCLXVI). Nevertheless the Holy See understood the desire of the Preachers; several provinces of Christendom ceased to be administered by them and were confided to the Friars Minor, viz., the Pontifical States, Apulia, Tuscany, the Marches, Treviso and Slavonia, to find their aim at Tournai, 11,993, 15,330, 15,409, 15,410, 18,895, 20,169; Tanon, "Hist. des tribunaux de l'inquisition en France" Paris, 1893; Idem, "Documents pour servir à l'hist. de l'inquisition dans le Languedoc", Paris, 1890; Frédéric, "Corpus documentorum Inquisitionis hereticarum pravitatis Neerlandiae", Ghent, 1900; Amaudr, "Le sanato et la croisade de l'abbaye de Cluny en Napoli Città di Castello", 1892; Cunat, "Hist. de l'inquisition en France", Paris, 1909; Jordan, "La responsabilité de l'Eglise dans la répression de l'hérésie au moyen-âge" in "Annales de Philosophie chrét.", CLIV, 1907, p. 225). The suppression of heresy which had been especially active in certain more affected parts of Christendom, diminished notably in the second half of the thirteenth century. The particular conditions prevailing in Spain brought about the re-establishment of the Inquisition with new duties for the establishment and the synodal assembly in Naples (1285) which was exercised from 1453 to 1498 by Thomas of Torquemada, who reorganized the whole scheme of suppression, and by Diego de Deza from 1498 to 1507. These were the first and last Dominican inquisitors general in Spain (Lea, "Hist. of the Inquisition in Spain", New York, 1906; Cottolenc y Valledor, "Fray Diego de Deza", Madrid, 1905).

(i) The Friars Preachers and the Secular Clergy.— The Preachers, who had been constituted from the beginning as an order of clerics vowed to ecclesiastical duties with a view to supplementing the insufficiency of the secular clergy, were universally accepted by the episcopate, which was unable to provide for the pastoral care of the faithful and the instruction of clerics. It was usually the bishops who summoned the Preachers to their dioceses. The conflicts which broke out here and there during the thirteenth century were not generally due to the bishops but to the parochial clergy who considered themselves injured in their temporal rights because of the devotion and generosity of the faithful towards the order. As a general thing compromises were reached between the convents and the parishes in which they were situated and peaceful results followed. The two great conflicts between the order and the secular clergy broke out in France during the first third of the sixteenth century. The University of Paris, led by William of Saint-Amour (1252-59), and was complicated by a scholastic question. The episcopate had no share in this, and the church supported with all its strength the rights and privileges of the order, which emerged victorious (Mandonnet, "Siger de Brabant", I, 70, 90; Perrod, "Étude sur la vie et les œuvres de Guillaume de Saint-Amour" in "Mémoires de la société d'émulation de Jura", Lons-le-Saunier, 1902, p. 61; Seppelt, "Der Konflikt der Bettelorden an der Universität Paris in der ersten Hälfte des 13. Jahrhunderts" in "Kirchengeschichtliche Abhandlungen", Breslau, III, 1905; VII, 1909). The strife broke out anew in the north of France after the privilege of Martin IV, "Ad fructus uberes" (13 Dec., 1281), and lasted until the Council of Paris in 1290. It was to a large extent conducted by Guillaume de Flavacourt, Bishop of Amiens, but in this instance also the two great mendicant orders triumphed over their adversaries, thanks to the energetic assistance of two cardinal legates ("Chanoines de France", I, p. 26; Finke, "Das Pariser National Konzil 1290" in "Römische Quartalschrift", 1895, p. 171; Paulus, "Welt und Ordeneder beim Ausgang des XIII. Jahrhunderts in Kämpfe um die Pfarr-Rechte", Essen-Ruhr, 1900).
The order gave many of its members to the episcopate, but endeavoured to prevent this. St. Dominic and Francis seem to have disapproved of the accession of their religious to ecclesiastical dignities ("Speculum perfectionis", ed. Sabatier, Paris, 1, 875; "Legenda aurea" of Guillaume S. Francisci", III, lxxxvi). Jordanus of Saxony, the immediate successor of St. Dominic, forbade all acceptance of election or postulation to the episcopate, under pain of excommunication, without special permission of the pope, the general chapter, and the master general ("Acta Cap. Gen.", ed. Reichert, 4). During his administration he resisted with all his strength and declared that he would rather see a friar buried than raised to the episcopate ("Vita Fratrum", ed. Reichert, 141, 143, 200). Everyone knows the eloquent letter which Humbert of Romans wrote to Albertus Magnus to dissuade him from accepting the nomination to the See of Ratisbon (1200; Peter of Prussia, "Vita B. Alberti Magni", Antwerp, 1621, p. 253). But all this opposition could not prevent the nomination of a great many to high ecclesiastical dignities. The worth of many religious made them so prominent that it was impossible that they should not be suggested for the episcopate. Princes and nobles who had sons or kin to appoint were no less anxious for this laic office with interested motives, but the Holy See especially saw in the accession of Dominicans to the episcopate the means of infusing it with new blood. From the accession of Gregory IX the appointment of Dominicans to dioceses and archdioceses became an ordinary thing. Hence until the end of the fifteenth century about fifteen hundred Preachers were either appointed or translated to dioceses or archdioceses, among them men remarkable for their learning, their competent administration, their zeal for souls, and the holiness of their lives. "Iglesia catholica", I–II; "Bull. Ord. Pred.", I–IV; "Script. Ord. Pred.", I, p. xxi; Cavaliere, "Galleria de' sommi Pontefici, Patriarchi, Arcivescovi, e Vescovi dell' ordine de' Predicatori", Benevento, 1896; Vigna, "I vescovi domenicani Liguri ovvero in Liguria", Genoa, 1857.

(j) The Preachers and Civil Society.—During the Middle Ages the Preachers influenced princes and communities. Princes found them to be prudent advisers, expert ambassadors, and enlightened confessors. The second half of the fifteenth century is especially rich in examples which illustrated their influence on others. As early as 1226 Jordanus of Saxony was able to write, in speaking of Blanche of Castile: "The queen tenderly loves the friars and she has spoken with me personally and familiarly about her affairs" (Beynon, "Le Joulin de Saxe", Paris-Lyon, 1865, p. 66). No prince was more devoted to the order than St. Louis, nor did any grant it more favours. The French monarchy sought most of its confessors during the Middle Ages from the Order of the Preachers (Chapotin, "A travers l'histoire dominicaine: "La princesse François du Moyen Age et l'ordre de Saint Dominique", Paris, 1903, p. 207; Iden, "Etudes historiques sur la province dominicaine de France", Paris, 1890, p. 128). It was the entrance of Humbert II, Dauphin of Vienna, into the order which gained Dauphiné for France (Guifrey, "Hist. de la réunion du Dauphiné à la France", Paris, 1878). The Dukes of Burgundy also sought their confessors from the order (Chapotin, op. cit., 190). The kings of England likewise frequented its members and gave them the chief in organizing and directing the religious orders, and consequently the Preachers entered into free conflict with Frederick II and Louis of Bavaria when these princes broke with the Church (Opladen, "Die Stellung der deutschen Könige zu den Orden im dreizehnten Jahrhundert", Bonn, 1908; Paulus, "Thomas von Strassburg und Rudolph von Sachsen. Ihre Stellung zum Interdikt" in "Hist. Jahrbuch", XII, 1892; 1; "Neues Archiv der deutschen Geschichte für alte Deutsche Geschichtskunde", XXX, 1905, 447). The kings of Castile and Spain invariably chose their confessors from among the Preachers ("Catalogo de los religiosos dominicos qui han servido a los Señores de Espana", y de Andalucia, en el empleo de sus Confesores de Estado", Madrid, 1700). The kings of Portugal likewise sought their confessors from the same source (de Sousa, "Historia de S. Domingos particular de Reino, e conquistas de Portugal", Lisbon, 1707; Grégoire, "Hist. des confesseurs des empereurs, des reis et d'autres princes", Paris, 1824).

The first to be established in the centres of cities, the Dominicans exercised a profound influence on municipal life, especially in Italy. A witness at the canonization of St. Dominick in 1233 expresses the matter when he says that nearly all the cities of Lombardy and the Marches placed their affairs and their statutes in the hands of the Preachers, that they might arrange and alter them to their taste and as was suitable to the times. The removal of wars, the restoration of peace, restitution for usury, hearing of confessions and a multitude of benefits which would be too long to enumerate ("Annales Ord. Pred.", Rome, 1756, append., col. 128). About this time the celebrated John of Vicens exercised powerful influence in the north of Italy and was himself posséd of Verona (Sutter, "Johann von Vicenza und die italienische Friedensbewegung im Jahre 1233", Freiburg, 1891; It. tr., Vicenza, 1900; Vitali, "I Domenicani nella vita italiana del secolo XIII"). The men and the order were well known. "She was the greatest figure of the second half of the fourteenth century, an Italian, not only a saint, a mystic, a miracle-worker, but a statesman, and a great statesman, who solved for the welfare of Italy the difficult and tragic question of her time" (Gebhart, "Une sainte homme d'état, Ste Catherine de Sienne" in "Revue Hedbomadière", 16 March, 1907, 257). It was the Dominican Bishop of Geneva, Adémàr de la Roche, who granted that town its liberties and franchise in 1387. Mallet de L'Isle, "Les Dames de la Rochelle", and others, have fully described the wealth and immunities, us and customs of the ville de Genève promulgués par l'évêque Adémàr Fabri le 25 Mai, 1387" in "Mémoires et documents de la société d'histoire et d'archéologie de Genève", Geneva, II, 1843, p. 270. Finally reference must be made to the profound influence exercised by Girolamo Savonarola (1498) on the political life of Florence during the last years of the fifteenth century (Villari, "La Storia di Girolamo Savonarola e de suoi tempi", Florence, 1857; Lutero, "Il vero Savonarola", Florence, 1897).

(k) The Preachers and the Faithful.—During the thirteenth century the faithful were almost without pastoral care and preaching. The coming of the Preachers was an innovation which won over the people eager for religious instruction. What a correspondent of the Pontifical See wrote in 1246 everywhere: "Before the arrival of the Friars
PREACHERS

Preachers the word of God was rare and precious and very rarely preached to the people. The Friars Preachers preached alone in every section of Thrurigia and in the town of Erfurt and no one hindered them" (Koch, "Graf Elger von Holmstein", Gotha, 1866, pp. 70, 71). About 1267 the Bishop of Amiens, Guillaume de Flavigny, in a letter to the prior of the famous monastery, already mentioned, declared that the people refused to hear the word of God from any save the Preachers and Minors (Bibl. de Grenoble, MS. 639, fol. 119).

The Preachers exercised a special influence over the people and the clergy of both north and south, so numerous in the Middle Ages, and they induced to penance and continence many great people living in the world, who were commonly called Beggars, and who lived either alone or in more or less populous communities. Despite the order's attraction for this devout, half-lay, half-religious world, the Preachers refused to take it under their jurisdiction in order not to hamper their chief activity or distort their ecclesiastical ideal by too close contact with lay piety. The General Chapters of 1228 and 1229 forbade the religious to give the habit to those who wished to receive her profession, or to give spiritual direction to any community of women not strictly subject to some authority other than that of the order ("Archiv. f. Litk. a. Kirchengesch.", II, 37; Bayonne, "Lettres du Ministre de l'Ordre", 1104); great numbers prevailed, and, despite everything, these clients furnished the chief elements of the Penitential Order of St. Dominic, who received their own rule in 1285, and of whom more has been said above (Mosheim, "De Boghariis et Beguinibus", Leipzig, 1720; Le Grand, "Les Béguines de Paris", 1893; Nimal, "Les Béguinages", Nivelles, 1908). The Order especially encouraged congregations of the Blessed Virgin and the saints, which developed greatly, especially in Italy. Many of them had their headquarters in the convents of the Preachers, who administered them spiritually. After the Penitential movement of 1260 confraternities were formed commonly called Discipulati, Batutti, etc. Many of them originated in Dominican churches (there is no general historical work on this subject). In 1274, during the Council of Lyons, Gregory X confided to the Dominicans the preaching of the Holy Name of Jesus, whence arose confraternities of that name (Bull. Ord. Præd., VIII, 521). Finally the second half of the fifteenth century saw the rapid development of confraternities to the influence of the Preachers ("Acta Sanctorum Sedes nec non magistraturum et capitulum generalium sacri ordinis Prædicatorum pro Societate SS. Rosarii", Lyons, 1890). With the object of developing the piety of the faithful the Preachers allowed them to be buried in the habit of the order (Cantimpratanus, "De bono universali amput", lib. II, viii, n. 8). From the time of Jordanus of Saxony they issued letters of participation in the spiritual goods of the order. The same general established at Paris the custom of the ecclesiastical universities at the order of the University, in order to turn them aside from dissipation, which custom passed to all the other universities ("Vita fratrum", ed. Reichert, 327).

(l) The Preachers and the Foreign Missions.— During the Middle Ages the Order of Preachers exercised considerable activity within the boundaries of Christendom and far beyond. The evangelization of heathen countries was confined to the nearest Dominican provinces. At the beginning of the fourteenth century, the missions of the group, the congregation of Friars Pilgrims for Christ. Some of the remote provinces, especially those of Greece and the Holy Land, were recruited from volunteers throughout the order. Besides the work of evangelization the religious frequently assumed the mission of ambassador or agent to schismatic or pagan princes, and Friars Preachers frequently occupied seats in paritbus infidelium. A number of them, faithful to the order's doctrinal vocation, composed works of all kinds to assist their apostolate, to defend the Christian Faith, to inform the Roman Church or Latin princes concerning the condition of the East and to combat, in so far as they were able, the heretics and the infidels against the dangers threatening Christianity. Finally they frequently shed their blood in these inhospitable and unfruitful countries. The province of Spain laboured for the conversion of the Arabs of the Peninsula, and the number of Romans described the satisfactory results (H. de Romanis, "Opera", ed. Bertherl, II, 502). In 1225 the first Spanish Dominicans evangelized Morocco and the head of the mission, Brother Dominic, was consecrated in that year first Bishop of Morocco (Analecta Ord. Præd., III, 374 sqq.). Some years later they were already established at Tunis ("Mon. Ord. Præd.: Hist.", IV (Barmusidianis), fasc. II, 29). In 1256 and the ensuing years Alexander IV, at the instance of St. Raymond of Pennafort, gave a vigorous impulse to this mission (Potthast, I, 138; 17, 137; 17, 939.),

In the north of Europe the province of England or that of Dacia carried its establishments as far as Greenland (Telch, "L'évangelisation de l'Amérique avant Christophe Colomb" in "Compte rendu du Congrès scientifique de l'histoire du christianisme", 1721). As early as 1233 the province of Germany promoted the crusade against the Prussians and the heretical Scladings, and brought them to the Faith (Scomberg, "Die Dominikaner im Erzbistum Bremen", Brunswick, 1901; Bull. Ord. Præd., I, 61; H. de Romanis, "Opera", II, 502). The province of Poland, founded by St. Hyacinth (1221), extended its apostolate by means of this saint as far as Kieff and Dantzig. In 1246 Brother Alexis resided at the Court of the Duke of Russia, and in 1248 the Preachers were again in Poland (Abrah, "Powsstanie organizacyj Kościoła lasickiego na Rusi", Lemberg, 1904; Rainaldi, "Annali ecc.", ad ann. 1246, n. 30; Potthast, 17, 168; Baracca, "Rys dziejów Zakonu Karmelitów jezycz w Polsce", Lemberg, 1861; Comtesse de Flavigny, "Saint Hyacinthe et ses compagnons", Paris, 1859). The province of Hungary, founded in 1221 by Bl. Paul of Hungary, evangelized the Cumans and the people of the Balkans. As early as 1235—37 Brother Richard and his companions set out in quest of the emperor Hungarian-Bohemian Radvil of dwelling on the Volga ("Vita fratrum", ed. Reichert, 305; "De inventa Hungaria Magna tempore Gregori IX", ed. Endlicher, in "Rerum Hungariae Monumenta", 248; Ferrarius, "De rebus Hungaricis Provincia S. Ord. Præd.", Vienna, 1637).

The province of Greece, founded in 1228, occupied those territories of the empire of the East which had been conquered by the Latins, its chief centre of activity being Constantinople. Here also the Preachers laboured for the return of the schismatics in the ecclesiastical province of Cyprus ("Script. Ord. Præd.", I, pp. i, xii, 102, 136, 156, 911; Potthast, 3198; "Vita fratrum", 1218). The province of the Holy Land, established in 1228, occupied all the Latin conquest of the Holy Land besides Nicosia and Tripoli. Its houses on the Continent were destroyed one after the other with the defeat of the Christians, and at the beginning of the fourteenth century the province was reduced to the three convents on the island of Cyprus ("Script. Ord. Præd.", I, pp. i, xii, 92, 136, 156, 911). The Province of Tripoli became a separate province in 1280 in "Archives de l'Orient Latin"; Idem, "Les franciscains et les dominicains à Jérusalem au treizième et au quatorzième siècle", 1890, p. 324). The province of the Holy Land was the starting point for the evangelization of Asia during the thirteenth century. As early as 1237 the provincial, Philip,
reported to Gregory IX extraordinary results obtained by the religious; the evangelization reached Jacobites and Nestorians, Maronites and Saracens (Script. Ord. Præd., I, 104). About the same time the Friars established themselves in Armenia and in Georgia (''Bull. Ord. Præd.'', I, 108; ''Script. O. P. Tomi H. S. S.'', I, 356), and later in the VIno Bellovacensis, ''Speculum historiale'', I. b. XXXI., 42; Tamarati, ''L’Eglise Géorgienne des origines jusqu’à nos jours'', Rome, 1910, 430).

The missions of Asia continued to develop throughout the thirteenth century in the past and missions went as far as Bagdad and India [Mandonnet, ''Fra Ricoldo de Monte Croce'' in ''Revue bib.'', I, 1883; Balme, ''Jourdain Cathala de Sévérac, Evêque de Coulain'' (Quilon, 1886). In 1312 the master general, Béranger de Landore, organized the missions of Asia into a special congregation of ''Friars Pilgrims'', with Franco of Perugia as vicar general. As a base of evangelization they had the convent of Pera (Constantinople), Cepha, Trebizond, and Negropont. Thence they branched out on both sides. The Friars, as their members were called, began to appear frequently in the East. When the missions of Pera were endeavored in 1559, there were a hundred and five monasteries there and, and the United Brethren (see below) eleven monasteries. In 1558 the Congregation of Pilgrims still had two convents and eight residences. This movement brought about the foundation, in 1330, of the United Brethren of St. Gregory the Illuminator. It was the work of Bl. Bartolommeo Petit of Bologna, Bishop of Maraga, assisted by John of Kern. It was formed by Armenian religious who adopted the Constitution of the Dominicans and were incorporated with the order after 1330. Thirty years after the foundation the United Brethren had in Armenia alone 50 monasteries with 700 religious. This province still existed in the eighteenth century [Ebel, ''Die wichtigste des 14. Jahrhunderts im Missionsgebiet der Dominikaner und Franziskaner'' in ''Forstschift des deutschen Campo Santo in Rom'', Freiburg i. Br., 1897, 170; Heyd, ''Die Kolonien der römischen Kirche, welche die Dominikaner und Franziskaner in 13. und 14. Jahrhundert in dem von der Tarasser beherrschten Ländern Asiens und Europas'', in ''Zentralblatt für historische Theologie'', 1858; Tournebize, ''Hist. politique et religieuse de l’Arménie'', Paris, s. d. (1910), 320; André-Marie, ''Missions dominicaines dans l’Extrême Orient'', Lyons and Paris, 1885, Mortier, ''Hist. des moeurs générales de l’ordre des Frères Prêcheurs'', I, IV.

(m) The Præachers and Sanctority. — It is characteristic of Dominican sanctity that its saints attained holiness in the apostolate, in the pursuit or promotion of learning, administration, foreign missions, the penance, or by the cardinalate, and the episcopate. Until the end of the fifteenth century the order in its three branches gave to the Church nine canonized saints and at least seventy-three blessed. Of the first order (the Præachers) are St. Dominick, St. Peter of Verona, martyr, St. Thomas Aquinas, St. Raymond of Pennafort, St. Vincent Ferrer, St. Antoninus of Florence. Among the Dominican saints in general there is a predominance of the intellectual over the emotional qualities; their mystical life is more subjective than objective; and the community is a strong part in their holiness. Meditation on the sufferings of Christ and His love was common among them. Mystic states, with the phenomena which accompany them, were ordinary, especially in convents of women in German countries. Many received the stigmata in various forms. St. Thomas Aquinas and Meister Eckhart were, from different standpoints, the greatest medieval theologian of the mystical state. (Giffre de Recha, ''Les vies et actions mémorables des saints canonisés de l’ordre des Frères Prêcheurs et de plusieurs bienheureux et illustres personnages du même ordre'', Paris, 1647; Marchesci, ''Sagro diario dominicano'', N. s. n. 113, 1845; P. V. de Lima, ''Agiologia dominico'', Lisbon, 1790-94, 4 vols. in fol.; ''Année dominicaine'', Lyons, 1883-1909, 12 vols. in 4; Imbert-Gourbeyre, ''La Stigmatisation'', Clermont-Ferrand, 1894; Thomas de Valvormares, ''On fourteenth century Dominican asceticism'', Barcelona, 1662; Turin, 1911, re-ed. Berthier).

(2) Modern Period.— The modern period consists of the three centuries between the religious revolution at the beginning of the sixteenth century (Protestantism) and the French Revolution with its consequences. The Order of Præachers, like the Church itself, felt the shock of these destructive revolutions, but its vitality enabled it to withstand them successfully. At the beginning of the sixteenth century the order was on the way to a genuine renaissance when the Reformation appeared. The progress of heresy cost it six or seven provinces and several hundreds of convents, but the discovery of the New World opened up a fresh field of activity. Its gains in America and those which arose as a consequence of the Pachacamac expedition and the Indies far exceeded the losses of the order in Europe, and the seventeenth century saw its highest numerical development. The sixteenth century was a great doctrinal century, and the movement lasted beyond the middle of the eighteenth. In modern times the order lost much of its influence on the political powers, which had universally fallen into absolutism and had little sympathy for the democratic constitution of the Præachers. The Bourbon Courts of the seventeenth and eighteenth centuries were particularly unfavourable to them, and in some cases to the occasion of the Society of Jesus. In the eighteenth century there were numerous attempts at reform which created, especially in France, geographical confusion in the administration. During the eighteenth century the tyrannical spirit of the European Powers and, still more, the spirit of the age lessened the number of recruits and the fervour of religious life. The French Revolution ruined the order in France, and the crises which more or less rapidly followed considerably lessened or wholly destroyed many of its provinces. (a) Geographical Distribution.—The modern period saw a great change in the geographical distribution of provinces and the number of religious in the order. The establishment of Protestantism in Anglo-Saxon countries brought about, during the sixteenth century, the total or partial disappearance of certain provinces. The provinces of Saxony, Dacia, England, and Scotland completely disappeared; that of Teutonia was mutilated; that of Ireland sought refuge in various houses on the Continent. The discovery and evangelization of America opened up vast territories, where the first Dominican missionaries established themselves as early as 1510. The first province, with San Domingo and the neighbouring islands for its territory, was erected, under the name of the Holy Cross, in 1525. Others followed quickly—among them St. James of Mexico (1532), St. John Baptist of Peru (1539), St. Vincent of Chiapa (1551), St. Antoninus of New Granada (1551), St. Catherine of Quito (1560), St. Lawrence of Chile (1592). In Europe the order developed constantly in the remainder of the sixteenth century till the middle of the eighteenth. New provinces or congregations were formed. Under the government of Serafin Cavalli (1571-78) the order had thirty-one provinces and five congregations. In 1720 it had forty-one provinces and four congregations. At the former date there were about
PREACHERS

900 convents; at the latter, 1200. During Cavalli's time the order had 14,000 religious, and in 1720 more than 25,000. It seems to have reached its greatest numerical development during the seventeenth century. Mention is made of 30,000 and 40,000 Dominicans; perhaps these figures include nuns; it does not seem probable that the number of Preachers exceeded 25,000. The order flourished in Austria-Hungary under Joseph II began the work of partial suppression of convents, which was continued in France by the Commission of Regulars (1770) until the Convention (1793) finally destroyed all religious life in that country. The Napoleonic conquest overthrew many provinces and houses in Europe. Most of them were eventually restored; but the Revolution destroyed partially or wholly the provinces of Portugal (1834), Spain (1834), and Italy (1870). The political troubles brought about by the revolt of Latin America from the mother-country at the beginning of the nineteenth century partially or wholly destroyed several provinces of the New World ("Script. Ord. Pred.", II, p. 1; "Analecta Ord. Pred.", I sqq.; "Dominicanus orbis descripit"., Y sqqq.; Chapotin, "Le dernier prieur du dernier couvent", Paris, 1839; Rais, "Historia de la provincia de Aragón, orden de Predicadores, desde le año 1683 hasta el de 1818", Saragossa, 1819; 1824.)

(b) Administration of the Order.—During the modern period the Dominicans were deprived of the right to possess movable property. They were placed under the generalship of Antonin Brémond (Fabricy, "Des titres primitifs de la Révélation", Rome, 1772, II, 132; "Acta Cap. Gen.", IV-VII; "Bull. O. P.", passim; V. de la Fuente, "La enseñanza Tomistica en España", Madrid, 1874; Contarin, "Notizie storiche circa gli pubblici professori nello studio di Padova scelti dall' ordine di San Domenico", Venice, 1769).

(d) Doctrinal Activity.—The doctinal activity of the Preachers, generalised during the modern period. The order, closely connected with the history of the Reformation in Germany countries, faced the revolutionary movement as best it could, and by preaching and writing deserved what Dr. Paulus has said of it: "It may well be said that in the difficult conflict through which the whole church was to pass in Germany in the sixteenth century no other religious order furnished in the literary sphere so many champions, or so well equipped, as the Order of St. Dominic" ("Die deutschen Dominikaner in Kampfe gegen Luther, 1515-1563", Freiburg i. Br., 1903). The order was conspicuous by the number and influence of the Dominican bishops and theologians who took part in the Council of Trent. To a certain extent Thomistic doctrine predominated in the discussions and decisions of the council, so that Clement VII, in 1559, could say, when he desired the Jesuits to follow St. Thomas, that the council approved and accepted his works (Astrain, "Historia de la Compañía de Jesús en la asistencia de España", III, Madrid, 1909, 580). The "Catechismus ad Parochos", the composition of which had been ordered by the council, and which was published at the command of Pius V (1566), is the work of Dominican theologians (Reginaldus, "De catechismi romani suctoritate dissertatio", Naples, 1765). The Spanish and Italian form of the catechism was endorsed by Francisco de Vitoria (d. 1540), produced a series of eminent theologians: Melchior Cano (1560), the celebrated author of "De locis theologicis"; Domingo Soto (1500); Bartolomé de Medina (1580); Domingo Baiés. This line of theologians was continued by Tomás de Lemos (1629); Díaz de Alvaro (1635); Juan de S. Tomás (1644); ("Script. O. P.", II, s. v.); P. Getino, "Historia de un convento" (St. Stephen of Salamanca), Vergara, 1904; Ehrl, "Die Vatikanischen Handschriften der Salamantenser Theologen des sechzehnten Jahrhunderts" in "Der Katholik", 64-65, 1884-85; L. G. Getino, "El maestro fr. Francisco de Vitoria" in "La Ciencia tomista", Madrid, I, 1910, 1; Caballero, "Vida del Ilmo. dr. D. Fray Melchor Cano" Madrid, 1871; Alvarés, "Santa Teresa y el P. Baiés", Madrid, 1882).

Italy furnished a contingent of Dominican theologians of note, of whom Thomas de Vio Cajetan (d. 1534) was incontestably the most famous (Cossa, cardinal). His work "De concordia et la riforma" (1612). Francisco Silvestre de Ferminiano (d. 1528) wrote treatises and commentaries on the "Summa contra Gentiles" (Script. O. P., II, 59). Chrysostom Javelli, a dissenter from the Thomistic School, left very remarkable writings on the moral and political sciences.
Praecursors

(op. cit., 104). Catharines (1553) is a famous polemicist, but an unreliable theologian (Schweizer, "Ambrosius Catharines Pol tus, 1484-1533, ein Theologe des Reformationszeitalters Münster, 1956), a serious polemicist. The Catholic tradition—and Jean Nicoll (d. 1673); Vincent de Contenson (d. 1674); Antoine Reginald (d. 1676); Jean-Baptiste Guet (d. 1081); Antoine Gendin (d. 1695); Antonin Manouilé (d. 1706); Noël Alexandre (Natalis Alexandre) (d. 1724); Franchette de Grassoven (d. 1759); Hyside de Sere (d. 1738) ("Script. O. P.", II; Hurter, "Nomenclato", IV; H. Serry, "Opera omnia", I, Lyons, 1770, p. 5). From the sixteenth century to the eighteenth the Thomistic School upheld by the authority of Dominican general chapters and theologians, the official admission of new religious orders and various theological faculties, but above all by the Holy See, enjoyed an increasing and undisputed authority.

The disputes concerning moral theology which disturbed the Church during the seventeenth and eighteenth centuries, originated in the theory of probability advanced by the Spanish Dominican Bartolomé de Medina in 1577. Several theologians of the order adopted, at the beginning of the seventeenth century, the theory of moral probability; and in consideration of the doctrine resulting from the General Chapter of 1656 condemned them, and after that time there were no more Probabilists among the Dominicans. The condemnations of Alexander VII (1665, 1667), the famous Decree of Innocent XI, and various acts of the Roman Church combined to make the Probabilists residues against the Dominicans. The publication of Concina's "Storia del probabilismo" in 1743 renewed the controversy. He displayed enormous activity, and his friend and disciple, Giovanni Vincento Patuzzi (d. 1769), defended him in a series of vigorous writings. St. Alphonsus Liguori felt the consequences of these disputes, and, in consideration of the position taken by the Holy See, greatly modified his theoretical system of probability and expressed his desire to adhere to the doctrine of St. Thomas Aquinas (Mandomnet, "Le décret d'Innocent XI contre le probabilisme", in "Revue Thomiste" 1901-03; Ter Haar, "Das Dekret des Papstes Innocenz XI über den Probabilismus", Faderborn, 1964; Concina, Della storia del Probabilismo e della probabilità nell'ordine degli angeli, ed. di G. de Llull, Studio-storico-critico sul sistema morale di S. Alfonso M. de Liguori", Monza, 1911; Döllinger-Resch, "Gesch. der Moralstreitigkeiten", Nordlingen, 1880).

The scientific production of the Dominicans of the sixteenth and seventeenth centuries was not confined to the theological movement noticed above, but shared in the general movement of erudition in the sacred sciences. Among the most noteworthy productions were the works of Pagani (d. 1541) on the Hebrew text of Scripture; his lexicons and grammars were famous in their day, and exercised a lasting influence (Script. O. P., II, 114); Sixtus of Siena (d. 1569), a converted Jew, created the science of introduction to the Sacred Books with his "Bibliotheca Sanctorum" (Venice, 1568; op. cit., 206); Jacques Coor, Iturigist and Orientalist, published the "Euchologium sovitate Graecorum" (Paris, 1647), a work which, according to Renuadet, was unsurpassed by anything in its time (Hurter, "Nomenclat. litter.", III, 1211). François Combes (d. 1679) issued editions of the Greek Fathers and writers (op. cit., IV, 161). Michel le Cen, Orientalist, produced a monumental work in his "Oryens Christianus". Vanaleb (d. 1679) was twice sent by Colbert to the Orient, whence he brought a large number of MSS. for the Bibliothèque du Roi (Pougeos, 1758, p. 10). The "Sciences de l'Orient" (d. 1792) left a large unfinished work. "Origines et Antiquitates Christianae" (Rome, 1753-57).

In the historical field mention must be made of Bartholomew de Las Casas (d. 1566) who left a valuable "Historia de las Indias" (Madrid, 1852). Noël Alexandre (d. 1724) left an ecclesiastical history of the Dominicans, and P. Binet "Histoire des ordres religieux de l'Inquisition" (Dict. de Théol. Cath., I, 789). Joseph Augustin Orsi (d. 1761) wrote an "Histoire ecclesiastique" which was continued by his confrère Filippo Angelo Bechetti (d. 1814). The last edition (Rome, 1838) numbers 50 volumes (Kirchenlex., LX, 1857). Nicolás Coeffeteau was an ecclesiastical historian according to Vaugelas, one of the two greatest masters of the French language at the beginning of the eighteenth century (Urbain, "Nicolás Coeffeteau, dominicain, évêque de Marseille, un des fondateurs de la prose française, 1574-1623", Paris, 1840). Thomas Campanella (d. 1639) was renowned by his numerous writings on philosophy and sociology as well as by the boldness of his ideas and his eventful life (Dict. de Théol. Cath., II, 1443). Jacques Brelle (d. 1673) left one of the foremost botanical works of his time, which was edited by A. de Jussieu, "Icones plantarum per Galliam, Hispaniam et Italian observatorum ad vivum exhibitarum" (Paris, 1714; Script. O. P., II, 645).

(f) The Preachers and Christian Society.—During the modern period the order performed countless services for the internal development of the Church and the Church's relations with the world. The influence of the Dominicans was gathered from the fact that during this period it gave to the Church two popes, St. Pius V (1556-72) and Benedict XIII (1724-30), forty cardinals, and more than a thousand bishops and archbishops. From the foundation of the Roman Congregation for the Missions in the sixteenth century a special place was reserved for the Preachers; thus the titulature of the Commissariat of the Holy Office and the secretaries of the Index were always chosen from this order. The title of Consultor of the Holy Office also belonged by right to the master general and the Master of the Sacred Palace (Gams, "Series episcoporum ecclesiae catholicae", Ratisbon, 1873; Falloux, "Histoire de Saint Pie V", Paris, 1858; Borgia, "Benedicti XIII vita", Rome, 1741; Catalano, "De secretario Indicia", Rome, 1751). The influence of the Preachers on the political powers of Europe was unequally exercised during this period: they remained confessors of the kings of Spain until 1700; in France their credit decreased, especially under Louis XIV, from whom they had to suffer "la guerre de la lanterne" (canons confessors de l'État, 1701); Chapotin, "La guerre de succession de Poissy, 1660-1707", Paris, 1892).

(g) The Preachers and the Missions. The missions of the Preachers reached their greatest development during the modern period. They were fostered, on the one hand, by the Portuguese conquests in Africa and the East Indies and, on the other, by the Spanish conquests in America and Western Asia. As early as the end of the fifteenth century Portuguese Dominicans reached the west coast of Africa and, accompanying the explorers, rounded the Cape of Good Hope to settle on the coast of East Africa. They founded temporary or permanent missions in the Portuguese African settlements and went in succession to the Indies, Ceylon, Siam, and Malacca. They made Goa the centre of these missions which in 1548 were erected into a special mission of the Holy See, which had to suffer from the British conquest, but continued to flourish till the beginning of the nineteenth century. The order gave a great many Jesuits to these regions (João de Janssens, "L'Evangelisation orientale", Evora, 1609; re-edited Lisbon, 1891; Caecenas de Sousa, "Historia de S. Domingo partidor do reino e conquistas de Portugal", Lisbon, 1767 (Vol. IV, by Lucas de Santa Catharins); André du Bosc, "Mission de la Société de Jésus au Brésil Orient", Lyons-Paris, 1865). The discovery of America soon brought Dominican evangelisation in
the footsteps of the conquistadores; one of them, Diego de Deza, was the constant defender of Christmas. We have since (2015) that it was to him the Sovereigns of Spain owed the possession of the Indies (Mandonnet, "Les dominicains et la découverte de l’Amérique", Paris, 1893). The first missionaries reached the New World in 1510, and preaching was quickly extended throughout the continent. According to the documents found in Bartolomé de las Casas, who took the habit of the order, their most powerful assistant in the defence of the Indians.

Bartolomé de las Casas (d. 1581) was the great apostle of New Granada, and St. Rose of Lima (d. 1617) the first flower of sanctity in the New World (Remesal, "Historia de la provincia de S. Vicente de Chiquí y Guatemala", Madrid, 1619; Davila Padilla, "Historia de la fundación y discurso de la provincia de Santiago de Mexico", Madrid, 1592; Brussels, 1625; Franco, "Segunda parte de la historia de la provincia de Santiago de Mexico", 1645, Mexico; re-ed. Mexico, 1900; Melendez, "Tesoros verdaderos de la India en la historia de la gran provincia de S. Juan Bautista de Perú", Madrid, 1832; Zamora, "Historia de la provincia de San Antonio del nuevo reyno de Granada", Barcelona, 1701; Helpe, "Life of las Casas, the Apostle of the Indies", London, 1833; Gutierrez, "Fray Bartolomé de las Casas, Apóstol de los Indios"; and his apologist, Fabie, "Vida y escritos de Fray Bartolomé de las Casas", Madrid, 1879; Wilberforce, "Life of Louis Bertrand", Fr. tr. Folghera, Paris, 1904; Masson, "Sainte Rose, tertiaire dominicaine, patronne du Nouveau Monde", Lyons, 1898). Dominican evangelization went from America to the Philippines (1568) and thence to China (1590), where Gaspar of the Holy Cross, of the Portuguese Congregation of the Indies, had already begun to work in 1559. The Preachers established themselves in Japan (1601), in Tonking (1671), and in the Island of Formosa. This flourishing mission passed through persecutions, and the Church has raised its numerous martyrs to her altars (Ferrando-Fonseca, "Historia de los PP. Dominicos a las islas Filipinas, y en sus misiones de Japón, China, Tungkin y Formosa", Madrid, 1870; Navarrete, "Tratados historicos, politicos, etnicos y religiosos de la monarquia de China", Madrid, 1676-1679, tr., London, 1704; Gentili, "Memorie di un missionario dominicano nella Cina", 1857; Orfane, "Historia eclesiastica di Rhet, o da Japam, dita da Japan desde de 1602 que entrò in el la orden de Predicadores, hasta el año de 1629", Madrid, 1863; Guglielmotti, "Memorie delle missioni cattoliche nel regno del Tuchino", Rome, 1844; Arias, "El beato Sanz y companeros martires", Manila, 1893; "I martiri annaniti e chinesi" (1786-1829), Rome, 1900; Clementi, "Gli otto martiri tonchinesi dell’ordine di S. Domenico", Rome, 1906). In 1635 the French Dominicans began the evangelization of the French Antilles, Guadaloupe, Martinique etc., which lasted until the end of the eighteenth century. (Du Tertre, "Hist. générale des Antilles", Paris, 1677-171; Labat, "Nouveau voyage aux isles de l’Amérique", Paris, 1742). In 1750 the Mission of Mesopotamia and Kurdistan was founded by the Italian religious; it passed to the Province of France (Parie) in 1866 (Goormachtigh, "Hist. de la mission dominicaine en Mesopotamie et Kurdistan", in "Anal. O. P.", III, 271).

(h) Dominican Saints and Blessed.—From the beginning of the sixteenth century members of the Order of Preachers were the subject of twenty-one canonizations or beatifications. Some of the beatifications included a more or less large number at one time: such were the Annamite martyrs, who formed a group of twenty-six beatified 21 May, 1900, by Leo XIII, and the martyrs of Tonking, who numbered eight, the last of whom died at the order of St. Pius X, 28 Nov., 1905. Five saints were canonized during this period: St. John of Gorkum (d. 1572), martyr; St. Pius V (d. 1572), the last pope canonized; St. Louis Bertrand (d. 1581), missionary in the New World; St. Catherine de’ Ricci (d. 1614) of the second order, and St. Rose of Lima (d. 1617), territory of the first American saint. (See general bibliography of saints in section Middle Ages above.)

(3) Contemporaneous Period.—The contemporaneous period of the history of the Preachers begins with the different restorations that were taken after the revolutions which had destroyed the order in several countries of the Old World and the New. This period begins more or less early in the nineteenth century, and it cannot be traced down to the present day without naming religious who are still living and whose activity embodies the present life of the order. The revolutions not having totally destroyed certain of the provinces, nor decimated them, simultaneously, the Preachers were able to take up the laborious work of restoration in countries where the civil legislation did not present insurmountable obstacles. During this critical period the number of Preachers seems never to have sunk below 3500. The statistics for 1876 give 3748 religious, but 500 of these had been expelled from their convents and were engaged in secular work. In 1876 and 1891 the number of the Preachers of the provinces of France and Italy give a total of very nearly 4472 religious both nominally and actually engaged in the proper activities of the order. They are distributed in 28 provinces and 5 congregations, and possess nearly 400 convents or secondary establishments.

In the revival movement France held a foremost place, owing to the reputation and convincing power of the immortal orator, Henri-Dominique Lacordaire (1802-61). He took the habit of a Friar Preacher at Rome (1838), and the province of France was canonically erected in 1850. From this province were detached the province of Lyons, called Occitania (1862), that of Toulouse (1869), and that of Canada (1909). The French Restoration likewise furnished many labourers to other provinces, to assist in their organization and progress. From it came the master general who remained longest at the head of the administration during the nineteenth century, Père Vincent Jandel (1850-72). Here should be mentioned the province of St. Joseph in the United States. Founded in 1856 by Charles Dunstan, afterwards first Bishop of Cincinnati, Ohio (1821-32), this province has developed slowly, but now ranks among the most flourishing and active provinces of the order. In 1910 it numbered 17 convents or secondary houses. In 1905 it established a large house of studies at Washington.

The province of France (Paris) has produced a large number of preachers, several of whom became renowned. The conferences of Notre-Dame-de-Paris were inaugurated by Père Lacordaire. The Dominicans of the province of France produced the most renowned of the orators: Lacordaire (1835-36, 1843-51), Jacques Monsabré (1869-79, 1872-90), Joseph Ollivier (1871, 1897), Thomas Etourneau (1898-1902). Since 1903 the pulpit of Notre Dame has again been occupied by a Dominican. Père Henri Didon (d. 1900) was one of the most esteemed orators of his time. The province of France displays greater intellectual and scientific activity than ever, the chief centre being the house of studies at present situated at Kain, near Tournai, Belgium, where are published "L’Année Dominicanine", "Mém. des Sciences Philosopiques et Théologiques" (1907), and "La Revue de la Jeunesse" (1909).

The province of the Philippines, the most populous in the order, is recruited from Spain, where it has
several preparatory houses. In the Philippines it has charge of the University of Manila, recognised by the Government of the United States, two colleges, and six establishments; in China it administers the missions of North and South Fookien; in the Japanese Empire, those of Formosa and Shikoku, besides at Nagasaki; in Brazil, at Niteroí (Venezuela), and at Rome. The province of Spain has seventeen establishments in the Peninsula and the Canaries, as well as the missions of Urubamba (Peru). Since 1910 it has published at Madrid an important review, "La Cienega," and the province of Holland has a score of establishments, and the missions of Curacão and Porto Rico. Other provinces also have their missions. That of Piedmont has establishments at Constantinople and Smyrnia; that of Toulouse, in Brazil; that of Lyons, in Cuba; that of Ireland, in Australia and Trinidad; that of Belgium, in the Belgian Congo, and so on.

Doctrinal development has had an important place in the restoration of the Preachers. Several institutions besides those already mentioned have played impregnable long to the Church. Such is the Bihabén, open to the religious of the order and to secular clerics, and which publishes the "Revue Thonistiate", so highly esteemed in the learned world. The faculty of theology of the University of Freiburg in the German Rhine, of the Dominicans in 1890, is flourishing and has about 250 students. The Collegium Angelicum, established at Rome (1911) by Hayacinthe Connier (master general since 1902), is open to regulars and seculars for the study of the sacred sciences. To the reviews mentioned above must be added the "Revue Thomistiate" founded by Père Thomas Coconnier (d. 1906), and the "Analecta Ordinis Praedicatarum" (1893). Among the numerous writers of the order in this period are: Cardinale Thomas Zigiari (d. 1893) and Zephirin Gonzales (d. 1895), editor of the "Joyeuse Lune"; Guillelotti (d. 1898), historian of the Pontifical Navy, and Father Heinrich Denifé, one of the most famous writers on medieval history (d. 1905).

In 1910 the order had twenty archbishops or bishops, one of whom, Andreas Frühwirth, formerly master general (1892-1902), is Apostolic nuncio at Munich (Sanvito, "Catalogus omnium provinciarum sacri ordinis praedicatorum" Rome, 1910; "Analecta O. P.", Rome, 1893-7; "L'Année Dominicaine", Paris, 1895—).

The circumstances under which St. Dominic established the first convent of nuns at Prouille (1236) and the legislation given the second order have been related above. As early as 1228 the question arose as to whether the Order of Preachers would accept the government of convents for women. The order itself was strongly in favour of avoiding this ministry and strengthening the missions of the order. The first nuns found, even among the Preachers, such as the master general, Jordanus of Saxonoy (d. 1230), and especially the Dominican cardinal, Hugh of St. Cher (d. 1263), who promised them that they would eventually be victorious (1267). The incorporation of monasteries with the order continued through the latter part of the thirteenth and during the next century. In 1288 the papal legate, Giovanni Boccanazzi, simultaneously placed all the Penitent Sisters of St. Mary of Magdala in Germany under the direction of the provincial of the Preachers, but this step was not final. The convents of sisters incorporated with the order were especially numerous in the province of Germany. The statistics for 1277 show 58 monasteries already incorporated, 40 of which were in the single province of Teutonia. The statistics for 1303 give 149 convents of Dominican nuns, and these figures increased during the succeeding centuries. Nevertheless, a certain number of monasteries passed under the jurisdiction of bishops. In the list of convents drawn up during the generalship of Serafino Cavalli (1371-1376) there are 520 monasteries, at Cologne (Venezuela), and at Rome. The province of Spain has seventeen establishments in the Peninsula and the Canaries, as well as the missions of Urubamba (Peru). Since 1910 it has published at Madrid an important review, "La Cienega," and the province of Holland has a score of establishments, and the missions of Curacao and Porto Rico. Other provinces also have their missions. That of Piedmont has establishments at Constantinople and Smyrna; that of Toulouse, in Brazil; that of Lyons, in Cuba; that of Ireland, in Australia and Trinidad; that of Belgium, in the Belgian Congo, and so on.

The Second Order. Dominican Sisters.—The circumstances under which St. Dominic established the first convent of nuns at Prouille (1236) and the legislation given the second order have been related above. As early as 1228 the question arose as to whether the Order of Preachers would accept the government of convents for women. The order itself was strongly in favour of avoiding this ministry and strengthening the missions of the order. The first nuns found, even among the Preachers, such as the master general, Jordanus of Saxonoy (d. 1230), and especially the Dominican cardinal, Hugh of St. Cher (d. 1263), who promised them that they would eventually be victorious (1267). The incorporation of monasteries with the order continued through the latter part of the thirteenth and during the next century. In 1288 the papal legate, Giovanni Boccanazzi, simultaneously placed all the Penitent Sisters of St. Mary of Magdala in Germany under the direction of the provincial of the Preachers, but this step was not final. The convents of sisters incorporated with the order were especially numerous in the province of Germany. The statistics for 1277 show 58 monasteries already incorporated, 40 of which were in the single province

C. The Third Order.—Neither St. Dominic nor the early Preachers wished to have under their jurisdiction—and consequently under their responsibility—either religious or lay associations. We have seen their efforts to be relieved of the government of nuns who, nevertheless, were following the rule of the order. But numerous laymen, and especially lay women, who were leading in the world a life of penance or observation of the rule, for the purpose of coming under the influence of the order and grouped themselves about its convents. In 1285 the need of more firmly uniting these lay elements and the idea of bringing under the direction of the Preachers a portion of the Order of Penance led to the establishment of the Order of the Third Degree. In 1288 the papal legate, Giovanni Boccanazzi, simultaneously placed all the Penitent Sisters of St. Mary of Magdala in Germany under the direction of the provincial of the Preachers, but this step was not final. The convents of sisters incorporated with the order were especially numerous in the province of Germany. The statistics for 1277 show 58 monasteries already incorporated, 40 of which were in the single province of Teutonia. The statistics for 1303 give 149 convents of Dominican nuns, and these figures increased during the succeeding centuries. Nevertheless, a certain number of monasteries passed under the jurisdiction of bishops. In the list of convents drawn up during the generalship of Serafino Cavalli (1371-1376) there are 520 monasteries, at Cologne (Venezuela), and at Rome. The province of Spain has seventeen establishments in the Peninsula and the Canaries, as well as the missions of Urubamba (Peru). Since 1910 it has published at Madrid an important review, "La Cienega," and the province of Holland has a score of establishments, and the missions of Curacao and Porto Rico. Other provinces also have their missions. That of Piedmont has establishments at Constantinople and Smyrna; that of Toulouse, in Brazil; that of Lyons, in Cuba; that of Ireland, in Australia and Trinidad; that of Belgium, in the Belgian Congo, and so on.

These events retarded the development of the Dominican Third Order, a portion of the Preachers

XII.—24
remaining unfavourable to the institution. Nevertheless, the Third Order continued to exist; one of its fraternities, that of Siena, was especially flourishing, a list of its members from 1311 being extant. The sisters numbered 100 in 1382, among them she who was called Caterina da Siena. They numbered 92 in 1378. The reforming movement of Raymond of Capua, confessor and historian of St. Catherine, aimed at the spread of the Third Order; in this Thomas Caffarni of Siena was especially active. The Dominican Third Order received new approbation from Boniface IX, 18 January, 1401, and on 27 April of the following year the pope published its rule in a Bull, wherupon its development received a fresh impetus. It never became very widespread, the Preachers having sought quality rather than number of territories. St. Catherine of Siena, canonized in 1461, is the patroness of the Third Order, and, following the example of her who has been called the Joan of Arc of the papacy, the Dominican tertiaries have always manifested special devotion to the Roman Church. Also in imitation of their patroness, who wrote splendid mystical works, they endeavoured to acquire a special knowledge of their religion, as befits Christians incorporated with a great doctrinal order. The Third Order has given several blessed to the Church, amongst them St. Rose of Lima, St. Maria of Siena, and St. Mary of the Incarnation. For several centuries there have been regular convents and congregations belonging to the Third Order. The nineteenth century witnessed the establishment of a large number of regular congregations of tertiaries devoted to works of charity or education. In 1895 there were about 55 congregations, with about 800 establishments and 20,000 members. In the United States there are flourishing convents at Sinsinawa (Wisconsin), Jersey City, Trinidad, Columbus (Ohio), Albany (New York), and San Francisco (California).

In 1852 Pére Lacordaire founded in France a congregation of priests for the education of youth, called the Third Teaching Order of St. Dominic. It is now regarded as a special province of the Order of Preachers, and has flourishing and select colleges in France at Oullins (1853), Sorèze (1854), Arecueil (1863), Arcachon (1875), Paris (Ecole Lacordaire, 1890). These houses have ceased to be directed by Dominicans since the persecution of 1903. The teaching order now has an apostolate in Buenos Aires, Chapmannit at Laussanne (Switzerland), and San Sebastian (Spain). During the Paris Commune four martyrs of the teaching order died in company with a priest of the First Order, at the same time, Père Louise Raphael Capitier, was an eminent educator (Mandonnet, "Les règles et le gouvernement de l'ordo de Penitentia au XIIIe siècle" in "Opuscules de critique historique", IV, Paris, 1902; Federici, "Istoria de' Cavalieri Gaudenti", Venice, 1787).

Preaching. See Homiletics.

Preadamites, the supposed inhabitants of the earth prior to Adam. Strictly speaking, the expression ought to be limited to denote men who had perished before the creation of Adam; but commonly even Coadamites are called Preadamites, provided they spring from a stock older than Adam. The question whether we can admit the existence of Preadamites is the strictest test of the existence of a human race (or human races) extinct before the time of Adam or before the Divine action described in Gen., 1, 2 sqq., is as little connected with the truth of our revealed dogmas as the question whether or not the stars inhabitated by rational beings resembling man. Palmieri ("De Creatione", Prato, 1910, p. 281, thes. xxx) does not place any theological censure on the opinion maintaining the past existence of such Preadamites, and Fabre d'Évıèu ("Les Origines de la terre et de l'homme", Paris, 1873, lib. XI, prop. 1) defends it. But preadamite theory as a whole is not different with regard to the view upholding the existence of Preadamites taken in the common acceptation of the term. It maintains that the men existing before Adam continued to coexist with Adam and his progeny, thus destroying the unity of the human race. Palmi in (the city) brands such heretical, and Father Pesch ("De Deo creante et elevante", Freiburg, 1906, n. 154) endorses this censure; Eosser (Kirchenlex., s. v. Präadamiten) considers it as only theoretically certain that there were no Coadamites who were not the progeny of Adam and Eve. According to the nature of the arguments advanced in favour of the heretical Preadamite theory, we may divide it into scientific and Scriptural Preadamism.

I. Scientific Preadamism.—There are no scientific arguments which prove directly that the progeny of a Preadamite race coexisted with the descendants of Adam. The direct conclusion from scientific premises is either the great antiquity of the human race or its multiplicity. In either case, or even in the combination of both, the existence of Preadamites is a hypothesis that depends on a Jew of the Orient, and is best only an assumption. From the great number of men, from their racial varieties, from the difference of languages, we cannot even infer that all men cannot not spring from a common stock, while the ancient national traditions of the Oriental nations, and the paleontological finds do not even show that the human race existed before our Biblical times; much less do these premises furnish any solid basis for the Preadamite theory. (For the unity of the human race see Anthropus (Ohio). Ramb., II, 1888.)

II. Scriptural Preadamism.—Pesch (loc. cit.) considers it doubtful whether Origen adhered to the Preadamite theory, but leaves no room for doubt as to Julian the Apostate. But these opinions are only a matter of historical interest. In 1555, however, Isaac de la Peyrère, a Calvinist of a noble family of Bordeaux and a follower of the Prince of Condé, published in close succession two works: "Præadamite, seu Exercitationes super versibus 12, 13, et 14 ep. Pauli ad Romanos", and "Systema chronologicum Corporis Laudis". ("Præadamita prima"). He maintained that Adam is not the father of the whole human race, but only of the Chosen People. The Jews spring from Adam and Eve, while the Gentiles are the descendants of ancestors created before Adam. The creation of these latter took place on the sixth day, and is related in Gen. i, 26 sqq., while Adam was formed after the rest on the seventh day as narrated in Gen., ii, 7. Adam and his progeny were to live and develop in Paradise, but they were to observe the law of Paradise. The sin of Adam was more grievous than that of the Gentiles: for he sinned against the law, while the Gentiles sinned only against nature. This distinction the writer bases on St. Paul's Epistle to the Romans, v. 12-14: "Until the law [given to Adam]", so Le Peyrère explains the passage, "sin [committed by the Gentiles] was in the world; but sin [of the Gentiles] was not imputed, when the law was not [given to Adam]". Again, those "who have not sinned after the similitude of the transgression of Adam" are the Preadamite Gentiles. Le Peyrère confirmed his theory of the Preadamites on the basis of Cain's fear of being killed (Gen., iv, 14), his flight, his marriage, his building of a city (Gen., iv, 15, 16), are pointed out as so many indications of the existence of other men than Adam and Eve. The author also claims that ancient Jewish and Mohammedan tradition favours his Preadamite theory.
But La Peyrère's proofs are not solid. (1) Scripture itself points out that the creation of man in Gen. ii, 7 sqq., is identical with that mentioned in Gen., ii, 7, for according to Gen., ii, 5, "there was not a man to till the earth"; according to Gen., ii, 20, "for Adam there was not found a helper like himself"; according to iii, 20, "Adam called the name of his wife Eve: because she was the mother of all the living." Scripture, therefore, knows of no men created before Adam. (2) The appeal to the incidents in the history of Cain loses its force, if we remember that they happened about 130 years after Adam left Earth, even from Paradise: at this time the progeny of Adam must have amounted to several thousand souls, so that Cain's fear and flight and his building of a primitive city are easily explained. (3) The difficulty arising from Cain's marriage was satisfactorily explained by St. Augustine ("De civit. dei," XV, xvi; cf. Epiphanius, "Hist.," xxxix, 6), who points out that necessity compelled the immediate offspring of Adam and Eve to marry even their sisters. (4) The context renders La Peyrère's explanation of Rom., v, 12-14, impossible. If the last clause in the passage refers to the law of God to Adam in Paradise, and not to the Mosaic Law, the phrase "but death reigned from Adam unto Moses" is meaningless, and the whole force of the Apostle's argument is destroyed. (5) Finally, La Peyrère's appeal to the traditions of the Kabbalists, Chaldeans etc., which are so often found wanting, is as worthless as R. Simon ("Lettres choisies," II, Amsterdam, 1730, ii, xxvii). It is, therefore, not astonishing that La Peyrère's Precedamism proved to be a nine days' wonder and did not survive its author. The theory was strongly opposed from the beginning by such scholars as Maresius, Hoornbeek, and Vosius on the part of the Reformed Church, and by the Lutheran theologians Calvius, Quenstedt, and Hollazius. The author himself renounced his error, and became a Catholic, and a member of the Oratory. In more recent times a political or social Precedamism has been introduced by Dominic M'Causland ("Adam and the Adamite, or the Harmony of Scripture and Ethnology," London, 1884) and Reginald Stuart Poole ("The Genesis of the Earth and of Man," London, 1860), who follow the ethnocentric view of such authorities as Morton, Nott, Giddon, and Agassiz. They maintain that Adam is the progenitor of the Caucasian race, while the other races descend from Preadamite ancestry, having either a mixed or pure descent. The primate sentiment prevalent in certain parts of America indirectly supported such Preadamite theories. But their truth must be judged in the light of what has been said about scientific and Scriptural Preadamism.

NATALIE ALEXANDER. HUM. SOCIÉTÉ, I (Bingen, 1780), 103 sqq. diss. iii. De Adam et Eva. As to Scriptural Preadamism, see the various dogmatic treatises on Creation (Pesch, Palmeni, Ferroves etc.), where they treat of the unity of the human race. For scientific Preadamism see GLA, Repertorium der kathol. theol. Literatur, 1, I (Paderborn, 1858), 218 sqq.; for Preadamism in the strict sense: REUTER, Bibel u. Natur (4th ed. Bonn, 1876), 457; RAUCH, Entwurf des Menschenurgeschichte (Augsburg, 1878); FREY, Anthropologie, I (4th ed. Freiburg, 1879), 356; WINCHELL, Preadamites, or a Demonstration of the Existence of Men before Adam (Chicago, 1880).

A. J. MAAS.

Prefend. The right of a member of a chapter to his share in the revenues of the cathedral, also the share to which he is entitled; in general, any portion of the cathedral revenues set aside for the support of the clergy attached to it (semi-prebends) even for those who are not members of the chapter. They are regarded as benefices (q. v.) and governed by the same laws. (See Chapter.)

Precaria (Prece, prayers) is a contract granting to a petitioner the use and usufruct of a revenue-bearing ecclesiastical property for a specified time, or during the life of the grantees, and principally for services rendered the Church. This contract (tit. XII; cap. III of the Decretals) is based on the "precarium" of the Roman Law (De precario, XLIII, xxvi); it differed from it inasmuch as the "precarium" could have for its object either movable or fixed goods and was revocable at the pleasure of the proprietor. In the Province of Meaux (825) prescribed for this reason the renewal of these concessions every five years. It ceased at the death of the grantee, or at the expiration of the allotted period, after which it could be revoked at the desire of the grantor. See FRANCIS; LICITATION; PROPERTY, ECCLESIAL; also the canonists on De Precario, lib. III, tit. XIV.

A. BOUDINON.

Precedence (Lat. procedere, to go before another) signifies the right to enjoy a prerogative of honour before other persons; e.g. to have the most distinguished place in a procession, a ceremony, or an assembly, to have the right to make a profession of faith, or to cast a vote, or append a signature before others, to perform the most honourable offices. Questions of precedence sometimes give rise to controversies. In both civil and ecclesiastical legislation they are regulated by laws and rules. In canon law the general rule is that precedence is determined by rank in the hierarchy both of jurisdiction and of order. Where rank is equal it is determined by priority of foundation: Qus prior est tempore, potior est jure (Regula juris 54, in VI). With regard to colleges (collegia), precedence is determined by the quality of the person to whom the college is attached. The order of precedence is regulated as follows: the pope always takes first rank, after him come cardinals, patriarchs, archbishops, exempt bishops, suffragan bishops, titular bishops, and prelates nuncios. In these categories priority of ordination and promotion determines precedence, among bishops or archbishops the date of their first promotion to the episcopal or archiepiscopal dignity. Custom or privilege may derogate from this rule. A Decree of Propaganda (13 Aug., 1883) grants to the Prelates of the Basilica of St. Peter in Rome the right of precedence in the United States (Collectio Lacensis, III, 572). In their own diocesan churches they have precedence before strange bishops and archbishops, but not before their own metropolitan. In metropolitan chapters they precede the Archdeacon and the latter before collegiate chapters. The secular clergy according to the importance of their office or the date of their ordination precede the regular clergy. Canons regular take the first place among the regular clergy, then come clerics regular, the monastic orders, and the mendicant orders. Among the mendicants the Dominicans take first place outside of processions; in processions, the acquired right of precedence or that appertaining to priority of establishment in a town must be respected. This last rule applies also to canons regularities, but in processions of the Blessed Sacrament the Confraternity of the Blessed Sacrament has precedence. The Third Orders have precedence of canons regularities. Questions of precedence at funerals have given rise to numerous decisions of the Congregation of Rites (saepe Decreta, e.g. Rituale Congreg. Rite, 1901, V, § 273; generalis, V. Precedentia). The provisory solution of questions of precedence in processions arising between regulars belongs to the diocesan bishop. The Congregation of Rites decides concerning those with regard to liturgical ceremonies; the Congregation of Canons Regular (generalis, V. Precedentia) regulates the precedence of the papal court.

A. VAN HOVE.

Precentor (L. Preceptor, from praec. before-cantor, singer), a word describing sometimes an ecclesiastical dignity, sometimes an administrative or ceremonial officer. Anciently, the precentor had various duties: he was the first or leading chanter, who on Sundays and greater feasts intoned certain antiphons, psalms, hymns, responses, etc.; gave the pitch or tone to the bishop and the deacon at Mass (the successor performing a similar office to the precentor was); recruited and taught the choir, directed its rehearsals and supervised its official functions; interpreted the rubrics and explained the ceremonies, ordered in a general way the Divine Office and sometimes composed desired hymns, sequences, and lessons of saints. He was variously styled capiscol (caput scholor, head of the choir-school), prior schola, magister scholae, and primicerius (a word of widely different implications). Victor of St. Hugo tells us that in the care of the primicerius were placed the treasurers, lessees, and psalmists (sorores). In the Middle Ages the principal dignitaries of cathedrals, collegiate chapters, and monastic orders, mimicked the example of St. Gregory the Great in acting as directors of chant-schools. The schola was always in attendance when the bishop officiated in his cathedral, and to the precentor was assigned a place near the bishop and high in dignity. His office was obviously one demanding much learning and executive ability, and his dignity corresponded with his duties.

In the cathedrals of England, France, Spain, and Germany, he ranked sometimes next to the dean, sometimes next to the archdeacon. In some instances his sphere of activity was much broader, including the duty of installing deans, canons, and other dignitaries; and in some monasteries, the duties of librarian and registrar. But from the fourteenth century his title and dignity were largely handed over to incumbents whose musical knowledge did not fit them for the duties to which the name of precentor owed its origin; the dignities remained, but the duties became obscurant. Some of these chapters retain traces of the dignity of Precentor, and one may see sometimes an archdeacon, sometimes a titular or honorary canon, carrying the baton cantoral, the insignia of his office" (Migne, "Dict. de Droit Canon", s. v. Chanteur). This "baton cantoral" is a silver or white staff. In the dioceses of Aix, Carcassonne, Coutances, Dijon, Mâcon, Orléans, the dignity of Precentor is still the highest in the chapter. Some chapters have sub-chanters, those of Arles being among the honorary resident canons" (Migne, "Dict. de Jurisprudence", s. v. Grand Chanteur, where also the quoted statutes of the Bishop of Dijon may serve to illustrate the modern idea of the officer of precentor: "The Preceunt or Grand Chanteur is the head of the choir and . . . brings the antiphon to the bishop when officiating pontifical. chanting, etc.", "Les émules of the Cathedral are placed under his supervision. He will also preserve order and silence in the sacristy"). In the Anglican Church the precentor directs the choir, his stall in the cathedral corresponding with that of the dean.

CRAWMER, Studies in Worship Music (London, 1888), 141-5, 170-2, gives interesting details of the duties of precentor in the Benedictine Church. See also J. G. F. For Normanch, Precantrix, Precentor, etc., see DU CANO, Glossarium, s. v. Precentor; VERARLES in Dict. Chr. Antig., s. v.

H. T. HENRY.

Preceptor (Lat. preceptum from praecipere, to command), Canonical, in its common acceptance, is opposed to counsel, inasmuch as the former imposes an obligation, while the latter is a persuasion. In ecclesiastical jurisprudence the word precept is used:

(1) In opposition to law. - A law is always binding even after the death of the legislator, until it is revoked; a precept is obligatory only during the lifetime or office of the recipient. A law directly affects the territory of the legislator, and thence passes to the subjects dwelling in it; a precept directly affects the persons of the inferior and is independent of location. Finally, a law is promulgated for a whole community, present and future, while a precept is directed to individuals and ceases with them. (2) As a term in extra-judicial processes. - When a grave fault has been committed by a cleric, it is the duty of the bishop, after making an informal inquiry into the matter, to give the delinquent two successive monitions or warnings. If he does not thereupon amend, the bishop proceeds to the issuance of a canonical precept, as directed by the Decree "Cum Magnopere" (1584). The precept, under pain of nullity, must be in writing, state plainly what is to be done or avoided by the delinquent, and mention the specific punishment to be inflicted if the precept go unheeded. The accused is then cited before the chancellor of the episcopal court, and the latter, in presence of witnesses, ecclesiastical or lay, must serve the precept upon him. An official record of this fact is then to be drawn up and signed by all concerned, including the delinquent if he so wishes. The witnesses may be bound by oath to observe securely the precepts. If the accused uncontramubly refuses to appear, the precept may be served upon him by a trust-worthv person or sent by registered mail. If even these measures are not possible, the precept may be posted publicly as an intimation to the delinquent. If he fails to amend after receiving the precept, a formal trial may then be instituted.

SMITH, Elements of Ecclesiastical Law, III (New York, 1888); FRITZSCHE, Bibliotheca Canonica, I, 2 (New York, 1889); s. v. Leg., art. 1; BAERT, Legal Formulary (New York, 1898).

WILLIAM H. W. NANNING.

Precrpts of the Church. See Commandments of the Church.

Precious Blood, the blood of our Divine Saviour. Jesus, at the Last Supper, ascribes to it the same life-giving power that belongs to His flesh (see Eucharist). The Apostles, St. Peter (I Peter, 1, 2, 19), St. John (1 John, i, 7, 8), etc., and above all St. Paul (Rom., iii, 25; Eph., 1, 7; Hebr., ix, x) regard it as synonymous with His immortality and Death, the source of redemption. The Precious Blood is therefore a part of the Sacred Humanity and hypothetically united to the Second Person of the Blessed Trinity. In the fifteenth century some theologians, with a view of determining whether the blood shed by the Saviour during His Passion remained united to the Word or not, raised the point as to whether the Precious Blood is an essential part or only a concomitant of the Sacred Humanity. If an essential part, they argued, it could never be detached from the Word; if a concomitant only, it could. The Dominicans held the first view, and the Franciscans the second. Pius II, in whose presence the debate took place, rendered no doctrinal decision on the point at issue. However, chiefly since the Council of Trent (Sess. XIII, c. 3) called the body and blood of Jesus "paries Christi Domini", the trend of theological thought has been in favour of the Dominican teaching. Suarez and de Lugo look askance at the Franciscans' view, and Faber writes: "It is not merely a concomitant of the flesh, as an inseparable accident of the body of the Saviour, but, as blood, was assumed directly by the Second Person of the Blessed Trinity" (Precious Blood, i). The blood shed during the triduum of the Passion was therefore reunited to the body of Christ at the Resurrection, with the possible exception of a few par-
articles which instantly lost their union to the Word and became holy relics to be venerated but not adored. Some such particles may have adhered and yet adhere to the instruments of the Passion, e.g. nails, scouring pillar, Scala Santa. Several places like Saintes, Bruges, Mantua etc. claim, on the strength of ancient traditions, to possess relics of the Precious Blood, but it is often difficult to tell whether the traditions are correct. Viewed as a part of the Sacred Humanity typified by the Blood offered to the Word, the Precious Blood deserves laterale worship or adoration. It may also, like the Heart or the Wounds from which it flowed, be singled out for special honour, in a way that special honour was rendered it from the beginning by St. Paul and the Early Fathers who so eloquently praised its redeeming virtue and rested all the Christian spirit of self-sacrifice. As Faber remarks, the lives of the saints are replete with devotion to the Precious Blood. In due course of time the Church gave shape and sanction to the devotion by approving societies like the Missionaries of the Precious Blood; enriching confraternities like that of St. Nicholas in Carcere, in Rome, and that of the London Oratory; attaching indulgences to prayers and seascals in honour of the Precious Blood; and introducing into devotion the commemorative feasts of the Precious Blood, Friday after the fourth Sunday in Lent and, since Pius IX, the first Sunday of July.

Feast of the Most Precious Blood.—For many dioceses there are two days to which the Office of the Precious Blood has been assigned, the office being in both cases the same. The reason is this: the office was at first granted to the Fathers of the Most Precious Blood only. Later, as one of the offices of the Fridays of Lent, it was assigned to the Friday after the fourth Sunday in Lent. In many dioceses these offices were adopted also by the fourth Provincial Council of Baltimore (1840). When Pius IX went into exile at Gaeta (1849) he had as his companion the saintly Don Giovanni Merlini, third superior general of the Fathers of the Most Precious Blood. Arrived at Gaeta, Merlini suggested that His Holiness make a vow to extend the feast of the Precious Blood to the entire Church, if he would again obtain possession of the throne of Sts. Peter and Paul. The pope took the matter under consideration, but a few days later sent his domestic prelate, Mons. Stella to Merlini with the message: "The pope does not deem it expedient to bind himself by a vow; instead His Holiness is pleased to extend the feast immediately to all Christendom.", This was 30 June, 1849, the day the French conquered Rome and the republicans capitulated. The thirtieth of June had been a Saturday before the first Sunday of July, wherefore the pope decreed (10 August, 1849) that henceforth every first Sunday of July should be dedicated to the Most Precious Blood.

Ulrich F. Mueller.

Precious Blood, Archiconfraternity of the Most Precious Blood.—Confraternities which made it their special object to venerate the Blood of Our Lord are so numerous in the life of the Carmelites lay brother, Francis of the Infant Jesus (d. 1601), mention is made of such a confraternity as existing in Valencia. A few years later they must have been quite numerous, for it is said of the Carmelite Anna of St. Augustine (d. 1623): "She received the spiritualty those who went about collecting alms for the confraternities of the Precious Blood erected in many places".

Ravenna, Italy, possessed one at a very early date. Another was erected in Rome under Gregory XIII and confirmed by Sixtus V, but merged later on with the Sacred Vignola. The archiconfraternity owes its origin to Mgr. Albertini, then priest at San Nicola in Carcere, Rome, where since 1708 devotions in honour of the Precious Blood had been held. Deeply moved by the temporal and spiritual misery caused by the French Revolution, he united, 8 December, 1808, into a society such as were willing to meditate frequently on the Passion and to offer up to the Divine Father the Blood of His Son, in expiation of their sins, for the conversion of sinners, for the great wants of the Church, and the souls in purgatory. He composed for them the "Choral of the Precious Blood" which they were to recite during his daily Mass. The confraternity was canonically erected by Pius VII through his cardinal vicar, 27 February, 1809, raised to the rank of an archiconfraternity, 26 September, 1814, and enriched with numerous indulgences. Pius IX increased the privileges, 19 January, 1850, and 30 September, 1852. In England it was erected in the church of St. Wilfrid, Staffordshire, 1847, but was transferred to the church of the London Oratory (12 August, 1850). Previous to this it had been introduced in Rome and was canonically erected in the numerous houses and parishes founded by them after their arrival (1844). As a rule, they enroll such as desire it at the end of their missions.

Ulrich F. Mueller.

Precious Blood, Congregation of the Most Precious Blood, an association of secular priests living in community, whose principal aim is to give missions and retreats. The members take no vows but are held together by the bond of charity only and by a promise "not to leave the community without permission of the lawful superior". The congregation was founded at the desire of Pius VII after his return from exile by Blessed Gaspar de Bufalo. Distressed at the spiritual condition of Rome, the pope determined that missions should be held throughout the Papal States and selected de Bufalo and a few other zealous priests to undertake the task. The pope presented them the convent of San Felice a Giano, where a foundation was made 15 Aug., 1815. New houses were opened, and in 1820 six missions were established in the Campagna for the conversion of the banditti. The growth of the society was checked at the election of Leo XII (1823), who, on misinforming as to the manner of the congregation and its founder, was unfavourable. He objected to the proposed name, "Congregation of the Most Precious Blood", as a novelty; but the society was finally cleared of all accusations and F. Betti justified the name from Scripture and the Fathers. Blessed Gaspar was succeeded by Don Biagio Valentini, a member of the society since 1817. His successor, the Ven. Giovanni Merlini (the process of whose beatification has been begun in Rome), was a native of Spoleto and friend of Pius IX, whose pole at Gaeta he shared. Through the influence of the pope, several new houses were opened in Italy, and one each in Alsace and Bavaria. The mother-house was established in the convent of the Crociferi, Maria in Trivio. Merlini died 13 January, 1873, and was succeeded by Don Enrico Rizzoli. Under his rule the Italian Government (1860, 1866, 1870) confiscated, among others, Maria in Trivio, since when the fathers who are in charge of this church have to rent a few rooms in their own house. In the convent garden a Methodist church was erected, but owing to the scanty attendance it was soon closed and is now used as a theatre. The Government confiscated the revenues of the seminary at Albano and suppressed
altogether twenty-five houses. The Kulturkampf
closed the houses in Alsace and Bavaria. Rizzoli was
succeeded by Mgr Caporali, in 1890 consecrated
Archbishop of Otranto; Mgr Salvatore Palmieri, to
whom the Government refused the exequatur when he
was named Archbishop of Rosaso, but later ac-
cceeded in his consecration as Archbishop of
Brindisi (1893); Aloysius Biaschelli; the present gen-
eral is Very Rev. Hysacinte Petroni.

The congregation was introduced into America
(1844) at the request of Bishop Purcell of Cincin-
tan. Francis de S. Brunner (q. v.)
de ducts a college (Collegeville, Ind.) and parishes in
Ohio (Dioceses of Cincinnati, Cleveland, Toledo), In-
diana (Diocese of Fort Wayne), Missouri (Diocese of
St. Joseph and Kansas City), Illinois (Archdiocese of
Chicago), Nebraska (Diocese of Lincoln). The chief
work of the order is the giving of missions and assist-
ing the secular parish clergy on occasions such as tridua,
Forty Hours devotions, retreats etc. The novitiate
is at Butkettsville, Ohio.

In America candidates pass through a year of pro-
bation after which they are admitted either as brothers
and then take the promise of fidelity, or as students,
to follow a six years' course in classical studies. Such
of the students as receive the degree A.B. enter the
seminary, and after the first year of philosophy give
the promise of fidelity. After five years more evidently,
you are ordained, and a year later become eligible to
full membership. If the ballot is favourable, they are
admitted and invested with the missionary's insignia
(a large ebon crucifix with brass figure and brass
chain, worn over the heart). In Europe the method
of adopting members is somewhat different, since there
none are admitted before they are at least students
of philosophy; often priests join the congregation.

The present statistics for the congregation are:
Italy, 3 provinces, 15 houses, the principal ones being
at Rome (San Sisto Maria), Padua, Venice, and
Varese; Spain, 1 province, 2 houses; North America, 1
province with a seminary at Carthage, Ohio, seat of the
provincial; a college at Collegeville, Ind., with 300
students; novitiate at Butkettsville, Ohio; parishes and
missions: Ohio, 19; Indiana, 4; Missouri, 5;
Nebraska, 2. The house at Shellenberg (Liechten-
stein) belongs to the American province. There
are in the American province 110 priests, 20 seminarians,
75 collegiateans, 70 lay-brothers, 35 novices, 17 convents,
and 44 missions and stations.

SOURCES OF THE.—At Mantua in
1608 a knight-order of the Precious Blood, which
received the approval of Paul V., was founded by
Vincente del Gonzaga, Duke of Mantua. Its aim was
to protect the sacred relic of the Precious Blood. The
members wore on a golden ribbon a remonstrance,
representing two angels holding up a vessel containing
three drops of blood. The Dukes of Mantua were
grandmasters, until Emperor Joseph I declared the
dukedom abolished; the order was then dissolved.
The sacred relic is said to have disappeared since 1848.

There is no bibliography for the European provinces:
for America: Brunner, Woz bin wir, welche in die Klöster nach
Amérique sind (Jena, 1866); Leben und Wirken des P. F. S. Brunner, II
(Carthage, 1882). As to the lives of some of the early members in Italy, Brevi Consili sulle vite e le
conversazioni delle Congregazioni dei Preciosi Sangue,
1880; on the activity of the American priests, Nuntius Aula,
I-X.

ULRICH F. MUELLER.

Precious Blood, Congregations of the.—I. Ber-
adines of the Precious Blood, a congregation
ofCanons Regular in exile founded by Mother
Ballou with the assistance of St. Francis de Sales, as
an offshoot of the reformed Cistercianesses.

II. Daughters of the Precious Blood, were
founded by Maria Seraphina Spieghans at Sittard,
Holland, 1862, and approved by a Decree of Leo XIII,
12 July, 1890. Their main object is the education of
girls, and the care of the sick. They wear a red girdle,
and on a red ribbon a cross with the initiales F. P. S.
(Filiae Pretiosi Sanguinis—daughter of the Precious
Blood). Leo XIII appointed Cardinal Mazzella as their
cardinal protector. The mother-house is in
Koningboch, Diocese of Roermond. They assist es-
specially theMissionaries of the Holy Ghost in
German East Africa. As yet they have made no
foundation in the United States.

ULRICH F. MUELLER.

III. Sisters Adorers of the Precious Blood, a
congregation of nuns established, 14 September, 1861,
by Right Rev. Joseph La Rocque, then Bishop of St.
Hyacinthe (Prov. Quebec, Canada), with the co-opera-
tion of Mgr. J. S. Raymond, then superior of the
seminary of St. Hyacinthe. The foundress, Mère
Catherine-Aurélie du Précieux Sang, commonly called
Mère Caouette or Mother Catherine, died, 6 July,
1905, at the mother-house in St. Hyacinthe, of which
she was then superior. The object of the institution
is two-fold: the glorification of the Precious Blood,
and the "salvation of souls or suffer", is the watch-word given to the sisters by the
foundress. She was joined by Sister Euphrasie de
Joseph, her cousin, Sister Sophie de l'Incarnation,
niece of Monsignor Raymond, and Sister Elisabeth de
l'Immaculée Conception, a cousin. The constitutions of
the institute were approved by Leo XIII, 20 Oc-
tober, 1896. The order is contemplative, and the sisters
maintain perpetual adoration of the Blessed Sacra-
ment. The Office is recited daily: on Thursday, the
Office of the Blessed Sacrament, which is also chanted
when the Blessed Sacrament is exposed; every first
Sunday of the month, and during the Forty-Hours
devotion, which by a special privilege of Pius IX is held
four times yearly. On Saturday the Office of the
Blessed Virgin is said, and on all other days that of the
Blessed Virgin and The Lord's Prayer. The sisters
are recited at midnight. The institute is governed by the
mother superior, aided by her councilors, and in certain cases
by the chapter of the community. The councilors
and the mother superior are elected for a term of five
years. Houses are independent of one another in
government, recruiting, and training their members.
The novitiate lasts two years. The choir and lay
sisters make perpetual vows; the tournières (out-
sisters) pronounce their vows for a year only, being
allowed to renew them afterwards on the Feast of the
Precious Blood. The choir sisters dress in white
with a red scapular and cincture on which are painted
in white the instruments of the Passion; for Commu-
nion, and before the Blessed Sacrament when ex-
posed, they wear a white mantle. Hence their popu-
lar name, "the white nuns". The lay sisters have
the same costume, but the dress is black. The
costume of the tournières is all black, as their functions call
them out of the cloister. The institute subsists on
alms and on the work of some of the sisters, who make
everything requisite for the service of the altar, and
also for their pious articles. The institute claims
Confraternity and the Guard of Honour of the Pre-
cious Blood, and spiritual retreats for ladies.

From the mother-house at St. Hyacinthe have
sprung many branches: Toronto (Ontario, Canada),
1867; Montreal (Quebec, Canada), 1874; Ottawa
(Canada), 1887; Three Rivers (Quebec, Canada),
1889; Brooklyn (New York), 1890; Portland (Oregon),
1891; Sherbrooke (Quebec, Canada), 1895; Nicolet
(Quebec, Canada), 1896; Manchester (N. H.), 1898;
Havana (Cuba), 1902; Lewis (Quebec, Canada), 1905;
and Joliette (Quebec, Canada), 1907.

SISTER AIMÉE DE MARIE.

IV. Sisters of the Precious Blood, a congrega-
tion of nuns founded at Gurtweil, Baden. In 1867
Rev. Herman Kessler, the pastor, who had long desired
to establish a home for destitute children and a normal school for the training of religious teachers, asked for six members of the community of the Sisters of the Precious Blood from Ottmarshaus, Alsace. They responded and began their work with twelve poor children under the direction of Father Kessler. Under the auspices of Archbishop von Vicari of Freiburg, a novitiate and the Mother-house were established; the latter was affiliated with the educational department of Karlsruhe. Other schools and academies were opened. In 1869 Bishop Junker of Alton, Ill., asked for sisters for his diocese. In 1870 a number of sisters sailed for Belle Prairie (now Pioles) in the Diocese of Arkansas. Meantime Bishop Baltus succeeded Bishop Junker; he entrusted them several parochial schools and promised further assistance on condition that the community should establish itself permanently in his diocese subject to his authority. Mother Augustine, superior of the mother-house at Gurtweil, apprehended a premature separation from Gurtweil, and was also opposed to limiting the sisters’ activity to one diocese only. She went to St. Louis where through the efforts of Father Muchel, Bishop of St. Louis, the Sisters of the Precious Blood were accepted as coadjutors of the Diocese of St. Louis (1872) and obtained charge of a number of schools in Missouri and Nebraska. In 1873 the Kulturkampf had reached its climax and the entire community was expelled; some went to Rome, others settled in Bosnia, Hungary, while the greater number joined their sisters in America. A mother-house was established in O’Fallon, St. Charles County, Mo., completed in 1875. News arrived that Mother Clementine, mistress of novices, with a few professed sisters and the entire novitiate had resolved to follow the dictates of Bishop Baltus and establish a mother-house in his diocese. Consequently a new novitiate was begun in O’Fallon. The novitiate of Mother Clementine’s branch was established at Ruma in 1876. They conduct schools in the Archdiocese of St. Louis, the Dioceses of Alton, Belleville, Oklahoma, St. Joseph, and Wichita. They number (1911): professed sisters, 230; novices, 20; candidates, 30; schools, 49,430. The O’Fallon community was incorporated (1878) under the laws of the State of Missouri with the right of succession, under the legal title of St. Mary’s Institute of O’Fallon, Mo. The sisters conduct schools in the Archdiocese of St. Louis, and in the Dioceses of Alton, Kansas City, Lincoln, and Omaha. They number (1911): professed sisters, 179; novices, 17; candidates, 11; academy, 1; schools, 20; pupils, 2435.

ULRICH F. MUELLER.

V. SISTERS OF THE PRECIOUS BLOOD, founded in the canton of Grisons, Switzerland, in 1833, by Maria Anna Brunner, and her son Rev. Francis de Sales Brunner (q. v.). They were inspired to the undertaking by a visit to Rome, during which they were much impressed by the devotion to the Most Precious Blood as practised by the congregation of Blessed Gaspare del Bufalo. The rule was founded, dictated and approved by the Bishop of Chur, the object of the community being the adornment of the Most Precious Blood and the education of youth, including the care of orphans and homeless or destitute girls. The sisters became affiliated with the Society of Priests of the Precious Blood, of which Father Brunner was a member, and on his being sent to America to establish his congregation there he enabled the sisters also to make a foundation, first at St. Alphon- sus, near Norwalk, and permanently at New Riegel, Ohio. In 1863 Archbishop Rabell wrote to revise the rule drawn up by Father Brunner in order to adapt it to altered conditions, and this revision, besides extending the time of adoration through the day as well as the night, increased the teaching force of the community, who were thus enabled to take charge of a larger number of parochial schools. In this year, also, the sisters were separated from the society of the fathers, with which it had hitherto been affiliated, and made a separate congregation with a superior general under the jurisdiction of the Archbishop of Cincinnati. The present mother-house is at Maria Stein, Ohio. They conduct schools in the Archdiocese of Cincinnati, and in the Diocese of Columbus; they also have foundations in Nashville, St. Joseph, and Tucson. The statistics for 1911 are: professed sisters, 592; novices, 48; postulants, 26; pupils, 6954.

SISTER MARY VICTORIA.

Precipiano, Humbert-Guillaume de, Count, b. at Besançon, 1626; d. at Brussel, 7 June, 1711. Having studied the classics at Constance, philosophy in his native town, and theology in the Jesuit college, Leuvin, he graduated as Licentiate in Law and Doctor of Theology at the University of Dôle. He was named successively canon, archdeacon, and dean of the metropolitan chapter of Besançon; commendatory Abbots of Bellevaux in Burgundy; and was then the Prior of the Abbey of St. Emilion at Dôle by Philip IV of Spain, La Franche-Comté being a Spanish dependency. In 1667 Philip sent him to the imperial Diet of Ratisbon as plenipotentiary for Burgundy. After 1672 he resided at Madrid as chief councillor for the affairs of the Church and Burgundy. Ten years later he was raised to the See of Bruges, and consecrated on 21 March, 1683. For seven years he laboured zealously to maintain the purity of the Faith and the rights of the Church, and to check the spread of Jansenism. In 1690 he was offered the Archbishopsric of Mechlin, which he accepted only upon the express order of the pope. At Mechlin his life was a constant struggle against the doctrines which were being actively disseminated by the French refugees, Arnauld, Quesnel, and others (see JANSENISM AND JANSENSM). In union with his suffragans, the archbishop began by insisting on the oath formulated by Alexander VII as a necessary condition for admission to Holy orders, benefices, and ecclesiastical positions. Three episcopal assemblies held under his presidency at Brussels in 1691, 1692, and 1697, confirmed this regulation. The second (1692) moreover, to prevent all subterfuges regarding the distinction of law and fact, had made certain additions to the formulary. Through Dr. Hennebey, the Jesuit, at Rome, and succeeded in having their claim upheld by Innocent XII. The pope ordered the adoption of the precise words of the Alexandrine oath, as being quite sufficient since it condemned the five propositions "in the obvious sense which the words of the propositions express, and which our predecessors condemned". Thereupon, men of bad faith declared that the Constitution of Alexander VII and the obligations it imposed had been changed, and that it was no longer necessary to reject the propositions "in sententia cordis" as the bishops communicated with Rome to obtain a more drastic and efficacious remedy; and the pope, now better informed, authorized them to proceed, not only in virtue of their own authority but also as delegates of the Holy See, against all who opposed the well-known decisions of the sovereign authority. The archbishop at once censured and prohibited seventy-one defamatory pamphlets of Jansenist origin; but, as the propaganda in favour of the "Augustinian" continued and moral suasion proved entirely ineffective, he sought the intervention of the secular power. Quesnel, Gerberon, and Brigode, the distributor of their writings, were arrested at Brussels, by order of Philip V, and confined to the archiepiscopal palace (1708). Quesnel escaped to Holland, but his vast correspondence was
seized and judicial proceedings against him begun. All the documents connected therewith were published under the title "Causa Quiescelliana" (Brussels, 1705). In no other case in the annals of the church can one find such evidence of the authentic history of Jansenism. In 1705, the Archbishop of Mechlin was one of the first to publish in his diocese the Bull "Vineam Domini Sabbatho", in which Clement XI condemned the theory of respecting silence (see Jansenius and Jansenism) and issued his solemn judgment on the powers of the sovereign pontiff. At Mechelin as at Bruges, Precipiano had to fight in defence of the right of asylum attached to certain places or religious houses, and at Mechlin his efforts were at first completely thwarted by the civil power. As a last resort he was forced to excommunicate the procurator-general, and the members of the General Council; the magistrates replied by imposing on him an enormous fine, and the heavy penalty of "aegre et igni interdictio". Through the personal intervention of Philip V, who esteemed the prelate highly, the quarrel was ended without encroachment on the rights of the Church, or dishonour to their devout champion.

J. FORGET.

Preconisation (Lat. praecominire, to publish, from praeced, herald, public crier). This word means: (1) in its strict juridical sense the ratification in a public consistory of the choice made by a third person of a titular of a consistory benefice, for example a bishopric. The pope approves the election or postulation of the titular made by a chapter, or ratifies the presentation of a candidate made by the civil power. This preconization is preceded by an informative process, which according to the present discipline is raised by the Consistorial Congregation for the countries not under Congregation of Propaganda, but the information is furnished by the Secretary of State if the question at hand refers to sees situated outside of Italy; (2) some authors define preconization as the report made in the above-mentioned informative process by the cardinals at the consistory (Bargilli, "Praelationes juris canonici", 1, Paris, 1907, 467); (3) again, preconization is considered the announcement to the pope that in an approaching consistory a cardinal will propose in the name of the head of a State the candidate whom the latter himself has designated for a see (Andre, "Cours de droit canon", s. v. Preconization, V, Paris, 1806, 345, 346); (4) finally, the pope ratifies, in a consistory, a nomination of a bishop which has been made previously by a decree of the Consistorial Congregation. According to a Decree of the Congregation of Rites, 8 June, 1901 ("Acta Apostolice Sedis", 1910, 596) the date of the anniversary of the election of a bishop is no longer that of his preconization in the consistory, but that of the decree or letter by which he is appointed.

A. VAN HOYE.

Precursor, The. See JOHN THE BAPTIST, SAINT. Predella. See Altar, sub-title, ALTAR-STEPS.

Predestinarianism is a heresy not unfrequently met with in the course of the centuries which reduces the eternal salvation of the elect as well as the eternal damnation of the reprobate to one cause alone, namely to the sovereign will of God, and thereby excludes the free co-operation of man as a secondary factor in anything about a happy or unhappy future in the life to come.

I. CHARACTER AND ORIGIN.—The essence of this heretical predestinarianism may be expressed in these two fundamental propositions which bear to each other the relation of cause and effect: (a) the absolute will of God as the sole cause of the salvation or damnation of the souls of men, regardless of his merits or demerits; (b) as to the elect, it denies the freedom of the will under the influence of efficacious grace while it puts the reprobate under the necessity of committing sin in consequence of the absence of grace. The system in its general outlines may thus be described: the condition with which some are saved while others are damned can only be answered by assuming an eternal, absolute, and unchangeable decree of God. The salvation of the elect and the damnation of the reprobate are simply the effect of an unconditional Divine decree by which God has determined that all men in eternal life are to attain this end with metaphysical necessity, and it is only such a necessity that can guarantee the actual accomplishment of the Divine will, God must give them during their lifetime efficacious graces of such a nature that the possibility of free resistance is systematically excluded, while, on the other hand, the will, under the influence of grace, is borne along without reluctance to do what is right and is forced to persevere in a course of righteousness to the hour of death. But from all eternity God has also made a decree whereby he has positively predestined the non-elect to eternal torments. God can accomplish this design only by denying to the reprobate irresistibly efficacious graces and impelling their will to sin continually, thereby leading them to eternal damnation. As it is owing to the will of God alone that heaven is to be filled with saints, without any regard to their merits, so also it is owing to that same will of God that hell is to be filled with the reprobate, without any regard to their foreseen sins and merits and with such only as God has eternally, positively, and absolutely destined for this sad lot. In any case sin is the most efficacious means of infallibly bringing to hell, with some appearance of justice, those who are positively destined for reprobation. In its further development Predestinarianism admits of a harsher and of a milder form according as its adherents by insisting exclusively on the salvific will of God push positive reprobation into the background or endeavour to hide under a pious phraseology what is a heretical doctrine, i. e. God's supposed relation towards sin. And yet this element forms the keystone of the whole system. For the all-important question is: Can God the all just absolutely and positively predestine anyone to hell? Can the all holy incite and force anyone to sin with the intention of leading him to eternal damnation? The denial of the universality of the salvific will of God and the restriction of the merits of Christ's passion to the elect are only natural consequences of the fundamental principles of this heresy.

The history of dogma shows that the origin of heretical Predestinarianism must be traced back to the misunderstanding and misinterpretation of St. Augustine's views relating to eternal election and reprobation. But it was only after the death of the great doctor of the Church (430) that this heresy sprang up in the Church of the West, whilst that of the East was preserved in a remarkable manner from these extravagances. Beginning from the anonymous author of the second part of the so-called "Predestinarian" (see below) up to Calvin, we find that all the adherents of this heresy have taken refuge behind the stout shield of Augustinism. The question therefore to be answered at present is this: Did St. Augustine teach this heresy? We do not wish to gainsay that St. Augustine's view of the nature of his life fell a victim to an increased rigorism which may find its psychological explanation in the fact that he was called to be the champion of Christ-
tian grace against the errors of Pelagianism and Semi-pelagianism. Still the point at issue is whether he, in order to establish the predestination of the just, gave up his former position and took refuge in the so-called "irresistible grace" (gratia irresistibilis) which in the just and in those who persevere destroys free will (as it did at first to Francis of Harnack) but also a few Catholic scholars (Rottmanner, Kolb) even up to the present time have thought that they found in his works evident indications of such a strange view. But among most of the modern students of St. Augustine an opinion is constantly gaining ground that the African Doctor at no time of his life, not even shortly before his death, embraced this dangerous view of grace which Jansenism claims to have inherited from him. Even the Protestant writer E. F. K. Muller emphasizes the fact that St. Augustine, with regard to the liberty of the will in all conditions of life, "never renounced his repudiation of Manichaeism, a step which had caused him so severe a struggle" (Realeunck. für Prot. Theologie, Leipzig, 1894, XV, 580).

The great theologian, by using the expressions "unavoidable and invincible" (De corrept. et gratia XIII, xxxviii: indeclinabiliter et insuperabiliter) does not refer, as is clear from the context, to Divine grace but to the weak will which by means of grace is made invincible against self-will, wittingly, even to the point of being unconquerable, without, however, thereby losing its native freedom. Other difficult passages must likewise be explained in view of the general fundamental principles of the saint's teaching and especially of the context and the logical connection of his thoughts (cf. J. Mausbach, "Die Ethik des hl. Augustinus", II, 25 sq.; Freiburg,1909). Hence St. Augustine, when towards the end of his life he wrote his "Retractations", did not take back anything in this matter, nor had he any reason for doing so. He is authentically against his religion and far from the thoughts of the great doctor than the idea that the Most Holy could in any way or for any purpose force the human will to commit sin. It is true that God foresees sin, but He does not will it; for He must of necessity hate it. St. Augustine draws a sharp distinction between praecire and prædestinatione, and to him the infallible foreknowledge of sin is by no means synonymous with a necessitating predestination to sin. Thus he says of the factum responsio divina (De gratia, gr. 12, 14): quidem prescirent, quid esset Adam factum injuste; prescirent tamen, non ad hoc cogente" (cf. Mausbach, ibid., 208 sq.). The question whether and in how far St. Augustine assumed, in connexion with the absolute predestination of the elect, what was later on known as the negative repudiation of the damned, is quite distinct from our present question and has nothing to do with heretical Predestinarianism.

II. THE WORK "PRÆDESTINATUS"—That the Pelagians after their condemnation by the Church had a great interest in exaggerating to their ultimate heretical consequences those ideas of St. Augustine which may easily be misunderstood, that thereby they might under the mask of orthodoxy be enabled to combat more effectually not only the ultra-Augustinian but also the whole Catholic doctrine on grace, is clearly proved by a work written by an anonymous author of the fifth century. This work, edited by Sirmond for the first time in 1843 in Paris under the title of "Prædestinatus" (P. L, LIII, 570 sq.), is divided into three parts. The first part contains a catalogue of the Divine foreknowledge (Divina praestantia) and the Heresia Prædestinorum) and is nothing less than a barefaced plagiarism from St. Augustine's work "De Heresibus" and original only in those passages where the writer touches on personal experiences and Richard Cheneau. "Die Widerrufung der Häretiker im 1. Buch des Prædestinatus", Leipzig, 1903). The second part is according to the assertion of the author of the work a treatise circulated (though falsely) under the name of St. Augustine which fell into his hands; this treatise, under the form of a violent polemic against the Pelagians, puts forward ultra-Augustinian views on predestination which thus affords a dangerous weapon to the Augustinian to attack both the one-sided exaggerations of the pseudo-Augustine and the Catholic doctrine on grace of the true St. Augustine. As a matter of fact this favourable opportunity is seized upon by the author in the last part, where he reveals his real purpose. Adhering closely to the text of the second part he subtly endeavours to refute not only Predestinarianism but also (and this is the main point), St. Augustine's doctrine on grace, although for the sake of appearances and to protect himself from attack, Pelagianism is nominally condemned in four anathemata (P. L., LIII, 655). All the older literature concerning this inferior compilation may now be considered as superseded by the recent scholarly work of Schubert, "Der sog. Prædestinatus, ein treuestes Pelagianbuch" (Leipzig, 1903). We need not, however, entirely accede to the opinion of Schubert that the whole pseudo-Augustine produced in the second part is nothing but a clumsy forgery of the anonymous Pelagian author who was merely making use of material more easily to overthow. But there can be no doubt as to the meaning, the spirit, and purpose of this manoeuvre. We have to do with a skilful defence of Pelagianism against the doctrine on grace as taught by St. Augustine. And the authorship points rather to Rome than to southern Gaul (perhaps Arnobius the Younger). This work, written probably about A.D. 440, emanated from the group of Pelagians closely associated with Julian of Eclanum. It is not impossible that a friend of Julian living in Rome was the one who made use of the material favourable to Pelagianism by means of this work.

III. LUCIDUS AND GOTTSCHALK.—Toward the middle of the fifth century heretical Predestinarianism in its harshest form was defended by Lucidus, a priest of Gaul, about whose life in all other respects history is silent. According to his view God positively and absolutely predestined some to eternal death and others to eternal life, in such a manner that the latter have not to do anything to secure eternal salvation. Divine grace in its turn carries them on to their destiny. As the Non accept men are destined for hell, Christ did not die for them. When Faustus, Bishop of Riez, ordered Lucidus to retract, he abandoned his scandalous propositions and even notified the Provincial Synod of Arles (c. 472) of his submission (cf. Mansi, "Concil. Collect. VII, 1010). It seems that within half a century the Predestinarian heresy had completely died out in Gaul, since the Second Synod of Orange (529), although it solemnly condemns this heresy, still speaks only hypothetically of its adherents; "si sunt, qui tantum malum credere velit" (cf. Denzinger, "Enchirid.", tenth ed., Freiburg, 1908, n. 200). The controversy was not renewed till the ninth century when Gottschalk of Orbais, appealing to St. Augustine, assailed in a scandalous manner the doctrine of predestination, which affected the whole Frankish Empire. Rabanus Maurus (about 840) wrote a refutation of Gottschalk's teaching and clearly summed it up in the following proposition (P. L. CXII, 1580 sqq.): As the elect, predestined by God and not born of necessity, is saved of necessity, so in the same way the eternally reproube become the victims of predestination to hell. Through the efforts of Hilduin, Archbishop of Reims, the Synod of Quierzy (849) compelled Gottschalk, whose enforced stay in the Order of St. Bene-
diet had cost him dearly, to burn his writings with his own hand, and silenced him by imprisoning him for life in the monastery of Hauvilliers near Reims. At the present time, however, scholars, because of two extant professions of faith (P. L., CXXI, 347 sq.), are inclined to free the eccentrio and obscure Gottschalk, the great scourge of Charlemagne, and to interpret in an orthodox sense his ambiguous teaching on “double predestination” (gemina predestinatio). It was an unhappy thought of Hincmar to ask the pantheistic John Scottus Eriugena to write a refutation of Gottschalk, as this only served to sharpen the controversy. To the great sorrow of Charles the Bald, the whole western part of the Frankish Empire resounded with the disputes of bishops, theologians, and even of some synods. The Canons of the Provincial Synod of Valence (855) may be taken as an expression of the then prevailing views on this subject; they emphasize the fact that God has merely foreseen from eternity and not foreordained the sins of the reprobrate, although it remains true that in consequence of their foreseen demerits he has decreed to them the eternal punishment (cf. Denzinger, loc. cit., nn. 320–25). It was essentially on this basis that the bishops of fourteen ecclesiastical provinces finally came to an agreement and made peace in the Synod of Tousy held in 860 (Schner, “Hinkmar von Reims”, 66 sq., Freiburg, 1896). The whole Middle Ages is generally characterized on the one hand by the repudiation of the one by the repudiation of the principle of positive reprobation for hell and of predestination for sin, on the other by the assertion of Divine predestination of the elect for heaven and the co-operation of free will; this teaching was only for a short time obstructed by Thomas Bradwardine, and the so-called precursors of the Reformation (Wyclif, Hus, Jerome of Prague, John Wessel).

IV. THE REFORMATION. Heretical Predestinarians received a new and vigorous impulse at the outbreak of the Reformation. Luther denied the freedom of the will in sinful man as also freedom in the use of grace, logically placed the eternal destiny of the individual solely and entirely in the hands of God, who without any regard to merit or demerit metes out heaven or hell just as He pleases. Zwingli endeavoured to obviate the grave consequences that this principle necessarily produces in the moral order by the vain excuse that “just as God incited the robber to commit murder, so also He forces the judge to pronounce sentence of death of him who has been legally condemned” (De provid. Dei, “Opera”, ed. Schuler, IV, 113). Melancthon taught expressly that the treason of Judas was just as much the work of God as was the vocation of St. Paul (cf. Trident, Sess. VI, can. vi, in Denzinger, n. 816). Calvin is the most logical advocate of Predestinarianism pure and simple. Absolute and positive predestination of the elect for eternal life, as well as of the reprobate for hell and for sin, is one of the chief elements of his whole doctrinal system and is closely connected with the prevailing thought of “the glory of God.” Strongly religious by nature and with an instinct for systematizing, but also with a harsh unyielding character, Calvin was the first to weave the scattered threads which he thought he had found in St. Paul, St. Augustine, Wyclif, Luther, and Bucer, into a strong network which enveloped his entire system of practical and theoretical Christianity. Thus he became in fact the systematizer of the dread doctrine of predestination. Although Calvin does not deny that man has all in paradise, however, the fall of Adam to an absolute and positive degree of God (Instit., I, 15, 8; III, 23, 8).

Original sin completely destroyed the freedom of will in fallen man; nevertheless, it is not the motive of the decretum horribile, as he himself calls the decree or reprobation. Calvin is an uncompromising Supralapsarian. God for His own glorification, and without any regard to original sin, has created some as “vessels of mercy”, others as “vessels of wrath”.

Those created for hell He has also predestined for sin, and whatever faith and righteousness they may exhibit are at most only apparent, since all graces are only means of grace and cannot make a person who has been predestined for heaven. The Jansenistic doctrine on redemption and grace in its principal features is not essentially different from Calvinism. The unbearably harshness and cruelty of this system led to a reaction among the better-minded Calvinists, who regarded such views as heretical and derogatory to the sanctity. Even so strictly Calvinistic a soul as Holland, Infralapsarianism, i.e. the connexion of reprobation with original sin, gained ground. England also refused to adhere to the strictly Calvinistic Lambeth Articles (1546), although in later years their essential features were embodied in the famous Westminster Confession of 1647, which was so strenuously defended by the English Puritans. On the other hand the Presbyterian Church in the United States has returned to the Jansenistic view that the harshness of Calvinism in its revision of its Confession in May, 1903, in which it also emphasizes the universality of the Divine love and even does not deny the salvation of children who die in infancy.

J. Pohle.

Predestination (Lat. prae, destinare), taken in its widest meaning, is every Divine decree by which God, owing to His infallible prescience of the future, has appointed and ordained from eternity all events occurring in time, especially those which directly proceed from, or at least are influenced by, man’s free will. It includes all historical facts, as for instance the appearance of Napoleon or the foundation of the United States, and particularly the turning-points in the history of the Church, such as the election of the Popes, or the election of Mary to the Divine Motherhood. Taken in this general sense, predestination clearly coincides with Divine Providence and with the government of the world, which do not fall within the scope of this article (see PROVIDENCE, DIVINE). I. NOTION OF PREDESTINATION.—Theology restricts the term to those Divine decrees which have reference to the supernatural end of rational beings, especially of man. Considering that not all men reach their supernatural end in heaven, but that many are eternally lost through their own fault, there must exist a twofold predestination: (a) one to heaven for all those who die in the state of grace; (b) one to the pains of hell for all those who depart in sin or under God’s displeasure. However, according to present usage, to which we shall adhere in the course of the article, it is better to call the latter decree the Divine “reprobation”, so that the term predestination is reserved for the Divine decree of the happiness of the elect.

A. The notion of predestination comprises two essential elements: the foreknowledge (praeconsciencia), and His immutable decree (decetrum) of eternal happiness. The theologian who, following in the footsteps of the Pelagians, would limit the Divine activity to the eternal foreknowledge and exclude the Divine will, would at once fall into Deism (q. v.), which asserts that God, having created all things,
PREDESTINATION

leaves man and the universe to their fate and refrains from all active interference. Though the purely natural gifts of God, as descent from pious parents, good education, and the providential course of nature, may also be called effects of predestination, still, strictly speaking, the term implies only those blessings which lie in the supernatural sphere, as sanctifying grace, all actual graces, and among them in particular those which are in an unceasing and a happy death. Since in reality only those reach heaven who die in the state of justification or sanctifying grace, all these and only these are numbered among the predestined, strictly so called. From this it fol- lows, contrary to reckoning among those who die in baptismal grace, as well as those adults who, after a life stained with sin, are converted on their death-beds. The same is true of the numerous pre- destined who, though outside the pale of the true Church of Christ, yet depart from this life in the state of grace, as catechumens. Protestants in good faith to schismatics, Jews, Mahomedans, and pagans. Those fortunate Catholics who at the close of a long life are still clothed in their baptismal innocence, or who after many relapses into mortal sin persevere till the end, and not indeed more esteemed than the rest, are more signally favoured than the last-named categories of persons.

But even when man's supernatural end alone is taken into consideration, the term predestination is not quite clear. This phrase is used with a sense. This need not astonish us, seeing that predestination may comprise wholly diverse things. If taken in its adequate meaning (praedestinatio adequadta or complete), then predestination refers to both grace and glory as a whole, including not only the election to glory as the end, but also the election to grace as the means, the vocation to the faith, justification, and final perseverance, with which a happy death is inseparably connected. This is the meaning of St. Augustine's words (De dono persever., xxxv): "Praedestinatio nihil est aliud quam prescienencia et preparatio beneficiorum, quibus certissime liberantur [i.e. salvantur], quicunque liberantur." (Predestination is nothing else than the foreknowledge and forordaining of these gracious gifts which make certain the salvation of all who are thereby saved. But the two concepts are not the same in meaning and glory may be separated and each of them be made the object of a special predestination. The result is the so-called adequate predestination (praedestinatio adequadta or complete), either to grace alone or to glory alone. Like St. Paul, Augustine often speaks of the two separate from the celestial glory (loc. cit., xix): "Praedestinatio est gratiae praeparatio, gratia vero jam ipsa donatio." (It is evident, however, that this (inadequate) predestination does not exclude the possibility that one chosen to grace, faith, and justification goes nevertheless to hell. Hence we may disregard it, since it is at bottom simply another term for the universality of God's salvific will and of the distribution of grace among all men (see Grace). Similarly eternal election to glory alone, that is, without regard to the other, but the two concepts are not the same in meaning and indicated as (inadequate) predestination. Though the possibility of the latter is never clearly to the reflecting mind, yet its actuality is strongly contested by the majority of theologians, as we shall see further on (under sec. II). The probability of predestination is only that the real dogma of eternal election is exclusively concerned with adequate predestination, which embraces both grace and glory and the essence of which St. Thomas (I, Q. xxiii, a. 2) defines as: "Praeparatio gratiae in presenti et gloria in futurum," (the foregoing in grace and the consequent in glory in the future.)

In order to emphasize how, mysterious and unapproachable is Divine election, the Council of Trent calls predestination a "hidden mystery." That predestination is indeed a sublime mystery appears not only from the fact that the depths of the eternal counsel cannot be fathomed, it is even externally visible in the inequality of the Divine choice. The unequal standard by which baptismal grace is distributed among infants and efficacious graces among adults is hidden from our view by an impenetrable veil. Could we gain a glimpse at the reasons of this inequality, we should at once hold the key to the solution of the mystery itself, which would be concealed, not but the child of the neighbour? Why is it that Peter the Apostle rose again after his fall and persevered till his death, while Judas Iscariot, his fellow-Apostle, hanged himself and thus frustrated his own election? Though all children who die in the baptismal grace, as well as those adults who, after a life stained with sin, are converted on their death-beds, are the same is true of the numerous pre- destined who, though outside the pale of the true Church of Christ, yet depart from this life in the state of grace, as catechumens. Protestants in good faith to schismatics, Jews, Mahomedans, and pagans. Those fortunate Catholics who at the close of a long life are still clothed in their baptismal innocence, or who after many relapses into mortal sin persevere till the end, and not indeed more esteemed than the rest, are more signally favoured than the last-named categories of persons.

But even when man's supernatural end alone is taken into consideration, the term predestination is not quite clear. This phrase is used with a sense. This need not astonish us, seeing that predestination may comprise wholly diverse things. If taken in its adequate meaning (praedestinatio adequadta or complete), then predestination refers to both grace and glory as a whole, including not only the election to glory as the end, but also the election to grace as the means, the vocation to the faith, justification, and final perseverance, with which a happy death is inseparably connected. This is the meaning of St. Augustine's words (De dono persever., xxxv): "Praedestinatio nihil est aliud quam prescienencia et preparatio beneficiorum, quibus certissime liberantur [i.e. salvantur], quicunque liberantur." (Predestination is nothing else than the foreknowledge and forordaining of these gracious gifts which make certain the salvation of all who are thereby saved. But the two concepts are not the same in meaning and glory may be separated and each of them be made the object of a special predestination. The result is the so-called adequate predestination (praedestinatio adequadta or complete), either to grace alone or to glory alone. Like St. Paul, Augustine often speaks of the two separate from the celestial glory (loc. cit., xix): "Praedestinatio est gratiae praeparatio, gratia vero jam ipsa donatio." (It is evident, however, that this (inadequate) predestination does not exclude the possibility that one chosen to grace, faith, and justification goes nevertheless to hell. Hence we may disregard it, since it is at bottom simply another term for the universality of God's salvific will and of the distribution of grace among all men (see Grace). Similarly eternal election to glory alone, that is, without regard to the other, but the two concepts are not the same in meaning and indicated as (inadequate) predestination. Though the possibility of the latter is never clearly to the reflecting mind, yet its actuality is strongly contested by the majority of theologians, as we shall see further on (under sec. II). The probability of predestination is only that the real dogma of eternal election is exclusively concerned with adequate predestination, which embraces both grace and glory and the essence of which St. Thomas (I, Q. xxiii, a. 2) defines as: "Praeparatio gratiae in presenti et gloria in futurum," (the foregoing in grace and the consequent in glory in the future.)

In order to emphasize how, mysterious and unapproachable is Divine election, the Council of Trent calls predestination a "hidden mystery." That predestination is indeed a sublime mystery appears not only from the fact that the depths of the eternal counsel cannot be fathomed, it is even externally visible in the inequality of the Divine choice. The unequal standard by which baptismal grace is distributed among infants and efficacious graces among adults is hidden from our view by an impenetrable veil. Could we gain a glimpse at the reasons of this inequality, we should at once hold the key to the solution of the mystery itself, which would be concealed, not but the child of the neighbour? Why is it that Peter the Apostle rose again after his fall and persevered till his death, while Judas Iscariot, his fellow-Apostle, hanged himself and thus frustrated his own election? Though all children who die in the baptismal grace, as well as those adults who, after a life stained with sin, are converted on their death-beds, are
PREDESTINATION

II. THE CATHOLIC DOGMA.—Reserving the theological controversie for the next section, we deal here only with those articles of faith relating to predestination and reprobation, the denial of which would involve heresy.

A. The Predestination of the Elect.—He who would place the reason of predestination either in man alone or in God alone would inevitably be led into heretical conclusions about eternal election. In the one case the error concerns the last end, in the other the means to that end. Let it be noted that we do not speak of the "cause" of predestination, which would be either the efficient cause (God), or the instrumental cause (grace), or the final cause (God's honour), or the primary meritorious cause, but of the reason or motive which induced God from all eternity to elect certain definite individuals to grace and glory. The principal question then is: Does the natural merit of man exert perhaps some influence on the Divine election to grace and glory? If we recall the dogma of the absolute gratuity of Christian grace, our answer must be outright negative (see GRACE). To the further question whether Divine predestination does not at least take into account the supernatural good and the supernatural destiny of the justified (see MARR). Those who, like the Pelagians, seek the reason for predestination only in man's naturally good works, evidently misjudge the nature of the Christian heaven, which is an absolutely supernatural destiny. As Pelagianism puts the whole economy of salvation on a purely natural basis, so it regards predestination in particular not as a special grace, much less as the supreme grace, but only as a reward for natural merit.

The Semipelagians, too, depreciated the gratuity and the strictly supernatural character of eternal happiness by ascribing at least the beginning of faith (fides) and final perseverance (dones perseverantiae) to the exertion of man's natural powers, and not to the initiative of preventing grace. This is one class of heresies which, slighting God and His grace, makes all salvation depend on man alone. But not all the errors into which man falls by making God alone responsible for everything, and abolishing the free cooperation of the will in obtaining eternal happiness. This is done by the advocates of heretical Predestinarism (q. v.), who, instead of putting form in Calvinism and Jansenism. Those who seek the reason of predestination solely in the absolute Will of God are logically forced to admit an irresistibly efficacious grace (gratia irresistibilis), to deny the freedom of the will when influenced by grace and wholly to reject supernatural merits (as a secondary reward for eternal happiness). And since in this system eternal damnation, too, finds its only explanation in the Divine will, it further follows that concurrence acts on the sinful will with an irresistibly force, that there the will is not really free to sin and that merits cannot be the cause of eternal damnation.

Between these two extremes the Catholic dogma of predestination keeps the golden mean, because it regards eternal happiness primarily as the work of God and His grace, but secondarily as the fruit and reward of meritorious actions of predestination. The process of predestination consists of the following five steps: (a) the first grace of vocation, especially faith as the beginning, foundation, and root of justification; (b) a number of additional, actual graces for the accomplishment of justification; (c) justification itself as the beginning of the state of grace and love; (d) final perseverance or at least the grace of a happy death; (e) lastly, the admission to eternal bliss. If it is a truth of Revelation that there are many who, following this path, seek and find their eternal salvation with infallible certainty, then the existence of one or more predestinates is proved (cf. Matt. xvi, 19; Acts, xx, 13). St. Paul (Rom. viii, 28 sq.): "we know that to them that love God, all things work together unto good, to such as, according to his purpose, are called to be saints. For whom he foreknew, he also predestinated to be made conformable to the image of his Son; that he might be the first born amongst many brethren. And whom he predestinated, them he also called. And whom he called, them he also justified. And whom he justified, them he also glorified." (Cf. Eph., i, 4-11.) Besides the eternal "foreknowledge" and foreordaining, the Apostle here mentions the various steps of predestination: "vocation", "justification", and "glorification". This belief has been faithfully preserved by Tradition through all the centuries, especially since the time of Augustine.

There are three other qualities of predestination which must be noticed, because they are important and interesting from the theological standpoint: its immutability, the definiteness of the number of the predestined, and its subjective uncertainty.

The immutability of the Divine decree, is based both on the infallible foreknowledge of God that certain, quite determined individuals will leave this life in the state of grace, and on the immutable will of God to give precisely to these men and to no others eternal happiness as a reward for their supernatural merits. Consequently, the whole future membership of heaven, down to its minutest details, with all the different measures of grace and the various degrees of happiness, has been irrevocably fixed from all eternity. Nor could it be otherwise. For if it were possible that a predestined individual should after all be cast into hell or that one not predestined should in the end reach heaven, then God would have been mistaken in his foreknowledge of future events; He would no longer be omniscient. Hence the Good Shepherd says of his sheep (John, x, 28): "And I give them life everlasting; and they shall not perish forever, and no man shall pluck them out of my hand." But we must beware of conceiving the immutability of predestination either as fatalistic in the sense of a second cause or as a revocable pretense for divine intervention in arbitrary fates. God's infallible foreknowledge cannot force upon man unavoidable coercion, for the simple reason that it is at bottom nothing else than the eternal vision of the future historical actuality. God foresees the free acts of creation and the liberty of a nation solely in order to shape it. Whatever may promote the work of our salvation, whether our own prayers and good works, or the prayers of others in our behalf, is so regarded included in the infallible foreknowledge of God and consequently in the scope of predestination (cf. St. Thomas, I, Q. xxiii, a. 8). It is in such practical considerations that the ascetical maxim (falsely ascribed to St. Augustine) originated: "Si non est predestinatus, fac ut predestineris" (if you are not predestined, so act that you may be predestined). Strict theology, it is true, cannot approve this bold saying, except in so far as the original decree of predestination is conceived as at first a hypothetical decree, which is afterwards changed to an absolute and irrevocable decree by the prayers, good works, and perseverance of those who are predestined, and according to the word of the Apostle (II Pet., i, 10): "Wherefore, brethren, labour the more, that by good works you may make sure your calling and election." God's unerring foreknowledge and foreordaining is demonstrated in the Bible by the book of Daniel and the "Book of Life" (liber vivus in Βιβλίον ζωής). This book of life is a list which contains the names of
all the elect and admits neither additions nor erasures. From the Old Testament (cf. Ex., xxxii, 32; Ps., cxviii, 29) this symbol was taken over into the New by Christ and His Apostle Paul (cf. Luke, x, 20; Heb., xii, 23), and enlarged upon by the Evangelist John in his Apocalypse (cf. Apoc., xi, 15). "Thou shalt not enter into it anything defined, but they that are written in the book of life of the Lamb" (cf. Apoc., xiii, 5; xvi, 15). The correct explanation of this symbolic book is given by St. Augustine (De civ. Dei, XX, 18): "its theory with all fallacy, vitum est" (the foreknowledge of God, which cannot err, is the book of life). However, as intimated by the Bible, there exists a second, more voluminous book, in which are entered not only the names of the elect, but also the names of all the faithful on earth. Such a metaphorical book is supposed wherever the possibility is hinted at that a name, though entered, might again be stricken out (cf. Apoc., iii, 5: "and I will not blot out his name out of the book of life") (cf. Ex., xxxii, 33). The name will be mercilessly cancelled when a Christian sinks into infidelity or godlessness and dies in his sin. Finally there is a third class of books, wherein the wicked deeds and the crimes of individual sinners are written, and by which the reprobate will be judged on the last day to be cast into hell (cf. Apoc., xiv, 12) (cf. Apoc., xvi, 12). The books are opened: and the dead were judged by those things which were written in the books, according to their works". It was this grand symbolism of Divine omniscience and justice that inspired the soul-stirring verse of the Dies irae, according to which we shall all be judged by books: "Liber scriptus praestitit: in quo totum contumetur". Regarding the book of life, cf. St. Thomas, I, Q. xxiv, a. 1-3, and Heinrich-Gutberlet, "Dogmat. Theologie", VIII (Mainz, 1897), § 6.

(2) The second quality of predestination, the definiteness of the number of the elect, follows naturally from the first. For if the eternal counsel of God regarding the predestined is unchangeable, then the number of the predestined must likewise be unchangeable and definite, subject neither to additions nor to cancellations. Anything indefinite in the number would ipso facto imply a lack of certitude in God's knowledge and would destroy His omniscience. Furthermore, the very nature of omniscience demands that not only the abstract number of the elect, but also the individual number, be counted. It would be idle and useless to undertake calculations and to guess at so and so many millions or billions of predestined. St. Thomas (I, Q. xxiii, a. 7) mentions the opinion of some theologians that as many men will be saved as there are fallen angels, while others held that the number of predestined will equal the number of the faithful angels.

Lastly, there were optimists who, combining these two opinions into a third, made the total of men saved equal to the unnumbered multitudes of created spirits. But even granted that the principle of our calculation is correct, no mathematician would be able to figure out the absolute number on a basis so vague, since the number of angels and demons is an unknown quantity to us. Hence, "the best answer", rightly remarks St. Thomas (I, Q. xxiii, a. 7, ad 3, lect.: ac de electo): "By relative number is meant the numerical relation between the predestined and the reprobate. Will the majority of the human race be saved or will they be damned? Will one-half be damned, the other half saved? In this question the opinion of the rigorists is to be also referred to, but not the more refined and just of the elect". By relative number is meant the numerical relation between the predestined and the reprobate. Will the majority of the human race be saved or will they be damned? Will one-half be damned, the other half saved? In this question the opinion of the rigorists is to be also referred to, but not the more refined and just of the elect". Pointing to several texts of the Bible (Matt., vii, 14; xxii, 14) and to sayings of great spiritual doctors, the rigorists defend as probable the thesis that not only most Christians but also most Catholics are doomed to eternal damnation. Almost repulsive in its tone is Massillon's sermon on the small number of the elect. Yet even St. Thomas (loc. cit., a. 7) asserted: "Pauciores sunt qui salvantur" (only the smaller number of men are saved). And a few years ago, when the Jesuit P. Castelain ("Le rigorme, le nom d'êtres et la doctrine du salut", 2nd ed., Brusseis, 1899) impugned the arguments of the preachers opposed by the Redemptorist P. Godts ("De pauci- tate salvadorum quod docuerat sancti", 3rd ed., Brusseis, 1899). That the number of the elect cannot be so very small is evident from the Apocalypse (vii, 9). When one hears the rigorists, one is tempted to repeat Dieringer's bitter remark: "Can it be that the Church actually exists in order to people hell"? The truth is that neither the one nor the other can be proved from Scripture or Tradition (cf. Heinrich-Gutberlet, "Dogmat. Theologie", Mainz, 1897, VIII, 363 sqq.). But supplementing these two sources by arguments drawn from reason we may safely defend as probable the opinion that the majority of Christians, especially of Catholics, will be saved. If we add to this relative number the overwhelming majority of non-Christians (Jews, Mahommedans, books are opened: and the dead were judged by those things which were written in the books, according to their works". It was this grand symbolism of Divine omniscience and justice that inspired the soul-stirring verse of the Dies irae, according to which we shall all be judged by books: "Liber scriptus praestitit: in quo totum contumetur". Regarding the book of life, cf. St. Thomas, I, Q. xxiv, a. 1-3, and Heinrich-Gutberlet, "Dogmat. Theologie", VIII (Mainz, 1897), § 6.

(3) The third quality of predestination, its subjective uncertainty, is intimately connected with its objective immutability. We know not whether we are reckoned among the predestined or not, as Christ can say: God alone knows it. When the Reformers, confounding predestination with the absolute certainty of salvation, demanded of the Christian an unshaken faith in his own predestination if he wished to be saved, the Council of Trent opposed to this pre- sumptuous belief the canon (Sess. VII, can. xvii): "S. q. d., hominem renatum et justificatum teneri ex fine ad credendum, se certo esse in numero predestinatorum, anathema sit" (if any one shall say that the regenerated and justified man is bound as a matter of faith to believe that he is saved, he shall be anathema). In truth, such a presumption is not only irrational, but also unscriptural (cf. I Cor., iv, 4; ix, 27; x, 12; Phil., ii, 12). Only a private revelation, such as was vouchsafed to the peni- tent thief on the cross, could give us the certainty of faith: hence the Tridentine Council insists (loc. cit., cap. xii): "Nam nisi ex speciali revelacione aceri non potest, quo Deus sibi elegant" (for apart from a special revelation, it cannot be known whom God has chosen). However, the Church contends only that blasphemous presumption which boxes a flimsy certainty in matters of predestination. To say that there exist probable signs of predestination which exclude all excessive anxiety is not against her teaching. The following are some of the criteria set down by the theologians: purity of heart, pleasure in prayer, patience in suffering, frequent reception of the sacraments, love of Christ and His Church, devotion to the Mother of God, etc.

3. The Reproduction of the Damned. An uncondi- tional and positive nunnuntary and no one was sent only to hell, but also to sin, was taught especially by Calvin (Instit., III, c. xxi, xxiii, xxiv). His followers in Holland split into two sects, the Supralapsarians and the Infralapsarians (q. v.), the latter of whom regarded original sin as the motive of positive condemnation, while the optimists regarded this factor and derived the Divine decree of reproba-
tion from God's inescutiable will alone. Infralapsarianism was also held by Jansenius (De gratia Christi, I, X, c. ii, xi sq.), who taught that God had preordained from the massa damnata of mankind one part to eternal bliss, the other to eternal pain, decreeing at the same time to deny to those positively damned the necessary Faculty by which they might be converted and keep the commandments; for this reason, he said, Christ died only for the predestinates (cf. Denzinger, "Enchiridion", n. 1092-6). Against such blasphemous teachings the Second Synod of Orange in 529 and again the Council of Trent had pronounced the ecclesiastical anathema (cf. Denzinger, n. 829). This condemnation was perfectly justified, because the heresy of Predestinarianism, in direct opposition to the clearest texts of Scripture, denied the universality of God's salvific will as well as of redemption through Christ (cf. Wis., xi, 24 sq.; 1 Tim., ii, 1 sq.), nullified God's mercy towards the hardened sinner (Ezech., xxxiii, 11; Rom., ii, 4; II Pet., iii, 9), did away with the freedom of the will to do good or evil, and hence with the merit of good actions and the guilt of the bad, destroyed at the same time the Divine attributes of wisdom, justice, veracity, goodness, and sanctity. The very spirit of the Bible should have sufficed to deter Calvin from a false explanation of Rom., ix, and his successor Beza from the exegetical maltreatment of 1 Pet., ii, 7-8. After weighing all the Biblical texts bearing on the problem of predestination, the Segate arrives at the conclusion: "There is no election to hell parallel to the election to grace: on the contrary, the judgment pronounced on the impotent supposes human guilt." It is only after Christ's salvation has been rejected that reproduction follows" ("Realencyk. für prot. Theol.", XV, 586, Leipzig, 1904). As regards the Fathers of the Church, there is only St. Augustine who might seem to cause difficulties in the proof from Tradition. As a matter of fact he has been accused by both Calvin and Jansenius as favoring their view of the question. This is not the place to enter into an examination of his doctrine on predestination; but that his works contain expressions which, to say the least, might be interpreted in the sense of a negative predestination, cannot be doubted. Probably toning down the sharper words of the master, his "best pupil", St. Prosper, in his apology against Vincent of Lerin (Resp. ad 12 ob. Vincentium), thus explained the spirit of Augustine: "Voluntate exierunt, voluntate ceicerunt, et quia præseti sunt caseri, non sunt predestinati; essent autem predestinati sicut sunt, si nec persuevere in holiness; hence, God's predestination is for many the cause of perseverance, for none the cause of falling away." Regarding Tradition cf. Petavius, "De Deo", X, 7 sq.; Jacquin in "Revue de l'histoire ecclésiastique", 1904, 206 sq.; 1906, 725 sq.

We may now briefly summarize the whole Catholic doctrine, which is in harmony with our reason as well as our moral sentiments. According to the doctrinal decisions of general and particular synods, God infallibly foresees and immaculately preordains from eternity all future events (cf. Denzinger, n. 1784), all fatalistic necessity, however, being barred and human liberty remaining intact (Denz., n. 607). Consequently man is free whether he accepts grace and does good or whether he rejects it and does evil (Denz., n. 797). Just as it is God's purpose, so is it an ingredient of grace, as well as an ingredient of eternal grace, that in the work of redemption it must be conceived as the result or effect of supernatural merit. This concession is important, since without it the theory would be intrinsically impossible and theologically untenable.

But what about the positive proof? The theory can find decisive evidence in Scripture only on the supposition that predestination to heavenly glory is unequivocally mentioned in the Bible as the Divine motive for the special graces granted to the elect. Now, although there are several texts (e.g. Matt., xxiv, 22 sq.; Acts, xi, 18 sq.), no one can deny that they have been positively strained in this sense, yet these passages lose their imagined force in view of the fact that other explanations, of which there is no lack, are either possible or even more probable. The ninth chapter of the Epistle to the Romans in particular is
claimed by the advocates of absolute predestination as that "classical passage wherein St. Paul seems to represent the eternal happiness of the elect not only as the work of God's purest mercy, but as an act of the most arbitrary will, so that grace, faith, justification must be regarded as sheer effects of an absolute, Divine decree (cf. Rom., ix, 18: "Therefore he hath mercy on whom he will; and whom he will, he hardeneth"). Now, it is rather daring to quote one of the most difficult and obscure passages of the Bible as a "classical text" and then to base on it an argument for bold speculation. To be more specific, it is impossible to draw the details of the picture in which the Abrahamic covenant of God to the whole Jewish nation, "pot, -1, over the clay, of the same lump, to make one vessel unto honour, and another unto dishonour" (Rom., ix, 21), without falling into the Calvinistic blasphemy that God predestined some men to hell and sin just as positively as he pre-elect others to eternal life. It is not even admissible to read into the Apostle's thought a negative reprobation of certain men. For the primary intention of the Epistle to the Ephesians is to insist on the gratitude of the vocation to Christian faith from the Jew, and the possession of the Mosaic Law and the carnal descent from Abraham gave to the Jews an essential preference over the heathens. But the Epistle has nothing to do with the speculative question whether or not the free vocation to grace must be considered as the necessary condition of a priori kept to those not predestined out of heaven, though He did not create them for hell.

A second milder opinion (e. g. de Lemos, Gotti, Gonet), appealing to the Augustinian doctrine of the massa damnata, finds the ultimate reason for the exclusion from heaven in original sin, in which God could, without being unjust, leave as many as He saw fit. The third and mildest opinion (as Goudin, Graveson, Billuart) derives reprobation not from the accident of the human action at the time of an "effectual election to heaven"; they represent God as having decreed ante prævisam merita to leave those not predestined in their sinful weakness, without denying them the necessary sufficient graces; thus they would perish infallibly (cf. Innreucker Zeitschrift für Kath. Theologie, 1883, p. 19, 20). Whatever view one may take regarding the intentional probability of negative reprobation, it cannot be harmonized with the dogmatically certain universality and sincerity of God's salvific will. For the absolute predestination of the blessed is at the same time the absolute will of God "not to elect" a priori the rest of mankind (Suarez), or which comes to the same, "to exclude them from heaven" (Gonet), in other words, not to save them. While certain Thomists (as Bañez, Alavés, Gonet) accept this conclusion so far as to degrade the "voluntas salvifica" to an ineffectual "velletas", which conflicts with evident doctrines of revelation, Suárez labours in the sweat of his brow to safeguard the sincerity of God's salvific will, even towards those who are reprobated negatively. But in vain. How can that will to save be called serious and sincere which has decreed from all eternity the metaphysical impossibility of salvation? He who has been reprobated negatively, may exhaust all his efforts to attain Salvation: it is vain his nothing. Moreover, it is necessary (in order to realize intellectual activity) to be compelled to frustrate the eternal welfare of all excluded a priori from heaven, and to take care that they die in their sins. Is this the language in which Holy Writ speaks to us? No; there we meet an anxious, loving father, who will not "that any should perish, but that all should return to penance" (II Pet., iii, 9). Leseux rightly says that it would be indifferent to him whether he was numbered among those reprobated positively or negatively; for, in either case, his eternal damnation would be certain. The reason for this is that, in the present age, or less, the entire exclusion from heaven means for adults practically the same thing as damnation. A middle state, a merely natural happiness, does not exist.

C. The Theory of Predestination post prævisam merita.—This theory, defended by the earlier Scholastics (Alexander of Hales, Albertus Magnus), as well as by the majority of the Molinists, and warmly recommended by St. Francis de Sales "as the truer and more attractive opinion", has this as its chief distinction, that it is free from the logical necessity of swallowing negative reprobation. The problem of absolute predestination ante prævisam merita in two points: first, it rejects the absolute decree and assumes a hypothetical predestination to glory; secondly, it does not reverse the succession of grace and glory in the two orders of
eternal intention and of execution in time, but makes glory depend on merit in eternity as well as in the order of time. This hypothetical decree reads as follows: Just as in time eternal happiness depends on merit as a condition, so I intended heaven from all eternity only for foreseen merit. It is only by reason of the man's foreknowledge of those merits that the hypothetical decree is changed into an absolute: These and no others shall be saved.

This view not only safeguards the universality and sincerity of God's salutifer will, but coincides admirably with the teachings of St. Paul (cf. II Tim., iv, 8), who knows that "there is laid up for me an undying crown in heaven a crown of justice", which "the just judge will render" (reddet, δικαιοσύνη) to him on the day of judgment. Clearer still is the inference drawn from the sentence of the universal Judge (Matt., xxv, 34 sq.): "Come, ye blessed of my Father, possess you the kingdom prepared for you from the foundation of the world. For I was hungry, and you gave me to eat," etc. As the "possessing" of the Kingdom of Heaven in time is here linked to the works of mercy as a condition, so the "preparation" of the Kingdom of Heaven in eternity, that is, predestination to grace, is conceived as dependent on the foreknowledge that good works will be performed. The same conclusion follows from the parallel sentence of condemnation (Matt., xxv, 41 sq.): "Depart from me, ye cursed fire" which was prepared for the devil and his angels. For I was hungry, and you gave me not to eat," etc. For it is evident that the "everlasting fire of hell" can only have been intended from all eternity for sin and demerit, that is, for neglect of Christian charity, in the same sense in which it is filled with "fire". Concluding a pari, we must say the same of eternal bliss. This explanation is splendidly confirmed by the Greek Fathers. Generally speaking, the Greeks are the chief authorities for conditional predestination dependent on foreseen merits. The Latins, too, are so unanimous on this question that St. Augustine is practically the only adversary in the Occident. St. Hilary (In Ps. lxxv, n. 5) expressly describes eternal election as proceeding from "the choice of merit" (ex merití selecto), and St. Ambrose teaches in his paraphrase of Rom., viii, 29 (De fide, V, vi, 83): "Non enim ante prædestinavit quam præsevit, sed quorum merita praeservavit, corrum praemia prædestinavit" (He did not predestinate before He foreknew, but for those whose merits He foresees, He predestinated the reward). To conclude: no one can accuse us of having ignored the fact that predestination has a firmer basis in Scripture and Tradition than the opposite opinion.

J. POHLE.

Preface (Lat. Prefatio), the first part of the Eucharistic prayers (Anaphora or Canon) in all rites, now largely adapted from the rest by the singing of the "Sanctus".

I. History.—According to the idea of thanksgiving which, after the example of the Last Supper (Matt., xxvi, 27; Mark, xiv, 23; Luke, xxiii, 17, 19; I Cor., i, 24), forms a fundamental element of the Eucharistic service, all liturgies begin the Anaphora, the consecration-prayer, by thanking God for His benefits. Almost every account we have of the early liturgy mentions this (Didache ix, 2-3; x, 2-4; xiv, 1; Justin, I Apol., i, 6; LXX, iii, 5; LXXVII, vii). Clement of Rome quotes a less developed form of these prayers that the hypothetical decree is changed into an absolute: These and no others shall be saved.

This view not only safeguards the universality and sincerity of God's salutifer will, but coincides admirably with the teachings of St. Paul (cf. II Tim., iv, 8), who knows that "there is laid up for me an undying crown in heaven a crown of justice", which "the just judge will render" (reddet, δικαιοσύνη) to him on the day of judgment. Clearer still is the inference drawn from the sentence of the universal Judge (Matt., xxv, 34 sq.): "Come, ye blessed of my Father, possess you the kingdom prepared for you from the foundation of the world. For I was hungry, and you gave me to eat," etc. As the "possessing" of the Kingdom of Heaven in time is here linked to the works of mercy as a condition, so the "preparation" of the Kingdom of Heaven in eternity, that is, predestination to grace, is conceived as dependent on the foreknowledge that good works will be performed. The same conclusion follows from the parallel sentence of condemnation (Matt., xxv, 41 sq.): "Depart from me, ye cursed fire" which was prepared for the devil and his angels. For I was hungry, and you gave me not to eat," etc. For it is evident that the "everlasting fire of hell" can only have been intended from all eternity for sin and demerit, that is, for neglect of Christian charity, in the same sense in which it is filled with "fire". Concluding a pari, we must say the same of eternal bliss. This explanation is splendidly confirmed by the Greek Fathers. Generally speaking, the Greeks are the chief authorities for conditional predestination dependent on foreseen merits. The Latins, too, are so unanimous on this question that St. Augustine is practically the only adversary in the Occident. St. Hilary (In Ps. lxxv, n. 5) expressly describes eternal election as proceeding from "the choice of merit" (ex merití selecto), and St. Ambrose teaches in his paraphrase of Rom., viii, 29 (De fide, V, vi, 83): "Non enim ante prædestinavit quam præsevit, sed quorum merita praeservavit, corrum praemia prædestinavit" (He did not predestinate before He foreknew, but for those whose merits He foresees, He predestinated the reward). To conclude: no one can accuse us of having ignored the fact that predestination has a firmer basis in Scripture and Tradition than the opposite opinion.

J. POHLE.

Preface (Lat. Prefatio), the first part of the Eucharistic prayers (Anaphora or Canon) in all rites, now largely adapted from the rest by the singing of the "Sanctus".
 enumeration was ruthlessly curtailed. Nothing is left of it but a most general allusion: “always and everywhere to thank thee.” But the mention of the angels which introduces the Sanctus had to remain. This, comparatively detailed, still gives the Roman Preface the character of a prayer chiefly about the angels and making them appeal to lead up to the Sanctus, as the medieval commentators notice (e.g. Durandus, ibid.). The corresponding prayer in Apost. Const. (VIII) contains two references to the angels, one at the beginning where they occur as the first creatures (VIII, viii), the other at the end of the commemoration of Old Testament history (originally written in connexion with Isaiah’s place in it) where they introduce the Sanctus (XII, xxvii). It seems probable that at Rome with the omission of the historical allusions these two references were merged into one. The “Et ideo” then would refer to the omitted list of favours in the Old Testament (at present it has no special point). So we should have one more connexion between the Roman Rite and the Apost. Const. (see Mass, Liturgy of).

The other special note of our Preface is its changeability, as the Eastern rites change with the calendar. The Preface was originally as much part of the variable Proper as the Collect. The Leonine book supplies Prefaces all through for the special Masses; it has 267. The Gelasian has 54; the Gregorian has 10 and more than 100 in its appendix at the varied time of the feast, the season, and so on, take the place of the old list of Divine favours.

The Preface after the ekphronia of the Secret (Per omnia saecula saeculorum—here as always merely a warning) begins with a little dialogue of which the versicles or equivalent forms are found at this place in every liturgy. First “Dominus vobiscum” with its answer. The Eastern rites, too, have a blessing at this point. “Sursum corda,” is one of the oldest known liturgical formulas (St. Cyril of Jerusalem calls it its ancestor, De Orat. Dom., xxxi, in “P. L.”, IV, 539; Apost. Const.: Άει τοι θεος). It is an invitation to the people eminently suitable just before the Eucharistic prayer begins. Brightman (infra, 556) quotes it as its source Lam., iii, 41. Equally old and universal is the people’s answer: “Habemus [corda] ad Dominum,” a Greek construction: Ἐξελειψεν τοις κήρυξιν, meaning: “we have them [have placed them] before the Lord.” Then follows the invitation to give thanks, which very early included the technical idea of the Agnus Dei: “Hic quantus Deus nostro.” So with verbal variations in all rites. The Jewish form of grace before meals contains the same form: “Let us give thanks to Adonai our God” (in the Mishna, Berachoth, 6). The people answer with an expression that again must come from the earliest age: “Dignum et iustum est.” This, too, is universal (Apost. Const.: Αέας και δίκαιο). Its reduplication suggests a Hebrew parallelism. The celebrant takes up their word and begins the Preface always: “Vere dignum et iustum est” (Apost. Const.: Αέας και δίκαιο). The beginning of the Roman Preface is approached among the others most nearly by Alexandria. Our present common Preface represents the simplest type, with no allusions; all the old list of benefits is represented by the words per Christum Domum nostrum only. This is the Preface given in the Canon of the Gelasian book (ed. Wilson, p. 234). Most of the others are formed by an intercalation after these words. But there are three types of Preface distinguished by their endings. the first and commonest form: “et quos tuae gentis tuum laudant angelis;” the second (e.g. for Christmas, Epiphany, Easter, Ascension, Apostles) begins that clause: “et ideo cum angelis;” the third and rarest (now only the Whit-Sunday Preface) has: “Quaupropter . . . sed et supremae virtutis.” The Trinity Preface (“quum laudant angelis”) is a variant of the first form. All end with the word: “dicens” (which in the first and second form refers to us, in the third form to the angels), and the people (choir) continue the sentence: “Sanctus, Sanctus, Sanctus,” etc.

There are many prayers for other occasions (chiefly blessings and exorcisms) framed on the model of the Preface, with the “Sursum corda” dialogue, beginning “Vere dignum” etc. From their form one would call them Prefaces, though not Eucharistic ones. Such are the ordination prayers, two at the consecration of a chalice and of the form of palms (but this was once a Mass Preface), part of the Good Friday calendar paschale. They are imitations of the Eucharistic Preface, apparently because its solemn form (perhaps its chant) made it seem suitable for other specially solemn occasions too. The Leonine, Gelasian, and Gregorian Sacramentaries have our ordination prayers, but not yet cast into this Preface form. But through the Middle Ages the Preface form was very popular, and a great number of blessings are composed in it. This is only one more case of the common medieval practice of modelling one on the other, already well-known and popular (compare the hymns written in imitation of older ones, etc.).

II. THE PREFACE IN OTHER RITES.—The name “Prefatio” is peculiar to Rome and to Milan, which is borrowed it from Rome. In other rite it is a special name; it varies from the reciting clausules of the Anaphora. In the Syrian-BYZANTINE-ARMENIAN group, though this part of the Eucharistic prayer is still longer than the Roman Preface and has kept some list of benefits for which we thank God, it is comparatively short. The Byzantine Liturgy of St. Basil has a fairly long form. As usual, there is a much shorter form in that of St. Chrysostom. The Armenian form is the shortest and mentions only the Incarnation. But in the Egyptian group of literigies the whole Intercession prayer is included in what we should call the Preface, so that this part is very long. This is the most conspicuous characteristic of the Alexandrine type. The prayer begins in the usual way with a list of favours (creation of the world and of man, the Prophets, Christ). Then abruptly the Intercession begins (“And we pray and entreat thee . . .”). Joined to it are the memory of the saints and the diptychs of the dead, and then, equally abruptly, the thanksgiving is resumed and introduces the Sanctus (Brightman, 125-132). It is clear that this represents a parallel composition; the two quite different prayers are joined awkwardly, so that the seams are still obvious. In all Eastern rites the Preface, or rather what corresponds to it, is said silently after the first dialogue, ending with an ekphronia to introduce the Sanctus (the Alexandrine Liturgy has another ekphronia in its Intercession). This accounts for its being less important an element of the service than in the West.

The Gallican Rite had a great number of Prefaces for feasts and seasons. Even more than in the old Roman Liturgy this prayer was part of the Proper, like the Collects and Lessons. But it was not called a Preface. Its heading in the Gallican books was “Contestation or “Inmolatio”; the Mozarabic title is “Inlatio.” These names really apply to the whole Eucharistic prayer and correspond to the Eucharistic Preliatio—Αναφορα. But as later parts had special names (“Vere Sanctus,” “Post sanctus,” “Post pridie,” etc.), these general titles were eventually understood as meaning specially the part before the Sanctus. Now the Mozarabic “Inlatio” may be compared to the “Prefatio.” The Ambrosian Rite has adopted the Roman name. Both Mozarabic and Ambrosian Rites keep the Gallican peculiarity of a vast number of Prefaces printed each as part of the Proper. III. PRESENT USE.—The Roman Missal in use contains eleven Prefaces. Ten are part of the Gregorian Sacramentary, one (of the Blessed Virgin) was added XII.—25
under Urban II (1088-99). The pope himself is reported to have composed this Preface and to have sung it first at the Synod of Guastalla in 1094. The Prefaces form a medium between the unchanging Ordinary and the variable Proper of the Mass. They vary so little that they are printed in the Ordinary first, then the solemn chants, and lastly without notes for Low Mass. The appendix of the new (Vatican) Missal gives a third "more solemn" chant for each, merely a more ornate form of the solemn chant, to be used ad libitum. Other services, such as orations and antiphons, may be used for semidoubles and all days above that, the simple chant for simples, ferials, and requiems. The Preface is chosen according to the usual rule for all proper parts of the Mass. If the feast has one, that is used; otherwise one takes that of the octave or season. All days that do not fall under one of these classes have the common Preface, except that Sundays have no special Preface have that of the Holy Trinity (so the decree of Clement XIII, 3 Jan., 1759). Requiems have the common Preface unless the latter come under a category that has a proper Preface (e.g., the Blessed Virgin, the Holy Ghost, etc.). Votive Masses of the Blessed Sacrament, like Corpus Christi, have the Christmas Preface. There are other extensions of use (the Preface of the Holy Cross for the Sacred Heart) all of which are noted in the Proper of the Missal and in the Calendar.

At High Mass after the last Secret the celebrant at the middle of the altar, resting his hands on it, sings: "Per omnia saecula saeculorum" etc.; the choir answers each versicle. He lifts up the hands at "Sursum corda"; at "Gratias agamus" he joins them, and at "Deo nostro" looks up and then bows. At "Vere dignum" he lifts the hands again and sings the Preface through. After "dicentes" he joins them and bowing says: "Sanctus" in a low voice, while the choir does "Sanctus" and deacon and subdeacon stand in line behind him all the time, bow with him at the words "Deo nostro", and come to either side to say the Sanctus with him. At Low Mass all is said, the server answering the dialogue at the beginning.

ADRIAN FORTESCUE.

Prefect Apostolic (Lat. prefectus, one put over or in charge of something). During the last few centuries it has been the practice of the Holy See to entrust to govern prefects Apostolic or through vicars Apostolic (q.v.) many of the territories where no dioceses with resident bishops exist. These territories are called respectively prefectures Apostolic and vicariates Apostolic. This had been done by the Holy See when, owing to local circumstances such as the character and customs of the people, the hostility of the civil powers and the like, it was doubtful whether an episcopal see could be permanently established. The establishment of a mere prefecture Apostolic in a place supposed that the Church has attained there only a small development. A fuller development leads to the foundation of a vicariate Apostolic, i.e., the intermediate stage between a prefecture and a diocese. A prefect Apostolic is of lower rank than a vicar Apostolic where his powers are more limited, nor has he, as a rule, the episcopal character which distinguishes the office of prefect Apostolic.

The duties of a prefect Apostolic consist in directing the work of the mission entrusted to his care; his powers are in general those necessarily connected with the ordinary administration on either through, as, for instance, the assigning of missionaries, the making of regulations for the good management of the affairs of his mission, and the like. Moreover, he has extraordinary faculties for several cases reserved otherwise to the Apostolic See, such as, for instance, absolutions from censures, dispensations from matrimonial impediments. He has also the faculty of consecrating all sorts of clergy and may appoint one of his prefects Apostolic have the power to administer Confirmation. The prefects Apostolic we have described so far have independent territories and are subject only to the Holy See. Sometimes, when a vicariate or a prefect extends over a very large territory, in which the Catholic population is unequally distributed, the Holy See places a portion of such territory in charge of a prefect Apostolic; in which case the faculties of the prefect are more limited, and in the exercise of his office he depends on the vicar Apostolic or the bishop, whose consent he needs for the exercise of many of his functions, and to whose supervision his administration is subject. With a view to still better protecting the authority of the local vicar Apostolic or bishop, it was proposed in the Vatican Council I, and this second class of prefects Apostolic having jurisdiction over districts within the limits of a vicariate or diocese of the Latin Rite; but the existing order remained unchanged owing to the interruption of that Council. As to the same class of prefects Apostolic we turn the limits of territory subject to Oriental Churches, Leo XIII abolished them by a Decree of the Propaganda (12 Sept., 1896), and substituted superioros with special dependence on the delegates Apostolic (q.v.) of the respective places. There are (1911) 66 prefectures Apostolic: Europe 5; Asia, 17; North America, 3; South America, 11; Africa, 23; Oceania, 7.

HECTOR PAPI.

Prelate, real, the incumbent of a prelate, i.e., of an ecclesiastical office with special and stable jurisdiction in foro externo and with special precedence over other ecclesiastical offices; or, honorary, with distinctions of this ecclesiastical dignity without the corresponding office. The prelates were the bishops as possessors of jurisdiction over the members of the Church based on Divine institution. Apart from the bishops, the real prelates include: (1) those who have quasi-episcopal, independent jurisdiction over a special territory separated from the territory of a diocese (prelates nullius, ec. dicæssae), as is the case with the abbots and provostships of monasteries (Monte Cassino, Einsiedeln, St. Maurice in the Canton of Wallis, etc.); (2) those who have offices in the administration of dioceses, and enjoy an independent proper jurisdiction (q.v.); (3) abbots of churches and dean of cathedral and collegiate churches, in so far as these still exercise a regular, personal jurisdiction; (3) abbots and provosts of monasteries, even when they administer no territory with episcopal powers, but have merely the permanent, supreme distinction of the monastery; (4) titular bishops, both those who in the vicariates Apostolic and other territories have supreme ecclesiastical administration, and those who have simply received episcopal consecration wanly, but in some district, such as certain officials in Rome, consecrating bishops, etc.; (5) the highest officials of the Roman office, who, in addition to the cardinals, have a prominent share in the direction of the Roman Church, and thus have a special relation to the person of the pope. In consequence of the extent of the government of the
PREMARE

Church, prelates are especially numerous in Rome. The most important real prelates of the papal curia are: the three highest officials of the Camera Apostolica (vice-camerlengo, general auditor, and treasurer) and the Majordomo of the Vatican, who are called prelati di fioccati; of the congregations of cardinals, the regent of the papal chancery, the regent of the Apostolic Penitentiary, and certain other high officials of the congregations of the Curia; the members of the College of Prothonotaries and the Secretaries of different pontifical offices, the librators of the Rota, the clerics of the Apostolic Chamber, the referendaries of the Signatura iustitiae. In the Constitution "Inter ceteras" of 11 June, 1659, Alexander VII laid down the conditions under which these real prelates might be accepted. The dignity granted by the pope with mention of these conditions is called "pallatia gratiae"; when the conditions are not imposed in the granting of the dignity, the latter is called "pallatia gratiae". To the real prelates belong, therefore, although no jurisdiction in foro externo is attached to their offices, all the highest palace officials, who perform a constant service in the retinue of the pope and in the offices created for that purpose. The appointment to these offices confers itself of the pallatia. Such officials are the Papal Secretaries, the Papal Briefs to the Princes, the substitute of the Cardinal Secretary of State, the four real Prviry Chamberlains, the real Privy Chamberlains of the Papal. A second class of prelates are those on whom the title and rank of the pallatre are conferred with the corresponding dress and privileges, but without the office or court service otherwise attached to it. These are: (1) the prothonotaries apostolic other than the real ones (see PROTHONOTARY APOSTOLIC); (2) the papal domestic prelates (Antistes urbani, Prefatus urbani, Prefatus domiciliaego), who are appointed for this dignity by papal Brief. They have the right of wearing the garb of a pallifer and of using in Solemn High Mass the special candle (palomatoria), but not the other episcopal insignia (Motu Proprio "Inter multiplices" of Pius X, 21 February, 1906, in "Acta S. Sedis", XXXVII, 491 sq.); (3) the supernumerary privy chamberlains (Camerieri soggetti sopra-numerarii), honorary chamberlains and chapelains, who may on special occasions wear the same garb as the officiating chamberlains of the pope. All prelates have the palliate and the palmerico and" corresponding to their rank; the higher prelates enjoy in addition other special privileges.

