(c) Here we are confronted by two facts that need earnest consideration. The establishment of long-recognised departments at the leading universities of nearly all countries in Europe and many American universities exclude all relation to God and practically favour the atheistic postulate just mentioned; and on the other hand, these are the very postulates summed up by Pius X under the name of "modernism". Hence the general outcry of the State universities against the Encyclical "Pascendi"
of 1907. To begin with the first, the licence of sub
jective truth is the very hotbed of anarchistic theories,
and the rebellion against the teaching of Christ will
end with the moral conditions of Greek and Roman
poetry. There is certainly no reason for her to deal with
the relation between science and the State, it must suffice
to show how the alarm is beginning to sound. It
seems to be a matter of course, and yet it sounds un-
usual, when Count Apponyi as minister of education
and worship in Hungary, on the occasion of an acad-
emic purification, solemnly sends to teachers of science
a moral and earnest consciousness. More re-
markable is the warning of Virchow at the meeting of
scientists at Munich (1877) against teaching personal
views and speculations as established truths, and in
particular, against replacing the dogmas of the Church
by a free discussion.

The moral state of a youth growing up under such
teaching could be anticipated in general from the his-
tory of paganism. It was reserved to our anti-
Christian age, however, to justify immoralty with an
appearance of science. The assertion has been made
all around in the form of thinking and meetings, that a
pure and moral life is detrimental from the point of
view of medicine. The medical faculty of the Uni-
college of the University of Christiana found it necessary to declare
the assertion entirely false, and to state positively that "we know of no harm or weakness owing to the doctrine of the apocalypse," expressed by Dr. Raoul in the words: "There is no such thing as pathology of continence"; and by Dr. Vital (see below) in the statement, that the commandments of God are legitimate from the standpoint of medicine, and that their observance is not only possible but advantageous. Warnings like these may be called forth by anticipate the effects but no other; they are not proofs the effects already existing. Such was the unanimous vote of the International Conference for
the protection of Health and Morals, held at Brussels
(September, 1902): "Young men have to be taught
that the virtues of chastity and continence are not
only not hurtful but most commendable from a purely
medical and hygienic point of view." The effects in
educational institutions must have been appalling
before scientific authorities dared to lift the veil by
public warnings. They were given by Dr. Fleury
(1888) in regard to French colleges, and were repeated
by his brother (1898) as a preparation. Even louder are the warnings of Paulsen, Förster, and
especially Obermedizinalrat Dr. Gruber regarding the
German gymnasia and universities. Dr. Despelsa
(see bibliography) insists that in order to stay the
current which is carrying the French along towards
irreligious of evolution. It is necessary to react against
the doctrinal and practical neo-paganism. No won-
der that the licentious doctrines have found their
way from books into journals and passed from the
to the illiterate. Soonsky, a literary au-

city, compares the present moral epidemic to that
of paganism Rome and of the French revolution, that a
paradox that the hypocrisy of covering crude animalism with the
cloak of art and science (see Allgemeine Zeitung, No.
3, 21 January, 1911).

What the State either will not or dare not do, the
Church does always, by keeping men mindful of the
object or end of their existence and this last end is not
science. The catherine points it out under three
heads: the knowledge of God; the observance of His
commandments; and the use of His grace. Knowledge
of nature is intended by God as a subordinate means
to the acquisition of a smaller portion of truth which
be a conflict between science and our final destiny.
The Church does not teach natural sciences, but
she helps to make their principles tributary to wis-
dom, first by warning against error and then by point-
ing to the ultimate cause of all things. When science
raises the cry against the guiding office of the Church,
it is comparable to a system of navigation without
any directions outside the ship itself and the surround-
ing waves. The formal object of each particular sci-
cience is certainly different. The intelligence of
steering of a vessel is different from the knowledge
of the stars; but the exclusion of all guiding lights
beyond the billows of scientific opinions and hypoth-
oses is entirely arbitrary, unwise, and disastrous.

B. The Church.—The Church in her relation to
science may be better seen from the viewpoint of the
subject into the following parts: opposite views; dis-
tinction between the teaching body and the ecclesia
discens; the holders of the teaching office; science of
faith; pretended conflicts.

1. Opposite views.—On the relation of the Church
to science there are irreconcilable views. (1)
Leo XIII in his Apostolic Letter of 22 January, 1898,
calls attention to the dangers imminent at the present
time to the minds of Catholics, and specifies them as a
confusion between licence and freedom, as a passion
for saying and reviling whatever one pleases, as a
habit of thinking up printing without restraint.
In the shadows cast by these dangers on men's minds, he
sees, are so deep as to make the exercise of the teach-
ing office of the Apostolic See more necessary now than
ever. The pope strengthens his words by the authority
of the Vatican Council, which claims Divine faith
at all things proposed by the Church, whether in solemn
decision or by the ordinary universal magis-
terium.

(2) Not so those outside the Church. To them,
spiritual restriction of thinking, speaking, writing is
a remnant of the times when science was in fetters, a
principle of the Dark Ages. View, in discussing the
appointment of professors of Protestant teachers at
Bonn and Marburg by the Prussian Government,
made the following declaration in the Chamber (6
March, 1896): "If it is considered incumbent upon
the theological faculties to preserve and to interpret
a certain deposit of so-called Divine and revealed
truths, then they do not fit into the framework of
universities, they are in opposition to the scientific
machinery prevailing there. The Reformers of the
sixteenth century", he continued, "are to-day replaced
by free scientific criticism; consistently, instead of
hating before the theological faculties, they should
have abolished them. And the thought that a man
from a certain class of men who claim to be holders of
Divine truth, would have vanished" (reported by Hert-
ling, see below, p. 49 sqq.). Such is the general voice
of those who stand outside of any creed. There are
others who wish to adhere to certain articles of faith
established either by a congress of reformers, or by a
sovereign, or by Parliament. Although widely dif-
fering among themselves as to the inspired books,
the Divinity of Christ, and even the existence of
Revelation, they all agree in considering the papacy
a usurpation, and Catholic obedience in matters of
fide and morals, a servitude and of divine authority.

(3) These conflicting views have existed from the
very cradle of Christianity, and will last to the end of
the world. St. Ambrose (397) speaking of the wise
of the world (sapiens mundi) says: "Deviating from
faith, they are implicated in the darkness of perpetual
blindness, although they have the day of Christ and
the light of the Church before them; while seeing noth-
ing, they open their mouth as if they knew everything,
keen for vain things and dull for things eternal" (Hezameron, V, xxiv, 86, in P. L., XIV, 240). Those
who accept the teaching of Christ have always formed
the smaller portion of the body of the Church, the
small flock is not composed of the rich or the mighty
or the wise of the world. They maintain that the
Church is a Divine institution, endowed with the
triple power of priesthood, teaching, and government;
her submission, firmness, and union in matters
of faith all over the world. Those who stand aloof and see in the Church nothing but a human institution, like the old Roman Empire for instance, may be consistent in condemning the Catholic position; at the same time they cannot but feel the need of some consistency in the Catholic point of view. To submit one's understanding to a doctrine supposed to be Divine and guaranteed to be infallible is undoubtedly more consistent than to accept prevailing postulates of science, or national doctrines, or a passing public opinion. Catholics must be permitted to interpret in their own favour what the Scripture says about the light of faith, the darkness of error, and the liberty of truth.

II. The Teaching Body and the Ecclesia Discens.—The teaching and hearing bodies of Christ's Church are technically called “ecclesia docens” and “ecclesia discens”. (1) The distinction between the teaching body of the Church and the body of hearers was made by its Founder in the command: “Going therefore, teach ye all nations” (Matt., xxviii, 19); “he that heareth you, heareth me” (Luke, x, 16). The same division is illustrated by St. Paul in the expression between body and soul: “If the whole body were an eye, where would be the hearing?” (I Cor., xii, 17). The office of teaching was communicated to the Church together with the dignity of priesthood and the authority of government. The triple power rests in St. Peter and the Episcopate, and in their legal successor. The office of teaching is not to impart scientific conviction, it is to give authoritative declaration, and the response to it, on the part of the hearers, is not science but faith. The Church may even use her ruling power to support her teaching. All this is exemplified in the early history of the Church, often not conversant with the schools of Athens, of Alexandria, or of Rome. St. Paul, who was called later, was probably the only scholar among them; even he professed that his preaching was not in the persuasive words of human wisdom (I Cor., ii, 4). He used his power against Hymenaeus and Alexander, who had made shipwreck concerning the faith (I Tim., i, 20), and exhorted Timothy to use the same authority against those who would not endure sound doctrine (II Tim., iv, 3). The Apostle St. John blamed several bishops of Minor Asia for not removing false teachers (Apost. Const., vii, 10).

(2) The partition of the Church in two bodies, one teaching and one hearing, does not exclude science from the latter, any more than it necessarily includes it in the former. The ascent of faith is a rational act; before it can be made, it must be known for certain that there is a God, that God has spoken, and what He has spoken. The Apostles, the early Fathers, councils, and popes bear witness to it (Pesch, see below, pp. 18-22). St. Peter wants the faithful to be ready always to satisfy every one who asks a reason of that hope which is in them (I Pet., iii, 15). St. Augustine asks: “Who does not see that knowledge precedes faith? Nobody believes unless he knows what to believe”. The following is the declaration of the Vatican Council (Sess. III, de fide, cap. 3): “To render the service of our faith reasonable, God has joined to the interior actions of the Holy Ghost exterior proofs of His revelation: Divine facts, miracles especially and prophecies, which are speaking witnesses of His infinite power and wisdom, unfailing testimonies of Divine revelation and adapted to the understanding of every one”. Innocent XI explicitly condemned the opinion that mere probability in the knowledge of revelation is sufficient for the supernatural ascent of faith. Pius IX demands that the reason should inquire conscientiously into the facts of Divine revelation, to make sure that God has spoken, in order to render Him, according to the Apostle, a reasonable service.

In the knowledge of the premises of faith, man has to progress with age and education. The child cannot give supernatural assent of faith to what parents or teachers say, until its mind is sufficiently developed to judge. Again, the knowledge that may suffice for a child will not do for a man. He must apply his mental faculties and interest himself in the foundations of his faith. The prudence of his mind should equal the simplicity of his will. Prof. Heis used to say that the catechist must be the custodian of his student's conscience. Progress of knowledge is especially commendable in parents, teachers, students, above all in professors of theological science and in ecclesiastical dignitaries. Under their scientific methods the premises of faith have become a special branch of theology, called apologetics.

(3) The contents of faith should be presented as far as mental faculties and Divine grace allow. Revelation points out the eternal destiny, shows the way, and gives the means; it warns against eternal f滚, helps in temptation, and shields from evil. Without knowledge there is no interest, and the propagation of the faith is for the sake of its increase. Hence the duty of all men to listen to God, to meditate on His words, and to understand them in a way. The highest acts of mercy and charity are teaching the ignorant and correcting the erring. The study of revealed truth and the propagation by word and deed of the kingdom of the Lord are among the main duties of Catholic teaching. The deposit of faith was practised in the Church at all times and by all classes. Owing to this study the Divine deposit of faith has grown into a scientific system which, in clearness and firmness of structure, is not equalled by other branches of knowledge. From the frame of this system stand out in relief the deep mysteries, beyond human comprehension, indeed, but well defined in meaning and safe against objections. It must be remembered, though, that divines and doctors, as such, do not constitute the teaching body of the Church; they all belong to the “Ecclesia discens”. Theology as a scientific system, with propositions, arguments, and objections, is not the direct object of the “Ecclesia docens”. She leaves it to specialists, with all manner of encouragement and direction.

(4) The dangers against faith.—Since faith, as the foundation of eternal life, is a supernatural virtue, it is opposed to temptation and delusion. Difficulties are inherent in the deposit of faith, others arise from outside. A revealed truth may appear contrary to the mind as unintelligible, like the mysteries, or repugnant to the will as entailing unwelcome precepts. Temptations from outside may be the constant hostility of the world towards the Church, discrimination against Catholics, falsification of history, anti-Christian and infidel literature, scandals within, and defections from the Church. From her positive and exclusive right to teach all nations whatsoever Christ has commanded the Apostles (Matt. xxvii, 20), the Church derives also the right of defence. To protect her flock against dangers of faith she calls in the full authority of her ruling power, with its subdivisions of legislation, judiciary, and administration. By this power she regulates the appointment and removal of religious teachers, the admission or prohibition of religious doctrines, and even methods of teaching, in word or writing.

III. The Holders of the Teaching Office.—These are the pope and the bishops, as successors to St. Peter and the Apostles. The promise of Divine assistance was given together with the command of teaching; it rests therefore, at the present time, to the pope and to the bishops, who have unrestricted authority to give the faithful the right information as to the teaching of the Church. But it is restricted to official, to the exclusion of private, acts regarding the deposit of faith.

(1) The official activity of teaching may be exercised either in the ordinary, or daily, magisterium, or
by occasional solemn decisions. The former goes on uninterruptedly; the latter are called forth in times of great danger, especially in times of heresy. The promise of Divine assistance provides for the integrity of doctrine "all days, even to the consummation of the world" (Matt., xxviii, 20). From the nature of the case it follows that individual bishops may fall into error, because ample provision is made when the error is by the Church in general, and the pastor in particular are protected by Providence. The "Ecclesia docens", as a whole, can never fall into error in matters of faith or morals, whether her teaching be the ordinary or the solemn; nor can the pope proclaim false doctrines in his capacity of supreme pastor of the universal Church. The latter is negative, which is known by the name of Infallibility (q.v.), the Divine promise of assistance would be a fallacy. To the right of teaching on the part of the "Ecclesia docens" naturally corresponds the obligation of hearing on the part of the "Ecclesia discens". Hearing is meant in the sense of submitting the understanding, and it is a double nature, according as the teaching is, or is not, done under the guarantee of infallibility. The former submission is called assent of faith, the latter assent of religious obedience.

(2) Submission of the understanding to other than Divine authority may appear objectionable, but is permitted in a number of different ways. With regard to the Church submission of the understanding is especially appropriate, no matter whether she speaks with infallible or with administrative authority, in other words, whether the submission is one of faith or one of obedience. Even from a human point of view her authority is exceptionally high and impartial. To the teaching that rests directly on the ruling authority only, without the prerogative of infallibility, belong the pastoral letters of bishops, particular diocesan catechisms, decrees of provincial synods, the decisions of Roman Congregations, and all the Church acts of the pope even such as are obligatory on the universal Church. In each diocese the official authority in matters of faith and morals is the bishop. Without his consent no professor of theology, no catechist, no preacher can exercise his official function, and no publication is usually permitted which is contrary to the faith and morals permitted within the diocese. The approbation of teachers is known as canonical mission, while the approval or refusal of books is called censorship (q.v.). Above the diocesan tribunals stand the Roman Congregations (q.v.) to which certain matters are referred, and in which a decision, in particular, may come in contact with the Congregation of Rites, which examines miracles proposed in support of beatifications and canonizations. More frequently it is the Congregation of the Index, which officially examines and decides upon the danger, to faith and morals, the books (not persons) denounced or under suspicion, and the Holy Office of the Inquisition, which decides questions of orthodoxy, with the pope himself as prefect. All the ecclesiastical authorities, mentioned in this paragraph, participate, either officially or by delegation, in the legislative, judicial, and executive powers of the Church, in support of their functions. If it goes without saying that their decisions become endowed with the prerogative of infallibility, when the pope approves them, not in an ordinary manner as, for instance, when he acts as prefect of a Congregation, but solemnly, or ex cathedra, with the obligation of acceleration to the whole Church. (3) To men of science the Roman tribunals of the Index and the Inquisition are best known in connexion with the name of Galilei (q.v.). Here seems to be the place to speak about the attitude of non-Catholic scientists towards the case. It can be shown that it is not always in keeping with the principles of science, from a triple point of view. (a) The error involved in the condemnation of Galilei is used as an argument against the right of the tribunals to exist. This is a logical and partial. The error was purely accidental, just as the miscarriages of justice in criminal courts is often the unfortunate result of similar accidental errors. If the argument does not hold in the latter case, it holds much less in the former. The analogy between the two cases is not evident. (b) The Reformation of the sixteenth century. Besides, it is about the only seriously erroneous decision of its kind among the hundreds that issued from the Roman tribunals in the course of centuries. (b) What is objected to in the Galilei case is not so much the historical truth of the blunder, as the present claim of the Church to be, by Divine right, the guardian of the Scriptures; it is the principle by which she adheres to the literal sense of Holy Writ, as long as either the context or the nature of the case does not suggest a metaphorical interpretation. Granted that the evidence, which convinced Copernicus, Kepler, and Galilei, should also have convinced the theologians of the time, the latter committed a blunder. It cannot be this, however, that is continuously upheld against the Church. Official blunders of the highest tribunals are easily and constantly pardoned, when they are committed in the exercise of an acknowledged right, and under the pretence of justice when a disputed case, in its course of appeals, is reversed two or three times, although each reversal puts a juridical blunder on record.

Hence, what is condemned in the case of Galilei, must be the right itself, viz., the claim and the principle before mentioned. Fortunately, however, they are in no way peculiar to the case of Galilei; they are as old as the Church; they have been applied in our own days, e.g. in the Syllabus of Pius IX (1864), in the Vatican Council (1870) and recently in the Encyclical "Pascendi" of Pius X (1907); and they will be applied in all the future. To attack the claim of the Church, the guardian of the Scripture, there is no apparent need for going back again and again to the old Galilei incident. Nor is the legal procedure against Galilei in any way peculiar to his case. The historian judges it by the established laws of the seventeenth century and finds it unjust. What is it that prevents the Church from trying to reinterpret the Galilei controversy from rest? It is hard to see any other motive in the agitation but the reluctance to admit the Church's claim to be the interpreter of the Scriptures.

(c) The vast Galilei literature shows a remarkable difference in the tendency to which the various points of view. Among Catholics little importance is attached to the case, simply because Catholics knew before and after, that the Roman Congregations are liable to error, and only wonder that not more mistakes are recorded in history. Among the others the sympathy shown for Galilei is not easily intelligible from a scientific point of view. The whole process was an entirely internal affair of the Church: Galilei appeared before his own legal superiors; for a time he was disobedient, but in the end submitted to his condemnation. The character which he displayed in the affair does not seem to call for the admiration paid to him. What then makes outsiders so sympathetic towards Galilei, if not his disobedience to the command of 1616? It would seem, judging from the praises given to his "immortal" dialogues.

IV. The Science of Faith.—Although faith is not science, yet there is a science of faith. The knowledge acquired by faith, on the one hand, rests upon science, and on the other lends itself to scientific methods.

(1) Faith is in many ways a parallel case to history. Although historical knowledge is not directly scientific, yet there is a science of history. Scientific inquiries precede historical knowledge, and the re-
results of historical research are treated on scientific methods. All we know from history we know upon the authority of testimony. It belongs to the science of history to search into the existence and truth of the authenticity of the sources and into the unfalsified transmission of their testimony to us. Nor is that all. The science of history will arrange the chain of discovered facts, not chronologically only, but with a view of causality. It will explain the why and the how, the rise and the downfall of men, of cities, of nations.

(2) The science of faith is theology. — Human testimony is here replaced by Divine authority. The premises of faith have been elaborated into a scientific system called apologetics. The Divinely revealed truths have been studied on historical, philosophical, and linguistic lines; they have been analyzed, defined, and classified; theoretical consequences have been drawn and applications to church discipline made; boundary lines between faith and science have been drawn and points of contact established; methodical objections and solutions have been applied; and attempts to undermine it have been logically refuted. The results of all these studies are embodied in a number of scientific branches, like the Biblical sciences, with their subdivisions of historical criticism, theoretical hermeneutics, and practical exegesis; then dogmatic and moral theology, with their consequences in canon law and social ethics. Every element in faith is grounded in evidences; again, church history and its branches, — patrology, history of dogmas, archeology, art-history. The men who represent these sciences are the Greek and Latin Fathers and the Doctors of the Church, among them the founders of Scholastic theology, not to mention more recent celebrities among the regular and secular clergy. A vast literature may be found in Migne's edition of the Fathers and in Hurter's "Nominalator." The widest field is here open for research eminently scientific. If science is knowledge of things from their causes, theology is the highest grade of science, since it traces its knowledge to the ultimate cause of all things. Science of this kind is what St. Thomas defines as wisdom.

(3) Let it not be said that there is no progress in the science of faith. Dogmatic theology may appear as the most rigid of its branches, and even there we find, with Alzina, under the understanding of stronger proofs, better classifications, profounder knowledge of dogmas in their mutual relation and history. Canon law has not only kept abreast with, but has gone ahead of, civil law, above all in its scientific foundations. Progress in the Biblical, historical, and patrological sciences is so apparent, that a passing mention. The answer to the question, whether there should be no progress of religion in the Church of Christ, goes as far back as the fifth century and was given by St. Vincent of Lerins in the following words: "Certainly let there be progress, and as much as may be... but so that it be really progress in the faith, not an alteration of it." About alterations he gives the following explanation: "It is the peculiarity of progress for a thing to be developed in itself; and the peculiarity of change, for a thing to be altered from what it was into something else (Commonitorium, I, 23; see P. L., L). The same difference between evolution and change was established by the Vatican Council: "If any one shall say that it is possible, that with the progress of science, a sense may ever be given to the doctrines proposed by the Church, other than that which the Church has under the understanding, let him be anathema" (Bull. III, cap iv, de fide et ratione, I, can. 3). Science that is changed is not developed but abandoned, and so it is with faith. True development is shown in the parable of the mustard seed which grows into a tree, without destroying the organic connexion between the root and the smallest branches.

(4) The scientific character of theology has been called in question on the following grounds: (a) Mysteries are said to be foreign to human science, for a doubt the reason to the existence and truth of Divine revelation, a source foreign to science; and then, they cannot be subjected to scientific methods. The objection has some appearance in its favour. Mysteries, properly so called, are truths which are essentially beyond the natural powers of any created intellect, and could not be known except by supernatural revelation. Yet the objection is only apparent. As far as the source of knowledge is concerned, science should be so eager for truth as to welcome it, no matter where it comes from. It should esteem the source of knowledge the higher the more certainty it gives. Science should demand of Divine Revelation its abounding certitude; should Divine Revelation be excluded from its domain? Natural sciences may confine themselves to the former, but the latter is in no way foreign to the historical and philosophical sciences, least of all to theology. The assertion that mysteries are beyond scientific research is too general. First, their existence can be established scientifically; second, they can be analyzed and compared with other scientific concepts; finally, they yield scientific consequences not otherwise accessible. If the objection had any real force, it would apply similarly to mysteries improperly so called, i.e., to natural truths that we shall never know in this life. Every element in faith is grounded in evidences, the very reason why the most learned scientists consider themselves the most ignorant. The sources of their knowledge seem to be closed forever, and scientific methods fail to open them. If this be an objection to the scientific character of a branch, then let history, law, medicine, physics, and chemistry be cancelled from the list of sciences.

(b) Scientific research is said to be impossible, when a proposition cannot be called in question, being bound up by the consensus of the Fathers and Doctors and the vigilant authority of the Church. A simple distinction between interior and methodical doubt will remove the difficulty. Methodical doubt is so much applied in theology that it may be said to be essential to Scholastic methods. And it is quite sufficient for impartial research. This is proved to evidence by the notorious fact that all the scientific proofs we now have for the precision of our knowledge have been furnished by men who could never entertain any interior doubt of its truth. The Catholic divine sees in the traditional doctrine of the Church a guiding light that leads him with great security through the fundamental questions of his science, where human reason, alone is so new that it is tossed in the same storms, inventions, surmises, hypotheses. Other difficulties touching upon science in general are mentioned in the next section.

V. Conflicts. — The conflicts between science and the Church are not real. They all rest on assertions like these: Faith is an obstacle to research; faith is contrary to the dignity of science; faith is discredited by history. Basing the answers on the principles explained above, we can dispel the phantoms in the following manner.

(1) A believer, it is stated, can never be a scientist; his mind is bound by authority, and in case of a conflict he has to contradict science. (a) The assertion is consistent on the supposition, that faith is a human invention. The believer, however, bases faith on Divine Revelation, and science on Creation. Both have their common source in God, the Eternal Truth. The principal points of contact between the two are enumerated above in section A (1), and there be question of conflicts. It is shown in the same place (II) that every one of the pretended conflicts, without exception, rests on arbitrary axioms. As far as scientific facts are concerned, the believer rests assured that, so far, none of them has ever been in
contradiction with an infallible definition. In case of an apparent difference between faith and science, he takes the following logical position: When a religious view is contradicted by a well-established scientific fact, then the sources of revelation have to be re-examined, and they will be found to leave the question open. What is more, he strenuously objects to the use of a scientific assertion, the latter has to be revised, and it will be found premature. When both contradicting assertions, the religious and the scientific, are nothing more than prevailing theories, research will be stimulated in both directions, until one of the theories appears unfounded. Premiers about which the believer has no knowledge, theoretically speaking, to the first case, and Darwinism, in its gross form, to the second; practically, however, disputed questions generally turn up in the third case, and so it was actually with the heliocentric system at the time of Copernicus, Kepler, and Galilei. (b) It is true, the believer is less free in his knowledge than the unbeliever, but only because he knows more. The unbeliever has one source of knowledge, the believer has two. Instead of barring his mind against the supernatural stream of knowledge by arbitrary postulates, man ought to be grateful to his well-instructed Christian child knows more of the important truths than did Kant, Herbert Spener, or Huxley. Believing scientists do not wish to be free-thinkers just as respectable people do not want to be vagabonds.

(2) Blind acceptance of dogmas and submission to non-scientific authority is said to be contrary to the dignity of science; hence the conflict between the Church and science. The answer is as follows: (a) The dignity of science consists in searching for and finding truth. What injures the dignity of science is not shams, nor is it condemnation of the authorities of science, but its claim to be the only true source of truth, drink from both streams that pour down from heaven. Hence it is, that a well-instructed Christian child knows more of the important truths than did Kant, Herbert Spener, or Huxley. Believing scientists do not wish to be free-thinkers just as respectable people do not want to be vagabonds.

As regards the Congregation of the Index in particular, its purpose is to shield the community from intellectual and moral poison. The prohibition of erroneous and dangerous publications is imposed by natural law and by the dictates of the Church's interests. All religious communities, and all science, ought not at all to stand in the rank of co-operators. Only then would its real dignity shine forth. The Catholic scientist sees furthermore a positive law in the exercise of this power, as derived from the Divine office of teaching all nations. And he sees this right made good from the very beginning of the Church, although the Congregation of the Index was not founded until 1570, and the first Roman Index had appeared only in 1559. Before the art of printing was invented, it sufficed to burn a few manuscript copies to prevent the spreading of a doctrine. How rapid and effective in presence of St. Paul (Acts, xix, 19). It is known that the other Apostles, the Fathers of the Church, and the Council of Nice (325) exercised the same authority. The enumeration of the various censures, prohibitions, and indexes issued by cities, universities, bishops, provincial councils, and popes, through the Christian centuries, may be seen in Hilgcr, "Der Index der Verbotenen Bücher" (Freiburg, 1904), 3-15.

The necessity of restricting the licence of all manner of publications may be illustrated by the following facts. As regards heretical books one might suppose that St. Francis of Asissi, who burned his own heresy, was all danger. Yet, the former thanked God for having preserved him from reading infidel books and from losing his faith. The latter confessed that he could not read a forbidden book without feeling the necessity of regaining the proper tone of mind by recurring to the Scripture, the "Imitation of Christ", and Louis of Granada. As to moral productions of literature, the flood has now become so enormous and the criminal results are so alarming, that leagues for public morality are being formed, composed of men and women, comprising all the conservative elements and all religious denominations, Political and Social denominations. For that reason there is hardly any country in the world where some censorship has not been exercised. The measures taken in England, in the Netherlands, Scandinavia, France, Switzerland, and Germany may be found in Hilgers, op. cit., 286-350. To say that more spiritual and moral on the death of parents, of the State, and of the Church are against the dignity of science would be a very bold assertion.

(3) Those who maintain that faith is discredited by history are the very ones that discredit history by falsifications. It must suffice in this place to elucidate this principal point. If a philosopher, as is maintained, then all the great scientists must be unbelievers. In spite of its boldness the assertion is made, in order to save the appearance of
consistency. The fact is, however, that up to the French Revolution, when Voltaire and Rousseau drew the last consequences from Atheism, the great scientists, almost to a man, speak with great reverence of God and of His wonderful Creation. Is it necessary to mention Copernicus, Kepler, Galilei, Newton, Leibnitz, Descartes, Marjolle, the Bernoullis, Euler, Linné, and many others? Since it is often the advocates of the glorious principles of 1789 that never tire of recounting the tragedy of Galilei, we beg to remind them of the great chemist Lavoisier, who died faithful to his Church under the guillotine while the so-called scientists were bien placés. Said Lebrun: "Nous n'avons plus besoin de chimistes" [see "Etudes", xcviii (Paris, 1910), 834 sqq.]. For the time after the French Revolution we find in Kneller's volume (see below) the names of a glorious array of believing scientists, taken only from the branch of natural sciences. According to Donat ("Die Freiheit der Wissenschaft", Innabrinck, 1910, p. 251) among the 8847 scientists enumerated in Poggendorff's "Biographisch-Literarisches Handwörterbuch" (Leipzig, 1863) there are no less than 862 Catholic clergymen, or nearly ten per cent of the number.

(b) The lack of true arguments for the theses "that faith, divided by history, is supplied by falsification. Among the fables invented for the purpose may be mentioned the condemnation of the doctrine about the Antipodes. Its (probable) representative, Virgilius, was accused in Rome (747) but not condemned (Hefele, "Konzilengeschichte", III, 557). He became Bishop of Salzburg, and was afterwards canonised by Gregory IX. Another story is the alleged prohibition by Boniface VIII of the anatomy of the human body. Columbus is reported as excommunicated by the "Council" of Saragossa. The recent re-appearance of Halley's comet has revived the story of Dr. Dinkes, who invented the "conjunction", though he tried to atone for his untruthfulness by omitting the phrase in the fourth edition of his "Essai philosophique" (see LADPACES). The atheist Arago changed the conjunction into excommunion. Vice-Admiral Smyth added the exorcism, Robert Grant the anathema, Flammari the "maléfice", and finally John Draper the malediction. Here the vocabulary came to an end. Poetry, gross and fine, sarcasm, and even astronomical errors were resorted to illustrate the conflict between science and the Church. Dr. Dinkes describes the Friar Minor, during the battle of Belgrade, crucify in hand, exorcising a comet which was not there; Halley's comet had disappeared more than a week before. Chambers (1861) honoured Callistus III with the title "the silly pope" for commemorating annually the victory of Belgrade. Daru lets the pope stand at the foot of the altar, with tears in his eyes and his forehead covered with ashes, and bids him look up and see how the comet continues its course unconcerned about conjunctions. John Draper lets the pope scare the comet away by noisy bells after the fashion of Dr. Dinkes. White conquers the papal litany: "From the Turk and the comet, good Lord, deliver us", which was supplemented by another writer: "Lord save us from the Devil, the Turk and the Comet". In "Popular Astronomy" (1908) the comet is left more than a week too long on the visible sky and in the "Rivista di Astronomia" (1909) every month too long; in "The Scientific American" (1909) it appears fully three years too soon. Such fictions and falsifications are needed to prove conflicts between Science and the Church (see quotations and rectifications in Stein, "Calixt III et la comète de Halley", Rome, 1909; Plattner, Bartolommeo).

As a smooth transition of the argument, and literature on this subject we may take the "History of the Conflicts between Religion and Science" of John W. Draper (see below), which deserves special mention, not for the difficulty it presents, but for its wide circulation in various languages. The author placed himself exclusively on philosophical and historical grounds. Neither of them formed the field of his special studies, and the many blunders in his work might be pardoned, if it were not for the gross untruthfulness of its contents. As the book is on the Index, a short specimen may be welcome to those who are not allowed to read it. In connexion with the subject of the preceding paragraph, Draper writes: "When Halley's comet came in 1456, so tremendous was its appearance that for one moment not even the Pope interfered. He exorcised and expelled it from the skies. It shrank away into the abysses of space, terror-stricken by the maledictions of Callistus III, and did not venture back for seventy-five years! . . . By order of the pope, all the church bells in Europe were rung to scare it away, the faithful were commanded to add each day another prayer; and as their prayers had often in so marked a manner been answered in eclipses and droughts and rains, so on this occasion it was declared that a victory over the comet had been vouchsafed to the Pope". Except the first half sentence, that the "comet came in 1456", his account is without any historical facts. The secularity of language, however, makes one think that the author did not expect to be taken seriously. The same manner of treatment is given to other historical points, like Giordano Bruno, de Dominis, the Library of Alexandria. How the Spanish Inquisition comes into the book is easily understood from its purpose; but how it comes under the title, "Conflicts between Religion and Science", remains a logical problem. The domination of the Church in the Middle Ages and its influence upon the progress of science is a subject that required a different mind and a different story. Without going into details, we can quote one by one of the Bullerists, Ch. de Smect, in answer to Draper. It was an easy but, at the same time, disgustingly difficult for him to correct Draper in this, as in all other historical points (de Smect, see below). Draper's philosophical reasonings on the scientific freedom of believing scientists, on the right of the Church in proclaiming dogmas and demanding assent, on the possibility of miracles, betray complete ignorance or confusion of the principles explained in the preceding paragraphs.

(c) A fitting conclusion to the chapter of "Conflicts between Science and the Church" may be found in the declaration of the Vatican Council (Sess. III, de fide, c. 4): "Faith and reason are of mutual help to each other: by reason, well applied, the foundations of faith are established, and, in the light of faith, the science of Divinity is built up. Faith, on the other hand, frees and preserves reason from error and enriches it with knowledge. The Church, therefore, far from hindering the pursuit of arts and sciences, fosters and promotes them in many ways. . . . Nor does she prevent sciences, each in its sphere, from making use of their own principles and methods. Yet, while acknowledging to the powers of the Church, Dr. White concludes: "Draper's ignorance of the history of the Church, and his theory of the development of science, are revealed in the fact that he has allowed himself to be led astray by the counterfeit of the modern Church, and being thus deceived, has not perceived that the real Church has been robbed of its heritage, and has been deprived of the right to enunciate spiritual truth".
in the proper manner, i.e., in the same dogma, in the same meaning, in the same understanding."

What was pronounced in the Decree of the Vatican Council was represented by a master's hand on a wall of the Vatican Palace, in a room called "Disputa," and Raphael has assigned to arts and sciences their proper place in the kingdom of God.

They are grouped around the altar, accept the Gospel from angels' hands, raise their eyes to the Re-deemer, and from Him to the Father and the Spirit, supported by the Church triumphant, their own ultimate end.

Reference literature: Draper, Hist. of the Conflicts between Religion and Science (New York, 1972); a work put on the Index on 24 September, the following three publications appeared against Draper's tirade: De Spinoza, L'Eglise et la science in Le duc de Chartres, 1818; J. L. van der Goes, De idee van de eenheid en de deelname (Amsterdam, 1881); Mel, Harmonia inter scientiam et fide (Madrid, 1881); and, Harmonia inter scientiam et fide (Madrid, 1883); these two Spanish essays were combined in two parts (parts of Ruido y Orosia and Orosia y Fari) by the Royal Academy of Moral and Political Sciences of Madrid. The same may also be said of the articles in the Revue de la science, 19, vol. I, II, III (1876) and vol. XI, 1879, and by Menéndez y Pelayo, Hist. de las litteraturas americanas (Madrid, 1888-91): Zöckler, Die Stellung der Beziehungen zwischen Theologie und Naturwissenschaft, II (Frankfurt, 1877-86), 986; Braun, Über Kosmologie vom Standpunkt der Theologie, in: Die Wissenschaft und die Religion, 18 (1885); Marx, Catholic Sciences and Catholic Scientists (Philadelphia, 1880); Brown, Faith and Science (Detroit, 1886); Ettlinger, Aplanico, t. V. Lectures 21-22 (Fribourg).

Scillium, MARTYRS OF.—In the year 180 six Christians were condemned to death by the sword, in the town of Scillium, by Vigiellus Saturninus, Proconsul of Africa. The Acts of their martyrdom are of special interest, as being the most ancient Acts we possess for the Roman Province of Africa. Their martyrdom is also notable among the many trials of the Church, because the accused were not subjected to torture. The dialogue between the Proconsul and the martyrs shows that the former entertained no prejudices against the Christians. He exhorts them to comply with the law, and when they decline he suggests that they take time to think on the subject. The Christians quietly refer him that their minds are made up, whereupon he pronounces sentence: "Whereas Speratus, Nartallus, Cittimus, Donata, Vestia, Secundus have affirmed that they live after the fashion of the Christians, and when offered a remand to return to the manner of life of the Romans, perished with a firmness in their conviction, we sentence them to perish by the sword!"

Scillard, David J. See SAINT SAINT MARIE, DIACOICE OF.

Scopas, ARCHIDIOCESE OF (SCOP; SCOPENIA), ancient residence of the early Servian rulers, is the modern Uschub (Uschub, Uskup, or Scojlo), a city of 25,000 inhabitants situated in the district of the Vardar in Macedonia. The first known bishop is Perigorius, present at the Council of Sardica (253). Scopias was probably a metropolitan see about the middle of the fifth century. After 552 we have no notice of bishops of Scopias till 582. The Bulgarian wars in the tenth century caused a temporary suppression of the see, but when the Bulgarians were converted a century later it again became a metropolitan see. Scopias has also long been a Greek schismatic archiepiscopate, west subject to the Servian Patriarch of Ipeck (or Ped); in 1717 it became, as it is now, a suffragan of Constantinople (Jirežek, "Geschichte der Bulgaren," p. 102). In 1346, Greek schismatic bishops held a national council under the patronage of the Servian ruler Dušan (1331-56), (Marković, "Gl Slav", ed. i., Papi I, 817). Catholic bishops continued to govern the See of Scopias during the thirteenth and fourteenth centuries. After 1340 Scopias had only titular bishops until 1586 when it became again a residential see. Since 1700 the bishops of Scopias bear the title of Apostolic administrators or of archbishops immediately dependent on the Roman See. Until 1860 the Catholic archbishops had an uncertain residence in the mountains of Macedonia or Albania, owing to the hostility of the Turks. They now reside in Uschub. Scopias was the birthplace of the famous sixteenth century Minorite, John Bandulović, a Croatian theologian and writer whose "Pštoloje
i Evangelii" (Epistles and Gospels) was printed at Venice in 1613, and often reprinted. Worthy of mention among the archbishops of Scopie are the Franciscan, Urbanus Bogdanović (d. 1684), and Darius Bucciarelli (d. 1787). The archbishopric extends over parts of Rumelia, Albania, and Old Servia, and numbers 11 parishes with a Catholic population of 19,473. Its ecclesiastical candidates are educated at the central seminary of Scutari. The school at Prizren and the archbishoprics of Scopie are subsidized by the Austrian emperor as well as by the Propaganda.

SCOT, MICHAEL. See MICHAEL SCOTUS.

SCOT, WILLIAM MAURUS, VENERABLE, English Benedictine martyr, hanged at Tyburn, 30 May, 1612; a younger son of William Scot of Chigwell, Essex, who married Prudence, daughter of Edmund Alabaster of Brett's Hall. He was educated at Cambridge, at Trinity College, and at Trinity Hall. He was professed and ordained at the Abbey of St. Facundus, Sahagun, Spain. After being twice imprisoned and banished, he returned to England, and after imprisonment in the Gatehouse and Newgate was condemned at the Old Bailey, Monday, 25 May, 1612, for being a priest. With him was convicted and condemned, for defence, Mr. Richard Newport, alias Smith, a native of Northamptonshire, ordained priest after seven years' study at Rome, who also had been several times imprisoned and twice banished. An account of their trial will be found in Bishop Chaloner's work cited below. Newport was cut down while still alive.

JOHN B. WAINEWRIGHT.

SCOTISM AND SCOTISTS. — I. SCOTISM. — This is the name given to the philosophical and theological system or school named after John Duns Scotus (q. v.). It developed out of the Old Franciscan School, to which Haymo of Faversham (d. 1244), Alexander of Hales (d. 1245), John of Rupeula (d. 1243), William of Ockham (d. 1308), and Cardinal Matthew of Aquasparta (d. 1289), John Pecham (d. 1392), Archbishop of Canterbury, Richard of Middletown (d. about 1300), etc., belonged. This school had at first but few peculiarities; it followed Augustinism (Platonism), which then ruled theology, and was carried on by the Parisian professors belonging to the secular clergy (William of Auvergne, Henry of Ghent, etc.), but also by prominent teachers of the Dominican Order (Rolen of Cremona, Robert Fitzsaker, Robert of Kilwardby, etc.). These theologians knew and utilized freely all the writings of Aristotle, but employed the new Peripatetic ideas only in part or in an uncritical fashion, and intermingled with Platonic elements. Albertus Magnus and especially St. Thomas (d. 1274) introduced Aristotelianism more widely into Scholasticism. The procedure of St. Thomas was regarded as an innovation, and called forth criticism, not only from the Franciscans, but also from the secular doctors and even many Dominicans (cf. Frans Ehrle in "Archiv für Literatur- u. Kirchengeschichte des Mittelalters," V, 1889, pp. 603 sqq.; Idem in "Zeitschrift für Kathol. Theologie," XIII, 1889, pp. 172 sqq.; Bernhard Jansen, ibid., XXXII, 1905, 289 sqq.). At this time Scotus, the Doctor Subitus, and also the ground already cleared for the conflict with the followers of Aquinas. He made indeed very free use of Aristotelianism, much freer than his predecessors, but in its employment exercised sharp criticism, and in important points adhered to the teaching of the Old Franciscan School—especially with regard to the plurality of forms or of souls, the spiritual matter of the angels and of souls, etc., wherein and in other points he combated particularly St. Thomas. The Scotism beginning with him, or what is known as the Later Franciscan School, is thus only a continuation or further development of the older school, with a much wider, although not exclusive-acceptance of Peripatetic ideas, or with the express and strict challenge of the view that matter is the principium individuationis. Concerning the relation of these schools to each other, or the relation of Scotus to Alexander of Hales and St. Bonaventure, consult the work of the Flemish Recollect, M. Hausser Collatio totius theologiae inter magistros nostros, Alex. Albene, S. Bonaventuram, Duns Scotum etc. ; 2 vols., Liége, 1532—).

Concerning the character and teaching of Scotus we have already said in the special article, where it was stated that he has been unjustly charged with Indeterminism, excessive Realism, Pantheism, Nestorianism, etc. What has been there said holds good of Scotism in general, the most important doctrines of which were substantially developed by Scotus himself. Little new has been added by the Scotists to the teaching of their master; for the most part, they have merely, in accordance with the different tendencies of the day, restated its fundamental position in such a way that it can be defended. Of the two works in which the most important peculiarities of the Scotist theology are briefly set forth and defended—Johannes de Rada, "Controversia theol. inter S. Thom. et Scotum" (1595)—; Killian Kasenberger, "Assertiones centum ad mentem ... Scotti" (new ed., Quaracchi, 1906). Reference may, however, be made to the influence which Scotism exercised on the teaching of the Church (i.e. on theology). It is especially noteworthy that none of the propositions peculiar to Scotus or Scotism has been censured by ecclesiastical authority, while the doctrine of the immediate Conception (which was soon accepted by all schools, orders, and theologians outside the Dominican Order, and was raised to a dogma by Pius IX. The definition of the Council of Vienne of 1311 that all were to be regarded as heretics who declared "quod anima rationalis ... non sit forma corporis humani subest, sed primum in anima et etsine ..." (de mensa et corpus christi) was condemned by the Vatican Council (d. 1313). The doctrine, however, was approved by the Lateran Council (d. 1311), and by the Council of Florence (d. 1439), and the Scotist views on the Incarnation, the person, and essentially the form of the human body, was directed, not against the Scotist doctrine of the forma corporis, but only against the erroneous view of Olivius; it is even more probable that the Scotists of the day suggested the passing of the Decree and formulated the question in such a way as to be able to defend it, by the formula of Nominalism is older than Scotus, but its views in Ocumism may be traced to the one-sided exaggeration of some propositions of Scotus. The Scotist Formalism is the direct opposite of Nominalism, and the Scotists were at one with the Thomists in combatting the latter; Ocumism itself (d. about 1347) was a bitter opponent of Scotus. The Council of Trent defined as dogma a series of doctrines especially emphasized by the Scotists (e.g. freedom of the will, free co-operation with grace, meritoriousness of good works, the causality of the sacraments ex opere operato, the effect of absolution). To other points the canons were intentionally so framed that they did not affect Scotism (e.g. that the first man was constititus in holiness and justice). This was also done at the Vatican Council. In the Thomistic-Molinist controversy concerning the foreknowledge of God, predestination, the relation of grace to free will, the Scotists took their little part, that of Scotus Subitus, the Doctor Subitus, that of Scotus Subitus, or took up a middle position, rejecting both the predetermination of the Thomists and the scientia media of the Molinists. God recognizes the free future acts in His essence, and provides a free decree of His will, which does not predetermine our free will, but only accompanies it. 
Jesuit philosophers and theologians adopted a series of the Scotistic propositions. Later, philosophers and theologians, reject in part many of these propositions and partly, and sometimes, and them, or at least do not directly oppose them. This refers mostly to doctrines touching the deepest philosophico-theological questions, on which a completely certain judgment is difficult to obtain. The following are generally rejected: formalism with the dead-givens; the distinction of animating and of the soul, the view that the metaphysical essence of God consists in radical infinity, that the relations trinitariae are not a perfection simpliciter simplex; that the Holy Ghost would be a distinct Person from the Son, even though He proceeded from the Father and was coeternus with the Father in the term of eternity; that the cordium (secret thoughts); that the soul of Christ is formally holy and impeccable, not by the very fact of the hypostatic union, but through another gratia creativa (the visio beatifica); that the merits of Christ are not simpliciter et intrinsecus, but only extrinsecus and secundum guad. infinite; that there are indifferent acts in individuals; that the gratia sanctificans and the charitas habituatus are the same habitus; that circumscription is a sacrament in the strict sense; that transsubstantiation makes the Body of Christ present per modum aductionis, etc. Another series of propositions was rejected negatively by Catholic theologians, such as in this false sense rightly rejected—e. g. the doctrine of the univocatio entis, of the acceptance of the merits of Christ and man, etc. Of the propositions which have been accepted or at least favourably treated by a large number of scholars, we may mention: the Scotist view of the relation between essentia and existens; that between ens and actus the distance is not infinite but only as great as the reality that the particular ens possesses; that the accidenta such as such also possess a separate existence (e. g. the accidentia of bread and wine in the Eucharist); that not only God, but also man can produce an esse simpliciter (e. g. man by generatio; the accipitrum of the particular individuation). Also many propositions from psychology: e. g. that the powers of the soul are not merely accidents even natural and necessary of the soul, that they are not really distinct from the substance of the soul or from one another; that sense-perception is not purely passive; that the intellect can recognize the singular directly, not merely indirectly; that the soul separated from the body forms its knowledge from things themselves, not merely from the idea which it has acquired through life or which God infuses into it; that the soul is not united with the body through certain powers, but by the substance through the senses, but for the purpose of forming with it a new species, i. e. human nature; that the moral virtues are not necessarily inter se connexae, etc. Also many propositions concerning the doctrine of the angels: e. g. that the angels can be numerically distinct from one another; that therefore several angels can belong to the same species; that it is not merely through their activity or the application of their powers that angels can be in a given place; that they cannot go from place to place without having to traverse the intermediate space; that they do not acquire all natural knowledge from infused ideas only, but also through contemplation of things themselves; that their will must not necessarily will good or evil, according as it has once decided. Furthermore, that Adam in the state of innocence could sin venially; that mortal sin, as an offence against God, is not immediately sacrilegous; that there was no desire of sin in Adam's heart; that Christ would have become man, even if Adam had not sinned; that the human nature of Christ had its proper created existence; that in Christ there were two fissiones, or sonships, a human and a Divine; that the sacraments have only moral causality; that, formally and in the last analysis, heavenly happiness consists not in the visio Divinae, but in the frustibus that in hell venial sin is not punished with everlasting punishment; etc. Scotism thus exercised also positively a wholesome influence on the development of philosophy and theology; its importance is not, as is often asserted, purely negative—that is, it does not consist only in the fact that it exercised a wholesome criticism on St. Thomas and his school, and thus preserved science from stagnation. A comparison of the Scotistic doctrine with that of St. Thomas has been often attempted—for example, in the above-mentioned work of Hauzer at the end of the first volume; by Saranno, "Concilii omnium controversiarum etc." (1589). It may be admitted that in many cases there is no difference and that in certain the Scotistic doctrine is possible, if one emphasizes certain parts of Scotus or St. Thomas, and pass over or tone down others. However, in not a few points the contradiction still remains. Generally speaking, Scotism found its supporters within the Franciscan Order; certainly, opposition to the Dominicans, i. e. to St. Thomas, made many members of the order disciples of Scotus. However, this does not mean that the foundation and development of Scotism is to be referred to the rivalry existing between the two orders. Even Aquinas found at first not a few opponents in his order, nor did all his fellow-Dominicans follow him in every particular (e. g. Durandus of St. Pourçain, d. 1332). Scotist doctrines were also supported by many Minorites, whose purity of purpose there can be no doubt, and of whom many have been included in the catalogue of saints and beatu (e. g. Sts. Bernardine, John Capistran, Jacob of the March, Angelus of Chiavasso, etc.). Furthermore, Scotism found not a few supporters among secular professors and in other religious orders (e. g. the Augustinians, Servites, etc.), especially in England, Ireland, and Spain. On the other hand, not all the Minorites were Scotists. Many attached themselves to St. Bonaventure, or favoured an eclectic doctrine from Scotus, St. Thomas, and St. Bonaventure, etc. The Conventuals seem to have adhered most faithfully to Scotus, particularly at the University of Padua, where many highly esteemed teachers lectured. Scotism found least support among the Capuchins, who preferred St. Bonaventure. Besides Scotus, the order had a number of highly-prized teachers, such as Alexander of Hales, Richard of Middleton, and especially St. Bonaventure (proclaimed Doctor ecclesiae by Sixtus V in 1587), the ascetico-mystical trend of whose theology was more suited to wide circles in the order than the critical, dispassionate, and often abstruse and sterile doctrine of the Scotists. In Spain the martyred tertiary, Blessed Raymond Lullus (d. 1315), also had many friends. It may be said that the whole order as such never had a uniform and special school of Scotists; the teachers, preachers, etc. were never compelled to espouse Scotism. His disciples did indeed come to be known as the "Doctor ordinis" or "Doctor (vel Magister) Ordinis", but even among these many partly followed their own course (e. g. Petrus Aureolus), while Walter Burleigh (Burleus, d. about 1340) and still more so Occam were opponents of Scotus. It is only at the end of the fifteenth and the beginning of the sixteenth century that a special Scotist School can be spoken of. The works of the master were then collected, brought out in many editions, commented, etc. Since 1501 we also find numerous regulations of general chapters recommending or directing the prescribing Scotistic sacramentaries; although St. Bonaventure's writings were also to a great extent admitted (cf. Marian Fernández García, "Lexicon scholasticum etc.", Quaracchi, 1910; "B. Joan. Duns Scoti: De rerum principi"o etc.", Quaracchi, 1910, pref. § 3, nn. 46, 47 sqq., where many regulations of 1501-1507 are given). Scotism appears to have attained its greatest popularity at the beginning of the
seventeenth century; during the sixteenth and the seventeenth centuries we even find special Scotist chairs, e. g. at Paris, Rome, Coimbra, Salamanca, Alcalá, Padua, and Pavia. In the eighteenth century it had still an important following, but in the nineteenth it suffered a greater decline. One of the reasons for this was the repeated suppression of the order in almost every country, while the recommendation of the teaching of St. Thomas by several popes could not be favourable to Scotism. It has even been asserted that it is now merely tolerated; but this statement is a priori improbable in regard to a school of which not a single proposition has been censured, and to which so many highly venerated popes, (bishops, cardinals and saints) have belonged; and it is still less probable in view of the approval of the various general statutes (repeated so often down to the present day), in which Scotism is at least recommended. In their Decrees Leo XIII and Pius X have recommended not alone St. Thomas, but also Scholasticism in general, and this includes also the Scotist School. In 1897 Leo XIII approved the “Constitutiones Generales Fratrum Minorum”, of which § 245 prescribes for the members of the order: “In doctrinis philosophicis et theologici antiqui scholai Franciscanae inhererent studio sollemni vel quodam estensionis negetur (in philosophical and theological doctrine they shall take care to follow the ancient Franciscan School, without, however, neglecting the other Schoolmen.) On 11 April, 1904, in a letter to the Minister General, Father Dionysius Schuler, Pius X expressed his pleasure at the revival of studies in the order in connexion with the Franciscan schools of the Middle Ages, and on 19 June, 1906, in a letter to the aforementioned Father Marian, praised his book, “Mentis in Deum quotidiana elevatio duce B. Joanne Duns Scoto etc.” (Quaracchi, 1907. See Marian, op. cit., n. 11.).

II. SCOTISTAE.—Most Scotists are both philosophers and theologians.

Fourteenth Century.—Pupils of Scotus: Francis Mayron (d. 1327), a very fruitful writer, who introduced the aditus sorbonicus into the University of Paris, i. e. the uninterrupted dispute lasting the whole day.—Peter Auriolus (d. about 1322), Archbishop of Aix.—William de Rubione (about 1383).—Jerome de Atharia, Order of the Blessed Trinity (about 1323).—Antonius Andreus (d. about 1320) from Aragon, a true disciple of Scotus, who is said to have written several treatises (about the human nature of Christ).—Jean de Tocni (d. about 1347).—Alvarus Pelagius (d. about 1350).—Bishop Petrus de Aquila (d. 1371), called Scotellus from his faithful adherence to Scotus, of whose teaching he issued a compendium (new ed., Levanti, 1907?).—Landulf Carsocioli (d. 1351), Archbishop of Amalfi.—Nicolaus Bonet (Bovet), who went to Peking and died as Bishop of Malta in 1390; John Bacon, Carmelite (d. 1346).

Fifteenth Century.—William Butler (d. 1410).—Petrus de Candida (d. 1410 as Pope Alexander V).—Nicolaus de Orbello (d. about 1485), who wrote a commentary on the Sentences (many editions).—William Viroling (Vorlioni etc., d. 1446), a celebrated theologian, who wrote a frequently quoted “Comm. super Sentent.” but who also followed St. Bonaventure.—Angelus Serpetri, General of the Order (d. 1454).—William Gorris (d. about 1480), not a Franciscan, who composed the “Scotus pauperum”.—Blessed Antoaninus Chaleroyn, d. about 1450, whose “Petrius” (called Angelica) is extant in about thirty editions, and contains a great deal of Scotist doctrine; it was publicly burned by Luther with the “Corpus juris canonici” in 1520.—Antonius Sirretus (Siretus, d. about 1490), famous for his “Formalitates”, to which secular and Franciscan writers contributed (about 1495), rector of the University of Paris, and not a Franciscan; Elector Frederick III of Saxony had his philosophical commentaries introduced into the University of Wittenberg at his expense.—Thomas Pencket, Augustinian (d. 1487), knew Scotus almost by heart, and edited his works.—Francis Sampson, General of the Order (d. 1491), was called by Pope Sixtus IV, before whom he held a disputation, the notes of which are extant (also 1491).—Benedict Reta (d. about 1464 as Sixtus IV), who defended in a disputation before Pius II and also in his writings the doctrine that the blood shed by Christ on the Cross was released from the hypospatic union.—Stephen Bruederl (d. about 1499), renowned professor in Paris and later a Franciscan, who wrote “Comm. in Bonavent. et Scotum” (often ed.).

Sixteenth Century.—This period is very rich in names. The following may be mentioned: Paul Scriptoris (d. 1505), professor at the University of Tübingen, who had as students all the other professors and many other members of religious orders.—Nicholas de Nussa (d. 1506).—Mauritius a Portu (d. 1613 as Archbishop of Tuam, Ireland), who wrote a commentary on many works of Scotus.—Francis Lichetus, General of the Order (d. 1520).—Anthony Trombetta, Archbishop of Athens (d. 1518), who wrote and edited able Scotist works.—Philip Carugi, apostate, later a Franciscan (d. about 1510).—Gomestius of Lisbon (d. 1513), re-edited the often issued fourteenth-century “Summa Asteana”.—Fransischi (d. 1520).—James Almassius (about 1520), Parisian magister and not a Franciscan, favoured Gallicanoism.—Antonius de Pantus, physician, composed in 1530 a Scotist lexicon.—Jerome Cadusius (d. 1529).—Le Brel (about 1527), wrote “Parvus Scotus”.—Puduanus Barletta (about 1545).—James Bargius (about 1560).—Johannes Dovetus, who wrote in 1579 “Monotesseron formulatitum Scotti, Sieretti, Trombettae et Brullerii”.—Joseph Angles, bishop and celebrated as a translator of Scotus, often edited “Flores theolog.”.—Damián Giner issued the “Opus Oxoniense Scoti” in a more convenient form (1598).—Cardinal Sarnansus (d. 1595), a highly distinguished scholar, wrote a commentary on some philosophical works of Scotus, and edited the works of many Scotists.—Salvator Bartolucci (about 1586), also a zealous editor.—Felix Peretius (d. 1590 as Sixtus V).

Seventeenth Century.—Of very many names we may mention: Gothabius (about 1605).—Guido Bartho- luci (about 1610).—Peter Bonaventura (about 1625).—Ruudt (d. 1630).—John de Terzi (d. 1631).—Philip Faber (d. 1630).—Albergunius, bishop (d. 1638).—Centini, bishop (d. 1640).—Mattheus de Sousa (about 1629).—Marino, bishop (d. 1663).—Francis Felix (about 1642).—Vulpe (d. 1647) wrote “Summa” and “Comm. theologie Scotti” in twelve folio volumes.—Blondus, bishop (d. 1644).—Oasuatius, archbishop (d. 1658).—Wadding (d. 1657), a well-known annalist, edited with other Irishmen in the College of St. Isidore at Rome the complete works of Scotus (12 vols., Lyons, 1639), with the commentaries of Mutilianus of Arecio (d. 1616), Fontio (d. 1606). Mauritus a Portu (d. 1619).—Archbishop of Armagh is Primate of Ireland (d. 1628), and Anthony Hickey (d. 1641); reprinted Paris, 1891-95. —Briceo, named on account of his keenness of intellect the Second Scotus, Bishop of Venezeula (d. 1667).—Belluti (d. 1679), edited with Mactrius a highly praised “Philosophia ad mentem Scotti” (many editions).—Scocenius (d. 1675) wrote a celebrated “Deputatio theolog.” (many editions) and “Theologia ad mentem Scotti” (1671, etc.).—Ferchius (d. 1668) wrote “Vita et apologia Scotti”, etc.—Brudinus (d. 1664).—Herincx (d. 1678).—Bishop of Ypres.—Stümel (d. 1681 at Fulda).—Bonvini (highly commended).—Horatio (several works, 1678, etc.).—Sannig (about 1690).—Lambrecht (about 1696), named the Viennese
Scotland.—Bishop Gennari (d. 1684).—Cardinal Brancatius (d. 1693), held in high favour by several popes. Hernández (d. 1695).—Macedo (d. 1681), a Portuguese, professor at Padua, is said to have composed over one hundred writings and was renowned for his philosophy.

Eighteenth Century.—Frassen (d. 1711) was for thirty years a celebrated professor at the Sorbonne, and wrote "Socinus academicus seu universa theol. Sociti," (many editions, 1672, etc.) last ed. Rome, 1809), a very profound and lucid work. Duro (d. 1720) wrote "Sociti," (many editions), Dupacquier, "Summae phil. et Sociti theol. (about 1720); many editions. Hieronymus de Montfortino, "Duns Scoti Summae theol. ex universis opin. et...juxta ordinem Summarum Angelicorum Doctorum" (6 vols., 1728–34; new ed., Rome, 1800–03), a very able work. Panger (d. 1722 at Augsburg), Scotist moralist. Kitto (d. 1759 at Munich), Scotist dogmatic theologian. Péres Lopes (d. 1724).—Krisper (d. 1749).—Hermann, Abbot of St. Trubert, "Theologia sec. Scoti principia" (1720).—Melgag (1747).—Bishop Sarmentero (d. 1775).

Nineteenth and Twentieth Centuries.—In the nineteenth century, although Scotism was retained in the schools of the Franciscan Order in accordance with the statutes, we meet but few tractsates secundum mentem Scoti, in any case no celebrated ones. The twentieth century appears to promise better. Father Fernández, a Spaniard, is a zealous Scotist. Besides the above-mentioned writings, he has written a large "Socitus Lexicon," and is at present (1911) issuing a new edition of Scotii's "Comment in Sentent." Another zealous worker is Father Deodat-Maria de Bassle; his fortnightly journal, "La parole morale," (now entitled "Rueve Duns Scoti"), contains much Scotistica. He is also engaged on the "Capitalia opera B. Joan. Duns Scoti" (Le Havre, 1908), of which the "Preparatio philosophica" and "Synthesisthesis theologica credendorum" have already appeared. Father Parthenius Minges has explained and defended much of the Scotist doctrine in his "Compend. theolog. dogmat. speciales et generalis" (Munich, 1901–02), and in a number of other works (cf. Catholic Encyclopedia, V, 199).

Parthenius Minges.

Scotland.—The term as at present used includes the whole northern portion of the Island of Great Britain, which is divided from England by the Cheviot Hills, the River Tweed, and certain smaller streams. Its total area is about 20,900,000 acres, or something over 30,000 square miles; its greatest length is 292 miles, and greatest breadth, 155 miles. The chief physical feature of the country is its mountainous character, lying no more than 500 feet above sea level, ground, as in England; and only about a quarter of the total acreage is cultivated. The principal chain of mountains is the Grampian range, and the highest individual hill Ben Nevis (4406 feet). Valuable coalfields extend almost uninterrupted from east to west, on both banks of the Rivers Forth and Clyde. The Tweed and its tributaries (except on parts of the east coast) water the southern part of Scotland, whereas the Clyde and its tributaries water the western Highlands. The part of Scotland lying beyond the Firths of Forth and Clyde was known to the Romans as Caledonia. The Caledonians came later to be called Picts, and the country, after them, Pictland. The name of Scotland came into use in the eleventh century, when the race of Scots, originally an Irish colony which settled in the western Highlands, attained to supreme power in the country. Scotland was an independent kingdom until James VI succeeded to the English Crown in 1603; and it continued constitutionally separate from England until the conclusion of the treaty of union a century later. It still retains its own Church (see Scotland, Established Church of) and its own form of legal procedure; and its people remains in many respects quite distinct from that of the English. Formerly the three prevailing nationalities of the country were the Anglo-Saxon in the south, the Celtic in the north and west, and the Scandinavian in the north-east; and these distinctions can still be perceived both in the characteristics of the inhabitants and in the proper names of places. The total population, according to the census of 1911, is 4,759,521, being an increase of 287,418 in the past decade. The increase is almost entirely in the large cities and towns, the rural population of almost every county, except in the mining districts, having sensibly diminished, owing to emigration and other causes, since 1901.

The history of Scotland is dealt with in the present article chiefly in its ecclesiastical aspect, and as such it naturally falls into three great divisions: I. The conversion of the country and the progress of the Christian monastic church. II. The gradual introduction and consolidation of the diocesan system, and the history of Scottish Catholicism down to the religious revolution of the sixteenth century; III. The post-Reformation history of the country, particularly in connexion with the persecuted remnant of Catholics, and finally the religious revival of the nineteenth century. Under these three several heads, therefore, the subject will be treated.

I. FIRST PERIOD: FOURTH TO ELEVENTH CENTURY.

—Nothing certain is known as to the introduction of Christianity into Scotland prior to the fourth century. St. Columba, writing at the end of the second, speaks of portions of Britain which the Romans had never reached being by that time "subject to Christ"; and early Scots historians relate that Pope Victor, about A.D. 203, sent missionaries to Scotland. This pope's name is singled out for special veneration in a very early Scotich (Culdees) litany, which gives some probability to the legend; but the earliest indubitable evidence of the religious connexion of Scotland with Rome is afforded by the history of Ninian, who, born in the south-west of Scotland about 300, went to study at Rome, was consecrated bishop by Pope Urban, returned to his country, and built at Candida Casa, now Whithorn, the first stone church in Scotland. He also founded there a famous monastery, whence saints and missionaries went out to preach, not only through the whole south of Scotland, but also in Ireland. Ninian died probably in 342; and current ecclesiastical tradition points to St. Palladius as having been his successor in the work of evangelising Scotland. Pope Leo XIII cited this tradition in his Bull restoring the Scottish hierarchy in 1878; but there are many anachronisms and other difficulties in the long-accepted story of St. Palladius and his immediate followers. It is certain whether he ever set foot in Scotland at all. If, however, his mission was to the Scotti, who at this period inhabited Ireland, he was at least indirectly connected with the conversion of Scotland also; for the earliest extant chronicles of the Britons show us how close was the connexion between the Church of the Scotti and that of the British. The Franks entered Scotland in the late sixth century, and were followed by the Irish in the seventh. David, the first king of the Scots, was a Christian, and the Faith throughout the western parts of the country. The north was still pagan, and even in the partly Christianised districts there were many relapses and
apostasies which called for a stricter system of organization and discipline among the missionaries. It was thus that, drawing her inspiration from the great monasteries of Ireland, the early Scottish Church entered upon the monastic period of her history, of which the first and the greatest light was Columba, Apostle of the northern Picts.

The monastery of Iona, where Columba settled in 563, and whence he carried on his work of evangelizing the mainland of Scotland for thirty-four years, was, under him and his successors in the abbatial dignity, considered the mother-house of all the monasteries founded by him in Scotland and in Ireland. One member of the Iona long held pre-eminence over all the monasteries of the Picts, and it continued in fact, all during the monastic period of the Scottish Church, to be the centre of the Columban jurisdiction. It is unnecessary to argue the point, which has been proved over and over again by the views put forward both by Anglicans and Presbyterians, that the Columban church was no isolated fragment of Christendom, but was united in faith and worship and spiritual life with the universal Catholic Church (see, as to this, Edmonds, “The Early Scottish Church, its Doctrine and Discipline”, Edinburgh, 1851). With St. Columba, southern Picts, another apostle was raised up in the person of St. Kentigern, to work among the British inhabitants of the Kingdom of Strathclyde, extending southward from the Clyde to Cumberland. Kentigern may be called the founder of the Church of Cumbria, and hence the first bishop of what is now Glasgow; while in the east of Scotland Lothian honours his first apostle the great St. Cuthbert, who entered the monastery of Melrose in 650, and became bishop, with his see at Lindisfarne, in 684. He died three years later; and less than thirty years afterwards the monastic period of the Scottish Church came to an end, the monks throughout Pictland, most of whom had resisted the adoption of the Roman observance of Easter, being expelled by the Pictish king. This was in 717; and almost simultaneously with the disappearance of the Columban monks we see the advent to Scotland of the Deiscol, Cotidsi, or Celts of the anchorens, who sprang from those ascetics who had devoted themselves to the service of God in the solitude of separate cells, and had in the course of time formed themselves into communities of anchorites or hermits. They had thirteen monasteries in Scotland, and together with the secular clergy were now introduced into the Church, and they carried on the work of evangelization which had been done by the Columbian communities which they succeeded.

From the beginning of the eighth to the middle of the ninth century the political history of Scotland, as we duly see it to-day, consists of continual fighting between the rival races of Angles, Picts, and Scots, varied by invasions of Danes and Norsemen, and culminating at last in the union of the Scots of Dalriada and the Pictish peoples into one kingdom under Kenneth Mac Alpine in 844. Ecclesiastically speaking, the most important result of this union was the elevation by Kenneth of the church of Dunkeld to be the primatial see of his new kingdom. Soon, however, the primacy was transferred to Abernethy, and some forty years after Kenneth's accession we find the first definite mention of the 'Scottish Church'; which King Grig regulated fri. A great period of independence, Grig's successors were styled no longer Kings of the Picts, but Kings of Alban, the name now given to the whole country between the Forth and the Spey; and under Constantine, second King of Alban, was held in 908 the memorable assembly at Scone, in which the king and Cellach, Bishop of St. Andrews, recognized by this time as primates of the kingdom, and styled Epscop Alban, solemnly swore to protect the discipline of the Faith and the right of the churches and the Gospel. In the reign of Malcolm I, Constantine's successor, the district of Cumberland was ceded to the Scottish Crown by Edmund of England; and among the very scanty notices of ecclesiastical affairs during this period we find the foundation of the abbey of which the ancient round tower, built after the Irish model, still remains. This was in the reign of Kenneth II (971-995), who added yet another province to the Scottish Kingdom, Lothian being made over to him by King Edmund of England. Iona had meanwhile, in consequence of the wars of the Western Picts with the Norsemen, been practically cut off from Scotland, and had become ecclesiastically dependent on Ireland. It suffered much from repeated Danish raids, and on Christmas Eve, 996, the abbey was devastated, and the abbot with most of his monks put to death. Not many years later the Norwegian power in Scotland received a fatal blow by the death of Sigurd, Earl of Orkney, the Norwegian provinces on the mainland passing into the possession of the Scottish Crown. Malcolm II was now on the throne, and it was during his thirty years' reign that the Kingdom of Alban became first equal, and then supreme, as Scotland, among the northern Picts. He was succeeded in 1034 by his son, Duncan, who after a short and inglorious reign was murdered by his own bodyguard and principal general, Malcolm. Macbeth wore his usurped crown for seventeen years, and was himself slain in 1057 by Malcolm, Duncan's son, who ascended the throne as Malcolm III. It is worth noting that Duncan's father (who married the daughter of Malcolm II) was Crinan, lay Abbob of Dunkeld; for this fact illustrates one of the general truths of history, that the Church was at this time labouring, namely the usurpation of abbeys and benefices by great secular chieftains, an abuse existing side by side, and closely connected with, the scandal of concubinage among the clergy, with its inevitable consequence, the hereditary succession to benefices, and wholesale secularization of the Church. These evils were indeed rife in other parts of Christendom; but Scotland was especially affected by them, owing to her want of a proper ecclesiastical constitution and a normal ecclesiastical government. The accession, and more especially the marriage, of Malcolm to Eilred of Dunfermline, brought into the Church the fortune of the Scottish Church, and indeed to be a turning-point in her history.

II. Second Period: Eleventh to Sixteenth Century.—The Norman Conquest of England could not fail to exercise a deep and lasting effect also on the northern kingdom, and it was in the immediate cause of the introduction of English ideas and English civilization into Scotland. The flight to Scotland, after the Battle of Hastings, of Edgar Atheling, heir of the Saxon royal house, with his mother and his sisters Margaret and Christina, was followed at no distant date by the marriage of Margaret to King Malcolm, as his second wife. A great-niece of St. Edward the Confessor, Margaret, whose personality stands out clearly before us in the pages of her biography by her confessor Turgoth, was a woman not only of saintly life but of strong character, and, so a good influence on the Scottish Church, a king more a father of his own family. The character of Malcolm III has been depicted in very different colours by the English and Scottish chroniclers, the former painting him as the severe and merciless invader of England, while, to the latter he is a noble and heroic prince, called Canmore (Canmore—great head) from his high kingly qualities. All however agree that the
influence of his holy queen was the best and strongest element in his stormy life. Whilst he was engaged in strengthening his frontiers and fighting the enemies of his country, and in performing the duties and pious exercises, to take in hand the reform of certain outstanding abuses in the Scottish Church. In such matters as the fast of Lent, the Easter communion, the observance of Sunday, and compliance with the Church’s marriage laws, she succeeded, with the help of God, in bringing Scotland into line with the rest of Catholic Christendom. Malcolm and Margaret rebuilt the venerable mons­tery of Iona, and founded churches in various parts of the kingdom; and during their reign the Christian faith was established in the islands lying off the north­ern and western coasts of Scotland, inhabited by the Norsemen. Malcolm was killed in Northumber­land in 1093, whilst leading an army against William Rufus; and his saintly queen, already dangerously ill, followed him to the grave a few days later. In the same year as the king and queen died Fothad, the last of the native bishops of Alban, whose ex­tinction opened the way to the claim, long upheld, of the See of York to supremacy over the Scottish Church—a claim rendered more tenable by the strong Anglo-Norman influence which had taken the place of that of Ireland, and by the absence of any opposition from diocesan jurisdiction in the Scottish Church.

Edgar, one of Malcolm’s younger sons, who suc­ceeded to his father’s crown after prolonged conflict with other pretenders to it, calls himself in his extant charters “King of Scots”, but he speaks of his sub­jects as Scots and English, surrounded himself with English advisers, acknowledged William of England as his feudal superior, and thus did much to strengthen the English influence in the northern kingdom. Dur­ing his ten years’ reign no successor was appointed to Fothad in the primacy; but at his death (when his brother Alexander succeeded him as king, the younger brother David obtaining domination over Cumbria and Lothian, with the title of earl) Turgot became Bishop of St. Andrews, the first Norman to occupy the primatial see. Alexander’s reign was signalized by the creation of two additional sees: the first being that of Moray, in the district beyond the Spey, where Scottish influence had long existed. The see was fixed first at Spynie and later at Elgin, where a noble cathedral was founded in the thir­teenth century. The other new see was that of Dunkeld, which had already been the seat of the primacy under Kenneth Mac Alpine, but had fallen under English influence. Here Alexander appointed the Culdee community by a bishop and chapter of secular canons. Elsewhere also he introduced regular re­ligious orders to take the place of the Culdees, founding monasteries of canons regular (Augustinians) at Scone and Loch Tay.

Even more, Alexander, his brother David, who succeeded him in 1124, and who had been edu­cated at the English Court (his sister Matilda having married Henry I.), laboured to assimilate the social state and institutions of Scotland, both in civil and ecclesiastical matters to Anglo-Norman ideas. His reign of thirty years, on the whole a peaceful one, is memorable in the extent of the changes wrought during it in Scotland, under every aspect of the life of the people. A modern historian has said that at no period of her history has Scotland ever stood relatively so high in the scale of nations as during the reign of this excellent monarch. Penetrated with the spirit of the spirit of the West, he recognized the inadequacy of the Celtic institutions of the past to meet the growing needs of his people, and David extended his reforms to every department of civil life; but it is with the energy and thorough­ness with which he set about the reorganization and

remodelling of the national church that his name will always be identified. While still Earl of Cumbria and Lothian he brought Benedictine monks from France to settle at Glasgow; and, after his return to Jedburgh, and procured the restoration of the ancient see of Glasgow, originally founded by St. Kentigern. Five other bishoprics he founded after his accession: Ross, in early days a Columban monastery, and afterwards served by Culdees, who were now suc­ceeded by secular canons; Fife, where David had also been a church in very early times; Caithness, with the see at Dornoch, in Sutherland, where the former Culdee community was now replaced by a full chapter of ten canons, with dean, precentor, chancellor, treasurer, and archdeacon; Dunkbla, and Streechin, founded shortly before the king’s death, and, both, like the rest, on the sites of ancient Celtic churches. The great abbeys of Dunfermline, Holy­rood, Jedburgh, Kelso, Kinloes, Melrose, and Dun­drennan were all established by him for Benedictines, Augustinians, or Cistercians, besides several priories and convents of nuns, and houses belonging to the military orders. To one venerable Celtic monastery, founded by St. Columba, that of Deer, we find David granting a charter towards the end of his reign; but his general policy was to suppress the ancient Culdee establishments, now moribund and almost extinct, and supercede them by his new religious foundations. Side by side with this came the reorganization of the Church, the erection of cathedral chapters and rural deaneries, and the reform of the Divine service on the model of that prevailing in the English Church, the use of the ancient Celtic ritual being almost universally discontinued in favour of that of Salisbury. Two church councils were held in David’s reign, both presided over by cardinal legates from Rome; and in 1150 took place, at St. Andrews, the first diocesan synod recorded to have been held in Scotland. David died in 1153, leaving behind him the reputation of a saint as well as a great king—a reputation which has been endorsed, with singular unanimity, alike by ancient chroniclers and the most impartial of modern historians.

David’s grandson and successor, Malcolm the Maid, was crowned at Scone—the first occasion, as far as we know, of such a ceremony taking place in Scotland. His priesthood was short, for the see was fixed first at Spynie and later at Elgin, where a noble cathedral was founded in the thir­teenth century. The other new see was that of Dunkeld, which had already been the seat of the primacy under Kenneth Mac Alpine, but had fallen under English influence. Here Alexander appointed the Culdee community by a bishop and chapter of secular canons. Elsewhere also he introduced regular re­ligious orders to take the place of the Culdees, founding monasteries of canons regular (Augustinians) at Scone and Loch Tay.

Even more, Alexander, his brother David, who succeeded him in 1124, and who had been edu­cated at the English Court (his sister Matilda having married Henry I.), laboured to assimilate the social state and institutions of Scotland, both in civil and ecclesiastical matters to Anglo-Norman ideas. His reign of thirty years, on the whole a peaceful one, is memorable in the extent of the changes wrought during it in Scotland, under every aspect of the life of the people. A modern historian has said that at no period of her history has Scotland ever stood relatively so high in the scale of nations as during the reign of this excellent monarch. Penetrated with the spirit of the spirit of the West, he recognized the inadequacy of the Celtic institutions of the past to meet the growing needs of his people, and David extended his reforms to every department of civil life; but it is with the energy and thorough­ness with which he set about the reorganization and
dioceses, to be immediately subject to the Apostolic See. The issue of this Bull, which was confirmed by succeeding popes, was followed, on William subscribing handsomely to Richard Coeur de Lion's crusading fund, by the King of England agreeing to abrogate the humiliating treaty which had made him the feudal superior of the King of Scots, and formally recognising the temporal as well as the spiritual independence of Scotland. William's reign, like that of its predecessors, was prolific in religious foundations, the principal being the great Abbey of Arbroath, a memorial of St. Thomas of Canterbury, with whom the king had been on terms of personal friendship. Even more noteworthy was the establishment of a Benedictine monastery in the sacred Isle of Iona by Reginald, Lord of the Isles, whose desire, like that of the Scottish kings, was to supersede the effete Culdees in his domains by the regular orders of the Church. In 1200 a tenth diocese was erected—that of Argyll, cut off from Dunkeld, and including an extensive territory in which Gaelic was (as it still is) almost exclusively spoken.

The Fourth Lateran Council was held in Rome in 1215, the year after William's death, under the great pontificate of Innocent III, and was attended by four Scottish bishops and abbots, and procurators of the other prelates; and we find the ecclesiastics of Scotland, as of other countries, ordered to contribute a twentieth part of their revenues towards a new crusade, and a papal legate arriving in Scotland soon afterwards to collect the money. In 1225 the Scottish bishops met in council for the first time without the presence of a legate from Rome, one of their number, as directed by a papal bull, to preside over the assembly with quasi-metropolitan authority and the title of conservator. The Scottish kings were regularly represented at these councils by two doctors of laws, specially nominated by the sovereign.

The thirteenth century, during the greater part of which (1214-98) the second and third Alexander wore the crown of Scotland, is sometimes spoken of as the golden age of that country. During that long period, in the words of a modern poet, "God gave them peace, their land reposed"; and they were free to carry on the work of consolidation and development so well begun by the good King David. Alexander II, indeed, when still a youth incurred the papal excommunication by espousing the cause of the English barons against King John, but when he had obtained absolution he married a sister of Henry III, and as secured a good understanding with England. The occasional signs of unrest among some of his Celtic subjects in Argyll, Moray, and Caithness were met and checked with firmness and success; and this reign witnessed a distinct advance in the industrial progress of the realm, the king devoting special attention to the improvement of agriculture. Many new religious foundations were also made by him, including monasteries at Culross, Pluscardine, Beuly, and Crossraguel; while the royal favour was also extended to the new orders of friars which were spreading throughout Europe, and numerous houses were founded by him both for Dominicans and Franciscans.

The friars, however, remaining under the control of their English provincials until nearly a century later. David de Bernham of St. Andrews and Gilbert of Caithness were among the distinguished prelates of this time, and did much for both the material and the religious welfare of their dioceses. Alexander III, who succeeded his father in 1249, was also fortunate in the excellent bishops who governed the Scottish Church during his reign, and he, like his predecessors, made some notable religious foundations, including the Cistercian Abbey of Sweetheart, and houses of Carmelites and Trinitarian friars. An important step in the consolidation of the kingdom was the annexation of the Isle of Man, the Hebrides, and other western islands to the Scottish Crown, pecuniary compensation being paid to Norway, and the Archbishop of Trondheim retaining ecclesiastical jurisdiction over the islands. Nearly all the Scottish bishops attended the general council convoked by Gregory X at Lyons in 1274, which, among other measures, levied a fresh tax on church benefices in aid of a crusade.

Boismond, a Piedmontese canon, went to Scotland to collect the subsidy, assessing the clergy on a valuation of rents. Boismond's Roll, which gave great dissatisfaction, but nevertheless remained the guide to ecclesiastical taxation until the Reformation. With the death of Alexander in 1286 the male line of his house came to an end, and he was succeeded by his youthful grandchild, Margaret, daughter of King Eric of Norway.

Edward I, the powerful and ambitious King of England, whose hope was the union of the Kingdom of Scotland with his own, immediately began negotiations for the marriage of Margaret to his son. The proposal was favourably received in Scotland; but while the eight-year-old queen was on her way from Norway, she died in Orkney, and the realm was immediately divided by rival claims to the crown. John de Baliol and Robert Bruce, both descended from a brother of William the Lion. King Edward, chosen as umpire in the dispute, decided in favour of Baliol; and relying on his servitude to Edward I, Edward soon renewed his efforts to subdue the Scotch, putting to death the valiant and patriotic William Wallace, and leaving no stone unturned to carry out his object. He died, however, in 1307; and Robert Bruce (grandson of Baliol's rival) utterly routed the English forces at Bannockburn in 1314, and secured the independence of Scotland. After long negotiations peace was concluded between the two kingdoms, and ratified by the betrothal of Robert's only son to the sister of the
SCOTLAND 617  SCOTLAND

King of England. Robert died a few months later, and was succeeded by his son, David II, out of whose reign of forty years there are no records. He lived in France, and eleven in exile in England, where he was taken prisoner when invading the dominions of Edward III. During the wars with England, and the long and inglorious reign of David, the church and people of Scotland suffered alike. Bishops forgot their allegiance and appeared and arrayed in arms; the king, head of their retainers; the state of religion and morals, both of clergy and laity was far from satisfactory, and contemporary chronicles were full of lamentations at the degeneracy of the times. Some excellent bishops there were during the fourteenth century, notably the Lamberts of St. Andrews, the former of whom was chosen one of the regents of the kingdom, while Lambert completed the noble cathedral of St. Andrews. Bishop David of Moray, a zealous patron of learning, is honoured as the virtual founder of the historic Scoots College in Paris. A proof that religious zeal was still warm is afforded by the first foundation in Scotland, at Dunbar, of a collegiate church, in 1342, precursor of some forty other establishments of the same kind founded before the Reformation.

David II died childless, and the first of the long line of Stuart kings now ascended the throne in the persons of Robert III, the patron of Robert Bruce and the High Steward. During Robert's reign of nineteen years there was almost continual warfare with the English on the Border, France on one occasion sending a force to help her Scottish ally against their common enemy. Robert was succeeded in 1390 by his son Robert III, in whose reign Scotland suffered more from its own turbulent barons than from foreign foes. Robert, Duke of Albany, the king's brother, himself wielded almost royal power, imprisoned and (it was said) starved to death the heir-apparent to the throne; and when the king died in 1406, leaving his surly son James a prisoner in England, Albany got himself appointed regent, and did his best to prevent the new king's return to Scotland. The years of Albany's dictatorship, which coincided with the general unrest in Christendom due to a disputed papal election, were not prosperous ones for the Church. Slighting the authority of the Pope, the Scottish clergy weakened, and the encroachments of the State on the Church became increasingly serious. A collection of synodal statutes of St. Andrews, however, of this date which has come down to us shows that serious efforts were being made by the church authorities to cope with the evil. But the Church, weakened by the intrigue of its rulers, was also assailed by the rising power of the nobility. France of course brought the French and Scottish churches into a close connexion which was in many ways advantageous, although one effect of it was that Scotland, like France, espoused the cause of the antipopes against the rightful pontiffs. The young king, James I, was at length released from England in 1429, after twenty years of captivity, returned to his realm, was crowned at Scone, and immediately showed himself a strong and gifted monarch. He condemned Albany and his two sons to death for high treason, took vigorous steps to improve and encourage commerce and trade, and earned the greatest interest in the welfare of religion and the prosperity of the Church. The Parliament of 1425 directed a strict Inquisition into the spread of Lollardism or other heresies, and the punishment of those who disseminated them; and James also personally urged the heels of the religious orders in his realm to see to a stricter observance of their vows. Robert the Bruce sent eight high Scottish ecclesiastics to Bascle to attend the general council there; but in the midst of his plans of reform he was assassinated at Perth in February, 1430.

King James's solicitude as to the spread of heresy in Scotland was not without cause; for early in his reign preachers of the Wycliffite errors had come from England, prominent among them being John Resby, who was sentenced to death and his body burned in 1407. The Scottish Parliament passed a special act against Lollardism in 1425; and Paul Crawar, an emissary from the Husites of Bohemia, who appeared in Scotland on a proselytising mission in 1433, suffered the same fate as Resby. An oath to defend the faith against Lollardism was sworn by the student body of the new University of St. Andrews, the foundation of which was a notable event of this reign. It was formally confirmed in 1414 by Pedro de Luna, recognised by the Scottish Church at that time as Pope Benedict XIII. Scotland was the last state in Christendom to adhere to the decrees of the Council of Florence, and declared her allegiance to the rightful pontiff, Martin V. The year before his death James received a visit from the learned and distinguished Aeneas Sylvius Piccolomini, who afterwards became Pope Pius II. About the same time the new Diocese of the Isles was erected, being severed from that of Argyll; and the bishops of the new see fixed their residence at Iona.

The new king, James II, had a long minority, during which there were constant feuds among his nobles; but he developed at manhood into a firm and prudent ruler, and he was fortunate in having as his adviser Bishop Kennedy of St. Andrews, one of the best prelates who ever adorned that see. James's early death, owing to an accident, in 1460, was doubly unfortunate, as his son and successor James III was a prince of far weaker character, unable to cope with the turbulent barons, some of whom broke out into open revolt, seducing the youthful heir to the throne to join them. Active hostilities followed, and James was murdered by a trooper of the insurgent army in 1468. The disturbances of his reign had their effect on the Scottish Church, in which abuses, such as the intrusion of laymen into ecclesiastical positions, the deprivation of the cathedral and monastic Chapters of their canonical rights, and the bannful system of commendatory abbots, flourished almost unchecked. New religious foundations there were, chiefly of the orders of friars; and the diocesan development of the Church was completed by the withdrawal of the See of Caithness and the diocese of the Isles from Caithness. The See of Oxford and the Isles from Norway. This act of consolidation formed part of the provisions of an important Bull of Sixtus IV, dated 1472, erecting the See of St. Andrews into an archiepiscopal and metropolitan church for the whole realm, with twelve suffragan sees dependent on it. Young as the archiepiscopal See was, it did not, of course, protest against the change; but it seemed to be equally unwellcome in Scotland. The new metropolitan, Archbishop Grahame, founded king, clergy, and people all against him; he was assailed by various serious charges, and finally deprived of his dignities, degraded from his orders, and sentenced to lifelong imprisonment in a monastery. His successor in the archiepiscopate, William Sheves, obtained a Bull from Innocent VIII appointing him primate of all Scotland and legisatus natus, with the same privileges as those enjoyed by the Archbishop of Canterbury. The protest of the See of Glasgow was followed by a Bull exempting that see from the jurisdiction of the primate; but in 1489 a law was passed declaring the necessity of Glasgow's being erected into an archiepiscopal. In 1492 the pope created the new archbishopric, assigning to it as suffragans the Sees of Ebrington, Dunbar, Orkney, and Shetland, but nine years later we hear of the arrest and trial of a number of Lollards in the new archiepiscopate; but they seem to have escaped with an admonition. From 1497 to 1513 the primatial see was occupied successively by a brother and a natural son of King James IV. The latter, who was nominated to the
primacy when only sixteen, fell with his royal father and the flower of the Scottish nobility at Flodden in 1513. For an, who succeeded him as archbishop, was an able and zealous prelate; but by far the most distinguished Scottish bishop at this period was the learned and holy William Elphinstone, Bishop of Aberdeen 1483-1514, and founder of Aberdeen University in 1494.

In 1525 the Lutheran opinions seem first to have appeared in Scotland, the parliament of that year passing an act forbidding the importation of Lutheran books. James V was a staunch son of the Church, and wrote to Pope Clement VII in 1526, protesting his determination to resist every form of heresy. Patrick Hamilton, a commendatory abbot and connected with the royal house, was tried and condemned for teaching false doctrine, and burned at St. Andrews in 1528: but his death, which Knox claims to have been the starting-point of the Reformation in Scotland, certainly did not stop the spreading of the new opinions. James, whilst showing himself zealous for the reform of ecclesiastical abuses in his realm, resisted all the efforts of his uncle Henry VIII of England to draw him over to the new religion. He married the only daughter of the King of France in 1537, much to Henry's chagrin; but his young wife died within three months. Meanwhile his kingdom was divided into two opposing parties—one, including many nobles, the queen-mother (sister of Henry VIII), and the religiously disaffected among his subjects, secretly supporting Henry's schemes and the advance of the new opinions; the other, comprising the powerful and wealthy clergy, several peers of Scotland, and the great mass of his still Catholic and loyal subjects. Severe measures continued against the disseminators of Lutheranism, many suffering death or banishment; and there were not wanting able and patriotic counsellors to stand by the king, notable among them being David Beaton, whom we find in France negotiating for the marriage of James to Mary of Guise in 1537, and himself uniting the royal pair at St. Andrews. Beaton became cardinal in 1538 and Primate of Scotland a few weeks later, on the death of his uncle James Beaton, and found himself the object of Henry VIII's jealousy and animosity, as the greatest obstacle to that monarch's plans for Scotland. Henry's anger culminated on the bestowal of the pope on the King of Scots of the very title of Defender of the Faith which he had himself received from Leo X; open hostilities broke out, and shortly after the disastrous rout of the Scotch forces at Solway Moss in 1542 James V died at Falkland, leaving a baby daughter, Mary Stuart, to inherit his crown and the government of his distracted country.

James V's death was immediately followed by new activity on the part of the Protestant party. The Regent Arran openly favoured the new doctrines, and many of the Scottish nobles bound themselves, for a money payment from Henry VIII, to acknowledge him as lord paramount of Scotland. Beaton was imprisoned, a step which resulted in Scotland being placed under an interdict by the pope, whereupon the people, still in great part Catholic, insisted on the cardinal's release. Henry now proposed that, if he did not actually originate, a plan for the assassination of Beaton, in which George Wishart, a conspicuous Protestant preacher, was also mixed up. Wishart was tried for heresy and burned at St. Andrews in 1546, and two months later Beaton was murdered in the same city. Arran, who had meanwhile reverted to Catholicism, wrote to the pope deploring Beaton's death, and asking for a subsidy towards the war with England. The Protestants held the Castle of St. Andrews, among them being John Knox; and the fortress was only recovered by the aid of a French squadron. Disaffection and treachery were rife among the nobles, and the English Protector Somerset, secure of their support, led an English army over the border, and defeated the Scottish forces with great loss at Pinkie in 1547.

A few months later the young queen was sent by her mother Mary of Guise to France, which she reached her home for thirteen years. The French alliance enabled Scotland to drive back her English invaders, peace was declared in 1550, and Mary of Guise was appointed regent in succession to the weak and vacillating Arran, entering an office just as a Catholic queen, Mary Tudor, was ascending the English throne. Arran's half-brother, John Hamilton, succeeded Beaton as Archbishop of St. Andrews, James Beaton soon after being appointed to Glasgow, while the See of Orkney was held by the piou, learned, and able Robert Reid, the virtual founder of Edinburgh University. The primate convoked a provincial national council in Edinburgh at which sixty ecclesiastics were present. A series of important canons was passed at this council, as well as at a subsequent one assembled in 1552, one result being the publication in the latter year of a catechism intended for the instruction of the clergy, as well as of their flocks. From 1547 to 1555 John Knox was preaching Protestantism in England, Geneva, and Frankfort, and the new doctrines made little headway in Scotland. In 1555, however, he returned to Edinburgh, and started his crusade against the ancient Faith, meeting with little molestation from the authorities. He went back to Geneva in the following year; but his Scottish friends were emboldened by his exhortations, subscribed in December, 1557, the Solemn League and Covenant, for the express object of the overthrow of the old religion. Angered by the execution of Walter Mylne for heresy in 1558, the lords of the Congregation (as the Protestant party was now styled) demanded of the Queen Regent authorization for public Protestant service. Mary laid the petition before a provincial council which met in 1559, and which, while declining to give way to the Protestant demands, passed many excellent and salutary enactments, chiefly directed against the numerous and crying abuses which had too long been rampant in the Scottish Church. But no conciliar decrees could avert the storm about to burst over the realm.
Knox returned to Scotland in 1559, and inaugurated the work of destruction by a violent sermon which he preached at Perth. There and elsewhere churches and monasteries were attacked and sacked. Troops arrived from France to assist the regent in quelling the insurgent Protestants, while in April, 1560, the English forces, despatched by Elizabeth, invaded Scotland both by land and sea in support of the Congregation. The desecration and destruction of churches and monasteries went on apace; and in the midst of these scenes of strife and violence occurred the death of the queen regent, in June, 1560. Less than a month later, a treaty of peace was signed at Edinburgh, the King and Queen of Scots (Mary had married in 1558 Francis, Dauphin of France), granting various concessions to the Scottish nobles and people. In pursuance of one of the articles of the treaty, the parliament assembled on 1 August, though without any writ of summons from the sovereign.

Although the treaty had specially provided that the religious question at issue should be remitted to the king and queen for settlement, the assembly voted to crown Mary, on the 15th, as regent, and repealed the Confession of Faith; four prelates and five temporal peers alone dissenting. Three further statutes respectively abolished papal jurisdiction in Scotland, repealed all former statutes in favour of the Catholic Church, and made it a penal offence, punishable by death, to administer the Eucharist or hear Mass. All leases of church lands granted by ecclesiastics subsequent to March, 1558, were declared null and void; and thus the destruction of the old religion in Scotland, as far as the hand of man could destroy it, was complete. No time or opportunity was given to the Church to carry out that reform of prevalent abuses which was foreseen in the decrees of her latest councils. As in England the creed of a tyrannical king, so in Scotland the uprightness of a mercenary nobility, itching to possess themselves of the Church's accumulated wealth, consummated a work which even Protestant historians have described as one of revolution rather than of reformation.

III. Third Period: Sixteenth Century to the Present Day.—It does not belong to this article to trace the development of the doctrines and discipline of the new religion which supplanted Catholicism in Scotland. It is sufficient to note that the Reformation did not remain confined to the Church as such. The aim of the Reformers was to stamp out every outward vestige of the ancient Faith before the return of the Catholic queen, now a widow; and the demolition of churches and monasteries continued unabated during 1561. In August of that year Mary arrived in Edinburgh, and was warmly welcomed by her subjects; but it was only with the greatest difficulty that she obtained toleration for herself and her attendants to practise their religion, anti-Catholic riots being of frequent occurrence. The few Catholic nobles, mostly belonging to the north, found themselves more and more unwelcome in Catholic life, while the prelates and clergy were in constant personal danger. Some champions of the Faith there still were, notably Ninian Winset and Quintin Kennedy, ready to risk life and liberty in the public defence of their Faith; and Mary herself did all in her power to cultivate close relations with the Holy See. Her ambassador in France was Archbishop Beaton of Glasgow. Pope Pius IV sent her the Golden Rose in 1561, and dispatched Nicholas of Gouda, a Jesuit, as nuncio to Scotland in the same year. Only one bishop ventured to receive the papal nuncio, an attempt to form a pitiful report of the religious condition. Scottish Episcopacy was weak. Darnley, a Catholic noble, who was proclaimed King of Scots, afforded a fresh pretext to the dissatisfied Protestant lords to intrigue against the throne; and headed by Moray, the queen's own half-brother, they openly revolted against her. Their armed rising was unsuccessful, but their murderous plots continued, and in 1567, Mary's confidant secretary and her husband Darnley were both murdered within less than a year's interval. The seizure of Mary's person by Bothwell, her husband's assassin, and her subsequent marriage to him, belongs to her personal history.

A month after her marriage Mary was imprisoned by her traitorous subjects at Lochleven, and a few weeks later, in July, 1567, she was forced to sign her abdication, and virtually ceased to be Queen of Scotland. Her baby son, James VI, was hurriedly crowned at Stirling, and in August, Moray, now regent, returned to Scotland from Paris, where he had been in communication with the French Protestant leaders. The penal laws against Catholics were now enforced with fresh severity, the Bishop of Dunkblane and many other ecclesiastics being heavily fined, and in some cases outlawed for exercising their ministry. Moray's first parliament renewed and ratified all the ecclesiastical enactments of 1560; but his efforts to conclude an alliance with England and with France were alike unsuccessful. He was also confronted with a strong body of nobles adherent to the cause of Mary, who by their aid escaped from her prison; but in May, 1568, her forces were defeated by those of the regent at Langside, and the unfortunate Mary was forced to flee to England, where she was not to quit till her tragic death nineteen years later. The regent, after the abortive conferences at York and Westminster dealing with the charges against his sister, returned to Scotland, and continued, with the support of the general assembly of the Kirk, his severest measures against the Catholics. Every indignity short of death was inflicted on the priests who were apprehended in various parts of the kingdom; but whilst intriguing to obtain possession of the queen's person, Moray was suddenly himself cut off by the bullet of an assassin. Lennox, who succeeded him as regent, proved a vigorous antagonist of Mary's adherents; and one of the foremost of these, Archbishop Hamilton, was hanged at Stirling after a mock trial lasting three days. Robert Hay, chosen to succeed him by the few remaining members of the chapter, was never consecrated, and the primatial see remained unoccupied by a Catholic throughout James's reign. His successor continued Lennox as regent, and Morton followed Mar, being chosen on the very day of John Knox's death (24 Nov., 1572). The iron hand of both pressed heavily on the Catholics, and we find the Privy Council publishing in 1574 a list of outlawed, including several bishops, any dealing with whom is forbidden under pain of death. All Papists cited before the civil tribunals are to be required to renounce their religion, subscribe to Presbyterianism, and receive the Protestant communion. The persecution at home had had the effect of driving many distinguished Scottish Catholics to the continent. In 1568 the residence of the bishopric of Glasgow was transferred to Antwerp, and since 1586 the residence of Archbishop Beaton of Glasgow, and of the able and learned Bishop John Leslie of Ross, both devoted friends and counsellors of Queen Mary.

The hopes that the young King James, who had been brought up and crowned with Catholic rites, might grow up in the religion of his ancestors, were destroyed by his signing in 1581 a formal profession of his adherence to Protestantism and disestablishment of Popery. This did not prevent him from entering into personal communication later with Pope Gregory XIII, when he thought his throne in danger from the claim of Queen Mary. He took the same time conciliatory measures towards his Catholic subjects, and affected solicitude for his unfortunate mother; but he never made any practical efforts to
obtain her release, and her cruel death in 1586 seemed to leave him singularly callous, though he attempted to appease the Catholic nobles, in their deep indignation at Mary's execution, by restoring Bishop Beaton to his former dignities, and appointing Archbishop Beaton his ambassador in France. There was at this time a distinct reaction in favour of Catholicism in Scotland, and a number of missionaries, both secular and religious, were labouring for the preservation of the Church. Kirk, of course, took alarm, and urged on the king the adoption of the severest measures for the suppression of every vestige of Catholicism. James himself headed an armed expedition against the disaffected Catholic nobles of the north in 1584, and after one severe rebuff put Huntly and Errol, the Catholic leaders, to flight. They left Scotland forever in 1585, and thenceforward Catholicism, as a political force to be reckoned with, may be said to have been extinct in Scotland. A large proportion of the people, however, still clung tenaciously to their ancient beliefs, and strenuous efforts were made, in the closing years of the sixteenth century, to eradicate the spiritual remnants of what was now a missionary country. In 1576 Dr. James Cheyne had founded a college to educate clergy for the Scotch Mission, at Tournai; and after being transferred to Pont-a-Mousson, Douai, and Louvain, it was finally fixed at Douai. The Scots College at Reims was opened by Pope Clement VII, and there was also a Scots College in Paris, dating from 1325, while the Scots abbeys at Ratibon and Wurzburg likewise became after the Reformation the nursery of Scottish missionaries.

In 1568 the secular clergy in Scotland were placed under the jurisdiction of George Blackwell, the newly-appointed archbishop of England. Many devoted Jesuits were labouring in Scotland at this time, notably Fathers Creighton, Gordon, Hay, and Abercromby, of whom the last received into the Catholic Church Anne of Denmark, the queen of James VI, probably in 1569, and made other distinguished converts. James's accession to the Crown of England in 1603, on the death of Queen Elizabeth, gave him much new occupation in regulating ecclesiastical matters in his new kingdom, and also in introducing, in the teeth of bitter opposition, the Episcopal system into Scotland. Pope Clement wrote to him in 1603 using him to be lenient and generous towards his Catholic subjects, and after long delay received a civil but vaguely-worded reply. James's real sentiments, however, were shown by his immediately afterwards decreeing the banishment of all priests from the kingdom, and returning to the pope the presents sent to his Catholic queen. The remainder of his reign, as far as his Catholic subjects were concerned, was simply a record of confiscation, imprisonment, and banishment, inflicted on all classes impartially; and one devoted missionary, John Ogilvie, suffered death for his Faith at Glasgow in 1615. The negotiations for the marriage of James to a daughter of Spain, and, after Henrietta Maria of France, occasioned a good deal of communication between Rome and the English Court, but brought about no relaxation in the penal laws. In 1623 William Bishop was appointed vicar Apostolic for England and Scotland; but the Scotch Catholics were afterwards withdrawn from his jurisdiction, and subjected to their own missioners and prefects. James VI died in 1625, after a reign which had brought only calamity and suffering to the Catholics of his native land.