J. P. KIRSCH.

PREAM, JOSEPH HENRI MARIE DE, missionary and sinologist, b. at Cherbourg, 17 July, 1866; d. at Macao, 17 Sept., 1876, entered the Society of Jesus 17 Sept., 1883, and departed for China in 1898. He laboured as missionary chiefly in the province Kwang-si. When the Christian faith was proscribed by Emperor Yong-tehing, in January, 1724, Preamere was confined with his colleagues in Canton. A still more rigorous edict banished him to Macao. In his studies he studied preeminently the Chinese language and literature of China, and in the opinion of sinologists he, of all the older missionaries, best succeeded in grasping their peculiarities and beauties. His principal work is entitled: "Notitia lingue sinica"; in simple form it explains the rules and usage of the vulgar Chinese language (son shue), and the style of the written, literary language (shen ching).

The famous English sinologist, James Legge, calls it "an invaluable work, of which it could hardly be possible to speak in too high terms". Father de Preamere is one of the missionaries who furnished Father Jean-Baptiste du Halde with the material for his "Description de la Chine" (Paris, 1735). In particular, the translation of the maxims taken from the Shu-King (Du Halde, II, 298); of eight odes of the Shi-King (II, 308); of the "Orphan of the House of Tehao", a Chinese tragedy (III, 341); the notes on the course of sturm, the principal examinations of the Chinese (II, 251); etc. In "Lettres Ecrites et Curieuses" we find many letters from Father Preamere. A much greater number of his writings are unedited, preserved, chiefly, at the National Library (Paris). Many undertake the defence of figurism, the name of a singular system of interpreting ancient Chinese books, the inventor of which was Father Joachim Bouvet. Following Bouvet, Preamere thought he discovered in the Chinese King (see CHINA) suggestions of Christian doctrines and allusions of Christ. The written Chinese words and characters are to him but symbols that hide profound senses. The three or four missionaries who adopted these ideas of Bouvet were never authorized to publish them in book form. The most important work with Briefs (Paris, 1736). In their defence has only recently appeared, translated from the Latin by M. Bonnetty, director of the "Annales de philosophie chretienne", aided by Abbé Femi, formerly missionary to China. It is entitled: "Vestiges choisis des principaux dogmes de la religion chretienne, extraits des anciens livres chinois" (Paris, 1878).

JOSEPH BRUCKER.

Premonstratensian Canons (CANONICI REGULARI PREMONSTRATENSIAE), founded in 1120 by St. Norbert at Prémontré, near Laon, France. At this time they were not bound by any fixed rule, charity being the bond of their union, and the example of their founder their rule of life. After a while Norbert unfolded his mind to his disciples on the special regulations which they should adopt. He told them that he had already consulted learned bishops and holy abbots; that by one (papal Brief) corresponding to their rank; the higher prelates enjoy in addition other special privileges.

JOSEPH BRUCKER.
active. The third is taken from monastic orders. The fourth and fifth are characteristic of the Norbertine Order, to which these special devotions were bequeathed by the founder. The title of the first chapter of the "Statuta" stood "De tremendo altaris Sacramento" seems to indicate that devotion to the Holy Eucharist as a sacrifice and sacrament should have the first place in the heart of a son of St. Norbert. St. Norbert wrote an Office in honour of the Immaculate Conception which contained these words: "Ave, Virgo que Spiritu Sancto praestans, de tanto priimis parentis pecatto triumphaet innoxia!" The third chapter of the "Statuta" begins with these words: "Horre Deiparvae Virginis Marie, candidi ordinis nostris patrone singularis, etc." Guerenuvus writes in his commentaries on the Canticle of Canticles: "St. Norbert, with his holy Order, was raised up by Divine Providence to render conspicuous in his day two mysteries, the Blessed Sacrament of the Holy Eucharist and the Immaculate Conception of Our Lady!" As to the second end, zeal for souls, the preface to the "Statuta" says: "Our order is the propagation of God's glory; it is zeal for souls, the administration of the sacraments, service in the Church of God. Our order is to preach the Gospel, to teach the ignorant, to have the direction of parishes, to perform pastoral duties, etc." At the time of St. Norbert the clergy were not numerous, often badly prepared for their ministry, and dissolute. Besides, there were numerous villages without church or priest. What was needed was clerical training to impart piety and learning. The order has had its share in the carrying out of this good work, and the Norbertine Abbeys have been called, by popes and bishops, seminaries of missionaries and parochial priests. From its beginning the order has accepted parishes which were, and are still, in many cases administered by Norbertine priests. That the Order of Prémontré may obtain benefits and administer parishes was again decided by Benedict XIV by the bull "Onerose" of 1 Sept., 1750.

COMPOSITION OF THE ORDER.—The order is composed of three classes: (1) priests and clerics under an abbot or provost; (2) nuns who embrace the Rule of St. Norbert; (3) members of the Third Order of St. Norbert. Both priests and nuns have a two years' probation and make solemn vows. In some countries Norbertine nuns are now bound by simple vows only. In the monasteries there are laybrothers and lay-sisters who likewise make their vows. The members of the Third Order, originally called fraters et sorores ad succurrendum, wear the white scapular under their secular dress and have certain prayers to say. The spirit of the Third Order must be in the spirit of the order itself. The members should possess zeal for souls, love mortification, and practise and promote an enlightened devotion to the Holy Eucharist and to the Immaculate Conception. As a modern author (Duhayon, S.J., "La Mine d'or", o. v.) says: "By the institution of the Third Order in the midst of the stream of temporal anxieties St. Norbert has introduced a religious life into the family circle. Nobody before St. Norbert had conceived the idea of realizing in the Church a state of life which should be midway between the cloister and the world, or in other words a religious order which should penetrate into the Christian homes. . . . After his death it was raised up by Divine providence to render conspicuous in his day two mysteries, the Blessed Sacrament of the Holy Eucharist and the Immaculate Conception of Our Lady!"

PROPAGATION OF THE ORDER.—The order increased very rapidly and, in the words of Adrian IV, it spread its branches from sea to sea. Before the death of Hugh of Fossé, the first abbot general, a hundred and twenty abbots were present at the general chapter. Of the first disciples, nearly all became abbots of new foundations, and several were raised to the episcopal dignity. Development was chiefly effected through the foundation of new abbeys, but several religious communities already in existence wished to adopt the constitutions of Prémontré and were affiliated to and incorporated with the order. We have already mentioned the names of abbots founded in France, Belgium, and Germany, but colonies of the sons of St. Norbert were sent to nearly every country of Europe and even to Asia. In 1198 King Stephen gave them his castle on the River Keret and thus was founded the Abbey of St. Stephen, the first of numerous monasteries in Hungary. Almaric, who had shared in St. Norbert's apostolate, a famous preacher in aid of the Crusades, was requested by Innocent II to preach in Palestine. At the head of a chosen band of Norbertines he set out in 1136 for the Holy Land, where he was hospitably received by Fulco of Anjou, King of Jerusalem, and by William, Patriarch of the Holy City. In the following year Almaric founded the Abbey of St. Abacuc. Henry Zdik, Bishop of Olmütz, made a pilgrimage to Jerusalem. He visited St. Abacuc and was so much touched by what he saw that he became a member of the order. Having obtained some religious, he returned to Bohemia and founded the Abbey of Mount Sion at Strahov, Prague. This abbey flourished so much that it was called the seminary of bishops, hav-
ing given eight bishops to Prague, ten to Olmütz, and some to other dioceses; a patriarch (John of Luxembourg) to Aquileia, and a cardinal (John of Prague) to the Church. In 1141 the Abbey of St. Samuel, near Jerusalem, was founded, and in 1145 another at Bethlehem. The abbeys were destroyed in 1187, when many of the religious were put to the sword or perished in the fire. Those who escaped founded a new community at Acre; but in 1291 this place, the last stronghold of the Christians in the Holy Land, was conquered by the Sultan Saraf, who cut to pieces the abbot, Egide de Marle, and put the religious, twenty-six in number, to death.

In 1147 Abbot Walter of Laon led a colony to Portugal and founded the Abbey of St. Vincent, near Lisbon. Two young Spanish noblemen, Sanchez de Assures and Dominic, while travelling in France, who had heard of St. Norbert. They went to Prémontré and were admitted to the order by St. Norbert. Ordained priests, they were sent to preach in Spain, and having obtained a few religious from La Case-Dieu, an abbey in Gascony, they founded in 1143 the Abbey of Retorta, the first in Spain. In 1149 the mother-house sent some of its religious to found the Abbey of St. Samuel at Barletta, in Apulia, Italy. At the same time sons of St. Norbert went forth from one abbey or another to found new houses in Great Britain and Ireland, Poland, Denmark, Norway, and even Riga on the Baltic Sea. In addition, sixteen cathedral chapters were composed of Norbertine canons, under a bishop elected by them. One of these was Candida Casa or Whitworth, in Scotland. It is impossible to give the exact number of abbeys, priories, and convents of nuns, so much do the various lists differ from one another. Perhaps the oldest list known is that which was made for the general chapter of 1320, and given by Lepaige. The most complete has been compiled by H. Delisle. There were 1300 abbeys and 500 convents of nuns, without counting the smaller residences, but these figures seem to be much exaggerated. However, whatever these lists may mean, they show the prodigious fecundity of the order during the first two centuries of its existence.

Organization. — The highest authority of the order is centred in the general chapter. The abbot general presides over it, but he owes obedience to it. The abbot general has the power to make the canonical visitation of any abbey, but his abbey is visited by the three principal abbots of the order, viz. by the Abbots of Laon, Floreffe, and Cuisy. The abbots are elected for life in a manner prescribed by the "Statuta". The abbot names his prior and other officials of his canonized or beatified, or who were deemed to have had the note of sanctity. The Rev. Leo Goovaerts, of the Norbertine Abbey of Averbode, Belgium, has since published a "Dictionnaire bio-bibliographique," in which he gives the names of over three thousand authors, a notice of their lives, and a description of the books they had written. George Lienhardt, Abbot of Roggensberg, gives in his "Hagiologia" the names of hundreds of persons whose holiness of life constitutes the brightest ornament of the Order of St. Norbert. Loss of First Fervour; Causes and Remedies.— The spiritual fervour, so remarkable and edifying in the first two centuries, had gradually been growing cold. A number of religious communities were no longer animated by the spirit of St. Norbert. With the disappearance of manual labour, intellectual activity, and certain observances, spiritual progress was retarded and even a kind of spiritual stagnation set in, to the great detriment of these communities. Affluence was another cause of this weakness. The first religious had cleared part of the forests, and by making the land more productive had created more resources, while the charity of benefactors had also increased the revenues, and with this affluence arose also a spirit of worldliness; but another evil was that this affluence excited the rapacity of covetous men in Church and State. The superiors of some houses had become more lax in abolishing abuses, and so irregularities had gradually crept in. Owing to the distance of many houses from the mother-house at Prémontré and also to national aspirations, cohesion, the strength of community had been weakened in the order; already in Saxony, England, and Spain a tendency was observed to form separate congregations with regulations of their own. With the approval of the popes the austere rule, especially with regard to perpetual abstinance from flesh meat.
was mitigated first in 1290, then in the constitutions of 1505, and again in those of 1630, but in spite of these mitigations, the "Statuta" composed and approved in the time of St. Norbert have remained substantially the same as they were in the beginning. At the beginning of the seventeenth century a new spirit seemed to enter the order, but especially in Lorraine, where the venerable Abbot Lailvets succeeded in re-forming forty abbies and in introducing into them the observances of the primitive constitutions. It was seen that the order was full of vitality and doing good and was so powerful that it was necessary to encourage the study of their religious, colleges were established near some university, as at Rome, Louvain, Paris, Cologne, Prague, Madrid, Salamanca, and elsewhere. To these colleges and universities young religious were sent. After the completion of their studies they returned to the abbey, where they taught philosophy and theology.

**Commentary on Orders.**—To speak of one country only, the concordat between Leo X and Francis I in 1516, which gave power to the King of France to nominate bishops, abbots, and other Church dignitaries, was a new era in the history of the order. The time had come when abbies alone, bishops, secular priests, and even laymen were put at the head of an abbey, and sometimes of two or more abbies. They took possession of all the temporalities, and frequently cared nothing for the material and spiritual welfare of the abbey. And this was done when Lutherans and Calvinists were making the fiercest attacks on the Catholic religion, and when earnest men were pleading for reform in Catholic institutions. Hugo, the annalist of the order, who gives the lists of abbies and of the abbots elected by the order or commendatory, shows how far the evil had prevailed for more than two hundred years. Talée (vol. II, 195) in his "Étude sur Prémontré" (Laon, 1874), writes that in 1770, of the 52 Norbertine abbies and priories, 67 were given in commendam and only 25 had abbots or priors of the order.

**Loss of Abbeys.**—Owing to a decree of the general chapter numerous convents of nunns had already disappeared before the end of the thirteenth century. As to abbies and priories the continuous wars in many countries, and in the East the invasions of Tartars and Turks, made community life almost impossible and ruined many abbies. The wars and the heresies of Hus and Luther destroyed several abbies. The Abbey of Episcopia in the Isle of Cyprus was taken by Islam in 1571. The Hussites took possession of several houses in Moravia and Bohemia; the Lutherans, in Saxony, Prussia, Denmark, and Sweden; the Calvinists, in Holland; and Henry VIII in England and Ireland. In Hungary many were destroyed by Solymán. With all these losses the order had still in 1627 twenty-two provinces or circaries, and Liehnardt gives a list of 240 houses still in existence in 1778.

Joseph II of Austria suppressed many houses and put others under commendatory abbots, but Leopold, Joseph's successor, restored nine abbies and with those he incorporated others. The French Revolution suppressed in 1790 all religious houses in France, in 1796 in Belgium, and afterwards all those in the occupied provinces of the Rhine. Only a few houses were still existing (5 in the Austrian Empire, 3 in Russian Poland, and 15 in Spain), but the abbeys in Spain were suppressed by the revolution which convulsed that country in 1833. The dispersed religious of the Belgian Province had long wished to reassemble and form new communities, but they were not allowed to do so under the Dutch Government (1815-30). When Belgium was separated from Holland and made into a separate kingdom, freedom of worship was granted, and the surviving religious, now well advanced in years, revived community life and reconstituted five Norbertine houses in Belgium (see Backx).

The religious of the confiscated abbey of Berne in Holland founded a new abbey, which the Abbey of Berne-Heeswijck has founded St. Norbert's Priory at West De Pere, Wisconsin, U. S. A. To the priory is attached a flourishing classical and commercial college. The Abbey of Grimbergen in Belgium obtained possession of the former Norbertine Abbey of Mondaye in France, and founded a new abbey. Mondaye in turn founded the priories of St. Joseph at Balarin (Department of Gers) and of St. Peter at Nantes. The Abbey of Tongerloo has founded three priories in England, viz.: Crowle, Spalding, and the same abbey was given to Belgian Congo, Africa, where the Prefecture of Ouellé (Welle) has been confined to them. The prefecture has four chief centres: Ilembo, Amadi, Gombori, and Jibar, with many stations attached from each centre. The Abbey of Averbode founded three priories in Brazil (Pirapora, Jaguarão, and Petropolis), with a college attached to each priory. The Abbey of the Park, near Louvain, has also sent to Brazil several priests who have charge of parishes and do missionary work. The Abbey of Grimbergen founded a house of the order at Wetaskiwin, in Alberta, Canada. The Priory of West De Pere has been made independent, with a novitiate of its own. The other priories are attached to the abbey by which they were founded.

In 1856 a new congregation of Norbertine canons, since incorporated with the order, was formed at Frigolet. Frigolet founded Conques and St-Jean de Cole in France, and Storrington and Weston-Bedworth in England. The abbies in Hungary have all become colleges of Norbertine canons, since the religious of these abbies study under Norbertine professors, and also follow the university lectures in order to obtain the diploma required to become professors in one of the six colleges conducted by these abbies. The order also possesses a college in Rome (Via di Monte Tarpco) for Norbertine students at the Gregorian University. The procurator of the order resides at this college, of which he is also the rector. At the death of Lécuy in 1834, the last Abbot General of Prémontré, the order was left with no spiritual head. In 1867 Jerome Zeidler, Abbot of Strakow, was elected, but he died in Rome during the Vatican Council. At a general chapter held in Vienna in 1883 Sigismund Stary, Abbot of Strakow, was elected. At his death he was succeeded by Norbert Schachinger, Abbot of Schlägl, in Austria.

**Statistics.**—The following statistics show the present state of the order in each circary. Particulars are also given having reference to some convents of nunns who, though no longer under the jurisdiction of the order, are or have been related to it. The figures have been taken from printed catalogues published in
December, 1910, or from letters since received. When
the desired information had not arrived in time, a
catalogue of a former year has been consulted.

_Circary of Brabant_ (Belgium and Holland).—Aver-
bode Abbey: priests, 82; clerics and novices, 20; lay
brothers, 36; of these, 27 priests and 21 lay brothers
have been sent to Brazil, and 2 priests and 5 lay broth-
ers to Vejle in Denmark. Grimbergen Abbey: priests,
37; clerics, 5; lay brothers, 7; of these, 4 priests are
in Canada. Park-Louvain Abbey: priests, 44; cler-
ics, 4; of these, 8 priests in Brazil. Postel Abbey:
priests, 25; clerics, 2; of these, 1 priest in Belgian
Congo, and 1 in Brazil. Tongerlo Abbey: priests
77; clerics, 19; lay brothers, 29; of these, 14 priests
and 5 lay brothers are in England; 10 priests and 10
lay brothers in Belgian Congo. Berne-Heeswijk
Abbey: priests, 41; clerics, 12; lay brothers, 9; a
flourishing college with 100 students is attached to the
abbey. St. Norbert’s Priory, West De Pere, Wisconsin,
U. S. A.: priests, 19; clerics, 3; lay brothers, 4;
and a college conducted by the fathers.

_Circary of France._—The Abbey of Mondave and
other houses are confiscated. The dispersed religious
formed a new house at Bois-Seigneur-Isaac, near
Nivelles, Belgium: priests, 27; clerics, 7; lay
brothers, 4.

_Circary of Provence._—The Abbey of Frigolet and
other houses are confiscated. The dispersed religious
bought the former Norbertine Abbey of Lefle. Dinant,
Belgium: priests, 38; clerics, 7; lay brothers, 8; of
these, 4 priests in France; 8 priests and 2 clerics in
England; and 2 priests in Madagascar.

_Circary of Austria._—Geras Abbey: priests, 26;
clerics, 4. Neu-Reisch Abbey in Moravia: priests,
11; clerics, 2. Schlägl: priests, 43; clerics, 3. Sellau
Abbey, Bohemia: priests, 20; clerics, 5. Strahov
Abbey, Prague: priests, 67; clerics, 8. Tepl Abbey,
college for their religious, who study at the University
of Budapest: 17 students are at Budapest, and six
clerics at the University of Fribourg.

_Councils of Norbertine Nuns (the Second Order)._—
Oosterhout Priory, Holland, 48 nuns. Neerpelt
Priory, Belgium, 23 nuns. Bonlieu Abbey, nuns ex-
peled from France, reassembled at Grimbergen,
Belgium, 36 nuns. Le Mesnil-St-Denis Priory, Seine
et Oise, France, 31 nuns. Abbey of St. Sophia, Toro,
Spain, 22 nuns. Abbey of St. Maria near Zamora,
Villanueva de Orbigo, Spain, 16 nuns. Zwierzyniec, near
Cracow, Austrian Poland, 47 nuns. Imbramowice
Abbey, Russian Poland; for a great many years the
nuns were not allowed to admit novices, but some
years ago leave was given with great restrictions by
the Russian government to admit a few. The Abbey
of Czerniwno, where there were only six very old
nuns, was suppressed and the nuns sent to Imbr-
amowice. Several novices were admitted, and at pres-
ent there are at this convent 9 nuns. Priory of Berg
Stins, near Uetnach, in the Diocese of St. Gall, Swit-
zerland, 30 nuns. Convent of Norbertine Nuns,
Third Order, St. Joseph’s at Reiligenberg, near Ol-
mütz, with branch house St. Norbert’s, at Prague.
Premonstratensians. See Premonstratensian Canons.

Premonstré, Abbey of, about twelve miles west of Laon, Department of Aisne, France; founded by St. Norbert. The land had belonged to the Abbey of St. Vincent, to whom it had been given by a former Bishop of Laon. Religious of St. Vincent's had tried in vain to cultivate it. As shown in the charter of donation the place was called, Premonstratensium, or parvum premonstratum. Prémontré, probably from a clearing made in the forest, but the name has easily lent itself to the adapted meaning of locus premonstratus, a place foretold, as for example in the life of St. Godfrey, one of St. Norbert's first disciples (1127): "Vent ad locum vere juxta nomen suum, a Domino premonstratum, euctum et praeestitatum" (Acta SS., 11 January). A venerable tradition says that the Bishop of Laon and St. Norbert visited Prémontré about the middle of January and that the bishop gave the property to St. Norbert, the first January, the feast of the Conversion of St. Paul. At the conclusion of the Council of Liège (1131), Innocent II and St. Norbert came to Laon and remained with Bishop Bartholomew. They also visited the Abbey of Prémontré and were rejoiced to see some five or six monks, clerics, and lay brothers—all united in the observance of their duties under Abbot Hugh of Fosse. In the general chapter of 1141 it was decided to remove the convents of nuns to at least one league's distance from the abbeys of men. Hugh died on 10 Feb., 1161, and was succeeded by Philip, then Abbot of Belval in Argonne. John II founded in 1252 a college or house of studies for Norbertine clerics at the University of Paris.

At the death of Virgilius, forty-third Abbot General of Prémontré, Cardinal Francis of Pisa had intrigued so much at the Court of Rome that he succeeded in being named commendatory Abbot of Prémontré, and in 1535 took possession of the abbey and all its revenues. Cardinal Francis was succeeded by Cardinal d'Este, the pope's legate in France, who held the abbey in commendam until 1572. The "Étude sur Prémontré" (Laon, 1874, 210) calls these two cardinals les fléaux de Prémontré. After the death of Cardinal d'Este a free election was held and Jean Des Pruets, Doctor of the Sorbonne, an earnest and zealous priest, was elected, and in the election of the new abbot by Gregory XIII, 14 Dec., 1572. With admirable zeal and prudence Des Pruets undertook the difficult task of repairing the financial losses and of promoting conventual discipline at Prémontré and other houses of the order. He died 15 May, 1596; and was succeeded by two zealous abbots, Longpré and Gossot; but the latter was succeeded by Cardinal Richelieu, as commendatory abbot. The last abbots general, L'Ecuéy, was elected in 1758. At the French Revolution the confiscation of Prémontré was bought by the town of Cognon, who demolished several buildings and sold the material. Having passed through several hands, the property was bought by Mgr. de Garsignies, Bishop of Laon and Soissons, whose successor sold it to the Department of Aisne, by whom the buildings were converted into an asylum. Of the old abbey as it was from the twelfth to the sixteenth century hardly anything remains, but three large buildings of the seventeenth and eighteenth centuries are still standing. A part of one of these buildings is used as a church, dedicated to St. Norbert. F. M. GEUDENS.

Preparation, Day of. See Paschae.

Presanctified Mass of the. See Good Friday, Holy Week.

Presbyterianism in a wide sense is the system of church government by representative assemblies called presbyteries, in opposition to government by bishops (episcopal system, prelacy), or by congregations (congregationalism, independency). In its narrow sense, Presbyterianism is the name given to the branch of the groups of ecclesiastical bodies that represent the features of Protestantism emphasized by Calvin. Of the various churches modeled on the Swiss Reformation, the Swiss, Dutch, and some German are known as the Reformed; the French as Huguenots (q. v.); those in Bohemia and Hungary by their national names; the Scotch, English, and derived churches as Presbyterian. There is a strong family resemblance between all these churches, and many of them have given their adherence to an “Alliance of the Reformed Churches throughout the World,” the Presbyterian System,” formed in 1876 with the special view of securing interdenominational cooperation in general church work.

I. DISTINCTIVE PRINCIPLES.—The most important standards of orthodox Presbyterianism are the Westminster Confession of Faith, and the Catechisms of 1647 (see Faith, Protestant Confessions of). Their contents, however, have been more or less modified by the various churches, and many of the formulas of subscription prescribed for church officials do not in practice require much in the way of a qualified acceptance of the standards. The chief distinctive features set forth in the Westminster declarations of belief are Presbyterian church government, Calvinistic theology, and absence of prescribed forms of worship.

A. Polity.—Between the episcopal and congregational systems of church government, Presbyterianism holds a middle position, which it claims to be the method of church organization indicated in the New Testament. On the one hand, it declares against hierarchical government, holding that all clergymen are peers one of another, and that church authority is vested not in individuals but in representative bodies composed of lay (ruling) elders and duly ordained (ruling and teaching) elders. On the other hand, Presbyterianism is in reality Congregational independency and asserts the lawful authority of the larger church. The constitutions of most of the churches provide for four grades of administrative courts: the Session, which governs the congregation; the Presbytery, which governs a number of congregations within a limited territory; the Synod, which governs the congregations within a larger territory; and the General Assembly, which is the highest court. Generally the church officers include, besides the pastor, ruling elders and deacons. These officers are elected by the congregation, but the election of the pastor is subject to the approval of the presbytery. The elders with the pastor as presiding officer form the session which supervises the spiritual affairs of the congregation. The deacons have charge of certain temporalities, and are responsible to the session.

B. Theology.—The Westminster Confession gives great prominence to the question of predestination, and favors the infralapsarian view of reprobation. It teaches the total depravity of fallen man and the exclusion of the non-elect from the benediction of God's grace. But within the last thirty years there has been a tendency to mitigate the harsher features of Calvinistic theology, and nearly all the important Presbyterian churches have officially disavowed the doctrines of total depravity and limited redemption.
Some have even gone so far as to state a belief that all who die in families are saved. Such passages of the standards as proclaim the necessity of a union between Church and State and the duty of the civil magistrate to suppress heresy have also to a great extent been eliminated or modified. In its doctrine on the Sacrament the Presbyterian Church is thus, in a latter part of the eighteenth century, substantially, but dynamically or effectually for believers only.

C. Worship.—No invariable forms are recognized in the conduct of public services. Directories of worship have been adopted as aids to the ordering of the various offices but their use is optional. The services are generally characterized by extreme simplicity and consist of hymns, prayers, and readings from the Scriptures. In some of the churches instrumental music is not allowed nor the use of any ornament except to enhance the beauty of Psalms. The communion rite is administered at stated intervals or on days appointed by the church officers. Generally the sermon is the principal part of the services. In Europe and in some American churches the pastor wears a black gown while in the pulpit. Of recent years the missionary societies in the United States and Canada have used a form of Mass and other services according to the Greek liturgy in their missions for Ruthenian immigrants.

II. History.—The Presbyterian, like the Reformed churches, trace their origin to Calvin. The claims to historical continuity from the Apostles through the Waldenses and the Scotch Culeeves have been refuted by Presbyterian scholars. It was in the ecclesiastical republics of Switzerland that the churches holding the Presbyterian polity were first established. John Knox (q. v.), who had lived with Calvin at Geneva, impressed upon the Scottish Reformation the ideas of his master, and may be regarded as the father of Presbyterianism as distinct from the Reformed churches. In 1560 a Conference of Faith which he drew up was sanctioned by the Scotch Parliament, which also ratified the jurisdiction exercised by the General Assembly of the Presbyterian Church. This was the beginning of the Kirk or the Scotch Establishment. There have been many divisions among the Presbyterians of Scotland, but in nearly all the elements of Presbyterianism in that country have been collected into two great churches: the Established Church and the United Free Church (see SCOTLAND, ESTABLISHED CHURCH OF). After Scotland the important centers of Presbyterianism are England, Ireland, Wales, the British colonies, and the United States.

A. England.—There was a strong Presbyterian tendency among certain English Reformers of the sixteenth century. For a moment Lancelot Lawman and Hooper would have reconstructed the church after the manner of Geneva and Zurich, but during the reign of Elizabeth the “prelatical” system triumphed and was firmly maintained by the sovereign. This policy was opposed by the Puritans who included both Presbyterians and Congregationalists. Towards the close of Elizabeth’s reign, the Presbyterians secretly formed an organization out of which grew in 1572 the first English presbytery. During the reigns of James I and Charles I the struggle between the Church of England and the Church of Scotland continued. In 1647 the Long Parliament abolished the presbytery and Presbyterianism was established as the national religion. In the same year the Westminster Assembly of divines presented to Parliament its Confession of Faith. With the restoration of the monarchy in 1660, the State Church became once more episcopal. English Presbyterianism never began to decline. Its principle of government was quite generally abandoned for independent administration, and during the eighteenth century most of its churches succumbed to rationalism. But during the last quarter of the eighteenth century there was a revival of Presbyterianism in England. Those who belonged to the United Presbyterian Church of Scotland coalesced in 1876 with the English Presbyterian Synod (an independent organization since the Scotch disruption of 1560), forming the Presbyterian Church of England, which is a very active body.

B. Wales.—The “Welsh Calvinistic Methodist Church” had its origin prior to, and independent of, English Methodism. Its first organization was effected in 1736, and it shared the enthusiasm of the Methodists of England under the Wesleys, but differed from them in doctrine and polity, the English being Arminian and episcopal, the Welsh, Calvinistic and presbyterian. A Confession of Faith adopted in 1833 follows the Westminster Confession, but is expanded to include the whole Calvinistic doctrine of reprobation. In 1864 a General Assembly was organized. The Welsh Presbyterians give great attention to home and foreign missions.

C. Ireland.—The history of Presbyterianism in Ireland dates from the Ulster plantation during the reign of James I. The members of the Presbyterian Church in Ireland had been confiscated to the crown, and thither emigrated a large number of Scotch Presbyterians. At first they received special consideration from the Government, but this policy was reversed whilst William Laud was Archbishop of Canterbury. The independent life of Presbyterianism in Ireland began with the formation of the Presbytery of Ulster in 1642, but its growth was checked for a time after the Stuart restoration in 1660. During the eighteenth and early part of the nineteenth century there was a general departure from the old standards and Unitarian tendencies caused various dissensions among the Ulster Presbyterians. There are still two Presbyterian bodies in Ireland that are Unitarian. The disruption in the Scottish churches and other causes produced further divisions, and today there are, exclusive of the two mentioned above, five Presbyterian bodies in Ireland, the most important of which is the Presbyterian Church of Ireland.

D. Colonial and Missionary Churches.—Presbyterianism in Canada dates from 1765, when a military chaplain began regular missions in Quebec. There was very little growth, however, until the early part of the nineteenth century, when British immigration set in. Before 1835 there were six independent organizations. The disruption of the Scottish church and other causes produced further divisions, and today there are, exclusive of the two mentioned above, five Presbyterian bodies in Canada, the most important of which is the Presbyterian Church of Canada.

E. Australia.—Presbyterianism in Australia dates from 1835. The small original congregation affiliated with this main body. The Canadian Church maintains many educational institutions and carries on extensive mission work. Its doctrinal standards are latitudinarian. Canada has the largest of the colonial churches, but there are important Presbyterian organizations in the other British possessions. In Australia Presbyterianism may be dated from the formation of the Presbyterian Church of New South Wales in 1826. There have been several divisions since then, but at present all the churches of the state are affiliated with this main body. In New Zealand the church of North Island, an offshoot of the Scottish Kirk, organized 1856, and the church of South Island (founded by Scottish Free Churchmen, 1854) have consolidated in one General As-
assembly. There is a considerable number of Scotch
and English Presbyterians in S. Africa. In 1906 they
proposed a basis of union to the Wesleyan Methodists,
Congregationalists, and Baptists in America, but thus far
without result. In Southern India a basis of union was
agreed on by the Congregationalists, Methodists,
and Presbyterians in July, 1908. There are Presby-
terian churches organized by British and American
missionaries in various parts of Asia, Africa, Mexico,
S. America, and the West Indies.
E. United States.—In tracing the history of Pres-
byterianism in the United States, the churches may be
divided into three groups: (1) the American churches,
which largely discarded foreign influence; (2)
Presbyterian bodies in Scotland; (3) the Welsh
dependent church, a descendant of the Calvinistic
movement.
(1) The American Churches.—The earliest Amer-
ican Presbyterian churches were established in Vir-
ginia, New England, Maryland, and Delaware during
the seventeenth century and were chiefly of Eng-
lish origin. The man who brought the scattered
churches into organic unity, and who is considered as
the apostle of American Presbyterianism, was Rev.
Francis Makemie, a clergyman from the Presbyterian
church in Ireland. With six other ministers he organized
in 1706 the Presbytery of Philadelphia, which ten
years later was constituted a synod. Between 1741 and
1758 the synod was divided into two bodies, the
“Old Lights” and “New Lights,” caused by the conven-
iement to the requirements of the ministry and
the interpretation of the standards. During this
period of separation the College of New Jersey, later
Princeton University, was established by the “New
Side,” with John Witherspoon, signer of the Declara-
tion of Independence, as first president. In 1788 the synod adopted a constitu-
tion, and a general assembly was established. The
satisfaction of the Cumberland Presbyterian Church by
the Synod of Kentucky led to the formation in 1810 of
the Cumberland Presbyterian Church. From con-
troversies regarding missionary work and doctrinal
matters two independent denominations resulted (1837),
the “Old School” and the “New School.” Both
lost most of their southern presbyteries when anti-
slavery resolutions were passed. The seceders
organized a southern church known since 1865 as the Presbyterian Church in the United States.
Fraternal relations exist between the northern and
the southern churches, who are kept apart especially by the policies of the Cumberland Church the coloured members were orga-
nized into a separate denomination in 1869. That
same year the “Old School” and the “New School” reunited, forming the Presbyterian Church in the United States of America, the largest and most in-
fluential of the Presbyterian bodies in America. Since
then its harmony has been seriously threatened only by the controversy as to the sources of authority
in religion, and the authority and credibility of the
Scriptures (1891–4). This difficulty terminated with the
trials of Prof. Charles A. Briggs and Prof. H. P.
Smith, in which the court declared its loyalty to the
views of the historic standards. In 1903 the church
revived the Confession of Faith, mitigating “the
knotty points of Calvinism.” Its position became
thereby essentially the same as that of the Cumberland
Church (white), and three years later (1906) the
two bodies entered into an organic union. A
part of the Cumberland church, however, repudiated
the action of its general assembly and still under-
takes to perpetuate itself as a separate denomination.
(2) The Welsh Church.—The second secessionist body from the established church of Scotland, the Associated Synod (Seceders), or-
organized through its missionaries in 1753 the As-
sociate Presbytery of Pennsylvania. Not long after
another separatist body of Scotland, the Old Coven-
Covenanters (Covenanters), founded a daughter
church in America known as the Associate Presby-
tery (1774). In 1782 these new seceder and covenant-
ner bodies united under the name of Associate Re-
formed Presbyterian Church. Some members of
the former body refused to enter this union and con-
tinued the Associate Presbyterian of Pennsylvania. There were secessions from the union in 1801,
and 1820. In 1838 nearly all these various elements
were brought together in the United Presby-
terian Church of North America. Two bodies that
remain outside this union are the Associate Reformed
Presbyterian Church, and the Welsh Church, which
in 1822 maintained an independent existence, and the
Associate Synod of North America, a lineal descendant of the Associate Presbytery of Pennsylvania, founded in 1858 by those who preferred to continue their own
organization rather than enter into the union effected
that year. (b) Covenanters or Covenanters.—
The Reformed Presbytery, which merged with the
Associate Presbytery in 1782, was renewed in an
independent existence in 1798 by the isolated covenant-
er who had taken no part in the union of 1782. This renewed presbytery, converted into a synod
in 1802, and which had for some years been
satisfactions with the attitude the church should take towards the Con-
stitution of the United States, the Synod of
dissenters, dissatisfied with what they considered laxity
among the “Old Lights,” withdrew from the synod,
and formed the “Covenanted Reformed Church,”
which has been several times reorganized and counts
among its members, in 1903, about 1,500 communicants.
(3) The Welsh Church.—The first organization
of a Welsh Calvinistic Methodist body in the United
States was at Remsen, N. Y., in 1824. Four years
later a presbytery was established, and the growth
of the denomination has kept pace with the increase
in the Welsh population. The English language is
the language of the church services. 11. Statistics. The Presbyterian denomination throughout the
United States of America, the largest and most in-
fluential of the Presbyterian bodies in America. Since
then its harmony has been seriously threatened only by the controversy as to the sources of authority
in religion, and the authority and credibility of the
Scriptures (1891–4). This difficulty terminated with the
trials of Prof. Charles A. Briggs and Prof. H. P.
Smith, in which the court declared its loyalty to the
views of the historic standards. In 1903 the church
revived the Confession of Faith, mitigating “the
knotty points of Calvinism.” Its position became
thereby essentially the same as that of the Cumberland
Church (white), and three years later (1906) the
two bodies entered into an organic union. A
part of the Cumberland church, however, repudiated
the action of its general assembly and still under-
takes to perpetuate itself as a separate denomination.
(2) The Welsh Church.—The second secessionist body from the established church of Scotland, the Associated Synod (Seceders), or-
organized through its missionaries in 1753 the As-
sociate Presbytery of Pennsylvania. Not long after
another separatist body of Scotland, the Old Coven-
Covenanters (Covenanters), founded a daughter
church in America known as the Associate Presby-
tery (1774). In 1782 these new seceder and covenant-
ner bodies united under the name of Associate Re-
formed Presbyterian Church. Some members of
the former body refused to enter this union and con-
tinued the Associate Presbyterian of Pennsylvania. There were secessions from the union in 1801,
and 1820. In 1838 nearly all these various elements
were brought together in the United Presby-
terian Church of North America. Two bodies that
remain outside this union are the Associate Reformed
Presbyterian Church, and the Welsh Church, which
in 1822 maintained an independent existence, and the
Associate Synod of North America, a lineal descendant of the Associate Presbytery of Pennsylvania, founded in 1858 by those who preferred to continue their own
organization rather than enter into the union effected
that year. (b) Covenanters or Covenanters.—
The Reformed Presbytery, which merged with the
Associate Presbytery in 1782, was renewed in an
independent existence in 1798 by the isolated covenant-
er who had taken no part in the union of 1782. This renewed presbytery, converted into a synod
in 1802, and which had for some years been
satisfactions with the attitude the church should take towards the Con-
stitution of the United States, the Synod of
dissenters, dissatisfied with what they considered laxity
among the “Old Lights,” withdrew from the synod,
and formed the “Covenanted Reformed Church,”
which has been several times reorganized and counts
among its members, in 1903, about 1,500 communicants.
(3) The Welsh Church.—The first organization
of a Welsh Calvinistic Methodist body in the United
States was at Remsen, N. Y., in 1824. Four years
later a presbytery was established, and the growth
of the denomination has kept pace with the increase
in the Welsh population. The English language is
the language of the church services. 11. Statistics. The Presbyterian denomination throughout the
United States of America, the largest and most in-
fluential of the Presbyterian bodies in America. Since
then its harmony has been seriously threatened only by the controversy as to the sources of authority
in religion, and the authority and credibility of the
Scriptures (1891–4). This difficulty terminated with the
trials of Prof. Charles A. Briggs and Prof. H. P.
Smith, in which the court declared its loyalty to the
views of the historic standards. In 1903 the church
revived the Confession of Faith, mitigating “the
knotty points of Calvinism.” Its position became
thereby essentially the same as that of the Cumberland
Church (white), and three years later (1906) the
two bodies entered into an organic union. A
part of the Cumberland church, however, repudiated
the action of its general assembly and still under-
takes to perpetuate itself as a separate denomination.
(2) The Welsh Church.—The second secessionist body from the established church of Scotland, the Associated Synod (Seceders), or-
organized through its missionaries in 1753 the As-
Presbytery.—The part of the church reserved for the higher clergy was known in antiquity by various names, among them presbyterium, because of its occupation during the liturgical functions by the priests attached to a church, arranged in a half-circle round the bishop. The presbytery was also known as apse, cela, or church below the nave, and in consequence reached by a stairway of a few steps; tribuna because of its location and general resemblance to the tribunal in civil basilicas whence the magistrates administered justice. These various names were, in the Middle Ages, mostly superseded by the term choir, which in turn yielded to the modern term sanctuary. The presbytery was separated from the rest of the church by rails (conceals). Eusebius, in his dedication oration at Tyre (H. E., X, iv), describes this feature of the church and its objects: "the Holy of Holies, the altar": he explains, was inclosed with wooden lattice-work, accurately wrought with artistic carving to render it "inaccessible to the multitude". In Constantinople, as appears from the episode related by Theodoret in which the emperor was accustomed to remain within the precincts of the presbytery during the celebration of the liturgy, but in the West this was not permitted (Theodoret, H. E., V, 17). The Council in Trullo (canon lxx), following an ancient tradition, specifically excepted the emperor from the general rule regarding the presbytery to the clergy. From this strict prohibition relative to the laity the term adyta (inaccessible) came to be used of the presbytery. Presbyterium also denoted a body of priests taken collectively, but modern times the term of the clergy is frequently called the presbytery (presbyter). Bingham, Antiquities of the Christian Church, V, III, 8 (Oxford, 1855).

Maurice M. Hassett.

Prescription (Lat. pres, before, and scribere, to write, in later legal Latin involving the idea of limitation) is a method created by law for acquiring estate by prescription of itself, confirmed by the fulfillment of fixed conditions. It is, therefore, either acquisitive or liberating, the former being frequently termed usucaption. Prescription has its origin in enactments of the civil law which have been confirmed by the canon law and which so far as the provisions for their enforcement are concerned are universally acknowledged to be perfectly valid in conscience. Public good demands that provision should be made for security of title to property as well as for the prevention of litigation as much as possible. Hence the State, using its right of eminent domain, may for grave reasons of the common welfare transfer ownership from one individual to another or release from lawful obligations. A person, therefore, who has under the proper conditions acquired real estate by prescription may retain it with a safe conscience even though the former owner were to appear and claim it.

Prescription, deriving its value from positive law, presupposes certain conditions in order to produce the effect attributed to it. Moralist are agreed that the essence of prescription is the fact that both natural and positive law. Thus one could not secure title without a public or legal procedure. It certainly had operated in his behalf. The reason is that the authority of the law cannot be invoked, without which the process fails.

The beneficiary must act in good faith. The civil codes are not so explicit in demanding this, but in conscience it is essential. This simply means that the law must be honestly carried out, and that what he has in possession really belongs to him. The Fourth Lateran Council requires this in no uncertain terms. Prescription cannot legitimate theft or detention of property known to be that of another. It may be noted, however, that when the scope of the prescription is to free one from a certain tax, and the attitude of him who profits by it need only be passive, then "good faith" is interpreted to mean that he should not hinder the other party exercising his right; he is not bound to warn him that prescription is running against him. The application in rural districts and with regard to such matters as the right to fish, to draw water, to pasture, and the like. Bad faith on the part of a decedent will prevent his immediate and sole heir from availing himself of prescription. The heir is then juridically one person with the deceased and must take over the latter's obligations. Consequently he can no more benefit by it than could his predecessor. In addition the good faith which is indispensable for prescription postulates in the possessor of a thing some sort of title to it. It need not be a true title because there would be no need of prescription. It must have the semblance of a good title, such as the purchase of something which did not as a matter of fact belong to the seller, or at least there must be a belief on the part of the possessor of a title as in the case of things acquired by inheritance.

From the point of view of the law, prescription is unintelligible without the fact of possession, whether this last stand for the holding of some thing or the enjoyment of some right. Either way the possession referred to must be accompanied by a veritable proprietary state of mind and is not satisfied by fiduciary relations such as trusteeship or by those of deposit, rental, and the like. Theologians exact as necessary qualities of this possession that it should be peaceful, that is, not assailed by lawsuits, sure, uninterrupted, and open, that is, not clandestine. Much stress is laid on the fact of possession by the common law which regards it as the very foundation of prescription. Tenure of property, other requisites of prescription, are intended to fix the extent of the right in the land and to determine what interest is to be held upon and from what the possessor may be displaced. This space is different for different kinds of goods. The common law allows prescription of moveables on proof of possession for thirty years; years, whilst a special provision demands an hundred years when the action lies against the Roman Church. The civil law in these circumstances allows such substantial differences in fixing this requirement that there is no way to summarize it. In general a longer time is required for immortal than moveable property. In the United States of America many of the States exact twenty years for immovables; in Maine forty years are necessary, whilst in others the time sinks to seven or even five years as in California. In England rights of common and all other profits from land become absolute and indefeasible after sixty years. The same is true of rights of way enjoyed as abutments in general after forty years; otherwise, prescriptive rights may be extinguished and will be presumed to have lapsed when they have not been used for twenty years, or sometimes even less.

In English law the term prescription is applied to rights only which are defined to be incorporeal here-

PRESENTATION

ican Council, Sess. III, c. 1.) It is also of faith that God is in an especial manner really and substantially present in the souls of the just. This indwelling of God in the souls of the just is attributed by what the theologians call application to the Holy Ghost, but in reality it is common to the three Divine Persons. Asecetical.—To put ourselves in the presence of God, or to live in the presence of God, as spiritual writers express it, is to become actually conscious of God as present, or at least so to live as though we were thus actually conscious. It is a simple act which involves the impression of the unseen Being with whom we have immediate relation and familiar converse, whose goodness and beauty we inwardly enjoy, whose love we have, and ever everlasting love; who exercises a particular providence among us, who is present everywhere and “who”, in the words of Cardinal Newman, “is heart-reading, heart-changing, ever accessible and open to penetration” (Grammar of Assent, 112). The simple child as well as the advanced contemplative may thus represent God as present to the mind, and live in the consciousness of His presence. It is only the angels and blessed who can behold the face of God.

The servant of God or the devout soul may be mindful of God in another way by the exercise of reason directed by faith. He sees God in the earth, the sea, the air, and in all things; in heaven where He manifests His glory, in hell where He carries out the law of His justice. He thinks of Him as present within us and without us, and especially as dwelling secretly in his innermost soul, hidden from all our senses, yet speaking, as it were, to the conscience with a voice that is in us but not of us; the voice of One who is with us yet over us.

Devotional.—One may therefore practise the devotion of living in the presence of God: (1) by a lively faith in that Divine presence, that God is near us and within us as Elias says: “the Lord liveth... in whose sight I stand” (III Kings, xxvii, 1; cf. IV Kings, iii, 14); (2) when distracted the mind may be easily brought back to the remembrance of God’s presence by the simple reflection: “The Lord is here”; “The Lord sees me”; (3) when occupied with conversation or business by breathing from time to time some secret aspiration or affection for God and then keeping the mind collected; (4) in dereliction of spirit, by keeping God in mind more faithfully, knowing that nothing can come between Him and the soul but grave sin, through which His special operation in the soul by grace ceases. Men may be said to come to God as they come more like Him in goodness, and to draw from Him, when they become unlike Him by their wickedness.

As the immediate preparation for mental prayer, it is fitting and necessary “to place ourselves in the presence of God”. This is to be done by an act of faith in the Divine presence, from which should follow: (1) an act of adoration; (2) an act of humility; (3) an act of sorrow or contrition; (4) an act of petition for light and grace. These acts may be made in the interior of the soul.

Arthur Devine

Presentation, Order of the, founded at Cork, Ireland, by Nano (Honoria) Nagle (see below). In 1776 she entered with some companions on a novitiate of the life. With them she received the Habit 29 June, 1776, taking the name of Mother Mary of St. John of God. They made their first annual vows 24 June, 1777. The foundress had begun the erection of a convent close to that which she had built for the Ursulines at Waterford on Christmas Day, 1777. They adopted as their title “Sisters of the Sacred Heart”, which was changed in 1791 to that of “Presentsion Sisters”. Their habit was similar to that of the Ursulines. The second superioress was Mother Mary Angela Collins. Soon after her succession a set of rules, adapted from those of St. Augustine, was drawn up by Bishop Moylan, and approved by Pius VI in Sept., 1791. This congregation of teaching sisters was raised to the status of a religious order by Pius VII in 1800.

Communities from Cork were founded at Killarney in 1793; Dublin in 1794; and at Waterford in 1798. A second convent at Cork was established in 1799, by Sister M. Patrick Fitzgerald; and a convent at Kilkenny in 1800, by Sister M. Joseph McLaughlin. At the present day, there are 62 convents, and more than 1,500 sisters. Each community is dependent on the mother-house, and subject only to its own superioress and the bishop of its respective diocese. The schools, under the British Government Board, have for their first object the Catholic and moral training of the young, which is not interfered with by the Government. The secular system followed is the “National”, superseded, in many cases, by the “Intermediate”, both of which ensure a sound English education; to which are added domestic economy, Latin, Irish, French, and Gately. Among the children in each of the city convents of Dublin, Cork, and Limerick is over 1200; that in the country convents between 300 and 400, making a total of 22,200 who receive an excellent education gratis. For girls who are obliged to earn a living, work-rooms have been established at Cork, Youghal, and other places, where Limerick lace, Irish point, and crochet are taught. The first foreign country to receive a Presentation Convent was Newfoundland in 1829, when Sisters Josephine French and M. de Sales Lovelock went from Galway. In 1842, fourteen houses of the order on the island and about twenty in the United States, the first of which was founded at San Francisco by Mother Xavier Cronin from Kilkenny in 1854. In 1853 a house was founded by Mother Josephine Sargent from Clonmel at Manchester, England, from which sprung two more, one at Burton and one at Glossop. Their schools are well attended; the number of children, including those of an orphanage, being about 1400. India received its first foundation in 1841, when Mother Xavier Kearney and some sisters from Rahan and Mullingar established themselves at Madras. Soon four more convents in the presidency were founded from this, and in 1891 one at Rawal Pindi. Their schools are flourishing, comprising orphanages, and day and boarding-schools, both for Europeans and natives; but the sisters do much good among the Irish soldiers, who go to them for religious instruction. In 1866 Mother Xavier Murphy and some sisters left Fermoy for a first foundation at Hobart Town, Tasmania, under the auspices of its first archbishop, Dr. Murphy. There is a branch of this house at Launceston. St. Kilda, Melbourne, received sisters from Kildare in 1873, and Wagga Wagga a year later, with Mother M. John Byrne at their head. From these two houses numerous others branches forth to all parts of Australia; to-day there are over twenty convents, about 500 nuns, and thousands of children attending their schools. M. De Sales Whyte.

Presentation, Order in America.—About half a century after its establishment, the Presentation Order sent four sisters from the Galway convent to Newfoundland, at the request of Dr. Fleming, Vicar Apostolic of the island. The mother-house is at St. John’s; there are now (1911) thirteen convents, 120 nuns, and over 2000 pupils. In November, 1884, some Presentation Nuns arrived at St. John’s, Newfoundland, and are now established in Ireland. Mother M. Teresa Comerford and her sisters had great initial difficulties; but Archbishop Alemany succeeded in interesting prominent Catholics of the
Presentation

398

City in their work, and in course of time two fine convents were built within the city limits, besides convents at Sonoma and Berkeley. The earthquake of 1906 destroyed both of their convents in the city, with property and contents, but the sisters have courageously begun their work afresh, and bid fair to accomplish as much good work as in the past.

The Presentation Convent, St. Michael’s, New York City, was founded 8 Sept., 1874, by Mother Joseph Hickey, of the Presentation Convent, Terenure, Co. Dublin, with two sisters from that convent, two from Clondalkin, and seven postulants. Rev. Arthur J. Donnelly, pastor of St. Michael’s Church, on completing his school building, went to Ireland in 1873 to invite the Presentation Nuns to take charge of the girls’ department. The consent of the nuns having been obtained, Cardinal Cullen applied to the Holy See for the necessary Brief authorizing the nuns to leave Ireland and proceed to New York, which was accorded by Pius IX. The work of the nuns at St. Michael’s has been eminently successful. From 1874 to 1910 there have been entered on the school register 16,781 names. In 1884 the sisters took charge of St. Michael’s Home, Green Ridge, Staten Island, where over two hundred destitute children are cared for.

In 1886 Mother Magdalene Keating, with six sisters, went to Milwaukee, at the invitation of Rev. P. J. Garrigan, afterwards Bishop of Sioux City, and took charge of the schools of St. Bernard’s Parish, Fitchburg, Massachusetts. The mission proved most flourishing, and has branch houses in West Fitchburg and Clinton, Massachusetts; Central Falls, Rhode Island; and Berlin, New Hampshire. The order was introduced into the Diocese of Dubuque by Mother M. Vincent Hennessey in 1874. There are now branch houses at Calmar, Elkader, Farley, Key West, Lawler, Waukon, Clare, Danbury, Whitemore, and Madison, Nebraska. The order came to Fargo, North Dakota, in 1880 under Mother Mary John Hughes, and possesses a free school, home, and academy. St. Colman’s, Watervliet, New York, was opened in 1881, the sisters having charge of the flourishing orphanage. In 1888 some sisters from Fargo went to Aberdeen, South Dakota, and since then, under the guidance of Mother M. Joseph Butler, they have taken charge of schools at Bridgewater, Bristol, Chamberlain, Elkton, Jefferson, Mitchell, Milbank, and Woonsocket, besides two hospitals in the University city of the order, who conduct 32 parochial schools, attended by 6909 pupils; 5 academies, with 416 pupils; 3 orphanages, with 519 inmates; 2 hospitals.

Mother M. Stanislaus.

Nagle, Nano (Honoria), foundress of the Presentation Order, b. at Ballygriffin, Cork, Ireland, 1728; d. at Cork, 20 April, 1784. After an elementary education in Ireland, where Catholic schools were then proscribed, she went to France for further studies, where some of her kinsmen were living in the suite of the exiled King James, and entered on a brilliant social life in the court circles of the capital. One morning, when returning from a ball, she was struck by the sight of crowds of working-men and women waiting for a church to be opened for early Mass. A few weeks later she returned to Ireland, and only the stringent laws then in force against Catholic educational activity prevented her from consecrating herself to the Christian training of Irish children, who were growing up in ignorance of their Faith. A short time spent as a postulant at a convent in France confirmed her belief that her mission lay rather in Ireland, a conviction strengthened by the advice of her directors. Her first step on returning to Ireland was to familiarize herself with the work of some ladies who had privately organized a school in Dublin. The death of her mother and sister, she went to Cork, where in the face of the most adverse conditions she began her crusade against the ignorance and vice there prevalent. Her first pupils were gathered secretly, and her part in the undertaking having been discovered, it was only after a period of opposition that she secured the support of her relative Yvar. In less than a year, however, she had established two schools for boys and five for girls, with a capacity for about two hundred. The foundress herself conducted the classes in Christian doctrine and instructed those preparing for First Communion, searching the most abandoned parts of the city for those in need of spiritual and temporal help. Her charity extended also to aged and infirm women, for whom she established an asylum at Cork, and especially to working-women, whose perseverance in faith and virtue was a source of solicitude to her. The demands of her numerous charitable undertakings proving excessive for her resources, she solicited contributions from house to house, at the cost of much humiliation.

For the purpose of perpetuating her work she decided to found a convent; and a community of Ursulines, young Irishwomen trained especially for the purpose, was sent to Cork in 1771, although they did not venture to assume their religious garb for eight years. As the Ursuline Rule, with which Nano had not thoroughly acquainted herself, did not permit entire consecration, a few of the sisters were sent to the education of poor children, she resolved to form a community more peculiarly adapted to the duties she had taken up, while remaining a devoted friend of the Ursulines. In 1775 she founded the Presentation Order (see above). She set herself to poverty, and self-abnegation to her community, giving seven hours daily to the class-room and four to prayer, in addition to the demands of her duties as superior and her work of visitation. It was said there was not a single garret in Cork that she did not know. Her austerities and the persistence with which she continued her labours in the most inclement weather brought on a fatal illness; she died exhorting her community to spend themselves for the poor. Her remains were interred in the cemetery of the Ursuline convent she had built.

Florence Rudge McGahan.

Presentation, Religious Congregations of the—(1) Daughters of the Presentation, founded in 1627 by Nicolas Sanguin (b. 1590; d. 1653), Bishop of Senlis, a prelate who was stoning by a life of sanctity for the error of 498 men and himself unstintingly to the service of the plague-stricken during a pestilence which devastated Senlis during the early years of his episcopate, he turned his attention to the foundation of a teaching order to combat the prevailing ignorance and the persistence and the rise of the clergy. Two young women from Paris, Catherine Dreux and Marie de la Croix, began the work of teaching in 1626 and the following year were formed into a religious community, which shortly afterwards was enclosed under the Rule of St. Augustine. The opposition of the municipal authorities gave way before the Bull of erection granted by Urban VIII (4 Jan., 1628) and letters patent of Louis XIII granted in 1650, the year in which the first solemn profession was held. In 1692 papal permission was obtained for two of Bishop Sanguin’s sisters and a companion to leave for a time their monastery of Moncel of the Order of St. Clare, to form the new community in the religious life. Seven years later they were received as members into the new order, over which the presided for more than thirty years. The congregation did not survive the Revolution, although under Bonaparte one of the former members organized at Senlis a school which was later taken over by the municipality. The habit was black over a robe of white serge, with a white guipure, a black ciborium, and veil. The death of the mother and sister, she went to Cork, where in the face of the most adverse conditions she began her crusade under the Rule of St. Augustine. The order was introduced into the United States about 1880 by Rev. John Frayne, S.J., who was the first to settle in the West. The first house was established in 1881 at St. Louis, Mo., and the order has since grown rapidly. The members are known as the Sisters of the Presentation of the Blessed Virgin Mary, and their work is educational. They are engaged in teaching, nursing, and other charitable works, and are found in many parts of the United States and Canada. They are governed by a superior and a council, and are subject to the Archbishop of the diocese in which they are located. The order has a large number of convents and schools, and is known for its devoted service to the education and spiritual welfare of the young.
erence made in them to the devotion of the Slavery of Our Lady, which was suppressed by the Church.

(2) Sisters of the Presentation of the Blessed Virgin, founded in 1854 by Ven. Marie Pospeskin at Sainvilliers, France, for the care of the sick. At the time of the religious disturbances in France, over seventeen hundred sisters were engaged in France, Spain, South America, and Asiatic Turkey, where they charge of a number of schools and parishes for girls. At Agua de Dios in Colombia they care for a colony of lepers. In 1915 the mother-house was established at Saint-Symphorien near Tours.

(3) Sisters of the Presentation of Mary, also called White Ladies, founded in 1796 at Montpezat by Ven. Marie Rivier (d. 1835), assisted by the Abbé Pontan nier, for the instruction of poor girls. The first novi tiate was opened at Thueys, near Aubenas, but the mother-house was permanently established at Bourg-Saint-Andéol in the Diocese of Viviers. The congregation soon spread over France and in 1853 a house was established in Canada. At the time of the dispersion of the religious orders in France the congregation numbered two thousand members in charge of schools and orphan asylums. The Polish mother-house is at Cracow.

Presentation of Our Lady, founded at Ghent in 1805 by Miss Weersin, in religion Mother Mary Augustine, and Canon de Decker (d. 1874) for the education of girls. The mother-house is at Saint-Nicolas, on which are dependent a number of filial houses, with about two hundred members.

FLORENCE RUDGE MCGAHAN.

Presentation, Right or. - Out of gratitude for the foundation or endowment of churches and benefices, the Church grants founders, if they wish to reserve it, the right of patronage, the first and chief privilege of which is the right of presenting a cleric for the benefice. Presentation therefore means the naming to the ecclesiastical authorities of a suitable cleric, thereby conferring on the latter the right to have the vacant benefice. Like election and nomination presentation confers on the cleric presented a real right (jus ad rem), so that the ecclesiastical superior entrusted with the institution may not give the benefice to another. To have the right of patronage, we need refer only to the right of ecclesiastical patronage belonging to ecclesiastical bodies as such, e.g. a chapter, and to the right of lay-patronage, possessed by laymen or ecclesiastics in their private capacity. Hence there exist not the differences in the manner of exercising the right of patronage, as might naturally be expected, especially when we remember that the foundations or endowments giving rise to the right of ecclesiastical patronage are made with property already belonging to the Church (see PATRONAGE). Theoretically no special form of presentation is necessary; it suffices if the act signifies the presentation, and excludes anything that might indicate a collection of the benefice, and if there is no assent; in practice it is made in writing, generally after voting has taken place or an arrangement has been made, when the patron is not an individual and when there are co-patrons. It is communicated to the ecclesiastical superior, usually the bishop, who has to perform the canonical institution. The patron exercises generally a power of urgency (fourteen to twelve years respectively), although he may act by an attorney; if he has not attained this age, he must act through those who have authority over him: mother, guardian, protector. If the patron is an individual, he makes the presentation by himself; if it is a chapter, a secret vote is taken and an absolute majority is required; if the co-patrons act individually, as when the different members of a family are called on to present a candidate, the most important point is to observe all the regulations governing the foundation; account is taken of the branches of the family and of the persons in each branch, in which case a relative majority. A ballot is resorted to also when the patronage is exercised by a numerous community, e.g. the men of a parish who have attained their majority. In case of a tie, the bishop selects one of the candidates proposed. As to the suitability of the candidate, see Patronage.

Patronage. Often, in virtue of a local law, as in Austria, the patron must select from a list of suitable candidates three for ecclesiastical patrons. By the acceptance of the presentation, the cleric presented acquires immediately the right to the benefice, if the patronage is ecclesiastical; but the right is definitive only, if the patronage is lay, on the expiration of the four months allowed the patron to exercise his right of presentation, unless the bishop has already proceeded to the institution. On learning of the presentation and acceptance, the bishop excommunicates the candidate (cf. Lib. III, Decret., tit. xxxviii. "De jure patronatus"; Conc. Trid. Sess. VII, c. 13; Sess. XXIV, c. 18; Sess. XXV, c. 9, de Ref.; see also BENEFICE).

See also BENEFICE.

A. BOUDINHON.

Presentation Brothers. — In the early part of the nineteenth century when the Penal Laws were relaxed, and the ban which was placed on the education of youth in Ireland during a long period of persecution was removed, great efforts were made to employ the opportunities which a comparative freedom placed within the reach of Irish Catholics, and several new religious congregations of both men and women sprang into existence. Amongst these was the Institute of Presentation Brothers founded by Edmund Ignatius Rice. The Brothers continued a diocesan congregation approved of by Rome until 1889, when a change was effected in the constitution of the body with a view to its more rapid development and the sanction of the bishops under whom the Brothers then laboured, all the houses of the Institute were united under a superior-general and Leo XIII approved and confirmed the new constitutions. The rapid spread of the order since then has been very marked. It now has several branches in each of the provinces of Ireland, and is also established in England and Canada. The Brothers conduct colleges, primary schools, industrial schools, and orphanages. A new novitiate and training college has been erected at Mount St. Joseph, Cork. The superior-general resides there. The Commissioners of National Education, after investigating the methods of training adopted by the institute, fully approved of them and recognized the training college. In the colleges, special attention is paid to the teaching of experimental science. Classes are taught in connexion with the Intermediate Education Board and Technical Department. Students are prepared for the Civil Service as well as for the National University. In the industrial schools and orphanages, in addition to the ordinary school studies, various trades such as agriculture and horticulture. Moreover, all the boys get a two years' course in manual instruction.

Brother De Sales.

Presentation of Mary, Congregation of the. — This congregation, devoted to the education of young girls, was founded in 1796 at Theuvs, Ardèche,
France, by the Venerable Mother Marie Rivier. The mother-house is now at Saint-André, Ardèche. The superior general is the Mother Marie Ste-Honorine. The provincial house in Canada was founded on 18 October, 1853, by Mgr Jean-Charles Prince, first Bishop of St. Hyacinthe. It is also the mother-house and the religious make their vows there. The first six religious, with Mother Marie St-Maurice as superior, settled at Ste-Marie de Monnoir, where Rev. E. Crevoisier, the founder of their mission, was stationed. They opened a boarding-school and a class for day pupils; both of these are very prosperous at the present time. In 1855 the novitiate was transferred to St. Hugues (in the county of Bagot), and in 1858 it was definitively located at St. Hyacinthe in a convent which was occupied up to this time by the Sisters of the Congregation of Notre Dame of Montreal. This house was of insufficient accommodation and the community was obliged to erect, not far from the seminary, a large building of which they took possession in 1876. The house occupied since 1858 then became an academy. Later it was necessary to add a large annex to the first building. The students were installed there in 1907. The provincial house is at the same time the mother-house of the institution in Canada. The Congregation of the Presentation of Mary comprises 30 in France and 16 in the United States, educating 13,670 children.

Sister Mary St. David.

Presentation of the Blessed Virgin Mary, Feast of the.—The Protoevangel of James, the Gospel of Pseudo-Matthew, the Gospel of the Nativity of Mary, and other apocryphal writings (Walker, "Apocryph. Gosp.", Edinburgh, 1870) relate that Mary, at the age of three, was brought by her parents to the Temple, and fulfilled a vow, there to be educated. The corresponding feast originated in the Orient, probably in Syria, the home of the apocrypha. Card. Pitra (Anal. Spic. Solesmensi, p. 273) has published a great canon (liturgical poem) in Greek for this feast, composed by some "Georgios" about the seventh or eighth century. The feast is missing in the earlier Menologio of Constantinople (eighth century); it is found, however, in the liturgical documents of the eleventh century, like the "Calend. Ostrogotum" (Martinozzi, "Annuar greco-slav", 329), and in the Menologio of Basil II (συνάξαρι Φωταγορών εκατότε). It appears in the constitution of Manuel Commenos (1166) as a fully recognized festival during which the law courts did not sit. In the West it was introduced by a French nobleman, Philippe de Maziers, Chancellor of the King of Cyprus, who spent some time at Avignon during the pontificate of Gregory XI. It was celebrated in the presence of the cardinals (1372) with an office accommodated from the office chanted by the Greeks. In 1373 it was adopted in the royal chapel at Paris, 1418 at Aix, 1420 at Avignon. Plus II granted (1460) the feast with a vigil to the Duke of Saxony. It was taken up by many dioceses, but at the end of the Middle Ages, it was still missing in many calendars (Grotfend, "Heilige und Heilige", III, 137). At Rome it was assigned (1500) to the Card. Ximenes to 30 September. Sixtus IV received it into the Roman Breviary. Pius V struck it from the calendar, but Sixtus V took it up a second time (1 September, 1585). In the province of Venice it is a double of the second class with an octave (10 October), and Sulpiicians and Carmelites keep it as a double of the first class; the Servites, Redemptorists, Carmelites, Mercedarians, and others as a double of the second with an octave. In the Roman Calendar it is a major double. The Greeks keep it for five days. In some German dioceses, under the title "Iliato", it was kept 26 November (Grotfend, III, 137).

Prester John, name of a legendary Eastern priest and king.

First Stage.—The mythical journey to Rome of certain Patriarch John of India, in 1122, and his visit to Callixtus II, cannot have been the first of the legend. Not until much later, in a MS. dating from the latter part of the fifteenth-century "Tractatus pulchrerrimus" (Zarncke), do we find the patriarch and priest united in one person. The first combination of the two legends appears at the end of the twelfth century, in an apocryphal book of devotions called the "Narrative of Eiseus". The first authentic mention of Prester John is to be found in the "Chronicles of Otto, Bishop of Freising, in 1145. Otto gives as his authority Hugo, Bishop of Gabala. The latter, by order of the Christian prince, Raymond of Antioch, went in 1144 (after the fall of Edessa) to Pope Eugene II, to report the grievous position of Jerusalem, and to induce the West to send another crusade. Otto met the Syrian prelate at Viterbo, where in the pope's presence he learned that a certain John, who governed as priest and king in the Far East, had with his people become converted to Nestorianism. A few years earlier he had conquered the brother monarchs of Media and Persia, Samarri. Prester John had emerged victorious from the terrible battle that lasted three days and ended with the conquest of Esbatana; after which the victor started for Jerusalem to rescue the Holy Land, but the swollen waters of the Tigris compelled him to return to his own country. He belonged to the race of the three Magi, their former kingdoms being subject to him. His enormous wealth was demonstrated by the fact that he carried a sceptre of pure emeralds. It is doubtful if the West gave unreserved credence to this tale, judging from the silence of its chronicles. Some twenty years later there came to light in unaccountable ways letters from this mysterious personage to the Byzantine emperor Manuel, Barbarossa, and other princes, which roused extravagant hopes. About a hundred manuscripts of the letter to Manuel of Constantinople are still extant (with many variants), and afford an interesting insight into this exceedingly complicated fiction. This wild medieval tale contains the principal incidents of the long Alexander legend. This letter is probably a Nestorian forgery. From that time it was believed that a Christian kingdom existed in the Far East, or in the heart of Asia. The legend furnished a wealth of material for the poets, writers, and explorers of the Middle Ages. In England Sir John Mandeville exploited it to excess. In Germany Wolfram von Eschenbach's "Parzival", was the first to unite the legend of the Holy Grail with this history of Prester John. He found many and more extravagant imitators (e. g. Albrecht von Scharfenstein in "Jüngere Titulre", 1517). The question is reasonable when we note that the Pontiff, Alexander III, dated from the Rialto in Venice in 1177 and beginning with the words "Alexander episcopus [or Papa], servus servorum Dei, carrissimo in Christi filio Joanni, illustri et magnifico In dorum regi", has anything to do with Prester John. The pope had heard many rumours of a powerful Christian ruler in the East. His physician in ordinary, Philippus, on returning from those parts, brought him further information. The pope sent his confidant to the king with the much-discussed letter, and an invitation to enter the Roman Church, and also a caution against boastfulness about his vast power and wealth. Provided that he listened to this warning, the pope would willingly grant his two requests (apparently, to cede him a church in Rome, and to accord him certain rights in the church of the Holy Cross, S. Croce). The result of this mission is not known; but judging from the
details in the letter, it is certain that the recipient was no mythical personage. The pope may have recognized him as the Presbyter of the legend, but this is uncertain.

HISTORICAL FOUNDATION OF THE ORIGIN OF THE Legend. Mattaeus Parsius does not mention the exact year of the battle between the Eastern conqueror and the Persian sultan; he only remarks that in 1145 it had taken place "ante multis annis". On the other hand, there is found in the Annals of Admont (1181) a note which, as far as we know, is a continuation of Otto’s chronicle, the following note: "Johannes presbyter rex Armeniae et Indie cum duobus regibus fratribus Persarum et Medorum pugnavit et vicit". Minute research has shown that in that year the Persian Sultan Sanjar was completely vanquished by a conqueror from the east, not very far from the ancient Ecbatana. The Arabic historian Ibn-al-Athir (1160–1233) says that, in the year of the Hegira of 536 (1141), Sanjar, the most powerful of the Seljuk princes, had mortally offended his vassal the Shah of Khaezan. The latter called to his assistance Ku Khan, or Korkhkan of China (Chinese, Yelutausche), who had come in 1122 from the west, with 10,000 men. The " Speculum China" at the head of a mighty army. Korkhkan killed Sanjar and 100,000 of his men. The Arabic versions are substantially corroborated by other Asiatic historians of that epoch: by the Syrian writer Abulfaradis (on account of his Jewish descent called Bar Hebraeus, 1226–36), by the Arabic Abulfeda (1273–1331), the Persian Mirkhond (1432–89) etc. It is not certain whether the Spanish Jew, Benjamín of Tudela, who travelled in Central Asia in 1171, refers to this event. If so, the hypothesis based on the researches of d’Avezac, Oppert, Zarneck, and Yule becomes a certainty, i.e. the land of this uncertain and shifting legend is in the Kitai, Karakhan (1141–1218), founded in Central Asia by the priest-king of the tale. The disputed points are the name, the religion, and the priestly character of the mysterious personage.

Independently of the much earlier work of d’Avezac, Oppert thinks that Ku-Khan, Korkhkan or Corehan (Corechan), as the East-Asian conqueror is called in the chronicles, could easily have become Jorchan, Jochanan, or in Western parlance, John; this name was then very popular, and was often given to the Christian and Mohammedan princes (Zarneck). History knows nothing about the Christianity of Yelutausche. Yet it is clear that the league of the West against the Mohammedans stirred up the oppressed Christians on the borders of Tatar Asia to look for a deliverer. The sacerdotal character of the legendary king still offers an unsolved riddle.

SECOND STAGE.—The political aspect of the legend again came forward in the thirteenth century. In November, 1219, Damietta was conquered by the crusaders. The following spring the report was circulated among the victors that in the East, King David, either the son or nephew of the Presbyter, had placed himself at the head of three powerful armies, and was moving upon the Mohammedan countries. A Arab astrologer foretold that when Easter fell on 3 April, the religion of Mohammed would be abolished. This occurred in 1222, and many expected that King David and his host would offer their support to the long-coming army of Frederick II. The enthusiasm that this announcement created in the camp at Damietta led to a premature outbreak of the Franks against Cairo, and the defeat of the army. The historical germ is easily discovered in the Mongol conqueror Jenghiz Khan, who at this time with three legions pushed forward towards the West, and in a most sanguinary battle annihilated the power of Islam in Central Asia. He and many of his successors were favorable to the Christians, and averse to the Mohammedans; the Mongol Kingdom soared over all Asiatie principalities by its display; but the name of David given to the Eastern conqueror still remains unexplained.

THIRD STAGE.—The horrible slaughter committed by the Mongols soon proved that they were no pious pilgrims bound for the holy Sepulchre, still less were they Christians. After a short time the legend assumed another form. It said that the Mongolians were the real conquerors mentioned in the Presbyter’s letter to Manuel. They had risen up against their own ruler, King David, murdering both him and his father. The "Historia" of Vincent of Beauvais says: "In the year of our Lord 1202, after murdering their ruler [David] the Tatars set about destroying the people". Certain historical facts form the basis of this remarkable report. Bar Hebraeus mentions that in 1006 the Mongolian tribe of the Keriai in Upper Asia had become Nestorian Christians. According to the account of Rubruquis, the Franciscan, these Keriai were related to the Naimans, another Mongolian shepherd tribe, and paid tribute to their ruler Corehan, who also were Nestorian Christians, and in that vicinity were considered the countrymen of Prester John. The prince of the Keriai, named Jenghiz Khan, died in 1202 completely subject to the superior power of Jenghiz Khan, who meanwhile was on the friendliest terms with his family, thus giving the Keriai a certain amount of independence. Marco Polo speaks of Une-Khan as the "grand prince who is called Prester John, the whole world speaking of his great power". In 1229 the celebrated missionary John of Monte Corvino converted a Nestorian prince belonging to this tribe, who afterwards served Mass for him ("Reor Gregorius de illustri genere Magni Regis qui dicitur fuit Presbyter Johannes"). And yet neither he nor the other missionaries, who at this time were trying to convert the Mongolian princes of Upper Asia, paid much attention to the extravagant embellishments of the legend. One of these missionaries, Odoricus de Foro Julli, wrote "that not a hundredth part of the things related of Prester John were true". For centuries the Prince of the Keriai was looked upon as the Prester John of the legend. The papal librarian Assamani and the geographer Ritter justified this scientific hypothesis by means of original documents. It is undoubtedly true, that in this explanation of the legend many of its peculiarities are more clearly brought out; e.g. the sacerdotal character of the hero; for according to Rubruquis, the Nestorians of that locality were in the priesthood even the children in their cradles. The main point, however, is still unexplained, namely, the
origin of the legend; the account of Rubruquis, however, carefully considered, supports the Oppert-Zarneck hypothesis, and elucidates the transition of the legend from the Karakhitai, to the Kiria. Zarneck meanwhile agrees with Oppert only in essentials, and in many points sharply and unjustly criticises his colleague. Oppert is an Orientalist, Zarneck is not.

FOURTH STAGE.—With the collapse of the Mongol Kingdom, hitherto the setting for this legend, the latter, finding no favourable background in Upper or Middle Asia, was shifted to the hill country of the Caucasus, or to Indic parts of India. It is true that all earlier accounts of the Presbyter designate India as his kingdom, but in the Middle Ages the term India was so vague that the legend obtained in this way no definite location. But in the fourteenth century there appeared many real or fictitious accounts of voyages (Zarneck), which pointed to the modern East Indies as the kingdom of the Priest-King. The most important document of this, or a somewhat later period, is the afore-mentioned tractatus pulcherminum. Especially a Catalonian, published in 1375, we find Christian kingdoms given in India. In another map of 1447, towers are to be found at the foot of the Caucasus, and underneath is written: "The Presbyter, King John built these towers to prevent [the Tartars] from reaching him." This map (1381) had already brought the Presbyter as King of Armenia. Professor Brun of Odessa supports the hypothesis founded on these and other plausible grounds, namely, that the Armenian king, Ivan, who in 1124 gained a great victory over the Crusent, was the first Presbyter John (Zeischi. f. Erdkunde, 1876, 279).

FIFTH STAGE.—Marco Polo speaks of the country called Abassia as part of India, meaning probably Abyssinia. Many scholars (among others Yule) are of the opinion that Pope Alexander's envoys, in 1242, were sent to the Negus of Ethiopia; at a much earlier time it was customary to see in him the Presbyter of the legend. In 1328 the Christian bishop, John of Columbo (not Colombo) in India, designated the Negus as Presbyter John: quem sem sacris Presbyter Johan. In Jerusalem at the beginning of the fifteenth century the Abyssinian priests described their country to the Christian Portuguese merchants as the Kingdom of Prester John. The Grand Master of the Knights of Rhodes expressed the same opinion in a letter written to King Charles VII of France in 1448. This interpretation was most popular at the end of the fifteenth and the beginning of the sixteenth century, on account of the voyages of discovery made by the Portuguese, who at first persistently sought the Presbyter's kingdom along the whole African coast (Vasco de Gama even carried with him letters of introduction to this supposed Christian ruler), and believed that in Ethiopia they had at last fallen in with him. As a matter of fact, the Christian Kingdom of Abyssinia had for centuries successfully withstand the onslaughts of Islam, and in him a person a kind of spiritual with temporal power, and the name of John recurs in a remarkable manner in the long line of princes of that land. The oldest map, discovered by P. Joseph Fischer, on which America is mentioned (1537), places the Presbyter's country in Asia (Province of Thebet; Tibet) in the following words: "This is the land of the good King and lord, known as Prester John, lord of all Eastern and Southern India, lord of all the kings of India, in which most are found as kinds of precious stones." On the carta marina (1516) it is placed in Africa: "Regnum Habesch et Habacci Presbiteri Joh. sive India Maior Ethipie" etc. In later times it was the general opinion that Abyssinia was the Presbyter's native land, "Terra de Preste"; the Portuguese called it. Only towards the end of the seventeenth century did this opinion disappear.

In Leuthoff's great work on Abyssinia (Frankfort, 1881) it is said that the land had been wrongly named the Presbyter's kingdom. The legend had a stimulating effect on Portuguese discoverers, and indirectly encouraged the missionary activity of Franciscan and Dominican missionaries in Central Asia. A Persian version of the Mongol ruler being often their goal. Some also exhibited a certain scientific interest in the solution of the legend; the narrative of Rubruquis, for instance, is still the starting point for all modern research.

Alois Stockmann.

Preston, Thomas, alias Roger Widdrington, Benedictine, d. in the Clink prison, 5 April, 1640. He studied first at the English College in Rome, his professor of theology being the distinguished Jesuit Vasquez. He was professed in the Benedictine Order in 1560, a man of mature age, and, says Weldon, a learned and virtuous man. He was sent on the English mission in 1603, landing at Yarmouth, and lived with Dom Sigebert Buckley (the last survivor of the monks of Westminster) until the latter's death in 1710. Before this he had been indicted at the Middlesex Sessions for the crime of being a priest, and the year after Dom Buckley's death he seems to have been in prison, as he delegated his authority to two other monks. Expelled from England, three years later, he took part at Reims in negotiations for the union of the English monks of Monte Cassino, Valladolid, and the old English Congregation. He returned to England and was again imprisoned, first in the Clink, on the south side of the Thames, and later in the Archbishop of Canterbury's palace at Croydon. In one prison or another he wrote, under the assumed name of Widdrington, several works treating of the oath of allegiance proposed by King James I, of which (together with many other Benedictine works) he favoured and apologist against the Jesuits. Weldon says that Preston "evermore disowned" the books written under the name of Widdrington, but there is no doubt that he was the author of them. Towards the end of his life, however, he seems to have altered his views, or at any rate to have made full submission on the question of the oath to the authorities of Rome.

D. O. Hunter-Blair.

Preston, Thomas Scott, Vicar-General of New York; prothonotary Apostolic; chancellor, distinguished converting, author, bishop, b. at Hartford, Connecticut, 23 July, 1824; d. at New York, 4 Nov., 1891. From his youth he was serious, pious, and zealous. He studied in the Episcopalian general seminary, located at Ninth Avenue and Twenty-tenth Street, New York, where he was recognized as the leader of the High Church party. In 1846 he received deacon's orders, and served in this
capacity at Trinity Church, the Church of the Annunciation in West Fourteenth Street, and at Holy Innocents, West Point. In 1847 he was ordained priest by Bishop Delaney of Western New York; his own bishop having refused to advance him to this order on account of his ritualistic views. He believed himself now a validly ordained priest of the English branch of the One, Holy, Catholic, Apostolic Church, and served for some time at St. Luke’s, Hudson Street, New York, hearing confessions and urging frequent Holy Communion. He was a deep student of the early history of the Church and of the Fathers, and thus gradually began to feel the branch theory untenable. His strong conviction of Catholicity, as well as of his obligation to embrace it, before he had ever read a professedly Catholic book or spoken to a priest. He was baptized and received into the Church on 14 November, 1849. In the autumn of 1850 he was ordained priest, and assigned to duty in the cathedral. In 1851 he was appointed pastor of Yonkers with out-missions at Dobbs Ferry and Tarrytown. In 1853 he became secretary to Archbishop Hughes, and chancellor of the diocese. He was appointed pastor of St. Ann’s in 1863, and was promoted in 1872 to be vicar-general. During the absence of Archbishop Corrigan in 1890 he was administrator of the diocese. He founded and directed for many years the Sisters of the Divine Compassion. He was a man of exquisite refinement, of tender piety, and of intelligence. His Adven- ture and Lenten conferences attracted multitudes from all parts of the city. His works are: “Reason and Revelation” (New York, 1868); “The Divine Paraclete” (1879); “Ark of the Covenant” (1890); “The Divine Sanctuary” (1897); “The Holy Year” (1885); “Visions of Christ” (1878); “The Protestant Reformation” (1879); “Protestantism and the Church” (1882); “Protestantism and the Bible” (1888); “Christian Unity” (1881); “The Watch on Calvary” (1883); “Christ and the Church” (1870); “God and Reason” (1884); “Devotion to the Sacred Heart.”

MICHAEI J. LAVELLE.

Presumption (Lat. presumpere, “to take before”, “to take for granted”) is here considered as a vice opposed to the theological virtue of hope. It may also be regarded as a product of pride. It may be defined as the condition of a soul which, because of a badly regulated reliance on God’s mercy and power, hopes for salvation without doing anything to deserve it, or for pardon of his sins without repenting of them. Presumption is said to offend against hope by excess, as despair by defect. It will be obvious, however, to one who ponders what is meant by hope, that this statement is not exact. There is only a certain analogy which justifies it. As a matter of fact we could not hope too much, assuming that it is really the supernatural habit which is in question.

Suares (“De sper.,” disp. 28, sect. 3, n. 2) enumerates five ways in which one may be guilty of presumption, as follows: (1) by a wrong interpretation of his own powers, unaided, what is definitely supernatural, viz. eternal bliss or the recovery of God’s friendship after grievous sin (this would involve a Pelagian frame of mind); (2) a person might look to have his sins forgiven by his acceptance of penance (this, likewise, if it be based on a seriously entertained conviction, would seem to carry with it the taint of heresy); (3) a man might expect some special assistance from Almighty God for the perpetration of crime (this would be blaspheous as well as presumptuous); (4) one might aspire to certain extraordinary supernatural excellencies, but without any conformity to the determinations of God’s providence. Thus one might aspire to the beatific vision, the title of Saint, to the infallibility of the Church, to the actual vision of God; (5) finally, there is the transgression of those who, whilst they continue to lead a life of sin, are as confident of a happy issue as if they had not lost their baptismal innocence. The root-malice of presumption is that it denies the supernatural ordinariness, as in the first instance, or travesties the conception of the Divine attributes, as in the others. Theologians draw a sharp distinction between the attitude of one who goes on in a vicious career, precisely because he counts upon some external assistance, and one who, though he is accompanied, but not motived, by the hope of forgiveness. The first they impeach as presumption of a very heinous kind; the other is not such specifically. In practice it happens for the most part that the expectation of ultimate reconciliation with God is not the cause, but only the occasion, of a person’s continuing in sinful indulgence. Thus the particular guilt of presumption is not contracted.

J. F. DE LANAY.

Presumption (in Canon Law), a term signifying a reasonable conjecture concerning something doubtful. It is based on the support of the force of circumstances can be accepted as a proof. It is on this presumption our common adage is based: “Possession is nine points of the law.” Presumption has its place in canon law only when positive proofs are wanting, and yet the formulation of some judgment is necessary. It is never in itself an absolute proof, as it only presumes that something is true. Canons divide presumption into (1) presumption of law (juris), or that which is deduced from some legal precept or authority expressed in law or based upon precedents or similarities, and (2) presumption of a judge or man (judicis or hominis), when the law is silent on the subject and an opinion must be formed according to the way that circumstances and indications would affect a prudent man or judge.

There are several sub-varieties of presumption of law. Thus, it is called presumption of law alone (juris tantum) when a thing is judged to be so until the contrary is proved. Hence the legal formula: “everyone is presumed guilty until his guilt is proved”; “ones bad always bad” (i.e. in the species of ill-doing, if amendment is not certain); “What is known in a remote place is known in a neighbouring place”, and others similar. It is denominated presumption juris et de jure, when the law so strongly supports the presumption that it is held to be certain in judicial proceedings. Against such a presumption no proofs are admitted except the evident truth. Thus, goods described in the inventory made by a guardian are presumed to belong to the possessions of the deceased, nor would the latter testimony of the guardian himself to the contrary ordinarily be admitted. As to the presumption judicis or hominis, it is called (a) vehement, when the probability is very strongly supported by most urgent evidence, or suspicious evidence; (b) probable, which took place eleven months after a husband’s decease. A vehement presumption is considered equivalent to a full proof in civil causes of not too great importance. As to whether it should have sufficient effect in criminal causes to produce the condemnation of an accused person, canonists do not agree. It is termed (b) probable, when it arises from less urgent and only less probable conjectures and indications. Such presumption is looked on as merely a semi-proof, unless it be sustained by public
rumour, in which case it is held as sufficient proof. Finally, it is denominated (c) rash, or temerarious, if its restorations are not mere conjectures or scarcely probable arguments. Such presumption is to be entirely rejected as a proof.

The foundation of these legal presumptions is to be sought in the natural conclusions drawn from the ordinary happenings of common life and the consideration of the motives that usually sway men in given circumstances. The general rules are thus formulated: "What is natural is presumed to be in the person or case in question; "Change is not to be presumed; "Presumption is to be formed from the favourable side". As to effects, when there is question of presumption juris, it abstracts from the necessity of proof; not so presumption hominis. A judge can follow the first in civil cases even when doubt remains, not so the second. The former places the burden of proof on the adversary, but the latter does not. Finally, the first is considered of itself equivalent to proof, while the second needs corroboration from something extraneous to itself.

WILLIAM H. W. FANNING.

PRETORIUM.—This name is derived from the Latin pretorium, in later Greek πραιτωρίον. Originally, pretorium signified the general's or praetor's tent in Roman camps; then it was applied to the military council sitting there in judgment, and later to the official residence of the provincial governor, a palace or castle. In the Gospel (v. g., Matt., xxvii, 27) it denotes the building Pilate occupied at the time of Christ's Passion. There were two castles of this kind, both built by Herod. The first rose on the site of the tower of Bithia, or tower of the House (II Esd., ii, 8; cf. I Mach., xiii, 53), called Baris by Josephus ("Ant. Jud.", XV, xi, 4; "Bell. Jud.", I, iii, 3). The tower of Baris stood on a rocky mass about 350 feet long and 130 feet wide, cut perpendicularly to a height of 30 feet on the south side, at a distance of a hundred yards from the north-west corner of the Temple enclosure, and to a height of 15 feet on the north, where it was separated from Mount Bezaetha by a ditch nearly 200 feet wide. On this rock, now occupied by the Turkish barracks, Herod built a new fortress. Between the rock and the Temple enclosure he made two wide courts surrounded with porticoes. The castle, called Antonia in honour of Mark Antony, is described by Josephus (Bell. Jud., V, v, 8). Some years later, Herod built a second palace, on the northern brow of Mount Sion, at the western extremity of the town.

That Pilate resided in one of these two castles when Jesus was brought before him can scarcely be doubted; and the early tradition which locates the pretorium in the fortress of Antonia is well supported by history and archaeology. During the Paschal solemnities, riots and sedition often broke out among the Jews in the precincts of the Temple; the Roman soldiers were armed and held under arms at the different porticoes, watching the populace, to suppress any attempted insurrection, the Temple being the watchtower of the city, as the Antonia was of the Temple (Bell. Jud., V, v, 8). In case of sedition the Temple was accessible only from the Antonia (cf. Bell. Jud., II, xv, 5, 6; VI, i-iii). Pilate came from Caesarea to Jerusalem solely to look after the Jews assembled around the sanctuary, and in such circumstances he would naturally have resided in the Antonia. St. John (xix, 13) tells us that the paved court, in Greek Lithostroton, where our Lord, according to death, bore the significant name of Gabbatha, in Syro-Chaldean (from Hebr. gaphipha, i. e. the raised). So interesting a place could not have been forgotten by the first Christians. In the year 340, St. Cyril of Jerusalem reminded his flock, as a well-known fact, that the house of Caiaphas and the pretorium of Pilate had remained "unto that day a heap of ruins by the might of Him who hung upon the Cross" (Catech., xiii, xxxiviii, xxxix). Now, the western palace of Herod was spared by Titus, and served as a citadel to the legion left to garrison the Upper City (Bell. Jud., VII, i, 1). During the rebellion of the Jews under Bar-Cocheba, Julius Severus took it by assault; but Hadrian rebuilt it and made of it the citadel of Elia Capitolina (Eutychius of Alex., "Annales"). Whereas the Antonia was utterly destroyed by Titus (Bell. Jud., VI, ii, 7), and history tells of no building raised upon its ruins before the fifth century.

In 333 the Bordeaux pilgrim mentions Golgotha as being on his left as he was walking from Mount Zion towards the northern Gate. "On the right", he says, "we perceive, down in the valley, walls where once stood the house or pretorium of Pilate. There the Lord was judged before His Passion." The Breviarium of Jerusalem (c. 436) mentions in the pretorium "a great basilica called St. Sophia, with a chapel, cubiculum, where our Lord was stripped of his garments and scourged". Peter the Iberian (c. 454) went down from Golgotha "to the basilica named after Pilate", and thence to that of the Paralytic, and then to Gethsemane. The local tradition remained constant, showing at all times up to the present day the pretorium of Pilate to have been in the Antonia.

Of this fortress there still remain three piers and two archivolts of the triple gateway, which gave access to the castle. The central arch, which crosses the street, and which from the sixteenth century only has been called Arch of the Ecce Homo, measures 20 feet. The smaller one, on the north, is enclosed in the new church of the Ecce Homo (1); the small southern arch has disappeared. Twice sentenced to death, he measures exactly 66 feet. To the east of the Arch of the Ecce Homo is a court paved with rectangular stone blocks, over 15 inches thick. It measures about 130 feet by 95 feet, and is bordered at the east end by foundation walls of ancient buildings.
THE ROCK OF BARIS AND THE TURKISH BARRACKS, JERUSALEM
This is the outer court or the Lithostrotos. On the
day of Christ's trial, the Jews could not penetrate
further amongst pagan dwellings without contracting a
legal defilement. On this pavement stands the chapel
of the Condemnation (2), restored in the twelfth
century and rebuilt in 1904. The chapel of the Flagellation
(3) rises about 100 feet more to the east; it
is probably from the fifth
century, but has been
three times rebuilt.
On the rock of Baris,
the natural site of
the royal palace, was the
tribunal, "the
inner court", called
"the court of the
pre
torium" in the Syrian
Version (Mark, xv, 16).
The chapel of the Crowning with
Thorns(3), built in the
twelfth century, is still
well preserved. The
basilicas of St. Sophia
(6), reconstructed in
the twelfth century,
stood towards the east
and were transformed later into a
Turkish tribunal, and
finally razed to the
ground in 1832, when
new barracks were
created.

BARNABAS MEISTERMANN.

Pride is the excessive love of one's own excellence.
It is ordinarily accounted one of the seven capital sins.
St. Thomas, however, endorsing the appreciation of St.
Gregory, considers it the queen of all vices, and puts
vainglory in its place as one of the deadly sins.
In giving it this pre-eminence he takes it in a most formal
and complete signification. He understands it to be
that frame of mind in which a man, through the love
of his own worth, aims to withdraw himself from sub
jection to Almighty God, and sets at naught the com
monwealth of species of contempt of God and of those who bear his commission. Regarded in
this way, it is of course a mortal sin of the most heinous
sort. Indeed St. Thomas rates it in this sense as one
of the blackest of sins. By it the creature refuses to stay within his essential orbit; he turns his back upon
God, not through weakness or ignorance, but solely
because in his self-exaltation he is minded not to sub
mit. His attitude has something Satanic in it, and is
probably not often verified in human beings. A less
atrocious kind of pride is that which impels one to
make much of oneself unduly and without sufficient
warrant, without however any disposition to cast off
the dominion of the Creator. This may happen, ac
cording to St. Gregory, either because a man regards
himself as the source of such advantages as he may dis
cern in himself, or because, whilst admitting that God
has bestowed them, he reposes this to have been in
response to his own merits, or because he attributes to
himself gifts which he has not; or, finally, because even
when these are real he unreasonably looks to be put
ahead of others. Supposing the conviction indicated in
these last two instances to be seriously entertained,
the sin would be a grievous one and would have the
added guilt of heresy. Ordinarily, however, this er
roneous persuasion does not exist; it is the demeanour
that is reprehensible. The last two cases generally
speaking are not held to constitute grave offences.
This is not true, however, when as man's arrogation
is the occasion of great harm to another, as, for in
stance, his undertaking the duties of a physician with
out the requisite knowledge. The same judgment is
to be rendered when pride has given rise to such
temple of soul that in the pursuit of its object one is ready for
anything, even mortal sin. Vain
glory, in addition and presumption are com
monly enumerated as the offspring vices of
pride, because they are well adapted to serve its inordinate
aims. Of themselves they are venial sins unless some extraneous considera
tion puts them on the ranks of grievous
transgressions.
It should be noted that presumption does
not have its origin in sin against hope. It means the desire to
to essay what exceeds one's capacity.

JOSEPH F. DELANY.

Priene, a titular see of Asia Minor, suffragan of Ephesus.
The foundation of the town of Priene dates from the period when the Carians, Leleges and
Lycians, were sole masters of the country. Later
it was occupied by the Ionians and became one of
the twelve cities of Ionia. It was a holy city, and
chose the leader of the Panionic feasts. Its temple
of Athena, built by Alexander, contained an an
cient statue of that goddess. Situated on the
northern slope of Mount Mycale, it never attained
great development, although it had at first two harbours and a fleet. In the time of Augustus it was
already forty stadia from the sea because of the in
roads of the Meander. It was conquered by the Persi
an King Argyes, then by Cyrus, and remained sub
ject to the Persians till the time of Alexander. Priene
endured great hardships under the Persian general
Tabates and later under Hiero, one of its citizens.
After regaining autonomy, it remained attached to the
Ionic confederation. It was the birthplace of the
philosopher Bias. The "Notitian episcopatuum" mentions it as a suffragan of Ephesus until the thir
teenth century. Four of its bishops are known: Theos
bius, present at the Council of Ephesus (431); Iai
doros, who was living in 451; Paul, present at the
Council of Constantinople (692); Demetrius, in the
twelfth century. The beautiful ruins of Priene are at
Samssoun Kalesi, near the Greek village of Keltish
in the vilayet of Smyrna, about two miles from the
sea.

PRIERIAS, SYLVESTER. See MAZZOLINI, SYLVESTER.
PRIEST

PRIEST. — This word (etymologically "elder", from πρεσβύτερος, presbyter) has taken the meaning of "sacerdos", from which no substantive has been formed in various modern languages (English, French, German). The priest is the minister of Divine worship, and especially of the highest act of worship, sac- rifice. The ordinance has the aspect of a legal one, for it exercises or exerts sacerdotal functions as intermediaries between man and the Divinity (cf. Heb., v, 1: "for every high priest taken from among men, is ordained for men in the things that appertain to God, that he may offer up gifts and sacrifices for sins"). In various ages and countries we find numerous and important differences: the priest properly so called may be assisted by inferior ministers of many kinds; he may belong to a special class or caste, to a clergy, or else may be like other citizens except in what concerns his sacerdotal functions; he may be a member of a hierarchy, or, on the contrary, may exercise an independent priesthood (e. g. Melchisedech, Heb., vii, 1-33); lastly, the methods of recruiting the ministers of worship, the rites by which they receive their ecclesiastical authority, differ much from one place to another. But, amid all these accidental differences, one fundamental idea is common to all religions: the priest is the person authoritatively appointed to do homage to God in the name of society, even the primitive society of the family (cf. Job, i, 5), and to offer to God the duties of the broad, but not all-inclusive sense of the word). Omitting further discussion of the general idea of the priesthood, and neglecting all reference to pagan worship, we may call attention to the organization among the people of God of a Divine service with ministers properly so-called: the priests, the inferior clergy, the Levites, and at their head the high-priest. We know the detailed regulations contained in Leviticus as to the different sacrifices offered to God in the Temple at Jerusalem, and the character and duty of the priests and Levites. Their ranks were recruited, in virtue not of the free choice of individuals, but of descent in the tribe of Levi, especially the family of Aaron, which had been called by God to His ritual service to the exclusion of all others. The elders (ἐρατηρούμενος) formed a kind of council, but had no sacerdotal power; it was they who took counsel with the chief priests to capture Jesus (Matt., xxvi, 3). It is this name presbyter (elder) which has passed into the Christian speech to signify the minister of Divine service, the priest. The law also has necessarily its priesthood to carry out the Divine service, the principal act of which is the Eucharistic Sacrifice, the figure and renewal of that of Calvary. This priesthood has two degrees: the first, total and complete, the second an incomplete participation of the first. The first belongs to the priest (sacerdos), and even a high-priest; he has chief control of the Divine worship (sacramentum antistes), is the president of liturgical meetings; he has the fullness of the priesthood, and administers all the sacraments. The second degree belongs to the priest (presbyter, sacerdos), but of the second rank ("secundi sacerdotes") Innocent I ad Eurgub.; by his pontifical ordination he receives the power to offer sacrifice (i. e. to celebrate the Eucharist), to forgive sins, to bless, to preach, to sanctify, and in a word to fulfil the non-reserved liturgical duties or priestly functions. In the exercise of these functions, however, he is subject to the authority of the bishop to whom he has promised canonical obedience; in certain cases even he requires not only authorization, but real jurisdiction, particularly to forgive sins and to take care that the acts of the sacerdotal power, affecting the society of which the bishop is the head, are reserved to the latter — e. g. confirmation, the final rite of Christian initiation, ordination, by which the ranks of the clergy are recruited, and the solemn consecration of new temples to God. Sacerdotal powers are conferred on priests by pontifical ordination, and it is this ordination which puts them in the highest rank of the hierarchy after the bishop. As the word sacerdos was applicable to both bishops and priests, and one became a presbyter only by sacerdotal ordinance has the highest rank, many interpreted the primitive meaning of "ancient" and was applied only to the minister of worship and of the sacrifice (hence our priest). Originally, however, the presbyteri were the members of the high council which, under the presidency of the bishop, administered the affairs of the local church. Doubtless in general these members entered the presbyterate only by the imposition of hands which made them priests; however, that there could be, and actually were presbyteri who were not priests, is seen from canons 45-47 of Hippolytus (cf. Duchesne, "Origines du culte chrétien", append.), which show that some of those who had confessed the Faith before the tribunals were admitted into the presbyterium without ordination. These exceptions were, however, merely isolated instances, and from the very immence authority that an act of recruiting the presbyteral order. The documents of antiquity show us the priests as the permanent council, the auxiliaries of the bishop, whom they surround and aid in the solemn functions of Divine Worship. When the bishop is absent, he is replaced by a presbyter; when the church, which is now the word presbyter, is the presbyteral assembly. The priests replace him especially in the different parts of the diocese, where they are stationed by him; here they provide for the Divine Service, as the bishop does in the episcopal city, except that certain functions are reserved to the latter, and the others are performed with less liturgical solemnity. As the churches multiplied in the country and towns, the priests served them with a permanent title, becoming rectors or titulars. Thus the bond uniting such priests to the cathedral church gradually became weaker, whereas it grew stronger in the case of those who served in the cathedral with the bishop (i. e. the canons); at the same time the lower clergy tended to decrease in number, inasmuch as the clerics passed through the inferior orders only to arrive at the sacerdotal ordination, which was indispensable for the administration of the churches and the exercise of a useful ministry among the faithful. Hence ordinarily the priest was not isolated, but was regularly attached to a definite church or connected with a cathedral. Accordingly, the Council of Trent (Sess. XXXIII, cap. xvi, renewing canon vii of Chalcedon) desires bishops not to ordain any clerics but those necessary or useful to the church or ecclesiastical establishment to which they are to be attached and which they are to serve. The nature of this service depends especially on the nature of the benefice, office, or function assigned to the priest; the Council in particular desires (cap. xiv) priests to celebrate Mass at least on Sundays and holydays, while those who are charged with the care of souls are to celebrate as often as their office demands (presbyter), who is the priest (sacerdos), by his pontifical ordination he receives the power to offer sacrifice (i. e. to celebrate the Eucharist), to forgive sins, to bless, to preach, to sanctify, and in a word to fulfil the non-reserved liturgical duties or priestly functions. In the exercise of these functions, however, he is subject to the authority of the bishop to whom he has promised canonical obedience; in certain cases even he requires not only authorization, but real jurisdiction, particularly to forgive sins and to take care that the acts of the sacerdotal power, affecting the society of which the bishop is the head, are reserved to the latter — e. g. confirmation, the final rite of Christian initiation, ordination, by which the ranks of the clergy are recruited, and the solemn consecration of
Priest, Assistant.—The assistant priest (pressebtler assistens, anciently called capitellus) is the first and highest in dignity of the ministers who assist the bishop in pontifical functions. Where there are cathedral chapters, ordinarily the first canon is entitled to assist the bishop, but if the bishop only assists at a service, then the first canon after the dignitaries should serve in this capacity. If a priest preaches at pontifical Mass, the preacher should also be assistant priest. A cardinal-bishop acts as assistant priest for the pope. By privilege, prothonotaries de numero participantium and mitred abbots may have an assistant priest when they celebrate pontifical Mass; and so also, but with some restrictions, supernumerary prothonotaries and prothonotaries adulator. Certain dignitaries of the Holy See, in virtue of special custom, are similarly privileged, and finally the Sacred Congregation of Rites tolerates the custom of having an assistant priest at a priest's solemn Mass. While assisting the celebrant the assistant priest wears the cope and amice over his surplice or rochet; but while assisting the bishop presiding at the throne he wears the regular clerical dress. At the time of the Litany the deacon sits on the platform of the throne, regularly at the right and a little in front of the first assistant deacon. When the celebrant uses the faldstool, the assistant priest sits on the bench at the deacon's right; but when the celebrant uses the bench, the assistant priest sits on a stool placed at the end of the bench and usually at the right of the deacon. His chief duty is to attend to the book, which he holds for most of the parts which the celebrant sings, and at the altar he turns the leaves, points out the text, etc. He ministers the ring, presents and holds the chalice for the veil of peace first, from the celebrant, and conveys it to the choir. At the throne he also ministers the incense and incenses the bishop. Sometimes it is his duty to publish the episcopal indulgences. When the bishop presides at the throne, part of the time the assistant priest occupies his place at the throne, and part of the time his regular place in the choir, and then he ministers the incense, incenses the bishop, and brings the kiss of peace from the celebrant to the bishop. In further cases besides those described, Divine Office his duties are similar to those described.

Priest, The HIGH.—The high-priest in the Old Testament is called by various names: קָהָן (Lev., i, 6); כהן גדול (Lev., xxvi, 10); נָחָלָה (Lev., iv, 3); i. e. the head priest (IV Kings, xxv, 18); כְּפֵלָא אָדָם הַבָּרִי (Lev., i, 6); כְּפֵלָא לאָדָם הַבָּרִי (Lev., iv, 3); i. e. the anointed priest (Lev., iv, 3); Gr., Ἀπατοπής (Lev., iv, 3), also in later books and New Testament. In the Old Testament Ἀπατοπής (Num., iii, 6); Ἀπατοπής (Lev., iv, 3); i. e. the high priest (IV Kings, xxv, 18); Ἀπατοπής τοῦ ὄμορφου (Lev., xxxi, 10), are the common forms. A coadjutor or second priest was called נָבָי (IV Kings, xxv, 18; see Gesenius, s. v. נָבָי). Aaron and his sons were chosen by God to be priests, Aaron being the first high-priest and Eleazar his successor; so that, though the Scripture does not say so explicitly, the succession of the eldest son to the office of high-priest became a law. The consecration of Aaron and his sons during seven days and their vestments are described in Ex., xxviii, xxix (cf. Lev., viii, 12; Ex., xlv, 7 sqq.). Aaron was anointed with oil poured on his head, and henceforth called "the priest that is anointed" (Lev., iv, 3). Some texts seem to require anointing for all (Ex., xxx, 30; Lev., x, 7; Num., iii, 3), but Aaron was anointed with oil in great profusion, even on the head (Ex., xxix, 7), to which reference is made in Ps., lxxxii, 2, where it is said that the precious ointment ran down upon his head and "to the skirt of his garments." The ointment was made of myrrh, cinnamon, calamus, cæsaia, and olive oil, compounded by the perfumer or apothecary (Ex., xxix, 22; Josephus, Ant., III, viii, 12), and poured on the head of Aaron as a consecration or anointing for profane uses (Ex., xxx, 31–33).

After the Exile anointing was not in use: both high-priests and priests were consecrated by simple investiture. The rabbis held that even before the Exile the high-priest alone was anointed by pouring the sacred oil "over him" and applying it to his forehead over the eyes "after the form of the Greek X" (Edersheim, "The Temple, Its Ministry and Service at the Time of Jesus Christ", 71). No age is specified, and thus youth was no impediment to the act. The same is the case with that of Aristobulus to the high-priesthood, though the latter was in his seventeenth year (Josephus, "Antiq.", XV, iii, 3). Josephus gives a list of eighty-three high priests from Aaron to the destruction of the Temple by the Romans (Ant., XX, x). They were in the-
PRIEST 408 • PRIEST

ginning chosen for life, but later removed at will by the secular power (Jos., "Ant.", XV, iii, 1; XX, 2), so that the numbers of the high-priests from the days of Herod until the day of the destruction of the Temple and the city, and burnt them, were in all twenty-eight; the time also that belonged to them was one hundred and seven years" (Jos., "Ant.", XX, x). Thus one-third of the high-priests of fifteen centuries lived within the last century of their history; they had become the puppets of the temporal rulers. The frequency of change in the office is hinted at by St. John (x, 51), where he says that Caiaphas was "the high-priest of that year". Solomon deposed Abiaiah for having supported the cause of Adoniass, and before the death of Solomon, by Zadok (I Kings, ii, 27, 35); then the last of Heli's family was cast out, as the Lord had declared to Heli long before (I Kings, ii, 32). It seems strange, therefore, that Josephus (Ant., XV, iii, 1) states that Antochus Epiphanes was the first to depose a high-priest. It may be that he regarded Abiaiah and Zadok as holding the office conjointly, since Abiaiah "the priest" and Zadok "the priest" were both very prominent in David's reign (III Kings, i, 34; I Par., xvi, 39, 40). Josephus may have considered Solomon's name as that of a return to unity; moreover, in the same section where he mentions the change, he says that Zadok was high-priest in David's reign (Ant., VIII, i, 3), and adds "the king [Solomon] also made Zadok to be alone the high-priest" (Ant., VIII, i, 4). Shortly before the destruction of the Temple by the Babylonians, Solomon, by lot, a more rustic name Phannias as the last high-priest: thus the high-priesthood, the city, and the Temple passed away together (Josephus, "Bell. Jud.", IV, iii, 8).

The prominence of Solomon at the dedication of the Temple need not lead to the conclusion that the king officiated also as priest on the occasion. Smith ("Ency. Bib.", s. v. Priest) maintains this, and that the kings of Judah offered sacrifice down to the Exile, alleging in proof such passages as III Kings, ix, 25; but since priests are mentioned in this same book, for instance, viii, 10, 11 such inference is not reasonable. As Van Hoonacker shows, the prominence of the secular power in the early history of the people and the apparent absence of even the high-priest during the most sacred functions, as well as the great authority possessed by him after the Exile, do not warrant the conclusion of Wellhausen that the high-priesthood was known only in post-Exilic times. That such a change could have taken place and could have been introduced into the life of the nation and secured as a permanent institution is hardly probable. We have, however, undoubted references to the high-priest in pre-Exilic texts (IV Kings, xi; xii; xvi, 10; xxi; xxii, etc.,) which Buhl ("The New Schaff-Herzog Enc. of Religious Knowledge", s. v. High Priest) admits as genuine, not interpolations, as some think, by which the "later office may have had a historic foreshadowing". We see in them proofs of the existence of the high-priesthood, not merely its "foreshadowing". Then too the title "the second priest" in Jer., ii, 24, where the high-priest also is mentioned, is a twofold witness to the same truth; so that though, as Josephus tells us (Ant., XX, x), in the latter years of the nation's history "the high-priests were entrusted with a dominion over the nation" and thus became, as in the days of the ascendant Maccabees, more conspicuous than in early times, yet this was only an accidental luster added to an ancient and sacred office.

In the New Testament (Matt., ii, 4; Mark, xiv, 1, etc.) where reference is made to chief priests, some think that these all had been high-priests, who having been banished until the destruction of the Temple and the great influence in the Sanhedrin. It is clear from John, xviii, 13, that Annas, even when deprived of the pontificate, took a leading part in the deliberations of that tribunal. Schurer holds that the chief priests in the New Testament were ex-high-priests and also those who sat in the council as members and representatives of the privileged families from which the high-priests were chosen (The Jewish People, Div. II, V, i, 204-7), and Maldonatus, in Matt., ii, 6, cites H Par., xxxvi, 14, showing that those who sat in the Sanhedrin as heads of priestly families were so seated.

The high-priest alone might enter the Holy of Holies on the day of atonement, and even he but once a year, to sprinkle the blood of the sin-offering and offer incense: he prayed and sacrificed for himself and for the people (Lev., vii). He likewise officiated "on the seventh day of the seventh month" and the annual festivals (Jos., "Bell. Jud.", V, v, 7). He might marry only a virgin "of his own people", though other priests were allowed to marry a widow; neither was it lawful for him to rend his garments nor to come near the dead even if closely related (Lev., xxi, 10-14; cf. Josephus, "Ant.", III, xii, 2). It belonged to him also to manifest the Divine will made known to him by means of the urim and thummim, a method of consulting the Lord about the fate of the nation and the future of the kingdom. Since the death of the high-priest marked an epoch in the history of Israel, the homicides were then allowed to return home from the city where they had found a refuge from vengeance (Num., xxxv, 25, 28).

The typical character of the high-priest is explained by St. Paul (Heb., ix), where he speaks of the fact that while the high-priest entered the "Holy of Holies" once a year with the blood of victims, Christ, the great high-priest, offered up His own blood and entered into Heaven itself, where He "also maketh intercession for us" (Rom., viii, 34; see Ficino, "Trip. Expos. in Heb.", ix).

In addition to what other priests wore while exercising their sacred functions the high-priest put on special golden robes, so called from the rich material of which they were made. They are described in Ex., xxviii, and each high-priest left them to his successor. Over the tunic he put on a piece violet robe, trimmed with tassels of violet, purple, and scarlet (Joseph., III, vii, 4), between the two tassels were bells which rang as he went to and from the sanctuary. Their mitres differed from the turbans of the ordinary priests, and had in front a golden plate inscribed "Holy to the Lord" (Ex., xxviii, 38). Josephus describes the mitre as having a triple crown of gold, and adds that the plate with the name of God which was written thereon had earned itself the character "hath remained to this very day" (Ant., VIII, iii, 8; III, vii, 6). In a note to Whiston's Josephus (Ant., III, vii, 6) the later history of the plate is given, but what became of it finally is not known. The precious vestments of the high-priest were kept by Herod and by the Romans, but seven days before a festival they were taken out and purified before use in any sacred function (Jos., "Ant.", XVIII, iv, 3). On the day of atonement, according to Lev., xvi, 4, the high-priest wore pure linen, but Josephus says he wore his golden vestments (Bell. Jud., V, v, 7), and to reconcile the two Ebersheim thinks that the rich robes were used at the beginning of the ceremony and changed for the linens vestments before the high-priest entered the Holy of Holies (The Temple, p. 270). For additional information concerning the vestments and ornaments of the high-priest see EPHOD, ORACLE, PECTORAL, URIM AND THUMMIM.

Schurer, The Jewish People in the Time of Jesus Christ, I, I 1892-7; also Göpel and other modern works. See also Smith, Dict. of the Bible, s. v. High-Priest; Ebersheim, The Temple, its Ministry and Service at the Time of Jesus Christ, 57-79; H Flatt, "The office of the High-Priest", given the radical view; On the Problem of the Old Testament (1960), 180-90, refers Wellhausen and others of the radical school.

JOHN J. TIERNEY.
Priesthood.—The word priest (Germ. Priester; Fr. prêtre; Ital. prete) is derived from the Greek πρεσβύτερος (the elder, as distinguished from μάρτυρες, the witnesses) that Buddhism, the Hinduism of India, and the Jewish sacerdotes, the Greek λειτουργός, and the Hebrew קָדוֹשׁ. By the term is meant a (male) person called to the immediate service of the Deity and authorized to hold public worship, especially to offer sacrifice. In many instances the priest is the religious mediator between God (gods) and man and the appointed teacher of religious truths, especially when these include esoteric doctrines. To apply the word priest to the magicians, prophets, and medicine-men of the religions of primitive peoples is a misuse of the term. This fact is evidenced by the very fact that in the Vedas, holy water is sacred to the deity, and consequently, mere leaders in the public prayers or guardians of shrines have no claim to the title priest. Our subject may be conveniently treated under four heads: I. The Pagan Priesthood; II. The Jewish Priesthood; III. The Christian Priesthood; IV. The Blessings arising from the Catholic Priesthood.

I. THE PAGAN PRIESTHOOD.—A.—Historically the oldest of pagan religions, the most fully developed, and the most deeply marked by priestly status is that of India, distinguished by hierarchy and many classes are recognizable: Vedism, Brahminism, Buddhism, and Hinduism. Even in the ancient Vedic hymns a special priesthood is distinguishable, for, although originally the father of the family was also the offerer of sacrifice, he usually sought the co-operation of a Brahmin. From the essential functions of praying and sacrificing during the sacrifice arose in Vedism the three classes of sacrificing (adharvi), singing (udgātar), and praying priests (holar). The four categories of soldier, priest, artist, and slave developed formally in later Brahminism into the four rigidly distinguished castes (Dahlmann), the Brahmans meanwhile forging ahead of the soldiers to the position of chief importance. The Brahmins alone understood the intricate and difficult sacrificial ceremonial, thanks to their great knowledge and sacrifices, they exercised an irresistible influence over the gods; a pantheistic explanation of the god Brahma invested them with a divine character. The Brahmin was thus a sacred and inviolable person, and to murder him was the greatest sin. Brahminism has wrongly been compared with medieval Christianity (cf. Teichmüller, “Religionsphilosophie”, Leipzig, 1886, p. 528). In the Middle Ages there was indeed a privileged priesthood, but not an hereditary priestly caste; therefore not classes, but orders, the highest ecclesiastical offices. Still less justified, in view of the pantheistic character of the Brahminic religion, are all attempts to trace a genetic connexion between the Catholic and Indian priesthhood, since the monothetic spirit of Catholicism and the characteristic organization of its clergy are irreconcilable with a pantheistic conception of the Deity and the unsocial temper of a caste system.

The same remarks apply with even greater force to Buddhism which, through the reform introduced by King Asoka (269–232 B.C.), forged Brahmanism into the background. As this reform inaugurated the reign of Agnosticism, Illumination, and a one-sided morality, the Brahminic priesthood, with the decay of the ancient sacrificial services, lost its raison d’être. If there be no eternal substance, no Ego, no immortal soul, no life beyond, then the idea of a God of a Redeemer of a priesthood forthwith disappears. The Buddhist redemption is merely an ascetical self-redemption wrought by sinking into the abyss of nothingness (Nirvana). The bonzes are not priests in the strict sense (see Erhart). With this change the name in common with Christian monasticism. Modern zealots for Buddhism declare with increasing boldness since Schopenhauer, that what they chiefly desire is a religion without dogma and without an alien redeemer, a service without a priesthood. It will therefore perhaps appear all the more extraordinary that the Church Fathers, as a consequence of the reformation of Thong-Ka-ba, has developed in Tibet a formal hierarchy and hierocracy in Lamaism (Lama=Brahma).

The monasticism and the religious services of Lamaism also present so striking a similarity with Catholic institutions that non-Catholic investigators have hesitatingly spoken of a “Buddhist Catholicism” in Tibet. Pope and dalai-lama, Rome and the city of Lhasa are counterparts; Lamaism has its monasteries, bells, processions, litanies, relics, images of saints, holy waters, sacred ropes, croziers, vestments, cope, baptism, confession, mass, sacrifice for the dead. Nevertheless, since it is the interior spirit that gives a religion its characteristic stamp, we can recognize in these externals, not a true copy of Catholicism, but only a wretched caricature. And, since this religious compound undoubtedly came into existence only in the fourteenth century, it is evident that the remarkable parallelism is the result of Catholic influence on Lamaism, not vice versa. We can only suppose that the founder Thong-Ka-ba was a Catholic layman. Of modern Hinduism, Schanz draws a gloomy picture: “In addition to Vishnu and Siva, spirits and demons are worshipped and feared. The River Ganges is held in special veneration. The temples are often built near lakes because to all who bathe there Brahma promises the forgiveness of sin. Beasts (cows), especially snakes, trees, and lifeless objects, serve as fetishes. Their offerings consist of flowers, oil, incense, and food. To Siva and his spouse bloody sacrifices are also offered. Nor are idolatry and prostitution wanting” (“Apoloie. d. Christentums”, Freiburg, 1905, II, 84 sq.).

B.—In the kindred but ethically superior religion of the Iranians (Parsecism, Zoroastrianism, Mazdaism), which unfortunately never overcame the theological dualism between the good god (Ormuzd=Athura-Mazda) and the wicked anti-god (Ahriman=Angró-Mainyu), there existed from the beginning a special priestly caste, which in the Avesta (q. v.) was divided into six classes. The general name for priest was ahraavus (man of fire), and the chief duty of the priesthood was the fire-service, fire being the special symbol of Ormuzd, the god of light. After the destruction of the Persian monarchy only two categories of priests remained: the officiating (zostar, jhist) and the ministering (rathur). Both were later succeeded by the Median magus (magus, modern Parsecism移动 (from magh-pati, magic-father). In addition to the maintenance of the sacred fire, the duties of the priests were the offering of sacrifices (flesh, bread, flowers, fruit), the performance of purifications, prayers, and hymns, and instructing in the holy law. Sacrificial animals were placed on a bundle of twigs in the open air, lest the pure earth should be defiled with blood. The human sacrifices, customary from time immemorial, were abolished by Zoroaster (Zarathustra). In ancient times the fires-altars were placed in the open air, and preferably on the mountains, but the modern Parsees have special fire-temples. The haoma, as the oldest sacrifice, calls for particular mention; manufactured out of the narcotic juice of a certain plant and used as a drink-offering, it was identified with the Deity Himself and is still used in the present day to immolate the worthlessness. This Iranian haoma is doubtless identical with the Indian soma, the intoxicating juice of which (nucleus castrdum acidum) was supposed to restore to man the immortality lost in Paradise during the Flood. By the Sassanides, Mitras the sun-god—according to the later Avesta, high-priest and mediator between God and man—had gradually supplanted the creative god
Ormusd, Persian Mithra-worship held the field almost unopposed; and under the Roman Empire it exerted an irresistible influence on the West (see MASS).

C.—To turn to classical antiquity, Greece never possessed an exclusive priestly caste, although from the Doric period of the Greek archaic priesthood the kings were regarded as the privilege of the nobility. In Homer the kings also offer sacrifices to the gods. Public worship was in general undertaken by the State, and the priests were state officials, assigned as a rule to the service of special temples. The importance of the priesthood grew with the extension of the mysteries, which were embodied especially in the Orphic and Eleusinian cults. Sacrifices were always accompanied with prayers, for which as the expression of their religious sentiments the Greeks showed a special preference.

But among no people in the world were religion, sacrifice, and the priesthood to such an extent the business of the State as among the ancient Romans. At the dawn of their history, their legendary kings (e. g. Numa) are themselves the sacrificial priests. Under the Republic, the priestly office was open only to the patricians until the Lex Oculina (about 300 B. c.) admitted also the plebeians. As the special object of Roman sacrifice was to avert misfortune and win the favour of the gods, dedicated in it from earliest times an important rôle. Hence the importance of the various classes of priests, who interpreted the will of the gods from the flight of birds or the entrails of the beasts of sacrifice (augures, haruspices). There were many other categories: pontifices, flamines, fetiales, luperces etc. During imperial times the emperor was the high-priest (pontifex maximus).

D.—According to Tacitus, the religion of the ancient Germans was a simple worship of the gods, without images; their services took place, not in temples, but in open fields. The priests, who were such, were highly respected, and possessed judicial powers, as the Old High German word for priest, bwarde (guardians of justice), shows. But a far greater influence among the people was exercised by the Celtic priests or druids (Old Irish, drut, magician). Their real home was Ireland and Britain, whence they were transplanted to Gaul in the third century before Christ. Here they appear as a priestly caste, exempt from taxes and military service; they constitute with the nobility the ruling class, and by their activity as teachers and physicians are regarded as representatives of a higher religious, moral, and intellectual culture. The druids taught the existence of Divine providence, the immortality of the soul, and transmigration. They appear to have had images of the gods, and to have offered human sacrifices; the latter practice may have come down from a much earlier period. Their religious services were usually held on heights and in oak-groves. After the conquest of Gaul the druids declined in popular esteem.

E.—The oldest religion of the Chinese is Sinism, which may be characterized as “the most perfect, spiritualistic, and moral Monotheism known to antiquity outside of Judaea” (Schanz). It possessed no distinct priesthood, the sacrifices (animals, fruits, and incense) being offered by state officials in the name of the ruler. In this respect no alteration was made by the reformer Confucius (sixth century B. c.), although he debased the concept of religion and made the almost deified emperor “the Son of Heaven” and the organ of the cosmic intellect. In direct contrast to this priestless system Laotse (b. 604 B. c.), the founder of Daoism (teo, reason), introduced both monasticism and a regular priesthood with a high-priest at its head. From the first century before Christ, these two religions found a strong rival in Buddhism, although Confucianism remains even to-day the official religion of China.

The original national religion of the Japanese was Shintoism, a strange compound of nature, ancestor, and hero-worship. It is a religion without dogmas, without a moral code, without sacred writings. The Mikado is a son of the Deity, and as such also high-priest; his palace is the legal temple. It was only in much later times that the Temple of Ise was built. A. D. 280 Confucianism made its way into Japan from China, and tried to coalesce with the kindred Shintoism. The greatest blow to Shintoism, however, was struck by Buddhism, which entered Japan in A. D. 552, and by an extraordinary process of syncretism, united with the old national religion to form a third. This fusion is known as Ryo-bu-Shinto. In the Revolution of 1868, this composite religion was set aside, and pure Shintoism declared the religion of the State. In 1877 the law establishing this situation was repealed, and in 1889 general religious freedom was granted. The various orders of rank among priests had been abolished in 1879.

F.—With the ancient religion of the Egyptians the idea of the priesthood was inseparably bound up for many thousand years. Though the ruler for the time being was nominally the only priest, there had developed even in the ancient kingdom (from about 3400 B. c.) a special priestly caste, which in the middle kingdom (from about 2000 B. c.), and still more in the New kingdom, 1550-1075 B. c., had become the ruling class. The great attempt at reform by King Amenhotep IV (died 1374 B. c.), who tried to banish all gods except the sun-god from the Egyptian religion and to make sun-worship the religion of the State, was thwarted by the opposition of the priests. The whole twenty-first dynasty was a family of priest-kings. Although Moses, learned as he was in the wisdom of the Egyptians, may have been indebted to an Egyptian model for one or two external features in his organization of Divine worship, he was, thanks to the Divine manifestation, able to establish the Jewish priesthood, which is based on the unique idea of Jahweh’s covenant with the Chosen People (cf. “Reallencyklopädie für protest. Theologie”, XVI, Leipzig, 1905, 33). Still less warranted is the attempt of some writers on the comparative history of religions to trace the origin of the Catholic priesthood to the Egyptian priestly castes. For at the very time when this borrowing might have taken place, Egyptian idolatry had degenerated into such loathsome animal-worship, that not even the Egyptian priests were safe from it away from it in disgust (cf. Aristides, “Apol.”, xii; Clement of Alexandria, “Cohortatio”, ii).

G.—In the religion of the Semites, we meet first the Babylonian-Assyrian priests, who, under the name of Chaldeans, practised the interpretation of dreams and the reading of the stars and conducted special schools for priests, besides performing their functions in connexion with the sacrifices. Hence their division into various classes: sacrificers (miakkus), seers (bdr), exorcists (dipu) etc. Glorious temples with idols of human and hybrid form arose in Assyria, and (apart from the obligatory cult of the stars) served for astrological and astronomical purposes. Among the Syrians the cruel, voluptuous cult of Moloch and Astarte found its special home, Astarte especially (Babylonian, Ishtar) being known to the ancients simply as the “Syrian Goddess” (Dea Syria). Likewise among the semitized Phrygians, Amonites, and Philistines these ominous deities found special veneration. Howling and dancing priests sought to appease the bloodthirsty Moloch by sacrifices of children, while the Gauls strove to pacify the Phrygian goddess Cybele. The notorious priests of Baal of the Chanaanites were for the Jews as strong an incentive to idolatry as the cult of Astarte was a temptation to immorality. The south-Semitic religion of the ancient Arabian was to divorce the nation of the desert without a distinct priesthood.
PRIESTHOOD

modern Islam or Mohammediam has a clergy (mujahidin, announcer of thehour of prayer, leader of the prayers; khâdir, preacher), but no real priesthood. The west-Semitic branch of the Hebrews is treated in the next section.

Of the vast literature on a few fundamental works can be cited: MILLER, Physical Religion (London, 1891); IDEM, Anthropological Relig. (London, 1892); IDEM, The Indian Religious System (London, 1893); ALLEGHENY, Geschichte des Priesterums (2 vols., Berlin, 1883); DE LA SAUMAYE, Lehrbuch der Religionsgesch. (2 vols., Freiburg, 1905); VOLLERS, Die Welt der Religionen in ihrem Zusammenhang (Jena, 1906).

Concerning the Indian priesthood:—AURIA, Die indogerman. Religion in der Hauptursprout des Indus-landes (2 vols., Leipsic, 1898); KELLER, Les religions de l’Inde (Paris, 1889); LECLERCQ, Les religions de l’Inde (Paris, 1894); HOPE, The Religions of India (London, 1893); HARDY, Die indische Religion (Leipsic, 1894); IDEM, Religi. Entstehung, Form, und Fortschritte der Religion der Zukunft (2nd ed., 1901); FREIDANK, Buddhismus und Christentum, eine Apologetik (1903); WIEZER, Laienreligion und Katholizismus (Leipsic, 1904). In the Indianes—DAMBROUST, Ormal et Aasram: leur origine et leur histoire (Paris, 1877); SPIEGEL, Brahmanische Altertümer (1882); IDEM, Origines du zoroastrianisme (1879); CARABELLE, La philosophie religieuse du mahâtmâ sous les Sassanides (Leipsic, 1884); MENSANT, Les Parsis, Hist. des communautés (Paris, 1886); GUERIN, Essai sur le culte et les mystères de Mithra (Paris, 1892); JACKSON, The Prophet of the Ancient East (New York, 1899); CUMONT, Les mystères de Mithra (2nd ed., Paris, 1902; tr. London, 1893).

(Munich, 1897-98); JENTSCH, Hellanenreligion (1887); DE GROOT, Religion der oriental. Volker (2 vols., 1898); IDEM, Rom. Religionen (Paris, 1898); WIMOWA, Relig. u. Kultur d. Römer (1903).

Concerning the Semites:—LEGRAND, La magie chez les Chrétiens (Paris, 1871); LACROIX, Sur les religions sémities (Paris, 1905); SCHRADE, Die Keilschriften u. das Alte Testament (3rd ed., 1905); SCHMIDT, Babylonische Säuberung mit Rücksicht auf Priestcr u. Bäser (1906); VINCENZ, Canop (Paris, 1907).

II. THE JEWISH PRIESTHOOD.—In the age of the Patriarchs the offering of sacrifices was the function of the father or head of the family (cf. Gen., vii., 20; xii., 7, etc.; Job, i., 5). But, even before Moses, there were others than the head and fathers of the family (cf. Ex., xix., 22 sqq.). Hummeltraut’s hypothesis (“Das vormosaische Priestertum in Israel,” Freiburg, 1899) that this pre-Mosaic priesthood was established by God Himself and made hereditary in the royal family (cf. Jer., xix., 2), has been upheld in punishment of the worship of the golden calf (cf. Ex., xxxii., 26 sqq.), can hardly be scientifically established (cf. Rev. bibl. internat., 1899, pp. 470 sqq.). In the Mosaic priesthood we must distinguish: priests, Levites, and high-priests.

Aaron himself and later the first-born of his family was to stand at the head of this priesthood as high-priest, while the other Levites were to act, not as priests, but as assistants and servants. The solemn consecration of the Aaronites to the priesthood took place at the same time as the anointing of Aaron as high-priest and with almost the same ceremony (Ex., xxix., 1-57; xii, 12 sqq.; Lev., viii., 1-36). This single consecration included that of all the future descendants of the priests, so that the priesthood was housed in the house of Aaron by mere descent, and was thus hereditary. After the Babylonian Exile strict genealogical proof of priestly descent was even more rigidly demanded, and any failure to furnish the same meant exclusion from the priesthood (I Esd., ii., 61 sqq.; II Esd., vii., 63 sqq.). Certain bodily defects, of which the later Talmudists mention 142, were also a disqualification from the exercise of the priestly office (Lev., xxi., 17 sqq.). Age limits (twenty and fifty years) were also appointed (II Par., xxxi., 17); the priests were forbidden to take to wife a harlot or a divorced woman (Lev., xxi., 7); during the active discharge of the priesthood, marital intercourse was forbidden. In addition to an unbloodied earlier life, levitical cleanness was also indispensable for the priesthood. Whoever performed a priestly function in levitical uncleanness was to be expelled like one who entered the sanctuary after partaking of wine or other intoxicating drinks (Lev., x., 9; xxi., 3). To incur an uncleanness “at the death of his citizens,” except in the case of immediate kin, was rigidly forbidden (Lev., xxi., 1 sqq.). In cases of mourning no outward signs of sorrow might be shown (e.g., by rending the garments). On entering into their office, the priests had first to take a bath of purification (Ex., xxix., 4; xii., 12), be sprinkled with oil (Ex., xxix., 21; Lev., viii., 30), and put on the vestments.

The priestly vestments consisted of four breeches, tunic, girdle, and mitre. The breeches (feminales linen) covered from the reins to the thighs (Ex., xxvii., 42). The tunic (tunica) was a kind of coat, woven in a special manner from one piece; it had narrow sleeves, ex-
tended from the throat to the ankles, and was brought together at the throat with bands (Ex., xxviii, 6). The girdle (bālleus) was three or four fingers in breadth and (according to rabbinic tradition) thirty-two ells long; it had to be embroidered after the same pattern and to be of the same colour as the curtain of the forecourt and the tabernacle of the covenant (Ex., xxxix, 26). The official vestments were completed by the mitre (Ex., xxxix, 26), a species of cap of fine linen. As nothing is said of foot-covering, the priests must have performed the services barefooted as Jewish tradition indeed declares (cf. Ex., iii, 5). These vestments were specified for use only at times they were kept in an appointed place in charge of a special custodian. For detailed information concerning the priestly vestments, see Josephus, "Antiq.," III, vii, 1 sqq.

The official duties of the priests related partly to their main occupations, and partly to subsidiary services. To the former category belonged all functions connected with the public worship, e. g. the offering of incense twice daily (Ex., xxx, 7), the weekly renewal of the loaves of proposition on the golden table (Lev., xii, 1); the anointing and filling of the oil-lamp, the golden candlestick (Lev., xxiv, 1). All these services were performed in the sanctuary. There were in addition certain functions to be performed in the outer court—the maintenance of the sacred fire on the altar of incense (Lev., vii, 11); the preparation of the morning and evening sacrifices, especially of the lambs (Ex., xxix, 38 sqq.). As subsidiary services the priests had to present the cursed water to wives suspected of adultery (Num., v, 12 sqq.); sound the trumpets announcing the holy-days (Num., i, 1 sqq.), declare the lepers clean or unclean (Lev., xiii-xvi; Deut., xxiv, 8; cf. Matt., viii, 14), dispense from vows, appraise all objects vowed to the sanctuary (Lev., xxvii), and finally offer sacrifice for those who broke the law of the Nazarites, i. e. a vow to avoid all intoxicating drinks and every uncleanness (especially from contact with a corpse) and to let one's hair grow long (Num., vi, 1-21). The priests furthermore were teachers and judges; not only were they to explain the law to the people (Lev., x, 11; Deut., xxxii, 10) without remuneration (Mich., iii, 11) and to preserve carefully the Book of the Law, of which a copy was to be presented to the (future) king (Deut., xviii, 18), but they also had to settle difficult lawsuits among the people (Deut., xviii, 6; xix, 17; xx, 5). In view of the complex nature of the liturgical service, David later divided his priests into different classes, each of which in turn, with its eldest member at its head, had to perform the service from one Sabbath to the next (IV Kings, xi, 9; cf. Luke, i, 8). The order of the classes was determined by lot (I Par., xxiv, 7 sqq.).

The income of the priests was derived from the tithes and the firstlings of fruits and animals. To these were added as accidentals the remains of the food, and guilt-obliterations, which were not entirely consumed by fire; also the herbage of the corn sacrificed and the natural products and money vowed to God (Lev., xxvii; Num., viii, 14). With all these perquisites, the Jewish priests seem never to have been a wealthy class, owing partly to the increase in their numbers and partly to the large families which they reared. But their exalted office, their superior education, and their social position secured them great prestige among the people. In general, they fulfilled their high position worthily, even though they frequently merited the stern reproof of the Prophets (cf. Jer., xxii, 13; Ezek., xxvii, 26; Os., viii, 8; Mich., iii, 11; Mal., i, 7). With the destruction of Jerusalem by Titus in 70 B. c. the entire sacrificial service and with it the Jewish priesthood ceased. The later rabbis never represent themselves as priests, but merely as teachers of the law.

B. Levites in the Narrow Sense.—It has been said above that the real priesthood was hereditarily in the house of Aaron alone, and that to the other descendants of Levi was assigned a subordinate position as servants and assistants of the priests. The latter are the Levites in the narrow sense. They were divided into the families of the Gersonites, Caathites, and Merarites (Ex., vi, 1-26; Num., xxvi, 57), so named after Levi's three sons, Gerson, Caath, and Merari (cf. Gen., xlvi, 11; I Par., vi, 1). As simple servants of the priests, the Levites might not enter the sanctuary, nor perform the real sacrificial act, especially the sprinkling for expiation of the sin-offerings; this was the privilege of the priests (Num., xviii, 3, 19 sqq.; xviii, 6). The Levites had however to assist the latter during the sacred services, prepare the different oblations and keep the sacred vessels in proper condition. Among their chief duties was the constant guarding of the tabernacle with the ark of the covenant; the Gersonites were encamped towards the west, the Caathites towards the south, the Merarites towards the north, while Moses and Aaron with their sons guarded the holy tabernacle towards the east (Num., iii, 22). They had no fixed home in Jerusalem. David created four classes of Levites: servants of the priests, officials and judges, porters, and finally musicians and singers (I Par., xxiii, 3 sqq.). After the building of the Temple by Solomon the Levites manned the daily service (I Par., xvi, 12 sqq.). When the Temple was rebuilt Levites were established as guards in twenty-one places around (Talmud; Middoth, i, i). In common with the priests, the Levites were also bound to instruct the people in the Law (II Par., xvii, 8; II Eed., viii, 7), and they even possessed at times certain judicial powers (II Par., xix, 11).

They were initiated into office by a rite of consecration: sprinkling with the water of purification, shaving of the hair, washing of the garments, offering of sacrifices, imposition of the hands of the eldest (Num., viii, 5 sqq.). As to the age of service, thirty years was fixed for the time of entrance and fifty for retirement from office (Num., iv, 3; I Par., xxiii, 24; I Eed., iii, 8). No special vestments were prescribed for them in the Law; in the time of David and Solomon the bearers of the ark of the covenant and the singers wore garments of fine linen (I Par., xv, 27; II Par., v, 12). At the division of the Promised Land among the Twelve Tribes, the tribe of Levi was left without territory, since the Lord Himself was to be their port of habitation and inheritance (I Chron., vi, 17-20). At the death of Josiah, xiii, 14). In compensation, Jahweh ceded to the Levites and priests the gifts of natural products made by the people, and other revenues. The Levites first received the tithes of fruits and beasts of the field (Lev., xxvii, 30 sqq.; Num, xviii, 20 sqq.), of which they had in turn to deliver the tenth part to the priests (Num., xviii, 26 sqq.). In addition, they had a share in the sacrificial banquets (Deut., xii, 18) and were, like the priests, exempt from taxes and military service. The question of the residence of the Levites is discussed by ordering the tribes endowed with landed property to cede to the Levites forty-eight Levite towns, scattered over the land, with their precincts (Num., xxxv, 1 sqq.); of these, thirteen were assigned to the priests. After the division of the monarchy into the Northern Kingdom of Israel and the Southern Kingdom of Juda, many Levites from the northern portion removed to the Kingdom of Juda, which remained true to the Law, and took up their abode in Jerusalem. After the Northern Kingdom had been chastised by the Assyrians (722 B. C.), the whole of Juda was also overrun by the Babylonians in 606 B. c., and numbers of the Jews, including many Levites, were hurried away into the "Babylonian exile". Only a few Levites returned to their old home under Esdras in 450 (cf. I Eed., ii, 40 sqq.).
With the destruction of the Herodian Temple in A.D.
70 the doom of the Levites was sealed.

C. — The High-priest. — At Jahweh's command Moses consecrated his brother Aaron first high-priest, repeated the consecration on seven days, and on the eighth day solemnly introduced him into the tabernacle and invested the portentous man with the sacred garments. The equipment of the high-priest consisted in washings, investment with costly vestments, anointing with holy oil, and the offerings of various sacrifices (Ex., xxix). As a sign that Aaron was endowed with the fullness of the priesthood, Moses poured over his head the oil of anointing (Lev., viii., 12), while the other Aaronites, as simple priests, had only their hands anointed (Ex., xxix, 7, 29). The high-priest was for the Jews the highest embodiment of theocracy, the monarch of the whole priesthood, the special mediator between God and the People of the Covenant, and the spiritual head of the synagogue. He was the priest par excellence, the "great priest" (Greek, ἡγαθός), the "prince among the priests", and, because of the anointing of his head, the "anointed priest". To this exalted office he had his special and costly vestments, the ephod, worn in addition to those of the simple priests (Ex., xxviii). A (probably sleeveless) purple-blue upper garment (tunic) fell to his knees, the lower seem being ornamented alternately with small golden bells and pomegranates of coloured thread. About the shoulders hung the ephod, the breast plate was made of costly material, and consisted of two portions about a ell long, which covered the back and breast, were held together above by two shoulder-bands or epaulets, and terminated below with a magnificent girdle. Attached to the ephod in front was the shield (rationale), a square bag bearing on the outside the names of the twelve tribes engraved on precious stones (Ex., xxviii, 6), and containing within the celebrated Urim and Thummim (q. v.) as the means of obtaining Divine protection. The vestments of the high-priest were completed by a precious turban (tiara), bearing on a golden frontal plate the inscription: "Sacred to Jahweh" (Heb. יָרוֹן תֶּבֶן).

The high-priest had supreme supervision of the Ark of the Covenant (and of the Temple), of Divine service in general and of the whole personnel connected with public worship. He presided at the Sanhedrin. He alone could perform the liturgy on the Feast of Expiation, on which occasion he put on his costly vestments and the sacrifices were offered by him alone (Lev., iv, 5), enter the holy of holies (sanctum sanctorum), and seek counsel of Jahweh on important occasions. The office of high-priest in the house of Aaron was at first hereditary in the line of his first-born son Eleazar, but in the period from Athiathar (1131 to 973 B.C.) it belonged, by right of primogeniture, to the line of Ithamar. Under the rule of the Seleucids (from about 175 B.C.) the office was sold for money to the highest bidder. At a later period it became the hereditary family of the Hasmon. With the destruction of the central sanctuary by the Romans, the high-priesthood disappeared.

Against the foregoing account of the Mosaic priesthood, based on the Old Testament, the negative biblical critics of to-day make a determined stand. According to the hypothesis of Graf-Wellhausen, Moses (about 1250 B.C.) cannot be the author of the Pentateuch. He was not the Divinely appointed legislator, but simply the founder of Monolatry, for ethically, Monolatry resulted from later Priestly Deuteronomy D made its appearance in substance in 621 B.C., when the astute high-priest Helkias by a pious fraud paralyzed off the god-fearing King Josiah the recently composed "Book of the Laws" as written by Moses (cf. IV Kings, xxii, 1 sqq.). When Esdras returned to Jerusalem from the Babylonian Exile about 580 B.C., he brought back the "Book of the Ritual" or the priest's codex P, i.e., the middle portions between Genesis and Deuteronomy, composed by himself and his school in Babylon, although it was only in 444 B.C. that he dared to make it public. A clever editor now introduced it into public or private use in the form of the old, pre-Exilic historical books, and the entirely new idea of an Aaronic priesthood and of the centralization of the cult was projected back to the time of Moses. The story of the tabernacle of the covenant is thus a mere fiction, devised to represent the Temple at Jerusalem as a sacred symbol in the history of the nation, at the dawn of Israelitic history and to justify the unity of worship. Although this hypothesis does not contest the great antiquity of the Jewish priesthood, it maintains that the centralization of the cult, the essential difference between priests and Levites, the supreme authority of the priests of the Temple at Jerusalem as compared with the so-called hill-priests (cf. Ezek., xlv, 4 sqq.), must be referred to post-Exilic times.

Without entering upon a detailed criticism of these assertions of Wellhausen and the critical school (see Pentateuch), we may here remark in general that the conservative school also admits or can admit that only the original portion of the Pentateuch is to be accepted as Mosaic, that in the same text many repetitions seem to have been brought together from different sources, and finally that additions, extensions, and adaptations to new conditions by an inspired author of a later period are by no means excluded. It must also be admitted that, though one place of worship was appointed, sacrifices were offered even in early times by laymen and simple Levites away from the vicinity of the Ark of the Covenant, and that in restless and politically disturbed epochs the ordinance of Moses could not always be observed. In the gloomy periods of Babylonian captivity no attention was paid to the prohibition of hill-sacrifices, and the Prophets were often gratified to find that on the high places (bamoth) sacrifice was offered, not to pagan gods, but to Jahweh. However, the Pentateuch problem is one of the most difficult and intricate questions in Biblical criticism. The Wellhausen hypothesis with its bold assertions of pious deceit and artificial projections is open to so great, if not greater, difficulties and mysteries as the traditional view, even though some of its contributions to literary criticism has been invaluable. It may be doubted that the critical structure has suffered a severe shock since the discovery of the Tell-el-Amarna letters dating from the fifteenth century B.C., and since the deciphering of the Hammurabi Code. The assumption that the oldest religion of Israel must have been identical with that of the primitive Semites (Polytheism, Animism, Fetishism, Ancestor-worship) has been proved false, since long before 2000 B.C. a kind of Henotheism, i.e., Polytheism with a monarchical head, was the ruling religion in Babylonia. The beginnings of the religions of all peoples are purer and more spiritual than many historians of religions have hitherto been willing to admit. One thing is certain: the final word has not yet been spoken as to the value of the Wellhausen hypothesis.

(1890). For modern Biblical criticism: — Wellhausen, Prolegomena.
III. THE CHRISTIAN PRIESTHOOD.—In the New Testament bishops and priests are, according to Catholic teaching, the sole bearers of the priesthood, the former enjoying the fullness of the priesthood (summus sacros s. primi ordinis), while the presbyters are simple priests (simplac saxos s. secundi ordinis). A “cleanse hand, is a sign of the attendant of the priest, with no priestly powers. Mentioning all special treatment of the bishop and the deacon, we here confine our attention primarily to the presbyters, since the term “priest” without qualification is now taken to signify the presbyter.

A. THE DIVINE INSTITUTION OF THE PRIESTHOOD.—According to the Protestant view, there was in the primitive Christian Church no essential distinction between laity and clergy, no hierarchical differentiation of the orders (bishop, priest, deacon), no recognition of pope and bishops as the possessors of the highest power of jurisdiction over the Universal Church or over its several territorial divisions. On the contrary, the Church had at first a democratic constitution, in virtue of which the local churches selected their own heads and ministers, and imparted to these their inherent spiritual authority, just as in the modern republic the “sovereign people” confers upon its elected president and his officials administrative authority. The deeper foundation for this transmission of power is to be sought in the primitive Christian idea of the universal priesthood, which excludes the recognition of a special priesthood. Christ is the sole high-priest of the New Testament, just as His bloody death on the Cross is the sole sacrifice of Christianity. If all Christians without exception are participants of the priestly dignity (Deut., xxv, vii; De prese, hebr.; xi.; De exhort. cast., vii) recognize an official priesthood with the objective Sacrifice of the Mass. The corruption quickly spread throughout the whole East and West, and persisted unchecked during the Middle Ages, until the Reformation finally succeeded in restoring to Christianity its original purity. Then “the idea of the universal priesthood was revived; it appeared as the necessary consequence of the very nature of Christianity. . . Since the whole idea of sacrifice was demonstrated to be a necessary consequence of the Reformation derived from it was removed” (“Realency. für prot. Theol.”, XVI, Leipzig, 1905, p. 50).

To these views we may answer briefly as follows. Catholic theologians do not deny that the double “hierarchy of order and jurisdiction” gradually developed from the germ already existing in the primitive Church, just as the primacy of the pope of Rome and the right of the bishops was recognized with increasing clearness as time advanced (see HIERARCHY). But the question whether there was at the beginning a special priestly body in the Church is altogether distinct. If it is true that “the reception of the idea of sacrifice led to the idea of the ecclesiastical priesthood” (loc. cit., p. 48), and that priesthood and sacrifice are reciprocal terms, then the proof of the Divine origin of the Catholic priestly must be regarded as established, once it is shown that the Christian Sacrifice of the Mass is coeval with the beginnings and the essence of Christianity. In proof of this we may appeal even to the Old Testament. When the Prophet Isaiah foresees the entrance of pagans into the Messianic Kingdom, he makes the calling of priests from the heathen (i.e. the non-Jews) a special characteristic of the new Church (Is., lxxvi, 21): “And I will take of them to be priests and Levites, saith the Lord.” Now this non-Jewish (Christian) priesthood in the future Messianic Church presupposes a permanent sacrifice, namely the sacrifice of the Son of God (I John, vi, 19), which must be given even to the going down is to be offered to the Lord of hosts among the Gentiles (Mal., III, 11). The sacrifice of bread and wine offered by Melchisedech (cf. Gen., xiv, 18 sqq.), the prototype of Christ (cf. Ps., Lxxii, 5 sqq.; Heb., v, 5 sqq.; vii, 1 sqq.), also refers prophetically, not only in the Last Supper but also in the everlasting repetition in commemoration of the Sacrifice of the Cross (see MASS). Rightly, therefore, does the Council of Trent emphasize the intimate connexion between the Sacrifice of the Mass and the priestly function (Sess. XXIII, cap. i. in Dentzinger, “Enchiridion”, 10th ed., 957): “Sacrifice and priesthood are by divine ordinance so inseparable that they are found together under all laws. Since therefore in the New Testament the Catholic Church has received from the Lord’s institution the holy visible sacrifice of the Eucharist it must also be admitted that in the Church there is a new, visible and external priesthood into which the older priesthood has been changed.” Surely this logic admits of no reply. It is, then, all the more extraordinary that Harnack should seek the origin of the hierarchial constitution of the Church, in Palestine, but in pagan Rome. Of the Catholic Church he writes: “She continues ever to govern the peoples; her popes lord it like Trajan and Marcus Aurelius. To Romulus and Remus succeeded Peter and Paul; to the bishops, to the secular and religious orders. To the legions correspond the hosts of priests and monks; to the imperial bodyguard the Jesuits. Even to the finest details, even to her judicial organization, may even to her very vestments, the continued influence of the ancient empire and of its institutions may be traced” (“Das Wasen d. Christentums”, Leipzig, 1902, p. 157). With the best of good will, we can recognize in this description only a sample of the writer’s ingenuity, for an historical investigation of the cited institutions would undoubtedly lead us to sources, beginnings, and motives entirely different from the analogous conditions of the Empire of Rome. But the Sacrifice of the Mass indicates only one side of the priesthood; the other side is revealed in the power of forgiving sin, for the exercise of which the priesthood is just as necessary as it is for the power of consecrating and sacrificing. Like the general power to bind and to loose (cf. Matt., xvi, 19; xviii, 18), the power of remitting and retaining sins was solemnly bestowed on the Church by Christ (cf. John, xx, 21). Catholicism preserves this immediate and inalienable right to trace its origin in this respect also to the Divine Founder of the Church. Both sides of the priesthood were brought into prominence by the Council of Trent (loc. cit., n. 961): “If any one shall say that in the New Testament there is no visible and
external priesthood nor any power of consecrating and offering the Body and Blood of the Lord, as well as of remitting and retaining sins, but merely the office and bare ministry of preaching the Gospel, let him be anathema.” Far from being an “unjustifiable usurpation of Divine powers”, the priesthood forms so indispensable a part of the meaning of the titles episcopos and presbyter, which until the middle of the second century were interchangeable and synonymous terms. Probably there was a reason in fact for this uncertainty, since the hierarchical distinction between bishop and priest seems to have been of gradual growth.