The thirty-five years which elapsed between the succession of Charles I and the restoration of his son Charles II, after the change of the house of Stuart, were perhaps the darkest in the whole history of Scottish Catholicism. Charles I sanctioned the ruthless execution of the penal statutes, perhaps hoping thus to reconcile the Presbyterians to his unwelcome liturgical innovations; and his policy of continuing Bishop Beaton's persecution of the Catholics and the Catholics. Queen Henrietta Maria, whom Pope Urban VIII urged to intervene on behalf of the Scotch Catholics, was powerless to help them, though a few instances of personal clemency on the part of Charles may be attributable to her influence. Meanwhile the Presbyterians laboured to destroy not only what was left of the abbeys and other buildings of Catholic times, but to uproot every Catholic observance which still survived. In the height of the persecution we find steps taken in Rome to improve the organisation of the Catholic body in Scotland; and in 1633 the scattered clergy were placed under the spiritual direction of a bishop of their own, to give a more practical effect to the mission. They numbered only five or six at that date, the missionaries belonging to the religious orders being considerably more numerous, and including Jesuits, Benedictines, Franciscans, and Lazarists. Missionaries from Ireland were also working on the Scotch mission, and a college for the education of Scotch clergy had been opened at Madrid in 1633, and was afterwards moved to Valadolid, where it still flourishes.

Charles II, who succeeded his father in 1660, was undoubtedly well-disposed personally towards Catholics and their Faith; but his Catholic subjects in Scotland enjoyed little more indulgence under his reign than they had done under the Presbyterians. The odious separation of children from their parents for religious reasons continued unabated; and in the districts of Aberdeenshire especially, where Catholics were numerous, they were treated as rigorously as ever. We have detailed reports of this period both from the prefect of the clergy, Winster, and from Alexander Leslie, sent by Propaganda in 1677 as Visitor to the Scottish mission. Their view of the religious situation was far from encouraging; but fresh hopes were raised among the Catholics, eight years later, by the coronation of a Catholic king. Charles II, who at once suspended the execution of the penal laws, declaring himself in favour of complete liberty of conscience. He opened a Catholic school at Holyrood, restored Catholic worship in the Chapel Royal, and gave annual grants to the Scots Colleges abroad and to the secular and regular missionaries at home. But the Catholics had hardly time to enjoy this respite from persecution, when their hopes were dashed by the Revolution of 1688, which drove James from the throne. William of Orange, notwithstanding his promises of toleration, did nothing to check the fanatics who plundered and murdered the Catholics, and in 1689 suspended the execution of the penal laws, declaring himself in favour of complete liberty of conscience. He opened a Catholic school at Holyrood, restored Catholic worship in the Chapel Royal, and gave annual grants to the Scots Colleges abroad and to the secular and regular missionaries at home. The immediate result of the salutary measure of 1829 was the rapid extension and development of the Church in Scotland. A new ecclesiastical seminary was, by the generosity of a benefactor, established at Blairs, near Aberdeen: the first converts were received at the beginning of 1832, and in Glasgow about the time the new postmaster of Scotland was appointed. The new college mounted up from a few scores to 24,000. Prominent among the bishops of Scotland during the first half of the nineteenth century was James Gillis, who was nominated as coadjutor for the Eastern District in 1837, the first year of the reign of Queen Victoria, and laboured indefatigably as an instrument of reform and spiritual reformer for nearly thirty years. The wave of conversions from Anglicanism which originated in the Tractarian movement in the Church of England was felt also in Scotland, where several notable converts were received during Bishop Gillis’s episcopate, and several handsome churches were built, and new missions established, through their instrumentality. Many new schools were also erected, and more than one convent founded, under the zeal of the prelate, and in the Western District the progress of Catholicism was not less remarkable. Bishop Andrew Scott, who was appointed to the see of Glasgow in 1841 and died as vicar Apostolic in 1846, saw during the interval the Glasgow Catholics increase from one thousand to seventy thousand souls; and his successors, Bishops Murdoch and Gray, were witnesses of a similar increase, and did much to multiply churches, missions, schools, and Catholic institutions throughout the vicariate. While in the sparsely-inhabited region included in the Northern Vicariate there was not, during this period, the same remarkable numerical increase in the faithful as in the more populous parts of Scotland, the work of organisation and development there also went on steadily and continuously.

During the thirty years’ pontificate of Pius IX the question as to the advisability of restoring to Scotland her regular hierarchy was from time to time brought forward; but it was not until the very close of his reign that this important measure was practically decided on at Rome, partly as the result of the report of Archbishop Manning, as Apostolic Visitor to the Scottish Church, on certain grave dissensions between Irish and Scottish Catholics which had long existed in the Glasgow district. Pius IX did not live to carry out his intention; but the very first official act of his successor Leo XIL was to lift the ban on the Scottish hierarchy by his Bull “Ex Supremo Apostatus apio” dated 4 March, 1878. Thus re-established, the hierarchy was to consist of two archbishops: St. Andrews and Edinburgh, with the four suffragans sees of Aberdeen, Argyll and the Isles, Dunblane, and Galloway, and a bishop, without suffragans. The exotic religious body styled the Scottish Episcopal Church immediately published a protest against the adoption of the ancient titles for the newly-erected sees; but the papal act roused no hostile feeling in the country at large, and was generally and sensibly recognised as one which concerned no one except the members of the Catholic body. They on their side welcomed with loyal gratitude a measure which restored to the Church in Scotland the full and normal hierarchical organisation which properly belongs to her, and which might be expected to give the same consoling results as have followed a similar act in England, Holland, Australia, and the United States.

If the “second spring” of Catholicism in Scotland has been less fruitful and less remarkable than in the countries just named, Scottish Catholics have nevertheless much to be thankful for. For the past thirty years to what has been done in the way of growth, development, better equipment, and more perfect organisation. Between 1878 and 1911...
the number of priests, secular and regular, working in Scotland has increased from 257 to 555; of churches, chapels, and stations, from 255 to 394; of congregational schools from 157 to 213, of monasteries from 15 to 26, and of convents from 11 to 28. The Catholic population, reckoned to number in 1787 about 380,000 souls, has increased to fully 520,000. Of these only some 25,000, including the Gaelic-speaking inhabitants of the Western Highlands and islands, and of the Diocese of Aberdeen, are of purely Scottish descent, the other dioceses comprising a considerable number of Catholics of Scottish blood. The rest of the Catholics of Scotland, including at least 375,000 people in the single Archdiocese of Glasgow, are either themselves entirely Irish by birth and race, or descended from recent immigrants from Ireland into Scotland. Glasgow also harbours, of course, a considerable but fluctuating body of foreign Catholics; and a certain number of Catholic Poles and Lithuanians are, always employed in the coal-fields and iron-works of central Scotland. But it would probably be within the mark to estimate the Irish element in the Catholic population north of the Forth as amounting to between 90 and 95 per cent of the whole; and its tendency is to increase rather than to diminish.

The education of clergy for the Scottish mission is carried on at Blairs College, Aberdeen (number of students, 80); at St. Peter's College, near Glasgow (52), and at the Scottish College at Rome (33), and at Vatertor (14). There are also a few Scottish students at the College of Propaganda at Rome; and 20 more, on French foundation-burses, were being educated in 1911 at the Ecole supérieure de Théologie at the College of Issy, near Paris. Good secondary schools for boys are conducted by the Jesuits at Glasgow, and by the Marist Brothers at Glasgow and Dumfries; and there are excellently equipped boarding-schools for girls at Aberdeen, Edinburgh, and elsewhere, under religious of various orders. The Sisters of Notre Dame are in charge of a fine training-college for teachers just outside Glasgow; and a hospital at Lanark is managed by the Sisters of Charity, as well as a large orphanage for destitute children. The Nuns of the Good Shepherd, the Sisters of Nazareth, and the Little Sisters of the Poor carry on their works of charity and beneficence with zeal and success, being largely helped by kindly and substantial; and many of the religious order's education to the teaching orders of the Catholic Church. In the larger centres of population there is still a good deal of sectarian bitterness, fomented of course by the members of Orange and similar societies, but on the whole religious animosities have greatly declined in recent times, and in those districts of the Highlands where Catholics are most numerous, they live as a rule on terms of perfect amity with their Presbyterian neighbours.

The public elementary schools of Scotland are controlled and managed by the school boards elected by the parents of each municipality; and Government grants of money are made annually not only to these schools, but also to other schools (including those under Catholic management) which, in the words of the Act of Parliament of 1872, are “efficiently contributing to the secular education of the parish or burgh in which they are situated.” The amount of these grants, conditional on the attendance and proficiency of the scholars, the qualifications of the teachers, and the state of the schools; and the schools are liable to be inspected at any time by inspectors appointed by the Crown on the recommendation of the Scotch Education Department, and empowered to decide that the conditions necessary for obtaining the government grant have been fulfilled. No grant is made in respect of religious instruction; but such instruction is sanctioned and provided for in the code regulating the scheme of school work, parents being, however, at liberty to withdraw their children from it if they please. No complete statistics are available as to the total number of children in the Catholic elementary schools; but in the Archdiocese of Glasgow and the Diocese of Galloway, which together comprise fully four-fifths of the Catholic population of the country, 66,482 children were presented in 1910 for religious examination. Besides the elementary schools, what are known as “higher grade schools” also receive grants in proportion to their efficiency, special additional grants being made to such schools in the six Highland counties.

With regard to the legal disabilities under which Scottish Catholics still lie, notwithstanding the Emancipation Act of 1829, it is unnecessary, as the provisions of that act apply to Scotland equally with England, to do more than refer to the article England (part II: England since the Reformation).

The only specifically Scottish office from which Catholics are debarred by statute is that of Lord High Commissioner to the General Assembly of the Established Church. In the course of course, would desire to hold. The clauses in the Act of 1829 providing for the “gradual suppression and final prohibition” of religious orders of men have in practice remained a dead letter; but they have in Scotland, as in England, the effect of seriously restricting the tenure and dispensation of their property by religious communities. All trusts and bequests in favour of religious orders are void in law; and the members of such orders can hold property only as individuals. The English statutes (of Henry VIII and Edward VI) invalidating bequests made to obtain prayers and masses, on the ground that these are superstitious and heretical, do not apply to Ireland or to Scotland; and it is probable the Scottish courts would recognize the validity of such bequests, as the Irish Courts undoubtedly do. See Liley and Wallis’s “Manual of the Law specially affecting Catholics” (London, 1863.)

I. Celtic Period: Inver, Critical Essay on the Ancient Inhabitants of Scotland (London, 1790); Skene, Celtic Scotland (Edinburgh, 1878-80); EDEN, Chronicles of the Picts and Scots (Edinburgh, 1881); LOGAN, The Scottish Gael (Inverness, u. a.); ANDERSON, Scotland in Early Christian Times (Edinburgh, 1881); WING, Archaeology and History of Scotland (Edinburgh, 1851); CAMERON, Religion in Caledonia (Inverness, 1885); MACLOUGH, Religion in Scotland (Edinburgh, 1880); EDINBURGH, The Royal Scottish Geographical Society (Edinburgh, 1879); CESSON, Religion in Protestant Scotland (Edinburgh, 1890); Dowzer, The Celtic Church in Scotland (London, 1894); LEAH, The Christian Faith in Early Scotland (London, 1885).

The Scottish Literature.—Literature in Scotland may be said to begin with the Life of St. Columba written by Cuimine, or Cuminum, who be-
came Abbot of Iona in 657. This was enlarged, in 690, into the celebrated "Vita Sancti Columbae"; by Adamnan, himself Abbot of Iona from 679 until his death in 704. Adamnan also wrote "De Situ Terrae Sanctae". Other early Latin writers to whom the Scottish Borders may perhaps lay claim are Michael Scott (c. 1175-1250), who was in his own day and since then more celebrated as an astrologer and mathematician than as a philosopher and expounder of Aristotle, and John Duns Scotus (1265-1308), the Doctor Subtilis of the Franciscans. The early Gaelic Literature of Scotland, as represented by the Ossianic Ballads and the other legends and poems contained in the Book of Leinster, was compiled about 1512-26; can scarcely be called distinctly national, and falls more conveniently under the general heading of Celtic Literature. Under that heading, too, are appropriately grouped the collections in "The Book of Fernaig" (1688-90) and in the "Beauties of Gaelic Poetry", as well as the various works written in Scottish Gaelic during the eighteenth and nineteenth centuries.

The present article is mainly concerned with that which is generally regarded as Scottish Literature proper, namely, the body of writing produced by native writers, the popular or distinctive English called, in the earliest times, Anglian, in the fourteenth, fifteenth, and early sixteenth centuries, Inglis, and from that time onward, Scots, or Scottish. This language, which had once held powerful sway as the vehicle of literary expression used by poets, preachers, and chroniclers in great part of Northern England and in that portion of modern Scotland which had of old belonged to the Kingdom of Northumbria, sank, about the fourteenth century, to the level of a dialect in the region south of the Tweed and the Cheviots, but continued for some two hundred years as the written or spoken language north of those boundaries as the official speech of the Scottish Court and kingdom, and as the spoken and written tongue of the great majority of the Scottish people. From the fifteenth century it spread to west and north, and was modified by contact with Highland Gaelic, on the one hand, and French and Latin, on the other, until it acquired characteristics and peculiarities which differentiated it not only from standard English, but also from its own cognate dialects in use in Northern England. It has been divided into three periods, namely: Early Scottish, extending down to 1475; Middle Scottish, the national period, from 1475 to 1650; and Modern Scottish, the dialectal period, from 1650 down to the present.

The earliest Anglian writing extant in Scotland is a runic inscription on the Ruthwell Cross in Dumfrieshire, which, long erroneously interpreted as Scandinavian, has been definitely deciphered as portion of a Caedmonian poem on the Death of Christ in the Northumbrian, that is the Anglian, dialect. This inscription may belong anywhere from the end of the seventh to the middle of the tenth century. A "Can tus" or lament, in eight very passable lines, composed soon after the death of King Alexander III of Scotland, which took place in 1286, is preserved by Andrew of Wyntoun in his Chronicle. We have also, from other chronicles, evidence to show that patriotic and satirical songs were composed in Scotland against the English, when King Edward I was engaged in his war of conquest at the end of the thirteenth century. Among the greatest of the whole is again when, at Bannockburn (1314), Bruce secured the independence of his country by his crushing defeat of the army of King Edward II. We may also infer from a statement of Barbour's that Border ballads were probably composed at an early period.

The life of the nation of Scotland to be named by name used to be Thomas Rymour (fl. 1280) of Erclisduone (or Earlston, in Berwickshire), because of his supposed authorship of the romance of "Sir Tristrem"; but more recent investigations tend to show that "Sir Tristrem" was the work of an Englishman earlier in date than the Scottish claimant. On the other hand, modern research seems destined to award a conspicuous niche in the Scottish literary history of the thirteenth century to the anonymous author of the "Historia Albionae". He is mentioned with much praise in Andrew of Wyntoun's Chronicle as having made the "gret gest off Arthur", the "Awyntyre [Adventure] of Gwayne", and the "Pystyll [Epistle] of Suete Susane". Eighty or ninety years later Dunbar laments the "gude Sry Hew Eglentoun". It has been generally assumed that Huchown and Sir Hugh of Eglinton, a nobleman of Ayrshire who played a conspicuous part in Scottish history for about twenty-five years, from 1350 to 1375, are one and the same. The "gret gest" has been identified with the "Morte Arthure", a non-romising alliterative poem, and the "Awyntyre of Gwayne", with a poem of similar metric scheme, entitled "Sir Gawane and the Grene Knight". Besides these works and the "Pystyll", there have also been attributed to Huchown the "Destruction of Troy" (from Guido delle Colonne's "Destructio Trojae"); the "Wars of Alexander" (from the "De Febris Alexandri"); the "Perece"; and the "Thebaide", from the French poems "Fuere de Cadres" and "Voeux de Paon"; the "Awyntyre of Arthure"; and, with other alliterative poems, "Cleanness", "Patience", and "Pearl". This output would be so remarkable alike for quantity and quality that, should Huchown's claim be finally substantiated, he will be entitled to rank among the very greatest of the Scottish poets. Other poems on the same metrical plan as the "Awyntyre of Arthure", that is, in rhyming stanzas with constant alliteration, are the "The Knightly Tale of Golagros and Gwayne" which, derived from the "Perceval" of Chrétien de Troyes, was written north of the Tweed. The author, who died about the end of the fifteenth century; the "Buke of the Howlat [Owl]", an allegory against pride, suggested probably by Chaucer's "Parlement of Foules", and written about 1452 by Richard Holland, a priest of Balcirks in Caithness; and the anonymous "Tale of Rauf Collesaer", written about 1470, and dealing with the story of Charlemagne and the charocal burner.

The War of Independence, making as it did for an intense national sentiment, reacted correspondingly on the literature of the country, and for a time poets and historians from the mythical pasting of romance were in verse in the blood exploits of the nation of Scotland. Foremost among the writers of this national epic stands the memorable figure of John Barbour (c. 1316-1396), Archbishop of Aberdeen. His poem of "Brus" or "The Bruce", in about 700 octosyllabic caesuras, tells the life-story of Bruce, and ends with the burial of the hero's heart at Dunblane. This monument is, with the exception of one or two lapses, in the main historically accurate; this, too, although it shows many traces of the influence of the French romances. "The Bruce" is a dignified composition, abounding in description, and all aglow with patriotic fire. To Barbour are also assigned a translation of part of a medieval romance on the "Trojan War" and the metrical "Legends of the Saints". More doubtfully—on account of confusion of dates—he has been credited with the translation from the French of "The Buik of the most noble and valiaised Conquerour Arthur and all the Conquerours of the world", a work of epic metre, and phrase, closely resembles "The Bruce". What Barbour did for Bruce, Blind Harry, or Harry the Minstrel (d. 1492), sought to do for the other great national hero, William Wallace. Blind Harry's "Wallace" is in 11,858 lines of heroic verse. It is not so faithful to the facts of history as "The Bruce" because it is intensely patriotic, and has been, in its original form and also in an early eighteenth-century modern-
ized form, a stimulant of national feeling through the ages.

The desire to celebrate the history of the nation is also shown in the "Orygynale Cronykil" composed about 1420 by Andrew of Wyntoun, canon regular, who lived not accordant past 1435 at St. Bridget in Loch Lven. The "Cronykil", which is in rhyming octosyllabic couplets, is the story of the world from its creation, in nine books, the last four of which dealt specifically with English and Scottish affairs. John Fordun (d. 1387), canon of Abercrombie cathedral, wrote in Latin the annals of Scotland: his "Scottichronicon" coming down to the death of David I in 1153. It was continued, also in Latin, down to the death of James I in 1437 by Walter Bower, or Bowmaker (d. 1449), abbott of the monastery of Austin Canons on Inchholm in the Firth of Forth.

The influence of Chaucer on Scottish poetry in the fifteenth and early sixteenth centuries was very great. It is evident in the "Kingis Quair"—the King's Quire or Book—of James I (1394-1437). During his long years of imprisonment in England (1400-24) James made a study of Chaucer, and in his noble poem, written in Latin, he addressed the "Jarl" or Great Earl, his sovereign in his indebtedness to his master. The "Kingis Quair" is in the seven-line stanza which, though previously written by Chaucer and others, has ever since James's time been called rime royal. To James are also assigned "A Ballad of Good Counsel" and, with considerable doubt over the authorship of some scholars, the "Song on Absence", "Feast of the Play", and "Chystis Kirk of the Grem", the last two uproarious descriptions of popular amusements. Another Scottish Chaucerian is Robert Henryson (1430-1506), notary public and preceptor in the Benedictine convent at Dunfermline. His principal works are "The Morall Fabillis of Esoe", written in number, with two Prologues; "Orpheus and Eurydice"; "The Testament of Cresseide", a sequel to Chaucer's "Troylus and Cresseide"; the "Garum of Gude Ladies"; and "Robene and Makenye", the first specimen of pastoral in the Scottish vernacular. Henryson had a real poetic gift and great mastery of style, and he holds a high position among the Scottish poets. The greatest of the Scottish Chaucerians was William Dunbar (c. 1400-1513). At one time a Franciscan and afterwards a secular priest, he appears to have been more of a courtier than a churchman. His output of poetry was prodigious. He has been called the "Bard of Scotland", reckoned by many the most important poet of Britain between Chaucer and Spenser. Seven of his poems, printed in 1508 at Edinburgh, are among the earliest specimens of Scottish typography. His principal works are "The Thresill and the Rois", a political allegory composed in honour of the marriage (1503) of James IV of Scotland and Margret Tudor, daughter of Henry VII of England; "The Golden Targe", another allegory; "The Merle and the Nightingale", a didactic allegory; the "Lament for the Makaris", a moralising poem; the "Dance of the Sevin Deidlie Syna", a ninefold tale of "The Lament for the Makaris", a moralising poem; the "Dance of the Seven Deadly Sins", a ninefold tale of "The Lament for the Makaris", a moralising poem; the "Tua Mariit Wemen and the Wede". Dunbar had poetic verve and an exuberant imagination; he had also a humour which was of the cynical order and frequently degenerates into mere ribaldry; and his mastery over satire has been seldom surpassed. He had a flyting, or poetical mock-contest, manner, which place his poems seemed to reach the depths of seculiarity. Apart from this, Kennedy's other poems are mostly moral and edifying. They are "The Praise of Aige"; "Ane Agit Man's Invective"; "Ane Ballat in Praise of our Lady"; and a fragmentary poem "On the Passion of Christ".

Gavin Douglas (c. 1475-1522), third son of Archibald, Earl of Angus ("Bell the Cat"), was successively Provost of St. Giles's in Edinburgh, Abbot of Arbroath, and Bishop of Dunkeld. He is famous for his complete translation of the "Eneid" (1513) into Scottish vernacular verse. It is the first translation of a great Latin poet into any British tongue. The metre employed is the heroic couplet. The translation of "The Iliad" (1516-17) is the first attempt in Scotland to bring the genius and beauty of this great epic to the public. Douglas's original poems are his Prologues to the several books of the "Eneid"; "The Palace of Honour" (1501), an allegory meant to show the triumph of virtue over adversity; "King Hart", an allegory on the temptations that beset man, and "The Passions", a short moral poem. Sir David Lyndsay (c. 1490-1555), Lyon King of Arms, was probably the most popular of the Scottish poets before Burns. He was a severe satirist of corruption in Church and State, and spares neither pope nor clergy, neither nobles nor king. His first poem, "The Dreme" (1528), has a beautiful Prologue. "The Dreme", itself is a somewhat wearisome description of what was to be seen in hell, in heaven, in purgatory, and on earth, and abounds in criticism of the condition of Scotland. In much the same vein are "The Complaynt to the King" (1529) and "The Testament and Councel of the Soveran Lordis Papyng" (1530). Of his numerous other works the most important are "The Historie and Testament of Squer William Meldrum" (1550); "Monarchie" (1553); and "Ane Pleasant Satyre of the Thrie Estaitis". The last mentioned is a rude drama combining the moral, the interlude, and the modern play, and was meant to satirise the actions of the nobles, the merchants. It is interesting in literary history as the only surviving specimen of the old Scottish vernacular plays, many of which, we know, must have been written.

Minor poets, contemporaries of Dunbar, were: Sir John Rownt, who wrote "The Cuming against the Steilari of his Fouls"; Quintyns Shaw, "Advice to a Courtier"; Patrick Johnstone, "The Three Deid Powis"; John Mearse, "Perrell in Paramours"; and James Ailff, "The Quair of Jelousy". Anonymous pieces of this period are: "Eleye on the Princes Margarett", daughter of James I of Scotland and wife of the Dauphin, afterwards Louis XI of France; "Cockell's Sow", which combines burlesque and fable, prowess and true love, in an extraordinary medley; "The Wowing of Jok and Jynny", a coarse tale of love-making; "Gyre-Carling", dealing with the perils of the sea; and a moral fragment—a burlesque of romance; "The Wife of Auchtermuchty", a version of a folk-tale of domestic rivalry; "Sym and his Brudir", a pointed satire on palmers; "The Thrie Priests of Pehls" didactic tales told by the device of bringing three priests together in an inn at Peebles; and "Grey Steill" and "Clariodius", both romances.

The old Scottish Border ballads and others, which are to be found in such collections as those made by Percy, Scott, Furnivall, and Child, present a study of absorbing interest. Nothing more can be done than to indicate the appeal of the brevity of narration, their rhythm and lift, their appeal to the primal feelings of human nature, their occasional patriotic spirit, and their still rarer flashes of humour. Many of the best of them belong to the fifteenth and sixteenth centuries. Such examples as "The Battle of Otteburn"; "Rimmont Wille"; "Mary Hamilton", "Sir Patrick Spens"; "The Young Tamlano", and "Jamie Teller of the Fair Dodhead"—to name only a few—have been a source of perennial delight to successive generations of readers.

Scottish prose literature in the fifteenth century is not much accounted for. Among the most important works are: "Ane Sobert Memoriale of the Scottis Cronikils", which belongs to about the year 1460; "The Craft of Dying" and other religious works; and Sir Gilbert Hay's translations of the "Buke of Battaillie" and the
“Buke of the Order of Knighthede” from the French, and the “Buke of the Governaunses of Princes” from the Latin. In the sixteenth century, however, the Knoxes and their contemporaries, John Preston, John Bale (c. 1470-1550), philosopher, and historian, Provost of St. Salvator’s College, St. Andrew’s, wrote, besides commentaries on Peter Lombard and maxims of the Church in his “Lectures on the Prophecies,” a translation of the “De Historia Gentis Scotorum Libri Sex,” printed at Paris in 1521. Hector Boece (c. 1465-1538), principal of King’s College, Aberdeen, canon of the cathedral in that city, and rector of Tyrvie in the same county, published in 1522 his “Historia Gentis Scotorum” and in 1521, his “Vita” and in 1527, in seventeen books, his “Scotorum Historia a prima gentis origine.” Boece’s Latin is much more elegant than Major’s, but his credulity as well as his historical facts many marvels which Major had rejected. A free translation of Boece’s work, made by John Bellenden (d. 15607), archdeacon of Moray and canon of Roos, was printed at Edinburgh in 1536, under the title of “Hystory and Croniklis of Scotland.” Bellenden’s style is a fine example of teso Scottish prose. Bellenden also translated in 1533 the first five books of Livy, published in 1522. An anonymous work, “The Complaynt of Scotland,” printed at Paris in 1549, was long regarded as a notable specimen of original Scottish prose, but recent investigations have proved that it is mainly a translation or plagiarism from the French. Its purpose is to lament the calamities to which Scotland was then subject. It is written in what has been called the “suraete” or “Ciceronian” style, employing numerous Latin and French words, and in this respect affords a striking contrast to Bellenden’s more homely vernacular. The “Complaynt” is interesting, among other reasons, because the last it gives of the songs and songs popular in Scotland, some of which are no longer to be found.

As the ecclesiastical controversy of the sixteenth century grew in intensity, a great development was given to religious and polemical works. In 1542, by order of John Hamilton, Bishop of Ross, the last Catholic Primate of Scotland before the Reformation, there was published at St. Andrew’s a “Catechism, that is to say ane Common and Catholike Instruction of the Christian People in Materia of our Catholike Faith and Religions.” This was the people’s book of the Reformation, the basis of the new doctrine, and is justly regarded as a noble example of the Scottish vernacular of that period. It was edited by Dr. Thomas Graves Law for the Clarendon Press in 1894. There were many Scottish Catholic writers of this century to whose works sufficient attention has not hitherto been given. Foremost among them is Ninian Winyet, or Winset (1518-92), who in the religious upheaval was deprived of his position as provost of the collegiate church of Linlithgow, subsequently held offices at the University of Paris and at the English College at Douay, and died as Abbess of St. James’s Monastery at Ratisbon. His works include “Certaine Tractatis for Reformation of Doctryne and Maners” and the “Buke of Four Scoir and Thre Questions.” Quintin Kennedy (1520-1564), Abbot of Crossraguel and son of the Earl of Cassillis, had a celebrated “Disputation” with Father Eding. He published a “Complement of a Compendius Tractise to establish the Conciense of a Christian man.”

John Hay, a Jesuit, who was expelled from Scotland in 1579, printed at Paris, in 1580, his “Certaine Demandis.” In the same year Nicol Burne, a Catholic, published his “Debates concerning the Controversit Headsis of Religion”, and another priest, John Hamilton, published, in 1581, “Ane Catholike and Faiclie Treatis”. There were also published several works of Scottish towns, such as Andrew Craig (c. 1512-1600) and Robert Rollock (c. 1555-99), to say nothing of John Gau, who as early as 1533 had published the first prose treatise on the reformed religion in the Scottish vernacular, namely, “The Right Way to the Kingdom of Heuine.” But the most famous of those who wrote in the vernacular (“The Chamaeleon” and the “Admonition to the trow Lordis”), and whose Latin writings, especially his paraphrase of the Psalms and his “Herum Scotiarum Historia”, gave him an enormous reputation. He was undoubtedly one of the best Latin scholars of modern times. Two of his four Latin tragedies, the “Baptistes” and the “Ephebes”, had a great effect on the German drama.

Scottish history in the vernacular was continued by Robert Lindsay (c. 1500-1565) of Pitcove in his “Chronicle of Scotland” from 1436 to 1475. John Leslie, or Leeley (1527-98), Bishop of Ross, and principal of St. Andrew’s College, wrote in Scottish a “History of Scotland” from the death of James I to his own time, which he subsequently translated into enlarged form into Latin, under the title of “De origine, moribus, et rebus gestis Scotorum”; it was published at Rome in 1578. In 1590 this work was translated into Scottish by Father James Dalrymple, of the monastery of St. James’s at Ratisbon. Always consistent in his championship of Mary Stuart, Leslie wrote in 1599 a “Defence of the Honour of Marie Queene of Scotland and Dowager of France”. Useful for historical details of the “Martyrs and Saints of the Kirk” (1535-1617) and the “Diary” of James Melville (1556-1614). Sir Richard Maitland (1496-1586) wrote a “Historic of the House of Seytoun” and a goodly number of poems; but he is best remembered for the magnificent collection of Early Scottish Poems by various authors, which he himself compiled with the aid of his daughter, he got together, and which is now preserved in the Pepysian Library at Magdalen College, Cambridge. A similar collection, and a very valuable one, made by George Bannatyne, enriches the Advocat’s Library at Edinburgh.

The Reformation in Scotland was materially advanced by “The Gude and Godlie Ballatiz”, the popular name of a collection of poems, partly devotional, partly satirical, which, first published about 1546, had subsequently a wonderful vogue, the formal title being “Ane Compendious Buke of Godlie Psalmes and Spirituall Songes for Singing of Sinne and Harlotrie”. Learned by heart and sung everywhere, these psalms and songs provided a ready means for prejudicing the minds of the people against the ancient Church. The major portion of the book would appear to be the work of three brothers, James, John, and Robert Wedderburns. The campaign was carried on after the Reformation by Robert Semplil (1530?-95) in “The Semplil Ballates”, which are coarse but clever satires against all who differed from the writer in politics or religion. Poets of a different vein were Alexander Scott (1525?-94) and Alexander Montgomerie (c. 1518-81), called the Scottish Anacreon. He wrote thirty-six short poems, nearly all satirical. His most remarkable pieces are “Ane New Yeur Gift to Quene Mary” and “Justing at the Drum”. Montgomerie’s fame rests mainly on “The Cherrie and the Sise” (1597), an allegory on virtue and vice. He also wrote “The Banks of Helicon” and some seventy sonnets, many
of which are direct translations from the French poet of the Pleiad, Pierre de Ronsard. Mary Stuart’s son, James VI of Scotland (1566-1625), who as James I of England was the first monarch to reign over both countries, has received, in the Old Testament of George Buchanan, and practised composition both in verse and prose, and, as beffited a sovereign of the dual kingdom, he wrote not only in Scottish but also in English. Some of his poetical works are “Essays of a Prentise in the Divine Art of Poetry,” “Anne Scottiz Poesies,” “Learned Education from The Eucharist,” “The Prose” he wrote “Doenomology” (1597); “Basilicon Doron” (1599); and “A Counterblast against Tobacco” (1604).

Alexander Hume (1560-1609), Puritan minister and son of Baron Polwarth, published, in 1596, an era of the so-called political and religious controversy, in the Right Use of Poesie may be espyd”. “The Triumph of the Lord” is the title he gives to his poem on the defeat of the Spanish Armada. Robert Sempill (1595-1659), a kinsman of the author of “The Sempill Ballates”, was a humorous and satirical writer. He continued his father’s, Sir James Sempill’s, satire against the Catholic Church, “The Packman’s Patriaest”, and wrote many other pieces. He is best remembered for “The Life and Death of Habbie Simson, Piper of Kilbarchan”. The stanzas of six lines, which he employed in this volume, were long after the Scottish poet. Shakespeare became typical of later poems, especially of a facetious type, in the Scottish vernacular. It is known as the “Habbie Simson stanss”, and is frequently used by Burns. The Scotch tradition for good Latinity was carried on by John Barclay (1582-1621) and Arthur Johnston (c. 1587-1614). John Rusbain’s Latin works include elegies and epigrams, a paraphrase of the Canticle of Canticles, and a complete version of the Psalms. He was editor of the “Deliciae Poetarum Scotorum”, a collection of Latin poems by various authors. Barclay wrote “Euphonios Salyricos” (1603); “Apologia” (1611); and “Icon Animorum” (1614). His most celebrated book is the “Argenis” (1621), a romance which, translated into nearly every European language, proved a really seminal work, and profoundly influenced European literature for many years. After an eventful career, Barclay died at the foot of the Ross, near Loch Ness.

Towards the end of the sixteenth, and throughout the seventeenth century Scottish literature is, especially by contrast with what was then being produced in England, scanty and poor. There is scarcely an outstanding name, if we except William Drummond of Hawthorned, and even he wrote in English. An era of religion and that of religious controversy, has been noted, often causes the impoverishment of the stream of pure literature. Of such controversy there was enough and to spare in Scotland during the period indicated, and the usual result now supervened. With regard to the language, the Reformation had begun, and Augustinian, Carmelite, and devotional books in use—the Bible, the Psalm-book, the Hymn-book, the Confession, the Catechism—were written in English, and mostly came from England. Following these, the language of pulpits and Parliament, of school, bar, and society came to be normally English. Books ceased to be printed in Scottish, and no one was taught to spell or write Scottish.

In addition, the union of the two Crowns under one sovereign, in 1603, and the consequent removal of the Court from Edinburgh to London naturally produced an influx of things English, so that the Anglicisation started by the Reformation was completed by the turn given to political events, and the old national Scottish vernacular, being now considered in the light of a provincial dialect, gradually ceased almost entirely to be a vehicle of literary expression. Hence it is that poets like William Drummond (1585-1649), Sir Robert Ayton (1570-1638), Sir William Alexander of Menstrie, afterwards Earl of Stirling (1567-1649), and others, are not inappropriate to the Scottish-born poets, philosophers, biographers, historians, and novelists of the eighteenth and nineteenth centuries who used English as their ordinary mode of expression.

But although, at the time of the union of the two Parliaments in the reign of Queen Anne (1707), the stashes of languages had disappeared from serious literature, it still lingered on the lips of men and was freely spoken even by those who read and wrote English; nay more, it was occasionally employed in the composition of facetious and satirical verse. Such being the case, a revival on a grand scale of the ancient Scottish vernacular for poetical use was attempted early in the eighteenth century. With this revival the name of Allan Ramsay (1686-1758) and his dramatic pastoral, “The Gentle Shepherd” (1725), are most intimately associated, although he himself was stirred to emulation by the work of Robert Kerr, Earl of Ancrum, “The Words of Bonnie Hoock” (1706). The impetus given by Ramsay in “The Gentle Shepherd” and in his earlier poems caused many writers to express themselves in this Scottish way. The movement soon produced such a masterpiece as the ballad of “The Brack of Yarrow” by William Hamilton of Bangour (1704-54); but it did not reach its climax until later in the century, with Robert Ferguson (1750-74) and Robert Burns (1759-96).

Among others who cultivated this style during the eighteenth century may be named the two Alexander Pernecuck, Lady Grisel Baillie. Lady Elizabeth Wardlaw, Alexander Ross, John Skinner, Jean Elliot of Minto, Mrs. Cockburn, Alexander Geddes, Hector Macneill, Lady Anne Barnard, and John Mayne. In the nineteenth century the tradition was continued by Robert Tannahill, William Nicholson Printe (“The Caledonian”); Alexander Boswell; Lady Nairne; James Hogg (“the Ettrick Shepherd”); William Laidlaw; Allan Cunningham; and William Motherwell. In recent years a mild attempt has been made by the writers of what is irreverently termed the Kail Yard school to revive Scottish vernacular in prose; but while the Scottish tales and sketches of James Matthew Barrie (“An Eidilzie Idyllie”, 1888, and “A Window in Thums”, 1889) and John Watson, better known as Ian Maclaren (“Beside the Bonnie Brier Bush”, 1894, and “The Days of Auld Lang Syne”, 1895), who may be taken as the principal representatives of the school, are full of humour and pathos, the method, their example in the writing of Scottish dialogue has not been widely imitated.

In this article no account has been given of writers on mathematics, natural philosophy, jurisprudence, or medicine, not because Scotland has not many eminent authors in these departments to abate, for indeed she is rich in such, but because, on general principles, their productions are not considered to come properly under the heading of literature.

For the texts of earlier authors see the various publications of the celtic society, London: The Scottish Text Society; the Roxburghe Club; the Scottish History Society; the Hunterian Society; the Camden Society; the Spalding Club; the Woburn Society; the English Text Society.

For the language see Sinclair, Observations on the Scottish Dialect (London, 1782); Dictionary (Edin- burgh, 1808-1824; new ed. 1879-1887); Murray, The Dialect of the Southern Counties of Scotland (1873); Smillie, Scottish Language (2nd ed., Edinburgh, 1886); Chamber’s Encyclopaedia (London, 1853); Murray ed.), The New English Dictionary (Oxford, 1888-1910); Wright (ed.), English Dialect Dictionary (London, 1896-1900);
tants of Scotland, may be said to date from August, 1560, in which month the Scottish Parliament, assembled in Edinburgh without any writ from the sovereign, decided that the Protestant Confession of Faith (drawn up on much the same lines as the Scottish Catechism which was adopted in November, 1561) was established, and only authorized, creed of the Scottish Kingdom. The same Parliament abolished papal jurisdiction, and forbade the celebration or hearing of Mass under penalty of death; but it made no provision for the appointment of the new clergy, nor for their establishment. At the next General Assembly, however, of the newly-established body, held in December, 1560, the First Book of Discipline was approved in which not only doctrinal questions and the conduct of worship were minutely legislated for, but detailed regulations were drawn up for the election and admission of ministers, and for their support on a generous scale from the confiscated revenues of the ancient Church. Scotland was divided ecclesiastically into ten districts, for each of which was appointed a superintendent to travel about, institute ministers, and generally set the Church in order. A system of Education was also devised. The establishment of the universities was also sketched out, for which the early Scottish Reformers have been highly lauded; but it was never carried out, and the whole educational work of the founders of the Kirk consisted in purging the schools and universities of "idolatrous regents" (i.e. Catholic teachers), more than a century being allowed to elapse before there was any attempt at national education in Presbyterian Scotland.

The fact that the greedy nobles who had fallen on and divided amongst themselves the possessions of the Catholic Church, absolutely refused to defend them, notwithstanding their professed zeal for the new doctrines. Only a sixth part of the ecclesiastical revenues was grudgingly doled out for the support of the ministers, and even that was paid with great irregularity. The grasping avarice of the nobles was also responsible for all delay and difficulties in settling the system of Church government on Presbyterian principles, as desired by the Protestant leaders. The barons saw with dismay the life-interest of the old bishops and abbots (preserved to them by the legislation of 1560) gradually lapsing, and their possessions falling to the Church. In a convention held in 1572 the lords actually procured the restoration of the old hierarchal system, and thus created being merely catasps to the nobles, who hoped through them to get possession of all the remaining ecclesiastical endowments. Although the General Assembly refused to recognise this sham episcopate, the fact of its existence kept alive the idea that Episcopalism might eventually be the established form of government in the Scottish, as in the English, Protestant Church; and the question of Prelacy versus Presbytery remained a burning one for more than a century longer. During the long reign of James VI, whose vacillating character induced him to caiole preferment in Church matters, his idea of independence and then to harass her by measures of the most despotick Erastianism, the religious condition of Scotland was in a state of continual ferment. The king succeeded in getting the bishops authorized to sit in Parliament in 1600; and when, three years later, he succeeded to the Crown of England, he openly "No bishop, no king", declared Presbyterianism incompatible with monarchy, suppressed the right of free assembly, and tried and punished the leaders of the Scottish Church for high treason. The discontent caused in Scotland by these high-handed measures came to a head after the death, when his son James, who had visited Scotland in 1633, and professed himself pained by the baldness of public worship. His imprisonment, four years later, of the English 'liturgy on
SCOTLAND 628 SCOTLAND
every congregation in Scotland, on pain of deprivation of the minister, was the signal for a general uprising, not less formidable because restrained. The Privy Council permitted (being powerless to prevent) the formation of a provisional government, whose first act was to destroy the National Covenant, first drawn up in 1590, engaging its subscribers to adhere to and defend the doctrine and discipline of the Scotch Protestant Church. The Covenant was signed by all classes of the people, and the General Assembly of 1638, in spite of the protest of the king himself, ordered John Hamilton to abolish the episcopacy, annulled the royal ordinances as to the service-book, and claimed a sovereign right to carry out the convictions of the national church as to its position and duty.

These high pretensions of the General Assembly, of which King Charles was, through his commission, a constituent part, were bound to come in conflict with Charles' lofty idea of his royal prerogative. He absolutely refused to concede the right of his Scottish subjects to choose their own form of church government, and marched an army to the border to enforce submission to his authority. The Scotch, however, posted their forces in the open field; the king was ultimately obliged to sign a treaty favourable to them and their claims; and his own downfall, followed by the dictatorship of Oliver Cromwell, a sworn opponent of Prelacy, brought the leaders of the Scottish Church into important relations with the new order of things in England. The Scottish Commissioners took a prominent part in the Westminster Assembly of 1643, convened to draw up the new standards of doctrine and church government for England under the Commonwealth; and it was there and there that was framed the "Shorter Catechism" which still remains the recognized religious text-book of the Presbyterian Church of Scotland. The latter years of the Commonwealth were, in fact, an epoch of prosperity hitherto unknown for Scottish Presbyterianism; but the restoration of Charles II, who was nowhere more warmly welcomed than in his northern dominions, was a rude blow to their Church's hopes of continued peace and spiritual independence.

Within a year of the assumption of his sovereign authority, Charles rescinded through his Parliament all the acts approving the national covenant and abolishing the hierarchy; and a few months later his Scottish subjects were hidden by proclamations to "compose themselves to a cheerful acquiescence" in the restoration of "the right government of bishops," on pain of imprisonment. Four new prelates were consecrated by English bishops for Scotland, and all occupiers of benefices had to get presentation from the patrons and collation from the bishops, or else be ejected from their livings, as nearly four hundred actually were. From this time until Charles II's death in 1650, an era of persecution prevailed in Scotland, large numbers of the Presbyterians refusing to conform to the Episcopal Church, and being treated in consequence with every kind of indignity, hounded from their houses, tortured, and in many cases massacred. The worship of the Covenanters was prohibited, but was nevertheless largely attended all over the country, and the armed risings of the people against their oppressors were forcibly put down, the Covenanting forces being hopelessly defeated in several engagements. At length, on the king's death, came a few years' breathing-time and peace; for his Catholic successor, James II, himself a man from the established religion, immediately conceded toleration and liberty of worship all over the kingdom, although some of his more fanatical subjects refused to accept a boon which they regarded as coming from a polluted source.

The Revolution of 1688, and the flight of the Catho-

lic king, opened the way to the abolition of the Presbyterian government which was odious to the majority of Scotchmen; and one of the first acts of the Parliament assembled in the first year of the reign of William III (July 1690) was to repeal all previous acts in Episcopacy. The establishment of church government was not settled by this Parliament; but, in the following year, the Jacobite and Prelatical cause having been rendered hopeless by the death of its leader, Graham of Claverhouse, Viscount Dundee, the king and queen and the three estates of the realm formally renounced the Westminster Confession, and re-established the Presbyterian form of church government and discipline. Lord Melville, a zealous Presbyterian, had already replaced Hamilton as the king's commissioner to the General Assembly, and the Restoration Act of Parliament, asserting the supremacy of the Crown in ecclesiastical causes, had been repealed. Another act ordered all professors and masters in every university and school to subscribe the Confession, and the popular election of ministers took the place of private patronage to benefices. The secular power thus re-established the Church as a fully national institution; the Church, just as it had re-established Episcopacy thirty years before; but the new settlement was made not by the arbitrary will of the sovereign, but (according to the principles of the Revolution) as being that most in accordance with the will of the people, as indeed there was no reason to doubt that it was. A most considerable section, however, especially in the east and northeast of Scotland, and more particularly among the wealthy and aristocratic classes, remained attached to Episcopalian principles; and though those of the clergy who refused to conform to the Establishment were treated with considerable harshness, no attempt was made to compel the laity to attend Presbyterian worship, or submit to the rigid Presbyterian discipline.

The majority of the Episcopalian were also Jacobites at heart, praying, if not working, for the restoration of the Stuart dynasty, and were thus a disturbing element in the country not only from a religious, but from a political point of view. The four Scottish universities (Aberdeen, Edinburgh, Glasgow, St. Andrews) were believed, and with reason, to be very unfavourably affected towards the new order of things in Church and State; and the visitation of them conducted in the closing years of the seventeenth century resulted in the majority of the professors being removed from office for refusing to comply with the test ordered by the statute of 1690. The effect of this state of things was that when the General Assembly met for the first time after nearly forty years, the universities were unrepresented save by a single member, while there were hardly any members belonging to the nobility or higher gentry, or representing the wide district of Scotland north of the Tay. The Assembly ordered all ministers and elders to subscribe the Westminster Confession, and appointed a solemn fast-day in expiation of the national sins, among which it was expressly mentioned the introduction of Episcopal government in the divided state of the country, it showed its prudence by not attempting to renew the general obligation of the National Covenant. The efforts of the Assembly, through its commissioners, to purge out the old incumbents throughout the kingdom, and replace them by orthodox ministers, proved quite ineffectual in Aberdeen and other strongholds of Episcopacy; but on the whole, the established religion, backed by the authority of the State and supported by the majority of the people, held its own, and increased in strength and numbers during the reigns of William III and his successor Queen Anne. The latter, while herself a strong adherent of the Episcopal Church of England, showed no inclination to favour the hopes and schemes of the Episcopalian minority in Scotland. A proposal in the Scottish Parliament of 1703 that the
free exercise of religious worship should be conceded to all Protestant Nonconformists (Catholics, of course, were carefully excluded) was met by a violent protest from the authorities of the Established Church, and was consequently dropped. The Episcopal body, however, continued its private worship, though not sanctioned by law, and provided for its continued organisation by the consecration of three more bishops (the old Synod having almost extinct) in 1705, without, however, claiming for them any diocesan jurisdiction.

The Union of England and Scotland into one kingdom in 1707, a measure unpopular with the great body of the Scottish nation, was resisted by many Presbyterians, through fear of the effect on their Church of a change in that direction. An Act of Parliament declared the Presbyterian form of church government to be thus permanently secured to find the British Parliament, a few years later, not only passing an act tolerating Episcopalian worship in Scotland, but restoring that right of private patronage to benefices which, revived at the Restoration, had been abolished, it was thought forever, at the Revolution. The importance of the latter measure, from the point of view of the history of the Established Church, can hardly be exaggerated; for it was the direct incentive to, and the immediate cause of, the beginning of the long series of schisms within the body, the result of which has been, in the mind of a Presbyterian historian, the "breakup of the Church into innumerable fragments". There were already included within the pale of the establishment two widely differing parties: the old orthodox Presbyterians or "evangelicals," who upheld the national covenant to the letter, and looked upon the toleration of Episcopacy as a national sin crying to heaven; and the semi-presbyterians, or the semi-presbytery party subsequently known as "moderates," who gradually became dominant in the government of the church, regarded their opponents as fanatics, declined to check, if they did not actually encourage, the Arminian or latitudinarian doctrines which were taking hold of the old Church. A schism was permitted without a murmur to the restoration of lay patronage, which struck at the very root of the essential principle of Presbyterian church government. The policy of the moderates prevailed; the revolt of the presbyteries was quelled, and the popular clamour to a great extent silenced. But at the same time thousands of people were alienated from the establishment, so that by the middle of the eighteenth century there were in every centre of population schismatic meeting-houses thronged with dissentient worshippers.

The long period of ascendancy of the Moderate party in the Church of Scotland, which lasted from the reign of Queen Anne well into the nineteenth century—a period of nearly a hundred years—was on the whole an uneventful one. Faithful to the Hanoverian settlement, and closely allied with the state, the establishment grew in power and influence, and produced not a few scholars and philosophers of considerable eminence. Principal William Robertson, the historian of Scotland, of America, and of Charles V, was one of the most distinguished products of this period; and he may be taken also as typical of the cultured Presbyterian divines of the eighteenth century, whose least conspicuous side was the theological or spiritual element which one might have expected to find in the religious leaders of the time. Spirituality, in truth, was not the strong point of the prominent Scottish churchmen of that epoch, whose doctrinal laxity has been acknowledged and deplored by their modern admirers and fellow-churchmen. Rationalism was rife in manse and pulpit throughout the country, and the sermons of Hugh Blair, which were translated into almost every European language, and were praised as the most eloquent utterances of the age, are purely negative from any theological point of view, however admirable as rhetorical exercises. Whatever spiritual fervour or devotional warmth there was in the Presbyterianism of the eighteenth century it is to be found with the high Church or the episcopalian, the dominant church, but in the ranks of the seceders from the establishment—the Burghers and Anti-burghers, and other strangely-named dissentient bodies, who were at least possessed with an intense and very real evangelical zeal, and exercised a proportionate influence on those with whom they came in contact. That influence was exerted not only personally, and in their pulpits, but also in their devotional writings, which undoubtedly did more to keep the essential principles of Christianity alive in the hearts of their countrymen, in an unbelieving age, than any figures of the literary, philosophical, and rhetorical, which were engendered by the established church of the country during the period under review.

It is singular that the state Church of Scotland, whose own religious spirit was so generally low, and which during the greater part of the eighteenth century, should nevertheless have during that period made more or less persistent efforts to uproot the last vestiges of the ancient Faith in the northern parts of the kingdom, many of which had remained absolutely unaffected by the Reformation. It was in 1725 the charters called over the prelates of the Highland districts, still besotted annually by the Sovereign, were at first forthcoming, with the express object of Protestantizing the still Catholic districts of the Highlands. Schools were set up, Gaelic teachers and catechists instituted, copies of the Protestant Bible, translated into Gaelic, widely disseminated, and every effort made to win over to the Presbyterian cause the poor people who still clung to the immemorial faith and practices of their fathers. Want of means prevented as much being done in this direction as was desired and intended; and for that reason, as well as owing to the unexpected reluctance of the Catholic Highlanders to exchange their ancient beliefs for the new evangel of the Kirk, the efforts of the proselytizers were only very partially successful, the inhabitants of several of the western islands, and of many isolated glens and straths in the western portion of the Highland mainland, still persisting in their firm attachment to the old religion.

Meanwhile the general revival of Evangelicalism, which was in part a reaction from the excesses and exaggerations of the French Revolution, was beginning to stir the dry bones of Scottish Presbyterianism, which had almost lost any influence it had formerly exercised on the religious life of the people. Personal piety, ardent zeal, and rugged pulpit eloquence of men like Andrew Thomson and Thomas Chalmers awoke the Established Church from its apathy, and one of the first evidences of its new fervour was the official sanction given to foreign mission work, which, more and more dignified, was carried on by the General Assembly of 1796. The business of church extension at home was at the same time energetically undertaken; and though it was long hindered by the hopelessness of obtaining increased endowments from the Government—the only means, curiously enough, by which the Church seemed for years to think the extension could be brought about.
private munificence came to the rescue, and within seven years more than three hundred churches were added to those already existing in Scotland. The first half of the nineteenth century, however, though a period of progress, was by no means a period of peace within the establishment. Side by side with the evangelical revival had sprung up again the old agitation about the essential evil of lay private patronage. Indeed the Church was torn by doctrinal controversies, resulting in the condemnation and expulsion of some ministers of distinction and repute, while in open opposition were the nonconforming bodies which had, at least temporarily, coalesced under the title of the United Seceders, proclaiming as they did theonomy, and denounced all state connexion with churches, and state endowments of religion, as intrinsically unscriptural and impious.

It was, however, the age-long grievance about patronage which proved the rock on which the Established Church was to split sandier and to be wellnigh shattered. The Veto Act, passed by the General Assembly in 1833, provided that the minister presented by the patron was not to be instituted unless approved by a majority of heads of families in the congregation; but the highest legal tribunals in Scotland absolutely refused to sanction this enactment, as against the Act of Lords, and both the Assembly and the patron appealed. The claim of the Church to legislative independence was rudely brushed aside by the President of the Court of Session, in his famous declaration that the "temporal head of the Church is Parliament, from whose acts alone it exists as the national Church, and from which alone it derives all its powers". The result of this momentous conflict was what was known as the "Disruption" of 1843, when 451 out of 1203 ministers quitted the church, together with fully a third of its lay members, and initiated a new religious organization thereunto known as the Free Church (see Free Church of Scotland).

The Established Church, shorn by the Disruption, of all the men who had been most prominent in promoting the evangelical revival, swept from its statute-book everything disallowed by the civil courts, became again "moderate" in its polity, and frankly Erastian in its absolute subservience to the civil powers. The national church of Scotland, as a state church, was now put to the test, and, after a fierce struggle, the Free Church, in 1843, to recruit its missionary staff, to extend its borders at home, to fill up the many vacancies caused by the latest schism, and to erect and endow new parishes. In 1874, thirty-two years after the Disruption, the Assembly petitioned Parliament for the abolition of the system of patronage, so long the great blot on the Church. The bill was granted, and the right of electing their own ministers conferred on the congregations—a democratic arrangement which, however gratifying to the electors, often places the candidate for their suffrages in a position both humiliating and undignified, and is not infrequently accompanied by incidents as ludicrous as they are discrediting. Nor has the new order of things apparently brought appreciably nearer the prospects of reunion between the Established and Free Churches, although the question of patronage, and not that of State recognition, was the main point of division there. A union of a kind, though not a complete one, has taken place between some religious bodies outside the pale of the Establishment; but the State Church herself seems powerless to recall or reunitè the numerous sects which have wandered from her fold, difficult or impossible as it seems to the outside observer to discover what essential point of difference there are between them in matters either of doctrine, discipline, or church government.

The Established Church of Scotland maintains that her system of government, by kirk-sessions, presbyteries, synods, and the General Assembly, is "agreeable to the Word of God and acceptable to the people"; but she does not claim for it exclusively the right of sanction and authority. There is no doubt as to its general popularity in Scotland, to whose people the democratic element in Presbyterianism strongly appeals. In the lowest judicature body, the kirk-session, the laymen or "elders" greatly preponderate, not them as the numerical majority, head and front, but as the authorities, while the members of the supreme body, the General Assembly, are chosen by popular election. The Sovereign is represented at the Assembly by his Lord High Commissioner; but his presidency is merely formal, and the Assembly is opened and dissolved not by him in the first place, but by the elected head or "moderator", in the name of Christ, the "head of the Church". It is needless however, to add that popular election and democratic government notwithstanding, the Scottish Established Church, like its English sister, is still the state church of Scotland, and the religious life of Scotland is in the hands of the State and not of the Church.

Present-day Statistics.—The number of ecclesiastical parishes in Scotland (1911) is 1441; of chapels, 80; of mission stations, 170; total, 1691; and the increase of church sittings since 1890 is stated to be 196,000. The total endowments of the Church from all sources (i.e. the national exchequer, local funds, "teindes" or tithes, either in kind or commuted, and funds raised within the Church) are reckoned at about £360,000 annually. The number of communicants, as returned to the General Assembly in May, 1913, was 711,200; of whom there were 22,212 ministers and elders, 21,000 teachers, with a roll of children amounting to nearly 301,000. It is claimed in the official returns of the Church that her membership has increased 52 per cent in 36 years, during which period the growth of the total population of Scotland has increased only 11 per cent. The increase of births in 1906 45 per cent of Scottish marriages, as compared with 26 per cent (United Free) and 10 per cent (Catholic). Reckoning the population of Scotland in 1911 at about 4,750,000, the proportion of communicants of the Establishment would be about 14 per cent of the whole. The Church of Scotland has in recent years displayed the highest degree of zeal in the spread of her work both at home and abroad. Since 1878 the Home and Foreign Missions have doubled their incomes; 460 new parishes have been erected, and 380 new churches built; missions have been established in Africa and China, and a Universities Foreign Mission started; and guilds and associations have been founded in connexion with a great variety of religious objects. During the same period of thirty-six years a sum of between sixteen and seventeen millions sterling (exclusive of government grants, school fees, and interest on capital) has been voluntarily contributed for parochial, missionary, and charitable purposes, in connexion with some of the Church's work.

The four Scottish Universities all possess faculties of "divinity", with well-endowed professors lecturing on theological or quasi-theological subjects; and a
degree at one of these universities, or at least a certificate of having attended courses of lectures therein, including all the legal details, to the lawy-er ministry. Many "bursaries" or scholarships are available for students in divinity; and the course of studies prescribed for them is comprehensive and carefully arranged. It is impossible, however, to deny the fact, or to view it without apprehension, that the hold of divinity on the public mind is becoming weaker in the Established as in the Free Church, among teachers and learners alike. German rationalistic ideas have penetrated deeply into the divinity halls of the Kirk; and half an hour's conversation with a Scotch professor of Biblical criticism or systematic theology, or with the abler of the younger generation of ministers who have set at their feet, will be sufficient to show how wide has been the departure from the old orthodox standards of belief within the Church. The latest formula of subscription imposed on ministers at their ordination still professes a belief in the "fundamental doctrines of the Christian faith" contained in the Presbyterian Confession; but this does not apparently include any real acceptance either of the Divinity of Christ or of the inspiration of Holy Scripture, at least in the sense in which these doctrines are understood by Catholics. "In Presbyterian Scotland," writes a modern critic, "there are many good men, but there is also a tone constantly used, not emphatically not a Christian country, any more than Protestant England." That such a deliberate verdict should be possible in the twentieth century of the Christian era is melancholy indeed.

Adamnan makes no mention of the monasteries founded by Columba and his contemporaries and followers in the Pictish territories north and east of the great central mountains. It may be stated generally that vestiges of Columban foundations are to be found in the northern, eastern, and western districts of Scotland, formerly occupied respectively by the Northern and Southern Picts and by the Scots of Dalriada. Many of these monasteries were established on the western coast, including those at tress, Garveloch, Harris, Lewis, North and South Uist, Lismore, Mull, Eigg, Canna, Colonsay, and numerous smaller islands.

Socto-Hibernian Monasteries, a convenient term under which to include the monastic institutions which were founded during the sixth century in the country now known as Scotland, though that name was not used in its present sense until four hundred years later. These institutions owed their origin to the zeal and energy of St. Columba, whose labours among the Picts and Scots extended over a period of nearly forty years, and whose biographer, Adamnan, the ninth abbot of Iona, is our chief authority on the subject, although his list of Columban foundations is probably incomplete, and the exact dates of their erection are uncertain. What is certain, however, is that these monastic houses grouped themselves round Iona and remained in close connexion with her. Like the Columban houses in Ireland, they acknowledged the jurisdiction of Iona as that of their mother-house, and the communities belonging to them together formed the widespread organisation known as the family of Iona, or musinot Ne. Not all these monasteries were actually founded by St. Columba in person, some of them owing their origin to his immediate followers, whose names have in many cases survived the disappearance of all material traces of the establishments in question. Reeves, Skene, and other Scottish and Irish antiquaries have devoted much time, labour, and research in the endeavour to identify the localities men-

D. O. Hunter-Blair.
himself, and placed by him under the care of his nephew Drostan, preserved its original and Celtic character for fifty years beyond the reign of David I., who granted it a new charter, and showed it special favour. Early in the thirteenth century, however, it was extinguished like the rest, the monastery being made over to the Cistercian monks, who held it until the Reformation. The building to 1286 preserved something of the primitive simplicity of the Columban foundations; for one of the Cistercian abbots is recorded to have resigned his office and returned to the stately abbey of Melrose, which he preferred to what he called that poor cottage of the monks of Deer. To-day a certain number of stones built up along the course of the old church, and several altars of a certain number of Scottish parishes, and a few grass-covered earthen mounds or fragments of walls, are all that is left to recall the numerous houses of the munificens, the oratories of the crusaders of Edward XIII centuries ago.

D. O. HUNTER-BLAIR.

SCOTS COLLEGE, THE. — Clement VIII gave Scotland its college at Rome. The Bull of foundation, dated 5 December, 1600, conferred on the college all the privileges already enjoyed by the Greek, German, and English colleges. The pope also bestowed on the infant college various endowments, including the revenue of an abbey in the Neapolitan kingdom and a monthly pension from the revenues of the Dataris. Later, when the old Scotch Hospice, which had for centuries been a Roman Catholic mission, was closed, its revenues were transferred to the Scots College.

The first students arrived in 1602, and for two years lived in the Via Trinitone, but the site and buildings were unsuitable, and in 1604 they moved to the present edifice at the corner of Via Quattro Fontane, close to the Quirinal Palace. The original college buildings had little to commend them, but the handsome and commodious college which Poletti, the architect, of St. Paul-without-the-Walls, erected on an extended site nearly half a century ago, is much admired for its graceful architecture. Attached to the college is its elegant little church and new church dedicated to St. Andrew, Patron of Scotland. The first superior of the new institution was Mgr. Paolini, but in 1614 the Jesuit took charge, and the first of this line of rectors was Father Anderson, nephew of Mary Stuart's faithful friend, Leslie, Bishop of Ross. To him the college owes its rule and constitution. During the Jesuit regime there was considerable trouble in the Scots as well as in the other pontifical colleges, many students being entered in the Society, and the authorities at home accused the Jesuits of tampering with the young men's vocations. Even the stringent application of the Mission Oath prescribed by Alexander VII did not end the friction. When the Society was suppressed (1773) the bishops in Scotland were asked to send a secular priest to be the new superior; but in an evil hour they urged that they had no one to spare. They lived to rue their refusal, for under their laxity, Italian Jesuits superseded their discipline, studies, piety, vocations, all suffered, and it was not altogether an unqualified misfortune when in 1798, owing to the occupation of Rome by the soldiers of the French Revolution, the college was forcibly closed, and the few remaining students returned to Scotland. In 1800 it was reopened through the indefatigable exertions of the Scots agent, Paul MacPherson, who succeeded in recovering the dilapidated college buildings along with the depleted revenues, and who became the first rector from the Scots secular clergy.

Gradually the college has bettered its status, and now (1911) with thirty-eight students to represent the half million of Scott Catholics it is proportionately the best attended of the colleges of Rome. The students have always frequented the Gregorian University. Among the benefactors of the college are Father William Thompson, the first Marchioness of Huntly, Cardinals Spinelli and Sacripanti, Henry Cardinal Duke of York, Mgr. Lenon, and Mgr. Taggart. A large proportion of the bishops who have ruled the Church in Scotland have studied in Rome, six being Roman students, and all along a succession of pious, learned, and devoted missionaries from Rome has done much to keep alive and extend the Faith. Bishop Hay, whose centenary has been kept this year (1911) with special celebrations at Fort Augustus and Edinburgh, by his doctrinal and devotional works both in London and Edinburgh, was pronounced by so great an authority as Conolly as the best work on the subject from England.

The college has had its country house, where the students spend the summer recess, for nearly three centuries near Grottaferrata on the Alban Hills, in the midst of vineyards where the country is as health-giving and picturesque as it is full of legendary, historical, and antiquarian interest. The Scots College, like other pontifical colleges, is immediately subject to the Holy See, which now exercises its jurisdiction partly by a cardinal protector, and partly by the Sacred Consistorial Congregation. Previous to 1908 the papal authority was exercised through the Sacred Congregation of Propaganda, and there were ordained with dimissorial letters issued by the cardinal protector. By a recent disposition the student's ordinary must declare in scripta that he has no objection to offer against his subject's promotion to Orders.

ROBERT FRASER.

SCOTT, MONTFORD, VENERABLE, English martyr, b. in Norfolk, England; martyred at Fleet Street, London, on 2 July, 1581. He went to Douai College in 1574, being one of the early students. He was ordained priest in 1576 and studied theology. The next year he was made subdeacon, and accompanied Dominick Vaughan to England. In Essex they fell into the hands of the Government, Dec., 1576, and under examination, Vaughan was weak enough to betray the names of Catholics both in London and Essex. They were then given over by the Privy Council to the Archbishop of Canterbury for further examination, but nothing more was elicited, and they were afterwards set at liberty. Scott returned to Douai on 22 May, 1577, and having been ordained priest at Brussels set out for the English mission on 17 June. The vessel in which he crossed to England was attacked by pirates, but he escaped with some loss of his goods. He is mentioned as having laboured in Kent (1580), Norfolk, Suffolk (1583), Lincolnshire and Yorkshire (1584). On 24 April, 1584, John Neaden and others were indicted at Norwich for having on 1 June, 1582, received blessed beads from him. In 1584 he was captured at York and brought to London, where he remained a prisoner for seven years. His release was procured by a money payment of one Baker, on condition of his leaving the country, but Topcliffe immediately procured his re-arrest. Meantime he had visited the confessor in Wobbech
Castle. He was brought to trial at the sessions at Newgate in company of Ven. George Besley (30 June, 1691), and was condemned on account of his presence in England of his being in the country contrary to the Statute. The next day he was drawn to Fleet Street, where he suffered martyrdom. Topelife said that he had that day done the queen and the king a singular piece of service in riddling the realm of such a praying and fasting papist as had not his peer in England or of his being in the country contrary to the Statute. The next day he was drawn to Fleet Street, where he suffered martyrdom. Topelife said that he had that day done the queen and the king a singular piece of service in riddling the realm of such a praying and fasting papist as had not his peer in England or of his being in the country contrary to the Statute.

Scranton, the episcopal see, is in the heart of the anthracite region and is a progressive city of 130,000 inhabitants (1910). Other large cities are Wilkes-Barre, Williamsport, Hazleton, Carbondale, and Pittston.

The pioneer Catholic settlers were principally of Irish and German descent, but in recent years the coal-mining industry has attracted numerous European labourers, mostly of the Slav and Italian races, until these now number almost one-half of the Catholic population.

Early History.—Although many of the pioneer settlers were Catholic immigrants, yet the first official visit of a priest to this territory of which there is any authentic record was in 1787. In that year Rev. James Pellents travelled up the Susquehanna River as far as Elmira, ministering to the Catholics scattered through this region. He returned to Baltimore, whence he had come, and reported conditions to his superiors. Years after the visit of Pellents the famous French settlement of Asylum or "Asylum" was founded (1793–94). The site chosen was on the banks of the Susquehanna River, opposite the present village of Scalping-Stone, Bradford County. It seems to have been planned as a retreat for the nobility, who were forced to flee from the terror of the French Revolution, and it was evidently intended that the queen herself should take refuge there. The most conspicuous building in the village, the "Queen's house" or "La grande maison," as it was generally called, was built and furnished for her special accommodation. The plan was, however, miscarried, for before the house was completed the unfortunate queen had followed her husband to the guillotine. For ten years this unique settlement flourished. It was made up, as we are told, of "some of the nobility and gentlemen of the court of Louis XVI, several of the clergy, a few mechanics and a number of the labouring class." The village consisted of about fifty houses. At the close of the Revolution most of the prominent refugees at Asylum accepted the invitation of Napoleon and returned to France. In 1804 we find the settlement practically abandoned. The place was ultimately made up of some few French Catholics, and among them a few priests. From a contemporary writer we learn that among the inhabitants of Asylum in 1795 was a certain "M. Carles, a priest and canon of Guernsey," and also a "M. Becdelliere, formerly a canon."

Religious services in the settlement were conducted by Esra Fromentin, "acting priest in the little log chapel" and M. Carles. We read also of a certain M. Colin, who, when the settlement went to the West Indies as chaplain in the army. Mention is also made of a beautiful illuminated Missal used there in the religious services, and afterwards presented to the Vatican Museum. Today scarcely a trace of this unique and interesting settlement remains.

The earliest permanent Catholic settlements were at Friendville and at Silver Lake, Susquehanna County. These, as well as the other Catholic settlers scattered throughout this district, were attended occasionally by priests sent from Philadelphia. In 1825, largely through the solicitation of Mr. Patrick Griffin, father of Gerald Griffin, the Irish novelist, Draughton, about one mile south of Susquehanna, was donated to the church by a Mrs. McIlhenny. In 1826 Rev. Patrick Phelan was appointed pastor of the mission, and the church was dedicated. The mission was elevated to that of a parish in 1828.

In 1838 Rev. John Vincent O'Reilly was sent by Bishop Kenrick to assist in administering to the Catholics of this extensive territory. He took up his residence at Silver Lake, and his charge comprised the Counties of Susquehanna, Bradford, Tioga, Potter, and Sullivan in Pennsylvania, and the five adjacent counties in New York State. The early history of the diocese is intimately bound up with the truly heroic labours of Father O'Reilly, and the foundations of many of the present parishes were the results of his missionary zeal.

His fruitful career was brought to an untimely end at the railway station at Susquehanna, 4 Oct., 1873. He was killed while rescuing a friend from the path of an approaching train.

Bishops.—Rt. Rev. William O'Hara, D. D., the first bishop, was born at Dungiven, County Derry, Ireland, 14 Apr., 1816, where his early education was obtained. In 1842 he was appointed pastor of St. Patrick's Church, Philadelphia. He was afterwards made rector and professor of moral theology at St. Charles's Seminary. In 1850 he was appointed pastor of St. Patrick's Church, Philadelphia, where he remained until his consecration as Bishop of Scranton, 12 July, 1868. The diocese then numbered 50 churches and 25 priests. To meet the needs of his rapidly growing diocese, he built St. Patrick's Orphanage, The House of the Good Shepherd, and St. Thomas' College. During the thirty years of his administration he saw the diocese increase till it numbered 121 churches and 162 priests. He died on 3 Feb., 1899, and is buried under the main altar of the cathedral of Scranton.

Rt. Rev. Michael John Hoban, D. D., the second bishop, was born at Waterloo, New Jersey, 5 June, 1853. His early education was received at Hawley, Pennsylvania, whither his parents moved shortly after his birth. He afterwards attended St. Francis Xavier's College (New York), Holy Cross College (Worcester, Massachusetts), and St. John's College (Cambridge). After some time in theological studies at Rome, he entered the American College, Rome, in 1876, where he was ordained to the priesthood, 22 May, 1880. His first appointment was as assistant at Towanda. He afterwards laboured successively as assistant at Pittston and pastor at Troy. In 1887
he organized St. Leo's parish, Ashley, Pennsylvania, where the present beautiful church and rectory are monuments of his zeal. There he remained until his consecration as Bishop of Alais and coadjutor Bishop of Philadelphia on 14g Mar. 1896. During his administration, since the death of Bishop O'Hara, he has enacted important legislation with regard to the internal affairs of the diocese, and under his inspiration the present beautiful and well-equipped St. Joseph's Infant Asylum, as also the Maloney Home for the Aged have been added to the St. Camillus's Hospital. The latter being the gift of the Marquess Martin J. Maloney of Philadelphia, in memory of his parents. Since the death of his predecessor, the diocese has grown from 152 priests, 121 churches, and a Catholic population of 135,000, to 265 priests, 222 churches, and a Catholic population of 205,000 (1911).

Catholic Education.—Catholic education in the diocese began with, and received a great impetus from the great pioneer Father O'Reilly. In the autumn of 1842 he opened a college at St. Joseph's, Susquehanna County. From this very modest beginning an understanding of the system of education, it grew and flourished; and in the twenty-two years of its existence educated two bishops and over a score of priests. It was destroyed by fire, 1 Jan., 1869, and was never rebuilt. At the present time higher education in the diocese is cared for by St. Thomas's College, in charge of the Brothers of the Christian Schools, and Greek courses are taught by two of the diocesan clergy. Mount St. Mary's Seminary, Scranton, conducted by the Sisters of the Immaculate Heart of Mary, and St. Ann's Academy, Wilkes-Barre, conducted by the Sisters of Christian Charity, are both flourishing and rapidly growing boarding schools for girls. St. Mary's parochial high school, Wilkes-Barre, conducted by the Sisters of Mercy, deserves mention as a model of equipment and efficiency. Nearly all of the larger parishes have their own parochial schools conducted by the sisters of the different teaching communities. Facilities for the preservation of the languages of the various nationalities are afforded in their parochial schools, which, for the most part, are conducted by sisters familiar with the mother-tongue. To meet this need two new teaching orders have recently been established: Sisters of St. Cyril and Methodius (Slovak) and Sisters of St. Casimir (Lithuanian). Both these orders had their inception in the novitiate at Mount St. Mary's, Scranton, where the first candidates were trained. The diocese now numbers 49 parochial schools and 14,440 pupils (1911).

Religious.—Pietistic Fathers, St. Ann's Monastery, Scranton; Theatine Fathers (Spanish); Stigmata Fathers (Italian); Brothers of the Christian Schools, Scranton; Sisters Servants of the Immaculate Heart of Mary, mother-house and novitiate, Scranton; Sisters of Mercy, mother-house and novitiate, Wilkes-Barre; Sisters of Christian Charity (German), mother-house and novitiate, Dunmore, Pennsylvania; Order of Good Shepherd; Little Sisters of the Poor; Sisters of the Holy Family of Nazareth (Polish); Bernardine Sisters (Polish); Missionary Sisters of the Sacred Heart (Italian); Sisters of St. Cyril and Methodius (Slovak).

Statistics.—Catholic population (U. S. religious census, 1910), 265,000, divided as follows: English-speaking, 133,000; Poles, 45,000; Italians, 21,000; Greek Ruthenians, 20,000; German, 16,000; Slovaks, 15,000; Lithuanians, 13,000; Magyars, 1000; Syrians, 1000; Priests, 265; churches, with resident priests, 183; mission churches, 49; parochial schools, 49; public schools, 57; orphan asylums, 1; orphan asylums, 1; home for the aged poor, 1; house of the Good Shepherd, 1; hospital, 1; college, 1; value of church property (1911), $6,400,000.
their perverse interpretations by means of which they had gradually laid a most heavy burden upon the people. They are also rebuked by Christ because of the undue importance ascribed by them to the "traditions of the elders".

Their teaching at this point was that Moses himself, in the person of Jesus, did not grant to Israel an oral as well as a written Law. This oral Law, according to their theory, had come down in an authentic form through the Prophets to Ezra, the first and greatest of the scribes, and rested practically on the same Divine authority as the written Word. Through this conception of an oral Law to which all the traditional customs and interpretations, however recent, were referred, the scribes were led into many departures from the spirit of the written Law (Mark, vii, 13), and even with regard to the latter their teaching was characterized by a slavish literalism. The ever-accumulating mass of legal traditions and legal decisions was designated by the name Halacha (the way). Together with the written precepts it constituted the perfect rule of conduct which every Jew should follow. But while the scribes devoted their chief attention to the Law, both written and oral, they also elaborated in fantastic and arbitrary fashion many unifying characters from the historical and didactic contents of the Old Testament. These homiletic teachings were called Hagada, and embraced doctrinal and practical admonitions mingled with illustrative parables and legends.

JAMES F. DRISCOLL.

Scriptorium, commonly a large room set apart in a monastery for the use of the scribes or copyists of the community. When no special room was devoted to this purpose, separate cells or studies called carrels were usually made in the cloister, each scribe taking the door and desk to himself. Of this arrangement the cloister of St. Peter's, Gloucester, now Gloucester Cathedral, supplies the most perfect example (see Cloister). The scriptorium was under the care of the precentor or else of one of his assistants called the armarius, whose duty it was to provide all the requisites needed by the scribes, such as desks, ink, parchment, pens, pen-knives, pumice-stone for smoothing down the surface of the parchment, awls to make the guiding marks for ruling lines, reading-frames for the books to be copied, etc. Most of these were manufactured at the monastery, and interceded with the work of the scribes. Of the rules of the scriptorium varied in different monasteries, but artificial light was forbidden for fear of injury to the manuscripts, and silence was always enforced. As a general rule those of the monks who possessed skill as writers made this their chief, if not their sole active work. An anonymous writer of the ninth or tenth century speaks of six hours a day as the usual task of a scribe, which would absorb almost all the time available for active work in the day of a medieval monk. Very often the scriptoria of a monastery were devoted to some peculiarities of writing, which were the habits of certain periods, and are of great value in ascertaining the source from which a manuscript comes. Thus at St. Albans the scribes for a long time affected a peculiar thirteenth-century style of hand with the long strokes of certain letters bent below, while individual variations from the common form of spelling, such as imbra for infra, are also peculiar to their work.

Various names were in use to distinguish the different classes of writers. In monasteries the term antiquarii was sometimes used for those monks who copied books and terrae who despatched the ordinary business of the house being called librarii, or simply scriptores. If a scribe excelled in painting miniatures or initial letters he usually confined himself to such work, and was called illuminator, while one who worked chiefly on legal documents was a notarius. The price of books varied a good deal at different dates, but was always what we should now call a low, considering the time and labour involved. Thus in 1380 John Patard, a Canon of Chichester, received seventy-five shillings and eight pence for an Evangelium, or book of the liturgical Gospels; and in 1467 the Paston "letters" show that a writer and illuminator of Bury St. Edmunds received one hundred shillings and two pence for a Psalter with musical notes, illuminations, and annotations. In 1503 Ebesham wrote out certain legal documents at two pence a leaf, and a book at "a peny a leaf, which is right wele worth". It is to be observed that on the invention of printing with movable types, although the new art met with strong opposition from the professional scribes, the monks commonly welcomed it, as is shown by the establishment of Cantox's press within the precincts of Westminster, and of very early presses at Subiaco and other monasteries.

I. Use of the Word. The corresponding Latin word scriptura occurs in some passages of the Vulgate in the general sense of "writing"; e.g., Ex., xxvii, 18: "the writing also of God was given in the scriptures"; again, 11 Pet., i, 21, God commanded it to be proclaimed through all his kingdom, and by writing also". In other passages of the Vulgate the word denotes a private (Tob., viii, 24) or public (Ezdr., ii, 62; Neh., vii, 64) written document, a catalogue or index (Ps., xxxvi, 6), or finally portions of Scripture, such as the canticle of Essechar (Is., xxxviii, 5), and the sayings of the wise men (Eccles., xii, 5). The writer of II Par., xxx, 5, 18, refers to prescriptions of the Law by the formula "as it is written", which is rendered by the Septuagint translators kata t'ma t'grafhn: το κατά τ' γραφήν, "according to Scripture". The same expression is found in II Esdr., vi, 4, and II Esdr., vii, 35, where we have the beginning of the latter form of appeal to the authority of the inspired books το γράμματα (Matt., iv, 6, 10; xxii, 13, etc.), or κατά το γράμματα (Rom., i, 11; ii, 24), "as it is written", "as it is written". As the verb γράφω was thus employed to denote passages of the sacred writings, so the corresponding noun γράμμα gradually came to signify what is here called the writing, or the inspired writing. This use of the word may be seen in John, vii, 38; x, 35; Acts, viii, 32; Rom., iv, 3; x, 17; Gal., iii, 8; iv, 30; II Tim., iii, 16; James, i, 8; I Pet., ii, 8; II Pet., i, 20; the plural form of the noun, τα γράμματα, of the same sense in Matt., xxi, 42; xxi, 29; xxvi, 54; Mark, xii, 24; xiv, 49; Luke, xxiv., 27, 45; John, v, 39; Acts, xvii, 2, 17; xviii, 24, 28; I Cor., xv, 3, 4. In a similar sense are employed the expressions γράμμα τούτου (Rom., i, 2), α γράμμα των προφητών (Matt., xxvi, 56), γράμμα προφητικά (Rom., xvi, 20). The word has a sense that modified but does not change the meaning of the preceding words. "Also if you have not read this scripture" (Mark, xii, 10). In the language of Christ and the Apostles the expression "scripture" or "scriptures" denotes the sacred books of the Jews. The New Testament uses the expressions in this sense about fifty times; and they occur more frequently in the earlier than in the later Gospels. It is evident that these developments are earlier than those in the synoptic Gospels. At times, the contents of Scripture are indicated more accurately as comprising the Law and the Prophets (Rom., iii, 21; 49; John, v, 39; Acts, xvii, 2, 17; xviii, 24, 28; I Cor., xv, 3, 4. In a similar sense are employed the expressions γράμμα τούτου (Rom., i, 2), α γράμμα των προφητών (Matt., xxvi, 56), γράμμα προφητικά (Rom., xvi, 20). The word has a sense that modified but does not change the meaning of the preceding words. "Also if you have not read this scripture" (Mark, xii, 10). In the language of Christ and the Apostles the expression "scripture" or "scriptures" denotes the sacred books of the Jews. The New Testament uses the expressions in this sense about fifty times; and they occur more frequently in the earlier than in the later Gospels. It is evident that these developments are earlier than those in the synoptic Gospels. At times, the contents of Scripture are indicated more accurately as comprising the Law and the Prophets (Rom., iii, 21;
It is disputed whether the word γραφή in the singular is ever used of the Old Testament as a whole. Lightfoot, Mal. iii, 23, gives the opinion that the singular γραφή in the New Testament always means a particular passage of Scripture. But in Rom., iv, 3, he modifies his view, appealing to Dr. Vaughan's statement of the case. He believes that the usage of St. John may admit a doubt, though he does not think so, personally, that St. Paul was absolutely without a text. Hort says (I Pet., ii, 6) that in St. John and St. Paul γραφή is capable of being understood as approximately to the collective sense (cf. Westcott, "Hebr.", pp. 474 sqq.; Deissmann, "Bibelstudien", pp. 108 sqq., Enc. tr., pp. 112 sqq.; Warfield, "Pres. and Reform. Review", X, July, 1896, pp. 477 sqq.). Here arises the question whether the expression of St. Peter (II Pet., iii, 16) τὰ λόγια γραφῆς refers to a collection of St. Paul's Epistles. Spitta contends that the term τὰ γραφαῖα is used in a general non-technical meaning, denoting only writings of St. Paul's associates (Spitta, "Der schwere Bußfall des Peter, der will der Judas", I, 294). Zahn refers the term to writings of a religious character which could claim respect in Christian circles either on account of their authors or on account of their use in public worship (Einleitung, pp. 98 sqq., 106). But Mr. F. H. Chase adheres to the principle that the phrase as γραφαί used absolutely points to a definite and recognised collection of writings, i.e., Scriptures. The accompanying words καὶ, τὰ λόγια, and the verb στροφάδωσιν in the context confirm Mr. Chase in his conviction (cf. Dict. of the Bible, III, p. 510b).

III. Nature of Scripture. A. According to the Jews.—Whether the terms γραφή, γραφεῖα, and their synonymous expressions γέγραμμαι (II Esdr., viii, 8), γέγραμμαι (Dan., ix, 2), κατάληγε γραμμάτων (Ps., xxxix, 8), γέγραμμαι (II Mach., viii, 23), γέγραμμαι τὰ ἁγία (I Mach., xi, 9), γέγραμμαι (II Tim., iii, 15) refer specifically to written or oral reports, they at least show the existence of a number of written documents the authority of which was generally accepted as supreme. The nature of this authority may be inferred from a number of other passages. According to Deut., xxxi, 9-13, Moses wrote the Book of Deuteronomy and delivered it to the priests that they might keep it, and read it to the people. Also Ex., xvii, 14; Deut., xvii, 18-19; xxvii, 1; xxviii, 1; 58-61; xxix, 20; xxx, 10; xxxi, 26; I Kings, x, 25; III Kings, ii, 3; IV Kings, xxii, 8. It is clear from IV Kings, xxiii, 1-3, that towards the end of the Jewish kingdom the Book of the Law of the Lord was held in the highest reverence. It contained the record of the Lord Himself. That this was also the case after the Captivity, may be inferred from II Esdr., viii, 1-9, 13, 14, 18; the book here mentioned contained the injunctions concerning the Feast of Tabernacles found in Lev., xxiii, 34 sqq.; Deut., xvi, 15 sqq. It is therefore identical with the pre-Exilic Sacred Books. According to I Mach., i, 57-59, Antiochus commanded the Books of the Law of the Lord to be burned and their retainers to be slain. We learn from II Mach., ii, 13, that at the time of Nehemiah there existed a collection of books containing historical, prophetical, and psalmic writings; since the collection is represented as uniform, and since the portions were considered as certainly of Divine authority, we may infer that this characteristic was ascribed to all, at least in some degree. Coming down to the time of Christ, we find that Flavius Josephus attributes to the twenty-two protocanonical books of the Old Testament Divine authority, maintaining that they had been written under Divine inspiration and that they contain in all their teachings (Contra Apionem, i, 22). Hellenist Philo too is acquainted with the three parts of the sacred Jewish books to which he ascribes an irrefragable authority, because they contain God's oracles expressed through the instrumentality of the sacred writers ("De vita contemp."); Antwerp edition of Mosis", pp. 401, 635 sqq.; "De monarchia", p. 564).

B. According to Christian Teaching.—This concept of Scripture is fully upheld by the Christian teaching. Jesus Christ Himself appeals to the authority of Scripture, "Search the scriptures" (John, v, 39); "this is living, and is to be desired" (John, v, 40). He is in absolute obedience to the "will of the law, till all be fulfilled" (Matt., v, 17). He regards it as a principle that "the Scripture cannot be broken" (John, x, 35); He presents the word of Scripture as the word of the eternal Father (John v, 35-41), as the word of God (Matt., xix, 4-5; xxii, 31); He declares that "all things must needs be fulfilled which are written in the law of Moses, and in the prophets, and in the psalms, concerning me" (Luke, xxiv, 44). The Apostles fully endorsed, and handed down to posterity, this view of the Scriptures. The Apostles knew that "prophecy came by the will of God"; II Pet., i, 21. The Holy Ghost, inspired by the Holy Ghost" (II Pet., ii, 21); they regarded all scripture, inspired of God as "profitable to teach, to reprove, to correct, to instruct in justice" (II Tim., iii, 16). They considered the words of Scripture as the words of God speaking in an inspired writer or by the mouth of the inspired writer (Hebr., iv, 7; Acts, i, 15-16; iv, 25). Finally, they appealed to Scripture as to an irresistible authority (Rom., passim), they supposed that parts of Scripture have a typical sense such as only God can employ (John, xix, 36; Hebr., i, 5; vii, 3 sqq.), and they derived most important conclusions even from a few words or certain grammatical forms of Scripture (Gal., iii, 16; Hebr., xii, 28-27). It is not surprising, then, that the earliest Christian writers speak in the same strain of the Scriptures. St. Clement of Rome (I Cor., xiv) tells his readers to search the Scriptures and believe in the truthful and all-powerful God; a serious man; St. Irenaeus (Adv. haer., I., xxxvii.2) considers the Scriptures as uttered by the Word of God and His Spirit. Origen testifies that it is granted by both Jews and Christians that the Bible was written under the influence of the Holy Ghost (Contra Cels., v, 8); again, he concluded that the Church which had the Holy Spirit knew that the Law and the Prophets were written by a heavenly charismata, and that the writings believed to be the words of God are not men's work (De princ., iv, vi). St. Clement of Alexandria receives the voice of God who has given the Scriptures, as a reliable proof (Strom., ii).

C. According to Ecclesiastical Documents.—Not to multiply patristic testimony for the Divine authority of Scripture, we may add the official doctrine of the Church on the nature of Sacred Scripture. The fifth ecumenical council condemned Theodore of Mopsuestia for his opposition against the Divine authority of the books of Solomon, the Book of Job, and the Canticle of Canticles. Since the fourth century the teaching of the Church concerning the nature of the Bible is practically summed up in the dogmatic formula that God is the author of Sacred Scripture. According to the first chapter of the Council of Carthage (A. D. 398), bishops and priests are bound to express their belief in this formula, and this profession of faith is exacted of them even to-day. In the thirteenth century, Innocent III imposed this formula on the Waldensians; Clement IV exacted its acceptance from Michael Palesologus, and the emperor actually accepted it in his letter to the Second Council of
of inspiration. The same formula was repeated in the fifteenth century by Eugenius IV in his Decree for the Jacobites, in the sixteenth century by the Council of Trent (1546), and the nineteenth century by the Vatican Council. What is implied in this Divine authorship of Sacred Scripture, and how it is to be explained, has been set forth in the article INSPIRATION.

III. COLLECTION OF SACRED BOOKS.—What has been said should not be understood to mean that Scripture does not refer to any single book, but comprises a number of books written at different times and by different writers working under the inspiration of the Holy Ghost. Hence the question, how could such a collection be made, and how was it made in point of fact?

The Collection of the Old Testament.—The main difficulty as to the first question (quaestio iuris) arises from the fact that a book must be Divinely inspired in order to lay claim to the dignity of being regarded as Scripture. Various methods have been suggested for ascertaining the fact of inspiration. It has been claimed that so-called internal criteria are sufficient to lead us to the knowing of this fact. But a closer investigation they prove inadequate. (1) Miracles and prophecies require a Divine intervention in order that they may happen, not in order that they may be recorded; hence a work relating miracles or prophecies is not necessarily inspired. (2) The so-called ethic-ethereal tradition. It fails because it is found that certain portions of Scripture are inspired writings, e.g., the genealogical tables, and the summary accounts of the kings of Judah, while it favours the inspiration of several post-Apostolic works, e.g., of the "Imitation of Christ", and of the "Epistles" of St. Ignatius Martyr. (3) The same must be said of the psychological criterion, or the effect which the perusal of Scripture produces in the heart of the reader. Such emotions are subjective, and vary in different readers. The Epistle of St. James appeared straunk to Luther, divine to Calvin. (4) These internal criteria are inadequate even if they be taken collectively. Wrong keys are unable to open a lock whether they be used singly or collectively.

Other students of this subject have endeavored to establish apostolic authorship as a criterion of inspiration. But this answer does not give us a criterium of inspiration of the Old Testament books, nor does it touch the inspiration of the Gospels of St. Mark and St. Luke, neither of whom was an Apostle. Besides, the Apostles were endowed with the gift of infallibility in their teaching, and in their writing as far as it formed part of their teaching; but infallibility in inspiration does, in any case, imply inspiration. Certain writings of the Roman pontiffs may be infallible, but they are not inspired; God is not their author. Nor can the criterion of inspiration be placed in the testimony of history. For inspiration is a supernatural fact, known only to God and probably to the inspired writer. Hence human testimony concerning inspiration is, at best, on the testimony of one person who is, naturally speaking, an interested party in the matter concerning which he testifies. The history of the false prophets of former times as well as of our own day teaches us the futility of such testimony. It is true that miracles and prophecy may, at times, confirm such human testimony as to the inspiration of a work. But, in the first place, not all inspired writers have been prophets or workers of miracles; in the second place, in order that prophecies or miracles may serve as proof of inspiration, it must be clear that the miracles were performed, and the prophecies were uttered, to establish the fact in question; in the third place, if this condition be verified, the testimony for inspiration is no longer merely human, but it has become Divine. No one will doubt the sufficiency of Divine testimony to establish the fact of inspiration; on the other hand, no one can deny the need of such testimony in order that we may distinguish with certainty between an inspired and a non-inspired book.

The Collection of the New Testament.—It is another difficult problem to state with certainty, how and when the several books of the Old and the New Testament were received as sacred by the religious community. Deut., xxvi, 9, 24 sq., informs us that Moses delivered the Book of the Law to the Levites and the ancients of Israel to be deposited "in the midst of the camp"; according to Deut., xvii, 18, the king had to procure for himself a copy of at least a part of the book, so as to "read it all the days of his life". Josue (xxiv, 26) added his portion to the law-book of Israel, and this may be regarded as the second step in the collection of the New Testament. According to 1 Sa., xxxiv, 18, and Jer., xxxvi, 4, the prophetic books also and Jeremiah collected their respective prophetic utterances. The words of II Par., xxix, 30, lead us to suppose that in the days of King Ezechias there either existed or originated a collection of the Psalms of David and of Asaph. From Prov., xxxv, 1, one may infer that about the same time there was made a collection of the Solomonic writings, which may have been added to the collection of psalms. In the second century n. c. the Minor Prophets had been collected into one work (Ezechia, xlix, 12) which is cited in Acts, vii, 42, as "the books of the prophets'. The same conspicuous found in Acts, ii, 16, that even these smaller collections had been gathered into a larger body of sacred books. Such a larger collection is certainly implied in the words II Mach., xi, 13, and the prologue of Ecclesiasticus. Since these two passages mention the main divisions of the Old Testament canons, this latter must have been completed, at least with regard to the earlier books, during the course of the second century n. c.

It is generally granted that the Jews in the time of Jesus Christ acknowledged as canonical or included in their collection of sacred writings all the so-called protocanonical books of the Old Testament. Christ and the Apostles endorsed this faith of the Jews, so that we have Divine authority for their Scriptural character. As there are solid reasons for maintaining that some of the New Testament writers made use of the Septuagint version which contained the deutero-canonical books of the Old Testament, it is to be in so far attributed to Sacred Scripture. Again, II Pet., iii, 15-16, ranks all the Epistles of St. Paul with the "other scriptures", and I Tim., v, 18, seems to quote Luke, x, 7, and to place it on a level with Deut., xxxv, 4. But these arguments for the canonicity of the deutero-canonical books of the Old Testament, of the Pauline Epistles, and of the Gospel of St. Luke do not exclude all reasonable doubt. Only the Church, the infallible bearer of truth, can furnish us invincible certainty as to the number of the Divinely inspired books of both the Old and the New Testament. See CANON OF THE HOLY SCRIPTURES.

IV. DIVISION OF SCRIPTURE. A. Old and New Testaments.—As the two dispensations of grace separated from each other by the advent of Jesus are called the Old and the New Testament (Matt., xxvi, 28; II Cor., iii, 14), so were the inspired writings belonging to either economy of grace from the earliest times called books of the Old or of the New Testament, or simply the Old or the New Testament. This name of the two great divisions of the inspired writings has been practically common among Latin Christians from the time of Tertullian, though Tertullian himself frequently employs the name "Instruments" or legally authentic document; Cassiodorus uses the title "Sacred Pandects", or sacred digest of law.

B. Protocanonical and Deutero-canonical.—The word "canon" denoted at first the material rule, or instrument, employed in various trades; in a meta-
pherical sense it signifies the form of perfection that had to be attained in the various arts or trades. In this metaphorical sense some of the early Fathers unimages of the ancient, the canon of faith, the canon of the Church (Epist. iv. 14). About erroneous tenets of the early heretics (St. Clem., "I Cor."); vii, Clem. of Alex., "Strom."; vii, Orig., "De princip."); vi, ix, etc.). St. Irenæus employed another metaphor, calling the Fourth Gospel the canon of truth (Adv. haer., iii, xi); St. Isidore of Pelusium applies the same to the inspired writings (Epist. iii, 162). The first writer to use the phrase is St. Augustine (Contra Crescent., II, xxxix) and St. Jerome (Prolog. gal.), the word "canon" began to denote the collection of Sacred Scriptures; among later writers it is used practically in the sense of catalogue of inspired books. In the sixteenth century, Sixtus Seraphinus, O.P., in De Sibylla the time of St. Augustine (Contra Crescent., II, xxxix) and St. Jerome (Prolog. gal.), the word "canon" began to denote the collection of Sacred Scriptures; among later writers it is used practically in the sense of catalogue of inspired books. In the sixteenth century, Sixtus Seraphinus, O.P., in De Sibylla

The Council of Trent arranges the inspired books partly in a topological, partly in a chronological order. In the Old Testament, we have first all the historical books, excepting the two books of the Maccabees, which were reputed to have been written after the former. The historical books are arranged according to the order of time of which they treat; the books of Tobias, Judith, and Esther, however, occupy the last place because they relate personal history. The body of didactic works occupies the second place in the Canon, being arranged in the order of date at which the writers are supposed to have lived. The third place is assigned to the Prophets, first the four Major and then the twelve Minor Prophets, according to their respective chronological order. The Council follows a similar method in the arrangement of the New-Testament books; the first part is given to the historical books, i.e., the Gospels and the Book of Acts; the Gospels follow the order of their reputed composition. The second place is occupied by the didactic books, the Pauline Epistles preceding the Catholic. The former are enumerated according to the order of dignity of the addresses and according to the importance of the matter treated. Hence results the series: Romans; I, II Corinthians; Galatians; Ephesians; Philippians; Colossians; I, II Thessalonians; I, II Timothy; Titus; Philemon; The Epistle to the Hebrews occupies the last place on account of its late reception into the Canon. In its place, the Council places the Epistle to the Hebrews. The book of Hebrews was added to the canon of the Council follows the so-called western order: I, II Peter; I, II, III John; James; Jude; our Vulgate edition follows the oriental order (James; I, II Peter; I, II, III John; Jude) which seems to be based on Gal., ii, 9. The Apocalypse occupies in the New Testament the place corresponding to that of the Prophets in the Old Testament.

The tripartite division of the New Testament is not followed by the Church in the reading of the Scriptures. The Bible is read in the order in which it was written, with certain subdivisions, but without the distinction between the Old and New Testaments.

The Liturgical Division.—The needs of liturgy occasioned a division of the inspired books into smaller parts. At the time of the Apostles it was a received custom to read in the synagogue service of the Sabbath-day a portion of the Pentateuch (Acts, xvi, 31) and a part of the Prophets (Luke, iv, 16; Acts, xiii, 15, 27). Hence the Pentateuch has been divided into fifty-four "parashas" according to the number of sabbaths in the intercalary lunar year. To each parashah corresponds a division of the prophetic writings called "Hapaxa." The Talmud speaks more minute divisions, "pe'ulot," which resemble our verses. The Church transferred to the Christian Sunday the Jewish custom of reading part of the Scriptures in the assemblies of the faithful, but soon added, or replaced, the Jewish lessons by parts of the New Testament (St. Jerome, "I Apol.," iv, xxvi, "De praef. et alio," etc.). St. Jerome, in his decisions on the church's discussions in the selection of the Sunday readings, this custom did not occasion any generally received division in the books of the New Testament. Besides, from the end of the fifth century, these Sunday lessons were no longer taken in order, but the sections were chosen as they fitted in with the ecclesiastical feasts and seasons.

The Arrangement of Books.—The catalogue of the books of the Old Testament is found in the Septuagint and the LXX. The Old Testament is divided into five sections:

1. The Law, the first five books of Moses (Genesis, Exodus, Leviticus, Numbers, Deuteronomy).
2. The History of Israel, consisting of the books of Joshua, Judges, Samuel, Kings, 1 and 2 Chronicles.
3. The Prophets, consisting of the books of the Minor Prophets (Isaiah, Jeremiah, Zechariah, and the twelve Minor Prophets), and the Major Prophets (Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, and Malachi).
4. The Writings, consisting of the Psalms, Proverbs, Ecclesiastes, Song of Solomon, Daniel, and the other books of the Old Testament.

The arrangement of the books of the New Testament is based on the following principles:

4. The Apocalypse.
Concordances) began to be constructed. About this time, Card. Stephen Langton, Archbishop of Canterbury, who died 1228, divided all the books of Scripture (excepting the Apocalypse), a division which found its way almost immediately into the codices of the Vulgate version and even into some codices of the original texts, and passed into all the printed editions after the invention of printing. As the chapters were too long for ready reference, Cardinal Hugh of St. Chrysostom (died 1191) divided the text into verses, a division which was indicated by the capital letters A, B, etc. Robert Stephens, probably imitating R. Nathan (1437) divided the chapters into verses and, published his complete division into chapters and verses first in the Vulgate text (1549), and later on also in the Greek original of the New Testament (1551). This division is still adhered to, and is found in all modern editions of the Scriptures.

V. Scripture and the Church. — Since Scripture is the written word of God, its contents are Divinely guaranteed truths, revealed either in the strict or the wider sense of the word. Again, since the inspiration of a writing cannot be known without Divine testimony, God must have revealed which are the books that constitute Sacred Scripture. Moreover, theologians teach that Christian Revelation was complete in the Apostles, and that its deposit was entrusted to the Apostles to guard and to promulgate. Hence the apostolic deposit of Revelation contained not merely Scripture, but the whole Revelation in the abstract but also the knowledge as to its constituent books. Scripture, then, is an Apostolic deposit entrusted to the Church, and to the Church belongs its lawful administration. This position of Sacred Scripture in the Church implies the following consequences:

1. The Apostles promulgated both the Old and New Testament as a document received from God. It is antecedently probable that God should not cast his written Word upon men as a mere windfall, coming from no known authority, but that he should entrust its publication to the care of those whom he was sending to preach the Gospel to all nations, and whom he had promised to be for all days, even to the consummation of the world. In conformity with this principle, St. Jerome (De script. ecc.) says of the Gospel of St. Mark: “When Peter had heard it, he both approved of it and ordered it to be read in the churches.” The Fathers testify to the promulgation of Scripture by the Apostles in the earliest and in any treat of the transmission of the inspired writings.

2. The transmission of the inspired writings consists in the delivery of Scripture by the Apostles to their successors with the right, the duty, and the power to continue its promulgation, to preserve its integrity, to explain it, to use it in proving and illustrating Catholic teaching, to oppose and condemn any attack upon its doctrine, or any abuse of its meaning. We may infer all this from the character of the inspired writings and the nature of the Apostolate; but it is also attested by some of the weightiest writers of the early Church. St. Irenæus insists upon these points against the Gnostics, who appealed to Scripture as to private historical documents. He excludes this Gnostic view, first by insisting on the mission of the Apostles and upon the succession in the Apostolate, especially as seen in the Church of Rome (Hær., III, 3-4); secondly, by showing that the preaching of the Apostles continued by their successors contains a supernatural guarantee of infallibility through the indwelling of the Holy Ghost (Hær., III, 24); thirdly, by combining the Apostolic succession and the supernatural guarantee of the Holy Ghost (Hær., IV, 36); fourthly, not to be regarded as a private historical document on account of the official mission of the Apostles, on account of the official succession in the Apostolate of their successors, on account of the assistance of the Holy Ghost promised to the Apostles and their successors, the promulgation of Scripture, the preservation of its integrity and identity, and the explanation of its meaning must belong to the Apostles and their legitimate successors. The same principles are advanced by the divinitations which found their way almost immediately into the codices of the Vulgate version and even into some codices of the original texts, and passed into all the printed editions after the invention of printing. As the chapters were too long for ready reference, Cardinal Hugh of St. Chrysostom (died 1191) divided the text into verses, a division which was indicated by the capital letters A, B, etc. Robert Stephens, probably imitating R. Nathan (1437) divided the chapters into verses and, published his complete division into chapters and verses first in the Vulgate text (1549), and later on also in the Greek original of the New Testament (1551).

3. By virtue of its official and permanent promulgation, Scripture is a public document, the Divine authority of which is evident to all the members of the Church.