As for the “universal priesthood”, on which Protestantism relies in its denial of the special priesthood, it must be understood that Catholics also believe in a universal priesthood; this, however, by no means excludes a special priesthood but rather presupposes its existence, since the two are related as the general and the particular, the abstract and the concrete, the figurative and the real. The ordinary Christian cannot be a priest in the strict sense, for he can offer, not a real sacrifice, but only the figurative sacrifice of prayer. For this reason the historical dogmatic development did not and could not follow the course it would have followed if in the primitive Church two opposing trains of thought (i.e. the universal versus the special priesthood) had contended for supremacy until one was vanquished. The history of dogma attests, on the contrary, that both ideas advanced harmoniously through the centuries, and have never disappeared from the Catholic mind. As a matter of fact the profound and beautiful idea of the universal priesthood may be traced from Justin Martyr (Dial. cum Tryph., cxvi), Irenæus (Adv. haer., IV, viii, 3), and Origen (“De orat.”, xxviii, 9; “In Levit.”, hom. ix, 1), to Augustine (De civit. Dei, XX, 11) and Leo the Great (Sermon, iv, 1), and thence to St. Thomas (Summa, III, Q. Ixxxii, a. 1) and the Roman Catechism. And yet all these writers recognized, along with the Sacrifice of the Mass, the special priesthood in the Church. The origin of the universal priesthood extends back, as St. Bonaventure (de Pot., who declares the faithful, in their character of Christians, “a holy priesthood, to offer up spiritual sacrifices”, and “a chosen generation, a kingly priesthood” (I Peter, ii, 5, 9). But the very text shows that the Apostle meant only a figurative priesthood, since the “spiritual sacrifices” signify prayer and the term “royal” (regale, paideia) could have had but a metaphorical sense for the Christians. The Gnostics, Montanists, and Catharists, who, in their attacks on the special priesthood, had misapplied the metaphor, were just as illogical as the Reformers, since the two ideas are not only real and figurative, but quite compatible. It is clear from the foregoing that the Catholic clergy alone are entitled to the designation “priest”, since they alone have a true and real sacrifice to offer, the Holy Mass. Consequently, Anglicans who reject the Sacrifice of the Mass are inconsistent, when they refer to their clergy as “priests”. The preachers in Germany quite logically disclaim the title with a certain indignation.

B. The Hierarchical Position of the Presbyterate.—The relation of the priest to the bishop and deacon must be kept in mind. It is true that he is, and it were, the middle term between the two, being hierarchically the subordinate of the bishop and the superior of the deacon (cf. Council of Trent, Sess. XXVI, can. vi). While the pre-eminence of the bishop over the priest consists mainly in his power of ordaining, that of the priest over the deacon is based on his power of consecrating and absolving (cf. Council of Trent, loc. cit., cap. iv; can. i and vii). The independence of the diaconate appears earlier and more clearly in the oldest sources than that of the priesthood, chiefly because of the long-continued fluctuation in the meaning of the titles episcopos and presbyter, which until the middle of the second century were interchangeable and synonymous terms. Probably there was a reason in fact for this uncertainty, since the hierarchical distinction between bishop and priest seems to have been of gradual growth.

Ephesians (Adv. haer., Ixxv, 5) offered an explanation of this condition of uncertainty by supposing that priests were appointed in some places where there was no bishop, while in other places where no candidates for priesthood were found, the people were satisfied with having a bishop, who, however, could not be without a deacon. Cardinal Franzelin (“De eccl. Christi”, 18th ed., Rome, 1897, tit. xvi) gives good grounds for the opinion that in the Bible bishops are indeed named presbyter, but simple priests are never called presbyter. The problem is, however, far from being solved, since in the primitive Church there were not yet fixed names for the different orders; the latter must be determined from the context according to the characteristic functions discharged. The appeal to the usage of the pagan Greeks, who had their eisegogos and episcelion, does not settle the question, as Ziebarth (“Das griechische Vereinswesen”, Leipzig, 1896) has shown in reply to Hatch and Harnack. Any attempt at a solution must take into account the varying use in different countries (e.g. Palestine, Asia Minor). In some places the “presbyters” may have been real bishops, in others priests in the present meaning of the term, while elsewhere they may have been mere administrative officers or worthy elders chosen to represent the local church in its external relations (see HIERARCHY OF THE EARLY CHURCH).

Like the Apostolic writings, the “Didache”, Hermas, Clement of Rome, and Irenæus often use the
terms “bishop” and “priest” indiscriminately. In fact, it is really a moot question whether the presbyterate gradually developed as an offshoot of the episcopate—which is in the nature of things more likely and in the light of the needs of the Church and more readily understood—or whether, conversely, the episcopate had its origin in the elevation of the presbyterate to a higher rank (Lightfoot), which is more difficult to admit. On the other hand, even at the beginning of the second century, Ignatius of Antioch (Ep. ad Magnes, 3, vindex, vsuus), brings up with remarkable clearness the hierarchical distinction between the monarchical bishop, the priests, and the deacons. He emphasizes this triad as essential to the constitution of the Church: “Without these [three] it cannot be called the Church” (Ad Trall, iii). But, according to the law of historic continuity, this distinction of the orders must have existed in substance and embryo during the first century; and, as a matter of fact, St. Paul (1 Tim., v. 17, 19) mentions “presbyters” who were subordinate to the real bishop Timothy. But in the Latin writers there is no ambiguity. Tertullian (De bapt., xvii) calls the bishop the “summus sacerdos,” under whom are the “presbyter et deacon”; and Cyprian (Ep. vi. 3) speaks of the “presbyterum episcopus sacerdotali honori conjunctum” i.e., the priest under a sacerdotal dignity with the bishop (see Bishop).

About 360, after the development of the orders had long been complete, Aërius of Pontus first ventured to obliterate the distinction between the priestly and episcopal orders and to place them on an equality with respect to their powers. For this he was ranked among the heretics by Epiphanius (Adv. haer., lxxv, 3). The testimony of St. Jerome (d. 420), whom the Scottish Presbyterians cite in behalf of the presbyteral constitution of the Church, raises some difficulties, as he appears to assert the full equality of priests and bishops. It is true that Jerome endeavored to enhance the dignity of the priesthood at the expense of the episcopate and to refer the bishop’s superiority “rather to ecclesiastical custom than to Divine regulation” (In Tit., i. 5: “Episcopi noverint esse magis consuetudine quam dispositione veritate presbyteris esse majores”). He desired a more democratic constitution in which the priests hitherto undeservedly slighted would participate, and he urged the correction of the abuse, widespread from the third century, by which the archdeacons, as the “right hand” of the bishops, controlled the whole diocesan administration (Ep. civ. ad Evagel.). It is at once evident that Jerome disputes not the hierarchical relation (ordo) of the bishops and the deacons of government (potestas jurisdictionis)—and this not so much in principle, but only to insist that the deacons should be dislodged from the position they had usurped and the priests established in the official position befitting their higher rank. How far Jerome was from being a follower of Aciscus and a forerunner of Presbyterianism appears from his important admission that the power of ordination is possessed by the bishops alone, and not by the priests (loc. cit. in F. L., XXII, 1193: “Quod enim factum—exceosa ordinatione—episcopus quod presbyter non facit”). By this admission Jerome establishes his orthodoxy.

C. The Sacramentality of the Presbyterate.—The Council of Trent decreed (Sess. XXIII, can. iii, in Denzinger, n. 965): “If any one shall say that order or sacred ordination is not truly and properly a sacrament instituted by Christ our Lord . . . let him be anathema.” While the synod defined only the existence of the Sacrament of Holy Orders, without deciding whether all the orders or only some fall within the definition, it is admitted that the priestly ordination presupposes the possession of sanctifying grace, and therefore confers, besides the right to the actual graces of the VIII, ix, 2). The three essentials of a sacrament—outward sign, interior grace, and institution by Christ—are found in the priestly ordination.

As regards the outward sign, there has been a long process of reaction among theologians concerning the matter and form, not alone of the priestly ordina-
tion, but of the Sacramento of Holy Orders in general. Is the imposition of hands alone (Bonaventure, Morin, and most modern theologians), or the presentation of the instruments (Gregory of Valencia, the Thomists), or are both together (Belarmino, De Laguna, Billot etc.) to be regarded as the essential matter of the sacrament? As to the priestly ordination in particular, which alone concerns us here, the difference of views is explained by the fact that, in addition to three impositions of hands, the rite includes a presentation to the candidate of the chalice filled with wine, and of the paten with the host. Concerning the latter Eugenius IV says expressly in his “Decretem pro Armenis” (1439; in Denzinger, n. 701): “The priesthood is conferred by the handing of the chalice containing wine and of the paten with bread.” However, in view of the fact that in the Bible (Acts, xiii, 3; xiv, 22; 1 Tim., iv, 14; v. 22; II Tim., i. 6), in all patristic literature, and in the whole East the imposition of hands alone is found, while even in the West the presentation of the sacred vessels and of the Roman Rite (cf. “Statuta ecclesiae antiquae” in P. L., LVI, 879 sqq.). In defence of the anointing, the Council of Trent condemned those who declared it “despicable and pernicious” (Sess. XXXIII, can. v). As regards the sacramental form, it may be accepted as probable that the prayer accompanying the second extension of hands (xepodeia) is the essential form, although it is not impossible that the words spoken by the bishop during the third imposition of hands (xepodeia): “Receive the Holy Ghost, whose sins you shall remit, they are remitted; whose sins you shall retain, they are retained,” constitute a partial form. The first imposition of hands by the bishop (and the priests) cannot be regarded as the form, since it is performed in silence, but it also may have an essential importance in so far as it is the source of the abuse since the third century, the continuation of the first touching of the head of the ordinandas (cf. Gregory IX, “Decret.”, I. tit. xvi, cap. III). The oldest formularies—e.g. the “Euchologium” of Serapion of Thmuis (cf. Funk, “Didascaleia”), the “Rubricae” of Tübingsen but their Latinized form of government (potestas jurisdictionis)—are those of the fifth century (Funk, loc. cit., I, 520), the latest discovered “Testament of the Lord” (ed. Rahmni, Mainz, 1899, p. 68), and the Canons of Hippolytus (ed. Achels, Leipzig, 1891, p. 61)—contain only one imposition of hands with a short accompanying prayer.

In the eleventh century the Ministerial Rite is still quite simple (cf. “Monum. liturg.”, V, Paris, 1904, pp. 54 sqq.), while, on the contrary, the Armenian Rite of the Middle Ages shows great complexity (cf. Conybeare-Macleane, “Rituale Armenorum”, Oxford, 1905, pp. 231 sqq.). In the Greek-Byzantine Rite, the bishop, after making signs of the cross, places his right hand on the head of the ordinandas, meanwhile reciting a prayer, and then, praying in secret, holds the same hand extended above the candidate, and invokes upon him the seven gifts of the Holy Ghost (cf. Goar, “Euchol. Greec.”, Paris, 1647, pp. 292 sqq.). For other formularies of ordination see Denzinger, “Ritus Orientalum”, II (Würzburg, 1864); Manser in Buchberger, “Kirchliches Handlexikon”; s. v. Priestereweihe; and the council constitutions of the living, ordination presupposes the possession of sanctifying grace, and therefore confers, besides the right to the actual graces of the
priestly office, an increase of sanctifying grace (cf. "Decret. pro Armenie" in Denzinger, n. 701). But in every case, where the candidate, after the solemn consecrating of the soul of sanctifying grace or not, the sacrament impresses on the soul an indelible spiritual mark (cf. Council of Trent, Sess. VII, can. ix, in Denzinger, n. 882), i.e. the priestly character, to which are permanently attached the powers of consecrating and absolving—the latter, however, with the reservation that for the valid administration of the Sacrament of Penance the power of jurisdiction is also required (see Character). As the priestly character, like that imparted by baptism and confirmation, is indelible, ordination can never be rescinded or renewed (cf. Ephesians, 4:11). It is not an impossible (cf. Council of Trent, Sess. XXIII, can. iv, in Denzinger, n. 964). That priestly ordination was instituted by Christ is proved not alone by the Divine institution of the priesthood (see above, A), but also by the testimony of Holy Writ and Tradition, which unanimously testify that the Apostles transmitted their powers to their successors, who in turn transmitted them to the succeeding generation (cf. I Tim., v, 22). Since the charismatic gifts of the "apostles and prophets" mentioned in the "Didache" have been directly transmitted to the Church, and only within the Church, itinerant missionaries still needed the imposition of hands to empower them to discharge the specifically priestly functions (see Charismata).

For the valid reception of the Sacrament of Orders, it is necessary not only to be baptized, which is in itself sufficient, but also to be a baptized person of the male sex. The first requisite is based on the episcopal prerogative of ordaining; the second on the conviction that baptism opens the door to all the other sacraments and that women are definitely barred from the service of the altar (cf. Ephesians, 4:11). St. Paul is a resolute champion of an exclusively male priesthood (cf. I Cor., xiv, 34). In this respect there is an essential difference between Christianity and Paganism, since the latter recognizes priestesses as well as priests—e.g. the hierodules of Ancient Greece, the vestal virgins of Rome, the baidajers of India, the wu of China, and the female bonzes of Japan. The early Church esteemed as an abridgment the female priesthood of Montanism and of the Collyriandian, and it never regarded the Apostolic institute of deaconesses as a branch of priestly orders, for the reception of a priestly ordination, canon law demands: freedom from every irregularity, completion of the twenty-fourth year, the reception of the earlier orders (including the diaconate), the observation of the regular institutes. In its title to ordination, therefore, the reception of a priestly ordination, canon law demands: freedom from every irregularity, completion of the twenty-fourth year, the reception of the earlier orders (including the diaconate), the observation of the regular institutes. In its title to ordination, therefore, the reception of a priestly ordination, canon law demands: freedom from every irregularity, completion of the twenty-fourth year, the reception of the earlier orders (including the diaconate), the observation of the regular institutes. For the valid and lawful reception of the priesthood the question arises as to the personal worthiness of the candidate. According to earlier canon law this question was settled by three ballots (scrutini); it is now decided by official examination and certification. One of the most important means of securing worthy candidates for the priestly office is careful inquiry regarding vocation. Inquirers in the sanctuary have at all times been the occasion of the greatest injury to the Church, and scandal to the faithful. For this reason, Pope Pius X, with even greater strictness than was shown in previous ecclesiastical regulations, insists upon the exclusion of all candidates who do not give the highest promises of a life conspicuous for firmness of faith and moral rectitude. In this connexion the importance and necessity of colleges and ecclesiastical seminaries for the training of the clergy cannot be too strongly emphasized.

D. The Official Powers of the Priest.—As said above, the official powers of the priest are intimately connected with his ordination and are impressed on his soul. Together with this character is conferred, not only the power of offering up the Sacrifice of the Mass and the (virtual) power of forgiving sins, but also authority to administer extreme unction and, as the regular minister, solemn baptism. Only in the case of an extraordinary vacancy of the sanctifying grace of ordination, the pope is a priest competent to administer the Sacrament of Confirmation. While the conferring of the three sacramental orders of the episcopate, presbyterate, and diaconate, pertains to the bishop alone, the pope may delegate a priest to administer the four minor orders, and even the subdiaconate. According to the present canon law, however, the papal permission granted to abbots of monasteries is confined to the conferring of the tonsure and the four minor orders on their subjects (cf. Council of Trent, Sess. XXIII, can. iv, in Denzinger, n. 964). The conferring of the deaconate, claimed to have been given to Cistercian abbots by Inoetics VIII in 1489, see Gasparri, "De sacr. ordine," II (Paris, 1893), n. 798, and Pohle, "Dogmatik," III (4th ed., Paderborn, 1910), pp. 587 sqq. To the priestly office also belongs the faculty of preaching (Freiburg, 1903), and inings and the sacramentals in general, in so far as these are not reserved to the pope or bishops. By the preaching of the Word of God the priest has his share in the teaching office of the Church, always, however, as subordinate to the bishop, and only within the limits of duty to which he is assigned as pastor, curate, etc. Finally, the priest may participate in the pastoral duty in so far as the bishop entrusts him with a definite ecclesiastical office entailing a more or less extensive care of souls, or in the valid and valid absolution of penitents from their sins. Certain external honorary privileges, e.g. those enjoyed by cardinal-priests, prelates, ecclesiastical councillors, etc., do not enhance the intrinsic dignity of the priesthood.

In the 17th and 18th centuries, the Catholic Church was a major player in European politics and culture, particularly in the context of the Counter-Reformation and the Enlightenment. The Church's role in spreading Catholicism and combating heresy was significant, and its influence extended far beyond the religious sphere.

The Church's institution was not just a spiritual authority but also a political and cultural one. Its control over vast territories, its wealth, and its influence on education and science were pivotal in shaping European society. The Church's role in the suppression of heresy and the promotion of orthodoxy was a key factor in maintaining the status quo and preventing social and political turmoil.

However, like any institution, the Catholic Church was not always depicted in a positive light. Throughout history, the Church has been the subject of criticism and protest, with many documentaries and books devoted to uncovering the darker aspects of its past. The Church's role in the history of the world is complex, and its impact continues to be felt in various ways today.
ART. At all times the Catholic clergy have shown themselves patrons of science and the arts, partly by their own achievements in these fields and partly by their encouragement and support of the work of others. That theology as a science should have found its home among the clergy is not surprising. The need for knowledge and the range of education lay so exclusively in the hands of the priesthood during the Middle Ages, that the ecclesiastical distinction of clericus (cleric) and laicus (layman) developed into the social distinction of educated and ignorant. But for the monks and clerics of the monastic and cathedral life, much of our civilization would have been lost. A medieval proverb ran: "A monastery without a library is a castle without an armory." Hume, the philosopher and historian, says: "It is rare that the annals of so unenlightened a people as were the English as well as the other European nations, after the decline of Roman learning, have been transmitted to posterity so complete and with so little mixture of falsehood and fable. This advantage we owe entirely to the clergy of the Church of Rome, who, founding their authority on their superior knowledge, preserved the precious little that remained from "antiquity." (Hume, "Hist. of England," ch. xxiii, Richard III.) Among English historians Gildas the Wise, Venerable Bede, and Lindard form an illustrious triumvirate. The idea of scientific progress, first used by Vincent of Beauvais, was early borrowed by the Church from the others, of purely Catholic origin. The modern maxim, "Education for all," is a saying first uttered by Innocent III. Before the foundation of the first universities, which also owed their existence to the popes, renowned cathedral schools and other scientific institutions laboured for the extension of secular knowledge. The father of German public education is Rhabanus Maurus. Of old centres of civilization we may mention among those of the first rank Canterbury, the Island of Jona, Mainz, Trier, Cologne, Paris, Orleans, Corbie, Cluny, Chartres, Toul, and Bec in France; Fulda, Reichenau, St. Gall, and Corvey in Germany. The attendance at these universities conducted by clergymen during the Middle Ages awakens one's astonishment: in 1340 the University of Oxford had no less than 30,000 students, and in 1538, when the German universities were almost deserted, about 20,000 students, according to Luther, flocked to Paris. The elementary schools also, wherever they existed, were conducted by the clergy. Churchmen issued the capitulary "Presbyteri per villas et vicos scholae haebeant et cum summa charitate parvulos doceant," i. e. the priests shall have schools in the towns and hamlets and shall teach the children with the utmost devotion. The art of printing was received by the whole Church, from the lowest clergy to the pope, as a "holy art". Almost the whole book production of the fifteenth century aimed at satisfying the taste of the clergy for reading, which thus furthered the development of the book trade. Erasmus complained: "The book-sellers declare that before the outbreak of the Reform they disposed of 3000 volumes more quickly than they now sell 600." (see Döllinger, "Die Reformations, ihre innere Entwicklung u. ihre Wirkungen," I, Ratisbon, 1851, p. 348). Early Humanism, strongly encouraged by Popes Nicholas V and Leo X, numbered among its enthusiastic supporters many Catholic clerics, such as Petrarch and Erasmus; the later Humanistic school, steeped in paganism, found among the Catholic priesthood, not encouragement, but to a great extent determined opposition. Only a few of the twenty-seventh century were priests: Cervantes, Lope de Vega, Calderón etc. At Oxford in the thirteenth century, by their skill in the natural sciences the Franciscans acquired celebrity and the Bishop Grosseteste exercised great influence. The friar, Roger Bacon (d. 1249), was famous for his scientific knowledge, as were also Gerbert of Rheims, afterwards Pope Silvester II, Albertus Magnus, Raymond Lully, and Vincent of Beauvais. Copernicus, canon of Thorn, who was the founder of modern astronomy, in which even to the present day the Jesuits especially (e. g. Scheiner, Galilei, Huygens, Seechi, Perry). The foundation of historical criticism was laid by Cardinal Baronius (d. 1607), the monks of St. Maur, and the Bollandists. A study of the history of art would reveal a proportionately great number of the apocrypha of the beautiful in art among the Catholic clergy of all centuries. From the paintings in the catacombs to Fra Angelico and thence to the Beuron school we meet numerous priests, less indeed as practising artists than as Maccenses of art. The clergy have done much to justify what the celebrated sculptor Canova wrote to Napoleon I: "Art is under no obligation to follow fashion, but to none so much as the Catholic religion." The basis on which higher culture finds its secure foundation is material or economic culture, which, in spite of modern technics and machinery, rests ultimately on labour that has been transferred to the other sciences, of purely Catholic origin. The modern maxim, "Education for all," is a saying first uttered by Innocent III. Before the foundation of the first universities, which also owed their existence to the popes, renowned cathedral schools and other scientific institutions laboured for the extension of secular knowledge. The father of German public education is Rhabanus Maurus. adviser and two medical doctors at a low fee; moreover, it also provides decent interment for parents of its members. The association is chartered and assists the society in its charitable offices. There are likewise brotherhoods of the clergy in Seville, Puerto de S. Maria, in Santucar de Renameda, Carmina, Ecija, and in the principal cities of Andalusia. To these must be added the association of priests entitled "Hermandad de Sacerdotes operarios Diocesanos del Sagrado Corazon de Jesus", founded in 1782 by Manuel Domingo y Sol (d. 1900). This association, which has received the approval of the pope, takes charge of the discipline in the seminaries, of which it is the custodian. There is, one in Mexico, and the Spanish College in Rome, whose late rector, Benjamin D. Mihan, became superior of the society on the death of the founder.

II. PORTUGAL.—A confraternity has existed in Lisbon from the year 1435 with the title of "Veneravel Irmandade dos Clerigos Pobres" under the protection of the Holy Trinity and is now installed in the suppressed convent of St. Martha. It is composed of secular and regular priests and clerics in orders. Its chief works are to render special homage to the Blessed Virgin, to afford succour to the brethren, and to aid primary education. In 1887 the brotherhood took up the functions of a benefit society.

III. AUSTRIA.—Austria possesses several confraternal groups. The "Associat der Vereinigung der Sacerdotalistes", founded in 1688 for secular or regular priests, has its seat in Vienna. The aim proposed to members is their sanctification and perseverance. The zealous promotion of devotion to the Sacred Heart is a prominent feature of the association. Much is made of intercession between members; the anniversaries of ordination is observed with fitting solemnity. The society has a monthly journal called "Korrespondenz der Associat" (Vienna). The "Priester-Sodalität zum heiligsten Herzen Jesu" of Botzen was established in 1886. Candidates are admitted after a year's probation. The key-note of the association is personal holiness by the thoughtful and reverent discharge of priestly duties. It supplies a guide to life by fixing a minimum for certain religious exercises likely to be crowded out: the meditation, twenty minutes, and when this is impossible its place is supplied by spiritual reading or ejaculatory prayer; confession, at least fortnightly; retreat, at least every second year, with three days' recollection other years; preparation for Mass and thanksgiving (fifteen minutes) in the chapel of the community, and the daily recitation of the breviary. Stress is laid on regular application to the exercises of the ministry; specialization is encouraged as promoting interest. Other points are: careful preparation of all instructions, zeal in the work of the communal, special care of talented boys and of neglected children. "Der Marianische Kongregazion im Priester-seminar" in Brixen has for its object to foster sacerdotal piety among its members and to cultivate the ecclesiastical spirit among the students of the seminary. The means insisted on are a personal devotion to Our Lady, public devotions with sermons twice a month, and mutual admonition. Its journal is the "Priester-Konferenz-Blatt". At Innsbruck there is a confraternity connected with the Jesuit College entitled "Priestergeheuerverein", consisting of priests and seminarians in theology. The essential object of the association is to maintain the bonds of spiritual companionship established in the seminary when the young priests leave to take up their pastoral work. The means employed are prayer (particularly associated devotion to the Sacred Heart) and correspondence (the periodical of the confraternity being sent to at least once a year).

IV. FRANCE.—A peculiar feature of the "Association des Prêtres séculiers du Sacré-Coeur" (Issoudun, France) is its intimate relation with the Missionaries of the Sacred Heart who have established a priory in the city. "Le soutien d'un prêtre, c'est le prêtre" is the principle which has guided the missionaries in founding an association whereby they may co-operate in the sanctification of the secular clergy. The confraternity was founded in 1889, blessed by Pius IX in 1890, and enriched by him with special favours in 1867 and 1874. In 1882 the roll of the association contained 700 names. At that date a journal was inaugurated, to be succeeded three years later by the monthly review entitled "Le Sacré-Coeur". Each member under the advice of his director arranges his time with sufficient detail to forestall omissions and yet with a certain elasticity so as not to interfere with parochial duties (see the "Manuel" (Issoudun), published by the Missionaries of the Sacred Heart).

V. ROME.—The "Pia Unio S. Paulli Apostoli", established in Rome, may be accepted as an approved type of a priestly association. It dates back to 1797, when it was instituted as a confraternity of priests for the corporal and spiritual assistance of sick brethren. With the co-operation of the laity the good work extended and ultimately became the Pia Unio S. Paulli Apostoli. The fostering vocations to the priesthood, the care of the young on festival days, and the holding of discussions on moral subjects. It was reorganized by Pius X in a decree dated 28 May, 1910, and attached to the Pauline Seminary. The object of the association is sanctification by the exercise of the sacred ministry. On the economic side financial aid is given in time of sickness and a loan committee has been projected. Provision is also made for the legal defence of the clergy when this is desirable.

VI. UNITED STATES.—The needs of the teeming, active, and diversified population of America have called into being a number of agencies for dealing with the spiritual and social problems which are constantly arising. Mention therefore should be made here of the following societies of priests: "Association for the Protection of Belgian and Dutch Immigrants"; "Association of the Secular Polish Clergy"; "Catholic Board for Mission Work among the Coloured People"; "The Bureau of Catholic Indian Missions"; "Catholic Missionary Union" which provides funds to enable bishops to defray the expenses of giving missions to non-Catholics in their dioceses. Finally the "Priests' Total Abstinence League" appears to come nearest to the true idea of a confraternity whose central idea is self-sacratification. [See the "Catholic Directory" (Milwaukee, 1913), 725-731.]

VII. SPANISH AMERICA.—It must suffice here to give the names of several societies of priests in certain districts of South America: Argentina, the "Asociación Eclesiástica de S. Pedro" with centres at Buenos Aires and Córdoba; Colombia, "Asociación de sacerdotes del Claro" at Bogota; Brazil, "Liga Sacerdotal Rio Grandeza" at Porto Alegre. In Mexico there is the "Asociación del Espiritu Santo" and the "Asociación de S. Juan Nepomuceno" at Guadalajara, and the "Asociación de Socorros mutuo de Clérigos" in the City of Mexico.

VIII. GERMANY.—In Germany almost all the associations for priests have as their object either the cultivation of the ecclesiastical life among the clergy or the assistance of the members in their temporal necessities. One of the most important of the pious societies is the "Assoziat des Vereinigung Sacerdotaliste" (see III. Austria). The association has already been introduced into about 27 dioceses in Germany. The "Eucharistic Association of the Priests of the Adoration" was founded in 1858 for secular priests, and was canonically erected into a confraternity on 16 January, 1887. Its objects are to foster among the clergy truly priestly sentiments and a lively love and veneration for the Blessed
Priests’ Communion League, an association of priests established at Rome on 20 July, 1906, in the Church of San Claudio, in charge of the Fathers of the Blessed Sacrament, and raised by Pius X to the dignity of an archconfraternity ten days later. Its object is to spread the practice of frequent and daily Communion among the faithful, in conformity with the Decree “Sacra Tridentina Synodus” of 20 December, 1905. The conditions for joining the league are: (1) To have one’s name inscribed on the register of the league; (2) to pledge oneself (though under no obligation of conscience) to promote zealously the observance of the Decree upon frequent and daily Communion by the apostolate of prayer, of preaching, and of the press; (3) to subscribe for the monthly periodical “Emmanuel”, published by the Fathers of the Blessed Sacrament. The members of the league begin their functions in the Church of San Claudio, and the pledge for the Eucharist is: when, how, wherefore, and with what love it was instituted by Jesus Christ; what are its effects, whether considered as a sacrifice, as the real, perpetual presence of God among us, and, above all, as the nourishment of our souls. They endeavour strenuously to dissipate the fear by which many of the faithful are prevented from frequenting the Holy Table, and teach them that to communicate lawfully every day nothing more is exacted than what even worldly Communion requires, namely, the state of grace and a right intention, although it is declared that there should be free access from deliberate venial sins. As the best means to spread the practice of daily Communion is daily attendance at Mass, they exhort the people to hear it every day. They should give their parishioners, during a period of not less than three days, a series of instructions dealing especially with the practice of and preparation for daily Communion. Members of the league take care to prepare children for the reception of Holy Communion at an early age. Priests belonging to the league enjoy the right of a privileged altar three times a week, provided they have not that right already; they may celebrate Mass an hour before sunrise and an hour after midday, and may distribute Holy Communion till sunset; they may gain a plenary indulgence on all the first-class feasts of the mysteries of faith, of the Blessed Virgin, and of the Apostles; and an indulgence of 300 days for every work they perform for the intention of the league; they may impat at the end of the triduum, after the general Communion, the papal benediction with the plenary indulgence also. Lastly, penitents confessing to priests enrolled in the league gain a plenary indulgence once a week, if accustomed to communicate very frequently.

Henry Parkinson.
PRIMACY

Sacrament as well as frequent communion." The regular and associated practice of the weekly adoration fosters a spirit of religious brotherhood. Priests animated by the Eucharistic spirit, impelled by the Eucharistic instinct, will be stimulated by the example of the neighbouring clergy and by a sense of spiritual companionship with a vast unseen array of associated personnel. The acts of homage and devotion in all parts of the world.

The precise and specific works of the association are the following: (1) to spend each week one full and continuous hour of adoration before the Blessed Sacrament exposed on the altar in the tabernacle; (2) to report monthly to the local director on a prescribed schedule (libellus) the performance of the above undertaking; (3) to apply once a month the indulgences attached to the hour of adoration for the benefit of the souls of members who may have died during the previous month; (4) to offer the Holy Sacrifice once a year for all deceased members of the association. Repeated failure to transmit the libellus entails, after due warning, loss of membership.

II. Membership and Privileges.—The confraternity was first established for men dedicated for the secular clergy only; but as far back as 1898 the admission of religious has been authorized; and by a concession of the superior general of the Congregation of the Blessed Sacrament dated 2 Nov., 1902, seminarians in the United States became eligible for admission even before receiving the subdiaconate. The Holy See has favoured the practice of this devotion with numerous advantages, notably with the singularly rich indulgences of "The Station of the Blessed Sacrament" (Beringer, "Les Indulgences," II, 129), and the facility of granting the indulgence of the Corderi Fathers (cf. Beringer, I, 504).

III. Organization.—The organization of the confraternity enjoys the merit of simplicity. Ordinary members are grouped under their respective diocesan directors. These are united under a general director for a district or a whole country, while the entire association throughout the world is subject to the central direction of the Fathers of the Blessed Sacrament at Brussels. For the greater convenience of administration local centres have been established in Austria, Argentina, Canada, Chili, Holland, Italy, Spain, and the United States. The diocesan directors are elected by members with the approval of the ordinary. They officially represent the confraternity in a diocese and manage the affairs of the local group. The revenue and energy of the members is promoted by periodical assemblies of the respective groups. Conferences of diocesan members are held on the occasion of the clergy retreats and at other convenient times. In the United States, besides these diocesan conferences, conventions of several dioceses have been held at Cotting ton, Kentucky (1894), at Notre Dame, Indiana (1894, 1898), and at Philadelphia (1899). More important gatherings from a large number of dioceses, called congresses, have been held at Washington (1893), St. Louis (1901), and Philadelphia (1904). The numerous local congresses held in France form a significant feature of the religious activity of the Church there (cf. "Annales," 1909, pp. 446–9; 1910, p. 158). Perhaps the most noteworthy characteristic of the confraternity is the rapidity with which it has spread throughout every portion of the world.

Canada has a total of two thousand four hundred and fifty members, the United States 8015, while the grand total for the whole confraternity in March of the year 1911 is one hundred thousand five hundred and sixty-one; and it is estimated that there are one hundred and forty bishops or archbishops. The real value of these figures is checked by the record kept of the individual reports sent in by members of their discharge of the duty of the weekly hour of adoration. Should a member have failed for a year to send in his libellus, he receives a reminder, which, if ineffective, is followed by the removal of his name from the register.

IV. Literature.—A number of monthly periodicals serve to maintain the fervour and activity of the associates: the "Emmanuel" (sixteenth year; New York); "Annales des Prêtres Adorateurs" (twentieth year; Brussels); "Annales de l'Association des Prêtres Adorateurs" (twenty-third year; Brussels); "Annales dei Sacerdoti Adoratori" (sixteenth year; Turin); "Annales de los Sacerdotes Adoradores" (third year; Buenos Aires); "SS. Eucharistica" (twentieth year; Bozen), the organ of the Eucharistic Association of Austria, Germany, Switzerland, "Eucharist and Priest" (sixteenth year; Verapoly, Malabar Coast). In addition to these sources of information and piety, there is much dogmatic and devotional literature on the subject of the hour of adoration, such as "The Real Presence," "The Month of our Lady of the Blessed Sacrament," "The Month of Mary," "The Month of St. Joseph," by the Ven. Père Eymard. The late Père Ternière published: "The Adoration of the Blessed Sacrament," "Eucharistic Christ," "The Eucharistic Heart," "The Mysteries of the Rosary." The whole of this remarkable practice has much increased among the members of the confraternity of making the hour of adoration at a time when the faithful are able to take part in it. Private or solemn exposition is adopted according to circumstances, and faithful prayers are recited and suitable hymns sung between the intervals of meditation. In this connexion the associations, entitled "Agrégation du très saint Sacrament" and "Ouvrée de l'Exposition Messeuelle du tres saint Sacrament dans les Paroisses," will be of service.

In addition to the literature mentioned in the article, see Statutes of the Eucharistic League (New York); Report of the Ninth Eucharistic Congress (Washington and Philadelphia) 1908, 255–294; Fournier, Advantages of the Priests' Eucharistic League, Its Origin and Present Status (paper read at the Montreal Congress) in Emmanuel (Nov., 1909), 275–280.

HENRY PARKINSON.

PRIMACY
(Lat. primatus, primus, first), the supreme episcopal jurisdiction of the Pope as pastor and governor of the Universal Church. (See Pope.)

Primacy. See Sodality.

Primary School. See Schools.

Primate (Lat. primas, from primus, "first").—In the Western Church a primate is a bishop possessing the supreme authority of the church only over his own province, like the metropolitan, but over several provinces and metropolitan. This does not refer to episcopal powers, which each bishop possesses fully, but to ecclesiastical jurisdiction and organization, especially in national churches. Primates exist only in the West, and correspond not to the patriarchs of the East but to the archbishops of the West. There is no uniformity in the institution, it has no place in common law; primatial rights are privileges. In their widest acceptance these rights would be: to convolve and pronounce the Church over national councils, to convene the sovereigns, to hear appeals from the metropolitan and even judicial courts, and finally the honorary right of precedence. This organization formerly useful, as it favoured and maintained unity in national churches, has lost its importance and disappeared; first, because national Churches as such no longer exist, and secondly on account of the gradual disciplinary centralization of the Western churches around the Roman See. Except in the case of Gran in Hungary, the primatial title is merely honorific. At the solemnities accompanying the canonization of the Pope the crown is worn by the primate in 1867, no special place was reserved for primate; and in the Vatican Council the precedence of primates was recognized only at the instance of the Prince-Primate of Hungary (Verig, "Kirchenrecht," § 133), as something exceptional and not to be considered a prece-
dent. The Brief "Inter multiplices", 27 November, 1869 (Acta S. Sedis, V, 235), ranks the primates according to their date of promotion after the patriarchs, but adds: Ex speciali indulgentia, i. e. by special favour, at least, only, nor must it be interpreted as conferring any right on them or diminishing the right of others. The history of the primacies in the Middle Ages is largely concerned with interminable disputes concerning special rights, privileges, etc. That the sees were at first those that did not bear the name. The Bishop of Carthage exercised a true primate jurisdiction over the provinces of Roman Africa, without being called a primate; on the other hand, in the provinces, other than the Proconsular, the oldest Bishop, who resembled a metropolitan, was called the primate. The title Primate of Africa was restored again in 1893 by Leo XIII in favour of the Archbishop of Carthage. The Bishop of Toledo was also a primate for the Visigothic kingdom. On the other hand, the Bishops of Thessalonica and Arles, invested with the vicariate of the pope, had authority over several provinces. We meet later with claims to primate authority in every country, and refusals to recognize these claims; the primates who have exercised a real authority being especially those of Milan, the Archbishops of St. Boniface, of Lyons, of Poitiers, and of Aquitaine, made by Gregory VII, Primate of the Gauls, in reality of the provinces called formerly "Lugdunenses". All kinds of reasons were invoked: the evangelization of the country, the importance of the see, pontifical concessions, etc. It is impossible to give more than the mere names of primacies: in Spain, Toledo, Compostella, Braga; in France, Lyons, Reims, Bourges, Vienne, Narbonne, Bordeaux, Rouen; in Germany, Mayence, Trier, Magdeburg; in England, Canterbury, York; in Scotland, St. Andrews; in Ireland, Armagh; in the Scandinavian countries, Lund. But of all these nothing but a title has remained; and at the Vatican Council the only bishops figuring as primates, in virtue of recent concessions, were those of Salzburg, Antivari, Salerno, Basils, Gnesen, Tarragona, Gran, Mechlin, and Armagh (Coll. Lecens., VII, pp. 34, 488, 726).

PRIME

We learn further from Cæsarian the reason that led to the institution of this office. The office of the night, comprising Matins and Lauds, ended then at sunrise, so that Lauds corresponded to the dawn. After the night offices at Bethlehem only, or after them, at Caesarea, the monasteries, the monks might retire to rest. As no other office called them together before Terce, those who were lazy seized the opportunity of prolonging their sleep till nine in the morning, instead of applying themselves to manual work or spiritual reading. To end this abuse, it was decided, in the above monastery, to continue the custom of reposing after the night office, but, to prevent an undue prolongation of sleep, the monks were recalled to choir at the hour of Prime, and after the recital of a few psalms they were to work until Terce (Cæsarian, "Instit.", III, iv). All this is established by authentic texts. The only difficulty is that some contemporaries of Cæsarian or even his predecessors, as Eusebius of Cæsarea, St. Jerome, St. Basil, St. John Chrysostom, speak of an office recited at sunrise, and which therefore would seem to be identical with Prime. But it must be noted that they are speaking of Lauds, which in some communities was recited later, and so was identified with the hour but not with the subject matter of Prime.

PRIME

The matter composing the new hour was drawn from the office of Lauds; or rather Prime, as an office, was a repetition of part of Lauds, and added nothing to the ensemble of the psalmody, only Psalms i, xii, and lxix, which were formerly part of Lauds, were recited at this hour. Such at least was the original composition of Prime; but the monasteries which gradually adopted it in the East and in the West changed its constitution as they liked. It is impossible to describe here all the variations this office underwent in the different liturgies. We need only remark that one of the most characteristic features of Prime is the recitation of the famous symbol "Quicumque vult salutus esse", called the Athanasian Creed, which has recently been the subject of much controversy in the Anglican Church. St. Benedict orders to be recited at Prime on Sundays four groups of eight verses of Ps. cxvii; on week-days, three psalms, beginning with the first and continuing to Ps. xix, taking three psalms each day (Ps. ix and xvii being divided into two). In that way Prime is symmetrical, like the other short hours of the day. It resembles these also in composition, the penitential being accompanied by a hymn, an antiphon, caputulum, versicle, and prayer. In the Roman Liturgy the office of Prime is not composed so symmetrically. Usually it consists of Ps. lii, cxvii, the first four groups of eight verses of Ps. cxvii, and during the week Ps. lii, xxxi, xxv, xxxiv, and xxii. The capitula and other elements are after the model of the short hours (cf. None).

PRIME

We learn further from Cæsarian the reason that led to the institution of this office. The office of the night, comprising Matins and Lauds, ended then at sunrise, so that Lauds corresponded to the dawn. After the night offices at Bethlehem only, or after them, at Caesarea, the monasteries, the monks might retire to rest. As no other office called them together before Terce, those who were lazy seized the opportunity of prolonging their sleep till nine in the morning, instead of applying themselves to manual work or spiritual reading. To end this abuse, it was decided, in the above monastery, to continue the custom of reposing after the night office, but, to prevent an undue prolongation of sleep, the monks were recalled to choir at the hour of Prime, and after the recital of a few psalms they were to work until Terce (Cæsarian, "Instit.", III, iv). All this is established by authentic texts. The only difficulty is that some contemporaries of Cæsarian or even his predecessors, as Eusebius of Cæsarea, St. Jerome, St. Basil, St. John Chrysostom, speak of an office recited at sunrise, and which therefore would seem to be identical with Prime. But it must be noted that they are speaking of Lauds, which in some communities was recited later, and so was identified with the hour but not with the subject matter of Prime.

III. CONTENTS.—The matter composing the new hour was drawn from the office of Lauds; or rather Prime, as an office, was a repetition of part of Lauds, and added nothing to the ensemble of the psalmody, only Psalms i, xii, and lxix, which were formerly part of Lauds, were recited at this hour. Such at least was the original composition of Prime; but the monasteries which gradually adopted it in the East and in the West changed its constitution as they liked. It is impossible to describe here all the variations this office underwent in the different liturgies. We need only remark that one of the most characteristic features of Prime is the recitation of the famous symbol "Quicumque vult salutus esse", called the Athanasian Creed, which has recently been the subject of much controversy in the Anglican Church. St. Benedict orders to be recited at Prime on Sundays four groups of eight verses of Ps. cxvii; on week-days, three psalms, beginning with the first and continuing to Ps. xix, taking three psalms each day (Ps. ix and xvii being divided into two). In that way Prime is symmetrical, like the other short hours of the day. It resembles these also in composition, the penitential being accompanied by a hymn, an antiphon, caputulum, versicle, and prayer. In the Roman Liturgy the office of Prime is not composed so symmetrically. Usually it consists of Ps. lii, cxvii, the first four groups of eight verses of Ps. cxvii, and during the week Ps. lii, xxxi, xxv, xxxiv, and xxii. The capitula and other elements are after the model of the short hours (cf. None).

IV. THE OFFICE OF THE CHAPTER.—So far we have spoken only of the office of Prime properly so called, which ends like the other short hours. It is followed by some prayers which we call the office of the chapter, and are composed in the Roman Liturgy of the reading of the martyrology, of a prayer, "Sancia Maria et omnis sancti", a prayer concerning work, "Resipiec in servos tuos... Dirige et sanctificare"; and a blessing. This addition to Prime is a legacy bequeathed by the monks to the secular clergy. As has been said above, originally after Prime the monks had to betake themselves to manual work or reading. The office therefore ended with a prayer for their work and others ... et opera manuum nostrarum dirigere super nos et opus manuum nostrarum et operum "Dirigere". Later the reading of the martyrology, the necrology, the rule, and a prayer for the dead were added (see Bäumer-Biron, loc. cit., I, 361-62).

In view of its origin and constitution, Prime is to be considered as the prayer of the house, whereas Lauds is devoted to recalling with the dawn the memory of Christ's Resurrection, Prime is the
morning hour which coöccurates all the work of the day. Its institution has made the liturgical day more regular and symmetrical. Prime, until then without an office, received its psalmody like Terce, Sext, None, Vespers. With Compline and Lauds, the liturgical day received its completion, its date from the Baptist's 'Prepare ye the way of the Lord, make straight in the desert a highway for our God!'

While for the night office there was the text: "media nocte surgam ad confidendum tibi".

F. Càbrol.

**Primer.** The common English name for a book of devotions which from the thirteenth to the sixteenth century was the ordinary prayer-book used by the laity. The contents of these books varied greatly, but they possessed certain common elements which practically speaking are never absent. The most important feature, judging by the position usually assigned to it as well as by the mass of evidence of miniatures and other ornament with which it is associated, was the Little Office of the Blessed Virgin Mary. In different liturgical centres, for example, at Rome, Salisbury, York, or Paris, the constituents of this Little Office differed from each other in various details; for example, the Psalms recited at Prime "according to the use of York" were not the same as those appointed for the same hour in the Sarum breviary and hence in the later printed editions of the Primer it is common to find upon the title-page or in the colophon an indication of the kind of Leather book used for the Primer, and to take it as an indication of the kind of Leather book used for the Church, which changed from day to day, was beyond their reach, but by rendering themselves familiar with the Hours of the Blessed Virgin, they were enabled both to make their own something of that burden of prayer which the monks actually performed, and also to imitate that sevenfold consecration of the day, which no doubt seemed to them the most distinctive feature in the monastic life. Hence it came to pass, no doubt, that the collection of these devotions to the Office, gathered into one small volume, became the standard of the laity. The Psalms were naturally supplemented these more strictly liturgical forms of prayer by the addition of many private devotions, often in the vernacular. For it must be remembered that the Psalms, the Officium B. M. V., the Vigilæ Mortuorum, etc., were recited by the laity as well as by the clergy in Latin. True, a number of manuscript primers of the fifteenth century are in existence, in which the whole contents have been translated into English, but these are comparatively rare exceptions. On the other hand, out of over a hundred editions of the English book-trade before the breach with Rome in 1533, not one is known to contain the Office or the Psalms in English.

**Primers for Children.** The origin of the name "primer" is still obscure. The earliest instance yet discovered of the use of the word is in a Latin will of 1233, where it evidently means a prayer-book. Probabilities favour the view (see "The Month", February, 1911, pp. 150-63) that it was called "primer" because the more elaborate forms developed out of a book containing the invariable elements already specified, pre-eminently the Psalms, the Creed, etc., which compilation was used as a first reading book for children. This will not seem strange when we remember that children in the Middle Ages learned to read not in English but in Latin, and that almost every child that learned to read learned with the more or less definite purpose of becoming a clerk,
PRIMIANUS 426

Rex Jasper, rex Melchior, et Trium regum
trimun munus.
The XV O8s of the passion of our Lorde in latyn.
Prayers to the pyte of our lorde: Adoro te do-
mine.
A prayer to our lord crucifyd: Preceor te aman-
testine.
Another to his V woundes: O pie crucifixe.
The prayer of saynt Bernlyn: O bone Jesu,
with an anthem and a collecte.
O rex glorie.
To the crede: Sanctifica me.
To thy proper Aungell: O sancte angele.
Post Reformation Primers.—So strong was the hold
which the Primer had taken upon the affections of
Englishmen that after the breach with Rome various
imitations, still bearing the name of Primer and
framed upon the same general lines, were put forward
with more or less of ecclesiastical approval by Mar-
shall and Bishop Hilsey, while in 1545 appeared “the
Royal Primer”, which was published in the name of
Henry VIII himself, and was to supersede all others.
Other substitutes, still furthered, and the introduc-
tion of the reformed doctrine now in favour, were pub-
lished in the reign of Edward VI. For the most part
these books were entirely in English and when under
Queen Mary the old form of Primer was restored,
several editions were produced, though thoroughly
Catholic in their contents, were printed in English
as well as in Latin. Under Elizabeth the Protestant
substitutes for the Primer returned, but that printed
in 1559 was still called “the Primer set forth at large
with many godly and devoute Prayers” and it in-
cluded a form of “Offices” divided into seven hours,
with the “seven psalms”, the litany (much modified),
and “the Dirge” (see “Private Prayers”, Parker
Society, 1851). Meanwhile the Catholics had to be
content with such ancient copies of the Marian or
earlier editions which they could still purchase, but
few copies of the Roman Hore printed entirely in
Latin which could be smuggled in from abroad.
The first Catholic Primer of penal times seems to
have been that edited by Richard Verstegan (Ant-
werp, 1599). It adhered to the old conception of the
Primer by making the Office of Our Blessed Lady
the most conspicuous feature of the whole, but a great
deal of new matter was introduced into the miscella-
nous devotions, and in the subsequent editions
printed in many of the cities to which Catholics
were permitted to travel, e.g., Rouen, Chartres, Rouen,
etc., a great deal of innovation was tolerated.
Of really old English devotions the “Jesus Psalter”,
which we know from John Dorne’s day-book to have
been printed and sold separately before 1620, was
one of the features most relished and most consist-
tently retained. The edition of 1706 seems to have
been much improved as regards the translations of
the hymns, and of some of these John Dryden is
believed to have been the author. The whole number
of Catholic editions of the Primer known to have
been printed under that name, either in England or
abroad since Elizabeth, amounts to over forty.

PRIMICERIUS

Primianus. See Donatists.

Primicerius (etymologically primus in cera, sc. in
tabula cerata, the first in a list of a class of officials),
a term applied in later Roman times to the head of
any administration—thus “primicerius notariorum”,

E r a n c a s t e r
"primicerius protectorum" etc. (cf. Forcellini, "To
tius latinitatis Lexicon", s. v.). In ecclesiastical use the
name was given to a few of the colleges of Nuits, and De
denfere, which occupied so important a place in
the administration of the Roman Church in later
antiquity and in the early Middle Ages. When young
clerics were assembled in schools for training in the
ecclesiastical service in the different districts of the
Western Church (from the fifth or sixth century), the
directors of these schools were also commonly given
this title. Thus, an inscription of the year 551 from
Lyons mentions a "Stephanus primicerius scola lec-
torum servientium in ecclesia Luguduni" (Le Blant,
"Inscriptions chrét. de la Gaule", I, 142, n. 1; of
fl. 551; Abbat. De Tours, "Glossarium", v.;
St. Isidore of Seville treats of the obligations of the
primicerius of the lower clerics in his "Epistola ad
Ludfredum" (P. L., LXXXIII, 896). From this
position the primicerius also derived certain powers
in the direction of liturgical functions. In the regu-
lation of the common life of the clergy in collegiate
and cathedral churches, according to the Rule of
Chrodegang and the statutes of Amalarius of Meta,
the primicerius appears as the first capitular after the
archdeacon and archpresbyter, controlling the lower
clerics and directing the liturgical functions and chant.
The primicerius thus became a special dignitary of
many chapters by a gradual development from the
position of the old primicerius of the scola cantorum
or lectorum.

J. P. KIRSCH.

Primus and Felician, Saints, suffered martyrdom
about 304 in the Diocletian persecution. The "Mar-
tyrlogium Hieronymianum" (ed. De Rossi-Duchene,
77) gives under 9 June the names of Primus and Felician
who were buried at the fourteenth milestone of
the Via Nomentana (near Nomentum, now Men-
tana). They were evidently from Nomentum. This
notice comes from the catalogue of Roman martyrs of
the fourth century. In 648 Pope Theodore translated
the bones of the two saints to the Roman Church of
San Stefano, under an altar erected in their honour
(Lib. Act. 4, 332), where they remain. Their
feast is still observed on 9 June.

Prince Albert, Diocese of, a suffragan see of St.
Boniface, Manitoba, in the Province of Saskatchewan,
Canada. Originally part of the Diocese of St. Albert,
it was formed, 4 June, 1891, into the Vicariate Apo-
stolic of the Saskatchewan, bounded in the south
by 52° 30' N. lat., in the west by 109° W. long., in the
east by the present boundaries of the province of the
same name, and in the north by the Arctic Sea. On 2 Dec.,
1907, most of this was erected into the Diocese of
Prince Albert, and Rt. Rev. Albert Pascal, O.M.I.,
became its bishop. The new diocese is bounded on
the south by a line passing between the thirtieth and
the thirty-first township, approximately 51° 30' N. lat.
Its eastern and western limits coincide with the
boundaries of the civil province as far north as the
sixtieth township (about 54° 20' W.) in the west, and
the fifty-sixth township (or 53° 30' E.) in the east,
thus forming in the north a line of demarcation with two
right angles just half way between its eastern and
western.

Fort Carlton within that territory had been pe-
eriodically visited by Catholic missionaries ever since
1842. In 1870 Father Moulin was put in charge of
the French half-breed families who had settled on the
banks of the Red River of the North. In 1874 the
permanent mission of St. Laurent was established
by Father Andre, who was replaced in Nov.,
1877, by Father Lestanc, the real founder of that mis-
sionary post on the south branch of the Saskatche-
wan. Then followed the missions of St. Anthony, at
Batoche, established in 1881 by the Rev. Dr. St. Joseph,
who was succeeded by Father Moulin, and of Prince
Albert, started by Father Andre in 1882. The first
missionaries of the diocese were French Oblates of
Mary Immaculate. The uprising of the dissatisfied
Saskatchewan Indians resulted in the battle of Rat
creek and Batoche, the murder of two missionaries
by Plains Cree, the destruction of several mission-
ary establishments, and the capture and execution
of the half-breed leader, Louis Riel. St. Louis de
Langevin was founded by Father Lecoq in 1886. The
advent of railways prompted the foundation of
parishes and farming settlements, of which the
most important is the German colony of St. Peter,
found in 1903 by the Very Rev. Bruno Doerfler,
O.S.B., now attended by several priests of the same
order.

The Catholic population of the diocese is estimated
(1911) at 45,000, of whom some 15,000 follow the
Ruthenian Rite. The French have 18 parishes, with
resident priests, and another 11,050; the Germans are
between 10,500 and 11,000, distributed in 12 parishes;
while the English-speaking population, about 3100,
have 4 parishes of their own. In other centres the
Catholics are of mixed nationalities. There are also
some 1000 Catholic Crees, whose spiritual needs are
attended to by French Oblates established on, or near,
their reserves. The schools of all these parishes, whether
public or separate, are equally satisfactory but not up to the Catholic ideal (see SASKATCHewan,
Province of). Saskatoon has 15,000 inhabitants,
and Prince Albert, 9000. The diocese counts 28
Oblate fathers, 22 secular priests, 14 Benedictines,
and 6 communities of women. It has 42 academies
and parish schools, 2 Catholic hospitals, and 2 board-
ing-schools for Indians with 130 pupils.

Church in Western Canada (Toronto, 1810).

A. G. MORRIS.

Prince Edward Island. See Charlottetown,
Diocese Of.

Prior, a monastic superior. In the Rule of St.
Benedict the term prior occurs several times, but it
does not signify any particular superior; it is simply
naturally applied to any superior, be he abbot, provost,
dean, etc. In other old monastic rules the term is used
in the same generic sense. With the Cluniac reform
the term prior received a specific meaning; it supplanted
the provost (propositus) of the Rule of St. Benedict.
In the congregation of Hirsau, which arose in Ger-
many in the eleventh century, the term prior was also
substituted for provost, and the example of the Cluniac
and Hirsau congregations was gradually followed by
all Benedictine monasteries, as well as by the Camal-
dolese, Vallombrosians, Cistercians, and other off-
shoots of the Benedictine Order. In the Benedictine
Order and its branches, in the Premonstratensian
Order, and in the military orders there are two kinds
of priors,—the claustral prior (prior claustralis) and
their conventual prior (prior conventualis). The
claustral prior, in a few monasteries called dean, holds
the first place after the abbot (or grand-master in military
order), whom he assists in the government of the
monastery and whose place he supplies in his absence.
He has no ordinary jurisdiction by virtue of his office,
but he performs the duties of his entire office ac-
cording to the will and under the direction of the ab-
bot. His jurisdiction is, therefore, a delegated one
and extends just as far as the abbot desires, or the constitution of the congregation prescribe. He is appointed by the abbot, generally whose name is prefixed to the Capitulars of the monastery, and may be removed by him at any time. In many monasteries, especially larger ones, the claustral prior is assisted by a subprior, who holds the third place in the monastery. In former times there were in larger monasteries, besides the prior and the subprior, also a third, fourth, and sometimes even a fifth prior. Each of these was called circa (or circulat), because it was his duty to make the rounds of the monastery to see whether anything was amiss and whether the brethren were intent on their works allotted to them respectively. He had no authority to correct or punish the brethren, but was to report to the claustral prior whatever he found amiss or contrary to the rules.

The conventual prior is the independent superior of a monastery that has no abbot; he rules in temporal and spiritual matters just like an abbot. Ordinarily he is elected by the chapter of his monastery and holds his office for life, though in former times he was often elected for a specified period of time. He may be assisted by a subprior, whose office is similar to that of the claustral prior in an abbey. In the thirteenth century and others of the tenth, eleventh, and twelfth centuries there was also a greater prior (prior major) who preceded the claustral prior in dignity and, besides assisting the abbot in the government, had some delegated jurisdiction over external dependencies of the abbey. The appellation of simple, or obedientary, prior (prior simplex or prior obedientiarius) is often applied to the superior of a monastic establishment which is a dependency of an abbey. He is an obedientary of the abbey, is appointed by him, and may be removed by him at any time.

The Augustinian Hermit, Carmelites, Servites, and Brothers of Mercy have three kinds of priors—the conventual prior, the provincial prior, and the prior general. The conventual prior is the first superior over a monastery. He is generally elected by the chapter of the monastery for a specified time, and his election requires the approval of the provincial prior. The provincial prior is the superior over a number of monasteries that are united into a province. He is elected for a specified time by the conventual priors and delegates from the various monasteries of the province, and his election requires the approval of the prior general. The prior general is the superior over the whole order; he is elected in the general chapter for a specified time and resides in Rome. The Dominicans also have conventual and provincial priors, but the superior of the whole order is not called prior general, but master general. The Carmelites have a conventual prior and a prior general, but no provincial priors. Their prior general is the only superior of all the members who do not reside in Rome. Before their suppression in France the prior of the Grande Chartreuse was always prior general, an office now filled by the prior of Farneta near Lucca in Italy. In all these orders the second superior of a monastery is called subprior and his office is similar to that of the claustral prior in the Benedictine Order.

MICHAEL OTT.

PRIOR (PRIORISA, PREPONTA), a superioris in a monastic community for women. The term priores is properly applied only to a superioris in a convent which has the papal approbation and whose members make solemn profession, that is, to convents which belong to an order in the strict sense of the word. In some places, however, it is customary to apply the title of prior to a superiors in a convent which has only the episcopal approbation and whose members make common profession. In general, the office of a prioris in an order for women corresponds to that of the prior in the same order for men. If the prior is the first superior, her authority over the convent is similar to that of a conventional prior in an abbey; if the first superior is an abbess, the office of the prior is similar to that of a claustral prior in an abbey.

For bibliography see PRIOR.

MICHAEL OTT.

PRIORY, a monastery whose superior is a prior. The Dominicans, Augustinian Hermit, Carmelites, Servites, and Brothers of Mercy call all their monasteries priories. The Benedictines and their offshoots, the Premonstratensians, and the military orders distinguish between conventual and simple or obedientiary priories. Conventual priories are those autonomous houses which have no abbeys, either because the canonically required number of twelve monks has not yet been reached or for some other reason. The Congregation of Cluny had many conventual priories. There were likewise many conventual priories in Germany and Italy during the Middle Ages, and in England all monasteries attached to cathedral churches were known as cathedral priories. Nearly all the famous Maurist Congregation in France (seventeenth and eighteenth centuries) were called priories. At present the Benedictine Order has twenty-seven conventual priories. Simple or obedientiary priories are dependencies of abbeys. Their superior, who is subject to the abbot in everything, is called simple or obedientiary prior.

For bibliography see PRIOR.

MICHAEL OTT.

PRISCA, SAINT, a martyr of the Roman Church, whose dates are unknown. The name Priscilla or Priscilla is often mentioned by early authorities of the history of the Church in Rome. The woman of Aquila, the pupil of St. Paul, bore this name. The grave of a martyr Priscilla was venerated in the Roman Catacomb of Prisca on the Via Salaria. The place of interment is explicitly mentioned in all the seventh-century inscriptions to the grave of Priscilla. The name of Priscilla, "Roma sotterranea," I, 176, 177.

The epitaph of a Roman Christian named Priscilla was found in the "larger Catacomb," the CEMONIUM MAUS, on the Via Nomentana, not far from the mausoleum of St. Agnes [De Rossi, Bull. di arch. crist. (1888-1889), 130, note 51]. There still exist in the Aventine a church of St. Priscus. It stands on the site of a very early title church, the TITUS PRISCA, mentioned in the fifth century and built probably in the fourth. In the eighth century there was found near this church a bronze tablet with an inscription of the year 224, by which a senator named Cæsarius Privus, is given in a Latin inscription. The place was granted in the Catacomb of Prisca to the same family or was identical with the founder of the title church cannot be proved. Still some family relationship is probable, because the name Priscilla appears also in the senatorial family of the Acilius Gallus. The burial-place was in the Catacomb of Prisca on the Via Salaria. The "Martyrologium Hieronymianum" mentions under 15 January a martyr Priscilla on the
Priscillianism.—This heresy originated in Spain in the fourth century and was derived from the Gnostic-Manichaen doctrines taught by Marcus, an Egyptian from Memphis. His first adherents were a lady named Agape and a rhetorician named Heliodorus, through whom the name Priscillianus enters the field of noble birth, of great riches, bold, restless, eloquent, learned through much reading, very ready at debate and discussion” (Sulpicius Severus, “His Sac.”, I, 46), was also enrolled. His high position and great gifts made him the leader of the party, and he became an ardent apostle of the new doctrines. Through his oratorical gifts and reputation for extreme asceticism he attracted a large following. Among those drawn to him were two bishops, Instantius and Salvinius. The adherents of the new sect organised themselves into an oath-bound brotherhood, the spread of which attracted the attention of the Catholic Bishop of Cordova, Hyginus, who made known his fears to Iadius, Bishop of Emerita, and, at the instance of the latter and of Ithacius of Ossanava, a synod was held at Saragossa, 384, when Priscillianus was not present at this synod not only from Spain but from Aquitaine. Though summoned, the Priscillianists refused to appear, and the synod pronounced sentence of excommunication against the four leaders, Instantius, Salvinius, Heliandius, and Priscillian. The enforcement of the synod’s decree was committed to Ithacius, an impulsive and violent man. He failed to bring the heretics to terms, and, in defiance, Priscillian was ordained to the priesthood and appointed Bishop of Avila. Ithacius and Ithacius appealed to the imperial authorities. The Emperor Gratian issued a decree which only not deprived the Priscillianists of the churches in which they had intruded themselves but sentenced Priscillian and his followers to exile. Instantius, Salvinius, and Priscillian proceeded to Rome to gain the aid of Pope Damascus in having this sentence revoked. Denied an audience, they went to Milan to make a similar request of St. Ambrose, but with the same result. They then resorted to intrigue and bribery at the court with such success that they were not only not excommunicated but permitted to regain possession of their churches in Spain, where, under the patronage of the imperial officials, they enjoyed such power as to compel Ithacius to withdraw from the country. He, in turn, appealed to Gratian, but before anything had been accomplished the emperor was murdered in Paris, and the usurper Maximus had taken his place. Maximus, wishing to curry favour with the orthodox party and to re-plenish his treasury through confiscations, gave orders for such synods to be held in his provinces as would be likely to attract Instantius was first tried and condemned to deposition. Thereupon Priscillian appealed to the emperor at Trier. Ithacius acted as his accuser and was so vehement in his denunciations that St. Martin of Tours, who was then in Trier, intervened, and, after expressing his disapproval of bringing an ecclesiastical case before a civil tribunal, obtained from the emperor a promise not to carry his condemnation to the extent of shedding blood. After St. Martin had left the city, the emperor appointed the Prefect Evodius of Thermes to investigate the case of Priscillian and several of his followers to the sword; the property of others was confiscated and they were banished. The conduct of Ithacius immediately met with the
severest reprobation. St. Martin, hearing what had taken place, returned to Trier and compelled the emperor to rescind an order to the military tribunes, already given to Spanish clerics, to the effect that they should be only to the height of men. There is no ground in the condemnation and death of Priscillian for the charge made against the Church of having invoked the civil authority to punish heretics. The pope censured not only the actions of Ithacius but also that of the emperor. St. Ambrose was provoked by the acquittal and of six others, and some of the Gallican bishops, who were in Trier under the leadership of Theognistus, broke off communion with Ithacius, who was subsequently deposed from his see by a synod of Spanish bishops, and his friend and disciple, his doctrinal teaching being rejected. The death of Priscillian and his followers had an unknown-for sequel. The numbers and zeal of the heretics increased; those who were executed were venerated as saints and martyrs. The progress and spread of the heresy called for fresh measures of repression. In 400 a synod was held in Toledo at which many persons, among them two bishops, Symphonius and Dictinnus, were reconciled to the Church. Dictinnus was the author of a book "Libra" (Scales), a moral treatise from the Priscillianist viewpoint. They were in possession of the Spanish Vandal convent and the Suedi aided the spread of Priscillianism. So menacing was this revival that Orosius, a Spanish priest, wrote to St. Augustine (415) to enlist his aid in combating the heresy. Under date took active steps for its repression and at his urgent insistence councils were held in 446 and 447 at Astorga, Toledo, and Galicia. In spite of these efforts the sect continued to spread during the fifth century. In the following century it commenced to decline, and after the Synod of Braga, held in 563, had legislated concerning it, it soon died out. In regard to the doctrines and teaching of Priscillian and his sect, it is not necessary to go into the merits of the discussion as to whether Priscillian was guilty of the errors traditionally ascribed to him, whether he was really a heretic, or whether he was unjustly condemned—the object of misunderstanding and reprobation even in his lifetime and afterwards made to bear the burden of heretical opinions subse-quently developed and associated with his name. The weight of evidence and the entire course of events in his lifetime make the supposition of his innocence extremely improbable. The discovery by Schepes of eleven treatises from his pen in a fifth-century manuscript, in the library of the University of Würzburg, has ended this controversy still involved in considerable difficulty. Künstl (Antipriscillana), who has examined all the testimony, has decided in favour of the traditional view, which alone seems capable of offering any adequate solution of the fact that the Church in Spain and Aquitaine was aroused to activity by the separatist tendency in the Priscillianist movement. The foundation of the doctrines of the Priscillianists was Gnostic-Maenpiean Dualism, a belief in the existence of two kingdoms, one of Light and one of Darkness. Angels and the souls of men were said to be severed from the substance of the Deity. Human souls were intended to conquer the Kingdom of Darkness, but fell and were imprisoned in material bodies. Thus both kingdoms were represented in man, and hence a conflict symbolised on the side of Light by the Twelve Patriarchs, heavenly spirits, who corresponded to certain of man's powers, and, on the side of Darkness, by the Signs of the Zodiac, the symbols of matter and the lower kingdom. The salvation of man consisted in the separation from the material. The twelve heavenly spirits having failed to accomplish this release, the Saviour came in a heavenly body, which appeared to be like that of other men, and through His doctrine and His apparent death released the souls of men from the influence of the material. These doctrines could be harmonised with what remained of the teaching only of the heretics and of exegesis, in which the liberal sense was entirely rejected, and an equally strange theory of personal inspiration. The Old Testament was received, but the narrative of creation was rejected. Several of the apocryphal Scriptures were acknowledged to be inspired and were used in their churches. The doctrine of the Dualism of Priscillian with its low concept of nature gave rise to an indecent system of asceticism as well as to some peculiar liturgical observances, such as fasting on Sundays and on Christmas Day. Because the Church was not to reason according to the Gentiles, be-cause it was believed that men in general could not understand the higher paths, the Priscillianists, or at least those of them who were enlightened, were permitted to tell lies for the sake of a holy end. It was because this doctrine was likely to be a scandal even to the faithful that Augustine wrote his famous work, "De mendacio".

P. J. HEALY.

Prisons.—I. In Ancient Times.—Many jurisconsults and Scriptural interpreters include imprisonment among the number of penalties recognized in Hebrew legislation, but the fact may well be questioned. However, on the coming of the Chaldians under Nebuchadnezzar, there were at least three prisons at Jerusalem, and, about the same time, the names of the places of detention were expressive of the regime to which the captives were subjected, such as Beth ha-telit (house of detention). Beth ha-asurim (house of those in chains), Beth ha-mah-pecheth (from the name of an instrument for chaining the hands and feet), and Bor (cistern, underground receptacle) [cf. Thonissen, "Etudes sur l'histoire du droit criminel des peuples de l'ancien Empire " (Brussels, 1893)]. At Athens imprisonments were imposed as a penalty, though this is doubted by many. It seems there was only one prison placed under the authority of the Eleven. The prisoners were not isolated and could be visited by their friends and the members of their families. Some were deprived of freedom of movement by having their feet attached to wooden blocks (Thonissen, "Le droit pénal de la république athénienne", 1873). At Rome there still remains at the foot of the Capitol the ancient Mamertine prison. It comprised an upper portion and a dungeon, the Tullianum. The prisoners were enclosed in the former which was lighted only by narrow loopholes, and, if they were condemned to death, they were thrown into the dungeon through an opening in its roof, to be strangled like Cataline's accomplices or starve to death like Jugurtha. Their naked corpses were then thrown out on the steps of the Gemonies. Imprisonment, which the laws did not usually pronounce, was of two kinds, simple detention or detention in chains. It was for life or for a time, according to the severity of the offense. The protection of the public prisons at Rome was entrusted to the triumviri capita!es. Under the empire perpetual imprisonment was abolished theoretically,
imprisonment being considered not so much a penalty as a means of supervising culprits. The care of the gaols, up to the middle of the third century, was included among the duties of the triumviri capitales. In the provinces a more regular administration entered upon. Ten essential posts were instituted. At first the accused do not seem to have been separated from the convicted, nor were the sexes kept apart; though there are instances of solitary imprisonment (Humbert in Darmenburg and Saglio, "Dict. des antiquités grecques et romaines", 3, 341).}

II. INFLUENCE OF CHRISTIANITY.—It was natural that when Christians were being hunted down and cast into gaol for their faith, the Church should recommend the faithful to visit the prisoners. The deacons and deaconesses were especially charged with the care of the incarcerated Christians, bringing them the comforts of religion, food, clothing, and especially money, which was needed to procure certain mitigations, even liberty. The deaconesses more particularly were appointed to this office, for in visiting the Christians they ran less risks: "Praebuit ut non repleverint, sed suscipierint fidem pauperum." At an early period the bishops began to purchase the liberty of the prisoners. For this they made collections, and if the receipts were not sufficient, they sold the church property. In many of the flocks bishop and episcopal lands were the objects of their charitable zeal. Debtors, towards whom Rome was so heartless, were not forgotten. Justinian granted private debtors the right of asylum in the house of God, but only if the creditors abused their rights; this favour was not, however, extended to public or state debtors. The Church, the help of sinners, could not but extend her assistance and protection to criminals; for crime is primarily a sin. In the earliest times, as soon as more peaceful days had dawned, she endeavoured to free those condemned to punish themselves in another way. For this she employed three means.

1. The pastoral indulgence. By virtue of an edict of Valentinian I in 367 all prisons were opened at Easter and the prisoners set free. This edict was called the indulgentia paschalis. The privilege was not extended to those arrested for sacrilege, poisoning, treason, adultery, rape, or murder. Valentinian the younger, Theodosius, and Theodoric issued similar edicts, but they excluded in addition recidivists.

2. The right of asylum. Under Constantine the Great heeding the advice of his friend and by his successors, Charlemagne ordained in a capitulary that no one taking refuge in a church should be taken from it by force, but should be unmolested till the court had pronounced its decision. This privilege in the course of time was abused and consequently was abolished. The right of asylum was not extended to adulterers, ravishers of young girls, or public debtors; it was confined to those who were unjustly pursued.

3. The right of intercession. The bishops had the right to ask the civil judge to order the prison to permit especially those sentenced to death; frequently, however, they petitioned to have prisoners discharged. In the course of time, through the influence of the Church, the lot of prisoners was greatly improved. The Council of Nicea (325) ordered the procuratores pontum to visit the gaols and offer their services. The Synod of Orleans (549) obliged the archdeacon to see all the prisoners on Sundays. The active intervention of the Church began in the days of Constantine the Great and continued for a long period. The bishops and priests were invited to accompany the procurators pontum to supervise the conduct of the judges, to visit prisoners on a certain week-day, Wednesdays or Fridays, and find out the reason of their imprisonment, to speak with them about their position and wants, to inform the proper authorities of any defects they noticed and to have changes made. During the Middle Ages this right and duty was enforced only here and there. St. Charles Borromeo was a great reformer and reorganized the whole prison system in his diocese, even to the smallest details, and his regulations give us an insight into their medical welfare.

The clergyman deputed by the bishop to look after the prisoners had to inquire constantly "que illorum cura adhibeatur, cum in primis ad animae salutem, tum etiam ad corporis sustentationem", i.e. what care was taken of them, first in regard to their spiritual needs and then to their physical welfare. The clergyman deputed by the bishop to look after the prisoners had to inquire constantly "que illorum cura adhibeatur, cum in primis ad animae salutem, tum etiam ad corporis sustentationem", i.e. what care was taken of them, first in regard to their spiritual needs and then to their physical welfare.

Influence of the Popacy.—The influence of the Popacy also was very great, and the prison system at Rome became a model. Popes Eugenius IV (1435), Paul V (1611), and Innocent X (1655) passed regulations improving the conditions of prisoners, until finally Clement XI (1703), by constructing St. Michael's prison, introduced the most essential change needed to ameliorate the penal system: the construction of a house of correction for youthful offenders, as is recorded in the inscription on the façade: "Pauca tuis instituendum ut qui nescias obseruare, tuos instituendusque ut qui inertas obseruare instituens serviant." (for the correction and education of abandoned youths; that they who, without training, were detrimental to the State, may, with the help of God, be trained and become useful subjects). The punishments to reclaim culprits were separation, silence, work, and prayer. Each prisoner had his cell at night, but all worked in common during the day. A religious confraternity supervised them and undertook their education. Each one was taught a trade, and was encouraged by a system of rewards. The punishments consisted in bread and water diet, work in their cells, black holes, and flogging. In the large workshop of the giallo was inscribed the motto: "Parum set coerere improbus penna nisi probo, et fessus nisi lucem vitreus ostendat, et finitus nisi umbris mittatur, et vinces nisi perpeta metuens, et cor quisque diutius ingemit, nisi reformata vertat (te reformare disciplina). In 1735 Clement XII erected a prison for women on the model of St. Michael's. If Clement is considered the creator of the modern penitentiary system, it must be pointed out that at Amsterdam the principle of separation at night and work in common during the day had been introduced in 1603 (Von Hippiel, "Beiträge zur Geschichte der Freiheitstrafe" in "Zeitschr. für die Gesch. Straf." 1897, p. 437, and Roux, "Revue pénitentiale", 1888, p. 124 sq.), and in England, 1608. In Germany and Italy, where learned juristcommentary proclaimed that the reformation of the culprit was the object of punishment (Rivière, "Revue pénitentielle", 1895, p. 1132). A priest, Filippo Frani, after experimenting at Venice and Naples on the effect of separating prisoners according to sex, age, and social rank, succeeded in making his house of refuge at Florence (casa pia di refugio), by the application of individual separation, a model establishment for the educational correction of children.

Influence of the Religious Orders.—In the Middle Ages the Church founded religious orders which bound themselves by vow to the redemption of captives: the Trinitarians, or Mathurins, established in 1198 by St. John of Matha and Felix de Valois, and the Nolancus, founded in 1223. In Spain, France, and especially Italy, there were, moreover, associations or confraternities labouring to improve the condition of prisoners: the Confraternità della Misericordia and the Compagnia di Santa Maria della croce al Tempio detta de Neri at Florence, the Pio Casa di Misericordia at Pisa, the Casa della pietà at Venice, etc. Besides the prisons depending on the State, there were prisons under the control of the religious authorities. Each convent had one or at times two prisons in which religious were incarcerated. The term of imprisonment was two—
prison or perpetual. The culprit had to do penance and amend his ways. He was isolated and often chained. Generally, if discipline was not perfect, unconditional corporal punishment was added to incarceration and the prisoner put on bread and water. The Church had the right to punish clerics for penal offenses and had its own episcopal prisons, but from the middle of the sixteenth century, as a result of the changed relations of Church and State, the privilege of prison for dissi~tion disappeared and the State resumed its right of punishing clerics in non-religious matters. In the episcopal prisons clerics were treated more gently than were the monks in convent prisons, nevertheless, the discipline was very rigorous. The Church had jurisdiction also over the laity in offenses of a religious character. Finally, it created a new procedure, differing from the ordinary, viz. the inquisitorial procedure in cases of heresy. Imprisonment was the severest punishment the inquisitors could inflict directly. According to the inquisitorial theory, it was not really a punishment, but a means for the culprit to obtain pardon for his crimes, and to amend and be converted, while close supervision prevented him from infecting the rest of the community. The sentences in the prisons were divided into two regimes: the severe and the milder; but, in either case, the captive was given only bread and water; he was confined to a cell, and forbidden all communications, though the latter provision was not strictly enforced. Those under the milder discipline could, if they behaved well, take a little exercise in the corridors, a privilege granted also to the aged and infirm. Those condemned to the severe regime were cast littered into a narrow dark cell; sometimes they were chained to the walls. The prisons were constructed without any regard to the health or convenience of the inmates, and the condition of the latter was wretched. The Inquisition sometimes commuted or remitted the punishment. The remission was ad tempus, for a longer or shorter period, according to the case.

III. Modern Prison Reforms.—In spite of these efforts to better the prison system in earlier days there was much room for improvement in the buildings, diet, and discipline. Usually the main object of the authorities was to punish rather than to reform the culprits. Not unusually the greatest criminals and persons convicted of trifling offenses were imprisoned together. Fortunately, after the construction of St. Michael's prison by Clément XI., the development of cellular imprisonment went on until the prisoners of the Centrale were divided and spread towards Northern Italy, to Turin (erection of the House of Good Counsel, 1757), Venice (1760), Milan, where Empress Maria Theresa established in 1759 a house of correction containing 140 cells, 25 of which were for women and 20 for children. From Milan the system, as might be expected, was introduced almost immediately into the Austrian Low Countries where Maria Theresa's efforts were earnestly seconded by Viscount Jean Vilain XIV., Burgomaster of Ghent (Vicomte Vilain XIV., "Mémories sur les moyens de corriger les malheureux", Brussels, 1841). At his suggestion the celebrated prison of Ghent, finished in 1775, was erected (Holtzendorf, "Handbuch", 1, pl. 3, gives the plan of this prison). The system adopted there was isolation by night and work in common by day. Moreover a change according to jurisdictional and moral classification was seriously undertaken. A general change in prison discipline was effected through the efforts of John Howard the philanthropist, b. in 1726 at Hackney, London (Rivière, "Le Livre de la Police de Paris", 1781, pp. 493 sqq.; also Thibault, "Les prisons de France", 1779, pp. 280 sqq.; see "The Rhineland Prisons", 1809, pp. 682 sqq.; Howard-Wines, "Punishment and Reform", 122 sqq.; Krohne, "Lehrbuch"; Cuche, "Traité de science et de législation pénitentières", 304). Having visited the prisons of England, Germany, France, Italy, Portugal, Turkey, and North America, he wrote a remarkable work, "State of the prisons in England and Wales with preliminary observations and an account of some foreign prisons". Howard described the wretched conditions of the prisons: imprisonment in common without regard to age or sex, want of space, bad food, darkness and vitiated air, want of light, filth, immorality, the use of spirituous liquors, gambling with cards and dice. After noting the evils, he proposes the remedies. It is on a religious training of the prisoners that he relies most for a reformed man. The second remedy is to provide that society is bound by the ties of brotherhood and even by the hope of reclaiming the culprit, to provide him with proper food and subject him to a hygienic regime; he favoured the separation of prisoners, though he did not approve of the system of shutting them alone in cells both by day and night, except for certain classes of culprits; all others he would separate only during the night. Howard was the interpreter of the opinion of the civilized world. It is interesting to note the results of this change of opinion in different countries, or, at least, to point out the original systems.

United States of America.—(1) The Pennsylvania system is the work of the Philadelphia Society for Alleviating the Miseries of Public Prisons, founded in 1778. The fundamental idea of this regime is rigorous and continued isolation in the cell, with repentance and lead the culprit to a better life. At first the system was carried to such an extreme that the cells were without light in order that the darkness might act more powerfully on the prisoner's mind and conscience. Some writers say that the culprits had no work to do, but that is uncertain. The Pennsylvania system, in its rigorous form as it was originally established, prevented, it is true, the mutual corruption of the prisoners and the planning of crimes to be committed on their release, which are the negative effects of individual separation; but it was not suited to produce positive results, that is, an awakening of the moral sense in man left to his own meditations; the cell can have an influence for moral good only when it enables the reflections of solitude to be relieved and strengthened by outside influences (Cuche, op. cit., 312 sqq.).

(2) The system of Auburn or silence (Chesel, "Avantages du Système d'Auburn", 1900), introduced in the State of New York, consists in isolating prisoners in small cells, to work together in strict silence during the day, and in separating them according to age and morality. This is, in general, the same as the regime of the prisons of Amsterdam, St. Michael, and Ghent. The principal objection urged against it is the difficulty of enforcing silence, and of preventing the inmates from communicating with one another. Moreover, such unnatural life makes the culprits irascible.

(3) In the so-called system of classification, the prisoners are divided not only according to sex, age, degree of guilt, aptitude for work, but also according to their moral character and the possibility of amendment; in each division work is in common. Such a system depending entirely on the judgment of the governor of the gaol seems difficult to carry out in practice.

(4) In the mitigated Pennsylvania system, the inmates are isolated in cells day and night; they are separated also in church, in school, and on the grounds, but they work at a lucrative trade, read books, are visited by members of the prison staff, are allowed to have relations from time to time, and may write to them.

(5) The state reformatories are intended to provide rigid training for prisoners between the ages
of sixteen and thirty who give hope of being corrected; the indeterminate sentence is the basis and the paroling of prisoners the completion of this system. The model establishment is the Reformatory at Elmina (Aschrott, “Aus dem Strafen u. Gefängnisse-wesen Nordamerikas”, 1889; Winter, “Die New-Yorker Straf- und Korrekturanstalt”, 1890; Yoon, “Rapport sur l'organisation pénitentiaire aux Etats-Unis” in “Revue pénitentiaire”, 1895; Barrows, “The Reformatory System in the United States”, Washington, Govt. Printing Office, 1900; Săbărua, “Rapport sur le Reformatory d'Elmina”; Cuche, op. cit., 368 sq.). The committee of directors release, before the end of their term, those who deserve this favour. The convicts are isolated at night; and in the daytime receive a professional, physical, and intellectual training. Every opportunity is taken to provide for the moral and religious improvement of the culprit. It is not the object of the system to train the prisoners only at specified hours but rather to do so continually, by bringing them into constant contact with an intelligent and qualified staff of resident teachers, and thus gradually inspire better resolutions. A last characteristic of the system is the multiplication of classifications and gradations. The reward consists in being promoted from grade to grade, which results in an increase of comfort and a greater remuneration for the same amount of work. The prisoner who has just completed his sentence descent. When he has been promoted to the first class or category, the convict, if his conduct during the preceding six months has been satisfactory, may be let out on parole. Generally a situation is found for him, and his employer sends in regularly an account of his conduct to the administration of the reformatory; certain officers are, moreover, appointed to watch over the paroled convicts and are authorized to arrest them and bring them back to the reformatory if their conduct is not satisfactory. This last stage of freedom on parole lasts six months, after which the prisoners are discharged from prison for good. (For treatment of juvenile offenders see Juvenile Courts.)

Great Britain.—Captain Macconochie introduced about 1840 a special system called the progressive into the convict settlement of Norfolk Island. This system consisted in proportioning the duration of the punishment to the work done and the good conduct of the convict. The duration was represented by a certain number of days according to the gravity of the crime. The culprit had to merit these marks before being liberated; each day he was awarded one or more, according to his work; if his conduct was unsatisfactory a slight penalty was imposed. Macconochie thus gave the convict the control of his own lot. The results were marvellous. When transportation was abolished, England remained faithful to the idea of making imprisonment in a cell only a small part of the penalty, and of gradually preparing the convict to return to society when he had gained his freedom. This system comprises the following stages: (1) The prisoner is at first confined to the cells for nine months. (2) He is then sent to one of the central public works prisons, Chatham, Dover, or Plymouth, where the Auburn regime is in force—separation is slight, work in common during the day. The culprits are divided into four classes, according to their work and conduct, by means of a system of marks, enabling them to reach a higher grade. Violation of discipline regulates them to a lower grade and even to the cells. (3) The next stage is that of the prisoner being liberated on a ticket-of-leave. In Ireland Walter Crofton devised an intermediate stage between the public gaol and conditional liberty. To test the moral character of the convict and to see if he was fit for liberty, he was compelled to reside six months in the prison at Lusk, a prison without walls, bars, or bolts, where the culprits were employed as free workmen in agriculture or a trade. This intermediate stage was abolished when Crofton’s connexion with the Irish prisons ceased.

The progressive system has been adopted in Hungary; during the Somerset enquiry the prisoners are employed on farms. What characterizes the regime of penal servitude, in addition to its progressive organization, is the nature of the work imposed on the prisoners. In the second stage the prisoners are engaged only in public works. The gaol at Wormwood Scrubs was built entirely by convicts, as were the breakwater at Portsmouth and part of the docks at Chatham etc. Prins (Science pénale et droit positif, p. 445 sq.) believes that the progressive regime, while not perfect, offers perhaps more scope than the purely cellular system, as it approaches more closely the normal conditions of life. The successive stages bring the convict nearer to liberty, and enable him to appreciate the advantages, the dangers, the meaning, and significance of freedom. The shops, where groups of convicts work together, are often under the supervision of the authorities, accustom them to the conditions of free work. Rivière and Cuche, viewing the question from another standpoint, hold that if the common prison is only a preparatory school for recidivists, it still retains that character when it is imposed on a prisoner. Persons who have caught a cold are not placed in a draught to fortify them against the draughts they must be exposed to later. At all events, what may have succeed in one country or in the case of a particular race might produce evil results if applied elsewhere (Cuche, op. cit., 325).

Belgium.—When a discussion arises among prison experts as to the merits and demerits of the cell, the typical example is always the Belgian cell says Cuche (cf. “Notice sur l'organisation des prisons en Belgique”, Brussels, 1910). It is necessary, therefore, to study it in detail. The cellular regime is due to Ducpetiaux, Inspector-General of Prisons, who, in 1830, determined to put an end to the abuses of the penitentiary system in vogue in Belgium, and to place the criminal in a cell, compensating for the severity of the punishment by curtailing its duration. Although he soon had the satisfaction of seeing his plan succeed so far as to have cellular gaols erected, it was only on 4 March, 1870, that cellular imprisonment was adopted. All offenders deprived of liberty are undergone under the regime of cellular isolation by day and night. The rule, however, admits of exceptions. The physical or mental condition of some prisoners will not allow the application or continuance of cellular discipline. Again the crowding of the cellular gaols sometimes makes it necessary to allow the prisoners to be put together. Finally, those who are condemned to hard labour or perpetual imprisonment are isolated only during the first ten years in prison. At the expiration of that time, those who have completed all penalties imposed are allowed to choose either to continue their form of imprisonment or to be placed under ordinary discipline. From 1870 to 1909, 170 (76 per cent) selected to continue their cellular life, and 55 (24 per cent) chooses the ordinary discipline.

The cellular system as it exists in Belgium is considered at present the most practical, though criminologists and practical experts are far from agreeing on the advantages and inconveniences of the cell, except in the cases of short terms, when there is unanimity. "Intellectual and physical constitution is in no way absolute", says Cuche (op. cit., p. 331); "we have merely to see if its advantages are considerably greater than its inconveniences; it must be remembered, too, that its merit is greatly increased when intelligent and devoted men are in XIII.—25.
charge of the establishment. If it be laid down as a principle that the prisoners shall be subjected to the cellular regime only as long as is judged proper by the physician who shall examine them on their admission and visit them regularly afterwards during the course of their punishment; if there be an official staff and a sufficient number of assistants to perform the social element in each prisoner; finally, if in confining prisoners to their cells, due discrimination as to sex, age, and race is made, the evil results of prolonged isolation will in large measure disappear. M. Henri de Toulouse-Lautrec (Prisons, pp. 195, 211), who visited the central prison of Louvain on three occasions, was very favourably impressed by the system; he recognizes that an excellent programme is being carried out: the prisoner is separated as much as possible from his fellows, and brought into contact as far as possible with society properly so-called, with which he maintains the best relations; his only regrets are that there are so many prisoners and that conditional liberations are granted so rarely.

Administrative and progressive reductions of the term of incarceration are granted. The rule in force reduces a sentence of 6 months to 4 months and 23 days; a year to 9 months and 12 days; 3 years to 2 years, 1 month, and 8 days; 5 years to 3 years, and 10 days; 10 years to 6 years, 3 months, and 9 days; 20 years to 9 years, 9 months, and 12 days. The legislature not having provided cases in which the original sentence is between 20 and 25 years, a conditional liberation is granted to the prisoner who, he would have been definitely liberated if he had been granted a reduction of 10-12 of the years over 20. Experience shows that a mathematical reduction, uniform in every case, ignoring the principle of the individualization of the penalty, does not meet the necessity of repression. The other resultants, like the system itself, the effect of prison restraint and to liberate much too rapidly criminals unworthy of the favour (Prins, op. cit., 523 sqq.).

The prisoners are divided into two classes: central prisons, numbering twenty-seven. The central prison of Louvain, and all the secondary prisons, except two which are to be changed, are arranged with a view to complete separation night and day. The central prison of Ghent, erected towards the close of the eighteenth century, has, however, one which has been arranged for cellular imprisonment by day and night; the others contain only night cells, the prisoners being assembled during the day. The central prisons receive only male convicts. There is no central prison for women, on account of the few crimes committed by women; they are incarcerated in the secondary prisons. The central prison of Louvain receives those condemned to hard labour and seclusion, as well as prisoners sentenced to correctional imprisonment for more than five years. There is a special quarter in the central prison at Ghent for youthful convicts. The inmates are isolated in cells at night and work in common during the day. The law allows the courts and tribunals, in sentencing an individual under the age of eighteen years completed, to order him to remain at the disposal of the Government after the end of his term till he attains his majority: such persons are also sent to Ghent. However, those who on account of their youth, the moral conditions in which they are situated, are subjected to the more rigid discipline of the special quarters till their majority are sent to a philanthropic school. The secondary prisons, which with one exception have two distinct sections, one for men and one for women, are principally prisons for punishment; accused persons are detained there; they contain, moreover, different classes of inmates, such as those detained only temporarily, beggars and vagabonds awaiting transference to the mendicity institutions.

The central administration of the prisons is under the control of the minister of justice. Connected with the central administration are two departments, divided into three sections: the first includes everything, except the accounting and construction departments; the second is engaged on the accounts; the third attends to buildings, improvement of the supervision of prisoners, the training of the judges and the police. An executive committee, inspectors, which embraces the prisons as a whole, there is permanent local supervision which, in each establishment, is confined to a commission, called the administrative commission. The members of this body, numbering three, six, or nine, according to the importance of the prison, are appointed by the king and selected preferably from the ranks of the clergy, physicians, manufacturers or merchants, engineers or architects. The royal procurator of the arrondissement, the burgomaster of the commune, and the military auditor, if there is one, are ex officio members. The commission participates in the work of reforming the lives of the condemned by visiting the cells as often as possible. It advises pardons and conditional liberation, and is consulted on all questions which concern the public welfare. It is a mere organ of control and consulting council; it participates in the working of the establishment, at least in the cases provided for by law, such as granting holidays to the staff, approving contracts, regulating the conditions relating to the work of the prisoners. The members of the staff of the central prison of Louvain may be taken as an example: a governor, two assistant governors, three Catholic chaplains, two Protestant chaplains, a Jewish chaplain, two teachers, two doctors, a druggist, two acolytes, the system itself being a mere organ. The most important of the female prisoners is confined to nuns.

The duty of the chaplains consists in presiding at religious exercises, and fulfilling the obligations of their ministry; religious instruction, administration of the sacraments, assistance to the dying. They go to the cells of their co-religionists unless the latter decline to receive them. The exercise of Catholic worship includes Mass and Benediction and also a moral and religious instruction on Sundays and feast days in the prison chapel. In the more important gaols a spiritual retreat is given every year by an outside clergyman. Attendance at religious exercises is optional. Cuche remarks quite correctly that "for adults as for children, experience proves that religion is the best method of inculcating morality". This incontestable truth has been admitted by every prison expert in the neighbouring countries. Krohne declares that it is only by means of religion that we can hope through punishment to reform the criminal, which is the principal object of imprisonment. Krautwirth, in his "Penal Sociology", gives an excellent refutation of the objection drawn from the liberty of conscience of the culprit. "Besides the moral influence of religion there is," adds Cuche, "the Divine service with its ceremonies, a fact often forgotten. In a prison, especially, it is cellular, assistance at Divine worship and singing
of hymns, are excellent distractions, while they offer the prisoner an occasion for salutary reflection. In Germany choruses in four parts are sung in the evening. Krohne gives a simple and touching description of a provision in some schools which makes it certain that each culprit should be given a hymn-book, as well as a New Testament, a Bible history, and a psalter. He even expresses the desire that the prisoner should be induced to purchase the hymn-book and the New Testament with his own money in order that he might keep them after his liberation."

Conditional Liberation.—Prins remarks: "As the system of conditional condemnation allows the judges to exercise their discretion, and remit the penalty in the case of offenders for whom a warning seems sufficient, conditional liberation allows the administration to act similarly towards those in prison, and to decide who should remain in prison till the end of their term and who should be prepared for definitive liberation by a conditional liberation. This plan acts as a stimulus, since it holds out to well-conducted prisoners the possibility of having their term shortened; it acts too as a restraint, as the liberated convict recognizes that the favour may be withdrawn; it is a stage of the punishment since it prepares the prisoner for his definitive liberation. Conditional liberation has become an essential part of the penal system throughout the world. As there is an anticipated liberation, when the culprit seems reformed before the end of the term to which he was sentenced, so it logically follows there should be a supplementary detention when the criminal at the expiration of his term does not appear to be reformed. Under such circumstances an indeterminate sentence is advocated (Cuche, "Traité de science et de législation pénitentiaires", 369–9). Some see in this theory the logic of a representation system, that is, the sole aim the moral reformation of the criminal; others consider it the logical result of the theory which considers the punishment as an act of social defence, the intensity of which is proportioned to the danger personified in the delinquent (cf. Prins, "Science pénale et droit positif", 455). This writer (op. cit., 459 sqq.) does not favour the indeterminate sentence as a penalty properly so called imposed on a normal responsible culprit, because it is not in harmony with the principles of our penal Code, which deems in the matter of punishment to safeguard the liberty of every individual against arbitrary use of power, and because it is very complicated in practice; he admits, however, that it is different when there is question of subjecting to government control a large number of young offenders, because it is applicable to the methods of criminal procedure suitable for children and minors. The Prisons' Society of Rheinisch Prussia and Westphalia (founded in 1826); the Society of Officers of the German Prisons (founded in 1844); the German Juristentag (founded in 1857); the International Union of Penal Law (founded in 1889); the Société générale des prisons in France, and the National Prison Congress of the United States, have likewise materially aided the work of prison reform. The following reforms among others have been warmly advocated: (1) The uniform repressive system should be differentiated into a system of education, a system of repression, and a system of preservation, and each of these should be in turn divided according to the degree of delinquents. In particular there should be a good division of the culprits, and a social effort made to reform those who are susceptible of it. (2) Short sentences are undesirable, as they are likely neither to intimidate nor to educate. (3) The cellular system is by far the most preferable, so long as danger to the physical and mental well-being of the culprit is averted. (4) The prisoner's work should be both useful and productive; it should not be monotonous or wearisome; the criminal should be applied to work in which he will easily find occupation on his liberation; the kinds of work should be sufficiently varied to suit the natural aptitude of the various prisoners. State public work is preferable. (5) While enforcing as far as possible the individualization of the penalty, as its progressive system, which isMabe conducive to rehabilitation, it leads up gradually to liberty, and prepares the culprit to enter again into society. (6) In the case of youthful offenders it is more than ever necessary to substitute education and protection for punishment. The "convicts" (les détenus or les délinquents) are enabled in the first instance to work in separate workshops, under the superintendence of a master (l'officier de l'atelier) (cf. Collard, "La loi du 2 Juillet 1900 et son application", Louvain, 1908). (7) The treatment of women
in prisons should be based on different principles from those applied to men. (8) In the case of conditional liberation the time of probation should be sufficiently prolonged.

CHARLES COLLAR.

Prisons, Ecclesiastical.—It is plain from many decrees in the "Corpus Juris Canonici" that the Church has claimed and exercised the right, belonging to a perfect and visible society, of protecting its members by condemning the guilty to imprisonment. The object of prison, in the first instance, was the keeping of a criminal, real or pretended, until his trial. The ecclesiastical idea of imprisonment, however, is that confinement be made use of both as a punishment and as affording an opportunity for reformation and reflection. This method of punishment was anciently applied even to clerics. Thus, Boniface VIII (cap. "Quosvis", iii, "De pen.") in 6 decree: "Although it is known that prisons were specially instituted for the custody of criminals, not for their punishment, yet we shall not find fault with you if you commit to prison for the performance of penance, either perpetually or temporarily as shall seem best, those clerics subject to you who have confessed crimes or been convicted of them, after you have carefully considered the persons and circumstances involved in the crime." The Church adopted the form of perpetual imprisonment because, by the canons, the execution of offenders, whether clerical or lay, could not be ordered by ecclesiastical judges. It was quite common in ancient times to imprison in monasteries, for the monks. They are doing penitence. Hence clerics whether they have been convicted of grave crimes (c. vii, dist. 50). The "Corpus Juris", however, says (c. "Super His", viii, "De pen.") that incarceration does not of itself inflict the stigma of infamy on a cleric, as is evident from a papal pronouncement on the complaint of a cleric who had been committed to prison because he vacillated in giving testimony. The reply recorded is that imprisonment does not ipso facto carry with it any note of infamy.

As to monastic prisons for members of religious orders, we have them recorded in decrees dealing with the incorrigibility of those who have lost the spirit of their vocation. Thus, by command of Urban VIII, the Congregation of the Council (21 Sept., 1624) decreed: For the future, no regular, legitimately professed, may be expelled from his order unless he be truly incorrigible. A person is not to be judged truly incorrigible unless not only all those things are found verified which are required by the common law (notwithstanding the constitutions of any religious order even confirmed and approved by the Holy See), but also those things required by the law (natural law); that is, to have patience and patience for one year in confinement. Therefore, let every order have private prisons, at least one in every province". The crimes in question must be such as by natural or civil law would merit the punishment of death or imprisonment for life (Reiffenstuel, "Jus Can. univ.", no. 228). Innocent XII reissued the year required by the above-mentioned decree to six months (Decree "Inistantibus", §2). A decree of the Sacred Congregation of the Council (13 Nov., 1632) declares that a religious is not to be judged incorrigible because he flees from imprisonment, unless, after being punished three times, he should make a fourth escape. It grants the authority of the pope to present a petition for incorporation by private authority, the Congregation on the Discipline of Regulars has decreed (22 Jan., 1886) that trials for incorrigibility, preceding dismissal, should be carried out by summary, not formal, process, and that for each case recourse should be had to Rome. A vestige of the monastic imprisonment (which, of course, nowadays depends only on moral force) is found in the decree of Leo XIII (4 Nov., 1892), in which he declares that religious who have been ordained and wish to leave their order cannot, under pain of perpetual suspension, depart from the cloister ("Exe clausura") until they have been adopted by a bishop.

Fritchard, Humphrey, Venerable. See Nichols, George, Venerable.

Privilege (Lat., privilegium, like priva lex) is a permanent concession made by a legislator outside of the common law. It is granted by special favour, and gives the privileged an advantage over the non-privileged individuals; it differs from particular laws which also confer certain classes of persons certain rights, e.g., the clergy and the religious have their laws and their privileges. The favour, being lasting, is thus distinguished from a permission or single dispensation. It is granted to his subjects by a superior having authority over the law; it thus receives an official value approximating it to a law, in the sense that he who enjoys it may lawfully exercise it, and third parties are obliged to respect its use. A privilege, finally, deviates from the common law, including particular laws, whether it merely adds to or degenerates from it.

Privileges are of many kinds. Contrasted with the law, they are: (1) assimilated to the law, forming part of it (claua in corpore juris), such are the privileges of clerics, or they are granted by special rescript. e.g., the law (propter ius), when they relate to an object not touched by the law, or contrary to the law (contra ius), when they form an exception, allowing one to do or to omit what the law forbids or commands. As to the manner of concession, they are (2) granted directly or obtained by communication with those who enjoy them directly. Moreover, the concession may be (4) either verbal or by an official writing. Verbal concessions are valid in the forum of conscience, or better, in the case of acts that need not be justified in the external forum; to be valid in the external forum, they must have been granted officially by rescript or at least attested by a competent official (Urban VIII, "Alias felicitati", 20 Dec., 1631; Reg. Conc. 27 and 52). If we consider the motive for granting them, privileges are (3) hereditary or remissionary, when they are attested on the merits or services of the grantee, or purely gratuitous. From the point of view of the subject, privileges are (6) personal, real, or mixed; personal are granted directly to individuals; real to what the law terms a "thing", for instance, a dignity such as, e.g., the privy council, is a thing, a personal privilege is mixed, to a group of persons, like a chapter or a diocese (local privilege). With regard to their object,
Privileges are (7) positive or negative, according as they allow the performance of an act otherwise forbidden, or exempt one from the performance of an act otherwise obligatory. Again they are (8) honorary; (9) purely graces or censures; (10) purely benefices or oblations, the latter entailing certain duties or obligations correlative to the privilege; among such are conventional privileges, like concordates. Finally, from the point of view of their duration, they are (10) perpetual or temporary.

Privileges recognized by the law require no proof and must be recognized by the court; all other privileges must be proved, not presumed. They are proved by the production of the original concession or by a duly certified copy. To avoid difficulties the superior can be rated to renew or confirm the privilege granted by him or his predecessors. This confirmation may be either in common form, recognizing the privilege again, but giving it no new force, or in specific form, which is a new grant, revalidating the former as far as needs may be. The two forms are distinguished by the context and the official wording employed (cf. Decret., lib. II, tit. xxx, "De confirmatione utili vel inutili"). The teaching of the canonists on the interpretation of rescripts may be summed up as follows: Privileges are to be construed according to the tenant; the interpretation being neither extensive nor restrictive but purely declaratory, that is the words are to be taken only in their full and usual signification. A privilege as being a concession of the ruler is understood generously, especially when it runs counter to no law; as far as it derogates from the law, particularly if it interferes with the rights of a third party, it is interpreted strictly. Privileges are obtained by direct concession, which is the usual way, or by prescriptive custom, an exceptional and indirect manner, or by communication. The last is an exception too, and the privilege is obtained by the grantees. It may occur in two ways: either explicitly, the legislator giving the former class what he gave the latter, or implicitly, when it is already decreed that the privileges granted to certain juridical entities are deemed accorded to certain others, unless the privilege be incommunicable or an exception be made by the superior. The best-known example of the communication of privileges is that existing among the Mendicant Orders, as appears by many pontifical Constitutions from the time of Sixtus IV to our day. They are preserved to the subject, thus the archeconfraternities and affiliated confra-
ternities.

Privileges cease by the act of the legislator, the act of the grantee, or spontaneously. (1) The legis-
lator may revoke his concession either explicitly by a contrary law containing the clause "notwithstanding all privileges to the contrary" or even, "notwithstanding all privileges of which ought to be reproduced textually". It is clear that a revocation may be only partial. (2) The grantee may terminate the privilege: first, by an express renunciation accepted by the superior; pro-
vided however that it is the case of a personal privilege; for privileges of general interest, like those of the clergy, may not be renounced. Second, by non-use, not always, however, as theoretically the use of privileges is optional, but when this non-user gives third parties a prescriptive right; thus by non-user the privilege of election or of option in a chapter may be lost. Third, by abuse, in which case the with-
drawal of the privilege is a penalty requiring at least a report on written assurance (excommunication, 12 October, 1869, II, 2), and is enjoyed also by nuns (c. 33, X de sent. excomm. V, 39), lay brothers (c. 33 cit.), novices (c. 21 in VIth h. V, 11), and even by tertiaries, who live in common and wear the habit (Leo X, "Declaratio", 19 December, 1516; "Nuper in sacro", i March, 1518). According to the wording of the canon, however, it is necessary, for the incurring of the excommunication, that the injury inflicted on the cleric or monk be a malicious and real injury, under which is included unauthorized deprivation of freedom (c. 29, X h. t. V, 39). Consequently, excommunication is not incurred by a superior justly chastising one of his inferiors (cc. 1, 10, 24, 54, X h. t. V, 39); by one who acts in self-defence against a cleric (cc. 3, 10, X h. t. V, 39), by one who avenges insult or assault on wife, mother, or daughter (c. 3 cit.); when the injury results from a joke (c. 1, X h. t. V, 39), or if the assailant be unaware (to be testified on oath, if necessary) of the clerical rank (c. 4, X h. t. V, 39). Instead of the pope, the bishop gives absolution in the case of a slight injury (c. 3, 17, 31, X h. t. V, 39); or if a journey to Rome

Leading Altar.

Privileges, Ecclesiastical, are exceptions to the law made in favour of the clergy or in favour of consecrated and sacred objects and places.

I. The privileges in favour of the clergy are: personal inviolability, a special court, immunity from certain burdens and the right to a proper maintenance (privilegium canonicus, fori, immunitas, competentia). In addition, the clergy have processes of the laity, religious and secular, processions, a special place in the church, viz., the presbytery (c. I, X de vita et honestate cleric., III, 1), and titles of honour. These honours increase according to the higher order or office.

Privilegium Consani—In an earlier canon law the injuring or wounding of a cleric was punished by severe canonical penances, and on occasion by ex-
communication (cc. 21, 22, 23, 24, C. XVII, q. 4).

A person wounding a bishop incurred ipso facto ex-
communication (Synod of Rome, 898, De Voccro. 8, c. 14). When about the middle of the twelfth cen-
tury at the instigation of politico-religious agitators, like Arnold of Brescia, privileges were committed against the defenceless clergy and religious, who were forbidden to carry weapons, the Church was compul-
ted to make stricter laws. Thus, the Second Council of Lateran (1139), c. xv, after the Synods of Clermont (1130), Reims (1131), and Pisa (1135), decreed that whoever therefore laid malicious
hand on a cleric or monk incurred ipso facto anathema,
the raising of which, except in danger of death, was not to be sought in person at Rome (c. 29, C. XVII, q. 4).

This privilege, which, from the opening words of the canon, is called the privilegium canonis "Si quis suadente diabolo" or simply privilegium canonis, continues even in modern times (const. de moderatei., 12 October, 1869, II, 2), and is enjoyed also by the laity (c. 33, X de sent. excomm. V, 39), lay brothers (c. 33 cit.), novices (c. 21 in VIth h. V, 11), and even by tertiaries, who live in common and wear the habit (Leo X, "Declaratio", 19 December, 1516; "Nuper in sacro", i March, 1518). According to the wording of the canon, however, it is necessary, for the incurring of the excommunication, that the injury inflicted on the cleric or monk be a malicious and real injury, under which is included unauthorized deprivation of freedom (c. 29, X h. t. V, 39). Consequently, excommunication is not incurred by a superior justly chastising one of his inferiors (cc. 1, 10, 24, 54, X h. t. V, 39); by one who acts in self-defence against a cleric (cc. 3, 10, X h. t. V, 39), by one who avenges insult or assault on wife, mother, or daughter (c. 3 cit.); when the injury results from a joke (c. 1, X h. t. V, 39), or if the assailant be unaware (to be testified on oath, if necessary) of the clerical rank (c. 4, X h. t. V, 39). Instead of the pope, the bishop gives absolution in the case of a slight injury (c. 3, 17, 31, X h. t. V, 39); or if a journey to Rome
The gradual liberation of the clergy from the lay forum received a further incentive from the ever-increasing number of ecclesiastical causes, from the acceptance of the dictum that the clergy were subject only to the Churches and to the ecclesiastical prohibition to clergies to engage in duels or duels, from the growing political importance of the bishops as counts and territorial lords after the disintegration of the Carolingian empire. Thus, in view of the ferocious acts of violence committed by the lay courts, one could demand in the most urgent terms that no cleric be summoned before the secular courts (cc. 1, 3, 9, 10, 37, C. XI, q. 1). This principle was called into life by the medieval popes, and, by decretal law, the exclusive competence of ecclesiastical judges over clergies in civil and criminal causes was established (cc. 4, 8, 10, 17, X de iud., II, 1; cc. 1, 2, 9, 12, 13, X de foro compet., II, 2). In feudal affairs alone were the clergy subject to the secular courts (cc. 6, 7, X de foro compet., II, 2). The ecclesiastical courts were thus competent for civil causes of clergies among one another, of laymen against clergies, and for all criminal causes of clergies. This _privilegium fori_ was also recognized by imperial laws (Authenticus of Frederick II, "Statutumus", 1139, ad 1. 33, 34, X de episc. I, 3). For some time it met with great opposition from the State. With the growing ascendancy of the State over the Church, the privilege was more and more limited, and was finally everywhere abrogated.

To-day, according to secular law, the civil and criminal causes of clergies belong to the lay court. Only with respect to the purely spiritual conditions of the station and office, are clergies subject to their bishop, and then not without certain state limitations—especially with respect to certain practical punishments. However, the Church maintains in principle the _privilegium fori_, even for those in minor orders, provided that they have the tonsure and wear clerical garb, and either already serve in a church or are preparing in a seminary or university for the reception of higher orders (Council of Trent, Sess. XXIII de Ref., c. vi; Sess. XXV de Ref., c. xx; Syllabus, n. 31). On the other hand, the popes have in their recent concordats to a great extent relinquished this position. They have, however, declared that the bishop's court can hear and try all criminal proceedings against a cleric, so that he may be able to take the necessary ecclesiastical measures (Bavarian Concordat, art. xii, litt. c.; Austrian Concordat, art. xiii, xiv; Concordat with Costa Rica, art. xiv, xv; that with Guatemala, art. xvi; with El Salvador, art. xvi; with San Salvador, art. xiv, xv). This warning of the bishop is also ordered by the laws of many states, as well as a similar regard for the cleric himself in the case of criminal proceedings (Regulation of the Russian Minister of Justice of 16 June, 1873; of 25 August, 1879; Austrian Law of 7 May, 1874, § 29).

But, wherever the pope has not relinquished the _privilegium fori_, lawyers and administrators, who directly or indirectly compel the judges to summon ecclesiastical persons before the secular forum, incur excommunication especially reserved to the pope (Pius IX, "Apostolice Sedis moderationi", 12 October, 1869, I, 7). In places where the papal derogation of the _privilegium fori_ has not been secured by a concordat or obtained by the secular judge, a lay complainant, before summoning a cleric before the secular courts, should seek the bishop's permission, or, if the complaint be against a bishop, the permission of the pope. Otherwise, the bishop can take punitive measures against him. (Congregatio de aliis, Congregationist, 22 December, 1886). It is also in accordance with the spirit of
the privilegium fori that it is ordered in many dioceses that all complaints of and against clerics be laid before the bishop for settlement; should no settlement be reached, the case may then be brought before the secular court [Archiv für Kathol. Kirchenrecht, 22 (1900), 526; LXXV (1909), 571; LXXVI (1906), 356 sq.]

Privilegium Immunitatis.—This consists in the exemption of ecclesiastical persons, things, and places from certain general obligations and taxation. The immunity is therefore either personal, real, or local. Personal immunity is the exemption of the clergy from certain public burdens and obligations, which the general religious sentiment of the people declares in keeping with their office, or which render the discharge of their calling difficult. Whether this privilege, as well as the other clerical privileges, rests on Divine law, the Church has never dogmatically decided, although canon law declares that churches and ecclesiastical persons and things are free from secular burdens according to both Divine and Church law (c. 4 in Vilt. III, 20); but ecclesiastical immunity rests on the Divine command (Council of Trent, Sess. XXV de Ref., c. xx); and that it is false to assert that ecclesiastical immunity can be traced only from secular law; that the immunity from military service consists abolished without any breach of the natural law or of justice, nay that it must be abolished in the interests of progress and civil equality (Syllabus, nn. 30, 32).

In accordance with the liberties granted to the pagan priests, the Christian emperors after Constantine exempted the clergy from the obligation of undertaking municipal offices, trusteeships, guardianships, and all public functions, from military service, quartering, and the other personal munera sordida (forbidden under the old law) and personal taxation (Cod. Just., I, I, t. 3 de episc. Novella exiii, c. 5). For the most part these privileges also prevailed in the Teutonic kingdom. Thus, Frederick II exempted the clergy from all taxation and from all secular burdens (Authentica, "Item nulla" 1220 ad 1, 2, C. de episc. I, 5). But the decreet law (c. 3 in VIto de immum. III, 23; c. 3 in Clem. de cens. III, 13) demanded the complete immunity of the clergy (cc. 2, 4, 7, X de immum. III, 49; c. 4 in VIto de cens. III, 25; c. 3 in VIto de immum. III, 13; and in the case of minor clerics, c. 3 in Clem. de immum. III, 17). This immunity was indeed in the Middle Ages, and especially at the end, complete, since in many cases we find the secular rulers doing their utmost to impose secular burdens on the clergy. The Council of Trent (Sess. XXV de Ref., c. xx), therefore, again exhorts the princes to respect this privilege. In recent times, and especially since the French Revolution, the State's demands on the clergy have been increasing. Hence the above-cited explanations of Privilege, ad 1, 2, C. de episc. I, 5).

The exemption of the clergy from national taxation is to-day almost entirely abolished; their exemption from municipal taxation still continues in some places. In Austria and Germany clerics are exempt from public offices and services and from serving as jurors (§ 120 II, of the Civil Code). In the two countries the clergy are also free from undertaking trusteeships, if they do not obtain the consent of their superiors. Finally, candidates for the ecclesiastical state, and still more ordained clergymen, are exempted from military service under arms. Less favourable is shown the clergy in Italy, and practically none in France since the separation of Church and State. Conditions vary greatly in other lands.

Privilegium Competentiae.—This is a right possessed by the clergy, in accordance with which, in the case of executions against their property an income, sufficient to constitute a livelihood, must be left to them. A beneficium competentiae was enjoyed by the Roman soldiers (fr. 6, 18, D. de re iudic. XII, 1). The Glossa argues that, since the cleric is a homo cecoris militae (cf. also c. 19, C.XXI, III, 23, q. 5), the same privilege should be enjoyed by the clergy. But this constitutes as poor a foundation as the c. "Odoardus" (c. 3, X. de solut. III, 23), according to which excommunication may not be inflicted on an insolvent cleric, who binds himself to pay on the appearance of the secular power. The origin of the privilege is to be referred rather to custom and to the idea expressed in many canons, that a cleric may not be brought into such a position that he is forced to seek a livelihood in an unworthy manner. In both theory and practice the privilege afforded protection from personal arrest, foreclosure of a mortgage, and from the immediate vacation of property in favour of the lay person. It also extended to the patrimony forming the title of ordination. On the other hand, if the cleric has not fulfilled his obligations and duties, disregarded cautions, or if the lay person be poorer than the debtor, the privilege is lost.

Since the abolition of the privilegium fori, the scope of the privilegium competentiae has been dependent on local state laws. Thus, according to the civil suit regulations of the German Empire, the yearly income or the pension of clerics is free from seizure to the extent of 1500 marks, and of the excess only one-third is liable. According to § 811, Ziff. 7, 8, 10, all objects necessary for the discharge of the clerical calling (e.g. books, proper clothing) are also exempt from seizure. In Austria, according to the law of 21 April, 1882, 800 gulden annually are exempt in the case of clergy employed in the care of souls and ecclesiastical beneficiaries, and 800 in the case of other clerics. In Italy also the privilegium competentiae still prevails, but it has been abolished in France.

As the privilegia clericorum are the legal consequences of the religious station, granted for the protection of the clerical calling, they may not, being the rights of a class, be waived by any individual, nor may they be withdrawn from an individual except in specified cases. They are forfeited by degradation (c. 2 in VIIto de pen. V, 9); by the committing of a serious criminal act and simultaneously being laid aside the cleric's cens. (c. 3 in Clem. de immum. III, 17); by a warning of the bishop (cc. 14, 23, 25, 45, X de scant. excomm. V, 39; c. 10, X de iud. I, 1; c. 1, X de apost. V, 9); by leading an unseemly or despicable life and simultaneously laying aside the clerical garb in spite of three warnings from the bishop (c. 18, X de vita et honest. cleric. III, 1; c. un. in VIIto h. t. III, 1; c. 1 in Clem. h. t. III, 1); and finally in the case of clerics in minor orders by laying aside the clerical garb (Pius IX, 20 September, 1860).

II.—Like clerics, consacrated and sacred things and places enjoy certain privileges from burdens and obligations; this is based on the privilegium immunitatis, and is termed real or local immunity. All objects intended for ecclesiastical use are termed res ecclesiastica. Res ecclesiastica in this wide sense are divided into res ecclesiasticae in the narrow sense and res sacrarum. Ecclesiastical things (res ecclesiasticae in the narrow sense), or ecclesiastical property (patrimonium or peculium ecclesiasticum), mediate maintain the Divine worship, and include all buildings and real property belonging to them; except property of the clergy, the churches, and cemeteries, the funds for the maintenance of the servants of the Church (bona messae, bona beneficati), and the ecclesiastical buildings (bona fabrice), and finally the property designed for charitable objects or pious foundations (res religiosa, causae
Sacred objects (res sacrae) are immediately connected with Divine worship, and are set apart from all other things by an act of worship or consecration as things consecrated (res consecrate), and by a profession of the will of the owner (res benedicta). To res consecrate belong churches, altars, chalices, and patens; to res benedicta are series of ecclesiastical utensils and cemeteries.

As the ecclesiastical property serves for the public good, it was exempted by the Roman emperors from all the lower and extraordinary burdens, but not from the regular taxes (I, 3, C. de episc. I, 3). This example was followed in the Frankish empire, in which church property was subject to all the ordinary public burdens. In addition, however, many extraordinary burdens were imposed, such as the dema gratuita to the king, the furnishing of accommodation for him on his journeys, the rendering of court and war services to him as their feudal lord, and many arbitrary forms of oppression. Consequently, the Third Lateran Council (1179) demanded the complete exemption of church property from taxation, and that only in case of public need, and then only with the consent of the bishop or of the pope, should it be subjected to public burdens (cc. 2, 4, 7, X de imm. III, 49; c. 1, 3, in VII, 4, 1, 4, 25, 27, 28, 30, III, 47; c. 5, un. Extra. commun. III, 13). Frederick II accordingly granted church property exemption from all taxation (Authentica "item nulla" ad I. 2, C de episc. I, 3).

After the close of the Middle Ages, however, secular rulers subjected to a great extent church property to public burdens; the Council of Trent therefore admonished them to respect the old privilege of immunitas rei (Sess. XXV de Ref., c. xx), but without much success. In modern and recent times the tendency has everywhere been to subject church property more and more to public taxation, so that the assertion that the privilege of immunitas rei was of purely secular origin was declared erroneous by Pius IX in the Syllabus, n. 30. Here and there, as in Germany and Austria, the State laws accord partial freedom from taxation to ecclesiastical property. In Italy the papal property is alone exempt; in France exemption ceased with the separation of Church and State. In the United States the Church shares in the exemption generally granted to all individuals and the property is not held to be in violation of the constitution.

For places and things consecrated to the Divine service no rights can be claimed which involve a profane use. Consequently, such objects are in this sense extra-commercial. Otherwise, in sharp distinction from other things, among the Roman emperors and Christians, the practice of the early Christian centuries, they may, in accordance with the Germanic conception of private churches, be possessed by private individuals and even enter into civil transactions and commerce. In churches and cemeteries, however, no judicial transactions, political meetings, markets, banquets, theatrical performances, secular concerts, dances, etc., may be held. The bishop may in all cases sanction their use outside of Divine service, provided that all scandal be avoided. Similarly, the use of the church for secular purposes may be allowed or tolerated apart from cases of need, where the propriety of its use is self-evident (cc. 1, 5, 9, X. de imm. III, 49; c. 2 in VI 19 h. t. III, 23). Mischief, disorder, and disturbance in the church (especially during Divine service) is an injury not only to the peace proper of the church, but to the cemetery or churchyard, are punished by the State as qualified crimes.

To the ecclesiastical local immunity belongs the right of asylum of churches. Even in the Old Testament it was decreed that the murderer or homicide might be safe from vengeance in certain places, until the public had come to a decision concerning his surrender (Ex., xxiii, 13; Num., xxxv, 6 sqq.; Deut., xix, 2 sqq.). Among the Greeks, and especially among the Romans, altars, shrines, temples, and statues were places of refuge (I, C. de his quod ad status confugant I, 25). Thus, when Christianity became the religion of the State, it followed as an inevitable consequence that the emperor should also reserve to the Church the right of asylum that churches and bishops (C. Just. de his quod ad status confugant I, 12). But, as the ecclesiastical right of asylum was still very limited, the Synod of Carthage (399) asked the emperor to remove these limitations. In the German empires it was the Church which founded the right of asylum as a protection against the rude conception of justice then prevalent and against savage revenge, by decreeing with the consent of the State that a criminal, who had reached the church or its immediate neighbourhood, might be delivered up only after he had performed ecclesiastical penance, and after the secular judge had promised that sentence of death or maiming would not be inflicted upon him (cc. 19, 36, C. XVII, q. 4, Capitulare de partibus Saxonie, 775-90, c. 2). The right of asylum, which had to begin with the monasteries and the church, was subsequently extended to the surroundings of the church, the cemeteries, the dwellings of bishops and pariah-priests, seminaries, monasteries, and hospitals, was upheld especially by the popes, although they excluded from the privilege very great criminals, such as highway robbers, murderers, and those who chose the church or churchyard as the scene of their crimes so as to enjoy immediately the right of asylum (cc. 10, X de imm. III, 49; c. 1, X de h. domie. V, 12).

Since the close of the Middle Ages, however, State legislation has been opposed to the ecclesiastical right of asylum, so that the popes have been compelled to modify it more and more (Gregory XIV, "Cum alias" of 24 May, 1591; Benedict XIII, "Ex quo divina", 8 June, 1725; Clement XII, "In suprema justitiae", 1 Feb., 1734; Benedict XIV, "Octo Notr. 15 March, 1750"). The modern penal codes no longer recognize an ecclesiastical right of asylum, and the Church can all the more readily acquiesce therein, as modern justice is humane and well-regulated. However, even to-day those who violate "ausu tenerrimo" the ecclesiastical right of asylum, "res cato latet sententiae simply reserved to the pope (Pius IX, "Apost. Sediæ moderato").

Johannes Baptist Schmoller.

Proba, Faltonia, Christian poetess of the fourth century. The name Faltonia is doubtful and it is apparently due to a confusion, as the MSS. call the name "Folotonus". Proba was granddaughter of Probus, consul in 310, daughter of Petronius Probianus, consul in 322, wife of Claudius Celcnus Adolphus, prefect of Rome in 351, and mother of C. Claudius Hermogenianus Olybrys, consul in 379, and of Faltonius, Proba belonged to a religious circle which upheld the old pagan religion so long against Christianity. Proba was at first a pagan, as was her
Probabilism is the moral system which holds that, when there is question solely of the lawfulness or unlawfulness of an action, it is permissible to follow a solidly probable opinion in favour of liberty even though the opposing view is more probable.

I. STATE OF THE QUESTION.—When a prohibiting law is certain, the subjects of the law are bound to submit to it, for the law is an authority which bids, unless they are excused by one of the ordinary exempting causes. On the other hand, when it is certain that no law forbids an action, there is no obligation to abstain from performing it. Between these two extremes there can be varying degrees of uncertainty about the existence or cessation of a prohibiting law. There is doubt in the strict sense when the intellect neither assents nor dissents, because either there are no positive arguments for and against the law, or the arguments for and against are of equal strength. The opinion which favours the law, and which is technically called the safe opinion, can be more probable than the opinion which favours liberty and which still retains solid probability. Again, the opinion which favours the law can be more probable, and the opinion which favours liberty only slightly probable. In the same way the opinion which favours liberty and which is technically called the less safe opinion, can be more probable than the opposing view, or can be most probable.

Thus the degree which is required and which suffices for solid probability, moralists lay down the general principle that an opinion is solidly probable which, by reason of intrinsic or extrinsic arguments, is able to gain the assent of many prudent men. All admit that extrinsic arguments are sufficient to make an opinion solidly probable; but there is divergence of view in estimating what number of experts are able to give an opinion this solid probability. The prevailing theory amongst Probabilists holds that if five or six theologians, notable for prudence and learning, independently adhere to an opinion their view is solidly probable, if it has not been set aside by authoritative decisions or by intrinsic arguments which they have failed to solve. Even one theologian of very exceptional authority, such as St. Alphonso Liguori, is able to make an opinion solidly probable, as we know from the official declarations of the Holy See. All moralists agree that mere flashy reasons are insufficient to give an opinion solid probability, and also that the support of many theologians who are mere collectors of the opinions of others is unable to give the opinion the view which they maintain.

Non-Catholics who bring charges of laxity against the moral systems which Catholic theologians uphold, often forget that the Catholic Church, in theory and in practice, has condemned various views in favour of liberty more than necessary. If the less safe opinion is speculatively uncertain, it is unlawful to follow it in practice, until all reasonable effort has been made to remove the uncertainty, by considering the arguments on both sides and by consulting available authorities. It is unlawful, also, to act on the less safe view unless the speculative uncertainty has been changed into practical certainty; for it is probable that the action to be performed is lawful. The whole question at issue between different moral systems concerns the way in which the speculative uncertainty is changed into practical certainty; each system has what is called a reflex principle of its own, by which practical certainty can be obtained that the action to be performed is lawful. Rigorism, or, as it is frequently called, Tutorism, held that the less safe opinion should be most probable. If not absolutely certain, before it could be lawfully put into practice, the moral system maintained that if the less safe opinion were slightly probable it could be followed with a safe conscience.

These two views, however, never received serious support from Catholic theologians, and were formally condemned by the Holy See. At one time or another in the history of the Church three other opinions gained many adherents. Some theologians, who put forward the system known as Probabilism, hold that the less safe opinion can be lawfully followed only when it is more probable than the safe opinion. Others, who hold that the system known as Equalism concerns the existence of a law, it is lawful to follow the less safe opinion when it has equal or almost equal probability with the safe opinion, but that, when there is question of the cessation of a law, the less safe opinion cannot lawfully be followed unless it is more probable than the safe view. Others again, who adhere to Probabilism, believe that, whether there is question of the existence or of the cessation of a law, it is lawful to act on the less safe opinion if it is somewhat more probable, even though the safe view is certainly more probable. In recent years a system known as Compensationism has tried to reconcile these three opinions by holding that not only the degree of probability attaching to various opinions must be taken into account, but also the importance of the law and the degree of utility attaching to the performance of the action whose morality is in question. The more important the law, and the smaller the degree of probability attaching to the less safe opinion, the greater must be the compensating utility which will permit the performance of the action of which the lawfulness is uncertain.

From what has so far been said it is clear that these various moral systems come into play only when the question concerns the lawfulness of an action. If the probability of the validity of the sacraments is in question, again it is not lawful to act on mere probability unless, indeed, this is of such a nature as to make the Church certainly supply what is needed for the validity of the act. Thus, apart from necessity, it is not lawful to act on mere probability when the validity of the sacrament is in question. Again, it is not lawful to act on mere probability when there is question of gaining an end which is obligatory, since certain means must be employed to gain a certainly required end. Hence, when eternal salvation is at stake, it is not lawful to be content with uncertain means. Moreover, the virtue of justice demands equality, and as such excludes the use of probability when the established rights of another are concerned. Consequently, if a certain debt has not been certainly paid, at least a payment pro rata debis is required, according to the prevailing view. It is evident, then, that the question which arises in connexion with the moral systems has to do solely with the lawfulness or unlawfulness of an action.

II. HISTORY OF PROBABILISM.—Probabilism as a moral system had its heyday prior to the end of the sixteenth century. Fathers, doctors and theologians of the Church at times solved cases on principles which apparently were probabilist in tendency. St. August-
tine declared that marriage with infidels was not to be regarded as unlawful since it was not clearly condemned in the New Testament: “Quoniam revera in Novo Testamento nihil inde praecessit est, et ideae aut licet credentem est, aut velit duobum dieritum, tum idem, et operibus”, c. xix, n. 35 in “De Iride et Operibus”, c. xix, n. 35 in “P. G.”, c. xix, n. 35 in “P. G.”, c. xix, n. 35 in “P. G.”. St. Thomas maintained that a precept does not bind except through the medium of knowledge: “Unde nullo ligatur per praecessit aliquod nisi mediante scientia illius” (“De Veritate”, Q. xvi, a. 3); and Probabilists are accustomed to point out that knowledge implies certitude. On the other hand many theologians were Probabilist in their principles before the sixteenth century. Sylvester Prierias (Opinio, s. 2), Conradus (De Contract, Q. xvi, a. 3) held that Probabilism had gained a strong hold on theologians when Medina arrived on the scene. Bartholomew Medina, a Dominican, was the first to expound the moral system which is known as Probabilism. In Exposition in IIa. 2ae, Thomas of Aquinas taught that, “if the opinion is probable it is lawful to follow it, even though the opposing opinion is more probable”. His system soon became the common teaching of the theologians, so that in the introduction to his “Regula Morum” Father Terill, S. J. (d. 1670) was able to say that until 1638 Catholic theologians of all schools were Probabilists. There were exceptions such as Rebellius (d. 1608), Comitatus (d. 1628), and Philaeithes (d. 1642), but the great body of the theologians of the end of the sixteenth and of the first half of the seventeenth century were on the side of Medina. Amongst them were Sa (d. 1596), Toletus (d. 1596), Gregorius de Valenti (d. 1603), Bannes (d. 1604), Vasques (d. 1604), Azor (d. 1607), Thomas Sanchez (d. 1610), Ledesma (d. 1616), Suarez (d. 1617), Lessius (d. 1622), Laymann (d. 1625), Bonaca (d. 1631), Castropalaus (d. 1635), Alvaras (d. 1635), and Ildephonse (d. 1639).

With the rise of Jansenism and the condemnation of “Augustinus” a new phase in the history of the Probabilist controversy began. In 1655 Inchoet X condemned the propositions of the Franciscans, vinctum honorum, and in 1655 the Louvain theologians condemned Probabilism. Tutorism was adopted by the Jansenists, and the Irish Jansenist theologian, Sinnichius (d. 1668), a professor of Louvain, was the foremost defender of the Jansenist doctrines. He held that it is not lawful to follow even a most probable opinion in favour of liberty. Jansenist Rigorism spread into France, and Pascal in his “Lettres Provinciales” attacked Probabilism with the vigour and grace of style which have given his letters their high place in literature. The “Lettres” were condemned by Alexander VII in 1657, but Rigorism did not receive its final blow till the year 1690, when Alexander VIII condemned the proposition of Sinnichius: “Non licet sequi opinionem vel inter probabiliter probabilissimam”.

After this condemnation a moderate form of Tutorism was unfolded by theologians like Steyvaert (d. 1701), Oppeart (d. 1720), Henricus a S. Ignatii (d. 1719), and Dens (d. 1775). During this period, dating from the second quarter of the eighteenth century, the following were amongst the notable theologians who remained true to Probabilism: Lugo (d. 1660), Lupus (d. 1681), Cardenas (d. 1684), Deschamps (d. 1701), Lacroix (d. 1714), Sperer (d. 1714), Salmanticensis (1717-1724), Massotta (d. 1745).

Side by side with Probabilism and Rigorism a party held sway which favoured Laxism, and which maintained in theory or practice that a slightly probable opinion in favour of liberty could safely be followed. The principal upholders of this view were Juan Sanchez (d. 1630), Bauny (d. 1649), and Alexander Ferdinand (d. 1655). In 1674, Fournier (d. 1675), Caramuel (d. 1682), Moys (d. 1684). Laxism was expressly condemned by Innocent XI in 1679; and Alexander VII (1665-66), and Innocent XI (1679) condemned various propositions which savoured of Laxism.

Besides Rigorism, Probabilism, and Laxism, there was also a theory of Probabilism which held that it is not lawful to act on the less safe opinion unless it is more probable than the safe opinion. This view, which was in vogue before the time of Medina, was revived in the middle of the seventeenth century, as an antidote against Laxism. Its revival was principally due to the efforts of Alexander VII and Innocent XI. In 1656 a general chapter of the Dominicans urged all members of the order to adopt Probabilism. The Dominicans, The Franciscans, and the Carmelites, the Trappists, and the Dominicans were Probabilists, subsequently the Dominicans in the main were Probabilists. Amongst them were Mercior (d. 1669), Gonet (d. 1681), Contenson (d. 1674), Vagnan (d. 1675), Natalis Alexander (d. 1724), Cucinella (d. 1730), Billaart (d. 1747), Patrice (d. 1760). Probabilism was held by many Jesuits such as Gonzales (d. 1705), Elizalde (d. 1768), Antoine (d. 1743), Ehrenreich (d. 1708), and Taberna (d. 1686). In 1700 the Gallican clergy, under Bossuet, accepted Probabilism. The Franciscans as a rule were Probabilists, and in 1762 a general chapter of the order, held at Mantua, ordered the members to follow Probabilism. In 1798 a general chapter of the Theatines adopted Probabilism. The Augustinians and the Carmelites, the Trappists, and the Dominicans were also Probabilists. The most notable event in the history of the controversy occurred in connection with Thyrus Gonzales, S.J., a professor of Salamanca, who (1670-72) wrote a work, entitled “Fundamentum Theologiae Moralis”, in favour of Probabilism. In 1673 the book was sent to the Jesuit General Oliva, who refused permission for its publication. Innocent XI favoured Gonzales, and in 1680 sent, through the Holy Office, a decree to the General Oliva ordering that liberty be given to the members of the Jesuits to accept Probabilism and against Probabilism. Gonzales was elected general of the order in 1687, but his book was not published until 1694.

During the controversies between the Probabilists and the Probabilists, the system known as Equiprobabilitas was not clearly brought into prominence. Equiprobabilitas holds that it is not lawful to follow either the less safe opinion when the safe opinion is certainly more probable; that it is not lawful to act on the less safe opinion even when it is equally probable with the safe opinion, if the objection is one which destroys the certainty of a law; but that if the existence of the law is in question, it is lawful to follow the less safe opinion if it has equal or nearly equal probability with the safe opinion. Many of the moderate Probabilists of the sixteenth and seventeenth centuries foreshadowed in their writings the theory to which, in his later days, St. Alphonse adhered. Even Suarez, who is regarded as a typical Probabilist, said: “Major probabilitas est quaedam moralis certitudo, si exessum probabilis probahit, sed certitudo certius est”. In the beginning of the eighteenth century Amort (d. 1777), Rassler (d. 1730), and Mayr (d. 1749), who are sometimes classed as moderate Probabilists, in reality defended Equiprobabilitas.

This view gained vigour and persistence from the teaching of St. Alphonse, who began his theolog-
Probabilism

443

Probabilism

A career as a Probabilist, subsequently defended
Probabilism, especially in a treatise entitled "De
probabilis in concursu probabilior"
(1749, 1755), and finally, about 1762, embraced
Equiprobabilism. In a new dissertation he laid down the
two propositions that it is lawful to act on the less
safe opinion, when it is equally probable with the safe
opinion, and that it is not lawful to follow the less
safe opinion when the safe opinion is notably and cer-
tainly more probable. In the sixth edition (1767) of
his "Moral Theology" he again expressed these views, and
indeed toward the end of his life frequently de-
clined to be called a Probabilist.

Probabilists sometimes hold that St. Alphonsus
never changed his opinion once he had discarded
Probabilism for Probabilism, though he changed
his manner of expressing his view so as to ex-
clude Laxist teaching and to give an indication of
what must be regarded as a solidly probable
opinion. As a matter of fact, as can be seen from
a comparison between the "Moral Theologies" of
moderate Probabilists and of Equiprobabilists, there is
little, if any, difference in their treatment of the
validity of a law so far as the uncertainty regards the
existence as distinguished from the cessation of a
law. Since the time of St. Alphonsus the prevail-
ning moral systems have been Probabilism and
Equiprobabilism. Probabilism has to a great ex-
tent inculcated in the Church, and even the most
modern theologians have espoused the cause of
Equiprobabilism.

During the nineteenth century the principal Equi-
probabilists have been Koenigs, Marc, Aertens, Ter
Haar, de Caigny, Gaudé, and Wouters. Quite re-
cently Ter Haar and Wouters have been engaged in
controversy with Lehmkühl who, especially in his
"Probabilismus Vindicatus" (1900) and in the ele-
venth edition of his "Theologia Moralis" (1910), has
strongly supported the Probabilist thesis which has been
accepted during the nineteenth century by the
vast majority of theologians.

In late years the system of Compensation has
arisen, which holds that a compensating reason, pro-
portional to the gravity of the law and to the degree
of probability in favour of the existence of the law,
is required in order that a person might lawfully act
on the less safe opinion. This theory was proposed by
Mannher, Laloux, and Potton; but it has gained little
support and has not yet become a rival of the old
theories of Probabilism, Equiprobabilism, or even Prob-
abilism.

III. PROBABILITY.—A. Teaching of Probabilists.—
The central doctrine of Probabilism is that in every
doubt which concerns merely the lawfulness or unlaw-
fulness of an act it is permissible to follow a solidly
probable opinion in favour of liberty, even though the
opposite view is more probable. Probabilists apply
their theory only when there is question merely of
the lawfulness or unlawfulness of an act, because in
other cases certainty might be demanded on various
grounds, as happens when the validity of the sacra-
tement is in question, and the established rights of another are concerned. They apply their doctrine whether the doubt about the law-
fulness or unlawfulness of an act be a doubt of law,
or a doubt of fact which can be reduced to a doubt of
law. Thus if it is solidly probable that Friday morning
has not yet set in, there is a doubt of fact which can be
reduced to a doubt of law as to whether it is lawful
in the circumstances to take meat. They also apply
their doctrine not merely to human but also to Divine
and natural laws, on the ground that the Divine legis-
lator and the human legislator: They apply their
principles whether the existence or the cessation of a
law is concerned, since, in their estima-
tion, liberty is always in possession. They also apply their doctrine even though the person whose
action is in question believes that the safe opinion is
the more probable opinion. If, however, he looks on
the safe opinion as morally obligatory, he cannot lawfully
use the opinion of others who differ from him. Nor
can a person on the same occasion use opposing prob-
abilities in his favour in reference to several obliga-
tions of which one or another would be certainly
violated; thus a priest cannot lawfully take meat on the
probability that Friday has already elapsed, and
at the same time postpone the reading of Complin on
the probability that Friday will not elapse for some
time. Finally, Probabilists insist that the opinion in
favour of liberty must be based on solid arguments and
not on mere timidity which are insufficient to gain
the assent of prudent men.

B. Arguments for Probabilism.—(1) External argu-
ments: (a) Probabilism, if untrue, is seriously detri-
tmental to the spiritual life of the faithful, since it per-
mits actions which ought to be forbidden, and the
Church cannot tolerate or give approval to such a
moral system. But the Church during many cen-
turies has tolerated Probabilism, and has given it
approval in the person of St. Alphonsus. Hence
Probabilism is not false. (b) The Church has tolerated Probabilism is shown from the
numerous approved authors, who, since the time of
Medina, have defended it without interference on the
part of ecclesiastical authority. That the Church has
given positive approval to Probabilism in the person
of St. Alphonsus is tacitly admitted even by those
including his treatise in favour of Probabilism, re-
ceived official sanction from the Decree of 18 May,
1803, the reply of the Sacred Penitentiary of 5 July,
1831, the Bull of Canonization of 26 May, 1839, and
the Apostolic Letters of 7 July, 1871 (cf. Lehmkühl,
"Theologia Moralis", I, nn. 165-75). Equiprobabilists reply that this argument proves
too much for Probabilists, since the Church has also
tolerated Equiprobabilism, and has given it positive
approval in the person of St. Alphonsus, whose works
in favour of Equiprobabilism received the sanction of
the Holy See in the official documents of 1803, 1831,
1839, and 1871. If Equiprobabilism is false, it is
seriously detrimental to the spiritual life of the faith-
ful, since it imposes burdens which ought not to be
imposed. Hence, if any argument can be derived for
Probabilism from the toleration or approval of the
Church, a similar argument can be derived therefor
for Equiprobabilism.

(6) In interpreting her own laws the Church applies
the principles of Probabilism, since amongst the rules
of law in "Sexto Decreetalium" we read: "Odia
restringi, et favores convenit ampliari" (r. 15); "In
obsecurs minimum est sequendum" (r. 30); "Contra
eum qui legem diuete potuit apertius, est interpre-
tatio facienda" (r. 57); "In ponit benignior est interpre-
tatio facienda" (r. 89). What is true of the
Church is equally true of other legislators, because
God is not a more exacting Legislator than His
Church, nor is the State to be presumed more strict
than God and the Church (cf. Tanqueray, "Theologia
Moralis fundamenta", n. 410).

Equiprobabilists reply to this argument that when
the less safe opinion is certainly less probable than
the safe opinion, the former has lost solid probability
and consequently cannot, so far as conscience is con-
cerned, obtain the privileges which the Divine Legis-
lator, the Church, and the State concede in the case
of really doubtful laws. Moreover, many of these
rules of law directly apply to the external forum
and ought not, without due limitation, be transferred
to the forum of conscience.

(2) Internal arguments: (a) a law which has not
been promulgated is not a law in the full and strict
sense, and does not impose an obligation. But when
there is a solidly probable opinion in favour of liberty,
the law has not been sufficiently promulgated, since
there has not been the requisite manifestation of the mind of the legislator. Hence, when there is a solidly probable opinion in favour of liberty, the law is not a law in the full and strict sense, and does not impose any obligation (cf. Lehmkühl, "Theologia Moralis", I, nn. 176-8).

Equiprobabilists reply that, when there is a solidly probable opinion in favour of liberty, the law is probably not sufficiently promulgated, and the question remains whether a law that is probably not sufficiently promulgated imposes any obligation in conscience. It would be begging the question to assume that no one can be compelled to give assent simply because there is the possibility that the law has not been sufficiently promulgated. Moreover, if the safe opinion happens to be the true opinion, a material sin is committed by the person who, acting on probability, performs the prohibited action. But, unless the law is promulgated, a material sin cannot be committed by its violation, since promulgation is a necessary condition of a binding law (cf. McDonald, "The Principles of Moral Science", p. 245).

(b) An obligation, concerning whose existence there is insincible ignorance, is no obligation. But, so long as there is a solidly probable opinion in favour of liberty, there is insincible ignorance about the obligation imposed by the law. Hence a law does not impose an obligation so long as the less safe opinion is solidly probable (cf. Lehmkühl, "Theologia Moralis", I, n. 179).

Equiprobabilists reply that there is not insincible ignorance in regard to a law when the safe opinion is also the more probable opinion, because in these circumstances a person is bound by ordinary prudence to give assent to the safe opinion. Although it is true that an obligation concerning whose existence there is insincible ignorance is no obligation, this is not true when one is compelled to give assent to an opinion as the more probable opinion (cf. Wouters, "De Minus-probabilismo", p. 121).

(c) According to the axiom: lex dubia non obligat, a doubtful law does not bind. But a law is doubtful when there is a solidly probable opinion against it. Hence it is lawful to follow a solidly probable opinion in favour of liberty (cf. Tanquerey, "Theologia Fundamentalis", n. 409).

Equiprobabilists in reply say that the axiom lex dubia non obligat holds when the law is strictly doubtful, i.e. when the reasons for and against the law are equal or nearly equal. A fortiori the law does not bind when there is a solidly or probably probable less safe opinion. It would, however, be begging the question to assume that the axiom holds when the less safe opinion is clearly less probable than the safe opinion.

(d) According to Equiprobabilists, it is lawful to follow the less safe opinion, when it is more probable than the safe opinion. But they must admit that Probabilism is more probable than Equiprobabilism, since the vast majority of theologians favour the milder view, and Equiprobabilists do not reject external authority. Hence on their own principles they ought to admit the practical truth of Probabilism.

Equiprobabilists reply that extrinsic authority is of no avail when the arguments on which the authority rests have been proved to be invalid; and they claim that they have proved the invalidity of the Probabilist arguments. Moreover, a reflex principle is useless unless its truth is proved with certainty, since its sole utility is to change speculative uncertainty into practical certainty. But greater probability does not give certainty. Accordingly, even if the Equiprobabilists were to admit the greater probability of Probabilism, that admission would be useless for Probabilists. The case is different with Equiprobabilism, which has practical certainty, since nearly all theologians nowadays admit the lawfulness of following the less safe opinion regarding the existence of a law, when it is equally or almost equally probable with the safe opinion.

(e) Many Probabilists lay stress on a practical argument in favour of their opinion, which is derived from the difficulty of distinguishing between various grades of Probability. It is impossible in practice, especially for ordinary people, to tell when one solidly probable opinion is more probable than another solidly probable opinion. But a moral system, to be of any serious utility, must be universal, so that not merely experts in moral science but also ordinary people can use the principles to which they adhere. The various degrees of probability must be discarded as practically useless, and Probabilism alone must be accepted as a working system.

Equiprobabilists reply that their system merely seeks, that if after due investigation it is found that the less safe opinion is not only certainly less probable than the safe opinion, the law must be observed. The necessary investigation has frequently been already made by experts; and others, who are not experts, are willing in accepting the conclusions to which the experts adhere.

C. Arguments against Probabilism.—In addition to some arguments to be explained in connexion with the other modern moral systems, it is necessary to mention a few difficulties which have been urged directly against Probabilism.

(1) When the less safe opinion is nearly and certainly less probable than the safe opinion, there is no true probability in favour of liberty, since the stronger destroys the force of the weaker reasons. Hence Probabilists cannot consistently maintain that it is safe in practice to act on the less safe opinion which is also the less probable.

Probabilists reply that the greater probability does not of necessity destroy the solid probability of the less probable opinion. When the foundations of the opposing probabilities are not derived from the same source, then at least the opposing arguments do not detract from one another; and even when the two probabilities are based on a consideration of the same argument, one opinion will retain probability in so far as the opposing opinion recedes from certainty.

(2) A moral system, to be of any use, must be certain, since an uncertain reflex principle cannot give practical certainty. But Probabilism is not certain, because it is rejected by all those theologians who upholds the opposing views. Hence Probabilism cannot be accepted as a satisfactory solution of the question at issue.

Probabilists reply that their system can be of no use to those who do not look on it as certainly true; but the fact that many theologians do not accept it does not prevent its adherents from regarding it as certain, since these can and do believe that the arguments urged in its favour are insuperable.

(3) Probabilism is an easy road to Laxism, because people are often inclined to regard opinions as really probable which are based on flimsy arguments, and because it is not difficult to find five or six serious authors who approve of opinions which right-minded men consider lax. The only sure way to safeguard Catholic morals is to reject the opinion which opens the way to Laxism.

Probabilists reply that their system must be prudently employed, and that no serious danger of Laxism arises if it is recognized that an opinion is not solidly probable unless there are arguments in its favour which are sufficiently strong to win the assent of many prudent men. As for the authority of approved authors, it must be remembered that five or six grave authors do not give solid probability to an opinion unless they are notable for learning and prudence, and independently adhere to an opinion which has not been set
aside by authoritative decisions or by unanswered arguments.

IV. MORAL SYSTEMS OPPOSED TO PROBABILITY.

A. Equiprobabilism.—This system can be expressed in the three following propositions:

(1) The doctrine that the existence of a law having equal or nearly equal probabilities, it is permissible to act on the less safe opinion.

(2) The opinions for and against the cessation of a law having equal or nearly equal probabilities, it is not permissible to act on the less safe opinion.

(3) The safe opinion being certainly more probable than the less safe opinion, it is unlawful to follow the less safe opinion.

With the first of these propositions Probabilists agree; but they deny the truth of the second and third propositions (cf. Marc, “Institutiones Morales”, I, nn. 91–103).

Arguments for Equiprobabilism: (1) In proof of their first proposition Equiprobabilists quote the axiom: nec dubia non obligat. When the opposing probabilities are equal or nearly equal, the law is doubtful in the strict sense, and a doubtful law imposes no obligation in conscience. They also apply the rule: in dubio melior est conditio possidentis. When the doubt regards the existence of a law, the law is in possession, and accordingly the opinion which favours liberty can be followed in practice.

(2) In proof of their second proposition, Equiprobabilists quote the same axiom: in dubio melior est conditio possidentis. When the doubt concerns the cessation of a law, the law is in possession, and therefore the law must be observed until it is displaced by a stronger probability in favour of liberty.

Probabilists reply to this argument that liberty is always in possession, since law and obligation presuppose the subject.

(3) In proof of their third proposition Equiprobabilists put forward various arguments, of which the following are the most forcible:

(a) A person is bound seriously to endeavour to bring his actions into harmony with objective morality. But a person who follows the less probable opinion in favour of liberty fails to observe this dictate of prudence, and consequently acts unlawfully (cf. Wouters, “De Minusprobabilismo”, p. 71).

Probabilists reply that this argument, if carried to its logical conclusion, would end in Rigorism, because the only way efficiently to bring our actions into perfect harmony with objective morality is to follow the safe opinion, so long as the less safe opinion has not acquired moral certainty. This is the only way of preventing all serious danger of committing material sin, and consequently is the only way of observing perfect harmony with objective morality. Since, however, Rigorism is universally condemned, the argument must be rejected, and the principles of Probability must be adopted which hold that it is sufficient to observe harmony with objective morality in so far as this is known with moral certainty (cf. Lehmkühl, “Theologia Moralis”, I, n. 191).

(b) On 26 June, 1880, the Holy Office, under the presidency of Innocent XI, issued, in connexion with the teaching of Thyrsus Gonzales, S.J., a Decree of which the authentic text was published 19 April, 1902, by the Secretary of the Holy Office. So much controversy has recently arisen in regard to the value of this decree, that it is opportune to quote the whole text:

“A report having been made by Father Laureus of the Decrees of a law directly by Father Gonzales, S.J., to Our Most Holy Lord; the Most Eminent Lords said that the Secretary of State must write to the Apostolic Nuncio of the Spains [directing him to signify to the said Father Thyrsus that His Holiness, having received his letter favourably, and having read it with approval, has commanded that he [Thyrsus] shall freely and fearlessly preach, teach, and defend with his pen the more probable opinion, and also manfully attack the opinion of those who assert that in a conflict of a less probable opinion with a more probable, known and estimated as such, it is allowed to follow the less probable opinion, and to inform him that whatever he does and writes on behalf of the more probable opinion will be pleasing to His Holiness.

Let it be enjoined upon the Father General of the Society of Jesus, as by order [de ordine] of His Holiness, not only to permit the Fathers of the Society to write in favour of the more probable opinion and to attack the opinion of those who assert that in a conflict of a less probable opinion with a more probable, known and estimated as such, it is allowed to follow the less probable; but also to write to all the Universities of the Society [informing them] that it is the mind of His Holiness that whosoever chooses may freely write in favour of the more probable opinion, and may attack the aforesaid contrary opinion; and to order them to submit entirely to the command of His Holiness’.