4. The Church necessarily possesses a text of Scripture, which is internally authentic, or substantially identical with the original. Any form or version of the text, the internal authenticity of which the Church has approved either by its universal and constant use, or by a formal declaration, enjoys the character of external or public authenticity, i.e., its conformity with the original must not merely be presumed juridically, but must be admitted as certain on account of the infallibility of the Church.

5. The authentic text, legitimately promulgated, is a source and rule of faith, though it remains only a means or instrument in the hands of the teaching body of the Church, which alone has the right of authoritatively interpreting the whole text. The Church is its own interpreter, as the Word of God is its own authority.

6. The administration and custody of Scripture is not entrusted directly to the whole Church, but to its teaching body, though Scripture itself is the common property of the members of the whole Church. While the private handling of Scripture is opposed to the fact that it is communal, property, its administrators are bound to communicate its contents to all the members of the Church.

7. Though Scripture is the property of the Church alone, those outside her pale may use it as a means of discovering or entering the Church. But Tertullian shows that they have no right to apply Scripture to their own purposes or to turn it against the Church. He also teaches Catholics how to contest the right of heretics to appeal to Scripture at all (by a kind of demurrer), before arguing with them on single points of Scriptural doctrine.

8. The rights of the teaching body of the Church include also that of issuing and enforcing decrees for promoting the right use, or preventing the abuse of Scripture. Not to mention the definition of the Canon (see Canon), the Council of Trent issued two decrees concerning the Vulgate (see Vulgate), and a decree concerning the English translation of the Vulgate (see Exorcism; Hermeneutics), and this last enactment was repeated in a more stringent form by the Vatican Council (sess. III, Conc. Trid., sess. IV). The various decisions of the Biblical Commission derive their binding force from this same right of the teaching body of the Church.

(Cf. Stapleton, Princ. C. Fid.
VI. ATTITUDE OF THE CHURCH TOWARDS THE READING OF THE BIBLE IN THE VERNACULAR.—The attitude of the Church as to the reading of the Bible in the vernacular may be inferred from the Church's pronounced hesitation about the possibility of the Church to provide newly-converted nations, as soon as possible, with vernacular versions of the Scriptures; hence the early Latin and oriental translations, the versions existing among the Armenians, the Slavonians, the Goths, the Italians, the French, and the English. As to the legislation of the Church on this subject, we may divide its history into three large periods:—

(1) During the course of the first millennium of her existence, the Church did not promulgate any law concerning the reading of Scripture in the vernacular. The faithful were rather encouraged to read the Sacred Books according to their spiritual needs (cf. St. Irenæus, "Adv. her.," III, iv).

(2) The next five hundred years show only local regulations concerning the use of the Bible in the vernacular. On 2 January, 1050, Gregory VII wrote to the Duke of Saxony that he would not allow the reading of the Scriptures in the language of the country. The letter was written chiefly to refuse the petition of the Bohemians for permission to conduct Divine service in the Slavic language. The pontiff feared that the reading of the Bible in the vernacular would lead to irreverence and wrong interpretation of the inspired text (St. Gregory VII, "Epist." vii, xii). The second document belongs to the time of the Wends and Albigensian heresies. The Bishop of Tetz had written to Innocent III that there existed in his diocese a perfect freemasonry for the Bible in the vernacular. In 1199 the pope replied that in general the desire to read the Scriptures aloud was praiseworthy, but that the practice was dangerous for the simple and unlearned ("Epist." II, cxxi; Hurter, "Gesch. des Papstes Innocent III"., Hamburg, 1842, IV. 501 sqq.). After the death of the Innocent III, the Synod of Toulouse directed in 1229 its fourteenth canon against the misuse of the Bible. In his whole canon the text is: "prohibemus, ne liberos Veteris et Novi Testamenti laicos permittatur habere" (Hefele, "Concilgesch." Freiburg, 1863, V, 875). In 1233 the Synod of Tarragona issued a similar prohibition in its second canon, but both these laws are intended only for the countries subject to the jurisdiction of the respective synods (Hefele, ibid., 918). The Third Synod of Oxford, in 1408, owing to the disorders of the Lollards, who in addition to their crimes of violence and anarchy had introduced virulent interpolations into the vernacular sacred text, issued a law in virtue of which only the versions approved by the local ordinary or the provincial council were allowed to be read by the laity (Hefele, op. cit., VI, 817).

(3) It is only in the beginning of the last five hundred years that we meet with a general law of the Church concerning the reading of the Bible in the vernacular. On 24 March, 1544, Pius IV promulgated in his Constitution, "Dominici gregis", the Index of Prohibited Books. According to the third rule, the Old Testament may be read in the vernacular by pious and learned men, according to the judgment of the bishop, as a help to the better understanding of the Vulgate. The fourth rule places in the hands of the bishop or the priest of the parochial church the task of providing the New Testament in the vernacular to laymen who according to the judgment of their confessors or their pastor can profit by this practice. Sixtus V reserved this power to himself or the Sacred Congregation of the Index, and Clement VIII added this restriction to the fourth rule of the Index, by way of appendix.

Benedict XIV required that the vernacular version read by laymen should be either approved by the Holy See or provided with notes taken from the writings of the Fathers or of learned and pious authors. It then became an open question whether this order of Benedict XIV was intended to supersede the former legislation or to further restrict it. This doubt was not removed by the next three decrees: the condemnation of the version of the Scriptures as to the necessity of reading the Bible, by the Bull "Unigenitus" issued by Clement XI on 8 Sept., 1713 (cf. Denzinger, "Enchir.," nn. 1294–1300); the condemnation of the same teaching maintained in the Synod of Pistoia, by the Bull "Auctorem fidei" issued on 28 Aug., 1794, by Pius VII, in warning against allowing the laity indiscriminately to read the Scriptures in the vernacular, addressed to the Bishop of Mohileff by Pius VII, on 3 Sept., 1816. But the Decree issued by the Sacred Congregation of the Index on 7 July, 1836, seems to render it clear that henceforth the laity may read vernacular versions of the Scriptures, if they be either approved by the Holy See, or provided with notes taken from the writings of the Fathers or of learned Catholic authors. The same regulation was repeated by Gregory XVI in his Encyclical of 5 May, 1844. In general, the Church has always allowed the reading of the Bible in the vernacular, if it was done in the house of the laity or before the children; she has forbidden it only when it was almost certain to cause serious spiritual harm.

VII. OTHER SCRIPTURAL QUESTIONS.—The history of the preservation and the propagation of the Scripture-text is told in the articles MANUSCRIPTS OF THE BIBLE; CODEX ALEXANDrinus (etc.); VERSIONS OF THE BIBLE; EDITIONS OF THE BIBLE; CRITICISM (TEXTUAL); the interpretation of Scripture is dealt with in the articles HERMENUTIC; EXEGESIS; COMMENTARIES ON THE BIBLE; AND CRITICISM (BIBLICAL). Additional information on the following questions is contained in the articles mentioned at the beginning of this article.

The Old Testament, The New. The history of our English Version is treated in the article VERSIONS OF THE BIBLE.

A. J. MAAS.

Scrope, Richard. See York, Ancient See of. Scruple (Lat. Scrupulus, "a small sharp, or pointed, stone", hence, in a transferred sense, "un easiness of mind"), an unfounded apprehension and consequently unwarranted fear that something is a sin which, as a matter of fact, is not such. In this article most of the questions connected with Scripture are treated in special articles throughout the course of the Encyclopaedia, for instance, in the articles: Jerome; Canon of the Holy Scriptures; Concordances of the Bible; Inspiration of the Bible; Testament, etc. Each of these articles has an abundant literary guide to its own special aspect of the Scriptures.

A. J. MAAS.
out in futile combat, and then not unfrequently the scrupulous person makes shipwreck of salvation either on the Scylla of despair or the Charybdis of unbecoming indulgence in vice.

of great importance to be able to make a correct diagnosis of this disease. Hence especially guides of consciences should be familiar with the symptoms that betray its presence as well as with the causes which commonly give rise to it. For one thing, the con-

fessor should not confound a delicate with a scrupu-

lous conscience, and for this he should interpret the rea-

sonable solici
tude sometimes discernible in those who are trying to emerge from a life of sin as a sign of scrupulosity. Then, too, ordinarily he ought not to hastily reach this conclusion on the very first experi-

ence of his penitent. It is true there are cases of scrupulotra
tends and psy

onfused with those who acted

scrupulosity, but this is not the rule. Some special indications that peo-

are really scrupulous, generally adopted by theolo-

gians, are those enumerated by LaCroix. Among

these is a certain rooted attachment to their own

opinion which makes them unwilling to abide by the

judgment once formed upon the pronouncement of

the latter have every title to deference. In con-

sequence, they go from one confessor to another, change

their convictions with hardly a shadow of motive, and

are tortured by an overshadowing dread that sin

lurks in everything they do, and say, and think.

The scrupulous may, and ought to, act in defiance of

the ecclesiastical law in such a way as to be consid-

ered as a heresy of scrupulosity. Nor can they, therefore, be impeached as

acting in a state of practical doubt. The unreal

phantasm that affrights their imagination, or the un-

substantial consideration that offers itself to their

disturbed reason, has no validity against the con-

science once formed upon the pronouncement of

the confessor or in some other equally trustworthy

fashion. In the various perplexities as to the lawfulness

of their actions they are not bound to employ any

such scrupulosity as would be incumbent upon persons in

a normal condition. They are not bound to repeat

anything of former confessions unless they are sure,

without protracted examination, that it is a mortal

sin and has never been properly confessed.

Their chief remedy is, having reposed confidence in

some confessor, to obey his decisions and commands

to the letter. They are counselled also to save the

avenue of their minds to wild conjectures and strange

ponderings responsible for so many of their worries. They should remove the cause of their scruples in so far as it may have been of their own choosing. Hence they are to guard against the reading of ascetical books of a rigorous and dry spirit and to confide their confessions to persons among whom the difficult task of receiving the confessions of these harassed souls are to carefully in-

quire into the origin of the anxieties laid before them. They are to treat their unhappy penitents in general with great kindness. Occasionally, however, some degree of severity may be useful when the penitent shows an extreme tenacity in adhering to his own unreasonable view of the situation. As a rule, the confessor's an-

swers to the innumerable troubles submitted should be
clear, unaccompanied by reasons, and so unhesitating as to inspire courage. He should not permit the pres-

entation indefinitely of the various doubts, much less, of course, the repetition of past confessions. Finally, he may sometimes do what should hardly ever be done in any other instance, that is, forbid the penitent to have recourse to another confessor.

Scrupulosity (Lat. scritinium from scrutari to search, to investigate), a term variously employed in canon law. (1) In promotion to orders a scrutiny or ex-

amination of the candidate is to be made according to the warning of the Apostle: "Impose not hands lightly on any man, nor share in the practice is ancient is testified by St. Cyprian (partly 285) in his thirty-eighth epistle. The ninth
canon of the Council of Nicaea (325) supposes the scrutu-

nity of candidates to be already in use. Many later

synods enforced and defined more exactly this scrutiny

of those who aspired to orders. The present discipline is laid down by the Council of Trent (Sess. XXIII, Cap. v, de ref.), though its observance in every detail has not been reduced to practice in all countries. A three-fold scrutiny is ordered: first, through the inquiry into the qualities of the candid-

ate; by the parish priests and by the bishop and by the pastoral and spiritual education given for the ordination of a deacon or priest. (2) Scrutu-

nity is also a form of ecclesiastical election and is made

either by written ballot or by pronouncing the chosen

name before legitimate scrutatores alone. It is the

usual form for electing the pope. (See Papal Elec-

tions). (3) Scrutiny is also the term for the exami-

nation of catechumens before baptism. In ancient
times there were three such scrutini and later on the

number was increased to seven. From the Middle Ages onwards owing to the fact that most who re-

ceived baptism were infants the prescribed scrutini

were reduced to that now found in the ritual for con-

ferring baptism. The subject-matter of these scrutu-

nities was the faith and dispositions of the candidate.

Sculpture.—In the widest sense of the term, sculp-

ture is the art of representing in bodily form men, ani-

mals, and other objects in stone, bronze, ivory, clay and similar materials, whether the objects repre-

sented actually exist in nature or are the creation of the imagination of the artist. A more concise and

exact definition of sculpture is the art which gives

beauty in bodily form by means of figures entirely or

partly in the round. Sculpture therefore depicts the

beauty of the corporeal world, not as does painting

means of an illusory representation upon a flat col-

coured surface, but by imitating in a solid substance

these bodies in their entirety and achieving the true

means of form and line. This true is ideal plastic beauty. Sculpture therefore does not include

landscape with its accompanying vegetation, nor the

phenomena of light and shade, which play such an

important part in painting. Inasmuch as sculpture

represents bodies in their actual form and contours,

its favourite subject, in contrast to painting, is the

single figure. And as the single figure never appears

in close relation with its surroundings the significa-

nance of its personality is presented in a more effect-

effective and powerful manner, particularly so because it is usu-

ally raised above its surroundings by means of a

pedestal, and is placed in the most advantageous

light by a suitable background. By these means the

statue becomes a monument, in which the character-

istic traits of a personality are perpetuated with ar-

tistic charm. These attributes of the statue render it

XIII.—41
difficult for sculpture to combine several figures in a group in which detail is necessarily subordinated to the whole. The most important principle of the group is that the figures should be as closely joined together as is possible, or as is compatible with the artistic effect. Such a juxtaposition is very much hindered by the material in the case of figures in the round. These difficulties do not exist in the case of the relief, and it can also be considered as sculpture, which it belongs by reason both of the material used and of the technique. In certain circumstances, relief approaches so nearly to painting that it may be called the transalional art between painting and sculpture; it is, so to speak, pictorial sculpture. It prefers to represent several figures or several scenes, side by side, or even on opposite sides, which has caused war scenes, festival processions, labour in the fields and at home; it therefore easily achieves what is hardly possible for sculpture in the round. There are two principal kinds of relief: Low Relief (bas-relief, basso-rilievo), the figures of which have only a limited thickness, and in which the appearance of solidity is achieved by the effect of light and shade; and High Relief (grand-relief, alto-rilievo), in which the figures sometimes appear entirely in the round. The chief demand which we make of a work of sculpture, whether it be a statue or a group, is artistic unity, that is to say, that all the parts should work together and make a whole of an even and continuous texture. In the case of the single statue it is not only the expression of the face which reveals the idea presented in the work of art, but the pose of the body and the posture of the limbs also contribute to the same end. For this reason everything irrelevant should, as far as possible, be avoided: this requirement has led to the principle first tersely enunciated by Lessing in his "Laocoon", and which has since been repeated innumerable times: that it is the purpose of sculpture (and also of painting) to represent human figures of great bodily beauty; from which Lessing made the further deduction that the highest purpose of sculpture is not the representation of spiritual but of sensuous beauty, that is to say, the beauty of the human body free from all draperies. Modern aesthetes have gone so far as to maintain as a rule without exception, that sculpture should create only nude bodies. A sculptor's fine artistic sense went so far as to demand that sculpture, in order to give the most emphatic expression to its distinctive characteristics, and not to weaken the sensuous appeal of the nude, should reduce somewhat the expression of emotion in the countenance, which should, so to speak, under a tone lower in order that it may harmonize with the body. These views, however, are in accordance neither with the teachings of history nor with good morals.

Not even with the ancient Greeks at the time of their most perfect development, was the representation of the nude body the chief aim of sculpture, and only in the age of their decline do the representations of the nude prevail. The most perfect creations of Grecian plastic art, the "Zeus" and the "Athena" of Phidias, were draped figures of gold and ivory, to which pilgrimages were made, not in order to enjoy their sensuous beauty of body, but to forget sorrow and suffering and to be fortified in religious belief. Draperies can and should be used to emphasize the spiritual significance of man. That Christian religion and morals have justly found objections to the representations of the nude is quite obvious, as is also the fact that such objections are removed when draped figures or other very delicate representation, as, for example, in the case of Adam and Eve in Paradise. Another subject of wide importance demanding a few words is the tinting of statues, or polychromy. Until a few decades ago scholars generally were of the opinion that the ancient sculptors used no other tint than the original colour of the marble; but closer investigation of the antique monuments as well as of the accounts in ancient literature prove beyond doubt that the Greeks very slightly tinted their statues, as was necessary when they placed them in richly decorated interiors. Since this has become known our judgment of the polychromy of medieval sculpture has become a more favourable one.

In accordance with the material used and the different methods also be considered as sculpture, which can be classified as follows: (1) Stone sculpture, or sculpture in a restricted sense, which for its noblest and most excellent works made use of marble. (2) Wood sculpture, which flourished especially in the Middle Ages; its success was much restricted by the practice of encasing the carved wood with cloth over the base, which is not incorrect. (3) Sculpture in metals, which not only creates the most lasting works, but allows greater freedom in the treatment of the material. From the perfection which it attained in antiquity metal sculpture degenerated greatly in the Middle Ages, when it was for the part confined to relief. Not until the Italian Renaissance was the art of metal casting again resumed for monumental statues. (4) Repoussé sculpture, in which the metal was beaten into form by means of hammer and punch. In antiquity and in the Middle Ages this process was used for smaller subjects only, but since then it has been much employed also for sculptor's work, as well, for instance the colossal statue of Arminius in the Teutoburgwald. (5) Sculpture in clay or terra-cotta, in which the figure is moulded in a soft substance, which afterwards hardens either by drying or firing. In this art also the ancients created much that is important, and during the Renaissance the terra-cottas of Luca della Robbia and his followers acquired great celebrity. (6) Sculpture in ivory was used by the Greeks in combination with gold for monumental works (chrysselephantine technique). In the Middle Ages and in modern times ivory is often used for works of small proportions; it is particularly suitable for delicate and pathetic subjects. (7) Glyptics, or the art of cutting gems, as well as the engraving of medals, coins, and seals, are varieties of sculpture which have a cultural rather than an artistic and aesthetic importance.

In a stricter sense, in a wide sense belongs to prehistoric times. The first attempts to represent human beings by images were probably made in the Sandwich Islands. A higher stage of development is shown by the ancient Mexican sculptures, particularly those of the Mayan period, among which, along with the representation of nude figures, many carved statues also found works showing a real observation of nature. A greater historic and aesthetic interest is first found in Egyptian sculpture, which in all times appears closely connected with architecture. As usual in primitive art, the works of the earliest or Memphitic period (until A.D. 3550) are distinguished by originality and nature. While in the later period the human figure was moulded in accordance with an unchangeable canon or type, from which only the countenances show any deviation. The sculptures of the later period are principally reduced, produced by incised outlines and slight modelling; statues also occur, but groups are very rare. With the elevation of the Egyptian kings (about A.D. 3550) the size of the figures was increased to colossal proportions, but as they were all executed in accordance with the traditional type, sculpture gradually declined. No important revival occurred because Egyptian sculpture was entirely absorbed by other reasons determining Hellenic art. Besides representations of religious scenes and episodes of Court life, those depicting the daily life of the people were also popular. These were conditioned by the belief of the Egyptians, that such representations were pleasing to the dead and that they beautified their life in the other world.
The sculpture of Babylonia and Assyria, the survivals of which have been excavated on the sites of ancient Nineveh and Babylon, has been produced under the influence of imperishable importance. It is imperfect in the representation of man, who is portrayed in a conventional and typical manner, but in the representation of animal combats and hunting scenes it reveals a surprisingly close observation of nature, free composition, and youthful energy. In its subject it is greatly the inferior of the Egyptian, since it serves almost entirely for the glorification of the great and little deities of the deified rulers. The sculpture of the Persians has become known particularly through the excavations at Persepolis. It served the same purpose as the Babylonian, but in the beauteous, the anthropomorphic, and the human figure shows a touch of individuality.

Pre-Christian sculpture attained its zenith in Greece; its sculptures have in all times been considered as unrivalled masterpieces. We can only devote a few words to them here. The subjects of Greek sculpture were taken particularly from the domain of religion, even in the times of the decline, when belief in the gods was rapidly disappearing. Numerous votive statues for deliverance from calamities or for victorious battles, as well as those erected in the temples and in their vicinity by the victors of the athletic games, belonged, in a wide sense, to religious sculpture. Besides religious subjects, portraits and genre statues were produced in great numbers. In accordance with the material used three classes of Greek sculpture may be distinguished: chryselephantine statues, the nude parts of which were of ivory and the draperies of gold; marble (particularly Parian marble); bronze, in which material the Greeks achieved perfect mastery of solid casting as well as hollow casting in a fire-proof mould. The excellences of Greek sculpture are extraordinary simplicity and clearness in composition, plastic repose as well as plastic action, wonderful charm, and conscientious technical execution. The great beauty of body which immediately impresses one at the sight of Greek sculpture is explained partly by the beauty of the Greek race, partly by the daily observation of naked youths and men as they appeared in the palaestra. Greek sculpture, hence, no sense of humanity in the modern sense, and only during the period after Phidias did sculptors venture to depict female goddesses, for instance Aphrodite, entirely nude. In addition to the excellences just mentioned special characteristics appear in each separate period. Three or four periods of Greek sculpture are usually distinguished.

Works of the first period, or of the Archaic style (b. c. 775-449), show in the beginning a lifeless constraint, but later reveal an expression of physical power and agility. The second period, the golden age (b. c. 449-323), is characterized at first by an ideal trend, represented especially by Phidias in the Attic School in his gold-ivory statues of the deities; partly also by a tendency to emphasize the highest physical beauty, the most celebrated representative of which is Polykleitos of the Argive School. The tendency during the last part of the second period was towards grace and bewitching beauty, combined with the expression of the most tender sentiment, through which subjectivity gained the upper hand, and through which the decline or third period (323-146) was ushered in. This age still produced a number of much admired works, such as the Laocoön group, or the works of Myron and Phidias. But the centres of art shifted to Pergamon and Rhodes. To the fourth period, the period of decay (b. c. 146-4. D. 397) are attributed the works, which partly originals, partly copies, were created by Greek and Roman artists in Italy. Typical of this period is the prevalence of portraits, both busts and statues. Greco-Roman sculpture was finally destroyed, not, as the Assyrian and Babylonian, by violent suppression or gradual absorption, but by the infusion of a new spirit and of new ideas.

III. The current views of early Christian art have very recently been radically changed because through the researches of Strzygowski and others, the Orient has received its just dues. Both in form and in technique the early Christian sculpture is generally speaking, identical with the pagan from which it was developed. But what the latest modern research has shown us is this: that it was not Rome which produced the best and most ancient works of Christian sculpture, but the East, which is certainly the cradle of Christian art. In Asia Minor the influence of Hellenistic art was still strong that many early Christian works have an almost classical character, but in the West, where this beneficent influence was lacking, sculpture fell earlier into decline. In pre-Constantinian times probably few works of sculpture were executed. This is especially true of representations of the Persons of the Trinity, because the Jews who had become Christians were averse to graven images, and the converted pagans were deterred by their remembrance of the innumerable statues of their former gods. But with the Emperor Constantine the production of sculptures in stone and bronze immediately began on a large scale. The century or two during which the art lasted has been preserved; but among these are a "Pastor Bonus" in the Museum of the Lateran, and a "Christ" in Berlin, both probably Oriental works. On the other hand, numerous reliefs survive, because, after the ancient custom, the sarcophagi, of which a large number survive, were richly decorated with sculptural representations. The surviving Christian sarcophagi belong mostly to the fourth and fifth centuries, and may be classified into an Occidental and an Oriental group. To the latter belong the beautiful sarcophagi of Ravenna, whose art stood in very intimate relation with the Byzantine. Sculpture in wood and ivory, so highly developed in antiquity, was enlisted in the service of the Church, as is proven by the portals of the Basilica of S. Sabina at Rome, and the numerous preserved book-covers, diptychs, and pyxes. For our knowledge of the transition from the early Christian to medieval sculpture we principally to reliefs carved in ivory, for there is an almost complete dearth of statuary until the tenth century. Sculpture in ivory achieved great importance in the ninth and tenth centuries. In delicacy of execution, in rhythm of line, and in well-considered arrangement of the laws of composition of this epoch approach the creations of the early Renaissance. This branch of sculpture flourished especially in France, at Tours, Corbie, and Metz.

In comparison with these delicate ivory carvings, the first attempts of Romanesque stone sculpture appeared crude and clumsy, but they contain the germ of a new life, which in the thirteenth century occasioned the first flower of medieval sculpture. It is typical of this period that sculpture, especially in stone, was predominantly subordinated to architecture and served almost exclusively for ecclesiastical purposes. The reliefs are entirely of symbolic character, and express thoughts which to a great extent have not yet been completely fathomed. At the beginning of this period (11th-12th centuries) there was an important development of sculpture in bronze, at Hildesheim under Bishop Bernward (c. 1052), and at Mayence under the works of Master Rupert. In Flanders (Belgium), also works of imposing beauty originated at this time, the best known of which is the Baptismal font at Liége (1112), resting upon twelve bronze oxen—the work of Renier de Huy. Until the end of the twelfth century sculpture in stone was almost entirely confined to reliefs, which served as decorations of baptis-
 SCULPTURE  

The centre of German sculpture during this period was in the North, especially in Lower Saxony, and in South Germany and the Rhineland are not poor in works of sculpture, but they are rather of an iconographic than of historical importance; as, for instance, the reliefs of the Schottenkirche (Sоut's Church) at Ratisbon. At the beginning of the thirteenth century German sculpture attained its highest triumph, which was based on the Byzantine and French influence. Several important schools flourished at the same time. In place of the traditional types and conventional draperies a lively, naturalistic presentation appears. Sculpture in bronze yields the first place to stone sculpture, and even statuary of wood finds its proper niche. The portal and window arches especially become the scenes of the new plastic decoration. In the tympanum the Last Judgement is generally represented; at the sides stand the wise and foolish virgins, the apostles, saints, and donors. The most important school of this period is the Saxon, with sculptures at Wechselburg, Freiberg, and Naumburg; the Frankish School with the reliefs of the choir-screens and statues in the cathedral of Bamberg, and the Romanesque sculptures of the cathedral of Strasbourg, which in many respects rival the best works of antique art. The sculptures of the remaining European countries during this period cannot be compared with these, to the order of subordination and artistic importance are the sculptures of Central France, where the cathedrals of Chartres, Le Mans, and Bourges achieve an imposing effect by reason of their solemn dignity and silent repose. In Italy also the church portals are decorated with mythological, legendary, and symbolic themes, but they lack all naturalness and consequently all artistic value. In other countries, however, were there so many artists who felt it necessary to immortalize their names by inscribing them upon their works.

The transition to Gothic sculpture—if, indeed, the expressions Romanesque and Gothic may be said to apply to sculpture—is not sudden, but very gradual, as is always the case with the appearance of a new tendency in art and of all new ideas. As the ideal of the Romanesque sculptures was virility and a dignified naturalness, so the Gothic masters followed an ideal trend which was not indeed to destroy the Romanesque naturalness, but gradually led to the conventionalization of figures, and a mechanical execution. The principal characteristics of the developed Gothic are that all persons have for the most part a youthful appearance, even though they are aged; their figures are slender and well-proportioned; long and smoothly flowing draperies; finally, the countenances have a thoughtful, spiritual, and modest expression. As long as the Gothic sculptors practised moderation in the application of these characteristics, they created works of classic beauty; but when the later generations attempted to surpass their predecessors, they fell into mannerisms, and created works which to-day seem highly inartistic. We have only to recall many representations of the Crucified One, which are caricatures of a human figure. The so-called Gothic pose—the exaggerated bend of the body towards one side and the constantly recurring smile, which almost becomes an expression of emotion. The demand for Gothic statues was enormous, since architecture made the widest use of them in the decoration of the churches. A thousand statues and other sculptures were hardly sufficient for a cathedral; the cathedral of Milan possesses 8000. This necessitated great rapidity of execution, which indeed promoted manual dexterity, but did not promote artistic conscientiousness. The innumerable statues should not, however, be examined and judged on their individual worth, but in relation to the buildings for which they were carved. From this point of view our only conclusion can be that it is hardly possible to conceive of anything more imposing than a Gothic cathedral with its wealth of decorative sculptures. The favourable position for sculptural decorations remains the portals, of which there are usually three on the façade of a Gothic cathedral. The sculptures which are here grouped together depict the entire scholastic theology in stone. A favourite subject is the life of our Saviour during His sojourn upon earth. The place of the Virgin. The portal is usually given to Our Lady with the Christ Child. The culmination of such theological representations in stone are the portals of the cathedrals of Paris, Chartres, and Strasbourg.

The most perfect development of Gothic sculpture took place in France, where the style originated. The principal scene of this development is Central France, where the cathedrals of Amiens, Chartres, Paris, and Rheims display a large number of most excellent figures, not only on the portals, but covering the façade above the portals (the so-called royal gallery), and even the choir. The subjects of these representations are the history of the world, and its Supreme Judge, His Most Holy Mother, the apostles, saints, kings, prophets, and sibyls, the Virtures and Vices, fables, and the occupations of man during each month of the year. This development began about 1150 at Chartres, and spread from there to St. Denis and Paris, attaining its highest development in the cathedral of Rheims with about 2500 statues, some of which indeed belong to the late Gothic period. The statues of the twelve apostles in the Ste Chapelle in Paris are gems of Gothic sculpture. About the same time (1400) able work was done by the Schools of Burgundy and the Netherlands, the most important monument of which is the tomb of Duke Philip the Bold at Dijon by Claus Sluter.

In England sculpture has always been a stepchild among the arts. There was practically none during the Romanesque period, and even in the early Gothic architecture either completely excluded sculptural representations in its edifices, or else used them only as decorations, as on the keystones and spandrels of the arches and in capitals. The finest examples are at Lincoln, Salisbury, and Westminster. Statuary is not of great importance; its best work is the effigy of Edward I. and its most important monuments are at Wells and Exeter.

These sculptures are characterized by pleasing simplicity, free composition, and dramatic action. A new phase of Gothic sculpture began with the discovery of the quarries on Purbeck Island, Dorsetshire, which provided the raw material of warm, pleasing colours. The sculptures carved on the island were so numerous that an individual style developed there (1175–1325). At a later period London supplied the chief demand of the country for sculpture, which consisted for the most part of sepulchral monuments. Deserving of a special mention is the School of the “Alabasters”, which for several centuries made the use of the rich English quarries of alabaster to carve small and large sculptures, rather in a mechanical than an artistic fashion. Among the bronze-workers the family of the Toreis, active for almost a century in London, is especially noteworthy; of these William Toreis of 1291 is the most famous. Queen Eleanor and Henry III in Westminster Abbey.

During the Gothic epoch Germany produced a great number of sculptural works, but until 1450 there is very little above mediocrity. About that year a new development began which lasted until 1550, and achieved such excellence that it may be termed the
second flower of German medieval sculpture. Sculptures in bronze and wood rather than in stone, constitute the finest product of this period. While in the first period North Germany took the lead, in this second period the hegemony can be briefly stated; the Southern countries, the Silesian School culminated in the works of the three Nuremberg masters, Veit Stoss, Adam Kraft, and Peter Vischer, the Würzburg School in Dill Riemenschneider, the Swabian, in Hans Multscher and Jörg Syrlin, and the Tyrolean, in Michael Pacher. The causes of this change and its chief characteristics can be briefly stated. In contrast with the early Gothic idealism a powerful realism now began to permeate art. People were represented exactly as in reality, with all the accidents of nature and costume; even the ugly and repulsive features were represented. The change in the character of the patrons of art played no small part in promoting this difference. Whereas formerly wealthy prelates and haughty nobles almost exclusively gave occupation to the artists, now, under the development of the third estate, the wealthy merchants or peasants caused monuments of devotion to be erected in the churches and in the homes of the wealthy. Although the common people gladly contributed to the decoration of the churches, they avoided the great expense of stone sculptures and confined themselves to presenting sculptures in wood. Indeed, for many of these works, stone was hardly feasible as a material. We have only to recall the thousands of almost innumerable altars. This frequent use of wood had also its effect on stone sculpture. There are in existence stone "sacrament houses" (tabernacles for the Blessed Sacrament) of this period which are as twisted and spiral as if they had been carved from wood. The treatment of the draperies is another characteristic of late medieval sculpture. While in the fourteenth century the draperies fell smoothly and simply, now they were puffed and bagged, bunched, and broken in such a manner as never again occurred. The subjects of sculpture were almost exclusively of a religious character. In statuary the most popular subjects were the Field, Our Lady of Sorrows, and St. Anne with the Madonna and the Christ Child (for the cult of St. Anne was more popular at the end of the Middle Ages than ever before or after).

The conditions for sculpture were especially favourable in Italy, where the chief attention was centred, not as in Germany or in France in the decoration of the portals and façade, but in puppets, altars, and sepulchral monuments. Since it also had the finest of materials, marble, at its disposal, Italian art ultimately took the palm in sculpture. In the beginning relief was principally attempted; after, it was not used till later. The development of Italian sculpture begins in the thirteenth century in Tuscany, which for about three centuries plays the leading part. It was the time of the proto-Renaissance, which is identified with the names of Niccolo, Giovanni, Andrea Pisano, and Giotto. From Pisano, and movement radiated from Pisano, but with Andrea Pisano, who was under the influence of Giotto, Florence became the centre and remained so throughout the entire early Renaissance. Siena, which rivalled Florence in painting, indeed produced a few able masters of sculpture, like Tino da Camaino (d. 1330), but it gradually lagged behind its rival. This circumstance, that the early Renaissance prospered above all in Florence, is of importance for the judgment of the Renaissance itself, which is still considered by many as a revival of antique art and therefore idealist, anti-eclectic, and only an art which arose in the soul of the Italian people on the basis of ancient tradition. It was not Rome, therefore, where at that time the antique monuments were being brought to light and studied, but Florence which became the cradle of the early Renaissance.

The most important works of this period are to be found in the churches, or in connexion with them; and they owed their origin to princes of the Church or to Church organizations. The number of these statues is immense; in sentiment, so sublime in conception, that they are not inferior to the best works of the Middle Ages—which is also a proof that the early Renaissance may not be designated as anti-religious. True, it cannot be denied that the late Renaissance, by too close imitation of the antique, lost many of these noble qualities, and therefore in most of its works leaves the spectator cold and unaffected. Among the numerous masters of the early Renaissance in Florence in the first half of the fifteenth century, the following three are especially prominent: Ghiberti, who has become celebrated as the sculptor of the Paradise Portals of the Baptistery of Florence; Donatello, the uncompromising realist and the sculptor of many statues, and Luca della Robbia, who in his terracottas attained an almost classical harmony and charm. With them were associated a large number of others, like Gino da Lanciano, and Benedetto da Majano, whose names should be mentioned. Among the sculptors in bronze Andrea del Verrochio is known through his world-famous group of Christ and St. Thomas in the church of Or San Michele, Florence; among the sculptors in marble Desiderio da Settignano, Rossellino, Mino da Fiesole, and Bendetti da Padua, publishers of Sienese, for it is not necessary to consider these artists more fully here, because they are all treated in separate articles in the Catholic Encyclopedia.

They exercised a wide-spread influence, and only Siena succeeded in maintaining an independent tendency in the art of Jacopo della Quercia (d. 1438). Lombardy and Venice had many important sculptors, with their at their disposal, as may be seen in the sculptures of the Basilica of St. Anthony at Padua and many sepulchral monuments in the churches of City of Venice.

In the age of Leo X, which is generally called the Golden Age of Italian art, sculpture also attained its apogee, judged from the purely formal point of view. Of imposing effect are the works of the Florentine Andrea Contucci, called Sansovino, as, for example, his Baptism of Christ. But all are surpassed in gigantic power and original composition by Michelangelo, who was unsurpassed in following the younger classical line, not indeed through this imitation they fell into mannerism, since the spirit of the great master was lacking in them, although they might imitate his external forms. Through Jacopo Sansovino (Tatti) Michelangelos tendencies were transplanted to Venice. A few of the younger sculptors, who were to preserve their independence, still created very able works, as did Giovanni da Bologna; but their works do not to a great extent belong to ecclesiastical art. As the entire art of the seventeenth century turned its back upon the dreary mannerism of the later sixteenth, so did also sculpture. It returned to nature, but not to the naive naturalism of the fifteenth century, but attempted a presentation which would show reality in its most effective form. Everything was calculated for effect and motion. Thus the movements of the limbs are violent and exaggerated, the muscles stand out prominently, the draperies flutter and fly as if blown by a storm. Another characteristic of this style is the frequent and affected use of allegory and personification; thus a nude man with books under his arm in the Annunziata, Florence, personifies thought. This style is the well-known Baroque sculpture, which, after the death of Michelangelo, was condemned and outlawed by many. While among Baroque sculptures there are many works which do not appeal to our Christian sentiment, nevertheless this judgment cannot be applied to all sculptures of
Sculpture. At all events a great number of these works bear testimony to the lively religious interest and also to the self-sacrifice of that much-condemned age. Furthermore, the Baroque sculptures should not be considered by themselves, but in connexion with the paintings and the architecture. This period was characterized in by a man who enshrined the mind of his contemporaries as hardly any artist has ever done, Lorenzo Bernini, the favourite of six popes. Among others who worked in his spirit was Alessandro Algarzi (d. 1653); but more independent of his influence was Giovanni Lazzaro da Ponte (d. 1690). Two paths pointed out by Bernini led sculpture to an abyss, from which no great spirit rescued it. It sank into triviality, exaggerated naturalism, and virtuosity.

Modern sculpture outside of Italy is in the main dependent on the development of Italian art. In France, where the Renaissance entered towards the end of the fifteenth century, sculpture, while preserving national peculiarities, is characterized by a simple, sometimes crude naturalism. It attained an important development on the Loire, with Tours as a centre, and Michael Colombe (d. 1512) as chief master. Not until the middle of the sixteenth century did the Italian influence enter. In the second half of the century French sculpture may be said to have reached its zenith. The most important representatives are Jean Goujon, Bontemps, and Pierre Pilon. The work of these sculptors, notwithstanding great formal beauty and technical ability, reveals a certain coldness and smoothness; and since 1650 secular subjects are preferred. This is even more the case with the younger generation represented by Pierre Puget, François Girardon, and Antoine Coysevox, whose works bear a specifically French imprint, a certain affected, stilted, and theatrical quality, which in the eighteenth century degenerates into an insipid elegance.

In the Netherlands, as elsewhere, native and Italian influences contended with each other until the latter gained ascendancy. Here besides some fine choir stalls were produced pulpits of a grandeur and magnificence unrivalled in other countries. The staiway, the body of the pulpits, and the sounding-board were treated as a single ornamental structure decorated with statues and carvings. Splendid examples of this sort are the pulpits of the cathedrals of Antwerp by the master, van der Voort, and the Church of St. Gudula, in Brussels by Henri Fransois Verschuel (1655-1724). Other important Flemish sculptors are François Duquesnoy (d. 1646), who was a contemporary of Bernini, under whose influence he carved St. Andrew in the cupola of St. Peter's at Rome; his pupil Arthur Quellinus and Adrain de Fries must also be mentioned.

During the Renaissance period Spanish sculpture was chiefly of a decorative character, and was displayed especially on the façades of the churches and palaces and in the towering gilded wooden pulpits (retablos). Favourable to its growth was the Spanish custom of donating in the churches and hospitals from the Passion and carrying them in processions. One of the most interesting masters is Damian Forment (d. 1533), who considered himself the equal of Phidias and Praxiteles; one of his ablest works is a retablo in the Cathedral del Pilar at Zaragoza. During the late Renaissance Pedro de Mens (d. 1630) carved the church of Malaga forty-two years, with such beauty and individuality that they must be numbered among the most important works of all modern sculpture. In England there was no native sculpture for several generations after the disappearance of the Gothic style. The first sculptor whose work can be said to create a living art was Nicholas Stone (1556-1647); the first to labour in the spirit of the Renaissance was Grinling Gibbons, whose finest decorative works are in St. Paul's, London, and in Trin-
John Flaxman (1755–1826), who found his inspiration in Greek rather than in Roman art. He is chiefly known for his pure classical figures on Wedgwood medallions, and for some beautiful portraits of the nineteenth century, but the later part of the period was marked by increasing naturalism. The chief representations of the transition include John Henry Foley (1818–74), whose statues of Goldsmith, Burke, and Grattan at Dublin are noteworthy; Thomas Brock, whose works include the O’Connell monument at Dublin and the Victoria Memorial in London, England’s most magnificent monument of sculpture, seventy feet high, and containing many symbolic figures; George Armstead (1823–1905), who carved a St. Matthew and other marble figures for the redecorations of the Church of St. Mary Abersavon; Sir J. E. Boehm (1834–91); Thomas Woolner (1825–93), a member of the Pre-Raphaelite Brotherhood. The most important British sculptor of the nineteenth century was Alfred Stevens (1817–75), a pupil of Thorwaldsen, but whose classical training did not preclude great originality in all branches of sculpture. His Westminster monument in St. Paul’s Cathedral is the most beautiful example of modern English sculpture that has produced. Mention should also be made of Lord Leighton (1830–1896), whose sculpture excels his painting, and particularly of George Frederick Watts, in whose works great power and originality are united with a high spiritual significance. The great change in English sculpture since about 1875 is due to French influence. For many years Jules Dalou, a French political exile of 1870, was in charge of the modelling classes in South Kensington Museum. His teachings substituted structure and movement for the previous haphazard methods, and inaugurated a sane and healthy naturalism. His pupils include Hamo Thornycroft, whose finely-modelled Teucer inaugurated the new movement. Other important sculptors of the same tendencies are E. Osnlov Ford, educated at Munich; J. M. Swan, the animal sculptor; and George Frampton, whose works are of special note in the United States. Among the most fertile and creative sculptors of the present day is Alfred Gilbert, who excels in all branches of sculpture, and whose very modern style unites the goldsmith’s to the sculptor’s art. His works, especially those of the beautiful statue of Christ and Angels for the church of the St. Alba’s Cathedral. Nearly all of these men enjoyed French training, but their art possesses certain qualities which are distinctly national.

In the United States.—Sculpture in the United States is a development of the last three quarters of the nineteenth century. It has developed in connection with the schools of Western Europe, but without being less individual or national than they. Its history may be divided into three periods: (1) The Colonial Period (1825–90); (2) The Middle Period (1850–90), in which classicism still exists, but increasingly gives way to a more national development; (3) The Contemporary or Cosmopolitan Period, developed as elsewhere, under French influence.

The Classical School.—Neither the Puritan doctrines of the early settlers nor the other religious tendencies of the period were so opposed to the development of sculpture. There were no facilities for technical training of any description, no monuments to study or inspire. Consequently, the early sculptors of colonial and early revolutionary periods were unimportant and formed no schools. The real development began in 1826 with the departure of Horatio Greenough of Boston (1805–82) for Rome. The character of his art is well known from his half-draped gigantic statue of Washington as the Olympian Zeus, which was later placed in the Capitol at Washington. Hiram Powers (1805–73) did similar work, but of a more sentimental character, in such statues as his celebrated “Greek Slave”, an example of the nude, chastely treated, and his “Eve Disconsolate”. Thomas Crawford (1813–57), a pupil of Thorwaldsen, is known as the sculptor of the bronze “Liberty” surmounting the dome of the Capitol at Washington, the bronze portals of the Capitol, and the pedestal group of the Senate Chamber.

Middle or Native Period.—Even during the classical period the transition to a more national art began. The pioneer was Henry Kirke Brown (1814–93), whose work, unaffected by his Italian study, is best typified in his remarkable equestrian statue of George Washington in Union Square, New York. Another important sculptor of native tendencies was Erastus Dow Palmer (1817–1904), who was practically self-trained and never left America. His ideal nude figures were the best executed up to that time, while his “Angel of the Sepulchre” shows his strength in religious subjects. Thomas Ball (1819) set a new standard in public monuments by such works as his equestrian statue of General Washington in Boston and his Lincoln monument in Washington. Representative of the Classical School during the middle period include the many-sided W. W. Stokey, Randolph Rogers, W. H. Rinehart, whose works may be best studied in Baltimore, and Harriet Hosmer. Mention may also be made of the statues of Civil War subjects by John Rogers (1824–1904), which enjoyed great popularity without being really good. The most distinguished artist of the later middle period was J. Q. A. Ward (1830–1910), a pupil of H. K. Brown, whose art is powerful, simple and sculptural. He was as successful in his public monuments as in his statues, such as the “Indian Hunter”, which stands in Central Park, New York.

Contemporary Sculpture.—The most recent development of American sculpture was ushered in by the Centennial Exposition at Philadelphia in 1876, which revealed the superiority of European, particularly of the French, work. From that time Paris became the training school of a great number of American sculptors, including George Washington portrait of a man. Among the most notable was that of Augustus Saint-Gaudens, who in 1870, to the highest technical efficiency he added remarkable powers of characterisation. His Shaw memorial relief at Boston and the statue of Lincoln in Chicago were epoch-making, and his General Sherman in Central Park, New York, places him in the first rank of American sculptors. His religious works include a beautiful “Amor Caritas” in the Luxembourg Museum, Paris. Foreign influence is absent from the work of Daniel Chester French (1850—), whose art is characterized by restraint and a certain purity of conception. Among the most charming works are “Death and the Sculptor” (Art Institute, Chicago) and the O’Reilly memorial in Boston, with a beautiful statue of Erin mourning. Frederick Macmonnies is the most thoroughly French of our sculptors, while Herbert Adams has found inspiration in the early Florentine masters.

Among the more prominent figures of the Cosmopolitan period include Bela L. Pratt, of Boston, Charles Grafy, of Philadelphia, Lorado Taft, of Chicago, and Douglas Tilden, of San Francisco, whose art is the most radical of all. But the centre of American sculpture is New York. Mention should be made of Charles H. Niehaus, a master of modelling, who rep
represents the German influence, of F. W. Ruckstuhl, and Carl Bitter, whose decorative work is celebrated, and of Paul Bardac, the sculptor of the La Fayette statue in Paris. The most important of the animal sculptors are the late Edward Kemy, whose speciality was native American wild animals, E. C. Potter, and A. C. Proctor, who has also portrayed the American Indian; but the most powerful sculptor of the Indian is Cyrus E. Dallin. The two most important characteristically American of the younger men are both from the West; Solon H. Borglum, the sculptor of the Indian, the cowboy, and the bronco, and George Gray Barnard, whose strong and simple art unites great breadth with an ideal characterization. There has been little opportunity for ecclesiastical sculpture in the United States. The most important commission has been the portals of St. Bartholomew’s Church, New York, completed in 1904; the central portal and friezes by D. C. French and Andrew O’Connor, the others by Herbert Adams and Philip Martiny. These very profuse decorations are excellent from the modern point of view, but too little subordinated to the architecture to be monumental. The sculptures of the Anglican Cathedral are of St. John the Divine, New York, by Gutterson Borglum are noteworthy.

**Scrup. See Scopia, Archdiocese of.**

**Scutari, Archdiocese of (Scutarena).—The first known bishop was Basius (387). The bishops of Scutari were at first subject to the Metropolitan of Salonica, Primate of all Illyricum, but when Justinian I transferred the primacy to Achrida, they became suffragans of the latter see. In the early Middle Ages Scutari was a suffragan of Dicolea. From the seventh to the middle of the twelfth century no bishop is known. Among its best-known bishops are: Francis II de Sanctis (1471–1491); Fra Dominicus Andrzejew (d. at Rome in 1639), a famous theologian and philosopher, friend of Gregory XV and of Urban VIII; Dominus Antonius III de Nigiris (1693–1702), martyred in 1702 by the Turks. In 1887 Scutari was sede principali united with the Archdiocese of Antivari, and in this way Pius IX made Scutari an archiepiscopal and metropolitan. The first archbishop of the united diocese, Mgr. Charles Postel, priest of Fevere, near Arcos, who had been Apostolic Administrator of Antivari (1834–1855), died at Scutari on 15 January, 1886. From 1036 to 1886 only 53 bishops of Scutari are known. On 23 October, 1886, the Archdiocese of Scutari was separated from that of Antivari, and remained an archdiocese and a metropolis with three suffragans: Alessio, Sapra, and Pulo. The ancient See of Ucinium, in the territory of Scutari, was in 1571 occupied by the Turks and ceased to exist, for no Christians remained. During the existence of Ucinium, its bishops were suffragans of the Metropolitan of Antivari or of that of Dioeclea. About the middle of the sixteenth century the ancient See of Sucumac was forever suppressed. Other ancient sees in this territory were the Sees of Dinastrum and Balasum.

The Archdiocese of Scutari comprises 29 parishes, of which 8 are held by Franciscans, and has a Catholic population of 25,300. It includes Mgr. Paschal Guerini, b. at Pesagno in Dalmatia, 21 May, 1821; ordained priest on 27 June, 1845; appointed Coadjutor Bishop of Scutari and titular Bishop of Paphos on 6 May, 1879; elected as Metropolitan and Archbishop of Scutari on 23 November, 1896. The episcopal residence is at Scutari. The Archdiocese of Scutari has a Collegium Pontificium Albanense founded as a central seminary (1855) by the Holy See, and then controlled by the Turks, it was reopened in 1859, the Emperor of Austria, Francis Joseph I, bearing two-thirds of the expense. The Austrian Government supported at first fifteen seminarians, now twenty-four; Propaganda supports ten; the remaining eleven are at the charge of their bishops; it is also assisted by the Jesuits. In a primary school, the Colleges in S. Francesca Xavieri, was opened in 1841 by the Jesuits, to which in 1868, by the wish of Pius IX, a course of philosophy was added and later a trade-school (Handelsschule). The Franciscans have a college or so-called profandat at Scutari and a novitiate at Rubigo. The Scolopi have a hospice of orphanage for poor girls. There are Sisters of Charity of St. Vincent de Paul, and four Catholic elementary schools. The Franciscans have hospices at Armamahje-Scutari and at Kasutari, and a monastery at Scutari. The schools and colleges are sustained mostly by the Propaganda and are supported by the Austrian Government.

**Antony-Lawrence Ganczyci.**

**Scythopolis, a titular metropolitan see of Palestina Secunda.** It is the ancient Bethsan (q. v.) so often mentioned in the Bible, as proved by texts in the writings of Josephus. Its name Scythopolis is very likely derived from a colony of Scythians who invaded Palestine in the seventh century B.C. (Herodotus, I, 103–5), and left some of their number behind (Pliny, “Hist. natur.”, V, 16; John Malalas, “Chronographia”, V, in P. G., XCII, 236; George Synkellos, “Chronographia”, 914 et seq.). The earliest known use of the name is in II Mach., xii, 29, and in the Greek text of Judith, iii, 10. Although Scythopolis was the only town situated on the right bank of the Jordan, it was the capital of Decapolis and in the fourth century became the civi and ecclesiastical metropolis of Palestine. The city of Scythopolis is not anciently known. Patarounos, intimate friend of Arius and his adherents, assisted at the Council of Nicaea in 325 and at various councils of the Arians till 360. Cruel and fanatical, he ill-treated the Catholic bishops exiled to Scythopolis, especially St. Eusebius of Veroeili. He was deposed by the Council of Seleucia in 356 and died soon after; his remains were desecrated by the pagans in 361. We may also mention Philip and Athanasius, both Arians; Saturninus, present at the Council of Constantinople in 381; Theodosius, friend of St. John Chrysostom; Acacius, friend of St. Cyril of Alexandria; St. Servius, killed by the Monophysites in 432, honoured on 21 February; John, who wrote in defence of the Council of Chalcedon; Theodore, who about 553 was compelled to sign an anti-orientian profession of faith, still preserved (Le Quien, “Oriens christianus.”, III, 681–84).

At the time of the Frankish occupation, the see was transferred to Nazareth; the Greeks long preserved the Sees of Scythopolis and Nazareth, but only the latter now exists. Among illustrious Christians of Scythopolis were: St. Procopius, martyr (8 July), who belonged to the clergy of the town (Delehaye, “Les legenles hagiographiques”, Paris, 1905, 144–5); Acacius, comitatus present metropolitan of Scythopolis in the sixth century, cited with praise by St. Jerome; Cyril, charming historian of monastic life in Palestine, who wrote seven lives of saints. In the sixth century there were four churches at Scythopolis, dedicated to St. Thomas, St. John, St. Procopius, and St. Basil, a local martyr. Many monks lived in the
Seal.—The use of a seal by men of wealth and position was common before the Christian era. It was natural then that high functionaries of the Church should adopt the habit as soon as they became influential. The practice was particularly promoted in one of St. Augustine's letters (letter to Victorinus) that it was used by a bishop. The practice spread and it seems to be taken for granted by Clovis at the very beginning of the Merovingian period (Mon. Germ. Hist.: Leg., II, 2). Later ecclesiastical custom required that the bishop's seal should be given to priests when for some reason they lawfully quit their own proper dioceses. It was enacted at Chalon-sur-Saône in 813. Pope Nicholas I in the same century complains that the bishops of Dôle and Reims had contra morem sent their letters to him unseen (Jaffé, "Italics"). The practice continued and was necessary to address the seal was necessarily broken. Later the seal served as an authentication and was attached to the face of the document. The deed was thus only held to be valid so long as the seal remained intact. It soon came to follow from this point of view that not only the quality of the ring and bishop, but also the kind of body corporate, cathedral chapters, municipalities, monasteries, etc., also required a common seal to validate the acts which were executed in their name.

During the early Middle Ages seals of lead, or more properly "bulls" (bullae), were in common use both in East and West, but except in the case of the papal chancery, these leaden authentications soon went out of favour in Western Christendom and it became the universal practice to take the impressions in wax. In England hardly any wax seals have survived of earlier date than the Norman Conquest. In the Bald's Leaburgh and diplomas etc. the earliest bishop's seals preserved are those of William of St. Carileph, Bishop of Durham (1081-96) and of St. Aeslm, Archbishop of Canterbury (1093-1109). The importance of the seal as a means of authentication necessitated that when authority passed into new hands the old seal should be broken and a new one provided. The bishop or pope dies it is the first duty of the Cardinal Camerlengo to obtain possession of the Fisherman's Ring, the papal signet, and to see that it is broken up. A similar practice prevailed in the Middle Ages and it is often alluded to by historians, as it seems to have been a matter of some ceremony. Thus we are concisely told: "There died in this year Robert de Insula, Bishop of Durham. After his burial, his seal was publicly broken up, when everyone from Egypt by the patriarch Theophilus for so-called originist ideas. In 634 the Greeks were defeated by the Arabs in the marshes of Bethan; in 1182 the little town fought valiantly against Saladin. To-day Beisan is a Mussulman village, situated by the road from Acre to Damascus in the Hebron. The ancient ruins still exist, especially those of the theatre which measures 130 metres in half-circumference; the ruined acropolis stands in the hill of Kalat el Hosn. The climate is charming, the land very fertile and well watered. Rabbi Simon ben Lakish said: "If paradise is in Palestine, its gate is at Beisan". Smith, Dict. Gr. and Roman Geo., s. v. Bethan; Robinson, Biblical Researchs, 326; Survey of Western Palestine, Memoirs II (London, 1862), 101-13; Niebuhr, La geographie du Tlmaul (Paris, 1866), 174 sqq.; Guérin, Description de la Palestine, Samaria, Jericho (Paris, 1874), 294-96; Frederich, Bible de la Bible de la Bible, s. v. Bethan; Bouillon in Bohus d'Orient, I, 371-8; Trompouk, Loca sancta (Halle, 1907), 106. S. VAILÈE.
cill of Durham (1220) declared as follows: "Ne sacerdos revelet confessionem—Nullus ira, vel odio, vel Ecclesia metu vel mortis in aliquo studet revelare confessiones, si non absolverit vel speciali ut dicendo Ego scio quales vos essis, sub periculo ordinis et beneficij, et si convictus fuerit, absque misericordia degradabitur," i. e., "A priest shall not reveal a confession—let none dare from anger or hatred or fear of the Church or of death, in any way to reveal, by word, or by oaths, or by general or special occasion, (for instance), by saying, 'I know what manner of men ye are' under peril of his Order and Benefice, and if he shall be convicted thereof he shall be degraded without mercy" (see Wilkins, "Concilia," I, 577, 585). The provincial Council of Oxford, held in 1287, contains a similar canon, in which degradation is prescribed for any breach of the seal. We find the law, as laid down by the 21st canon of the Lateran Council, declared in the Acts of the Synod of Exeter in 1287 (Spelman, "Concilia," II, 357).

The fact that the laws of the Church were so emphatic on the subject, coupled with the fact that the Church was the world's great bulwark in the war against heresy, gave good ground for inferring that the secular courts recognized the seal. The recognition of it would not have rested on any principle of immunity from disclosure of confidential communications made to clergymen. It would have rested on the fact that converts were under a sacrament, and that the necessity for it which the doctrine of the Church laid down, on the fact of the practice of it by both king and people, and on the fact that the practice was wholly a matter of spiritual discipline and one, moreover, in regard to which the Church had so definitely declared the law of absolute secrecy.

It is stated by some, among others by the Commissioners appointed to report upon the ecclesiastical courts in their report published in 1883, that the ecclesiastical courts in England did not regard themselves as bound by the rules of canon law framed by the Church outside England, by the various papal Decrees, Rescripts, etc. But the Commissioners add that these courts paid great respect and attention to these Rules, Decrees, etc. There seems to be so much weighty evidence against this view that it is difficult to accept it. Sir Frederick Pollock says: "Maitland in "History of English Law" (I, 94 and 95) say that the jus commune or common law of the universal Church was the law of the Church in England. In this connexion important material is contained in the "Provinciale" of Lyndwood (Oxford, 1879), the only great English constitution.

The "Provinciale" consists of the provincial constitutions of fourteen archbishops of Canterbury from Stephen Langton (d. 1228) to Henry Chichele (d. 1443). When Lyndwood was engaged on this compilation he was the principal official of the Archbishop of Canterbury: he had been, also, the procurator of the clergy in the Convocation of Canterbury. Professor Maitland, in his essays on "Roman Canon Law in the Church of England," expresses the opinion that the ecclesiastical courts in England regarded the general body of canon law, including the various papal Decrees and Rescripts and the commentaries of the various great writers, as their law, which they had to administer. In citing Lyndwood as providing us with strong ground for this opinion, Professor Maitland aptly says: "At any rate he will state the law which he administers in the chief of all the English ecclesiastical courts."

From this "Provinciale" there is a constitution of Walter, Archbishop of Canterbury, apparently Walter Reynolds, transferred from the See of Worcester to the primatial see in 1313. The constitution begins with a prohibition to priests who have fallen into mortal sin to say Mass without first going to confession and warning them against imagining, as some believe erroneously do, that mortal sins are forgiven by the general confession made in the recitation of the Confiteor. It opens with these words: "Also knows no priest dare from anger, hatred or fear, even of death, to disclose in any manner whatsoever, whether by sign, gesture or word, in general or in particular, anybody's confession. And if he shall be convicted of this he shall be, deservedly, degraded, without hope of reconciliation."

Upon this constitution we have the following commentary by Lyndwood occurring upon the word "Confession"; "Supply 'Sacramental'. For in a Confession which is not sacramental, when, for instance, anyone in secret counsel reveals to some one else something which is secret in the nature of sin, thus, suppose he reveals to a priest what he owes or what is owing to him, the priest is not to receive such a secret under the seal of Confession. And although through indiscipline he may have so received it, he is not to conceal it unless as a matter of counsel or secret. Wherefore, if the priest was ordered (compulsus) by a judge rightly inquires about the matter in order that he may know the truth, he is bound to do so, notwithstanding that he may have received the secret under the seal of Confession. And though he may have sworn to keep the matter secret, yet if afterwards that oath is broken, he shall be bound to discover the matter, and if the judge, by the law contained therein, if the priest is examined, he is bound to tell the truth, notwithstanding his sworn promise. For that oath is not binding on him, being an unlawful one and, thus, one not to be kept to the prejudice of another's right"—he cites in support, St. Thomas Aquinas and Hastiensis—but if some such debt is unjustly demanded by some tyrant, then though he is aware of the debt he ought to keep silence about it or to change the subject or to reply sophistically ('responde sophisticis')"—he cites in support a commentary on Raymond de Penafforte.—"But," Lyndwood continues, "what if the priest should know that matter by any other means than by Confession before the spiritual tribunal (in foro animis)? It may be said that in so far as he knows it by any other means and he is ordered (compulsus) by a judge he may tell it, but not, of course, so as he heard it in confession; for if he told him, he would say 'It is what I heard', and he would retract. But let him always refrain as far as possible from speaking about the person so as to avoid scandal unless there be immediate necessity"—he cites in support, Innocent IV, the glossary on Raymond de Penafforte and Astianus, a Friar Minor and writer of the fourteenth century.

Dealing with the priest's being found guilty of revealing a confession, he says: "But what if the person confessing consents to its being revealed, because, perchance, he calls the Confessor as a witness?" His answer is: "The doctors say that he may reveal it. But understand this in such way that the priest shall make no account of what he knows only through confession (hoc tamen sic intellige quod sacerdos illud, quod solet solum per confessionem, nullo modo debet revelare). But the person who has confessed can intimate the matter to him in some other way which gives him leave to reveal it: and then he can tell, but, none the less, he ought to avoid scandal as much as possible. For he is bound to conceal the confession for two reasons, viz., on account of the sacrament, because it is almost of the essence of the sacrament to conceal the confession (quia quasi de essentia Sacramentum est celare Confessionem); likewise for the sake of the scandal. The first is removed by the permission of the person confessing, but the second remains none the less: and, therefore, where scandal is to be feared, he ought not to make use of such permission. These are the pronouncement of Thomas and of Peter, according to what is noted by John in
‘Summa Confessionis Rubrica de Confessione celanda, questio 100’, and with this pronouncement Johannes Andreus seems to agree. But I ask—what if it were already cited to be committed, but not yet committed? For instance, some one confesses that he wants to kill a man or to commit some other mischief and he says that he is unable to resist the temptation. May the priest reveal it? Some say that he may reveal it to such a person as can be beneficial and not detrimental (nulli ut proficiscet et non obesse), but the doctors of theology in this case say in general (communiter) that he must not reveal it, but must keep it entirely secret (ominino celare). Henry de Segusio says, however, that whatever he can properly (bono modo) do for the person he ought not to reveal the confession of person and without betrayal of him who makes the confession. Others say that where the confession is one of a sin about to be committed it is not a real confession, and that to the person making it, a penance cannot be given (neque tali datur potest potestas) and for these reasons it may be revealed to those who can be beneficial and not detrimental as I have said before”; he quotes Rudovicus and Guido of Bayso.

He states that Henry de Bohic “seems to adhere to the opinion of those theologians who say that even where future danger threatens, as, for instance, in the case of a heretic who proposes to commit the fatal deed of a murder or of some other future temporal injury, the confessor ought to furnish a remedy (adhicere remedium) as far as he can without the revelation of the Confession, as, for instance, by moving those confessing to desist and otherwise using diligence to prevent the purpose of the person confessing. He may, too, tell the prelate to look rather diligently (diligenter) after his flock; provided that he does not say anything through which by word or gesture he might betray the person confessing. And this opinion I hold to be more correct and more in keeping with the law, which speaks plainly. But the other opinion which sanctions the revelation of the Confession to those who can be beneficial and not detrimental might hold good when the person confessing consents to it according to what I have said above”.

Lyndwood then continues as follows: “One may deduce from the premises that if a judge maliciously proceeding by mischance is of a priest whether he knows anything of such a fact, which he has, perhaps, heard in confession, if he cannot, by changing the subject or by some other means, turn aside the unjust judge, he can answer that he knows nothing therefore (inde), because it is secretly understood (subhoplitati mentis); or he can say nothing through confession because it is secretly understood ‘nothing to be revealed to you.’” Upon the word “generaliter” there is the following comment: “And so truly, not at all (i.e. the confession is not to be in any way revealed) when the confession has been made to the nearest not as judge but as the minister of God. For if anything have been revealed to him as judge he is not bound to conceal it”; he cites Hosienus in support. It is to be observed that there is nowhere an exception in respect of the crime of treason. His commentary on the duty of not disclosing the confession of a crime proposed to be committed tends to show that he would not have recognized any such exception.

A manual, called “Pupilla oculi” (see Gasquet, “Pre-Reformation Essays”), which appears to have been mainly designed for practical use among the clergy, was published in the sixteenth century by John de Burgh, a professor of theology and Chancellor of the University of Cambridge. According to Mr. Edward Badley who wrote in 1865 a most able pamphlet on the privilege of the seal of confession entitled “The Privilege of Religious Confessions in English Courts of Justice”, this manual, to which Professor Maitland also refers, enjoyed great popularity. Its counsel to confessors who may happen to be witnesses in a court of justice are sufficiently like those in “Provincialis” to render it unnecessary to quote them.

Lyndwood thus affords us, as Professor Maitland points out, even by the fact of citing these various authorities, very strong evidence that the general canons of the law of the English ecclesiastical secular courts were modified by the Reformation ecclesiastical canons which were made by the authority of the synod with the sanction of the metropolitan. No crown sanction was required for their validity as canons. But the particular law in question was not one demanding observance in ecclesiastical courts in England, but in the civil and criminal courts of the land and on all occasions. It is an established principle of English law that no such rule or law could have become legally binding in England without being allowed and accepted there. The accuracy of the principle itself seems unquestionable and probably the only difference of opinion will arise as to the causes which might lead to the extension and acceptance in England of rules of canon law. Adopting merely the basis that only such decrees and such rules of canon law as had been in fact received and accepted in England were binding there, we have evidence that the aforesaid Fourth Lateran Council, as at least, two of its decrees, and as to clandestine marriages, was received and accepted in England. The judgments of the Courts in the case of Evans v. Ascuiete, tried in the third year of Charles I and reported in Palmer’s “Reports”, is based upon the validity of the former decree in England and it cites two cases, decided in the reign of Edward III, showing that the law declared by that decree had been acted upon by the civil courts of the land in that reign. The judgment of the Court of King’s Bench delivered by Lord Hardwicke, in the case of Middleton v. Croft ([1796] cases temp. Ed. Hardwicke, 526), though not expressly saying that the second decree was accepted and allowed in England, by its reasoning shows us that such was the case.

Remarkable evidence of the acceptance of the decrees of the Council of Lateran in England is brought to our notice by Professor Maitland in his introductory remarks to his edition of the Statutes of the County of Gloucester for the year 1221”. Speaking of trial by ordeal he says: “In 1215 the Lateran Council condemned the ordeal and at the beginning of Henry’s (the Third) reign the relation of England to Rome was such that this decree of the Church was received in England, and of course, received. At the next eyre (i.e. Circuit of judges for trials in the various counties), and a very general eyre it was, took place in the winter of 1215-9. The judges had already started on their journeys when an order of the king in council was sent round to them. It was dated 17th January, 1219, and is of much great moment in the history of our law, and, seemingly, so little known, that its substance shall be stated—When you started on your eyre it was as yet undetermined what should be done with persons accused of crime, the Church having forbidden the ordeal.” The order, thereupon, proceeds to suggest certain rules for the judges to follow.

In the Anglican Church.—In the “Codex Juris Ecclesiastici Anglicani” (London, 1781) by Dr. Edmund Gibson, chaplain to the Archbishop of Canterbury and afterwards Bishop of London, is found a list of the various canons and constitutions which had been made for the Church in England at different times. In his introduction to that work, in which he cites the statute 25 Hen. VIII, c. 21, concerning Peterspence and the exercise of papal jurisdiction in England, the author, in touching upon canon law, says as follows: “This is another branch of the
Laws of the Church of England and is partly Foreign and partly Domestic. The Foreign is what we commonly call the Body of Canon Law consisting of the Councils, Decrees of Popes and the like: which obtained in England by virtue of their own Authority (in like manner as they did in other parts of the Western Church) till the time of the Reformaion: and from that time have continued upon the foot of Consent, Usage, and Custom. He cites 25 Hen. VIII, c. 21.

He goes on to say that before the Reformation, their not being repugnant to the laws of the land was the condition of these laws being received here. But the reader is to be reminded of John de Worcest, certain constitutions of Otho and Othobon, which the commentator says were not received here. Dr. Gibson cites a constitution of Simon Sudbury, Archbishop of Canterbury (1378), ordering confessions to be heard three times a year, and that whoever would not confess at least once a year should be prevented from entering a church while living and should not receive Christian burial when dead: and this order was to be published frequently in the churches.

That the particular decree as to the secrecy of the seal of confession was locally re-enacted by English councils has already been shown to have great importance, whether as enacted by the Universal Council of the Lateran or re-enacted by the English councils, seems to have been only confirmatory of something already well established in the Church or, at most, as definitely declaring the punishment for the violation of the secrecy. That the decree was allowed and accepted by the civil courts of England can only be a matter for deduction. There is no direct proof of it, as there is, for instance, in the cases of these two other decrees, which are cited only as some evidence of the probability of the acceptance of this particular decree. Before enumerating other and chief grounds of this probability it is well to remember that if the law of the secrecy of confession was already well established in the Church it would be very unlikely that we should find evidence of any direct notice of the decree as in the cases of the two others.

But there seems to be absolutely no evidence which could cause one to doubt that a rule declared by the Church, as to a matter essentially bound up with a sacrament, which formed part of the necessary religious practice of the nation, would have been heathenishly accepted by the nation by reason of the mere fact that the universal Church had declared thereon. The strong grounds for holding that the law only solemnly declares an obligation upon priests which the nation had always believed to lie upon them, one would not expect to find any overt acceptance of the rule. Again, it is important to remember that the rule itself concerned priests mainly and that, undoubtedly, they were bound by it, and we see from the English canons re-enacting it the severe penalties to which they became liable in the ecclesiastical courts in England for any breach of it. Therefore, the disregard of it by the civil courts would have caused a perpetual conflict between these two tribunals even were the former was only exercising the jurisdiction which rightfully belonged to it, besides the fact that it would have so sharply conflicted with the religion practised by the nation.

The question of jurisdiction over clerks transgressing ecclesiastical law was entirely in the hands of the Church. The "Regulæ de Officiis Officiérum Ecclesiasticorum, 1583" to which we have already alluded, tells us that "ecclesiastical jurisdiction in its widest sense covered all the ground of ecclesiastical relations, persons, properties, rights and remedies: clergymen in all their relations". But the jurisdiction of the ecclesiastical courts extended even much further, including as it did the province of marriage, and that of probate coupled with the devolution of movable property in cases of intestacy. Within this latter province there would have been, perhaps, more than in any other province within the jurisdiction of any court, occasion for desiring to know something that might have transpired under the seal of confession. Pollock and Maitland’s "History of the Laws of England" tells us that intestacy was regarded with an abhorrence somewhat akin to that with which a death without sacramental confession was regarded. This may probably be a considerable overstatement, but it serves to show that this province was, at least, as much calculated as any other to raise the question of the seal of confession.

Again, let us remember that in some districts, such as Durham and Chester, bishops exercised temporal jurisdiction. Even in the King’s Courts, as Lord Coke points out, oftentimes the judges were priests, before Innocent IV prohibited priests from acting as judges. Pollock and Maitland’s "History of the Laws of England" gives us as a specimen date, that of 16 July, 1195, on which there sat in the Court of King’s Bench an archbishop, three bishops, and three archdeacons. The same book tells us that "it is by popish clergymen that our English common law is converted from a rude to a mature condition, and when the ‘popish clergymen’ yielding at length to the pope’s commands no longer sit as the principal justices of the king’s court the golden age of the common law is over". It is highly improbable that at a period when systematisation of the common law was proceeding at the hands of popish clergymen a rule compelling the disclosure of confession would have grown up. Finally, it is worthy of some observation that there is not a single reported case, textbook or commentary, during the whole pre-Reformation period which contains any suggestion that the laws of evidence did not respect the seal of confession.

The conclusion that before the Reformation the seal was regarded as sacred by the common law of England. Sir Robert Phillimore in his work on (Anglican) ecclesiastical law makes a definite statement to this effect.

The only recorded statute of the English Parliament which deals with the right of confession is Statute I of the 9th year of Edward II, c. 10. The statute is called "Articuli Cleri", and the part referred to deals with the rights of offenders who abjure the realm and, fleeing to a church for refuge, claim privilege of sanctuary. After stating that such persons are to be allowed to have the necessaries of life and that they are to be at liberty to go out of the church to relieve nature, the statute continues as follows: "Placat etiam Domino Regi, ut latrones vel appellatores quando-cumque voluerint possint sacerdotibus suas facinora confiteri: sed caveat conferentibus eorum crimen hujusmodi appellatores informem". This law, long obsolete, was repealed in 1683, and is translated in the collections of the Statutes (Statutes of the Realm, I, 173), and in Pickering’s edition of "Statutes at Large" (Cambridge, 1782): "And the King’s Pleasure is, that Thieves or Appellants (Whenever they will) may confess their Offences unto Priests: but let the Confessors beware that they do not erroneously inform such Appellants."

Sir Edward Coke, the great common lawyer who was Chief Justice under James I, in the 2nd Institute, c. X, says: "This branch extended only to thieves and appellants, but is continued by the long statute on treasons: for if high treason be discovered to the confessor, he ought to discover it for the danger that thereupon dependeth to the king and the whole realm: therefore the branch declareth the common law, that the privilege of confession extendeth only to felonies": "For by the common law," he states further on, "a man indited of high treason could not
have the benefit of clergy nor any clergyman privilege of confession to offence high treason. It is not quite clear from his statement, but it seems likely that Sir Edward Coke has interpreted the concluding caution to the confessors as a recognition of the seal of confession, and, if so, it would seem that he has wrongly interpreted it, because the translation of the word "informator" as "to inform against" would appear to be an unlikely interpretation. The clause would seem to be as one of warning to the confessors not to inform these offenders, when they are admitted to hear their confessions, of what is going on outside.

Therefore, except as far as it shows that the right of privacy confiding was reserved to these offenders, the statute, in its actual words, contains no declaration of the privilege of the seal of confession. But Sir Edward Coke's comment is important as being a statement by him of the existence of the privilege at common law in respect of felonies. For the exclusion of it from cases of high treason there appears to be no foundation except Sir Edward Coke's comment as quoted, because the two cases which he cites in support of that view nowise support it.

The first of these cases is that of Friar John Randolf, cited from the Rolls of Parliament, 7 Henry V, who was the confessor of Queen Joan, widow of Henry IV. There is nothing recorded from which Sir Edward Coke's averment that the queen's conspiracy had been proved by the disclosure of her confession to Friar Randolf can be deduced. The words are "Tant p relation & confession d'une frere John Randolf de l'ordre des Freres Menoures come p autres evidences creables". The word "confession" is, clearly, there used in its primary sense of an admission. The reports of the matter in Holinshed's "Chronicles" and in Stow's "Chronicle of England" support this view as they state that Randolf was imprisoned, Holinshed saying that "it was reported that he had conspired with the queen by sorcery and necromancy to destroy the King", while Stow says that he had counselled the queen to her crime. Thus, evidently, when he was imprisoned on the charge of the conspiracy with the queen he confessed it.

The second case is one which occurred after the Restoration in the trials of Fr. Garnet (see Garnet, Henry), on the charge of conspiracy in the Gunpowder Plot. It is reported in the records of the state trials. There is not only no mention of any decision by the court that the privilege of confession did not extend to the concealment of high treason, but there is not even the faintest indication of any opinion to that effect by any member of the court. There was no question of the giving of evidence by a witness before a court of justice of matter revealed to him in confession. The issue being whether Fr. Garnet was a party to the conspiracy, the question of his cognizance and, if cognisant, of his non-disclosure was not penalised. Sir Edward Coke did not dispute that he had heard the particulars of the plot from Greenwell, one of the conspirators, but the defence was that he had heard them only in confession, though he had previously received a general information of the plot from another of the conspirators, Catesby. Not only was the defence not rejected at once by the court as being bad in law, but, to infer from the arguments put to the prisoner upon it by certain members of the court, it was treated with a seriousness which seems surprising in a post-Reformation period, and, especially, at a moment of such strong anti-Catholic feeling.

In the absence of any member of the court, asked Fr. Garnet if there must not be confession and contrition before the absolution, and, having received an affirmative answer, he observed to him that Greenwell had shown no penitence, or intention to desist. "Hereby", he said, "it appears that either Greenwell told you out of confession, and then there would be no secrecy: or, if in confession, he professed no repentency, and the court should not accept him." He further said to him that after Greenwell had told him in particular what Catesby meant, and he then called to mind what Catesby had previously told him (Fr. Garnet) in general, he might have disclosed it out of his general knowledge from Catesby. Further asked Sir Edward Coke if the whole confession, when Catesby wished to tell him the particulars, he had refused to hear him, to which Fr. Garnet answered that he was loth to hear any more. Sir Edward Coke, for the prosecution, addressed to the court six arguments on the subject, the first being that this particular confession was not sacramental, the fifth being that Fr. Garnet had learned of the conspiracy from Catesby extra confessionem, and the last being that "by the common law, however it (the confession) were, it being a crimen lasae majestatis, he ought to have disclosed it". There is no indication of any adoption by the court of this last proposition. The confession in question was only an item in the evidence brought forward. One infers from the report that the court were not satisfied with the defence, as a fact, of the confession, and, also, that they considered the charge to be proved from the other evidence.

A paper on the law relating to confession in criminal cases by Mr. Charles H. Hopwood, the writer admits the probability of the calculation of the seal before the Reformation. He says that Garnet's case even as cited by Lord Coke could hardly be in point, inasmuch as Garnet was not called as a witness in the Gunpowder treason trial, and that the obligation of the seal of confession, if put forward by Garnet at all, was only done so by way of his own defence that he was not a conspirator, but merely knew whatever he knew through hearing the confession of the others, and that Sir E. Coke appears almost to confess and avoid this plea by retorting that the confession was one of crime not yet executed. Sir Edward Coke in his commentary on the "Articuli Cleri", c. 10, interpreting the wording of it as he does, says that it declares the common law. His supporting this statement by the citation of a recent case, together with this own argument, already mentioned, in that connexion, affords strong evidence that this learned lawyer was of opinion that even in his post-Reformation period the common law of England recognised the privilege of confession, except in the case of treason. If that is his view, as seems, at least, highly probable, it is profoundly interesting as the opinion of a very distinguished lawyer and a fierce champion of Protestantism.

It is important, however, to bear in mind that by the penal laws Catholicism was a proscribed religion. The practice of it was subjected to severe penal statutes and priests and persons performing its rites were rigorously suppressed. The courts treated as a matter of law if the latter is inconsistent with the provisions of the statute. It is true that there is no statute which expressly declares that religious confession shall not be privileged from disclosure in the witness-box. But so many statutes were passed against the practice of the Catholic religion that it would seem inconsistent with them to hold that such a privilege still prevailed at common law.

**Confession and the Book of Common Prayer.**—In the first half of the nineteenth century nearly all these laws were repealed, most of them having been for some time ineffective. The law was passed one way or the other about the disclosure in evidence of religious confession. If the privilege had ceased to be part of the common law legislation would be necessary to re-establish it. If it survived in the common law it can only have done so through the allowance of it in the case of the Protestant Church of
England. If there was any such allowance it might be argued that by the sanction now given by the State to the practice by Catholics of their religion the same allowance to them, too, is to be implied. In order to consider whether any allowance of the privilege of religious confession endured in the Protestant Church of England, it is necessary to consider whether confession itself endured there and, if so, to what extent.

It is material to recollect that the whole system of spiritual jurisdiction and the administration of canon law in England received a paralyzing blow with the advent of the Reformation. The Submission of the Clergy (1553) (223) deprived the laws of the universal Church, under the headship of the pope, of all the validity in England which was based on the mere ground of their being Decrees of the universal Church. That statute appointed a commission of thirty-two persons, sixteen lay and sixteen ecclesiastical, to inquire into the various ecclesiastical constitutions and canons, and it enacted that such of them as, in the opinion of the commissioners or the majority of them, ought to be abolished, should be abolished, and such of them as, in their opinion, ought to stand, should stand, the king’s assent being first obtained; but that they should have some manner, any canons, or constitutions which were not contrariant to the laws, statutes, or customs of the realm or were not to the damage of the king’s prerogative, were still to be used and executed as before. The statute was repealed in the reign of Queen Mary, but revived in that of Elizabeth; however, the commission never completed its labours and never arrived at any determination. The same direction is further pursued by other statutes in the same reign. Thus the preamble to 25 Henry VIII, c. 21, states that the realm of England is subject only to such laws as have been made within the kingdom or such as, by the suffrages of the sovereign, the body of the realm, and the consent of the Realm, have been taken by their own consent to be used among them, and to the observance of which they have bound themselves by long use and custom, which suffrages, consent, and custom are the basis of the forces thereof.

In an Act of the same reign relating to marriage, the prelude runs thus: “Whereas the usurped power of the bishop of Rome hath always intangled and troubled the mere jurisdiction and regal power of this realm of England”. There is, also, the Act 37 Henry VIII, c. 17, which declares that “by the word of God, the supremacy is, in effect, in the Church of England”, having power and authority to exercise all manner of ecclesiastical jurisdiction. Thus, in the reign of Henry VIII, the whole basis of canon law—the jurisdiction of the universal Church with the pope for its head—was removed, and for such canon law and ecclesiastical jurisdiction as remained a new basis was constructed, viz. that of the consent of the English nation and the royal suffrages. Professor Maitland observes that these various statutes impose upon the ecclesiastical courts “not merely new law, but a new theory about the old law”. “Their decisions”, he says, were dictated to them by acts of Parliament, and that is a very new phenomenon.” “In this reign”, he says, “we come upon a sudden catastrophe in the history of the spiritual courts.”

This reign is the introduction of the Protestant Reformation into England inasmuch as it nationalizes the Church, makes it dependent upon the State, sepa- rates it from the authority of the pope, makes the king supreme head. Still we find the king sternly checking the growth of Protestant doctrine and by the Statute of the Six Articles, passed in the thirty-first year of his reign, we find it declared that “auricular confession is expedient and necessary to be retained and continued, used and frequented in the Church of God”, and it was thereby made a felony to assert a contrary opinion. Therefore, with the exception, conceivably, of its exclusion in cases deemed to offend against the king’s prerogative which was then carried to great lengths, there is no reason to think that the privilege of the seal would not have been observed in that reign. But under Edward VI and his Calvinistic uncle, the Lord Protector Somerset, the Church of England, in the name of the State, repudiated the doctrine also, and in matters other than that of its headship. In the first year of his reign (1547), we find a mention of confession in a royal injunction issued to all his subjects, clergy and laity. The ninth of the royal injunction issued that year runs as follows: “And whereas, virtue, for the good of souls, lies in confession, let every person make confession of every sin, whether venial or mortal, with any matterly weight: After which confession the Priests shall absolve him after this sorte: Our Lord Jesus Christ who hath left power to his Church to absolve all sinners which truly repent and believe in him, of his great mercy forgive thee thine offences; and by his authority committed to me, I absolve thee from all thy sins, in the name of the father and of the son, and of the holy ghost”. This Prayer Book goes on immediately to say: “and the same form of absolution shall be used in all private confessions”. The Second Prayer Book, which was published in 1552, contains the same form as the First Prayer Book in the service in the form of the service in the sixteenth century it omits all mention of private confession. It also prescribes the general confession in the service before the Communion, as to which last named, however, it expressly denies transubstantiation or consubstantiation. This denial was omitted in the Third Prayer Book and is omitted from the Prayer Book as finally settled in 1662. The service for the visitation of the sick remains the same in that final version with the exception that, instead of saying “Here the sick person shall make a special confession”, it says: “shall be moved to make a special confession of his sins”, and after that the form of the service there are the words “if he humbly and heartily desire it”). The mention of private confession is omitted.

We receive an indication of the nature of the confession spoken of from the exhortation to the Communion service, prescribed in all the versions of the Prayer Book, which directs the minister to exhort the congregation in the following words: “And if there be any of you whose conscience is troubled and grieved in anything, lacking comfort or counsel let him come to me or to some other discreet and learned priest, taught in the law of God, and confess and open his sin and grief secretly, that he may receive such ghostly counsel, advice and comfort that his conscience may be relieved and that of us (as of the ministers of God and of the Church) he may receive comfort and absolution to the satisfaction of his mind, and avoiding of all scruple and doubtfulness: requiring such as shall be satisfied with a general confession not to be offended with this, and that in time and place, with the assent and assenting, the auricular and secret confession to the Priest: nor those also which think needful or convenient for the quietness of their own consciences particularly to open their sins to the priest to be offended with them that are satisfied with their humble confession to God and the general confession to the Church”. The latter part, from “requiring, etc.”, was omitted in the
Second and subsequent Prayer Books. In the ordination service prescribed in the Prayer Book the bishop is to speak the following words: "Receive the holy ghost for the office and work of a Priest in the Church of God now committed to thee by the imposition of our hands. Whose sins thou dost forgive they are forgiven; and whose sins thou dost retain they are retained."

The two "Books of the Homilies" are official documents of the Protestant Church of England. The public prayerbooks and prayerbooks were prepared by Archbishop Cranmer and other leaders of the Reformation in England and by the sovereign, King Edward VI. They were designed for the use of the clergy in their parish churches, mainly in order to put doctrine before the people in plain language. The first was called Homilies and the second was the Book of Common Prayer. The reading of the homilies or one of them every Sunday in parish churches was enjoined by royal authority. They subsequently received sanction from the mention made of them in the Communion service contained in the Prayer Book. It is evident that it was intended that further homilies should be written later.

The second "Book of the Homilies" was published by the authority of Queen Elizabeth and was appointed to be read in every parish church. It contains a homily on Repentance, the second part of which is written with argument, condemning the doctrine of the necessity of certain confession. The condemnation concludes as follows: "I do not say but that, if any do find themselves troubled in conscience, they may repair to their learned curate or pastor, or to some other godly learned man, and shew the trouble and doubt of their conscience to them, that they may receive at their hand the comfortable salve of God’s word: but it is against the true Christian liberty, that any man should be bound to the numbering of his sins, as it hath been used heretofore in the time of blindness and ignorance."

We find, on the other hand, on the revival of Catholicism under Edward’s successor, Queen Mary, some special mention of confession which appear to indicate that its practice was regarded as one of the tests of orthodoxy. In articles of visitation of his diocese by Bonner, Bishop of London, in 1554, we find the following inquiry under Art. XXI: "Whether any person have been accustomed to receiving the sacraments of the altar, or to be confessed and receive at the priest’s hand absolution according to the laudable custom of this realm?" Among similar articles set forth in 1557 by Cardinal Pole for the visitation of his Archdiocese of Canterbury, we find the following: "Touching the Laying on of the Hand. It is required, whether they do contend or despise by any manner of means any other of the sacraments, rites or ceremonies of the church, or do refuse or deny auricular confession?"

This may be said to constitute the official documentary evidence of the doctrine and discipline of the Church of England with regard to confession. It was not made a part of the discipline, and the practice of confession was optional, the only instance with regard to which we find any imperative words used being that of a dying person who should feel his conscience troubled with "any weighty matter". It may be that these last words are a literal translation of the Latin "graviter materia", frequently used, and so, perhaps, may denote, approximately, grievous or mortal sin. But even as to this occasion we find, as already pointed out, the words "shall make" altered to "shall be moved to make". It was not part of the doctrine of the Church of England as it continued established under Edward VI and, subsequently, from the accession of Elisabeth onwards, that auricular confession was necessary for forgiveness. The Statute of the Six Articles was repealed in the first year of Edward VI. The opinion and belief in the Protestant Church of England during that and the succeeding centuries were opposed to such a doctrine.

 Anglican Canons and Theologians.—Bishop Hooker, the Caroline divinity, was opposed to obligatory confession. In the afore-mentioned "Codex Juris Ecclesiasticci Anglicani" of Dr. Gibson, the writer characterizes as follows the Sacraments of Penance and Extreme Unction: "Title XXI. The Two Popish Sacraments of Penance and Extreme Unction." In the "Parergon Juris Canonici Anglicani" published by Doctor D. Joachim and John Ayiffe Conton, Prichard, we find in the introduction (p. XL) this passage: "Tho’ several Titles of the Canon Law are out of use with us here in England by reason of the gross Idolatry they contain in them, as the Title of the Authority and Use of the Pall, the Title of the Mass, the Title of Relics, and the Words and Sign of the Saints, the Title of Monks and Regular Canons, the Title of keeping the Eucharist and Chrism, and such other of the like Quality: Yet these are retained in the general". It is true that he does not include confession amongst these titles, but, on the other hand, he makes no reference to the Church or Canon Law so as to it in the whole. And over, in the chapter on public penance (p. 420) we find a statement that penance is distinguished by the Romanists and the canon law as (1) external which includes confession to a priest, and that it is this first kind which they make a sacrament for the interest of the confessors as well as the absolutoes in the absolution of the priest. "But", Dr. Ayliffe continues, "we Protestants who deny Penance to be a sacrament say that it consists in sorrow, confessing to God in foro conscientiae."

In Wheatley's "Rational Illustration of the Book of Common Prayer, being the substance of all the liturgical in Bishop Sherwood's, Mr. Lestrane's, Dr. Comber's, Dr. Nichols, and all former Ritualists, Commentators or Others upon the same Subject, collected and reduced into one continued and regular method and interspersed all along with new observations", we find (p. 374) the following comment on the words contained in the service for the visitation of the sick, which have been set out above: "i. e. I suppose if he has committed any sin, for which the censure of the Church ought to be inflicted or else if he is perplexed concerning the nature or some nice circumstances of his crime. On the words of absolution we find this paragraph: "Notably and otherwise, the prima nobilitas of the Church", which means, apparently, that it is not the imparting of a Divine forgiveness for the actual sin.

The only occasion in which the concealment of a confession is imposed as a duty by the Protestant Church of England seems to be in the anons which were made in 1603. Canon 113 deals with the suppression of evil deeds by the reporting thereof by the persons concerned with the administration of each parish. It provides for the presentment to the Ordinary by persons, vicars, or curates of the crimes and iniquities committed in the parishes. It concludes with the following reservation and proviso always, That if any man confess his secret and hidden sins to the minister, for the unburdening of his conscience, and to receive spiritual consolation and ease of mind from him: we do not in any way bind the said minister by this our Constitution, but do strictly charge and admonish him, that he do not at any time reveal and make known to any person whatsoever any crime or offence so committed to his trust and secrecy (except they be such crimes as by the laws of this realm his own life may be called into question for concealing the same) under pain of irregularity.

There are three points to be observed in the canon: First, the confession there referred to, from the likeness of the words used to those used in such parts of the liturgy as mention confession, which have been noticed above, seems to be the confession mentioned.
in the liturgy, viz. such form of confession as survived in the Protestant Church of England. Second, there is an express exemption from the duty of secrecy where such duty should conflict with one imposed by the civil power under a certain penalty. There does not appear to have been, in fact, at that time any law which made the mere concealment of any crime, including treason, an offense punishable with forfeiture. But this is not the subject laid down in the canon. The exemption is a marked departure from the pre-Reformation ecclesiastical law on the subject as shown by the pre-Reformation English canons and otherwise. Third, even apart from the exemption, the language used to declare the necessity for a suitable form to refer to the law used to declare the secrecy in pre-Reformation days. It is evident that secrecy is not quasi of the essence of the confession, as Lyndwood had declared it to be of the confession of which he wrote. The confession as to whose secrecy the Fourth Lateran Council, in behalf of the Church in the whole world, and the English Councils of Durham, Oxford, etc., in behalf of the Church in England, had made stringent decrees seems to have been banished by the Reformation.

It results from the Submission of the Clergy Act, mentioned above, that a canon is void if it contravenes common or statute law, and, accordingly, it becomes a nullity in evidence. Parson et al. v. Brooks, 656, is consistent with it, as was held in the recent case of R. v. Dibdin (Law Reports, 1910, Probate, 57). It does not seem that there was in 1603 any statute to which canon 113 was necessarily contrariant or that any has been passed since. When we have to decide whether or not it conflicted with the common law it must be remembered that many items of the common law must have disappeared or have undergone considerable alteration by such a change in the whole national life as that which was caused by the Reformation. Rules of canon law and certain precepts of the Church had, undoubtedly, formed some of the stones in the growing fabric of English common law. So, where the practices to which these rules or precepts applied were repudiated or considerably modified one must expect a corresponding cessation or modification of the common law relating thereto. The same instance of such a confession would be inapposite. Even the Established Church of England did not claim for this confession which she sanctioned absolute inviolability, as the canon which has just been quoted shows.

The Civil Courts.—It was decided by the Court of King's Bench in a judgment delivered by Lord Hardwicke, in the case of Middleton v. Atkin, that the canons of 1603, though binding on the clergy, do not bind the laity. The reason for this is that though canons, in order to be valid must, as these did, receive the royal sanction, they are made in convocation, and, thus, without representation of the laity. Accordingly, if this canon infringed a right enjoyed by the lay subjects of the realm it would, seemingly, in as far as it did so, not be valid against them. Thus, a canon purporting to forbid clergymen from appearing as witnesses in any action which a subject might lawfully bring in the king's courts would, seemingly, be void as against the subject. The fundamental principle is that a witness shall give in evidence the whole truth that he knows concerning the matter in dispute and that the parties to the dispute are entitled to have that evidence given. The rules which regulate and which, in certain exceptional cases, restrict the giving of evidence are the growth of practical rulings of judges, occurring mainly within the last two to three centuries (see the judgment of Parke B. in the case of The Queen v. Ryle, 9 M. & W., 244). The rule which excludes evidence, "he requiring of which would be contrary to public licy, as may occur in relation to the conduct of the business of a state department, is an instance. In view of the absolute repudiation by the State of the jurisdiction of the Catholic Church and in view of the abandonment of the Sacrament of Confession as practiced before the Reformation, one may fairly presume that, from the date of that event, confession would no longer have been regarded as a ground from motives of public policy, entitling to an exemption from the practical operation of the law. It is now known about the cause, were it to be civil or criminal.

Important Cases and Decisions.—We know for certain that in the gradual growth of the rules of evidence as laid down within the last two to three centuries by the judges of the King's Bench in the cases of privilege as such, as well as in the cases of the secrecy essential to the identity of the unwilling witnesses, the courts recognized as enjoying the privilege was that between client and attorney or counsel. We find an express instance of the recognition of privilege in the case of that particular relationship in the judgment of the Court of King's Bench in 1603 in the case of Spark P. v. Middleton (1 Keble's Reports, 505). In an anonymous case reported in Skinner's "Reports", 404, in 1693, Lord Chief Justice Holt said that the privilege would extend to a law scrivener, because he would be counsel to a man with whom he would advise. But he is reported to have added "otherwise of a Gentleman." Parson et al. v. Brooks, 656, is already referred to, maintains that Lord Holt did not mean this last assertion to be general and exclusive. This may conceivably be so. It is recorded in another anonymous case, which we find in Lord Raymond's "Reports", p. 733, that the same judge refused to admit the evidence of a person entrusted by both the parties to the cause to make and keep secret a bargain; and he added that "(by him) a trustee should not be a witness in order to betray the trust". But the last decision cannot be said to be in agreement with the law of evidence as generally laid down. In the case of Vailant v. Dodemud (1743) 1 Atkin's "Reports", 524 Lord Hardwicke C. L. held that to claim the privilege as clerk in court or agent to a party was too general, "for", he said, "no persons are privileged from being examined in such cases but persons of the profession, as counsel, solicitor, or attorney. But the client is in the relationship of the client to attorney or counsel restricted to the subsistence of that relationship when professionally created by the employment by the client of the attorney or counsel as such, and that it is not extended to confidential communications taking place between a person and a friend not employed as such, in the single character of the person who acts as counsel, solicitor, or attorney. (Wilson v. Rastall, 1792, 4 Term Reports, 753). In the case of Kingston's case (1796), 20 State Trials, p. 572 it was held that a physician or surgeon was compulsable to give evidence of matters which might come to his knowledge in the course of his profession, without privilege as to a suit. The great commentator on the laws of England, Mr. Justice Blackstone, confines the privilege to communications made for the purpose of a legal cause. He specifies the persons who are ex-empted as "counsel, attorney, or other person intrusted with the secrets of the cause". Mr. Serjeant Peake in his work on the law of evidence expressly excludes clergymen or priests or physicians.

At the same time one may observe in the judgment in the case of Wilson v. Rastall as in other some cases the indication of a potentiality of an expansion of this side of the law of evidence that "I have evidence which I cannot give." Lord Kenyon said, giving judgment, "that the privilege of a client only extends to the case of the attorney for him: Though whether or not it ought to be extended farther, I am happy to think may be inquired into in this cause." He meant that the matter would not be definitely concluded as an appeal would be
possible. In the case of Du Barré v. Livette (Peake’s “Nisi Prius Cases”, 108) the same judge, Lord Kenyon, logically held that the privilege would extend so as to preclude an interpreter between a solicitor and a foreign client from giving evidence (a decision that had passed).

In the report of that case we find that the plaintiff’s counsel informed the court that Mr. Justice Buller had recently tried on circuit a case of the King v. Sparke: that the prisoner, in that case, was a “papist” and that it came out at the trial that he had made over to his priest a capital on the body of a Protestant clergyman that this confession was received in evidence by the judge: and that the prisoner was convicted and executed. It seems obvious from what we are told about the two persons concerned that neither of them could have regarded the confession as sacramental. Lord Kenyon said that he would have pronounced before admitting such evidence. He added “But this case differs from it. The Papian religion is now no longer known to the law of this country, nor was it necessary for the prisoner to make that confession to aid him in his defence. But the relation between attorney and client is as old as the law itself.”

The case of Butler v. Moore was decided in Ireland by Sir Michael Smith, Master of the Rolls, in 1802. It is reported in MacNally’s “Rules of Evidence”, p. 253. It concerned the will of Lord Dunboyne, who had abandoned the Catholic Faith; he was also confessed as having abandoned the same. The Queen, in his absence, had come to the conclusion that he had have come within the penal law which deprived “lapsed papists” of the power to make a will. The circumstances under which he abandoned his Faith and those under which he is generally said to have returned to it are as follows: He was Bishop of Cork at the death of the previous primate. Anxious to be able to transmit in a direct line the peerage and the headship of an ancient house, the new Lord Dunboyne appealed to Rome for a dispensation from his vow of celibacy. It was refused him, and, thereupon, he joined the Protestant Church and married, but had no issue. It is said that one day while he was driving along a country road a woman rushed out of a cottage, calling for a priest for some one who lay dangerously ill inside. Lord Dunboyne answered her “I am a priest”, and, entering the cottage, he heard the dying person’s confession. From a certain moment, said to have been this, till the end of his life he confessed his Faith, and, at last, professed his Faith. His will was disputed by his sister, Mrs. Catherine O’Brien Butler, on the ground, that having re-conformed to Catholicism, he was incapable of making one. In order to prove that fact she administered interrogatories to Father Gahan, a priest who had attended his father. Dunboyne shortly before his death, to the following effect: What religion did Lord Dunboyne profess, first, from 1783 to 1792? and, second, at the time of his death, and a short time before? As to the first question, Fr. Gahan answered that Lord Dunboyne professed the Protestant religion. To the second question he demurred to his knowledge (if any) arose from a confidential communication made to him in the exercise of his clerical functions, which the principles of his religion forbade him to disclose, nor was he bound by the law of the land to answer. The Master of the Rolls held, after argument by counsel, that there was no privilege, and he confirmed the demurrer. Fr. Gahan adhered to his refusal to answer and he was adjudged guilty of contempt of court and was imprisoned.

In 1823 in the case of the King v. Redford, which was tried before Best C.J. on circuit, when a Church of England clergyman was about to give evidence in a case with the syphilis, the judge checked him and indignantly expressed his opinion that it was improper for a clergyman to reveal a confession. In 1828 in the case of Broad v. Pitt (3 C. & P., 518), where the privilege of communications to an attorney was under discussion, the same judge said: “The privilege does not apply to clergymen since the decision the other day in the case of Gillham, but, for one, will never consent a clergyman to disclose communications made to him by a prisoner: but if he chooses to disclose them, I shall receive them in evidence.” As a fact, the case of R. v. Gillham (1 Moo. C. C., 180), tried in 1828, did not decide nor did it ever turn on the question of privilege of confession to a clergyman. It turned on the question of the admissibility in evidence any admission of acknowledgment of his guilt which had been induced by the ministrations and words of the Protestant prison chaplain. The acknowledgment of the murder which he was charged was made by the prisoner to the jailer and, subsequently, to the authorities; he appears to have made no acknowledgment of it to the chaplain himself. In the case of the King v. Shaw [(1834) 6 C. & P., 392], a witness who had taken an oath not to reveal a statement which had been made to him by the prisoner, was ordered to reveal it.

“Everybody”, said Mr. Justice Patteson, who tried the case: “except counsel and medical adviser cannot be compelled to reveal what they may have heard.” In the case of Greenlaw v. King [(1838) 1 Beav., p. 145], Lord Langdale M.R. said: “The cases of privilege are confined to solicitors and their clients; and stewards, parents, medical attendants, clergyman, and persons in any such relation, are bound to disclose communications made to them.”

The foundation of the rule protecting communications to attorneys and counsel was stated by Lord Brougham, Lord Chancellor, in an exhaustive judgment on the subject in the case of Greenough v. Gascoill [(1833) 1 Mylns & Keen, p. 103], to be the necessity of having the aid of men skilled in jurisprudence for the purpose of the administration of justice. It was not, said he, on account of any particular importance which the law attributed to the business of people in the legal profession or of any particular disposition to afford them protection, though it was not easy to see why a like privilege was refused to others, especially to medical advisers. A like opinion was expressed by Turner V.C. in the case of Russell v. Jackson [(1851) 9 Hare, p. 391] in the following words: “It is evident that the rule which protects from disclosure confidential communications, between solicitor and client, to the Cotton against the confidence reposed by the client in the solicitor, for there is no such rule in other cases, in which, at least, equal confidence is reposed: in the cases, for instance, of the medical adviser and the patient, and of the clergyman and the prisoner”. Moreover, in the relationship of lawyer and client the privilege was confined to communications between them made in respect of the particular litigation and it did not extend to communications generally passing between a client and his lawyer professionally. But the principle has developed so as to allow inclusion any professing in a clerical capacity, and to the information and belief founded thereon: Minet v. Morgan [(1873) 8 Chancery Appeals, p. 366]; Lyell v. Kennedy [(1883) 9 Appeal Cases, p. 90]. In the former case Lord Selborne, Lord Chancellor, said: “There can be no doubt that the law of the Court as to this class of cases did not erstwhile reach a broad ground and character, nor did it reach it by successive steps, founded upon that respect for principle which usually leads the Court to right”.

In 1853 in the case of the Queen v. Griffin, a Church of England workhouse chaplain was called to prove conversations with a prisoner. A Catholic, under whom, he stated, he had visited in a spiritual capacity. The judge, Mr. Baron Alderson, strongly intimated to counsel that he thought such conversations
ought not to be given in evidence, saying that there was an analogy between the necessity for privilege in the case of an attorney to enable legal evidence to be given and that in the case of the clergyman, a spiritual assistance to be given. He added, "I do not lay this down as an absolute rule: but I think such evidence ought not to be given".