Equiprobabilists say that in this Decree there is a clear expression of the mind of Innocent XI about the morality of teaching that it is permissible to act on the less safe opinion when the safe opinion is certainly more probable. Furthermore, in this teaching, commends Father Gonzales for his opposition to it, and orders the General of the Jesuits to allow full liberty so that anyone who pleases may write against it.

Probabilists reply that, though Innocent XI was opposed to Probability, his official Decrees merely commanded that liberty of teaching be allowed to the members of the order. Moreover, they point out that Gonzales was not an Equiprobabilist, but a Probabilist of a strict type whom St. Alphonsus regarded as an extremist.

B. Probabiliorism.—According to the teaching of Probabiliorists, it is unlawful to act on the less safe opinion unless it is also the more probable opinion. In addition to an argument derived from the Decree of Innocent XI, the principal arguments for Probabiliorism are the following:

(1) It is not lawful to follow the less safe opinion, unless it is truly and expeditiously probable. But an opinion which is opposed by a more probable opinion is not truly and expeditiously probable, because its arguments are annulled by more potent opposing arguments and cannot in consequence gain the assent of a prudent man. Hence it is not lawful for a person to follow the less safe opinion when he regards the safe opinion as more probable.

As has already been explained in connexion with Probabilism, Probabilists maintain that the less safe opinion does not necessarily lose its solid probability because of more probable opposing arguments. This being so, the law is not certain, and consequently does not impose an obligation in regard to action, even though in regard to speculative assent it is rightly looked on as more probable.

(2) As in speculative doubt we are bound to give assent to the view which is more likely to exclude error, so in practical doubt about lawfulness we are bound to adopt the opinion which is more likely to exclude the danger of material sin. But the more probable opinion is the more likely to exclude this danger. Consequently in practical doubt we are bound to adopt the Probabiliorist view. Probabilists admit only that this view leads to Probabilism in so far as to Probabiliorism, because the only efficacious way of excluding reasonable danger of material sin is to act on the safe opinion so long as the less safe opinion is not morally certain. Moreover, Probabiliorism would impose an intolerable burden on the science of timorous minds, since it would demand an
Investigation into the various degrees of probability, so as to enable a person definitely to say that one opinion is more probable than another. In view of the great diversity of opinion, which exists on many moral subjects, this definite judgment is practically impossible, especially in the case of the vast majority of men who are not experts in moral science.

C. Compensationism.—This maintains that a double law is not devoid of all binding force, and that there must be a compensating reason, proportionate to the probability and gravity of the law, to justify the performance of the action which is probably forbidden. This teaching is based on an analogy with an act where two effects, one good and the other bad. It is not lawful to perform each effect unless there is a justifying cause proportionate to the evil. In the case of a doubtful law the bad effect is the danger of material sin, and the good effect is the benefit, which arises from the performance of the action which is probably forbidden. Hence in this case, a compensating cause, proportionate to the probable evil, is required to justify the performance of the action.

Probabilists reply that this moral system leads to Tullianism, but it is impossible that if no compensating benefit exists, it is not lawful to perform an action so long as it certainly is not forbidden. Again, Probabilists say that the preservation of liberty is of itself a sufficient compensating reason when there is question of a law which is not certain. Finally, Probabilists answer that, as a point of experiment, though not of obligation, it is advisable to look for a compensating cause over and above the preservation of liberty when a confessor is directing penitents in the use of probable opinions. If no such compensating reason exists, the penitent can be advised, though not under pain of sin, to abstain from the performance of the action which is probably forbidden.

J. M. HARTY.

Probatic Pool. See Bethsaida.

Probatus, Marcus Aurelius, Roman Emperor, 276–82, raised to the throne by the army in Syria to succeed the humble and pious Obodas at Sirmium in Illyricum; by courage and ability he won the confidence of the soldiers, and during the reign of Marcus Aurelius he subdued Palmyra and Egypt. As emperor, he ordained that the imperial edicts must be ratified by the senate, and he returned to the senate the right of electing the governors of the senatorial provinces. His reign was passed in wars with the Germans. He personally drove the Alamanni across the Rhine and forced them as far as the fortifications, extending from Ratisbon to Mainz. His success in Congress or more to Rome that he distributed sixteen thousand German warriors among the Roman legions. In 278 the emperor re-established peace in Rhaetia, Illyricum, and Moesia by campaigns against the Burgundians and Vandals. In the meantime his generals had overcome the Franks on the lower Rhine. The next year the emperor went to Asia Minor where he punished the Issaurians and gained their fortified castle Cremna in Pisidia. His reign was advanced as far as Syria and Egypt. Probus settled foreign colonists in all the boundary provinces. In this way, he brought about that the outlying provinces were peacefully settled by German tribes. During his long absence in Asia Minor rival emperors were proclaimed in various provinces; e.g. Saturninus at Alexandria, Proculus at Lyons, who controlled Gaul and Spain, and had a successor at Cologne named Bonosus. All these rivals were vanquished by the Germanic tribes. Probus celebrated his triumphs at Rome over his enemies and even hoped to attain to an era of peace and plenty. In times of peace he employed the soldiers in constructing public works, building temples and bridges, regulation of rivers, digging canals to drain marshes, and planting vineyards, especially in Gaul, Pannonia, and Moesia. By forcing the soldiers, who no longer had any interest in the prosperity of the citizens, to do this work, Probus roused them to revolt; in Rhetia the prefect of the guard, Marcus Aurelius Carus, was proclaimed emperor. The troops sent against him by Probus joined the rebels, and the emperor himself was killed near his birthplace.

PROBATION. See Courts, Ecclesiastical.

Procesional, Roman.—Strictly speaking it might be said that the Processional has no recognized place in the Roman series of liturgical books. As the full title of the work so designated shows, the book consists of a single section of the Roman Ritual (titulus ix) with sundry supplementary materials taken from the Missal and the Pontifical. What we read on the title-page of the authentic edition runs as follows: “Processionale Romanum sive Ordo Sacrarum Processionum ex Rituali Romano depromptus additis quae similis in Missali et Pontificale habentur”. Seeing, however, that the Ritual does not always print in full the text of the hymns, litanies, and other prayers which it indicates and thus leaves these set out at length with the music belonging to them. Processional appropriated to the special use of various local churches, e.g. “Processionale ad usum Sarum”, are of fairly common occurrence among the later medieval manuscripts. At the close of the fifteenth century and in the beginning of the sixteenth, we have a good many printed processional belonging to different churches of France, England, and Germany.

PROCESA. See Holy Ghost.

Procesions, an element in all ceremonial, are to be found, as he was born, in almost every form of religious worship. The example of the processions with the Ark in the Old Testament (cf. espec., II Kings, vi, and III Kings, viii) and the triumphant entry of our Saviour into Jerusalem in the New were probably not without influence upon the ritual of later ages. Even before the age of Constantine, the funeral processions of the Christians seem to have been carried out with a certain amount of solemnity, and the use of the word by Tertullian (De Prescriptio, xii) may possibly have reference to some formal movement of the church which led afterwards to the assembly itself or the service being called processio as well as synaxis and collecta (Probst, “Sakramentarien und Ord.”, 205).
About the time of St. Gregory the Great, and possibly earlier, two forms of procession played a great part in papal ceremonial. The one was the procession to the "Station," the other the solemn entry of the celebrant from the secretarium, or sacristy, to the altar. A good description of the stational procession is given in the St. Augustin Ordin., "Christianus," II, 6 (Ducange, "Christianus," II, 6). The pontiff, the clergy, and the people assembled in the appointed church, where the clergy vested and the office was begun. The poor people of the hospital went first with a painted wooden cross; then the stationary crosses, with three candles each and a retinue, followed, and then the bishops, priests, and subdeacons; finally came the pope surrounded by his deacons, with two crosses borne before him and the schola cantorum or choir following behind him. As the procession moved along to the station church where Mass was to be offered the Kyrie Eleison and the litany were sung, from which the procession itself was often called latania. The solemn entrance of the celebrant as he proceeded from the sacristy to the altar was of course a procession on a smaller scale, but this is minutely described in the first "Ordin." The pontiff was again surrounded by his deacons and preceded by the subdeacons, one of whom swung a thurible, and a conspicuous feature was the group of seven acolytes carrying tapers, which make us think of the seven candles now lighted on the altar as a pontifical High Mass. In this procession to the altar the antiphon of the introit was sung. On certain special occasions, notably St. Mark's Day (25 April), which coincided with the old Roman festival of the Robigalia, and in Gaul on the three Rogation Days before the feast of the Ascension, there were processions of exceptional solemnity (see LITANY).

Although not now formally recognized as a procession in the liturgical books, we may say that the sprinkling of the congregation with holy water at the beginning of the parochial Mass on Sundays preserves for us the memory of the most familiar procession of the early Middle Ages. The rite is prescribed in the Capitularies of Charlemagne and of Louis the Pious, as well as in other ninth-century documents. For example a Council of Nantes before the year 900 enjoins that "every Sunday before Mass, each priest is to bless water in a vessel which is clean and suitable for so great a mystery, for the people to be sprinkled with when they enter the church, and let him make the round of the yard [atrium] of the said church with the processionall crosses, sprinkling it with the holy water, and let him pray for the souls of them that rest therein" (Manii, "Concilii," XVIII, 173). In the monastic ceremonial of the same period this holy water procession on the Sunday morning was usually described in much detail. After the sprinkling of the high altar and of the other altars of the church in order, the whole body of the monks, after being sprinkled themselves, went in procession through the cloister, making stations there, while the celebrant assisted by two lay brothers blessed the different portions of the monastery (see Martène, "De antiq. eccles. rit.," IV, 46-9). At the present day the Roman Missal, which is the primary liturgical authority for this "Blessing of the people with holy water to be imparted on Sundays" (Benedictio populi cum aqua benedicta diebus dominicis impietantiis), says nothing about a procession, though some such process of the celebrant and assistant clergy around the church very commonly takes place. The rubric only directs that the priest having intoned the antiphon "Asperges me," then breaks the altar and assists. After which he is to sprinkle the clergy and the people, while he recites the Misereur with his assistants in a low voice. The other ordinary processions, as opposed to the extraordinary processions, which the bishop may enjoin or permit as circumstances may call for such a form of public supplication, are specified in the Roman Ritual to be the Procession of Candles on the Purification of our Lady (2 February), that of Palms or Palm Sunday, the greater litanies on the feast of St. Mark (25 April), the Rogation processions on the three days before the Ascension, and the procession of the Blessed Sacrament on the feast of Corpus Christi. The prescriptions to be observed on all these occasions are duly set down in the Roman Ritual. For their history etc., see CANDLES; CORPUS CHRISTI; HOLY WEEK; LITANY, etc. We might also add to these "ordinary" processions the carrying of the Blessed Sacrament to the altar of repose on Maundy Thursday and the return on Good Friday, as well as the visit to the font on Holy Saturday and the procession which forms part of the rite of the consecration of the holy oils in cathedral churches on Maundy Thursday. This latter function is described in full in the Roman Pontifical. In earlier times a series of processions were usually made to the font after Vespers upon every day of Easter week (Morin in "Rev. benedict.," VI, 150). Traces of this rite lingered on in many local churches down to the eighteenth and nineteenth centuries, but it finds no official recognition in the Roman service books.

Under the heading of "extraordinary" processions the Roman Ritual makes provision for the following emergencies: a procession to ask for rain, another to beg for fine weather, a third to drive away storms, three others assigned respectively to seasons of famine, plague, and war, one more general on occasion of any calamity (pro quacunque tribulatione), one rather lengthy form (in which a number of the Jubilate and Laudate psalms are indicated for recitation) by way of solemn thanksgiving, and finally a form for the translation of important relics (reliquiarum insignum). In the majority of these extraordinary processions it is directed that the Litany of the Saints be chanted as in the Rogation processions, a supplication special to the occasion being usually added and repeated, for example in the procession "to ask for rain" the peti-
tion is inserted: "Ut congruentem pluviam fidelibus tuois concedere digeris. Te rogamus adi nos". In the medieval rituals and processions a large variety of such exceptional forms may be found, connected especially with supplications for the produce of the earth. A common feature in many of these was to make a station towards the four points of the compass and to read at each the beginning of one of the four Gospels with other prayers. The practice of carrying the Blessed Sacrament upon such occasions is frequently condemned in medieval synods. In England the perambulation of the parishes on the "Gang days", as the Rogation days were called, lasted far into the seventeenth century. Aubrey, for example, declares in a postscript note to his "Remains": "On Rogation Days the Gospels were read in the cornfields here in England until the Civil wars" (Havell, "Faiths and Folklore", II, 478). The modern custom of making these processions was kept up seemingly without a view to its utility in impressing upon the memory the boundaries of the parish and in some places boys were flogged at the boundaries that they might remember the spot in old age. In the Greek and some of the Oriental liturgies the two processions known as the great and little entrances form a very imposing feature of the rite. At the "little entrance" the Book of the Gospels is carried in by the deacon accompanied by acolytes bearing torches and two fans. The "great entrance" takes place when the holy gifts, i.e. the bread and wine, are solemnly brought to the altar while the choir sings the famous "cherubic hymn". Similar features seem to have existed in the early Gallican Liturgy; even in the Roman high Mass the procession which heralds the singing of the Gospel is probably the survival of a more imposing ceremony of earlier date.

**Processional Cross.—** A processional cross is simply a crucifix which is carried at the head of a procession, and which, that it may be more easily seen, is usually mounted upon a long staff or handle. From an archaeological point of view this subject has already been briefly dealt with under Caoss. It will suffice to note here that the processional cross does not essentially differ from what may be called the cross of jurisdiction which is borne before the pope, his legates, and metropolitan or archbishops. The pope is entitled to have the cross borne before him wherever he may be; a legate's cross is used only in the territory for which he has been appointed, and that of an archbishop within the limits of his province. All these crosses, including that of the pope, have in public processions a double-barred cross as a sort of heraldic fiction which is unknown in the ceremonial of the Church. It is supposed that every parish possesses a cross of its own and that behind this, as a sort of standard, the parishioners are marshalled when they take part in some general procession. It is usual also for cathedral chapters and similar collegiate bodies to possess a ceremonial cross which precedes them in their corporate capacity; and the same is true of religious, for whom usage prescribes that in case of the monastic orders the staff of the cross should be of silver or metal, but for the mendicant orders, of wood. In the case of these crosses of religious orders, confraternities, etc. it is usual in Italy to attach streamers to a sort of penthouse over the crucifix, or to the knob underneath it. When these are carried in procession the figure of Christ faces the direction in which the procession is moving, but in the case of the papal, legatine, and archiepiscopal crosses the figure of our Saviour is always turned towards the prelate to whom it belongs. In England, during the Middle Ages, a special processional cross was used during Lent. It was of wood, painted red and had no figure of Christ upon it. It seems probable that this is identical with the "vezzarum eunericum" of which we read in the Sarum processional.

**Processional Canopies.—** As, according to the requirements of the Ceremonial Episcoporum, the aultar of a church and especially the high altar should be covered by a baldacchino and the bishop's throne etc. should be honoured with the same mark of respect, so canopies are used in processions and solemn receptions not only for the Blessed Sacrament but also under certain circumstances for bishops, legates, and princes of the blood royal. High Masses on which a bishop has the right to use a canopy are at his solemn reception in his own cathedral city, and when he makes his first pastoral visitation to any town or parish within his jurisdiction the Ceremonial of Sarum directs that in these receptions the bishop is to ride on horseback wearing his mitre, and under a canopy which is in the first instance to be carried by some of the principal magistrates of the town. Excepting in the rare case of separate portions of the True Cross or of the instruments of the Passion, relics borne in procession are not to be carried under a canopy. In processions of the Blessed Sacrament the colour of the canopy must always be white. For transporting the Blessed Sacrament from one altar to another or for taking the Holy Viatricum to the sick, it is customary in many places, e.g. in Rome, to use an umbella, or ombrellina, as it is called in Italian, which is simply a small canopy with a single staff.

**Processional Banners.—** Processional banners have also been in common use in the Church since medieval times. In England before the Reformation they are frequently referred to, though it does not seem clear that these vexilla were floating draperies, such as we are now accustomed to understand by the name. The woodcuts which appear in some early editions of the Sarum Processionary and others show a rigid frame of wood or metal. In the Rogation processions and some others two special vexilla were
carried, representing the one a lion, the other a dragon (Rock, "The Church of Our Fathers," 1904, IV, 229). The use of a number of richly embroidered banners in religious processions of all kinds is now customary in many parts of the Church, but the Rite of Rome (tit. IX, cap. 1, 4, 5) seems to contemplate only a single banner. "At the head of the procession let a cross be carried, and where the custom obtains a banner adorned with sacred devices (sacer imaginibus insigniun), but not made in a military or triangular shape.

**Procesional Hymns.**—We may recognize a particular class of hymns which in the early Middle Ages were specially composed to be sung in processions, as distinct from the breviary hymns. These processional hymns were nearly always provided with a refrain. England was specially rich in such hymns, and several are to be found in the Sarum Processional. In the Roman liturgy we still retain the "Gloria, laus et honor" sung in the procession on Palm Sunday, and in the ceremony of the consecration of the oils on Maundy Thursday we have the hymn "O Redemptor, sike cemen tenet conceninentium" (which contains the refrain, as has also the Easter hymn "Salve fests dies", which in different forms appears in the Processionals of both Sarum and York. The liturgy required the hymns of the procession to be sung in processions, lack a refrain and are less properly processional hymns.

**Process of Canonisation.** See Beatification and Canonisation.

**Procesus and Martinian.** Saints, martyrs whose dates are unknown. The "Martyrologium Hieronymianum" (ed. De Rossi-Duchesne, 85) gives under 2 July their names. The Berne manuscript of the Martyrology also gives their burial-place, viz. at the second milestone of the Via Aurelia. The old catalogue of the burial places of the Roman martyrs likewise mentions the graves of both these saints on this road (De Rossi, "Roma sotterranea", I, 183-3). They were publicly venerated in Rome from the fourth or perhaps the third century, although nothing further is known. A legend makes them the keepers of the keys of St. Peter and St. Paul, and because of the latter a difficulty arose. People were ready to condemn the propositions but not the memory of Theodore. Proclus met this difficulty by disclaiming any intention of attributing the propositions to Theodore. Volusianus, the uncle of Melania the Younger, was converted and baptised by him. The writings of Proclus, consisting chiefly of homilies and epistles, were first printed by Ricardus (Rome, 1360), reprinted in Gallandi, IX; also in P. G., LXXVI, 651. For Proclus and the Triasgion, see *Th Reservation, The Short, H. E. 704 sqq.; Chelis, Hist. des Autres E. S., XIII, 472 sqq.; Butler, Lives of the Saints, October 24.

F. J. Bachho.

**Proclus, Montanist.** See Montanists.

**Proclus, Neo-Platonist.** See Neo-Platonism.

**Proconesus (Proconneus), titular see in Hellepeut. Proconesus was the name of an island situated in the eastern part of the Propontis, between Priapus (now Kara Bogha) and Cyzicus. It was also the name of the capital of this island colonized by Milesians or Cyziceni and the ancient Elis (Pelops Archet). In 493 b.c, it was burned by a Phoenician fleet in the service of Darius. In 410 the Athenian vessels commanded by Alcibiades subjected it, like Cyzicus, to the domination of Athens. Later it was conquered by Cyzicus. Coins of the Roman epoch can still be seen. Proconesus was renowned for its quarry of white marble, used in constructing the adjoining towns, particularly that of Cyzicus, and the tomb of Mausoleus at Halicarnassus, later of Constantine the Great. The latter still uses the quarry. It has given to the island its modern name of Marathon, which was given also to the Propontis. The ancient capital seems to be the present village of Patalia. The island forms to-day a nptet of the vilayet of Brousse. The island contains about seventy-seven square miles and 9000 inhabitants, nearly all Greek. During the Byzantine epoch exiles were frequently sent there, among whom may be mentioned Stephen the Young, and the patriarch, Saint Nicephorus; Saint Gregory the Deacon, Saint Nicodemus the Stutterer, and the hermit known as the Saint who burned there. In 1399 a battle took place between the Turks and Venetians. The island and the neighbouring isles form a suggur fug for the schismatic Greeks. In the Middle Ages it was an autocephalous archdiocese, originally dependent on Cyzicus. Le Dehen (Oriens Christianus, 4, 26) names six of his bishops: the first known, John, assisted at the Council of XII.—29
Epheusus, 431. He does not mention a Saint Timothy, who must have lived in the sixth and who is venerated as the patron of the island.

Smith, Dict. of Greek and Roman Geography, s. v.; Geddes, Procopius, in Greek (Constantinople, 1856). S. Petrides.

Procopius. See HUB AND HUSBANDS.

Procopius of Cesarea, Byzantine historian, b. in the latter years of the fifth century at Cesarea in Palestine, d. not earlier than A.D. 562. We have no account of his parentage or education, except that by a legal and literary training he qualified himself for the civil service. As early as A.D. 527, before Justin's death, he became counselor, assessor, and secretary to Belisarius, whose fortunes and campaigns he followed for the next twelve or fifteen years. He was raised to the dignity of an ilustrius. He is reckoned the greatest of the later Greek historians. We owe to him an eyewitness's description of Belisarius's wars, in eight books. Of these, two dealt with the Persian War, two with the Vandalic, three with the Gothic; Book VIII concludes with a general survey of events down to A.D. 554. The scope of the work is more than military; he is the best authority for the history of Justinian's reign, and Gibbon eloquently expresses his regret at reaching a date where he must exchange Perseus for Lessing, and Theocritus for Lessing, and Thucydides imitates Thucydides chiefly; perhaps also in casting his work into eight books. His range of reading included all the greatest of the Greek historians and geographers, and he was well schooled in the poets and the orators. But his unique value lies in his personal as well as official familiarity with the people, the places, and the events of which he writes. His tone in this work is critical and independent. His account of "Justinian's Buildings" (ἐποικισμάτων) was completed in A.D. 558 or 559. It is composed in the manner of the courtly psengers for which Phrygian concorium of Trajan had cast the model; and he is thought to have written it either by imperial command or at least in order to vindicate himself from suspicions of disaffection. But the very extravagance which prompts him to credit Justinian with all the public works executed in the entire Eastern Empire during his reign gives the work an exhaustive scope and a peculiar value for the archaeologist. The third of his books has gained a scandalous celebrity and arouses more question both as to its authenticity and motives. This is the "Anecdota", which Suidas characterizes as "a satirical attack on Justinian", but which is most commonly known by the title of "Arcana historica" (the secret history). It is a supplement to the other history, carrying the narrative from the year 558-9, when it breaks off, and as into the pages of a private journal, Procopius pours his detestation of Justinian and Theodora; even Belisarius and his wife are spared. It is a bitter, malignant, and often obscene inveigh against all the powers of the Byzantine Church and State, apparently the work of an ill-conditioned man of letters for a lifetime of obsequiousness. The indiscriminate violence of the pamphlet betrays the writer's passionate indignation, and spoils the authenticity. The announcement is now generally allowed, after a great deal of not unbiased discussion in the seventeenth and eighteenth centuries. (The "Anecdota" was first published in 1623.)

Dahn, Procopius von Cesarea (Berlin, 1865). A succinct account is to be found in Kram geschicht der Byzantinischen Literatur vom Justinian bis zum Ende der Palaiologenzeit, in der Handbuch der klassischen Altertumswissenschaft (Munich, 1898). See also Suda, Lexicon, 502; Chevalier, R.C.S., 258; Schenkel, IV, 62, and preface to the recent edition of the work by Mr. Schlingloff; and the "Zeitschrift für die historischen Zeitschriften" (1893), II, 107-109; Mnemosyne, N.S., IX (1889), 109-112, 149-54, 160-4.

J. S. Philimore.

Procter, Adelaide Anne, poetess and philanthropist, b. in London, England, 90 October, 1825; d. in London, 2 February, 1884. She was the eldest daughter of the poet Bryan Waller Procter ("Barry Cornwall") and Anne Benson Skepper. As a child Adelaide showed precocious intelligence. She attained considerable proficiency in French, German, and Italian, as well as in music and drawing, and she was a great reader. Brought up in surroundings favourable to the development of literary leanings, she began to write verses at an early age, and at eighteen contributed to the "Book of Beauty". In 1851 she and two of her sisters became Catholics without, apparently, any disturbance of the harmonious relations of the domestic circle. In 1853, under the pseudonym of "Mary Berwick", she sent to "Household Words" a short poem, which so pleased the editor, Charles Dickens, that he not only accepted it but also invited further contributions. It was not until late in the following year that Dickens learned that his unknown correspondent was the daughter of his old friend, Barry Cornwall. To "Household Words" and "All the Year Round" nearly all her poetry was in the first instance contributed. In 1859-60 her poems were collected and published in two series under the title of "Legends and Lyrics". They had a great success, reaching the tenth edition in 1866. In that year a new issue, with introduction by Dickens, was printed, and there have been several reprints since.

Miss Procter was of a charitable disposition: she visited the sick, befriended the destitute and homeless, taught the ignorant, and endeavoured to raise up the fallen ones of her own sex. She was generous yet practical with the income derived from her works. In 1859 she served on a committee to provide fresh ways and means of providing employment for women; in 1861 she edited a miscellany, entitled "Victoria Regina", which had some of the leading litterateurs of the time as contributors and which was set up in type by women compositors; and in 1862 she published a slender volume of her own poems, "A Chaplet of Verses", mostly of a religious turn, for the benefit of the Providence Row night refuge for homeless women and children, which, as the first Catholic Refuge in the United Kingdom, had been opened on 7 October, 1809, and placed under the care of the Sisters of Mercy. In her charitable zeal she appears to have unduly taxed her strength, and her health, never robust, gave way under the strain. The cure at Malvern was tried in vain; and, after an illness of fifteen months, she died calmly, and was buried in Kensal Green Cemetery.

Dickens has given a characteristic testimony to her worth. "She was", he says, "a friend who inspired the strongest attachments; she was a finely sympathetic woman with a great accordant heart and a convincing noble manner." Modest and cheerful, unconstrained and unaffected, and quick in repartee, she had the gift of humour herself and of appreciating humour in others. Her works were very popular; they were published in America and also translated into German. In 1877 her poems were in greater
demand in England than those of any living writer except Tennyson. If her verses are unambitious, dealing with simple emotional themes, they have the merit of originality and give evidence of much culture. She appears perhaps to greatest advantage in her narrative poems, several of which, such as "The Angel in the House," "The Spirit of the Faithful Soul," "A Legend of the Faithful," and "A Legend of Provence," are well known in anthologies; but some of her lyrics, like "Cleansing Fires" and "A Lost Chord," have made a very wide appeal. Some of her poems, for example, "Per Fascem ad Lucem" and "Thankfulness" are so descriptive as to be almost operatic in their use as hymns.

P. J. Lennox.

Procurator, a person who manages the affairs of another by virtue of a charge received from him. There are different kinds of procurators: general, or particular, according as he is authorized to manage all the affairs of his principal, or only particular; and a general procurator may represent another in judicial matters (ad lites), or in matters not requiring court proceedings (ad negotia); special procurators are the syndicus, a general agent of a university or corporation and the fiscal procurator, appointed by public authority as guardian of the law in civil, and especially in criminal proceedings.

Everybody, unless expressly forbidden by the law, has the right to appoint a procurator in affairs of which he has the free management. In selecting a procurator, a person is free, provided the choice does not fall on someone debarred by law, as excommunicated persons, notorious criminals, regulars without the consent of their superiors, clerics in cases for which they cannot act as lawyers, and finally, for judicial cases, persons under twenty-five, for non-judicial cases, persons under seventeen years of age. A procurator has the right and duty to act according to the terms of the charge committed, but a general mandate does not include cases for which the law requires special commission. He is also allowed to elect a substitute, except in cases of marriages, and in general whenever, owing to the serious character of the affair, the procurator is supposed to have been chosen with the understanding that he should transact the business in person.

The power to act as procurator ceases: (a) as soon as he has fulfilled his office; (b) if with a sufficient reason he resigns; (c) if the principal or appointer revokes his mandate; but he must do this in due time. The procurator, even if the affair still remains unaffected (re tupere), this revocation must be brought to the notice of the procurator before the latter completes the transaction; one of the chief exceptions to these rules is when there is question of a procurator to contract a marriage, in which case the revocation holds good, as long as he was made before the procurator contracted in the principal's name.

Unless the procurator acted beyond his powers, the principal must accept whatever the latter did in his name.

S. PAPI. Procurator Fiscalis. See Fiscal Procurator.
under Pius IX and Leo XIII has become the common law of all religious orders.

Existing Law.—Definition.—According to the existing law, religious profession denotes the act of embracing the religious state by the three vows of poverty, chastity, and obedience according to the rule of an order canonically approved; it involves then a triple vow made to God, and binding oneself to the rule of a certain order. Very often the rules or constitutions of an order or congregation (approved before the Norme of 1901) add to these essential vows certain special vows inspired by the purpose of the order; they may be divided into two groups: a vow of special obedience to the pope and the Roman Church; the Poor Clares, a vow of enclosure; the Mercedarians, a vow of devoting themselves to the redemption of Christian captives, even giving themselves as hostages; the Minims, a vow of strict abstinence; the Carmelites Sisters and Discalced Augustinians, a vow of humility; the first profession in the Society of Jesus implies a vow of indifference in regard to final vows, i.e., whether they be solemn or simple; the solemn profession adds a vow of obedience to the pope for minimum; and the simple vows public faith... The third essential is the observance of poverty, and the eschewal of ambition; the Brothers of St. John of God make a vow to serve the sick; the Clerks Regular of the Pious Schools, a solemn vow to educate children, and also three simple vows relating to poverty and the shunning of ambition; the religious of the Christian Schools, vows of stability and of gratuitous education of all classes; the Little Sisters of the Poor, a vow of hospitality.

Division.—Profession was express, when made with the usual ceremonies; tacit, or implied, when the reciprocal engagement between the order and the religious was proved by outward acts; it was sufficient for this purpose to wear the habit of the professed member for some time openly and without objection being made in any one. Pius IX abolished the tacit solemn profession for religious orders (11 June, 1858) and it has fallen into disuse altogether.

Profession is either simple or solemn. Sollemn profession exists at present only in the institutes approved by the Holy See as religious orders. It is always perpetual, and dispensation from it is difficult to obtain; a religious who has been dismissed from his order is still under the same obligations as if he continued in it. It is the same as the case with one who obtains from the Holy See the indult of perpetual secularization; professed who have left their order owe to the bishop of the diocese in which they reside the obedience which they formerly owed to their religious superior. Sollemn profession implies a reciprocal engagement between the religious and his order, which undertakes to maintain him, and treat him as a member of its household, except in case of special privilege, it can dismiss a professed religious in canonical form only for incorrigible failure in some grave fault; a professed religious who is dismissed is ipso facto suspended, and the suspension is reserved to the Holy See (see the recent decree "Cum singulae" of 16 May, 1911). According to existing law, solemn profession annuls a marriage previously contracted, but not yet consummated, and creates a diriment impediment to any future marriage; and also renders the professed religious incapable, without the permission of the Holy See, of acquiring or of possessing and disposing of property. In Belgium, and probably in Holland, when a professed religious has failed with this disability, it is uncertain whether he has the power to dispense him from his vows: this is strictly reserved to the Holy See.

Common Effects of Profession.—Every perpetual profession one who has not shown himself worthy to renew his profession, or to take in subsequent profession; but a physical infirmity which was indicated after the vows, or the cause of which was known at the time of the vows, does not justify the dismissal of a religious against his will. In congregations which have no solemn vows, the Holy See ordinarily prescribes a term of temporary vows, varying from three to six years, before the perpetual vows. There are however some congregations, such as the Nuns of the Sacred Heart, in which all the vows are perpetual; and pious societies without perpetual vows, such as the Servers of Charity of St. Vincent de Paul; or even without vows, like the Missionaries of Africa, or White Fathers, who have only an oath of obedience. The Holy See insists that on the expiration of temporal vows, these should be either renewed or converted into perpetual vows, as the case may be, without allowing any interval of time, during which the religious would be free from his obligations.

Simple profession sometimes is a preparation for solemn profession, and sometimes has a distinct character of its own. In all religious orders, three years for religious who has taken into some grave fault, for the validity of solemn profession (see NUNS), and for lay brothers, six years of simple profession and an age of at least thirty years are required (Decree of 1 Jan., 1911). This time of simple profession may be considered as a second term of probation; it is not difficult for the religious to obtain permission to make a temporary profession, and on the other hand, the order may dismiss him for any grave cause of dissatisfaction, the sufficiency of which is left to the judgment of the superior. The dismissal of nuns, however, requires the consent of the Holy See; religious with simple or even temporary vows, who have received major orders in their institute, are in the same position, in regard to dismissal, as those who have made their final profession. Generally speaking, simple profession does not prevent a religious from retaining or acquiring property; the administration and disposition of property alone are forbidden. Except in the Society of Jesus it is no longer a diriment impediment to marriage, and it never annuls a marriage already contracted.

Conditions of Validity and Form.—It is essential in all cases for the validity of a religious profession that the candidate should be at least sixteen years of age and have passed one year in the novitiate. Persons who, under the provisions of the Decree "Ecclesia Sagax" of 19 May, 1909, have been admitted to the novitiate without the consent of the Holy See, cannot without the same consent make a valid profession. Admission to profession, especially to the first, is generally decided by the chapter. Profession made or permitted under duress is null and void; and the Council of Trent places sentence of excommunication on all persons who compel a young girl to enter a monastery by solemn profession, or who forcibly prevent her from doing so. Although tacit profession, which has been expressly abolished for clerics, has fallen into disuse everywhere, no particular rite or formula of profession is essential, unless distinctly required by the constitutions. A general Decree of the Sacred Congregation of Rites of 14–27 August, 1874, indicates the manner in which profession should be made during Mass. Since the Decree "Auctis admodum", simple but perpetual profession creates the same bond between the religious and the congregation as solemn profession does in a religious order. Such a religious can be dismissed only for incorrigible persistence in some grave public fault. When conformed to the law with this disability, the vows have power to dismiss a religious, they have not the power to dispense him from his vows: this is strictly reserved to the Holy See.
profession admits one to the religious state and consequently creates an obligation to aspire after perfection. This obligation is sufficiently fulfilled by observing the vows and rules, so far as they bind the conscience. All previous vows, provided they do not prejudice the right of a third party, may be changed into religious promises, and even into something of a higher character; and this may be done by the religious himself, or by someone who has power to commute the vows. If the profession be solemn, these previous vows are annulled by canon law. Theologians generally teach that, when made in a state of grace, a violation of the vows makes a moral sin, while a violation of the vows makes a sin of omission, which is a sin in the religious a remission of all the penalties due to past sins. The generally accepted opinion, by which religious profession was compared to a new baptism, induced St. Pius V to permit novices in houses of Dominican nuns to make their profession when in danger of death even before completing their years of novitiate (Constitution "Summi sacerdotii", 23 August, 1670). This has since been extended to all religious orders; but restoration to health deprives the profession made under such circumstances of all canonical effect.

Profession of Faith. See CREED.

Promise, Divine, in Scripture.—The term promise in Holy Writ both in its nominal and verbal form embraces not only promises made by man to his fellowman, and by man to God in the form of vows (e.g. Deut., xxiii, 21-3), but also God's promises to man. A complete study of this phase of the subject would require an account of the whole of the Old Testament prophecy and also a discussion of several points pertaining to the subject of Divine grace and election. For God's every word of grace is a promise; man's willingness to obey His commandments brings him many assurances of grace. When the children of Israel were commanded to go in and "possess the land" it was practically already theirs. He had "lifted up His hand to give it them"; their disobedience, however, rendered of no effect the promise implied in the command. There are, moreover, many examples of promises which were not fulfilled. (The above discussion is quoted from "The New Testament phrase "inheriting the promises" (Heb., vi, 12; cf. xi, 9; Gal., iii, 29) is found in the apocryphal Psalms of Solomon, xiii, 8 (70 n. c. to 40 n. c.). It is believed that this passage is the first instance in extant Jewish literature where the expression "the promises of the Lord" sums up the assurances of the Messianic redemption. The word "promise" is used in this technical sense in the Gospels only in Luke, xxiv, 49, where we find that the promise of the Father refers to the coming of the Holy Ghost. In passages such as Acts ii, the mention of promise by which Christ will fulfill the Epistle to the Hebrews especially abounds. St. Paul indeed both in his speeches and in his Epistles looks at the Christian Gospel from the same point of view. And we see that it was by a contemplation of Christ the suffering man ultimately discovered what the "promise" meant.

The New-Testament teaching on the subject might be summed up under three heads: that which the promise contained, those who were to inherit it, and the conditions affecting its fulfillment. The contents of the "promise" are always intimately concerned with Christ, in whom it has found its perfect fulfillment. In the preaching of St. Peter it is the risen Jesus, "both Lord and Christ", in whom the "promise" has been fulfilled. The forgiveness of sins, the gift of the Holy Ghost, the past and the future through grace (II Peter, i, 4), all the Divinely bestowed possessions of the Christian Church, may be said to be its contents. Passing to St. Paul we find a general conception of the same character. Christ and the "promise" are really "promised" to Israel. The promises of God are all summed up in Christ. A conception of the "promise" which was distinctly common to the early Christians is set forth in I John, ii, 25-26: "And this is the promise which he hath promised us, life everlasting." Concerning the inheritors of the "promise", it was given at first to Abraham and his seed. In Hebrews, xi, 9, we find Isaac and Jacob referred to as "co-heirs of the same promise." A controversy existed in the primitive Church over the interpretation of the expression "the seed of Abraham". St. Paul speaks frankly concerning the prerogatives of Israel, "to whom belongeth the promises" (Rom., ix, 4). Of the Gentile Church before admission to Christianity, he says its members had been "strangers to the covenants of the promise", consequently cut off from all hope. It was the work, however, to show the physical historical accident, such as Jewish birth, could entitle one to a claim as of right against God for its fulfillment. It is his teaching in one instance that all who are Christ's by faith are Abraham's seed, and therefore inherit the promises. He does, however, with the fact that the promise is not being fulfilled to the seed of Abraham (referring to the Jews); yet his heart is evidently on the side of those against whom he argues. For to the last the Jew was to St. Paul "the root, the first fruits, the original and proper heirs". The echoes of this conflict die away in later writings: as instinctively Christ is felt to be the Lord of all, the scope of the promise is universalized.

Spontaneity on the part of the promiser is among the primary conditions on which the promise is fulfilled (e.g. Acts, xii, 9: "if it be possible that the Jesus whom I suffered come to me again" (Acts, xi, 15: On the one hand we find that Abraham, "patiently enduring . . . obtained the promise" (Heb., vi, 15), because the birth of Isaac was the beginning of its fulfillment. On the other hand, he is one of the fathers who "received not the promise" yet with a true faith looked for a child of Abraham, because of the promises which was not granted to them. The New-Testament phrase "inheriting the promises" (Heb., vi, 12; cf. xi, 9; Gal., iii, 29) is found in the apocryphal Psalms of Solomon, xiii, 8 (70 n. c. to 40 n. c.). It is
realization of the fulfillment. Through lack of the cooperation no law exists that from lack of faith have the Divine promises often proved of no avail in the Old Testament as well as in the New (see Grace).

Promotio per Saltum. See Orders, Holy.

Promotor Fidei (Promoter of the Faith), an official of the Roman Congregation of Rites. The office was created by Clement XI, 7 April, 1708. In earlier times the work now undertaken by the Promotor Fidei was entrusted to the Promotor Fiscalis or some consistorial advocate. The Promotor Fidei is also an official of the Congregation of Indulgences and Sacred Relics, but his main duty is performed in the processes of beatification and canonization, which are conducted by the Congregation of Rites. It is the special care of the Promoter of the Faith to prevent any rash decisions concerning miracles or the cause of the candidate for the altar. All documents of beatification and canonization processes must be submitted to his examination, and the difficulties and doubts he raises over the virtues and miracles are laid before the congregation and may be further answered before any further steps are taken in the processes. It is his duty to suggest natural explanations for alleged miracles, and even to bring forward human and selfish motives for deeds that have been accounted heroic virtues. For the supposition of witnesses outside of Rome, the promoter formulates the questions and he has the power to appoint sub-promoters to assist him. All the processes for beatification and canonization must be submitted to the promoter under pain of nullity. Owing to his peculiar duty of antagonizing the proofs put forward on behalf of persons proposed for sainthood, the Promoter of the Faith is commonly referred to, half jocosely, as the devil's advocate.

Promulgation (Lat. promulgar, to make known, to post in public).

I. PROMULGATION IN GENERAL.—This is the act by which the legislative power makes legislative enactments known to the authorities entrusted with their execution. The subjects bound to observe them. Philosophically it is a matter of dispute whether promulgation is of the essence of a law. It seems indisputable that the essential element of a law is the will of the legislator, but it is clear that the legislator should make known his will and intention in one way or another. This manifestation is the promulgation of the law, which is not necessarily distinct from the very elaboration of the law, provided that this takes place by external acts—such as the vote of a legislative assembly or by royal sanction. Such is the practice indeed in England and in most of the states of the American Union, but, as it was thought too severe, the legislation of various countries requires the promulgation of laws by a special formal act, through which the text of the law is made known to the community, e. g. by publication of this text in an official journal or bulletin of the Government. Previous to this publication the law does not take effect. The promulgation of a law must not be confounded with its publication, the object of the first being to make known the will of the legislator, of the second to spread the legislative enactments among subjects bound to observe them.

II. PROMULGATION IN CANON LAW.—The Church has long exacted the promulgation of a law by a special act of the authorities: "Leges instituentur quum pro-

mulgentur", a law is not really a law until it has been so made known, says Gratian (Declarat. Gratiani, pt. I, c. 3, dist. VII). However, no special form is prescribed for acts of ecclesiastical authorities inferior to the pope, even synodal decrees being considered sufficiently promulgated by being read in the synod. The Constitution "Promulgandis" of Pius X (29 September, 1908) determined the ordinary method of promulgating pontifical laws, namely by the insertion of the text of the law in the "Acta Apostolicae Sedis" (the official publication of the Holy See), after this insertion has been ordered by the secretary or the supreme authority of the Congregation or the office through the medium of which the pope has issued the law. A regulation of 5 January, 1910, divides the official bulletin of the Holy See into two parts: in the first or official part should be inserted all documents requiring promulgation to have the force of law; the second merely serves to illustrate and supplement the first (Acta Apost. Sedis, 1910, p. 37). However, the pope explicitly reserves the right to determine in exceptional cases another method of promulgation. Prior to this law two systems had been chiefly in use in the different provinces of the church, until the end of the thirteenth century, and Roman promulgation. During the first period promulgation often took place in the different ecclesiastical provinces either through special envoy or through the bishops. Nevertheless it is also a fact that laws binding in one province only do not require promulgation. During the second period the custom, which became exclusive during the fifteenth century, developed of having the new laws read and posted up by curators at Rome only, at the doors of the great basilicas, the Palazzo Cancellaria, the Campo de' fiori, and sometimes at the Capitol. The value of this means of promulgation was disputed in modern times: some claimed that the Church had admitted the arrangements of Novels lxvi and cxvi of Justinian, which required provincial promulgation for some laws; others maintained that in theory publication at Rome was sufficient, but that the popes did not wish to bind the faithful before the laws were made known to them by the bishops; while others appealed to ancient custom, to which the pope should conform. This last theory, made use of by the Gallonists and Felbromanists, furnished the State with a pretext for preventing the promulgation of laws which it did not like. A special method of promulgation was also introduced with the express or tacit consent of the Holy See for the decrees of congregations; they were published at the secretariate of the dicasteries from which they emanated.

Pro Nuncio. See Nuncio.

Proof, the establishment of a disputed or controverted matter by lawful means or arguments. Proof is the result of evidence; evidence is the medium of proof. There is no proof without evidence, but there may be evidence without proof. Proof is judicial, if offered in court; otherwise it is extra-judicial. Proof is perfect, or complete, when it produces full conviction, and enables the judge without further investigation to pronounce sentence: imperfect, or incomplete, if it begets probability only. Canonists enumerate six kinds of perfect proof: the testimony of two witnesses, who are above all suspicion; a public document, or other instrument having the force of a public document, as, for instance, a certified copy of a public instrument; conclusive presumption
of law; the decisive oath; judicial confession; evidence or notoriety of the fact. Imperfect or semi-proof is derived from the testimony of one witness only, or of several singular witnesses, or of two witnesses not entitled to the presumption of their testimony by usage or suspicion; writings or instruments of a private character; a document admitted as authentic only on the strength of the handwriting; the necessary oath; presumption which is only probable, not conclusive; public report when legally proved. Two imperfect proofs cannot constitute perfect proof in criminal cases, in which proof must be clearer than the noonday sun; in matrimonial cases, when there is question of the validity of a marriage already contracted; or in civil actions of a grave character. With these exceptions two incomplete proofs tending to establish the same point may constitute full proof or conviction. Judicial proofs must as a rule be full and conclusive. There are, however, some exceptions. Thus the testimony of but one witness will suffice when it is beneficial to another person and hurts no one. Likewise in summary causes of little moment and not prejudicial to any one, half proof is sufficient; also when the judge is commissioned to proceed, having merely examined into the truth of the fact (sola facti verte tecipe inspicient).

Confession, the acknowledgment by a person that which is true, and his opponent is true, is judicial or extra-judicial. Judicial confession is the best of proofs. It must be made in clear and definite terms, in court, that is, before the judge in his official capacity, during the trial, with certain knowledge of the fact and also of the consequences of said confession, by a person not under twenty-five years of age, acting with full liberty and not through fear. Such a confession makes further proof unnecessary; renders valid any previous defective proceedings; and, if made after the defendant has already been convicted, deprives him of the right of appeal. The confession may be revoked during the same session of court in which it was made; after an interruption the only remedy available is to show, if possible, that the confession was illegal, because wanting in some requisite quality, as above. Ordinarily a confession does not mitigate against accomplices or others, but only against the one confessing. Extrajudicial confession, if properly proved, constitutes in criminal cases a grave presumption, but not perfect proof. It is sufficiently the pronouncement of sentence, if made in the presence of the plaintiff or his representative and if it specifically states the cause or origin of the obligation.

Instruments or Documentary Evidence.—A public instrument is one drawn up by an officer with the required formalities. If a document be the work of a private person, or of an official who does not observe the prescribed formalities, it is a private instrument. Instruments to possess weight must be genuine and authentic. Public instruments consequently must bear the name, title, and seal of the official issuing them. Private documents should be written in the presence of witnesses and attested by them.

Presumptions.—Circumstantial, presumptive, or indirect evidence, strong enough to establish a moral certainty, is admitted also in canon law, but it must be accepted with caution, and sentence modified in accordance with the degree of evidence. The rational basis of such evidence lies in the connexion of the facts or circumstances, known and proved, with the fact at issue. A presumption consequently is more or less strong, as the fact presumed is a necessary (vehement, very strong presumption), or usual (strong presumption), or infrequent (rash, unreasonable presumption), consequence of the fact or facts seen, known, or proven. A presumption is legal, if the law views it as valid in evidence. Types of two kinds: direct (Juris simplitcier), which may be set aside by contrary proof; conclusive (Juris et de jure), against which no direct proof is admitted. A presumption is natural (hominis) when the law permits the judge to draw whatever inference he considers warranted by the facts proved; such presumptions are sometimes called presumptions of gravity or guilt. The legal assumption is to place the burden of proof on him against whom the presumption militates. A rash presumption is little more than mere suspicion; a grave or sound presumption constitutes imperfect proof, while a vehement presumption suffices in civil cases of and too great importance. Legal presumptions or presumptions of law are of course stronger than natural presumptions or presumptions of facts; while specific presumptions have more weight than those of a general character. Presumptions that favour the accused or the validity of an act already performed are preferred.

Oaths.—Oaths, as proof, are decisive (titis decisioriae) or necessary. The decisive oath is given by the judge, when private interests are in question, to one of the litigants at the instance of the other. The case is decided in favour of the one taking the oath; if he refuse to swear, sentence is pronounced against him. The necessary oath is given by the judge on his own initiative, not at the request of one of the litigants, to complete imperfect proof, and is called supplementary; or to destroy the force of circumstantial evidence, arising especially from current rumour, against the accused, and is called purgative. This latter is permitted only when there is not at least semi-perfect proof. The supplementary oath is permissible only when there is at least imperfect and yet not full proof. It is not allowed in criminal actions or in important civil cases, as, for example, when the validity of a marriage or a religious profession is in question.

Public Report.—Witnesses testify as to the existence or non-existence, the origin, extent, and nature of a public report. Their testimony does not concern the truth or falsehood of the report. It is for the judge to trace the report to its source and accept it at its proper value. Since, however, it is to be presumed that public opinion is founded on fact, in civil matters it furnishes semi-perfect proof, when its existence is properly established. In criminal matters it has less weight still, being sufficient only for an investigation.

Evidence of the Fact.—Evidence or notoriety of the fact, vis, when it is so open and evident that it cannot be concealed or denied, needs no proof. Hence a judicial inspection or visitation of the corpus delicti is often of advantage. Under this head might be mentioned the opinion of experts, who are appointed by the judge to examine certain matters and to give their expert testimony concerning the same.

Rules.—Proof must be clear, specific, and in keeping with the charge or point at issue; otherwise confusion and obscurity will arise. To establish a point other than the one in question will avail nothing. Whether the evidence offered is relevant or not, the judge will determine. The issue must be established substantially, not necessarily in all its details. The burden of proof lies with the plaintiff, though the defendant must offer proof in support of his allegations, exceptions etc. What is evident needs no proof: in criminal cases this axiom applies only to what is evident in law, i.e. he who has the presumption of all in his favour is exempt from the necessity of proving his contention.

Time to Introduce Evidence.—Judicial evidence must be introduced during the trial. Ordinarily, therefore, evidence may not be presented before the hearing of the petition or charge and the answer of the defendant to the same (contestatio hisa). This rule, however, does not apply when the judge proceeds to render a verdict summarily or by default, where there is danger of the testimony being lost through death or other cause. Again, as a rule, no
Propaganda, Sacred Congregation of.—The Sacred Congregation de Propaganda Fide, whose official title is “sacra Congregatio christiano nominis propagandae” is the department of the pontifical administration charged with the spread of Catholicism and with the regulation of ecclesiastical affairs in non-Catholic countries. The intrinsic importance of its duties and the extraordinary extent of its authority and of the territory under its jurisdiction have caused the cardinal prefect of Propaganda to be known as the “red pope”.

I. History.—A. First Period.—Its establishment at Rome in the seventeenth century was owing partly to the necessity of communicating with new countries then recently discovered, and partly to the new system of government by congregations adopted during the Counter-Reformation. It is well known that, during this period, the defence and propagation of Catholicism suggested to the Holy See the desirability of establishing a system of administrative departments, to each of which was assigned some special branch of Catholic interests. The propagation of the Faith was a matter of such vital importance as to demand for its work an entire congregation. The reconquest of the Church of the lands severed from it was not of greater importance than the evangelization of the vast regions then being explored by courageous adventures. America, Africa, the Far East, opened up new lands, new peoples, new conquests; the Church, conscious of her natural mission to propagate the Gospel and to infuse into life, and to act and to act quickly, especially as Holland and England, while striving eagerly for commerce and colonial expansion, were also upon spreading everywhere the doctrines of Protestantism.

The origin of the Sacred Congregation of Propaganda has been variously accounted for; in reality it is the result of slow evolution. It is certain that it passed through two distinct periods, one formative and the other constitutive. The first period is that of the cardinalitial commission de propagandae (its name signifies a definite pontifical department or ministry). This lasted from the time of Gregory XIII (1572–85) to 1622, when Gregory XV established the congregation properly so-called. Gregory XIII instituted a primary commission composed of the three cardinals, Caraffa, Medici, and Santorio, who were especially charged to promote the union with Rome of the Oriental Christians (Slavs, Greeks, Syrians, Egyptians, and Abyssinians). Their meetings, held under the presidency of Cardinal Santorio, known as the Cardinal of Santa Severina, revealed certain urgent practical needs—e.g. the foundation of foreign seminaries, the propagation of the catechisms and similar works in many languages. Its efforts were successful among the Armenians, the Syrians, both Western (as those of the Lebanon) and Eastern (as those of Malabar). After the death of Gregory XIII the rapid succession of four popes in seven years retarded the progress of the commission’s work. Clement VIII (1592–1605), a pontiff of large and bold aims, was deeply interested in the commission, and caused its first meeting after his election to be held in his presence. He retained Santorio as its president; weekly meetings were held in that cardinal’s palace, and every fifteen days the decisions and recommendations of the commission’s members were referred to the pontiff. To this period belongs a very notable triumph, the union with Rome of the Ruthenian nation (the Little Russia of Poland), called the Union of Brest (1598).

B. Second Period.—The death of Clement VIII revealed an essential weakness of the institution. It was a personal commission, depending for its very existence on the energy of its few members. Eventually the meetings of the three cardinals, which were held at the same time an active propagation of the Catholic Faith was kept up among both Protestants and non-Christians. The practical demise of the commission made evident the necessity of providing for its permanence. The honour of accomplishing this belongs to Gregory XV (1621–23). On 6 Jan., 1622, the pope summoned thirteen cardinals and two prelates, to whom he announced his intention of constituting a permanent and well-organized congregation for the propagation of Catholicism. The cardinals and hearers were appointed members of the congregation. The preliminaries of organization were diligently carried on; on 22 June of the same year appeared the Bull “Insorutabilis Divinae”, by which the Sacred Congregation de propagandae fide was instituted, composed of thirteen cardinals and two prelates, to whom were added a secretary and a consultant. Its first presidents were Cardinal Sauli, dean of the Sacred College, and Cardinal Ludovisi, nephew of the pope and founder of the Irish College at Rome. On 25 May 1622 the pope, on procuring for the support of the congregation by the Constitution “Romanum Decret”, assigned to Propaganda the tassa dell’ anello (ring-tax) assessed on each newly appointed cardinal (500 gold scudi, later 600 silver scudi). On 14 Dec. of the same year was published the Constitution “Cum Inter Multiplies” and on 13 June, 1623, another Constitution, “Cum Nuper”, both of which conferred on the congregation ample privileges and immunities in order to facilitate and accelerate its labours. When the pope died, 1 Dec. 1623, the new congregation passed into the hands of his successor, Urban VIII (1633–44), was Cardinal Barberini, one of the original thirteen members of the congregation.

After the death of Cardinals Sauli and Ludovisi, Urban VIII directed the formation of a permanent prefecture of the congregation, and nominated to the office his brother, Cardinal Antonio Barberini (29 Dec., 1632). At the same time he appointed his nephew, a second Cardinal Antonio Barberini, as the auxiliary of the preceding, and later made him his successor. These two open the series of prefects.
general of Propaganda. It was clear to Urban VIII that the impulse given to the establishment of ecclesiastical seminaries by the Council of Trent had already produced excellent results, even in the vast province of the Propaganda, through the agency of the numerous national colleges then set up, the Bavarian, the German, English, Greek, Maronite, Scots, and other colleges. But he also saw that it was necessary to establish a central seminary for the missions where young ecclesiastics could be educated, not only for countries which had no national college but also for such as were endowed with such institutions. It seemed very desirable to have, in every country, priests educated in an international college where they could acquire a larger personal acquaintance, and establish in youth relations that might be mutually helpful in after life. Thus arose the necessity of the Propaganda known as the Collegium Urbanum, from the name of its founder, Urban VIII.

It was established by the Bull "Immortalis Dei", of 1 Aug., 1627, and placed under the immediate direction of the Congregation of Propaganda. The number of these institutions became eventually necessary to divide its immense domain into various secretariats and commissions.

This continuous increase of its labours dates from its very earliest years. In the beginning the meetings of the Congregation were held in the presence of the pope; soon, however, the pressure of business grew to be so great that the general prefect and the general secretary were authorized to transact all current business, with the obligation of placing before the pope, at stated intervals, the more important matters, which is still the custom. In extent of territory, in external and internal organization, and in jurisdiction, the congregation has undergone modifications according to the needs of the times; but it may be said that its definite organization dates from about 1650.

Jurisdiction.—As a general principle, it was understood that the territory of Propaganda was (apart from the Catholics of all the Oriental rites) conterminous with those countries that were non-Catholic in government. Naturally there were, and are, exceptions: for example, Russia, depending, ecclesiastically, upon the Congregation of Extraordinary Ecclesiastical Affairs, since it is necessary to treat all Russian affairs through governmental channels. The territorial jurisdiction of Propaganda was promulgated in the bull "Sapienti Consilio" as follows: in Europe, Great Britain and Gibraltar, Sweden and Norway, Denmark, Germany (Saxony, Anhalt, Mecklenburg, Schaumburg, Oldenburg, Lauenburg, Hamburg, Bremen, Lübeck, Schleswig-Holstein), Holland, Luxemburg, some places in Switzerland (Maselins and Calais in the Grisons, St. Maurice in the Canton of Valais), the Balkan peninsula (Bosnia, Herzegovina, and Greece); in the New World, the United States, Canada, Lower California, the Lesser Antilles (British and Danish), Jamaica and Honduras; some missions in Peru, Patagonia; all Oceania except the Philippines; all Asia except the Russian possessions; all Africa. As to the Catholics of the Oriental rites, they are subject personally (that is, wherever they may be) to Propaganda. Their division by rites generally corresponds to their nationality. These rite are: the Armenian, frequent (besides, of course, in Armenia) in Austria, Persia, and Egypt; the pure Coptic Rite (in Egypt); the Abyssinian Coptic Rite, to which belong a few failwaters, Abyssinian colonies in Eritrea; the pure Greek Rite, including some communities in Southern Italy and a very few in Turkey; the Rumanian Greek Rite, with adherents among the Rumanians of Hungary and Transylvania; the Armenian Greek Rite, a portion of the Liturary Russians in Austria and Russia; the Bulgarian Greek Rite, in Bulgaria and in Macedonia; the Melkite Greek Rite (Greco-Syrian), which includes the Catholics of Greece, also hellenized natives of Syria and Palestine; the unmixed Syriac Rite (Western Syriac), or that of the Syriacs of the plain of Syria and Palestine; the Syro-Malabar Rite (Syro-Malabar) or the (Syrian) Maronites of Mount Lebanon; the Syro-Chaldaic Rite (Eastern Syriac) i.e. Syria in the Persian Empire; the Malabar Rite (Eastern Syrian), i.e. the Catholics of Malabar in South-western India. Among most of these peoples there has set in a remissable tide of emigration to the New World, especially to North America, whither the Ruthenians and Maronites emigrate in large numbers.

In the Constitution "Sapienti Consilio" of Pius X (29 June, 1908), the plan was followed of entrusting to Propaganda those countries of Europe and America where the ecclesiastical hierarchy is not established. Great Britain, Holland, Luxemburg, Canada, and the United States were therefore removed from its jurisdiction; on the other hand, all the vicariates and prefectures Apostolic of America and the Philippines, which until then were formerly subject to the Congregation of Extraordinary Ecclesiastical Affairs, were placed under Propaganda. Inasmuch as the departure from the general plan was in leaving Australia under the jurisdiction of the latter congregation, with the addition of St.-Pierre, in Martinique, and Guadeloupe. Another restriction of the powers of Propaganda effected by the new legislation was, that all matters appertaining to faith, the sacraments (particularly matrimony), rites, and religious congregations—as such, even though they were exclusively devoted to the work of the missions—were assigned to the care of the respective congregations: those of the Holy Office, the Sacred Congregation of Rites, and Religious.
cesses. The vicariates Apostolic are missions at the head of each of which is placed a bishop who acts as representative of the pope in the local government. The Apostolic Vicariate of Franciscol mission importance, each of which has at its head an ecclesiastic, not a bishop, with the title of prefect Apostolic. Those territories of Propaganda which are not organized as dioceses are either vicariates or prefectures; their number increases rapidly, since every year a new vicariate Apostolic is Propaganda, or the prefecture is raised to the dignity of a vicariate or some new prefecture is created. The simple missions are few and mostly in Africa. They represent an uncertain or transitory condition that may be readily changed by the establishment of an Apostolic prefecture.

The colleges are institutions for the education of the clergy, intended either to supply clergy for missions that have no native clergy or to give a better education to the native clergy for the apostolate in their own country. The central seminary of Propaganda is, as has been said, the Urban College, established in the palace of the congregation at Rome. The immediate superiors are two prelates, one the general secretary of the congregation, and the other the president of this college. It sends students from all the territories subject to Propaganda, but from nowhere else. The average number of its resident students is about one hundred and ten. It has its own schools, which are attended by many of the sons of the subjects of the kingdom, and the Bohemian College. Besides the preparatory training, these schools offer courses of philosophy and theology, and confer the academic degrees of Bachelor, Licentiate, and Doctor of Theology. The number of students in these schools exceeds five hundred. In Rome, the College of the Holy Ghost, run by Peter and Paul, for Italian missionaries (Lower California and China), and the College of St. Anthony, for Franciscan missionaries (especially in China), are subject to Propaganda, which also exercises jurisdiction over the following missionary colleges outside of Rome: St. Calceor, at Milan, for Italian missionaries to China and India; St. Charles, at Parma (China); Brignole-Sale, at Genoa (without local designation of mission); Instituto per li Nazioni dell' Africa (Tunis); College for African Missions, at Lyons, especially for French missionaries to Africa; Seminary of Foreign Missions, at Paris (India, Indo-China, China, Japan); Mill Hill Seminary, near London, for the missionaries of the Society of St. Joseph (India, Central Africa, Malagasy, and the Netherlands Indies) (for Dutch students of the Mill Hill Society); House of St. Joseph, Brixen in the Tyrol (for German students of the same society); four colleges of the Society of the Divine Word, at Steyl (Holland), at Heiligenkreuz (Germany), and at St. Gabriel, near Vienna, for the students of the same society whose missionary fields are centered in the United States, South America, China, and Africa; College of All Hallows, Dublin, for Irish missionaries; American College at Louvain, for missionaries to the United States. The national colleges at Rome subject to the Propaganda are: the Greek, Ruthenian, Armenian, and Maronite colleges. It also exercises jurisdiction over the Albanian College at Scutari, the College of Pul-Penang (Prince of Wales Island) in Indo-China, belonging to the Society of Foreign Missions at Paris for the native Indo-Chinese clergy. Before the appearance of the Constitution "Sapiens Consilio", the American, Canadian, English, Irish, and Scots Colleges at Rome, the English College at Louvain, and the Scots College at Valsesia, and, the Irish College at Paris were all subject to Propaganda.

The auxiliaries of this vast organisation are all religious orders and regular congregations of men and women to which foreign missions are confided. Their number is very great. The principal orders (Benedictines, Dominicans, Carmelites, Jesuits etc.) have charge of numerous missions. During the nineteenth century many regular societies of missionary priests and missionary sisters entered actively, and with great success, on missionary labours under the direction of the congregation. The principal colleges of Apostolic prefectures (or directly subject to Propaganda) are: at Rome, the Colleges of St. Fidelis (Capuchin) and St. Isidore (Irish Franciscans), and the Irish Augustinian College; outside of Rome, the college at Schooten near Brussels for missionaries of the Immaculate Heart of Mary), the seminary of the African Missions at Lyons (White Fathers) etc.

IV. INTERNAL ORGANIZATION.—The internal organization of Propaganda is the result of almost three centuries of experience. All its works are carried on by means of a general cardinalatial congregation, two cardinalitial prefectures, and several permanent commissions. The general congregation is composed of all the cardinals of Propaganda chosen by the Pope "Eminentiissimi Patres Consilii Christiano nominati in Propagandam". The spiritual and temporal power resides in this body. The creation and division of dioceses, vicariates, and prefectures, the selection of bishops and other ordinary superiors of missions, matrimonial causes, ecclesiastical appeals, and the exercise of such discipline in Propaganda as may be necessary, all come under the jurisdiction of the General Secretary. The meeting twice a month and deals alternately with the affairs of the Latin and the Oriental rites. Only the cardinal-members of Propaganda are present, together with two prelates, the general secretary, and the secretary of the Oriental rites. To the general prefect of Propaganda, a cardinal, belongs the duty of despatching all current business and all matters pertaining to the General Congregation. He is the ordinary head of Propaganda. The General Prefecture has subject to it two secretariats: the General Secretariate and the Secretariate of Oriental rites. The general secretary (always a prelate, Monsignor) is the chief assistant of the cardinal prefect, and the immediate head of the General Secretariate. He countersigns all letters addressed by the cardinal prefect to the pope, forwards all such letters as he judges necessary, signs all letters from the prefecture destined to points in Rome (except to cardinals and ambassadors, letters for whom are signed by the cardinal prefect alone). An under-secretary has been added by the Constitution "Sapiens Consilio". The secretary of the Oriental rites is the head of his secretariat, and is charged with duties analogous to those of the general secretariat, of whom he is independent. Each of the secretariates has its minunanti, scrivitori, and protocolisti. There are also the General Archives, and a Despatch Office. The minunanti (so called because one of their duties is to prepare the minutes of decrees and letters which are afterwards re-copied by the scrivitori) are officials occupied with the subordinate affairs of certain regions. We may note here the simplicity and the industry of the Propaganda secretariate: only six minunanti attend to the affairs of the countries of the Latin Rite subject to the congregation. Apropos of the authority of Propaganda we shall see what a vast deal of work is involved in the ordinary acts of the secretariates. The minunanti, in addition to making minutes of the ordinary acts of the secretariates, prepare the ponenze, i.e., the printed copies of the propositions or cases destined to come before the general cardinalitial congregation. Every week each of the two secretariates holds a meeting (congress) in the presence of the cardinal prefect, of its own secretariat, and of the head of the other secretariat. At this meeting each minunante reports on all matters for the settle-
ment of which reference to the pertinent set of documents may be necessary, he gives oral information to the prelates. He arranges the report of the minunante and the opinion of the Secretary concerned, sometimes of all others present, the cardinal prefect issues an order to reply, or to defer the case, or to send it up to the general congregation. The scrivitori copy all documents that are to be dispatched, while the protocolisti stamp, number, and register all papers received and sent out. Records of the earliest proceedings of the congregation, dating from its first establishment, are preserved in the General Archives, or Record Office. Finally, there is the Despatch Office (ufficio di spedizione), which keeps its own register of all documents issuing from Propaganda, and sees to their actual forwarding. The office of consultant is filled gratuitously by a number of prelates, to whom the secretariates send such of the pomenze as are of litigious nature—matrimonial causes, diocesan difficulties, etc. These consultants are requested to express their opinions, which are then attached to the pomenze and presented therewith to the cardinals at the General Congregation. The Oriental Secretariat employs interpreters—ecclesiastics who translate all current correspondence in Arabic, Armenian, etc., and who are sworn to perform their work faithfully.

The method of treatment applied by Propaganda to an ordinary case may be described as follows: A letter addressed to the Secretary General is opened by the cardinal prefect, who annotates it with some terse official formula in Latin, embodying his first instructions (e.g. that a price of the antecedent document relating to this matter is to be made). Then the letter goes to the Protoocollo, where it is stamped and registered, and its object noted on the outside. The chief minunante reports on its object and on the note made by the cardinal to the Secretary General, and writes the corresponding order of the secretary. Supposing the order should be to write a letter, the folio is given to the minunante, who draws up his minute according to the instructions of the cardinal prefect and of the secretary, he then passes it on to the scrivitore, who copies it, and verifies the copy. This copy, with all the correspondence in the case, is returned (supposing it to be matter to be sent away from Rome) to the cardinal prefect, who signs it and remits it to the secretary. The secretary countersigns it and passes it on to the Despatch Office, which, after returning to the protocollo (for preservation) the other correspondence of the case under consideration, registers it, encloses all matter to be forwarded in an envelope, writes thereon the postal weight, and sends it on to the Accounting Office. After the postal weight is verified, the stamps affixed, and the letter forwarded to the Post Office. By this system everything is under control, from the subject-matter of the correspondence to the cost of postage. The whole routine is completed with rapidity and regularity under the immediate responsibility of the several persons who have charge of the matter in its various stages.

Before the Constitution "Sapienti Consilio" the second cardinalitial Prefecture of Propaganda was that of the cardinal prefect of finance, to whom were entrusted the finances of Propaganda, the expenses, subsidies etc. Decisions regarding subsidies pertained either to the cardinal prefect or to the General Congregation, or to the Board of Finance (congresso economico), which met as an executive committee for the transaction of the most important ordinary business with which the General Congregation was entrusted. This Prefect, as he was composed of the general prefect, the cardinal prefect of finance, and of some other cardinal of the General Congregation. Pius X, however, by the above mentioned Constitution, suppressed the Prefecture of Finance, and its functions are now discharged by the General Prefecture. With the prefecture of Finance was joined the executive office of the Reverend Chamber of Chancellors (Azienda della Riforma Camara degli Spogli), i.e. the effective administration of the revenues collected from vacant benefices (spogli), one of the sources of revenue of Propaganda.

The two permanent commissions of Propaganda are: one for the revision of Synodal Decrees (provincial or diocesan) in countries subject to Propaganda and one for the revision of liturgical books of the Oriental rites. Each of these Commissions is presided over by a cardinal, has for secretary a prelate, and is always in close communication with its own secretariat.

V. FACULTIES.—The faculties (authority) of the Congregation of Propaganda are very extensive. To the other pontifical congregations are assigned quite specific matters: the only restriction on Propaganda is that of territory, i.e. while one congregation is concerned with rites, a second with bishops and regulars, a third with marriage, a fourth with subsidies etc., Propaganda deals with all such matters, in a practical way, for all the countries subject to it. Thus, the nomination of a bishop, the settlement of a matrimonial case, the granting of an indulgence, are within the jurisdiction of Propaganda. The limits of its jurisdiction are practical rather than theoretical; in general, it may be said that Propaganda is authorized to deal with matters peculiar to the other congregations, when such matters are presented as practical cases, i.e. when they do not raise questions of a technical character, or of general bearing, or are not of a class specifically reserved to some other department of the pontifical administration. It is more particularly true of the Congregation of the Holy Office. Matrimonial cases are very frequently brought before Propaganda, especially those in which the marriage is alleged to be invalid, either as null
PROPAGANDA

from the beginning or because it was never consumed.

The procedure in such cases is as simple as it is practical: Propaganda having been appealed to by one party, directs the local episcopal court to hold a canonical trial and to report its results to the congregating. Propaganda sifting, under its own authority, defendant and plaintiff, may protect themselves by legal counsel at their own expense. When the congregation has received the record of the local court, it transmits the same to a consultant with a request for his opinion on the objective status of the question at issue (pro re versatilc). If the opinion be in favour of the nullity or of the non-consummation of the marriage, then the record, together with the opinion of the consultant, is sent on to a second consul-

tor (pro vinculis defensores), whose duty it is to set forth the grounds, more or less conclusive, that can be adduced in favour of the validity, or consummation, of the marriage, and therefore of its indissolubility. The local record and the opinions of the consultants (ponentes) are then printed in as many copies as there are cardinal-judges in the con-

gregation. This printed p Slovenz is sent to each of these cardinals (the printed document is held to be secret, being looked on as manuscript) that they may examine the matter. One of them (cardinale pon-

ente) is selected to summarize the entire case, and his summary turns over to the local consultor and the opinions of the consultants, with the obliga-
tion of reporting on the case at the next General Congregation. At this meeting, the cardinals, after mature discussion, pronounce judgment. Their decision is immediately submitted to the pope, who ratifies it, if he sees fit, and orders the proper decree to be issued.

It should be added that all these proceedings are absolutely without expense to the litigants (gratia quan-

daei) i.e. no one must make any payment to the congregation because or on ac-

count of any favour or decision. Thus, the wealthi-
est Catholic in America, Great Britain, Holland, or Germany, who has brought a matrimonial case before Propaganda, pays literally nothing, whatever the judgment may be. There are no chancery expenses, and nothing is collected even for the printing of the diocesan records, consultants' opinions, etc. This fact shows how absurd are certain calumnies uttered against the Holy See, especially in connexion with marriage annulments, as though a marriage could be procured at Rome by the use of money. Were such the purpose of the Roman Curia, it would not exempt the richest countries of the world—those precisely in which it is easiest for persons of opulence to institute legal proceedings—from any expense, great or small, direct or indirect.

VI. INCIDENTAL FEATURES.—Propaganda for-

merly possessed a valuable museum, the Museo Borgi-

ano (situated in the palace), so called because it was given by Cardinal Stefano Borgia, who was general of the church in the fourteenth century. It once contained precious Oriental codices, es-

cially Sahidic (Coptic of the Thebaid) now pre-

served with other Coptic codices in the Vatican Li-

brary, for the greater convenience of students. It pos-

sesses at the present time an important cabinet of medals and many ethnological curiosities sent as gifts by missionaries in far distant lands, and scattered through the Palace of Propaganda are many valuable paintings of the old masters. Propaganda also conducted, until within recent years, the famous Propaganda Press where were issued liturgical and catechetical books, printed in a multitude of alphabets. Among its most note-

teworthy curios is a Japanese alphabet in wooden blocks, one of the first seen in Europe. The Prop-

aganda Press issued, among other publications, an official statistical annual of the missions conducted

by the congregation (Missiones Catholicae cura S. Congreg. de Propaganda Fide descriptae), as well as the "Collectanea", a serial record of pontifical acts relating to the business of the congregation. In 1884 the Italian Government liquidated the real estate of Propaganda, and sold it only at a fraction of its true value. The building was sold to the Mignanelli palace for the use of its schools, its printing press, and two villas used as summer resorts for the students of the Urban College.

One of the customs of Propaganda, worthy of special mention, is the gift of a fan to all employees at the beginning of the summer. This custom appears to have arisen in the early days, when fans were sent from China by the missionaries. It is cus-

tomary for the Urban College to hold, at Epiphany, a solemn "Accademia Polyglotta", to symbolize the world-wide unity of the Catholic Church. At this accademia the Propaganda students recite poems in their respective mother tongues. Invited guests always find it very interesting to listen to this medley of the strangest languages and dialects. Another custom of the Urban College is that each graduate student (alumno), wherever he may be in the pursuit of his ministry, is bound to write every year a letter to the cardinal prefect, to let him know how the writer's work is progressing and how he fares himself. The cardinal answers immediately, in a letter of paternal encouragement, which local standard and maintained a bond of affection and of mutual good-

will between the "great mother"—as the "Propag-

andists", or the alumni of Propaganda, designate the congregation—and her most distant sons.

The names of many distinguished persons appear in the records of Propaganda, notably in the catalogue of its cardinals, prelates, and officials. Among the cardinal prefects entitled to special mention are the following: Giuseppe Sagrimenti (d. 1727), a meri-
deant Venetian jurist and of a very learned Barnabite Sigismondo Gerzilli (d. 1802); Stefano Borgia, patron of Oriental studies, protector of the savant Zeoga (d. 1804); Ercole Consalvi (d. 1824), the great diplomatist, Secretary of State to Pius VII, at whose death he was made prefect gen-

eral of Propaganda by Leo XII; Mauro Cappellari, later Gregory XVI, who was prefect general from 1826 to his election as pope (1831). Among the General Secretaries (who usually become cardinals) the fol-

lowing are particularly worthy of special mention: Nicolò Fortiguerra, a distinguished man of letters (d. 1739); the erudite Angelo Mai, secretary from 1833 to 1838. The list of missionaries sent forth by Propaganda has been long and glorious, containing the names of many famous. The principal church of Propaganda is St. Fidelis of Sigmaringen, a German Capuchin missionary in Grisons, Switzerland. The Calvinists killed him in the village of Sercis, 24 April, 1622. He was canonized by Benedict XIV in 1746. Propaganda holds at all times a grateful memory of the Dominican Carmelites. It was they who vigorously urged the Holy See to found the congregation, foremost among them being Domenico de Gesù e Maria, general of the order. In the original act of its foundation he appears as a member. Tommaso da Gesù, another Carmelite, opportunist published in 1613, at Antwerp, a Latin work on the obligation of preaching the Gospel to all nations.

Many authors have treated of Propaganda very inaccurately, and have confused the ancient and recent systems of adminis-

U. BENIGNI

Propagation of the Faith. The Society for the Propagation of the Faith is an international association for the assistance by prayers and alms of Catholic missionary priests, brothers, and nuns engaged in preaching the Gospel in heathen and non-Catholic countries.

I. ORIGIN AND DEVELOPMENT. It was founded in Lyons, France, in 1822, as a result of the distress and persecution endured in France by the faithful and the clergy. In 1815, Bishop Dubourg of New Orleans was in Lyons collecting alms for his diocese, which was in a precarious condition. To a Mrs. Petit, whom he had known in the United States, he expressed the idea of founding a charitable association for the support of Louisiana missions, which suggestion she cordially embraced, but could procure only small sums among her friends and acquaintances. In 1820, Pauline Jaricot of Lyons received a letter from her brother, a student at the Seminary of the Immaculate Conception, in which he described the poverty of the members of the Foreign Missions of Paris. She conceived the idea of forming an association whose members would contribute one cent a week for the missions. The membership rose to a thousand and the offerings were sent to Paris. In 1822, Miss Jaricot of Lyons, New Orleans, was sent to Lyons by Bishop Dubourg to visit his benefactors and reanimate their zeal. The success of Miss Jaricot, they thought at first of establishing a similar society for American missions, but decided to unite, instead of dividing, efforts.

A meeting of the friends of the missions called by Father Inglese was attended by twelve ecclesiastics and laymen, and on 3 May, 1822, the Society for the Propagation of the Faith was formally established. Its object was declared to be to help Catholic missionaries by prayers and alms. It was understood that the new association should be catholic, that is, endeavour to enlist the sympathy of all Catholics, and assist all missions, without regard to situation and nationality. However, it is not the aim of the society to help "Catholic countries," no matter how needy their needs may be, for that reason France, Italy, Austria, Spain, Portugal, etc., have never received help from it. For the same reason, as soon as missions are able to exist by their own efforts the society withholds its aid, andascade the demands on the resources inadequate. In 1823, a delegate was sent to Rome and Pius VII heartily approved the new undertaking, and granted the indulgences and other spiritual privileges that permanently enrich the society, which judgment has been ratified by all his successors. In 1840, Gregory XVI placed the society in the rank of Universal Catholic institutions, and on 25 March, 1894, in the first year of his pontificate, Pius X recommended it to the charity of all the faithful, praising it, confirming its privileges, and raising the feast of its foundation to a higher rite.

A large number of provincial and national councils (especially the III Council of Baltimore, 1884), as well as thousands of bishops from all parts of the world, have likewise enacted decrees and published letters in favour of its development. It receives contributions from all parts of the Christian world.

Organization. The organization is extremely simple. To become a member it is necessary to recite daily a prayer for the missions, and contribute at least five cents monthly to the general fund. As the society is organized in Catholic countries, the usual method for gathering the contributions is to form the associates into bands of ten, of whom one acts as a promoter. These offerings are turned over to some local or diocesan director and finally forwarded to the general committee. Besides the ordinary members, there are special members who contribute personally 50 dollars a year, and promote or assist at one time a sum of at least forty dollars. The official organ of the society is the "Annals of the Propagation of the Faith," the first number of which appeared in France in 1822. At present 350,000 copies of that publication are printed bi-monthly in French, English, German, Italian, Spanish, Portuguese, Dutch, Polish, Flemish, Basque, Maltese, and the dialects of Brittany. The "Annals" contains letters from missionaries, news of the missions, and reports of all money received and apportioned by the society. It is illustrated magazine, "Christian Missions," published by the society in Italy, France, England, Germany, Holland, Spain, Poland, Hungary, and the United States.

Administration. The Society for the Propagation of the Faith takes no part in selecting missionaries, appointing them to their field of work, or training them for it, and does not concern itself with the administration of the missions. Its aim is merely to assist missionaries chosen, trained, and sent forth by the Catholic Church. The missions are administered by two central councils, each composed of twelve clergymen and laymen of recognized ability and knowledge of business affairs, and distinguished for zeal and piety. These councils, one of which is in Lyons and the other in Paris, are self-recruiting, and work purely gratuitously. They keep in close touch with the missions, serve as headquarters for the distribution of the alms received from the delegates of the society, to whom they pass successively from the diocesan and parochial directors, and the promoters of bands of ten. Every year, at the end of January, the offerings of the members of the society all over the world are forwarded to these central bureaux, and the total amount is divided among all the missions of the earth. With conscientious care and impartiality the reports of the superiors of the missions, bishops, vicars and prefects, Apostolic are studied and all allotments recommended, in accordance with the extent and necessities of each mission, and in consideration of the desires of the pope and the data furnished by the Congregation of the Propagation of the Faith. The Lyons Central Council first examines the reports, and finally submits the allotments which are sent to each mission. It is a law of the society to make its affairs public, and each year an integral account of all money received, all appropriations made, and all expenditures is published in the "Annals." The society does not deal in investments and has no permanent fund. At the beginning of each year the total sum collected during the past year is distributed, and the missions are always at the mercy of the faithful.

Results Obtained. In 1822, the society collected a little more than 8000 francs. The sum was divided in three parts, of which one was assigned to the Eastern missions, the other two to Louisiana and Kentucky. At present about three hundred dioceses, vicariats and prefectures Apostolic receive assistance and the total amount collected up to 1910, inclusively, is $785,846,872.51. The following will show the part each country has taken in furnishing the sum, and in what year the society was established there:

he to whom the substance of a thing belongs is called its proprietor: first, because the right to the substance is the highest right; secondly, because this right naturally tends to grow into absolute ownership. The tenant, for instance, enjoys the usufruct of a thing only through a cause which lies outside his will, i.e. through a contract. If this cause is removed, then he loses his right, and the thing reverts to him to whom the substance belongs. The right to the substance necessarily implies the absolute right of disposal as soon as any accidental, external limitations are removed. This is probably the reason why lawmakers, when establishing the definition of property, take into consideration only absolute ownership. Thus the French civil code (544) defines ownership as "the right to make use of the possession in corporeal thing absolutely provided it be not forbidden by law or statute"; the code of the German Empire (903) says: "The proprietor of a thing may use it as he likes and exclude from it all outside interference, as long as the law or the rights of others are not violated and in Blackstone (Comm. 1, 128) we read that the right of property "consists in the free use, enjoyment and disposal of all acquisitions, without any control or diminution, save only by the laws of the land."

The statement has been made that the Roman law set up a definition of property which is absolute and excludes all legal restrictions. This is not correct. The Roman jurists were too vividly conscious of the principle Salus publica suprema lex to exempt private property from all legal restrictions. No clearer proof is needed than the numerous easements to which the Roman law subjected property (cf. Puchta, "Kursus der Institutionen", II, 1842, 551 sqq.). Precisely in order to exclude this erroneous conception, the Roman jurists, following the example of Bartolus, formulated in general terms definition for the right of property: "It is possible to dispose perfectly of a material thing in so far as it is not forbidden by law (Jus perfecte disponendi de re corporali nisi lego prohibeat). Again, man is essentially a social being. Consequently, all rights granted him are subject to the necessary restrictions which are demanded by the common welfare and more accurately determined by law. This right of disposal which the civil power exercises over property has been called dominium altum, but the term is misleading and should be avoided. Ownership gives to the person the right to dispose as he sees fit, but private interests as he sees fit. The Government has no right to dispose of the property of its subjects for its private interests, but only as far as the common weal requires.

Classes of Property.—If the holder of the right of ownership is considered, property is either individual or collective, according as the owner is an individual (a physical person) or a community (a moral person). Individual property is also called private property. Again, collective property differs as the community. Those estates are real collective property which have for ever been set aside for a fixed purpose and are, by a sort of fiction, considered as a person (persona juridica, ficta), for example, endowments for pious purposes or for the public benefit: hospitals, orphanages. For the actual administrators or usufructuaries are not to be regarded as proprietors of the endowment. Furthermore, property may be either public or private. Public property is the property of a public community, namely, the State and the Church. Everything else is private property. However, in the distinction between private and public property arises not only from difference in ownership, but also from difference in purpose. Public property is intended to serve the interests of the community at large; private property, the interests of a limited circle. Public property is private property, even if it belongs to

On 25 March, 1904, Pius X addressed an encyclical letter to the Catholic world recommending the Propagation of the Faith to the charity of all the faithful, in which he says: "If the messengers of the Catholic doctrine are able to reach out to the most distant lands, and the most barbarous peoples, it is to the Society for the Propagation of the Faith that credit must be given. Through that Society salvation began for numberless peoples... through it have there been gathered a harvest of souls..." In 1884, His Eminence Cardinal Gibbons, writing to the directors of the society in the name of the American hierarchy asserted the exclusive right for the international Council of the Church said: "If the grain of mustard seed planted in the virgin soil of America has struck deep roots and grown into a gigantic tree, with branches stretching from the shores of the Atlantic ocean to the coasts of the Pacific, it is mainly to the assistance rendered by your admirable Society that we are indebted for this blessing."

PROPERTY.—I. NOTION OF PROPERTY.—The proprietor or owner of a thing, in the current acceptance of the word, is the person who enjoys the full right to dispose of it in so far as it is not forbidden by law. The thing or object of this right of disposal is called property, and the right of disposal itself, ownership. Taken in its strict sense, this definition applies to absolute ownership only. As long as the absolute owner does not exceed the limits set by law, he may dispose of his property in any manner whatsoever; he may use it, alienate it, lease it etc. But there is also a qualified ownership. It may happen that several persons have different rights to the same thing, one subordinate to the other: one has the right to the substance, another to its use, a third to its usufruct, etc. Of all these persons he alone is called the proprietor who has the highest right, viz., the right to the substance; the others, who hold subordinate, are not called proprietors. The tenant, for example, is not said to be the proprietor of the land he tills, nor the lessee proprietor of the house in which he dwells; though both have the right of use or 'usufruct' they do not the highest right, namely the right to the substance. There are two reasons why
the family as a whole. Not all collective property is public property. The property of a community remains private as long as that community is able to exclude outsiders from participating in its enjoyment. But when a community admits of immigration or of permanent settlement, like the rest, sharing in its property, that property ceases to be private. If we consider the object of ownership, property may be movable or immovable. Immovable property consists in land (real estate), and in everything so attached to the land that, as a rule, it cannot be transferred from one place to another without undergoing a change in its nature. All the rest is movable property. Lastly, the purpose distinguishes property into goods of consumption and goods of production, according as the goods are directly intended either for production, i.e., for producing new goods, or for consumption.

III. Possession differs essentially from property. At times, possession denotes the thing possessed, but generally it means the state of possessing something. He possesses a thing who has actual control over it and intends to keep it. Possession may be just or unjust, as is the case with the thief who has knowingly taken the property of another. Since such possession is manifestly unjust, it is forbidden to the possessor no more than to the thief. On the other hand, it may happen that one is bona fide possessor of another's property. Such possession implies certain rights. It is incumbent on the owner to prove that the thing does not belong to the possessor. If he is unable to furnish this evidence, the law protects the actual possessor of the thing under dispute. The basic reason why possession must not be neglected when ownership is disputed is that under normal conditions possession is the result of ownership. For, generally speaking, the possessor is the owner of a thing. Thus, being the normal state of affairs, the law favours the presumption that the actual possessor is also the legal possessor and consequently holds that nobody has the right to evict him unless the illegality be proved. He who seeks to overturn existing conditions as being unjust must bear the burden of proof. Should this principle be denied, the security of property would be greatly endangered.

IV. Opponents of Private Property.—The present order of society is largely based on the private ownership of property. Familiarity with this is necessary. Now there are many communists and socialists who condemn this kind of ownership as unjust and injurious, and who aim at abolishing either all private property or at least the private ownership of productive goods, which they wish to replace by the collective ownership of goods. Their intention may be good, but it proceeds from a total misunderstanding of human nature as it is, and, if carried out, would result in disastrous failure (cf. COMMUNISM and SOCIALISM). The so-called agrarian socialists, among whom must be numbered the anarchist-taxis, do not propose to abolish private ownership of all productive goods, but maintain only that the land with the natural bounties which it holds out to mankind essentially belongs to the whole nation. As a logical conclusion they propose that ground rent be confiscated for the community. This theory, too, starts from false premises and arrives at conclusions which are impracticable. (See AGRARIANISM.)

V. Insufficient Justification of Private Property.—Outside the communist and socialistic circles, the question of private property is mainly appraised in the works of jurists, but in regard to its foundation opinions differ widely. Some derive the justice of private property from personality (personality theory). They look upon private property as a necessary supplement and expression of human personality. Thus, for instance, F. A. von Savigny (Recht der Vererbungs- und Erbrechtsrecht', 6th ed., 1871, §68) thinks that the "individuality of every human mind, in choosing and retaining its ends, requires property, i.e., the free contract and disposal of holdings, whereby the entire personality is brought into action. Similar views are held by Bluntschli, Stahle, and others. This theory admires in property the element of individual personality, but it itself too indefinite and vague. If it is understood to mean only that, as a rule, private property is necessary for the free development of the human personality and for the accomplishment of its tasks, then it is correct, as will appear in the course of our discussion. But if these theorists remain within the pure notion of personality, then they cannot derive from it the necessity of private property, at least of productive goods or land. At most they might prove that everybody is entitled to the necessary means of subsistence. But this is possible without private property strictly so called. Those who are either voluntarily or involuntarily poor and live at the expense of others possess no property and yet do not cease to be persons. Though the children of a family are without property during the lifetime of their parents, still they are true persons. Others derive private property from a primitive contract, express or tacit (contract theory), as Grotius (De jure bell et pacis, II, c. 2, § 2), Pufendorf, and others. This theory is founded on the supposition, which has never been and never will be proved, that such a contract ever has or must have taken place. And even supposing the contract was actually made, what obliges us to-day to abide by it? To this question the theory is unable to give a satisfactory answer.

Others again derive the justice of private property from the laws of the State (legal theory). The first to advance this hypothesis was Hobbes (Leviathan, c. 2). He considers the laws of the State as the fountain-head of all the rights which the subjects have, and consequently also as the source of private ownership. The same view is taken by Montesquieu, Trendelenburg, Wagner, and others, as far as ownership is concerned. Kant (Rechtslehre, p. 1, §§ 8, 9) grants indeed a provisory proprietorship in the condition of nature prior to the formation of the State; but definite and peremptory ownership arises only through the civil laws and under the protection of the coercive power of Government. Most of the partisans of this theory, like Hobbes, proceed from the wrong supposition that there is no natural right put to a certain thing, but that every person has a concession of the civil power. Besides, their appreciation of actual facts is superficial. It is true that the laws everywhere protect private property. But why? A fact, like private property, which we meet in one form and another with all races, ancient and modern, cannot have its last and true reason in the civil laws which vary with time and clime. A universal, constant effect supposes a universal, constant cause, and the civil laws cannot be this cause. If they were the only basis of private property, then we might abolish it by a new law and introduce communism. But this is impossible. Just as the individual and the family existed prior to the State, so the rights necessary for both, to which belongs the right of property, existed prior to the State. It is the duty of the State to bring these rights into harmony with the interests of the community at large and to watch over them, but it does not create them.

John Locke saw the real foundation of private property in the right which every man has to the produce of his labour (labour theory). This theory was highly applauded by Smith and especially by Adam Smith, Ricardo, Say, and others. But it is untenable. There is no doubt that labour is a powerful factor in the acquisition of property, but the right to the products of one's labour cannot be the right to property. The labourer can sell the product of his work his own only when the material on which he
works is his property, and then the question arises how he came to be the owner of the material. Suppose, for instance, that a number of workmen have been engaged to cultivate a vineyard; after the work is done, the grapes and the wine, do not belong to them, but to the owner of the vineyard. Then the further question may be asked: How did the owner of the vineyard acquire his property? The final answer cannot be the right to the product of his labour. There were some who asserted that the Roman law derived private property solely from the right of first occupation (ius primi occupantis), as for instance Wagner (Grundlegung I, c. §102). But they confounded two things: Though the Roman jurisprudence occupied the original title of acquisition, they supposed as self-evident the right of private property and the right to acquire it.

VI. The Doctrine of the Catholic Church.—The Catholic Church has always regarded private property as justified, even though there may have existed personal abuses. Far from abolishing the commandments of the Old Law (Thou shalt not steal; thou shalt not covet thy neighbour's house), anything that is his) Christ inculcated them anew (Matt., xix. 21; Rom. v. 10). On the contrary, the Catholic Church, following in the footsteps of its Founder, has always recommended voluntary poverty as an evangelical counsel, yet she has at the same time asserted the justice and, as a rule, the necessity of private property and rejected the contrary theories of the Circumcellions, Waldenses, Anabaptists etc. Moreover, theologians and canonists have at all times taught that private ownership is just. Leo XIII, especially in several encyclicals, strongly insisted on the necessity and justice of private ownership. Thus the encyclical "Rerum novarum" expressly condemns as unjust and pernicious the design of the socialists to abolish private property. The right of acquiring private property has been granted by nature, and consequently he who would seek a solution of the social question must start with the principle that private property is to be preserved inviolate (privata possessiones inviolate servandas). And Pius X, in his Motu Proprio of 18 Dec., 1903, laid down the following two principles for the guidance of all Catholics: (1) "Unlike the beast, man has on earth not only the use, but a person who owns it, and this is true not only of those things which are consumed in their use, but also of those which are not consumed by their use"; (2) "Private property is under all circumstances, be it the fruit of labour or found in alienation or donation, a natural right, and everybody may make such reasonable disposal of it as he thinks fit."

VII. Economic Theory Based on the Natural Law.—The doctrine of the Church has here explained how the right way to a philosophical justification of private property is to be derived from the natural law, since the present order in general demands it for the individual as well as for the family and the community at large; hence it is a postulate of reason and everybody receives by nature the right to acquire private property. This justification of private property, which is outlined by Aristotle (Politi., 2, c. 2), may be called the "economic theory based on the natural law". The necessity of private ownership arises partly from the external conditions of life under which the human race actually exists, partly and especially from the human experience, with all its needs and faculties, inclinations both good and bad, which the average man reveals at all times and in all places. This theory does not assert that there should be nothing else than private property of individuals only. Families, private corporations, communities, and states, as well as the Church, may own property. Its distribution is not something settled by nature uniformly and immutably for all times and circumstances, but full play is given to human liberty. Generally speaking, what is necessary, that property must also exist. The boundaries between private and public property may vary from age to age; but, as a rule, private ownership becomes the more necessary and the more prevalent the farther the civilization of a people progresses.

In order to gain a clear insight into the basis of property, we must carefully distinguish three things: (1) The institution of private property, i.e. the actual existence of private property with all its essential rights. In general, it is necessary that private property should exist, at least to a certain extent, or, in other words, the natural law demands the existence of private property. From the necessity of private property follows immediately (2) every man's right to acquire property. The institution of private property supposes this right; for the former cannot rightly exist unless everybody has the right to acquire private property. Nature, or rather the Author of nature, requires the institution of private property; hence He must also will the means necessary for nature, namely, property. And this is what we call private property. This right refers to no object in particular; it is merely the general capacity of acquiring property by licit means, just as one may say that owing to the freedom of trade everybody has the right to engage in any legitimate business. The right to acquire property belongs to every man from the first moment of his existence; even the child of the poorest beggar has this right. (3) From the right of acquisition arises the right of owning a certain concrete object through the medium of some fact. Nobody, basing his claim on his existence alone, can say: this field or this house is mine. God did not distribute immediately the goods of this earth among men. He left this distribution to man's activity and to historical development. But since private property and consequently the acquisition of a definite object by a definite person is necessary, there must also be some facts on which such acquisition may be based. Among these facts the first in time and by nature is simple occupation. Originally the goods of this earth were without a definite owner, i.e. there was nobody who could claim the right of ownership. But since they had been given to man and since everybody had the right of acquiring property, the first men could take as much of these goods by simple occupation as seemed useful to them. Later generations, too, could make their own goods, still without a master. As time went on and the earth was populated, its goods passed more and more into the hands of individuals, families, or whole tribes. Now in order to acquire or occupy something, the more will to possess it as private property is not sufficient; the object must come for a fair price, or be brought under our control and must be permanently marked as our own. These marks may be of various kinds and depend on custom, agreement etc.

Philosophical Explanation.—We shall prove first of all that, generally speaking, the institution of private property is necessary for human society and that it is consequently a postulate of the natural law; this established, it follows at once that the right of acquiring property is a natural right. The first reason for the necessity of private property is the moral impossibility of any labor. If all goods remained without a master and were common to all, so that anybody might dispose of them as he saw fit, then peace and order would be impossible and there would be no sufficient incentive to work. Who should own the private property of individuals only. Families, private corporations, communities, and states, as well
PROPERTY

Like the individual, the family, when deprived of all property, easily falls into a vagabond life or becomes wholly dependent on the will of others. The duty to care for the preservation and education of the family and mother honoredly, while the consciousness that they are responsible for their children before God and men is a powerful stay and support of their moral lives. On the other hand, the consciousness of the children that they are wholly dependent on their parents for their maintenance and start in life is a very important element in their education. The socialists are quite logical in seeking to transfer not only the possession of productive goods, but also the care of the education of children to the community at large. But it is obvious that such a scheme would end in the total destruction of the family, and hence that socialism is an enemy of all genuine civilization.

Private property is also indispensable for human society in general. Progress in civilization is possible only when many co-operate in large and far-reaching enterprises; but this co-operation is out of the question unless there are many who possess more than is required for their ample maintenance and at the same time have an interest in devoting the surplus to such enterprises. Private interest and public welfare here meet; and each, if he consults only his own interest, will use their property for public enterprises because these alone are permanently paying investments. The advances and discoveries of the last century would not have been accomplished, at least the greater part of them, without private property. If we but recall the extensive net-work of railroads, steamships, lines, telegraphs, and telephones, which is spread around the world, the gigantic tunnels and canals, the progress made in electricity, aerial navigation, aviation, automobiles etc. we must confess that private property is a powerful and necessary factor in civilization. Not only economic conditions, but also the higher fields of culture are bettered by the existence of wealthy proprietors. Though they themselves do not become artists and scholars, still they are indirectly the occasion for the progress of the arts and sciences.

The rich can order works of art on a large scale, only they have the means that frequently are necessary for the education of artists and scholars. On the other hand, wealth can make many be eminent artists and scholars. Their advance in life and their social position depend on their education. How many brilliant geniuses would have been crippled at their birth if fortune had granted them every comfort. Lastly, we must not overlook the moral importance of private property. It urges man to labour, to save, to be orderly, and affords both rich and poor frequent opportunity for the exercise of virtue.

Though private property is a necessity, still the use of earthly goods should be regulated by reason. As Aristotle intimated (Polit., i, 2, c. 5) and as Christian philosophy has proved in detail (St. Thomas, "Summa" II-II, Q. xvi, a. 2; Leo XIII's encycl., "De conditione opificum"). This end is obtained when the rich not only observe the laws of justice by not taking unjust advantage, but also, out of charity and liberality, share their abundance with the needy. Earthly goods are meant to be, in a certain manner, useful to all men, since they have been created for all men, and consequently the rich are strictly obliged to share them with others as much as possible.

True Christian charity will even go beyond this strict obligation. A wide and fertile field is thus opened up to its activity, through the existence of poverty. For the poor themselves, poverty is a reward, but beneficial, school of trust in God, humility, renunciation. It is of course true that property should not degenerate into wretchedness, which

XII.—30
is no less an abundant source of moral dangers than is excessive wealth. It is the function of a wise Government so to direct the laws and administration that a moderate well-being may be shared by as many as possible. Civil war now and then need not result from conflict of men by taking away from the rich in order to give to the poor, for "this would be at bottom a denial of private property"; but by regulating the titles of income in strict accordance with the demands of public welfare.

Thus far we have spoken of the necessity of private property for the civil welfare of a nation. We have seen that it is one of the essential conceptions of a government even as a religious. After a long period of time, then, when the whole country has been turned into property, occupation loses its significance as conferring a right to real estate. But for movable goods it still remains important. It is sufficient to recall fishing and hunting on unclaimed ground, searching and digging for gold or diamonds in regions which have not yet passed over into private ownership. Many regard labour as the primitive title of acquisition, that is, labour which is different from mere occupation. But in this they are wrong. If we consider an object and its product that is in a sort his, only when he is proprietor of the object, the material; if not, then the product belongs to another, though the workman has the right to demand his reward in money or other goods. Now the question again recurs: How did this other man obtain possession of these goods? Finally we shall arrive at a primitive title different from labour, and this is occupation. Besides occupation there are other titles of acquisition, which are called subordinate or derivative, for instance, accession, fruition, conveyance by various kinds of contracts, prescription, and especially the right of inheritance. By occupation an ownerless thing passes into the possession of a person, by accession it is extended, by the other derivative titles it passes from one possessor to another. Though all these titles mentioned, with the exception of prescription, are valid by the law of nature, and hence cannot be abolished by human laws, still they are not precisely and universally applied by natural law. To define them in individual cases in accordance with the demands of the public welfare, with due regard to all concrete circumstances is the task of legislation.

V. CATHREIN.

Property Ecclesiastical.—Abstract Right of Owners.—That the Church has the right to acquire and possess temporal goods is a proposition which may now probably be considered an established principle. But though almost self-evident and universally acted upon in practice, this truth has met with many contradictions. Scandalized by frequent examples of greed, or misled by an impossible ideal of a clergy entirely spiritualized and raised above the sordidness of the world, (see, e.g., the somewhat later Marsilius of Padua, and finally the Wycliffites, formulated various extreme views regarding the lack of temporal resources which befitted ministers of the Gospel. Under John XXII the doctrine of Marsilius and his forerunners had provoked the two Decretals of Genoa (13 Nov., 1323) and "Lieto juxta doctrinam" (23 Oct., 1323) by which it was affirmed that our Lord and His Apostles held true ownership in the temporal things which they possessed, and that the goods of the Church were not rightfully at the disposition of the emperor (see Denzinger-Bannwart, no. 494-5). Somewhat less than a century later the errors of Wyclif and Hus were condemned at the Council of Constance (Denzinger-Bannwart, n. 586, 598, 612, 694-5, etc.) and it was equivalently defined that ecclesiastical persons were not entitled to temporal possessions, that the civil authorities had no right to appropriate ecclesiastical property, and that if they did so they might be punished as guilty of sacrilege. In later times these positions have been still more extended, so that now, especially in the Encyclical "Quanta cura" (1864) condemned the opinion that the claims advanced by the civil Government to the ownership of all church property could be reconciled with the principles of sound theology and the canon law (Denzinger-Bannwart, n. 1607, and the appended Syllabus, propa. 26 and 27).

But apart from these and other similar pronouncements the right of the Church to the complete control of such temporal possessions as have been bequeathed upon her is grounded in the faith. The truth of this is attested not only by the utterances of St. Paul, for example, the argument in I Cor. ix, 3 sq., and finally the interpretation of the doctors and pastors of the Church at all periods, recognizes no dependence upon the State, but shows plainly that the principle of absolute ownership and free administration of ecclesiastical property has always been maintained. It may be further noted that in some of the sternest of her disciplinary enactments the Church has proved that she takes for granted her dominion over the goods bestowed upon her by the faith. Thus in the 22nd Decree of the Ecumenical Council of Lyons (1274) pronounces excommunication ipso facto against those lay persons who seize and detain the temporal possessions of the Church (see Friedrich, "Corpus Juris", II, 853 and 1059) and the Council of Trent followed suit in its Ses. XXII (De ref. c. xi) by launching excommunications latae sententiae against those who usurped many different kinds of ecclesiastical property.

Subject of Rights of Property.—But while the abstract right of the Church and her representatives to hold property is clear enough, there has been in past ages much vagueness and diversity of view as to the precise subject in whom this right was vested. The idea of a corporate body, as that of an organized group of men (universitas) which has rights and duties other than those and duties of all or any of its
members, existed, no doubt, at least obscurely in the early centuries of the Roman Empire. Before the time of Justinian it was pretty clearly apprehended that the members of such a group formed legally but a social whole, a set of "fictitious persons", though this conception of the *persona ficta* dear to the medieval legislists and perpetuated by men like Savigny, is not perhaps quite so much in vogue among modern students of Roman law (cf. Gierke, *Die deutsche Genosenschaftsrecht*, III, 129–36). It was at any rate recognized that this "fictitious person", or "group-person", was not subject to death like the individuals of which it was composed, and on the other hand that it could not be called into existence by private agreement. It required a *sacramentum* or something of the sort to be legally constituted.

These well-understood principles, we might suppose, could easily have been invoked to regulate the ownership of property in the case of the Christian communities established in the Roman Empire, but the question in point of fact was complicated by a survival of the ideas which attached to what were called *res sacrae* in the old days of paganism. This title of "sacred things" was given to all property or utensils consecrated to the gods, though it was regarded as something which should be extinguished by any recognition of such consecration. As *res sacrae* these things were regarded as in a sense withdrawn from the exercise of ordinary ownership, and formed a category apart. The truth seems to be that the gods themselves in pagan times were often conceived of as the owners. This is suggested by the fact that while it was ruled that the gods, i.e., their temples, could not inherit at law, still certain deities were explicitly exempted from this inhibition and were allowed to inherit as any private individual inherited. Such deities were, for example, Jupiter Tarpeius at Rome, Apollo Didymius of Miletus, Diana of the Ephesians, and others (Ulpian, "*Frage*, 22, 6). In similar wise when Christianity became the established faith of the empire, "Jesus Christ" was often appointed heir, and Justinian construed such an appointment as a gift to the Church of the place of the testator's domicile (Codex 1, 2, 25). The same principles were followed when an archangel or a martyr was appointed heir, and this, Justinian tells us, was sometimes done by educated people. This was to be made to some shrine or church bearing that dedication which the circumstances indicated, and, failing such indication, to the church of the testator's domicile (Codex 1, 2, 25). The civil power in any case seems to have assumed a certain prospective control over *res sacrae* probably with the view of safeguarding their inviolability. "Sacred things", we read, "are things that have been duly, that is by the priests (*pontifices*), consecrated to God—sacred buildings, for instance, and gifts duly dedicated to the service of God. And these by their constitution have for their laws the holy law of God, to be hidden to be alienated or burdened (*obligari*) except only in order to ransom captives. But if a man by his own authority establish a would-be sacred thing for himself, it is not sacred, but profane. A place, however, in which sacred buildings have been erected, even if the buildings be pulled down, remains still sacred, as Papinnian too wrote" (Institutes, II, i, 8).

As regards alienation, however, we may compare Cod. 1, 2, 21, which allowed the sale of church property to sustain the lives of men during a famine, and which is confirmed. We put aside, however, finally the debt, of a church's superfluous vessels but not of its immovables or things really necessary.

These and similar provisions have been invoked to support very divergent theories as to the ownership of church property under the empire. The real fact seems to be that the jurists of the early centuries had no clear conception as to the precise subject of these rights was ever adopted. In later times many canonists, like Philipps and Lammer, have maintained that the property was vested in the Church (ecclesia catholica) as a whole. Others like Beitz and Thomasinus assume that the bishop was the true proprietor. Himself is regarded as the true proprietor. To others again, and notably to Savigny, the theory has commend itself that the Church held property as a community, while many still more modern authorities, with Friedberg, Schmoller, and Menzler, defend the view that each separate local church was regarded as an institution with proprietary rights and was identified, at least popularly, with its patron saint. According to this conception the saints were the successors of the pagan gods, and whereas previously Jupiter Tarpeius, or Diana of the Ephesians, had owned land and revenues and sacred vessels, so now under the Christian dispensation St. Michael or St. Mary or St. Peter were regarded as the proprietors of all that belonged to the churches that were respectively dedicated to them.

No doubt this view obtains some apparent support from the fact that almost everywhere, and notably in England, at the dawn of the Middle Ages we find testators bequeathing property to saints. In the oldest Kentish charter of which the text is preserved the newly-consecrated church was given to St. Andrew, and to thy church at Rochester where Justus the bishop presides, do I give a portion of my land." Even as late as the Domesday inquisition the saint is often depicted as the landowner. "St. Paul holds land, St. Constantine holds land, the Count of Mortain holds lands of St. Peter—the church of Worcester, an episcopal church, has lands, and St. Mary of Worcester holds them" (Pollock and Maitland, *Hist. of English Law*, I, 501). But the most recent authorities, and amongst others Professor Maitland himself in his admirable edition, are inclined to regard such phrases as mere popular locutions, a personification which must not be pressed as if it involved any serious theory as to the ownership of ecclesiastical goods. The truth seems to be, as Knecht has shown (System des Justinianischen Kirchenvermögensrechts, pp. 5 sq.), that the Christian Church was a unique institution which it was impossible for the traditional conceptions of Roman law to assimilate successfully. The Church had its own system, its own practice, and its own traditions. In the meantime the rights of ecclesiastical property were protected efficiently enough in practice and the questions of legal theory did not occur, or at any rate did not press for a solution.

From the time of the Edict of Milan, issued by Constantine and Licinius in 313, we hear of the restoration of the property of the Christians "known to belong to their community, that is to say their churches, and not to the individuals" ("ad jus corporis eorum, id est ecclesiarii, non hominum singulorum continentia")—Laurentius, "De morte pers." xlivii), while a few years later by the Edict of 321 the right of bequeathing property by will "to the most holy and venerable community (concilio) of the Catholic faith" was guaranteed. Practically speaking there can be little doubt that this Christian "concilium", "collegium", "corpus" or "conventulum" (the words principally used to indicate the body of true believers) denoted primarily the local Christian assemblies represented by their bishop and that it was to the bishop that the administration of such property was committed. It stands out, therefore, that the enactments of the time of Justinian was the recognition of the right of individual Churches to hold property. Despite the recent attempt of Bon- droit (De capacitate possidenti ecclesiae, 123–38) to revive the old concept of this eminence vested in the universal Church Catholic, there is not much evidence to show that such a view was current.
among the jurists of that age though it undoubtedly grew up later (see Gierke, "Genossenschaftsrecht", III, 8). So far as property went, Justinian burdened himself with the rights of particular ecclesiastics, not with those of the general Ecclesia, but at the same time he did encourage a centralizing tendency which left the supreme jurisdiction in the bishop's hands within the limits of the Civitas, his own sphere of authority.

There can be no reasonable doubt that, with the exception of the monasteries which possessed their goods as independent institutions, even then under the superintendence of the bishop (as all authorities in Knecht, op. cit., p. 58), the whole ecclesiastical property of the diocese was subject to the bishop's control and at his disposal. His powers were very large, and his subordinates, the diocesan clergy, received only the stipends which he allowed them, while not only the support of his ecclesiastical assistants, who generally shared a common table in the bishop's house, but also the sums devoted to the relief of the sick and the poor, to the ransom of captives, as well as the primitive church and replacement of episcopate immediately upon his death. No doubt custom regulated in some measure the distribution of the resources available. Popes Simplicius in 475, Gelasius in 494 (Jaffé-Wattenbach, "Regesta", 636), and Gregory the Great in his answer to Augustine (Bede, "Hist. eccl.", 17), quote as one of the good works that all emoluments that accrue are to be divided into four portions—one for the bishop and his household because of hospitality and entertainments, another for the clergy, a third for the poor, and a fourth for the repair of churches, and these texts naturally were incorporated at a later date in the "Decretum" of Gratian.

Church Property in the Middle Ages.—Centralization of this kind, however, leaving everything, as it did, in the bishop's hands, was adapted only to peculiar local conditions and to an age which was far advanced in commerce and orderly government. For the sparsely settled and barbarous regions occupied by the Teutonic invaders changes would sooner or later become necessary. But at first the Franks, Angles, and others, who accepted Christianity took over the system already existing in the Roman Empire. The Council of Orleans in 511 enacted in its fifteenth decree that every kind of contribution or rent offered by the faithful was in accordance with the above decree to be divided among the bishop, the clergy, and the poor, with the exception of the bishop, though of the goods actually presented at the altar he was to receive only a third part. So with regard to the Church's right of ownership, her freedom to receive legacies and the inviolability of her property, the pages of Gregory of Tours bear ample evidence to the generosity with which religion was treated during the early Merovingian period (cf. Hauck, "Kirchengeschichte Deutschlands", I, 134-7)—so much so that Chilperic (c. 580) complained that the royal treasury was exhausted because all the wealth of the kingdom had been transferred to the churches.

Almost everywhere the respect due to the rights of the clergy was put in the foremost place. As Maitland has remarked (Hist. of Eng. Law, I, 499), "'God's property and the Church's, twelvefold' are the first written words of English law. The consciousness of all that was involved in this code of King Ethelbert of Kent (c. 610) had evidently made a deep impression upon the mind of Bede. 'Among other benefits,' he says, 'which he [Ethelbert] conferred upon the church, he also, by the introduction judicial decrees, after the Roman model, which, being written in English, are still kept and observed by them. Among which he in the first place set down what satisfaction should be given by those who should steal anything belonging to the Church, the bishop or the other clergy, resolving to give protection to those whose doctrine he had embraced' (Hist. eccl., II, 5). Even more explicit is the famous privilege of Whitred, King of Kent, a hundred years later (c. 696): 'I, Whitred, an earthly king, stimulated by the heavenly King and kindled with the seal of the Holy Spirit and of his divine institutions of our forefathers that no layman ought with right to appropriate to himself a church or any of the things which to a church belong. And therefore strongly and faithfully we appoint and decree, and the name of Almighty God and of all saints we forbid to all King's successors and of all taxation, and to all laymen, every lordship over churches, and over any of their possessions which I or my predecessors in days of old have given for the glory of Christ, and our lady St. Mary and the holy Apostles' (Hadden and Stubbs, "Councils", III, 244).

This touches no doubt upon a difficulty which had just begun to be felt and which for many centuries to come was to be a menace to the religious peace and well being of Christendom. As already suggested, the primitive church of a parish, or a community governed by a bishop, who was assisted by presbyterium of subordinate clergy, was unworkable in rude and sparsely populated districts. In those more northerly regions of Europe which now began to embrace Christianity, village churches remote from the court where another had to be traced, no doubt were founded and maintained by the bishops themselves (cf. Fusel de Coulanges, "La monarchie franque", 517) the religious centres, which became the parishes of a later date, developed in most cases out of the private oratories of the landowners and their servants. The great man built his church and then set himself to find a clerk who the bishop might ordain to serve it. It was not altogether surprising if he looked upon the church as his church seeing that it was built upon his land. But the bishop's consent was also needed. It was for him to consecrate the altar and from him that the ordination of the destined incumbent had to be sought. He will not act unless a sufficient provision of worldly goods is secured for the priest. Here we see the origin of patronage. This "advowsen" (adwocato), or right to present to the benefice, is in origin an ownership of the soil upon which the church stands and an ownership of the land or goods set apart for the sustenance of the priest who serves it. Obviously the sense of proprietorship engendered by this relation of church and land is the subservience of the secular liberty. Where such advowsons rested in the hands of the clergy or monastic institutions, there was nothing very unseemly in the idea of the patron "owning" the church, its lands, and its resources. In point of fact a large and ever-increasing number of parish churches were made over to religious houses. The monks provided a vicar to discharge the duties of parish-priest, but absorbed the revenues and tithes, spending them no doubt for the most part in works of utility and charity. But while the idea of a bishop presenting for example the church of a parish to a monastery "proprietary jure possessandum", "to be held in absolute ownership", excites no protest, the case was different when laymen took back to their own use the revenues which their fathers had allocated to the parish-priest, or when kings began to assert a patronage over ancient cathedrals, or again when the emperor wanted to treat the Church Catholic as a sort of fief and private possession of his own.

In any case it is plain that the general tendency of the parochial movement, more especially as the churches or "parochiae" or corporately oratories of the landowners, was to take much of the control of church property out of the hands of the bishops. A canon of the Third Council of Toledo (589), re-enacted subsequently elsewhere, speaks very significantly in this connexion. "There are many", it says, "who against
the canonical rule, seek to get their own churches consacrated upon such terms as to Withdraw their endowment (dolem) from the bishop's power of disposition. This we disapprove in the past and for the future forbid")(cf. Chalon in Mansi, X, 119). On the other hand many ordinances, for example that of the Council of Carpentras in 527 (Mansi, VIII, 707), make it quite clear that when the bishop is main-
tained in theory, the practice prevailed of leaving the offerings of the faithful to the church in which they were made so long as they were there needed. The payment of tithes, which seems first to have been put forward as a sort of levy of moral obligation by certain bishops and synods in the sixth century (see Selborne, "Ancient facts and fiction", cap. xi), must have told in the same direction. It seems tolerably plain that this collection must always have been un-
derstood locally, and the threefold partition of tithes which is spoken of in the so-called "Capitulare episcoporum" and which appears in the "Egbertine Exceptions" takes no account of any bishop's share. The tithes are to be devoted first to the upkeep of the church, secondly to the relief of the poor and of pil-
gresses, and thirdly to the support of the clergy in general.

Even if, according to the celebrated ordinance of Charlemagne in 778-9, the tithes which everyone was bound to give "were to be dispensed according to the bishop's commandment", local custom and tradition were not thereby placed on an arbitrary apportionment. Usage varied considerably, but in almost all cases the resources so provided seem to have been expended parochially and not upon the general needs of the diocese.

It was in the ninth century particularly that not only in the matter of tithes but in the revenues of bishoprics and monasteries a general apportionment began to be arrived at. Both bishop and abbot had now become great personages, maintaining a certain state which could not be kept up without considerable expenditure. The common expenses of the diocese and the monastery tended more and more to become the private property of the bishop and the abbot. Disputes naturally arose, and before long there came a division of these resources. The bishop shared the revenues with the chapter and separate establishments, or "menses", were created. Similarly the abbot lived apart from his monks and in a large measure the two systems became mutually independent. Naturally in the case of cathedral chapters the process of separation went further and without"an exactitude, the chapter still held property in common and administered it through a steward, or "economus", each of the canons in the course of time acquired a separate prebend, the administration of which was left entirely in his hands. The same freedom was gradually con-
ected to parish-priests and other members of the clergy, once they had duly been put in possession of their benefits. To all intents and purposes it might be said that in the later Middle Ages the parish-

The long-protracted process of division and adjust-
ment which led up to the comparatively stable and
well-defined ownership of church property in the later Middle Ages was also, as might be expected, fertile in abuses. The improper use of tithes by the monasteries set an example which unscrupulous and powerful laymen, were not slow to follow, and it was the privilege of abbeys and parish churches to be continually attempting to make simoniacal compacts with those whom they proposed to present to such benefices. But there can be no doubt that from the eleventh century onwards the centralised government of the Church, as well as the marked progress made in the study of canon law, did much to check these abuses even during the worst times of the Great Schism.

Acquisition.—Turning from early history to ques-
tions of principle we find it laid down by the canons of Tours (c. 427) that as regards the very essence of property it stands on the same footing as any corporation or any private individual. There is nothing in the nature of things to prevent her from receiving legacies or gifts either of movable or immovable goods, and she may also allow be upplied to non-religious ends, by occupation, by prescription, or by the emoluments resulting from any legitimate form of contract. Indeed if the civil power interferes sub-
stantially with the freedom of collecting alms and receiving donations the rights of the Church are thereby invaded. The laws which were enacted in the latter part of the thirteenth century both in England and in France to check the passing of property into "mortmain" were for this reason always regarded as wrong in principle, though the loss occa-
ned to the feudal lord by the cessation of rights, gifts, leases, collations, marriages, etc., when the land was made over to ecclesiastical use could not be denied. No doubt this legislation of the civil power was in practice acquiesced in while licenses to ac-
cquire land in mortmain were obtainable without great difficulty upon adequate compensation being made (this was known in France as the droit d'amorisation, see Viollet, "Institutions politiques", II, 389-413), but the restrictions thus imposed were never accepted in principle. Such the case of medieval "Clericia laicos" of Boniface VIII who claimed that the Church possessed the right to acquire property by the donations of the faithful independently of any interference on the part of the State and that if compensation was made it should be done through the free action of the Holy See, in whom the dominion of all church goods ultimately rested, acting in willing response to any reasonable representations that might be addressed to it.

Later on and especially since the Reformation in countries where no state provision existed for the maintenance of the clergy, custom, generally endorsed by the enactments of provincial synods and the sanction of the Holy See, has intro-
duced besides certain traditional juris, or rights, for spiritual services various exceptional methods of adding to the slender resources of the missions or stations: Such are for example bench-rents or charges for more advantageous seats, collections, charity sermons, and out-door collections made from house to house. At the same time the dangers of abuse are jealously watched and it is particularly insisted upon that there should be a suf-

ficiency of free seats to allow the poor readily to dis-
charge the obligation of attending Sunday Mass.

The bishops are charged to see that basars and en-
tertainments got up for church purposes are not an
occasion of scandal. In particular any refusal of the sacraments to the sick and dying on the ground of a neglect to contribute to the support of the mission is immoral. So also are the mortuary or methods of soliciting alms, as for example when the priest quite the altar during the celebration of Mass to go round the church to make the collection himself or when promises of Masses and other spiritual favours in return for contributions are extorted. The Church, as also the more enlightened public journals, when the names of particular singers are placarded as solitaires in the music performed at liturgical functions (cf. Laurentius, "Juria eccles. inst.", 640). In the past certain definite forms of alms were recognized as the normal return for the services performed in kind. Of such alms (mainly Mass) a late mention may be found in the Council of Trullo in Mansi, "Concilia", XI, 956); still the practice gradually fell into disuse or took some other form, e. g. that of tithes, more particularly perhaps the custom of "York tithes", sometimes known as "all agest".

2. Tithes.—This was also an Old Testament ordinance (see Deut., xiv, 22-7) which many believe to have been identical in origin with firstfruits. Like the latter due, tithes were probably taken over by the early Christian Church at least in some districts, e.g. Syria. They are mentioned in the "Didascalia" and the "Apostolic Constitutions", but there is very little to show that the payment was at first regarded as of strict obligation. Still less can we be certain that there was continuity between the usage referred to in the Eastern Church of the fourth century and the institution which, as already mentioned above, we find described by the Council of Macon in 885. (See TITRES.)

3. Dues, rather ill-defined and still imperfectly understood, which are known to the Anglo-Saxons as "church-shot". We meet them first in the laws of King Ine in 693, but they continued throughout all the Anglo-Saxon period and later. This is commonly considered to have been a contribution not paid according to the wealth and quality of the person but according to the value of the house in which he was living in the winter and identical with the see dues (cathedraticum) of a later age (see Kemble, "Saxons in England", II, 559 sq.). Other dues equally difficult to identify with exactness were the "light-shot" and the "soul-shot". Thus we find among the canons passed at Eynesham in 1009 such an ordinance as the following: "Let God's rights be paid every year duly and carefully, i.e. plough-alms 15 nights after Easter, tithe of young by Pentecest and of all fruits of the earth by All Hallows Mass (Nov. 1). And the Church-shot at St. Martins Mass (Nov. 11) and light-shot thrice a year, and it is most just that the men pay the soul-shot at the open grave!"

4. Funerary Dues.—The last-mentioned contribution of "soul-shot", the precise signification of which is imperfectly understood, is typical of a form of offering which at many different epochs has been a recognized source of income to the Church. Even if we look upon the payments to certain clerks prescribed by Canon (Novel, lix) as a fee for a ministerial service rendered, rather than an offering to the Church, still from the time of the Council of Braga (can. xxi in Mansi, IX, 779) in 583, such money contributions though quite voluntary were constantly made in connexion with burials. In medieval England the mortuary case of a great man's charity or dignity commonly took the form of a war-horse with all its trappings. The horse was led up the church at the Offertory and presented at the altar rails. No doubt it was afterwards sold or redeemed for a money payment

(5) Ordination Dues and other Offerings in connexion with the Sacraments.—Just as it is recognized that Mass stipends, supposing the conditions to be observed which custom and ecclesiastical authority prescribe, may be accepted without simony, so at present all people of the wealth of the Church are acquired. A word may be said upon some of the more noteworthy of these.

(6) Investments and Landed Property.—But the most substantial source of revenue, and one that we desire to view in the present age of the Church, may be considered as necessary to the Church's well-being, is land, or in more modern times investments bearing interest. Even before the toleration edict of Milan (313), it is clear from the restitution there spoken of that the Church must have owned considerable landed possessions, and from that time forward donations and legacies of property yielding annual revenues naturally multiplied. As already pointed out, the Church's right to receive such donations whether by will or under leases was repeatedly acknowledged and confirmed. In medieval England it was usual by way of symbolical investiture, by which possession was given to the Church, to lay some material object upon the altar, for example a book, or parchment deed, or a ring, or most frequently of all the tithes of the Church. This knife was laid on the altar before it was laid upon the altar (see Reichel, "Church and Church Endowments" in "Transactions of the Devonshire Association", XXXIX, 1907, 377-81).

The modern exponents of the canon law, basing their teaching on the pronouncements of the Holy See and the decrees of provincial synods, lay great stress upon the principle that the offerings of the faithful are to be expended according to the intention of the donors. They also insist that where that intention is not clearly made known certain reasonable presumptions must be followed; for example in missionary centres where a church has not yet been built and organized donations are presumed to be made in view of the ultimate erection of such a church. So again money given to the Offertory of an officiary or parochial church, or collected by the faithful from house to house is not to be considered as a personal gift to the priest in charge but as intended for the support of the mission. Certain difficult questions which arise with regard to such contributions of the faithful in places where parochial duties are undertaken by the religious orders are legislated for in the Constitution "Romanos pontifices" (q.v.) of Leo XIII, 8 May, 1881.

Foundations.—By these are understood a TRANSFERrence of property to the Church or to some particular ecclesiastical institute in view of some service or work to be done either perpetually or for a long time. They are not valid until they are formally accepted, and for
that purpose they have to be approved by the bishops and for all institutions under their jurisdiction. It is for the bishop to decide whether the endowment is sufficient for the charge, but the foundation once made, especially previously obtained by the initiative of the Latin-Americans in 1899 (n. 870) also points out, "much depends on circumstances of time and place in deciding what ought to be regarded as property of small value [valor exiguus], hence in this matter a decision to meet the case ought to be obtained, by each country separately from the Apostolic See." It will be readily understood that all forms of hypothecation or the raising of money upon the security of church property must be regarded as subject to the same conditions as alienation. In cap. iii, X, de pign. iii, 21, the "Corpus Juris" has preserved a decretal of Alexander III addressed to the Bishop of Exeter and deciding that in a case where the parish-priest had pawned a silver chalice and a Breviary and had died before redeeming them, his heirs were to be compelled under pain of excommunication to recover and restore the property to the church to which it belonged.

Alienation.—That the Church herself has the right to alienate ecclesiastical property follows as a consequence of the complete ownership by which she holds it, and for the same reason in the exercise of this right she is entirely independent of the civil authority. Still as the Church is only a persona morali, she is in the position of a minor, and disposes of her property through her prelates and administrators. No one of these, not even the pope, has the power to alienate ecclesiastical property validly, without some proportionate reason (Wernz, "Jus Decret.", III, i. 170).

Further, the alienation, which in accordance with num-
berless decrees and canons of synods (see the second part of the Decret., C. xii, q. 2, canons 20, 41, 62) is thus forbidden, comprehends not only the transfer-
ence of the ownership of church goods but also the proc-
ceedings by which the property is burdened, e.g.,
by mortgages, or lessened in value or exposed to the risk of loss, or by which its revenues are for any nota-
ble time diverted from their proper uses. It is to this inalienability of all the possessions of the Church, which like the "hand of a dead man" never loosens its grip of what it once has clutched, that the prej-
udice already referred to against property held in "mortmain" grew up in the thirteenth century.

Still the prohibition of alienation is not absolute. It is governed by reason and by the necessity of time when done. The canonists recognize: (1) urgent neces-
sity, for example, when a church is in debt and has no other means of raising the money needed; (2) manifest utility, such as may occur when an oppor-
tunity presents itself of acquiring a much-desired piece of land on exceptionally advantageous terms; (3) piety, e.g., if church goods are sold to ransom captives or to feed the starving poor; and (4) con-
veniency, e.g., if the Church is under the necessity of disposing or distributing (tractatus), e.g., between the bishop and the chapter; (2) the consent of the bishop in those matters in which it is required; (3) a formal mandate for the act of alienation issued by competent authority, e.g., the viceroyal-general if he is empowered to do this; (4) the formal consent of interested parties and in many cases of the cathedral chapter.

Finally the important constitution "Ambofiose" of Paul II, confirmed by Urban VIII, 7 Sept., 1624, and by Pius IX in the Constitution "Apostolicæ Sedis," 12 Oct., 1869, requires under penalty of excommunication the consent of the Holy See for the alienation of immovable property of great value. At one time it was contended that the Constitution "Ambrosiose" had fallen into desuetude, but most canonists hold that the present one has not been abrogated and can not
now be maintained (see e.g., Wernz, III, n. 165, Sägmüller, 870). Still the requirements of the "Amb-
rosiose" are much mitigated in practice by the faculties commonly conceded to bishops by the Holy See for ten years at a time to authorize the alienation of a considerable amount. In the United States the Third Plenary Council of

Baltimore (1884) laid down that all acts of alienation or any equivalent disposition of property involving a sum greater than $5000 required papal permission, the consent of the diocesan consultors having been previously obtained. As the third party involved, the conditions cannot ordinarily be changed, at least without appeal to the Holy See. In particular where a charge of Masses to be said has been accepted, and the foundation no longer meets that charge, applica-
tion must be made to the Holy See before the number can be reduced.

Prescription.—With regard to prescription, also, ecclesiastical property has special privileges. Amongst private individuals the canon law recognized that possession, even with a limited titulus and without proceedings by which the property is burdened, e.g., by mortgages, or lessened in value or exposed to the risk of loss, or by which its revenues are for any nota-
ble time diverted from their proper uses. It is to this inalienability of all the possessions of the Church, which like the "hand of a dead man" never loosens its grip of what it once has clutched, that the prej-
udice already referred to against property held in "mortmain" grew up in the thirteenth century.

Still the prohibition of alienation is not absolute. It is governed by reason and by the necessity of time when done. The canonists recognize: (1) urgent neces-
sity, for example, when a church is in debt and has no other means of raising the money needed; (2) manifest utility, such as may occur when an oppor-
tunity presents itself of acquiring a much-desired piece of land on exceptionally advantageous terms; (3) piety, e.g., if church goods are sold to ransom captives or to feed the starving poor; and (4) con-
veniency, e.g., if the Church is under the necessity of disposing or distributing (tractatus), e.g., between the bishop and the chapter; (2) the consent of the bishop in those matters in which it is required; (3) a formal mandate for the act of alienation issued by competent authority, e.g., the viceroyal-general if he is empowered to do this; (4) the formal consent of interested parties and in many cases of the cathedral chapter.

Finally the important constitution "Ambrosiose" of Paul II, confirmed by Urban VIII, 7 Sept., 1624, and by Pius IX in the Constitution "Apostolicæ Sedis," 12 Oct., 1869, requires under penalty of excommunication the consent of the Holy See for the alienation of immovable property of great value. At one time it was contended that the Constitution "Ambrosiose" had fallen into desuetude, but most canonists hold that the present one has not been abrogated and can not
now be maintained (see e.g., Wernz, III, n. 165, Sägmüller, 870). Still the requirements of the "Amb-
rosiose" are much mitigated in practice by the faculties commonly conceded to bishops by the Holy See for ten years at a time to authorize the alienation of a considerable amount. In the United States the Third Plenary Council of
eclesiastical property of the Papal States, is different from those who co-operate in the same way elsewhere. The Encyclical "Respiicientes" of 1 Nov., 1870, dealing with the former class clearly extends the excommunication to all who co-operate, whereas in France and Belgium it falls only under the civil law of the Church, and by this, those who merely take part in the liquidation of property, or act as clerks, for instance, in the proceedings, do not seem to incur the censures, but only those who are the actual spoliators and usurpers of the property or those who order and plan it; the latter affects, in other words, the principals and not those who are merely accessories. The question of the application of these censures is very fully discussed, amongst other recent authorities, by Card. Gennari (Consultations, 1) and by the Abbé Bouhenné in the "Canoniste Contemporain" (March, 1909-Oct., 1910).

Apart from such determined acts of spoliation as those which followed the occupation of Rome (1870) and the recent Associations and Separation Laws in France, the clergy are generally instructed to comply, so far as possible, with the requirements of the civil law, if only in the interest of the property of which they are the administrators. These and similar points are dwelt upon in the Decrees of the Second Plenary Council of Westminister (1872) which dealt with the length of the question of ecclesiastical property. For example, the Fathers of the Council direct that "no administrator of a mission should draw up any legal document concerning church property, without the express authority of the bishop, who will not fail to consult lawyers most skilled in these matters, and subject everything to the most careful revision". So, too, it directs that "all buildings belonging to a mission should be most carefully insured against fire", and lays down rules as to the destination of Mass offerings, stove fees (cura stabilita). For Ireland some similar regulations were made in the Maynooth Synod of 1875, and we may note how the synod, after directing that a two-fold inventory of church property should be made, one copy to be kept by the bishop in the diocesan archives and the other to be kept among the parish records, lays down the following wise rules respecting the requirements of the civil law: "Lest ecclesiastical property fall into other hands on account of the defects of the law, the bishop will take heed that the titles or deeds may be accurately ascertained according to the law and in the name of three or four trustees (curatorem). The trustees are to be the bishop of the diocese, the parish-priest or other whose property is concerned, the vicar-general or other person, prudent, well known for uprightness, and for being versed in matters of this sort. These trustees should meet once a year, so as to provide for the security of the aforesaid goods. And if one of them die the others are bound to appoint another in his place. All bishops or priests having possession or administration in any way of such property are bound to make their wills, and these wills are to be kept by the bishop; and to no one in extremitis will the last sacraments be given unless he makes his wills or promises to do so."

The great and classical work dealing with the whole question of church property is THOMASIN, Vetus et nova ecclesiae disciplina circius beneficio et beneficiarii, of which several editions have been published, including one at least in French. All the more copious treatises upon canon law, such as those of Phillips, van Schmelzer, Schedler, necessarily deal with the matter at some length, modern authorities special mention should be made of WEINS, Das Dekretuum, III (Rome, 1905); SIEGBERGER, Kirchenrecht (Freiburg, 1909); LAVERTY, Inst. juris eccl. (Freiburg, 1909); see also MAMMI, Il diritto di chiese di acquistare e possedere beni temporali (Venice, 1766); MAYER, Das Finanzwesen der Kirche in Deutschland (Dillingen, 1885); BONDOERT, De capacitate possessori ecclesiasticae (Louvain, 1900); SCHEFF, De jure ecclesiae acquirendi (Louvain, 1892); Kraft, "Die katholischen Kirchenrechtswissenschafter" (Stuttgart, 1903); MOGLART, L'Aplices et l'Etat (Paris, 1902); GENNARI, Consultazioni di morale, di diritto canonico e di diritto (1907-9); BOUDINON, Biens d'aples et points canoniques, in Canoniae contemporain (April, 1909-Oct., 1910); FOUR التعاليم، de idolol. Cath., s. v. Biens eclosiastiques; TAUNTON, Law of the Church (London, 1906). HERBERT THURSTON.

**Property Ecclesiastical, in the United States.—** The Third Plenary Council of Baltimore declared (tit. IX, cap. 1, n. 264): "We must hold, holily and inviolably, that the complete right of ownership and dominion over ecclesiastical goods resides in the Church." In English-speaking countries, however, the States as a rule do not recognize this inherent right of the Church, but claims for itself the supreme dominion over temporal possessions. "The State refuses to recognize the Church as an actual corporation with the power of holding property in her own name; hence the civil power deals only with specific individuals" (Taunton, op. cit. infra, p. 310). The fathers of the Third Plenary Council of Baltimore say on this subject: "On account of the grave dangers to which temporal goods are often exposed when bishops are not allowed to control them according to their discretion, the Church must be able to resort to the civil law. The state must therefore be educated to the idea that in many parts of the United States the civil laws concerning the possession and administration of temporal goods rest upon principles which the Church cannot admit without departing from the will of Christ which first became free to put her religious principles into practice" (tit. IX, cap. ii, n. 266). The many painful incidents arising in the United States from insecure methods of holding ecclesiastical property (usufruct, usurpation of church goods, etc.) caused the bishops to make stringent rules for safeguarding ecclesiastical possessions. Dissensions frequently arose owing to the abuse of power by lay trustees (see TRUSTEE SYSTEM), in whose name the property was often held.

The various councils of Baltimore endeavoured to fill a remedy for this defect by the Edict of the First Provincial Council (n. 5) declared that no church should be erected or consecrated unless (where possible) it had first been deeded to the bishop (instrumento scripto assignato). Administrators of temporal goods were exhorted to observe the prescriptions of the Council of Trent concerning church property. The Third Provincial Council (n. 43) says: "We admonish bishops, priests, and all others who have care of movable or immovable property given for ecclesiastical uses, to take measures as soon as possible to secure the carrying out of the will in the exact words of the donators, according to the safest method prescribed by the civil laws in the various States." The Fourth Council adds (n. 56): "that if this security can be obtained in no other way, then the property is to be handed on by means of last wills and testaments, drawn up according to the provisions of the civil law". In 1840 Propaganda issued a decree that each bishop should make some fellow-bishop his heir, and that, on the death or resignation of the former, the latter should then hand over the property to the new bishop. This counsel was not however, to be expressed in the testament, but signified in writing to the chosen heir, who was then to burn the letter. The fathers of the Fifth Provincial Council asked for a modification of this decree, as the laws of various States would make it difficult of execution; they desired that each bishop, within three months after his consecration, should make a will and deposit a duplicate of it with the archbishop (n. 59). The First Plenary Council of Baltimore occupied itself with the vexed question of church property, determining "We warn priests who administer churches, the title to which has been given to the bishop, not to constitute lay-trustees without episcopal sanction, or permit them to be elected by the faithful, lest an impediment arise to their free administration" (n. 94). In like manner, the Second Plenary Council made new de-
PROPEHY 473 PROPEHY
crees concerning church property. The Fathers of this council seem to have been hopeful that the prescriptio
property belonging to the diocese, not directly con-
trolled by the aforesaid parish corporations. The
laws of the Church are fully observed, as the bishop
of the diocese exercises sufficient control over all the
property; without him, the other members of the
corporation can take no action binding in law, and he
himself is powerless to act without the consent and
co-operation of the others. Dr. P. A. Baart ("Cathol-
itic Fortnightly Review", XIV, no. 4) says: "The
Church, through the Sacred Congregation of Propa-
ganda Fide, whose decrees are approved by the
Pope, has declared that the corporation system which
recognizes the rights of the hierarchy is prefer-
able to the fee simple tenure by the bishops as indi-
viduals before the civil law."

WILLIAM H. W. FANNING.

PROPEHY—MEANING.—As the term is used in
mystical theology, it applies both to the secret
of canonical Scripture and to private prophesies.
Understood in its strict sense, it means the foreknow-
ledge and foretelling of future events, though it may
sometimes apply to past events of which there is no
foreknowledge, and to present events which will be
known by the natural light of reason. St. Paul,
speaking of prophecy in 1 Cor. xiv, does not confuse
its meaning to predictions of future events, but in-
cludes under it Divine inspirations concerning what is
secret, whether future or not. As, however, the mani-
festation of hidden things or future events comes under revelation, we have here to understand
by prophecy what it is in its strict and proper sense,
namely, the revelation of future events. Prophecy
consists in knowledge and in the manifestation of
what is known. The knowledge must be supernatural
and infused by God because it concerns things beyond
the natural power of created intelligence; and the
knowledge must be manifested either by words or
signs, because the gift of prophecy is given primarily
for the good of others, and hence needs to be manifested.
It is a Divine light by which God reveals things con-
cerning the unknown future and by which those things are
in some way represented to the mind of the prophet,
whose duty it is to manifest them afterwards to others.

DIVISION.—Writers on mystical theology consider
prophecies with reference to the distinction between
mind, to the objects revealed, and to the means
by which the knowledge is conveyed to the hu-
mind. By reason of the illumination of the mind prophecy may be either perfect or imperfect.
It is called perfect when not only the thing revealed,
but the revelation itself is made known, that is, when
the prophet knows that it is God who speaks. The
prophecy is imperfect when the recipient does not
know clearly or sufficiently from whom the revelation
proceeds, or whether it is the prophetic or individual
spirit that speaks. This is called the prophetic in-
instinct, wherein it is possible that a man may be
deceived, as it happened in the case of Nathan who said
To David when he was thinking of building the
Temple of God: “Go, do all that is in thy heart,
cause the Lord is with thee.” (2 Sam. vii. 12.)
But that very night the Lord commanded the Prophet
to return to the king and say that the glory of the
building of the temple was reserved, not for him, but
for his son. St. Gregory, as quoted by Benedict XIV,
explains that some holy prophets, through the fre-
quent practice of prophesying, have come to predict some things, believing that therein they
were influenced by the spirit of prophecy.
By reason of the object there are three kinds of
Prophecy according to St. Thomas (Summa, II-II, Q. 61, a. 4): Prophecy of revelation, of foreknowledge, and of predestination. In the first kind God reveals future events according to the order of secondary causes, which may be hindered from taking effect by other causes which would require a miraculous power to prevent, and these may or may not happen, though the prophets do not express it but seem to speak absolutely. Isaia spoke thus when he said to Eschecias: “Take order with thy house, for thou shalt die, and not live” (Is., xxxviii, 1). To this kind belongs the prophecy of promise, as that mentioned in the parable of the thirty pieces of silver, which God said to his prophet that thy house and the house of thy father should minister in my sight, for ever”, which was not fulfilled. It was a conditional promise made to Heli which was dependent upon other causes which prevented its fulfilment. The second kind, that of foreknowledge, takes place when God reveals future events which depend upon created free will and which He sees present from eternity. They have reference to life and death, to wars and dynasties, to the affairs of Church and State, as well as to the affairs of individual life. The third kind, that of predestination, reveals the power of God, which reveals what He alone will do, and what He sees present in eternity and in His absolute decree. This includes not only the secret of predestination to grace and to glory, but also those things which God has absolutely decreed to do by His own supreme power, and which are to take place to come.

The objects of prophecy may also be viewed in respect to human knowledge: (1) when an event may be beyond the possible natural knowledge of the prophet, but may be within the range of human knowledge and known to others who witness the occurrence, as, for instance, the result of the battle of Lepanto revealed to St. Pius V; (2) when the object surpasses the knowledge of all men, not that it is unknowable but that the human mind cannot naturally receive the knowledge, such as the mystery of the Holy Trinity, or the mystery of predestination; (3) when the things that are beyond the power of the human mind to know are not in themselves unknowable because their truth is not yet determined, such as future contingent things which depend upon free will. The first kind is the one which is more common, because it is the most general and embraces all events that are in themselves unknowable.

God can enlighten the human mind in any way He pleases. He often makes use of angelic ministry in prophetical communications, or He may inform him by direct inspiration and illuminate his mind. Again the supernatural light of prophecy may be conveyed to the intellect directly or through the senses or the imagination. Prophecy may take place even when the senses are suspended as in ecstasy, but this in mystical terminology is called rapture. St. Thomas teaches that there is no suspension of the sense activities when anything is presented to the mind of the prophet through impressions of the senses, nor is it necessary when the mind is immediately enlightened that activity should be suspended; but it may be necessary that this should be the case when the manifestation is made by imaginative forms, at least at the moment of the vision or of the hearing of the revelation, because the mind is then abstracted from external things in order to fix itself entirely on the object manifested to the imagination. In such a case a perfect judgment cannot be formed of the prophetic vision during the transport of the soul, because then the senses which are necessary for a right understanding of things cannot act, and it is only when a man comes to himself that he can properly know and discern the nature of his vision.

Recipient of Prophecy.—The gift of prophecy is an extraordinary grace bestowed by God. It has never been confined to any particular tribe, family, or class of persons. There is no distinct faculty in human nature by which men, normal or abnormal, can prophesy, neither is there any special preparation required beforehand for the reception of this gift. Hence Cornely remarks: “Modern authors speak inaccurately of ‘schools of prophets’, an expression never found in the Scriptures or the Fathers” (Comp. Introduct. in N. T., n. 458). Neither was there anything resembling an external rite by which the office of prophet was inaugurated; its exercise was always extraordinary and depended on the immediate call of God. The prophetic light, according to St. Thomas, is in the soul of the prophet in a permanent form or habit, but after the manner of a passion or passion formation (Summa, II-II, Q. 61, a. 2). Hence the ancient prophets by their prayers petitioned for this Divine light (I Kings, vii, 6; Jer., xxxii, 16; xxxiii, 2 sq.; xii, 4 sq.), and they were liable to error if they gave an answer before invoking God (II Kings, vii, 2, 3).

Writing on the recipients of prophecy, Benedict XIV (Heroic Virtue, III, 144, 150) says: “The recipients of prophecy may be angels, devils, men, women, children, heathens, or gentiles; nor is it necessary that a man should be in the state of grace in order to receive the light of prophecy provided his intellect and senses be adapted for making manifest the things which God reveals to him. Though moral goodness is most profitable to a prophet, yet it is not necessary in order to obtain the gift of prophecy;” He also tells us that a natural penetration cannot know future events which are undetermined and contingent or uncertain, neither can they know the secrets of the heart of another, whether man or angel. When therefore God reveals to an angel as the medium through which the future is made known to man, the angel also becomes a prophet. As to the Devil, the same author tells us that he cannot of his own natural knowledge foretell future events which are the proper objects of prophecy, yet God may make use of him for this purpose. Thus we read in the Gospel of St. Luke that when the Devil saw Jesus he fell down before Him and, crying out with a loud voice, said: “What have I to do with thee, Jesus, Son of the most high God?” (Luke, viii, 28).

There are instances of women and children prophesying in Holy Scripture; the sister of Moses is called a prophetess; Anna, the mother of Samuel, prophesied; Elizabeth, the mother of John the Baptist, by a divine revelation recognized and confessed Mary as the Mother of God. Samuel and Daniel are known as prophets; Enoch was prophesied to be the advent of the Messiah and the devastation of Assyria and Palestine. St. Thomas, in order to prove that the heathens were capable of prophecy, refers to the instance of the Sibyls, who make clear mention of the mysteries of the Trinity, of the Incarnation of the Word, of the Life, Passion, and Resurrection of Christ. It is true that the Sibylline poems now extant became in course of time interpolated; but, as Benedict XIV remarks, this does not hinder much of them, especially what the early Fathers referred to, from being genuine and in no wise counterfeit.

That the gift of private prophecy exists in the Church is clear from Scripture and the acts of canonization of the saints in every age. To the question, what credence is to be given to these private prophecies, Cardinal Cajetan answers, as stated by Benedict XIV: “Human actions are of two kinds, one of which relates to public duties, and especially to ecclesiastical affairs, such as preaching, celebrating Mass, pronouncing judicial decisions, and the like; with respect to these the question is settled in the canon law, where no questionar that has been given to him who says he has privately received a mission from God, unless he confirms it by a miracle or a special testimony of Holy Scripture. The other class of human actions consists of those of private
persons, and speaking of these, he distinguishes betwixt prophecy, which joineth or adviseth them, according to the universal laws of the Church, and a prophet who does the same without reference to those laws. In the first case every man may abound in his own sense whether or not to direct his actions according to the will of the prophet; in the second case the prophet is not to be listened to. (Herodic Virtue, III, 192.)

It is also important that those who have to teach and direct others should have rules for their guidance to enable them to distinguish true from false prophets. A summary of those prescribed by theologians for our guidance may be of service to us. In the first place, there must always be a check to decide how these things are applied to devote souls in order to save them from errors or diabolical delusions: (1) the recipient of the gift of prophecy should, as a rule, be good and virtuous, for all mystical writers agree that for the most part this gift is granted by God to holy persons. The disposition or temperament of the person should also be considered, as well as the state of health and of the soul; (2) the prophecy must be conformable to Christian truth and piety, because if it propose anything against faith or morals it cannot proceed from the Spirit of Truth. (3) Prophecies which concern things outside the reach of all natural knowledge, and have for its object future contingent things or those things which God only knows: (4) it should also concern something of a grave and important nature, that is something for the good of the Church or the Church a victory or a rule; (5) this rule will help to distinguish true prophecies from the puerile, senseless, and useless predictions of fortune-tellers, crystal-gazers, spiritualists, and charlatans. These may tell things beyond human knowledge and yet within the scope of the natural knowledge of demons, but not those things that are strictly speaking the objects of prophecy; (6) prophecies or revelations which make known the sins of others, or which announce the predestination or reprobation of souls are to be suspected. Three special secrets of God have always to be deeply respected as they are very rarely revealed, namely: the state of conscience in this life, the state of souls after death unless canonized by the Church, and the mystery of predestination. The secret of predestination has been revealed only in exceptional cases, as that of Paul, and only in exceptional cases, because so long as the soul is in this life, its salvation is possible. The day of General Judgment is also a secret which has never been revealed; (6) we have afterwards to ascertain whether the prophecy has been fulfilled in the way foretold. There are many prophecies in the prophecy which was not absolute, but containing threats only, and tempered by conditions expressed or understood, as exemplified in the prophecy of Jonas to the Ninevites, and that of Isaiah to King Eschias; (b) it may sometimes happen that the prophecy is true and from it, and the human interpretation of it false, as men may interpret it otherwise than God intended. It is by these limitations we have to explain the prophecy of St. Bernard regarding the success of the Second Crusade, and that of St. Vincent Ferrer regarding the near approach of the General Judgment in his day.

CHIEF PARTICULAR PROPHECIES.—The last prophetic work which the Church acknowledges as Divinely inspired is the Apocalypse. The prophetic spirit did not disappear with the Apostolic times, but the Church has not pronounced any work prophetic since then, though she has canonized numberless saints who were more or less endowed with the gift of prophecy. The Church allows freedom in accepting or rejecting particular or private prophecies according to the evidence for or against them. We should be slow to admit and slow to reject; in every case treat them with respect when they come to us from trustworthy sources, and are in accordance with Catholic doctrine and the rules of Christian morality.

The real test of these predictions is their fulfilment; they may be only pious anticipations of the ways of Providence, and they may sometimes be fulfilled in part, and in part contradicted by events. The minatory prophecies which announce calamities, being for the most part conditional, may or may not be fulfilled. Many private prophecies have been verified by subsequent events, some have not; others have given rise to a good deal of discussion as to their genuineness. Most of the private prophecies of the saints and servants of God were concerned with individuals, their death, recovery from illness, or vocations. Some of the most notable things which have affected the fortunes of nations, as France, England, and Ireland. A great number have reference to popes and to the papacy; and finally we have many such prophecies relating to the end of the world and the approach of the Day of Judgment.

The more noteworthy of the prophecies bearing upon "latter times" seem to come on common end, to announce great calamities impending over mankind, the triumph of the Church, and the renovation of the world. All the seers agree in two leading features as outlined by E. H. Thompson in his "Life of Anna Maria Taigi" (she predicted some terrible convulsion, from some deep-rooted impurity, consisting in a formal opposition to God and His truth, and resulting in the most formidable persecution to which the Church has ever been subject. Secondly, they all promise for the Church a great triumph and the soul of the Church she has ever achieved here below. We may add another point in which there is a remarkable agreement in the "catena" of modern prophecies, and that is the peculiar connection between the fortunes of France and those of the Church and the Holy See, and also the large part which that country has still to play in the history of the Church and of the world, and will continue to play to the end of time." Some prophetic spirits were prolific in the forecasts of the future. The biographer of St. Philip Neri states that, if all the prophecies attributed to this saint were narrated, they alone would fill entire volumes. It is sufficient to give the following as examples of private prophecies.

(1) Prophecy of St. Edward the Confessor.—Ambrose Little in his Life of St. Edward the Confessor, dated 28 October, 1856, in giving a sketch of English Catholic history, relates the following vision or prophecy made by St. Edward: "During the month of January, 1066, the holy King of England St. Edward the Confessor was confined to his bed by his last illness, and he was not of the royal blood. He was at Reen, in Yorkshire, relates that a short time before his happy death, this holy King was in ecstasy, when two pious Benedictine monks of Normandy, whom he had known in his youth, during his exile in that country, appeared to him, and revealed to him what was to happen in England in future centuries, and the cause of the terrible punishment. They said: 'The extreme corruption and wickedness of the English nation has provoked the just anger of God. When malice shall have reached the fulness of its measure, God will, in His wrath, send to the English people wicked spirits, who will punish and afflict them with great severity, by separating the green tree from its parent stem the length of three furlongs. But at last this same tree, through the compassionate mercy of God, and without any national (governmental) assistance, shall return to its original root, refurnish and bear abundant fruit.' After having heard these prophetic words, the saintly King Edward opened his eyes, returned to his senses, and the vision vanished. He immediately related all he had seen to his vicar. Edward, Bishop of Canterbury, and to Harold, his successor to the throne, who were in his chamber praying around his bed." (See "Vita beati Edwardi regis et
confessoris", from MS. Selden 55 in Bodleian Library, Oxford.)

The interpretation given to this prophecy is remarkable when applied to the events which have happened. The spirits mentioned in it were the Protestant innovators of the sixteenth and seventeenth centuries who desired the reform of the Catholic Church in England. The severance of the green tree from its trunk signifies the separation of the English Church from the root of the Catholic Church, from the Holy Roman See. This tree, however, was to be separated from its life-giving root for a distance of three furlongs, which is understood to signify three centuries, at the end of which England would again be reunited to the Catholic Church, and bring forth flowers of virtue and fruits of sanctity. The prophecy was quoted by Ambrose Lisle Philips on the occasion of the restoration of the Catholic hierarchy in England by Pope Pius IX in 1850.

(2) Prophecies of St. Malachi.—Concerning Ireland.—This prophecy, which is distinct from the prophecies attributed to St. Malachi concerning the pope, and the effect that the life of the English nation would undergo at the hands of England oppression, persecution, and calamities of every kind, during a week of centuries; but that she would preserve her fidelity to God and to His Church amidst all her trials. At the papacy and many others from her oppressors (or oppressions), who in their turn would be subjected to dreadful chastisements, and Catholic Ireland would be instrumental in bringing back the British nation to that Divine Faith which Protestant England had during three hundred years, so rudely endeavoured to wrest from her. This prophecy is said to have been copied by the learned Benedictine Dom Mabillon from an ancient MS. preserved at Clairvaux, and transmitted by him to the martyrized successor of Oliver Plunkett.

Of the Popes.—The most famous and best known prophecies about the popes are those attributed to St. Malachi (q.v.). In 1139 he went to Rome to give an account of the affairs of his diocese to the pope, Innocent II, who promised him two palliums for the metropolitan sees of Armagh and Cashel. While at Rome, he received (according to the Abbé Cucherat) the strange vision of the future wherein was unfolded before his mind the long list of illustrious pontiffs who were to rule the Church until the end of time. The same author tells us that in dignified terms he prayed the pope to console him in the midst of his tribulations, and that the document remained unknown in the Roman Archives until its discovery in 1590 (Cucherat, "Prop. de la succession des papes", ch. xv). They were first published by Arnold de Wyon, and ever since there has been much discussion as to whether they are genuine predictions of St. Malachi or forgeries. The silence of 400 years on the part of so many learned authors who had written about the popes, and the silence of St. Bernard especially, who wrote the "Life of St. Malachi" with great care against their authenticity, but it is not conclusive if we adopt Cucherat's theory that they were hidden in the Archives during those 400 years.

These short prophetic announcements, in number 115, indicate some noticable trait of all the future popes, and that of Celestine II, who was elected in the year 1139, until the end of the world. They are eunuated under mystical titles. Those who have undertaken to interpret and explain these symbolical prophecies have succeeded in discovering some trait, allusion, point, or similitude in their application to the individual popes, either as to their country, their name, their coat of arms or insignia, their birth-place, their talent or learning, the title of their cardinalate, the dignities which they held etc. For example, the prophecy concerning Urban VII is Lefium et rose (the lily and the rose); he was a native of Florence and on the arms of Florence figured a fleur-de-lis; he had three bees emblazoned on his escutcheon, and the bees gather honey from the lilies and roses. Again, the name accords often with some remarkable and rare events in the pontificates of Pius IX, Leo XIII, and Pius X, in substantiation to the prophecies of St. Malachi and their wonderful appropriateness: "Crux de cruce (Cross from a Cross) Pius IX; Lumen in cele (Light in the Sky) Leo XIII; Ignis ardens (Burning Fire) Pius X. There is something more than a coincidence in the designations given to these three popes so many hundred years before their time. We need not have recourse either to the family-names, armorial bearings or cardinalltial titles, to see the fitness of their interpretation in these prophecies. The afflictions and crosses of Pius IX were more than fell to the lot of his predecessors; and the more aggravating of these crosses were brought on by the House of Savoy whose emblem was a cross. Leo XIII was well advised about the papacy, Pius X was on the papacy. The present pope is a truly burning fire of zeal for the restoration of all things in Christ.

The last of these prophecies concerns the end of the world and is as follows: "In the final persecution of the Holy Roman Church there will reign Peter the Roman, who will feed his flock amid many tribulations, after which the seven-hilled city will be destroyed and the dreadful Judge will judge the people. The End." It has been noticed concerning Petrus Romanus, who according to St. Malachi's list is to be the last pope, that some say that no pope shall intervene between him and his predecessor designated Gloria olivae. It merely says that he is to be the last, so that we may suppose as many popes as we please before Peter the Roman. Cornelius a Lapis refers to this prophecy in his commentary "On the Gospel of St. John" (c. xvi) and "On the Apocalypse" (c. xvi-xv), and he endeavours to calculate according to it the remaining years of time.

(3) Prophecy of St. Paul of the Cross.—During more than fifty years he has been accustomed to pray for the return of England to the Catholic Faith, and on several occasions had visions and revelations about its re-conversion. In spirit he saw the Passionists established in England and labouring there for the conversion, and sanctification of souls. It is well known that several of the leaders of the Oxford Movement, including Cardinal Newman, and thousands of converts have been received into the Church in England by the Passionist missionaries.

There are many other private prophecies concerning the remote year 1914, which will precede the General Judgment and concerning Antichrist, such as those attributed to St. Hildegarde, St. Bridget of Sweden, Venerable Anna Maria Taigi, the Curé d' Ars, and many others. These do not enlighten us any more than do the Scriptural prophecies as to the day and the hour of that judgment, which still remains a Divine secret.

ARTHUR DEVINE.

Prophecy, Prophet, and Prophetess. I. In the Old Testament. A. Introduction.—Jahwe had forbidden Israel all kinds of oracles in vogue among the pagans. If, for a time, he consented to reply by Urim and Thummim (apparently a species of sacred lot which the high-priest carried in the ephod of his ephod, and consulted at the request of the public authorities in matters of graver moment), yet He always abominated those who had recourse to divination and magic, practiced augury and enchantment, trusted in charms, consulted soothsayers or wizards, or interrogated the spirits of the dead (Deut., xviii, 9 sqq.). Speaking of orthodox Jahveism, Balaam could truthfully say "There is no soothsaying in Jacob, nor divination in Israel. In their times it shall be told to Jacob and to Israel what God hath wrought" (Num., xxiii, 23). For the absence of other oracles, the Chosen People were indeed more than compensated by a gift unique in the annals of mankind, to wit, the gift of prophecy and the prophetic office.

3. General Idea and the Hebrew Names. (1) General Idea.—The Hebrew Prophet was not merely, as the word commonly implies, a man enlightened by God to foretell events, he was the interpreter and supernaturally enlightened herald sent by Jahve to communicate His will and designs to Israel. His mission consisted in preaching as well as in foretelling. He had to maintain and develop the knowledge and practice of the Old Law among the Chosen People, lead them back when they strayed, and gradually prepare the way for the new kingdom of God, which the Messias was to establish on earth. Prophecy, in general, signifies the supernatural message of the Prophet, and more especially, from custom, the predictive element of the prophetic message.

(2) The Hebrew Names.—The ordinary Hebrew word for prophet is nāḇī. Its etymology is uncertain. According to many recent critics, the root nāḇī, not employed in Hebrew, signified to speak enthusiastically, "to utter cries, and make more or less wild gestures" like the pagan mantics. Judging from a comparative examination of the cognate words in Hebrew and the other Semitic tongues, it is at least equally probable that the original meaning was merely: to speak, to utter words (cf. Eur. "Die Propheten," Fribourg, 1903, 148). The historic meaning of nāḇī established by biblical usage is "interpreter and mouthpiece of God". This is forcibly illustrated by the passage, where Moses, excusing himself from speaking to Pharaoh on account of his embarrassment of speech, was answered by Jahve: "Behold I have appointed thee the God of Pharaoh: and Aaron thy brother shall be thy prophet. Thou shalt speak to him all that I command thee; and he shall speak to Pharaoh, that he let the children of Israel go out of his land" (Ex., vii, 1-2). Moses, speaking towards the King of Egypt the rôle of God, inspiring what is to be uttered, and Aaron is the Prophet, his mouthpiece, transmitting the inspired message he shall receive. The Greek προφητής (from προφητεύω, to speak for, or in the name of some one) translates the Hebrew word accurately. The Greek prophet was the revealer of the future, and the interpreter of divine things, especially of the obscure oracles of the pythons. Poets were the prophets of the muses: Inspire me, muse, thy prophet I shall be" (Pindar, Bergk, Fragm. 127).

The Hebrew nāḇī is only a predicate action. The two most usual synonyms rōṯâh and hōṣāḥ emphasize more clearly the special source of the prophetic knowledge, the vision, that is, the Divine revelation or inspiration. Both have almost the same meaning: hōṣāḥ is employed, however, much more frequently in poetical language and almost always in connexion with a supernatural vision, whereas rōṯâḥ, of which rōṯâḥ is the participle, is the usual word for to see in any manner. The compiler of the first Book of Kings (ix, 9) informs us that before his time rōṯâḥ was used where nāḇī was then employed. Hōṣāḥ is found much more frequently from the days of Amos. There were other less specific or more unusual terms employed, the meaning of which is clear, such as, messenger of God, man of God, servant of God, man of the spirit, or inspired man, etc. It is only rarely, and at a later period, that prophecy is called nēḇāḏā, a cognate of nāḇī.

THE GODLY FELLOWSHIP OF THE PROPHETS
Fra Angelico and Signorelli, Cathedral of Orvieto

more ordinarily we find hāḏēm, vision, or word of God, oracle (ne Ṿm) of Jahve, etc.

C. Brief Sketch of the History of Prophecy.—(1) The first person entitled nāḇī in the Old Testament is Abraham, father of the elect, the friend of God, favoured with his personal communications (Gen., xx, 7). The next is Moses, the founder and lawyer of the theocratic nation, the mediator of the Old Covenant holding a degree of authority unequalled till the coming of Jesus Christ. "And there arose no more a prophet in Israel like unto Moses, whom the Lord knew face to face, in all the signs and wonders, which he sent by him, to do in the land of Egypt to Pharaoh, and to all his servants, and to his whole land, and all the mighty hand, and great miracles, which Moses did before all Israel" (Deut., xxxiv, 10 sqq.). There were other Prophets with him, but only of the second rank, such as Aaron and Maria, Eldad and Medad, to whom Jahve manifested himself in dreams and vision, but not in the audible speech with which He favoured him, who was most faithful in all His house (Num., xii, 7).

Of the four institutions concerning which Moses enacted laws, according to Deuteronomy (xiv, 18-21), one was prophecy (xviii, 9-22; cf. xiii, 1-5, and Ex., iv, 1 sqq.). Israel was to listen to the true Prophets, and not to heed the false but rather to
extirpate them, even had they the appearance of miracle-workers. The former would speak in the name of Jave, the one God; and foretell things that would be accomplished or be confirmed by miracles. The latter were to come in the name of the false gods, of whom doctrine evidently is an endeavour to foretell events. Later prophetic writers added as other signs of the false Prophets, cupidity, flattery of the people of the nobles, or the promise of Divine favour for the nation weighed down with crime. Jerusalem is both a sheep-sayer; a professional soothsayer it would seem, of whom Javeh makes use to proclaim even in Moab the glorious destiny of the Chosen People, when He was about to lead them to the Promised Land (Num., xxii-xiv).

In the time of the Judges, in addition to an unnamed Prophet (Judges, vi, 8-10), we meet with Debbona (Judges iv-v), "a mother in Israel", judging the people, and communicating the Divine orders concerning the War of Independence to Barac and the tribes. The word of God was rare in those days of anarchy and semi-apotheosis, when Javeh partly abandoned Israel to render it conscious of its feebleness and its sins. In the days of Samuel, on the contrary, prophecy became a permanent institution. Samuel was not a prophet, whose Divine mission it was to restore the code of the elder, and to supervise the beginning of the monarchy. Under his guidance, or at least closely united to him, we find for the first time the nebi'tim (1 Sam., x; xix) grouped together to sing the praises of God to the accompaniment of musical instruments. They are not Prophets in the strict sense of the word, nor are they disciples of the Prophets destined to become masters in their turn (the so-called "schools of Prophets"). Did they wander about spreading the oracles of Samuel among the people, whose history it was to restore, to awaken the faith of Israel and increase the dignity of Divine worship, they seem to have received charismata similar to those bestowed upon the early Christians in the Apostolic days. They may not ineptly be compared with the families of singers gathered around Davud, under the direction of their three leaders, Asaph, Heman, and Idithun (1 Par., xxv, 1-8). Doubtless the bened, nebi'tim of the days of Elias, and Eileesus the "disciples of the Prophets" or "members of the confraternities of the Prophets", were we to judge by the circumstances domiciled respectively at Gilgal, Bethel, and Jericho, must be regarded as their successors. St. Jerome seems to have understood their character aright, when he saw in them the germ of the monastic life (P. L., XIX, 1070).

Are we to consider them as degenerate and faithless successors those false Prophets of Javeh whom we meet at the Court of Ahab, numbering four hundred, and later very numerous, also fighting again against Isaias and Micheas and especially against Jeremiaas and Ezechiel? A definite answer cannot as yet be given, but it is wrong to consider them, as certain critics do, as authentic as the true Prophets, differing from them only by a more retrograde spirit, and less brilliant intellectual gifts. After Samuel the first Prophets properly so-called who are explicitly mentioned are Nathan and Gad. They assist David by their counsels, and, when necessary, confront him with energetic protests. Nathan's parable of the little sheep of the poor man is one of the most beautiful passages in prophetic literature (II Kings, xii, 1 sqq.). The Books of Kings and Paralipomenon mention a number of other "men of the spirit" exercising their ministry in Israel or in Judah. We may mention at least Ahias of Silo, who announced to Jerobeam his fatal death, the son of Tabeel, and the ephemeral character of his dynasty, and Micheas, the son of Jemla, who predicted to Ahab, in presence of the four hundred flattering court Prophets, that he would be defeated and killed in his war against the Syrians (III Kings, xxi).

But the two greatest figures of prophecy between Solomon and Isaias are Eileesus and Eileesus. Javeh was again endangered, especially by the Tyrian Jezebel, wife of Ahab, who had introduced into Samaria the worship of her Phoenician gods, and Israel's faith was tottering, as it divided its worship between Baal and Asherah. Jephthah was no less menacing, King Joram had married Athalia, a worthy daughter of Jezebel. At that moment Eileesus appeared like a mysterious giant, and by his preaching and his miracles led Israel back to the true God and suppressed, or at least moderated, their leaning towards the gods of Chanaan. At Carmel he won a magnificent and terrible victory over the Prophets of Baal; then he proceeded to Horeb to renew within him the spirit of the Covenant and to be present at a marvelous theophany; thence he returned to Samaria to proclaim to Ahab the voice of justice calling out for vengeance for the murder of Naboth. When he disappeared in the fiery chariot, he left to his disciple Eileesus, with his mantle, a double share of his spirit. Eileesus continued the work of his master, achieved great success, and became such a bulwark to the Kingdom of the North, that King Joas wept for his death and took his farewell with these words: "My father! my father! chariot of Israel and its horses!" Not all the Prophets left their oracles in writing. Several of them, however, have written the history of their times. Gad and Nathan, for instance, the history of David; and Nathan that of Solomon; also Semeias and Addo the annals of Roboam; Jechu, son of Hanani those of Josaphat. . . . Is it possible that the book of the historical books of Josue, Jeremias, Samuel, and Kings were called in the Jewish canon the "earlier Prophets" because of the belief that they were written by the Prophets or at least based on their writing? To this query there can be no solution.

(2) Prophetic Writers.—The prophetic books were entitled in the same canons the "later Prophets". Gradually the custom of calling their authors the prophetic writers crept in. There are four Greater Prophets, that is, those whose works are of consider- able length. Isaias, Jeremias, Ezechiel, and Daniel, had twelve Minor Prophets, who were but the breifere—Osee, Joel, Amos, Abdias, Jonas, Micheas, Nahum, Habacuc, Sophonias, Aggeus, Zacharias, and Malachias. The Books of Baruch, which is not included in the Hebrew canon, is united in our Bibles to the Book of Jeremias. The ministry of Amos, the most ancient perhaps of the prophetic writers, is placed about the years 760-50. Osee follows him immediately. Next comes Isaias (about 740-700), and his contemporary Micheas. Sophonias, Nahum, and Habacuc prophesied towards the last quarter of the seventh century. Jeremias about 626-586; Ezechiel between 592-70. The prophecy of Aggeus and in part that of Zacharias are dated exactly in 520 and 520-18. Malachias belongs to the middle of the fifth century before Christ. Abdias, Joel, Baruch, as well as portions of Isaias, Jeremias, Zacharias, their dates being disputed, it is necessary to refer the reader to the special articles treating of them.

(3) The Prophetae.—The Old Testament gives the name nebi't, to three women gifted with prophetic charismata: Mary, the sister of Moses; Debbora; and Holda, a contemporary of Jeremias (IV Kings, xxiii, 14); also to the wife of Isaias meaning the spouse of a nabi'; finally to Noadis, a false prophetess in 3:7. The Septuagint and Vulgate speak of a false Prophet (Neh., vi, 14).
(4) 

Cessation of Israelite Prophecy.—The prophetic institution had ceased to exist in the time of the Machabees. Israel clearly recognised this, and was awaiting its reappearance. Its necessity had ceased. Revelational revelation and the moral code expressed in Holy Writ were full and clear. The people were brought into the presence of the living magistracy, fallible, it is true, and bound overmuch by letter of the law, but withal zealous and learned. There was a feeling that the promises were about to be fulfilled and the consequent apocalyptic increase of science and criticism. It was not unifying, therefore, for God to allow an interval to elapse between the prophets of the Old Covenant and Jesus Christ, who was to be the crown and consummation of their prophetic career.

D. Vocation and Supernatural Knowledge of the Prophets.—(1) The Prophetic Vocation.—“For prophecy came not by the will of man at any time: but the holy men of God spoke, inspired by the Holy Ghost” (II Pet., i, 21). The Prophets were ever conscious of this Divine mission. I am not a prophet, the prophetary is not given me, said to Amasias, who wished to prevent him from prophesying at Bethel. “I am a herdsman plucking wild figs. And the Lord took me when I followed the flock, and the Lord said to me: Go, prophesy to my people Israel” (Jer., xxvi, 14). Can I not prophesy? Who will not prophesy? The Lord God hath spoken, who shall not prophesy?” (iii, 8). Isaias saw Jahve seated on a throne of glory, and when a seraph had purified his lips he heard the command: “Go!” and he received his mission of preaching to the people the terrible judgments of God. God made known to Jeremias that he had consecrated him from his mother’s womb and appointed him the Prophet of nations; He touched his lips to show that He made them His instrument for proclaiming His just and merciful judgments. The oracles that the Prophet endeavoured to be excused and to conceal, the oracles entrusted to him. Impossible; his heart was consumed by a flame, which forced from him that touching complaint: “Thou hast deceived me, O Lord, and I am deceived: thou hast been stronger than I, and thou hast prevailed” (xx, 7). Eschelch sees the glory of God borne on a fiery chariot drawn by celestial beings. He hears a voice commanding him to go and find the children of Israel, that rebellious nation, with hardened heart and obdurate will. And instruction deliver to them the warnings he was to receive.

The other Prophets are silent on the subject of their vocation; doubtless they also received it as clearly and irresistibly. To the preaching and predicating of the false Prophets uttering the fancies of their hearts and saying “the word of Jahve” when Jahve spoke to them not, they fearlessly oppose their own oracles as coming from heaven and compelling acceptance under penalty of revolt against God. And the manifest sanctity of their lives, the miracles wrought, the prophetic bent of mind, the witness of history, to their contemporaries the truth of their claims. We also separated from them by thousands of years should be convinced by two irrefragable proofs among others: the great phenomenon of Messianism culminating in Christ and the Church, and the excellence of the religious and moral teaching of the Prophets.

(2) Supernatural knowledge: inspiration and revelation.—(a) The fact of revelation.—The Prophet did not receive merely a general mission of preaching or of teaching, but mission of announcing that his words is Divine, all his teaching is from above, that is, it comes to him by revelation or at least by inspiration. Among the truths he preaches, there are some which he knows naturally by the light of reason or experience. It is not necessary for him to learn them from God, just as if he had been entirely ignorant of them. If suffices if the Divine illumination places them in a new light, strengthens his judgment and preserves it from error concerning these facts, and if a supernatural impulse determines his will to make them the object of his message. This oral inspiration isparalleled to the divine inspiration, in virtue of which the Prophets and hagiographers composed our canonical books.

The whole contents of the prophetic message is not, therefore, within the compass of the natural faculties of the Dispensational messenger. The object of all strictly so-called prediction requires a new manifestation and illumination; unaided the Prophet would remain in more or less absolute obscurity. This, then, is revelation in the full sense of the term.

(b) Manner of the revelatory communications; Canons for the interpretation of the prophecies and their fulfilment.—In the words of St. John of the Cross—and the doctors of mysticism have a special right to be heard in this matter—“God multiplies the means of transmitting these revelations; at one hour He tells them by words, at another by visions, figures, images, similitudes; and, again, of both words and symbols together” (The Ascent of Carmel, II, xxvii): To grasp accurately the meaning of the Prophets and judge of the fulfilment of their predictions, these words must be remembered and compared. The material element prevails, what the word may have a strictly literal meaning and simply signify itself. When Micheas, the son of Jemla, beholds “all Israel scattered upon the hills, like sheep that have no shepherd”, and hears Jahve say, “These have no master; let every man of them return to his house in peace” (III Kings, xxii, 17), he sees exactly what will be the outcome of Achab’s expedition against the Syrians at Ramoth of Galaad. Again, the meaning may be entirely symbolic. The armless branch shown to Jeremias (xxvi, 12) is not shown for itself; it is intended solely to represent by its name "אָמַש (vigilant), the Divine watchfulness, which will not allow the word of God to be fulfilled. Between these two extremes there exists a whole series of intermediary possibilities, of significations imbed with varying degrees of reality or symbolism. The son promised to David in Nathan’s prophecy (II Kings, vii) is at once Solomon and the Messianic king. In the last verse of Aggeus Zoroabel signifies himself and also the Messiah.

Neither the Prophets nor their contemporaries, sensible hearers, were ever misled. It is wrong to say that he believed that at the end of time the hill of Sion would physically surpass all the mountains and hills on the earth (ii, 2). Examples might be multiplied indefinitely. Yet we are not forced to believe that the Prophets were always able to distinguish between the literal and the symbolical significations of their visions. It was sufficient for them not to give, and to be unable to give, in the name of God any erroneous interpretation. It has never been shown that the vision frequently disregards distance of time and place, and that the Messias or the Messianic era almost always appears on the immediate horizon of contemporary history. If to this we add the frequently conditional character of the oracles (cf. Jer., xviii; xxiv, 17 sqq.; etc.), and remember moreover that the Prophets convey their message in words of eloquence, expressed in Oriental poetry, so rich in striking colours and bold figures, the pretended distinction between realized and unrealized prophecies, predictions substantially accurate but erroneous in detail, is a mere illusion.

(c) State of the Prophet during the Vision.—Ordinarily the vision occurred when the Prophet was awake. Dreams, of which the false Prophets made ill use, are scarcely ever mentioned in the case of the true Prophets. Much has been said about the
eckatonic state of the latter. Possibly the soul of the Prophet may have been at times, as happened to the mystics, so absorbed by the activity of the spiritual facades that the activity of the mind was suspended, though no definite instance can be cited. In any case, we must remember what St. Jerome (In Isaiam, Prolog. in P. L., XXIV, 19) and St. John Chrysostom (In 1 Cor. homil. XXIX in P. G., LXI, 240 sqq.) remarked that the Prophets always retained their self-consciousness and were never subject to the disordered and degrading psychic conditions of the pagan soothsayers and pythias; and, instead of enigmatic and vuerile syllabine oracles, their pronouncements were often sublime and always worthy of the one who uttered them.

E. The Teaching of the Prophets.—(1) The exterior form.—They usually taught orally. To this they often added symbolical acts which accorded with Oriental tastes and caught the attention of their hearers. Jeremiah, for instance, wandered through Jerusalem under a wooden yoke, symbolizing the approaching subjugation of the nations by the King of Babylon. The false Prophet Hananiah, having taken this yoke and broken it on the ground, receives this answer, in the name of Jahve, Thou hast broken off the yoke of iron that our fathers made, and I will break off the yoke of iron from thee, and on thine arms thou shalt make the chains of iron (xxvii, 13). Jeremiah and Eschelch make frequent use of this method of instruction. Amos was probably the first who was inspired to unite the written to the spoken word. His example was followed. The Prophets thus exercised wider and more lasting influence, and left moreover an indisputable proof that God had spoken by them (cf. Isaias, viii, 16). Some prophecies seem to have been made exclusively in writing, for instance, probably the second part of Isaias and all Daniel. The great part of the prophetic book is couched in rhytmic language perfectly adapted to the popular and, at the same time, sublime character of the oracles. Hardly any kind of Hebrew poetry is absent: epithalamia and lamentations; little satirical songs; odes of wonderful lyricism etc. The fundamental law of Hebrew poetry, the parallelism of the stichs, is usually observed. The metric seems to be based essentially on the number of accents marking a raised intonation. Most exhaustive researches upon the question of the poetic character, however, have been made, but without many definitely accepted conclusions.

(2) The Teaching.—(a) Preaching: religion and morals, in general.—Samuel and Elias sketch out the programme of the religious and moral preaching of the later Prophets. Samuel teaches that the Israelites, and not the king, shall represent Jahve; that Jahve alone is essentially true, and immutable (xv, 29); that He prefers obedience to sacrifice (xx, 22). For Elias also Jahve alone is God, Baal is nothing. Jahve chastises all iniquity and punishes the injustice of the powerful for the feeble. These are the fundamental points emphasized more and more by the prophetic writers. Their doctrine is based on the existence of one God alone, possessing all the attributes of the true Divinity—sanctity and justice, mercy and fidelity, supreme dominion over the material and moral world, the control of the cosmic phenomena and of the course of history. The worship desired by God does not consist in the profusion of sacrifices and offerings. They are nauseous to Jahve unless accompanied by adoration in spirit and in truth. With what greater indignation and disgust will He not turn away from the cruel or unclean practice of human sacrifice and the prostitution of sacred things so common among the neighbouring nations. On being asked with what one should approach and come before the Most High God, He replies by the mouth of Michael: "I will show thee, O man, what is good, and what the Lord requireth of thee; Verily to do judgment, and of love mercy, and to walk solicitous with thy God" (vi, 8). So religion joins morality, and formulates and imposes its dictates. Jahve will call the nations to account for the misdeeds the race has committed against the Most High, besides, for not observing the Mosaic legislation (cf. Amos, i-iv, etc.). And He will do this, so as to conciliate in a Divine manner the rights of justice with the realization of the promises made to Israel and mankind.

(b) Prophetic predictions. The Day of Jahve; the Saved; Messianism; Eschatology. The constant subject of the great prophetic predictions of Israel, the punishment of the guilty nations, and the realization for all of the ancient promises. Directly or indirectly all the prophecies are directed to the obstacles to be removed before the coming of the new kingdom or with the preparation of the New and final Covenant. From the days of Amos, and clearly it was not even then a new expectation, Israel was awaiting a great day of Jahve, a day, which it deemed one of extraordinary triumph for it and its God. The Prophets do not deny, but rather declare with absolute certainty that the day must come. They dispel the illusions concerning its nature. For Israel, faithless and burdened with crimes, the day of Jahve will be as a day of light to lighten the darkness of the nations (Is. xiv, 1-6; Jer. xii, 20; Am. v, 18 sqq.). The time is approaching when the house of Jacob will be lifted among the nations as wheat is shaken in the sieve and not a good seed drops to the ground (ix, 9). Alsal the good seed is rare here. The bulk of the nations will be carried away to a holy germ from which the Messianic kingdom will arise. The pagan nations will serve as sieves for Israel. But as they have wandered still further from the right path, the day of Jahve will come for them in turn; finally the remnant of Israel and the converts of the nations will unite to form a single people under the great king, the Son of David. The remnant of Ephraim or of Juda remaining in Palestine at the time of the Exile, the remnant returning from the Captivity to form the post-Exilic community, the Messianic kingdom in its militant state and its final consummation—all these stages of the history of salvation are mingled here and there in one prophetic view. The future life looms up but little, the oracles being addressed principally to the Assyrians. The Messianic theme has been more by the Prophets. However, Ezechiel (xxxvii) alludes to the resurrection of the dead; the apocalypse of Isaias (xxvi, 19 sqq.) mentions it explicitly; Daniel speaks of a resurrection unto life everlasting and a resurrection unto eternal reproach (xii, 2 sq.). The broad daylight of the kingdom is left to the future, as the kingdom is before the Father. The present is the age of the messianic kingdom, and not of the Virgin-Mother, the old man Simeon and Anna, the Prophets, are enlightened by the Holy Ghost and unfold the future. Soon the Precursor appears, filled with the spirit and power of Elias. He finds anew the accents of olden prophecy to preach penance and announce the coming of the kingdom. Then it is the Messias in person who, long foretold and awaited as a Prophet (Deut., xviii, 15, 18; 1a, xlv, etc.), does not disdain to accept this title and to fulfill its significance. His preaching and His predictions are much closer to the prophetic models than are the teachings of the rabbis. His great predecessors are as far below Him as the servants are below the only Son. Unlike them He does not receive from without the truth which He preaches. Its source is within Him. He promulgates it with an authority thereunto unknown. His revelation is the definite message of the Father. To understand its meaning more and more clearly the heathen world has to turn to the church which Jesus founded. "I will show thee, O man, what is good, and what the Lord requireth of thee; Verily to do judgment, and
God continues to select certain instruments like unto the Prophets of the Old Law to make known His will in the Church and to help men towards the saving events: such, for instance, are the Prophets of Antioch (Acts, xiii, 1, 8), Agabus, the daughters of the Evangelist Philip, etc. And among the charismata (cf. Prat, "La théologie de Saint Paul," 1 pt., note II, p. 130–5) conferred so abundantly to hasten and for the incipient progress of the faith, one of the principal, next after the Apostolic, is the gift of prophecy. It is granted "unto edification, and exhortation, and comfort" (1 Cor., xiv, 3). The writer of the "Didache" informs us that in his day it was fairly frequent and widespread, and he indicates the signs by which it should be recognised (xi, 7–12). Finally the Canon of the Scriptures closes with a prophetic book, the Apocalypse of St. John, which describes the struggles and the victories of the new kingdom while awaiting the return of its Chief at the consummation of all things.

Propositions Condemned. See CENSURES, THEOLOGICAL; EXCOMMUNICATION.

Proprium.—The Proprium de tempore and the Proprium Sanctorum form in the present liturgy the two principal portions of our Breaviary and Missals; the first comprises the parts assigned for the days of the Masses or Office (introductions, prayers, lessons, responses, versicles, antiphons, etc.); the second is devoted to the Offices of the Saints. The Proprium de tempore begins with the first Sunday of Advent and ends with the last Sunday after Pentecost. It includes, after Advent, the parts assigned for the Christmas season (six Sundays); Septuagesima, three weeks; Lent, six weeks; Paschal time, fifty days; Pentecost, and the twenty-four Sundays after. Most of the Sundays comprising this cycle, and often weekdays, have special Offices which composed the Proprium de tempore. The Proprium Sanctorum comprises all the saints' days with special Offices, from St. Andrew on 30 November. The Offices of the saints, like those de tempore, are composed of lessons, antiphons, responses, hymns, and other liturgical passages special to the saints' feasts. It is unnecessary to remark that in the liturgical Books before the ninth or eighth century, there were no special Offices; the service was practically a solemn festival, St. John the Baptist, the Apostles, or St. Michael; the season of Septuagesima did not yet exist, at least in its entirety. A century or two later the Christmas season had not been evolved, even the weeks of Advent had practically no special Offices. In the first ages of the Church, except for the Feast of Easter, Christmas Day, and Sundays, the liturgical cycle did not exist. The Divine Office and the Liturgy of the Mass were performed with the help of the books of the Old and the New Testaments, and sometimes of psalms or canticles, readings, exhortations, and impromptu prayers. The liturgical cycle, that is, the feasts of the year or of the martyrs exerted hardly any influence on the Liturgy, and in this sense it may be said that in the beginning there was neither a Proprium de tempore nor a Proprium Sanctorum. Propers (op. cit. infra) thinks that it was at Rome, in the fourth century under Pope Damasus, that this liturgical "reform" took place, especially in arranging the liturgical prayers to suit the needs of its feasts and to be accepted with some reservations, as it is indisputable that even then the cycle had exerted its influence on the liturgy, in certain special circumstances. It seems certain that the origin of the Common of the Saints is the same as that of the Propria, and that it was at first a Proprium; for instance, the Common of the Apostles was originally the Proprium of the Apostles at St. Peter's and St. Paul; and the Common of a Martyr was originally the Proprium of St. Stephen and St. Lawrence.

F. CABROL.

Proschko, Franz Isidor, well-known Austrian author, b. at Hohenfurth, Bohemia, 2 April, 1818; d. at Vienna, 6 February, 1891. Throughout his life he was engaged in various departments of the public service. A monument was erected on his grave (in his honour (1906.) Of his numerous writings, always characterized by a Catholic spirit, the most important are: "Leuchtfächerchen" (1849) and "Feierstunden" (1854), books for the young; "Höllemaschine" (2 vols., 1854), "Der Jesus" (2 vols., 1857), "Die Nadel" (2 vols., 1858), and "Pugatschew" (2 vols., 1860), historical romances; "Ausgewählte Erzählungen und Gedichte" (1873). His complete works were edited in six volumes ("Franz Isidor Proschko, Gesammelte Schriften", 1901–09) by his daughter, Hermione (b. at Linz, 29 July, 1831), who is also a distinguished Catholic writer, and whose works include: "Heimatklänge" (poems, 2nd ed., 1879); "Unter Tannen und Palmen" (1880); "Aus Oesterreichs Lorbeherin" (1891); "In Freud und Not" (1893); "Gott lenkt" (1895).

THOMAS KENNEDY.

Prose is a word, and a stranger, or newcomer, Vulgate, advent.—The English term "prose" occurs only in the New Testament where it signifies a convert to the Jewish faith (Acts xxi, 15; Acts, ii, 11; vi, 5; etc.), though the same Greek word is commonly used in the Septuagint to designate a foreign sojourner in Palestine. Thus the term seems to have passed from an original local and chiefly political sense, in which it was used as early as 300 B.C., to a technical and religious meaning in the Judaism of the N.T. epoch. Besides the proselytes in the strict sense who underwent the rite of circumcision and confirmed to the precepts of the Jewish Law, there was another class often abused by the Jews (Acts xxiv, 22–23) who were "fearers of God" (Acts, xvi, 14), "worshippers of God" (Acts, xvii, 14), servers of God" (Acts, xii, 43; xv, 17). These were sympathetic adherents invited by the Monotheism and higher ideals of the Jewish religion. St. Paul addressed himself especially to them in his missionary journeys, and from them he formed the beginning of many of his Churches.

Prose or Sequences.—I. DEFINITION AND GENERAL DESCRIPTION.—The Sequence (Sequentia)—or, more accurately as will be seen further on, the Prose (Prosa)—is the liturgical hymn of the Mass, in which it occurs on festivals between the Gradual and the Gospel, while the hymn, properly so called, belongs to the Breviary. The Sequence differs also in structure and melody from the hymn; for whilst all the strophes of a hymn are always constructed according to the same metre and rhythm and are sung to the same melody as the first strophe, it is the peculiarity of the Sequence, due to its origin, that (at least in those of the first epoch) a pair of strophes is constructed on a different plan. A sequence usually begins with an independent introductory sentence or an Alleluia (an intonation with its own melody); then follow several pairs of strophes, each pair with its own melody; in the earlier periods

XII.—51
the conclusion is uniformly an independent sentence of shorter or longer form. Each pair of strophes is composed of strophe and antistrophe, which ex-

achieve agree in the length and the number of their syllables (later also in rhythm) and effect). The execution was entrusted to two choirs (usually of men and boys, respectively), the strophe being sung by one and the antistrophe by the other to the same melody. Thus, in contrast with the monotony of the hymn, the Sequence shows manifold diversity in outward construction, in melody, and in method of execution. The various transformations which this original plan underwent in the course of the centuries, and according to which we divide sequencio into those of the first, third, and second periods, will be considered in the next paragraph.

II. ORIGIN, DEVELOPMENT, AND CLASSIFICATION.

—That the Sequence started from the Alleluia is generally admitted, and may be considered as certain; but the manner of its origin and the various phases of its development before we get to what are termed the “versus ad sequentias” (which are the immediate predecessors of the Sequence), are still shrouded in obscurity and cannot now be determined with certainty, as the oldest documents are not contempo-

rary. In some cases which we can vouch for, definite conclusions can be drawn. With the aid of the „Analecta hymnica mediæ ævi“—especially the material of the last volume (LIIII) edited by the Rev. H. M. Bannister and the writer of the present article —and with the assistance of the material gathered by Bannister for his forthcoming work on the Se-
quence melodies of all Western countries, we may trace the most probable development of the Sequence as follows:

(1) The starting-point of the Sequence is the Alle-

luia with its melismata (i. e. a more or less melo-
dious succession of notes on its concluding a); in other words, the Alleluia which precedes the versus alleluuiaticus. This succession of notes was called sequentia (or sequela, “that which follows”); synonymous terms are jubulus, jubilatio, numena, melodia, as was later explained by Abbé Gerbert of Saint-Blasien: „Nomen sequentiarium antea jubilatio-
tionibus ejusmodi proprium fuit, haud dubie, quia soni illi ultimam verbi syllabam seu vocalem se-
quebantur. ‘Sequitor jubilatio’, ut habitetur in Ord.

Ponc. II., sequentia vs. sequentiam vocant.” In citatis his locis agitur de Alleluia, in cujus ultima syllaba hujusmodi numena haud raro satis longe com-
parent in veteribus codicibus. . . Ipsa illa repetitio a a cum modulatione sequentiae dicatur. ‘Post Alleluia quaedam melodía neumatun cantatur, quam sequentiam dicitur’; al. S. Udalrici lib. I. I. Consuet. Cluniac. cap. II. Belethi idem affirmat: ‘Mors enim fuit, ut post Alleluia cantaretur neuma; nominatur autem neuma cantus qui sequebatur Alle-

luia. Quod tamen ita intelligi debet, ut ipsa utimae vocali A conjungatur. ‘Graecia non sequitur cantum, sed melodia’. Typis St. Blasianis I, 1774, pp. 338 seq.; cf. „Analecta hymnica“, XLVI, 11 sq.; XLIX, 266 sqq.). Hence sequentia is originally only a musical term; etymologically it is the same as the Greek διαλογική, although the latter word actually means something else (cf. Christ and Paradise, XLIX, 266 sqq.). However, however, we are justified in supposing Greek-Oriental influence from the similarity of the terms sequentia and διαλογική must be left undecided, es-

pecially Hymnalist (question) which probably led to the Greek διαλογική, must be regarded as a genuine Western product without traces of anything essentially Eastern.

(2) It was the length of the melisma or jubulus over the ending a (when and how this length arose is not here the question) which probably led to the Greek διαλογική, being divided into several parts (incipia, musical

phrases). Each division was then called sequentia, and the whole, as comprising several such divisions, sequentiae. The reason for this division was a purely practical one, viz. to allow the singers time to take breath, and to effect this the more easily the practice was introduced, so it would seem, of having these divisions of the melody (or sequentiae) sung by alternate choirs, each musical phrase being sung twice; exception was made in the case of a few jubili, appar-

ently the shorter ones, which have no such repetition. This is the origin of the alternate choirs, and of the consequent repetition of all or nearly all the divisions of the melody. In the old musical manuscripts the repetition is indicated by a = deno or duplex or die per bis; cf. discantus for bis, etc.

(3) A much more important advance was made when some of the divisions of the melody or sequentiain—for it did not as yet apply to all of them—were provided with a text; this text, consisting of short versicles, was appropriately termed in the “Procemnium” of Notker “versus ad aliquot sequentias” (i.e. the verses or text to some of the divisions of the melody), in which expression the proper meaning of sequentia is preserved. When we reach these versus ad sequentias we are on safer his-
torical grounds. In the Analecta hymnica (LIV, 1772, pp. 515-516) we have examples of them preserved in some old French and English tropers; not a single example comes from Germany. For the purpose of illustration we may give the first paragraphs of the jubili “Fulgens praecala” from the Winchester Tropier:

„Fulgens praecala“

The first three divisions of the jubili are here without any text; they are pure melody sung to the vowel a: a text is then provided for the fifth division and its repeat; this is again followed by a on which the melody was sung; a text has been composed for the eighth and twelfth divisions as for the fifth; the end-
ing is three divisions of the melody without any text.

(4) From these “versus ad sequentias” to the real Sequence was no great step; a text was now set to all the sequentiain or divisions of the melody with-

out exception, and we thus have what we call a sequence. The proper and natural title of such a melody with its text (a text which has neither rhythm, metre, nor rhyme) is doubtless “sequentia cum prosa” (melody with its text), a title found in old French sources. As this text (prosa) gradually be-

came more prominent, and as it had to be marked before the melody, the use of the term "Prosa" which is frequently evinced in the language of the sequences, or from whatever other reason, em-

ployed almost exclusively the title Sequentia. In
this connexion it is interesting to quote the remark of William of Hirsau in his "Conseuetudines": "... pro signo proese, quam quidam sequentiam vocant." From the single title "Sequentia cum proese" and the two titles "Proese" and "Sequentia" (Proese and Sequence), which are now used promiscuously; the first is the older and more accurate, the second the more usual. (As a matter of curiosity we may mention that there have been people who took in earnest the interpretation of proese as = pro ad, i.e. pro sequentia.)

This sketch of the development of the Prose or Sequence explains many peculiarities in the oldest sequences. Originally the text was adapted to a melody which already existed; as the division of this melody (clausula), with the exception of the introductory and closing ones, were usually repeated by alternative choirs (cf. above II, 2), there arose double strophes of the same length and sung to the same melody—in other words, symmetrically constructed parallel strophes. Those somewhat long pieces of melody (a musical division corresponding to the strophe of the text) were further subdivided into smaller divisions, shorter musical phrases with short half-pauses, so that the whole of the melody was divided into a number of short musical phrases of different lengths. As the text had to follow this peculiarity, the strophe was divided into different verses of different lengths. Under these circumstances it was natural that at the beginning neither rhythm nor metre (still less rhyme, which is of relatively late origin) was taken into practical account, and the whole presented an appearance and form very different from what we usually understand by a poem.

On the whole then the Prose was true to its name in being prose, except that the fact that the antistrope had to be as long as the strophe and that the end of the verse had, so far as possible, to correspond with the end of the word imposed a certain restraint. Moreover, as it seems, the first writers of sequences felt themselves especially bound by another law (frequently observed also in later times), which is important to note, prevailed without exception in the versus ad sequentias, the predecessors of the Sequence, and which, therefore, may not be considered the product of a later date; the jubilus of the Alleluia was built upon its concluding a, and is thus the melody of the a. This is the original text of the jubilus, ought therefore naturally to be prominent in the text which was introduced to replace it. As a matter of fact, in all versus ad sequentias and in many old sequences (especially the chant not the strophes but often all the verses end in a. But we must not overlook the fact that in those of German origin this law is seldom observed or, more properly speaking, is still only occasionally used (cf. Analecta Hymnica, LIII, no. 100, 101, 155, 156), and even then it is not the verses but only the strophes which end in a. As an example of these peculiarities we may quote the first strophes of the sequence "Ecce reclusus" (Anal. Hymn., LIII, 16), once a favourite Christmas sequence in all countries:

1. Ecce reclusus laudibus plie digna
2. Hulius diei carmina, in qua nobis lux ortirur gratissima;
3. Hodie ascendo
4. Gestis capti
5. Helius diei carmina, in qua nobis lux ortirur gratissima;
6. Paepe virilis gaudio;
7. Post se ipsum mortua;
8. Homo laesus
9. Post se ipsum mortua;
10. Homo laesus
11. Post se ipsum mortua;
12. Homo laesus
13. Post se ipsum mortua;
14. Homo laesus
15. Post se ipsum mortua;
16. Homo laesus

Some few sequences of the older period do not show the strophes in pairs, their strophes lacking antistrope. An example is the following Advent-Sequence (Anal. Hymn., LIII, n. 3):—

1. Alleluia;
2. Qui regis aequor
3. Tu plebi tueas
4. Praesta dona illi salutaria.
5. Quem præsidium propheticae
6. extensa, "carmen
7. sacrum
8. et anima saeculorum."
the text had almost exclusively the character of prose, the strophes being dissimilar and the verses of unequal length, of different structure, and without rhyme or regular rhythm. These latter are therefore called the sequences of the first epoch; none have been preserved in the liturgy of to-day. (From the beginning of the strophes of the first two to those of the second epoch occupied more than a century, viz. from the end of the tenth, when the change made itself visible here and there, to the beginning of the twelfth, when the new style reached its perfection. Sequences with more or less numerous traces of the transition process are so numerous that they may be placed in a class by themselves. While maintaining the structure of sequences of the first epoch these sequences add a greater or less degree of the element of rhyme (although not yet pure rhyme) and greater uniformity of rhythm. They may be entitled sequences of the transitional style, not of the transitional period; for many sequences of the transitional period still bear the distinct stamp of the older ones, and moreover, while the seven or, in some cases, eight strophes of the second sequence, which opened with the most favour, some writers of prose utilized the structure of the early period, while employing rhyme according to the style of the second period. It should also be observed that not a few sequences are so very skin to those of the first, whilst others on the contrary are so nearly related to those of the second epoch, that it is very difficult to decide to what group they should be referred. A sharp line of division cannot be drawn, since the development from the older to later forms (sometimes in strong contrast with the first) was not only slow but steady, revealing no abrupt transition or change. A good example of the transitional style is the Easter sequence which is still used, but now a little altered in the "Misale Romanum", and which was probably composed by W. некто of Burgum (9481)."

1. tus nobis, victor. Rex, miseric. (6) The final phase of the development is seen in the sequences of the second epoch already described, in which uniformity of rhythm, purity of rhyme, and strict regularity in structure characterize the verses, though the strophes still evince manifold variety. Not infrequently most (sometimes even all) of the pairs of strophes are composed of verses so uniform that the outward difference between these sequences and hymns, though not completely removed, is considerably lessened. The present sequence for Corpus Christi, composed by St. Thomas Aquinas in 1263, may serve as an example:—

1a. Laudata salutare, Descuere et pastorem In hymnus et canticis.
1b. Quantum potes, tantum salut.
2b. Pange lingua gloriosi Corporis mysterior
3a. Salve sancte Spiritus.
3b. Stabat mater dolorosa, et Dies irae dies illa, of which the second epoch was originally rhymed prayers—show even greater, and in fact complete, symmetry in all the strophes—the sequences for Whitsun and the requiem Mass show uniformity even in all the verses. In other respects, however, many sequences of the second epoch, despite their uniformity, evince such variety in the structure of the pairs of strophes that, in contrast with the former, they present considerable diversity. But the element which is wanting in all of them is the connexion with the Alleluia-jubilus and its melody, and it is only in the repetition of the melody in the antistrophe and in the melodic connexion that the origin from the jubilus can still be observed.

Of the above-mentioned six phases in the development of the sequence the first and second are very obscure in two respects, as regards (1) the appearance of the Alleluia-jubilus without the text and (2) its connexion with the so-called Gregorian Alleluia. To answer the first question, we are naturally tempted to point to the fact that in some of the earliest tropers (e. g. Cod. Sangallen, 484), the Alleluia-jubilus has no text. It is quite true that melodies without text are found round the choral hymns that these are melodies to which texts were subsequently added is not true: they are melodies to previous sequence-texts, as is shown in the introduction to "Anal. hymn", LII, pp. xxii sq. The expression "melodies without text" is liable to be, in fact has been, misunderstood, and should be replaced by "melodies to an existing but unwritten text". No one has as yet found a single Alleluia jubilus without text, whence it might have been deduced that the existence of jubilus in this form before the ninth century, and independent of it. The prior existence of such jubilus must indeed be admitted, but no example has as yet been discovered, nor is the discovery of such jubilus hereafter probable. For, in spite of long and careful research, no liturgical MS. with no melodies has been discovered of a date earlier than the ninth century, with the one exception of a Pontificial of Poitiers (Cod. Parisin. Ars. 227), which is either eighth- or ninth-century; even of the tenth century we have only one certain and three or four probable ones. One might hazard the opinion that it was only in the ninth century that the melodies, which were previously known by heart, came to be inserted in the choir-books. In the ninth century, however, the textless Alleluia-jubilus were already replaced by the versus, and many sequences; the form of the textless jubilus can be only provisionally conjectured on the basis of the jubilus with the versus ad sequentias (see above, II, 3).

For this reason it is still more difficult to give a decided answer to the second question as to the connexion between the jubilus, which forms the basis of the sequence-melodies, and the GregorianAlleluia. If we take it for granted that the latter have been handed down unaltered and retain the original form in the oldest known sources (though these do not go further back than the ninth century), in other words,
that the Alleluia before the Alleluia-verse had in the time of St. Gregory the Great the form which the Benedictines of Solemne have established for it in their valuable publications, then we must admit that the melodies of the Gregorian Alleluia, even the longest of them, are much shorter than, and are different in kind from, the melodies of the jubilus to which the verse ad sequentiam and the sequence proper were attached. According to the "Procenium of Notker", the text of the sequences is so set to the melodia longissima of the Alleluia-jubilus that practically one syllable of the text corresponds to one note of the jubilus. When we seek the origin of this comparatively long melisma? Was it developed from the Gregorian Alleluia by similar melismatic interpolations and musical embellishments, just as responsories of the Breviary with their final melisma grew into the tropes and versets with their more extensive text and music? This view cannot be accepted; for we always straightforwardly recognize the original melisma of the responsory as the basis or letenovia of the melody of the versets, which at the end of each division and at the conclusion repeats the concluding note of the verset. Quite different is the case with respect to the sequences of the first epoch. The introduction, it is true, follows the melody of its Alleluia; a few words which follow are frequently adapted to the first notes of the melisma of the Alleluia-jubilus of the sequence then entirely deserts the melisma of the Alleluia and never returns to it. Various modern liturgiologists have believed that the long jubilus may be referred to Byzantine influence during the eighth century; however, no direct positive evidence has hitherto been forthcoming, and no example of Byzantine music, which might have served as a model for the long Alleluia jubilus, has come to light. Moreover, assuming a Byzantine model, it is more than enigmatical why writers of prose often adhered so conscientiously to the melody of the Alleluia proper and to the first notes of its concluding a; assuming that the verses were written to fit foreign melodies, we are at a loss to explain why a part is not foreign. Perhaps the difficulty may be explained if we assume that Gregory the Great found a long Alleluia, presumably derived from the Greeks, and gave it the short form preserved in the choir-books of the West. We know that he shortened many parts of the Sacramentary. If this ancient obvious origin has continued to exist in some places alongside of the shorter ones, and may have served later as the basis of the sequence text. While this attempt at a solution of the great riddle has much in its favour, it is still only an attempt.

III. MELODY AND TITLE OF THE MELODY.—From what has been said it will be seen that there are two classes of sequence melodies: (1) those which originally formed the Alleluia-jubilus. These are the melodies to which a sequence text was later composed; (2) those which originated simultaneously with the text, both being composed by the same person, or those which were composed by a musician for a text written by a prosator. Not every sequence has its own melody; often several sequences were written to one and the same melody, and, if this was very popular, many sequences were written to it. Hence many sequences have the same plan and the same melody. In such sequences the obvious thing was to identify the melody by some distinctive word; this word was and is called the title of the melody. About 30 titles or "Procenii" of a monk of the men's and women's period are found in the old MSS.; this does not imply that only 300 old melodies are known, for many melodies have come down to us without title.

It was natural that the title should be chosen from the initial word of the original sequence, to the melody of which later sequences were adapted; as examples we may cite such titles as "Alimphora", "Creator poli", "Digna cultu", "Exsultet elegantia", "Fulgens praelia", etc.

It was also natural, if indeed not even more appropriate, to provide as the title of a sequence melody the beginning of the Alleluia-verse whose Alleluia-jubilus gave the basis for the sequence. Hence we explain such titles as "Ostende", "Lestatus sum", "Excita", "Venim Domine", "Dominus regnavit", "Dios sanctificatus", "Multifarie", and several others. Thus the Alleluia-verse of the Gradual for the first Sunday in Advent is "Ostende nobis Domine miseriordiam tuam etc."; for the second Sunday, "Lestatus sum in his etc."; for the third, "Excita Domine potentiam tuam etc.", and so on. In the further development of the Sequence, as the list of titles increased, as the sense of the connexion of the Sequence with the Alleluia and its verse gradually disappeared, and as for some reason or other the desire for novelty arose, titles were adopted which seem to us rather far-fetched. Important words from the beginning or middle of a sequence were taken as the title of that sequence. In the sequel, the procedure was the same as in the initial. In the "Missale romanum" (Analy. hymn., LIII, n. 239), the words "virgo" and "ploras" gave the title "Virgo plorans"; from "Hanc concordi familiaris" (Analy. hymn., LIII, n. 215) was taken the title "Concordia"; in the Roman Gradual (Analy. hymn., LIII, n. 246), the second strophe commences "Filium matris", whence was taken the title "Filia matris"; the sequence "Summi triumphum regis" (Analy. hymn., LIII, n. 67) belongs to the alleluia-verse, "Dominus in Sina in sancto ascendet in altum captivam duxit captivatatem", and the conspicuous words "captivam... captivatatem" produced the title "Captiva"; the same is the case with other titles, e. g. "Amena", "Materna", "Maris stella", "Planctus cygni", etc. Several titles are evidently formed on the principle of analogy; from the beginning of the sequence "Lyra pulchra regem" (Analy. hymn., LIII, n. 52) and "Nona tuba nunc tua" (ibid. n. 14), titles (namely "Lyra" and "Nona tuba") which indicated musical instruments were introduced; analogous to these are such titles as "Bucca", "Cithara", "Fideicula", "Fistula", "Organa", "Tuba", "Tympanum", etc. "Symphonies" is founded on the analogy of "Concordia", and the title "Chorus" related to it. Of somewhat later date than the genuine or supposed origin of the melody are such titles as "Greca", "Romana", "Metensis", "Occidentana", etc. Far-fetched and now scarcely explicable are the titles "Cignea", "Frigdola", "Planetus sterilia", "Duo tres", "Hypodiaconiessa", "Vitella", etc. If the conjecture be accurate that the title of a melody is simpler and more natural the nearer it is to its origin, then the titles, taken in connexion with other facts, provide the means of explaining the question as to the original home of the various sequences.

IV. HISTORY OF THE SEQUENCE.—Formerly the origin of the Sequence was always sought at St. Gall, and Notker Balbulus was universally accredited as its inventor. The basis for this supposition was furnished by the so-called "Procenium of Notker", in which Notker tells us that it was the "Antiphona... ad sequentiam" (in which it was not only difficult to understand, but ad sequentiam erant modulati”), which had suggested to him to place the words of a text under the melodia longissima of the Alleluia-jubilus in such a way that each word of the text corresponded to a note of the melody. But does this prove that Notker was the
first person who did this? In St. Gall, certainly; but elsewhere this might have taken place long before-hand. Besides it is very doubtful on other grounds whether the "Procmium of Notker" is genuine and authentic. Until the last two decades our knowledge of the musical works of older calendar. of the work of the older sequences, and especially their melodies, were only known to us through the St. Gall tropers, whose importance was enhanced by their number; other old tropers from Germany, of which scarcely six were known, were treated as copies of those of St. Gall. What France, England, or Italy had done in the production of sequences was scarcely suspected, and one had no idea at all of the relation which their melodies had to the St. Gall melodies. Subsequently it became plain that the St. Gall composer was more than once influenced by an older French exemplar; what has been said above as to the development of the Sequence—it was based on the most extensive collection of original material—undoubtedly goes to prove that all the peculiarities of the sequences in their early stage are found in those of France, whilst those of St. Gall (i.e. the German ones) show signs of a relatively later period and of a phase of greater development, even in the matter of the sequence and of titles of melodies. Further proofs cannot be given here, and we must content ourselves by referring to the "Anastica hymnica," LIII, the results of which may be summed up in three sentences: (1) prose or sequences did not originate in St. Gall. Notker Balbulus was not their first inventor, although he was their first and most prominent exponent in Germany. Their origin goes further back, probably to the eighth century; (2) failing more definite evidence, it is difficult to say exactly what sequences are to be attributed to Notker Balbulus; meanwhile, we cannot derive them from theprobe first experienced clearly of German origin come from St. Gall and what from other German abbeys or dioceses; (3) all that has hitherto been discovered as to the origin and development of sequences shows France to have been the original home of the "versus ad sequentias" and of the "sequentia cum prosa." As to the precise locality of that home in France—whether it was Luxeuil, or Fleury-sur-Loire, or Moissac, or Saint-Martial, must be a matter for conjecture. In what countries and to what extent France made its influence felt in the course of time is not yet decided with accuracy. At the end of the tenth and especially in the eleventh century sequences were certainly very widely spread and popular in all countries of the West—even in Italy, which was by that time the centre of the intellectual life of Europe. Any share in this branch of composition. Not only in Northern but also in Southern Italy, in the neighbourhood of Benevento and Monte Cassino, were schools for sequences, as the discoveries of Bannister at Benevento have proved. Of all these sequences of the first epoch there is a complete in the eleventh century which were found only in a given country and were therefore local products; others (but they were relatively few) were the common liturgical property of all countries of the West. Besides these, there are two particular groups to be distinguished, viz., such as were used only in France, England, and Spain, and such as were used only in Germany, Italy, and the Netherlands. This being the case, we may classify sequences as Gallo-English or Germano-Italian: to the first class belong the Spanish; to the second, those of Holland and Flanders. Between these countries which belong to one class, there existed a whole or less free exchange of sequences, whilst sequences which belong to the other class were as a whole excluded and only rarely introduced. Thus, between France and Italy, as well as between England and Germany, there existed sometimes a friendly exchange, but scarcely ever between France and Germany. This fact probably played some role in the development of sequences in various countries and in the influence which one country exercised upon another. Of the composers of sequences unfortunates, the honour of bringing sequences to perfection during the first epoch belongs to Germany. During the second epoch the picture changes: in the abbey of the Canons Regular of St. Victor in Paris the Sequence with rhythm and rhyme reached artistic perfection, combining spendour of form with depth and seriousness of conception. This was the case with Adam of St. Victor (d. 1192); it is unfortunately uncertain whether many of the sequences ascribed to him are really his or belong to his predecessors or imitators. The new style met with an enthusiastic reception. The sequences of Adam of St. Victor came into liturgical use almost everywhere, and found eager and frequently even successful imitation. In French Graduals almost all the sequences were replaced by the "versus ad sequentias," whereas in Germany, together with the new ones, a considerable number of those which are supposed to be Notker's remained in use as late as the fifteenth century. Some precious contributions were furnished by England. Italy on the other hand falls quite behind during the second epoch. However, the two noble sequences still in use, the "Stabat mater" and the "Dies irae," are the works of two Italian Franciscans, their composition being with some certainty ascribed to Thomas of Aquino (d. 1274) and Thomas of Celano (d. about 1250); both these works, however, were originally written as rhymed prayers for private use and were only afterwards used as sequences. St. Thomas of Aquinas too (d. 1274) has bequeathed to us the immortal sequence, "Lauda Sion salvatorem," but that is the only one he wrote. Sequences like hymns declined in the fifteenth century, and reached their lowest stage of decadence where they had most flourished in the twelfth and thirteenth (viz. in France). The development of sequences is therefore far from having come to a close, and there is much still to be expected. If not all the melodies were taken over by them and preserved with fidelity and conservation, with the admission of sequences and tropes into the liturgy, ecclesiastical music found its opportunity for further development and glorious growth.

...
surgeon in the campaign of 1812-5. He was also an enthusiastic lover of ecclesiastical chant. At length in 1821 he determined to become a priest, and was ordained at Ratisbon, 11 April, 1826. Henceforward he devoted himself to the acquisition of ancient church music and to the performance and composition of choral music as well as the emoluments from his church preferments, searching through Italian and other musical archives. In 1830 he was made Canon and Kapellmeister of Ratisbon cathedral, of which he had been vicar chorale since 1827. With unwearied patience he collected, and transcribed hundreds of musical scores, and in 1835 started the publication of his invaluable "Musica Divina", the fourth volume of which appeared in 1862; this was followed by a "Selectus Novus Missarum", in two volumes (1857-61).

W. H. GRATTAN-FLOOD.

Prosper of Aquitaine, Tino.—The first sure date in the life of Prosper is that of his letter to St. Augustine, written while in the field of war. In 436 or 437 a certain Hilary wrote to St. Augustine in reference to difficulties raised against his doctrine in Marseilles and the neighbourhood. Hilary distrusted his own ability to give St. Augustine a proper grasp of his difficulty. The latter, he described, was a man distinguished "tum moribus, tum eloquio et studio" (for morals, eloquence and zeal) to write also. This friend was Prosper who, though he had never met St. Augustine, had corresponded with him. The two letters were despatched at the same time, and may be said to have opened the semi-Pelagian controversy. St. Augustine replied to the appeal made to him with the two treatises, "De Pretescriptione" and "De Dono Perseverantiae". It was about this time that Prosper wrote what was revived on great conflict of a form of letter to a certain Rufinus, and his great dogmatic poem of over a thousand hexameter lines, "De Ingratia", on the semi-Pelagians, who were enemies of grace and represented as reviving the errors of Pelagianism. Two epigrams of twelve and fourteen lines respectively against an "obstructator" of St. Augustine seem also to have been composed in the lifetime of the saint. Three opuscules belong to the time immediately after the death of St. Augustine (430): (1) "Responsionum ad quaestionem" to his Gallace. These capitula were a series of fifteen propositions attributed to St. Augustine by his opponents, e. g. "the Saviour was not crucified for the whole world." To each Prosper appended a brief responso, and concluded the treatise with fifteen corresponding sententiae, setting forth what he held to be the true doctrine. (2) "Ad capitula observationum Vincentianarum responsiones". The Vincentian objections were like the "capitula Gallorum", but more violent, and they attacked Prosper as well as St. Augustine. Prosper replied to them one by one. The Vincent who drew them up was probably Vincent of Lerins (Bardenhewer, Hauck, Valentin), but some writers have contested this point. (3) "Pro Augustino responsiones ad excerpta Genesinum". This is an explanation of certain passages in St. Augustine's treatises, "De predicatione" and "De dono perseverantiae", which presented difficulties to some priests at Genoa who asked Prosper for an explanation of them. These three opuscules are placed by Bardenhewer after Prosper's visit to Rome.

The Vincentine visi and a friend went to Rome to invoke the aid of St. Celestine. The pope responded with the Letter, "Apostolicæ Verba", addressed to the bishops of Gaul, in which he blamed their remissness with regard to the enemies of grace, and exculated St. Augustine. On returning to Gaul, Prosper again took up the controversy in his "De Gratia Dei et libero arbitrio contra collatorum". The "Collator" was Casian who in his "Conference" had put forward semi-Pelagian doctrine. The date of this, the most important of Prosper's prose writings, can be fixed at about 433, for the author speaks of twenty years since he had written the Pelagian heresy, viz., according to his "Chronicle", a.d. 413. An ironical epitaph on the Nestorian and Pelagian heresies was probably composed shortly after the Council of Ephesus. The "Expositio psalmorum" is substantially an abridgment of the "Exegesiographiae" of St. Augustine. It probably comprised the whole psalter, but as it has come down to us it only comments on the last fifty. The "Sententiae ex Augustine delibatas" is a collection of sayings extracted from the writings of St. Augustine. In framing these Prosper as a rule dealt rather freely with the text of St. Augustine, chiefly in the interests of rhythmic prose. Canons 9, 14, 15, 16, 18 of the second Council of Orange were taken from "sentences" 22, 222, 226, 160, 297. The epigrams are a number of the sentences turned into verse. Both these works must have been written about the time of the Council of Chalcedon, and probably, therefore, in Rome, whither Prosper was summoned about a. d. 440 by Leo the Great. According to Gennadius (De vir. ill., 84), he was said to have drawn up the letters written to the bishops.

The "Chronicle" of Prosper, from the creation to a.d. 378, was an abridgment of St. Jerome's, with however, some additional matter, e.g. the consuls for each year from the date of the Passion. There seem to have been three editions: the first continued up to 433, the second to 445, the third to 455. This chronicle is sometimes called the "Consular Chronicle", to distinguish it from another ascribed to Prosper where the years are reckoned according to the regnal years of the emperors and which is accordingly called "The Imperial". This first edition is the earliest work of Prosper. It was compiled by a man whose sympathies were not with St. Augustine, and who was formerly supposed to be Tiro Prosper and not Prosper of Aquitaine, but this theory has broken down, for Prosper of Aquitaine in some MSS. of the "Consular Chronicle" is called Tiro Prosper. With regard to the writings of Prosper not yet mentioned, Valentin pronounces the poem "De providentia" to be genuine; the "Confessio S. Prosperi", and "De vocazione" are genuine; the "De Demetriadem", the "Proprietorum sedis Apostolicæ auctoritates de Gratia Dei, etc." appended to the Epistle of St. Celestine, and the "Poema maritii ad conjugem" to be very likely genuine. The "De vita contemplativa" and "De promissionibus" are not by Prosper, according to Valentin and Hauck. Hauck agrees with Valentin with regard to the "Poema maritii" and the "Confessio", but pronounces against the "De vocazione", the De providentia", and on the other doubtful works expresses no view.

The story that Prosper was Bishop of Resina in Italy was exploded by Sirmondoni and others in the seventeenth century. For the origin of this legend see Dom Morin in "Rêveue bénédictine", XIII, 241 sqq. Prosper was neither bishop nor priest. The question whether he mitigated the severity of St. Augustine's doctrine has been much debated. The difference of opinion probably arises more from different views regarding St. Augustine's doctrine than from different interpretations of Prosper's. The general trend of opinion among Catholic writers seems to be in favour of the affinity of viewpoint, e.g. Kraus, Funk, Bardenhewer, Valentin, and others.

VALENTIN, St. Prosper d'Aquitaine (Toulouse, 1000); BARDENHEWER, Patrologie. The best edition of Prosper is the one published by the Benedictines in Florence (1711). Many of the more important works are included in the Benedictine edition of St. Augustine. The De ingratiisque and some other treatises are contained in Herder, S. Pat. opus. Mem-
Protectorate of Missions, the right of protection exercised by a Christian power in an infidel country with regard to the persons and establishments of the missionaries, applies to all promotion of missions, but only to that permanently exercised in virtue of an acquired right, usually established by a treaty or convention (either explicit or tacit), voluntarily consented to or accepted after more or less compulsion by the infidel power. The object of the protectorate may be more or less extensive, according as it embraces only the missionaries who are subjects of the protecting power, or applies to the missionaries of all nations or even to their neophytes, the native Christians. To comprehend fully the nature of the protectorate, it is necessary to understand its limits and as it is to-day, it will be necessary to study separately the Protectorate of the Levant and that of the Far East.

Protectorate of the Levant.—This comprises the missions of the countries under Turkish rule, whether who constantly occupy, Syria, Palestine, Egypt, Barbary, etc. It is French in origin and was, until near the end of the nineteenth century, the almost exclusive privilege of France. It was inaugurated in the Holy Land by Charlemagne, who secured from the celebrated Caliph Hayoun al-Raschid a sort of share in his sovereignty over the Holy Places of Jerusalem. Charlemagne and his successors made use of this concession to make pious and charitable foundations in the Holy City, to protect the Christian inhabitants and pilgrims, and to insure the perpetuity of Christian worship. The destruction of the Arabian Empire by the Turks put an end to this first protectorate, but the persecutions to which the new Musulman masters of Jerusalem subjected pious visitors and the clergy in charge of the Holy Sepulchre brought about the creation of a new protectorate, which Palestine was conquered from the infidels and became a French kingdom. The Christian rule was later replaced by that of Islam, but during the three centuries of Crusades, which had been undertaken and supported by the promoters of charity, the Eastern Christians had grown accustomed to look to that country for assistance in oppression, and the oppressors had learned to esteem and fear the valour of its warriors. In these facts we find the germ of the modern Protectorate of the Levant.

The Capitulations.—The protectorate began to assume a contractual form in the sixteenth century, in the treaties concluded between the kings of France and the sultans of Constantinople, which are historically known as Capitulations. At first this name designated four new agreements the first, and arose from the fact that the articles of these agreements were called Capitoli in the Italian redaction: the term has not, therefore, the same meaning as in military parlance. Francis I was the first king of France who sought an alliance with Turkey. To this he was urged, not by the spirit of the Crusaders, but entirely by the desire to break in Europe the dominating power of the House of Austria. By compelling Austria to spend its forces in defence against the Turks in the East, the term does not render it unable to increase or even to maintain its power in the West. His successors down to Louis XV followed the same policy, which, whatever criticism it merits, was as a matter of fact favourable to Christianity in the Levant. The French kings sought, by their zeal in defending Christian interests at the Porte, to extinguish their alliance with the sultan, was a source of scandal even in France. As early as 1528, Francis I had appealed to Solyman II to restore to the Christians of Jerusalem a church which the Turks had converted into a mosque. The sultan refused on the plea that his religion would not permit alteration of the purpose of a mosque, but he promised to maintain the Christians in possession of all the other places occupied by them and to defend them against all oppression. However, religion was not the object of a form of war between France and Turkey prior to 1604, when Henry IV agreed with Ahmed I the insertion, in the capitulations of 20 May, of two clauses relative to the protection of pilgrims and of the religious in charge of the church of the Holy Sepulchre. The following are the clauses, which form articles IV and V of the treaty: "IV. We also desire and command that the subjects of the said Emperor of France, and those of the princes who are his friends and allies, may be free to visit the Holy Places of Jerusalem, and no one shall attempt to prevent them, or compel them, in time of peace, and as it is to-day, it will be necessary to study separately the Protectorate of the Levant and that of the Far East.

The Capitulations.—The protectorate began to assume a contractual form in the sixteenth century, in the treaties concluded between the kings of France and the sultans of Constantinople, which are historically known as Capitulations. At first this name designated four new agreements the first, and arose from the fact that the articles of these agreements were called Capitoli in the Italian redaction: the term has not, therefore, the same meaning as in military parlance. Francis I was the first king of France who sought an alliance with Turkey. To this he was urged, not by the spirit of the Crusaders, but entirely by the desire to break in Europe the dominating power of the House of Austria. By compelling Austria to spend its forces in defence against the Turks in the East, the term does not render it unable to increase or even to maintain its power in the West. His successors down to Louis XV followed the same policy, which, whatever criticism it merits, was as a matter of fact favourable to Christianity in the Levant. The French kings sought, by their zeal in defending Christian interests at the Porte, to extinguish their alliance with the]
recommendation of his ambassadors and consuls to the Porte and the pashas, obtained justice and protection from their enemies. Though the missionaries were sometimes on such amicable terms with the non-Catholic clergy that the latter authorised them to preach in their churches, they usually experienced lively hostility from that quarter. On several occasions the Greek and Armenian schismatical patriarchs, displeased at seeing a great portion of their flocks abandon them for the Roman priests, on various pretexts, called on the Turks to forbear all propagandaism by the latter. The representatives of Louis XIV successfully opposed this ill-will. At the beginning of the reign of Louis XV the preponderance of French influence with the Porte was also manifested in the authority granted the Franciscans, who were protegés of France, to repair the dome of the Holy Sepulchre: this meant the recognition of their right of proprietorship in the Holy Sepulchre as superior to the claims of the Greeks and the Armenians. In 1723 the schismatical patriarchs succeeded in obtaining from the Sultan a "command" forbidding his Christian subjects to embrace the Roman religion, and the Latin religion to hold any communication with the Greeks, Armenians, and Syrians, on the pretext of instructing them. For a long time French diplomacy sought in vain to have these measures annulled. At last, as a reward for the services rendered to Turkey during its wars with Russia and Austria (1736-9), the French succeeded in 1740 in securing the renewal of the capitulations, with additions which explicitly confirmed the right of the French Protectore, and at least implicitly guaranteed the liberty of the Catholic apostolate. By the eighty-seventh of the articles signed, 28 May, 1740, Sultan Mahmud declares: "... The bishops and religious subject to the Emperor of France living in my empire shall be protected while they confine themselves to the exercise of their religion only, and may prevent them from practising their rite according to their custom in the churches in their possession, as well as in the other places they inhabit; and, when our tributary subjects and the French hold intercourse for purposes of selling, buying, and other business, no one may molest them for this sake in violation of the sacred laws." In subsequent treaties between France and Turkey the capitulations are not repeated verbatim, but they are recalled and confirmed (e.g. in 1802 and 1858). The various regimes which succeeded the monarchy and which recognise the ill maintained authority of Rome in law, and in fact, the ancient privilege of France in the protection of the missionaries and Christian communities of the Orient. The expedition in 1860 sent by Napoleon III to put a stop to the massacre of the Christians was in harmony with the ancient rôle of France, and would have been more so if its work of justice had been more complete. The decline in recent years of the French Protectorate in the Levant will be treated below.

Protectorate of the East.—Portuguese Patronage.—In the Far East—this refers especially to China—there was not, prior to the nineteenth century, any protectorate properly so called or based on a treaty. What is sometimes called the "Portuguese Protectorate of Missions" was only the "Portuguese Patronage" (Padroado). This was the privilege, granted by the popes to the Crown of Portugal, of designating candidates for the sees and ecclesiastical benefices in the vast domains acquired through the expeditions of its navigators and captains in Africa and the Orient. It brought considerable revenue to the King of Portugal a certain portion of the ecclesiastical revenues of his kingdom, carried the condition that he should send good missionaries to his new subjects, and that he should provide with a fitting endowment such dioceses, parishes, and religious establishments as should be needed to maintain clerics in his new conquests. Portugal's zeal and generosity for the spread of Christian-
first French church at Peking: the emperor donated the ground, within the limits of the imperial city, and the building materials, while the French king supplied labor for the decoration of the building. The magnificent liturgical ornaments. Several other churches erected in the provinces through the munificence of Louis XIV increased the prestige of France throughout the empire. Under Louis XV the mission in China, like many other things, was somewhat overgrown, but new interest did not entirely wane. It found a zealous protector in Louis XVI's minister, Bertin, but it felt keenly the suppression of the Society of Jesus and the French Revolution with all its consequences, which dried up the source of the apostolic zeal. It was therefore that in 1798 a number of French missionaries (Lazarists or members of the Society of Foreign Missions), assisted by some Chinese priests, who preserved the Faith throughout the persecutions of the early nineteenth century, during which several of them were martyred.

Treaties of Tien-tien.—When the English, after the so-called Opium War, imposed on China the Treaty of Nanking (1842), they did not at first ask for religious liberty, but the murder of the Lazarist John Gabriel Perboyre (11 Sept., 1840) becoming known, the English government signed an article stipulating that a bachelor of foreign mission taken in the interior of the country should not be tried by the Chinese authorities, but should be delivered to the nearest consul of his country. On 24 Oct., 1844, Théodore de Lagrénée, French bishop and consul, was assassinated by a mandarin, but the French government received no satisfaction. This was a new era. The treaties properly so-called, which was signed on that date at Wampoa (near Canton), speaks only of liberty for the French to settle in certain territory in the open ports, but, at the request of the ambassador, an imperial edict was sent to the mandarins and at least partially promulgated, which raised the Christian religion and removed the prohibition for Chinese to practise it. However, the murder of the missionary Chapdelaine (1856) and other facts showed the insufficiency of the guarantees accorded to Europeans; to obtain others, England and France had recourse to arms. The war (1858-60), which showed China its weakness, was ended by the treaties of Tien-tien (24–25 Oct., 1860). They contained an article which stipulated freedom for the French and for other Chinese to embrace Christianity. This article was included in the treaties which other powers a little later concluded with China. To the treaty with France was also added a supplementary article, which reads as follows: “An imperial edict conformable to the imperial edict of 20 Feb., 1861, drawn up by M. de Lagrénée, and signed by the mandarins of the whole empire that soldiers and civilians be permitted to propagate and practise the religion of the Lord of Heaven [Catholic], to assemble for explanation of doctrine, to build churches wherein to celebrate their ceremonies. Those [the mandarins] who henceforth make searches or arbitrary arrests must be punished. Furthermore, the temples of the Lord of Heaven, together with the schools, cemeteries, lands, buildings etc., which were confiscated formerly when the followers of the religion of the Lord of Heaven were persecuted, shall be either restored or compensated for. Restoration is to be made to the French ambassador residing at Peking, who will transfer the property to the Christians of the localities concerned. In all the provinces also the missionaries shall be permitted to rent or purchase lands and erect buildings at will.” The general and exclusive right of protection granted to the French over all the Catholic missions in China could not be more explicitly recognized than it was by this agreement, as the French ambassador the individual intermediary in the matter of all restitutions. And the representatives of France never ceased to make full use of this right in favour of the missionaries, whom from the middle of the nineteenth century a revival of Apostolic zeal drew from all countries to China. From them the passports necessary to permeate the barriers into the interior of the country were regularly sought, and to them were addressed complaints and claims, which it was their duty to lay before the Chinese Government. The French ministers also secured, not without difficulty, the necessary additions to the Treaty of Tien-tien—such, for instance, as the Secretary of State desired to have inserted in the commercial convention (1858), regulating the important question of the purchase of lands and buildings in the interior.

Rivals of the French Protectorate.—The foregoing historical sketch shows that the ancient French right of protection over the missions in both Turkestan and China, was established as much by constant exercise and by services rendered as by treaties. Furthermore, it was based on the fundamental right of the Church, derived from God Himself, to preach the Gospel everywhere and to receive from Christian powers the assistance necessary to enable her to perform her task untrammeled. The desire to further the Church's mission, which always guided the French monarchs to a greater or less extent, does not influence the present government. The latter endeavours, however, to have the foreign concessions properly guarded, and to have the concessions and the foreign traders, and to have the foreign nation's traders, and to have the foreign nation's commercial rights respected. This extension of the concessions means, and for them not to attempt to retain them, whatever the resulting contradictions in their policy. It is very evident that France owes to this protectorate throughout the Levant and in the Far East a prestige and a moral influence which no commerce or conquest could ever have given her. Thanks to the protectorate, the treasures of respect, gratitude, and affection won by the Catholic missionaries have to a certain extent become the property of France; and, if the French entertained doubts as to the utility of this time-honoured privilege (a few anti-clericals attempt to obscure the evidence on this point), the efforts of rival nations to secure a share of it would prove enlightening. These efforts have been frequent, especially since 1870, and have been to a large extent successful.

As early as 1875, at the time of the negotiations between France and Egypt with regard tojudiciary reform, the German Government declared that it recognized no exclusive right of protection for any power, but it forced Hungary to ratify the Egyptian treaty, and the East, and that it reserved its rights with regard to German subjects belonging to any of these establishments.” In Germany and Italy a paragraph of article sixty-two of the Treaty of Berlin, which had been signed by all the European powers in 1878, was used as a weapon against the exclusive protectorate of France: “Ecclesiastics, pilgrims, and monks of all nationalities travelling in Turkey in Europe or Turkey in Asia shall enjoy the same rights, advantages, and privileges. The official right of protection of diplomatic and consular agents of the Powers in Turkey is recognized, with regard both to the above-mentioned persons and to their religious, charitable, and other establishments in the Holy Places and elsewhere.” The passage immediately following this paragraph in the article was overlooked: “The acquired rights of France are explicitly reserved, and there shall be no interference with the status quo in the Holy Places.” Thus the protection guaranteed to all ecclesiastics, etc., no matter what their nationality or religion, as the generally recognized right of France, and to watch over this protection, could be understood with the reservation of the “acquired rights” of France i. e. of its ancient protectorate in behalf of
Catholics. This protectorate is, therefore, really confirmed by the Treaty of Berlin.

But, as a matter of fact, the influence of Russia, which has assumed the protectorate of Christians of the Greek Rite, has already greatly affected the standing which the ancient French Protectorate had assured to Catholics in Palestine and especially in Jerusalem. Moreover, Emperor William II of Germany has installed Protestantism with a magnificent church beside the Holy Sepulchre (1886). As a sort of compensation, he has indeed ceded to German Catholics the site of the Dormition of the Blessed Virgin, which he obtained from the sultan; here a church and a monastery have been erected and, together with the other German establishments, have been placed under the protection of the German Empire, without the slightest deference to the ancient prerogative of France. A similar situation prevails in China. First, in 1888, Germany obtained from the Chinese Government that German passports should insure the same advantages to the missionaries as those secured at the French legation. At the same time the German Catholic missionaries of Shan-tung, who had much to endure from the infidels, were on several occasions offered the powerful protection of the German Empire. Mgr Anzer, the vicar Apostolic, decided to accept it, after which beyond a doubt it was quoted as a triumph of the successful aid of the French minister. In 1896 the German ambassador at Peking received from Berlin the command not only to support energetically the claims of the Catholic missionaries, but even to declare that the German Empire would pledge itself to defend against all unjust oppression the persons and property of the mission of Shan-tung, together with freedom of preaching, in the same measure in which such had been formerly guaranteed by the French Protectorate. The murder of two of the Shan-tung missionaries in Nov., 1897, afforded the occasion for a more solemn affirmation of the new protectorate, while it furnished a long-sought pretext for the occupation of Kiaochow.

Austria had a better foundation for claiming a share in the Catholic protectorate, as, in various treaties concluded with the Porte (1699, 1718, and 1739), it had secured a right of protection over “the religious” in the Turkish Empire and even at Jerusalem. Whatever the meaning of this concession (apparently it did not extend to worship), it was never confirmed by usage, except in the countries bordering on Austria (notably Albania and Macedonia). In 1848 the Austrian Protectorate was extended to the mission of the Sudan and Nigritia, which was in the care of Austrian missionaries, but the process was not completed until 1860, when the Coptic Catholic hierarchy was restored in Egypt by Leo XIII (1885), the new patriarch and his suffragans placed themselves under the protection of Austria.

Italy also has been very active in seeking to acquire a protectorate of missions, by patronising societies for the assistance of the missionaries and by legislative measures intended to prove its benevolence to the Italian missionaries and persuade them to accept its protection. It even attempted by attractive promises to win over the Propaganda, but the Sacred Congregation discouraged it by a circular addressed to the Italian missionaries of the Levant and the Far East on 22 May, 1888. This not only forbade the missionaries to adopt towards official representatives of Italy any attitude which might be interpreted as favoring the securing of a protectorate of this character, but once more affirmed the privilege of France in the most formal manner: “They [the missionaries] know that the Protectorate of the French Nation in the countries of the East has been established for centuries and sanctioned even by treaties between the empires. They will observe this matter; this protectorate, wherever it is in force, is to be religiously preserved, and the missionaries are warned that, if they have need of any help, they are to have recourse to the consuls and other ministers of France.”

The Protectorate of the Holy See.—The instances just mentioned was not the only occasion on which the Holy See undertook the defence of the French Protectorate. Whenever missionaries sought protection other than that of France, French diplomacy complained to Rome, and the Propaganda was always careful to reprimand the missionaries and to remind them that it appertained to France alone to protect them against infidel powers. Two such instances, relating to the years 1744 and 1844 and selected from many others, are cited by the author of the study of the French Protectorate in the “Civilta Catholic” (5 November, 1904). To these may be added Leo XIII’s confirmation of the Decree of 1888 in his reply to Cardinal Langenieux, Archbishop of Reims, dated 1 August, 1888: “France has a special mission in the East confided to her by Providence—a noble mission consecrated not alone by ancient usage, but also by international treaties, as has been recognized recently by Our Congregation of the Propaganda in its deliberation of 22 May, 1888. The Holy See does not wish to interfere with the glorious patrimony which France has received from its ancestors, and which she has transmuted beyond a doubt into the most successful enterprises of civilisation, but it is also showing itself equal to its task.” This attitude of the Holy See is the best defence of the French Protectorate, and is in fact its only defence against the manoeuvres of its rivals as regards missions not under the direction of French subjects. The latter would have difficulty in resisting the pressing invitations extended to them from other quarters, if the Holy See left them free to accept. Rome gives still another proof of respect for the acquired rights of France by refusing, as it has hitherto done, to accredit permanent legates or ministers to Constantinople and Peking. For a time the idea, supported by the official agents of the Turkish and Chinese governments, attracted Leo XIII, but he dismissed it at the instance of French diplomats, who represented to him that the object was less to establish amicable relations between the Holy See and Turkey or China than to evade the tutelage of the lay protectorate. Pius X has done nothing to alter the protectorate, although some action in this direction would perhaps have been but a just reprisal for the French mission.

Some Objections.—The protectorate of missions is, however, open to some criticism both in theory and in practice. This article will not deal with attacks based solely on hatred of religion; the following are the most plausible, which have influenced even friends of the apostolate to the extent of making them sometimes doubtful of the usefulness of the institution, even for the missions. The protectorate, it is said, is unwillingly tolerated by the authorities of infidel countries; it embitters the antipathy and hatred excited by the Christians in those countries, and causes the missionaries, who rely on its support, to be insufficiently mindful of the sensibilities of the natives and on their guard against excessive zeal. The modicum of truth contained in these objections shows that the exercise of the protectorate requires great wisdom and discretion. Naturally, the infidel powers chafe somewhat under it as a yoke and an uncomfortable and even humiliating servitude, but, so long as they do not assure the missionaries and their coadjutors of the guarantees which are found in Christian countries (and experience has shown how little this is the case in Turkey and China), the protectorate remains the best means of providing them. But, to obviate as much as possible the odium attached to the meddling of one foreign power in the affairs of another, this nature of intervention is absolutely necessary. The solution of the delicate problem lies in the cordial union and prudent collaboration.
Proctories

of the agents of the protectorate and the heads of the mission, and these things it is impossible to realise in practice. When it is learned that the superior of the mission of south-east Chi-li during the difficult period from 1850 to 1854 had recourse to the French protectorate only three times and arranged all other difficulties directly with the local Chinese authorities (Em. Becker, "Le R. P. Joseph Gonnet", Ho-kien-fou, 1907, p. 275), it will be understood that the French Protectorate was not necessarily a heavy burden, either for those who exercise it or for those bound by it. The abuses which may arise are due to the men, not to the system; for, after all, the missionaries, though not faultless, are most anxious that it should not be abused. Perhaps the abuse most to be feared is that the protectors should seek payment for their services by blackmailing the spiritual direction of the mission or by demanding political services in exchange: a complete history of the protectorate would show, we believe, such abuses and others to be insignificant

Joseph Brucker.

Proctories, institutions for the shelter and training of the young, designed to afford neglected or abandoned children shelter, food, raiment, and the rudiments of an education in religion, morals, science, and manual training or industrial pursuits. Institutions of this character are to be found in most of the Catholic countries. They are usually open to the reception of juvenile delinquents, who, under the better ideas now obtaining in criminal procedure, are committed by the courts, especially by Juvenile Courts (q. v.), to educational rather than to penal institutions. The first Catholic protectory for youth, was founded at Rome in 1704 by Clement XI. When John Howard, the English prison reformer (1726-90), visited the institution, he read above the entrance this inscription: "Clement XI, Supreme Pontiff, having for the reformation of criminal youths, to the end that those who when idle had been injurious to the State, might, when better instructed and trained, become useful to it. In the Year of Grace 1740; of the Pontiff, the Fourth." On a marble slab inserted in one of the interior walls he read a legend: "It is of littleness of novices by punishment, unless you reform them by education". This has become the key-note of modern penology. The inmates worked together by day in a large hall where was hung up in large letters, visible to all, the word silentium, indicating that the work must go on in silence. At night they slept in separate cells. From 1804 to 1854 had recourse to the French Protectorate, but it was not necessarily a heavy burden, either for those who exercise it or for those bound by it. The abuses which may arise are due to the men, not to the system; for, after all, the missionaries, though not faultless, are most anxious that it should not be abused. Perhaps the abuse most to be feared is that the protectors should seek payment for their services by blackmailing the spiritual direction of the mission or by demanding political services in exchange: a complete history of the protectorate would show, we believe, such abuses and others to be insignificant

PROTESTANT

Most of the juvenile delinquents sent to institutions in the United States are committed either during minority or for an indeterminate period. Statistics show that female delinquents are committed during minority more frequently than the males. On the other hand, commitment for an indeterminate period was more frequently imposed upon males than females. Most of these delinquents are literate. During 1906, of the male delinquents, 84.7 per cent could both read and write; the per cent of literate females was as high as 89.4.

The length of stay in the institution is as a general rule not long. Under the system of parole and probation, the actual restraint is much shortened. The average duration of residence of 1500 boys discharged from the New York Catholic Protective had been fifteen and two-thirds months; of two hundred and fifty girls, thirty-two and one-half months. The management of the Protective claim that the girls' departments are five months longer and show better home for delinquent children, and express their satisfaction with the recent amendment of the law in New York to prohibit the conviction of children under sixteen years of age of crime as such, restricting the complaint to delinquency.

At St. Louis, in France, in the first quarter of the eighteenth century, St. John Baptiste de la Salle undertook the training and correction of wayward youth. The methods which are now employed at the New York Catholic Protective, which is under the same order established in France, may be taken as indicative of the general plan of protectories or the ideals which they seek to attain. The Protective aims to form the youth committed to its care by vigilance, good example, and instruction: vigilance, to remove from the children the many occasions of offending; example, that the teachers be exemplars of the virtues they inculcate, for example is much better than precept; instruction, that they may become intelligent scholars, not only in the secular sciences but in religion, which is the warmth that animates the heart. During the winter of 1904-5, England achieved a quasi-establishment in Maryland and Virginia, and to a lesser extent in the other colonies, with the exception of New England, where for many years the few Episcopalians were bitterly persecuted and at best barely tolerated. In the Southern states, notably in Virginia and Maryland, in the latter of which the Church of England had dispossessed the Catholics not only of their political power, but even of religious liberty, the Church of England, although so provided for from a worldly point of view, was by no means in a strong state, either spiritually or intellectually. The appointment to parishes was almost wholly in the hands of vestries who refused to induct ministers and so give them a title to the emoluments of their office, but preferred to pay chaplains whom they could dismiss at their pleasure. This naturally resulted in filling the ranks of the ministry with very unworthy candidates, and reduced the clergy to a position of contempt in the eyes of the laity.

As there were no bishops in America, the churches in the colonies were under the jurisdiction of the Bishop of London, who governed them by means of commissaries; but, although among the commissaries were men of such eminence as Dr. Bray, in Maryland, and Dr. Blair, the founder of William and Mary College in Virginia, the lay power was so strong

William H. Delacy.

Protestant Episcopal Church in the United States of America.—The history of this religious organization divides itself naturally into two portions: the period of its dependence upon the Church of England and its separate existence as an independent body. The Church of England was planted permanently in Virginia in 1607, at the foundation of the Jamestown Colony. There had been sporadic attempts before this date—in 1585 and 1587, under the auspices of Walter Raleigh in the Carolinas, and in 1607, under the auspices of Chief Justice Popham and Sir Ferdinando Gorges in Maine. The attempt to found colonies had failed, and with it, of course, the attempt to plant the English ecclesiastical institutions. In the latter part of the century England achieved a quasi-establishment in Maryland and Virginia, and to a lesser extent in the other colonies, with the exception of New England, where for many years the few Episcopalians were bitterly persecuted and at best barely tolerated. In the Southern states, notably in Virginia and Maryland, in the latter of which the Church of England had dispossessed the Catholics not only of their political power, but even of religious liberty, the Church of England, although provided for from a worldly point of view, was by no means in a strong state, either spiritually or intellectually. The appointment to parishes was almost wholly in the hands of vestries who refused to induct ministers and so give them a title to the emoluments of their office, but preferred to pay chaplains whom they could dismiss at their pleasure. This naturally resulted in filling the ranks of the ministry with very unworthy candidates, and reduced the clergy to a position of contempt in the eyes of the laity.

As there were no bishops in America, the churches in the colonies were under the jurisdiction of the Bishop of London, who governed them by means of commissaries; but, although among the commissaries were men of such eminence as Dr. Bray, in Maryland, and Dr. Blair, the founder of William and Mary College in Virginia, the lay power was so strong.
and the class of men willing to undertake the work of the ministry so inferior that very little could be done. Even the efforts of the Society for the Propagation of the Gospel proved of very little effect in the South, though in Pennsylvania, New York, and New Jersey it bore fruit. But, with the Anglican Church was sunk in spirit and intellectual lethargy in the South, and while it had a rather attenuated existence in the Middle states, an event occurred in New England in 1722 which was of the greatest moment for the future of Congregationalism, and which shook Congregationalism in New England to its very foundations. Timothy Cutler, the rector of Yale College, with six other Congregational ministers, all men of learning and piety, announced to their brethren in the Congregational ministry of Connecticut that they could no longer remain out of visible communion with an Episcopal Church: that some of them doubted of the validity, while others were persuaded of the invalidity, of Presbyterian ordinations. Three of them were subsequently persuaded to remain in the Congregational ministry, the rest becoming Episcopalians, and three of them, Measors, Cutler, Johnson, and Brown, were ordained to the ministry of the Anglican Church. During the period of the Revolution the Church of England lost the obedience of the last third of Americans by its strong attachment to the cause of the British Crown. But there were not wanting both clergymen and laymen most eminent in their loyalty to the cause of the colonies and in the patriotic sacrifices which they made to the cause of independence. Among the clergy two such men were Mr. White, an assistant of Christ Church, Philadelphia, and Mr. Provost, assistant of Trinity Church, New York. The rector of these churches being Tories, these gentlemen subsequently succeeded them in the college, and their respect for the Anglo-Americans increased. At the close of the war, Episcopalians, as they were already commonly called, realized that, if they were to play any part in the national life, their church must have a national organization. The greatest obstacle to this organization was the obtaining of bishops to carry on a national hierarchy. In Connecticut, where those who had gone into the Episcopal Church had not only read themselves into a belief in the necessity of Episcopacy, but had also adopted many other tenets of the Caroline divines, a bishop was considered necessary. Accordingly, the clergy of that state elected the Rev. Samuel Seabury and requested him to go abroad and obtain the episcopal character. It was found impossible to obtain the episcopate in England, owing to the fact that the bishops there could not by law consecrate any man who would not take the oath of allegiance, and, although during the War of the Revolution, Seabury had been widely known for his Tory sympathies, it would have been impossible for him to return to America if he had received consecration as a British subject. Upon the refusal of the English bishops to confer the episcopate, he proceeded to Scotland, where, after prolonged negotiations, the Nonjuring bishops consented to confer the episcopal character upon him. These bishops were the remnant of the Episcopal Church which the Stuarts had so ardently desired to set up in Scotland, and which had lost the protection of the State, together with all its endowments, by its fidelity to James II. Their religious principles were scarcely less obnoxious than those of Roman Catholics and politically they were considered quite as dangerous. They were indeed exceedingly High Churchmen, and had made such alterations in the liturgy as brought them more than once under the ban of the Holy Eucharist by the more orthodox of the Catholic Church. They had even been known to use chism in confirmation, and they were strong believers in the sacerdotal character of the Christian ministry and in the necessity of Apostolic succession and episcopal ordination. Dr. Seabury was consecrated by them in 1784, and, being of very similar theological opinions himself, he professed immediately after his consecration, whereby he agreed to do his utmost to introduce the liturgical and doctrinal peculiarities of the Nonjurors into Connecticut. Upon his return to his own state he proceeded to organize and govern it as a Catholic bishop would; he excluded the laity from all deliberations and ecclesiastical councils and, as much as he could, from all control of ecclesiastical affairs. But if sacerdotalism was triumphant in Connecticut, a very different view was taken in New York, Pennsylvania, and Virginia. Dr. White, now rector of Christ Church, and a doctor of divinity, believed that if the Episcopal Church was ever to live and grow in America it must assert to, and adopt as far as possible the principle of representative government. He would have been willing to go on without the episcopate until such time as it could have been obtained from England, and in the meantime to ordain candidates to the ministry by means of Presbyterian ordination, with the proviso, however, that the ordinands as gentlemen were to be conditionally re-ordained. This, however, found little favor among Episcopalians, and at last, after considerable difficulty, an act was passed in Parliament whereby the English bishops were empowered to confer the episcopate upon men who were not subject to the British Crown. Accordingly, Dr. White, being elected Bishop of Pennsylvania, and Dr. Provost, Bishop of New York, proceeded to England and received consecration at the hands of the then Archbishop of Canterbury, Dr. Moore, on the 26th of November 1790. The union, however, found little favor among Episcopalians, and at last, after considerable difficulty, an act was passed in Parliament whereby the English bishops were empowered to confer the episcopate upon men who were not subject to the British Crown. Accordingly, Dr. White, being elected Bishop of Pennsylvania, and Dr. Provost, Bishop of New York, proceeded to England and received consecration at the hands of the then Archbishop of Canterbury, Dr. Moore, on the 26th of November 1790. The union, however, was finally cemented in 1792, when Dr. Craggert being elected Bishop of Maryland, and there being three bishops in the country of the Anglican line exclusive of Dr. Seabury, the Bishop of New York withdrew his objections as far as to allow Dr. Seabury to make a fourth. If Dr. Seabury had not been invited to take part in the consecration of Dr. Craggert, a schism between Connecticut and the rest of the country would have been the immediate result. Almost from the very beginning of its independent life the tendencies which have shown themselves in the three parties in the Episcopal Church of the present day were not only evident, but were even embodied in the members of the Episcopate. Bishop Provost, of New York, represented the rationalistic temper of the eighteenth century, which has eventuated in what is called the Broad Church Party. Bishop White represented the Evangelical Party, with its belief in the desirability rather than the necessity of Apostolic succession and Presbyterianism, as nearly as possible with the other progeny of the Reformation. Bishop Seabury, on the other hand, represented the traditional High Church position, intellectual rather than emotional, and laying more stress upon the eucharistic and organized character of the Church than upon emotional religion. This school has played a very important part in the his-
tory of the Protestant Episcopal Church in the United States; and, while it was undoubtedly influenced to a large extent by the Oxford Movement, it was existent and energetic long before 1833. Indeed, in the twenties Bishop Hobart was already presenting that type of evangelical piety, united with high scholarship, which has been characteristic of the party ever since. The Oxford Movement, however, was not without its influence, and as early as 1843 the disputes between the extreme High Churchmen and the rest of the Episcopal Church had reached a condition of such acerbity that when the Rev. Arthur Cary, in his examination for orders, avowed the principles of "Tract 90", and in spite of that fact was not refused ordination, the controversy broke out into an open war. The Bishop of Philadelphia, Dr. Onderdonk, was suspended from his office on a charge of drunkenness, the real reason being his sympathy with High Churchmen; and his dispossess was so unjust that it was declared by the famous legal authority, Horace Binney, to be absolutely illegal. He was not, however, restored to the episcopal see until more than a dozen years later. His brother bishop of New York fared even worse. Charges of immorality were preferred against him, and he was suspended from his office for the rest of his life, despite the fact that the vast majority of his fellow-citizens, whether by their connivance or not, firmly believed in his innocence. An attempt, however, to suspend a third bishop of High Church views, the father of the late Monsignor Doyle, failed after he had been presented four times. Bishop Doane, not only by his unrivalled diplomatic skill, but by the goodness and probity of his life, made an ecclesiastical trial impossible.

In 1852 the Bishop of North Carolina, Dr. Ives, resigned his position in the Episcopal Church and submitted to the Apostolic See; and he was followed into the Catholic Church by a considerable number, both of clergy and laymen. His secession drew out of the Episcopal Church all those of distinctly Roman sympathies, but the High Church Party lived on, growing, and in some degree prospering, in spite of hostile legislation, while in course of time a Protestant party sprang up again. Since the passing of the open-pulpit canon in the General Convention of 1907, some twenty clergymen and a large number of the laity have submitted to the Catholic Church. On the other hand, the extreme High Church party was disturbed by the growth of ritualism, and unable to drive out High Churchmen in any large numbers, themselves seceded from the Protestant Episcopal Church in 1873, and formed what is known as the Reformed Episcopal Church. Unlike many of the Protestant bodies, the Episcopal Church was not permanently disrupted by the Civil War, for with the collapse of the Confederacy the separate organization of the Protestant Episcopal Church in the Confederate States ceased. The Broad Church party, however, have remained in the Protestant Episcopal Church, and of late years have seriously affected its attitude toward such subjects as higher criticism and the necessity of episcopal ordination. The most outspoken advocates of this school, who in their conclusions differ little or not at all from the extreme modernists, have not been able seriously to alter the teaching of the Episcopal Church upon such fundamental truth as the Trinity and Incarnation; and in a few cases the High Church Party and the Episcopal Church by combining, have been strong enough to exclude them. From the Broad Church party, however, is gaining strength; its clergy are men of intellect and vigour, and the laity who support the party are in the main people of large means. To it the future of Anglicanism belongs more than to any other school of thought within the Anglican body.

The Protestant Episcopal Church in the United States of America possesses a hierarchy of 5413 clergy, 438 candidates for orders, and 946,252 communicants. These communicants should be multiplied at least three times in order to give an idea of the adherents of the Protestant Episcopal Church. It possesses nine colleges and universities and fifteen theological seminaries.

Protestantism.—The subject will be treated under the following heads, viz.: I. Origin of the Name. II. Characteristics of Protestant Principles. III. Discussion of the Three Fundamental Principles of Protestantism: A. The Supremacy of the Bible; B. Justification by Faith Alone; C. The Universal Priesthood of Believers. IV. Private Judgment in Practice. V. "Justification by Faith Alone" in Practice. VI. Advent of a New Order: Cesaropapism. VII. Rapidity of Protestant Progress Explained. VIII. Present-day Protestantism. IX. Popular Protestantism. X. Protestantism and Progress: A. Prejudices; B. Progress in Church and Churches; C. Progress in Religious Toleration; D. The Test of Vitality. XI. Conclusion.

I. ORIGIN OF THE NAME.—The Diet of the Holy Roman Empire, assembled at Speyer in April, 1529, resolved that, according to a decree promulgated at the Diet of Worms (1524), communities in which the new religion was so far established that it could not without great trouble be altered should be free to maintain it, but until the meeting of the council they should introduce no further religion, and should not forbid the Mass, or hinder Catholics from assisting theret. Against this decree, and especially against the last article, the adherents of the new Evangel, the Elector Frederick of Saxony, the Landgrave of Hesse, the Margrave Albert of Brandenburg, the Dukes of Luneburg, the Prince of Anhalt, together with the deputies of fourteen of the free and imperial cities, entered a solemn protest as unjust and impious. The meaning of the protest was that the dissentients did not intend to tolerate, so far as they understood. On that account they were called Protestants. In course of time the original connotation of "no toleration for Catholics" was lost sight of, and the term is now applied to, and accepted by, members of the Western Churches, and the constitution of the sixteenth century, was set up by the Reformers in direct opposition to the Catholic Church. The same man may call himself Protestant or Reformed: the term Protestant lays more stress on antagonism to Rome; the term Reformed emphasizes adherence to any of the Reformers. Wherever the influence of the Reformation is prevalent, many will say they are Protestants, merely to signify that they are not Catholics. In some such vague, negative sense, the word stands in the new formula of the Declaration of Faith to be made by the King of England at his coronation; viz. : "I declare that I am a faithful Protestant". During the debates in Parliament it was observed that the proposed formula effectively debarred Catholics from the throne, whilst it committed the king to no particular creed, and no man knows what the creed of a faithful Protestant is or should be.

II. CHARACTERISTIC PROTESTANT PRINCIPLES.—However vague and indefinite the creed of individual Protestants may be, it always rests on a few standard rules, or principles, bearing on the sources of faith, the means of justification, and the constitution of the Church. An acknowledged Protestant authority,
Philip Schaff (in "The New Schaff-Herzog Encyclopedia of Religious Knowledge," e. v. Reformation), sums up the principles of Protestantism in the following words: "The Protestant goes directly to the Word of God for instruction, and to the throne of grace in its prayer; whilst the pious Roman Catholic appeals the same appeal of conscience, and offers his prayers through the medium of the Virgin Mary and the saints.

From this general principle of Evangelical freedom, and direct individual relationship of the believer to Christ, proceed the three fundamental doctrines of Protestantism—the absolute supremacy of (1) the Word, and of (2) the grace of Christ, and (3) the general priesthood of believers... (1) The [first] objective [or formal] principle proclaims the canonical Scriptures, especially the New Testament, to be the only infallible source and rule of faith and practice, and asserts the right of private interpretation of the same, in distinction from the Roman Catholic view, which declares the Bible and tradition to be co-ordinate sources and rule of faith, and makes tradition, especially the decrees of the Church councils, the only legitimate and infallible interpreter of the Bible. In its extreme form Chillingworth expressed this principle of the Reformation in the well-known formula, "The Bible, the whole Bible, and nothing but the Bible." (2) The subjective principle is recital of the Apostles' Creed, and belief in the Trinity. Protestantism, however, by no means despises or rejects church authority as such, but only subordinates it to, and measures its value by, the Bible, and believes in a progressive interpretation of the Bible through the expanding and deepening consciousness of Christendom. Hence, besides having its own symbols or standards of public doctrine, it retained all the articles of the ancient creeds and a large amount of disciplinary and ritual tradition, and, in those doctrines and ceremonies for which no clear warrant was found in the Bible, went to other sources, of which seemed to contradict its letter or spirit. The Calvinistic branches of Protestantism went farther in their antagonism to the received traditions than the Lutheran and the Anglican; but all united in rejecting the authority of the pope (Melanchthon for a while was willing to concede this, but only jure humano, or a limited disciplinary superintendency of the Church), the meritoriousness of good works, indulgences, the worship of the Virgin, saints, and relics. The Eucharist, the dogma of transubstantiation and the Sacrifice of the Mass, purgatory, and prayers for the dead, auricular confession, celibacy of the clergy, the monastic system, and the use of the Latin tongue in public worship, which superficially seems to bring the vernacular languages were substituted. (2) The subjective principle of the Reformation is justification by faith alone, or, rather, by free grace through faith operative in good works. It has reference to the personal appropriation of the Christian salvation, and aims to give all glory to Christ, by declaring that the sinner is justified before God (i.e. is acquitted of guilt, and declared righteous) solely on the ground of the all-sufficient merit of Christ as apprehended by a living faith, in opposition to the theory—then prevalent, and substantially sanctioned by the Council of Trent—which makes faith and good works co-ordinate sources of justification, laying the chief stress upon works. Protestantism does not depreciate good works; but it denies their value as sources or conditions of justification, and insists on them as the necessary fruits of salvation. (3) The universal priesthood of believers implies the right and duty of the Christian laity not only to read the Bible in the vernacular, but also to take part in the government and all the public affairs of the Church. It is the essence of Protestantism that which puts the essence and authority of the Church in an exclusive priesthood, and makes ordained priests the necessary mediators between God and the people." See also Schaff, "The Principle of Protestantism, German and English" (1845).

III. DISCUSSION OF THE THREE FUNDAMENTAL PRINCIPLES OF PROTESTANTISM. The Supremacy of the Bible, and of faith, is unhistorical, illogical, fatal to the virtue of faith, and destructive of unity. It is unhistorical. No one denies the fact that Christ and the Apostles issued the Bible by the Holy Spirit, and never desired that the Bible should be the supreme rule of faith, or that faith should be the only standard of truth. But the question is, what authority should be regarded as the supreme rule of faith, or the only standard of truth? The answer is, the Bible. The Bible is the supreme rule of faith, or the only standard of truth, because it is the Word of God, and represents the authority of Christ, who said, "He that believeth on me hath the witness of God the Father and of Jesus Christ; whom also he hath sent to be the Comforter unto you; even the Spirit of truth; whom the world cannot receive, because it seeth him not, and knoweth him not: but ye know him; for he dwelleth with you, and shall be in you." (John 14:16–17.) The Bible is the supreme rule of faith, or the only standard of truth, because it is the Word of God, and represents the authority of Christ, who said, "He that believeth on me hath the witness of God the Father and of Jesus Christ; whom also he hath sent to be the Comforter unto you; even the Spirit of truth; whom the world cannot receive, because it seeth him not, and knoweth him not: but ye know him; for he dwelleth with you, and shall be in you." (John 14:16–17.)

B. JUSTIFICATION BY FAITH ALONE.—See article JUSTIFICATION.

C. The Universal Priesthood of Believers is a fond fancy which goes well with the other two fundamental principles of Protestantism. For, if every man is his own supreme teacher and is able to justify himself by an
easy act of faith, there is no further need of ordained teachers and ministers of sacrifice and sacraments. The sacraments themselves, in fact, become superfluous. The abolition of priests, sacrifices, and sacraments is the logical consequence of false premises, i.e., the right of private judgment and justification by good works. It is the true principle, which they laid down might do also. But Scripture speaks of bishops, priests, deacons as invested with spiritual powers not possessed by the community at large, and transmitted by an external sign, the imposition of hands, thus creating a separate order, a hierarchy. (See Hierarchy; Priesthood.) Scripture shows the Church starting with an ordained priesthood as its central element. History likewise shows this priesthood living on in unbroken succession to the present day in East and West, even in Churches separated from each other by wars, revolutions, and changes of dynasty; a society confessedly established to continue the saving work of Christ must possess and perpetuate His saving power; it must have a teaching and ministering order commissioned by Christ, as Christ was commissioned by God. "As the Father hath sent me, even so send I you." (John 20:21.) Scripture are at best shadows of Churches wax and wane with the priestly powers they subconsciously or instinctively attribute to their pastors, elders, ministers, preachers, and other leaders.

IV. PRIVATE JUDGMENT IN PRACTICE.—At first sight it seems that private judgment as a rule of faith would at once dissolve all creeds and confessions into individual opinions, thus making impossible any church life based upon a common faith. For such opinions there is no two can theologically look on any subject. Yet we are faced by the fact that Protestant churches have lived through several centuries and have moulded the character not only of individuals but of whole nations; that millions of souls have found and are finding in them the spiritual food which satisfies their spiritual cravings; that their missionary and charitable activity is covering wide fields at home and abroad. The apparent incongruity does not exist in reality, for private judgment is never and nowhere allowed full play in the external life from that sound, open mind on its interpretation are rather a lure to entice the masses, by flattering their pride and deceiving their ignorance, than a workable principle of faith.

The first limitation imposed on the application of private judgment is the incapacity of most men to judge for themselves on matters above their physical needs. How many Christians are made by the tons of Testaments distributed by missionaries to the heathen? What religious activity could a well-educated man extract from the Bible if he had not taught his brain and his book to guide him? The second limitation arises from environment and prejudices. The assumed right of private judgment is not exercised until the mind is already stocked with ideas and notions supplied by family and community, foremost among these being the current conceptions of religious dogmas and duties. People are said to be Catholic, Protestants, Mahommedans, Pagans "by birth," because the environment in which they are born inures them with reverence and habits of conduct before they are able to judge and choose for themselves. And the firm hold which this initial training gets on the mind is well illustrated by the fewness of changes in later life. Conversions from one belief to another are of comparatively rare occurrence. The number of converts in any denomination compared to the number of stauncher adherents is a negligible quantity. Even where private judgment has led to the conviction that some other form of religion is preferable to the one professed, conversion is not always achieved. The convert, beside and beyond his knowledge, must have sufficient strength of character to resist the influence of old habits, and to face the uncertainties of life in new surroundings. His sense of duty, in many cases, must be of heroic temper.

A third limitation put on the exercise of private judgment is the authority of Church and State. The Reformers took full advantage of their emancipation from papal authority, but they showed no inclination to allow their followers the same freedom. Luther, Zwingli, Calvin, and Knox were as intolerant of private judgment when it went against their own conceptions as any pope in Rome was ever intolerant of heresy. Confessions of faith, symbols, and catechism were set up everywhere, and were invariably backed by the secular power. In fact, the secular power in the several parts of Germany, England, Scotland, and elsewhere required it. The moulding of religious denominations than private judgment and justification by faith alone. Rulers were guided by political and material considerations in their adherence to particular forms of faith, and they usurped the right of imposing their own choice on their subjects. Thus, careless of the endless disputes of private opinions: cujus regio ejus religio.

The above considerations show that the first Protestant principle, free judgment, never influenced the Protestant masses at large. Its influence is limited1 to a few leaders of the movement, to the men who by dint of strong character were capable of creating separate sects. They indeed spurned the authority of the Old Church, but soon transferred it to their own persons and institutions, if not to secular princes. How necessary it was the new authority exercised is matter of history. Moreover, in the course of time, private judgment has ripened into unbridled freethought, Rationalism, Modernism, now rampant in most universities, cultured society, and the Press. Planted by Luther and other reformers the seed took root, or soon withered, among the half-educated masses who still clung to authority or were coerced by the secular arm; but it flourished and produced its full fruit chiefly in the schools and among the ranks of society which draw their intellectual life from that sound, open mind, the infallible means to spread free judgment and its latest results to the reading public.

It should be remarked that the first Protestants, without exception, pretended to be the true Church founded by Christ, and all retained the Apostles' Creed with the article "I believe in the Catholic Church." The fact of their Catholic origin and surroundings accounts both for their good intention and for the confessions of faith to which they bound themselves. Yet such confessions, if there be any truth in the assertion that private judgment is the mark of the liberal Bible are the only sources of Protestant faith, are directly antagonistic to the Protestant spirit. This is recognized, among others, by J. H. Blunt, who writes: "The mere existence of such confessions of faith as binding on all or any of the members of the Christian community is inconsistent with the great principles on which the Protestant bodies justified their separation from the Church, the right of private judgment. Has not any member as just a right to be satisfied with and to maintain all his forefathers had a right to reject the Catholic creeds or the canons of general councils? They appear to violate another prominent doctrine of the Reformers, the sufficiency of Holy Scripture to salvation. If the Bible alone is enough, what need is there for adding articles? If it is rejoiced that they are not additions to, but
merely explanations of, the Word of God; the further question arises, amid the many explanations, more or less at variance with each other given by the different sects of Protestantism, which is the true one? Their confessed object being to secure uniformity, the experience of three hundred years has proved to us what may not have been foreseen by their originators, that they have had a diametrically opposite result, and have been productive of other harm than of 'variance' (Dict. of See, 3rd. ed. V. Heresies, etc.). London, 1886, s. v. Protestant Confessions of Faith.

By pinning private judgment to the Bible the Reformers started a book religion, i.e. a religion of which the theoretical and legal law of faith and conduct is contained in a written document without method, without authority, without an authorized interpreter. The collection of books called "the Bible" is not a methodical code of faith and morals; if it be separated from the stream of tradition which assents to Divine inspiration, it has no special authority, and, in the hands of private interpreters, its meaning is easily twisted to suit every private mind. Our modern laws, elaborated by modern minds for modern requirements, are daily obscured and diverted from their intended purposes by those who dare not acknowledge absolute necessity for their right interpretation and application, and unless we say that religion is a personal concern, that coherent religious bodies or churches are superfluous, we must admit that judges of both civil and criminal law as necessary to them as judges of civil law are to States. And this is another reason why private judgment, though upheld in theory, has not been carried out in practice. As a matter of fact, all Protestant denominations are under constituted authorities, be they called priest or presbytery, elders or ministers, pastors or presidents. Notwithstanding the contradiction between the freedom they proclaim and the obedience they exact, their rule has often been tyrannical to a degree, especially in Calvinistic communities. Thus in the seventeenth and eighteenth centuries there was no more priest-ridden country in the world than Presbyterian Scotland. A book-religion has, moreover, another drawback. Its devotees can draw devotion from it only as flesh worshippers draw from it their idol, viz. by firmly believing in its hidden spirit. Remove belief, and the doctrine of inspiration fades, and what remains may be regarded as simply a human document of religious illusion or even of fraud. Now, in the course of centuries, private judgment has partly succeeded in taking the spirit out of the letter. The more compact, the simpler the letter, the more it has been accused by critics, high and low, to discuss without any spiritual advantage.

V. "Justification by Faith Alone" in Practice.—This principle bears upon conduct, unlike free judgment, which bears on faith. It is not subject to the same limitations, for its practical application requires less mental capacity; its working cannot be tested by anyone; it is strictly personal and internal, thus escaping such violent conflicts with community or state as would lead to repression. On the other hand, as it evades coercion, lends itself to practical application at every step in man's life, and favours man's inclination to evil by rendering a so-called "conversion" ludicrously easy, its baneful influence on morals is manifest. Add to justification by faith alone the doctrines of predestination to heaven or hell regardless of man's actions, and the slavery of the human will, and it seems inconceivable that any good action at all could result from such beliefs. As a matter of history, public morality did at once deteriorate to an appalling degree wherever Protestantism once obtained to mention the robberies of Church goods, brutal treatment meted out to the clergy, secular and regular, who remained faithful, and the horrors of so many wars of religion, we have Luther's own testimony as to the evil results of his teaching (see Jansen, "History of the Reformers," ed. by Dr. St. Louis, 1808, 274-83, where each quotation is documented by a reference to Luther's works as published by de Wette).

VI. Advent of a New Order: Cesaropapism.—A similar picture of religious and moral degradation comes from contrast with the writers for all countries after the first introduction of Protestantism. It could not be otherwise. The immense fermentation caused by the introduction of subversive principles into the life of a people naturally brings to the surface and shows in its utmost ugliness all that is brutal in human nature. But only for a time. The ferment exhausts itself, the fermentation subsides, and order reappears, possibly under new forms. The new form of social and religious order, which is the residue of the great Protestant upheaval in Europe, is territorial or State Religion—an order based on the religious supremacy of the temporal ruler, in contradistinction to the old order in which the temporal ruler took an oath of obedience to the Church. For the right understanding of their order it is necessary to describe the genesis of this far-reaching change.

Luther's first reformatory attempts were radically democratic. He sought to benefit the people at large by curtailing the powers of both Church and State. The German princes, to him, were "usually the biggest fools or the worst scoundrels on earth". In 1523 he wrote: "The people will not, cannot, shall not endure your tyranny and oppression any longer. The world is not now what it was formerly, when you could chase and drive the people like game". This manifesto, addressed to the poorer classes, was taken up by Franz von Sickingen, a Knight of the Empire, who entered the field in execution of its threats. His object was two-fold: to strengthen the political power of the knights—the inferior nobility—against the princes, and to open the road to the new Gospel by overthrowing the bishops. His enterprise had, however, the opposite result. The knights were beaten; they lost what influence they had possessed, and the princes were proportionately strengthened. The rising of the peasants likewise turned to the advantage of the prince. Thus Luther, the sacred reformer, left the princes without an enemy and the new Gospel without its natural defenders. The victorious princes used their augmented power entirely for their own advantage, in opposition to the lower clergy and against the freedom of the nation; the new Gospel was also to be made subservient to this end, and this by the help of Luther himself.

After the failure of the revolution, Luther and Melanchthon began to proclaim the doctrine of the rulers' unlimited power over their subjects. Their dissolving principles had, within less than ten years, destroyed the existing order, but were unable to knit together its debris into a new system. So the secular powers were called on for help; the Church was placed at the service of the State, its authority, its wealth, its institutions all passed into the hands of kings, princes, and town magistrates. The one discarded Pope of Rome was replaced by scores of popes at home. These, "to strengthen themselves by alliances for the promulgation of the Gospel", banded together within the limits of the German Empire and made common cause against the emperor. From this time forward the progress of Protestantism is on political rather than on religious lines; the people are not clamouring for innovations, but the rulers find the advantage in enlarging the bishops' rank or influence, or censuring, or both, thus giving the new Gospel on their subjects. Denmark, Sweden, Norway, England, and all the small principalities and im-
peral towns in Germany are examples in point. The supreme heads and governors were well aware that the principles which had brought down the authority of Rome would equally bring down their own; hence the penal laws everywhere enacted against dissenters from the state religion decreed by the temporal power. England under Edward VI., and the Puritans elaborated the most ferocious of all penal codes against Catholics and others unwilling to conform to the established religion.

To sum up: the much-vaulted Protestant principles only wrought disaster and confusion where they were allowed to run their course, or reverting to something like the old system: symbols of faith imposed by an outside authority and enforced by the secular arm. No bond of union exists between the many national Churches, except their common hatred for "Rome", which is the birthmark of all, and the trade-mark of many, even unto our day.

VII. Rapidity of Protestant Progress Explained.—Before we pass on to the study of contemporary Protestantism we must, first of all, find and solve a difficulty. How is the rapid spread of Protestantism accounted for? Is it not a proof that God was on the side of the Reformers, inspiring, fostering, and crowning their endeavours? Surely, as we consider the growth of early Christianity and its connection with the Lord's Supper, in the midst of its Divine origin, so we should draw the same conclusion in favour of Protestantism from its rapid spread in Germany and the northern parts of Europe. In fact the Reformation spread much faster than the Apostolic Church. When the death of the Apostles died, no kingdoms, no vast tracts of lands, were entirely Christian; Christianity was still hiding in the catacombs and in out-of-the-way suburbs of heathen towns. Whereas, in a period of similar duration, say thirty years, Protestantism spread over the better part of Germany, Scandinavia, Switzerland, England, and Scotland. A moment's consideration supplies the solution of this difficulty. Success is not invariably due to intrinsic goodness, nor is failure a certain proof of intrinsic badness. Both largely depend on circumstances: on the means employed, the obstacles in the way, the receptivity of the public. The success of Protestantism, therefore, must itself be tested before it can be used as a test of intrinsic goodness.

The great movement of the sixteenth century found the ground well prepared for its reception. The cry for a thorough reformation of the Church in head and members had been ringing through Europe for a full century; it was justified by the worldly lives of many of the clergy, high and low, by abuses in church administration, by money extortions, by the neglect of religious duties reaching far and wide through the body of the faithful. Had Protestantism offered a reform in the sense of amendment, probably all the corrupt elements in the Church would have turned against it, as Jews and pagans turned against Christ and the Apostles. But what the Reformers aimed at was, at least in the first instance, the radical overthrow of the existing Church, and this overthrow was effected by pandering to all the worst instincts of man. A bait was tendered to the seven-headed concupiscence which dwells in every human heart; pride, covetousness, lust, anger, gluttony, envy, sloth, and all their offspring were covered and healed by easy trust in God. No good work—such was the death-blow of the Church. In Germany, the head of the Church was the prince of apostasy: political and religious independence allured the kings and princes: the abolition of tithes, confession, fasting, and other irksome obligations attracted the masses. Many persons were deceived into the new religion by outward appearances of Catholicism which the innova-
tors carefully maintained, e. g. in England and the Scandinavian kingdoms. Evidently we need not look for Divine intervention to account for the rapid spread of Protestantism. It would be more plausible to see the finger of God in the stopping of its progress.

VIII. Present-Day Protestantism.—Theology.—After nearly four and a half centuries the Reformation is still the religion of millions, but it is no more the original Protestantism. It has been, and is, in a perpetual flux: the principle of untrammeled free judgment, or, as it is now called, Subjectivism, has been swaying its adherents to and fro from orthodoxy to Rationalism, and Rationalism to Secularism. The movement has been most pronounced in intellectual centres, in universities and among theologians generally, yet it has spread down to the lowest classes. The modern Ritschel-Harnack school, also called Modernism, has disciples everywhere and not only among Protestants. For an accurate and exhaustive survey of its main lines of thought we refer the reader to the Encyclopaedia "Pascendi Dominici Gregis" (8 Sept., 1907), the profound, and which, to defend the Church against such inroads and infiltrations. In one point, indeed, the Modernist condemned by Pius X differs from his intellectual brothers: he remains, and wishes to remain, inside the Catholic Church, in order to leave it with his ideas; the other stands frankly outside, an enemy or a renegade of the Church. Subjectivism should also be noted that not every item of the Modernist programme need be traced to the Protestant Reformation; for the modern spirit is the distilled residue of many philosophies and many religions: the point is that Protestantism proclaims itself its standard-bearer, and claims credit for its achievements.

Moreover, Modernistic views in philosophy, theology, history, criticism, apologetics, church re-form, and Protestant theological literature in Germany, France, and America, England only slightly lagging behind. Now, Modernism is at the antipodes of sixteenth-century Protestantism. To use Ritschel's terminology, it gives new "values" to the old beliefs. Scripture is still spoken of as inspired, but its inspiration is only the impassioned expression of human religious experiences; Christ is the Son of God, but His Sonship is like that of any other good man; the very ideas of God, religion, Church, sacraments, have lost their old values: they stand forth nakedly for the subject in whose religious life they form a kind of fool's paradise. The fundamental fact of Christ's Resurrection is an historical fact no longer; it is but another freak of the believing mind. Harnack puts the essence of Christianity, that is the whole teaching of Christ, into the Fatherhood of God and the Brotherhood of man: Christ Himself is no part of the Gospel! Such was not the teaching of the Reformers. Present-day Protestantism, therefore, may be compared with Gnosticism, Manichaeism, the Renaissance, eighteenth-century Philosophy, in so far as these were virulent attacks on Christianity, aiming at nothing less than its destruction. It has achieved important victories in a kind of civil war between orthodoxy and unbelief within the Protestant pale; it is no mean enemy at the gate of the Catholic Church.

IX. Popular Protestantism.—In Germany, especially in the greater towns, Protestantism, as a positive guide in faith and morals, is rapidly dying out. It has lost all its influence on the masses. Its ministers, when not themselves infidels, fold their hands in helpless despair. The old faith is but little preached and with little profit. The ministerial energies are turned towards works of charity, foreign missions, polemics against Catholics. Among the English-speaking nations things seem just a little
better. Here the grip of Protestantism on the masses was much tighter than in Germany, the Wesleyan revival and the High Church party among Anglicans, and a number of their faith alive. The deleterious teaching of English Deists and Rationalists did not penetrate into the heart of the people. Presbyterianism in Scotland and elsewhere has also shown more vitality than less well-organized sects, 'England', says J. R. Green, 'became the proverbial judgment of God for the rest of Europe. It was as yet the one English book which was familiar to every Englishman; it was read in the churches and read at home, and everywhere its words, as they fell on ears which custom had not deadened, kindled a storm of indignation and enthusiasm. So large was its concern, no history, no romance, hardly any poetry, save the little-known verse of Chaucer, existed in the English tongue when the Bible was ordered to be set up in churches. The power of the book over the masses of Englishmen showed itself in a thousand superficial ways, and in none more conspicuously than in the influence exerted on ordinary speech. But far greater than its effect on literature or social phrase was the effect of the Bible on the character of the people at large... (Hist. of the English People, ch. xvi.)

X. PROTESTANTISM AND PROGRESS.—A Prejudice.

The human mind is so constituted that it colours with its own previous conceptions any new notion that presents itself for acceptance. Though truth be object, and of its nature one and unchangeable, personal conditions are largely relative, dependent on preconceptions, and changeable. The arguments, for example, which three hundred years ago convinced our fathers of the existence of witches and sent millions of them to the torture and the stake, make no impression on our more enlightened minds. The same may be said of the whole theological controversy of the sixteenth century. To the modern man it is a dark body, of whose existence he is aware, but whose contact he avoids. With the controversies have gone the coarse, uncritical methods of attack. The adversaries are now facing each other like parliamentarians of opposite parties, with a common desire of polite fairness, no longer like armed troopers only intent on killing, by fair means or foul. Exceptions there are still, but only at low depths in the literary strata. Whence this change of behaviour, notwithstanding the identity of positions? Because we are more reasonable, more civilized; because we have evolved from medieval darkness to progressive light. And what is progress? Here Protestantism puts in its claim, that, by freeing the mind from Roman thraldom, it opened the way for religious and political liberty; for untrammeled evolution on the basis of self-reliance; for a higher standard of morality; for the advancement of science—in short for every good thing that has come into the world since the Reformation. With the majority of non-Catholics, this notion has hardened into a prejudice which no reasoning can break up; the following discussion, therefore, shall not be a battle royal for final victory, but rather a peaceful review of facts and principles.

B. Progress in Church and Churches.—The Catholic Church of the twentieth century is vastly in advance of that of the sixteenth. She has made up her loss in political power by the power of her spiritual influences and efficiency; her adherents are more widespread, more numerous, more fervent than at any time in her history, and they are bound to the central Government at Rome by a more filial affection and a clearer sense of duty. Religious education is also more preferred to clerical education, and religious practice, morality, and works of charity are flourishing; the Catholic mission-field is world-wide and rich in harvest. The hierarchy was never so united, never so devoted to the pope. The Roman unity is successively resisting the inroads of sects, of philosophies, of politics. Can our separated brethren tell a similar story? In lands where they are ruled and backed by the secular power? Can they not rejoice at their disintegration, at their falling into religious indifference, or returning into political parties. No, for any shred of Christianity is better than blank worldliness. But we do draw this conclusion: that after all the principle of authority is still working out the salvation of the Church, whereas among Protestants the principle of Subjectivism is destroying what remains of their former faith and driving multitudes into religious indifference and atheism.

C. Progress in Civil Society.—The political and social organization of Europe has undergone greater changes than the Churches. Royal prerogatives, like that exercised, for instance, by the Tudor dynasty in England, are gone for ever. "The previous was absolute," both in theory and in practice. Government was identified with the will of the sovereign, his word was law for the conscience as well as for the conduct of his subjects" (Brewer, "Letters and Papers, Foreign and Domestic etc."); II, pt. i, i, p. cxixiv). Nowhere now is personal dictation inscribed on the national statute-books, or left to the caprice of the rulers. Where still carried on it is the work of anti-religious passion temporarily in power, rather than the expression of the national interest and welfare. Education is no longer a monopoly of the Church; charity is placed within reach of the poorest and lowest. The punishment of crime is no longer an occasion for the spectacular display of human cruelty to human beings. Poverty is largely prevented and largely relieved by the number and are waged with humanity; atrocities like those of the Thirty Years War in Germany, the Huguenot wars in France, the Spanish wars in the Netherlands, and Cromwell's invasion of Ireland, are gone beyond the possibility of return. The witch-finder, the witchburner, the inquisitor, the disbanded mercenary soldier have ceased to plague the people. Science has been able to check the outbursts of pestilence, cholera, smallpox, and other epidemics; human life has been lengthened and its amenities increased a hundredfold. Steam and electricity in the service of industry, trade, and international communication, are even now drawing humanity together into one vast family, with many common interests and a tendency to uniform civilization. From the sixteenth century there has been real progress. Who have been its chief promoters? Catholics, or Protestants, or neither?
which the English people are wont to boast, leading them to welcome a foreign usurper and foreign troops for no other reason than to obtain their assistance against their Catholic fellow-subjects, in part to do precisely what the latter were falsely accused of doing in the time of Elizabeth.

The Stuart dynasty lost the throne, and their successors were reduced to mere figure-heads. Political freedom had been achieved, but the times were not yet ripe for the wider freedom of conscience. The penal laws against Catholics and Dissenters were aggravated instead of abolished. That the French Revolution of 1789 was largely caused by the English events of the preceding century is beyond doubt; it is, however, equally certain that its moving spirit was not English Puritanism, for the men who set up a declaration of the Rights of Man against the Rights of God, and who enthroned the Goddess of Reason in the Cathedral Church of Paris, drew their ideals from Pagan Rome rather than from Protestant England.

O. Progress in Religious Toleration.—As regards Protestantism the general progress of civilization since the origin of Protestantism we must mark off at least two periods: the first from the beginning in 1517 to the end of the Thirty Years War (1648), the second from 1648 to the present day; the period of youthful expansion, and the period of maturity of Protestantism. But besides its influence on civilization the previous questions should be examined: in how far does Christianity contribute to the amelioration of man—intellectual, moral, material—in this world: for its salutary effects on man's soul after death cannot be tested, and consequently cannot be used as arguments in a purely scientific disquisition. There were highly civilized nations in antiquity, Assyria, Egypt, Greece, Rome: and there are now China and Japan, whose culture owes nothing to Christianity. When Christ came to enlighten the world, the light of Roman and Greek culture was shining its brightest, and for at least three centuries longer the new religion added nothing to its lustre. The spirit of Christian charity, however, gradually leavened the heathen mass, softening the hearts of rulers and improving the condition of the ruled, especially of the poor, the slave, the prisoner. The close union of Church and State, begun with Constantine and continued under his successors, the Roman emperors of East and West, led, with but few exceptions, to a lay episcopacy which the princes assumed well-nigh reduced the medieval Church to a state of abject vassalage, the secular clergy to ignorance and worldliness, the peasant to bondage and often to misery.

Had it not been for the monasteries the Church of the Middle Ages would not have saved, as it did, the remnant of Roman and Greek culture which so powerfully helped to civilize Western Europe after the barbarian invasions. Dotted all over the West, these monks formed model societies, well-organised and ruled, and prospering by the work of their hands, true ideals of a superior civilization. It was still the ancient Roman civilization, permeated with Christianity, but shackled by the jarring interests of Church and State. Was Christian Europe, from a worldly point of view, better off at the beginning of the fifteenth century than pagan Europe at the beginning of the fourth? For the beginning of our distinctly modern progress we must go back to the Renaissance, Nonnal, i.e. post-Reformation, revival, following upon the conquest of Constantinople by the Turks (1453); upon the discovery of the new Indian trade route round the Cape of Good Hope by the Portuguese; upon the discovery of America by the Spaniards, and upon the development of all European interests, fostered or initiated at the end of the fifteenth century, just before the birth of Protestantism. The opening of the New World was for Europe a new creation. Minds expanded with the vast spaces submitted to them for investigation; the study of astronomy, at first in the service of navigation, soon reaped its own reward by discoveries in its proper domain, the starry heavens; descriptive geography, botany, and anthropology, and kindred sciences demanded study of those who would reap a share in the great harvest East and West. The new impulse and new direction given to commerce changed the political aspect of old Europe. Men and nations were brought into that close contact of common interests, which is the root of all civilization; wealth and the printing-press supplied the means for satisfying the awakened craving for art, science, literature, and more refined living. Amid this outburst of new life Protestantism appears on the scene, itself a child of the times. Did it help or hinder the forward movement?

The youth of Protestantism was, naturally enough, a period of turmoil, of disturbing confusion in all the spheres of life. No other nation became without a sense of shame and sadness the history of those years of religious and political strife; of religion everywhere made the handmaid of politics; of wanton destruction of churches and shrines and treasures of sacred art; of wars between cities of the same nation, conducted with inhuman cruelty, cities laid waste, towns pillaged and levelled to the ground, poor people sent adrift to die of starvation in their barren fields; of commercial prosperity cut down at a stroke; of seats of learning reduced to razing and loose living; of charity diminished by social intercourse to give place to slander and abuse, of coarseness in speech and manners, of barbarous cruelty on the part of princes, nobles, and judges in their dealings with the “subject” and the prisoner, in short of the almost sudden stop of all real country into worse than primitive savagery. "Greed, robbery, oppression, rebellion, repression, wars, devastation, degradation" would be a fitting inscription on the tombstone of early Protestantism.

But violent non durat. Protestantism has now grown into a sedate something, difficult to define. In some form or other it is the official religion in many lands of Teutonic race, it also counts among its adherents an enormous number of independent religious bodies. These Protestant Teutons and semi-Teutons claim in turn the world, and vying to possess the greatest wealth, the best education, the purest morals; in every respect they feel themselves superior to the Latin races who still profess the Catholic religion, and they ascribe their superiority to their Protestantism.

Man knows himself but imperfectly: the exact state of his health, the truth of his knowledge, the real motives of his actions, are all veiled in semi-obscure; of his neighbour he knows even less than of himself, and his generalisations of national character, typified by surnames and nicknames, are Antipathies rooted in ancient quarrels—political or religious—enter largely into the judgments on nations and Churches. Opprobrious, and so far as sense goes, obsolete epithets applied in the heat and passion of battle still cling to the ancient foe and create prejudice against him. Conceptions formed three hundred years ago amid a state of things which has long ceased to be, still survive and distort our judgments. How slowly the terms Protestant, Papist, Romanist, Nonnal, i.e. post-Reformation, Renaissance, still cling to the ancient foe and create prejudice against him. Again: Is there any of the greater nations that is purely Protestant? The richest provinces of the German Empire are Catholic, and contain fully one-third of its entire population. In the United States of America, according to the latest census, Catholics form the majority of the
church-going population in many of the largest cities:
San Francisco (81.1 per cent); New Orleans (79.7 per cent);
New York (79.9 per cent); St. Louis (69 per cent);
Boston (68.7 per cent); Chicago (68.2 per cent);
Philadelphia (51.8 per cent).

Great Britain and its colonies have a Catholic
population of twelve millions. Holland and
Switzerland have powerful Catholic provinces and
cantons; only the small Scandinavian kingdoms have
succeeded in keeping down the old religion. A further
question suggests itself: granting that some states are
more prosperous than others, is their greater pros-
perity due to the particular form of religion that they
profess? The idea is absurd. For all Chris-
tian denominations have the same moral code—the
Decalogue—and believe in the same rewards for the
good and punishments for the wicked. We hear it
asserted that Protestantism produces self-reliance,
whereas Catholicism extinguishes it. Against this
may be set the statement that Catholicism produces
disciplined order—an equally good commercial asset.
The truth of the matter is that self-reliance is best
found in states with political institutions and a cen-
tralized government. These existed in England be-
fore the Reformation and have survived it; they like-
wise existed in Germany, but were crushed out by
Protestant C.esaropapism, never to revive with their
primitive vigour. Medieval Italy, the Italy of the
Republics, where they had nearly been free, showed its
many towns and principalities: though the coun-
try was Catholic, it brought forth a crop of undis-
ciplined self-reliant men, great in many walks of life,
good and evil. And looking at history, we see Catho-
lic France and Spain attaining the zenith of their
national grandeur, whilst Germany was undermining
and disintegrating that Holy Roman Empire vested
in the German nation—an empire which was its
unity, its strength, the source and mainstay of its
cultural vigour.

England's grandeur during the same epoch is due to
the same cause as that of Spain: the impulse
given to all national forces by the discovery of the
New World. Both Spain and England began by
securing religious unity. In Spain the Inquisition
at a small cost of human life preserved the old faith;
in England the infinitely more cruel penal laws
stamped out all opposition to the innovations im-
ported from Germany. Germany itself did not
recover the prominent position it held in Europe un-
der the Roman Church, but the conditions of
the new empire during the Franco-German War
(1871). Since then its advance in every direction,
except that of religion, has been such as seriously to
threaten the commercial and maritime supremacy of
England. The truth of the whole matter is this:
religious toleration has been placed on the statute
books of modern nations; the civil power has severed
itself from the ecclesiastical; the governing classes
have grown alarmingly indifferent to things spiritual;
the educated classes are largely Rationalistic; the
working classes are widely infected with anti-re-
ligious socialism; a prolific press daily and period-
ically preaches the gospel of Naturalism overtly or
covertly to countless eager readers; in many lands
Christian teaching is banished from the public schools;
and revealed religion is fast losing that power of
fashioning politics, culture, home life, and personal
character which it used to exercise for the benefit
of Christian states. Amid this almost general flight
from God to the creature, Catholicism alone makes a
struggle, but the struggle is infantile compared
than ever, its confidence in final victory is unshaken.

E. The Test of Vitality.—A better standard for
comparison than the glamour of worldly progress,
best an accidental result of a religious system,
is the power of self-preservation and propagation,
i.e. vital energy. What are the facts? "The anti-
Protestant movement in the Roman Church" says a
Protestant writer, "which is generally called the
Counter-Reformation, is really at least as remarkable
as the Reformation itself. Probably it would be no
exaggeration to call it the most remarkable single
episode that has ever occurred in the history of the
Christian Church... its extent and power are greater
than that of the Protestant movement, and its
permanence results are fully as large at the present
day. It called forth a burst of missionary enthu-
siasm such as has not been seen since the first day of
Pentecost. So far as organisation is concerned, there
seems to be no question that the bands of the men
which the made the Roman Empire has fallen upon the
Roman Church; and it has never given more striking proof
of its vitality and power than it did at this time, im-
mEDIATELY after a large portion of Europe had been
torn from its grasp. Printing-presses poured forth
literature not only to meet the controversial needs of
the moment but also admirable editions of the early
Fathers to whom the Reformed Churches appealed—
sometimes with more confidence than knowledge.
Communities were formed and armies marshalled. Regions of Europe which had seemed to be lost for ever [for example, the southern portion of Germany and parts of Austria-Hungary] were covered to the Papacy, and the claims of the Vicar of Christ were carried far and wide through countries where they had never been before. (R. H. Malden, classical lecturer, Selwyn College, Cam-

Dr. G. Warneck, a protagonist of the Evangelical
Alliance in Germany, thus describes the result of the
Kulturkampf: "The Kulturkampf [i.e. struggle for
superiority of Protestantism against Catholicism in
Prussia], which was inspired by political, national,
and liberal-religious motives, ended with a complete
victory for Rome. When it began, few people knew
Rome and the weapons used against her, fore-
told with certainty that a contest with Romanism
on such lines would of necessity end in defeat for the
State and in an increase of power for Romanism... .
The enemy whom we met in battle has brilliantly
conquered us, though we had all the arms civil power
can supply. True, the victory is partly owing to the
ability of the leaders of the Centre party, but it is
truer still that the weapons used on our side were
blunted tools, unfit for doing serious harm. The
Kulturkampf, like the Roman State, is a godless
power, worldly to the core, but after all she is a Church,
and therefore disposes of religious powers which she
invariably brings into action when contending with
civil powers for supremacy. The State has no
equivalent power to oppose. You cannot hit a spirit
not even the Roman spirit... ." (Der evangelische
Bund und seine Gegner", 13-14). The anti-re-
ligious Government of France is actually renewing the
Kulturkampf; but no more than its German models
does it succeed in "wiltting the Roman spirit". En-
dowments, churches, schools, convents have been con-
fiscated, yet the spirit lives.

The other mark of Catholic vitality—the power of
propagation—is evident in missionary work. Long
before the birth of Protestantism, Catholic
missionaries had converted Europe and carried the
Faith as far as China. After the Reformation they
reconquered for the Church the Rhineland, Bavaria,
Austria, part of Hungary, and Poland; they estab-
lished flourishing Christian communities all over
North and South America; and in the islands of
Oceania, wherever, in short, Catholic powers allowed them
free play. For nearly three hundred years Protes-
tants were too intent on self-preservation to think of
foreign missionary work. At the present day, how-
ever, they develop great activity in all heathen coun-
tries, and not without a fair success. Malden, in the
work quoted above, compares Catholic with Protestant results and methods; although his sympathy is naturally with his own, his approbation is all for the other side.

II. CONCLUSION.—Catholicism numbers some 270 millions of adherents, all professing the same Faith, using the same sacraments, living under the same discipline; Protestantism claims roughly 100 millions of Christians, products of the Gospel and the fancies of a hundred reformers, people constantly begging their "unhappy" or vainly striving for a union which is only possible under that very central authority, protestation against which is their only common denominator.

For more see Catholic or Protestant textbooks. The Catholic standard work is BELLARMINI's Disputataiones de Controversiis Christianae fidei etc. (4 vols. Rome, 1632-35); on the Protestant side: GEBHARD, Logi Theologiæ, etc. (9 vols., Berlin, 1803-75). For the historical, political, and social history of Protestantism see the works of D. LEXNER, Die Reformation (3 vols. Ratibon, 1843-51); The Church and the Churches, tr. MacCabe (1862); JANBERG, Hist. of the German People at the close of the Middle Ages, tr. CHRISTIE (London, 1898-1910); PANTIN, Hist. of the Popes from the close of the Middle Ages to VITTORIO (London, 1891-1910); BALMER, Protestants and Catholicity in their effects on the civilization of Europe, tr. HAMMOND and KIRKHAM (1840); BAUBRILLAT, La Religion et la Révolution (Paris, 1833); HILLERG, The Protestant Church, the Roman Church and the Jews (London, 1908), these are illuminating lectures given at the Institut Catholique of Paris by its rector. On the Protestant side also the voluminous writings of CREIGHTON and GARDINER, both fair-minded.

J. WILHELM.

Protonotary Apostolic, member of the highest college of prelates in the Roman Curia, and also of the honorary prelates on whom the pope has conferred this title and its special privileges. In later antiquity there were in Rome seven regional notaries, who, on the further development of the papal administration and the accompanying increase of the notaries, remained the supreme palace notaries of the papal chancery (or protonotaria). In the Middle Ages the prothonotaries were very high papal officials, and were often raised directly from this office to the cardinalate. Sixtus V (1585-90) increased their number to twelve. Their importance gradually diminished, and at the time of the French Revolution the office had almost entirely disappeared. On 8 February, 1838, Gregory XVI re-established the college of real protonotaries with seven members called "protonotarii de numero participantium", because they participated in the revenues.

Since the sixteenth century the popes had also appointed honorary protonotaries, who enjoyed the same privileges as the seven real members of the college; and titular protonotaries, who held a corresponding position in the administration of the episcopal ordinaries or in the collegiate chapter. By the Motu Proprio "Inter multiplices" of 21 February, 1905, Pius X exactly defined the position of the prothonotaries. These are divided into four classes: (1) the "Protonotarii apostolici de numero participantium" (members of the real college), who exercise their office in connexion with the acts of consistory and canonizations, have a representative in the Congregation of the Propagation, and, according to the reorganization of the Curia by the Constitution "Sapienti consilio" of 20 June, 1908, sign the papal Bulls instead of the earlier aulic Papal Bulls (or Bullas regiae), who enjoy the use of pontificals and numerous privileges, and may also, after examining the candidates, name annually a fixed number of doctors of theology and of canon law; (2) the "Protonotarii apostolici supranumerarii", and, with them the second one (4 three cases) of those who fill the offices of the patriarchal churches (the Lateran, St. Peter's, and St. Mary Major), and of cathedral chapters outside of Rome to which the privilege has been granted, can be raised; (3) the "Protonotarii apostolici ad instar [s. participantium]", who are appointed by the pope and have the same capacities as the real protonotaries; (4) the "Protonotarii titulares seu honorarii", who are found outside of Rome, and who may receive this dignity from the nuncios or as a special privilege. The privileges, dress, and insignia of the members of these four classes are exactly defined by the above-mentioned Motu Proprio.

See the bibliography of FREYTAG.

J. P. KIRSCH.

Protocol, the formula used at the beginning of public acts drawn up by notaries, e.g., mention of the reign, time, place, etc. (Justinian, "Novels", 43); also, the compact register in which notaries register the acts drawn up by them, in order of date; finally, the first draft of these acts (called minutes, because they are written in small characters), which remain in care of the notary, and from which a copy or transcript (said to be engrossed, because written in larger characters) is made, and sent to the interested parties. In tribunals where the registers have retained the name notary, the protocol is the register in which records of the proceedings are preserved and the office in which the originals of these documents are kept (cf. Regulation of the Rota, 4 August, 1910, art. 2). Public acts, official records, ought to be engrossed, that is, certified to be faithful copies of the original preserved in the protocol, the notary who transcribes the document witnessing on the copy itself that it is exact; this is what is known as fides instrumentorum, or trustworthiness of the documents. The word "protocolium" (fidei instrumentorum, or the canonical writers on the title De fide instrumentorum, II, tit. xiii).

Protocoevangelium of St. James. See APOCRYPH.

Protomartyr. See STEPHEN, SAINT.

Protopope, a priest of higher rank in the Orthodox and Byzantine Uniat Churches, corresponding in general to the Western archpriests or dean. The rights and duties of these dignitaries have varied to some extent at different times and in different Churches. Roughly the titles archpriest (πρωτοπριέστου), protopriest (πρωτοπριετής), protopope (πρωτοπάπας) may be taken as meaning the same thing, though they have occasionally been distinguished. The general idea is that the archpriest has the highest rank in his order; he comes immediately after the bishop. In the fifth century he appears as head of the college of priests, as the bishop's delegate for certain duties of visitation and judgment, as his representative in case of absence or death (such a record). So Libanius, "Breviarium", XIV (P. L., LXVIII, 1016). He therefore combined the offices of our modern dean of the chapter, vicar-general, and vicar capitular. The title recurrs constantly in the early Middle Ages (Bingham, op. cit., i, 252 seq.). At Constantinople there was an elaborately organized court of ecclesiastical persons around the patriarch, whose various places in choir when the patriarch are celebrated in the same length, and the same way the pontiff celeberates in the church" (Goar, 225). Under him is the "protopope" (πρωτοπαπας) (1) who takes his place in the absence (ibid.). So also Leo Allatius's list, where it is said further that: "he holds the place [πατριάρχης, as deputy of the pontiff]" (ibid., 229). He is promoted by presentation to the patriarch, who lays his hand on him with prayer, and the clergy cry "Thank you" (the title being given by Goar, 238). Goar notes that the protopope, at least to some ex-
tent, succeeded to the place of the episcopos. He could ordain lectors; at concelebrations where no bishop is present he presided and said the Epiphonesia.

In the bishop's absence he took his place as president, and represented his office to his fellow-clergy. On Ruse George Kodinos (fourteenth century) says of the protopope: "he is first in the tribunal τοῦ βηθικοῦ, in authority holding the second place after the pontiff" (De Officiis, I, quoted by Goar, 237).

Distinct from the official of the patriarchal court that bore the same title, were the protopopes in the country parishes. They correspond to our rural deans, having delegate episcopal jurisdiction for minor cases, from which appeal may be made to the bishop. So Theodore Balsamon (twelfth century): "It is forbidden by the canons that there should be bishops in small towns and villages and because of this they ordain for these, priests who are protopopes and chöriscopi (Syntagma, III, 142). There are cases in which a protopope in a remote place has episcopal jurisdiction, but not orders, like some vicars Apostolic, or the archpriests in England from 1599 to 1821.

In such cases they are distinguished from archpriests and have such officials under them (so the introduction to Nicholas Bulgar's "Sacred Catechism", Venice, 1581). In modern times the Orthodox (and Uniat) title of protopope often means hardly more than a complimentary title conveying a certain rank and precedence with sometimes a few unimportant rights. Often in a church that has several priests (as we should say a rector and curates) the first (rector) is called protopope.

In Russia, Bulgaria, Rumania, and Austria the protopopes have authority over a district containing several parishes. They have to visit these occasionally and represent for the clergy the court of first instance. In Orthodox Hungary and Transylvania there are protopopes'eparchies (eparchies), in which the protopope is elected by clergy and people and rules under the bishop. In these cases he may be compared to our rural deans. Such an office is the highest to which a married Orthodox priest may aspire, since bishops are always monks. In Russia the protopope (protoi) sometimes wears the Byzantine mitre and epigonation, but not the omophorion or sakkos.

ADRIAN FORTESCUE.

Prototype. See HCRONET.