In 1865 the question attracted public attention in England upon the prosecution of Constance Kent for a murder committed five years previously. She made a statement in her own defence, and a Church of England clergyman, the Rev. Arthur Wagner, and she expressed to him her resolution to give herself up to justice. He assisted her in carrying out this resolution and he gave evidence of this statement before the magistrates. But he prefaced his evidence by a declaration that he was not of the opinion that there was any moral ground for withholding information on the ground that it had been received under the seal of "sacramental confession". He was but slightly pressed by the magistrates, the fact of the matter being that the prisoner was not defending the charge. At the Assizes, Constance Kent pleaded guilty, and her plea was accepted so that Mr. Wagner was not again called. The position which Mr. Wagner assumed before the magistrates caused much public debate in the press. There was considerable expression of public indignation that it should have been suggested that Mr. Wagner could have any right so as to withhold evidence on the ground which he had put forward. The indignation seems to have been largely directed against the assumption that sacramental confession was known to the Church of England. Questions were asked in both Houses of Parliament. In the House of Lords, Lord Westbury, Lord Chancellor, in reply to the Marquis of Westminster, stated that "there can be no doubt that in a suit or criminal proceeding a clergyman of the Church of England is not privileged so as to decline to answer a question which is put to him for the purposes of justice, on the ground that his answer would reveal something that he had known in confession. He is compelled to answer such a question, and the law of England does not even extend the privilege of refusing to answer to Roman Catholic clergyman in dealing with a person of their own persuasion". He stated that it appeared that an order for commitment had in fact been made against Mr. Wagner. If that is so, it was unfounded.

On the same occasion Lord Chelmsford, a previous Lord Chancellor, stated that the law was clear that Mr. Wagner had no privilege at all to withhold facts which came under his knowledge in confession. Lord Westmeath said that there had been two recent cases, one being the case of a priest in Boldon, in which, on refusing to give evidence, had been committed to prison. As to this case Lord Westmeath stated that, upon an application for the priest's release being made to the Home Secretary, Sir George Grey, the latter had replied that if he were to remit the sentence without an admission of error on the part of the Catholic priest and without an assurance on the part that it would not again in a similar case adopt the same course, he (the Home Secretary) would be giving a sanction to the assumption of a privilege by ministers of every denomination which, he was advised, they could not claim.

Lord Westbury's statement in the House of Lords drew a protest from Dr. Phillpotts, the then Bishop of Exeter, who wrote him a letter strongly maintaining the privilege which had been claimed by Mr. Wagner.

The bishop argued that the canon law on the subject had been accepted without gaining a course of special sect, that it had been confirmed by the Book of Common Prayer in the service for the visitation of the sick, and, thus, sanctioned by the Act of Uniformity. From the bishop's reply to Lord Westbury's answer to his letter it is apparent that Lord Westbury had expressed the opinion that the 113th canon of 1603 simply meant that the "clergyman must not make a false and voluntarily and without legal obligation to disclose what is revealed in the sacrament of confession". He appears, also, to have expressed an opinion that the public was not at the time in a temperament to bear any alteration of the rule compelling the disclosure of such evidence.

The second case referred to by Lord Westmeath was that of the Queen v. Hay, as tried before Mr. Justice Hill at the Durham Assizes in 1860 (2 Foster and Finslaison, p. 4). The prosecutor had been robbed of his watch by the prisoner and another man. A police inspector had subsequently received the watch from Fr. Kelly, a priest in the neighbourhood, upon his calling at the presbytery. Fr. Kelly was summoned as a witness by the prosecutor, and required Fr. Kelly not to be administered to him objected to its form not, he explained, to that part of it which required him to tell the truth and nothing but the truth, "but as a minister of the Catholic Church", he said, "I object to that part which states that I shall tell the whole truth." He said that the whole object of the oath is this: it is the whole truth touching the trial which you are asked: which you legitimately, according to law, can be asked. If anything is asked of you in the witness-box which the law says ought not to be asked—for instance, if you are asked a question which merely asks you to repeat yourself—you would be entitled to say, 'I object to answer that question'". The judge told him that he must be sworn. When asked by counsel from whom he had received the watch Fr. Kelly replied: "I received it in connex with the confession". The judge said: "You are not asked at present to disclose anything to you in the confessional, you are asked a simple fact—from whom did you receive that watch which you gave to the policeman?" Fr. Kelly protested: "The reply to that question would implicate the person who gave me the watch, therefore I cannot answer it. If I answered it my suspension for life would be a necessary consequence. I should be violating the laws of the Church as well as the natural laws". The judge said: "On the ground that I have stated to you, you are not asked to disclose anything that a penitent may have said to you in the confessional. That you are not asked to disclose: but you are not asked to disclose facts which you heard regarding the stolen property on the 25th December last. Do you answer or do you not?" Fr. Kelly replied: "I really cannot, my Lord", and he was forthwith committed into custody.

It may be fairly deduced from Mr. Justice Hill's words that he would not have allowed Fr. Kelly to disclose any statement which had been made to him in the confessional, and, in this sense, his words may be said to give some support to the Catholic claim for privilege for sacramental confession. But we need not wonder that he was not ready to extend the protection to the act of revealing, though, even in the case of non-Catholics, it ought, in all like cases, to be entitled to the same secrecy, in view of the circumstances under which, obviously, it was made.

The laws of evidence except where they have been prescribed or declared by statute are the growth of the rulings of judges and of practice which has been followed. Thus, their origin affords an opportunity for development in accordance with the development of society itself and of its principles and opinions. We have seen this development in regard to the extension of the privilege, accorded from the beginning to communications passing between counsel and attorney, and the development that this spirit of development may spread itself over other provinces as to which no privilege shall theretofore have been recognised. It is possible that it may be even now ready to declare the privilege in the case of
religious confession when that case next arises. Some indication of this possibility is found in the case of Ruthven v. De Bonn, which was tried before Mr. Justice Ridley and a jury in 1901. The defendant, a Catholic priest, having been asked a general question as to the nature of the matters mentioned in sacramental confession, was told by the judge that he was not bound to answer it. The writ was present in court at the hearing of the trial and, as far as his recollection serves him, he understood Mr. Justice Ridley to say something to the effect that the judges had come to this mind in the matter, but the report of the trial of 3 February 1901, does not contain such a statement. The learned judge said to the plaintiff, who was conducting his case in person: “You are not entitled to ask what questions priests ask in the confessional or the answers given.”

If upon a case involving the question of the privilege next arising a ruling in favour of it should be made, this would be probably rather as a growth of the conception of public policy and not as a matter of traditional common law. There is a case in 1898 (Normanshaw v. Normanshaw, 69 L. T., 488) which was heard before the then President of the Divorce Court, Sir Francis Jeune, which shows a kind of middle attitude. In it, the Bishop of the Church of England, objected to giving evidence of a conversation which he had had with the respondent upon her being sent to see him after her misconduct. Upon the witness objecting to disclose the conversation, the President said that each case of confidential communication should be dealt with on its merits and that he saw no reason why this particular conversation should not be disclosed, and he ordered the witness to disclose it. In summing up he remarked that it was not to be supposed for a single moment that a clergyman had any right to withhold evidence from court, and that it was a principle of our jurisprudence that justice should prevail, and that no unrecognized privilege could be allowed to stand in the way of it. But it is to be observed that there had been no allegation of a religious confession. It is probable from the manner in which the President expressed himself that if a sacramental confession had been alleged he would not have ordered the respondent to disclose it.

On the other hand, in 1881, in the case of Wheeler v. Le Marchant (17 Ch. D., 681), where the production of certain correspondence between the defendants' solicitors and their surveyors, passing before action brought, was in question, the Court of Appeal held that no privilege was involved in which part of the correspondence between client and legal advisers did not extend to the communications between solicitors and other persons not made for the purposes of litigation. The following words were spoken in his judgment by Sir George Jessel M.R., a judge of great eminence: “In the first place, the principle protecting confidential communications is of a very limited character. . . . There are many communications, which, though absolutely necessary because without them the ordinary business of life cannot be carried on, still are not privileged. . . . Communications made to a priest in the confessional on matters perhaps considered by the penitent to be more important than his life or his fortune, are not protected.”

The tenth edition of Taylor, “On Evidence,” edited by Hume-Williams, contains a note by the editor saying that he has advised magistrates that they are bound to state to the person purporting to give evidence on the ground of their having been bound by the public policy of religious confession. But the editor appears to base the obligation of their decision on the decision in the case of R. v. Gilham, which, as said above, does not seem to be to the effect attributed to it. In Sir Robert Phillimore’s work on “The Ecclesiastical Law of the Church of England” we find the following statement: “It seems to me at least not improbable that, when this question is again raised in an English court of justice, that court will decide it in favour of the inviolability of the confession, and expound the law so as to make it in harmony with that of almost every other Christian state.” In Best’s work on “The Law of Evidence” we find not only an express statement to the effect that the privilege is accorded but one to the effect that there is ground for holding that the right to the privilege is existant.

Jeremy Bentham.—As regards the policy of excluding from disclosure statements made to clergymen by way of religious confession, opinion is not unanimous. Jeremy Bentham, writing in the last years of the nineteenth century, devotes a whole chapter to serious, considered argument that Catholic confession should be exempted from disclosure in judicial proceedings, even in Protestant countries. The chapter is headed: “Exclusion of the Evidence of a Catholic Priest, respecting the confessions entrusted to him, proper.” The following are extracts of some of the most remarkable passages in it. “Among the cases,” it begins, “in which the exclusion of evidence presents itself as expedient, the case of Catholic confession possesses a special claim to notice. In political state, in which this most extensively adopted medium of communication is to be used, the risk of wrong footing either of equality or preference, the necessity of the exclusion demanded will probably appear too imperious to admit of dispute. In taking a view of the reasons which plead in favour of it, let us therefore suppose the scene to lie in a country in which the Catholic religion is barely tolerated: in which the wish would be to see the number of its votaries decline, but without being accompanied with any intention to aim at its suppression by coercive methods. Any reasons which plead in favour of the exclusion in this case will, a fortiori, serve to justify the maintenance of it, in a country in which this religion is predominant or established.”

He refers the reasons in favour of the exclusion to two heads: (1) evidence (the aggregate mass of evidence) not lessened; and (2) vexation, preponderant vexation. Under the first heading he says that the effect of non-exclusion would be the decrease in the prudence of confessions, and the intimidation given by the coercion, he says, “gained in the shape of assistance to justice, would be casual, and even rare: the mischief produced by it, constant and all-extensive.”

The advantages of a temporal nature, which, in the countries in which this religious practice is in use, advantage is taken from it at present, are shown in a great degree in this point; that the loss of them would be as extensive as the good effects of the coercion in the character of an aid to justice. To form any comparative estimate of the bad and good effects flowing from this institution, belongs not, even in a point of view purely temporal, to the design of this work. The basis of the inquiry is that this institution is an essential feature of the Catholic religion, and that the Catholic religion is not to be suppressed by force. If in some shapes the revelation of testimony thus obtained would be of use to justice, there are others in which the disclosures thus made are actually of use to justice, under the assurance of their never reaching the ears of the judge. Repentance, and consequent abstinence from future misdeeds of the like nature; repentance, followed even by satisfaction in some shape or other, satisfaction more or less adequate for the past: such are the well-known consequences of the institution: though in a community being ever so tolerant, will in every country and in every age be variable, according to the degree and quality of the influence exercised over the people by the religious sanction in that form, and the complexion of the moral part of their character in other respects.

These words are all the more remarkable when we call to mind what a strenuous opponent the author of
them was to the privilege allowed to communications between legal advisers and their clients. It is noticeable that, in dealing with this question, the Catholic religion alone presents itself to the mind of Jeremy Bentham as being concerned with it. The whole question of the admission of a recognized confession to the office of minister of religion is left to the discretion of the Catholic practice of confession. It must be admitted by the most ordinary impartial observer that Catholics are in fact upon a different and much stronger footing in regard to the matter than any other religious body, because they are the only large religious body in Western Europe and America whose discipline, in the continuation of long tradition and practice, confession forms a vital constituent part. It is noticeable that British judges and lawyers, where denying the existence of the privilege, have stated that it cannot be allowed even in the case of Catholics, thereby recognizing, in the light of obvious fact, that their claim is not only most forcible but is peculiar.

As it has been sought to indicate, one can hardly contend as a legal sequence that the removal of the proscription of Catholicism by the State has revived the privilege in favour of confession, the existence of which independence of character has been sought to be proved. But there are cogent arguments, on the ground of public policy and of the desirability of candid consistency in state conduct, in favour of the seal being respected. The Catholic religion is now not only tolerated in England and Ireland, but it is sanctioned by the State as its own agent, Catholic chaplains to the army, the navy, and to the prisons. Moreover, the State knows full well that confession is an essential part of Catholic practice and that the inviolability of the seal is an essential part of confession; the three main objects for which these chaplains are required are that they may hear the confessions of the persons in their charge, by means of their presence, and communicate to them. To say that, despite these facts, the Catholic chaplain of a remand prison might be required, under pain of committal, to disclose, on the prisoner's trial, a sacramental confession which the latter had made, would seem like laying a trap for both the priest and the prisoner. No one having the least acquaintance with trials as conducted by English or Irish judges to-day can think of such an event except as being in the remotest degree improbable. Yet, if the confession should have been made voluntarily, without the inducement of any hope by the party to whom it was made, in time of authority, the same legal principles would seem to apply to it as would apply to such a confession made by any other penitent or in any other place. If it should become an established principle, whether by judicial ruling or by legislation, that religious confession should be immune from disclosure in courts of justice, it is highly probable that the principle will embrace any denomination in which a confession in the nature of a religious exercise have occurred. One is disposed to believe that such a principle would accord with the bulk of modern feeling towards the question.

Scotland.—The legal position as to the seal of confession is the same with regard to Ireland as it is with regard to England.

India.—In India the British law as to the seal of confession is the same as in England.

British Colonies.—Apart from any express legislation or from any local law to the contrary prevailing, the law on the subject in the British Colonies and throughout the British Empire would be the same as that which prevails in England. In Cape Colony the law is the same as in England. The legal adviser is privileged: there is no ordinance or statute extending the privilege to the priest. Of the Commonwealth of Australia, Victoria, by the Evidence Act, 1890, S. 55, has enacted that "No clergyman of a church or religious denomination shall, without consent of the person making the confession, divulge in any suit, action or proceeding whether civil or criminal any confession made to him in his professional character according to the usage of the church or religious denomination to which he belongs." In New Zealand, by the Evidence Act, 1880 (1), "a minister shall not divulge in any proceeding any confession made to him in his professional character, except with the consent of the person who made such confession." For the Dominion of Canada the law on the subject is the same as in England. There is no Dominion legislation upon the subject. But the provinces of Quebec, by Art. 275 of its Code of Civil Procedure, has...
enacted that a witness "cannot be compelled to declare what has been revealed to him confidentially in his professional character as a confessor or religious adviser". But even apart from this express legislation the privilege of the seal has been transmitted, in Quebec, from the old French law of the province, the continuance of the liberty of the Catholic religion having been guaranteed (see Gill v. Bouchard, 1896, R. J., 575). In 1890 the case of Mass v. Robillard [(1890) 10 Revue légale, p. 527]—which turned upon a political election—a witness was asked, with regard to his voting, whether he had been to confession to a certain priest and for what reason that priest had refused to hear his confession. The defendant to the suit objected to the question, the being prior violation of the privilege of confession. It was argued on the other side that the privilege did not extend so as to prohibit a penitent from revealing what had been said by the priest. The court upheld the objection, deciding that a witness cannot be asked what a priest said to him during confession and that the disclosure of what has been said during confession is not permitted. In the case of Gill v. Bouchard, referred to above, it was held by the Court of Queen's Bench, on an appeal from a judge of the Superior Court, that a priest, who was being sued for damages for having (it was alleged) conspired with a real estate firm to have his master's papers taken from him, could not be compelled to disclose what he had said to the apprentice on the subject during the latter's confession, even though his advice to the apprentice was the alleged unlawful act for which he was being sued. It was held that the priest was protected by Art. 370 of the Code of Civil Procedure, and that, in the absence of evidence to the contrary, the priest's statement that whatever he had said was said while he was fulfilling his functions as religious adviser must be final and conclusive. Thus, unless the person seeking to get in evidence what has passed in the confessional can prove that such matter has not passed in the performance of the practice of confession or in the fulfillment by the priest of his duty as confessor or religious adviser, the priest's statement that if anything has passed, it has passed in the fulfillment of such duty or in the course of confession is conclusive, and any question upon the matter is entirely precluded by that statement. In the present case, at the trial, answered: "If I spoke to the child about the matter it was in the confessional." (The boy's father told the court that the boy had said that drinking and bad words took place at his master's workshop.) The priest was then asked whether "he had counselled or advised the apprentice to leave his master either in the confessional or elsewhere?" The priest objected to answering this question and contended that he was not legally bound to do so. The judge of the Superior Court held, on the ground that the question was one as to whether the priest had or had not committed a legal wrong that he was not exempt from the obligation of answering it, and as the priest continued to refuse, he was declared guilty of contempt of court and ordered to be imprisoned. This decision, as already mentioned, was, after an exhaustive argument of the question, reversed on appeal by the Court of Queen's Bench, which declared the law to be as stated above.

In Newfoundland, by the Consolidated Statutes, 1872, C. 23, s. 11, which section has since been incorporated in the Consolidated Statutes, 1892, it is enacted that "a clergyman or priest shall not be compellable to give evidence as to any confession made to him in his professional character."

UNITED STATES OF AMERICA.—The position of the question at common law is the same in America as it is in England. In the case of the Commonwealth v. Drake [(1818) 15 Mass., 154], we find it argued on the one side that a confession of a criminal offence made penitentially by a member of a certain Church to other members, in accordance with the discipline of that Church, may not be given evidence. These others were called as witnesses. The solicitor-general, on the other hand, argued that religious confession was not protected from disclosure. It is true that he, also, took the point that in this case "the confession was not to the church nor required by any known ecclesiastical rule", but was made voluntarily to his neighbours. The court held that the evidence was rightly received. On the other hand, in the case of People v. Phillips (1 Southwest L. J., 90, in the year 1813, the Court of General Sessions in New York, in a decision rendered by De Witt Clinton, recognized the privilege, and 10 Oct., in the year 1819, the Court of Chancery in the State of New York. This was directly owing to the trial of Rev. Anthony Kohlmann, S.J., who refused to reveal in court information received under the seal of confession. (See Kohlmann, Anthony; and Sampson, "The Catholic Question in America", New York, 1813, appendix). There is also Smith's case reported in the "New York City Hall Recorder", vol. II, p. 77, which, apparently, was decided in the same way. But these few reported cases, as to the first of which we have no report of the grounds of the decision, and the other two of which come from inferior courts, are hardly of sufficient weight to help settle the question of what the law is in other. If the question had ever had occasion to call for the considered judgment of a court of appeal, there is no doubt that the answer to it at common law would have been deduced from its history in England. But some of the states have made the privilege a matter of statute law. In Arizona (Revised Statutes, 1910, S. 2635, par. 5) a clergyman or priest cannot without the consent of the person making the confession be examined as to any confession made to him in his professional character in the course of discipline enjoined by the Church to which he belongs. The same provision is enacted in the Penal Code, S. 1111, with the prelude "There are particular relations in which it is the policy of the law to encourage confidence and to preserve it inviolate".

The Territory of Alaska (C. C. P., 1900, S. 1037) and the State of Oregon (annot. C. C. P., 1892, S. 712, par. 3) have provisions almost identical with the above as to the privilege of a person in Arizona with the substitution of the words "shall not" for "cannot". The States of Colorado (Annotated Statutes, 1891, S. 4824), California (Code of Civil Procedure, 1872, S. 1881, par. 3), Idaho (Revised Stat., 1887, S. 5965), California (Code of Civil Procedure, 1872, S. 1613, par. 5), Montana (Code of Civil Procedure, 1885, S. 2163), New York (Statutes, 1885, S. 3405), Washington (Code and Stat., 1897, S. 6994), Utah (Rev. Stat., 1898, S. 3414), North Dakota (Rev. Codes, 1895, S. 5703 (3), and South Dakota (Stat., 1899, S. 6544) have statutory provisions similar to that prevailing in Arizona.

In California the provision was amended by the Code Commission, 1901, by the addition to S. 1581 of the words: "Nor as to any information obtained by him from a person about to make such confession and received in the course of preparation for such confession."

The Commission also added a section (1892) to the effect that when a person who has made such a confession testifies, without objection on his part, to it or to any part of it, the clergyman to whom it was made may be examined fully as to it in the same action or proceeding: and that nothing contained in S. 1882 is to affect the right of the court to admit evidence of such confession even if otherwise interposed thereto or, when the court finds as an inference from proper evidence that the consent has been expressly or impliedly given. But all the amendments of the Commission have been held to be void on formal grounds (Lewis v. Dunne, 134 Cal., 291). By the Statutes of the State of Arkansas, 1894.
(S. 2018): “No minister of the gospel or priest of any denomination shall be compelled to testify in relation to any confession made to him in his professional character, in the course of discipline enjoined by the rules or practice of such denomination.” By the Revised Statutes of the State of Indiana, 1897 (S. 507), certain classes of persons are enumerated who are “not to be competent witnesses,” which classes include “clergyman or priest who is a confessor to any confession made to him in course of discipline enjoined by their respective churches.” Similarly, in the State of Missouri (Revised Statutes, 1899, S. 4659), “a minister of the gospel or priest of any denomination, concerning a confession made to him in his professional character, in the course of discipline enjoined by the rules of practice of such denomination,” is to be incompetent to testify.

The States of Kansas [General Statutes, 1901, S. 4771 (5)], and Oklahoma (Statutes, 1893, S. 335) have laws by which “a clergyman or priest, concerning any confession made to him in his professional character in the course of discipline enjoined by the church to which he belongs, without the consent of the person making the confession,” is to be incompetent as a witness. In the State of Iowa it is enacted (Code, 1897, S. 4806) that “no minister of the gospel or priest of any denomination shall be allowed, in giving evidence, to disclose any confidential communication properly intrusted to him in his professional capacity, and necessary and proper to enable him to discharge the functions of his office according to the usual course of practice or discipline.” But the prohibition is not to apply to cases where the party in whose favour it is made waives the right. The State of Nebraska (Compiled Statutes, 1899, S. 5907 and 5908) has like provisions. It has also, (S. 5902) a similar enactment to that in force in Kansas, which has been mentioned above. In the State of Kentucky it is enacted (C. C. P., 1895, S. 606 (5) that a clergyman or priest shall not testify to any confession made to him in his professional character in the course of discipline enjoined by the Church to which he belongs, without the consent of the person confessing. In Ohio (Annotated Revised Statutes, 1898, S. 3241) and in Wyoming (Revised Statutes, 1887, S. 2240), almost identical provisions are made. In North Dakota (Revised Codes, 1895, S. 5704) and South Dakota (Statutes 1899, S. 6545) have provisions that if a person offers himself as a witness that is to be deemed a consent to the examination also of a clergyman or priest on the same subject within the meaning of the enactment (Colorado Revised Statutes, 1891, S. 4825) and Oklahoma have like provisions as to implied consent.

In the State of Michigan it is enacted (Compiled Laws, 1897, S. 10, 180) that “no minister of the gospel or priest of any denomination whatever shall be allowed to disclose any confessions made to him in his professional character in the course of discipline enjoined by the rules or practice of such denomination.” In the State of New York it is enacted (Code of Civil Procedure, 1877, S. 833) that “a clergyman or other minister of any religion shall not be allowed to disclose a confession made to him in his professional character in the course of discipline enjoined by the rules or practice of the religious body to which he belongs.” By S. 836 the protection is to apply unless the person who has confessed expressly waives it upon the trial or examination. In the State of Wisconsin (Statutes, 1895, S. 4074) there is an enactment like S. 833 of the New York Code of Civil Procedure, with the addition of the qualification “without consent thereto by the party confessing.” In the State of Vermont it is enacted (Statutes, 1896, no. 30) that “no priest or minister of the gospel shall be permitted to testify in any court in this State to statements made to him by any person under the sanction of a religious confession.” In Hawaii it is enacted (Civil Law, 1897, S. 1418) that “no clergyman of any church or religious denomination shall, without the consent of the person making the confession, divulge in any action, suit or proceeding, whether civil or criminal, any confession made to him in his professional character according to the teachings of the church or religious denomination of which he belongs.”

It will be noted that in each case, with the exception of Hawaii, Iowa, and Vermont, the enactment contains the words “discipline enjoined,” while of these others, Hawaii has the words “according to the teachings of the church or religious denomination,” and Vermont has the words “according to the teachings of the church or religious confession.” Iowa appears to have the most widely-worded provision on the subject: a “confidential communication to a clergyman properly entrusted to him in his professional capacity” is included in the same sentence with confidential communications to an attorney, counsellor, or doctor, and the only other qualification put upon it is that it should be “necessary and proper to enable him (the clergyman) to discharge the functions of his office according to the usual course of practice or discipline.” But the statutes would not cover a casual communication made to a clergyman which is not made by him in his professional capacity (State v. Brown, 1895, 95 Iowa, 381). In like manner it was held in 1835 in the State of New York that a communication made to a clergyman by a member of his congregation, but not made to him as a clergyman or in the course of discipline, was not within the privilege (People v. Gates (1835), 13 Wend., 311). Similarly, in Indiana, it has been held that where the evidence given by a priest does not concern any confession made to him in the course of discipline, enjoined by the Church, the evidence is admissible (Gillooly v. State (1877), 56 Ind., 182); that only statements made to clergymen in obedience to some supposed religious duty are privileged (Knight v. Lee, 80 Ind., 201). The States of Georgia, Louisiana, North Carolina, Pennsylvania, Tennessee, and Texas have statutes protecting communications made to attorneys professionally. From the fact of such communications being protected by statute while these secret communications, if written, are not so protected it does not necessarily follow that no privilege is accorded to these latter communications, because the former were already privileged at common law.

F R A N C E.—In the western portion of the Continent of Europe the sacredness of the seal of confession received public and ecclesiastical recognition at an early date. Among the Capitularies of Charlemagne the first capitulary of the year 813, Article XXVII, is as follows: “that inquiry shall be made whether what is reported from Austria (de partibus Austriae) is true or not, viz., that priests, for reward received, make known thieves from their confessions (quod profiteri de confessionibus acepto pretio manifestent iatrones).” The Austria here referred to is the eastern part of the old Western Empire, then called Austria. In France it was an incontestably established principle not only that a confessor could not be examined in a court of justice as to matters revealed to him in confession, but that admissions made in confession, if disclosed, might not be received or acted upon by the court and would not be evidence. Merlin and Guyot, distinguished writers on French jurisprudence, cite a decree of the Parliament of Normandy deciding the principle and laying down that a person who is the deacon of the church, or a layman, cannot be examined in any case, both ecclesiastical and civil, and if such were examined and examined falsely, by his solemn oath, the person interrogating him was to be held guilty of criminal complicity. A sentence in another case from the same court, adopted by the Supreme Court, is as follows: the admission of confessions is not evidence of anything; the examiner is not to be allowed to demand those admissions; if the confessor is to be examined, he is to be examined in secret, that is, apart from the person accused, and in the presence of a confessor of the same order, and if he is examined in any other way, his confessions are to be disregarded. In France the courts are divided in opinion as to the validity of an exception made to this rule, which is that if a person is accused of a crime, and in the course of procuring his release by means of confession, makes a false confession, the court is not bound to accept the confession as true. This exception is not, however, applied to a confession made under a promise of secrecy, and in the case of any crime of a civil character. The courts hold that if the exception is to be applied it must be by the accused himself, and not by the court. The law of Belgium is similar in its provisions, the court is not bound to accept a false confession made in the course of procuring an accused person's release by means of confession. The Roman Catholic Church has a similar provision, and the law of the United States is similar to the French law in its provisions.
criminal, whose names the criminal had confessed to him when going to the scaffold. These decrees were judicial. From the able and comprehensive argument of the appellant’s counsel in the Quebec case of Gill v. Bouchard, which has been mentioned above, much valuable information on the French law upon the subject is to be obtained. In that argument there is cited a decree by the Parliament of Flanders in 1776 declaring the evidence of a woman who repented a confession which he had overheard was not admissible, and reversing the judgment which had been passed on the admission of such evidence.

Muteau, another distinguished French jurist, speaks in clear and emphatic terms of the sacredness of confession, in his work on the exercise of his duties in 1776. He tells us in a foot-note of a certain Marquise de Brinvilliers, among whose papers, after she had been arrested, was found a general confession (apparently made in pursuance of religious discipline) accusing herself of an attempt to murder various members of her family. The court trying her, he says, absolutely ignored this confession. Muteau gives us a quotation from Oresius in Pandect t. 73, in which Oresius says: “He who has confessed to a priest is not held to have confessed.” In Bonnino’s case, which is cited in the course of the appellant’s argument in Gill v. Bouchard as having been decided by the court of Cassation (as throughout the part of the French Empire) in February, 1810, and as being reported in the “Journal du Palais périodique,” VIII, 607, the court is reported to have decided that an open avowal made by a penitent in consequence of his being counselled in confession to make such avowal ought not to be received in evidence against him.

Merlin and Muteau tell us that formerly the breach of the seal by a priest was punishable with death. Guyot says that canonists are not agreed as to whether the breach is an offence cognizable by the civil courts (si c’est un delit commun ou un cas royal), but that several canonists maintain that the civil judges ought to have cognizance of it. This appears to be his own view because the breach is a grave crime against religion and society, a public scandal, and a sacrilege. He cites, however, a decree of the Parliament of Toulouse of 16 Feb., 1679, deciding that the cognizance of the offence belonged to the ecclesiastical in lieu.

All these three writers except from the general inviolability of the seal the single case of high treason, that is, an offence against the person of the king or against the safety of the State. Merlin and Guyot, appear to base their authority for this statement on the statement of Laurent Bouchel, a distinguished French advocate (1550–1629). He practised before the French Parliament; he was also an expert in canon law and he wrote a work on the Decrees of the Gallienian Church. They cite Bouchel as stating that “on account of the gravity and importance of the crime of high treason the confessor is excused if he reveals it; that he (Bouchel) does not know if one ought to go further and say that the priest who may have kept such a matter secret and not have denounced it to the magistrate would be guilty and would be an accomplice; that one cannot doubt that a person who is informed of a conspiracy against the person and estate of the prince would be excommunicated and anathematized if he did not denounce it to the magistrate to have it punished”. It is to be noticed that this statement by Bouchel, as cited by Merlin and Guyot, does not mention any decree or decision or any other authority supporting it. Muteau, in his argument, bases the exception mainly upon a decree of Louis XI, of 22 December, 1477, enjoining “upon all persons whatsoever” to denounce certain crimes against the safety of the State and the person of the king which might come to their knowledge. He says that the theologians have invariably maintained that confessors were not included among persons bound to reveal high treason. Muteau points out, also, that the Inquisition itself uniformly laid down that “never, in no interest,” should the seal of confession be violated.

Dallos (after) in his learned and comprehensive work on jurisprudence, in which the whole of French law is compiled and commented on under the numerous subjects affected by that law, states that the Council of France (his work was published in 1853, when he was an advocate practising at the imperial Court of Paris) protect the rules of ecclesiastical discipline, they could not exact from the clergyman, in breach of these rules, the disclosure of secrets revealed to him in the exercise of his ministry. Gillot, a member of the Council of Lateran enjoining the secrecy of the seal, which, he tells us, only reproduces an older rule going back to the year 600, he observes that the inviolability declared by it is absolute and without distinction.

The decision of the Court of Cassation in Laveine’s case (30 Nov., 1810, Recueil général des lois et des arrêts, XI, i, 49) affords support, not by the actual decision, but by certain words used in it, to the contention for the exception of high treason, while the actual decision is commonly cited as one of the leading judicial authorities for the general principle of the immunity of the confessor. It was a case in which restitution had been made by a thief through a priest outside the reach of the thief, however, stating at the time that he regarded the conversation as being to his confessor and as made under the seal of confession, to which the priest assented. The court of first instance held that only a communication received in sacramental confession would be privileged and that, therefore, the priest was bound in this case to disclose the name of the thief. The Court of Cassation reversed this decision. Its judgment commences with a reference to the existence of the Concordat and to the result that the Catholic religion is placed under the protection of the State, and it goes on to say that a confessor may not be ordered to disclose secret communications made to him in the exercise of his calling, “excepting those cases which appertain directly to the safety of the State” (hors les cas qui tiennent immédiatement à la sûreté de l’État). Commenting on these words, Dallos (after) says that the judgment of the Court, in admitting the exception. Dallos appears not to agree with it.

“The oath,” he says, “prescribed by the Concordat and the Organic Articles is no longer used: even if were, the obligation which would result from it to disclose to the Government what was being plotted to its destruction in the discourse or other communicatio secretum, would be contrary to confession. The duty of informing having been, moreover, struck out from our laws, at the time of the revision of the penal code in 1832, it could not subsist in such a case.”

By Art. 378 of the French Penal Code “doctors, surgeons, and other officers of health as well as attornies, cases, mid-wives, and all other persons, who, by their status (état) or profession are the depositaries of secrets committed to them, revealing such secrets, except in cases in which the law obliges them to inform (hors les cas où la loi les oblige à se porter dénonciateurs) shall be punished with imprisonment from one to six months, and with a fine of from 100 to 500 francs.” The exception, mentioned in the article, of persons obliged by law to be informers, as pointed out by M. Dallos, has become obsolete owing to the fact that Articles 103–107, which dealt with the obligation of informing, were repealed by the law of 28 April, 1852. Dr. Rivière, commenting on the exception, in his edition of the French Codes (Code pénal, p. 68) has a note to that effect. M. Armand Dallos, the son and collaborator of the author of the “Jurisprudence générale,” says in another work: “Supposing that one may admit a derogation from this principle in favour of the interests of the State compromised by some
plot, which is, at least, very debatable, one must, nevertheless, maintain in private cases the obligation of secrecy in its integrity". The same writer says that the exception of the confessor is deduced from the principle of Art. 378 of the Penal Code, from the needs of the soul and, above all, from the laws which have recognised the Catholic religion. "And it would be,” he continues, "that every man, in any case at all, force the religious conscience of the confessor in constraining him to break, in defiance of one of the most imperious duties of his office, the seal of confession.

In Fay’s case (Dec. 4, 1891), Recueil général des l’Immeuble, 1892, 1, 473) the Court of Cassation held that the ministers of religions legally recognised are obliged to keep secret communications made to them by reason of their functions; and that with regard to priests no distinction is made as to whether the secret is made known in confession or outside it, and the obligation of secrecy is absolute and is a matter of public policy: C. Penal 378. The annotator of the report begins his notes by saying that it is an universally admitted point that the exemption from giving evidence is necessarily extended to priests with regard to the matters confided to them in confession. But, of course, from the Court of Cassation in Belgium declaring that there has never been any doubt that priests are not bound to disclose confessions in the witness-box. The Concordat between France and the Holy See having been broken, and, consequently, the Catholic religion being no longer established in France under the auspices of the State, the grounds adduced for some of the decisions cited above cease to hold good. But Art. 378 of the Penal Code endures, and, as shown, there is no longer any statutory obligation upon the classes of persons enumerated in it to give information of crime of any nature. Consequently, in virtue of that article, confession only by not absolutely exempt from any obligation ever to disclose a confession, but they are under a statutory obligation never to do so.

SPAIN.—In Spain, from an indirect report given by Muteau, we get stern proof, at a comparatively early period, of the abhorrence in which a breach of the seal of confession was held. According to Muteau, Raviot, in his "Observations sur le recueil des arrêts de Perrier", cites a Spanish writer as stating that under James I of Aragon, who reigned in the thirteenth century, if a priest were convicted of a breach of the seal of confession, his tongue was cut out. The same menacing threats, we are told, are made against those convicted of the offence have been handed over by popes to the civil power to receive the punishment of death. In a country in which there are still to-day so many laws for maintaining respect for the Catholic religion, it is clear that the law would not demand that priests should be required to reveal in the witness-box what had been said to them in sacramental confession.

ITALY.—Pafmannius, a famous sixteenth-century Italian writer on jurisprudence, perhaps the most gifted and able lawyer of his day, and almost universally followed his "Praxis criminalis" being for two centuries the standard for the great majority of criminal jurisdictions in Western Continental Europe, expressly denies that cases of high treason form any exception to the general and uniform rule of the inviolability of the seal of confession. He states (Quest. 51: nn. 99, 100 and 101) as follows: "Sacerdos non potest decretis commissae per contumetiam revelare etiam quod sint atrocissima etiam quod tum discretionem tum majorem esse et cogi potest de mandato papae," i.e., "a priest may not reveal the offences committed by the person confessing, even though they be of the most atrocious, and even though they come under the crime of high treason: and, what is more, he cannot even be compelled thereto by order of the pope". In modern Italy, by the Code of Civil Procedure, Art. 288, doctors, surgeons, etc., and every other person to whom by reason of his state, profession, or office a secret has been confided, may not be obliged to give evidence of such secret under pain of nullity (i.e., of his evidence), save in the cases in which the law expressly obliges them to give information of any matter to the public authority. That appears to be no such express obligation upon priests in the law.

GERMAN EMPIRE.—By the Code of Civil Procedure for the German Empire of 30 Jan., 1877, book II, part I, title 7, par. 345, certain classes of persons are entitled to refuse to give evidence. The fourth class consists of "clergymen in respect of matters which have been confided to them in exercise of the care of souls". It was held by a decision of the Imperial Court of June, 1883, that if a clergyman should have communicated to a third person any matter so confided to him he would not be exempt from giving evidence of the communication to the third person. Dr. von Wilmowski and Justiarath Levy in their edition of the German Imperial Code of Civil Procedure have a comment expressing doubt as to the correctness of this decision. Paragraph 350 enacts that clergymen may not refuse to give evidence when they are called upon to give evidence of matters which have been confided to them in the exercise of the care of souls. Wilmowski and Levy comment as follows upon this paragraph: "Whether clergymen are effectually released through the consent of the confidant or through permission of their superiors is to be decided according to the religious conceptions of the denomination to which the clergyman belongs. By Catholic ecclesiastical law a release from the obligation to keep secret anything communicated under the seal of confession is entirely excluded (c. 12, X, de penit. 5, 38)"

AUSTRIA.—In Austria by the Code of Criminal Procedure (Strafprozess-Ordnung) of 23 May, 1873, par. 15, certain classes of persons may not be examined as witnesses and if they should be so examined their evidence shall be null and void (bei sonstiger Nichtigkeit ihrer Aussage). The first class consists of clergymen in respect of what has been confided to them in confession or otherwise under the seal of clerical professional secrecy.

EGYPT.—In Egypt there is in the Penal Code (Art. 274) a provision to the same effect as that of Art. 378 of the French Penal Code.

MEXICO.—By the Penal Code of Mexico, promulgated 20 December, 1891, Art. 798, confessors, doctors and surgeons are exempted from being forced to disclose secrets which may have been confided to them by reason of their state or in the exercise of their profession, nor are they to be compelled to give notice of offences of which they have become cognisant in this way.

BAILEI.—By the Penal Code of the United States of Brazil, Art. 192, it is a penal offence to reveal any person or secret of whom or which notice or cognizance is had by reason of office, employment, or profession (see Confession; Secret).

River, Canada, and through him to Archbishop J. Signay of Quebec. Their replies were most discouraging; they had no priests to send to so distant a field. The Hudson Bay Company, moreover, informed of the appeal, refused transportation for any Catholic missionaries to their territory. McLoughlin, however, was not so easily conquered, and his services to the company were too important to be disregarded. Finally the Home Office relented, and in 1837 Fathers F. N. Blanchet and M. Demers of the Archdiocese of Quebec were allowed to accompany the annual convey to the North-west.

The two missionaries arrived at Vancouver, Washington, on 24 Nov., 1838. Their reception was an ovation for the Catholic Faith. Tears were shed when the Holy Sacrifice was offered for the first time. When the few days of mutual joy had passed the

The Cathedral of St. James, Seattle

The priests would willingly have proceeded to the south side of the Columbia, where twenty-six families claimed their services, but the orders of their ecclesiastical superiors disposed otherwise, and they permanently located north of the Columbia River. The Hudson Bay Company maintained no less than twenty-eight established posts in the territory north of the Columbia River, which was inhabited by about 100,000 Indians. At Cowitz, therefore, with its four Catholic families, Father Blanchet opened his first mission, which can rightfully claim to be the parent church of the North-west. Here he erected in 1839 a log building, twenty by thirty feet in size, which he dedicated to St. Francis Xavier, and which served as his chapel and residence. During the erection of this building an unexpected difficulty presented itself. A delegation of Nezinquial Indians wished to see the "real Blackrobe" and to be instructed by him. Being ignorant of their language and at a loss to make himself understood, he thought of a novel contrivance to instruct them. He made a long flat stick or ladder with forty short parallel lines on it to represent the four thousand years before Christ; these were followed by thirty-three points and three crosses to show the years of Christ's life and the manner of His death. A church and twelve perpendicular marks denoted the beginning of the Catholic Church at the death of Christ through the Apostles; eighteen further hori-
sontal marks and thirty-nine points showed the time elapsed since the death of the Saviour. The lesson proved successful. The Indians took home copies of the book, which they called the Su-ch'a-les-stick, and with which they continued to refer to as the "Catholic ladder." The completion of his architectural labours, Father Blanchet made several short visits to the Wallamette Valley settlers.

Meanwhile Father Demers followed the route of the hunters and trappers, and visited the Indian settlements in the present State of Washington, also Father Blanchet made a few journeys to the Nisqually Indians, and even planted the cross on Whitby Island, where he said Mass in 1840. Manuel Bernier of Newaukum Prairie accompanied Father Blanchet from Cowlitz to the Nisqually Prairie and to Puget Sound, and where they built the first church on Puget Sound. The Oblate Fathers also established missions for the Indians and whites on Puget Sound. The semi-annual meeting in 1842 was of special importance for the Oregon missions. Father De Smet, who had come from the Rocky Mountains missions to Vancouver in quest of supplies, was present, and, as a result of the conference, he set out for Europe to obtain help and to expose their needs to the sovereign pontiff. Archbishop Signay was likewise interested in their work; he had not only sent an appeal to Rome, but, as soon as available, despatched to their assistance Fathers A. Langlois and J. B. Bolduc. These priests arrived at Vancouver on 17 Sept., 1843. The former took charge of Walla Walla. Father Demers retired to the newly-founded Oregon City. Father De Smet returned in August, 1844, accompanied by four Jesuit Fathers and six Sisters of Notre-Dame de Namur; and almost simultaneously, on 14 May, 1844, at St. Joseph, hearing the news that the territory had been created a vicariate, with Father F. N. Blanchet as vicar Apostolic. The briefs appointing Father Blanchet as Vicar Apostolic of Oregon were received at Vancouver on 4 Nov., 1844. He was named bishop with the titulus of Philadelphia, and, on the same reservation to Rome, was changed to that of Drusa, after his consecration at Montreal, on 25 July, 1845. Bishop Blanchet sailed for Europe to lay the news of his extensive vicariate before the Holy See, and Father Demers was appointed vicar-general and administrator of the diocese during his absence. In the autumn of 1847 Bishop Blanchet returned to the Oregon coast, accompanied by five secular priests, two deacons, one novice, three Jesuit Fathers, three lay brothers, and seven Sisters of Notre-Dame de Namur. Meanwhile Rome had transformed his vicariate into an ecclesiastical province, and on his return he found himself the shepherd of Oregon, which comprised all the territory west of the Cascade Mountains. His suffragans were to be his own brother, Magaire, as bishop of the newly-created Diocese of Walla Walla, which extended east of the Cascade Mountains, and his vicar-general Father Demers as Bishop of the new Diocese of Puget. A unique historical feature characterized the erection of the ecclesiastical Province of Oregon. The three constituting dioceses were created rather simul-
cumbency. Another object of his solicitude was the Christian education of the younger generation. During his administration the Jesuits transformed (1838) their common school at Spokane into a college for boys (opened 1839), and in 1858 the first Bishop of Seattle. At his invitation the Redemptorist and Benedictine Orders, the Sisters of St. Dominic, St. Francis, the Holy Names, and the Visitatin entered the diocese and began their useful work. At his death the diocese had: 41 churches and chapels; 37 schools; and 40 priests of regular orders.

The Right Rev. Edward J. O'Dea (b. 23 Nov., 1856, at Roxbury, Mass.; consecrated 8 Sept., 1896, at Vancouver) became third Bishop of Nequally and first Bishop of Seattle. Preceding his elevation to the episcopal dignity he spent twelve years in the service of the Archdiocese of Seattle. The new bishop was confronted with financial difficulties. He came into a strange territory, and had to assume a cathedral debt of $25,000, which at this period of incipient diocesan development and general financial depression throughout the country pressed heavily upon him. The foundation for the rogress of the archdiocese was laid in 1898, when a constitution for its government was adopted and promulgated. On this occasion also the bishop's financial embarrassment was taken from his shoulders by his clergy. The spiritual needs of the youthful commonwealth were his next care. The formal territory had become a state. The Indians, decimated by disease and other causes, were relegated to small reservations, and industrious and thrifty immigrant farmers were rapidly taking their places. From a white population of 75,000 in 1880 the state was making gigantic strides towards its goal of more than one million inhabitants. The bishop's spiritual work was not limited to the general needs of the diocese; it extended also to the wants of the children and the needy. He encouraged the establishment of parochial schools when possible. In 1909 an industrial home for neglected and orphan boys was established under his personal supervision. To protect the Italian immigrants and their families against the dangers to their faith in large cities, he invited the Missionary Sisters of the Sacred Heart, an Italian religious order, to the city of Seattle, and encouraged them in their difficult and often ungrateful work. Washington's centre of population was shifted towards the Puget Sound, and Seattle became a city of 237,000 inhabitants. Its new cathedral, the Cathedral of St. James, built on a hill overlooking the city and harbour, was begun in 1905 and was dedicated on 22 Dec., 1907. By Decree of 11 Sept., 1907, the name of the see was changed to that of the Diocese of Seattle.

Statistics.—There are in the diocese (1911): 141 priests, including 52 of religious orders; 76 churches with resident priests, and 166 mission churches and chapels; 43 brothers and 503 sisters of religious orders; 6 colleges for boys; 18 academies for girls, of which 2 are Normal schools; 64 primary schools with 5126 pupils; 1 protectorate, now accommodating 78 boys; 1 home for working girls; 2 rescue homes for girls; 6 orphanages with over 500 children; 13 hospitals; 3 homes for aged poor. The estimated Catholic population of Washington is about 100,000.

Sebast, a titular see in Phrygia Paetana, suffragan of Laodicea. Sebastus is known to us, apart from Hierocles, "Synecdemus", 667-8, by its coins and more so by its inscriptions; the latter identify it with the present village of Sivalli, in a fertile region at the foot of Bourgas Dagh, in the eastern portion of the plain of Basan Ova, a vilayet of Brousse. The neighbouring village of Sedjukler, a mile and a half distant, is also full of its ruins. Sebastus owes its name and foundation to Emperor Augustus, who established in the suburbs of the old city the Monastery of god Men and his Greek equivalent Zeus, as well as Apollo and Artemis, were adored there. The town was governed by strategi or archons, and in A. D. 99 a gerousia or council was established. Several of the inscriptions, which have been discovered in Sebastus, are Christian.

Le Quen (Oriens christ., I, 895) mentions seven bishops, six of whom are known to have taken part in councils, by their signatures: Modestus at Chalcedon, 451; Anatolius at Constantinople, 553 (possibly Bishop of Sebastus in Cilicia); Plato at Constantinople, 692; Leo at Nicea, 787; Euthymius at Constantinople, 889; Constantine at the Photian Council, Constantinople, 879; Theodore, the author of a lost historical work, in the tenth century. The see is mentioned in the "Notitiae episcopatum" until the thirteenth century, sometimes under the name of Sebastus.

Another Sebastus occurs in the "Notitiae episcopatum" as a bishopric in Cilicia Prima, Taurus being its metropolis, and also a Julio-Sebastus, a see in Usaura, suffragan of Seleucia.

Sebastus, Forty Martyrs of. See Forty Martyrs of Sebastus (Sivias), Armenian Catholic Diocese of.

Sebastus, a city in Phrygia, was called by Augustus 'd'Asie Mineure', I, 101); under DIOCLETIAN it became the capital of Armenia Prima and after Justinian who rebuilt its walls, the capital of Armenia Secunda (Procopius, "De Aedificiis", III, 4; Justinian, "Nov.", xxxi, 1). Towards 640 Sebastus numbered five suffragan bishoprics and only four in the tenth century (GELZER, "Ungebruckte . . . Texte der Notitiae episcopatum", 558, 553). In 1347 the diocese still existed, and as late, perhaps, as 1371 (Miklosich and Müller, "Acta patriarchatus Constantinoiupoli", I, 257, 558; II, 65, 78), in the fifteenth century it had become merely a titular see.

Among its bishops, the Roman Chronicle of the places of the events in the year 567, which was written by the metropolitan of the place (Oriens christ., I, 419-26), wrote: St. Blasu, whose feast is celebrated 3 February; Eulalius, present at the Council of Nicaea in 325; Eustathius, who was several times condemned, and who played a considerable part in the establishment of monasticism; St. Matheus, who later bore the name of Antiochius St. Peter, brother of St. Basil the Great of Cessarea (feast 9 January).

This city produced many martyrs: St. Antichus, feast 16 July; St. Erenarchus under DIOCLETIAN, 29 November; St. Atticus, Eudosius, and their companions, under the reign of Galerius, 2 November; St. Severian, 9 September; and especially the Forty Martyrs, soldiers who were plunged into a frozen lake and suffered martyrdom in 320, and whose feast occurs 9 March. In the beginning of the eleventh century the city was governed under the suzerainty of the Greek emperors, by an Armenian dynasty which disappeared about 1080; in the twelfth century it became the residence of the Turkoman emirs; in the thirteenth century, of the Seljuk princes, one of whom, Ala-Ed-Din, rebuilt the city in 1224. To this epoch may be traced several very beautiful medals, or schools, still in a state of preservation. Another Turkish dynasty was established in 1392 by Sultan Bajazet. Taken and destroyed in 1400 by Timur, who, it is said, caused the massacre of its 100,000 inhabitants, Sebastus passed anew under the sway of the Osmanis. Sivas is the chief city of a
vilayet and numbers 45,000 inhabitants, of whom 10,000 are Armenian Gregorians, 2000 schematic Greeks, 200 Catholics, and the remainder Turks. The Catholic Armenian diocese comprises 3000 faithful, 18 priests, 7 churches, 4 chapels, a large college conducted by the French Jesuits, and a school taught by the Sisters of St. Joseph of Lyons. At Tokat, a dependency of this diocese, are also a Jesuit house, Sisters of St. Joseph, and Armenian Sisters.

Sebastian, SAINT, Roman martyr; little more than the fact of his martyrdom can be proved about St. Sebastian. In the "Deposito martyrum" of the chronologer of 354 it is mentioned that Sebastian was buried on the Via Appia. St. Ambrose ("In Psalmum cxviii", "Sermo", XX, no. xlv in P. L., XV, 1497) states that Sebastian came from Milan and even in the time of St. Ambrose was venerated there. The Acts, probably written at the beginning of the fifth century and formerly ascribed erroneously to Ambrose, relate that he was an officer in the imperial body-guard and had secretly done many acts of love and charity for his brethren in the Faith. When he was finally discovered to be a Christian, in 286, he was handed over to the Mauretanian archers, who pierced him with arrows; he was healed, however, by the widowed St. Irene. He was finally killed by the blows of a club. These stories are unhistorical and not worthy of belief. The earliest mosaic picture of St. Sebastian, which probably belongs to the year 682, shows a grown, bearded man in court dress but contains no trace of an arrow. It was the art of the Renaissance that first portrayed him as a youth pierced by arrows. In 367 a basilica which was one of the seven chief churches of Rome was built over his grave. The present church was completed in 1611 by Cardinal Scipio Borghese. His relics in part were taken in the year 826 to St. Medard at Soissons. Sebastian is considered a protector against the plague. Celebrated answers to prayer for his protection against the plague are related of Rome in 680, Milan in 1575, Lisbon in 1699. His feast day is 20 January.