Protrus and Hysacith, saints, martyrs during the persecution of Velarion (257–9). The day of their annual commemoration is mentioned in the "Deposition Martyrum" in the chronographia for 354 (Ruinart, "Acta martyrum", ed. Ratisbon, 632) under 11 September. The chronographia also mentions their graves, in the Cemetery of Bassilia on the Via Salaria, later the Catacomb of St. Hermes. The Itineraries and other early authorities likewise give this place of burial (De Rossi, "Roma sotterranea", I, 176–7). In 1845 Father Marchi discovered the still undisturbed grave of St. Hysacith in a crypt or the above-mentioned catacomb. It was a small square niche in which lay the ashes and pieces of burned bone wrapped in the remains of costly stuffs (Marchi, "Monumenti primitivi: I, Architettura della Roma sotterranea cristiana", Rome, 1844, 238 sqq., 294 sqq.). Examination of the saint had been because both martyrs had suffered death by fire. The niche was closed by a marble slab similar to that used to close a loculus, and bearing the original inscription which confirmed the date in the old Martyrology:

D R I I I I D U S S E P T E B R Y A C H I N T H U S M A R T Y R

(Buried on 11 September Hysacith Martyr). In the same chamber were found fragments of an architrave belonging to some later decoration, with the words: 

... S E P U L C R U M P R O T I M (artyris) ... 

(Grave of the Martyr Protus). Thus both martyrs were buried in the same crypt. Pope Damasus wrote an epitaph in honour of the two martyrs, part of which still exists (Inscriptiones latine, 532, 49). In the epitaph Damasus calls Protus and Hysacith brothers. When Leo IV (847–55) translated the bones of a large number of Roman martyrs to the churches of Rome, the relics of these two saints were to be translated also; but, probably on account of the devestation of the burial chamber, only the grave of St. Protus was found. His bones were transferred to San Salvatore on the Palatine. The remains of St. Hysacith were placed (1849) in the chapel of the Propaganda. Later the tombs of the two saints and a stairway built at the end of the fourth century were discovered and restored.

J. P. KIRSCH.

PROUT, FATHER, the name by which the Rev. Francis Sylvestre Mahony (O'Mahony), author of "The Bells of Shandon", is generally known, b. at Cork, 31 Dec., 1804; d. in Paris, 18 May, 1864. Educated at Clongowes Wood College, Ireland, and St. Acheul, France (1815–21), he entered the Jesuit novitiate in Paris in 1821, and in 1823 was sent to Rome for his course in philosophy. In 1825 he returned to Clongowes as disciplinarian and after a brief stay there, going subsequently to Freiburg and Florence, he left the Society of Jesus and entered the Irish College at Rome as a student for the priesthood. He did not complete his course there, but in 1832 was ordained at Luco—a step against which practically all his religious superiors had warned him. He returned to his native diocese and for a time served there as priest, being conspicuous for his heroism and devotion as chaplain to the Cork Cholera Hospital during the terrible epidemic that visited the city at that time. Developing some differences with his superiors, he went to London in 1834, and almost immediately commenced his literary career, joining "Fraser's Magazine", then under the editorship of his fellow-townsmans, Maginn. For three years he wrote in "Fraser's" (1834–7), then in "Bentley's Magazine", edited by Charles Dickens, and in 1848 he sent by Dickens to Rome as correspondent for the "Daily News". For twelve years he filled that post, then went to Paris (1858) as correspondent of the "Globe" and spent the rest of his life there. After his death his remains were brought to Cork and, after a public funeral, were interred in the family vault in Shandon churchyard. Although for thirty years Mahony did not exercise his priestly

FATHER PROUT (FRANCIS MAHONY)
duties, he never wavered in his deep loyalty to the Church, recited his Office daily, and received the last sacraments at the hands of his old friend, Abbé Roberge, who has left abundant testimony of his excellent dispositions. Popularly best known as the author of the famous lyric, "The Bells of Standon," Mahony's title to literary fame rests more securely upon the collection of writings known as the "Reliques of Father Prout." Dowered with a retentive memory, irrepressible humour, large powers of expression, and a strong satirical turn of mind, an omnivorous reader, well trained in the classics thoroughly at home in the French and Italian languages, and a ready writer of rhythmical verse in English, Latin, and French, he produced in such articles as "An Apology for Lent," "Literature and the Jesuits," and "The Roguery of Tom Moore," an extraordinary mixture of erudition, fancy, and wit, such as is practically without precise parallel in contemporary literature. The best of his work appeared in "Fraser's Magazine" during the first three years of his literary life. He translated largely from Horace and the poets of France and Italy, including a complete and free metrical rendering of Gresset's famous mock-heroic poem "Vert-Vert," and Jerome Vida's "Silkworm". But his newspaper correspondence from Rome and Paris is notably chiefly for the vigour of his criticisms upon the events of the day, and these were most caustic language. Seven years before his death he edited the first authorized collection of the "Reliques," and in 1830 wrote the inaugural ode for the "Cornhill Magazine," then starting under Thackeray's editorship. No complete biography of "Fathers Prout" has yet been written but fragmentary materials are now available.

THOMAS F. WOODLOCK.

Provercher, Léon Abel, naturalist, b. 10 March, 1820, in the parish of Bécancourt, Nicolet county, Province of Quebec; d. at Cap Rouge, P. Q., 23 March, 1892. He studied at the College and Seminary of Nicolet, was ordained 12 Sept., 1844, and for the next twenty-five years zealously and fearlessly organized two pilgrimages to Jerusalem, one of which he conducted in person. In 1865 he established in his parish at Portneuf a confraternity of the Third Order of St. Francis, probably the first of its kind in Canada. From childhood he had a special love for the study of nature; but he could spare from his pastoral duties was devoted to the study and description of the fauna and flora of Canada; his extensive pioneer work in this domain won for him the appellation of the "Father of Natural History in Canada." In 1869 he founded the "Naturaliste Canadien," a monthly publication which he edited for twenty years, and from 1869 until his death he was engaged almost exclusively in scientific work. Among his chief writings are: "Traité élémentaire de Botanique" (Quebec, 1868); "Flora of Canada" (2 vols., Quebec, 1862); "Le Vert-Vert Canadien" (Quebec, 1867); "Le Verger, le Potager et le Parterre" (Quebec, 1874); "Faune entomologique du Canada" (3 vols., 1877-90); "De Quebec a Jerusalem" (1864); "Une Excursion aux Climats tropicaux" (1890); "Les Mollusques de la Province de Quebec".

EDWARD C. PHILLIPS.

Provercher, Joseph Norbert. See Canada, CATHOLICITY IN; St. Boniface, Diocese of.
and warnings to an imagined pupil or disciple. He warns him against evil company (i, 8–19); describes to him the advantages attending the pursuit of wisdom, and the evils to be avoided by such course (ii); exhorts him to obedience, to trust in God, to the payment of legal offerings, to patience under the Divine chastisement, and sets forth the value of wisdom (iii, 1–26). After some miscellaneous precepts (iii, 27–35), he renews his pressing exhortation to wisdom and virtue (iv), and gives several warnings against unchaste women (v, 20–35; viii), after the first of which are inserted warnings against servitude, indolence, laziness, and various vices (vii, 1–19). At several points (i, 20–33; vi; ix) Wisdom herself is introduced as speaking and as displaying her charms, origin, and power to men. The style of this first part is flowing, and the thoughts therein expressed are generally developed in the form of connected discourses. The second part of the book (xxii, 16) has for its distinct heading: “Mishle Shelomoh”, and is made up of disconnected sayings in couplet form, arranged in no particular order, so that the present writer has been unable to give it a single connected form. In many instances a saying is repeated within this large collection, usually in identical terms, at times with some slight changes of expression. Appended to this second part of the book are two minor collections (xxii, 17–xxiv, 22; xxiv, 23–34), Chiefly made up of yiqquteh; that is, quatrains (xxii, 17–21) of the first appendix request attention to the “words of the wise” which follow (xxii, 22– xxiv, 22), and which, in a consecutive form recalling that of the first part of the book, set forth warnings against various excesses. The second appendix has for its title: “These also are words of the wise”, and the few proverbs it contains conclude with two verses (33, 34), apparently taken over from vi, 10, 11. The third part of the book (xxv–xxx) bears the inscription: “These are also Mishle Shelomoh, which the men of Eschias, king of Judah, copied out.” By their miscellaneous character, their couplet form, etc., the proverbs of this third part resemble those of x–xxii, 16. Like them also, they are followed by two minor collections (xxx and xxxi, 1–9), each supplied with its respective title. The first of these minor collections has for its heading: “Words of Agur, the son of Takeh”, and its principal contents are Agur’s meditation on the Divine transcendence (xxx, 2–9), and groups of numerical proverbs. The second minor collection is called: “The words of Agur, king: the oracle which his master taught him.” In it the queen-mother warns her son against sensuality, drunkenness, and injustice. Nothing is known of Agur and Lamuel; their names are possibly symbolic. The book concludes with an alphabetical poem descriptive of the virtuous woman (xxx, 10–30).

III. HEBREW TEXT AND ANCIENT VERSIONS.—A close study of the present Hebrew Text of the Book of Proverbs proves that the primitive wording of the pithy sayings which make up this manual of Hebrew wisdom has experienced considerable alterations in the course of its transmission. Some of these imperfections have, with some probability, been assigned to the period during which the maxims of the “wise men” were preserved orally. Most of them belong undoubtedly to the time after these sentiments or enigmatic sayings had been written down. The Book of Proverbs was numbered among the “Hagiographa” (writings held by the ancient Hebrews as less sacred and authoritative than either the “Law” or the “Prophecy”), and, in consequence, copyists felt at liberty to alter the text as they saw fit with scrupulous accuracy. Again, the copyists of Proverbs knew, or at least thought they knew, by memory the exact words of the pithy sayings they had to write out; hence arose involuntary changes which, once introduced, were perpetuated or even added to by subsequent transcribers. Finally, the obscure or enigmatic character of a certain number of maxims led to the deliberate insertion of glosses in the text, so that primitive dicta now wrongly appear in the form of trithics, etc. (cf. Knabenbauer, “Comm. in Proverbs”, Paris, 1910). Of the ancient versions of the Book of Proverbs there is no evidence that any was of value. It probably dates from the middle of the second century B.C., and exhibits very important differences from the Massoretic Text in point of omissions, transpositions, and additions. The translator was a Jew conversant indeed with the Greek language, but has not always (too use paraphrases) owing to the difficulty of rendering Hebrew pithy sayings into intelligible Greek. After full allowance has been made for the translator’s freedom in rendering, and for the alterations introduced into the primitive wording of this version by later transcribers and revisers, two things remain quite certain: first, the Septuagint may occasionally be utilized for the discovery and the emendation of inaccurate readings in our present Hebrew Text; and next, the most important and authoritative ancient version of Proverbs presents, especially in the line of additions and transpositions, point to the fact that the translator rendered a Hebrew original which differed considerably from the one embodied in the Massoretic Bibles. It is well known that the Sahidic Version of Proverbs was made by monks, who had been subjected to recensions, and the Coptic Version is useful for the control of the Greek Text. The present Peshito, or Syriac Version, of the Book of Proverbs was probably based on the Hebrew Text, with which it generally agrees with regard to material and arrangement. At the same time, it was most likely made with respect to the Septuagint, the peculiar readings of which it repeatedly adopts. The Latin Version of Proverbs, which is embodied in the Vulgate, goes back to St. Jerome, and for the most part closely agrees with the Massoretic Text. It is probable that many of its present deviations from the Hebrew text in conformity with the Septuagint should be referred to later copyists anxious to complete St. Jerome’s work by means of the “Vetus Latina”, which had been closely made from the Greek.

IV. AUTHORSHIP AND DATE.—The vexed questions anent the authorship and date of the collections which make up the Book of Proverbs go back only to the sixteenth century of our era, when the Hebrew Text began to be read by scholars in their entirety. They were not even suspected by the early Fathers who, following implicitly the inscriptions in i, 1; x, 1; xxiv, 1 (which bear direct witness to the Solomonic authorship of large collections of proverbs), and being misled by the Greek rendering of the titles in xxx, 1; xxxi, 1 (which does away altogether with the references to Agur and Lamuel as authors distinct from Solomon), regarded King Solomon as the author of the whole Book of Proverbs. Nor were they real questions for the subsequent writers of the West, although some (especially those who attacked the Vulgate as a mere faithless rendering of xxx, 1; xxx, 1, which might have led them to reject the Solomonic origin of the sections ascribed to Agur and Lamuel respectively) insisted in the eyes of the words Agur and Lamuel were but symbolic names of Solomon. At the present day, most Catholic scholars feel free to treat as non-Solomonic not only the short sections which are ascribed in the Hebrew Text to Agur and Lamuel, but also the minor collections which their titles attribute to the “wise” (xxii, 16–xxiv, 22; xxiv, 23–29; xxx, 1–31) and which are placed at the head of the virtuous woman which is appended to the whole book. With regard to the other parts of the work (i–ix; x–xxi, 16; xvi–xxix), Catholic writers are wellnigh unanimous in ascribing them to Solomon. Bearing distinctly in mind the statement in III (A. V. L.)
Kings, iv. 20–22, that, in his great wisdom, Solomon "spoke 3000 Mashals", they have no difficulty in admitting that this monarch may be the author of the much smaller number of proverbs included in the three collections in question. Guided by ancient Jewish and Christian tradition they feel constrained to extend the explicit titles to the same collection of all the more so because the titles in the Book of Proverbs are manifestly discriminating with regard to authorship, and because the title, "These also are Mishle Shemolom, which the men of Ezechias, King of Judah, copied out" (xxv, 1), in particular, bears the impress of distinctness and accuracy. Looking into the contents of these three large collections, they do not think that anything found therein with respect to style, ideas, historic background etc. should compel anyone to give up the traditional authorship, at whatever time—either under Ezechias, or as late as Eadras—all the collections embodied in the Book of Proverbs reached their present form and arrangement. A very different view concerning the authorship and date of the collections is that the titles is gaining in favour among non-Catholic scholars. It treats the headings of these collections as no more reliable than the titles of the Psalms. It maintains that none of the collections comes from Solomon's own hand and that the general tenor of their contents bespeaks a late period of time. These are the principal arguments usually set forth in favour of this opinion. In these collections there is no challenge of idolatry, such as would naturally be expected if they were pre-exilic, and monogamy is everywhere presupposed. It is very remarkable, too, that throughout no mention is made of Israel or of any institution peculiar to Israel. Again, the subject of those collections is not the nation, which apparently no longer enjoys its independence, but the individual, to whom wisdom applied in a merely ethical, and hence very legal, manner. The personification of wisdom, in particular (chap. viii.), is either the direct result of the influence of Greek upon Jewish thought, or, if independent of Greek philosophy, the product of late Jewish metaphysics. Finally, the close spiritual and intellectual relations of Proverbs to Ecclesiasticus shows that, however great and numerous are the differences in detail between them, the two works cannot be separated by an interval of several centuries. Despite the confidence with which some modern scholars urge that the separation from the traditional authorities was that of i–ix, x–xxii, 16; xxv–xxix, a close examination of their value leaves one unconvinced of their proving force.

V. Canonity.

The Book of Proverbs is justly numbered among the proto-canonical writings of the Old Testament. In the first century of our era its canonical authority was certainly acknowledged in Jewish and Christian circles, for the Sacred Writers of the New Testament make a frequent use of its contents, quoting them at times explicitly as Holy Writ (cf. Rom. iv. 20; Heb. iii. 4; Gal. iv. 5; James, iv. 5, 6, etc.). It is true that certain doubts as to the inspiration of the Book of Proverbs, which had been entertained by ancient rabbis who belonged to the School of Shammai, reappeared in the Jewish assembly at Jamnia (about A. D. 100); but these were only theoretical difficulties which could not induce the Jewish leaders of the time to count this book out of the Canon, and which in fact were there and then set at rest for ever. The subsequent assaults of Theodore of Mopsuestia (d. 419), of St. Augustine (d. 430), of St. Le Clerc (d. 1736) against the inspiration of that sacred book left likewise its canonical authority unshaken.

For introductions to the Old Testament see introduction. Recent commentators—Catholic: Rolain (Maries, 1739); Lestré (Paris, 1879); Fillion (Paris, 1892); VioGROUX (Paris, 1903); Braem (Paris, 1910). FRANCIS E. GIGOT.

**PROVIDENCE**

**PROVIDENCE**

**Providence, Congregations of.**—I. Daughters of Providence, founded at Paris, by Madame Poisson (Marie de L’Eunanche) in 1643. Madame Poisson, having obtained letters patent from Louis XIII., opened a home to provide protection and instruction for young girls, whom beauty, poverty, or parental neglect exposed to the loss of Faith and to other spiritual perils. Until this home came within the protection of Providence, with the name of Providence. Among the many who sought admission were some capable of instructing the rest, and of these, seven, who gave evidence of a religious vocation, were selected to form a religious community under rules drawn up for their use by St. Vincent de Paul at the direction of François de Gondy, Archbishop of Paris (1647). New letters patent were granted by Louis XIV., whose mother, Anne of Austria, gave the institute its first fixed abode in the Hospital of la Santé in Paris (1651). Providence was opened for convalescents from the Hôtel-Dieu, a grant confirmed by royal letters in 1667, bestowing on the religious all the privileges, rights, and exemptions accorded to hospitals of royal foundation. The Archbishh of Paris established other houses in various parts of the city, and foundations were made first at Metz and Sedan, where special attention was devoted to Jewish converts and the reclamation of heretics. After two years of probation candidates were admitted to the simple vows of chastity, obedience, the service of others, and perpetual stability. The superior, elected every three years, and the ecclesiastical superior, appointed by the Archbishop of Paris, were assisted in the temporal administration of the community by two pious matrons, chosen from among the principal benefactresses. In 1851 some members of the congregation joined the Sisters of Charitable Instruction of the Child Jesus of Saint-Maur, established by Nicolas Barré in 1778, thenceforth known as the Ladies of Saint-Maur and of Providence; the remaining members of the Congregation of Our Lady, founded by St. Peter Fourier. The following congregation became a model for others established to carry on a similar work in various dioceses of France, whose activities, however, came eventually to embrace the establishment of elementary schools for girls, orphanages, and asylums for the blind and deaf mutes, and the care of the sick in hospitals and their own homes. In 1903 the number of Sisters of Providence in France exceeded 10,000. From the original seminary of Providence also came the religious who formed the nucleus of the Congregation of Christian Union subsequently established by M. le Vachet, a priest whose counsels had encouraged Madame Poisson.

**II. Sisters of Providence.** (St. Mary-of-the-Woods).—Among the teaching religious orders that originated in France at the close of the Revolution was the Congregation of the Sisters of Providence of Rueil—La-Loir, founded by M. Briand and M. C. Dujaric, Cura of Rueil (Sarthe). The society had a struggle for existence for several years, but was finally established with the collaboration of Sophie Zézi de Rosecox, the first superior general. Mother de Rosecox was of an ancient noble Breton family and was renowned for her piety, charity, and zeal. Many
followed her to Ruillé and the community prospered. Though the sisters devoted themselves to various works of mercy and charity, the instruction of youth was their primary object. They soon had schools not only throughout the diocese, but in distant countries. Rev. Simon-Gabriel Brutt, first Bishop of Vincennes, commissioned his vicar-general, Mgr de la Halliandière, to return to his native country to procure priests and religious teachers for his immense diocese. Scarcely had he arrived in France when the death of Bishop Brutt was announced, followed by the appointment of Mgr de la Halliandière as his successor. The newly-consecrated bishop obtained from Mother Mary a colony of religious for Indiana. Six sisters, under the leadership of Mother Theodore Guérin, a woman of exceptional qualifications and high spiritual attainments, reached their home in the New World, 22 Oct., 1840. Instead of being established in the episcopal city, as they had been led to expect, they were taken to a densely wooded country, where only the foundation of a building for them was completed; and they were obliged to find shelter in a neighbouring farmhouse, one room and a corn loft being at their disposal. After a few weeks the community obtained sole possession of this house, which then became the mother-house, called St. Mary-of-the-Woods. In the same year a new building was completed, a boarding school was opened with seven pupils. In 1841 another member from the French mother-house arrived at St. Mary's, Irna Le Fer de la Motte, Sister St. Francis Xavier, who became mistress of novices.

The foundress showed her foresight and capacity for organization and administration, in an educational plan providing for the advanced studies and culture of the time. As early as 1846, a charter was granted by the State empowering the institution to confer academic and collegiate degrees. While the new foundation prospered, many sufferings and hardships were endured, arising from the rigours of the climate, poverty, isolation, a foreign language, troublesome subjects, and the like. The keenest trial of all was misunderstanding with the bishop. It lasted seven years. At the Seventh Council of Baltimore, the bishop placed his difficulties before the assembly and offered his resignation, at the same time strongly denouncing the Sisters of Providence. In 1847, just as he had informed Mother Theodore that he had dismissed her from her office as superior-general (to which she had, with his consent, been confirmed for life), released her from her vows, and dismissed her from her congregation, the Papal Brief appointing Bishop Bazin to the See of Vincennes was received from Rome. The death of Mother Theodore occurred on 14 May, 1850, and so eminent was her holiness that preliminaries have been undertaken for introducing the cause of her beatification at Rome.

The sisters take simple vows. The postulantship, two months, is followed by a novitiate of two years, at the end of which novices are taken for three years, renewed then for five years, if the subject is satisfactory and desires to persevere. A year of second novitiate precedes the final and perpetual vows. This year, during which the nuns devote themselves entirely to the spiritual life, is passed at the mother-house. A course of normal training is carried on in connexion with the novitiate properly so called, and summer sessions are held during the vacation for all teachers who return to the mother-house for the annual retreat. The administrative faculty is an elective superintendental and of three assistants, a secretary, procurator, treasurer, and a general chapter. The rules and constitutions received final approval from the Holy See in 1887. Among prominent members of the order were: Sister St. Francis Xavier (Irma Le Fer de la Motte), b. at Servan, Brittany, 16 April, 1818; d. at St. Mary-of-the-Woods, 30 January, 1856, whose life has been published under the title "An Apostolic Woman," and Sister M. Joseph (Elvire le Fer de la Motte), b. at St. Servan, 16 February, 1825; d. at St. Mary-of-the-Woods, 12 December, 1861, a member of whose life has been published in French. The sisters direct parochial schools and academies in the Dioceses of Baltimore, Boston, and Chicago; in the Dioceses of Indianapolis, Ft. Wayne, Peoria, and Grand Rapids; orphanages at Vincennes and Terre Haute; an industrial school in Indianapolis; a college for the west of Terre Haute. Statistics for 1910 are: 937 sisters; 68 parochial schools; 15 academies; 2 orphan asylums; 1 industrial school; 20,000 children.

Sister MARY THEODORIA.

III. SISTERS OF PROVIDENCE OF CHARITY.—The Sisters of Providence, known also as Sisters of Charity, were founded in Montreal, Canada, 25 March, 1845, under the Rule of St. Vincent de Paul, by Rt. Rev. Ignace Bourget. In December, 1861, a branch of the order, with intention to form a mother-house, was established at Kingston, Ontario, under the protection of Rt. Rev. Edward J. Horn, then bishop of that diocese. From this establishment four sisters, in November, 1873, to open a mission in Holyoke, Massachusetts. In 1892 this branch of the order, with permission of the Holy See, became a diocesan establishment, with Rt. Rev. Thomas D. Beaver, the present bishop of Springfield, Massachusetts, as superior. There are no lay sisters in the order, and the members are devoted exclusively to the works of charity. Since they became diocesan their membership approximates three hundred, and the institutes of charity entrusted to their management have been multiplied. In the present year (1888) they have in charge four diocesan hospitals and one sanatorium, with an annual total of about five thousand patients treated therein. Connected with these hospitals is a training school for pupil nurses, and the sisters also receive a professional training and personally care for and supervise the treatment of their patients. They have two orphan asylums, caring for about three hundred children; an infant asylum of modern construction capable of sheltering one hundred and fifty little ones, ranging from infancy to six years. Their duties also extend to both sexes. They care for one hundred and forty aged and infirm women, and for eighty aged men, in three separate homes of recent construction. They have two homes for working girls, and the provisions of their rule permit them to enter into the work of charity which the bishop of the diocese may see fit to place in their keeping. (See Charity, Sisters of Sisters of Charity of Providence.)

Sister MARY OF PROVIDENCE.

IV. SISTERS OF PROVIDENCE OF SAINT ANNE, founded at Turin in 1834 by the Marchesa Julia Falletti de Barolo for the care of children and the sick. The order was approved by the Holy See 3 March, 1846. Its mother-house is at Florence, and there are daughter institutions at Bagnoria, Castelfidardo, and Assisi, where the sisters conduct the industrial school of San Francesco, founded in 1803. In Rome their two recent asylums (Via Veneto and the Sacred Heart (Via Conde) harbour three hundred children. At Secundasbad in the Diocese of Hyderabad, India, they have a convent where they educate European and Eurasian girls, and they also conduct a school at Kasipet in the same diocese. In Italian Eritrea they have a home for children reclaimed from slavery.

HEINRICH, Ordens u. Kongregationen, III (Paderborn, 1900), 387.

BLANCHE M. KELLY.

V. SISTERS OF PROVIDENCE OF THE INSTITUTE OF CHARITY, an offshoot from the Sisters of Providence,
founded by Jean-Martin Moye in France in 1762 for teaching poor girls and tending the sick. Their present existence, constitution, and religious character are due to Antonio Rosmini, of whose institute they really form a part. In 1831, at the request of Abbé Löwenbruck, the French Bishop of Toul, they were invited by the Court of Rome to go to Portugal. The four pious but uneducated young women from the Val d'Ossola and neighboring Swiss valleys. This priest, one of the moving spirits in the Institute of Charity then beginning at Domodossola, wished these young women to receive a religious training at Portieux and then to found there an Institute. They returned in 1832 and joined a community already organized at Locarno in Ticino, and designed to be a novitiate as well as a school for the poor. They provided no funds, however, and though they opened a school, being but slenderly educated, they could get no salaries as recognized teachers. This bad management induced Rosmini to intervene. He reformed their rule to suit it to its new conditions, and thenceforward had to assume entire responsibility for them. Thus they were from the first a distinct body, the 'Rosminiane,' as they were called. Bristol, as before, provided schools for the education of teaching sisters was formed at Domodossola in a former Ursuline convent. The Holy See in its solemn approval of the Institute of Charity in 1839 gave an indirect recognition of the success of these parts in its institute. The number that they have steadily increased. The order is mainly contemplative; but, when necessary, they undertake any charitable work suitable to women, especially the teaching of girls and young children, visiting the sick, and instructing in Christian doctrine. The central houses have smaller establishments emanating from and depending upon them. For each of these groups there is one superioriæ, elected by the professed sisters for three years, and eligible for three years more. Aided by assistants, she appoints a procuratrix over each lesser establishment and assigns the grades and most of the offices. All the sisters return to their central house every summer for a retreat and to hold a chapter for the election of officers. The novitiate lasts three years; the usual three vows are then taken, at first for three years, then either renewed or made perpetual. In each diocese the bishop is protector. There are houses in Italy, England, and Wales. In Italy there were in 1906 about 600 sisters and 60 novices. They have 64 establishments, most of which are elementary schools for children and girls; there are also nursery schools, a few orphanages, a home for poor old men. They are scattered in nine dioceses, some in Piedmont, others in Lombardy. The principal houses are those of Borgomanero, the central house for Italy, Domodossola, Intra, and Biella. The English branch began in 1843 on the initiative of Lady Mary Arundel, who had taken a house at Loughborough in order to aid the Fathers of the Institute in that mission. Into this house, fitted as a convent, she received two Italian sisters, the first nuns to wear a religious habit in the English Midlands since the Reformation. A year later they opened a girls' and infants' school, which was the first day-school for the poor taught by nuns in England. The first English superioriæ was Mary Agnes Amberth, niece of the Earl of Shrewsbury. Under her rule the present central house was built at Loughborough. A boarding-school and middle and elementary schools are conducted by the nuns. There are six other establishments. At St. Etheldreda's in London and at Whitwick, Rugby, and Bexhill they have girls' and infants' schools, at Cardiff, two houses, one for visiting the sick and tending the poor, and the other a secondary school and pupil-teachers' centre. Whitwick and St. David's, Cardiff, are the only places in which their work is not auxiliary to that of the Fathers of the Institute. (See ROSMINIANES.)

WILLIAM HENRY FOLLARD
health, he began a tour of his diocese to collect, and
succeeded in raising some hundreds of thousands of
dollars in a few years, so that when he died (May,
1886) the new cathedral was almost completed without
any debt encumbering it. It was during his episco-
pate that the French Canadian Catholics began to
come to the diocese in considerable numbers, first to
Woonsocket and then to the various mill towns along
the little streams of the Blackstone and the Paw-
tucket, and above all to Fall River. The bishop, en-
grossed with other things, did not realize apparently
the magnitude of the problem, and his attempts to
deal with it were not sufficiently a cause of anxiety
and pain to himself and others.
Rt. Rev. Matthew Harkins succeeded Bishop Hen-
drickson after an interval of eleven months. Born in
Boston 17 Nov., 1846, educated at the Boston Latin
School, Holy Cross College, and Douai College in
France, he made his theological studies at Saint
Sulpice (Paris), where he was ordained in 1869. The
Vatican Council took place while he was continuing
his studies in Rome. Made pastor of Arlington in
1876, he was transferred to St. James' parish, Boston,
in 1881. In 1884, he was consecrated to Bishop and
Archbishop Williams of Boston, his former pas-
tors. On the 14 April, 1887, Bishop Harkins was
consecrated in the new (uncompleted) Cathedral of
Sts. Peter and Paul in Providence which had first
been opened a year before for the obsequies of his
predecessor, Bishop Harkins. A man of wide read-
judicial temperamental, a lover of order and method,
he has devoted himself to the task of organizing his
diocese. He has particularly made his own the dio-
cesan charities. The orphan asylum begun in 1875,
transferred in 1885, had always obtained a precarious
income from fairs and donations, and for these he
substituted parochial assessments. Through the gen-
erosity of Joseph Banigan the Home for the Aged in
 Pawtucket was built in 1881. Mr. Banigan also
bought the large St. Maria Working Girls' Home in
Providence in 1894, at a cost of $80,000, and either
gave in his lifetime or left by will (1897) sums of
$25,000 or more to nearly every diocesan charity.
St. Joseph's Hospital was begun in 1891 and the St.
Vincent de Paul Infant Asylum in the following year;
the Home for the Good Shepherd in 1897, the Home
of the Good Shepherd in 1904, Nazareth Home (a
day-nursery, that also supplies nurses in the homes
of the poor) in 1906. In Woonsocket and Newport
and other parts of the diocese similar charitable institu-
tions have been erected at the suggestion and advice
of Bishop Harkins. Almost every parish church has
now a total of seventy-nine are exclusively French Cana-
dian, while there are a few small parishes of mixed
French and English-speaking Catholics. In the last
fifteen years (1911) the Italians have come to Prov-
dence and the number in large numbers, so that there
are perhaps between thirty and forty thousand
of them in the diocese. Two churches for the Italians
were dedicated in Providence in 1910 and other
smaller parishes provide for their needs in the out-
living districts. The four colonies of Poles have four
Polish parishes, while the Portuguese have one in
Providence. One Syrian parish in Central Falls
ministers to some of the Orientals in these parts.
Parochial schools are established in the greater num-
ber of the English-speaking parishes of the cities.
Thus out of seventeen English-speaking parishes in
Providence, nine have large and well-equipped
schools; of the four in Pawtucket, three have schools;
the three parishes in Newport have schools. The
others are either very small or heavily in debt or
unable to procure suitable teachers. Among the
French Canadians, with whom the church stands as
a patriotic as well as a religious institution, it is
rare to find a parish without its school. Religious
women are usually the teachers (in ten schools, the
Sisters of Mercy); in only three are there Brothers
for the larger boys. La Salle Academy, a diocesan
High School of which the bishop is president, obtained
a university charter from the state (1910). The
teachers are diocesan priests (for the classics) and
Christian Brothers. It is conveniently situated in
Providence. One day high school (St. Francis
Xavier's Academy) and two boarding schools (Bra-
view, Sisters of Mercy, and Elmhurst, Religious of
the Sacred Heart) provide similar training for the
girls. In all there are some eighteen thousand chil-
dren receiving Catholic training in the diocese.
A diocesan weekly, the 'Providence Visitor', san-
tioned by the bishop and edited by diocesan
priests, has a considerable influence among the Cath-
olics of the state. The Catholic Club for men, es-
lished in 1909, has its own home in Providence and
a large and influential membership. The Catholic
Woman's Club, established in 1901, has a member-
ship of four hundred and is noted for considerable
literary and social activity. Although in a numerical
majority, Catholics do not exert any perceptible in-
fluence on public life. They receive their share of
effective official leadership in both a religious dem-
docrat, the other a republican, being Catholics.
Frequently the mayors and other city officials are
Catholics. There has, however, never been a Catholic
judge of a superior court.
The clergy until recently was nearly exclusively
diocesan. From 1878 to 1899 the Jesuits had St.
Joseph's parish in Providence, out left there, as there
was no prospect of opening a college. Now various
small communities of men have parishes in outlying
districts, Westerly (1905, Marist Fathers), Port-
ravens (1907, Congregation of the Holy Ghost),
Natick (1899, Sacred Heart Fathers); in 1910 the
Dominicans began a new parish between Pawtucket
and Providence. The Catholic population of the
diocese, approximately from 230,000 to 275,000, live
for the most part in the densely inhabited Providence
County, only eighteen parishes, and several of them
very small, existing in the four other counties of the
state, while there are sixty-one in Providence county.
History of the Catholic Church in New England: Diocese of
Providence; 1. Chancery Records.

AUSTIN DOWLING.

PROVIDENCE, DIVINE (Lat., Providentia; Greek, προδομος).—Providence in general, or foresight, is
a function of the virtue of prudence, and may be
defined as the practical reason, adapting means to an
end. As applied to God, Providence is God Himself
considered in His power or attributes. Providence so
orders all events within the universe that the end
for which it was created may be realized. That end
is that all creatures should manifest the glory of
God, and in particular that man should glorify Him,
recognizing in nature the work of His hand, serving
him in obedience and love, and thereby attaining to
the full development of his nature and to eternal
happiness in God. The universe is a system of real
beings created by God and directed by Him to
this supreme end, the concurrence of God being ne-
necessary for all natural operations, whether of things
animate or inanimate, and still more for operations
of the supernatural order. God preserves the uni-
verse in being; He acts in and with every creature
in each and all its activities. In spite of sin, which
is due to the wilful perversion of human liberty,
acting with the concurrence in consequence of the
purpose and intention of God and in spite of evil
which is the consequence of sin, He directs all, even
evil and sin itself, to the final end for which the uni-
verse was created. All these operations on God's part,
with the exception that he is attributed in Catholic
thology to Divine Providence.

The Testimony of Universal Belief.—For all re-
ligions, whether Christian or pagan, belief in Provi-
dence, understood in the wider sense of a superhuman being who governs the universe and directs the course of human affairs with definite purpose and beneficent design, not only as a very real and practical belief, Prayer, divination, blessing, curse, oracle and sacred rite, all testify to a belief in some over-ruling power, divine or quasi-divine in character; and such phenomena are found in every race and tribe, however uncivilized or degraded. We find it, for instance, not only among the ancient Egyptians, to-day, but also among the early Greeks, who, though they do not appear to have clearly distinguished between Providence and Fate, and though their gods were little more than glorified human beings, subject in human frailty and marred by human passion, they too the less watched over the home and the family, took sides in human warfare, and were the protectors and avengers of mankind. The intimate connexion of the gods with human affairs was even more marked in the religion of the early Romans, who had a special god to look after each detail of their daily life, their labours in the field, and the business of the state. The ancient religions of the East present the same characteristics. Aurasmos, the supreme god of the Persians during the Achaemenian period, as the king of all the operating kings of the world, is the maker of kings and nations, who punishes the wicked and hearkens to the prayers of the good (see cuneiform inscriptions translated by Casarotti in the "Hist. of Relig." II, 13 sq.). A similar notion is found in the religion of the Persians. Asiatic and Babylonian records are no less clear. Marduk, the lord of the universe, shows mercy to all, implants fear in their hearts, and controls their lives; while Shamash directs the law of nature, and is the supreme god of heaven and earth (Jastrow, 296, 300, 301). The books of the Avesta, though they depict a dualistic system, represent the good god, Mazdaeh Ahura, with all his attributes, and yet, even against the principle of evil (Hist. of Relig., II, 14). In the dualism of the Gnostic theories, on the other hand, the world is shut off from the supreme god, Bythis, who has nothing directly to do with human affairs, and it desires not the Fall of man, the life of a remote and transcendent deity was probably derived from Greek philosophy. Socrates certainly admitted Providence, and believed in inspiration and divination; but for Aristotle the doctrine of Providence was mere opinion. It is true that the world was for him the instrument and expression of the Divine thought, but God Himself lived a life wholly apart. The Epicureans explicitly denied Providence, on the ground that if God cares for men He can be neither happy nor good. Everything is due, they said, to chance or free will. On both these points they were opposed by the Stoics, who insisted that God must love men, otherwise the very notion of God would be destroyed (Plutarch, "De commun. notiti." 32; De stoic. rep." 38). They also attempted to prove the action or existence of Providence from the adaptation of means to ends in nature, in which evil is merely an accident, a detail, or a punishment. On the other hand, the notions of God, nature, force, and fate were not clearly distinguished by the Stoics, who regarded them as practically synonymous. While Ciceron, who works out the argument from adaptation at considerable length in his "De natura deorum," ends unsatisfactorily with the statement, "Magna Diitur curant, parva negligent," as his ultimate solution of the problem of evil (n. 51-66).

Cairn, The Evolution of Theology Among The Greek Philosophers (Glasgow, 1904); Casarotti, Leaves from My Eastern Garden; Ezech., De natura deorum, Fox, Religion and Morality (New York, 1909); Jastrow, The Religion of Babylonia and Assyria (Boston, 1888); Hist. of Religions (London, 1910); Louis, Dogmes Religieux des Philhellenes (Paris, 1893); Müller, Sacred Books of the East. IV, XXIII, XXXI, The Zend-Avesta, tr. Darasmeier and Miller (London, 1880-7); Morris, Hellenistic Philosophy (London, 1893); Socrates (Paris, 1886); Plutarch, De communibus notitiis; Insine, De onirochronia, a Book on the Origin and Growth of Religion, as illustrated by the Religions of Ancient Egypt (London, 1880); Sacht, The Religion of the Ancient Persian Lectum and Texts (New York, 1898); Zeller, Stoics, Epicureans, and Sceptics (London, 1880).

The Testimony of Scripture. — Though the term Providence is applied to God only three times in Scripture (Eccl. v, 5; Wis. xiv, 3; Judith, ix, 5), and once to Wisdom (Wis. vi, 17), the general doctrine of Providence is consistently taught throughout both the Old and New Testaments. God not only implants in the nature of things the potentiality of futur development (Gen. i, 7, 12, 22, 28; vii, 17; ix, 1, 7; xii, 2; xv, 5), but in this development, as the nature of thing is, in the moral government of the world, in that in Scriptural language what nature does God is said to do (Gen. ii, 5; Gen. vii, 10, 17, 18, 22, 23; viii, 1, 2, 5 sq.). Seed time and harvest, cold and heat, summer and winter, the days of light and darkness, the life of the earth, the life of man, are His gift (Gen. ii, 6, 7; Ps. cxlv, 8, 9; cxviii, 11; cxlviii, 17; Job, xxxii, 37; Joel, ii, 21 sq.; Eccles. xi, 14). So too with man. Man tills the ground (Gen. iii, 17 sq.; iv, 12, 19, 20), but human labours without Divine assistance are of no avail (Ps. cxxi, 6; Prov. xxv, 31). Even for an act of sin, Divine concurrence is necessary. Hence in Scripture the expression "God hardened Pharaoh's heart" (Ex. vii, 13; ix, 12, x, 20, 27, xi, 10, xiv, 8). Pharaoh's heart was hardened" (Ex. vii, 13; viii, 19, 32; ix, 7, 33). "Pharaoh hardened his heart" (vii, 15) and "Pharaoh did not set his heart to do it" (vii, 23), or "hearkened not" (vii, 4, 19), or "increased his sin" (ix, 34), are practically synonymous. God is the sole ruler of the world (Job, xxxiv, 13). His will governs all things. Job, ix, 7, 10; Job, xiv, 22-6; xiv, 24-8; Eccles. xvi, 18-22; Esther, xiii, 9. He loves all men (Wis. vi, 25, 27), desires the salvation of all (Is. xiv, 22, 23; Wis., xii, 16), and His providence extends to all nations (Deut., ii, 19; Wis., vi, 8; Is., xviii, 19), for He, "who saith, I will avenge thee," shall, even as Christ, "doth not the thing which He saith He shall repent (Ezech., xvii, 20-32; xxxii, 11; Wis., xi, 24); for He is above all things a merciful God and a God of much compassion (Ex. xxxiv, 6; Num., xiv, 18; Deut., v, 10; Ps. xxxii, 5; ci, 8-17; cxlv, 9; Eccles., ii, 23). Yet, He is a just God, as well as a Saviour (Is., xvi, 21). Hence both good and evil proceed from Him (Lam., iii, 38; Amos, iii, 6; Is., xiv, 7; Eccl., vii, 15; Eccles., xi, 14), good as a bounteous gift freely bestowed (Ps. cxliv, 16; Eccl., v, 18; 1 Par., xxix, 12-4), evil as the consequence of sin (Lam., iii, 38; Joel ii, 20; Amos, iii, 10, 11; Is., v, 4, 5). For God rewards men according to their works (Lam., iii, 64; Job, xxxiv, 10-7; Ps. xvi, 27; Eccles., xvi, 12, 13; xi, 23; 1 Kings, xxv, 23), their thoughts, and their devices (Jer., xvii, 10; xxxii, 19; Ps. vii, 10). From His anger there is no escape (Job, ix, 13; Ps. xxxii, 16, 17; Wis., xvi, 13-8); and none can prevail against Him (Eccles., xviii, 1; Wis., xi, 22-3; Prov., xxi, 30; Ps. ii, 1-4; xxxi, 10; Judith, xvi, 16, 17). If the wicked are spared for a time (Jer., xi, 10; Job, xxxii, 13-15; Prov., xxi, 31; Eccles., xii, 12), they shall ultimately receive their deserts if they do not repent (Jer., xiii, 17; Job, xxii, 14-18; Ps. xcvii, 9; Prov., xiv, 31). The good, though
they may suffer for a time, are comforted by God (Ps. xvi. 15; Is., li. 12), who will build them up, and will not cease to do them good (Jer., xxxi, 28 sq.; xxxii, 41). For in spite of the wicked, God’s counsels are never changed or thwarted (Is., xiv. 24-7; xiii, 13; Job, xix. 26; Ps., cxxvii, 7), He con- verts into good (Gen. 1, 20; cf. Ps. xc, 10); and suffering He uses as an instrument whereby to train men up as a father traineth up his children (Deut., vii, 1-6; Ps. cxv, 10-2; Wis., xiii, 1, 2); so that in very truth the world fighteth for the just (Wis., xvi, 17).

The teaching of the Old Testament on Providence is assumed by Our Lord, who draws therefrom practical lessons both in regard to confidence in God (Matt., vi, 25-33; vii, 7-11; x, 25-31; Mark, xi, 22-4; Luke, xi, 9-12; John, xvi, 26, 27) and in regard to the forgiveness of our enemies (Matt. v, 38-45; Luke, vi, 27-38); while in St. Paul it becomes the basis of a definite and systematic theology. To the Athenians in the Areopagus Paul declares (1) that God made the universe and is its supreme Lord (Acts, xvii, 24); (2) that He preserves the universe in its existence, giving life and breath to all things (verse 25), and hence, as the source whence they all proceed, must Himself lack nothing nor stand in need of any human service; (3) that He has directed the great events and their distribution very wisely, and (4) this to the end that they should seek Him (verse 27) in whom we live and move and have our being, and whose offspring we are (verse 28). Being therefore the offspring of God, it is absurd for us to liken Him to things inanimate (verse 29), and though God has borne with this ignorance of man’s part for a time, now He demands pence (verse 30), and, having sent Christ, Whose authority is guaranteed by His Resurrection, has appointed a day when the world shall be judged by Him in justice (verse 31). In this way the Romish concept of Divine Providence is further evolved, and the doctrine of Providence becomes identical with that of grace. Nature manifests so clearly the power and the divinity of God that failure to recognize it is inexplicable (Rom., i, 20-2). Hence God in His anger (verse 18) gives man over to the desires of his heart (verse 24), to a responsive state (verse 28).

Some day He will vindicate Himself (ii, 2-5), rendering to every man according to his works (ii, 6-8; 1 Cor., x, 10; Gal., vi, 8), but ii, 9 says, and his secret thought (ii, 10); but for the present He forbears (iii, 26; cf. ix, 22; II Peter, ii, 9) and is ready to justify all men freely through the redemption of Jesus Christ (Rom., iii, 22, 24, 25); for all men stand in need of God’s help (iii, 25). Christians, moreover, having already received the grace of redemption (v, 1), should glory in tribulation, knowing that it is but a trial which strengtheneth patience and hope (v, 3, 4). For the graces that are to come are far greater than those already received (v, 10 sq.) and far more abundant than the consequences of sin (v, 17). Life everlasting is promised to us (v, 21); but unsaid we can do nothing to gain it (vii, 18-24). It is the grace of Christ that delivers us (vii, 25) and makes us co-heirs with Him (viii, 17). Yet we must also suffer with Him (verse 27) and be patient (verse 25), knowing that all things work together for good to them that love God; for God in His Providence has regarded us with love from all eternity, has predestined to be made conformable to the image of His Son, that He might be the first-born among many brethren, has adopted us, has justified us (Rom., v, 1; I Cor., viii, 11) and even now has begun to accomplish within us the work of glorification (Rom., viii, 29, 30; cf. Eph., i, 3 sq., II Cor., iii, 18; II Thes., ii, 13). This, the beneficent purpose of an all-seeing Providence, is wholly gratuitous, entirely unmerited (Rom., iii. 24: ix, 11-2).

It extends to all men (Rom., iii, 10; I Tim., iii, 4), even to the reprobate Jews (Rom., xi, 26 sq.); and by it all God’s dealings with man are regulated (Eph., i, 11).

The Testimony of the Fathers is, it need hardly be said, perfectly unanimous from the very outset. Even those Fathers—and they are not many—who do not treat expressly of the subject use the doctrine of Providence as the basis of their teaching, both dogmatic and practical (e.g. Clement, "I Epis. ad Cor., xix sq., xxvi, xxvii in "P. G.", i. 245-54, 267-70). God governs the whole universe (Aristides, "In col., i. 18 in "Texts and Studies" (1891), 35, 50; "Anon. epis. ad Diog.," vii in "P. G.", II, 1175 sq.; Origen, "Contra Celsum", IV, n. 75 in "P. G.", XI, 1146; St. Cyprian, "Lib. de idol. van.", viii, ix in "P. L.", IV, 546-7; St. John Chrysostom, "Ad eos qui scandalizati sunt!", v in "P. G.", LII, 487; St. Augustine, "De gen. ad lit.", V, xxi, n. 42 in "P. L.", XXXIV, 335-8; St. Gregory the Great, "Lib. moral.", XXXII, n. 7 in "P. L.", LXXVI, 637 sq.; XVI, xii in "P. L.", LXXV, 1126). It extends to every individual, adapting itself to the needs of each (St. John Chrysostom, "In Matt.", n. 3 in "P. G.", LVII, 354), and embraces even what we think is due to our own initiative (Hom. xxi, n. 3 in "P. G.", 298). All things are created and governed with a view to man, to the development of his character, and to the discovery of his needs (Aristides, "Apol.", i, v, vi, xv, xvi, Origen, "Contra Celsum", IV, lxiv, lxviii in "P. G.", XI, 1143-51; Lactantius, "Deiræ Dei", xiii, xv in "P. L.", VII, 115 sq.; St. John Chrysostom, "Hom. xii in Matt.", n. 5 in "P. G.", LVII, 216, 217; "Ad eos qui scandalizati sunt!", vii in "P. G.", LII, 491-3; "Ad Stagir.", i, iv in "P. G.", XLVII, 432-4; St. Augustine, "De div. quest.", xxx, xxxi in "P. L.", XV, 19, 20). The chief proof of this doctrine is derived from the apta-
tasies of a means to an end, which, since it takes place in the universe comprising a vast multitude of relatively independent individuals differing in nature, function, and end, implies the continuous control and unifying governance of a single supreme Being (Minucius Felix, "Octavius", xvii in Halm, "Corp. Scrip. Eccl. Lat.", II, 21, 22; Tertullian, "Adv. Marcin.", II, iii, iv in "P. L.", II, 313-5; Origen, "Contra Celsum", IV, lxiv sq. in "P. G.", XI, 1143 sq.; Lactantius, "De ira Dei", x-xv in "P. L.", VII, 100 sq.; St. John Chrysostom, "Rom. ad Pop. Ant.", ix, 3 in "P. G.", LXIV, 243 sq.; St. Augustine, ", In Ps.", n. 9 in "P. G.", LV, 56-4; "Ad Demetrium", ii, 5 in "P. G.", XLVII, 418, 419; "Ad Stagir.", passim in "P. G.", XLVII, 423 sq.; St. Augustine, "De gen. ad lit.", v, xx-xvii in "P. L.", XXXIV, 335 sq.; Ps., xxviii, xxi, 15 in "P. L.", XXXVII, 1942-7; "De prov. orat.", i-v in "P. G.", LXXIII, 555 sq.; St. John Damascene, "De fid. orth.", i, 3 in "P. G.", XCIV, 795 sq.). Again, from the fact that God has created the universe, it shows that He must also govern it; for just as the manifestations of man demand attention and guidance, so God, as a good workman, must care for His work (St. Ambrose, "De Offic. miniat.", XIII in "P. L.", XVI, 41; St. Augustine, "In Ps.", cxxv, n. 12, 13 in "P. L.", XXXVII, 1893-9; Theodoret, "De prov. orat.", i in "P. G.", LXII, 564, 568-4; Salianius, "De gub. Dei", v, vii-xii in "P. L.", LIII, 40 sq.; St. Gregory the Great, "Lib. moral.", xxxv, n. 46 in "P. L.", LXXVI, 314). In addition to this, Tertullian ("De testim. animas in "P. L.", I, 861 sq.) and St. Cyprian (loc. cit.) appeal to the testimony of the human conscience, and to sayings common to all mankind (cf. Salianius, loc. cit.); while Lactantius ("De ira Dei", viii, xvi in "P. L.", VII, 97, 114, 115, 126) uses a distinctly pragmatic argument based on the utter ruin that would result to society, were the Providence of God generally denied.
The question of Providence in the Fathers is almost invariably connected with the problem of evil. How can God's omnipotence be consistent with the omnipotence of an all-powerful God? And why especially should the just be allowed to suffer while the wicked are apparently prosperous and happy? Patriotic solutions to these problems may be summed up under two heads: (1) Sin is a just punishment of the will of God, though it happens with His permission. It can be ascribed to Providence only as a secondary result (Origen, "Contra Celsum", IV, xvii in "P. G.", XI, 1516-7; St. John Damascene, "De fin. ord."., i, 21 in "P. L.", XCV, 95 sq.). (2) Sin is done by the free will of man who bears it in his own heart, and is certainly foreseen by God, but could have been prevented only by depriving man of his most noble attribute (Tertullian, "Adv. Marcionem.", II, v-vii in "P. L.", XXXIX, 662). Moreover, (3) in this world man has to learn by experience and contrast, and to develop by the overcoming of obstacles (Lactantius, "De coaevit. Dei", xii, 11, 14 in "P. G.", i, 1158). Providence, natural and moral ("De fin. ord.", I, vii, n. 18 in "P. L.", XXXII, 986). (4) One reason therefore why God permits sin is that man may arrive at once at a consciousness of righteousness and of his own inability to attain it, and so may put himself in God's hand (Anon. episc. ad Diogn., xii in "P. G.", II, 1175). See also St. Gregory the Great, "Lib. moral.", III, i in "P. L.", LXXV, 627). (5) For sin itself God is not responsible, but only for the evils that result as a punishment of sin (Tertullian, "Adv. Marc.", II, xiv, xv in "P. L.", II, 327 sq.), evils which happen without God's will but are contrary to it (St. Gregory the Great, op. cit., VI, xxxii in "P. L.", LXXVII, 746, 747). (6) Had there been no sin, physical evil would have been inconsistent with the Divine goodness (St. Augustin, "De div. quest.", lxxxi in "P. L.", LVIII, 96, 98); nor would God permit evil at all, unless He could draw good out of evil (St. Augustin, "Enchir.", xi in "P. L.", LX, 236; "Sermo.", cxiv, 3 in "P. L.", XXXVIII, 1067; St. Gregory the Great, op. cit., LXI, xvi, xvii, xxvii, xlv in "P. L.", LXXVII, 747; LXXVI, 61-2). (7) All physical evil, therefore, is the consequence of the Fall (St. John Chrysostom, "Ad Stagir.", I, ii in "P. G.", LVIII, 428, 429; St. Gregory the Great, op. cit., VIII, II in "P. L.", LXXX, 833, 834), and regarded in this light is seen to be at once a medicine (St. Augustin, "De civ. Dei.", II, 22) and a "Sermo.", xviii, 4, 5 in "P. L.", XXXVIII, 126-8), a discipline ("Sermo.", xvii, 4-9 in "P. L.", XXXVIII, 118-21; St. Gregory the Great, op. cit., XVI, xxiv; VII, xxiv; XIV, xi in "P. L.", LXXV, 698, 818, 1060), and an occasion of charity (St. Gregory the Great, VII, xxxii). Evil and suffering thus tend to increase the merit of (XIV, xxxvi, xxxvi in "P. L.", 1058, 1059), and in this way the function of justice becomes an agency for goodness (Tertullian, "Adv. Marc.", I, xiii in "P. L.", 324 sq.). (8) Evil, therefore, ministering to God's design (St. Gregory the Great, op. cit., XVI, xxii in "P. L.", LXXV, 747; Theodoret, "De prov. ort.", v-viii in "P. L.", LXXXIII, 652 sq.). Hence, if the universe be considered as a whole it will be found that that which for the individual is evil will in the end turn out to be consistent with Divine goodness, in conformity with justice and right order (Origen, "Contra Celsum", IV, xiv in "P. G.", XI, 1177-80; St. Augustin, "De ordine", I, i-v, 9; II, iv in "P. G.", XXXII, 977-97, 990, 1009-1002). (9) It is the evil which is the penalty of sin ("Sermo.", III, xx in "P. L.", VII, 137 sq.; St. Ambrose, "De offic. minist.", XVI, cf. XII, XV in "P. L.", XVI, 44-6, 38 sq.; St. John Chrysostom, "Hom. xiii in Matt.", n. 5 in "P. L.", LXIV, 216, 217; St. Augustin, "In Ps.", xci, n. 8 in "P. L.", XXXIII, 1176; Theodoret, "De prov. ort.", ix in "P. G.", LXXXIII, 727 sq.). In the Last Judgment the problem of evil will be solved, but the problem of the why less or more of a mystery (St. Augustine, "De div. quest.", lxxix in "P. L.", XL, 98, 99; St. John Chrysostom, "Ad eos qui scand.", VIII, IX in "P. G.", LII, 494, 495). In regard to poverty and suffering, it is a well-ordered and justly ordered thing of earthly goods, but is recalling what is His own (St. Gregory the Great, op. cit., II, xxxi in "P. L.", LXXVII, 571); and secondly that, as Salvianus tells us ("De gubern. Dei.", I, 1, 2 in "P. L.", LIII, 29 sq.), nothing is so light that it does not appear heavy to him who bears it in his heart; it is defined as expressed in a created thing that it does not appear light to him who bears it with goodwill.

The Testimony of the Councils.—From the creeds we learn that God the Father is the omnipotent creator of heaven and earth; that God the Son descended from heaven, became man, suffered and died for our salvation, and is to be the judge of the living and the dead; that the Holy Ghost inspired the Prophets and the Apostles, and dwells in the saints—all of which implies Providence in a spiritual and corporeal sense. The Creed of Faith prescribed for the Waldenses in 1208 declares God to be the governor and disposer of all things corporeal and spiritual (Denzinger, 10th ed., 1908, n. 421). The Council of Trent (Sess. VI, can. vi, a. d. 8) defines that evil is ordered by God, in the sense as defined in a created thing, and that evil deeds are not to be attributed to God in the sense as good deeds, but permission only, so that the vocation of Paul is God's work in a much truer sense than the treachery of Judas. The Council of the Vatican sums up past doctrine in the statement that God in His Providence protects and governs all things (Sess. III, c. i, d. 1784).

Philosophical Developments.—The basis of all further philosophical speculations among Scholastics in regard to the precise nature of Providence, its relation to other Divine attributes, and of creation, was laid by Boethius in the "De consol. phil."", IV, vi sq. in "P. L.", LXXXIII, 813 sq.). Providence is the Divine Intelligence itself as it exists in the supreme principle of all things and disposes all things; or, again, it is the evolution of things temporal as conceived and brought to unity in the Divine Intellect, as St. Thomas says (Summa I, Q. xxii, a. 1), is the cause of all things. Providence, therefore, pertains primarily to the Intelligence of God, though it implies also will (I, Q. xxii, a. 1, ad 3 unam), and hence is defined by St. Thomas: "Divine Providence is the order of things by Boethius called Fate (loc. cit.): but St. Thomas naturally objects to the use of this term (I, Q. cxv, a. 1). Strictly only those things which are ordained by God to the production of certain determinate effects are subject to necessity or Fate (I, Q. xxii, a. 4; Q. ciii, a. 3; Q. cxv, a. 1, 2, 4). This excludes chance, which is a relative term and implies merely that some things happen irrespective of, or even contrary to, the natural purpose and tendency of things; or, that not things happen irrespective of the supreme and universal cause of all things. But it does not exclude free will. Some causes are not determined ad unam, but are free to choose between the effects which they are capable of produc-
ing (I, Q. xxii, a. 2, ad 4; cf. Boethius, op. cit., V, ii, in "P. L.", LXIII, 835). Thus things happen contingently as well as of necessity (I, Q. xxii, a. 4), for God has given to different things different ways of acting, and His concurrence is given accordingly (I, Q. xxii, a. 4). Yet all things, whether due to necessary causes or to causes of nature, are so ordered that they are in accordance with His all-embracing purpose. Hence Providence is at once universal, immediate, efficacious, and without violence: universal, because all things are subject to it (I, Q. xxii, a. 2; cii, a. 6); immediate, in that though God acts through secondary causes, yet all are dependent on Him and receive their powers of operation from Him (I, Q. xxii, a. 3; Q. ciii, a. 6); efficacious, in that all things minister to God's final purpose, a purpose which cannot be frustrated (Contra Gent., III, xciv); without violence (suum), because it violates no natural law, but rather effects its purpose through these laws (I, Q. ciii, a. 8).

The functions of Providence are threefold. As physical, it conserves what is and concurs with what acts on the universe; it becomes the universal law, a conscience, sanctions—physical, moral, and social—answers human prayers, and in general governs both the nation and the individual. That God should answer prayer must not be understood as a violation of the order of natural Providence, but rather as the supervening of Providence in effect because this very arrangement that such a concession be made to such a petitioner, falls under the order of Divine Providence. Therefore to say that we should not pray to gain anything of God, because the order of His Providence is unchangeable, is like saying that we should not walk to get to a place, or eat to support life" (Contra Gent., III, xciv). The Providence whereby we are enabled to overcome sin and merit eternal life—supernatural Providence—pertain to another order, and for a discussion of it the reader is referred to Grace; Predestination.

St. Thomas' treatment of the problem of evil in relation to Providence is based upon the consideration of the universe as a whole. God wills that His nature should be manifested in the highest possible way, and hence has created things like to Himself not only in that they are in se, but also in that they are the cause of good in others (I, Q. ciii, a. 4, 6). In other words He has created a universe, not a number of isolated beings. Whence it follows, according to St. Thomas, that natural operations are to be referred for the whole, but not necessarily what is better for each part except in relation to the whole (I, Q. xxii, a. 2, ad 2 um; Q. lviii, a. 2, ad 3 um; Contra Gent., III, xciv). Sin and suffering are evils because they are contrary to the good of the individual and to God's original purpose in regard to the individual, but they are not contrary to the good of the universe, and this good will ultimately be realized by the omnipotent Providence of God.

Province, Ecclesiastical, the name given to an ecclesiastical administrative district under the jurisdiction of an archbishop (q. v.). Ecclesiastical provinces first assumed a fixed form in the Eastern Church. The mission of St. Paul to Antioch for Syria, Ephesus for the Province of Asia, Alexandria for Egypt, Rome for Italy, whence Christian missionaries issued to preach the Gospel, were regarded as the mother-churches of the newly-founded Christian communities. From the second half of the second century the bishops of the territories within the same natural geographical boundaries were accustomed to assemble on important occasions for common counsel in synods. From the end of that century the summons to attend these increasingly important synods was usually issued by the bishop of the capital of the state province (eparchy), who also acted as its metropolitan. Important communications were also forwarded to the bishop of the provincial capital to be brought to the notice of the other bishops. Thus in the East during the third century the bishop of the provincial metropolis came gradually to occupy a certain superior position, and received the name of metropolitan. At the Council of Nicaea (325) this position of the metropolitan was taken for granted, and was made the basis for conferring him definite rights over the other bishops and dioceses of the state province. In Eastern canon law since the fourth century (cf. also the Synod of Antioch of 341, can. ix), it was a principle that every civil province was likewise a church province under the supreme direction of the metropolitan, i.e. of the bishop of the provincial capital. This general principle was developed so early in the Western Empire. In North Africa the first metropolitan appears during the fourth century, the Bishop of Carthage being recognized as primate of the dioceses of Northern Africa; metropolitans of the separate provinces gradually appear, although the boundaries of these provinces differ from those of the divisions of the empire. A similar development was witnessed in Spain, Gaul, and Italy. The migration of the nations, however, prevented an equally stable formation of ecclesiastical provinces in the Christian West as in the East. It was only after the fifth century that such gradually developed mostly in accordance with the ancient divisions of the Roman Empire. In Italy alone, on account of the central position of Rome, this development was greater. However, at the end of antiquity the existence of church provinces as the basis of ecclesiastical administration was fairly universal in the West. In the Carolingian period they were reorganized, and have retained their place till the present day. The delimitation of church provinces is since the Middle Ages a right reserved to the pope. There have always been, and are to-day, individual dioceses which do not belong to any province, but are directly subject to the Holy See. For the present boundaries of ecclesiastical provinces see articles on the various countries.

Provincial, an officer acting under the superior general of a religious order, and exercising a general supervision over all the houses of the order called a province. The division is to a certain extent geographical, and may consist of one or more countries, or of a part of a country only; however, one or more houses of one province may be situated within the territory of another, and the jurisdiction over the religious is personal rather than territorial. The old orders had no provincial superiors; even when the monasteries were united to form congregations, the abbots of each congregation was in a sense centre (e.g. Antioch for Syria, Ephesus for the Province of Asia, Alexandria for Egypt, Rome for Italy), whence Christian missionaries issued to preach the Gospel, were regarded as the mother-churches of the newly-founded Christian communities. From the second half of the second century the bishops of the territories...
congregations with simple vows, especially congregations of women, into different provinces as a regular institution, and some congregations have no such division.

The provincial is ordinarily appointed by the provincial chapter, subject to confirmation by the general chapter: in the Society of Jesus, he is appointed by the general. The "Regulations" (Normae) of 18 June, 1901, vest the appointment of the provincial in the general council. The provincial is never elected for life, but ordinarily for three or six years. In religious families, the custom of provincial chapters in almost all Catholic countries has not been replaced by a general council.

He appoints the regular confessors, calls together the provincial chapter, presides over its deliberations, and takes care that the orders of the general chapter and the superior general are properly carried out. He is an ex officio member of the general chapter. His principal duty is to make regular visitations of the houses in his province in the name of the general and to report to the latter on all the religious and the property of the order; his authority over the various houses is assured, according to the statutes.

He has in many cases the right of appointment to the less important offices. At the end of his term of office, the provincial is bound, according to the Constitution "Nuper" of Innocent XII (23 Dec., 1691), to resign, unless the general has agreed to the contrary.

He has in many cases the right of appointment to the less important offices. At the end of his term of office, the provincial is bound, according to the Constitution "Nuper" of Innocent XII (23 Dec., 1691), to resign, unless the general has agreed to the contrary.

As far as the regulations concerning masses are concerned, he may insist that they be said in the absence of the bishop; if he does not do so, he loses his right to be elected and to vote in the general chapter. In accordance with the privilege granted to the Society of Jesus by the provinces of a religious order is recognized by the Pope to approve of the rule of the religious, and to insist on the observance of the precautions of the charge of the masses in the convents of his order; these observances may be regarded as being the law. This law may not be permanently diverted from its sacred use except for good reason and with the approbation of the superior general. The aqueducts of the simple vows and not exempt, the provinces have no power of jurisdiction. According to the "Regulations" of 1901, his duty is also to supervise the financial administration of the provincial procurator and the local superiors.

A. VERMEERSCH.

Provincial Council, a deliberative assembly of the bishops of an ecclesiastical province, summoned and presided over by the metropolitan, to discuss ecclesiastical affairs and enact disciplinary regulations for the province. The good government of a society as vast as the Church required groups of those dioceses whose similar interests would gain by common treatment. This led to the organization of ecclesiastical provinces and so of provincial councils. As long as administrative centralization in the great sees was imperfect, and while the general canon law was being slowly evolved, this provincial grouping was very important. The Councils of Nicaea (325, can. v), Antioch (341, can. xx), and others ordered the bishops of each province to meet twice a year; however, even in the East, the law was not long observed; the Councils "in Trullo" (892, can. viii) and Nicaea (787, can. vi) prescribe, but with little success, only one meeting each year. In the West, except in Africa, and in a certain sense also at Rome, provincial councils were neither frequent nor regular; most of those that were held, and which have left us precious documents, were episcopal assemblies of several provinces or regions. In spite of the frequent renewal of the ancient laws, the Councils of the province did not become a regular institution. The great Lateran Council (1215) also ordered an annual provincial council, but it was not long obeyed. The Councils of Basle (1433) and Trent also tried to revive the provincial councils, and ordered them to be held at least every three years (ess. XXIV, c ii), laying down for them a certain programme. As a result there was, towards the end of the sixteenth century, in Catholic countries, a remarkable series of provincial councils, notably those of Milan, under St. Charles Borromeo; but the movement soon waned. Towards the middle of the nineteenth century there was a fresh series of provincial councils. The Council of the province is never summoned without the concurrence of the province, and the custom of unconventional episcopal reunions or conferences, have compensated for the rarity of provincial councils to a large extent.

(1) The metropolitan has the right and the duty of convoking the council; the Council of Trent (cit. n. ii) ordered it to be convoked, first in the year following its own close, and then every third year at least; if the metropolitan is prevented or the see is vacant, the senior suffragan acts. The time appointed is after the octave of Easter, or another more opportune time at the discretion of the metropolitan. It is not necessary to hold the council in the metropolitan city; any town in the province may be selected. The penalty of suspension with which the Councils of the Lateran (c. xxv, "De accusat.") and Trent threatened those diocesan metropolitans who have certainly fallen into desuetude.

(2) All those who, "by right or by custom", have the right to assist at the council are to be convoked. These are, first, the suffragan bishops; exempt bishops, immediately subject to the Holy See, must assist, unless for a just cause they are excused by the metropolitan whose council they will attend, without prejudice to their exemptions and privileges. Secondly, those who exercise an external jurisdiction: prelates suditus, vicars capi
tular or administrators Apostolic of vacant sees, and vicars Apostolic if they are not exempt.

They have the right to take part in the deliberations. The council may allow this also to titular bishops, and the representatives of bishops prevented from attending. The other persons convoked, with a right only to take part in consultations, are non-exempt abbots, deputies of cathedral chapters, superiors of religious institutes, deputies of the universities and rectors of seminaries, and lastly the consultors, theologians, and canonists. The persons called to the council are strictly obliged to attend, unless legitimately prevented, and subject to a penalty of excommunication under penalty of cen
erary. Formerly, negligent bishops were deprived of communion with their colleagues (cf. can. x, xii, xiv, Dist. xvii); but this penalty is obsolete. It is not permissible to leave the council before its close without a just and approved reason.

(3) The ceremonies of the provincial council are regulated by the Pontifical (3rd part, "Ordo ad synodum"), and the Ceremonial of the Bishops (lib. i, c. xxxi); they include in particular the profession of faith. The work of the council is prepared in special commissions or congregations; the decrees are enacted in private or public sessions, and are decided by a majority of the members having a deliberate vote. The metropolitan presides, directs the discussions, proposes the subjects, but he has not a preponderating voice and the bishops can take up whatever matters or proposals they judge fitting. The adjournment or close, generally at a solemn public session, is announced by the metropolitan with the consent of the bishops.

(4) The provincial council is not competent to deal directly with matters of faith, by defining or condemning; yet it may treat of such from a disciplinary point of view: promoting religious teaching, pointing out the errors of the day, defending the truth. Its proper sphere is ecclesiastical discipline; to correct abuses, to watch over the observance of laws, espe-
especially the reform laws of the Council of Trent; to promote the Christian life of the clergy and people, to settle disputes, to decide minor differences between bishops, to adopt measures and make suitable regulations for all these objects. The decrees of the provincial councils are binding on the whole province; each bishop, however, may prudently grant dispensations in his own diocese, as he is the legislator of that diocese, but he may not abrogate the decrees of the Council. If the Council deems any derogation from the common law useful, it ought to send a postulatum to the pope.

(5) Within the limits indicated above, a provincial council is a legislative body whose decrees are transmitted to the pope, who has to decide whether to accept or reject them. If the pope approves, the decrees are binding on the whole Church. This system was more common in the New Testament, where the Church was divided into provinces governed by bishops who were subject to the jurisdiction of the apostles.

ANDREW B. MEBHAN.

Provisors, Statute of.—The English statute usually so designated is the 25th of Edward III, St. 4 (1350-1), otherwise termed the Statute of Provisors. Its acts do not require papal ratification for their validity. It is customary instead to ask for the pontifical approbation; but the latter is generally given in common form only, so that the decrees continue to be provincial decrees, and may be abrogated by a later council; if, however, the approval is given in specific form, as the Council of Mount Lebanon was approved by Benedict XIV, the decrees acquire a supplementary authority and may not be modified without the papal consent. In any case, the decrees of every provincial council must be revised. Benedict IV (1587) so ordained, and the revision was entrusted to the Sacred Congregation of the Council; but in virtue of the Constitution "Sapiens" of Pius X (29 June, 1908) the duty now devolves on the Sacred Congregation of the Consistory.

1. A. BOUTINHON.

Provision, Canonical, a term signifying regular Induction into a benefice, comprising three distinct acts—the designation of the person, canonical institution, and installation. In various ways a person may be designated to fill a vacant benefice: by election, postulation, presentation, or recommendation, resignation made in one's favour, or approved exchange. In all cases confirmation by the proper ecclesiastical superior of the selection made is required, while letters of appointment, as a rule, must be presented. The reception of administration by a chapter without such letters brings excommunication reserved to the pope, together with privation of the fruits of the benefice; and the nominee loses ipsa facto all right to the prelacy. Ordinarily greater benefices are conferred by the pope: minor benefices by the bishop, who as a rule has the power of appointing to all benefices in his diocese. The pope, however, owing to the fullness of his jurisdiction, may appoint to any benefice whatsoever. These extraordinary provisions became common in the eleventh and subsequent centuries, and met with stern opposition. In 1351 an English statute (Statute of Provisors) was enacted, designed to prevent the pope from exercising this prerogative. Similar enactments were made in 1390 and in later years. At present only in certain defined cases does one receive the right of the use of this right. The bishop's power is further restricted at times to confirming an election or postulation; or to approving candidates presented by one who enjoys the right of presentation by privilege, custom, or prescription.

Canonical institution or collation is the concession of a vacant benefice by one who has the authority. If made by the sole right of the prelate, it is free; if made by legal necessity, for example, after due presentation or election, or at the command of a superior, it is ecclesiastical benefice and can be lawfully obtained without canonical institution.

Installation, called corporal or real institution, is the induction into the actual possession of a benefice. In the case of a bishop it is known as enthronement or enthronement. Corporal institution, according to common law, belongs to the archdiocesan prelate, who appoints to the bishop or his vicar-general. It may take place by proxy: the rite observed depends much on custom. To installation belong the profession of faith and oath, when prescribed. (See Benefice; Institution, Canonical; Installation.)

Charles W. Sloane.

Provoost (Lat. praepositus; Fr. prévôt; Ger. Probst). Anciently (St. Jerome, "Ep.", II, xiv: Ad Rusticam monach.) every chapter (q.v.) had an archpriest and a sub-priest, the former being nominated in the absence of the bishop and had general supervision of the choir, while the latter was the head of the chapter and administered its temporal affairs. Later the archpriest was called decanus (dean) and the archdeacon praepositus (provost). At present the chief dignity of a chapter is usually styled dean, though in some countries, as in England, the term provost is applied to him. The provost, by whatever name he may be known, is appointed by the Holy See in accordance with the fourth rule of the Roman Chancery. It is his duty to see that all capitular statutes are observed. To be authentic, all acts of the chapter, in addition to the seal of the chapter, require his signature. Extraordinary meetings of the chapter are convened by him, generally, however, on written request of a majority of the chapter, and with the consent of the bishop. He presides in the council on the election of a bishop, and when the bishop is absent. The provost is elected in the same manner as the bishop, and can be appointed to his office by the pope, personally, or by the council of the chapter. When the bishop is absent, the provost conducts the business of the chapter, and is thereby able to act as an intermediate between the bishop and the council. To this end he is given the power to appoint diocesan vicars and to name their assistants. He is also empowered to receive and examine the accounts of the chapter and to take such measures as are necessary to ensure the efficient administration of the temporal affairs of the chapter. In general, the provost is the senior clergyman of the chapter, and is the principal officer of the chapter, both in secular and spiritual matters.

Andrew B. Meshan.

Prudence (Lat. prudencia, contracted from prudentia, seeing ahead; one of the four cardinal virtues). Definitions of it are plentiful from Aristotle down. His "recta ratio agibilium" has the merits of brevity and inclusiveness. Father Rickaby aptly renders it as "right reason applied to practice". A fuller description and one more servicing the idea: an intellectual habit enabling us to see in any given juncture what affairs are just and what is not, and how to come at the one and avoid the other. It is to be observed that prudence, whilst possessing in some sort an empire over all the moral virtues, itself aims to perfect not the will but the intellect in its practical decisions. Its function is to point out which course of action is to be taken in any round of concrete circumstances. It indicates which, here and now, is the golden mean wherein the essence of all wits and counsellors. It is the habit of the mind to judge the good it discerns. That is done by the particular moral virtue within whose province it falls. Prudence, therefore, has a directive capacity with regard to the other virtues. It lights the way and measures the arena for their exercise. The insight it confers makes one weigh and compare and choose and discriminate. This implies a sort of lucidity of the heart and the soul and their reality. It must proceed over the eliciting of all acts proper to any one of them at least if they be taken in their formal sense. Thus, without prudence bravery becomes foolhardiness; mercy sinks into negligence; temperance into faintheartedness. But it must not be forgotten that prudence is a virtue adequately distinct from the others, and not simply a condition attendant upon their operation. Its office is to determine for each in practice those circumstances of time, place, manner, etc. which should be observed, and which the Scholastics comprise under the term medium ratioins. So it is that whilst it qualifies immediately the intellect and proceeds from it, it is nevertheless rightly styled a moral virtue.

This is because the moral agent finds in it, if not the eliciting, at any rate the directive principle of virtuous actions. According to St. Thomas (II-II, Q. xlvii, 1, 3) it is its function to do three things: to take counsel, i.e. to cast about for the means suited in the particular case under consideration to reach the end of any one moral virtue; to judge soundly of the fitness of the means suggested; and, finally, to command their employment. If these are to be done well they necessarily exclude remissness and lack of concern; they demand the use of such diligence and care that the resultant act can be described as prudent, in spite of whatever speculative error may have been at the bottom of the process. Readiness in finding out and ability in adapting means to an end does not always imply prudence. If the end happens to be a vicious one, a certain adroitness or sagacity may be exhibited in its pursuit. This, however, according to St. Thomas, will only deserve to be called false prudence and is identical with that referred to in Ruth, vii, 6, "the wisdom of the flesh is death". Besides the prudence which is the fruit of training and experience, and is developed into a stable habit by repeated acts, there is another sort termed "infused". This is directly bestowed by God's bounty. It is inseparable from the condition of supernatural charity and so is to be found only in those who are in the state of grace. Its scope of course is to make provision of what is necessary for eternal salvation. Although acquired prudence considered as a principle of operation is quite compatible with sin in the agent, so it is well to note that vice obscures or at times utterly blinds its judgment. Thus it is true that prudence and the other moral virtues are mutually interdependent. Impudence in so far as it implies a want of obligatory prudence and not a mere gap in practical mentality is a sin, not however always necessarily distinct from the special wicked indulgence which it happens to accompany. If it proceed to the length of formal scorn of the Divine utterances on the point, it will be a mortal sin.

Richard, The Moral Teaching of St. Thomas (London, 1890); Leisegang, Theologia Moralis (Freiburg, 1887); Rickaby, Ethics of Natural Law (London, 1905); St. Thomas Aquinas, Summa Theologiae (Turin, 1885).

Joseph F. Delany.

Prudentius, Aurelius Clemens, Christian poet, b. in the Tarraconensis, Northern Spain, 348; d. probably in Spain, after 405. He must have been born a Christian, for he nowhere speaks of his conversion. The place of his birth is uncertain; it may have been Saragossa, Tarragona, or Calahorra. He practised law with some success, and in later life deployed the zeal he had devoted to his profession. He was twice provincial governor, perhaps in his native province, with a tenuously uncertain date. Towards the end of his life Prudentius renounced the vanities of the world to practise a rigorous asceticism, fasting until evening (Cath., iii, 88) and abstaining entirely from animal food (ibid., 56). The Christian poems were written during this period; he later collected them and wrote his infamous epitaph, which was not published until 405. A little before (perhaps in 403) he had to go to Rome, doubtless to make some appeal to the emperor. A number of his poems (Peristephanon, vii, xi, xii, xiv) were written subsequently to this journey, in which he took advantage of the account of the tombs of the martyrs. "Corona Symmachum" must have been written at Rome; the second book belongs to the period between 29 March
and December, 403. All other works antedate the journey to Rome.

Prudentius wrote to glorify God and atone for his sins. His works fall into three groups—lyric, didactic, and didascalical. The lyrics form two collections. In the "Cathemerinon" the hymns are for the sanctification of the hours of the day or certain important occasions, such as Christmas, the Epiphany, obsequies, etc. Some continue the liturgical tradition of Saint Ambrose, and are written in the Ambrosian iambic dimeter; others are an attempt to enlist the metres of Horace in the service of Christian lyrical poetry. Despite his negligence Prudentius displays more art than Ambrose. Hymn xii, on the feast of the Epiphany, contains the two celebrated stanzas, "Salutare flores martyrum," characterized by profound feeling united to the purest art; hymn x on burial is likewise very remarkable. However, his style is generally diffuse, and the hymns admitted to the Roman Breviary had to be curtailed. The "Peristephanon" is dedicated to the glory of the martyrs: Emeterius and Chelidonius of Calaborra, Lawrence the Deacon, Eulalia, the eighteen martyrs of Saragoosa, Vincent, Fructuosus with Augurius and Eulogius, Quirinus of Sicilia, the martyrs of Calaborra put to death on the 1st October. The number of the Forum, Cornelium Romanus, Hippolytus, Peter and Paul, Cyprian, and Agnes. Taken altogether, it is an endeavour to endow Christianity with a lyrical poetry independent of liturgical uses and traditions. Unfortunately, neither Prudentius's talent nor current taste favoured such an enterprise. The narratives are spoilt with too much rhetoric. There are, however, beautiful passages, a kind of grave power, and some pretty details, as in the hymns on St. Eulalia (see v. 206–15) and St. Agnes. Certain others, such as that on St. Hippolytus, have an archaeological interest. The whole collection is curious, but of unequal merit.

The two principal didactic poems are the "Apologia", on the dogma of the Trinity, and the "Harmatgienia", on the origin of sin. One is somewhat astonished to find Prudentius attacking ancient heresies, such as those of Sabellius and Marcian, and having nothing to say on Arianism. It is due to the fact that he closely follows and imitates Tertullian, whose rugged genius resembles his own. These poems are not of passionate, glowing emotions, but of intricate, precise exposition being combined with poetic fantasy. Some brilliant scenes, like the sacrifice of Julian (Apoth., 460), merit quotation. The comparison of souls led astray by sin with doves caught in the net (ibid., 770) has a happy inspiration of "Salutare flores". Orthodoxy is his great preoccupation in these poems, and he invokes all kinds of punishments on heresy. Yet he is not always free from error, here or elsewhere. He believes that only a small number of souls are lost (Cat., vi, 93). It is an example of the meaning of his metaphors to assert that he makes the soul material. The "Psychomachia" is the model of a style destined to be lovingly cultivated in the Middle Ages, i.e., allegorical poetry, of which before Prudentius only the merest traces are found (in such authors as Apuleius, Tertullian, and Claudian). In Tertullian's "De Spectaculis", 29, we find its first conception; he personifies the vices and the virtues and shows them contesting for the soul. The army of vices is that of idolatrie, the army of the virtues that of faith. The poet, as one might expect, would find it difficult to imagine anything more unfortunate or insupportable. Incidents, action, and characters of the Æneid are here travestied, and the deplorable effect is heightened by the borrowing of numerous names and motifs from the Greek classics. It is the "Dittochoe", forty-nine hexameter tetra-stichs commenting on various events of the Old and New Testament, must be included among the didactic poems of Prudentius. Doubts have been raised regarding the authenticity of these verses but with very good reasons. Gennadius, the archbishop of Thessalonica, attributes to Prudentius, mistakenly perhaps, a "Hexaemeron" of which we know nothing.

His most personal work is the invective against Symmachus. It shows how the Christians reconciled their patriotism with their faith. Prudentius identifies himself with the Church of Rome and, thus transgressing it, preserves that ancient belief in the eternity of the city. He can be impartial towards the pagan and praise him for services rendered the State. He is proud of the senate, seeing its majority Christian. Christianity is coming to crown the Roman institutions. Romans are superior to the barbarians, as man is superior to the animals. These two books against Symmachus undertake, therefore, to solve the problem which presented itself to the mind of the still hesitating pagan. A genius more powerful than pliant Prudentius displays a more versatile and richer talent than that of his pagan contemporary, Claudian. To the rhetoric he disapproves, he himself misuses; he often exaggerates, but is never commonplace. The superior of many pagan poets, among the Christian he is even the greatest. To his latter part, the style is not bad considering the period in which he wrote, and, while there are occasional errors in his prosody due to the pronunciation then current, he shows himself a careful versifier and has the gift (then become rare) of varying his metres. An edition of Prudentius can appear in the "Corpus" of Vienna edited by J. Bergman. The best manuscript is at Paris, in the Bibliothèque Nationale, Latin department, 8084; on one of its margins is the half-effaced name of Vettius Agorius Basiliius Mavortius (conul in 527), who made a recension of the works of Horace. This manuscript is free from the dogmatic corrections which are found in others.

PAUL LEHAY.

Prudentius (GALINDO), Bishop of Troyes, b. in Spain; d. at Troyes on 6 April, 861; celebrated opponent of Hincmar in the controversy on predestination. He left Spain in his youth, probably on account of the Saracen persecution, and came to the Frankish Empire; he changed his name of Prudentius to Galindo into Prudentius. He was educated at the Palatine school, and became Bishop of Troyes shortly before 847. In the controversy on predestination between Gottschalk of Orbaia, Archbishop Hincmar of Reims, and Bishop Parulfus of Laon, he opposed Hincmar in an epistle addressed to him. In this epistle, which was written about 849, he defends against Hincmar a double predestination, viz. one for reward, the other for punishment, not, however, for sin. He further upholds that Christ died only for those whom he actually loved. In his "De predestinatione contra Johannem Scotum", which he wrote in 851 at the instance of Archbishop Wenilo of Sens who had sent him nineteen articles of Erigena's work on predestination for refutation. Still it appears that at the synod of Leon, 854, he is able to defend his doctrine. He did not admit only one predestination, perhaps out of reverence for the archbishop, or out of fear of King Charles the Bald. In his "Epistola auctori ad Wenileonem", written about 856, he again upholds his former opinion and makes the theses of his predecessor. The new bishop Æneas of Paris depend on the latter's subscription to four articles favouring a double pre-
destination. Of great historical value is his continuation of the “Annales Bertiniani” from 835–61, in which he presents a reliable history of that period of the Western Frankish Empire. He is also the author of “Vita Sancte Maure Virginis” (Acta SS. Sept. VI, 275–8) and some poems. At Troyes his friend Abbot Ethelward (d. April 12, 1025) of the Bollandists do not recognize his cult (Acta SS. Apr. I, 531). His works, with the exception of some of his poems, are printed in P. L., CXV, 971–1458; his poems in Mon. Germ. Poetæ Lat., II, 679 sq.

**Michael Ott.**

**Prüms**, a former Benedictine abbey in Lorraine, now in the Diocese of Trier, founded by a Frankish widow Bertrada, and her son Charibert, 23 June, 720. The first head of the abbey was Angilaudas. Bertrada’s grandson Thibaut the Great, Duke of Burgundy, was married to King Pepin the Short’s daughter, and Prüm became the favourite monastery of the Carolingians and received large endowments and privileges. Pepin rebuilt the monastery and bestowed great estates upon it, 13 August, 762. The king of the men from Meaux under Abbot Aymerus to the monastery. The church, dedicated to the Saviour (Salvator), was not completed until the reign of Charlemagne, and was consecrated, 26 July, 799, by Pope Leo III. Charlemagne and succeeding emperors were liberal patrons of the abbey. Several of the Carolingians entered the religious life at Prüm; among these was Lothair I, who became a monk in 855. His grave was rediscovered in 1860; in 1874 the Emperor William I erected a monument over it. In 852 and 892 the monastery was plundered and devastated by the Normans, but it soon recovered. The landed possessions were so large that the abbey developed into a principality.

At times during the eleventh and twelfth centuries the monastery contained over three hundred monks. The period of its internal prosperity extends to the thirteenth century. The monks were energetic cultivators of the land. About 836 Abbot Marquard founded a new monastery, Münstereifel; in 1017 Abbot Urald founded at Prüm a collegiate foundation for twelve priests; in 1160 Abbot Gerhard founded a hospital for nobles’ children at Niederprüm. The abbey was adopted by the monastery cared for the poor and sick. Learning was also cultivated. Among those who taught in the school of the monastery were Ado, later Archbishop of Vienne (860–75). Another head of the school, Wandelbert (813–70), was a distinguished poet. Abbot Regino (893–99) made a name for himself as historian and codifier of canon law. Cæsarius of Heisterbach is only brought into the list of authors of this monastery by being confounded with Abbot Cæsarius of Prüm (1512–16). In the thirteenth and fourteenth centuries the monastery declined partly from the oppression of its secular administrators, but more from internal decay. It reached such a pass that the monks divided the revenues among themselves and lived apart from one another. Consequently the archives of Trier sought to incorporate the abbey in the diocese. In 1376 Charles IV gave his consent to this, as did Boniface IX in 1379, but the pope’s consent was recalled in 1398; Sixtus IV about 1473 also gave his approval to the incorporation, but the abbots refused to receive the monastery back into the abbey. In 1511 carried on war against the archbishop. Finally, when the abbey was near ruin, Gregory XIII issued the decree of incorporation 24 Aug., 1574, which was carried into effect in 1576 after the death of Abbot Christopher von Manderscheid. After this the archbishops of Trier were “perpetual administrators” of the abbey. The abbey was now brought into order within and without, and once more flourished to such a degree that the two archaeologists Martene and Durand, who visited the monastery in 1718, state in their “Voyage littéraire” that all of the monasteries in Germany Prüm showed the best spirit, and especially this monastery was zealously pursued. Much was made of this effort even in the eighteenth century to shake off the supremacy of Trier.

In 1801 Prüm fell to France, was secularized, and its estates sold. Napoleon gave its buildings to the state. Since 1815 the abbey has belonged to Prussia. The church, built in 1721 by the Elector Louis, is now a parish church. The monastic buildings are now used for the district court and the high-school. The churches of Christ are considered to be the most notable of the many relics of the church; they are mentioned by Pepin in the deed of 762. He is said to have received them from Rome as a gift of Pope Zacharias or Pope Stephen.

**Klemens Lößfler.**

**Prusia.** See **Bruna.**

**Prusias ad Hypium**, titular see, suffragan of Claudiopolis in the Honorian. Memnon, the historian, says that Prusias I, King of Bithynia, was captured from the Bessarceans the town of Kieros, united to his dominions and changed its name to Prusias (“Prag. hist. Græce.”, coll. Didot, frag. 27 and 47; fragment 41 treats of Kios or Guemlek, also called Prusias, and not of Kieros, as the copist has written; this has given rise to numerous confusions). Pliny (Hist. nat., V, 43) and Ptolemy (V, i, 13) merely mention it, one below Mt. Hyphasis, the other near the River Hypius or Milan-Sou. Several of its bishops are known: George (not Hexechius, as Le Quien says, 329; Olympius in 451; Domitius in 681; Theophilius in 787; Constantine in 869; Leo in 879; St. Paul, martyred by the Iconoclasts in the ninth century (Le Quien, “Oriens christi.”, I, 579). It is not known when this see disappeared, which still existed in the tenth century (Gerber, “Unser Lutherland.”, Texte der Notitiae episcopatuum”, 554). The ruins of Prusias are found to-day at the little Mussulman village of Ekki Bagh or rather Uskub in the Casa of Duzdje and the vilayet of Castamouni. The region is very rich, especially in fruit trees. Ruins are still seen of the walls and the Roman theatre forty-six miles in circumference.

**S. Vailéz.**

**Prussia.**—The Kingdom of Prussia at the present time covers 134,016 square miles and includes about 40 per cent of the area of the German Empire. It includes the greater part of the plain of northern Germany and of the central mountain chain of Germany. With the exception of the small Hohenzollern district, the original domain of the Prussian royal family, it does not extend beyond the Main. However, in a south-westery direction west of the Rhine it includes a considerable portion of the basin of the Saar and of the plateau of Lorraine. All the large German rivers flow through it, and it contains the greater part of the mineral wealth of Germany, coal, iron, salt, and potash. Of the area devoted to agriculture over 2·5 per cent are used for the cultivation of grain as follows: 25·91 per cent for rye, 15·37 per cent oats, 8·66 per cent wheat. In 1905 the population was 37,262,935, that is 61·5 per cent of the population of the German Empire. The annual increase of the population is about 1·9 per
cent, but this results from the decline of emigration and the decrease of the death-rate. In 1905 about 11.5 per cent were Slavs, of whom 8,887 per cent were Poles. In religion 63.29 per cent were Protestants, 35.14 per cent Catholics, 0.13 per cent Jews. In 1871 a machine 1 per cent of the population was employed in agriculture, 38.7 per cent in manufactures. About one-half of all the manufacturing industries are carried on in the provinces of the Rhine, Westphalia, and Silesia. It is only since 1856 that Prussia has had its present area, and not until 1871 did it become the ruling state of Germany. Its present area and power are the result of a gradual development extending over more than seven centuries.

I. The beginnings of the state are connected with the bloody struggles and with the wonderful cultural and missionary labours by means of which the territories on the Baltic between the Elbe and Memel were wrested in the twelfth and thirteenth centuries from the Slavs and won for Germany and the Catholic Church. In this era the region on the Vistula and the Pregel Rivers, which originally was the only part of the territory bearing the name of Prussia, conquered by the Teutonic Knights in 1230 and converted to Christianity. In 1309 the Grand Master of the order transferred his residence to the Marienburg, a castle noted for its artistic importance, which has been destroyed by the East Prussian storm. The order and the region ruled by the order attained their highest development in the years succeeding this, especially under the government of Winrich of Kniprod (1351-92), Pomerania, the district along the coast to the right and left of the mouth of the Oder, was continued to be ruled by its dynasty of Slavonic dukes, nevertheless it was also under German influence and was converted to Christianity in the first half of the twelfth century by St. Otto of Bamberg. The inland territory between the Elbe and Oder, as the region drained by the Warthe and Netze, first called the Electorate of Brandenburg and the New Mark, were acquired from 1134 onwards by the Ascanian line, which also had possessions in Saxony. Before long this line also gained the feudal suzerainty over Pomerania. In all three districts the Teutonic Knights, who carried on wars and colonized at the same time, had the principal share in reconstructing the political conditions. The Cistercian Order had also a large part in the peaceful development of civilization; flourishing monasteries beginning at Lehnin, and Chorin and extending as far as Oliva near Danzig, and Christianized the natives. In all these territories, though, numerous German cities were founded and German peasants were settled on the soil.

After the extinction of the Ascanian line in 1320 the Electorate of Brandenburg became a possession of the Bavarian House of Wittelsbach, and in 1373 of the House of Luxemburg. Under the new rulers the government and the country greatly declined and the nobility ruled with an iron hand. In order to restore order the last member of the Luxemburg line transferred Brandenburg, at first temporarily, then on 30 April, 1415, as a fief to Frederick of Hohenzollern. This was the birthday of the future great state of Prussia, for Prussia has not become a great power from natural, geographical, or national conditions, but is the product of the work of its kings of the House of Hohenzollern. Frederick I probably desired to make Brandenburg a great kingdom on the Baltic for himself; however, he limited himself to conquering by the power of the nobility and his attention again to imperial affairs. During the next two centuries his descendants did not do much to increase the power of Brandenburg, and they never attained the power of the last members of the Ascanian line. The most important event was the "Dispositio Achillis" of 1473, by which Brandenburg was made the chief possession of the Hohenzollern family and primogeniture was established as the law of its inheritance.

Of the Hohenzollern rulers of the fifteenth and sixteenth centuries only Frederick II (1440-70) and John Sigismund (1533-88) had the power. He became prominent. They were more successful in internal affairs than in the endeavour to extend the size and importance of their realm. Frederick II separated the towns of Brandenburg from the Hanseatic League, and forced them to become a part of the territory of Brandenburg. He also brought the clergy under the power of the state by the aid of two Bulls of 1447, which he obtained from Pope Nicholas V, and laid the foundation of the later State Church system established by his family. His efforts to enlarge his territories were checked by the rapid development of the power of Poland at this time, which was followed by the rising importance of Hungary. The result was that all the German possessions along the coast of the Baltic were endangered; and the greater part of the territory of the Teutonic Knights, comprising the region of the Vistula, was conquered together with Danzig by the Poles after two wars: in the war of 1410-11 the Teutonic Knights were defeated by the Poles at the battle of Tannenberg; this was followed by the First Peace of Thorn; after the Second Peace of Thorn the Poles took Danzig. The Poles also took part in the war which Frederick II waged with Pomerania over the possession of Stettin. When Frederick's nephew and successor sought compensation for Stettin in Silesia, he was opposed by Hungary and had to retire there also.

As ruler Joachim I was even firmer than Frederick II. During his administration the nobility were forced to give up their freebooting expeditions. Following this example the ruling family of Pomerania, which was the most important member of the Teutonic Order, had to give up the wishes of its members to the excesses of the Pomeranian nobility also. In the provinces along the Baltic the nobility had then a force of armed men at their disposal probably equal to similar forces of the princes. Thus, for example, a family called Wedel had so many branches that in the sixteenth century it could at one time reckon on two hundred men among its own members capable of bearing arms. When these rode out to war with their squires and mounted men they formed a body of their own, whose elections were oftentimes too difficult for the ruling princes to meet. Both in Brandenburg and Pomerania the establishment of order was followed by an improvement in the laws and the courts, and by a reorganization of the administration. This latter brought about the gradual formation of a class of civil officials, who had become skilled in legal training, and who were dependent not on the nobility but on the ruling princes. The beginnings were also made of an economical policy. Joachim I sought to turn to the advantage of the Hohenzollerns the fact that the Western line of the house of Saxony, which up to that time had been of more importance than the Hohenzollerns, had paralyzed its future development in 1485 by dividing its possessions between two branches of the line. These two dynastic families, Wettin and Hohenzollern, were active protagonists for the great spiritual principalities of the empire. In 1513 Joachim's brother Albrecht became Archbishop of Magdeburg and Bishop of Halberstadt, and in 1514 Archbishop of Mainz. At the same time another member of the Hohenzollern family, one brother Albrecht, then Grand Master of the Teutonic Order, that is, he was the ruler of that portion of Prussia which still belonged to the order. In 1525 he brought about the secularization of the territory of the order, and made it a permanent possession of his family; in return for this, however, he was obliged to acknowledge the
feudal suzerainty of Poland. Joachim was unable to maintain his claims to the right of succession on the extinction of the Pomeranian dukes, but had to give up the claim to feudal supremacy (Treaty of Grodno, 1660).

Of all the ecclesiastical principalities, Joachim's successors were able to retain Magdeburg alone, and this only to the end of the century. In Prussia (1659) they obtained the right to joint feudal possession, and thus gained for the main branch of the family a claim to the Duchy of Prussia. Taken altogether, however, the Hohenzollern power declined very decidedly. The ruling branch in Brandenburg was badly crippled by debts, and the last member of the line ruling in Prussia was weak-minded. This enabled the Estates, which had rapidly developed in all German territories from the second half of the fifteenth century, to obtain great influence over the administration, both in Prussia and Brandenburg. This influence was due to the fact that the Estates, owing to their possessing the right of granting the taxes, were equivalent to a representative assembly composed in part of the landowners, the nobility, and the clergy, and in part of the cities, who controlled considerable ready money. At first the nobility was the most powerful branch of the Estates. In time the nobles well-disposed the ruling princes, both in Brandenburg and Prussia, and also in Pomerania, transferred to them the greater part of the prince's jurisdiction and other legal rights over the peasants, so that the feudal lords were able to bring the peasants into complete economic dependence upon themselves and to make them serfs. As a result the influence of the nobility constantly grew. But as the nobles were men without breadth of view, and in all foreign complications saw the means of reviving the power of the princes and of imposing taxes, the strength of the three Baltic duchies waned equally in the second half of the sixteenth century. None of them seemed to have any future.

II. At this juncture the head of the Franconian branch of the Hohenzollern family, George Frederick of Ansbach-Bayreuth, persuaded the Brandenburg branch of the family to enter upon a far-reaching policy of extension which, in the end, resulted in leading the dynasty and the state over which it reigned into an entirely new path. Influenced by George John, Duke of Prussia (1788–1948), and his son, George Frederick William (1788–1815), the family of which was nearing extinction. Up to this time Prussian policy had been entirely directed to gaining control in eastern Germany, and this marriage was the first attempt to make acquisitions in western Germany. During the reign of John Sigismund (1609–19) the duchies of Cleve, Julich, and Berg were obtained in 1629, and in 1618 that of Prussia. Of the possessions of Cleve, Julich, however, Julich and Berg were claimed by the Wittelsbach family, and Brandenburg was only able to acquire Cleve and a few adjacent districts (1614); even the hold on this inheritance was for a long time very insecure. On the other hand Prussia was united with Brandenburg without any dispute arising because Poland in the meantime had become involved in war with Gustavus Adolphus and was obliged to act with caution. At about the same time the ducal House of Pomerania was growing weak owing to the extinction of the state ruled by the Hohenzollerns seemed to approach a great extension of its territories.

In 1613 John Sigismund became a Calvinist, a faith at that time which had a great attraction for all the exceptions of every branch of the German Protestant princes. The ruler of Brandenburg and Prussia became the son-in-law of the leader of the

Calvinistic party, the Elector Palatinate, and his daughter married Gustavus Adolphus of Sweden. However, on account of the great power which the Estates had acquired in his dominions John Sigismund was not able to undertake a war. The Estates were strongly opposed to his adoption of Calvinism, and his promise to leave the Lutheran Confession undisturbed hardly satisfied them, nor were they willing to grant any money for his external policies. On account of these financial difficulties his successor, George William (1619–40), during the Thirty Years' War, came near losing the territories just inherited; and he was not able to make good his claims to Pomerania when, in 1637, his right of inheritance was to be enforced. It became evident that the power of the Estates must be crushed and the people forced to pay their taxes regularly, before the Hohenzollerns could obtain firm possession of their newly acquired domain, establish their authority in Pomerania, and then build up their power in the Baltic coast lands in the valleys of the Oder and Vistula. George William's chief adviser, Count Adam von Schwerzenberg, recognized this and made the attempt to carry out this policy; from 1637 he was engaged in a severe struggle with Sweden, to prevent the Swedes from taking possession of the Estates.

The merit of finally carrying out this policy and of turning the small and far from cultured state into a strong instrument for political and military aggression belongs to the Great Elector, Frederick William (1640–88), and to his grandson, King Frederick William I (1713–40). In 1644 the Great Elector laid the foundation of the standing army with the aid of which his successors raised Brandenburg-Prussia to its leading position; Frederick William I increased the standing army to 30,000 men. In order to procure the resources for maintaining his army the Great Elector gradually reorganized the country on entirely different principles, and did his utmost to further the prosperity of his people so as to enable them to bear increased taxation. His grandson continued and completed the same policy. At this period a like internal policy was followed in all the states of the German Empire, including the larger ones. Nowhere, however, was it carried out in so rational and systematic a manner as in Brandenburg-Prussia, and nowhere else were its results so permanent. In this, not in its originality, consists the greatness of the political position which the Hohenzollerns. The Estates and their provincial diets were not opposed and put down on principle, but they were forced in Prussia and Cleve to grant what was needed for the army; the cities were then subjected to a special indirect taxation (excise duties), and in this way were withdrawn from the government of the Estates. The nobility, now the only members of the Estates, were subjected to personal taxation by reforms in the existing system of direct taxation, by the abolition of the feudal system, and especially by the introduction in the other states of the general taxation of land. At the same time the control that the Estates had acquired over the collection and administration of the taxes was abolished, and the assessment and collection of the taxes was transferred to the officials of the Government, who had originally charge only of the administrative and commissariat departments of the army. All these officials were placed under a central bureau, the general commissariat, and a more rigid and regular state system of state receipts and expenditures was established. Among the changes were the founding of at least independent departments of the state, the result being
PRUSSIA

that these bodies, especially the cities, were actually ruled by these officials.

These reforms reached their culmination in the founding of the "General Directory", at Berlin, and of the Boards of War and Finance in the provinces in 1721. The result was that the entire official life of Prussia became bureaucratic, and financial considerations had the preponderating influence in the internal administration of the country, as is still strikingly noticeable. Those departments of national administration that yielded little revenue, or were apt to cost more than they could be counted upon to yield, were for the present neglected, or in part still left under the old system. While the Estates had acquired the supervision of them; such were, above all, the administration of law, ecclesiastical affairs, and the schools. On the other hand, great attention was given to improving economic conditions, and gradually all the measures were used in Prussia that the genius of a Colbert had planned during the reign of Louis XIV to raise France to the place of the first power in the world. Accordingly the population was increased by encouraging the immigration of the Dutch, Huguenots, and finally of the Protestant refugees driven by the Mennonites. Much effort was done to improve the soil and the breeding of cattle. In agreement with the prevailing principles of economics, i.e. as much money as possible should be brought into the country, but that its export should be prevented, manufacture and commerce were to be stimulated in every possible way. The Great Elector even established a navy and also founded colonies on the African Gold Coast; in 1717 Frederick William I sold the colonies. Many excellent officials were drawn from other countries to aid in the administration. However, the ruling prince was the centre of the Government. The result of this was, that, as early as the latter years of the reign of the Elector, the principal boards of administration and the ministers presiding over them sank more and more into mere tools for carrying out the will of the ruling prince, and decisions were made, not in the boards, but in the cabinet of the prince. This method of administration became completely systematized in the reign of Frederick William I; consequently it is customary to speak of the cabinet government of Prussia. This form of administration was maintained until 1806.

The success of the organizing energy of the ruling princes was so evident that even before the end of the seventeenth century Leibniz said: "This country is a great and prosperous state. But name its name, and the whole kingdom was given to the country when Frederick I (1688-1713), the son of the Great Elector, crowned himself on 18 January, 1701, at Königsberg, with the title "König in Prussia", meaning of the former duchy. As long as the development of the internal strength of the country was backward there was little chance of gaining any important additions of territory, even though the great wars of the period made such efforts very tempting. The Great Elector was a man of an uncontrolled and passionate character, and of much military ambition; it was very hard for him to let others reap where he had sown, for he had taken part in nearly all the wars of his era. Frederick William I was also alive to his country's glory, but was more inclined to prepare for war than to carry it on; in many respects his character recalls that of the later William I. The great royal couple of the day, to whose sway policy of the Hohenzollerns was to increase their possessions along the Baltic. Above all they desired to own Pomerania, which Sweden retained. By the Treaty of Westphalia the Great Elector received only four Swedes in this province, which was worth very little value. He gained nothing from the first Northern War (1655-60) in which he took part; his victory over the Swedes in the battle of Fehrbellin (1675) proved fruitless. His grandson finally acquired Stettin and the mouth of the Oder in 1720, and Hither Pomerania (Vorpommern) did become a part of Prussia until 1815. The Great Elector was more fortunate in obtaining the release of the Duchy of Prussia from the feudal suzerainty of Poland (1655), and was also able to increase its area by the addition of Ermland. He further desired to acquire Silesia. In these years the chief battlefield of Europe was the western part of the Continent. This was unfavourable for the schemes of the Hohenzollerns, for at that time they had no definite policy of territorial extension in western Europe, and consequently no interests of any sort in those cases.

In the west the Great Elector limited himself to securing the lasting possession of Cleve (1667) and the occupation of the territories which France had secured for him in exchange for Pomerania, namely Minden, Halberstadt, and Magdeburg, which before this had been ecclesiastical principalities. These gave him strategically important positions controlling points of crossing the Elbe and the Weser; but he could not obtain Magdeburg until 1666, and did not gain full possession of it until 1680. During the reigns of his successors and grandsons much of the territories to the west of these were obtained. Taken altogether Brandenburg-Prussia had by 1740 increased in area from 9000 square miles under the first Hohenzollern Elector and 31,600 square miles in the reign of John Sigismund to about 46,800 square miles with a population of about 2,200,000. Up to that time about a third of the area of the country had lain towards the east, but from this period onward the preponderating part of its territories began to be found in the west. The wife of the Great Elector belonged to the family of the Princes of Orange, and this led the Elector to consider Holland in his foreign policy; in 1672 especially this influenced him to take part in the war between Holland and Louis XIV. He also gave more attention to imperial affairs than his immediate predecessors. In the politics of the empire sometimes he sided with the emperor. At times, however, he adhered to the views held by the German ruling princes that there was an inner Germany consisting of the various states of the empire; and that this was the real Germany, the interests of which did not always coincide with those of Austria or of the reigning emperor. He believed that the real Germany must at times maintain its interests against Austria by the aid of one of the guaranteeing powers of the Peace of Westphalia, viz. France and Sweden. The duty of the Elector of Hohenzollern was to uphold the duty as a prince of the empire was at the beginning of his reign when influenced by religious prejudices, and towards its end when disappointed by the Peace of St.-Germain-en-Laye (1679).

Another sign that the Prussian state was becoming gradually involved in the affairs of western Europe was the fact that a second wife the Great Elector married a Guelph, to which family the wives both of his son and grandson belonged. In the second half of the seventeenth century the Guelph line founded the Electorate of Hanover in north-western Germany, the only state in this section of Germany that, at the beginning of the eighteenth century, could in any way compete with Brandenburg-Prussia for the leading position. The founding of the Academy of Berlin is due to Sophia Charlotte, wife of Frederick I. The founding of the University of Halle, which soon gained a European reputation on account of its professors Thomasius and Christian Wolff and the institutions for the poor founded by Professor Francke. The fine addition in the naval case at the court of the Great Elector was made by Andreas Schlüter who were both works of this reign.

III. Frederick II, The Great (1740-88), son of Frederick William I, had probably more intellectual
PRUSSIA

ability than any other Hohenzollern known to history; he had in him a touch of genius. What checked the Prince was that he seemed to derive all of his force and energy from his contacts with the outside world, and that he often seemed to be living in a world of fiction. He was, however, that he seemed from his natural pre-dispositions, and from the way in which in youth he looked upon life, to be born for entirely different conditions than those prevailing in the Prussia of that era. He was more inclined to literature and music than to official routine work and military service, and early became a free-thinker. He preferred the literature of France and despised that of Germany, and was indifferent to Prussia and its people. When a young man these tastes led to conflicts with his father, and in 1753 he resolved on his own to return to Emden, and imprisoned him for several years in the fortress at Kustrin. Frederick was then married against his will, by the advice of Austria, to the Princess Elisabeth of Brunswick-Bevern, personally an excellent and good woman. He finally learned self-control and applied himself with gradually increasing zeal and intensity to the civil and military affairs of the state, but he did this not from a sense of pleasure in such occupations, but from a feeling of duty, and may not have been the reason why an eagerness to enter the army in his place, or to withdraw the forces of his predecessors in comparison to his natural abilities. On the other hand, in the conduct of war the king showed extraordinary energy, great intellectual activity, and occasionally, genius. In his foreign policy Frederick followed the principles of his predecessors and sought above all to develop his domain towards the east. The precocious position of Austria at the beginning of the reign of Maria Theresa was taken advantage of by Frederick to begin a campaign in Silesia in Dec., 1740. As a pretext for the war he took the treaties of succession of his forefathers with the rulers of several of the smaller Silesian duchies, made in 1537, for the non-fulfilment of which Austria seemingly was alone to blame.

He gained the battle of Mollwitz 10 April, 1741, and on 5 June formed an alliance with France, the chief of the other opponents of Maria Theresa; the intervention of England led him to agree to a truce on 1 Oct., 1742, which enabled him to make its military force equal to that of France. In alarm Frederick advanced into Moravia, gained the battle of Chotusitz, 17 May, 1742, and in the Peace of Breslau, of 1 June of the same year, obtained from Austria the cession of the prince-electorship of Silesia and the two general captivities of Glatz, Troppau, and Teschen. As in the war between Austria and France, which still went on, the advantage of the former continually increased, Frederick once more formed an alliance with Austria's opponents and began a campaign in Bohemia in Sept., 1744, but was obliged to withdraw from this province in December. His position in Silesia now became precarious, but he extricated himself by the victory at Hohenfriedberg, 4 June, 1745, and then defeated the enemy, already on the march to Bohemia, at Soor 20 Sept. at Kathlisch-Hennersdorf 29 Nov., and at Kesselsdorf 15 Dec. By the Peace of Dresden of 25 Dec., 1745, Frederick retained Silesia. Maria Theresa, however, was not wishing to give up Silesia without further effort. Consequently, after peace had been made between Austria and France, Kaunitz, who was now Maria Theresa's minister of foreign affairs, sought to form more friendly relations with France and to strengthen those already existing with Russia. So little, however, was attained in this direction that when news of this intelligence was received, but Maria Theresa's persistence and the measures taken by Frederick in 1756 led to the formation of the alliance. Made uneasy by the weakness of France, Frederick did not maintain the amicable relations that had existed until then between himself and that power. When war broke out between England and France over the colonies in 1755-6, England negotiated with Russia for the assistance of her troops. Frederick feared to permit such auxiliaries to march through Prussia and offered to guarantee England's possession on the Continent himself (Convention of Westminster, Jan., 1756).

France and Austria now agreed to help each other in case of attack by Frederick (First Alliance of Versailles, 1 May, 1756). Upon this Frederick, led perhaps by fear of attack by a coalition stronger than himself, perhaps also by the hope of making fresh and by daring adventurism, began a third war, the Seven Years' War, with the object of preventing the advance of the Austrian troops. Without any declaration of war he advanced into the Electorate of Saxony, which was friendly to Austria, and besieged Dresden 9 Sept., but the Saxone troops kept up a longer resistance than he had counted upon, so it was 1757 before he could begin a campaign in Bohemia. In the meantime Russia and Austria had signed an alliance for war against him 2 Feb., 1757; in addition both the Empire and Sweden declared war against him, 1 May, 1757. Austria agreed in the Second Alliance of Versailles to adopt the offensive together against him. Frederick's opponents could produce a force of 430,000 men, while he with the aid of England and Hanover (Treaty of 11 January, 1757) controlled about 210,000 men. It was not least in order to force the matter to a conclusion as quickly as possible, before the means of his still poor country were exhausted. On 6 May he won a bloody battle near Prague, but on 18 June he was defeated near Kolin and suffered losses by the new Austrian commander Daun which he could not repair. Frederick was forced to return to Saxony, while the French defeated the Hanoverian army at Kastenbeck on 6 July, and the Russians defeated a Prussian army at Gross-Igerndorf on 30 Aug. However, the Russians and French did not form a junction with the Austrians quickly enough. When finally the united French and Imperial army advanced, Frederick defeated the joint forces badly at Rossbach on 5 Nov., and then turned against Daun, who had entered Silesia and had reached Breslau. Frederick then defeated him on 5 Dec. Duke Ferdinand of Brunswick continued to lead the Hanoverian and Prussian forces that fought against the French and drove the latter to the Rhine in the battle of Crefeld, 23 June, 1758. The English did not, however, reach the greatest expectations aroused by the success at Leuthen. In 1758 the Russians advanced. Frederick maintained himself against them at Zornedorf, 25 August, but the battle was not decisive; from here he hastened to Saxony, where the troops he had left behind were threatened by Daun, and he was surprised by Daun at Hochkirch on 14 Oct.

At the end of 1758 the majority of his officers were dead, and he could only fill the gaps among the soldiery by the compulsory enlistment of mercenaries. His treasury was empty. He had nothing but the crown to live on. He exhausted the resources of Saxony. On the other hand the Austrian army was always ready for the field, and the Austrian artillery was superior to his. Accordingly his opponents in the campaign of 1759 forced Frederick to take the defensive. The united Russians and Austrians decisively defeated Frederick at Kunersdorf on 12 August. The result was a series of capitulations. Frederick lost Saxony, the greater part of Silesia was taken from him in 1760-8, largely by长春. While the following years were to be bent on his own energy, was the gradual dissolution of the alliances between his enemies. France began to withdraw in the Third Alliance of Versailles of 30-31 December, 1757. At first Russia and Austria drew all the closer together in the Treaty of St. Petersbourg.
of 1 April, 1760. The Russians plundered Berlin in Oct., 1760. At this most critical moment Frederick maintained himself only by the almost unexpected victory of Torgau, 3 Nov., 1760, which enabled him once more to occupy a secure position in Saxony. As early as 1761 the Russian interest in this struggle began to decline, and when in January, 1762 Peter III, an admirer of Frederick's embrace, took sides with Frederick (truce in March, peace 5 May, alliance 19 June). It was also an advantage to Frederick that Turkey began a war against Austria. In July, 1762, Peter III was succeeded by the famous Catherine II. She wished to have a European policy, and continually urged Maria Theresa to yield. On the Rhine Ferdinand of Brunswick continued to keep the French in check. As the French were also successful in their war with England, they withdrew from the struggle against Frederick by the preliminary Peace of Fontainebleau (3 Nov., 1762). The imperial army broke up. Finally Austria also grew weary of the struggle.

On 15 Feb., 1763, the Peace of Hubertusburg closed the Austro-Prussian war. Frederick retained Silesia, but also lost new acquisitions. His personal importance and the respect for the military prowess of Prussia were so greatly increased that henceforth Prussia was treated by the other countries as a great power. After this Frederick's admirers presented him with a peaceful policy to increase his realm by taking part in the First Partition of Poland (1772), whereby he gained Polish Prussia with the exception of Danzig and Thorn. The War of the Bavarian Succession (1777-79), which Frederick declared against Austria to prevent Bavaria becoming part of that monarchy, caused but little bloodshed. In the Peace of Teschen Austria abandoned all claim to the Bavarian succession. In 1781 Frederick took part in the "Naval Alliance of Neutral Powers". This was formed by Catherine II, and intended mainly to limit the power of England on the Baltic, but it was of small importance. It should also be mentioned that in 1744 East Prisia became a part of Prussia by inheritance.

The most important measure of domestic policy carried out by Frederick in the first half of his reign with the help of his minister Cocomesi, was the reorganization of the department of justice, which had been neglected during the reign of his father. After the Seven Years' War his personal influence became more marked. He made the other departments of government dependent on him, and only in isolated cases did power struggle with his modern, enlightened spirit. This, animated by humanitarian ideas and a tolerance arising from indifference, was also alive in him. He even exaggerated many of the objectionable sides of the old system of government. He ruled the country and his new province as an enlightened despot, exclusively from the cabinet, though as a writer he approved of Rousseau's views as set down in the "Social Contract". In addition he employed the higher officials as if they were subalterns. The officials throughout the country during his reign developed more and more of a tendency to treat the people and especially the middle classes with bureaucratic contempt. Though proud of their victories in the Seven Years' War, the people meanwhile were conscious of belonging to a unified Prussian State. It was during these years of his reign Frederick regarded it as his duty to inspire the entire Prussian people in their economic and social feelings with the sense of their direct relations to the Government, so that every Prussian in all his doings should have in view not only his own personal advantage but also the welfare and strengthening of the state. Practically, however, this idea only led him to accentuate the social differences, the abolition of which was demanded by the needs of the time. At the end of his reign the Prussian State, of which he was more than ever the monarch, ended just as at the beginning of this rule, with the president of the Chancellor's Council. As regards economic policy, he held on to the worn-out mercantile system.

The great errors of this policy, e.g. the neglect of agriculture, the failure to abolish serfdom, the retention of the double system of taxation (direct for the country and indirect for the cities), a system that paralyzed all economic development, the maintenance of the excessively high system of taxation with its many internal duties, were due to this cause. The same may be said of many of his failures, such as the mercantile enterprises which he founded, or his partial failures, such as the transfer of several industries, in particular the porcelain and silk industries, to the leading provinces of the state. His adherence to the mercantile system of economy was necessitated by his adherence to the new ideas of the Enlightenment, which also affected the finances which led the Prussian Government to provide for the economic prosperity of the population, with the intention of bringing as much money as possible into the country in order to have it for government purposes. He was able to make changes in the financial theories of Prussian policy. These theories led him, for instance, in imitation of French fiscal methods, to introduce the Regie, i.e. to farm out the customs and indirect taxes, and to make the sale of tobacco, coffee, and salt absolute monopolies. The Regie made him very unpopular. It is all the more surprising that, notwithstanding the reactionary character of his internal policy, he made the country politically capable of performing all the unusual tasks that he imposed on it, that he changed his possessions into a well-regulated state, and that he succeeded, by political measures, in repairing the terrible injuries of the Seven Years' War in a comparatively short time. Large extents of moor-land and swamp were brought under cultivation, a hundred thousand colonists were settled in deserted districts, and the revenues yielded by manufacture and industry were decidedly increased. The great estates were aided to pay off their debts by encouraging union credit associations, and Frederick sought to regulate and give in other departments of state to the government control. He was also a founder of the Prussian Bank. In harmony with the spirit of the times he also undertook a comprehensive codification and revision of the laws of the state, which was completed after his death and culminated in the publication of the general "Prussian Statute Book" of 1794; Sures was the chief compiler.

Towards the end of his reign he encouraged the efforts made on behalf of the Catholic public schools by the provost Feltig, and those for the Protestants by Freiherr von Zedlitz and the cathedral canon Roeschow, but he never gave the schools sufficient money. The new code laid down the principle that the public schools were a state organization. Frederick's government, internal and foreign, was marked by a mixture of strong and weak characteristics. It was the policy of a man of genius who was entirely devoted to his task; too intellectual and enlightened to be reactionary, but one who showed himself greater in carrying out and in utilizing the policies of his predecessors, than in establishing what was necessary to ensure the future development of the state. Great that in his achievements, he ended by paralyzing Prussia's vital powers and engaged the resources of the country in a direction opposed to its development. Frederick gave Prussia the position of a Great Power. But, outside of his personal importance, this position of the state rested exclusively
on its military power, not yet, as in the case of the other Great Powers, upon the area of the country and the economic efficiency of the population. Consequently, the church privileges of the Catholics had to be placed on a stronger basis. Its people had to make marked advances culturally, and develop a national spirit. Furthermore, the effort must be made to bring the future development of Prussia into agreement with the laws of the coming generation, so that the roots of its life should receive fresh nourishment. Both problems could best be solved by furthering the transfer towards the west of the centre of gravity of the Prussian states already begun under Frederick’s predecessors. This western development of his territory was also a policy furthered by Frederick, but he pursued it unwillingly and cared little for it. By this one-sidedness he lessened his services to Prussia when he enlarged his territories in the district of the Oder and Vistula, where the foundations of the state had been laid during the Middle Ages.

There is no doubt that in 1757–58 the coalition formed against him would have crushed him had not Hanover fought on his side and given him the strategic western gateway as a great power. As early as 1763 he regarded Austria as the deadly enemy of Prussia, he could not fail to see that for strategic reasons it was absolutely necessary for Prussia to have the whole of north-western Germany within its sphere of influence; he died determined to attain this end. Moreover, he could not abstain from interfering in imperial politics in order to keep Austria from making southern Germany dependent on itself. He, therefore, urged on the War of the Bavarian Succession against Austria in 1779–79, and in 1783 was for a time the leader of the “League of Princes” formed among the German princes of the empire against Joseph II. However, all imperial, that is to say, German politics were distasteful to him. By his example he, more than any one else, contributed to smother all interest in the empire on the part of the German statesmen. He preferred rather to rest Prussian policy on that of Russia, and to lay his political schemes in the east of Europe. In like manner in his internal administration he deliberately neglected his western provinces, although it was just this part of his kingdom that lay in the centre of the rising economic life of Europe, and contained, along with Silesia, the mineral treasures that in the future were to make the country and its population rich. It was also the population of this section that was to prove itself unusually energetic and capable of action. Frederick’s excellent minister of commerce, Heynitz, did not neglect the western provinces. In these provinces the young Freiherr von Stein passed the first years of his career in the service of the Government. During Frederick’s reign the eastern provinces of Prussia were also brought into connexion with the cultural development of the civilisation of Western Europe. In order to meet the growing demand of England for grain, their great estates were worked on a new basis. The young men of the nobility admired England as a model country and were full of interest in all the liberal ideas of the period. Prominent among these was Theodore von Schön. But a number of other young jurists called for a constitution. The University of Königsberg had a large share in producing this development. One of its professors, Kraus, a political economist, spread the theories of Adam Smith; another professor was Kant, who also started with the English philosophy.

During Frederick’s reign a novel element found its way into Prussian State-Silesia, Prussia for the first time acquired a province that was predominantly Catholic; in annexing Polish Prussia it annexed one that was half Catholic. Up to then the only Catholics in Prussia were a few in Cleve. During the reign of the Great Elector, Catholic Ermland also became a part of Prussia, but this province never was considered of much importance. Later the church privileges of the Catholics here were more and more attached upon national treaties. As a rule they were respected. However, a strict watch was kept that the position of the Catholics should be an exceptional one. Attempts to introduce Protestantism among them were encouraged. In particular matters Frederick followed in the path of his predecessors. Being a free-thinker the tolerance of his predecessors, based on treaty obligations, became under him a policy merely of religious indifference. “In my kingdom, each may go to Heaven after his own fashion.” He provided for the religious and educational needs of the Catholics, and showed favour to the Jesuits. Still, in his reign Catholics were not allowed to hold office except inferior ones. In its foreign policy the State remained the champion of Protestant interests. This policy could be continued, notwithstanding the great increase in the number of Catholics, because the population of Prussia was accustomed to obey the Government without claiming any rights for itself. In the course of time difficulties would naturally arise between north and south.

IV. When Frederick II died the area of Prussia was about 78,100 square miles and its population 5,500,000. Since 1740 the annual revenues of the State had risen from 7,500,000 to 22,000,000 thalers; the annual disposable state treasury, to attain 54,000,000 thalers. Frederick’s successor, his nephew Frederick William II (1786–97), was a man of some ability, but was soon led astray by his taste for loose living, and fell under the influence of bad counsellors, such as the theologian and Roscrucian von Wessel, and Colonel von Schloffenwerder. Frederick William III (1797–1840) was a man without much ability, somewhat like a subordinate official in instinct, of good intentions but little force. In consequence of the Revolution whose spirit spread throughout Europe the demands of the new era made themselves heard in Prussia also. Both the ministry and the cabinet were constantly occupied with plans for reform, but there was a lack of united and harmonious working and of ability to come to a decision. Dangerous agitations arose among the civil officials. Government by the cabinet became intolerable to the ministers, as the administration was no longer exercised by the king himself but by the secretaries of the cabinet, who during this reign were von Beyme, Lombard, and Mencken. Thus the zeal for reform only increased the dissatisfaction, and very little was accomphished. Frederick William II disavowed the opposition to Austria when he signed the Reichenbach Convention of 27 July, 1790, with the Emperor Leopold II. In 1792 he even became an ally of Leopold’s in the war with France, in order to combat the “principles” of the Revolution. His army, however, accomplished but little in this war, and on 5 April, 1795, he signed a separate treaty of peace with France at Basle, thus deserting Austria. For a number of years following this treaty his and his successor’s official policy was neutral. In 1802, Frederick William II agreed with France upon a line of demarcation by which nearly all of northern Germany was declared neutral under the protection of Prussia. Prussia worked energetically for the secularisation of the Catholic ecclesiastical principalities, and by agreement with France in 1802 obtained the Dioceses of Paderborn, Fulda, a part of Münster, Eichsfeld, the Bishopric of Speyer, and the cities of Erfurt and Dortmund; the decision of the imperial assembly of 1803 confirmed it in the possession of these territories.

Prussia kept a close watch upon the fate of Hanover
in the wars between Napoleon and England, being desirous of having Hanover if possible. For a considerable length of time Napoleon tempted Prussia by holding out the hope of this acquisition, and in 1808 by the plan of a North German Confederation of which Prussia was to be the leader. Frederick William III even sought to gain territory in southern Germany. By an agreement made with the Hohenzollern Line of southern Germany he obtained in 1791 the Principalities of Ansbach and Bayreuth; in 1796 he made an unexpected attack upon Nuremberg but soon vacated it. None of these undertakings were conducted with much energy and with a clearly-defined end in view, for at the same time the political plans of Prussia in Eastern Europe exceeded her strength. Not only did Prussia obtain Danzig and Thorn in the Second Partition of Poland (1792), but in the Third Partition (1795) she acquired the central basin of the Vistula, with Warsaw as its capital. Prussia now included the entire basins of the Oder and Vistula. But it was no longer possible to make the eastern territories the preponderating part of the State. Besides the country was now half Slavonic, and the majority of its people were henceforth Slavonic. The old Prussian territories had by this time been brought to a higher state of culture and had become in some measure capable of meeting the demands on them. The State now undertook another task: this was to bring the demoralized Polish province, with its spirit of independence, to economic prosperity, and to give them civil and administrative rights. In 1806 Prussia became involved in a war with Napoleon, which made evident the confusion of its internal affairs, and its lack of strength. Its army, led by the grey-haired Ferdinand of Brunswick, was cut to pieces in the battles of Jena and Auerstädt, fought on the same day (14 Oct.), after a skirmish at Saalfeld; Prince Louis Ferdinand died 18 October. Most of the fortresses capitulated without any real resistance. The bureaucracy of government officials lost its head and acted in a cowardly manner. The people were apathetic. The king, however, made some resistance, with the aid of Russia. Napoleon wished to make an end of Prussia as a State, and only the intercession of Russia preserved the Hohenzollern dynasty. But the Peace of Tilsit, 9 July, 1807, Prussia lost the Franconian provinces and all those west of the Elbe, as well as the Polish acquisitions outside of Poland Prussia. Moreover, French troops were garrisoned in the districts bordering to it, and an enormous war indemnity was demanded (Convention of Koenigsberg, 12 July, 1807).

However, Prussia's terrible humiliation, notwithstanding all its mournful results, first opened the way for the exercise of those energies of the country that had been until now suppressed. The suffering showed great endurance in his misfortunes. His wife Louise made herself the intermediary between him and the men from whom the restoration of the country was to come. During the war Scharnhorst the future reorganizer of the Prussian army had his opportunity to distinguish himself at the battle of Eylau, 7-8 February, 1807. In the winter of 1806-07 the philosopher Fichte delivered his celebrated "addresses to the German nation" at Berlin. In the summer of 1807 the king appointed Count Hardenburg, a native of Hanover, minister of foreign affairs, but was obliged to dismiss him in July at Napoleon's bidding; the count, however, still continued to advise the king. Shortly after the Peace of Tilsit Scharnhorst was given charge of military affairs. From this time forward the men of the Prussian army, the soldiers were better treated, a thorough education was required from those desiring to become officers, and the people were gradually accustomed to the idea of universal military service, until it was introduced by the law of 3 Sept., 1814. On 5 October, 1807, Freiherr von Stein, a native of Nassau, was placed at the head of all the internal affairs of Prussia. With his appointment the real reform minister came into power. He was able to retain his position only a year, but this sufficed to impress on the legislation of the time a character of grandeur, although he could not control its details. Stein found the kingdom reduced in reality to the present province of East Prussia, and there the liberal officials were already preparing radical changes. The law of 9 Oct., 1807, was already enacted, according to which the peasant was made a free holder, with the right to hold landed property and to follow any occupation he chose. Stein only signed the decree. The law made it necessary to readjust all peasant holdings and the taxes upon them. This readjustment dragged on during a number of years, and was not finally completed until the middle of the century.

After Stein's retirement this measure frequently proved the economic ruin of the peasants. Another consequence of this law, as completed by the law on trade taxation, Oct., 1810, and by the Edict of 7 Sept., 1811, was the tendency to establish a central state administration. Prussia led the way in this reform in Germany. Stein's chief personal interest was in the reform of the constitution and of the administration. His desire was to create a union between the Government and the people that was then lacking, to awaken in the Government officials a spirit of national solidarity, to enkindle in Prussia popular sentiment for Germany. The lesser offices in Prussia were to be divided into two classes; the former following the historical and geographical divisions of the country (provinces, circles, communes); the second determined wholly by the needs of the Government (Regierungsbezirke). The duties of the former were to be performed by administrative bodies, who were to act as the representatives or as the deputies of the people; the latter by government officials. With the administrative body, in some cases, a government official was associated (provincial president); in other cases certain government duties were confided to their heads (Londrui, Bürgermeister). On the other hand the representatives of the people were to have a share in the government, and in the course of time, as a counterpoise to the ministerial bureaucracy, the members of the national diet were to be elected from the provincial diets. Stein substantially gave the franchise only to land owners. He desired that the people in general should be accepted into the government by the schools and universities. Freedom of action was to be restored to the state officials by putting an end to cabinet government, and giving each minister the independent administration of his own department. Personally, Stein was only able to shape the bill by the municipal legislation of 19 Nov., 1808, and the "laws on the changed constitution of the highest administration of the realm" of 24 Nov., 1808. His fiery temperament and his strong German sympathies made him too impatient. Together with his plan had had his effects; it was the German people for a war against Napoleon. Consequently he was obliged to resign. Moreover, he did not sufficiently gauge the peculiarities of Prussia, particularistic, dynastic, and bureaucratic. His work, however, did not perish.

In 1810 the University of Berlin was founded as the great national centre of education; in 1811 the University of Breslau. In 1810 Hardenberg re-entered the Government and a chancellor carried on the work of reform systematically until his death in 1822. He successfully maintained only the professions and accommodated himself to the peculiarities of the Prussian character: like Stein he thoroughly believed in the necessity of a complete reconstruction of the State. He made special efforts to reform the system of taxation, but he was
not able to do this at once. In 1810 and 1815 he even promised to call a national parliament. After his own fashion he liberalized or bureaucratized Stein's plans, often taking the Napoleonic legislation for his model. Only the opposition of the Prussian nobility prevented the realization of Stein's reform of the administration (1812) by substituting the French system of prefecture and municipality for the self-governing institutions of district and city. These reforms led to the awakening of a sense of nationality both in the educated classes and the common people; and when in 1813 Napoleon returned defeated from Russia the whole population of Prussia rose of their own accord for king and country, and also for the liberation of Germany about which the kings had not concerned themselves.

During the War of Liberation of 1813–14 and 1815 the Prussian army had a large share in the overthrow of Napoleon. At the Peace of Paris (20 May, 1814) and the Congress of Vienna, which rearranged the map of Europe, Hardenberg represented Prussia. He desired to form a permanent agreement in policy between Prussia and Austria, while the king preferred to join his interests with those of Russia. At the important moment (Nov., 1814) the king decided against his minister, whereby a fresh European war was nearly kindled. The question was whether the greater part of Poland was to be long to Russia, and what compensation Prussia should receive for its share of Poland. Russia was successful, and only Poland and Prussia and the Grand Duchy of Posen were given to Prussia. As a compensation for the loss of Saxony, Russia demanded Saxony. Owing to Austria's opposition it received only the present Prussian province of Saxony and, instead of the remainder of Saxony, the Westphalan and Rhenish provinces, where before 1802 it had possessed only small territories. The annexation of Saxony was so entangled in Western Europe that it could no longer pursue a policy of neutrality, such as it had adopted after the Treaty of Basle. By this means, however, the centre of gravity of Prussia was completely shifted towards Western Europe. Henceforth Prussia could scarcely give up the military control of northern Germany; should opposition arise, it must endeavour to incorporate into its own territories the districts between its eastern and western provinces. It soon felt the temptation to become the leader of Germany against Western powers and to take up its old possessions in Swabia and on the Rhine, and had no longer any territories in Germany. In 1814–15 the area of Prussia was increased to 108,000 square miles, and its population reached 10,500,000. The geographical and political changes which took place in 1807–15, years of suffering and war, had been too rapid. Much remained to be done. Reactionary forces asserted themselves once more. Until 1840 old and new ideas struggled against each other, even among the ruling statesmen. The reactionary tendencies, especially of the Court of Frederick the Great, reappeared with the king's approval.

However, government by cabinet order was not re-established. The higher officials, who under Frederick the Great had been the king's executive tools, now practically carried on the Government in the name of the king. The minister Nagler spoke of "the limited intelligence of the subject". The promise to call a national representative assembly was limited to the case of the State needing a national loan; but it was taken that no such necessity occurred. The Prussian Government not only took part in all the attempts of Austria and Russia since 1818 to suppress all revolutionary and politically liberal movements among the people, but even showed the greatest zeal and severity in doing so; e.g. the persecution of student societies, the imprisonment of Jahn, the order forbidding Arndt to lecture, and the expulsion of Görres from Germany. Partly through attachment to the king, with whom they had been united in common sufferings and partly because of the generally excellent behaviour of the officials, the people of the old Prussian provinces maintained an attitude of expectation. With the new provinces, however, serious friction arose. Having been forced to France during the years 1795–1814, these provinces had grown accustomed to democratic forms and frequently had a racial dislike to Prussians. The struggle began with the question whether the Prussian statute-book should replace the French "Code civil" in the province of the Rhine. The conflict was intensified by the appointment of many old Prussian officials to positions in the Rhineland and was greatly augmented by quarrels about methods of Church government and the claims of the State in matters of religion. The territories annexed in 1814–15 were mostly peopled by Catholics. Hitherto the State had controlled the Catholic Church authorities of the kingdom in the same way as the Protestants. This not only aroused the opposition of the democratically-inclined Rhineland provinces, but it also caused the resistance of the new western Catholic movement, which, without much regard to diplomacy, strove to secure complete liberty for the Church by vigorous defence of her rights.

The question in contention was, does it not it was the duty of the Catholic priest to bless mixed marriages was the accidental but highly opportune occasion of bringing the matter to an issue. The Archbishop of Cologne, von Droste zu Vischering, led the opposition. The Prussian Government imprisoned him in a fortress as a "disobedient servant of the state". A powerful popular commotion throughout the Rhine country was the result; this gained its echo in a Polish national movement in Posen, where Archbishop Dumnôr resisted the marauders and was arrested. Success was on the side of the Catholics and the new provinces. But alongside of these after effects of the spirit of Frederick II the Stein-Hardenberg policy continued to gain ground, especially after 1815. The reform of taxation was now carried through under the direction of the statistician J. G. Hoffmann. Organization of the provinces was completed, and an edict granting provincial diets was issued in 1823. General communal legislation was postponed because the economic and social conditions of the eastern provinces still differed widely. Allenstein and Johannes Schulze did much for education. Under the lead of the king, the Government compelled the union of the Lutheran and the Reformed churches; in order to give the union a firm basis, a new liturgy was issued in 1821. The old Lutherans who opposed the union of the two denominations were subjected to severe police restraint. By the Papal Bull "De salute animarum", and the Brief "Quod de fidelium", two Catholic church provinces were erected 16 July, 1821: the Archidioceese of Gnesen-Posen, with the Suffragan Diocese of Dantzig; and the Archidioceese of Cologne, with Trier, Münster, and Paderborn as suffragans. In addition the exempt Bishops of Breslau and Ermland were established. The bishops were to be elected by the cathedral chapters, but were to be directed by the pope not to choose any person not acceptable to the king. The endowment of the bishoprics with landed estates proposed in 1803 was not carried out; hitherto the State has provided yearly subventions in accordance with the budget of the ministry of worship. The progress at this time was in the field of political economy. The post office was well organized by Postmaster-General Nagler.

By the law of 26 May, 1818, Prussia changed from a prohibitive high tariff to a low tariff system, almost completely suppressed the taxes on goods in transit.
It thereby simplified its administration of the customs, and made business easier for its subjects, but the law fell heavily on the provinces belonging to other German states that were surrounded by Prussian territory, and gradually effected the states of modern Poland, Germany, North Sea and the Baltic to be carried on across Prussian territory. After violent disputes a Zollverein (customs union) was gradually formed; the first to join with Prussia in such a union were the smaller states of Northern Germany, beginning with Schleswig in 1812 and 1816; in 1823 Hesse Kassel, and in 1831 Electoral Hesse; from 1 Jan., 1834, the kingdoms of Southern Germany, Saxony, and the customs and commercial union of the Thuringian States. By the beginning of 1836 Baden, Nassau, and Frankfort had also joined. With the exception of the non-Prussian north-western districts, besides Mecklenburg and the Hanseatic cities, all non-Austrian Germany was now economically under Prussian hegemony. The different states joined the Zollverein by terminable agreements. Each of the larger states retained its own customs administration; changes in the Zollverein could only be made by a unanimous vote. These states simply agreed in their economic policy and in the administration of the tax. They did not form a united Germany from an economic point of view. The measure that deserve the chief credit for the establishment of the Zollverein are Motz (d. 1830) and his successor Nassen. From the first, Prussia was determined that Austria should not be admitted as a member of the new customs union. Politically this union did not bring its members into closer alliance, but it was probably the cause of a great increase of their economic prosperity. The greatest benefit from it was gained by the Prussian Rhinen provinces. Consequently the migration of the Prussian Liberals in politics, gradually grew friendly to the Prussian Government; it hoped to be able to dictate Prussia's economic policy in the course of time. The result was that political conditions within the country improved. In all its other relations to the newly acquired provinces the State had been forced to give way (e.g. the continued existence of the "Code civil") or would have to in the future (e.g. in its ecclesiastical policy). Now the Rhinen provinces began to divide politically. The State was further strengthened by gaining the support of the teachers and professors as an after effect of the patriotic movement in the War of Liberation and partly owing to its energy in the cause of education. The Prussian political system, of meddlin with everything, perhaps justified by necessity, was at this time philosophically defended and glorified by the philosopher Hegel.

V. Frederick William IV (1840-61) in his youth had enthusiastically taken part in the War of Liberation, and afterwards in all the efforts for the reorganization of the State. His character was inconsistent; while a man of ability, he was subject to the influence of others. Soon after his accession he conciliated the Catholics (Johann Geisel as coadjutor of the archbishop establishment of a Catholic department in the Ministry of Worship and Education). Although personally a Conservative, he appointed some moderate Liberals to places of prominence. He first called forth opposition among the doctrinaire and radical elements of the eastern provinces by connexion of the Office of education, and by granting representation on the occasion of his coronation at Kônigsberg. In accordance with Stein's original plan he intended to give to Prussia a legislature chosen by the several provincial diets. Too much time was spent with nothing coming to any decision. In the meantime the western provinces also joined the movement for more liberal institutions, largely as a consequence of the debates in the provincial diet of the Rhine, in 1845. The restlessness was increased by economic distress, especially among the weavers of Silezia, by contradictory ordinances issued by the Government, and by the discovery of a national Polish traffic which was to reduce the northern trade. Finally in Feb., 1847, the king summoned to Berlin a "first united diet", composed of all the provincial diets. The authority of the united diets was to be small, its future sittings were to depend on the pleasure of the king. The more liberal element of the eastern provinces warned not to expect this to be sufficient. The more politic liberals of the western provinces, however, gained the victory for the new diet, for they hoped in this way to attain to power in the State. The united diet was opened 11 April, 1847. Passionate differences of opinion showed themselves in the debates over the wording of an address to the king, in which, although moderately expressed, the demand for such a "national parliament" as had been promised in 1815 was put forth. Motions made in favour of the granting of a national parliament, and finally the refusal of the diet to take decisive action on a proposed railroad loan, so angered the king that he closed the sessions of the diet towards the end of June. Throughout the country there was a movement to obtain a parliamentary chamber directly elected by the people. When in March, 1848, there was danger that the revolution would break out in Prussia, on 7 March the king made the concession that the united diet should meet every fourth year. On 14 March he summoned the second united diet to meet at the end of April, but he was not willing to concede the election by the people and a written constitution. On 15 March barricades were built in the streets of Berlin. On the evening of 17 March the king decided to grant a general amnesty and an assembly of the second united diet for 2 April, and to take part in the movement for forming a German national state. Notwithstanding the announcement of this decision, bloody fighting broke out in the streets of Berlin 18 March. The next day the king withdrew the troops who were confronting those in revolt. In Posen the Poles gained control of the Government, while the Rhine province threatened to separate from Prussia and to become the first province of the future united Germany. On 20 March, after a defeat at Prague, Prussia would devote its entire strength to the movement for a united Germany, and to maintaining the rights of Germany in Schleswig and Holstein by war with Denmark. At the end of the month the king entrusted the Government to the Rhenish Liberals. The brief session of the second united diet had for a time a quieting effect, the Radical element predominated in the Prussian National Assembly which opened 22 May, and the king's ministers, chosen from the Rhenish Liberals, were not able to keep it in check. During the summer the Conservative element, especially that of the old Prussian provinces, bestirred itself and held the "Junker Parliament"; founded the "Kreuzzeitung", and won influence over the masses by appealing to the sentiments of Prussian particularism and loyalty to the king. When the Radicals favoured street riots, sought to place the army under the control of parliament, and resolved upon the abolition of the nobility, of kingship by the grace of God, and demanded that the Government should supersede the king, the liberal chamber dismissed his Rhenish ministers. In the German movement also they had, in his opinion, failed. The war in Schleswig-Holstein had brought Prussia into a dangerous European position (Armistice of Malmö, 26 Aug., 1848). The king then commissioned Count Brandenburg on 2 Nov. to form a Conservative ministry. The most
important places in it were given to men from the old Prussian provinces. On 9 Nov., 1848, the National Assembly was adjourned and removed from Berlin. The king was proclaimed in the city. On 5 Dec. the National Assembly was dissolved, and a constitution was published on the king's sole authority. Nevertheless, certain fundamental constitutional provisions were granted in it, and the upper and lower houses of parliament provided for. Much was done to meet the demands of the Catholics for the complete liberty of the Church. After the failure of the Rhinish Liberal Government, the king hoped for support from the leaders of the western powers, and a message was sent to them as at first given. In order to satisfy public opinion a series of laws, intended to satisfy Liberal wishes, was promulgated in the course of the next few weeks. In accordance with the recently imposed constitution, a new chamber of deputies was immediately elected and opened 26 Feb., 1849, in order that it might express its opinion on the Constitution. However it came to no agreement with the Government. The three-class system of election, which is still in force, was now introduced for elections to the second chamber. In each electoral district all voters were divided into three classes, so that one-third of the taxes is paid by each class; each class elects the same number of electors, and these electors elect the deputies. Upon this the Radicals abstained from voting. They were in the minority of forty in the first chamber. The revision of the Constitution could now be proceeded with, and it was proclaimed on 31 Jan., 1850. According to its provisions Prussia was to be a constitutional kingdom with a diet of two chambers; great power was left to the Crown, which was moreover favoured by obscurities and omissions in the document. After the convulsions of 1848 Prussia had much need of rest. During this year the course of the German national movement had, however, excited the hopes of the king that Germany would acquire the unity which even he desired to see, and that Prussia would, as a result of this unity, be the leader of the German national armies, or perhaps control the new state. The Liberals were estranged from the king in the autumn of 1848, and the wish was frankly expressed, if not fulfilled, that the future constitution of Germany should be decided in agreement with Austria, and if possible in agreement with all other German princes. These difficulties led the king to decline the German imperial crown when it was offered to him by the Frankfurt Diet, by which time in April he had given up the chance of the throne. The king's plan was accepted by a parliament claiming its power from the sovereignty of the people. Soon after this, influenced by General Radotzky, he himself decided to open new negotiations on the question of German unity. The intention was that Prussia should unite with other German states that were ready to join in a confederation called the "union", and that the union should adopt a constitution and have a diet. This confederation was to form a further indissoluble union with Austria, by which each should bind itself to agree on the most exorbitant demands. Prussia had aided the principalities of central Germany to suppress internal revolts in the spring of 1849, these countries did not at first venture to disagreewith Prussia, as appears from the agreement of 26 May with Saxon and Hanover, called the "union of the three kings". Nearly all the smaller states joined also. Bavaria, however, refused to enter the union, and Austria worked against this plan. In the summer of 1849 Austria proposed to the Prussian Government that the two powers should revive the old German Confederation which had been cast aside the year before, and should henceforth lead it in common ("Interim", 30 Sept., 1849). Russia, which had generally supported Prussia, now upheld Austria. Nevertheless the king, although much opposed by members of his Government, persisted in his scheme of a union. The constitution planned for the union was laid before a diet of the principalities belonging to the union, summoned to meet at Erfurt. The Diet in session from 20 March to 29 April, 1850, accepted the Constitution. Upon this Austria, encouraged by the status of its efforts to form a confederation among themselves to which neither Prussia nor Austria should belong. This confederation was to act as a counterbalance to Prussia, and at the same time was a menace to the Prussian supremacy in the Zollverein. In the autumn of 1850 the gap between the two powers was widened. Prussia, however, not wishing an open rupture, urged both sides to mutual concessions. Prussia now finally gave up its scheme of the "union", and promised to re-enter the federal diet (Agreement of Olmütz, 29 Nov., 1850; further conferences, Jan. to April, 1851). The dispute between the two powers as to which should control the Zollverein continued for two years longer. The ability of Prussia to accomplish the difficult task of defeating the attacks of Austria was probably due to the expert knowledge and clearness of the movement of the government of Prince Rudolf von Delbrück, and to the fact that Hanover joined the Zollverein in Sept., 1851. Still, concessions had to be made to Austria in the Treaty of 19 Feb., 1853, which crippled the Zollverein until 1865. In all questions of foreign policy, Prussia and Austria remained suspicious and cool. Prussia felt that the dispute had resulted in a painful weakening of its European position. The damage was further increased by the irrevocable policy of the king during the Crimean War, which caused England to try to exclude Prussia from the congress at Paris in 1856. A small group of Prussian politicians, especially Bismarck, began to urge an aggressive policy and the seeking of support from Napoleon III for such a policy, but neither Frederick William IV nor his brother William who succeeded him would listen to the suggestion. As regards the internal condition of the country, after the close of the revolutionary movements the Conservatives obtained a large majority in both houses of the Prussian Diet. The more determined members of the Conservative party, especially central, the Conservatives demanded a complete restoration of conditions existing before the revolution. They were supported in these demands by the camarilla which had been active at the court since 30 March, 1848, and among the members of the cabinet. He would have restored the constitution of von Gerlach. Among the measures desired by the Conservatives were: abandonment of the German national policy; limitations of Prussian policy to northern Germany; closer connexion with England; the adoption of a free trade and an economic policy; restoration of judicial and police power on their estates to the nobility; alteration of the Constitution of 1850; and restoration of the Protestant character of the country. Otto von Manteuffel, who had been minister-president since Nov., 1850, was able to defend the state, and to suppress all parties as much as possible, and to make the Government official body once more the great power in the State. Up to 1854 there were bitter disputes as to the constitution of the upper house of the diet. At last it was agreed that it should be composed partly of representatives of the state, partly of representatives of the large cities and universities, and partly of members independently appointed by the king. The bureaucratic administration established by Manteuffel led to many arbitrary acts by the police, who were under the supervision of Minister-president von Westphalen; the result was much bitterness among the people. Von der Heydt, Minis ter of Commerce, pursued a sensible policy, declining to favour concentration of capital, and protecting the
small mechanical industries that were threatened with a crisis. From 1854 the influence of the churches over the primary schools was strengthened by the regulations issued by Raumer, Minister of Worship and Education. A deflection from the Conservative party, led by von Bethmann-Hollweg (grandfather of the powerful Ministry who was to retire as German Chancellor in 1917), was of little importance, but apparently influenced the heir to the throne. In the same way the "Catholic Fraction" (1852), formed to oppose the re-establishment of the Protestant character of the State, proved to be only temporary. The King fell ill, and on 23 Oct., 1857, he appointed his brother William to act for him; on 26 Oct., 1858, William was made regent. All extremes of policy and religion were distasteful to William, and he began his reign with many misconceptions of the position of domestic politics. He therefore dismissed Manteuffel and formed his first ministry, the ministry of the "new era", of men of the Bethmann-Hollweg party and of moderate Liberals, the premier being Prince Karl of Hohenzollern. He desired by this selection to assure the public of an intelligent policy in foreign relations. The Liberals, however, regarded it as a sign that the moment had come to repair the failure in 1848 to obtain a parliament and a Liberal form of government for Prussia. The war between Austria and France in 1859 obliged William to give his attention to the Prussian army, which was still dependent on the law of 1814, and had shown many deficiencies when mobilized on account of the war. In Dec., 1859, the regent appointed von Roon minister of war. A bill laid before the Diet in 1860 called for the reconstruction of the military forces, which since the War of Liberation had been disorganized; the army was once more to be a centralised professional force, and at the same time be enlarged without a great increase of expense. The Diet avoided taking any positive stand on the question. William, however, went on with the reorganisation. In Jan., 1861, he became king (1861–88).

In June, 1861, most of the Liberals united in the Radical "German party of progress". The elections at the end of the year placed this party in the majority. Bills upon questions of internal politics that were intended to meet Liberal wishes were laid before the Diet in vain, nor did the resumption of the policy of the "union" by Count Bernstorff, Minister of Foreign Affairs, nor the commercial treaty with France in 1862 pacify the Liberals. A conflict between the Crown and the Diet began. The money demanded for the army was refused in 1862.

In Sept., 1862, the king called Bismarck to the head of affairs. He was ready to carry on the administration without the approval of the budget. In 1863 Bismarck dissolved the lower house of the Diet, took arbitrary measures against the Press, and sought to bring the Liberals in disfavour with the people by a daring and successful foreign policy. His first opportunity for this came when strained relations developed between the German Confederation and Denmark. A conflict between the Duchies of Schleswig and Holstein. The upper house of the Diet now refused to grant the money for the expenses of the war against Denmark. Bismarck nevertheless carried on the war jointly with Austria; among its events were the successful storming of the Düppel entrenchments on 18 April, and the crossing to the Island of Alsen in the night of 28–29 June, 1864. Even these events caused public opinion to change. At the next election the Conservatives were in the majority, and signs of disruption in the party of progress were evident. The disputes which arose between Austria and Prussia as a result of the war with Denmark caused Bismarck to go to war with Austria in the early summer of 1866.

The "party of progress" was now completely divided. At a fresh election for the House of Deputies on 3 July, accidentally the day of the victory of Königgrätz (Sadowa), the Conservatives gained one-half of the seats. The enthusiasm over the defeat of Austria and over the definite settlement thereby of Prussia's leading position in non-Austrian Germany was so great that the difficulties besetting the internal policies of the state appeared of little importance, but apparently influenced the heir to the throne. The same way the "Catholic Fraction" (1852), formed to oppose the re-establishment of the Protestant character of the State, proved to be only temporary. The King fell ill, and on 23 Oct., 1857, he appointed his brother William to act for him; on 26 Oct., 1858, William was made regent. All extremes of policy and religion were distasteful to William, and he began his reign with many misconceptions of the position of domestic politics. He therefore dismissed Manteuffel and formed his first ministry, the ministry of the "new era", of men of the Bethmann-Hollweg party and of moderate Liberals, the premier being Prince Karl of Hohenzollern. He desired by this selection to assure the public of an intelligent policy in foreign relations. The Liberals, however, regarded it as a sign that the moment had come to repair the failure in 1848 to obtain a parliament and a Liberal form of government for Prussia. The war between Austria and France in 1859 obliged William to give his attention to the Prussian army, which was still dependent on the law of 1814, and had shown many deficiencies when mobilized on account of the war. In Dec., 1859, the regent appointed von Roon minister of war. A bill laid before the Diet in 1860 called for the reconstruction of the military forces, which since the War of Liberation had been disorganized; the army was once more to be a centralised professional force, and at the same time be enlarged without a great increase of expense. The Diet avoided taking any positive stand on the question. William, however, went on with the reorganisation. In Jan., 1861, he became king (1861–88).

In June, 1861, most of the Liberals united in the Radical "German party of progress". The elections at the end of the year placed this party in the majority. Bills upon questions of internal politics that were intended to meet Liberal wishes were laid before the Diet in vain, nor did the resumption of the policy of the "union" by Count Bernstorff, Minister of Foreign Affairs, nor the commercial treaty with France in 1862 pacify the Liberals. A conflict between the Crown and the Diet began. The money demanded for the army was refused in 1862.

In Sept., 1862, the king called Bismarck to the head of affairs. He was ready to carry on the administration without the approval of the budget. In 1863 Bismarck dissolved the lower house of the Diet, took arbitrary measures against the Press, and sought to bring the Liberals in disfavour with the people by a daring and successful foreign policy. His first opportunity for this came when strained relations developed between the German Confederation and Denmark. A conflict between the Duchies of Schleswig and Holstein. The upper house of the Diet now refused to grant the money for the expenses of the war against Denmark. Bismarck nevertheless carried on the war jointly with Austria; among its events were the successful storming of the Düppel entrenchments on 18 April, and the crossing to the Island of Alsen in the night of 28–29 June, 1864. Even these events caused public opinion to change. At the next election the Conservatives were in the majority, and signs of disruption in the party of progress were evident. The disputes which arose between Austria and Prussia as a result of the war with Denmark caused Bismarck to go to war with Austria in the early summer of 1866.

The "party of progress" was now completely divided. At a fresh election for the House of Deputies on 3 July,
and because the Government proceeded more circumspectly. It was only in Hanover that a strong party, that of the Guelpfs, maintained a persistent opposition. The war had also made it possible for Prussia to restore the efficiency of the Zollverein. The recent agrarian and industrial developments are of much benefit to Prussia’s western provinces, for the commerce of the Rhine and the manufacturing districts of the lower Rhine and Westphalia rapidly grew in importance. Berlin also shared in the general increase of prosperity, it became a city of a million inhabitants, a centre of wealth, was almost entirely rebuilt, and covers a larger area each year. In its active mercantile life it is a symbol of the present character of Prussia just as Potsdam, near by, still preserves the character of the Prussia of the era of Frederick the Great.

The result of the great economic development was a renewed growth in influence of the Liberal party, which, however, did not last beyond 1877. From 1870 the Liberals were opposed by the new and strong Centre party, in which the great majority of the non-Liberals, Catholic population of the western provinces were combined. The opposition between the Centre and the Liberals made it possible for the Conservatives to gain time to form a more effective political organization than any they had had before, and to regain for their Leader his hold on the mind of the country. The marked influence upon Prussia’s domestic policy, notwithstanding the fact that since 1866 the western provinces included the greater part of the territory and population of the country. From 1871 the Government took part in the struggle in which Liberals and Catholics fought out their opinions. It restricted the share of the churches in the direction of primary schools, and passed laws that destroyed the ruling position of orthodoxy in the Protestant church system. Throughout the increase most in the power of the State. During the eighties Bismarck abandoned the Kulturkampf, so far as government interference in Catholic church life extended. There was no essential change in the policy affecting the Evangelical Church. The Evangelical Church has a supreme church council, and by the law of 1873 it received a synodal and parish organization; in 1876 a general synod was established by law. Few changes were made in the school laws. The final decision concerning them has not yet been reached, as in the Constitution the main cause of school disputes a promise, and this promise must now be fulfilled. A bitter struggle arose over this question. The bill of 1891 was dropped as too liberal; that of 1892 was withdrawn on account of opposition of the Liberals. After the matter was allowed to rest. In 1906, owing to the necessities of the situation, a law was passed by a combination of the Government with the Conservatives and National Liberals, with the tacit consent of the Centre. The question to be settled was who should bear the expense of the public schools? It was laid down that the public schools were in general to be denominational in character; but that everywhere, as exceptions, denominational public schools were permissible, and in two provinces, Nassau and Posen, should be the rule. The share of the Church in them was not defined, and the struggle as to its rights of supervision still continues. The general level of national education is satisfactory. Only 0.04 per cent of the recruits have had no schooling. In 1901 there were 36,756 public primary schools, of which 21,600 were Catholic, and had altogether 90,206 teachers, and 5,670,870 pupils. Only 315 primary schools were private institutions. For higher education Prussia has 10 universities, 1 Catholic lyceum, 5 polytechnic institutions, and 2 commercial training colleges. Unfortunately there grew out of the Catholic influence only the religious affect; education, but also the conflict against the Polish population. The Government has always distrusted the Poles. This distrust has been increased by the democratic propaganda among the Poles, by their progress in economic organization, and their rapid social development. Moreover, the rapid increase of the Polish population has made it necessary to secure to the Poles outstrip the German element, which does not seem capable of much resistance, in the provinces of East and West Prussia, and of late in Silesia. In 1885 the Government began a land policy on a large scale. The scheme was to purchase from the Poles as many estates as possible with government funds, to form from these farms to be sold by the Government on easy terms, and by establishing villages to settle a large number of German peasants in these provinces, which, on account of the many baronial estates, were thinly populated, and thus to strengthen the German element in them (1890, law for the forming of these government-leased, or sold, farms; 1891, law for a bank in support of these holdings). The Government began by banishing large numbers of Poles, then set systematically to work to germanize the Poles by the limiting the use of the language; thus, even in purely Polish districts, Polish was almost entirely excluded from the public schools as the language of instruction, even for teaching religion. With exception of a break in the early part (1890–94) of the tradition of Wielopolsky, this anti-Polish policy has been carried on with steadily increasing vigour. At last in 1908 the Government by law acquired the right to expropriate Polish lands for its colonizing scheme, as voluntary sale of such lands had almost entirely ceased. So far no use has been made of the new right of this authority. The harsh policy of the Government greatly promoted the growth of Radicalism among the Poles; of late, however, the more sober elements seem to have regained influence over them. As to the Polish population of the eastern provinces, there has also been a large emigration of Poles into the western provinces, factory hands, so that in some of the western election districts the Poles hold the balance of power.

Outside of its Polish policy Prussia since 1870 has done much for agriculture. Mention should be made of the founding of the central credit association fund, the first director of which was Freiherr von Huene, a member of the Centre party of the Prussian Diet. The reform of the system of taxation, however, was caused by the need of the entire economic life. Indirect taxes were restored, the direct taxes of the country were based on an income-tax, from which very small incomes were exempted. The income-tax was supplanting by a moderate property tax. The taxes on personal property were left to the communes for their purposes. Preparations for the tax-reform were made from 1881 by Bitter, Minister of Finance, and the reform was carried out (1890–93) by Miquel, Minister of Finance, a former leader of the National Liberal party. The introduction of the refund system was simplified by the fact that only one-twelfth of the direct taxes were needed for the requirements of the Government, and of this one-twelfth the income-tax yielded 80 per cent. Five-sixths of the revenues of the Government come from the surplus earnings of the railways, as since 1879, nearly all the railways within its territories have been purchased by the State. As these surpluses vary they affect the uniformity of the budget, especially in periods of economic depression. Since 1909, however, the government provisionally fixed the amount of the purchase of the railways by the State affected for some time the improvement of the waterways, on account of the advantage to the State of the railway revenues. In 1886 the improvement of water communication, which is still urgent in the eastern provinces, was taken up both in the rivers and in the form of a canal policy. In 1897
a bill was laid before the Diet, which sought to relieve the railways from overtaxing with freight, by a comprehensive construction of canals on the Rhine and the other tributaries. This proposal was rejected. It was once more brought up, and this time the provision was included that the Government should have a monopoly of the towing on the canals to be built. The bill was accepted in this shape in 1805.

The result of the Government improvements of the waterways is its endeavour to limit the entire freedom of river navigation which has grown up in Germany on the basis of the acts of the Congress of Vienna. So far the Government has not been able to overcome this position to this day, in the empire and the neighbouring states; a bill to this end is before the Diet. Since 1870 Prusia has also considered large schemes for improving the organization of the administration. The organization of the districts and country communes had not been settled in the earlier period; the organization of the provinces had also to be perfected. The law regulating the administration of the districts was passed in 1872 under the influence of the National liberal party; the law affecting the provinces in 1875. At the same time a law, which made the approval of the Diet necessary, was issued, which gave administrative jurisdiction was carried. In 1897 the difficulties were finally removed which up to that time had prevented the Government from obtaining a law to regulate the country communes. This was accomplished by the effort to pass a law for the entire country, and by passing one simply for the southern provinces, where the need was most pressing. Since then there has been no further legislation as regards the organization of the administration. In the future near and large questions as to administration will have to be settled, which in the present time are being discussed by a commission appointed by the king in 1908, who are to report directly to him. Of late, public opinion has also been occupied with constitutional questions, especially of the Centre and the parties of the Left for the adoption of the imperial system of electing the Reichstag in Prusia. The Government is not ready for this, and desires only to modify the three-class system. The first bill for this did not meet with the approval of the Prussian Diet, and was withdrawn in 1910.

Przemysl, Dioceze of (Premslenski), Latin see in Galicia, suffragan of Lemberg. After conquering Halicz and Wladimir, Casimir the Great suggested to the pope the creation of seven Latin sees in places where, from the beginning of the fourteenth century, ecclesiastical jurisdiction had been established. The bishops of Przemyśl, Chelm, Vladimir, Lutsk, Kiev, and Lemberg, Franciscans and Dominicans immediately began to establish missions. When the Bishop of Lebus appointed an incumbent for Przemyśl, the pope refused to recognize his jurisdiction and designated (1359) as successor the Dominican prior of Sandomin, Nicetus Ruthenus. The latter was consecrated at the papal Court and the pope declared this diocese directly subject to the Holy See. As the see was insufficiently endowed, the bishop did not reside in his cathedral town, and the administration was transferred to Lemberg. In 1366 Lebus again endeavoured to assert jurisdiction over Przemyśl, but Gregory XI appointed Eric de Winesen (1377), who became the first actual bishop of Przemyśl. Blessed Jacob Strepa rendered important services to the Diocese of Przemyśl. In Breslau, the Bishop of the Chaste had introduced the Franciscans to Cracow; about one hundred years later they came to Lemberg, where, for three years, Strepa was protector of the order. During that time, Archbishop Bernard laid Lebus under an interdict and communicated the town councillors. Strepa took up the cause of the city to protect it from the influence of the neighbouring ecclesiastics. In addition, he had to defend the Franciscans and Dominicans against the accusation of the secular clergy, who maintained that their administration of the sacraments was invalid. In 1391 Strepa became Archbishop of Galicia. In that capacity he adjusted the ancient quarrel between the Dioceses of Halicz and Przemyśl. In 1444 Bishop Franz Zachariasiewicz published the “Livres” (mentioned below), which mention fifty-episcopate of his predecessors, nine bishops have succeeded him (111). To the “Livres” are prefixed important data concerning the early history of the Latin sees in Russia (pp. xvi–xxix) and concerning the Latin dioceses of Galicia (pp. xli–xlvii). Among the see of Cracow, the Latin see of Lemberg has about 1,152,000 Catholics; 547 secular priests; 396 religious men in 27 convents, and 698 religious women in 97 (99) convents.

C. WOLFGANGEBER.

Przemyśl, Sambor, and Sanok, Dioceze of (Premislenski, Samborskienski, et Sanechenski), a Greco-Ruthenian Uniat diocese of Western Galicia, Austria. It is really the Diocese of Sambor (Pernyemyl) of the Greek Rite, since the See of Sambor represents only a former contrast between the Catholic and the Orthodox about the time of the union of the churches, and there never was at any time a Bishop of Sanok. Przemyśl is a see of great antiquity, being mentioned as River San, in the Crownland of Galicia, about fifty-four miles west of Lemberg. Its population in 1900 was 45,350, and it contains the Cathedral Church of the Nativity of St. John the Baptist and the diocesan seminary of the Ruthenian Greek Catholics. Sambor
is a manufacturing town situated about ten miles away upon the River Dziester; it had in 1900 some 17,550 inhabitants. Sanok is a still smaller town, situated twenty miles south-west of Przemysl, and has about 5000 inhabitants.

The original cathedral church of Przemysl was a church connected with the great castle, but this was given to the Latins by King Wladislaw in 1412. The Ruthenians then took the present Church of the Nativity of St. John the Baptist for their cathedral. The cathedral church of Sambor, dedicated to the Transfiguration, is situated near the town of Old Sambor. All this part of the country was the Kingdom of Poland, and on its partition in 1772 between Prussia, Austria, and Russia, Sambor remained with Russia.

The metropolitan bishopric is divided into 49 deaneries, containing 688 organized parishes, 1334 churches and chapels, 6 monasteries of Basilian monks, and 2 convents of Greek nuns. The clergy consists of 883 secular priests, and as follows: 602 married, 129 widowers, and 12 celibates, together with 30 monastic priests. The Greek Catholic population of this diocese is 1,198,398.

The Diocese of Przemysl stretched over a large part of Red Russia, covering some 900 square miles, west of the Archdiocese of Lemberg. It is perhaps the oldest of the Ruthenian dioceses, and Sts. Cyril and Methodius are said to have preached Christianity there. It is certain that this part of south-west Russia received Christianity nearly one hundred years before the conversion of King Vladimir at Kiev.

The names of its early missionary bishops are lost, but from 1218 the succession is unbroken. Antiniius (1218-25) is the first bishop whose name is recorded. He was a monk and Bishop of Novgorod, but was banished from there and then became Bishop of Przemysl, succeeding a former bishop who had just died. King Danilo at this time was in union with the Holy See, and for over one hundred years the Greek bishops of Przemysl were likewise united with Rome.

Hilarion (1254), Abraham (1271), Jeremias (1283), Memnon (1288), Hilarion (1292), George (1315), Mark (1330), Cyril (1333), Hilarion (1336), Basil (1385), Athanasius (1392), and Gelasius (1412) ruled this diocese during its peace with Rome. In 1416 the Bishop of Przemysl embraced the schism. Elias (1422) was the first bishop who took the title Przemysl and Sambor. St. See of Sambor was founded in the thirteenth century, and shortly afterwards the two dioceses were united, although the double name was not used until assumed by Elias. Athanasius (1440-49) opposed the union of the Council of Florence. The succeeding bishops of Przemysl adhered to the schism, and retained schismatic for over a century.

In 1594 Bishop Michael Kopystynski (1591-1610) took up the idea of reunion with Rome and added his name to the declaration of union at the Synod of Brest. Later he withdrew it and was excommunicated by the Greek Catholic Metropolitan of Kiev, Michael Ragosa. His successor, Athanasius Krupetzki (1610-52), was a zealous Catholic bishop. Meanwhile the schismatics elected another bishop and drove out Athanasius; and for nearly a century there was a double line of Greek bishops, the Orthodox holding the see at Przemysl, and the Catholics holding it at Sambor. In 1668 the Orthodox coadjutor bishop, George Hoshovski, took up his residence at Sanok, and from that date the title of Bishop of Przemysl, Sambor, and Sanok was assumed, although no see was established at Sanok. The Catholic bishops were Procopius Chmelski (1652), Anthony Terletski (1662), and John Malechowski (1669).

The next Orthodox bishop was Innocent Vinnitski (1680-700), and during his administration the Catholic Bishop Krupetzki left his see and died, where he died in 1691. From the time of his consecration Bishop Innocent had announced his intention of uniting with the Holy See. He prepared his clergy for the union, and on 23 June, 1691, he renounced the schism and signed the act of union. Since then the Greek Diocese of Przemysl has always been Catholic. In 1694 the first Catholic diocesan synod of the Greek Catholic Church was held at Sambor, where the new situation of the Greek Catholic clergy was canonically established.

The bishops succeeding him were: George Vinnitski (1700-13), Jerome Ustritski (1715-46), Onuphrius Shumlanski (1746-92), Athanasius Szepticki (1762-79), Maximilian Ryolo (1780-94), and Anton Angelovich (1795-1806). The see remained vacant from 1808 until 1813, during the Napoleonic wars, but was administered by the Metropolitan of Lemberg, the well-known historian of the Greek Uniate, Michael Kostuchewsky. The succeeding bishops were: Leopoldus Levitski (1813-16), John Shnigurski (1818-47), Gregor Jacimovich (1848-59), Thomas Polanski (1860-99), John Stupinski (1872-90), and Julian Peleza (1891-96), the renowned author of the "History of the Union of the Ruthenian Church with Rome." The present bishop (111) is Constantine Chekhovitch.

The See of Przemysl was elevated to the dignity of a metropolis in 1863, with a suffragan see at Sanok, with 195 parishes. The diocese numbers 32,411 persons, 75,000 acres of land, and 50 schools.

**Andrew J. Shipman.**

**Psalms.**—The Psalter, or Book of Psalms, is the first book of the "Writings" (Kethubhim or Hagio-}
instrument; its Hebrew equivalent (from הָדָּם, "to trim") means "a poem of trimmed and measured form." The two words show that a psalm was a poem of set structure to be sung to the accompaniment of stringed instruments. The New Testament text uses the names παλμοι (Luke, xxv, 44), βιθήν παλμοι (Luke, xx, 42; Acts, i, 20), and δαβίδ (Heb., iv, 7).

C. The Vulgate follows the Greek text and translates psalmi, liber psalmorum. The Syriac Bible in like manner names the collection מזמרות.

II. CONTENTS.—The Book of Psalms contains 150 psalms, divided into five books, together with four doubtless of the titles of the psalms.

A. Number.—The printed Hebrew Bible lists 150 psalms. Fewer are given by some Massoretic MSS. The older Septuagint MSS. (Codd. Sinaiticus, Vaticanus, and Alexandrinus) give 151, but expressly state that the last psalm is not canonical. "This psalm was written by David with his own hand and is outside the number." These numbers differ in the Vulgate following the Septuagint and omitting Ps. cxii. The differences in the numerations of the Hebrew and Vulgate texts may be seen in the following scheme:

<table>
<thead>
<tr>
<th>Hebrew</th>
<th>Septuagint and Vulgate</th>
</tr>

<tr>
<td>xvi-xviii</td>
<td>xvi-xviii</td>
</tr>
</tbody>
</table>

In the course of this article, we shall follow the Hebrew numeration and bracket that of the Septuagint and Vulgate. Each number has its defects; neither is preferable to the other. The variance between Massorah and Septuagint texts in this numeration is likely enough due to a gradual neglect of the original poetic form of the Psalms; such neglect was occasionally by liturgical usage and carelessness of copyists. It is admitted by all that Ps. ix and x were originally a single acrostic poem; they have been wrongly separated by Massorah, rightly united by the Septuagint and Vulgate. On the other hand Ps. cxii-xvi is made up of two songs—verses 1-11 and 12-15. Ps. xiii-xliii (xli and xliii) are shown by identity of subject (yearning for the house of Jahweh), of metrical structure and of refrain (cf. Heb. xlii, 6, 12; xliii, 3), to be three strophes of one and the same psalm. The Hebrew text is correct in counting as Ps. cxvi (cxvi-cxv) is made up of two songs—verses cxvi-xviii. Later liturgical usage seem to have split these and not a few other poems. Zenner ("Die Chorgesänge im Buche der Psalmen," II, Freiburg im Br., 1896) ingeniously combines into what he deems were the original choral odes: Ps. i, ii, iii, iv; vii-xiii (vi-xi); ix-x; xx, xxi (xxi, xxii); xli-xlviii (xli-xlviii); lxxx-lxxvi (lxxx-lxxxvi); cxvi-cxv (cxvi-cxv). These latter, called "orphan psalms" by Jewish tradition, are thus distributed in the five books of the Psalter:

- Ps. i-xi, xii-xiii, xiv-xvi, xvii-xviii, xix-cxvi (cxvi-cxvii, cxvii-cxviii, cxviii-cxlix). Of these, Ps. x is broken into Ps. ix; Ps. xxxiii has a title in the Septuagint and Vulgate; and Ps. xxxiv has a title in the Vulgate.

B. Division.—The Psalter is divided into five books. Each book, save the last, ends with a doxology. These liturgical forms differ slightly. All agree that the doxologies at the end of the first three books have nothing to do with the original songs to which they have been appended. Some consider that the fourth doxology was always a part of Ps. cxi (cf. Kirkpatrick, "Psalms," IV and V, p. 634). We prefer, with Zinner-Wiesemann (op. cit., 76), to regard it as a doxology pure and simple. The fifth book has no need of an appended doxology. Ps. cl, whether composed as such or not, serves the purpose of a grand doxology which fittingly brings the whole Psalter to its close.

The five books of the Psalter are made up as follows:

- Ps. i-xi: i-xi (i-xi); doxology, Ps. xii, 14.
- Ps. xii-xlvii: xii-lxxii (xii-lxxii); doxology, Ps. lxxii, 18-20.
- Ps. lxxiii-lxxx: lxxiii-lxxxvii (lxxiii-lxxxvii); doxology, Ps. lxxxvii, 53.
- Ps. lxxxviii-cxc (lxxxviii-cxc); doxology, Ps. cxi, 48.
- Ps. cxi-cxc: cxi-cxx (cxi-cxx); doxology, Ps. cxxi, 45.

In the Massoretic text, the doxology is immediately followed by an ordinal adjective indicating the number of the succeeding book; not so in the Septuagint and Vulgate. This division of the Psalter into five parts belongs to early Jewish tradition. The Midrash on Ps. i tells us that David gave to the Jews five books of psalms to correspond to the five books of the Law given them by Moses. This tradition was accepted by the early Fathers. Hippolytus, in the doubtful fragment already referred to, calls the Psalter and its five books a second Pentateuch (ed. Lagarde, 193). St. Jerome defends the division in his important "Prologus Galeatus" (P. L., XXVIII, 553) and in Ep. cxi (P. L., XXXII, 11, 68). Writing to Marcella (P. L., XXXIII, 431), he says: "In quinque equidem volumina psalterium apud Hebræos divum censet... He, however, contradicts this statement in his letter to Sophronius (P. L., XXVIII, 1123): "Nos Hebræorum auctortatem sacuti et maxime apostolorum, qui semper in Novo Testamento psalmonmorum librum nominant, unum volumen asserimus."
one (Pss. xiii, lxvi, lxvi). Of these, eight Pss. xiii-xxi (xii-xvii) are “of the sons of Korah” (līhād qərā‘); Ps. 1 is “of Asaph”; Ps. 1-xxx are Davidic “of the Director” (līmedqədāh) and Ps. lxxix and lxxx of “of Solomon”. Ps. xiii (xii) is part of xii (xii); Ps. lxvi and lxvii (lxvi and lxvii are Davidic in the Septuagint and Vulgate.—Bk. III has one Davidic psalm, lxxvi (lxxvii): eleven “of Asaph” lxxix-lxxxii (lxxix-lxxxii); for the rest of the psalms of “of Korah”, lxxxiv, lxxxv, lxxxvi, lxxxvii, lxxxviii (lxxviii, lxxxviii, lxxxix, lxxxi, lxxv, lxxvi, lxxvii, lxxxviii) and one of “of Ethan”, lxxxix (lxxxviii). Ps. lxxxi is likewise assigned to Heman the Ezrahite.—Bk. IV has two Davidic psalms, ci and cii (c and cii), and one of Moses. Moreover, the Septuagint ascribes David to eight others: Pss. xlii, xliii, xlv, xlvii, xxiv, xxv, xxvi, xcv (xxviiii, xxviiii, xxviii, xxix, xxx). The remainder are anonymous.—Bk. V has twenty-seven anonymous psalms out of forty-four. Pss. cviii-cx, cvix, cvii, cviii, cvix, cvxii, cvxiii, cvxiii-cxiv (cvxiii-cxiv, cvxiii, cvxv, cvxvi, cvxviii, cvxix, cvxx, cvxxiv, cvxxviii, cvxxviii, cvxxix, cvxxx, cvxxx). The remaining are anonymous.—Bk. VI has twenty-seven anonymous psalms out of forty-four. Pss. cviii-cx, cvix, cvxxiv, cvxxv, cvxxvi, cvxxvii, cvxxviii, cvxxix, cvxxx. The remaining are anonymous.

(b) Ewald, Riehm and others suggest “a skilful artistic song”, from other uses of the cognate verb (cf. II Par., xxx, 22; Ps. xlvii, 7). Kirkpatrick thinks “a cunning psalm, a song to do. It is difficult to see that the Mākhîl is either more artistic or more cunning than the Mīzmūr. (c) Delitzsch and others interpret it as a “contemplative poem”; Briggs, “a meditation”. This interpretation is warranted by the usage of the cognate verb (cf. Is., xli, 20; Job, xxxvi, 27), and is the only one that suits all Mākhîl.

Tephillah (תפילה; Septuagint, προσευχή; Vulg., oratio; a prayer), the title to five psalms, xvi, lxxvi, xe, cii, cxii (lxxvi, lxxxi, lxxxi, cxii, cxlii). The same is true of the word used in the text to Bk. II (cf. Ps. lxxvi, 20). “The prayer of David when he was in Philistia” (Ps. xxv, “has been ended”). Here the Septuagint ἄλλοι (Vulg., laudes) points to a better reading, ἀλλαζειν (vulgar lat. “to change, alter”) point to a better reading, ἀλλαζειν (Vulg., “to change, alter”).

Tephillah (תפילה; Septuagint, προσευχή; Vulg., lausalia (a song of praise)), is the title only of Ps. cxlii (cxlv).

Mīzqām (מיכַּם; Septuagint, στέγηγάρια or εἰς στέγηγάρια; Vulg., tituli inscriptio or in tituli inscriptio), obscure term in the title of six psalms, xvi, lxxvi, lxxvi (lxvii, lxxvii, lxxviii), always joined to “of David”. Of the six psalms, three are for use on Holy Days, Rabbis derives this title from הָעָשָׁה, “golden”. The Mīzqāmim are golden songs, “articulate in form and choice in contents”.

Shipḥyôn (שִׁפְחְיָון; Septuagint merely φίλας; Vulg., psalmus; Aquila, ἀνάγομαι; Symmachus and Theodotion, ἐν τῇ ἐνέργῃ; St. Jerome, ἐνέργεια) occurs only in the title to Ps. vii. The root of the word means “to wander”, “to roam”, hence, according to Ewald, Delitsch and others, the title means a wild dithyrambic ode with a reeling, wandering rhythm.

(d) Titles indicating the musical setting of a psalm (a specially obscure set):—

Eight titles may indicate the melody of the psalm by citing the opening words of some well-known song:

Nēhāth (ניהָת; Septuagint and Theodotion, ἐν τῇ ἐνέργῃ; Aquila, ἀνάγομαι; Symmachus, ἐν ἐνέργεια; St. Jerome, super hereditatus; Vulg., pro ea qua hereditatem consecuitur) occurs only in Ps. vi. The ancient versions rightly derive the title from הָעָשָׁה, “golden”. Raskh (“Die Psalmen. 3rd ed. 1904, p. xxv”) thinks Nēhāth was the first word of some ancient song; most critics translate “with wind instruments” wrongly assuming that Nēhāth means flutes (נִיָּהֲשָׁת, cf. Is., xxx, 29).

Al-tāṣāḥēth (אתַּשאָת; Septuagint, ἀληθινός; Aquila, Symmachus, μάρτυς; except Ps. lxv, Symmachus, ἄλλος μάρτυς; St. Jerome, ut non disperdatur (David humiliet et simplicem); Vulg., ne disperdas or ne corrempas), in Ps. lvi-lxxvi, lxvi (lxxvi-lxxvii, lxxviii, meaning “destroy not”, may be the beginning of a vintage song referred to in Is., lxvi. St. Symmachus gives, in title to Ps. lvi, ἀληθινός μᾶς δισπεράας; and in this wise suggests that ἄλλος originally preceded ἄλλος. “Al-Muth-Labben (את מָעֲתָלֶבֶן; Septuagint, ἄλλα τῶν κυρίων τῶν ναῶν; Vulg., pro occulti filii, “concerning the secret sins of the son”; Aquila, ἀλλά τῶν κυρίων τῶν ναῶν, “of the youth of the son”; Theodotion, ἀλλά τῶν κυρίων τῶν ναῶν, “concerning the maturity of the son”) in Ps. ix, probably means “set to the tune ‘Death Whiteness’”.

Al-ayyadēh hasshahar (את עִיָּדָה חַשְׂחָר; Septuagint, αἰγόπουλον τῆς ἀναρχίας; Vulg., pro expectatione matutina, “for the morning offering”; Aquila, ἀληθινὸν τῆς ἀναρχίας, Symmachus, ἀληθινὸν τῆς βορείας τῆς ἀναρχίας, “the help of the morning”; St. Jerome, pro cervo matutino), in Ps. xxii, (xii, very rarely means “set to the tune ‘The Hind of the Morning’”.

'Al Shoshannim in Ps. xlv and lxix (lxvii and lxviii), Shushan-eduth in Ps. ix (lxix), Shoshannim-eduth in
Ps. lxx (lxxix) seem to refer to the opening of the same song, "Lilies" or "Lilies of testimony". The preposition is 'αι or 'ει. The Septuagint translates the consonants οἵτινες οἱ Δολούνομενοι; Vulg., 'pro quo consumebatur," for those who shall be changed."

'Αλ 'Εννανθ "ελέμ reõbõm, in Ps. vi. (iv) means "as at the dawn of the day." The same occurs in the vowels of Massorah, "set to 'The silent dove of them that are afar." The Septuagint renders 'οὕτως τοῦ λαοῦ τοῦ αἰῶνα 

Vulg., 'pro populo qui a sancta longe facit est," for the folk that are afar from the sanctuary." Baethgen (op. cit., p. xli) explains that the Septuagint understands Israel to be the dove; reads 'ελέμ for 'ελέμ, and interprets the word to mean god or sanctuary.

'Al Mahalath (Ps. lili), "Mahalah lemnoth (Ps. lxxii) is transliterated by the Septuagint 'Mahalath' by Vulg., "pro Mahalath." Aquila renders τε τέλις, "for the dance"; the same idea is conveyed by Symmachus, Theodotion, Quinta, and St. Jerome (pro choro). The word 'Al is proof that the following words indicate some well-known song to the melody of which Ps. lxi (lxxi) and lxxii are harmonies.

'Αλ-Άγγελιτών, in titles to Ps. vili, lxxii, lxxiv (vii, lxxi, lxxiii). The Septuagint and Symmachus, ὕπερ τῶν λαόων; Vulg., and St. Jerome, pro incertiis, "for the wine-presses." They read γλῶσσα, pl. of γλάσσα. The title may mean that these psalms were to be sung to the same melody. The Massoretic title may mean a Gittite instrument (Targ., "the harp brought by David from Gath," or a Gittite melody. Aquila and Theodotion follow the reading of Massorah and, in Ps. viii, translate the title 'ελέμ της γενεώτητος; yet this same reading is said by Bellarmine ("Explanatio in Psalmos", Paris, 1889, I, 43) to be meaningless.

One title probably means the kind of musical instrument to be used. 'Νεβγίδα (Νεβγίδα) Septuagint, άνιλοει, in Ps. iv, άνιλοεί elsewhere; Vulg., in cæmarumus; Symmachus, in cæmarumus; St. Thomas. The title 'ιπτάματος occurs in Ps. iv, vi, livi, lxxvi, lxxvi (iv, vi, lili, lxxvi, lxxv). The root of the word means "to play on stringed instruments" (I Kings, xvi, 16-18, 23). The title probably means that these psalms were to be accompanied in cantillation exclusively "with stringed instruments". Ps. lxi (lx) has 'Αλ Νεβγίδα in its title, and was perhaps to be sung with one stringed instrument only.

Two titles seem to refer to pitch. 'Αλ-'Αλάμαθ (Ps. xlvi), "set to maidens," i.e. to be sung with a soprano voice. Targ., "the voice of the dauntless." Symmachus, 'ελέμ τῶν ερωμάτων; Vulg., pro ocularis, "for the hidden"; Symmachus, 'ελέμ τῶν αἰπύρων, "for the everlasting"; Aquila, τε καταναγωγος; St. Jerome, pro juvenilibus, "for youth."

'Αλ-'Αχασμήνιτος (Ps. vii and xlii), "set to the eighth" Septuagint, κεφαλή τών ερωμάτων; Vulg., pro octava. It has been conjectured that "the eighth" means an octave lower, the lower or bass register, in contrast with the upper or soprano register. In I Par. xv, 20-21, Levites are assigned some "with psalteries set to 'Alamoth" (the soprano register); others, with harps set to 'Shemhithe" (the lower register).

(c) Titles indicating the liturgical use of a psalm: —'Ημμαθαλοθ, in title of Ps. cxx-cxxiv (cxxx-ciicxii); Septuagint, οἵτινες τῶν αμβατάρων; St. Jerome, canticum graduum, "the song of the steps". The word is used in Ex. xx, 26 to denote the steps going up from the women's to the men's court of the Temple plot. There were fifteen such steps. Some Jewish commentators and Fathers of the Church have taken it that, on each of the fifteen steps, one of these fifteen Gradual Psalms sung. It is a theory commonly held, in contrast with the content of these psalms; they are not temple-psalms. Another theory, proposed by Gesenius, Delitzsch, and others, refers the "steps" to the stair-like parallelism of the Gradual Psalms. This stair-like parallelism is not found in all the Gradual Psalms; nor is it distinctive of any of them. A third theory is the most probable. Aquila and Symmachus read εἰς τὰς ἀμβατάρια, "for the going up"; Theodotion has ἐμαυτὸν τὰς ἀμβατάρια. These are a Pilgrim Psalter, a collection of pilgrim-songs, of songs of those going up to Jerusalem for the festival of King Jehoshaphat. The pilgrims went up singing (xxx, 29). The psalms in question would be well suited for pilgrim-song. The phrase "to go up" to Jerusalem (ἐμαυτόν) seems to refer specially to the pilgrim going-up (Mark, x, 33; Luke, x, 46; John, xii, 1). This theory is now commonly received. A less likely explanation is that the Gradual Psalms were sung by those "going up" from the Babylonian exile (I Esd., vii, 9).

Other liturgical titles are: "For the thank-offering," in Ps. c (xxi); "To bring to remembrance," in Ps. xxxviii and lxx (xxxvii and lix); "To teach," in Ps. xi (xxxix); "For the last day or the Feast of Tabernacles," in the Septuagint of Ps. xxi (xxviii), οὕτως σημεῖον, Vulg., in conscriptione jam postassium, xvi (xvii), i.e. entitled "A Song at the Dedication of the House." The psalm may have been used at the Feast of the Dedication of the Temple, the Encenca (John, x, 22). This feast was instituted by Judas Maccabeus (I Macc. iv, 59) to commemorate the rededication of the temple after its desecration by Antiochus. Its title shows us that Ps. xcvii (xci) was to be sung on the Sabbath. The Septuagint entitles Ps. xxiv (xxii) τὰς μακαμάς, "for the first day of the week"; Ps. xcviii (xlii) διεστρεφομεν, "for the second day of the week"; Ps. xxiv (xci), τετελεῖται οὐκέτας, "for the fourth day of the week"; Ps. xcii (xcii) εἰς τὴν ἡμέραν τοῦ καταξαθόλου, "for the day before the Sabbath". The Old Latin entitles Ps. lxxi (lxxx) quinta sabbati, "the fifth day of the week". The Maima (Taimid, VII, 12) assigns the same psalms for the daily Temple service and tells us that Ps. lxxx (lxxii) was for the morning sacrifice of the third day (cf. James Wm. Thirlst, "The Titles of the Psalms, Their Nature and Meaning Explained", New York, 1905).

(2) Value of the Titles: Many of the critics have branded these titles as spurious and rejected them as not pertaining to Holy Walt; such critics are de Wette, Cheyne, Olshausen, and Vogel. More recent critical Protestant scholars, such as Briggs, Hain-Loch, and Fink, set them apart psalms eu cae tunc agentur, et partim secundum caeque congeriantur. So comprehensive a statement of the case can hardly be made for the titles; most modern scholars give to the titles a more varied history. Almost all, however, are at one in considering as canonical those at times obscured direct psalms. In this unanimity Catholics carry out Jewish tradition. Pre-Massoretic tradition preserved the titles as Scripture, but lost much of the liturgical and musical meaning, very likely because of changes in the liturgical cantillation of the Psalter. Massoretic tradition has kept carefully whatever of the titles it received. It makes the titles to be part of Sacred Scripture, preserving their consonants, vowel-points, and accents with the very same care which is given to the rest of the Jewish Canon. The Fathers give to the titles that respect
and authority which they give to the rest of Scripture. True, the obscurity of the titles often leads the Fathers to mystical and highly fanciful interpretations. St. John Chrysostom ("De Compunctione", II, 11, 415) interprets τὴν τῶν δισεκατοτετραγωνίων τὸν δισεκατοτετραγωνίων τὴν τῆς στρώσεως, "for the eighth day", "the day of rest", "the day of eternity". St. Ambrose (In Lucam, V, 6) sees in this title the same mystical number which he notes in the Eight Beatiudes of St. Matthew, in the eighth day as a fulfilment of our hope, and in eight as a sum of all virtues: "pro octava eminuit inscribuntur psalmi". In this matter of mystical interpretations of the titles, St. Augustine is in advance of the generally literal and matter-of-fact Sts. Ambrose and John Chrysostom. Yet when treating the worth and the genuineness of the titles, no Father is more decided and pointed than is the great Bishop of Hippo. To him titles are inspired Scripture. Commenting on the title to Ps. lii, "Of David, when Nathan the Prophet came to him, what time he had gone into Bethabae", St. Augustine (P. L., XXXVI, 586) says it is as inspired as is the story of David's fall, told in the Second Book of Kings (xi, 1-6); "Utraque Scriptura canonica est, utraque sine ullis dubiis et ambiguitate Christianis fidei adhibenda est". Some recent Catholic scholars who are quoted in this matter are: Conly, "Specialis Introductio in Libros V. T."; II, 85; Zechokke, "Hist. Sacr. V. T.", 206; Thalhofer, "Erklärung der Psalmen", 7th ed., 1904, 8; Patrizi, "Cento Salmi", Rome, 1875, 32; Danio, "Historia V. T.", 276; Hoberg, "Die Psalmen der Vulgate", 1892, p. xii. Only a very few Catholic scholars have denied that the titles are an integral part of Holy Writ. Gignot, in "Special Introduction to the Old Testament" (New York, 1906), II, 75, cites with approval this denial by Lestrange, "Le Livre des Psaumes" (Paris, 1883), p. 1. Barry, in "Tradition of Scripture" (New York, 1906), 102, says: "It is plausible to maintain that inscriptions to which the Massorah, LXX, and Vulgate bear witness cannot be rejected. But to look on them, under all circumstances, as portions of Scripture would be to strain the Trinitarian Decrees". Because of the danger that, without grave reason, these time-honoured parts of the Bible may be rated as extra-canonical, the Biblical Commission has recently (1 May, 1910) laid special stress on the vital importance of the Foreword. The Foreword is understood as not related to the titles of the Psalms, at least from ancient Jewish tradition, and that, on this account, they may not be called into doubt, unless there be some serious reason against their genuineness. Indeed, the very disagreements which we have noted lead us to the same conclusion. By the time the Septuagint was written, the titles must have been exceedingly old; for the tradition of their vocalisation was already very much obscured.

III. AUTHORS OF THE PSALMS.—A. Witness of Tradition. (1) Jewish tradition is uncertain as to the authors of the Psalms. Baba Bathra (14 f) mentions ten; Pesachim (10) attributes all the Psalms to David.

(2) Christian tradition is alike uncertain. St. Ambrose, "In Ps. xlii and xxvii" (P. L., XIV, 923), mentions nine. St. Jerome, in the foreword to Book I of his "De Civitate Dei", XVII, 14 (P. L., XII, 547), thinks that all the Psalms are Davidic; and the names of Aggeus and Zacharias were superceded by the poet in prophetic spirit. St. Philastrius, Hier. In Ps. xlii, XLI, ed. Boeth., the Psalms of David are probably cited as heretical. On the other hand, plurality of authorship was defended by Origen, "In Ps." (P. G., XII, 1068); St. Hilary, "In Ps. Proem. 2" (P. L., IX, 233); Eusebius, "In Ps. Proem. in Ps. 41, 72" (P. G., XXII, 74, 368); and many others. St. Jerome, "Ad Cyprianum", Epist. 140, 4 (P. L., XLII, 1169), says that "err who deem all the psalms are David's and not the work of those whose names are superseceded".

(3) This disagreement, in the matter of authorship of the Psalms, is carried from the Fathers to the theologians. Davidic authorship is defended by St. Thomas, the converted Jew Archbishop Paul of Burgos, Bellarmine, Salmeron, Sa, Mariana; multiple authorship is defended by Nicholas of Lyra, Cajetan, Sixtus Senensis, Bonfretre, and Menochio.

(4) The Church has come to no decision in this matter. The Council of Trent (Session IV, 8 April, 1546), in its decree on Sacred Scripture, includes "Psalterium Davidicum 150 Psalmonium" among the Canonical Books. This phrase does not define Davidic authorship any more than the number 150, but only designates the book which is defined to be canonical (cf. Pallavicino, "Istoria del Concilio di Trento", 1, VI, §91, Naples, 1853, 1, 376). In the preliminary sola, fifteen Fathers were for the name "Psalms David"; six for "Psalterium Davidicum"; nine for "Libri Psalmorum"; sixteen for the name adopted, "Psalterium Davidicum 150 Psalmorum"; and two had no concern which of these names was chosen (cf. Theiner, "Acta Authentica Concilii Tridentini", I, 72 sqq.). From the various sola it is clear that the Council had no intention whatever of defining Davidic authorship.

(5) The recent Decree of the Biblical Commission (1 May, 1910) decides the following points:

(a) Neither the wording of the decrees of the council nor the opinions of certain Fathers have such weight as to determine that David is sole author of the whole Psalm.

(b) It cannot be prudently denied that David is the chief author of the songs of the Psalter.

(c) Especially can it not be denied that David is the author of those psalms which, either in the Old or in the New Testament, are clearly cited under the name of David, for instance ii, xvi, xxviii, xxxii, bxx, cx (ii, xvi, xxvii, bxvii, cix).

B. Witness of Old Testament. In the above decision the Biblical Commission has followed not only Jewish and Christian tradition, but Jewish and Christian Scripture as well. The Old Testament witness to the authorship of the Psalms is chiefly the titles. These seem to attribute various psalms, especially of the Psalter, to David, the sons of Korah, Solomon, Moses, and others.

(1) David:—The titles of seventy-three psalms in the Massoretic Text and of many more in the Septuagint seem to single out David as author: cf. Ps. iii. (ili-ix), i.e. all of Bk. I save only x and xxxiil; Ps. li-lix (l-ix), except bxi and bxvi, in Bk. II; Ps. lxxv (lxxv) of Bk. III; Ps. citii (ciii) in Bk. IV; Ps. cxvii-cx, cxxii, cxxxii, cxxxii, cxxxv-cxliv of Bk. V. The Hebrew title is "דוע". It is now generally held that, in this Hebrew word, the preposition l has the force of a genitive, and that the Septuagint reads λαυσ "of David", is a better translation than the Vulgate ἢς ὄντως, "unto David himself". Does this preposition mean authorship? Not in every title; else both David and the Director are the authors of Ps. xxvii (civ) and all the other psalms, the Director, are joint authors of the psalms attributed to them. In the case of such composite titles as of the Director, a psalm of David" (Ps. xci), or of the Director, of the sons of Korah, a psalm" (Ps. civii), then probably all the elements of a title or collection of titles or collections of various collections of psalms—the collections entitled "David", "the Director", "the sons of Korah".
Just as the New Testament, the Council of Trent, and many Fathers of the Church speak of "David", "the Psalter of David", "the Psalms of David", not in truth, because all the psalms are David's, but because he was the psalmist par excellence, so the titles of many psalms assign them not so much to their authors as to their collectors or to the chief author of the collection to which they pertain. On the other hand, some of the longer titles go to show that "of David" may mean authorship. Take an instance: "Of the Director, to the tune 'Destroy not', of David, a chosen piece (Mikhālam), when he fled from the face of Saul into the cave" (Ps. lvii). The historical occasion of the Davidean composition of the song, the lyric quality of the psalm, its inclusion in the early collection "of David" and later in the Director's hymn-book, the tune to which the psalm was either written by David or set by the Director—all these things seem to be indicated by the very composite title under consideration. Of a sort with the Davideic titles is the ending subscribed to the first two books of the Psalms: "Amen, Amen; ended are the praises of David, son of Yishai" (Ps. lxxii, 20). This subscription is more ancient than the Septuagint; it would be altogether out of place if David or David's chief author of the psalmist of the two books whereto it is appended.

Further Old Testament evidence of Davideic authorship of the Psalms, as suggested by the Biblical Commission's recent decree, are David's natural poetic talent, shown in his songs and dirges of II Kings and I Par, together with the fact that it was he who instituted the solemn levitical cantillation of psalms in the presence of the Ark of the Covenant (I Par., xvi, xxii–xxv). The songs and dirges attributed to David are significantly alike to the Davideic psalms in spirit and style and wording. Let us examine the opening lines of II Kings, xxii:—

"And David spoke to Jahweh the words of this song in the day that Jahweh saved him from the grasp of his foes and out of the hands of Saul, and he said:

2. Jahweh is my Cliff, my Fortresses, my Way of Escape,
3. My God, my Rock to Whom I betake me,
4. Shouting praise, I cry to Jahweh,
5. And from my foe I get salvation."

This undoubtedly Davideic song it was well to compare, part for part, with Ps. xviii (xvii). We shall cite only the title and opening lines of this Davideic psalm: "The Lord is my Rock, my Fortresses, my Way of Escape, my God, my Rock to Whom I betake me, my Shield, the Horn of my Salvation, my Tower! Shouting praise, I cry to Jahweh, and from my foe I get salvation!"

The two songs are clearly identical, the slight differences being probably due in the main to different liturgical reductions of the Psalter. In the end the writer of II Kings gives "the last words of David" (xxiii, 1)—to wit, a short psalm in the Davideic style wherein David speaks of himself as "Israel's sweet singer" (cf. Ps. lxxvii, 2). In like manner the Chronicler (I Par., xvi, 8–36) quotes as Davideic a song made up of Ps. cv, 1–13, Ps. cxvi, and a small portion of Ps. cvi. Finally, the Prophet Amos addresses the Samaritans: "Ye that love pleasure, all ye that feed on curds, ye that have thought themselves to have instruments of music like David" (vi, 5). The poetic power of David stands out as a characteristic of the Shepherd King. His elegiac plaints at the death of Saul and Jonathan (II Kings, i, 19–27) reveal some power, but not that of the Davideic psalms. The above reasons for Davideic authorship must be supplemented by the parallel late reduction of II Kings, 21–24 and upon the discrepancies between the passages we have paralleled. The question of late reduction of the Davideic songs in II Kings is not within our scope; nor does such late reduction destroy the force of our appeal to the Old Testament, since that appeal is to the Word of God. In regard to the discrepancies, we have already said that they are explainable by the admission that our Psalter is the result of various liturgical reductions, and does not present all the psalms in the precise form in which they were committed to the final writer.

(2) Asaph: Asaph is accredited, by the titles, with twelve psalms, l, lxxiii–lxxiv (xlix, lxxi–lxxii). These psalms are all national in character and pertain to widely-separated periods of Jewish history. Ps. lxxiii (lxxii), although assigned by Briggs ("Psalms", New York, 1906, p. lvii) to the early Persian period, seems to have been written at the time of the havoc wrought by the Assyrian invasion of Tiglath-pileser III in 737 b. c. Ps. lxxiv (lxxiii) was probably written, as Briggs surmises, during the Babylonian Exile (after 586 B.C.). Asaph was a Levite, the son of Barachias (I Par., vi, 39), and one of the three chiefs of the Levitical choir (I Par., xv, 17). The "sons of Asaph" were set aside "to prophesy with harps and with psalteries and with cymbals" (I Par., xxv, 1). It is probable that their original writer or family composed the psalms which later were collected into an Asaph psalter. The features of these Asaph psalms are uniform: frequent allusions to the history of Israel with a didactic purpose; sublimity and vehemence of style; vivid description; an exalted conception of the deity.

(3) The Sons of Korah:—The Sons of Korah are named in the titles of eleven psalms—xii–xli, lxxiv, lxxvi, lxxvii, lxxxiii (xliii–xliv, lxxiii, lxxiv, lxxvi, lxxvii). The Korahim were a family of temple singers (I Par., xx, 19). It can scarcely be that each psalm of this group was jointly composed by all the sons of Korah; each was rather composed by some member of the guild of Korah; or, perhaps, all were gathered from the various sources into one liturgical hymnal by the guild of the sons of Korah. At all events, there is a oneness of style to these hymns which is indicative of oneness of Levitical spirit. The features of the Korahite psalms are: a great love for the Holy City; a yearning for the public worship of Israel; a supreme trust in Jahweh; the whole is simple, elegant, well-balanced. From their Messianic ideas and historical allusions, these psalms seem to have been composed between the days of Issias and the return from exile.

(4) Moses:—Moses is in the title of Ps. xc (lxxix). St. Augustine (P. L., XXXVII, 1141) does not assign Mosaic authorship; St. Jerome (P. L., XXII, 1167) does. The author imitates the songs of Moses in Deut., xxxii and xxxiii; this imitation may be the reason of the title.

(5) Solomon:—Solomon is in the titles to Ps. lxxvi and lxxv (lxxi and lxxvi), probably for a similar reason.

(6) Ethan:—Ethan, in the title of Ps. lxxv (lxxxvii), should probably be Ithuh. The Psalter of Ithuh, or Ye'ud, contained also Ps. xxxix, lxxxv (lxxv), lxxxvi (lxxvi), which date without the shadow of a doubt. When the Pharisaics said that the Christ was the Son of David, Jesus put them the question: "How then doth David in spirit call him Lord, saying:
The Lord said to my Lord" (cf. Matt., xxii, 43-45; Mark, xii, 36-37; Luke, xx, 42-44; Ps. cx, 1). There can be here no question of the name of a collection "of the Psalms," or the prophet's collection of psalms when St. Peter, on the first Pentecost in Jerusalem, says: "For David ascended not into heaven; but he himself said: The Lord said to my Lord etc." (Acts, ii, 34). Davideic authorship is meant by Peter, when he uses Ps. lxxi (lxvii), 26, cix (cxi), 8, and ii, 1-2 as "from the mouth of David" (Acts, i, 16; iv, 25). And when the chief Apostle has quoted Ps. xvi (xv), 8-11, as the words of David, he explains how these words were intended by the dead patriarch as a prophecy of centuries to come (Acts, ii, 25-32). St. Paul's testimony is conclusive, when he (Rom., xi, 1, 9) assigns to David parts of Ps. xxxii, xxxv, and lxix (xxxii, xxxvi, lxviii). A non-Catholic might object that St. Paul refers to a collection called "David," especially as such a collection seems clearly meant by "in David," &c. &c. of Heb., iv, 7. We answer, that this is an evasion: had St. Paul meant a collection, he would have dictated to David in the letter to the Romans.

D. The Critics incline to do away with all question of Davideic authorship. Briggs says: "It is evident from the internal characteristics of these psalms, with a few possible exceptions, that David could not have written them" (Psalms, p. xxii). Ewald allows that this internal evidence shows David to have written Ps. iii, iv, vii, xi, xv, xvii, first part of xix, xxiv, xxxii, xxxvi, c (iii, iv, vi, vii, xi, xiv, xv, xxii, xxvii, xxxii, xxxvi, c). IV. CANONICITY.—A. The Christian Canon of the Psalms presents no difficulty; all Christians admit into their canon the 150 psalms of the Canon of Trent; all reject Ps. c cli of the Septuagint, probably a Machabean addition to the canon.

B. The Jewish Canon presents a vexing problem. How has the Psalter been evolved? The traditional Jewish opinion, generally defended by Catholic scholars, is that not only the Jewish Canon of the Psalms but the entire Palestinian Canon of the Old Testament was practically closed during the time of Edras (see Canon). This traditional opinion is probable; for the arguments in its favour, cf. Cornely, "Introductio Generalis in N. T. Libros," I (Paris, 1848, 1852).

(1) The Critical View:—These arguments are not all admitted by the critics. Says Driver: "For the opinion that the Canon of the Old Testament was closed by Ezra, or his associates, there is no foundation in ancient author, and no trace in the "Introduction" to the "Liber meeting of the Old Testament," New York, 1892, p. x). In regard to the Psalms Wellhausen says: "Since the Psalter is the hymn-book of the congregation of the Second Temple, the question is not whether it contains any post-exilic psalms, but whether it contains any pre-exilic psalms." (Bleek's "Introduction," ed. 1876, 1877). Hitzig ("Begriff der Kritik," 1831) deems that Books III-V are entirely Machabean (186-185 B. C.). Olschhausen ("Die Psalmen," 1853) brings some of these psalms down to the time of his own, and the reign of John Hyrcanus (135-105 B. C.). Duhm ("Die Psalmen," 1899, p. xxii) allows very few pre-Machabean psalms, and assigns Ps. ii, xx, xxxi, lxxi, lxxii, lxxxvii, lxxxvii (b), cxxxii (i), lxxiv, lxxv, lxxvi, lxxxvi (b), lxxxvii (c) to the reigns of Aristeus I (105-100 B. C.) and his brother Alexander Jannæus (104-79 B. C.); so that the Canon of the Psalter was not closed till 70 B. C. (p. xxiii). Such extreme views are not due to arguments of weight. So long as one refuses to accept the force of the traditional argument in favor of the Palestinian Canon, one must at least admit that the Jewish Canon of the Psalms was undoubtedly closed before the date of the Septuagint translation. This date is 285 B. C., if we accept the authority of the Letter of Aristeas (see Septuagint); or, at the very latest 132 B. C., the period at which Ben Sirach wrote, in the prologue to Ecclesiasticus, that the law itself and the prophet's intentions are "the work of the Hagiographers, of which were the Psalms had been translated into Greek." This is the opinion of Briggs (p. xii), who sets the final redaction of the Psalter in the middle of the second century B. C.

The gradual evolution of the Book of Psalms is now quite generally taken as the current of course. Their application of the principles of higher criticism does not result in any uniformity of opinion in regard to the various strata of the Psalter. We shall present these strata as they are indicated by Prof. Briggs, preserving the least rash of those who have lately published what are called "critical editions" of the Psalms. His method of criticism is the usual one; by a rather subjective standard of internal evidence, he carves up some psalms, patches others, throws out portions of others, and "edits" all. He assigns seven psalms to the early Hebrew monarchy; seven to the middle monarchy; thirteen to the late monarchy; thirteen to the time of exile; thirty-three to the early Persian period; sixteen to the middle Persian period (the time of Nehemiah); eleven to the late Persian period; three to the "general or Jewish psalm" (Ps. xcvii, xcvi-c) together with eight others to the early Greek period (beginning with Alexander's conquest); forty-two to the late Greek period, and to the Machabean period Ps. xxxii, cii (b), cix (b), cxxvi, cxxix (c), cxxix (c), cxxix (c), cxxix (c), cxxix (c).

Of these psalms and portions of psalms, according to Briggs, thirty-one are "psalms apart," that is never incorporated into a Psalter before the present canonical redaction was issued. The rest were edited in two or more of the twelve Psalters which mark the evolution of the Book of Psalms. The earliest collection of psalms was made up of seven Mikhâhkim, "golden pieces," of the middle Persian period. In the late Persian period thirteen Maskim were put together as a collection of meditations. At the same time, seventy-two psalms were edited, as a prayer-book for use in the synagogue, under the name of "David," of these thirteen have in their titles references to David's life, and are thought to have formed a previous collection of psalms. In the early Greek period in Palestine, eleven psalms were gathered into the minor psalter entitled the "Sons of Korah."

About the same time in Babylonia, twelve psalms were made into a Psalter entitled "Asaph." Not long thereafter, in the same period, the exilic Ps. lxxviii-lxxxii, together with two orphan Ps., lxvi and lxvii, were edited along with selections from "David," "Sons of Korah," and "Asaph," for public worship of song in the synagogue; the name of this psalter was "Mîmûmân." A major psalter, the Elohist, Ps. xxii-lxxxii (xii-lxxxii), is supposed to have been made up, in Babylonia, during the middle Greek period, of selections from "David," "Korâh," "Asaph," and "Mîmûmân," the name is due to the use of Elohim and avoids use of Jahveh in the other psalms. About the same time, in Palestine, a prayer-book was made up of 54 from "Mîmûmân," 16 psalms from "David," 4 from "Korâh," and 1 from "Asaph," this major psalter bore the name of the "Director." The Halles, or Alleluiaic songs of praise, were made up into a psalter for temple service in the Greek period. These psalms have halleluyah (Praise ye Yah) either at the beginning (Ps. cxxi, cxxi), or at the close (Ps. civ, cxv, cxxvi), or at both the beginning and the close (Ps. cxvii-cxvii). The Septuagint gives Αλλαλουα also at the beginning of Ps. cv, cxxvi, cxxv, cxxvi, cxxvi, cxxv, cxxvi, cxxvi. Briggs includes as Halles all these except cxvii and cxv, "the former being a triumphal Machabean song,"
the latter the great alphabetic praise of the law". A like minor psalter of the Greek period was the "Pilgrim Psalter" (Ps. cxx—xxxiv), a collection of "Songs of Pilgrimage" the "Songs of Ascents", or "Gradual Psalms", which the pilgrims chanted while going up to Jerusalem for the three great feasts.

As a sequel to what we have already said, the application of divise criticism to the Psalter does not meet the approval of Catholic exegetes. Successive redaction of the Psalms they readily admit, provided the doctrine of the inspiration of Holy Writ be not impugned. The doctrine of inspiration has regard to the Psalms as they now stand in the canon, and does not impede a Catholic from admitting various redactions of the Psalter previous to our present redaction; in fact, even uninspired liturgical redaction of the inspired Psalms would not be contrary to what the Church teaches in the matter of inspiration, so long as the redactor had preserved intact and absolutely unaltered the inspired meaning of the Sacred Text. The Biblical Commission (1 May, 1910) will not allow that our present redaction contains collections of chabeban psalms, Delitsech, Peromwe, Renan, and many other critical scholars. "Had so many psalms dated from this age, it is difficult, not to think that they would have borne more prominent marks of it in their diction and style. (Driver's "Introduction to the Literature of the Old Testament", New York, 1896, vii, li, lixlv, lixvii, lixviii, which Delitsech and Peromwe on historical grounds admit to be Machabean, occasion to Davison (Hastings, "Dict. of the Bible", IV, 152) "unequatable difficulties arising from their place in the second and third books". There are no certain proofs that these or any psalms are Machabean. The Biblical Commission does not, on this account, deny any of the psalms are Machabean; it leaves that question still open. In the matter of redaction, it allows that "for liturgical or musical or other unknown reasons, psalms may have been split up or joined together" in course of time; and that "there are other psalms, like the Misere mei, Deus [Ps. ii], which, in order that they might be better fitted to the historical circumstances and the solemnities of the Jewish people, were slightly re-edited and changed by the omission or addition of a verse or two, so long as the inspiration of the entire text remains intact". That is the important thing; the doctrine of the inspiration of Psalm MSS. as they now stand, we will not suffer. Few would ask what is the doctrine of the inspiration of the entire text kept intact? Were the previous redactors inspired? Nothing has been determined by any authority of the Church in these matters. We incline to the opinion that God inspired the meanings of the Psalms as originally written, and in like manner inspired every redactor who gathered and edited these songs of Israel until the last inspired redactor set them together in their present form.

VI. TEXT. The Psalms were originally written in Hebrew verses as much as we know only coins and in a few lapidary inscriptions; the text has come down to us in square Aramaic letters. Only the versions give us any idea of the pre-Massoretic text. Thus far no pre-Massoretic MS. of the Psalms has been discovered. The Massoretic text has been preserved in more than 3400 MSS., of which none is earlier than the ninth century and only nine or ten earlier than the twelfth (see MANUSCRIPTE OF THE BIBLE). These Massoretic MSS. represent two slightly variant families of one tradition—the texts of Ben Asher and those of the word "paradigm". Their variations have been traced in the interpretation of the Psalms. The study of the rhythmic structure of the Psalms, together with the variations between Massorah and the versions, have made it clear that our Hebrew text is far from perfect, and that its points are often wrong. The efforts of critics to perfect the text are at times due to no more than a shrewd surmise. The metrical mould is chosen; then the psalm is forcibly adapted to it. It were better to leave the text in its imperfect condition than to render it worse by guess-work. The decree of the Biblical Commission is aimed at the feuds and bickerings in the Massoretic Text are an occasion, though no excuse, for countless conjectural emendations, at times wild and fanciful, which nowadays pass current as critical exegesis of the Psalms.

VI. VERSIONS.—A. Greek. The chief version of the Psalms is the Septuagint. It is preserved to us in Cod. U. Brit. Mus. Pap. 37, seventh century, containing Ps. x—xxviii; Leipzig Pap., fourth century, containing Ps. xxix—lv; Cod. Sinaicicus, fourth century, complete; B, Cod. Vaticanus, fourth century, complete, except Ps. cv, 27—xxxvii, 6; A, Cod. Alexandrinus, fifth century, complete except Ps. xii, 19—lxxvii; 1, Cod. Bodleianus, ninth century, complete; and in many other later MSS. The Septuagint Version is of great value in the study of the Psalter. It provides a large number of readings which are clearly preferable to those of the Massoretes. It brings us back to a text at least of the second century B. C. In spite of a seeming servility to words and to Hebrew constructions, a servility that probably existed in the Alexandrian Greek of the Jews of the period 300—the end of the Septuagint shows an excellent knowledge of Hebrew, and fears not to depart from the letter and to give the meaning of his original. The second-century A. D. Greek versions of Aquila, Symmachus, and Theodotion are extant in only a few fragments; these fragments are witnesses to a text pretty much the same as our Massoretic.

B. Latin. About the middle of the second century the Septuagint Psalter was translated into Latin. Of this Old Latin, or Itala, Version we have only a few MSS., and the citations by the early Latin Fathers. At the request of Pope St. Damasus I, A. D. 383, St. Jerome revised the Itala and brought it back closer to the Septuagint. His revision was soon so distorted that he complained, "plus antiquum erorem quam novam emendationem valere" (p. L, XXIX, 117). This is St. Jerome's "Roman Psalter"; it is used in the recitation of the Office in St. Peter's, Rome, and in the Missal. The corruption of his first translation led St. Jerome to undertake an entirely new translation of the Hexapla edition of the Septuagint. He worked with the Hebrew text, and with the Greek text before A. D. 392. He indicated by setsektics the parts of the Hebrew text which had been omitted by the Septuagint and were borrowed by him from Theodotion; he marked with the obelus (+) the parts of the Septuagint which were not in the Hebrew. These critical marks gave in course of time to be utterly neglected. This translation is the "Gallican Psalter"; it is part of the Vulgate. A third Latin translation of the Psalms, made from the Hebrew Text, with Origens Hexapla and the other ancient versions in the_new, was completed by St. Jerome in the fourth century at Bethlehem. This version is of great worth in the study of the Psalter. Dr. Briggs says: "Where it differs from H. and G., its evidence is especially valuable as giving the opinion of the best Biblical scholar of ancient times as to the original text, based on the use of a wealth of critical material vastly greater than that in the possession of any other critic, earlier or later" (p. xxxii).

C. For other translations, see VERSIONS OF THE BIBLE; RHYMED BIBLES.
with line, couplet with couplet, strophe with antistroph, in the lyric building up of the poetic picture or impression or exhortation. Is there metre in the Psalms? The Jews of the first century A.D. thought so. Flavius Josephus speaks of the hexameters of Moses (Antiq., II, xvi, 4; IV, viii, 44) and the trimeters and tetrameters and manifold meters of the odes and hymns of David (Antiq., XI, xii, 3). Pliny says that Moses had learned the "theory of rhythm and harmony" (De vita Moisii, I, 5). Early Christian writers voice the same opinion. Origen (d. 254) says the Psalms are in trimeters and tetrameters (In Ps. cxvii; cf. Card. Pitra, "Antiquitates ecclesiae", I, 341). Jews (d. 55) in "De proprieitate evangeltiae", XI, 5 (P. G. XXII, 552), speaks of the same metrists of David. St. Jerome (420), in "Prefat. ad Eusebii chronicon" (P.L., XXVII, 36), finds iambics, Alcaics, and Sapphics in the Psalter; and, writing to Paula (P. L., XXII, 442) he explains that the acrostic Ps. cx and cxii (cxviii and cxlv) are iambic tetrameters. Modern exegetes do not agree in this matter. For a time many would admit no metre at all in the Psalms, or at best, no metre of the sort of the "rubricable" (s. v.) writes: "though metre is not discernible in the Psalms, it does not follow that rhythm is excluded". This rhythm, however, "defies analysis and systematization". Driver ("Intro. to Lit. of O. T.", New York, 1892, 339) admits in Hebrew poetry "no metre in the strict sense of the term". Exegetes who find metre in the Psalms are of four schools, according as they explain Hebrew metre by quantity, by the number of syllables, by accent, or by both quantity and accent.

(1) Defenders of the Latin and Greek metrical standard of quantity applied to Hebrew poetry are Francis Gomarus, in "Davidis lyra", II (Lyons, 1837), 313; Mark Meibom, in "Davidis psalmi X." (Amsterdam, 1690) and in two other works, who claims to have learned his system of Hebrew metre by Divine revelation; William Jones, "Poesiae Asiaticae commentariorum" (Leipzig, 1777), who tried to force Hebrew words into Arabic metres.

(2) The number of syllables was taken as the standard of metre by Hare, "Psalmorum liber in versiculos metrice divisus" (London, 1736); he made all feet disyllabic, the metre trochaic in a line of an even number of syllables, iambic in a line of an odd number of syllables. The Massoretic system was rejected, the Syriac put in its stead. This opinion found chief defence in the writings of the learned Innsbruck Professor Gams (d. 1815) and the sister house. In Ps. cxviii (of 1815), "Supplementum ad Metr. bibl." (Innsbruck), "Carmina veterum testamenti metricon" (1882), "Dichtungen der Hebräer" (1882-84).

(3) Accent is the determining principle of Hebrew metre according to C. A. Anton, "Conjectura de metro Hebræorum" (Leipzig, 1770); "Vindiciae disput. de metr. Heb." (Leipzig, 1771); "Specimen editionis noviTestamenti hebræici" (Frankfort, 1806), I; "Versuch einer richtigen Theorie von der biblischen Verkunst" (1775); Ernst Meier, "Die Form der hebräischen Poesie nachgewiesen" (Tübingen, 1883);

Julius Ley, "Die Metrischen Formen der hebräischen Poesie" (Leipzig, 1858); "Über die Alliteration im hebräischen" in "Zeitschr. für kathol. Theol.", 1891, 690; 1895, 373; 1896, 108, 369, 376, 571, 754; Houthuijs, S.J., in "Zeitschr. für kathol. Theol.", 1890, 235, 278, 472, 478, 488, 749; 1899, 167; Dr. C. A. Briggs, in "The Book of Psalms", in "International Critical Commentary" (New York, 1906), p. xxxix, and in many other publications therein enumerated; Francis Brown, "Measure and Metre in Hebrew Poetry" (1913), "Proverbs" in "Internat. Crit. Comm." (1899); W. R. Harper, "Amoe and Hoses" in "Internat. Crit. Comm." (1905); Cheyne, "Psalms" (New York), 1892; Duhm, "Die Psalmen" (Freiburg im Br., 1897), p. xxxix. This theory is the best working hypothesis together with the all-essential principle of parallelism; it does far less violence to the Massoretic Text than either of the foregoing theories. It does not force the Massoretic syllables into grooves that are Latin, Greek, Arabic, or Aramaic. It is independent of the accent; it does not consider one thing, a fixed and harmonious number of accents to the line, regardless of the number of syllables therein. This theory of a tonic and not a syllabic metre has this, too, in its favour that accent is the determining principle in ancient Egyptian, Babylonian, and Assyrian poetry.

(4) Of recent years the pendulum of Hebrew metrical theories has swung back upon quantity; the syllabic must not be utterly neglected. Hubert Grümme, "Grundzüge der hebräischen Akzent- und Vokallehre" (Freiburg, 1896, and "Psalmenprobleme" (1902), builds up the metre chiefly upon the tonic principle, at the same time taking into account the mora or pauses due to quantity. Schloëg, "De re metrica veterum Hebraeorum" (Vienna, 1899), defends Grümme's theory. Sievers, "Metrisehe Studien" (1901), also takes in the unsyllabicated syllables for metrical consideration; so does Baethgen, "Die Psalmen" (Göttingen, 1904), p. xxviii.

C. Other Characteristics.—Alliteration and assonance are frequent. Acrostic or alphabetical psalms are Iv, xxviii, xxxii, xxx iii; i.e., cx, cxxv, cxxvi, cxxvii, cxviii, cxxix, cxxx. The letters of the alphabet begin successive lines, couplets, or strophes. In Ps. cxviii (of 1815) the same letter begins eight successive lines in each of the twenty-two alphabetical "hees". In Ps. cxxvi (of 1833), cxxv (of 1833), cxxvi, lxx, cxvii, cxviii (of 1834), the same word or words are repeated many times. Rhymes, by repetition of the same suffix, are in Ps. ii, xii, xxvii, xxx, lv, lv, cxvii, etc., (ii, xii, xxvii, xxxi, lii, lx, cxvii, etc.), these rhymes occur at the ends of lines and in casuual strophes. Lines were grouped into strophes and antistrophs, commonly in pairs and triplets, rarely in greater multiples; at times an independent strophe, like the epode of the Greek chorus, was used between one or more strophes and the corresponding antistrophes. The word סדה (Sade) almost invariably marks the end of a strophe. The meaning of this word and its purpose is still a moot question. We think it was originally סדה (520, "to throw"), and meant "a throwing down", "a prostration". During the antiphonal cantillation of the Psalms, the priests blew their trumpets to mark the end of a strophe, and at the signal the two choirs or the people or both choirs or people prostrated themselves (cf. Ham, "Expository Times", May, 1911). The principle of parallelism determined these Leitton (of 1840) and was studied by Köster, in "Die Psalmen nach ihrer strophischen Anordnung" (1837), distinguishes various kinds of strophic parallelism, corresponding to various kinds of
paradigm in lines and half-lines, synonymous, antithetic, synthetic, identical, introverted. Zinner, S.E., in his "Chorgesänge im Buche der Psalmen" (Freiburg im Br., 1896), has very cleverly arranged many of the psalms as choral odes, chanted by two or three choirs. Hermann Wiesemann, S.J., in "Die Psalmen nach dem Urtext" (Münster, 1906) applied the metrical principles of Zinner, and revised and published the latter's translations and studies of the Psalms. This work takes too great liberty with the Sacred Text, and has lately (1911) been put on the Index.

VIII. POETRY.—The extravagant words of Lamartine in "Voyage en Orient" are classic: "Lises de l'Horece ou du Pindare après un Psalme! Pour moi, je ne le peux plus". One wonders whether Lamartine ever read a psalm in the original. To criticise the Psalms as literature is very difficult. Their text has reached us with many losses in the matter of poetic form. The authors varied much in style. Their literary beauty should not be judged by comparison with the poetry of Horace and Pindar. It is with the hymns of ancient Egypt, Babylon, and Assyria that we should compare the songs of Israel. Those ancient hymns are crude and rude by the side of the Psalms. Even the impecunious Ps. xviii, xxx, iii, lix, lxxix, cix, cxxxvii (xvii, xxxiv, li, lixvii, lxxix, cv, cvxxxviii), those national anthems so full of love of Jehovah and of Israel, can be heard in their hatred of the foes of Jehovah and of Israel, if read from the viewpoint of the writers, are sublime, vivid, glowing, enthusiastic, though exaggerated, poetic outbursts, instances of a "higher seriousness and a higher truthfulness", such as Aristotle never would have found in a song of Babylonia or of Sumeria. Whether their tones are those of praise or blame, of sorrow or of joy, of humiliation or of exaltation, of deep meditation or of didactic dogmatism, ever and everywhere the writers of the Psalms are dignified and grand, true to the ideals of Jehovah's chosen folk, spiritual and devotional. The range of thought is immense. It takes in Jehovah, His temple, cult, priests, creation; man, friend and foe; beasts, birds; all nature, animate and inanimate. The range of emotions is complete; every emotion of man that is pure and noble has been set to words in the Psalms. As an instance of poetic beauty, we subjoin the famous Ps. xxiii (xxii), translated from the Hebrew. The poet first speaks in his own person, then in the guise of the sheep. The repetition of the first couplet as an echo is suggested by Zinner himself, to complete the envelope-form of the poem, or the introverted parallelism of the strophic structure:

The Poet: 1. Jehovah is my Shepherd;
I have no want,
The Sheep: 2. In pastures of tender grass he seth me;
Upto still waters he leadeth me;
3. He turneth me back again;
Guideth me along right paths for his own name's sake.
4. Yea, though I walk through the vale of the shadow of death,
I fear no harm;
For thou art with me;
Thy rod and thy staff, they comfort me.
5. Thou settest food before me,
In the presence of my foes;
Thou hast anointed my head with oil;
My trough runneth over.

The Poet: 6. Ah, goodness and mercy have followed me all the days of my life;
I will go back to the house of Jehovah;
Even for the length of my days.
Jehovah is my Shepherd;
I have no want!
are clear in the sufferings of the Servant of Jehovah of Psa. xxii, xi, lix (xxi, xxxix, lxxvii). Ps. xxii was used in the Jewish Church of the Christians as the Gospel Psalms describe as his own the emotions and sufferings of the Messias. Hence it is that the Biblical Commission (1 May, 1910) rejects the opinion of those who do away with the Messianic and prophetic character of the Psalms and refer only to the future lot of the Chosen People; there are parallels, however, concerning Christ. Cf. Maas, „Christ in Type and Prophecy“ (New York, 1893).

X. LITURGICAL USE.—A. The use of the Psalms in Jewish liturgy has been spoken of. Cf. also articles Synthetic and Liturgical in The New Catholic Encyclopedia. The liturgical use of the Psalter dates from the time of Christ and His Apostles. He recited the Hallel at the last Passover, Psa. cxii—cxiv before the Last Supper, Psa. cxxvii—cxxxiv thereafter. Psa. xxii was His dying words; authoritative citations of other psalms appear in His discourses and those of His Apostles (cf. Luke, xx, 42; xxiv, 44; Acts, i, 20). The Apostles used the Psalms in worship (cf. Acts, xvi, 25; James, v, 13; I Cor., xiv, 26). The earliest liturgical service was taken from the Psalter. St. Paul represents the Ephesian Christians, all assembled, worshiping, one chorus talking, one chorister singing, a psalm to the Lord, giving thanks [εὐχαριστοῦντες] always for all things (Eph., v, 16). Probably the Evangelists expressly refer to the Psalter in Col., iii, 16. St. Basil (P. G., XXXII, 764) speaks of this psalmody in two choirs—οὕτως ἀλλήλων. The custom of psalmody, or antiphonal singing, is said to have been introduced into the Church of Antioch by St. Ignatius (Socrates, „Hist. Eccl.“, VI, vii). From Syria, this custom of the Synagogue would seem to have passed over to Palestine and Egypt, to Asia Minor, Constantinople, and the West. St. Ambrose was the first to inaugurate in the West the chanting of the Psalms by two choirs (cf. Batifol, „Histoire du bréviaire roman“, 1893). In the Proprium of tempora of the Roman Rite, all the Psalms are chanted at least once a week, some twice and oftener. In Matins and Lauds, according to the Vulgate’s enumeration, are Psa. 1—cxvii, excepting a few that are fixed for Prime and other hours; in Vespers are Psa. cxvi—cxxxiv, excepting a few fixed for other hours. The great alphabetic praise of the Law, Psa. cxviii, is distinguished between Prime, Terce, Sext, and None. The Benedictiones, Franciscan, Carmelites, and Dominicans, who did not chant the Psalter once a week; the Jews follow the Roman ritual.

In the Latin Rite, Psa. vi, xxxi, xxxvi, i, cxvii, cxlii (Douai) have long had reciting, in the above order, as prayers of sorrow for sin; they are lyric odes of the sorrowing soul and have hence been called the „Psalms of Lamentations“. Their recitation during Lent was ordered by Innocent III (1198–1216). Pius V (1566–72) established the custom, now no longer of general obligation, whereby these psalms became a part of the Friday ferial Office of Lent.

Thou called the Roman Rite, still used in Milan cathedrals, distributes the Psalms over two weeks. The Oriental Rites in union with Rome (Melchite, Maronite, Syrian, Coptic, Ethiopic, etc.), together with the heretical Oriental Churches, all keep up the recitation of the Psalter as their Divine Office.

The bibliography of the Psalms is naturally enormous and can be given only in small part.

Psalms, ALPHABETIC, are so called because their successive verses, or successive parallel series, begin with the successive letters of the alphabet. Some of these formations are perfectly regular, others are more or less defective. Among the regular Alphabetic Psalms must be reckoned Psa. cx, cxi, cxviii (Heb., Psa. cx, cxi, cxviii). The praise of the strong woman in Prov., xxxi, 10–31, and the first four chapters of Lamentations exhibit a similar regular formation. Psa. cx and cxi consist of twenty-two verses each, and each successive verse begins with the corresponding successive letter of the alphabet. Psa. cxviii consists of twenty-two strophes containing each eight distichs; the successive twenty-two strophes are built on the twenty-two letters of the alphabet in such a way that each of the eight distichs of the first strophe begins with the letter, each of the eight distichs of the second strophe begins with the second letter, etc. Prov., xxxi, 10, consists of twenty-two distichs, each successive distich beginning with the corresponding letter of the alphabet. Lam., i, ii, iv, consists of twenty-two short strophes beginning with the successive letters of the alphabet. In Lam., i, each successive of the alphabet begins three lines, so that the chapter consists of twenty-two lines, each of which letter of the alphabet occurs three times as the initial of the line. Defectively Alphabetic Psalms may be found in Psa. ix, xxiv, xxxiv, xxxvi, cxvi (Heb., ix, x, xxviii, xxxvi). But the device is not limited to the Book of Psalms; it is also found in other poetical portions of the Old Testament.

VicoBiou, Dit. de la Bible (Paris, 1895).

A. J. MAAS.

Psalterium.—The Psalterium, or Book of the Psalms, only concerns us here in so far as it was translated and used for liturgical purposes. As a manual of private devotion it has already been sufficiently discussed under PRAYER-BOOKS. Its liturgical use the Psalterium contained the bulk of the Divine Office. The other books associated with it were the Lectionary, the Antiphonary, and Responsorial, and the Hymnary. The Psalterium contained primarily the book of Psalms and it may be noted that for some centuries the Western Church used two different Latin versions, both due to St. Jerome. The earlier of these was a more revision of the pre-existing Latin translation which closely followed the Septuagint. St. Jerome under-
took this revision in 383 at the request of Pope Damasus, and the text thus corrected was retained in use at Rome for many centuries afterwards. In 592, however, when at Bethlehem, the saint set about the same task much more seriously with the aid of the Hexapla. He produced what was almost a new version, and this being circulated in Gaul, through a copy sent to Tours in the sixth century, became commonly known as the "Psalterium Gallicanum", and in the end entirely supplanted the Roman. A precious manuscript at the Vatican (Regim. 11), of the sixth or seventh century, contains the "Psalterium Gallicanum" upon the left-hand page, and a version made from the Hebrew upon each page facing it.

The Psalter proper is here followed, as nearly always in these liturgical books, by the principal canticles, e.g. the Canticle of the Three Children, the Canticle of Moses etc. and, what is not so general a feature, though sometimes found, by a collection of hymns or Hymnarium. These last were more commonly written in a book apart. The oldest Psalter of the British Museum, which comes from St. Augustine's, Canterbury, and which was long supposed to have been one of the actual books brought by St. Augustine to England, also contained the Canticles with two or three hymns.

In other similar books we find the Gloria, Credos, Quiescuit vult, and the Litany of the Saints; at the beginning usually stands a calendar. Many of the more ancient psalteria which survive, as for example the "Psalterium Aureum", of St. Gall and the "Utrecht Psalter", both of them probably of the ninth century, are very richly illuminated or illustrated—a fact which has probably had much to do with their preservation. A certain tradition tended to establish itself at an early date with regard to the subjects and position of these embellishments. In particular the custom spread widely of dividing the whole Psalter into three parts containing fifty psalms each. Hence the first psalm, the fifty-first psalm, and the hundred and first psalm are usually introduced by a full-page miniature or by a richly-illuminated initial letter. Thus also in penitential codes and monastic documents of both England and Ireland during the early Middle Ages, it is common to find allusions to the recitation of "two fifties" or "three fifties", meaning two or three of the divisions of the Psalter. With regard to the Divine Office the recitation of the Psalms was in primitive times so arranged that the whole Psalter was gone through in the course of the Sunday and a Semi-Offer Office each week. In many psalteria marginal notes indicated which psalms belonged to each day and hour. Less commonly the psalms were not arranged in their numerical order, but, as in a modern Breviary, according to the order of their occupation within the liturgy of the Church. These classes of books were called psalteria feriata. In medieval cathedral chapters it was common to assign two or three psalms to each prebend for daily recitation, the psalms being so distributed that the bishop and canons got through the whole Psalterium between them. The repetition of the entire Psalter was, as many necrologies and monastic customs show, a favourite form of suffrage for the dead.

The Psalms (also Psaume, Psaume, Psalma, Psalmas), Nicholas, Bishop of Verdun, b. at Chaumont-sur-Aire in 1518; d. 10 August, 1575. Having studied classics at the Norbertine Abbey of St. Paul at Verdun, of which his uncle François Psaume was commendatory abbot, he commenced studies at the Universities of Paris, Orleans, and Poitiers; and then entered the Norbertine Abbey of St. Paul at Verdun. Ordained priest in 1540, he was sent to the University of Paris, where, after a brilliant defence of numerous theses, he won his doctorate of theology. But for the intrigues of François, Cardinal of Pisa, Psaume, who had already been made Abbot of St. Paul, Verdun, would have been elected Abbot General of Prémontré, for his nomination had already been confirmed by Francis I, King of France. In 1546 he was chosen to represent the Norbertine Order at the Council of Trent, but the Cardinal of Lorraine retained him and, with the pope's consent, resigned the Bishopric of Verdun in favour of Psaume, who was consecrated bishop, 26 August, 1548. In the following year he attended the Provincial Council of Trier, and in the same year he published its canons and decrees in his own diocese. He was also present at the General Council of Trent from May, 1551, until its prorogation on 26 April, 1552, dying in Padua on 30 December. In his last years he devoted himself to study and learning and by his zeal in defence of the doctrine and the prerogatives of the Church. He was active in condemning certain abuses, especially those of the commendam (see COMMENDATORY ABBOT). On 2 January, 1552, he was charged by the papal legate with the editing of the canons of the council. In 1552 he returned to Trent, where the sessions of the council had been resumed. On both occasions Psaume kept a diary of all that passed at the various sessions; it was printed at Paris (1564-90), at Reims and at Verdun in the same year. Hugo, the annalist of the order, also edited it in two parts, but much was left out in the second part. Hugo's "Collectio" was edited by Le Plat in the fifth volume of his "Monumenta Conc. Tridentinum". The parts omitted are supplied by Dollinger, in "Ungeheuerliche Berichte u. Tagebucher u. Geschichten d. Konvulsiv u. Trient", II (Nordlingen, 1876), p. 172. Psaume was also requested by the Archbishops of Reims and Trier to co-ordinate French ecclesiastical legislation and make it agree with the canons and decrees of the Council of Trent. He wrote much in defence of Catholic doctrine against the Calvinistic and Lutheristic heresies. To provide a sound education for youth he gave financial assistance to the Jesuits in founding a college at Verdun. He is buried near the altar of the Blessed Sacrament in the cathedral of Verdun.

Herbert Thurston.

The Psalter of St. Louis of France Bibliothèque Nationale, Paris

In this letter from the Psalter of St. Louis of France the Psalms are followed by the principal canticles.
PSEULLUS

Michael, Byzantine statesman, scholar, and author, apparently at Constantinople, 1018; d. probably 1078. He attended the schools afterwards learning jurisprudence from John Xiphilinos, later patriarch (John VIII, 1064-75). Psellus practised law, was appointed judge at Philadelphia, and under the Emperor Michael V (1041-2) became imperial secretary. Under Constantine IX Monomachus (1042-4) he became influential in the state. At this time he taught philosophy at the new Academy at Constantinople, arousing opposition among ecclesiastical persons by preferring Plato to Aristotle. Psellus attained a great reputation as a philosopher. His pedagogical career was cut short by his appointment as Secretary of State (στρατηγοφυτής) to Constantine IX. In 1054 he followed Xiphilinos to the monastery of Olympos, in Bythinia, where he took the name Michael. He soon quarrelled with the monks, here threatened to return to the capital. He was one of the ambassadors sent to treat with the rebel Isaac Komnenos after the defeat of the imperial army near Nicea in 1057. When Isaac I (1057-9) entered Constantinople in triumph Psellus had no scruple against taxing him. Psellus drew up an indictment against the Patriarch Michael Cerularius in 1059, and preached the enthusiastic panegyric that the government thought advisable after Cerularius's death. Psellus maintained his influence under Constantine II (Dukas, 1059-67); under Michael VII (1071-7) he became Chief Minister of State. Famous for oratory as well as for philosophy and statecraft, he preached the panegyric of the Patriarch John Xiphilinos in 1075. A work written in 1060-7 after Psellus's death has a commendatory preface by him. Krumbacher (Byzant. Literatur, 434) suggests that the preface may have been written before the work was begun. That Psellus was able to retain his influence under succeeding governments, through revolutions and usurpations, shows his unscrupulous servility to those in power. Krumbacher characterizes him as "grovelling servility, uncouthness, insatiable ambition, and unmannered vanity" (op. cit., 435). Nevertheless his many-sided literary work and the elegance of his style give him a chief place among contemporary scholars. Compared with Aristotle, Magnus and Roger Bacon is to Krumbacher "the first man of his time". His important works are: commentary on Aristotle Περὶ ἐρμηνείας; treatises on psychology; works on anatomy and medicine, including a poem on medicine and a list of sicknesses; a fragmentary encyclopedia, called "Manifold Teaching" (Ἀδελθημα μαθησιαστικῶν); a paraphrase of the Iliad; a poem on Greek dialect; a treatise on the topography of Athens; a pathetic compendium of law and an explanation of legal terms. His speeches are famous as examples of style, and contain much historical information. His best known panegyrics are on Cerularius, Xiphilinos, and his own mother. About five hundred letters, and a number of rhetorical exercises, poems, epistles, and occasional writings are extant. His most valuable work is his history (Ἁρωτομελείας) from 976 to 1077, forming a continuation to Leo Diaconus. Works (incomplete) in F. G., CXXII, 477-1186, also in F. G., CXXII, 477-1186, IV and V, the history edited by Batmacher is published in Muthern, Byzantina Texta (London, 1899); Leo Allatius, De Psellio et artem scriptae (Rome, 1624), containing the history and a treatise on logic. Psellus also wrote a history of the Jewish Church, from 1700, 41-97, and in F. G., CXXII, 477-538; Krumbacher, Byzantinishe Literaturgeschichte (2nd ed., Munich, 1897), 433-444; Durand, Pierre, Dynamiques, I (Paris, 1906), x, ii.

PSYCHOLOGY

Greek ΨΥΧΟΛΟΓΙΑ, Lat. psychologia; Fr. psychologie; Ger. Seelenkunde, in the most general sense the science which treats of the soul and its operations. During the past century, however, the term has come to be frequently employed to denote the latter branch of knowledge—the science of the phenomena of the mind, of the processes or states of human consciousness. Moreover, the increasing differentiation, characteristic of the advance of all departments of knowledge in recent years, has manifested itself in so marked a manner in psychological investigation that there are already several distinct fields of psychological work, each putting forward claims to be recognized as a separate science. The term psychology seems to have first come into use about the end of the sixteenth century (Goellnies, 1590, Casmann's "Psychologia Anthropologica", 1594). But the popularization of the name dates from Ch. Wolff in the eighteenth century.

History.—Aristotle may well be deemed the founder of this as of so many other sciences, though by him it is not distinguished from general biology, which is itself part of physics, or the study of nature. His treatise Περὶ ἐκκοιτάσεως ("De Anima") was during two thousand years virtually the universal textbook of psychology, and it still well repays study. In the investigation of vital phenomena Aristotle employed to some extent all the methods of modern science: observation, internal and external; comparison; experiment; hypothesis; and induction; as well as demonstration and speculative reasoning. He defines the soul as the "Entelechy or form of a natural body potentially possessing life". He distinguishes three kinds of souls, or grades of life, the vegetative, the sensitive, and the intellectual or rational. In man the higher virtually includes the lower. He investigates the several functions of nutrition, appetite, locomotion, sensuous perception, and intellect or reason. The last is confined to man. The working of the senses is discussed by him in detail; and diligent anatomical and physiological study, as well as careful introspective observation of our conscious processes is manifested. Knowledge starts from sensation, but sense only apprehends the concrete and singular thing. It is the function of the intellect to abstract the universal essence. There is a radical distinction between thought and sentience. The intellect or reason (σοφία) is separate from sense and immortal, though how precisely we are to conceive this σοφία and its "separateness" is one of the most puzzling problems in Aristotle's psychology. Indeed, the doctrines of free will and personal immortality are not easily reconciled with Aristotle's teaching.

Scholastic Period.—There is little effort at systematic treatment of psychology from Aristotle to the medieval philosophers. For Epicurus, psychology was a branch of physics in subordination to a theory of hedonistic ethics. With the introduction of Christianity certain psychological problems such as the immortality and the origin of the soul, free will and moral habits at once assumed a vastly increased importance and raised the treatise "De Anima", to one of the most important branches of philosophy. Moreover, the angels being presumed to exist in mass, the whole human soul conceived as separate from the human body, a speculative theory of the nature, attributes, and operations of the angelic beings, partly based on Scriptural texts, partly deduced by analogical reasoning from human psy-
chology, gradually grew up and received its final elaboration in the Middle Ages in the metaphysical theology of the Schoolmen. The Christian mystics were naturally led to consider the character of the soul of God, and the great controversy between Realism and Nominalism from the early Middle Ages directed much attention to the theory of knowledge and the problem of the origin of ideas. However, although psychological observation was appealed to, the epistemological discussions were largely metaphysical in character during this period. To Albertus Magnus and St. Thomas the popularization of the psychology of Aristotle throughout Europe during the thirteenth century was mainly due. In Questions lixx to xc of part I of the “Summa Theologica”, St. Thomas gives a very fair complete and systematic account of the leading topics connected with the soul. However, questions of biology, general metaphysics, and theology were constantly interwoven with psychology for many centuries afterwards. Indeed, the liberal use made of biological evidence is a marked feature in the treatment of this branch of philosophy throughout the entire history of scholastic philosophy. But although there is plenty of proof of acute observation of mental activities, the usual appeal in discussion is rather to metaphysical analysis and deductive argument than to systematic introspective observation and induction, so characteristic of modern psychology. The treatise “De Anima” of Suarez is a very good example of scholastic psychology at the close of the Middle Ages. The treatise, running six books, starts with an inquiry into the essence of the soul. Recalling Aristotle’s definition of the soul as the form of the body, the author proceeds to examine the relations of the vegetative, sensitive, and rational soul. Next, in book II he treats of the faculties of the soul in general and their relation to the soul as an essence. In book III he investigates the nature and working of the cognitive faculties, and especially of the senses. In book IV he inquires into the character of the activity of the intellect. In book V he deals with faculties of appreciation produced by free will. In book VI is devoted to speculative consideration of the condition and mode of operation of the soul in a future life. In each question he begins with a summary of previous opinions and then puts forward his own solution. The order of treatment is to move from the general to the particular, from the faculties and their operations is characteristic of the scholastic treatises generally. The method is mainly deductive and the argument metaphysical, though dealing with the senses there is constant appeal to recognized physiological authorities from Aristotle to Avicenna.

In psychology as well as in other branches of philosophy the influence of Descartes was considerable though indirect. His subjective starting-point, cogito, ergo sum, his insistence on methodic doubt, his advocacy of reflection on thought and close scrutiny of our fundamental ideas, all tended to encourage the method of internal observation, whilst the mechanical explanation of the “Traité des Passions” favoured the advent of physiological psychology. It was probably, however, John Locke’s “Essay on the Human Understanding” (1690) that philosophy owed its first method of analytic introspection which constitutes the principal feature of modern psychological method. Notwithstanding the confused and inconsistent metaphysics and the many grave psychological blunders with which that work abounds, yet his frequent appeal to inner experience, his honest efforts to describe mental processes, and the quantity of acute observations scattered throughout the work, coming also at an age when the inductive method was rapidly rising in popularity, achieved a speedy and wide success for the book, their treatment kindled empirical bent to all future English psychology.

Psychological observation and analysis were still more skilfully used by Bishop Berkeley as a principle of explanation in his “Theory of Vision”, and then employed by him to establish his psychological creed of Idealism. Finally, David Hume, the true founder of the Associationist school of psychology, still further increased the importance of the method of introspective analysis by the daring sceptical conclusions he claimed to establish by its means. The subsequent British adherents of the Associationist school, Hartley, the two Mills, Bain, and Herbert Spencer, continued this method and tradition along the same lines. There is constant direct appeal to inner experience combined with systematic effort to trace the genesis of the highest, most spiritual, and most complex mental conceptions back to elementary atomic states of sensuous consciousness. Universal ideas, necessary truths, the ideas of self, time, space, causality as well as the conviction of an external material world were all explained as the outcome of sensations and associations. The empirical world was essentially different from the lower sensuous powers was denied, and all the chief data formerly employed in establishing the simplicity, spirituality, and substantiality of the soul were rejected. Rational or metaphysical psychology was thus virtually extinguished and erased from English philosophical literature during the nineteenth century. Even the more orthodox representatives of the Scotch school, Reid and Dugald Stewart, who avoided all metaphysical argument and endeavoured to controvert and expose it, in the end, to experience and observation, had only further confirmed the tendency in the direction of a purely empirical psychology. The great need in English psychological literature throughout most of the nineteenth century, on the side of those defending a spiritual doctrine of the human mind, was a systematic and thorough treatment of empirical psychology. Excellent pieces of work on particular questions were done by Martineau, W. G. Ward, and other writers, but nearly all the systematic treatises on psychology in the Scotch school, such as Stewart’s “Virtue and Duty”, is devoted to a materialistic philosophy. Yet, if philosophy is to be based on experience, then assuredly it is on the carefully scrutinized and well-established results of empirical psychology that any satisfactory rational metaphysics of the origin and destiny of the soul, its origin, and its destiny must be built. It was in their faulty though often plausible analysis and interpretation of our states of consciousness that the greatest errors in philosophy and psychology of Bain, the two Mills, Spencer, and their disciples had their source; it is only by more careful introspective observation and a more searching analysis of the same mental facts that these errors can be exposed and solid foundations laid for a true metaphysical psychology of the soul.

In France, Condillac, La Mettrie, Holbach, and Bonnet developed the Sensationalism of Locke’s psychology into an increasingly crude Materialism. To oppose this school later on, Royer-Collard, Cousin, Joffroy, and Maine de Biran turned to the work of Reid and the “common sense” Scotch school, approximately the same time as they turned to American psychology. Some of these writers, moreover, sought to carry their reasoning beyond the mere inductions of empirical psychology, in order to construct on this enlarged experience a genuine philosophy of the soul, as “principle” and subject of the states and activities immediately revealed to introspective observation.
In Germany the purely empirical tendency which had reduced psychology in England to a mere positivistic science of mental facts did not meet with quite the same success. Metaphysics and philosophy proper never fell there into the degradation which they experienced in England in the beginning of the nineteenth century. Although a philosophical science of the nature and attributes of the soul was rejected by Kant, and abandoned in the systems of Fichte, Schelling, and Hegel, yet mere phenomenalism was never completely triumphant in Germany. Herbart, at least, holding the reality of faculties, postulates a simple soul as the underlying subject of the presentations or ideas which form our conscious life. Hermann Lotze, laying similar stress on the importance of scientific observation of our mental states, insists even more strongly that our introspective experience correctly interpreted affords abundant metaphysical justification for the doctrine of an immaterial soul. Meanwhile the earlier attempts of Herbart to express mental activities in mathematical formulae led to a more successful line of phenomena and methods to which that of Wundt, Fechner, Wendt, and others. The aim of this school is to attain the possible quantitative measurement of conscious states. As this is ordinarily not directly possible, much industry and genius have been devoted to measuring quantitatively, by the aid of skill, the immediate physical antecedents and effects of sundry mental activities, by which it is hoped to secure accurate quantitative descriptions of the mental states themselves. Psychological laboratories devoted to research of this kind have been set up in several countries, especially in Germany and America. One of the most successful so far is that at the Catholic University of Louvain, and another has lately been established at that of Washington. In Great Britain, however, the special home of empirical psychology since Locke, the new movement in favour of experimental psychology has not, at all events down to the present time, met with much success. The advance of physiological science, and especially of that of the brain and nervous system, has also reacted on psychology, stimulating closer inquiry into the relations between mental and bodily processes. It cannot, however, be maintained that the progress of physiological knowledge, considerable though it is, has brought us appreciably nearer to the solution of the great problem, how body and mind act on each other mutually. We know something of mental disease and of abnormal mental states, such as those of hypnotism and double-consciousness, has also opened up new fields of psychological research, constantly widening with the last thirty years.

Scope of Psychology.—As we have already observed, recent writers commonly confine the term psychology to the science of the phenomena of the mind. Thus William James, probably the psychologist of widest influence during the past twenty years, defines psychology as "the Science of Mental Life, both of its physiological facts and of its functions." ("Principles", I, 1). Wundt's definition is: "the science which investigates the whole content of Experience in its relations to the Subject". ("Outlines", 3rd ed., 3). Other writers describe it as, "the science of the facts apprehended by our internal sense", or again, "the science of our states of consciousness, their laws of succession and concomitancy". The common feature of all these definitions is the limitation of the scope of psychology to the phenomena of the mind directly observable by introspection. In it, however, it is seen that all philosophical problems are to be excluded, as rigorously as from chemistry or geology. It is, in fact, la psychologie sans dome. If such questions as the nature, origin, or destiny of the soul are to be discussed at all, it must be, according to these writers, not in psychology, but in some branch of speculation to be styled the metaphysics or ontology of the human mind, and to be completely isolated from science.

In direct contrast with this view is that ordinarily adopted by Catholic writers hitherto. By them, psychology has usually been conceived as one of the most important and fundamental sciences. Allowing that it may be best described as the philosophical science, which investigates the nature, attributes, and activities of the soul or mind of man. By soul, or mind, is understood the ultimate principle within which the will, self-consciousness, and my body is animated. Whilst the soul and the mind are conceived as fundamentally one, the latter term is usually employed to designate the animating principle viewed as subject of my conscious or mental operations; the former denotes it as the root of all vital activities. By terming their branch of knowledge a philosophical science, it is implied that psychology ought to include not only a doctrine of the laws of succession and concomitance of our conscious states, but an inquiry into their ultimate cause. Any adequate psychology is, therefore, in their view, presents itself in two stages, empirical or phenomenal psychology, and rational or metaphysical psychology. Though conveniently separated for didactic treatment the two are organically connected. Our metaphysical conclusions as to the nature of the soul must rest on the evidence supplied by our experience of the character of its activities. On the other hand, any effort at thorough treatment of our mental operations, and especially any attempt at explanation of the higher forms or products of consciousness, is urged, is quite impossible without the adoption of some metaphysical theory as to the nature of the underlying subject or agents of these states. Professor Dewey has justly observed: "The philosophic implications embedded in the very heart of psychology are not got rid of by sweeping them under the carpet..." ("Psychology", IV). Ladd, and others also, recognize the evil of "clandestine" metaphysics when smuggled into what claims to be purely "scientific" non-philosophical treatments of psychology.

Psychology is not in the same position as the physical sciences which invest in a question in geology, chemistry, or mechanics, we may, at least temporarily, prescind from our metaphysical creed, but not so—judging from the past history—when giving our psychological accounts and explanations of mental products, such as universal concepts, the notions of moral obligation, responsibility, personal identity, time, or the perception of an external material world, or the simple judgment, two and two must make four. The view, therefore, of those philosophers who maintain that the immediate connections between many of the questions of empirical and rational psychology are so indissoluble that they cannot be divorced, seems to have solid justification. Of course we can call the study of the phenomena of the mind, "Psychology", and that of its inner nature, the "Philosophy of the Mind"; and we may treat each in a separate volume. That is merely a matter of terminology and convenience. But the important point is that in the explanatory treatment of the higher intellectual and rational processes, it is impossible for the psychologist to preserve a philosophically neutral attitude. A truly scientific psychology, therefore, should comprise: (1) a thorough investigation by introspective observation and analysis of our various mental activities —co-operative and competitive, sensuous and rational —seeking to resolve all products of the mind back
to their original elements, determining as far as possible their organic conditions, and tracing the laws of their growth; (2) based on the results of this study, as a rational theory, the empirical character of the study of the agent or subject of these activities, with its chief properties.

Method of Psychology.—The primary method of investigation in empirical or phenomenal psychology is introspection or reflective observation of our mental states. This is the ultimate source of all knowledge of mental facts; even the information gathered immediately from other quarters has finally to be interpreted in terms of our own subjective experience. Introspection is, however, liable to error; consequently it has to be improved and corrected by all the supplementary sources of psychological knowledge available. Among the chief of these are: the internal experience of other observers communicated through language; the study of the human mind as exhibited in different periods of life from infancy to old age, and in different races and grades of civilization; as embodied in various languages and literatures; and as revealed in the absence of particular senses, and in abnormal or pathological conditions such as dreams, hypnotism, and forms of insanity. Moreover, the anatomy, physiology, and pathology of the brain and nervous system supply valuable data as to the organic conditions of conscious states. Experimental psychology, psychophysics, and psychometry help towards accurate measurement, and establish the connection of macro-phenomena with micro-processes of mental activity. And the comparative study of the lower animals may also afford useful assistance in regard to some questions of human psychology. By the utilization of these several sources of information, the data furnished to the psychologist by the introspective observation of his own individual mind may be enlarged, tested and corrected, and may thus acquire in a certain degree the objective and universal character of the observations on which the physical sciences are built. Introspection is frequently spoken of as the subjective method, those other sources of information as supplementary objective methods of psychological study.

Branches of Psychology.—Indeed some of them have rapidly grown to be such large and important fields of research that they now claim to be recognized as special departments of psychology, or even sciences in their own right. Thus we have comparative psychology including animal psychology, child psychology, and race psychology. Again psychiatry or psychopathology, the science of mental disease, also physiological psychology, which, in a broad sense, includes all systematic study of the organic conditions of mental life, or, as Ladd defines it, "psychology approached and studied from the physiological side". Experimental Psychology.—A special department of physiological psychology which has recently risen rapidly into favour in some countries is experimental psychology, alluded to above in our historical sketch. It is at times styled the "New Psychology" by its more enthusiastic supporters. It seeks to secure precise and objective standards in the description of mental states by controlling their conditions by skilful devices and ingenious apparatus. Its chief success so far has been in its efforts to measure the varying intensity of sensations, the delicacy of sense-organs and "reaction-time" or the rapidity of a faculty's response to stimulation. Certain properties of memory have also been made the subject of measuring experiments and more recently considerable industry has been devoted, especially by Külpe and the Wiener Kreis, to bring some or all of the higher activities of intellect and will within the range of the laboratory apparatus. Opinions still differ much as to both the present value and future prospects of experimental psychology. Whilst Wundt, the leader of the new movement for the past fifty years, places the only hope of psychological progress in the experimental method, William James's judgment on the whole matter is one of the most significant in the history of the subject. His view was that "its proper psychological outcome is just nothing at all" ("Principles", I, 534). Apart, however, from the very modest positive results, especially in the higher forms of mental life, which the experimental method has achieved or may achieve in the future, its existence may nevertheless be welcomed as a necessary agency in the training of the psychological specialist, both in increasing his appreciation of the value of the most minute accuracy in descriptions of mental states, and also by fostering in him habits of precision and skill in systematic work, which should be of the highest value.

Classification. The Faculties.—In empirical psychology, with modern writers, the next step after determining the method of the science is to attempt a classification of the phenomena of mental life. In the scholastic philosophy of the equivalent operation was the systematic division of the faculties of the soul. Apart from vegetative and locomotive powers the Schoolmen, following Aristotle, adopted a bipartite division of faculties into those of cognition and appetency. The former was subdivided into sense-senses, and intellectual or rational. The latter faculties they again subdivided into the five external senses and the internal activities of imagination, sensuous memory, sensation communes, and vis cognitiva. But there was much disagreement as to the number, character, and connection of the internal forms of sensuous cognition. There were also divergences of opinion as to the nature of the faculties in general in themselves and to what extent there was a distinction realis between faculties and the essence of the soul. But in the eighteenth century, there was general agreement as to an essential difference between all sensuous and intellectual or spiritual powers of the mind. The possession of the latter constitutes the differentia which separates man from the irrational animals.

Content of Empirical Psychology.—The psychologist naturally begins with the treatment of the phenomena of sentience. The several senses, their organic structure and functions, the various forms of sentient activity with their cognitive, hedonic and affective properties, the science of mental disease, also physiological psychology, which, in a broad sense, includes all systematic study of the organic conditions of mental life, or, as Ladd defines it, "psychology approached and studied from the physiological side".

Modern Empirical Psychology.—The constant aim of modern psychology is to analyse all complex mental operations into their simplest elements and to trace back to their first beginning all acquired or composite habits.
and faculties, and to show how they have been generated or could have been generated from the fewest original aptitudes or fundamental activities of the mind. This is sound scientific procedure—recognized in the Scholastic aphorism, *Vita non sunt multilingua sed multiformia*. In a very general sense, it is possible to suggest a special faculty for any mental state which can be accounted for by the co-operation of already recognized activities of the soul. But the labour and skill devoted during the past century and a half to the development of a synthetic procedure has developed one feature of modern psychology by which it is differentiated in a most marked manner from that of the Middle Ages and of Aristotle. The present-day treatment is pronouncedly genetic. Thus, whilst the Schoolmen in their account of mental operations, such as perception, conception, or desire, considered these processes almost solely as elicited by the normal adult human being already in full possession and control of matured mental powers, the chief interest of the modern psychologist is to trace the growth of the agents from their first to the simplest manifestations in infancy, and to discriminate what is the product of experience and acquired habits from that which is the immediate outcome of the innate capabilities of the soul. This is the only possible way of judging the development of the mental operation of perception as given in most Scholastic textbooks with that to be found in any modern handbook of psychology. The point of view is usually quite different. Since much of the most plausible modern attacks on Scholastic psychological doctrine has been made in this manner, the genetic treatment from the Thomist standpoint of many psychological questions seems to us to be among the most urgent tasks imposed nowadays on the neo-Scholastic psychologist. The value of such work from the Thomist standpoint would seem for the moment distinctly greater than that of any results likely to be achieved in quantitative experimental psychology. Obviously there is nothing in the Thomistic conception of the soul and its operations incompatible with a diligent investigation into the unfolding of its various aptitudes and powers.

**Rational Psychology.**—From the study of the character of the activities of the mind in experimental psychology, the student now passes on to inquire into the nature of the principle from which these activities originate, the more or less metaphysical or mathematical division of the science. For, as we have indicated, the analysis and explanatory accounts of the higher forms and products of mental activity, which the scientific psychologist is compelled to undertake even in phenomenal psychology, involve metaphysical assumption and conclusions which he cannot escape—certainly not by merely ignoring them. Still, it is in this second stage that he will formally and inductively, both analytic and synthetic. He argues from effect to cause. From the character of the mental activities already scrutinized and from the minds of the cases, he now concludes as to the nature of the subject to which they belong. From what the mind does, he seeks to learn what it is. In particular, from the simple spiritual nature of the higher activities of intellect and will, he infers that the being, the ultimate principle from which they proceed, is simple and spiritual nature. Consequently, it cannot be the brain or any corporeal substance. Having established the simplicity and spirituality of the soul, he then goes on to deduce further conclusions as to its origin, the nature of its union with the spiritual nature, and its final destiny. In this way by rational arguments the Scholastic thinkers claim to prove that the human soul can only have arisen by creation, that it is naturally incorruptible, and that the boundless aspirations of the intellect, the insatiable yearnings of the will, and the deepest convictions of the moral reason all combine to establish a future life of the soul after death. The chief thing of which the soul is treated under the articles *Animism; Association of Ideas; Consciousness; Imagination; Immortality; Individual; Intellectual; Life; Personality.*

**Michael Maher.**

**Psychophysics.** See Consciousness, Quantitative Science of Consciousness.

**Psychotherapy** (from the Greek *πυψη, "mind", and ἰατρός, "I cure") that branch of therapeutics which uses the mind to influence the body; first, for the prevention of disease by keeping worry from lowering resistive vitality; secondly, for reaction against disease during progress by freeing the mind from solicitude and tapping latent resources. After the ailment retrogrades, to help convalescence through the removal of discouragement during weakness by inspiring suggestion. Psychotherapy is sometimes regarded as a comparatively new development consequent upon our recent advance in psychology and especially in physiological psychology; it is, however, as old as the history of humanity, and the priests in ancient Egypt used it effectively. Wherever men have had confidence in other men for their physical good there has always been a large element of psychic influence. The first persons who have any record in history was I-Em-Hetep, "The Bringer of Peace"; we know that it was much more the confidence that men had in him than anything which he did by physical means that brought him this complimentary title and enabled him to live so much good. He was so highly respected that the famous step pyramid at Sakkara, near Memphis, is called by his name, and after his death he was worshipped as a god. The Eastern nations always employed mental influences in medicine, and we have abundant evidence of its effective. Among the Greeks the influence of the mind on the body was recognized very clearly. Plato says in the *Charmides*: "Neither ought you to attempt to
cure the body without the soul. . . . You begin by curing the soul [or mind]." These expressions occur in a well-known passage in which Socrates tells of curing a young man of headache by suggestion. He pretended to have a remedy that had been discovered by the court of a great sheik, and the man had a headache; though it was really indifferent in its effect, the employment of it produced the desired result. In this story we have the essence of psychotherapy at all times. The patient must trust the suggestion and must be persuaded that the suggestion has already been efficient on others, and then the cure results. There are many passages of Plato in which he discusses the influence of the mind in lessening physical ills and also in increasing them, and even creating them, so that he says in the "Republic" that if in his generation men were educating themselves in disease instead of in health, and this was making many very miserable.

A special form of psychotherapy is by hypnotism. This consists in suggestion made to the patient while he is in a state of concentration of attention that may be so deep as to resemble sleep. We find traces of this from the early days in Egypt, and especially in the temple hospitals. The Western nations paid much attention to it and succeeded in producing many manifestations that we are likely to think of as quite modern. As the result of more careful investigation in recent years we have come to realize more clearly that there is in hypnotism due entirely to the subject and not to the operator. It is not the power of the operator's will, but the influence of the subject on himself that produces the condition. (See Hypnotherapy.) Hypnotism may be useful at the beginning of certain neurotic ills, but it depends for its efficiency on the patient's will. If repeated frequently it always does harm. The recurrence of attention to it in each succeeding generation is one of the most intractable in the history of the use of the mind to influence the body.

Unconscious Psychotherapy.—Besides deliberate psychotherapy, there is not a little unconscious psychotherapeutics in the history of medicine. Many remedies have been introduced, have seemed to benefit patients, have then had considerable vogue, and subsequently proved to be quite without effect. The patients were helped by the confidence aroused by the new remedy. Such therapeutic incidents make it difficult to determine the real value of new remedies. Respectively speaking, a new remedy may acquire a reputation because of their recommendation by someone who commands confidence; only after this loses its effect can the true value of the remedy be estimated.

Accompanying every branch of science has furnished medicine with supposed remedies which have been of benefit for a time and have subsequently proved to be of little or no avail. In the later Middle Ages magnets were supposed to draw diseases out of people and actually affected many patients favourably. As electricity developed, each new phase of its found applications in medicine that were very promising at first, but afterwards proved to be of little therapeutic value. The supposed effect of the Leyden jar shortly after its discovery is ludicrous reading. Galvani's work gave new impetus to electrical therapy. A wandering quack from America, Perkins, made a fortune in Europe by means of two metal instruments about the size of lead pencils with which he stroked patients. They were supposed somehow to make an application of Galvani's discovery of animal electricity to the body. After various "Perkins tractors" failed to produce any such results. In spite of disappointments, each new development has had the same results. When the stronger electrical machines, and then the methods of producing high-frequency currents, were invented, these were announced as having wonderful curative powers and actually cured many patients, until the suggestive value of the new discovery failed to act favourably on the mind. When the X-rays attracted attention, they too were used with the most promising results in nearly every disease, though now their range of therapeutic work is limited. Faith Cures.—Faith has always been a strong therapeutic agent. Science, or the supposed application of scientific principles, has probably been the responsible cause of more faith cures than anything else. The reason why astrology maintained its influence in medicine was because of faith in scientific knowledge transferred to the realm of human affairs. When light was studied, it too came into therapeutics. With the discovery of the ultra-violet rays and their actinic value, blue-glass therapy became a fact, thousands of tons of blue glass were sold, and people sat beneath it and were cured of all kinds of pains and aches. Each new development of chemistry and of physics led to new applications to therapeutics, though after a time most of them have proved to be nugatory. The faith in the scientific discovery had acted through the mind of the patient; so as to bring about an amelioration of symptoms, if not a cure of the disease. The patients who are cured are usually sufferers from chronic diseases, who either have only a persuasion that they are ill or, having some physical complaint, in a fit of weakness, or for the natural forces that would bring about a cure. This inhibition cannot be lifted until the mind is relieved by confidence in some wonderful remedy or scientific discovery that gives them a conviction of cure.

Quackery and Mind Cures.—The history of quackery is really a chapter of psychotherapy. The quack's best remedy is always his promise to cure. This he does for all diseases. As a consequence he benefits people very much through their minds. Such patients have never before been able to be cured, and, without having much to matter with them, they have suffered, or at least complained. When they lift the burden of solicitude from themselves, nature cures them by very simple means, but the cure is attributed to the last remedy employed. We have no remedies in medicine that have come to us from quacks; their wonderful cures have been obtained from simple well-known remedies plus mental influence. The same power over the mind helps nostrums, or special medicines, sold with the promise of cure. As a consequence there are many cures that governments have purchased the special secret from its inventor and published it to the world. The secret has always proved to be some ordinary remedy known before, and just as soon as its secrecy was lost it failed to cure. The spread of popular education, instead of making such faith cures by nostrums less common, has rather served to give them wider diffusion. The ability to read leaves people open to the suggestive influence of print, though it does not necessarily supply the judgment requisite for a proper appreciation of what is thus presented. As a consequence our generation is nostrum-ridden and spends millions of money for remedies which are quite indifferent or, at most, trivially helpful, and sometimes are absolutely noxious. Government analysis of a section of the most popular remedies widely consumed throughout the country five years ago showed that the only active ingredient was alcohol and that a dose of the medicine was about equivalent to a drink of whisky. This lessened the sale of these remedies, however, only for the time being, and most of them have, of course, the second most popular present source of scientific superstition concerns electricity. All sorts of rings, medals, and electrodes are bought at high prices with the confidence that they will produce wonderful results. Rheumatic rings and wristlets, foot electrodes, one of copper and the other of zinc, electric belts, shields
SPECIAL PSYCHOTHERAPY.

Ordinarily, it is presumed that psychotherapy is only efficient in affections that are due to mental persuasions, so-called imaginary diseases, and that it cannot benefit organic affections. In recent years, however, abundant proof has been forthcoming that favourable influence upon the mind can modify even very serious physical conditions. It is not unusual for a cancer patient who has lost some twenty or thirty pounds in weight to regain this and more after an exploratory incision which has shown the disease most impenetrable, to such solicitude, is given to understand that now he ought to get better and he proceeds to do so. In one such case a gain of seventy pounds was recorded. The patient eventually died of cancer, but there had been months of strength and efficiency that would not otherwise have been secured. There are affections, too, in which unfavourable mental persuasion produces serious physical changes that may even prove fatal if any other cause intervenes. It is now very well known that a great many cases of so-called dyspepsia are due to over-nervousness. An elimination from the diet of so many articles supposed to be indigestible that the patient's nutrition is seriously interfered with. Occupation of mind with the stomach is particularly likely to interfere with its proper digestion. Delicate people may reject a meal if they are reminded of something nauseating, or if a particular smell or some untoward incident disturb them. Food eaten with relish and in process of satisfactory digestion may be rejected if something deterrent is heard in reference to its origin or mode of preparation, and rejection occurs whether the disgusting statement be true or false. A conviction that certain articles of food will disagree with us is almost sure to make them difficult of digestion: a great many people are quite sure that they cannot digest milk or eggs, but prove thoroughly capable of digesting those articles of diet without difficulty when, as in tuberculosis sanatoria, they are required to take them regularly.

HEART AND MENTAL INFLUENCE.

The heart might be presumed free from the influence of the mind, because of its great importance. It is probably through this organ, however, that most of the favourable and unfavourable influence of the mind on the body is exerted. The heart begins to beat in the embryo long before the nervous system is formed, but it very soon comes into close relation with the brain and with the nervous system. In excitement and joy the heart beats fast; in fright and depression it beats slowly; and any vehement emotion seriously affects its action.

This is true in health, but is particularly true in disease of the heart itself. Sufferers from heart-disease die from joy as well as from fright. The state of mind may influence the heart favourably or unfavourably in the course of disease, and the physician must recognize this and use his understanding of it to good purpose.

Many of our heart remedies are rather slow to act, to be effective after hours or even days, and they go out less in the air and take insufficient exercise, and then many adventitious symptoms develop. The patient attributes these to the underlying nervous disease, though they are really due to the mental state and to confinement. The promise of a cure lifts up the despondent mind, tempts the patient to go out; the appetite will be improved, many symptoms will disappear, and the patient thinks that the underlying disease is being helped. Hence the many advertised remedies for even such absolutely incurable ills as locomotor ataxia, multiple sclerosis, epilepsy, and the like.

DREAMS.

Psychotherapy is of course most important in the treatment of such affections as depend on mental influence. We have a whole series of dreams,
of anxieties, of exaggerations and sensations, and then of habits and of lack of will power, that can only be properly treated through the mind. The dreads, or phobias, constitute a rather large class of nervous affections which present the most striking manifestation of the peculiar dread of dirt, sometimes under the form of bacteriophobia; acrophobia, the dread of heights, which may become so poignant as to make it impossible for a person to sit in the front row of a gallery or even to say Mass on a high altar; alacrophobia, or the dread of cold, the effects of which may make life miserable. Then there is the dread of the dark, the dread of wide open places, the dread of narrow spaces, the dread of walking beneath anything overhanging, and numbers of others. There is always a certain mental element in these, yet they occur in persons of intellect and character. Only suggestion and training will cure them. Usually they are worse when the patient is run down.

TREMORS AND TICS.—After the dreads come the tremors, the tics or habits, and then the conscious surveillance of actions usually automatic, such as talking, writing, even walking, which interfere with the accomplishment of them. Under emotional stress, as after a panic, men sometimes find themselves unable to sign their names when anyone is watching them. Some men cannot drink a glass of water at a sitting without spilling it. They have a tendency to this, rather than nervous conditions, and must be treated as such. There are a number of tremors that occur as a consequence of fright which can only be bettered in the same way. Many of the tics—as winking, head-nodding, slight convulsions of the arms, movements of the lips, and nose—must be looked on in this same way. Children must be watched and prevented from contracting them. They have a tendency to run in families by imitation. If noted early, they can be removed by the formation of a contrary habit. Some habits of children especially certain sucking habits and tongue movements, lead to ugly deformities of the mouth when the jaws are in the plastic stage. Thumb-sucking is a habit that must be taken seriously, or the results on the mouth will be very marked. Biting the nails in older people is a corresponding affection. Such habits develop, as a rule, only in those with some psychasthenic condition, but the individuals may be very useful members of society.

Alcoholic and Drug Habits.—The greatest usefulness of psychotherapy is in alcoholism and in the drug habits. There is no remedy that will cure alcoholism. We have had, during the past half century, hundreds of advertised cures: we know now that all of them owed their success to influence on the patient’s mind. When a cure is claimed by a nostrum, that nostrum must be benefited by it. Afterwards it sinks to the ordinary level and comes to be recognized as only a helpful physical treatment with a strong mental factor attached. When the patients are in the midst of the attacks of alcoholism, their physiological system makes them crave some stimulation. At this time they must be given other than alcoholic stimulants, and must be under such surveillance as shall help them to keep away from liquor. After a variable time—from a week to two or three weeks—they are quite capable of resisting the craving by themselves, if they really want to. The cure of alcoholism is easy, but relapses are easier still, because the patients think that they can take a glass and go no further. When they are tired or chilled, or fear that they are going to catch a cold, or some other thing, it is suggested to them that they indulge in a glass and then in the second and third, and the old habit has to be broken again. We have any number of examples, however, of men who have not drawn a sober breath for ten, twenty, or thirty years who have resolved to drink no more and have kept their resolution after a period of alcoholism during which they indulged in drink in the way of temptation, he will almost surely fall; he is more susceptible than others; he must be kept from contact with it in every way, and then it is comparatively easy for him not to relapse into the habit.

Probably the most helpful factor in the treatment of alcoholism is the patient himself, a physician, or a religious man, whom he thoroughly respects, to whom he turns with confidence in moments of trial. There is no reason, except in case of distinct deterioration, why he should not be completely cured; but we do drugs, but mental influence and will power is the most important crutch. Though it is true that and situations, now grown so common in the United States. That country uses more than ten times as much opium and cocaine as is required in medicine. The special victims of the habits are those who can easily procure the drugs—drugsters, physicians, and nurses. It is quite easy to cure a drug habit. It is for easy to resume it. Relapses take place because the patients persuade themselves that for this once they need a dose of their favourite remedy. One dose leads to another, and so the habit is resumed. After a time a habit of relapse into the habit develope and is most difficult to break. If the patients themselves want to, however, it is not hard as a rule to correct these habits. Moral factors mean much more than physical. Patients must have someone whom they take to their confidences, have proper living, with long hours in the open air and good hours of sleep, and must not be subjected to emotional strains. It is almost impossible to break up the habit in an actor or a broker, or a gambler, because every hour and then he feels the need of the stimulant to enable him to accomplish some sudden task in his work. The same thing is true of a doctor or a nurse with many emergency calls to answer. Often the change of life necessary may be difficult, but as the wages of the drug habit is premature death, it should not be difficult to make patients understand the necessity. Other habits—dietary, sexual, and the like—must be met in just the same way. The patient can be helped in the beginning by means of drugs. After that it depends on his will. His will may be helped very much, however, by having a confidant, a confessor, or a physician to whom he goes in relapses, and who advises him so that his surroundings may be made more favourable.

Faith Cures and Miracles.—It is often said that the cures at shrines and during pilgrimages are mainly due to psychotherapy—partly to the tradition in Providence, and partly to the strong expectancy of cure that comes over suggestive persons at these times and places. Undoubtedly many of the cures reported at shrines and during pilgrimages are of this character. Such analyses of cures are not of noel merely as cures, but are used for diagnosis, like tuberculosis, diagnosteced by one or more physicians of standing, ulcers of various kinds, broken bones that have long failed to heal, and other readily demonstrable organic affections. When cures are worked in such cases, some force beyond that of nature as we know it must be at work. The physicans who have been most closely in touch with the patients at such shrines are those most confident in their expression that they have seen miracles take place. A visit to a shrine like Lourdes is sufficient to convince any physician that there is something more than psychotherapy, though he can see also abundant evidence of psychotherapy at work.

Cycles of Psychotherapy.—Our time has seen a revival of psychotherapy in many forms. Interest in it runs in cycles. It is always most intense after a period of alcolholism during which he indulged in drink in the way of temptation, he will almost surely fall;
tery of life has been discovered. In the reaction that follows disilusionment mental healing becomes a case of concretion. Our phase will lose significance as preceding growth, depending upon the unconscious of bodily and mental factors as co-ordinating influences for health will recur.

COTTEN, Three Thousand Years of Mental Healing (New York, 1911); Lawrence, Promethia Psychiatry and Quackery (Boston, 1910) (both of them lack sympathy for preceding generations); and (2) the Rosicrucian, as a school, and (3) the Rosicrucian Order, an example of the place of bodily and mental factors as co-ordinating influences for health will recur.

Ptoloméus, Claudius. See Geography and the Church.

Ptoloméis, a titular see in Egypt, metropolis of Thébaïs Secunda. Ptoloméis owes its name to Ptolomé Soter who built it on the site of a village named Si (with the article, Sf., whence the Copto Sf., or Si; Arabic Abasya; Greek Sois and Syis). The capital of the nome of Thinite, it supplanted Thèbes as capital of Thèbæis; as important as Memphis, its administration was copied from the Greek system. A special cult in honour of the Ptolemys, particularly of its founder, was established. In the sixth century it was the civil metropolis of Thebæis Secunda. The Querian (Origen, Christians, II, 605) mentions three bishops: the Melitian Ammonius; Heraclides, present at the Council of Ephesus (431); Isaac, who signed the letter of the bishops of Thebæis to the Emperor Leo (457) and was present at the Council of Constantinople under the Patriarch Gennadius. A Greek "Notita episcopatuum" refers to the see about 820. It had also some Coptic bishops (Zéda, Catalogou oecum. et c. 329). The Coptic "Notitiae episcopatuum" distinguish exact copies of the documents cite it frequently, and allusion is made to its medical school. To-day it is known as Menahéy or Menahéh, contains 8000 inhabitants, belongs to the district of Girzeh, Province of Sohag, on the western bank of the Nile, and is a railway station between Cairo and Thèbes.

Ptolémèis (Saint-Jean d'Acre), a titular metropolis in Phoenicia Prima, or Maritima. The city of Acre, now Saint-Jean-d'Acre, was called Ptolémæis in 235 B.C., by Ptolemy II, surnamed Philæphus, and since then this name has been associated with thejointly with the primitive one, at least as the official name. Quite early it possessed a Christian community visited by St. Paul (Acts, xxii, 7). The first bishops known are: Clarus, present about 190 at a council held concerning the observance of Easter; Æneas, at Nicea, 325, and at Antioch, 341; Nectatus at Constantinople, 381; Antiochus, friend and later adversary of St. John Chrysostom, and author of some lost works; Heladius at Ephesus, 431; Paul at Antioch, 445, and at Chalcodon, 451; John in 518; George at Constantinople, 553 (Le Quien, "Oriens christianus", II, 813). The see was a suffragan of Tyre, which then depended on the Patriarchate of Antioch. With the Latin conquest the province of Tyre was attached to the Patriarchate of Jerusalem. Latin bishops resided there, and the list of bishops begins from 265; it is found in Eusebius (Hier. Cath. med. avv. I, 66). From this date to the taking of the city by the Arabs in 1291 the bishopric was governed by the Patriarch of Jerusalem. Concerning the titular bishops up to 1592 see Eusebius, II, 88; III, 105. The official list of the Roman Curia (Rome, 1854) does not mention Ptolémæis as a bishopric, but it may have been known as an archbishopric. The Greeks elevated the see to the rank of metropolitan depending on the Patriarchate of Jerusalem. This occurred before 1872, when Joseph, present at the Council of Jerusalem, was qualified as metropolitan; the same conditions now exist. The Melkite, or Greek, metropolis numbers 10,000 faithful, 36 priests, 30 churches or chapels, 17 schools, 3 orphanages, and a monastery of 23 monks. There is a Latin parish directed by the Franciscans, a hospital, school for boys, the Ladies of Nazareth, and a seminary, a schola, and hospital of the Church Missionary Society.

S. PRÉDÈRES.

Ptolomy of Lucca. See BARThOLOMew OF Lucca.

Ptolemy the Gnostic, a heretic of the second century and personal disciple of Valentine. He was probably still living about 180. No other certain details are known of his life; Harnack's suggestion that he was identical with the Ptolemy spoken of by St. Justin is as yet unproved (Text. u. Untersuch. New. Ser. XIII, Anal. s. alt. Gesch. d. Chr.). He was, with Heracleon, the principal writer of the Italian or Western school of Valentian Gnosticism. His works have reached us in an incomplete form as follows: (1) a fragment of an exegetical writing observed by Ireneus (Acta, lxx., viii., 5); (2) a letter to Flora, a Christian lady, not addressed to us. This letter is found in the works of Eusébius (Hær. XXXIII, 3-7). It was written in response to Flora's inquiry concerning the origin of the Law of the Old Testament. This law, Ptolemy states, cannot be attributed to the supreme God, nor to the devil; nor does it proceed from one law-giver. A part of it is the work of an inferior god; the second part is due to Moses, and the third to the elders of the Jewish people. Three different sections are to be distinguished even in the part ascribed to the inferior god: (1) The absolutely pure legislation of the Decalogue which was not destroyed, but fulfilled by the Saviour; (2) the laws mixed with evil, like the right of retaliation, which were abolished by the Saviour because they were incompatible with His nature; (3) the section which is typical and symbolic of the higher world. It includes such precepts as circumcision, fasting, and was raised by the Saviour from a sensible to a spiritual plane. The god who is the author of the law, in so far as it is not the product of human effort, is placed in a middle position between the Supreme God and the devil. He is the creator of the universe, is neither perfect, nor the author of evil, but ought to be called just. In his interpretation of the universe, Ptolemy resorted to a fantastic system of cosmogony. Forty of these, as he believes, rule the higher world, the pleroma. This system becomes the basis of a wild exegesis which discovers in the prologue of St. John's Gospel the first Ogdoad. (See GNOSTICISM.)

N. A. WEBER.

Publican, in the Gospels, is derived from the publican of the Vulgate, and signifies a member or employe of the Roman financial companies who farmed the taxes. From the time of the Republic the Roman State relieved itself of the trouble of collecting the taxes in the provinces by putting up the taxes of each in a lump sum to auction. The auctioneers were called publicans, and received authorization to extort the sum from the province in question. Such a system afforded ample opportunity for rapacious exactions on the part of the company and its officials, and the abuses were often intolerable. On account of these, and more, perhaps, because of the natural though imperfect Jewish hatred of the Romans, and the fact that those of the Jews who found it profitable thus to serve the foreign rulers were objects of execration to their countrymen. In the Gospel narrative we find
them as a class habitually coupled with "sinners" and the "heathen". The attitude of Christ towards this, as well as other despised classes, was that of an uplifting sympathy. One great reproach cast upon Him by His enemies, the self-righteous Scribes and Pharisees, was the friendship of the publicans and sinners; and consistently with this conduct it pleased Him to choose as one of the twelve Apostles Levi or Matthew the Publican (Matt., ix. 9).

Matthew, Comment. of Gospel of St. Marko (New York, 1898); Dietrich, Die rechtliche Natur der Societas publicanorum (Mies- sen, 1890); Thibault, Les donnees chretianes des Romans (Paris, 1898).

Public Honesty (Decency), a diriment matrimonial impediment consisting in a relationship, which arises from a valid betrothal, or from a marriage approved by the Church but not consummated. Marriage between the persons affected by this impediment, as described below, is null; were it possible for them to marry they might be exposed to incontinency, owing particularly to their intimacy and familiar intercourse.

Traces of this impediment are found under another name in Roman law, since according to Modestinus (D. XXIII, ii, 42, De ritu nuptiarum) not only what is lawful, but likewise what is eminently fitting, is to be observed in entering into wedlock. Hence in this Roman law affinity arising from a valid marriage, whether consummated or not, constituted a diriment impediment between the affined in all degrees throughout the direct line, and to the second degree (civil method of computing) in the indirect or oblique line. Moreover, there was a quasi-affinity, which, for the safeguarding of public morals, rendered marriage null and void: (1) between a man and his stepdaughter or between a woman and her stepson; (2) between a woman and the son or father of her betrothed, and conversely between a man and the daughter or mother of his affianced (D. XXIII, ii, 12 and 14); (3) lastly, between persons affined through concubinage (loc. cit., 14); and D. XXXVIII, x, 7).

The Church, imitating this legislation, admits an impediment, which, in her estimation, is required by public decency or good morals. In canon law carnal intercourse, leit or otherwise, is the principle of affinity; in Roman law, it is valid marriage, whether consummated or not. Public honesty then coincides at times with the affinity of the Romans, at times with their quasi-affinity. This impediment is sometimes attributed, but wrongly, to Boniface VIII. It doubtless owes its existence not to a positive law, but to custom, and probably dates back to the twelfth century (Berardi, III, diss. II, cap. iii). Canons xvi, xix, xv (Caus. II, Q. ii) in Gratian's Decretum, indicating an earlier existence of this impediment, are apocryphal (Gasparri, "De Matrimonio", n. 801).

According to our present legislation (Trent, Sees. XXIV, cap. iii, De Ref. Matr.) the impediment of public honesty arises from a valid betrothal between the male party to the contract and the woman and the blood relatives of the woman in the first degree (mother, daughter, sister), and conversely between a woman and the blood relatives of the man in the same degree (father, son, brother). Once existing, the impediment always remains, even though the betrothal is lawfully broken (see Betrothal). It is to be noted that betrothal, to be valid, must now ("Ne temere" of Pius X) be in writing, signed by the contracting parties and by the ordinary, or a parish priest within his own territory, or two witnesses. If one of the contracting parties is unable to write, an additional witness is required. If the betrothal is conditional, the impediment does not arise until the condition is verified.

Second, this impediment, for a stronger reason, is begotten by a marriage contract, not perfected by carnal relations—and this, too, though the marriage be invalid, unless the invalidity be due to lack of lawful consent. By carnal intercourse public decency gives way to affinity, and, though some deny this, all admit that in a partial dispensation it is sufficient to express the impediment of affinity, while public decency, if it still exist, is understood.

A civil marriage does not give rise to this impediment (S. C. C., 17 March, 1879), nor does public decency begot a second impediment to a former betrothal; namely, a betrothal or marriage (unless consummated) with the mother, sister, or daughter of an affianced person does not prohibit the keeping of one's troth to the said person. Since the impediment of public decency is of ecclesiastical origin, it follows that the Church may dispense without it, and that it does not affect unbaptized persons, even though later they become Christians. A dispensation from "Disparity of Worship" includes one in public decency, where the baptized party requires such. Finally it is apparent that this impediment may be multiplied in the same person, as, for instance, if one were to enter into betrothal with several women related by blood in the first degree.

Pueblo Indians. —Name: From the Spanish word meaning "village" or "town". A term used collectively to designate those Indians of central New Mexico and north-east Arizona, of sedentary and agricultural habits and dwelling in permanent communal stone-built or adobe houses, as distinguished from the surrounding tribes of ruder culture and roving habit. The name is strictly a cultural appellation, without linguistic or proper tribal significance, although in former times each group of pueblos speaking the same language or dialect appears to have constituted a loose confederacy, or "province" as termed by the Spaniards.

Divisions and Languages: The ancient area of Pueblo culture, as indicated by the numerous prehistoric ruins, extended from about the Arkansas and Grand rivers, in Colorado and Utah, southward indefinitely in institution of the culture, and eastward across Arizona eastward almost across the Texas Panhandle. This area seems to have been gradually narrowed down by pressure of the invading wild tribes from the north and east: Apache, Navaho, Ute, and Comanche—and, by the slow drying up of the country, until at the beginning of the historic period in 1540 the Pueblo population centred chiefly on the upper Pecos and Rio Grande and about Zuni in New Mexico, and upon the Hopi mesas in north-east Arizona. The inhabited pueblos at that date probably numbered close to one hundred, with a total approximate population far from 50,000, as against 25 population, with a total population in 1910 of 11,153. This does not include the two small Americanized pueblos of Isleta del Sur (Texas) and Senez (Mexico), in the immediate neighborhood of El Paso, which might bring the total up to a few more than 11,200 souls. With the exception of these two, all but the seven Hopi pueblos (including Hano) are in New Mexico. In all, there were represented seven languages of four distinct linguistic stocks, classified as follows:

1a. Tewa group ("Tegua province") 1910 a. d.

1 Hano (with Hopi, Arizona) about 125
2 Nambe ..................... about 95
3 Pojoaque (recently extinct)
4 San Ildefonso ................ 110
Juan de la Cruz at Puaray. The first, and it is believed, all three, were killed by the Indians, being the first missionary martyrs within the United States. Unless otherwise noted, all the Catholic mission workers in the Pueblo region are Franciscans.

No other entry of the Pueblo country was made until 1581, when Fr. Augustin Rodriguez asked and received permission for the undertaking. Accompanied by two other priests, Frs. Santa Maria and Lopes, with an escort of about twenty Indians and volunteers under Francisco Cervantes, he reached Tiguex late in the year. The escort was apparently frightened by the hostile attitude of the natives, but the priests remained, and all three soon afterward met the fate of their predecessors, being killed by the Tiguas.

In an attempt to ascertain the details of their death, and possibly recover their remains, a volunteer explorer, Don Antonio Cepejo, accompanied by Fr. Bernardino Beltran, in the next year led a small expedition over the same route up the Rio Grande. Having accomplished this purpose he went on, visiting almost every Pueblo tribe from the Pecos to the Hopi, finally reaching Mexico in the fall of 1583. Late in 1590 a strong expedition under Castano de Sosa ascended the Rio Grande, stormed Pecos and visited a large number of pueblos, whose inhabitants either fled or were made submission. One or two expeditions seem to have reached the buffalo plains. The real conquest of the country was accomplished in 1598-9 by Juan de Onate of Zacatecas, with 400 men, including commissary Fr. Alonso Martinez and nine other Franciscans, who traversed the whole region to beyond the Hopi, generally establishing friendly relations with the natives, and organizing regular forms of government, with a priest in each district. A massacre of a Spanish detachment at the almost inaccessible cliff town of Acoma resulted in the burning of the pueblo and the massacre of most of the inhabitants, 24 January, 1599. In 1605 Santa Fé was founded as the capital of New Mexico.

In 1817 eleven Franciscan churches had been built and 14,000 natives baptized. In 1821 Fr. Alonso de Benavides arrived as first custodian with 27 more Franciscans. In 1827 over 34,000 Indians had been baptized and 43 churches built, and 46 fathers and a number of laymen were at work. To Fr. Benavides we owe the "Memorial", the standard authority on the missions of New Mexico. He died at Madrid in 1630. Fr. Geronimo Salmeron, of the same period, is the author of a "Doctrina" in the Jemez language and of a valuable "Relaciones de Nuevo Mexico". In 1630 there were about 50 friars serving 80,000 Indians in over 90 pueblos grouped into 25 mission jurisdictions, and the whole region was added to the wild Apache and the unidentified Jumana in the eastern plains.

Shortly afterward began the difficulties between the administration and the missionaries, which led up to the great disaster of 1680. Revolts at various times of the Jumenes, Tewas, Pisos, and others were harshly repressed by the governors. Taos planned a general rising and several missionaries were killed. From about 1670 the Apache and Navaho raids became a constant check to Pueblo prosperity. The trouble culminated in August of 1680 in a general rising of all the Pueblos, with a few exceptions, under Popé, a Tewa chief of San Juan. Nearly four hundred Spaniards were killed, including twenty-one of the thirty-three missionaries then in the country; every mission was destroyed, with the exception of the Guadalupino. Otermin was besieged in Santa Fé, and finally compelled to withdraw with every Spaniard in the country into Mexico. Many of the Indians abandoned their pueblos and built new towns in inaccessible regions. For twelve years more in the Pueblos Fr. Padilla with the Wichita, Fr. Luis de Escalona remained behind at Pecos ("Cieyou") and Brother.

Juan de la Cruz at Puaray. The first, and it is believed, all three, were killed by the Indians, being the first missionary martyrs within the United States. Unless otherwise noted, all the Catholic mission workers in the Pueblo region are Franciscans.

No other entry of the Pueblo country was made until 1581, when Fr. Augustin Rodriguez asked and received permission for the undertaking. Accompanied by two other priests, Frs. Santa Maria and Lopes, with an escort of about twenty Indians and volunteers under Francisco Cervantes, he reached Tiguex late in the year. The escort was apparently frightened by the hostile attitude of the natives, but the priests remained, and all three soon afterward met the fate of their predecessors, being killed by the Tiguas.

In an attempt to ascertain the details of their death, and possibly recover their remains, a volunteer explorer, Don Antonio Cepejo, accompanied by Fr. Bernardino Beltran, in the next year led a small expedition over the same route up the Rio Grande. Having accomplished this purpose he went on, visiting almost every Pueblo tribe from the Pecos to the Hopi, finally reaching Mexico in the fall of 1583. Late in 1590 a strong expedition under Castano de Sosa ascended the Rio Grande, stormed Pecos and visited a large number of pueblos, whose inhabitants either fled or were made submission. One or two expeditions seem to have reached the buffalo plains. The real conquest of the country was accomplished in 1598-9 by Juan de Onate of Zacatecas, with 400 men, including commissary Fr. Alonso Martinez and nine other Franciscans, who traversed the whole region to beyond the Hopi, generally establishing friendly relations with the natives, and organizing regular forms of government, with a priest in each district. dication of former Christian teaching. The sacred vessels of the slain priests had been carefully preserved and candles were still burning upon the altar. The reconquest was assured by the retaking of Santa Fé from the Tano, and the surrender of all the defenders, 29 December, 1693, but a spirited resistance was kept up by the various tribes, even at heavy loss, for nearly a year longer. The de-
feated hostiles were compelled to return to their abandoned towns or to gather into new ones, as their common enemy extended the right of conquest. A part of the Yeya, who had fled from the Rio Grande to the far distant Hopi, remained with their protectors and now constitute the pueblo of Hano, still retaining their distinct customs and language. In June, 1696, half the pueblos rose again, killing five missionaries and a number of other Spaniards, but were finally reduced to submission. The missions were re-established among all but the Hopi, who showed such determined hostility to Christianity as to destroy one of their own towns, Awatobi, and massacre or enslave the entire population for having consented to receive missionaries (1700). Sporadic outbreaks and alarms continued for many years, together with increasingly bold inroads by the wild tribes. In a special junta held in 1714 the missionaries, against the civil and military authorities, petitioned the viceroy to send soldiers to carry arms and paint their bodies. From 1719 to 1745 the Jesuits of Arizona made efforts to secure official charge of the Hopi, but without success. In 1747 an expedition against the wild Comanches, who had raided Pecos and other eastern pueblos, killed 107, captured 206 and took nearly 1000 horses.

In 1750 the hostility of the civil administration to the missionaries resulted in two counter reports, in one of which the Franciscans were accused of neglecting their duties, and it was recommended that the number of missions be reduced. The Jesuits, however, who were the most important, the one with 1000 and the other with 2000 Indians, and each with two resident missionaries. In 1776 the Franciscan Fr. Francisco Garcés ascended the Colorado to the obdurate Hopi, but was repulsed. A part of the Anza took advantage of a terrible famine in the tribe to induce a few of them to remove to the mission pueblos (see Hopi I). In this same year, 1780-1, besides the famine and pestilence which nearly exterminated the population, the pueblos of 5000 Indians of the mission pueblos, in consequence of which the governor in 1782 officially reduced the number of missions by eight, despite the protests of the friars. Says Bancroft: "It should be noted that the New Mexican missions were radically different from the Californian establishments of later years. Practically, except in being subject to their provincial and paid by the king, instead of being under the bishop and supported by parochial fees, these friars were mere parish priests in charge of Indian pueblos. There were no mission estates, no temporalities managed by the padres, and except in petty matters of religious observance the latter had no authority over the neophytes. At each pueblo the padre had a church, where he preached and taught and said Mass. With the help of these routine duties, and of those connected with baptism, marriage and burials, he got generally content. The Indians, for the most part willingly, tilled a little piece of land for him, furnishing also a few servants from week to week for his household service and that of the church. He was in most instances a kind-hearted man and good of his Indians, spending much of his salary on them or on the church.

The Indians were in no sense Christians, but they liked the padre in comparison with other Spaniards, and were willing to comply with certain harmless church formalities (sic), which they neither understood nor cared to understand. To understand or explain them brought against them he says, "with all their shortcomings, the padres were better men than their enemies." Official reports of this later period represent the Indians as constantly victimized by the traders and the Spaniards generally.

About the year 1800 the missions still existing were eleven, viz: at Sia (Asuncion), Ileaeta (San Agustín), Laguna (San José), Picures (San Lorenzo), San Felipe, San Juan, Dandia (Aspumay or Dolores), Poynaque (Quadalepu), Santa Clara, Santo Domingo, Toros (San Geromino), Zuñi (Quintal de Zuñi). "Visits were young, Cochiti (San Buenaventura), Galisteo, Jemez (San Diego), Nambe (San Francisco), Pecos (Los Angeles), San Felipe, San Ildefonso, Santa Ana, Tesuque. With the increase of the Spanish population and the steady decrease of the Indians in importance as well as in number, the missions also declined, and in 1811 there were but five missionaries in nineteen pueblos of New Mexico. The establishment of the Republic of Mexico in 1821 tended further to weaken the mission support. In 1832 there were still but five resident of the Christian Indians are "in the same condition," as in California, because there was nothing to confiscate. In 1837 a part of the Pueblos attempted a revolution, and elected José Gonzales of Taos as governor, but were defeated in the following January and the Indian leader taken and shot. In January, 1847, the same Indians of Taos resisted the newly established American government, killing Governor Charles Bent and about twenty other Americans, but were finally defeated, their pueblo being stormed, about 150 of their men killed, and several others executed. With some exceptions none of the pueblos have since remained quietly under American rule, the treaty of Cession having conferred upon them the theoretical right of citizenship, with which however they seldom concern themselves, their affairs being administered through the Indian Office, and their pueblo lands being secured under old Spanish grants confirmed by act of Congress in 1858. Other legislation left them practically disfranchised. "They never cost the government a dollar of warlike expenditure, and they received more less aid from the Department than they cost to the benevolent of the hostile tribes." In 1832 the capital was removed from smallpox. With the changing conditions the pueblos lost their mission character, the old Franciscans being replaced by secular priests.

Excepting the Hopi of Arizona and about one-half of the people over 5000 Indians of the mission pueblos are still under Catholic influence and at least nominally Catholic, although a majority undoubtedly still adhere to their ancient rites. Every pueblo is served either by a resident or visiting priest, including several Franciscans, with frequent instruction by friars from Santa Fé or Bernallilo. Some of the old churches, however, are in ruinous condition and visits from the priest are at long intervals. Besides a number of Government schools there is a Catholic day school at Jemez, conducted by Franciscan Sisters and the two flourishing boarding-schools of Saint Catherine's at Santa Fé, in charge of the Sisters of the Blessed Sacra-
cement, and Loretto at Bernallilo, under the Sisters of Loretto. Of Protestant work, past and present, the most important is that of the Presbyterians, at Laguna, begun about 1870 by Rev. John Ducharme, the author of several books, who speaks the language. Although very few of the adult Pueblos speak any English, a large number speak Spanish fluently. Home Life and Industries: The primitive Pueblo culture stood alone. It centred about the house, an immense compound of his Indians, and several stories high, of many rectangular rooms and
PUEBLO DANCE AND GROUP OF PUEBLO INDIANS, ZUÑI, NEW MEXICO
narrow passage ways, of varying sizes and directions, with flat roofs which served as working or resting places, or as observation points for ceremonial occasions. The houses of the pueblo were usually built around a central open space or plaza in the middle of which was the "kiva" (Spanish "estufa") or sunken rock-hewn room dedicated to the sacred secret rites of the various priesthoods. For better defence against the wild tribes the outer walls were frequently solid, without door or window opening, entrance being effected by means of ladders—one on the outside for ascending to the flat roof, and another descending into the interior through a doorway in the roof itself. The material was either cut sandstone or volcanic tufa, faced with adobe, or adobe blocks of sun-baked clay. The roofs were of timbers reinforced with cornstalks laid in clay. The fire-place was in the centre or in the corner, and the smoke escaped through the doorway in the roof. At one end of the principal living-room was a low stone enclosure fitted with stone slabs of various smoothness and set slanting, on which the corn was ground into meal by means of stone metates. The cooking vessels and the cooking fires of the same region were simply variant forms of the same structure, from which the modern Pueblo house differs but very little. The prehistoric "cliff-dwellers" were in many cases the ancestors of the Pueblos of to-day. The Hopi, in fact, are still true cliff-dwellers, the houses being for the most part built on the summits of mesas several hundred feet above the surrounding desert.

Their main dependence was agriculture assisted by irrigation, corn and beans being the principal crops, with "chile" pumpkins, native cotton and tobacco, and, later, peaches introduced by the old missionaries. In spite of their arid surroundings they were industrious and successful farmers. They also hunted to some extent, particularly jackrabbits, which were taken by circle "drives" in which whole communities participated. Fish was never eaten. The dog was the only domestic animal, with the exception of the turkey and eagle occasionally kept for feathers. As weavers and potters they excelled all other tribes north of Mexico, their pottery being particularly beautiful, being well-modelled, finished, and general workmanship. Their native cotton is now superseded by wool. They also made a great variety of baskets, the basket plaques of the Hopi being especially artistic. The men were expert carvers in wood. Their ordinary clothes were the tunic, with elaborately embroidered furs of woven cotton for ceremonial occasions; fabrics of wool and yucca fibre were also used in ancient times. Blankets of woven strips of rabbit skin were worn in winter. In summer the men went practically naked except for the breechcloth and children under ten years were seldom clothed. Belts, necklaces, earrings, and ornaments of shell, turquoise, and more recently of worked coin silver, were worn by both sexes. The hair was cut off above the eyes in front, and either bunched up behind by the men, or at the side by the women, the upper part of the head being distended by a general hair-arrangement. The women alone were the potters and breadmakers, but both sexes shared in farming, house-building, weaving and basket-making. Weapons were the bow and arrow, lance, club, and knife, with a boomerang club for killing jackrabbits and shields for ceremonial occasions.

Organization and Religion.—All the Pueblo tribes had the clan system, some having as many as twenty or more clans, with descent generally, but not always, in the mother. Monogamy was the rule, uninhibited by the discipline of the "kivas" or religious society. The roof was the common room and northward, and the woman was the virtual owner of both the house and the garden, with correspondingly higher status than in other tribes. Each pueblo was an independent and separate community, the only larger bond being similarity of language or customs, the chief being simply the executive of the priesthoods. In some pueblos there is said to have been a summer and a winter chief. Since Spanish times the town government is vested in an elective chief or governor, a vice-chief and a council. Practically all affairs of importance—war, medicine, hunting, agriculture, etc.—were controlled by the numerous priesthoods or secret societies, whose public ceremonies made up a large and picturesque part of Pueblo life. Among these ceremonies the Snake Dance of the Hopi is probably most widely known. Their religion was an animism, with special appeal to the powers supposed to control the growth of crops, hunting, and war. Some of their ritual myths were of great length and full of poetic imagery, while some of their ceremonies were of high dramatic character, often interwoven with features of the grossest obscenity. Special regard was paid also to the cardinal points, to which were ascribed both sex and colour. Belief in witchcraft was universal and witch executions were frequent occasions. The dead were buried in the ground. In temperament the Pueblos were gentle, and still are, peaceable, kindly, industrious, and of rather jovial disposition. They have been little changed by the white man's civilization beyond the addition of a few conveniences in housekeeping and working methods, and the majority still hold tenaciously to their old beliefs and ceremonies (see also Hopi Indians).

The literature upon the Pueblos Indians and region is so voluminous that it is only possible to note a few of the works most readily available.

**Puerto Viejo, Diocese of. See Portovigio.**

**Puget, Pierre, painter, sculptor, architect, and naval constructor, b. at Marseilles, 31 Oct., 1622; d. there 2 Dec., 1694. At fourteen he was apprenticed to a shipbuilder and showed much talent. In 1637 he set out on foot for Italy, and found work with the flower painter, Fleury. On his return he continued to study painting under Pietro da Cortona. In 1643 he returned to France, and was summoned to Toulon to build a man-of-war. In 1646 he was again in Italy as assistant to a religious of the Feuillants, whom Anne of Austria had commissioned to superintend all the principal monuments of antiquity. Puget's attention was thus directed to architecture. In 1653 he was back in France, painting altar-pieces for different churches, the "Annunciation and Visitation" (Aix); the "Salvator Mundi", the "Baptism of Con stantine and of Oliva", in the roof of the castle and northward, and the woman was the virtual owner of both the house and the garden, with correspondingly higher status than in other tribes. Each pueblo was an independent and separate community, the only larger bond being similarity of language or customs, the chief being simply the executive of the priesthoods. In some pueblos there is said to have been a summer and a winter chief. Since Spanish times the town government is vested in an elective chief or governor, a vice-chief and a council. "Madonna" for the Balbi; another for the Carrega; "St. Philip Neri"; the "Rape of Helen", Palazzo Spinola; a relief of the "Assumption" for the Duke of Mantua. His sculptures in the Louvre are "Hercules", "Janus and the Earth", "Perseus delivering Andromeda", "Milo of Crotona", "Alexander and Diogenes". At the Conagé, Marseilles, is his "Plague of Milan". Architectural works are the door and balcony of the Hotel de Ville, Toulon; the fish market, Marseilles; he also commenced the Church and Hospice of Charity in that city, but left it unfinished at his death.

M. L. HANDLEY.

Puigh, George Ellis, jurist and statesman, b. at Cincinnati, O.; 28 November, 1822; d. there, 19 July, 1876. He was the son of Lot Puigh and Rachel Anthony. Educated at Miami University, Oxford, O., graduating A.M. in 1843, he was admitted to the bar of the Supreme Court of Ohio in 1844, and won high repute as a lawyer in Cincinnati, where he established his practice. He served in the Mexican War, 29 April, 1847-1 April, 1848, as captain Co. F, 4th Ohio V. I., and as aide-de-camp to General Lane, being commended for bravery at Atlebro, 19 Oct., 1847. He was a member of the Ohio House of Representatives from Hamilton County, 1848-9; city solicitor, Cincinnati, 1850; attorney-general, State of Ohio, 1852-54; and was elected to the United States Senate from Ohio, 3 Dec., 1855-3 March, 1861. He was the first native of Ohio to sit in that body. His principal services were in the committees on public lands and on the Judiciary. Displaying great ability in discussion of the measures arising from the question of slavery and in the organization of the territories of Kansas and Nebraska, he supported Douglass's doctrine of popular sovereignty, and was defeated for re-election to the Senate in 1861 by Chase. He was delegate in 1860 to the Charleston-Baltimore Convention of the Democratic party, acting as chairman of Ohio delegation and supporting the nomination of Douglas. The reply to Yancey on the slavery question was most effective. Yancey blamed the northern delegates for "admitting slavery to be wrong and thus surrendering the very citadel of their argument". Puigh answered: "You mistake us; we will not do so." He defined the position of the northern democrats, settling out that while they were not opposed to the institution of slavery in the states where it existed, they were unalterably opposed to its extension into any free state and any territory without the untrammeled consent of the residents thereof, as ascertained by an appeal to the ballot.

During the Civil War he advanced the exercise of every constitutional power by the Government to preserve the Union. Defeated for Lieutenant-Governor of Ohio in 1863, and for representative to the 29th Congress in the 1st Ohio district in 1864, he was elected a delegate to the constitutional convention of Ohio in 1872, but declined to serve. His most noted legal argument was the appeal in habeas corpus proceedings on behalf of Vallandigham in 1863. The question involved was the power and duty of the court to free Vallandigham held in confinement under a military order. Puigh urged release on the ground that the civil courts of Ohio and of the United States were open and unimpeded in Ohio and that only through proceedings in them, and not by the exercise of military authority, could Vallandigham, a civilian, be lawfully imprisoned. Soon after his marriage to Therese Chaffant, 22 Nov., 1855, both he and his wife were converted to the Church.

JOHN G. EWING.

Puigin, Augustus Welby Northmore, architect and archaeologist, b. in London, 1 March, 1812; d. at Ramsgate, 14 Sept., 1862; only child of Augustus Charles Puigin (originally de Puigin), a French Protestant of good family, who had fled from France and settled in London about 1798, and soon acquired distinction as a draughtsman in the office of John Nash, and as a teacher of architectural drawing. The young Puigin received his elementary education as a day-boy at Christ's Hospital, better known as the Blue-coat School. At an early age he took his place among his father's pupils, and in 1825 he accompanied a party to Normandy for the study of Gothic architecture. From his father he inherited a surprising dexterity and dexterity in drawing and from his mother, Catherine Welby, some of that force of character and piety which so distinguished him in after years. When fourteen he was entrusted with the responsibility of preparing drawings of Rochester Castle, and the year following, on occasion of his second visit to France, we find him suffering from overwork while sketching in the Cathedral of Notre Dame at Paris. In the same year he was engaged to design furniture for Windsor Castle. In his youth a passion for theatrical accessories took possession of him. He fitted up a model stage with mechanical appliances of all kinds on the upper floor of his father's house in Great Russell St.; he executed the scenery for the new ballet opera of "Kenilworth", which owed its success largely to the architectural effects of his scenery; and subsequently he worked at the rearrangement of the stage machinery of Drury Lane. Still a delicate youth he became intensely fond of the sea, had a smack of his own, did some small trading in carrying woodcarvings from Flanders, and was shipwrecked off Leith in 1830. This love of the sea was strong in him to the end of his life.

In 1831 he married Ann Garnett, and shortly afterwards was imprisoned for non-payment of rent. He then opened a shop in Hart Street, Covent Garden, for the supply of architects' drawings and architectural accessories. The venture, however, did not succeed. His wife died in childbirth 27 May, 1832. In 1833 he married Louisa Burton, who bore him six children, among whom were the two who successively carried on his business, the eldest, Edward (d. 1876) and the

From a portrait by Herbert
youngest, Peter Paul (d. 1904). Both received from the pope the decoration of the Order of St. Sylvester. After conversion to the residence of his wife at Salisbury, and in 1834 embraced the Catholic Faith, his wife following his example in 1839. Of his conversion he tells us that the study of ancient ecclesiastical architecture was the primary cause of the change in his sentiments, by inducing him to pursue a course of study, leading to the faith. He never swerved in his fidelity to the Church, notwithstanding the bitter trials he experienced. He found that he had exchanged the noble English cathedrals with its service of chant for Moorfields chapel with its sermons. In 1835 he bought a small plot of ground at Laverstock, near Salisbury, on which he built for himself a quaint fifteenth-century house, St. Marie's Grange. In 1837 he made the acquaintance of the authorities of St. Mary's College, Oscott, where his fame as a writer preceded him. He found there men in sympathy with his ideas about art and religion. The president, Rev. Henry Woodall, was so impressed by him, that he accepted his services for the completion of the new chapel and for the decorations of the new college building. His designs included a chancel with its effective groining, the stained glass of the chancel windows, the decorated ceiling, the stone pulpit, and the splendid Gothic vestments. He constructed the reredos of old wood-carvings brought from the Continent and placed in niches on the front of the super-altar, he provided the seventeenth-century confessional, altar rails, and stalls, the carved pulpit (from St. Gertrude's, Louvain), the finest in England, as well as the ambo and chasubles of the sacristy (see "The Eclectic", July, 1905). He built both lodges and died the turreted red-brick "Pugin's night-cap" to the tower. Above all he inspired superior and students with an ardent enthusiasm for his ideals in Gothic art, liturgy, and the sacred chant. Tradition points out the room in which on Saturday afternoons he used to instruct the workmen from Hardman's, Birmingham, in the spirit and technical of their craft. The president appointed him professor of ecclesiastical antiquities (1838-44). While at the "Old College" he gave his lectures in what is now the orphans' dining-room, and at the new college in a room which still bears the inscription "Architecture." This association with one of the leading Catholic colleges in England afforded him valuable opportunities for the advancement of his views. During this period he did much of his best work in writing, teaching, and theoretical design. Many times he visited France and the Netherlands either alone, or in the company of his father or the Earl of Shrewsbury, he did not visit the great cities of Italy until 1847. The ecclesiastical buildings of Rome sorely disappointed him; but he had his compensation in the gift from Pius IX of a splendid gold medal as a token of approval, which gratified Pugin more than any other event in his life. His second wife having died in 1844, he married in 1845 Jane, daughter of Thomas Knill of Tiptree Hall, Herefordshire, by whom he had two children. In the meantime he had removed from Laverstock, and after a temporary residence at Cheyne Walk, Chelsea (1841), he took up his residence at Ramsgate, living first with his aunt, Miss Selina Welby, who made him her heir, and then in the house called St. Augustine's Grange, which, together with a church, he had built for himself. Of these he said that they were the only buildings in which his designs had not been curtailed by financial conditions.

Pugin was somewhat below the middle stature and rather thick-set, with long dark hair and grey eyes that seemed to take in everything. He usually wore a sailor's jacket, loose pilot trousers, a low-crowned hat, a black silk handkerchief thrown round his neck, and shapeless footwear carelessly tied. His form and attire suggested the seaman rather than a man of art. A voluble talker both at work and at table, he possessed a fund of anecdote and a great power of dramatic presentation; and when in good health overflowed with energy and good humour. And if sometimes his language was vigorous or personal, he was generous and never vindictive. Inured to industry from childhood, as a man he would work from sunrise to midnight with extraordinary ease and composure. His chief characteristic was his enthusiasm for the Gothic, his delight in the details of any archituteural work; he extolled the virtues of the Middle Ages. Pugin was an ardent Catholic, the religious enthusiasm of whom had long been evident in his work. He was an ardent and enthusiastic builder whom he had known as a workingman at Beverley. He trained the workmen he employed, and was in turn idolised by them. In his home at Ramsgate he lived with the regularity and asceticism of a monk, and the intellectual eagerness of a student. His benevolence made him everywhere the father of the poor.

His life was a battle for truth and fitness in architecture. He fought for the Christian inspiration of medievalism as against the cold paganism of the classic style. The victory ultimately fell to his side. The Englishman of to-day can with difficulty realise the condition of bad taste and ignorance which prevailed in matters of art at the commencement of the nineteenth century. "When Welby Pugin began his labours," says Ferrey, "there was not a single building of modern date, either public or private, which was not a reproach and a disgrace to the country." And although not alone, still more than any other man Pugin worked for a restoration. He revealed the principles of the medieval art, and applied them. Others have since applied his principles. The occasional exaggeration or narrowness of his views has been corrected or avoided; and it remains true that the restoration of our ancient churches, as well as the varied beauty of many of our new structures, is due to the ability and unceasing energy of Pugin. He was the man for his time. Gothic art was being studied, and many were turning their thoughts to the Church out of which it had sprung. Still, prejudice had to be broken down and ignorance removed; but the spirit of Pugin triumphed in the end.

BUILDINGS.—The following may be set down as typical and fairly complete: Cathedral:—Birmingham; Northampton (older portion); Nottingham; Southwark; Killarney; Enniscorthy; Salford (designed only); Parish Churches:—Diocese of Birmingham: Alton, Crewdse, Cheadle, Dudley, Kenilworth, Rugby, Solihull, Stowe-upon-Trent, Uttoxeter. Diocese of Liverpool: in Liverpool, St. Marie's (some years ago removed stone by stone to its present site); St. Oswald's, Bishop-Eton (church now forming new Aisle), St. Marie's, Southport (now north aisle). Diocese of Northamton: Cambridge (former chapel). Great Marlow; Lynn (former church). Diocese of Nottingham: Derby; Shepshed; Whitwick. Diocese
of Hexham and Newcastle: Newcastle-on-Tyne, Stockton-on-Tees.

To the above may be added churches or chapels at Barnstaple, Blairgowrie (Perthshire), Douai, Fulham, Gorey (Wexford), Guernsey; Kensington (London, Carmelite Church), Manchester (St. Wilfrid's), Parsons, and finally claim to rank as Architect: Stratford, Tagogate (Wexford), Waterford, Woolwich, a chapel for Sir William Stuart, and the high altar, Farm Street (London). *Convent:-* Alton, Bermondsey, Birmingham, Cheddle, Edge Hill, Gorey, Nottingham, Parsonstown, St. Paul's, Fleet, Tagogate. *Monasteries:* Downside, Mount St. Bernard's (Leicestershire). *Colleges:* Mount St. Mary's, Ratcliffe, Ushaw (additions), St. Edmund's, Ware (church), Oscott, (chapel completed), Maynooth (additions), Ushaw (church and refectory). *Domestic Buildings:* Adare (seat of Lord Dunraven), Alton Castle (rebuilding), Alton Towers (completion), Bilston Grange (near Rugby), Chirk Castle (restoration), Grace-Dieu, Leicestershire (restoration and church), Hornby Castle (near Leeds; plans for rebuilding), Magdalen College, Oxford; Scone, (gymnasium); Scarthin Castle, Bakewell. *Thorp Almshouses, Lincolnshire, Tofts, near Brandon (restoration).*

Much discussion has arisen concerning the claims of Puig to the credit of having designed the Houses of Parliament at Westminster. The Old Palace of Westminster was actually destroyed by fire in 1834, plans for the new buildings were invited, and those of Charles Barry (afterwards Sir Charles) received the approval of the Commissioners from among some eighty-four competitors. The first stone of the new edifice was laid in 1840 and the queen formally opened the two houses in 1852. At the outset Barry called in Puig (1836-37) to complete his half-drawn plans, and he further entrusted to him the working plans and the entire decoration (1857-52). Puig's own statement on the subject is decisive: "Barry's great work," he said, "was immeasurably superior to any that I could attempt at the time I have produced, and had it been otherwise, the commissioners would have killed me in a twelve-month" (i.e., by their opposition and interference).

*Literary Work:* The influence he wielded must be ascribed to much of his vigorous writings and exquisite designs as to any particular edifice which he erected. His "Contrastes" (1836) placed him at once ahead of the pioneers of the day. His "Glossary" (1844), so brilliant a revival in form and colour, produced a reaction of much importance. Scarcely less important were his designs for "Furniture" (1835), for "Iron and Brass Work" (1836), and for "Gold and Silver-Smiths" (1836), to which should be added his "Ancient Timber Houses of the XVth and XVIth Centuries" (1839), and his latest architectural work on "Chancel Screens and Rood Lofts" (1851). Besides the above elaborately illustrated productions, many other explanatory and apologetic writings, especially his lectures delivered at Oscott (see "Catholic Magazine," 1838, April and July), gave powerful expression to the views of the Church in the direction of constructive and decorative art, he brought out a pamphlet on the chancel: "An Earnest Appeal for the Revival of the Ancient Plain Song" (1850). It is worthy of mention that some of his earliest drawings appear in the volumes published by his father ("Examples of Gothic Architecture," 1821, 220 plates; "Architectural Antiquities of Normandy," 1828, 80 plates; "Gothic Ornaments, England and France," 1831, 91 plates). In knowledge of medieval architecture and Gothic elements, Puig stood above all his contemporaries. As a draughtsman he was without a rival. The success of his career is sought not so much in the buildings he erected, which, being, mostly for the Catholic body, were nearly always shorn of their chief splendour by the poverty of his patrons. He invented no new forms of design, though he freely used the old; his instinct led him not to Art as such, but to the Gothic embodiment of Art, which seemed to him the only true form of Christian architecture. He lacked the patience and breadth of the truly great mind, yet he may truly claim to rank as architect of the nineteenth century. His unquestioned merit is the restoration of architecture in England and the revival of the forms of medieval England, which since his day have covered the land. Queen Victoria granted his widow a pension of £100 a Year, and a committee of all parties founded the Pugin Travelling Scholarship (controlled by the Royal Institute of British Architects) as the most appropriate memorial of his work and a partial realization of his project which he had brought forward in his "Apology for the Revival of Christian Architecture in England" (1843).

*Henry Purcell.*

**Puiseux, Victor-Alexandre, French mathematician and astronomer.** b. 14 August, 1830, at Argenteuil-sur-Oise, near Paris (Jura). He went to school at Pont-à-Mousson (Lorraine). His brother persuaded the family to send the boy to a boarding-school in Paris (1844). In a year's time he entered the College Rollin, where he studied mathematics under Sturm. He took the competitive examinations of the Paris lycees and, having won the prizes in mathematics and physics, he was admitted to the Ecole Normale in 1837. Three years later he was appointed associate professor in science and in 1841 received the degree of doctor in mathematical sciences and the appointment to teach at the College of Rennes. In 1845 he was called to the new University of Besançon, where he taught science until 1849. He then returned to Paris as maître de conférences at the Ecole Normale. He substituted repeatedly both at the Sorbonne and at the College de France, lecturing for Sturm, Le Verrier, and Binet. In 1853 and 1854 he had charge of the examinations for admission to the polytechnic school. From 1855 to 1859 he was assistant astronomer at the Paris observatory, placed at the head of the burch department. From 1857 until six months before his death Puiseux was the successor of Cauchy in the chair of celestial mechanics at the Sorbonne. He resigned, but was granted the right to keep his title. He also gave up his appointment as member of the Bureau des Longitudes (1868-1872) on account of failing health.

Puiseux excelled especially in mathematical analysis. In his account of algebraic functions, first published in the "Journal de Liouville" (1851), he introduced new methods, marking an epoch in this subject. He also gave considerable expression to the thoroughness of his knowledge in this direction. He supervised the new edition of Laplace's works, published under the auspices of the Academy of Sciences, revising all the formulae and scrupulously verifying all his calculations in celestial mechanics. He performed a great deal of dry and laborious work himself, such as the reduction of the observations on the moon at Paris during the years 1801-29, and the intricate computations and deductions from the observations on the transit of Venus in 1874 and 1882. He had also a decided taste for botany and natural sciences in general. He was fond of philosophy and the classics.

While a student at the normal school he took part in the religious discussions of the day, displaying strong convictions and a keen intelligence. He se-
On 17 Oct., 1776, he offered his services to Franklin, the American agent, landed at Boston in July, 1777, and joined Washington. He rendered signal service, 4 Sept., 1777, at Brandywine Creek; he was commissioned 15 Sept., 1777, by the Continental Congress commander of the horse with rank of brigadier. He saved the army from surprise at Warren Tavern, and took part 4 Oct., 1777, in the battle of Germantown. He was prominent in the Jersey campaign during the winter, but resigned his command, 28 March, 1778, to organize an independent corps known as Pulsaki's Legion. The banner of the legion was purchased by him from the Moravians at Bethlehem and not presented to him, as said, by the Moravians, "Hymn of the Moravian Nuns". Ordered to Little Egg Harbor, New Jersey, the legion on 15 Oct., 1778, suffered severe loss through a night attack, which it repulsed. Dissatisfied with his assignments, he was only dissuaded by Washington from resignation. He entered Charleston, 8 May, 1779; he gallantly attacked the investing British on 11 May. Against the inclination of the authorities he held the city until it was relieved on 13 May. He rendered great services during the siege of Savannah, Georgia, and which was invested on the city, 9 Oct., he commanded both the American and French cavalry. He was wounded by a shot in the upper part of the thigh, and was taken on board the brig Wasp. He died as the vessel was leaving the river and was buried at sea off St. Helena's Island, South Carolina. His body subsequently taken back to Poland, and it is stated he himself requested that his remains lie under the monument erected to his memory at Savannah. On 11 May, 1910, there was unveiled at Washington a monument to his memory, erected by order of Congress.

SPARKS, The Library of American Biography, second series (15 vols., Boston, 1844-47), IV, 365-446; DE RUE, Histoire de l'Empire de Pologne, et du démembrement de cette République (Paris, 1807); Senate Executive Document, no. 120, 49th Congress, 2nd Session (1887); American Catholic Historical Researches, new series, VI (1910).

JOHN G. EWIN.

Pulaski, Diocese of (Pulatkensas). The ancient Pulati in Albania no longer exists; its name is borne by a district of European Turkey. The first Bishop of Pulati (877) was a suffragan of Dioeces, after the overthrow of which the bishops of Pulati were suffragans of Dioces (Thessalonica). Diodorus, bishop, and even later Pulati is not mentioned. From 1340 to 1520 there were two Dioceses of Pulati, Polata major and Polata minor; the bishops of the latter were known as Episcopi Sobrinienses from the Franciscan hospice in the village of Sobrin in the Turks and the decay of its population, after the death of Vincenzo Giovannelli appointed in 1556, the bishops no longer resided at Pulati. After 1667 its bishops were vicars Apostolic for Pulati. The Franciscan, Peter Raggi, was nominated Bishop of Pulati in 1697 and Apostolic administrator of the Archdiocese of Scopia in Albania. Since 1867 Pulati is suffragan of Scutari. The present (forty-first) Bishop of Pulati is Nicholaus Marconi, O.F.M., b. at Trent, Tyrol, 18 May, 1842, elected bishop 23 December, 1890. He resides at Giovanni. His coadjutor, with right of succession, is Bernardinus Schlau, O.F.M., b. at Scutari, 23 June, 1873, nominated bishop in January, 1910. The Diocese of Pulati comprises 13 parishes, all, except one, held by Franciscans. There are 14,044 Catholics: 9 secular priests; 14 churches or chapels. Missiones Catholicas (Rome, 1907); MARAKOVIC, Dukiuokuska- baroka Mitropolia (Zagreb, 1905); MIHAILOVIC, Is albanios o albanios, XXIII (Brod, Peremio, 1909), 124-126.

ANTHONY LAWRENCE GANCEVIC.

Pulcheria, Saint, Empress of the Eastern Roman Empire, eldest daughter of the Emperor Arcadius, b. 19 Jan., 399; d. in 453. After the death of Arcadius (408), her younger brother, Theodosius II, then only seven, became emperor under the guardianship of
Anthesmus. Pulcheria had matured early and had great administrative ability; she soon exerted salutary influence over the young and not very capable emperor. On 4 July, 414, she was proclaimed Augusta (empress) by the Senate, and made regent for her brother. She made a vow of virginity and persuaded him to renounce the same, the imperial palace then becoming almost a monastery (Socrates, "Histor. eccles.", XVII, xxii). At the same time she fulfilled all her duties as a ruler for about ten years jointly with her brother. After the marriage, brought about by Pulcheria, of Theodosius II with Eudoxia, the new empress sought to weaken Pulcheria's influence over the emperor, and, with the aid of some courtiers, succeeded for a time. Nevertheless, Pulcheria had always a powerful position at Court, which she used in behalf of ecclesiastical orthodoxy, as shown by her opposition to the doctrines of Nestorius and Eutyches. Eudoxia supported Nestorius. St. Cyril of Alexandria sent Pulcheria his work "De fide ad Pulcheriam", and wrote her on behalf of the true Church doctrine, to which she held unwaveringly (letter of Cyril in Mansi, "Concil. eccles.", IV). He also wrote to Eudoxia (ibid., 679 sqq.). Theodosius II himself seems to have been influenced by Nestorius to the prejudice of Cyril, whom he blamed for appealing to the two empresses (ibid., 1110). Pulcheria, however, was not deterred from her determination to work against Nestorius and to defend the Church. By her influence on her brother's mind she did much to defend and favour the definition of the Council of Ephesus. In the further course of the negotiations over the Council of Ephesus, the Patriarch of Alexandria sought to gain Pulcheria's seal and influence for the union and sent her presents as he did to other influential persons at the Court (Mansi, loc. cit., V, 987 sqq.). There is no doubt that the final acknowledgement by the emperor of the condemnation of Nestorius was largely due to Pulcheria. The Nestorians, consequently, spread gross calumnies about her (Suidas, s. v. Pulcheria). Court intrigues obliged her (449) to leave the imperial palace and retire to a suburb of Constantinople, where she led a monastic life. When the Empress Eudoxia went to Jerusalem, Pulcheria returned (about 449) to Court. At the emperor's death (28 July, 450) she was proclaimed empress, and then married the able general, Marcian, but with the condition that her vow of virginity should be respected. At her order Marcian was proclaimed Augustus.

Meantime, at Constantinople, Eutyches had announced his theory of the union of Christ and the Patriarch Flavian had expressed his opposition, as did also Pope Leo I. Once more Pulcheria took up the cause of the Church. On 13 June, 449, the pope had written both to Pulcheria and to Theodosius, requesting them to end the heresy ("Leoni epist.", XXXI, in Migne, LVI, 786 sqq.). Nine other letters followed. Theodosius II confirmed the decisions of the Robber Synod of Ephesus (449) and the pope, who had rejected them, sought to bring the emperor back to orthodox opinions. On 13 Oct., 449, he went to the emperor and also to Pulcheria (Epist. xiv), begging the latter for aid. The Roman Archdeacon Hilarius also wrote with the same object (Epist. xvi in "Leoni Epist."). and at Leo's entreaty Valentinian III of the Western Empire, with Eudoxia and Galla Placidia, wrote to Theodosius and Pulcheria (Epist. lvii). Another letter to Pulcheria was sent by Leo on 16 July, 450 (Epist. lxx). After the death of Theodosius, conditions were at once changed. Marcian and Pulcheria wrote to Leo (Epist. lxxxviii), informing him that the Patriarch Anatolius had been removed by the imperial government and had signed the papal letter to Flavian concerning the two natures in Christ. She requested the pope to let it be known whether he would attend personally the council that had been summoned. The empress was influential in the Council of Chalcedon (451) and with the emperor attended the sixth session (25 Oct., 451). Leo in his letter of 13 April, 451 (Epist. lxxix), wrote Pulcheria that both the Nestorian and Eutychian heresies had been overcome largely by her efforts. He thanked her for the benefits she had bestowed on the Church, for her support of the papal legates, for the recall of the banished bishop, for the honourable burial of the body of the Patriarch Flavian. Pulcheria showed no less zeal in promoting other interests of the Church. She built three churches in Constantinople in honour of Mary the Mother of God; one, erected after the condemnation of the Nestorian heresy, was expressly for the use of women. She also built churches, hospitals, houses for pilgrims, and gave rich gifts to various churches (Sosomen, "Hist. eccles.", IX, 1). She had the bones of St. John Chrysostom, who had died in exile, brought back to Constantinople and buried in the church of the Apostles on 27 Jan., 438; this led to the reconciliation with the Church of the schismatic party of the Johnnites (Socrates, "Histor. eccles.", VII, xiv). Pulcheria had the relics of the forty martyrs of Sebaste, which were found near Constantinople, transferred to church (Socrates, "Histor. eccles.", II, 1). She venerated as a saint in the Greek and other Oriental Churches as well as in the Latin Church. Her feast is given under 10 Sept. in the Roman Martyrology and in the Greek Menia; in the other Oriental calendars it is given under 14 Aug.

J. P. Kirsch.

Pulci, Luigi, Italian poet. b. at Florence, 15 Aug., 1432; d. at Padua in 1484. The Pulci gave many interesting writers to the history of Italian letters in the earlier period of the Renaissance. Luigi's brothers, Luca and Bernardo, as well as the latter's wife, also poetized. Luigi frequented the household of Lorenzo il Magnifico, who was very fond of him, and helped him in a material way, a debt which he repaid by imitating certain verses of his patron and fellow-poet. Some attempt has been made to convict him of heterodoxy, because of rather free passages in his most famous work. Those who have imitated in this attempt have failed to realize that Pulci was an inveterate joker and that the passages in question figure among the least serious of the poem. He had all the burlesquing and parodying instincts of his time, and spared no man or institution when the whim was on him. His chief title to fame is the chivalrous romantic poem, "Morgante", which on the basis of two antecedent Italian documents gives the history of Roland's parapetadventure, and marks a first serious attempt at an artistic treatment of the Car- lvingian epic matter imported from France. Dealing ostensibly with the adventures of a giant, Morgante, the author is far more concerned with the wandering career of Orlando, Rinaldo, and other legendary heroes of Charlemagne's court. The lesser compositions of Pulci are known as "Morgante". They include the "Beca da Diocomano", which is a burlesque treatment of the idyll in verse, and follows the example set by Lorenzo's "Nancia da Barberino", the octave on the "Giostra" of Lorenzo; a number of brief lyric poems (stromboli) ; a prose tale; and a "Confessioni" in terza-rima, which has too much the air of a parody of parts of Scripture.

Operae (Lucas, 1759); Morgante, ed. Volpi (Florence, 1800), a true scholarly ed., is still noted; Pulci, "Rudis II" (1781) and "Rudis III" (1781): articles in Giornale storico, XVI, XVII; Ross, II Quattrocento.

J. D. M. Ford.
Pullen (Polyenius, Pullan, Pullen, Pullenus, Pulley, la Poole), Robert, d. 1147 (?). Nothing is known of his early life except that he was born at Poole in Dorsetshire and was not supported by any evidence. Other accounts state that he came from Devonshire. John of Salisbury in his Historia Plantagenetorum, in his history of Symeon of Durham, written within half a century of Pullen's death, asserts that Henry I offered him a bishopric which he refused, being devoted to the study of philosophy. His early education was received in England, but going the treacherous and false road of King Stephen in 1135 he seems to have gone to Paris to continue his life of study in peace there. According to other accounts, he completed his education at Paris, where he subsequently lectured before returning to Oxford to teach. At Oxford he was one of the first masters whose names have been recorded. He opened schools there and taught without exacting fees; he is said to have supported many scholars at his own expense and to have been largely instrumental in fostering the growth of the Oxford school of philosophy. It is true, Pullen must be confessed that they rest on the statements of later writers, it would seem more probable that they happened during the reign of Henry I, when he refused to accept the bishopric offered. He was certain of Archbishop Bancroft 1134, and it is equally certain that he was absent from England for a notable time within the next few years, for at some date prior to 1143 he seems to have been in trouble with his bishop for being absent so long from his duties. This appears from an undated letter of St. Bernard addressed to the Bishop of Rochester, in which the saint makes his excuses for detaining Pullen in Paris "on account of the sound doctrine which is recognized in him". In the same letter he blames the bishop for seizing the archdeacon's goods, and he begs that Pullen may stay longer in Paris where he is necessary. Though Bishop Stubbe (op. cit.) has thrown doubt on the identity of this Archdeacon Robert Pullen with the cardinal of the same name, the statements of St. Bernard's biographer, William Abbé of Theodoric, and the Oseney Chronicle justify the identification.

While in Paris, Pullen taught logic and theology with great success. Among his pupils was John of Salisbury, who describes him as a man commended by his learning, and to his teaching, in 1143 or 1142. In 1143 he is still described as Archdeacon of Rochester and in or about that year he probably went to Rome on the invitation of Innocent II, who died in September of that year, but Pullen found favour with the new pope, Celestine II, who created him a cardinal (Ciacium). The Oseney chronicle, however, states that he was called to Rome by Lucius II who succeeded Celestine in 1144. Certainly it was Pope Lucius who appointed him Chancellor of the Holy Roman Church, an office which he was discharging through 1145 and 1146. When St. Bernard's disciple, Eugenius III, became pope in 1154 the saint wrote a letter to Cardinal Pullen begging him to console and counsel the new pontiff. As a theologian Cardinal Pullen used all his influence among the cardinal's friends to induce him to take an interest in the church, and he embodied his doctrine in his work "Sententiarum Logi- carum Libri VIII" reprinted in P. L., with a mathematical preface to it by the Maurist, Dom Hugo Mathouey, originally written for his edition, published at Paris in 1608. In this treatise, he is breaking new ground for being one of the first teachers to compile a book of "Sentences", but his work was soon supplanted by that of Peter Lombard. He covers a wide range of subjects, but his treatment lacks orderly arrangement, and he relies for his proofs on Scripture and reason in preference to the testimony of tradition. Taking his stand on the authority of the Bible and on papal declarations he preaches and enters on speculative disputation. The first book treats of God and His attributes; the second, of the creation of angels, of the soul, of the fall of man and of original sin; the third, of the ancient and the new law, and of the Incarnation; the fourth, of God's power; the fifth, of the Resurrection, the descent of the Holy Ghost, the preaching of the Gospel, of baptism, confirmation, confession, and some virtues and vices. The sixth book deals with a variety of subjects, including ignorance, negligence, and frailty, good and bad spirits, the choirs of angels, merits, and the administration of the Sacrament of Penance; the seventh discusses the forgiveness of sins, penance and fasting, prayer, tithes, the civil power, the priesthood, its privileges and obligations, continuity, the contemplative and active life, and matrimony. The eighth book deals with the Blessed Sacrament, the Second Advent, Antichrist, the Last Judgment and the ultimate state of the saved and the lost. The titles of some other works which remain unpublished are given by John of Salisbury (Pitts., De Angelis illustribus scriptoribus (Paris, 1818); Jaffa, Scriptores Pontificum Romanorum (Berlin, 1851); Williams, Lives of the English Cardinals (London, 1868); Chevalier, Hist. Gen. des Auteurs Sacres & Ecoles., IV (1849); Scraba, Lectures on Medioval and Modern History (Oxford, 1886). 

Edwin Burton.

Pulpit (Lat. pulpita, a stage or scaffold), an elevated stand to preach on. To elucidate the meaning of the word Durandus refers (Ration. div. offic., I) to Solomon (II Par., vi, 13), who prayed from "a brazen scaffold upon a step of wood", and read the law of God. Their elevated position and public action suggest to Durandus the symbolical meaning of the pulpit: the position of the perfect. He also calls it analogum (vel aerarium deerum partem), from the preaching of the word of God; and ambus ab ambitu, quia nutram... ambit et cingit. The ambus (q. v.) was the immediate predecessor of the present pulpit. In the first Christian era the bishop preached from his cathedra; a survival of this is retained in the French and German words for pulpit, chair and predilect. The other German word kanzel recalls the position of the ambo at the choir screen (cancelli). Durandus clearly distinguishes the pulpit from the cancelli and stalli of the choir. The pulpit, characterised as part of the church furniture by its independent position in use, is found separated from the choir and pushed forward in the central part of the nave beyond the choir for singers, as indicated by a large circle in the building plan of St. Gall (520). The analogia, or reading desks for the Epistle and Gospel, remained at the sides of the choir, and were used for the same purpose. The pulpit, which, as belonging to the choir, was considered a part of the cancelli and was chiefly used for reading or singing parts of the liturgy. Just when it became customary to use the ambo mainly for the sermon, which gave it a new impor-
tance and affected its position, is not known. The pulpit is often connected with the appearance of the mendicant friars, but this can refer only to some innovations in its use and some external changes, as the Fathers of the Church had long before this constantly used the ambo for preaching. Although Paul of Samosata (Eus., VII, xxx) speaks to the people from a high canopied seat in the apse, Socrates (Hist. eccl., VI, v) says of St. Chrysostom that he preached "sitting on the ambo". Sozomen (Hist. eccl., IX, ii) states the same, still characterizing the ambo as θησαυροθήκη γιατί τὸν προφήτα. Chrysostom was the first to supply a text to the ambo "in order to be better understood"; Isidore of Seville first employed the word pulpit (Etym., XVI, iv), then "tribunal", because from this the priest gave the "precepts for the conduct of life", proclaiming law and justice. Isidore also uses the word "sanatorium" from λέον, as "the addresses were given" from it. To the ambo became the regular place for the preacher, and its situation was dependent on local conditions. In the Church of St. Sophia it stood under the dome (Paul the Silent, LXXXVI, 2259 sqq.), but was united with the choir "like an island with the mainland". Similarly at Ravenna the ambo of Bishop Agnellus (sixth century) stood in the central aisle of the nave, on the inner side of the old chancel screen. In large churches, therefore, the bishops, e.g. Ambrose, Augustine, and Paulinus of Nola, preached from the ambo at a very early date. The desire to be more plainly understood was the reason why the preacher's platform was pushed towards the centre of the nave; which change led to its assuming the present form. There are still modern times that the two terms attained clearly distinct meanings. At present the pulpit no longer serves for the reading of the Epistles and Gospels, nor as the tribune for singing, hence the eagle or dove formerly used as support of the book now has little meaning. A position in which the preacher could be heard throughout the church became necessary, and the pulpit was then adapted to receive a greater amount of adornment, having reference to the preaching of the Gospel.

The number of ambos still in existence which may be included among pulpits is undetermined. The ambo of Salonica, traditionally called "Paul's pulpit", appears to be the oldest remaining monument of this kind (fourth to sixth century). It is circular in form, about four metres in circumference, with two stairways, for ascending and descending, and is ornamented with carvings of the three Magi set in niches representing a shell; two ornamental bands are carried around above the niches ("Archives des missions scientifiques", 111, 1870). Bishop Agnellus, builder of the ambo of the cathedral at Ravenna (sixth century), called it πραγμα, or tower-like structure. The exterior surface of the round middle part and the steps which come far forward on the sides have panels arranged like a chess-board in six parallel bands filled with symbolic animals: fish, ducks, doves, deer, peacocks, and lambs in regular succession. Owing to the aversion of Byzantine art of that period to delineating the human figure, animals are here presented in symbolical dependence on the words: "Preach the Gospel to every creature". The ambo of St. Sophia was adorned with flowers and trees. The beautiful pulpit in the palace at Achaea, according to the inscription, a present from Emperor Henry II (d. 1024). The ground-plan consists of three unequal segments of a circle. The wooden core is covered with sheets of copper overlaid with gold. Of the fifteen compartments on the side panels, six contain ivory carvings belonging to an earlier period, and the others, precious stones, cups of rock-crystal, and enamels. There is no explanation as to what this was intended to represent: with large generosity the emperor had given whatever he had that was costly for the house of God. St. Bernard preached from this pulpit, and also from the pulpit preserved in the cathedral of Reims. In that era there were many wooden pulpits which were movable wherever occasion required.

In many places the pulpit was made part of the rood-loft, which was a gallery or loft of wood or stone, existing as early as the eleventh century and used, instead of the cancelli, to separate the choir from the nave; it was called the lecturium, or odeum, as the loft where the choir sang in, and from which were the doxologies. Statues of the Saviour and His Apostles, representing the Last Judgment and the Passion, frequently ornamented the rood-loft on the side towards the nave. At Wechselburg in Saxony a Romanesque pulpit from the beginning of the thirteenth century is still in existence; it probably belonged, together with the celebrated altar cross, to the partially preserved rood-loft, which, with a few others of that period, is still to be found. It is ornamented with well-executed reliefs, and rests on arched openings and columns. On the mandorla, there is a relief of Christ as teacher, surrounded by the symbols of the Evangelists; on either side are Mary and John trampling upon allegorical symbols of error. The other reliefs, viz., the sacrifice of Abel and Abraham and the Brazen Serpent, were chosen with reference to the cross and altar in the rood-loft, redemption by Christ's sacrificial death being a main topic of preaching. From the thirteenth century, rood-lofts were customary in churches where they were called jubé from the formula, Jube domino beneficia: these still belong to the Renaissance period. Pulpits like those of the present time were built in Italy as early as the thirteenth century. The pulpit at Pisa, completed by Niccola Pisano in 1280, is an unattached structure resting on seven columns, which opened the way to a new development for Italian sculpture. In addition to what is palpably borrowed from antiquity, e.g. the Virgin as Juno, there are figures taken entirely from the life of the time. Instead of the mosaic, six bas-reliefs surround the framework: the Annunciation, Nativity, Adoration of the Magi, Presentation in the Temple, Crucifixion, and the Last Judgment; they present the main contents of the doctrine of salvation. Between the trefoiled arches of the columns over the capitols, in the spandrels, are symbolical representations of the virtues and figures of the prophets. An allegorical meaning should also be attributed to the lion, griffin, and dog, which, together with three figures of men, ornament the seventh or middle column, and to the lions that carry three of the supports; the stand guard near the pulpit. The pulpit of the cathedral pulpit of Siens was executed by the same master in a similar manner. It forms, however, an octagon, thus permitting two more large reliefs which represent the slaughter of the children at Bethlehem and further details of the Last Judgment. A third work of the same character, containing figures
that, expressive feeling and motion, is the pulpit of the Church of San Andrea at Pistoia, which was completed by Nicola’s son Giovanni in 1301.

The first examples of Renaissance pulpit are those of Donatello (fifteenth century). For funeral orations in the churchyard, for the preaching of pilgrimages, or for the exhibition of relics, pulpets were often built outside of the churches, as that of the cathedral at Prato. Donatello inserted here into the original round form of the pulpit seven white marble panels, on which in his customary manner he represented in bas-relief little cherubs in an animated dance; the ornamentation of the bronze capital below the pulpit, which rests on a single support, is also purely decorative in character. At an earlier era the platform of the pulpit was supported by an under-structure or by a number of columns, and during the Renaissance pulpets projected from a pillar or wall, like balconies. Both bronze pulpets in San Lorenzo at Florence rest on four Ionic columns, and are decorated with representations of the Passion, over which there is a frieze of cherubs borrowed from the art of antiquity. In the beautiful marble pulpit of Santa Croce at Florence, the panels of the breastwork are decorated with scenes from the life of St. Francis. The details of the work are executed with fine artistic feeling and proportion; the decorative statuettes and other accessories are dignified and graceful. The magnificent pulpit made by Master Pilgrim for the Cathedral of St. Stephen at Vienna (sixteenth century) is decorated with busts of the Fathers of the Church and figures of other saints. The ornate decoration of the pulpit of the collegiate church at Aschaffenburg depicts the Church Fathers around the supporting pillar, busts of the same in the upper frieze, scenes from the Bible separated by spirited figures of the Evangelists, and angels in the place of consoles. In the Cathedral at Trier the ascent to the pulpit is covered by a magnificently ornamented archway with a high decoration at the top. On the string-piece of the steps are carved the Sermon on the Mount and the Last Judgment, and on the panels of the parapet the works of mercy are depicted. The pulpit of Freiberg in Saxony is fantastically developed from the root of a plant and on it in a naturalistic manner the figures of men and animals are formed.

The most striking pulpets of the Baroque period are those of Belgium. The base, stairway, and sounding-board were artistically or fantastically covered according to the taste of the time with luxurious and ornate carving. In Ste Guilde’s at Brussels the banishment of Adam and Eve from Paradise is carved underneath the pulpit, while, in contrast, the Mother of God is represented above the sounding-board as a mighty female warrior and slayer of the dragon. Underneath the pulpit of the cathedral of Mechlin there is a representation of the Crucifixion on Calvary with the people at Christ’s feet, while below the rock Saul falls from his horse, overcome by the truth; above at the side are carvings of Adam and Eve with the Serpent. All these are rich in suggestions for the sermon. At the base of the pulpit of the Church of St. Andrew at Antwerp there is a splendid carving of Christ and the Apostles Peter and John in a little boat. Over the sounding-board angels hold on high the St. Andrew’s cross, and beneath it a dove, representing the Holy Ghost, sends rays in all directions. The whole structure of a pulpit in Cracow represents a ship, with sails, mast, and rigging, poised over sea monsters. The ornamentation of the pulpit should never be excessive, but subordinate to that of the high altar, whose view it should not obstruct. The latter difficulty is often removed by setting the pulpit slightly towards the side aisle, whereby a troublesome echo from the transept is avoided. Near which pillar of the nave the pulpit should placed depends upon the acoustics of the church. The sounding-board should, above all, make the voice of the preacher perfectly distinct; by giving it the form of a shell the waves of sound are often sent in a definite direction. In order that the speaker may be readily understood, the pulpit should not stand too high. Its ornamentation should be of a proprie: representations of the Evangelists or Church Fathers, scenes from the Bible, as the Sermon on the Mount, the dove as a symbol of the Holy Ghost on the under side of the sounding-board, and perhaps an angel over it. A single, skillfully developed into the platform of the pulpit is satisfactory, when its decoration and that of the stairway and string-piece is subordinate to that of the central main part. The lack of a vertical support makes an unpleasant impression: a reading-desk or crucifix is apt to produce an overloading effect. A well-arranged pulpit-cloth varied in colour to suit the various feasts and periods of the year would be proper.

Punishment. See Punishment, Congress of.

Punishment, Capital, the infliction by due legal process of the penalty of death as a punishment for crime. The Latins use the word capitalis (from caput, head) to describe that which is related to life, that by which life is endangered. They used the neuter form of this adjective, i. e., capitale substantively to denote death, actual or civil, and banishment imposed by public authority in consequence of crime. The idea of capital punishment is of great antiquity and formed a part of the primitive concepts of the human race. When Cain committed fratricide (Gen., iv), and was rebuked therefor by God, he uttered the lament that his life would be in danger by reason of the hostility of others. A mark was set upon him by the Lord which was a guarantee of his personal safety. The first Divine pronouncement which seems to sanction the death penalty is found in Gen., ix, 6: "Whosoever shall shed man’s blood, his blood shall be shed; for man was made to the image of God." When the ancient Israelites had departed from Egypt, after sojourning in the Sinaitic Penetola, they received from the Lord a code of legislation wherein the death penalty was prescribed for many offences. Thus, in Ex., xxi, that penalty is prescribed for murder, for a wilful assault upon the father or mother of an offender, for cursing a man’s father or mother, and for stealing. Down to their latest days the Kingdoms of
No more cruel form of punishment for offences deemed capital existed in ancient times than that which prevailed among the Jews, i.e., stoning to death. The criminal procedure in capital punishment is repeatedly mentioned in the Old and New Testaments. It would appear from the Book of Esther that hanging was the punishment which prevailed among the Assyrians. Two of the king's slaves who plotted against his life were thus punished (Esther, ii), and by that method the king's prime minister, Aham, was executed, the gibbet used for that purpose being said in Esther, vii, to be the same one which Aman had prepared, "fifty cubits high" (ibid., vi), with the design of hanging thereon Mardochai, the Jew, who had incurred his displeasure, but who was "precious in the sight of the Lord".

The ancient Greeks punished homicide (phōnēs), committed by design, and many other offences with death. The court which prescribed this penalty was the Court of the Areopagus. The court was not invest with discretionary power in awarding punishment, as Demostrhenes says that the law determined this according to the nature of the crime. Willful murder was punished with death, and other degrees of homicide and malicious wounding were punished by various lesser penalties. Those who were convicted upon a charge of unintentional homicide, not perfectly excusable, were condemned to leave the country for a year. Treason (probolosia) was punished with death. The goods of traitors who suffered death were confiscated, and their houses razed to the ground. It was not permitted to bury their bodies in the country, but they were cast out into some desolate place. Hence, the bones ofThemistocles, who had been condemned for treason, were brought out and buried secretely at his request, as is shown by Theophrastus. The posterity of a traitor received the treatment of outlaws. The Areopagus was the tribunal for the trial of cases wherein the charge against an individual was willful murder and wounding, or a charge of arson or poisoning. The Attic legend tells us that the first notable trial before the Areopagus was that of Orestes upon a charge of having murdered his mother. Eschylus represents this trial as the origin of the court itself. Some authorities claim that the Ephetai acted as a court for the trial of cases of perjury, in conjunction with the Areopagus. The Ephetai certainly had jurisdiction over cases involving the lesser degrees of homicide.

The punishment of death at Athens was generally by poison in the case of freemen. After sentence, the condemned murderer was directed to take a cup of hemlock or other poison and drink it. In the case of the imposition of any penalty upon a criminal in the courts of Athens, the prosecutor proposed the penalty in the first instance and then the person condemned had the privilege of suggesting a different punishment. Thus it was that, when his death was proposed, after trial and conviction, suggested that instead of being punished by death he ought to be entertained at public expense for the rest of his life in the Prytanæum, the palatial quarters used by the Athenians for entertaining and providing municipal hospitality. Criminals of low social grade, such as slaves, were beaten to death with cudgels.

The Roman law was notably severe in regard to public offences. A law of the Twelve Tables contained some provision as to homicide (Plin., "H. N." 5, 32); but this is all that we know. It is generally assumed that the law of Numa Pomphilius, quoted by Festus (s. v. Parrici Quaestores), "Si quis hominem liberum dolo sciens morti duxit paricida esto" [If any one with guile, and knowingly, inflicts death upon a free man, let him (even let us as a punishment) be incorporated into the Twelve Tables, and is the law of homicide to which Pliny refers; but this cannot be proved. It is generally supposed that the laws of the Twelve Tables contained provisions against incantations (malum carmen) and poisoning, both of which offences were also included under parricide (parricidium). The punishment of a parent was sewed up in a sack (caleus or cloelleus) and thrown into a river. It was under the provisions of some old law that the Senate by a consilium (decrees) ordered the consul P. Scipio and D. Brutus (138 b. c.) to inquire into the murder in the Silva Scantia. The Lex Cornelia de sacrarum et sacris (concerning assassins and sorcerers) was passed in the time of Sulla (82 b. c.) and derives its distinctive name from his middle name, Cornelinus. This law contained provisions as to death or fire caused by dolus malus (evil fraud) and against persons going about armed with the intention of killing or thieving. The law not only provided for cases of poisoning, but contained provisions against those who made, sold, bought, possessed, or gave poison for the purpose of poisoning, or also against a magistrate or senator who conspired in order that he might overpower in a judicium publicum (public judgment), etc. To the provisions of this law was subsequently added a senatus consultum (decrees of the senate) against mala sacrificia (evil sacrifices) otherwise called impia sacrificia (punishment of godlessness). It was provided that the persons who were brought within the provision of this lex. The punishment inflicted by the law was the interdictio aquæ et ignis (prohibition of the use of water and fire), according to some modern writers. Marcianus (Dig. 49, tit. 8, s. 8) says that the punishment was made deportatio in insolam et honorum adeuntia, that is, banishment to an island and deprivation of personal property. These statements are reconcilable when we consider that deportation under the emperors took place of interdictio. It may be, therefore, that "Digest" was suited to the times of the writers or the compilers. Besides, it appears that the lex was modified by various senatorial decrees and imperial rescripts.

The Lex Pompeia de parricidio, passed in the time of Cn. Pompeius, extended the crime of parricide to the killing (dolo malo, i.e., by evil fraud) of a brother, sister, uncle, aunt, and many other relations enumerated by Marcianus (Dig. 49, tit. 9, s. 1); this enumeration also comprises step-father (estricus), step-mother (estricea), son-in-law (filius uxor), and vice versa (D. 49, tit. 10, s. 9). The murderer was prohibited to leave Italy. The death penalty was, however, in force at Rome.

The Lex Cornelia de sacrarum et sacratarum (concerning the gods and their worshipers), the agents in which the "Lex Cornelia" contained a provision against parricide, if we are rightly informed as to the provisions thereof, unless there was a separate lex Cornelia relating to the specific crime of parricide. As already observed, the provisions of these two laws were modified in various ways under the emperors.
It appears from the law of Numa, quoted by Festus (a. v. Parrići Quastores), that a parricide was any one who killed another dolo malo. Cicero (pro Rose, Am., c. xxv) appears to use the word in its limited sense, as distinguished from punishment of the cullesus. In this limited sense there seems no impropriety in Catiline being called parricide, with reference to his country; and the dictator Caesar's death might be called a parricidium (the crime of parricide), considering the circumstances under which the name was given to a class of cases, c. lxxxviii. If the original meaning of parricida be what Festus says, it may be doubted whether the etymology of the word (pater and caedo) is correct; for it appears that parricida or parricide meant murderer generally, and afterwards the murder of certain persons in a near relationship. If the word was originally parricida, the law intended to make all malicious killing as great an offence as parricide, though it would appear that parricide, properly so called, was, from the time of the Twelve Tables at least, specially punished with the cullesus, and other murders were not.

Carnifex (flesh-maker) was the appellation given to the public executioner at Rome, who put slaves and foreigners to death (Plaut., "Bacch." iv, 4, 37; "Capt." v, 4, 22), but not citizens, who were punished in a manner different from slaves. It was also his business to administer the torture. This office was considered so disgraceful that he was not allowed to reside within the city (Cic., "Pro Rabir." 5), but lived without the Porta Metia, or Esquilina (Plaut., "Pseud." i, 3, 98), near the place destined for the punishment of slaves (Plaut., "Cas." ii, 6, 2; Tacit., "Ann." xv, 60; Hor., "Epod." v, 99) called Sesterium under the emperors (Plaut., "Gall." 20). It is thought by some writers, from a passage in Plautus (Rud. iii, 6, 19), that the carnifex was anciently keeper of the prison under the triumvir capitalis, but there does not appear sufficient authority for this opinion (Lipsius, "Excurs. ad Tacit. Ann." iii, 32).

Cru cifiction was a method of inflicting capital punishment by nailing or tying malefactors to pieces of wood transversely placed the one upon the other. The crosses used by the ancients were of several forms; one shaped like the letter X has often been called cruc Andrews (Andrew's cross) because, according to tradition, St. Andrew suffered death upon a cross of that form; another was formed like the letter T, and a Roman writer tells us that he was punished in disparagement of the letter itself. The third kind of cross, and that most commonly used, was made of two pieces of wood crossed so as to make four right angles. It was on this kind of a cross that Christ suffered, according to the unanimous testimony of the Fathers. Crucifixion, under the Roman law, was usually reserved for slaves and the worst kind of evildoers. The incidents of crucifixion were that the criminal, after the pronouncement of sentence, carried his cross to the place of execution, a custom mentioned for Britain and other writers as well as in the Gospels. Scourging was inflicted upon the persons executed as in the case of other capital punishments among the Romans. Grotius and other writers have called attention to the fact that the scourging of Christ was not in accordance with the Roman usage, because it was inflicted before the sentence of death was pronounced. The criminal was next stripped of his clothes, and nailed or bound to the cross. The latter was the more painful method, as the sufferer was left to die of hunger. Instances are recorded of crucified men lasting many days. The Romans usually left the body on the cross after death.

During the Middle Ages, in spite of the zealous humanitarian efforts of the Church, cruel punishment was continually inflicted, and the cruelties of the punishment were very frequently inflicted. This severity was, in general, an inheritance from the Roman Empire, the jurisprudence of which, civil and criminal, pervaded Europe. One of the most horrible forms of punishment, derived from ancient Roman usages, was burning at the stake. The nations of modern Europe, as they gradually developed, seemed to have agreed upon the necessity of extirpating all influences and agencies which tended to pervert the faith of the people, or which seemed to them to betray the potency of evil spirits. Therefore, the laws of all these nations provided for the destruction of con taminious unbelievers, teachers of heresy, witches, and sorcerers, by fire. The words of Exodus (xxii, 18), "Wizards thou shalt not suffer to live," sank deep into the consciousness of the medieval people, were literally interpreted, and rigidly observed. Witches were burned in England as late as the time of Sir Matthew Hale (1609-78). The Statute of

Elisabeth in 1562 made witchcraft a crime of the first magnitude, whether directed to the injury of others or not. The Act of James the Sixth in 1603 defines the crime more minutely and provides the penalty of death. In Scotland, during the reign of the same monarch and even later, the prosecution and punishment of alleged witchcraft became a popular frenzy, to which the courts lent their zealous aid. The number of victims in Scotland from first to last has been estimated as more than four thousand. The last regular execution for witchcraft is said to have taken place at Dornoch in 1722, when an old woman was condemned by David Ross, Sheriff of Caithness. The same belief in witchcraft and the same overmastering dread of it pervaded New England. Many persons were convicted of witchcraft and were tortured, imprisoned, and burned. One of the leaders in ferreting out and punishing witches was the Reverend Cotton Mather who, although a man of prodigious learning and deep piety, betrayed in the prosecution of witches absolute fanaticism and merciless cruelty. The laws against witchcraft were formally repealed in England in 1736. They were not repealed in Austria until 1766.

Canon law has always forbidden clerics to shed human blood and therefore capital punishment has always been the work of the officials of the State and not of the Church. Even in the case of heresy, of which so much is made by non-Catholic controversialists, the functions of ecclesiastics were restricted invariably to ascertaining the fact of heresy. The punishment, whether capital or other, was both prescribed and inflicted by civil government. The infliction of capital punishment is not contrary to the
Punishment

Of the Catholic Church, and the power of the State to visit upon culprits the penalty of death derives much authority from revelation and from the writings of theologians. The advisability of exercising the power of death, and also of determining upon it, are matters of much less difficulty than the determination of whether the sin or crime for which the punishment is to be inflicted is in fact a sin or crime, or whether the person who is condemned is really guilty of it. The laws of the Old Testament, it will be seen, do not, like the laws of the New Testament, provide for the infliction of the penalty of death.

The traditional method of capital punishment in England has been by hanging the criminal by the neck until dead, although during the Middle Ages beheading was customary. The English law in the time of Blackstone provided that a person convicted of treason should be executed in the same way as if he were charged with the crime of sorcery. The sentence was enforced by the executioner, and the body was buried in the grave in the same way as if he were charged with the crime of sorcery. Blackstone made a point of distinguishing between the two kinds of punishment, and the sentence was enforced by the executioner, and the body was buried in the grave in the same way as if he were charged with the crime of sorcery.

The practice of hanging in England has been continued to this day. In the Middle Ages, the head of the criminal was cut off with a knife, and the body was buried in the grave. In the time of Blackstone, the body was buried in the grave in the same way as if he were charged with the crime of sorcery. Blackstone made a point of distinguishing between the two kinds of punishment, and the sentence was enforced by the executioner, and the body was buried in the grave in the same way as if he were charged with the crime of sorcery.

The penalty of death, universal in its day, was declared by the famous Marquess Beccaria to be absolutely without justification. In his famous work, "Crime and Punishment", he says (chap. xxviii):

"The punishment of death is not authorized by any right; for I have demonstrated that no such right exists. It is, therefore, a war of a whole nation against a citizen, whose destruction they consider as necessary or useful to the general good. But, if I can further demonstrate that it is necessary, I shall have gained the cause of humanity. The death of a citizen can be necessary in one case only: when, though deprived of his liberty, he has such power and connexions as may endanger the security of the nation; when his existence may produce a dangerous revolution; when he is in a state of rebellion against the laws of the country, or, in short, in a state of treason. But, even in this case, it can only be necessary when a nation is on the verge of recovering or losing its liberty; or in times of absolute anarchy, when the disorders themselves hold the place of laws. But in a reign of tranquillity; in a government established upon the united wishes of the nation; in a state fortified from enemies without, and supported by strength within; . . . where all power is lodged in the hands of the true sovereign; where riches can purchase pleasure and not authority, there can be no necessity for taking away the life of a subject."

The learned marquis makes a most impressive argument in favour of penal servitude for life as a substitute for the judicial killing of criminals. Voltaire, in his commentaries on the treatise of Beccaria, emphasizes his opposition to capital punishment by saying, "It hath long since been observed that a man after he is hanged is good for nothing, and that punishments invented for the good of society ought to be useful to society. It is evident that a score of stout citizens, who are attached to the life of their country, would serve the state in their punishment, and that hanging them is a benefit to nobody but the execu-
tioner." These two authorities, as well as Sir William Blackstone, refer to the favourable results which followed the abolition of capital punishment in Russia by the Empress Elizabeth and the continuance of the same policy by her successor, Catherine III. Beccaria makes a telling argument against the execution of criminals in saying: "The punishment of death is pernicious to society, from the example of barbarity it affords. If the passions, or necessity of war, have taught men to shed the blood of their fellow creatures, the laws which are intended to moderate the ferocity of mankind should not increase it by examples of barbarity, the more horrible as this punishment is usually attended with pompous pageantry. It is not absurd that the laws, which detect and punish homicide, should, in order to prevent murder, publicly commit murder themselves? What are the surest and most useful laws? Those compacts and conditions which all would propose and observe, in those moments when private interest is silent, or combined with that of the public. What are the natural sentiments of every person concerning the punishment of death? We may read them in the contempt and indignation with which everyone looks on the executioner, who is nevertheless an innocent executor of the public will; a good citizen, who contributes to the advantage of society; the instrument of the general security, as good soldiers are without. What then is the origin of this contradiction? Why is this sentiment of mankind inculcable to the scandal of reason? It is, that in a secret corner of the mind, in which generally impressions of nature are still preserved, men discover a sentiment which tells them that their lives are not lawful in the power of anyone, but that of necessity only, which with its iron sceptre rules the universe."

The opposite view was taken by Jeremy Bentham. In his work, "Rationale of Punishment" (1830) he says that death is regarded by most men as the greatest of all evils; and that especially among those who are attached to life by the ties of reputation, affection, enjoyment, hope, or fear, it appears to be more efficacious punishment than any other. Sir Samuel Romilly in his "Memoirs" (1840) takes issue with Beccaria. "Beccaria," he says, "and his disciples confess that it is not the greatest of evils, and recommend other punishments as being more severe and effectual, forgetting, undoubtedly, that if human tribunals have a right to inflict severer punishment than death, they must have a right to inflict death itself" (III, 278). It may be said in this connexion that Sir Samuel Romilly was one of the most strenuous and efficacious agents in reforming and humanizing the criminal code of England. The battle is still raging between the advocates and the opponents of capital punishment. It has been well observed by Montesquieu that the excessive severity of law hinders its execution, for when the punishment surpasses all measure the public will frequently out of humanity prefer impunity to such punishment. The same benevolent and philosophical idea was also expressed in the first statute enacted by the English Parliament in the reign of Queen Mary; and that statute recites in its preamble:

"That the state of every King consists more assuredly in the love of the subjects towards his prince than in the dread of laws made with rigorous design; and that laws made for the preservation of the Commonwealth without great penalties are more often obeyed and kept than laws made with extreme punishments."

The policy at present pursued by the nations of the world generally favours capital punishment. It has been abolished in Italy, Holland, most of the cantons of Switzerland, Belgium, Portugal, and Rumania, and in the States of Michigan, Rhode Island, Wisconsin, Iowa, and Maine. It has fallen into practical disuse in Finland and Prussia. It is retained in Russia only for treason and military violation of the Peace. The State of Colorado abolished it in 1897, but as the result of a lynching outbreak in 1900 it was restored in 1901. The death penalty is inflicted by the guillotine in France, Belgium, Denmark, Hanover, and two cantons of Switzerland. In these countries the execution is public. Criminals are executed privately by the guillotine in Bavaria, Saxony, and in two cantons of Switzerland. Execution upon the gallows is in vogue in Austria and Portugal. Hanged is conducted privately in Great Britain and in most of the states of the Federal Union. In the States of New York, New Jersey, Massachusetts, Ohio, North Carolina, and Virginia, criminals are executed by electricity. In China and in fifteen cantons of Switzerland criminals condemned to death are publicly beheaded; in Prussia they are privately beheaded. In Ecuador, and in the Grand Duchy of Oldenburg, they are shot. In Spain they are executed by means of an instrument called the garrotte, and such executions are public. In China they are strangled in public with a cord. In Brunswick they are beheaded.

JOHN WILLEY WILLIS.

PUNO, Diocese of (Puntihes), suffragan of the Archiepiscopate of Lima in Peru. Its jurisdiction is extended over the whole territory of the Department of Puno, with a Catholic population (1909) of 260,810 souls; 85 priests; 62 parishes; 320 churches and chapels. The residence of the bishop is at the City of Puno. The bishopric was created by law of the republic, 28 November, 1832, and by a Bull of Pius IX of 6 Nov., 1861, approved by executive resolution, 6 Sept., 1865. Dr. Mariano Chacon y Becerra was nominated the first Bishop of Puno on 17 June, 1861, and consecrated 7 April, 1862, but resigned before assuming his duties. His successor, Dr. Juan Ambrosio Paredes, was nominated 17 June, 1865, and in 1875 transferred to the See of Arequipa. He was succeeded by Mgr. Pedro José Chavez, whose consecration took place on 25 July 1875. The next Bishop of Puno was Mgr. Juan Este-
bánes y Seminario, a Discalced Recollect, who was consecrated on 26 Feb., 1881, and died in the same year. The diocese was then left vacant until 1909, its last Apostolic administrator being Mgr. Ismael Puirre- don, until Sept., 1909, when the present bishop, Mgr Laisson, was consecrated.

The diocese of Tunu is divided into 9 ecclesiastical provinces, viz.: Cereso; Baja de Chucuito; Alta de Chucuito; Lamba; Baja de Lamba; Huancani; Azangaro; Carabaya, and Sandia. There is in the City of Tunu a seminario conciliar for the education of the diocese. The diocese is well supplied with public and private schools, some of the latter connected with the parishes. (See Peru.)

JULIAN MORENO-LACALLE.

FURCELL, JOHN BAPTISTE, Archbishop of Cincinnati, b. at Mallow, Ireland, 26 Feb., 1800; d. at the convent of the Ursulines, Brown County, Ohio, 4 July, 1883. Of his early education but few particulars can be found. His parents, Edward and Johanna Purrell, being industrious and pious, gave their children all the advantages of the education attainable at a time when the penal laws were rigorously enforced. John displayed remarkable talent and mastered all the branches of the school curricula before his eighteenth year. Entrance into the colleges of Ireland was an impossibility. He therefore decided to seek in the United States the higher education denied him in his native country. Landing at Baltimore he applied for and obtained a teacher's certificate in the Asbury College. He spent about one year in giving lessons as private tutor in some of the prominent families of Baltimore. His ambition was to become a priest, and this he never lost sight of while teaching others as a means of obtaining a livelihood. On 20 June, 1820, he entered Mount St. Mary's Seminary, where he received his previous knowledge of the classics. After three years' study in the seminary he received tunicure and minor orders from Archbishop Mareschal, of Baltimore, at the close of 1823.

On 1 March, 1824, in the company of Rev. Simon Gabriel Bruté, one of the professors of the seminary, afterwards first Bishop of Vincennes, he sailed for Europe to complete his studies in the Sulpician Seminaries of Iasy and Paris. On 26 May, 1826, he was one of the three hundred priests ordained in the cathedral of Paris by Archbishop de Quelen. After his ordination he continued his studies until the autumn of 1827, when he returned to the United States to enter Mount St. Mary's Seminary as professor. He afterwards became president, until his appointment as Bishop of Cincinnati, Ohio, to succeed the ailing Fenwick. He received notice of his appointment in August, 1833, and was consecrated bishop in the cathedral of Baltimore, 13 Oct., 1833, by Archbishop Whitfield. He attended the sessions of the Third Provincial Council of Baltimore, which opened on the day of his consecration and continued for one week.

After winding up his affairs in connexion with the seminary, he set out for the scene of his life's work. Going from Baltimore by stage to Wheeling, and from Wheeling to Cincinnati by steamboat, he reached his destination 14 Nov., 1833. Bishops Flaget, David of Bardstown, Reeve of Detroit, and a few priests met him and conducted him to his cathedral, which was on Sycamore Street, Cincinnati, and installed by Bishop Flaget, who made the address of welcome. After the installation Bishop Reeve, who had been administrator of the diocese during the vacancy, made the legal transfer of the property in his charge. The site of the first cathedral and at that time the only church in the city, a humble structure, is now occupied by the imposing St. Xavier's Church, accommodating over one thousand families, under the care of the Jesuit Fathers. On his arrival in 1833 Bishop Purrell found himself in a city of about 30,000 inhabitants and only one church. The diocese embraced the whole State of Ohio.

The prospect presented to the young bishop, then in his thirty-third year, was enough to fill his mind with horror and dread. The difficulties increased, for soon the tide of immigration turned towards Ohio. Immigrants from Germany and Ireland swelled to thousands, and as they were all Catholics it became his duty to provide for their spiritual wants, and that had to be done quickly. A seminary had been founded by Bishop Fenwick in the Athenaeum, which stood near the cathedral. The number of students was of course very small, but Bishop Purrell had to rely on this little school to help him in his work. He began his work as a bishop with an energy and earnestness that never flagged during his whole life. He was uniriting in his labour, preaching and giving lectures, writing articles for the "Telegraph", a Catholic paper founded by Father Young, a nephew of Bishop Fenwick, the first Catholic paper published in Ohio.

At his first ordination he raised to the priesthood Juncker, afterwards first Bishop of Alton, Illinois. He lost no time in providing for the wants of the growing Church in Cincinnati. Holy Trinity on Fifth Street, the first church built for the German-speaking Catholics, was followed by another, St. Mary's, at Clay and Thirteenth Streets. Finding it impossible to provide professors or give his own time to the seminary, he called to his aid the Jesuit Fathers, to whom he gave over the church property on Sycamore Street, and purchased a site for his new cathedral on Plum and Eighth Streets, and Western Row, then the western boundary of Cincinnati. Western Row is now Central Avenue. The new cathedral, a magnificent structure 200 feet long and 80 feet wide, built of Dayton limestone, with its beautiful spire of solid stone rising to the height of 225 feet, is one of the finest in the West. This grand temple was completed and consecrated by Archbishop Eccleston of Baltimore, 26 Oct., 1846, thirteen years after Bishop Purrell's arrival at Cincinnati. After trying his hand in a dioecesan seminary, he finally located it on Price Hill, west of the city limits. The main building was completed and opened for the theologians in 1851. He called it Mount St. Mary's of the West, after his own Alma Mater at Emmitsburg. Two residence seminaries were established, St. Aloysius's for the chil-

\textbf{German-speaking parents, and St. Peter's, are teaching St. Joseph's, for children of English-speaking people, and provision was made for their maintenance.}

He made a complete visitation of his extensive diocese the first year of his administration, providing for the spiritual care of his scattered flock, either placing resident priests in parishes or, in some cases, having priests visit regularly the smaller communities that were unable to support a resident pastor. In 1840 the canal and railway systems that were to revolutionize the existing conditions of commerce were begun and construction forty-three years later. Of the Fish-Hatchery Miami Railroad from Xenia to Cincinnati, a distance of 65 miles, was opened for traffic in 1841. It is now a link in the great Pennsylvania system. These public works brought immense numbers of emigrants to the state. What were villages soon grew into cities: Cleveland, Toledo, Columbus, Dayton, and Hamilton became the cities of the state. New parishes were formed, and churches and schools were built. Cleveland became a bishopric in 1847, and Columbus in 1868. He was obliged to call on European priests to help to meet the fast-growing wants of his diocese.

Bishop Purcell made several trips to Europe, visiting the various seminaries there, and soliciting students having the missionary spirit to share his labors. On one of his visits to Europe he was accompanied by a band of zealous young priests, Fathers Machbeuf, Lamy, Gacon, Cheynol, and Navaron. Father Machbeuf afterwards became first Bishop of Denver; Father Lamy, first Archbishop of Santa Fé. The others lived to a ripe old age, doing missionary work in the diocese till God called them to their reward. While the state was growing in population, the city of Cincinnati did not lag behind. Cist's "Cincinnati" (1851), in its church statistics, gives the Catholics 13 parishes and 11 parish schools, with an enrollment of 4449 pupils. Bishop Purcell from the beginning was an earnest advocate of the establishment of parochial schools. The rapid growth of Ohio and the West was recognized in Rome, and in 1850 Cincinnati was made an archbishopric. The pallium was conferred on Archbishop Purcell by Pope Pius IX, who at the same time made him assistant at the pontifical throne, in appreciation of his personal worth. The new ecclesiastical province of Cincinnati had for suffragans the Diocese of Cleveland, Detroit, Indianapolis.

In 1851 the archbishop did not hesitate in making known his views on the Civil War. He decided to fly the flag from the cathedral spire. This action of the archbishop called forth a great deal of adverse criticism, as there was at the time an inflammatory party in the North opposed to the war. Many Catholics were in sympathy with this party. The archbishop boldly took his stand and ignored the adverse criticism. The event showed the wisdom of his course. The last vestiges of insane Know-nothings and its hatred of the Church disappeared. This wave of bigotry which spread over the whole country in the early fifties had showed itself decidedly hostile to Catholics in Cincinnati in 1854, when Archbishop Bedini was the guest of Archbishop Purcell. The firm stand taken by the German and Irish Catholics under the direction of the archbishop overawed the mob that threatened to destroy the cathedral and thus prevented bloodshed.

Archbishop Purcell attended the Council of the Vatican. In the discussion of Papal Infallibility he took the side of the minority which opposed the opportuneness of the decision, but on his return from Rome, which he left before the question was decided, he gave in his adhesion to the doctrine as soon as he learned of the signing of the decree by Pope Pius IX. This he did in a sermon he preached in the cathedral saying, "I am here to protest against the infallibility of the pope in the words of the Holy Father defining the doctrine."

He celebrated his golden jubilee of priesthood 26 May, 1876. He was joined in this celebration not only by his diocese but by the whole country. Bishops and priests personally or sent representatives. He had reason to rejoice when he saw the result of his work. When he came to Cincinnati he found a small city with but one church, and a diocese with a few Catholics scattered through the state. In forty-three years to 1876, he increased the diocese to a population of nearly 300,000, with forty well-organized parishes having schools giving Catholic education to 20,000 children, a well-equipped seminary, colleges, and charitable institutions to take care of the poor and sick. Throughout the diocese were well-organized parishes, churches, and parish schools. Forty years before he had only a few priests; in 1876 he could count on the help of 150 diocesan and 50 regular priests, and a Catholic population of 150,000. In reply to the addresses of congratulation on the occasion, he modestly referred to the success to the cordial assistance of the priests and the generous aid of the laity.

The serious financial disaster that clouted last years was the result of circumstances for which he was not responsible. Giving all his time to the spiritual management of the diocese, he left the material part altogether in the hands of his brother, Father Edward Purcell. He received deposits from people who were distrustful of the banks, which were unstable institutions until the general government adopted the national banking system during the War of Rebellion. The large amount involved represented the accumulation of compound interest. This financial disaster crushed out the lives of the archbishop and his brother. The crash came in the autumn of 1878, and the archbishop died five years later. His brother had passed away in the spring of the preceding year.

After fourteen years of litigation and the mismanagement of the assignees, the affair came to an end, when the court found the amount due on the cathedral and diocesan institutions to be $140,000. Archbishop Elder accepted the findings of the court and made arrangement by a system of assessments on the parishes to meet the loans made to pay the amount required by the final decision. This decision was made in 1892. Under the wise direction of Bishop Elder, who succeeded Archbishop Purcell, all the loans have been paid off.

In 1877 Bishop Purcell, wishing to come in touch with the learned men of Ohio, became a member of the Ohio College of Teachers. At one of the meetings the discussion turned on religion, and some remarks were made reflecting on the Church. Bishop Purcell asked leave to reply to them at length. This permission could not be granted under the rules limiting speeches to ten minutes. In a spirit of fairness, Dr. Wilson offered the bishop the use of his chapel on Fourth and Main Streets to reply. This offer was gladly accepted, and the bishop delivered a masterly discourse. The position and teaching of the Catholic Church were put before the people of Cincinnati so clearly and forcibly as to cause many who heard the bishop at least to reconsider the ideas they had formed of Catholic teaching and practice. The Catholic Church was unfavourably known by non-Catholics at the time, owing to the false charges made by free-thinkers and the spread of anti-Catholic literature giving false views of her teaching and practice. The lecture was a surprise to many who had up to that time looked upon Catholics as a danger to the country. It stirred up a great deal of discussion in the community, so much so that Alexander Campbelle,
founder of the Campbellite wing of the Presbyterian Church, felt called to take upon himself the defence of Protestantism. He sent a letter to Bishop Purcell challenging him to a public debate. The bishop with a great deal of reluctance accepted the challenge, and invited Mr. Campbelle to call at his residence in the Atheneum, Sycamore Street, to arrange for the debate. The meeting took place at 2 p.m. on 11 Jan., 1837. It was agreed to hold a debate in the Baptist Church, now St. Thomas's Catholic Church, on Sycamore Street. The debate was to begin 13 Feb. and to continue seven days, exclusive of Sunday. Two sessions were to be held each day, the morning session from 9 to 12:30 and the afternoon from 3 to 5. The debate was to be held under the direction of five moderators, two to be chosen by each of the disputants, these four to choose a fifth.

Mr. Campbelle was to open the discussion, Bishop Purcell to reply. The discussion was to be taken down by shorthand writers, printed after revision by the disputants, and sold, the net proceeds to be distributed equally among Catholic and Protestant Charity of Priests. The names of the moderators were Samuel Lewis, Thomas J. Briggs, William Disney, John Rogers, and J. W. Platt.

Mr. Campbelle's charges were:

1. The Catholic Church is not now nor was it ever apostolic. The Church of Rome is not the Church of Christ.
2. The notion of Apostolic succession is without foundation in the Bible and reason.
3. She is not uniform in faith, but fallible and changeable as other sects in religion and philosophy.
4. She is the Babylon of St. John.
5. Purgatory, indulgences, confession, and transubstantiation are immoral in their tendencies, injurious to the well-being of society, political and religious.
6. The world is not indebted to the Church for the Bible.
7. If the Church is infallible and unchangeable, she is opposed to the spirit of the institutions of the United States, which means progress.

At the close of the debate one of the city papers said 'Catholicity lost nothing and Protestantism gained nothing by the discussion.' It made a profound impression on the community at large. Catholic doctrine was brought before the people in a way they had never understood it before. Thinking men were led to lay aside the prejudice caused by their ignorance of the Church. Bishop Purcell's ability as a public teacher was recognized and his learning respected. The reputation and standing he acquired by this discussion he maintained during his entire administration. The members of his own flock were encouraged when they found their bishop so competent to teach them about their faith and defend it against the attacks of non-Catholics. The discussion brought him into prominence throughout the whole country. He was called upon to deliver lectures and preach sermons in nearly every diocese. He was looked upon as the representative bishop of the West, as Archbishop Hughes was of the East.

In 1867 Mr. Vickers preached a sermon at the laying of the cornerstone of St. John's Evangelical Church, in which he made charges against the Church. Archbishop Purcell felt called upon to take notice of Mr. Vickers's sermon. This he did in a sermon preached at the laying of the cornerstone of St. Rose's Church. This brought on a discussion in the columns of the "Catholic Telegraph" and the "Cincinnati Gazette". The discussion attracted little attention, as the archbishop had to patiently follow his opponent, refuting the oft-repeated false charges against the Church.

The observatory corner-stone was laid on Mount Adams 9 Nov., 1842, by John Quincy Adams, president of the United States. He is reported to have said in the course of his speech, "this observatory is to be the result of the first science, that should never be obscured by the dark side of Church and State, and intolerance symbolized by the Popish Cross." The position is now the site of the Holy Cross Monastery of the Passionist Fathers. The monastery was solemnly dedicated 22 June, 1873, when the archbishop preached a most eloquent sermon on the "Triumph of the Cross". This was his reply to the remarks of John Quincy Adams and his slurs on the Cross of Christ. He had before that placed the cross above the observatory when he built his votive church called the "Immaculate" on Mount Adams.

The following religious orders came to the archdiocese during the incumbency of Archbishop Purcell:—the Sisters of Charity, founded at Emmitsburg, came to Cincinnati in 1826, in union with the Sisters of St. Francis of Assisi. In the charge of the Sisters of Charity formed an independent community, taking the name of the Sisters of Charity of Cincinnati. Archbishop Purcell received their vows in 1852. The Jesuit Fathers took charge of the college in 1840, and the Sisters of St. Vincent de Paul and the Benedictine Sisters in 1847. The Sisters of Notre Dame of Namur, Belgium, came to Cincinnati in 1840. The Precious Blood Fathers came to Ohio in 1840. The Franciscan Fathers came to the diocese in 1844; the Good Shepherd Sisters in 1857; the Sisters of Mercy in 1858; Little Sisters of the Poor in 1868; Sisters of St. Francis in 1858; Ladies of the Sacred Heart in 1869; and the Passionist Fathers in 1870.

Purgatorial Societies, pious associations or confraternities in the Catholic Church, which have for their purpose to assist in every possible way the poor souls in purgatory. The Catholic doctrine concerning purgatory, the condition of the poor souls after death, the community of souls, the satisfaction due to the souls, the life to be won by a pious person, constitutes the basis of these associations, although they were called into life by pure Christian charity for one's neighbour which reaches beyond the grave. This brotherly love was the distinguishing mark of Christ's Church throughout the whole Church of the early centuries down to the time of the catacombs. The first clear evidence of this is supplied by the prayers for the dead in the oldest liturgies and breviary prayers, and by the earliest Christian inscriptions.

In the centuries which followed, wherever the Christian and ecclesiastical spirit manifested itself in the form of associations, zeal and love for the poor souls were revealed in the same degree (cf. Kraus, "Kerkeri, i. Altertümer", s. v. "Pateriakia"). The old religious orders, e. g. the Benedictine Order with all its branches, especially the Order of Cluny which inaugurated All Souls' Day, furnish the most convincing proof of this. Religious confraternities are likewise distinguished in their early beginnings, and the special devotion to the dead and deceased, e. g. the Brotherhood of Constantinopolis which flourished in 336 (Baronius, "Annales", ad an. 336. IV (Lueca, 1739), 295; cf. VII (Lueca, 1741), 889 "Parabola"); and in the West the Confratres or Confraternities of the Middle Ages. Even the modern confraternities or guilds, established primarily for secular purposes.

Although offering one of the best proofs of the existence of lively faith, especially among Anglo-Saxons, Franks, and the Germanic people in general, the medieval associations of brotherhoods of prayer called "fraternitates", "societas", "consortium", "societas fraterna", and "consortium fraternitas" (cf. Adalbert Eber, "Die klosterl. Gebets-Verbrüderungen", Ratibod, 1899; Georg Zappert, "Die Klostergemeinden unterhalb der Monastery-Mittelalter"; Vincent [1853]) are little known. They were founded chiefly, though not solely, to assist deceased members with prayers, Mass, and all works of Christian charity. Critical investigators, therefore, simply designate these institutions "Totenbünde" (associations for the dead). Ducange-Pavre defines a Confraternity as "a society formed between various churches and monasteries, which binds themselves to hold exclaves for the deceased members of one another as for their own brothers". There were alliances between bishops, bishops, prelates, and noblemen; later kings, princes, bishops, priests, and the laity, especially ecclesiastical benefactors, were admitted. In the certificate of admission or the document instituting the brotherhood it was usually stated in detail how many Masses, what prayers, etc., were to be said for the repose of souls of deceased members, in the monasteries and churches or by individuals. The names of all members were enrolled in the register of brotherhood (Liber vitae), a development of the ancient diplomatic. A messenger was immediately dispatched with a circular (rotula) to announce the death of a member to all the affiliated monasteries, where the name was inserted in the dead list (see Necrologia) for constant commemoration; these lists were, like the earlier diplomatic (q.v.), read aloud so that special prayers might be said for the deceased mentioned, and a special commemoration made by the priest during the Holy Sacrifice (Krauss, "Christl. Altertümere", II, 486 sqq.).

The revival of the religious life in the West, emanating from England in the sixth century, marks the rise of these confraternities, which attained their greatest prosperity during the period of the Carolingians, maintained their position throughout the Middle Ages, and declined with its close. From England also issued the first systematic treatise on these fraternities, compiled by Wycliff about 1400 in his "Trialogus" (IV, xxx sq.), and followed by all religious innovators of these times. These brotherhoods may be divided into those formed of several monasteries, churches, or individual bishops, priests, abbots, and monks. However, kings, princes, and other laymen, especially benefactors, were admitted into these three classes, and even the frequently very numerous subordinates of a monastery. Especially during their most flourishing period, confraternities were formed among monasteries. In the ninth century Reichenau was affiliated with more than a hundred other monasteries and chapters in Germany, Switzerland, France, and Italy; this was chiefly due to the reform of the monastery by St. Benedict of Aniane (d. 821), and is the largest brotherhood known to us. Alcuin worked in the west of the Frankish Empire, and, before him, St. Boniface had sought with eager zeal to establish and foster in Germany such unions and brotherhoods with England and Italy (cf. Monumenta Germaniae Historica, "Annalera", XII (Paris, 1797)), 274 sqq.).

In this connexion it is interesting to note the "Act of Spiritual Association" between the Abbeys of St. Denis of France and St. Remy of Reims (Bibl. Nat., MS. lat. 13090, fol. 70), in which it is arranged that, within thirty days after the death of a member, the entire Office be recited by each of the surviving members, that the priest, the Master, and the Master of the Confraternity, and their assistants, be present at the various offices, and that vigils be held in common on the first, seventh, and thirteenth days.

At the provincial and national synods of the Middle Ages the bishops and abbots present frequently formed themselves into such brotherhoods, often extending to the cathedral chapters and monasteries whose superiors were members, and to the kings and princes present at the councils. In the eighth and ninth centuries there was a whole series of such synods, e.g.: Leyong (762); Dingolfing (784); Freising (803); Salzburg (790); Freising (803); Clermont (813); Spalath. Cachelusseres ann. X, 816; Savonieres near Toul (859); brotherhoods were also formed at other English and Italian synods [cf. Mansi, XI sqq. ad annos cit.]; Wilkins, "Concilia Britanniae", I (London, 1737, 171). At diocesan synods all the clergy of a diocese with their bishop formed themselves into a brotherhood, and frequently priests of still smaller districts (rural chapters) formed lesser associations of prayer to which the laity were also admitted [cf. F. L., CVI, 866 sqq.]; Baluz, "Lettre sur le concile de 112, livii; Harduin, "Com.", VI, 420, ff). Individuals of every station, rank, and sex eagerly joined these associations, while numerous rich persons founded monasteries, or made large benefactions to secure a special share in their suffrages after death. English kings, bishops, and also abbots, and others, particularly the English kings gave them an excellent example, as did St. Boniface and Alcuin. Even the laity of the lower classes joined the brotherhoods of St. Gall and Reichenaus ["Mon. Germ. Hist., I. 1. 15", "Lachfraternitat", and "Necrologia", Mansi, "Concili", XIX, 283 sqq.]; Concil. Tremoniense" (i.e. of Dortmund, 1035).

The communion of spiritual goods and indulgences, granted by monasteries in the last centuries to another monastery, to benefactors and friends outside the cloister, or to other confraternities, is more than a memorial of the old brotherhoods, since in these grants, or communicationes, the promise of spiritual help for the deceased is one of the chief features. With these brotherhoods of prayer there appeared at an early period Confraternitate more closely resembling the associations which are to-day known under that name. Their chief object was care for the poor souls. Among these might be included the above-mentioned associations from the earliest times, which devoted themselves especially to the spiritual welfare of the dying and the burial of the dead; the confraternities for the dead, when we have information, only examples can be cited from the earlier centuries, but these show sufficiently clearly how widespread these must then have been. According to an inscription in the church of Sta. Coasne and Damiani in Rome (Baronius, "Annal.", XVI (Lucca, 1744), 272) a number of priests and bishops in Rome formed themselves into an association of so- doles (c. 985), each promising that on the death of a member he would immediately sing forty Masses for the repose of his soul. At the beginning of the eleventh century Erci, the friend of Knut the Great, erected in honour of God and St. Peter a confraternity at Abbotsbury, according to the statutes of which each member should on the death of another contribute one penny for the repose of his soul [Dugdale, "Monasticon Anglicanum", I (London, 1821), 386]. In 1220 Bishop Peter of Sens ratified a confraternity formed by thirteen clergy, who bound themselves to celebrate annually four anniversaries for the benefactors and members of the confraternity ("Gallia Christiana", XII (Paris, 1797), 70). Twenty-four secular priests united to practice works of mercy for the dead, read Masses for the repose of their souls, etc. (Quix, "Beschreibung der Münster-
kirche zu Aachen", 58, 157, 161 sq.). In 1355 there existed at Glocknitz a lay confraternity for the dead, which accepted members from other parishes (Monum. Beatae Mariae Virginis) and cared for the dead and the priests of the poor. Ducange-Favre (s. v. Purgatorium) speaks of a pious association, founded in 1413, expressly under the name of purgatory, in the old church of Maria Desuriatia (Daurade) at Toulouse. These confraternities concerned themselves almost exclusively with the souls of deceased members and benefactors, while the distinguishing mark of the later associations is their foundation for all poor souls. Provision for burials was first made by "La Compagnia della Pietà," founded in Rome, 1448 (cf. Bereng. in "Archiv. storico hist. di Toscana," XXXIII, 5 sq.), and nearly related to the confraternities here described. In the newly-erected church of the German cemetery (Campo Santo), a confraternity, "in honour of the bitter Passion of Christ and of the Sorrowful Mother, to comfort and assist all the faithful souls," was erected (1448) by the penitentiary, Johannes Goldener of Nuremberg, later titular Bishop of Accon and Auxiliary Bishop of Bamberg (cf. De Waal, "Der Campo Santo der Deutschen zu Rom," Freiburg, 1896, pp. 46 sqq.), and it is described as a new church in an anchorite convent with the "imperial Requiem Mass Association for assisting souls of deceased members (loc. cit., 307; cf. Beringer, "Die Ablässe," 13th German ed., 1906, pp. 885 sqq.) and it is the first purgatorial society according to the present meaning of the name. The "Black Penitents," who march in procession through Rome under the banner of mercy, were founded in 1488 to assist before execution those condemned to death, and afterwards to provide for their burial, exequies, and Requiem Mass [cf. Raynald, "Annales," XI (Lucca, 1754), 178 sq. ad an. 1490]. The Confraternity of Our Lady of Suffrage (S. Maria del Suffragio) existed in Rome from 1592, expressly for the relief of the poor souls. It had numerous members, and since 1615 has aggregated other confraternities with the same object (Decr. summae C. Indulg., n. 83, p. 67; Moroni, II, 306; Li., 328).

The Archconfraternity of Death and Prayer (mortis et orationis), founded in Rome, 1538, to provide for the burial of the poor and abandoned, still exists (cf. Berignani, loc. cit.); at the beginning of the seventeenth century it was granted a special indulgence (Paul V (Rescr. auth. C. Indulg., n. 26, pp. 448 sqq.; Moroni, II, 303). About 1687 the rules of a special confraternity "for the Relief of the Most Needy Souls in Purgatory under the invocation of the Sacred Names of Jesus, Mary, and Joseph" were approved in Rome (Moroni, XVI, 130). The confraternity for the relief of the departed under the title of "Jesus Christ on Mount Calvary and the Sorrowful Mother" enjoyed special popularity and was inaugurated, 8 Sept., 1766, the processions of the Way of the Cross in the Roman Coliseum: among its illustrious members was St. Leonard of Port Maurice (Rescr. auth. Summ. 39, pp. 497 sqq.; Moroni, loc. cit.). The Ingolstadt Mass Association, formed by the Franciscans of Ingolstadt in 1726 to procure for all members the grace of a happy death and for those already deceased speedy assistance and liberation from the pains of purgatory, was erected into a formal ecclesiastical confraternity under the title of the Immaculate Conception in 1874. An ancient, highly venerated picture of the Mother of God was adopted as the titular picture of the association, and all the indulgences of the confraternity of the same name in the Ara Coeli at Rome, i. e. the indulgences of the Blue Scapular (Rescr. auth. n. 393; Summ. 55, pp. 580 sqq.). It numbers its members by tens and hundreds of thousands; almost 2000 Masses are daily celebrated in Rome by their priests and provided for the members of the Mass Association, which includes the intention of particularly assisting the most recently deceased members.

At the close of the Middle Ages the old confraternities, generally confined to a town or small district, gradually disappeared, as did also many of the later ones in the confusion at the end of the eighteenth century, while others preserved only a semblance of life. Since the beginning of the nineteenth century they have been replaced by vigorous new associations, which, richly endowed with indulgences by ecclesiastical authorities, have had a vast extension even to the entire Church. By Brief of 5 October, 1818, Pius VII endowed the Archconfraternity of Our Mother of Sorrows and the Poor Souls in Purgatory (Archiconfraternitas B. V. Dolorosae sub invocatione Anini marum purgatorio), which was erected in the basilica of S. Maria in Trastevere, with rich indulgences (Rescr. auth. Summ. 28, pp. 455 sqq.). First among the later confraternities which have extended throughout Christendom is the "Archiconfraternity for the Relief of the Poor Souls in Purgatory under the title of the Assumption of the Virgin and of the church of S. Maria in Montereone at Rome," founded in 1841. It rapidly developed, especially in England and North America, and was endowed with indulgences in 1841-63. Priests empowered to receive the faithful into the spiritual activity of this confraternity enjoy various of the faculties. This confraternity is especially adapted for rapid expansion, because in 1861 it was expressly authorized to aggregate every confraternity of whatever name and object and to communicate to them its graces and privileges provided they added to their original titles "and for the Relief of the Poor Souls in Purgatory"; they must not, however, be already aggregated to another archconfraternity, nor have been endowed with indulgences on their own account (Rescr. auth. Summ., n. 48, pp. 543 sqq.). The Redemptorist fathers conduct this archconfraternity (cf. Seeberger, "Key to the Spiritual Treasures", 2nd ed., pp. 296 sqq.).

At Nam in France a confraternity similar to that of Our Lady of Suffrage was established in 1857, received the faculty of aggregating other confraternities and the right of the Institute of Nam in 1858. In 1873 it was given the same right for the whole world. In addition to the indulgences of the Roman confraternity, that of Nam has received others: the recital of the Rosary of the Dead was approved especially for its members by Pius IX in 1872 (Ignatians, n. 188, p. 393; Rescr. auth. Summ., ed., pp. 470 sqq.). In accordance with its ancient traditions, the Benedictine Order formed a twofold Confraternity of the Poor Souls at Lambach, Diocese of Lins, Austria. In 1877 the Archconfraternity of the Perpetual Adoption of the Blessed Sacrament under the Protection of St. Benedict for the Poor Souls in Purgatory was erected with right to aggregate other confraternities of the same name and object in Austria-Hungary. In 1893, with the same title and objects, this confraternity was erected in the abbey church of St. John the Baptist at Collegeville, Minnesota; it shares in all the indulgences of the Lambach confraternity, and possesses, as the archconfraternity for North America, the faculty of aggregating all confraternities of the same name and communicating to them its indulgences. Finally, by Brief of 2 March, 1910, Pius X granted to the Lambach archconfraternity the right of aggregation for the whole world (Acta Ap. Sed., III, 93 sqq.). There was also founded, in 1878, in the same abbey church of Lambach a Priests' Association under the Protection of St. Benedict for the Relief of the Poor Souls in Purgatory. This was approved and recommended by the diocesan bishop, Frans Joseph Rudigier. Many other bishops,
especially in North America, recommended it to their clergy. The direction of the association is in the hands of the general-director of the Archconfraternity of Lamach, who enters the members in a special register. The official organ for both is the "Benedicentissimus" published by the Abbey of Emaus in Prague (cf. Seeberger, op. cit., 301 sqq.).

A work of atonement to procure relics and liberation for the most needy and abandoned souls in purgatory by the celebration of many Masses was founded in 1894 in the parish of La Chapelle-Montligeon, Diocese of Sées, France. Until 1893 this association was agregated to the archconfraternity of St. Maria in Monteronne, but it was declared by Brief of 2 October, 1893, an honorary archconfraternity and prima-primarum. Only associations united with that of Montligeon may adopt the same title and statutes. This association of many million members is blessed by the pope, and recommended by numerous bishops. To become a member, one must have one's name enrolled, and contribute five centimes annually for the objects of the association; persons who make a single contribution of five francs have a permanent share in all the Masses celebrated for the deceased. Seven Masses are said weekly for the souls in purgatory, three monthly for deceased priests, and in addition many thousand Masses are offered annually. A monthly organ of the association is published in four languages (cf. Lit. 304 sqq.; Beringer, op. cit., II, 478 sqq.). The Order of Chiny have always been conspicuous for their special devotion to the poor souls. Since 998, St. Odilo, Abbot of Chiny, had All Souls' Day celebrated by his monks on 2 November, which day was gradually devoted by the entire Church to the relief of the poor souls. In memory of this fact, a new archconfraternity was erected at Chiny in the parish church of Our Lady. By Brief of 25 May, 1898, Leo XIII granted Chiny its own "Purification of the Poor Souls of Purgatory," the indulgences of the old Roman Confraternity of Prayer and Death (see above), and authorized it to aggregate similar confraternities throughout France and its colonies ("Analecta eccles.," 1898, p. 328; Beringer, "Die Ablassk.," II, 475 sqq.). The "Associazione del Sacro Cuore di Gesù in suffragio delle Anime del Purgatorio" was canonically established in Rome (Lungotevere, Prati) in a church of the Sacred Heart, and granted indulgences and privileges by Leo XIII (1903-5). The director of this association is the Prior of the Franciscan Fathers, and in its membership, is Victor Jouet, who edicts "Rivista mensile dell' Associazione".

Having named the best-known and most widespread modern confraternities for the poor souls, we must not forget that, among the numerous other confraternities and pious associations, there is scarcely one— if indeed any—which does not seek to promote with special devotion the intercession for, and help of, the poor souls. Indulgences of the confraternities are ever applicable to the souls in purgatory, and the privilege of the above-mentioned and for priests who are members, may be used in favour of dead members or of all the poor souls. The formation of the "Catholic League for Constant Intercession for the Poor Souls in Purgatory" was proposed by certain pious citizens of Rome, approved by Leo XIII in the last years of his reign, and enriched with indulgences. The only requisite for membership is to recite thrice daily the prayer, "Requiem aeternam dona eis Domine et lux perpetua luceat eis. Requiescant in pace. Amen," thereby gaining once daily an indulgence.\footnote{Seeberger, op. cit., 301 sq.} In conclusion we must mention the thousands and perhaps millions of the faithful, who have made the heroic act of charity (q. v.), thus assisting in the most perfect manner the souls in purgatory, and further the crown of all these associations, in this work, is the Order of the Helpers of the Holy Souls.

Joseph Hilgenm.

**Purgatory.**—The subject is treated under these heads: I. Catholic Doctrine; II. Errors; III. Proofs; IV. Duration and Nature; V. Succouring the Dead; VI. Indulgences; VII. Invocation of Souls; VIII. Utility of Prayer for the Departed.

I. Catholic Doctrine.—Purgatory (Lat., purgare, to make clean, to purify) in accordance with Catholic teaching is a place or condition of temporal punishment for those who, departing this life in God's grace, are not entirely free from venial faults, or have not fully paid the satisfaction due to their transgressions. The faith of the Church concerning purgatory is clearly expressed in the Decree of Union drawn up by the Council of Florence (Mani, t. XXXI, col. 1031), and in the decree of the Council of Trent which (Sess. XXV) defined: "Whereas the Catholic Church, instructed by the Holy Ghost, has from the Sacred Scriptures and the ancient tradition of the Fathers taught in Councils and very recently in this Ecumenical Council (Sess. VI, cap. xxx; Sess. XXII, cap. ii, iii) that there is a purgatory and that the souls therein detained are helped by the sufferages of the faithful, but principally by the acceptable Sacrifice of the Altar; the Holy Synod enjoins on the Bishops that they diligently endeavour to have the sound doctrine of the Fathers in Councils regarding purgatory everywhere taught and preached, held and believed by the faithful" (Denzinger, "Enchiridion," 953). Further than this the definitions of the Church do not go, but the tradition of the Fathers and the Sermon, must be used to explain the teaching of the councils, and to make clear the belief and the practices of the faithful.

Temporal Punishment.—That temporal punishment is due to sin, even after the sin itself has been pardoned by God, is clearly the teaching of Scripture. God indeed brought man out of his first disobedience and gave him power to govern all things (Wis., x, 2), but still condemned him "to eat his bread in the sweat of his brow" until he returned unto dust. God forgave the incredulity of Moses and Aaron, but in the case of Saul he was permitted to see the "blindness of his eyes" (Num., xx, 12). The Lord took away the sin of David, but the life of the child was forfeited because David had made God's enemies blaspheme His Holy Name (II Kings, xii, 13, 14). In the New Testament as well as in the Old, almsgiving and fasting, and in general penitential acts are the external fruits of repentance (Matt., iii, 8; Luke, xvii, 3; xiii, 3). The whole penitential system of the Church testifies that the voluntary assumption of penitential works has always been part of true repentance, and the Council of Trent (Sess. XXIV, can. 33) reminds the faithful that God does not always remit the whole punishment due to sin together with the guilt. God requires satisfaction, and will punish sin, and this doctrine involves as its necessary consequence a belief that the sinner failing to do penance in this life may be punished in another world, and so not be cast off eternally from God.

**Venial Sins.**—All sins are not equal before God, nor dare anyone assert that the daily faults of human frailty will be punished with the same severity that is threatened out to sins (cf. Denzinger, 13). On the other hand whoevercomes into God's presence must be perfectly pure, for in the strictest sense His "eyes are too pure to behold evil" (Hab., i, 13). For unrepented venial faults, for the payment of temporal punishments due to sin at time of death, the Church has always taught the doctrine of purgatory,
So deep was this belief ingrained in our common humanity that it was accepted by the Jews, and in at least a shadowy way by the pagans, long before the coming of our Saviour."" "Videri" VI. 708 sq. Sophocles, "Antigone", 450 sq.; cf. Mommsen, "Rome", I., xiii.

II. ERRORS.—Epiphanius (Hsr., lxv, P. G., XLII, col. 513) taught that prayers for the dead were of no avail. In the Middle Ages, the doctrine of purgatory was rejected by the Albigenses, Waldenses, and Hussites. St. Bernard (Serm. lxvi in Cantic., P. L., CLXXXIII, col. 1098) states that the so-called A postolici denied purgatory and the utility of prayers for the departed. M. de Rudder (Histoire de la pauvreté de la foi", III, col. 1123 sq.) it would seem that the great difference of opinion was not concerning the existence of purgatory, but concerning the nature of purgatorial fire; still S. Thomas proves the existence of purgatory in his dissertation against the errors of the Greeks, and the Council of Florence also thought necessary to affirm the belief of the Church on the subject (Bellarmine, "De Purgatorio", lib. I., can. II., modern Orthodox Church. Orthodox doctrine of purgatory, but is rather inconsistent in its way of putting forth its belief (Fortescue, "Orthodox Eastern Church", London, 1907, 389).

At the beginning of the Reformation there was some hesitation especially on Luther's part (Leipziger Disputation, 1519), but whether it be retained, but, as the breach widened, the denial of purgatory by the Reformers became universal (Centurist. Magdeburg., cent. IV, cap. iv), and Calvin termed the Catholic position "exilata commentum quod crucem Christiani Evang. ". (Quod fidei nostram labefact et evexit" (Institutiones, lib. III, cap. v, § 6). Modern Protestants, while they avoid the name purgatory, frequently teach the doctrine of the middle state, and Martensen ("Christian Dogmatics", Edinburgh, 1890, p. 457) writes: "As no soul leaves this present existence in a fully complete and prepared state, we must suppose that there is an intermediate state, a realm of progressive development, (!) in which souls are prepared for the final judgment" (Farrar, "Mercy and Judgment", London, 1881, cap. iii.; A. Campbell, "The Doctrines of the Middle State", London, 1821; Hodge, "Systematic Theology", New York, 1885, III, 741).

III. PROOFS.—The Catholic doctrine of purgatory supposes that the faithful so disposed for the last judgment who have not been able to enter heaven at once, may be effaced from purgation, and then eventually be admitted to the beatific vision. It is to this doctrine that the Fathers have appealed in their decrees for the dead. St. Thomas ("Summa Theologica", I., 1, 11) and St. Bernard (Serm. lxxi in Cantic., p. 11) have repeated that the souls of the faithful deserve a share in the Beatific Vision, provided they be purified from the effects of sin. The Church has always held that the souls of the faithful are speedily admitted to the Beatific Vision, provided they be purified from all their sins. The doctrine of purgatory has been professed by all the Fathers of the Church, and has been defined by the Councils of the Church. The doctrine of purgatory has been held by all the great theologians, and has been taught by all the Fathers of the Church. The doctrine of purgatory has been accepted by all the Eastern and Western Churches. The doctrine of purgatory has been maintained by all the great theologians, and has been taught by all the Fathers of the Church.

"Intercession has been made for the soul of the dead one departed and God has heard the prayer, and the soul has passed into a place of light and refreshment." "Surely VI. 708 sq. Sophocles, "Antigone", 450 sq.; cf. Mommsen, "Rome", I., xiii.

Some stress too has been laid upon the objection that the ancient Christians had no clear conception of purgatory, and that they thought that the departed remained in uncertainty of salvation to the last day; and consequently they prayed that those who had gone before might in the final judgment escape even the everlasting torments of hell. The earliest Christian traditions are clear as to the particulars of judgment. The judgment is not a simple distinction between purgatory and hell. The passages alleged as referring to relief from hell cannot offset the evidence given below. (Bellarmine, "De Purgatorio", lib. II., cap. v; Gihl, "Holy Sacrifice of the Mass", tr. St. Louis, 1902, p. 50.) Concerning the famous case of Trajan, which vexed the Doctors of the Middle Ages, see Bellarmine, loc. cit., cap. viii.

Old Testament.—The tradition of the Jews is put forth with special emphasis in Machabees. Judas, the commander of the forces of Israel, "making a gathering . . . sent twelve thousand drachmas of silver to Jerusalem for sacrifice to be offered for the sins of the dead, thinking well and religiously concerning the resurrection (For if he had hoped that they that should have been loosed from sins" (II Mach., xii, 43-46). At the time of the Machabees the leaders of the people of God had no hesitation in asserting the efficacy of prayers offered for the dead, in order that those who had departed this life might find pardon for their sins and the hope of eternal resurrection.

New Testament.—There are several passages in the New Testament that point to a process of purification after death. Thus, Jesus Christ declares (Matt., xii, 32): "And whosoever shall speak a word against the Son of man, it shall be forgiven him: but he that shall speak against the Holy Ghost, it shall not be forgiven him, neither in this world, nor in the world to come." According to St. Isidore of Seville (De ord. creat., c. xiv, n. 6) these words prove that in the world to come there is purification by fire. The same interpretation is given by Gregory the Great (Dial., IV, xxxii); St. Bede (commentary on this text); St. Bernard (Sermo lxvi in Cantic., n. 11) and other eminent theological writers (cf. Hurrer, "Theol. Dog. Compend. dec. X.

A further argument is supplied by St. Paul in I Cor., iii, 11-15: "For other foundation no man can lay, but that which is laid; which is Christ Jesus. Now if any man build upon this foundation, gold, silver, precious stones, glass, or wood, or stubble: Every man's work shall be made manifest; for the day of the Lord shall declare it, because it shall be revealed in fire; and the fire shall try every man's work, of what sort it is. If any man's work abide, which he hath built thereupon, he shall receive a reward. If any man's work shall perish, it shall be as if he had purposed to build it, yet be saved, yet as by fire." While this passage presents considerable difficulty, it is regarded by many of the Fathers and theologians as evidence for the
existence of an intermediate state in which the dross of lighter transgressions will be burnt away, and the soul thus purified will be saved. This, according to Bellarmine (De Purg., I, 5), is the interpretation commonly given by the Fathers and theologians; and he cites to this effect St. Ambrose (commentary on Ps. xxvii, 57, and 52) and St. Augustine (Comm. in Ps. xxxvii, 18). St. Gregory the Great (Dialog., III, xxxiii), and Origen (Hom. xi in Exod.). See also St. Thomas, “Contra Gentes,” IV, 91. For a discussion of the exegetical problems, see St. Ansgar, “Die christliche Eschatologie,” p. 275.

Tradition—This doctrine that many who have died are still in a place of purification and that prayers avail to help the dead is part of the very earliest Christian tradition. Tertullian (“De corona militis” mentions prayers for the dead as an Apostolic ordinance, and in “De Monogamia” (cap. x, P. L., II, col. 912) advises a widow “to pray for the soul of her husband, begging repose for him and participation in the first resurrection”; he commands her also, “Let no woman have the authority of a deacon.” He mentions the anniversary of his demise, and charges her with infidelity if she neglect to succour his soul. This settled custom of the Church is clear from St. Cyprian, who (P. L. IV, col. 339) forbade the customary prayers for the repose of the dead without a legal provision. “Our predecessors prudently advised that no brother, departing this life, should nominate any churchman as his executor; and should he do it, that no obligation should be made for him, nor sacrifice offered for his repose.” Long before Cyprian, Clement of Alexandria had passed over the question of the state or condition of the man who, reconciled to God on his death-bed, had no time for the fulfillment of penance due to his transgression. His answer is “the believer through discipline divests himself of his guilt and it is unprofitable to try to persuade him from his state or condition.” St. Augustine, in his great work on the resurrection (De resurrectione), says that the soul of the departed is not annihilated, but is alive in the bosom of Abraham, with those who in this life have pleased God (P. L., I, col. 1144). He follows the teaching of the diptychs where the names of the dead were inscribed; and this remembrance by name in the Sacred Mysteries—a practice that was from the Apostles) was considered by Chrysostom as the best way of evoking aid for the soul of the departed man (AD Cor., Hom. xii, n. 4, P. G., LXXI, col. 361, 362).

The teaching of the Fathers, and the formularies used in the Liturgy of the Church, found expression in the early Christian monuments, particularly those contained in the catacombs. On the tombs of the faithful were inscribed words of hope, words of petition for peace and for rest; and as the anniversaries came round the faithful gathered at the graves of the departed to make intercession for those who had gone before (Wilpert, “Roma soterranea,” xxi, 396 ff.). At bottom this is the same thing which is expressed by the Council of Trent (Sess. XXV, “De Purgatorio”), and to this faith the inscriptions in the catacombs are surely witnesses (Kirsch, “Die Aclamationen und Gebete der alchristlichen Grabschriften”), Cologne, 1896, pp. 70-78). In the fourth century in the West, Ambrose insists in his commentary on St. Paul (I Cor., iii) on the existence of purgatory, and in his masterly funeral oration (“De obitu Theodosii”), thus prays for the soul of the departed emperor: “Give, O Lord, rest to Thy servant Theodosius, that in the heavens He may be prepared for Thy saints.... I loved him, therefore will I follow him to the land of the living; I will not leave him till by my prayers and lamentations he shall be admitted unto the holy mount of the Lord, to which his deserts call him” (P. L., XVI, col. 1397). St. Augustine is clearer even than his master. He describes two conditions of men; “some there who have departed this life, not so bad as to be deemed unworthy of mercy, nor so good as to be entitled to immediate happiness,” etc., and in the resurrection he says there will be some who “have gone through these pains, to which the spirits of the dead are liable” (“De Civ. Dei, XXI, 24). Thus at the close of the fourth century not only (1) were prayers for the dead found in all the Liturgies, but the Fathers asserted that such practice was from the Apostles themselves; (2) those who were helped by the prayers of the faithful and by the celebration of the Holy Mysteries were in a place of purification; (3) from which when purified they “were admitted unto the Holy Mount of the Lord,” etc. The patristic Tradition that those who do not believe in purgatory have been unable to bring any serious difficulties from the writings of the Fathers. The passages cited to the contrary either do not touch the question at all, or are so lacking in clearness that they cannot affect the perfectly open expression of
the doctrine as found in the very Fathers who are quoted as holding contrary opinions (Bellarmine "De Purg.", lib. I, cap. xii; Billot, "Quest. de Mort., lib. III, cap. 25"); (2) Otto, Prosch, "Fres. Dogmat.", 2nd ed., Freiburg, 1902).

IV. DURATION AND NATURE — Duration. — The very reasons assigned for the existence of purgatory make for its passing character. We pray, we offer sacrifice for souls therein detained that "God in mercy may forgive the belief of fault and receive them into the bosom of Abraham" (Const. Apost., P. G., I, col. 1144); and Augustine (De Civ. Dei, lib. X, cap. xii and xvii) declares that the punishment of purgatory is temporary and will cease, at least with the last Judgement, all punishment suffered by some in this life only, by others after death, by others both now and then; but all of them before that last and strictest judgment.

Nature of Punishment. — It is clear from the Liturgies and the Fathers above cited that the souls for whose peace sacrifice was offered were shut out for the time being from the sight of God. They were "not so good as to be entitled to eternal happiness". Still, for them "death is the termination not of nature but of sin" (Ambrose, "De obitu Theodoci,"; and the same author’s letter to Ambrose). The same thing makes the title of happiness. This is the Catholic position proclaimed by Leo X in the Bull "Exsurge Domine" which condemned the errors of Luther (Bullarium, ed. Taurin., V, 751).

As the souls detained in purgatory conscious that their happiness is but deferred for a time, or may they still be in doubt concerning their ultimate salvation? The ancient Liturgies and the inscriptions of the catacombs speak of a "sleep of peace", which would be impossible if there was any doubt of ultimate salvation. Some of the Doctors of the Middle Ages thought uncertainty of salvation one of the severe punishments of purgatory (Bellarmine, "De Purgat.", lib. II, cap. iv); but this opinion finds no general credit among the theologians of the medieval period, nor is it possible in the light of the belief in the particular judgment. St. Bonaventure gives as the reason for this elimination of fear and of uncertainty the intimate conviction that they can no longer sin (lib. IV, dist. xx, p. 1, a. 1, q. iv): "Est evasivatis timore consummator confirmationis libertas orbitati, qua delitescet se pene coram posse" (Fear is cast out because of the strengthening of the will by which the soul knows it can no longer sin), and St. Thomas (dist. xxi, q. 1, a. 1) says: "nisi scirent se esse liberandas suffragia non pereant" (unless they knew that they were to be delivered, they would not ask for prayers).

Merit. — In the Bull "Exurge Domine" Leo X condemns the proposition (n. 38) "Nec probatum est ullius aut rationibus aut scripturis ipse esse extra solum meriti aut augendi caritatis" (There is no proof from reason or Scripture that they [the souls in purgatory] cannot merit or increase in charity. For them "the night has come in which no man can labour"; and Christian tradition has always considered that only in this life can man work unto the profit of his own soul). The Doctors of the Middle Ages while agreeing that this life is the time for merit and increase of grace, still some with St. Thomas seemed to question whether or not there might be some non-essential reward which the souls in purgatory might merit (IV, dist. xxi, q. 1, a. 3). Bellarmine believes that in this matter St. Thomas changed his opinion and refers to a statement of St. Thomas ("De Malo", q. vii, a. 11). Whatever may be the mind of the Angelic Doctor, theologians agree that no merit is possible in purgatory, and if they may be urged that the souls there merit by their prayers, Bellarmine says that such prayers avail with God because of merit already acquired "Solum impetrant ex meritis preteritis quomodo nunc sanit orando pro nobis imparient lietet non merendo" (They avail only in virtue of past merits as those who are now passing into purgatory are not by merit but by prayer). (loc. cit., II, cap. iii).

Purgatorial Fire. — At the Council of Florence, Bessarion argued against the existence of real purgatorial fire, and the Greeks were assured that the Roman Church had never issued any dogmatic decree on this subject. In the Western Church, the existence of real fire is common. Augustine in Ps. xxxvii, n. 3, speaks of the pain which purgatorial fire causes as more severe than anything a man can suffer in this life, "gravior erit igitur quam quidquid potest Patris in hac vita" (P. L., XXXVI, col. 397). Gregory the Great speaks of those who after this life "will expiate their faults by purgatorial flames", and he adds "that the pain will be more intolerable than any one can suffer in this life" (Ps. 3, p. 1, a. 1). Following in the footsteps of Gregory, St. Thomas teaches (IV, dist. xxi, q. 1, a. 1) that besides the separation of the soul from the sight of God, there is the other punishment from fire. "Una penitenti, in quantum splendet retendantur a divina visione; alia sensum secundum quod aigne consummodur servatur et of finalis beatitudo" (Ps. 3, p. 1, a. 1, q. ii) that this punishment by fire is more severe than any punishment which comes to men in this life; "Gravior est omni temporalis pena, quam modo submetit anime carnii consensu, quod fidei, quin etiam a fide nullius affectus est" (Sess. XXV, "De Purgatorio").

V. SUCOURING THE DEAD. — Scripture and the Fathers command prayers and oblations for the departed, and the Council of Trent (Sess. XXV, "De Purgatorio") in virtue of this tradition not only asserts the existence of purgatory, but adds "that the souls therein detained are aided by the suffrages of the faithful and principally by the acceptable sacrifice of the altar". That the souls are still in communion with the souls in purgatory is the earliest Christian teaching, and that the living aid the dead by their prayers and works of satisfaction is clear from the tradition above alleged. That the Holy Sacrifice was offered for the departed was recorded by the Catholic Church from the time of St. Cyprian, and that the souls of the dead were aided particularly "while the sacred victim lay upon the altar" is the expression of Cyril of Jerusalem quoted above. Augustine (Serm. clxxxii, n. 2) says that the "prayers and signs of the faithful on behalf of the Holy Sacrifice of the altar aid the faithful departed and move the Lord to deal with them in mercy and kindness," and he adds, "this is the practice of the universal Church handed down by the Fathers". Bellarmine writes that prayers are offered on behalf of the dead "by the living and the dead without any discrimination" (De penit., disp. xlvii, § 6, n. 4).

VI. INDULGENCES. — The Council of Trent (Sess. XXV) defined that indulgences are most salutary and "according to the will of Christ, those sins and temporal punishments which remain for us not by merit but by prayer", (loc. cit., II, cap. iii). The Council of Trent made popular the idea of "Indulgences of the Church". It is the common teaching of Catholic theologians that (1) indulgences may be applied to the souls detained in purgatory; and (2)
that indulgences are available for them "by way of suffrage" (per modum suffragii).

1. Augustine (De Civ. Dei, XX, ix) declares that the souls of the faithful departed are not separated from the Church, which is the kingdom of Christ, and for this reason the prayers and works of the living may avail for them. "If therefore" argues Bellarmine (De indulgentiis, xiv) "we can offer our prayers and our satisfactions in behalf of those detained in purgatory, because we are members of the great body of Christ, why not the Vicar of Christ apply to the same souls the superabundant satisfaction of Christ and his saints and what he is the dispenser?" This is the doctrine of St. Thomas (IV, Sent., dist. xiv, q. ii, a. 3, q. 2) who asserts that indulgences avail principally for the person who performs the work for which the indulgence is given, but secondarily may avail even for the dead, if the form in which the indulgence is granted be so worded as to be capable of such interpretation, and he adds "nor is there any reason why the Church may not dispose of its treasure of merits in favour of the dead, as the sun is sometimes to be beheld in clouds." (St. Bonaventure, (IV, Sent., dist. xx, p. 2, q. v) agrees with St. Thomas, but adds that such "relaxation cannot be after the manner of absorption as in the case of the living, but only as suffrage (Hoc non tenet modum juricendi, sed potius suffragii)."

2. Bellarmine himself says: "The true opinion is that indulgences avail as suffrage, because they avail not after the fashion of a juridical absolution 'quia non present per modum juricendae absolutionis'. But according to the custom in virtue of which the suffrage is obtained at times per modum meriti congrui (by way of merit), at times per modum impetratio (by way of supplication) at times per modum satisfactio (by way of satisfaction); but when there is question of applying an indulgence to one in purgatory it is only per modum suffragii satisfactioni, and for this reason "the pope does not absolve the soul in purgatory from the punishment due his sin, but offers to God from the treasury of the Church whatever may be necessary for the cancelling of this punishment". If the question is whether such satisfaction is accepted by God out of mercy and benevolence, or ex justitiae, theologians are not in accord—some holding one opinion, others the other. Bellarmine after canvassing both sides (pp. 157, 138) does not dare to set aside either opinion, but is inclined to think that the former is more reasonable while he pronounces the latter in harmony with piety (admodum pia).

3. Condition.—That an indulgence may avail for those in purgatory several conditions are required: (1) The prayer must be made even as we are praying for the living. There must be a sufficient reason for granting the indulgence, and this reason must be something pertaining to the glory of God and the utility of the Church, not merely the utility accruing to the souls in purgatory. (2) The pious work enjoined must be performed by the living and if the enjoined satisfaction requires the state of grace, this must be verified as in the case of indulgences for the living.

If the state of grace be not among the required works, in all probability the person performing the work may gain the indulgence for the dead, even though he himself is not in that state (Bellarmine, loc. cit., p. 139). Suares (De Pœnit., disp. liii, s. 4, n. 5 and 6) puts this categorically when he says: "Status gratiae solutum requiritur ad tollendum obicem indulgentiae" (the state of grace is required only to remove some hindrance to the indulgence), and in the case of the holy souls there can be no hindrance. This teaching is bound up with the doctrine of the Communion of Saints, and the monuments of the catacombs represent the saints and martyrs as interceding with God for the dead. The prayers too of the early liturgies speak of Mary and of the saints interceding for those who have passed from this life. Augustine believes that burial in a basilica dedicated to a holy martyr is of value to the dead, for those who recall the memory of him that has suffered living" (Bellarmine, lib. II, xv). In the same place Bellarmine accuses Dominicus A Soto of rashness, because he denied this doctrine.

VII. INVOCATION OF SOULS.—Do the souls in purgatory pray for us? May we call upon them in our needs? There is no decision of the Church on this subject, nor have the theologians pronounced with definiteness concerning the invocation of the souls in purgatory and their intercession for the living. In the ancient liturgies there are no prayers of the Church directed to those who are still in purgatory. On the tombs of the early Christians nothing is more common than a prayer or a supplication asking the departed to intercede with God for surviving friends, but these inscriptions seem always to suppose that the departed one is already with God. St. Thomas (II—II, Q. lxxxii, a. 11, ad 3 um) denies that the souls in purgatory pray for the living, and states that they are not in a position to pray for us, rather we must make intercession for them. Despite the authority of St. Thomas, many renowned theologians hold that the souls in purgatory really pray for us, and that we may invoke their aid. Bellarmine (De Purgatorio, lib. II, xv) says the reason alleged by St. Thomas is not at all convincing, and holds that the prayer of love, when united with their prayers may have great intercessory power, for they are really superior to us in love of God, and in intimacy of union with Him. Suarez (De pænit., disp. xlvii, s. 2, n. 9) goes farther and asserts "that the souls in purgatory are holy, dear to God, love us with a true love, and are mindful of our wants; that they know in a general way our necessities and our dangers, and how great is our need of Divine help and divine grace".

When there is question of invoking the prayers of those in purgatory, Bellarmine (loc. cit.) says it is superfluous, ordinarily speaking, for they are ignorant of our circumstances and condition. This is at variance with the opinion of Suarez, who admits knowledge at least in a general way, also with the opinions of many modern theologians who point to the practice now common with almost all the faithful of addressing their prayers and petitions for help to those who are still in a place of purgation. Scavini (Theol. Moral., XI, n. 174) sees no reason why the souls detained in purgatory may not pray for us. He adds that one cannot say that this practice has become common at Rome, and that it has the great name of St. Alphonsus in its favour. St. Alphonsus in his work the "Great Means of Salvation", chap. I, III, 2, after quoting Sylvius, Gotti, Lessaus, and Medina as favourable
to his opinion, concludes: "So the souls in purgatory, being beloved by God and confirmed in grace, have absolutely no impediment to prevent them from praying for us. Still the Church does not invoke them or implore their intercession, because ordinarily their prayers have no efficacy. But the faithful may piously believe that God makes our prayers known to them." He alleges also the authority of St. Catharine of Bologna who "whenever she desired any favour had recourse to the souls in purgatory, and obtained it immediately here.

VIII. UTILITY OF PRAYER FOR THE DEPARTED.—It is the traditional faith of Catholics that the souls in purgatory are not separated from the Church, and that the love which is the bond of union between the Church's members should embrace those who have departed this life in God's grace. Hence, since our prayers and our sacrifices can help those who are still waiting in purgatory, the saints have not hesitated to warn us that we have a real duty toward those who are still in purgatorial expiation. Holy Church through the Congregation of Indulgences, 18 Dec. 1855, has bestowed a special blessing on the so-called "heroic act" in virtue of which "a member of the Church militant offers to God for the souls in purgatory all the satisfactory works which he will perform during his lifetime, and also all the suffrages which the faithful will offer for him after his death." (Herbic Act, vol. VII, 292). The practice of devotion to the dead is also consoling to humanity and eminently worthy of a religion which seeks all the purest feelings of the human heart. "Sweet," says Cardinal Wiseman (lecture XI), "is the consolation of the dying man, who, conscious of imperfection, believes that there are others to make intercession for him when his own time for merit has expired; soothing to the afflicted survivors the thought that they possess power of relieving their friend. In the first moments of grief, this sentiment will often overpower religious prejudice, cast down the unbeliever on his knees beside the remains of his friend and snatch from him an unconscious prayer for rest; it is an impulse of nature which for the moment, aided by the analogies of revealed truth, seizes at once upon this consoling belief. But it is only a fitting and melancholy light, while the Catholic feeling, cheering, though with solemn dimness, reënacts the unfailing lamp, which the piety of the ancients is said to have hung before the sepulchres of their dead."

Besides the works cited in the article, consult Scheeren-Armenia, IV (Freiburg, 1802), good bibliography. Wuginan, Lectures on the Principal Doctrines and Practices of the Catholic Church (London, 1836), lect. EDWARD J. HANNA.

Purgatory, St. Patrick's, Lough Derg, Ireland. This celebrated sanctuary in Donegal, in the Diocese of Clogher, dates from the days of St. Patrick, but it is also known as the Lough Derg pilgrimage, so named from Lough Derg, the lake, covering 2200 acres, about thirteen miles in circumference, and 450 feet above sea level, on which are eleven islands, the principal of which are Saints Island and Station Island. The sanctuary lands on Saints Island were known in the Middle Ages as Tornoon (from the sixth-century St. Dubhthac who presided over the retreat), and were subsequently called Termon Magrath from the family of Magrath, who were corts of stewards of the place from 1290. St. Patrick's connexion with the purgatory which bears his name is not only a constant tradition, but is supported by historical evidence, and admitted by the Bollandists. In 1130, the Regular of St. Augustine were given charge of Lough Derg—it being constituted a dependent priory on the Abbey of Sts. Peter and Paul, Armagh. Its fame became European after the knight Owen's visit in 1500, although it had been previously described in 1120 by David, the Irish writer of Würzburg. Numerous accounts of foreign pilgrimages to St. Patrick's Purgatory are chronicled during the thirteenth, fourteenth, and fifteenth centuries, including the vision related in the "Legend of Aurea", printed in 1482.

In 1470, Thomas, Abbot of Armagh, got the priory in commendam, and in 1479 the community had almost died out, the revenues being farmed by Neill Magrath. Pope Alexander VI ordered the cave to be closed on Saints Island, and the papal decree was executed on St. Patrick's Day, 1497. A few years later, in 1502, the station was transferred to Station Island, where the Purgatory had originally existed. The cave was visited by a French knight in 1516, and by the papal nuncio, Chierici, in 1573. Chierici gives an interesting account of his visit, and states that there were three Austin Canons in the priory. Though formally suppressed by the English Government in 1632, the lay owner permitted the Austin Canons to resume their old priory, and in 1660 we find Rev. Dr. O'Tyger as prior, whose successor was the Father Art Maccullein (1572-1710). The Franciscan Friars were given charge of the Purgatory in 1710, but did not acquire a permanent residence on the Island till 1763, at which date they built a friary and parsonage on St. Patrick's Island. In 1750 St. Patrick's Church was built, and was subsequently remodelled. From 1785 the priory has been governed by secular priests appointed by the Bishop of Clogher. In 1813 St. Mary's Church was rebuilt, but it was replaced by the present Gothic edifice in 1870, and a substantial hospice was opened in 1882. The number of pilgrims from 1871 to 1911 has been about 3000 annually, and the station season lasts from June to 15 August. The station or pilgrimage lasts three days, and the penitential exercises, though not so severe as at other austere in a high degree, and are productive of last spiritual blessings.

W. H. GRATAN-FLOOD.

Purification of the Blessed Virgin Mary, FEAST of. See CANDLAMAS.

Purificator. See ALTAR, sub-title ALTAR LINENS; CHALICE.

Purim (PURIM).—The origin of the name is disputed: some derive it from the Persian pur (part lot), or pur (full); others from the Aramaic purat (root pura), to break into pieces). The feast was instituted to commemorate the deliverance of the Jews from the machinations of Xerxes' minister, Haman, who had obtained from the king an edict for their extermination, date of the massacre, 13 Adar, purifying the king's king, appointer of water, and eret, 1000 men, under the intercession of Esther, Jewess and queen of the realm, the edict was recalled, and on 13 Adar the Jews, certain of royal protection, defended themselves and killed a large number of their enemies (ix, 16). In Susa (then the Persian capital) Jewish vengeance reigned for two days, in other parts of the realm for one day (ix, 17, 18). Hence the Purim was celebrated
PURITANS

on 15 Adar in Susa, and in other parts on 14 Adar. Reuse (Geesch. des Alten Test., § 470) identifies it with "Nicanor Day," and holds the Book of Esther for the name Purim, but this theory is refuted by the "Megillah Ta'anith" (second century, A.D.), where 13 Adar is still called "Nicanor Day." Fürst (Kanon des A. T.) and Meier (Hebr. Wörterb.) identify the feast with the Persian spring festival, which the Jews are supposed to have adopted in Susa; the Book of Esther is then a mere allegory, intended to cast a national holiday about the feast. Von Hammer (Wien. Jahrb. Lit., 1827) calls the Purim a transformation of the Sorosanian feast Farasudgin (Festive Wedding). In the latter the first day of the year was a two-days festival of rejoicing (Lagardé, Beitrag zur Gesch. der Religion, 1887) elaborated this theory and brought to its support linguistic considerations of little value. Grata (Monatschr. Gesch. u. Wiss. der Jud., xxxv, 10-12) derives Purim from purah (winepress), and accordingly identifies the feast with the observance of the Greek and Roman Bacchanaelia, forgetting that the wine season is passed when the Purim is celebrated. Others, like Zimmermann (Zeitschr. d. Kirkenwiss. d. Geb. des Judenthums, 2), and Wiesend (Zeitschr. für die Kunde des Morgenlandes, VI, 47-209), and Wilderhofer ("Comment. on Esther" in Martin's "Kurzer Handcomm.", p. 178) wish to make the Book of Esther a mere metamorphosis of mythological legends. These hypotheses, however, have a background of historical historians. Originally the Purim was celebrated without liturgical services. Later the Book of Esther, the Mogillah par excellence, was read on the evening of the vigil and on the morning of the feast. The name of Haman occurs in the reading, the congregation kisses, stamts, and gesticulates: "Let his name be blotted out! Let the name of the wicked perish!" The reader names ten sons of Haman in one breath to indicate that they died at the same moment. The vigil is observed by a strict fast called the "fast of Esther." This is a fast that is celebrated with great solemnity, gifts being exchanged. Sometimes, however, the fast degenerated into an occasion for debauchery and licence, gruesome details (e.g. the burning on a gibbet of an effigy of Haman) being added to the diversions. At times the scene was burnt to manifest hatred for the Christians (Cod. Theod., XVI, viii, 18). When the fast occurred in an intercalary year it was celebrated twice: on 15 Adar (Little Purim) and on 15 Ve-adar (Great Purim). Purim was early the time of the Machabees (I Mach., xvi, 37) and Josephus (Antiq., XI, vi, 13). The Purim frequently contributed to the preservation of the Jewish faith, when in imminent danger. To this fact the Cairene Purim and the Purim Vincent bear witness. The first commemorates the deliverance of the Jews in Cairo (1524); the latter in Frankfort (1615).

Charles L. Souvat

PURITANS.—One of the chief difficulties in studying the various movements loosely spoken of as Puritanism is to frame an exact definition capable of including the varied and sometimes mutually inconsistent forms of belief usually classified under that name. In its original meaning it signified "those who strive to preserve the purity of the people," (Maitland, op. cit. inf., 590). A more recent writer adopting and expanding this definition adds: "The many sects and persons who fall under this definition, were usually characterized both by an aversion from gaiety and by a passionate love of civic freedom" (Trevelyan, op. cit. inf., 60). We may see the first beginnings of English Puritanism in the attitude of those who in 1563 entered into the "Vestiarist Controversy" by opposing the use, by the clergy, of the cap and gown in daily life and of the surplice in church. English exiles from Geneva were active in the cause, and by 1565 their resistance to the crown was noted. The queen's wishes subjected some of them to loss of benefices. This controversy of rights and vestments developed into a controversy of polity, until Presbyterianism emerged in antagonism to Episcopalianism. Yet in the process the movement developed on such divergent lines that it was later divided into different theories of Church government. First there were the moderates who were willing to retain government by bishops, though they preferred the title "superintendent," but who wished the usages of the Establishment to conform more nearly to Genevan practices. Those who held this system were in agreement with the Scottish Presbyterianism which had been established by John Knox. Secondly there were the strict Presbyterians who wished for the Calvinistic view of church government, the theology and order of worship. In England the movement was led by Thomas Cartwright of Cambridge, whose doctrine that there should be equality of authority and that bishop and presbyter were all one was soon adopted in Scotland. Thirdly there were the Free Churchmen or Independents who augmented all coercive power in the church and wished all men to be free in forming congregations. Their leader was Robert Brown, whose followers were at first persecuted by Anglicans and Presbyterians alike, but whose descendants grew in power and influence until under Oliver Cromwell they became the predominant party. The three bodies differed from one another in doctrine, in ecclesiastical polity, and in their view of toleration. The strength of Puritanism as common to these three bodies lay in the results effected by the general study of the Bible, in which the Puritans learned the relations of man with God as exemplified in the histories and parables of Holy Writ. This private study of the Scriptures was carried on by the aid of private interpretation which inevitably resulted in the multiplication of minor sects such as Fifth Monarchy men, Levellers, Diggers, and others. Thus Puritanism could not attain a recognized dogmatic system. At first it shared many Calvinistic views, but the theological views were early the time of the Machabees (I Mach., xvi, 37) and Josephus (Antiq., XI, vi, 13). The Purim frequently contributed to the preservation of the Jewish faith, when in imminent danger. To this fact the Cairene Purim and the Purim Vincent bear witness. The first commemorates the deliverance of the Jews in Cairo (1524); the latter in Frankfort (1615).

Maria Barker whom he married in 1828 after vicissitudes which almost shook his reason, and which revealed the intensely emotional character of Pusey's temperament. His affections counted for much in the part that he played as a champion of orthodoxy; but his principles were sternly held, and to them he was to the end faithful. He was an enormous reader, cultivated acute verbal accuracy, showed no turn for metaphysics, and was always religious-minded.

At Easter, 1822, he took a First Class with distinction, the one the young John Keble. He was elected Fellow of Oriel in 1823; won the Latymer Essay in 1824; and at Bishop Lloyd's instance went off next year to Germany, intending to combine the study of languages with a theological training. He attended lectures by Eichhorn, made acquaintance with Hengstenberg and Tholuck, learned something from Schleiermacher, and brought home a tinge of Liberalism in theology which did not go deep. His affinities were with devout mystics; he admired the teaching of Spener and was himself a Pietist, feeling kindly to the title 'Pietism' in the sense of 'Pietists'". In 1826–27 he paid a second visit to Berlin etc. and became an excellent Arabic scholar under Freitag.

His long and almost unbroken career of controversy was opened by the pamphlet "Laws," afterwards withdrawn, in which he defended German religion against H. J. Rose. Both writers had the same object in view; they became friends; and Pusey's covert intention was to warn Englishmen against the dangers of Rationalism. The Tractarian movement found him in sympathy with Newman, but he did not join it formally until 1835. His tracts on Holy Baptism (67–8–9) were, like all Pusey's writings, too long, too abundant, but impressive from their weight of erudition and pleading earnestness. He neglected style, was often obscure, and could not put himself into the mind of his opponents. "Imperturbably sanguine", he took the movement to be simply Anglican; hence, when it betrayed tendencies towards Rome he was shocked, but not alarmed. The friendship between himself, Keble, and Newman, romantically devoted to one another, made them triumvirs in an agitation of which the double issue became only by degrees apparent. In 1840 the world talked of "Puseyism", and with a sure instinct, for Newman had gone upon the solitary path where the High Church host would not follow him. But through with hesitations, it followed Pusey. During the Hampden troubles (1836) he had fought for Catholic dogma and denounced the Nominalism which made short work of creeds. His position never wavered. It was founded, he said, on the teaching of the Fathers, " anterior to the separation of East and West."

When Tract 90 appeared he upheld it on principle as giving a Catholic interpretation, i.e. the sanction of antiquity, to the Thirty-Nine Articles. He sat on Newman's behalf in the negotiations with the Bishop of Oxford. But when the Bench of Bishops charged against the Tract, their condemnation, he left Pusey undismayed.

He was himself suspended from preaching by the authorities of the university, in consequence of his sermon on the Holy Eucharist in 1843. The proceedings were flagrantly unjust as well as grotesque, and they helped to destroy the old Oxford constitution. Pusey, like other great scholars, was very temperamental. Of the four beloved栖es, from Mitcham he passed to Eton in 1812. Always delicate, shy, and serious, he made few friends and took little part in boys' games. In January, 1819, he proceeded to Christ Church, Oxford, where he was destined to spend his life, except for an interval of study abroad. He formed an attachment, while a mere youth, to
Pustet, the name of a family of well-known Catholic publishers. The original home of the Pustets was the Republic of Venice, where the name Bustetto is common even to-day. Probably in the seventeenth century, the founder of the Ratisbon line emigrated to South Germany, where one of his descendants, Anton Pustet, lived as a bookseller in the Bavarian borough of Hals (near Passau) at the close of the eighteenth century. To him and his wife Anna (née Scheueröcker) was born on 25 March, 1798, a son, Friedrich. Having learned bookbinding under his father, Friedrich started a small book-store in Passau in 1819, and in 1822 founded a separates printing establishment. This business developed so favourably, thanks to Pustet’s energy and skill, that, in 1826, he was able to transfer his publishing business to Ratisbon. Establishing business relations with prominent Catholic authors, he extended the range of his publications to all branches of literature, while paying special attention to theology. In 1830 he married Theresa von Schmid; ten children were the fruit of this marriage. To extend his business undertakings, in 1833 Pustet set up one of the first printing-machines, and in 1836 erected near Ratisbon a paper factory, for which he procured the first paper machine in Bavaria. In 1845 he began printing liturgical works; with this he associated a department for church music, with the co-operation of Dr. Froske, for the purpose of carrying out the latter’s ideas for the reform of ecclesiastical music. Men like Dr. Witt, Dr. Haberl, Haller, later rendered valuable services in this department. In 1860 he handed over the business to his sons Friedrich (b. 1831), Karl (b. 1839), and Klemens (b. 1833). In 1856 he founded the Medieval Bavarian School-book-Publishing Company, which he conducted until 1874. He died on 5 March, 1882. Inheriting their father’s ability, the sons continued the extension of the business. Friedrich chose for his department liturgical publications, Karl German works, and Klemens the paper factory. The success of Friedrich earned for him in 1870 the title “Typographus S. R. Congregationis”; among various other distinctions, the firm was entrusted by the Vatican with the world-famous editio typica of all the liturgical works. After a most successful business activity, which extended also to politico-religious life, Friedrich died on 4 August, 1902. Klemens had died before him (1898), and Karl’s death followed on 17 January, 1910. The last, who was a Privy Counsellor of Commerce, had raised the German publications of the firm to the highest level; a list of these publications may be mentioned the “Regensburger Marienkalender” and the illustrated family magazine, the “Deutscher Haussechta”. The present heads of the Pustet firm are Friedrich Pustet, son of Friedrich, and Ludwig, son of Karl. Among the other products of the firm may be mentioned the illustrated monthly, “Der Aar”, appearing since October, 1910. It remains to add that branch firms others have drawn nearer to Rome and seem willing, if they might keep their orders, to accept the whole of the papal teaching without demur.

Pusey was a hound of Catholic circles; he collected; there is a complete bibliography in Vol. IV of his Life by Liddon (pp. 394-446). That copious work also includes a large selection from his correspondence. Of purely scientific or professional undertakings may be noted his “Catalogue of Arabic MSS. in the Bodleian” (1835), “The Minor Prophets” (1860), “Daniel the Prophet” (1864). This latter treatise was held on its appearance to contain the best defence of the traditional views regarding the Book of Daniel. Life. In 4 vols., begun by Liddon, finished and published by Johnston, Wilson, Newbold (London, 1863-97). See also bibliographies under Newman; Oxford Movement.

William Barry.
PUTATIVE marriage.—Putative (Lat., putatorius, supposed) signifies that which is commonly thought, reputed, or believed. A putative marriage, consequently, in canon law is a matrimonial alliance which is commonly reputed to be valid, and is sincerely believed by one at least of the contracting parties to be so in the eyes of the Church, because it entered into in good faith; but which in reality is null and void, owing to the existence of a diriment impediment. The Church too in her external forum recognizes such a marriage, until its invalidity be proved; and concedes to the children born thereof the rights of legitimacy.

Andrew B. Meekan.

Putanus, Erasmus (Erniek de Put), b. at Venloo, in Dutch Limbourg, 4 Nov., 1574; d. at Louvain, 17 Sept., 1646. A Belgian humanist and philologist, he studied at the schools of Dordrecht and Cologne (Collège des Trois-Couronnes), where he took the degree of Master of Arts, 28 Feb., 1595. He lived at Louvain, the lectures on ancient history given by Justus Lipsius. In 1597 he re-paired to Italy, and lived in intimacy with the learned men of that country, especially the famous Cardinal Federigo Borromeo, through whom he was appointed professor of Latin at the Palatine School of Milan from 1601 to 1606, and from 1606 to 1609, when the States of Brabant offered him the chair left vacant by Lipsius at Louvain. He taught with éclat at the Collège des Trois-Langues for forty years, and was loaded with favours by reigning princes: the Archduke Albert appointed him his honorary counsellor (1612), and increased his annual pension by 200 ducats (1614), and added the reversion of Château-César. At the same time he filled, after 1603, the post of historiographer to King Philip IV, on behalf of the Milanese, with other appointments, often ill-paid in consequence of a treasury depleted by continual wars. His rash language provoked political animosities, and he was almost driven into exile by request of King James I of England, who wrongly believed him to be the author of an injurious lampoon.

In 1610 he numbered seventeen children, of whom four died in infancy. The services he rendered to his native Guelders, the Low Countries, and individuals were considerable. Putanus was an encyclopedist; his ideal, which saw in numerous and varied acquisitions the fullest measure of wisdom and the surest means of arriving at virtue the end of all knowledge, had been suggested to him by his master Justus Lipsius. During a certain period of his literary activity (1603–19), he detached himself from Lipsius by aiming at personal leadership of a school. He dreamed of re-establishing in Belgium the splendid classical period and the cult of eloquence which he had derived from Italy. When he saw the uselessness of his efforts, the indifference of a too utilitarian age inclined towards positive sciences, he again threw himself into encyclopedic authorship and produced his best chronological work. His merit as a philologist is somewhat limited; but his dissertations, reproduced in the Theauri of Grevisius and Gronovius, are of real value and may still be consulted. As a whole, his influence on Belgian philology was not unfortunate.

For the history of the numerous writings and editions of Ernikius Putanus see Roerich and Vandervelde in Bibliotheca Sacra, 52, 178; also Roerich in Biographie Nationale de Belgique, XVIII (1904); Bæm, Étude sur Ernikius Putanus (Louvain, 1909).

Putzer, Joseph, theologian and canonist, b. at Kranzegg, Tyrol, 4 March, 1836; d. at Ilechester, Md., 15 May, 1908. He entered the Congregation of the Most Holy Redeemer and made his religious profession, 14 Aug., 1856. Having finished his theological studies at Mautern, Austria, he was ordained 7 Aug., 1859. He arrived in New York, 7 Aug., 1876, was assigned to St. Alphonsus', Baltimore, until 1880, and was occupied in parish work at St. Michael's church until 1884, when he was chosen Superior of St. Mary's, Buffalo, and in 1887 was called to Ilechester, Md., to occupy the chair of moral theology and canon law. With great learning, he possessed a fund of genuine, solid piety, of which humility and simplicity were characteristic traits. His opinion was constantly sought on questions of theology and canon law; he wrote frequently for periodicals and journals, generally signing his articles: "J. P." He is best known by his "Commentarium in Facultates Apostolicas", five editions, first undertaken by Father Konings. Father Putzer revised and enlarged it into practically a new work. On its appearance the "Civilità Cattolica" (7 Oct., 1893) and "Il Monitore" (31 Aug., 1897) among others praised its clearness, depth, precision, and learning. Father Putzer also published an "Instructio de confessarum religiosorum exterritorum" (two editions) and "Jubilium anni 1901—Commentarium". He left an abundance of unpublished manuscripts. The "American Ecclesiastical Review" says of him that he entitled "to the gratitude of all who believe themselves debtors to Holy Church. His memory, his judgment, his keen power of analysis were rarely at fault in difficult questions of moral theology."

C. J. Warren.

Puvís de Chavannes, Pierre, French painter, b. at Lyons, 14 Dec., 1824; d. at Paris, 24 Oct., 1898. Through his father Puvís was Burgundian—"Burgundian salt", says the proverb, that is the strongest French race, which produced such men as Boesquet, Buffon, and Lamartine. His Lyonnaise idealism, which he inherited through his mother, never allowed him to lose the sense of the real, his dreams were always possible and probable. His vocation was slow in manifesting itself. His parents intended him for the Ecole Polytechnique, and he was twenty-three years old when after his return from a first journey to Italy he showed the inclination to paint. Determining to adopt art as a profession, he studied for a year without much profit in the studio of Henry Scheffer, the brother of Ary, and afterwards entered
those of Delacroix and Couture. Another sojourn in Italy, where he remained a year, fixed his ideas and determined his creed. He returned convinced of the artistic dignity and great eminence of decorative painting. The art of the great Italian masters, their mastery of expressing in large compositions stamped with simplicity, the marvellous thoughts and the beliefs common to a period or a people, was thenceforth the object which he set about realizing for his contemporaries. Without being positively Christian his inspiration preserves a clearly spiritual character. In the midst of the materialistic invasion of the second half of the nineteenth century Puvis (with Eugène Carrière) was the noblest champion of religious art in France. As a painter his originality freed him from early influences and tendencies. In a sense he was really self-taught. While admiring Delacroix, he detected the Romantic anarchy, with its disordered passions, and despised academic conventions, the timid taste and feeble ideas of the so-called classical. If he was in sympathy with any section of the school, it was doubtless with the small group of landscape painters. In view of the importance with which he endowed landscape, the atmosphere which he instils into his frescoes, his liking for familiar horizons and lowly countrysides, together with his way of depicting and ennobling them, it seems evident that Puvis studied Corot. Finally in the paintings of Théodore Chassériau the young artist found an ideal similar to his own, a kindred spirit and a model for his Ambiens pictures.

Puvis's first "Salon" was a "Pietà" exhibited in 1852, but he was constantly rejected for some years afterwards. His already remarkable pictures, such as his "Salome" or his "Julia", shocked the public by a determined absence of shadows (as in mosaics) and by an hieratic and Byzantine strangeness. At the Salon of 1876 his "Return from the Hunt" (Museum of Marseilles), which is a striking work of youthful, heroic, barbarous movement. A great decorative talent became more and more evident in these strays works. Then came the opportunity to paint a hall for a private citizen: "At last", said the artist, "I have water to swim in." Henceforth he forced himself to that regimen of work which he observed all his life, the regimen of a Carthusian or cenobite in art; one meal a day at about seven in the evening, two rapid walks lasting an hour before and after work between Montmartre and his studio at Neuilly, sessions of nine or ten hours of incessant work, in the evening, reading, drawing, music, and conversation with his friends. Several journeys interrupted this regular life.

It is not known to whom the merit belongs of having singled out the young painter and appointed him to the work which was his true profession, nor who commissioned him to paint the frescoes of the staircase in the museum of Amiens, but it was through this chance that Puvis undertook the work which became his true sphere, that of monumental painting. In 1881 appeared "War" and "Peace"; in 1883 "Work" and "Rest"; in 1865 these were completed by a new work "Ave Picardia Nutrix". There is nothing simper or nobler than these paintings. They are considered by more than one authority his best work, and in any case are the manifestation of a singularly new art. He showed an admirable faculty for generalization, a power of expressing life in universal features without cold allegories or romantic disturbances, while retaining the rustic realism, and, ancient. But because of its very novelty, its matural simplicity, this new and vigorous work created astonishment and scandal, with which the artist had to contend for many years. Still sharper criticisms were aroused by his "Autumn", "Sleep", "Harvest" (1878); and especially by the "Poor Sinner" (Salon of 1875), in which the touching archaism had the effect of a challenge. Puvis was accused of not knowing how to paint or draw. His ideas and projects seemed incomprehensible and like a defiance of public taste. There was no attempt to understand the methods of synthesis and simplification due to the particular circumstances of fresco, these pieces being persistently regarded from the same standpoint as the other Salon pictures. The result was a prolonged misunderstanding lasting fifteen years, during which much ink was wasted.

Finally the intelligent initiative of the Marquis de Chenuvèers, the best director of the fine arts France has ever afforded the unjustly criticised painter the opportunity for a decisive triumph. This was in connexion with the paintings of the "Childhood of St. Genevieve" (1878–8), in the ancient church of that name, now the Pantheon. All that had been misunderstood at the Salon became clear here, all that, seen at close range amid fictitious surroundings, had seemed a defect vanished and acquired a meaning in the perfect accord of the work with the monument. For the first time it was perceived that decoration had its own laws and that in this light each of the artist's apparent weaknesses became a charm and a necessity. Thenceforth the master held a unique position in the French school. Without ever having been a sort of painter laureate. During his last twenty years each of his successive works increased his henceforth undisputed reputation; they were "Ludus pro patria" (1880–2), for the Museum of Amiens; "Deux pays" (1882), for M. Leon Bonnat; for the Lyons Museum, the "Sacred Wood Dear to the Arts and Museums" (1884) with the "Antique Vision", "Christian Inspiration", the "Sàone" and the "Rhône" (1886); "Inter artes et naturam" (Rouen Museum); "Summer", "Winter", Victor Hugo Presenting his Lyre to Paris", for the Paris Hôtel de Ville (1886–7); and pictures, two new scenes from the legend of St. Genevieve: "St. Genevieve Revitiualling the Parisians" (1897) and "St. Genevieve Watching over Paris" (1898). After an interval of twenty years this last picture met with the same popularity as that which had welcomed the first scene of the "Childhood". It is a sublime picture, a monastic costume, standing erect and motionless in the night, watching over the blue roofs of the sleeping city.

During this last portion of his life the master exercised a wholly new jurisdiction over art; without being the leader of a school, he was in all his disciples, his word was law. To him the Government had recourse on solemn occasions, for instance the