The Cenomisal, Sibenico, XV-XVI Century

Klemens Lüfler.

Sebastian Newdigate, Blessed, executed at Tyburn, 19 June, 1535. A younger son of John Newdigate of Harefield Place, Middlesex, king's serjeant, and Amphyle, daughter and heiress of John Newell of Sudbury, Lincolnshire. He was educated at Cambridge, and on going to Court became an intimate friend of Henry VIII and a privy councillor. He married and had a daughter, named Amphyle, but his wife dying in 1524, he entered the London Charterhouse and became a monk there. He signed the Oath of Supremacy "in as far as the law of God permits", 6 June, 1534. Arrested on 25 May, 1535, for denying the king's supremacy, he was sent to the Marshalsea prison, where he was kept for fourteen days bound to a pillar, standing upright, with iron rings round his neck, hands, and feet. There he was visited by the king who offered to load him with riches and honours if he would conform. He was then brought before the Council, and sent to the Tower, where Henry visited him again. His trial took place, 11 June, and after condemnation he was sent back to the Tower. With him suffered Blessed William Exmew and Blessed Humphrey Middlemore.

Camb., Blessed Sebastian Newdigate (London, 1901); and the authorities there cited.

John B. Wainwright.

Sibenico (Sabinicensis), Diocese of, suffragan of Zara. Sibenico was the seat of a bishop before 1094.
the establishment of a see. As the people could not get along with their bishop in Trau, they chose their own bishops until fifty years later the energetic Bishop VIncent VII, and appointed the Franciscan, Sisgiorich. The building of the cathedral, which was not consecrated until a century later, was begun in 1443. The Dominican bishop, Vincenzo Arri
goni, did much for the see; he held seven synods before John Boccasini, and established the synod in 1449. Johann Zaffrion was Pater concili of the Vatican council. Despite the additions of Scar
dona (1813), parts of Trau and Tinn (1828), the bishopric Sebenico has but 93,000 Catholics with 54 priests, 83 friars in 7 stations, and 68 nuns in 4 mon t".99.

Secchi, Angelo, astronomer, b. at Reggio in Emilia, Italy, 18 June, 1818; d. 26 Feb., 1878. He was the son of a joiner, Antonio Secchi. His mother (née Luisa Belgieri), a practical middle-class woman, had her son taught even sewing and knitting. After studying for several years in the gymnasium kept by his uncle, he was driven from his native town after his eightieth year entered the Jesuit Order at Rome on 3 Nov., 1833. After completing his humanistic and philosophical studies at the Roman College, on account of his extraordinary talent for the natural sciences he was appointed tutor of mathematics and physics at Rome in 1839, and professor of physics in the Jesuit college at Loreto in 1841. In the autumn of 1844 he began the study of theology under the most distinguished professors (Pasquaglia, Perrone, Patrizi, Ant. Pallarin), and on 12 Sept., 1847, was ordained priest by Mgr Canali. At the outbreak of the Roman revolution in 1848, he had to leave Rome with all his fellow-Jesuits. Accompanied by his teachers, de Vico and Pianciani, he travelled first through Paris to England, where he resided for a short period at Stonyhurst College. On 24 Oct., 1848, he sailed with twenty other exiled Jesuits from Cherbourg on the United States. The vessel was wrecked on 19 Nov. Secchi's companion, de Vico, renowned as the discoverer of several comets, had succumbed in London to typhus fever contracted in consequence of the hardships of the journey, and in death was honoured in an enthusiastic notice by John Herschel in the Monthly Notices of the Astronomical Society'. Secchi settled in Georgetown, near Washington, District of Columbia, where the American Jesuits conducted a university and an observatory (then under the care of Father Curley). Here he brought his suddenly interrupted theological studies to a close by a brilliant examination for the doctorate, and joined the faculty of the university as professor of physics. Astronomy as yet claimed little of his attention, as he wished to perfect himself as a physicist. Of decisive importance for his later achievements in the domain of meteorology was his close friendship with the celebrated hydrographer, meteorologist, and astronomer, F. M. Maury, who lived in Washington. To this friendship, through the medium of Secchi, Italy owed its first acquaintance with the epoch-making discoveries of the great American, whose valuable services in marine meteorology and navigation cannot be overrated. In later years Secchi dedicated himself to his friend's theories of our mutual friendship", his work, "Sui recenti progressi della Meteorologia" (Rome, 1861), and on his death in 1873 gave him an enduring memorial in a warm and touching necrology (cf. "Bullettino meteorologico del Collegio Romano", XII, Rome, 1873).

Contrary to expectation, Secchi's residence at George
town soon came to an end, when the Roman revolution was forcibly terminated by the French general, Napoleon. On 21 April 1852, on his return journey to England, and in 1850 he under
took the direction of the observatory in the Roman College, for which post his teacher de Vico had warmly recommended him on his death-bed. Because of the instability of the foundation walls and the want of modern instruments, Secchi soon felt it was compelled to be content with his investigation concerning the radiation of the sun, the rings of Saturn, and the planetoids. By the end of 1852, however, his energy had succeeded in having a new observa
tory prepared on the firm vault of the Church of St. Ignatius in the Roman College, and fitted with new instruments. From this time date Secchi's brilliant scientific activity and the European fame of his observatory. On account of the extraordinary variety of his investigations, we must distinguish three persons in Secchi: the astronomer, the meteorologist, and the physicist.

As an astronomer Secchi began with a revision of the great catalogue of the double stars made by W. Struve at Dorpat (1824-37). After seven years of strenuous labour he was able to print the chief portion of his results in the "Memorie del Collegio Romano" (Rome, 1859) with 10,000 verified double stars; this was continued and finished by his assistant in 1866 and 1875. One of the best calculators of the courses of the double stars, the astronomer Doberek of Dublin, has to a great extent taken Secchi's catalogue as the basis of his calculations. Hand in hand with this gigantic task went his study of the physical conditions of the planets Saturn, Jupiter, and Mars, and of the four great moons of Jupiter. On the discovery of spectrums analysis by Kirchoff and Bunsen (1860), Secchi was the first to investigate closely the spectrums of Uranus and Neptune. From 1852 the moon also became the subject of his investigations. He made so exact a micrometric map of the great crater of the moon (Copernicus) that the Royal Society of London had numerous photographic copies made of it, and had them distributed among those interested in astronomy. All Secchi's studies of astronomy, to be found in his "Monthly Notices of the Astronomical Society", "Sui recenti progressi della Meteorologia". Secchi settled in Georgetown, near Washington, District of Columbia, where the American Jesuits conducted a university and an observatory (then under the care of Father Curley). Here he brought his suddenly interrupted theological studies to a close by a brilliant examination for the doctorate, and joined the faculty of the university as professor of physics. Astronomy as yet claimed little of his attention, as he wished to perfect himself as a physicist. Of decisive importance for his later achievements in the domain of meteorology was his close friendship with the celebrated hydrographer, meteorologist, and astronomer, F. M. Maury, who lived in Washington. To this friendship, through the medium of Secchi, Italy owed its first acquaintance with the epoch-making discoveries of the great American, whose valuable services in marine meteorology and navigation cannot be overrated. In later years Secchi dedicated himself to his friend's theories of our mutual friendship", his work, "Sui recenti progressi della Meteorologia" (Rome, 1861), and on his death in 1873 gave him an enduring memorial in a warm and touching necrology (cf. "Bullettino meteorologico del Collegio Romano", XII, Rome, 1873).
Secchi also took part in the Italian expedition to observe the eclipse of the sun on 22 Dec., 1870, in Augusta, Sicily. Although his observer was not favoured by the weather, he was repaid for this journey by the discovery of a "flashing spectrum" which is considered a direct proof of the existence of a "reverting stratum" ("wanderende Schicht"), a mixture of glowing metal vapours which later received the name of "red giants," IX, it is evident that this observation production the dark Fraunhofer lines in the sun's spectrum. During this same eclipse Professor Young of the American expedition saw clearly in his spectroscope the bright lines of the flash spectrum. Secchi published the results of his own investigations and those of others in a treatise, arranged and published as a "Le soleil. Exposé des principales découvertes modernes" (Paris, 1870). The second appeared in two volumes as an édition de luxe (Paris, 1875-77), after the German translation by Schellen had appeared under the title "Originalwerk beständig der neuesten vom Verfasser hinzugefügten Beobachtungen u. Entdeckungen" (Brunswick, 1872). In the study of the fixed stars Secchi distinguished himself not only by the invention of new instruments (helioseroscope, star spectroscope, telescroscope), but especially by the discovery of what is now known as the fifteen known and from about 4000 spectra of stars, on which he had been at work since 1863. The unexpected discovery that all fixed stars may, according to their physico-chemical nature, be reduced to a few spectral types, was an achievement of as great significance as Newton's law of gravitation. This great law was confirmed by the works of d'Arrest of Copenhagen and E. C. Pickering of Harvard (in his well-known "Draper Catalogue"). When H. C. Vogel of Potsdam (1874) changed Secchi's purely empirical division of the stars into a genetic development of the stars from type to type, the theory of the unity of the world and of the identity of the fixed stars and the sun received most profound scientific demonstration and confirmation. Secchi published his views concerning the world of stars in "Le Stelle" (Milan, 1877), which appeared in German as the thirty-fourth volume of the "International Astronomical Congress" (Leipzig, 1878). Passing over his other investigations concerning comets, groups of stars, and nebulous stars, we may remark in passing that Schiaparelli's celebrated treatise on the relations between the groups of asteroids and comets was published in Secchi's "Bullettino" (Milan, 1876).

As a meteorologist, Secchi was, as already said, an enthusiastic disciple of the American F. M. Maury, whose discoveries he utilised and continued with uninterrupted zeal throughout his life. He turned his attention to the most varied phenomena, e.g., the aurora borealis, the origin of hail, of quicksand, the effects of lightning, the nature of good drinking water, etc. He was the first to ascribe, on the basis of ingenious experiments, the telluric lines of the spectrum of the sun to the influence of atmospheric vapour. Secchi especially studied the "Roman climate." Still greater interest for him had the investigation of terrestrial magnetism and terrestrial electric currents. He was the first to organize a systematic observation of these currents as an eventual means of prognosticating the weather, and worked with good results in union with other observers with similar aims (e.g., Greenshields). The Magnetic Observatory, arranged and fitted by Secchi in 1858, was for a long period the only one in Italy. Commissioned by Pius IX, who promoted all his undertakings with princely liberality, he made long travels through France and Germany in 1858 to procure the most suitable projection lenses for the lighthouses of the papal harbour towns. He secured, however, his greatest fame by his invention of the "Meteorograph," a skilfully-constructed weather machine, which works day and night and records the curves of atmospheric pressure, temperature, rainfall, rainy season, strength of wind, and relative dampness of the atmosphere. In its original form the "Meteorograph" was extremely simple, but in 1867, through the munificence of the Emperor of Russia, it received a new and more elevated form claimed the admiration of everybody at the Paris Exhibition of 1867. It created a great sensation, and Secchi received as prize of honour from the hands of Napoleon III the large gold medal and the insignia of Officer of the Legion of Honour; the Emperor of Russia presented him the Order of the Golden Rose. An exact description of these apparatus with illustrations is given in the brochure, "Il meteorografo del Collegio Romano" (Rome, 1870).

As physicist Secchi was a disciple of Piazzi, and devoted himself from the beginning preferentially to astrophysics, then to a great extent regarded as of secondary importance. American readers will be interested to learn that Secchi contributed one of his best works on "Electrical Rheometry" to the "Smithsonian Contributions to Knowledge," III (Washington, 1852). If we may include in physics geodetic measurements, the calculation of trigonometric horizontal lines, the prediction of the future triangulation of the Papal States especially deserves honourable mention. By discharging this tedious and difficult task on the commission of the papal government between 2 Nov., 1854, and 28 April, 1855, he supplied one of the most important fundamental data for the subsequent graduation of Southern Europe. His results were edited in model fashion in the great work, "Misura della Base trigonometrica eseguita sulla Via Appia" (Rome, 1853). He acquired world-wide fame as a physicist by his greatly-admired work, "Sulla unità delle forze fisiche" (Rome, 1894), which afterwards became the basis of all natural processes to kinetic energy. With astounding acumen he here combines in a uniform picture all the results of earlier natural science, and anticipates and even in certain ways outstrips later investigations and views. The second edition (2 vols., Milan, 1874) was translated later into English, German, and Russian. Secchi was, however, too much of a philosopher and a Christian to venture, after the fashion of more modern Materialists and Monists, to extend his "kinetic atomistics" to the domain of the soul and the intellect. On the contrary, his philosophy was planned on a theistic basis, inasmuch as he traced back the work of matter and its motion to a Divine creative act. In two magnificent lectures, which he published at the beginning of his "Lessione elementari di fisica terrestre" (Turin and Rome, 1879) and independent works a German translation by Dr. Gütter (Leipzig, 1882; 4th ed., 1885), he gave a more than eloquent expression to his Christian view of life. After the capture of Rome by the Piedmontese in 1870, his firmness of faith and his fidelity to the pope and the Jesuit Order were more than once put to a rude test. But no enticements, however alluring, of the new rulers (e.g., the general supervision of all the observatories; the granting of the senatorial dignity with express release from the constitutional oath) could induce him to falter in his loyalty or fidelity. The new authorities did not venture to expel him from his observatory, and he continued his investigations until he succumbed to a fatal disorder of the stomach.

Sechelt Indians (properly Siciatl), a small tribe speaking a distinct language of Salishan linguistic stock, formerly occupying the territory about the entrance of Jervis and Sechelt inlets, Nelson Island, and Cook Inlet, said to have been dispersed upon reservation on the Sechelt Peninsula in south-western British Columbia, under the jurisdiction of the Fraser River agency. In their primitive condition the Sechelt consisted of four divisions occupying different settlements. Socially they had three classes: chiefs, nobles, or responsible, and the lower class. The chiefs as a rule owed their hereditary distinction to the superior generosity of some ancestor on occasion of the great ceremonial gift-distribution or poll tax, common to all the tribes of the North-west Coast. The middle class, or nobles, consisted of the wealthy and those of unquestioned respectable parentage, and its members were eligible to the priesthood through the medium of the poll tax. The third and lowest class consisted of the thriftless and the slaves, which last were prisoners of war or their descendants, and could never hope to attain the rank of freedom.

The seem to have been without the secret societies which constituted so important a factor in the life of several other tribes of the region, but their shamans priests and doctors of both sexes possessed great influence, and in some cases appear to have had clairvoyant powers. The severe tests to which candidates were subjected, including long fasts, seclusion, and sleepless vigils, served to limit their number to those of superior physique and will power and to correspondingly increase the respect in which they were held. Certain candidates for occult hunting powers were prohibited from having their hair cut and were shut up in boxlike receptacles, from which they were never allowed to issue for years, except after dark and accompanied by guards, to prevent their being seen by others. The secret custom prevailed also among the neighboring Thomson River Indians. Descent was in the male line, and polygamy practised. The chiefs apparently did not exist, and the carved and painted poles set up in front of the houses were, in this tribe, commemorative rather than totemic. Both boys and girls were secluded and subjected to a special discipline for some days at the puberty period. The general law was to guard against idleness or laziness. According to the regulations, the chief gods being the sun and the "Great Wanderer". The dead were laid away in boxes upon the surface of the ground on some retired island. Their souls were supposed to ascend to the sun and to return later in a second incarnation. A few of their myths have been recorded by Hill-Tout.

The Sechelt subsisted by hunting, fishing, and the gathering of roots and berries, the salmon, the deer, and the salal berry being the three most important food items, and the fishing, hunting, and drying paraphernalia, their most important belongings. Their houses were long communal structures of cedar boards divided into family compartments by hanging mats, related families generally living together. A continuous platform running around the inside served both as lounge and bed. Food was stored in secret places outside. Baskets of various sizes and shapes from cedar rootlets and tastefully designed and decorated, were the principal household furniture, together with bowls, tubs, and dance masks of cedarwood. Dressed skins, fabrics of cedar-bark, and blankets woven from the hair of mountain sheep, or of dogs, served for dress. Head-dressing was practiced, as among other tribes of the region. Practically all of the former beliefs and customs, except such as relate to household economies, are now obsolete and almost forgotten.

The work of Christianization and civilization was begun among the Sechelt in 1850 by the Oblate Father (afterwards Bishop) Pierre P. Durieu (d. 1889). At that time, they, in common with nearly all the tribes of the North-west coast, were sunk in the lowest depths of drunkenness and degradation, in contact with profligate whites. In spite of abuse and threats, Father Durieu persevered, with such good effect that in a few years the whole tribe was entirely Catholic, with heathenism and dissipation alike eliminated. For the better advancement of civilization and religion he gathered the people of the several scattered villages into a new, compact and orderly town, Chateluch (meaning "Outside Water"), with about one hundred neat cottages, each with its own garden, an assembly hall, band pavilion, street lamps, waterworks, and a mission church, all built by the Indians, under supervision, and paid for by themselves. A flourishing boarding-school in charge of the Sisters of St. Anne cares for the children. Hill-Tout, our principal authority on the tribe, says: "As a body, the Siciatl are, without doubt, the most industrious and prosperous of all the native peoples of this province. Respecting their improved condition in their tribal and individual prosperity, high moral character and orderly conduct, it is only right to say that they own it mainly, if not entirely, to the Fathers of the Oblate mission, and particularly to the late Bishop Durieu, who more than forty years ago went first among them and won them to the Roman Catholic Faith. After a few years of Converts have they become, cheerfully and generously sustaining the mission in their midst, and supplying all the wants of the mission Fathers when amongst them".

The Sechelt probably numbered originally at least 1000 souls, but were already decreasing from dissipation and introduced diseases before Father Durieu's advent. In 1862, in common with all the tribes of southern British Columbia, they were terrified by an epidemic of smallpox introduced by gold-miners. During the continuance of the scourge some twenty thousand thousand of them died. Many were vaccinated by the four Oblate missionaries then in the country. In 1904 they were reported at 325. They number now about 250, all Catholics. Their principal industries are hunting, fishing, and lumbering, while the women are expert basket-weavers. In 1892 a Roman Catholic mission was opened by Father Durieu, the first in British Columbia, and several native priests, regulars and seculars, have been trained in the mission. The Jesuits have laboured among the Indians in this district since 1848.

James Mooney.
assistant Bishop of Armagh from 434 till his death. At the commencement of his episcopal rule, the local fair (anoadh) was accustomed to be held in the church enclosure as the clergy, ignoring the saint's denunciation as to holding a fair on hallowed ground, we read that "the earth opened and swallowed up thirteen horses, chariots, and drivers, while the remainder fled". He died after an episcopate of fourteen years. The name of his see in the corrupt form of "Shekau" (Schenau in Schenkau) testifies to the veneration in which he was held.

St. Sechnall's fame in the literary world is as the writer of the earliest Latin poem in the Irish Church, the well-known alphabetic hymn commencing "Audite omnes amantes Deum, sancta merita". This he composed in praise of his uncle, St. Patrick, and was rewarded with a promise that whoever would recite daily (morning and evening) the concluding three verses with proper disposition would obtain everlasting bliss in Heaven. It consists of twenty-three stanzas in the same metre as employed by St. Hilary in his hymn "Ynam mun dicat turbis fratum, Ynam mun cansus potens" and was printed by Colgan and Muratori. It was regarded as a lorica or preserver to be sung (or recited) in any great emergency, and its singing was one of the "Four honours" paid to St. Patrick, being assigned as the hymn for the feast of the national Apostle. Another beautiful hymn by St. Sechnall is "Saneti venite. Christi corpus suum" traditionally sung by angels in the church of Dunshaughlin, and adopted for use at the reception of Holy Communion.

W. H. Grattan-Flood.

Seckau, Diocese of (Secoviensis), in Styria, Austria, suffragan of Salzburg. The See of Seckau was founded by Archbishop Eberhard II of Salzburg, with the permission of Honorius III, 22 June, 1218, and made suffragan of Salzburg. Emperor Frederick II gave his consent, 26 October, 1218, and confirmed on the incumbent of the see the dignity of prince of the Roman Empire. The first bishop was Provost Karl von Friesach (1218-30). Under Joseph II the diocese was reorganized and its territory enlarged. The original intention of that emperor, to establish an archbishopric at Graz, was frustrated by the opposition of the Archbishop of Salzburg. In 1786, however, the residence of the prince-bishop was transferred from Seckau to Graz, the capital of Styria, but the name of the diocese remained unchanged. A new cathedral chapter was established at Graz, composed of three dignitaries and four canons. The see included the Salzburg territory in Styria; at the same time a new diocese (Leoben) was created for Upper Styria. After the death of the first and only Bishop of Leoben, the administration of this see, since 1909, was entrusted to the bishops of Seckau. The Diocese of Seckau is due to the regulation of the Slovene bishopric of Seckau, for the creation of the Diocese of Lavant. At the present time (1909) the Diocese of Seckau comprises all Upper and Middle Styria, with a population nearly all German.

Among the prince-bishops of Seckau in earlier days the foremost is Martin Brenner (1855-1615), distinguished by his labours for the restoration of Catholic life in Styria. In the sixteenth century Seckau was adorned by such men as Roman Sebastian Zangerle (1824-48) and the apostolic Johann Baptist Zwager (1867-93), highly esteemed for his great zeal and his popular religious writings. Dr. Leopold Schuster, who became prince-bishop in 1893, was before his elevation professor of Church history in the University of Graz, and is well known for his historical writings. In 1910, the diocese numbered 937,000 Catholics, distributed over 336 parishes, with 45 deaneries. The cathedral chapter consists of eleven residential canons and six honorary canons. The following religious communities are established in the diocese: the Benedictines in the venerable Abbey of Admont (founded 1074) and at St. Lambrecht (1103); since 1883 also at Seckau, which house was made an independent abbey in 1887, and is in the hands of the Beuron Congregation; the Cistercians at Reinf (founded 1129); the Canons Regular of St. Augustine at Vorau (founded 1183). There are Dominicans at Graz; Franciscans at Graz, Lankowitz, Maria-Trost, and Gleichenberg; Minorites at Graz; Capuchins at Leibnitz, Hartberg, Schwanberg, Knittelfeld, Murau, and Irnding; Carmelites at Graz; Brothers of St. John of God at Graz, Algersdorf, and Kainbach; Lazarists at Graz, Redemptorists at Mautern and Leoben. The orders and congregations of women in the diocese devote themselves principally to the care of the sick (Sisters of St. Elizabeth, Sisters of St. Vincent de Paul, Sisters of the Holy Cross) and the education of the young (Ursulines, Ladies of the Sacred Heart). The students of the diocesan seminary receive their theological education at the University of Graz.

The Cathedral, Graz

(founded 1183). There are Dominicans at Graz; Franciscans at Graz, Lankowitz, Maria-Trost, and Gleichenberg; Minorites at Graz; Capuchins at Leibnitz, Hartberg, Schwanberg, Knittelfeld, Murau, and Irnding; Carmelites at Graz; Brothers of St. John of God at Graz, Algersdorf, and Kainbach; Lazarists at Graz, Redemptorists at Mautern and Leoben. The orders and congregations of women in the diocese devote themselves principally to the care of the sick (Sisters of St. Elizabeth, Sisters of St. Vincent de Paul, Sisters of the Holy Cross) and the education of the young (Ursulines, Ladies of the Sacred Heart). The students of the diocesan seminary receive their theological education at the University of Graz.

Of the religious communities, the Benedictines have a theological school of their own at Admont; the Redemptorists at Mautern; the Dominicans and Lazarists at Graz, where there is also a diocesan seminary for boys connected with a gymnasium. Preparatory schools for classical studies (Unter-gymnasium) are conducted by the Benedictines at Admont and St. Lambrecht. Not a few famous scientists have come from the secular clergy of the diocese and from the religious orders. The scientific services of the earlier monastic houses deserve praise. The following periodicals are carried on by the diocesan clergy: "Kirchliches Jahrbuch für die kath. Geistlichkeit" (Graz, 1837-40); "Der Kirchenschmuck, Blätter des christlichen Kunstvereins der Diözese Seckau" (since 1870), edited by Joh. Graus; "Literarischer An-

zeiger" first with the restriction "zunächst für den
kath. Klerus der Kirchenprovinz Salzburg
since 1902, with the additional title "Katholische Literaturlaubblatt") published since 1886, and conducted since 1902 by Gutjahr and Haring. Great zeal for the spread of Catholic literature is shown by the "Katholischer Pressverein", to which also owe the foundation of the Catholic printing press and publishing house, "Druck und Buch", The cathedral of the Romanesque movement of Gothic architecture. No less remarkable as ecclesiastical architecture are the churches of the ancient monasteries. In recent times the "Christlicher Kunstverein für die Diözese Seckau" has fostered the study of Christian art in general and displayed rare practical interest in new ecclesiastical eros or improves the act of devotion: the informations (Sacred Heart Church, Graz; Romanesque Cathedral, Seckau). The ancient pilgrimage of Mariasell (annually, 80,000 to 100,000 pilgrims from all parts of Europe) is in the Diocese of Seckau.

Second Advent. See Judgment, Divine; Millenium and Millenniumianism.

Secret (Lat. secrernere, "to set apart"), in Moral Theology, something not commonly known, and which it is one's duty to keep concealed. Theologians are wont to enumerate three kinds: the natural secret, the secret by promise, and the secret of trust.

There is also the self-accusation made in sacramental confession (see Seal of Confession). The natural secret is that upon which one happens and which cannot be divulged without injuring or causing sorrow to its owner. The secret by promise, as its name indicates, is that whose obligation, once made, is binding on at least one of the parties. The secret of trust is the trust reposed by another in the keeping of any information, however obtained, and given in confidence. The engagement is said to be explicit when the secret is plainly accepted on the condition laid down, or at any rate the protest is made. It is said to be tacit when the circumstances and the office of the one in whom confidence is reposed make it clear that this has been done only with the rigorous understanding above indicated. This is pre-eminently true of things told to physicians, lawyers, priests, and others in their professional capacity.

The natural secret derives its binding force from the duties of justice and charity, either or both of which may be infringed by its violation. Speaking generally, therefore, and apart from inadvertence in the act or the trivial nature of the thing involved, its betrayal without sufficient cause will be a serious breach. The occasions when it may lawfully be revealed are connected with the general rule governing the manifestation of secrets. Moralists say that it may be done whenever it is necessary to prevent serious harm either to oneself, or to a third party, or to the community. Sometimes a valid justification is found in the reasonably presumed consent of him whose secret it is. In any case, whenever it appears that only charity, and not justice, dictates its concealment, one will not be bound to undergo a grave inconvenience in order to keep the secret. It is an acknowledged principle that charity does not ordinarily bind at such a cost. The secret by promise, if it be that only and not—as may often happen—a natural secret as well, does not for the most part oblige under pain of mortal sin. The failure to keep one's word, while reprehensible, does not involve the homicide or suicide in the case of a confidential relation. It would be otherwise if the promiser meant specifically to take upon himself an obligation of justice. The infraction of this virtue may more easily be a serious transgression. Of course, a promise, no matter how solemn, can never hold one to a line of action disregard of the law, being lawfully interrogated about such a secret, cannot take refuge in the confidential nature of his information, but must answer truthfully. Moralisists are not at one as to whether a man who has promised to hold a secret at the cost of his life be obliged to make good his promise when actually confronted with so distasteful an alternative: the more probable teaching seems to be that he would have to stand by his pledge. When there has been no such special guarantee furnished, then the law supplies that one cannot be constrained to keep faith at the expense of serious harm to himself. It ought to be noted that when the publishing of a promised secret carries with it damage of some consequence for the person to whom it belonged, than not merely fidelity, but justice has been grievously outraged. The same is to be said if the parties to the secret have bound themselves by mutual declarations.

The secret of trust outranks the others as to stringency of obligation. The exceptions in which it may lawfully be disclosed are much fewer. This is because its contractual nature as well as the demand of the natural law for the sanctity of confidences given for purposes of consultation requires an inviolability to be departed from only for reasons of the gravest import. Hence the guilt of surrendering a secret of trust would ordinarily be grievous. However, all are agreed that it may be given up if it threaten consider. As to the common good, civil or ecclesiastical. Likewise it may be revealed if its keeping would seriously jeopardize some unoffending third party, and if at the same time the owner of the secret is the cause of the impending mischief and refuses to desist. Lastly, it may be delivered up even when holding it sacred would result in notable damage to the person to whom it has been deposed. St. Alphonsus Liguori qualifies this last assertion by saying that it would not hold true if the breach of faith were to work grave injury to the common weal. The thing to put stress on is that this class of secrets is privileged. Even the scepter of a superior commander, who had manifested his avails nothing against the natural law which confers on them a peculiarly sacrosanct character.

JOSEPH F. DELANY.

Secret. — The Secret (Lat. Secreca, oratio secreta) is a prayer said in a low voice by the celebrant at the end of the Offertory in the Roman Liturgy. It is the original and for a long time the only official prayer of the kind. It is said in a low voice merely because at the same time the choir sings the Offertory, and it has inherited the special name of Secret as being the only prayer said in that way at the beginning. The silent recital of the Canon (which is sometimes called "Secreta"), as by Durandus,
"Rat. div. off.," IV, xxxv), did not begin earlier than the sixteenth century. Cardinal Borron thinks not till the tenth (Rev. Burag, II, 13, 31). Moreover, all our present official prayers are late additions, not made in Rome till the fourteenth century (see OFFERTORY). Till then the officital act was made in silence, the corresponding prayer that followed it was "the Secret." Already in "Apostolic Constitution" (M. IV, xxi, 4), the celebrant, to whom the bread and wine, prays "silently" (Brightman, "Eastern Liturgies," p. 14), doubtless for the same reason, because a psalm was being sung. Since it is said silently the Secret is not introduced by the invitation to the people: "Oremus." It is part of the Mass, and changing for each person, each occasion, and is built up in the same way as the Collect (q.v.). The Secret too alludes to the saint or occasion of the day. But it keeps its special character inasmuch as it nearly always (always in the case of the old ones) asks God to receive these present gifts, to sanctify them, etc. All this is found exactly as now in the earliest Secrets we know, those of the Leonine Sacramentary. Already there the Collect, Secret, Postcommunion, and "Oratio ad populum" form a connected and homogeneous group of prayers. So the multiplication of Collects in one Mass (see COLLECT) entailed a corresponding multiplication of Secrets. For every Collect the corresponding Secret is said.

The name "Secreta" is used in the "Gelasian Sacramentary"; in the Gregorian book these prayers have the title "Super oblatione." Both names occur frequently in the early Middle Ages. In "Ord. Rom." II they are: "Oration super oblatione secreta" (P. L., LXXVIII, 973). In the Gallican Rite there was also a variable officital prayer introduced by an invitation to the people (Duchesne, "Origines du culte," Paris, 1898, pp. 197-8). It has no specific name. At Milan the prayer called "Oratio super sincipiens" (Studon for the veil that covers the oblation) is said while the Offertory is being made and another "Oratio super oblation" follows after the Creed, just before the Preface. In the Mozarabic Rite after an invitation to the people, to which they answer: "Presta eterno omnipotens Deus," the officital office says a prayer that the Secret and continues at once to the memory of the saints and intercession prayer. It has no specific name (P. L., LXXV, 540-1). But in these other Western rites this prayer is said aloud. All the Eastern rites have prayers, now said silently, after the Great Entrance, when the gifts are brought to the altar and offered to God, but they are invariable all the year round and no one of them can be exactly compared to our Secret. Only in general can one say that the Eastern rites have prayers, corresponding more or less to our officital idea, repeated when the bread and wine are brought to the altar.

With the rise of Protestantism and the consequent disruption of the Christian religion into numerous denominations, the use of the word "secta" has become frequent among Christians. It usually implies at present disapproval in the mind of the speaker or writer. Such, however, is not necessarily the case as is evidenced by the widely used expression "sectarian" (for denominational) institutions and by the statement of the well-known authority H. W. Lyon that he uses the word "in no invidious sense" ("A Study of the Sects," Boston, 1891, p. 4). This extension of the term to all Christian denominations results no doubt, from the tendency of the modern non-Catholic world to consider all the various forms of Christianity as the embodiment of revealed truths and as equally entitled to recognition. Some churches, however, still take exception to the application of the word to themselves. In such cases of identity of belief, eye of inferiority or depreciation. The Protestant denominations which assume such an attitude are at a loss to determine the essential elements of a sect. In countries like England and Germany, where State Churches exist, it is usual to apply the name "sect" to all dissenters. Obedience to the civil authority in religious matters thus becomes the natural requisite for a fair religious name. In lands where no particular religion is officially recognized the distinction between Church and sect is considered impossible by some Protestants (Loofs, "Symbolik", Leipzig, 1902, 74). Others claim that the preaching of the unpardoned Word of God, the independent administration of the sacraments and the historical identification with the national life of a people entitle a denomination to be designated as a Church; in the absence of these qualifications it is merely a sect (Kalb, 592-94). This, however, does not solve the question: for what authority among Protestants will ultimately and to their general satisfaction judge of the character of the preaching or the manner in which the sacraments are administered? Furthermore, an historical religion may contain many elements of falsehood. Roman paganism was more closely identified with the life of the nation than any Christian religion ever was, and still it was an utterly defective religious system. It was a non-Christian system, but the example nevertheless illustrates the point at issue; for a religion true or false will remain so independently of subsequent historical association or national service.

Sect and Sects. —I. ETYMOLOGY AND MEANING.—The word "sect" is not derived, as is sometimes asserted, from secreto, to cut, to dissect, but from sequi, to follow (Skot., "Etymological Dict."). 3rd ed., Oxford, 1898, a. v.). In the classical Latin tongue secta signified the mode of thought, the manner of life and, in a more specific sense, the specific school to which one had sworn allegiance, or the philosophical school whose tenets he had embraced. Etymologically no offensive connotation is attached to the term. In the Acts of the Apostles it is applied both in the Latin of the Vulgate and in the English of the Revised Version to a group of people. One, to whom one has identified himself (xxiv, 5; xxvi, 5; xxviii, 22; see xxiv, 14). The Epistles of the New Testament disparagingly apply it to the Christian communities. The Epistle to the Galatians (v, 20) numbers among the works of the flesh, "quarreling and jealousy, and division among you." The second Epistle (ii, 1) speaks of the "lying teachers, who shall bring in sects of perdition." In subsequent Catholic ecclesiastical usage this meaning was retained (see August. contra Faust. Manich. XX, 3); but in Christian antiquity and the Middle Ages the term was of much less frequent use than "heresy" or "schism." These words were more specific and consequently clearer. Moreover, as heresy directly designated substantial doctrinal error and sect applied to external fellowship, the Church, which has always attached paramount importance to soundness in doctrine, would naturally prefer the doctrinal designation, "heresy.

With the rise of Protestantism and the consequent disruption of the Christian religion into numerous denominations, the use of the word "sect" has become frequent among Christians. It usually implies at present disapproval in the mind of the speaker or writer. Such, however, is not necessarily the case as is evidenced by the widely used expression "sectarian" (for denominational) institutions and by the statement of the well-known authority H. W. Lyon that he uses the word "in no invidious sense" ("A Study of the Sects," Boston, 1891, p. 4). This extension of the term to all Christian denominations results no doubt, from the tendency of the modern non-Catholic world to consider all the various forms of Christianity as the embodiment of revealed truths and as equally entitled to recognition. Some churches, however, still take exception to the application of the word to themselves. In such cases of identity of belief, eye of inferiority or depreciation. The Protestant denominations which assume such an attitude are at a loss to determine the essential elements of a sect. In countries like England and Germany, where State Churches exist, it is usual to apply the name "sect" to all dissenters. Obedience to the civil authority in religious matters thus becomes the natural requisite for a fair religious name. In lands where no particular religion is officially recognized the distinction between Church and sect is considered impossible by some Protestants (Loofs, "Symbolik", Leipzig, 1902, 74). Others claim that the preaching of the unpardoned Word of God, the independent administration of the sacraments and the historical identification with the national life of a people entitle a denomination to be designated as a Church; in the absence of these qualifications it is merely a sect (Kalb, 592-94). This, however, does not solve the question: for what authority among Protestants will ultimately and to their general satisfaction judge of the character of the preaching or the manner in which the sacraments are administered? Furthermore, an historical religion may contain many elements of falsehood. Roman paganism was more closely identified with the life of the nation than any Christian religion ever was, and still it was an utterly defective religious system. It was a non-Christian system, but the example nevertheless illustrates the point at issue; for a religion true or false will remain so independently of subsequent historical association or national service.
To the Catholic the distinction of Church and sect presents no difficulty. For him, any Christian denomination which has set itself up independently of his own Church is a sect. According to Catholic teaching any Christians who, banded together, refuse to accept the entire doctrine or to acknowledge the supreme authority of the Catholic Church, constitute merely a religious party under human unauthorised leadership. The Church teaches that the authority invested by Jesus Christ which has a rightful claim to the allegiance of all men, although in fact, this allegiance is withheld by many because of ignorance and the abuse of free-will. She is the sole custodian of the complete teaching of Jesus Christ which must be accepted in its entirety by all mankind. Her judges, and her representatives are not to be known as such, because they do not belong to a party called into existence by a human leader, or to a school of thought sworn to the dictates of a mortal master. They form part of a Church which embraces all space and in a certain sense both time and eternity, because it is the Church of Christ as a mediating, and triumphant. This claim that the Catholic religion is the only genuine form of Christianity may startle some by its exclusiveness. But the truth is necessarily exclusive; it must exclude error just as necessarily as light is incompatible with darkness. As all non-Christian religions, so all sects which are not taught by Christ, or repudiate the authority instituted by him in his Church, they have in some essential point sacrificed his doctrine to human learning or his authority to self constituted leadership. That the Church should refuse to acknowledge such religious societies as organisations, like herself, of Divine origin and authority is the only logical course open to her. No fair-minded will be offended at this if it be remembered that faithfulness to its Divine mission enforces this uncompromising attitude on the ecclesiastical authority. It is but a practical assertion of the principle that Divinely revealed truth cannot and must not be sacrificed to human objection and speculation. But while the Church condemns the errors of non-Catholics, she teaches the practice of justice and charity towards their persons, repudiates the use of violence and compulsion to effect their conversion and is ever ready to welcome back into the fold those who have strayed from the path of truth.

II. Historical Survey; Causes; Remedy of Sectarianism.—The recognition by the Church of the sects which sprang up in the course of her history would necessarily have been fatal to herself and to any consistent religious organization. From the time when the Roman Emperors threatened the purity of her doctrine to the days of modernistic errors, her history would have been but one long accommodation to new and sometimes contradictory opinions. Gnosticism, Manicheism, Arianism in the earlier days and Albigensianism, Hussitism, and Protestantism of later date, mention only two heresies, would have called for equal recognition. The different parties into which the sects usually split soon after their separation from the Mother Church would have been entitled in their turn to similar consideration. Not only Lutheranism, Calvinism, and Zwinglianism, but all the countless sects springing from them would have had to be looked upon as equally capable of leading men to Christ and salvation. The present existence of 168 Christian denominations in the United States alone sufficiently illustrates this contention. A Church adopting such a policy of universal approval is not liberal but indifferent; it does not love and strive to save souls and to teach a mission among men. Numerous general causes may be assigned for the disruption of Christianity. Among the principal ones were doctrinal controversies, disobedience to disciplinary prescriptions, and dissatisfaction with real or fancied ecclesiastical abuses. Political issues and national sentiment also had a share in complicating the religious difficulty. It is impossible to assign all the causes of what is called the divided state of Christendom. The political situation has been the foundation of all. It is the principle of a living authority divinely commissioned to preserve and authoritatively interpret Divine Revelation which is the bond of union among the different members of the Catholic Church. To its repudiation is not only due the initial separation of non-Catholics, but also their subsequent failure in preserving union among themselves. Protestantism in particular, by its proclamation of the right of private interpretation of the Sacred Scriptures swept away with one stroke all living authority and constituted the individual supreme judge in doctrinal matters. Its divisions are therefore but natural, and its heresy trials in disagreement with one of its fundamental principles. The disastrous results of the many divisions among Christians are keenly felt to-day and the longing for union is manifest. The manner, however, in which the desired result may be attained is not clear to non-Catholics. Many see the solution in undogmatic Christianity or undenominationalism. The points of dispute of decisive importance are still overlooked and a common basis for union thus obtained. Hence they advocate the relegation of doctrinal differences to the background and attempt to rear a united Christianity chiefly on a moral basis. This plan, however, rests on a false assumption; for it minimizes, in an effort to come to a peaceable union, the importance of the right teaching and sound belief and thus tends to transform Christianity into a mere ethical code. From the inferior position assigned to doctrinal principles there is but one step to their partial or complete rejection, and undenominationalism, instead of being a means of unity desired by Christ, cannot but result in the destruction of Christianity. It is not in the further rejection of truth that the divisions of Christianity can be healed, but in the sincere acceptance of what has been discarded; the remedy lies in the return of all dissenters to the Catholic Church.

N. A. Weber.

Secular Clergy (Lat. clericus secularis).—In the language of religious the world (seculum) is opposed to the cloister; religious who follow a rule, especially those who have been ordained, form the regular clergy, while those who live in the world are called the secular clergy. Hence the expression is frequently used in canonical texts: "uterque clericus", both secular and regular clergy. The secular cleric makes no profession and follows no religious rule, he possesses his own property like laymen, he owes to his bishop canonical obedience, not the renunciation of his own will, which results from the religious vow of obedience; only those who are bound by religious orders are subject to the vow of chastity. The secular clergy, in which the hierarchy essentially resides, always takes precedence of the regular clergy of equal rank; the latter is not essential to the Church nor can it subsist by itself, being
to take the oath, but this was refused on account of his Atheism. Finally, in 1886, the new Speaker allowed him to take the oath and sit in Parliament. In 1888 Bradlaugh succeeded Holyoake as president of the London Secular Society, and in 1886 enlarged the scope of this association by founding the National Secular Society, over which he presided until 1890, when he was succeeded by Mr. G. W. Foote, the actual president. The following words from Bradlaugh's farewell speech are significant: "One element of danger in Europe is the approach of the Roman Catholic Church towards meddling in political life. . . . Beware, when that great Church, whose real capacity or influence leading men is marked, tries to use the democracy as its weapon. There is danger to freedom of thought, to freedom of speech, to freedom of action. The great struggle in this country will not be between Freethought and the Church of England, not between Freethought and Dissent, but—as I have long taught, and now repeat—between Freethought and Rome" (Charles Bradlaugh, II, 412).

In the United States, the American Secular Union and Freethought Federation, presided over by Mr. E. P. Peacock, with many affiliated local sections, was for its object the separation of Church and State, and as its platform the nine demands of Liberalism, namely: (1) that churches and other ecclesiastical property shall be no longer exempt from taxation; (2) that the employment of chaplains in Congress, in state legislatures, in the army and navy, and in prisons, asylums, and all institutions supported by public money, shall be discontinued, and that all religious services maintained by national, state, or municipal governments shall be abolished; (3) that all public appropriations for educational and charitable institutions of a sectarian character shall cease; (4) that, while advocating the loftiest instruction and the inculcation of the strictest uprightness of conduct, religious teaching and the use of the Bible for religious purposes in public schools shall be prohibited; (5) that the appointment by the President of the United States and the governors of the various states of religious festivals, fasts, and days of prayer and thanksgiving shall be discontinued; (6) that the theological oath in the courts and in other departments of government shall be abolished, and simple affirmation, under the pains and penalties of perjury, established in its stead; (7) that all laws directly or indirectly enforcing in any degree the religious and churchional dogmas of Sunday or Sabbath observance shall be repealed; (8) that all laws looking to the enforcement of Christian morality as such shall be abrogated, and that all laws shall be conformed to the requirements of natural morality, equal rights and impartial justice; (9) that, in harmony with the Constitution of the United States, and the conditions of the several states, no special privileges or advantages shall be conceded to Christianity or any other religion; that our entire political system shall be conducted and administered on a purely secular basis; and that whatever changes are necessary to this end shall be consistently, unfinishingly, and promptly made.

Although the name Secularism is of recent origin, its various doctrines have been taught by free-thinkers of all ages, and, in fact, Secularism claims to be only an extension of free-thought. "The term Secularism was chosen to express the extension of freethought to ethics" (English Secularism, 34).

The question of the existence of God, Bradlaugh was an atheist, Holyoake an agnostic. The latter held that Secularism is based simply on the study of nature and Science, which is nothing to do with religion, while Bradlaugh claimed that Secularism should start with the de-proof of religion. In a public debate held in 1877 between these two secularists, Bradlaugh said: "Al-
though at present it may be perfectly true that all men who are Secularists are not Atheists, I put it that in my opinion the logical consequence of the acceptance of Secularism must be that the man gets to Atheism if he has brains enough to comprehend it. You cannot have a scheme of morality without Atheism. The Utilitarian scheme is a defiance of the doctrine of Providence and a protest against God. On the other hand, Holyoake affirmed that "Secularism is not an argument against Christianity, it is one independent of it. It does not question the pre-"

existences of the soul, the existence of God and the providence of God. It does not say there is no light or guidance elsewhere, but maintains that there is light and guidance in secular truth, whose conditions and sanctions exist independently, and act forever. Secular knowledge is manifestly that kind of knowledge which is founded in this life, which relates to the conduct of this life, conduces to the welfare of this life, and is capable of being tested by the experience of this life" (Charles Bradlaugh, 1, 334, 336). But in many passages of his writings, Holyoake goes much further and seeks to disprove Christian truths. To the criticism of theology, he adduces the progress, and the improvement of the material conditions of life, especially for the working classes. In ethics it is utilitarian, and seeks only the greatest good of the present life, since the existence of a future life, as well as the existence of God, "belong to the debatable ground of speculation" (English Secularism, 87). It tends to substitute "the piety of useful men for the usefulness of piety" (ibid., 8).

II. Curriculum.—The fundamental principle of Secularism is that, in his whole conduct, man should be guided exclusively by considerations derived from the present life itself. Anything that is above or beyond the present life should be entirely overlooked. Whether God exists or not, whether the soul is immortal or not, are questions which at best cannot be answered, and on which consequently no motives of action can be based. A fortiori all motives derived from the Christian religion are worthless. "Things Secular are as separate from the Church as land from the ocean" (English Secularism, 1). This principle is in strict opposition to essential Catholic doctrines. The Church is as intent as Secularism on the improvement of this life, as respectful of scientific achievements, as eager for the fulfilment of all duties pertaining to the present life, but it regards the present life merely as an anticipance as an end in itself, and independent of the future life. The knowledge of the material world leads to the knowledge of the spiritual world, and among the duties of the present life must be reckoned those which arise from the existence and nature of God, the fact of a Divine Revelation, and the necessity of preparing for the future life. If God exists, how can Secularism "inculcate the practical sufficiency of natural morality?" If "Secularism does not say there is no light or guidance elsewhere", how can it command us to follow exclusively the light and guidance of secular truth? Only the Atheist can be a Christian.

According as man makes present happiness the only criterion of the value of life, or on the contrary admits the existence of God and the fact of a Divine Revelation and of a future life, the whole aspect of the present life changes. These questions cannot be ignored, for on them depends the right conduct of life and the conduct of man to the highest possible point. If anything can be known about God and a future life, duties to be fulfilled in the present life are thereby imposed on "all who would regulate life by reason and ennoble it by service". Considerations purely human become inordinate, and the "light and guidance" in secular truth must be referred to and judged from a higher point of view. Hence the present life in itself cannot be looked upon as the only standard of man's worth. The Church would fail in her Divine mission if she did not insist on the insufficiency of a life conducted exclusively along secular lines, and therefore the falsity of the main assumption of Secularism.

Again, the Catholic Church does not admit that religion is simply a private affair. God is the author and ruler not only of individuals, but also of societies. Hence the State should not be indifferent to religious matters (see Etruria). How far in practice Church and State should go together depends on the circumstances and cannot be determined by any general rule, but the principle remains true that religion is a social as well as an individual duty.

In practice again, owing to special circumstances, a secular education in the public schools may be the only possible one. At the same time, this is a serious defect which must be supplied otherwise. It is not enough for the child to be taught the various human sciences, he must also be given the knowledge of the necessary means of salvation. The Church cannot renounce her mission to teach the truths she has received from God. Moreover, the "Divine Four" must be taught also as citizens, all men have the right to perform the religious duties which their conscience dictates. The complete secularization of all public institutions in a Christian nation is therefore inadmissible. Man must not only be learned in human science; his whole life must be directed to the higher and nobler purposes of morality and religion, to God and Himself. While fully recognizing the value of the present life, the Church cannot look upon it as an end in itself, but only as a movement toward a future life for which preparation must be made by compliance with the laws of nature and the laws of God. Hence, to prevent as far as possible compromises between the Church and Secularism, since Secularism would stifle in man that which, for the Church, constitutes the highest and truest motives of action, and the noblest human aspirations.

C. A. DUBRAY.

Secularisation (Lat. secularizatio), an authorisation given to religious with solemn vows and by extension to those with simple vows to live for a time or permanently in the "world" (seculum), i. e., outside the cloister and their order, while maintaining the essence of religious profession. It is a measure of kindness towards the religious and is therefore to be distinguished from the "expulsion" of religious with solemn vows, and the "dismissal" of religious with simple vows, which are penal measures towards guilty subjects. On the other hand, as secularisation does not annul the religious character from absolute dispensation from vows; this likewise is a lenient measure, but it annuls the vows and their obligation, and the one dispensed is no longer a religious. As a general rule dispensation is the measure taken in the case of religious with simple vows while secularisation is employed when a less liberal dispensation is required. Nevertheless there are exceptions in both cases. Sometimes lay religious with solemn vows or lay sisters are wholly dispensed from their vows, religious life in the world being very difficult for lay persons; in other instances religious men or women with simple vows are allowed to live beside their habit and live outside their houses, at the same time observing their vows; such is the case for instance with the religious men and women in
France, who have temporary renewable secularisation in virtue of the Instructions of the C. C. of Bishops and Regulars (24 March, 1869). It is not therefore correct to speak of religious dispensed from their vows as secularised; the expression applies only to religious with solemn vows, especially to religious priests.

Secularisation is granted to these regulars like dispensation or absolution with simple vows, either for reasons of general order or for motives of personal and private order. To the first class belong expulsions and suppression of religious houses by various governments, for instance, Spain in 1839, Italy in 1866, France in 1902; to the second class belong various religious houses suppressed in France by the Law of 15 June, 1802, today. The C. C. of Regular Discipline of 21 July, 1869, summarised under two heads: maintenance of the religious life, and at the same time relaxation of the religious life so far as is necessary in order to live in the world.

Secularisation is divided into temporary and perpetual; the first is simply the authorisation given to a subject to live outside of his order, either for a fixed time, e.g., one or two years, or for the duration of particular circumstances, conditions of health, family, business, etc., but there is no change in either the conditions or duties of the religious. He is dependent on his superiors, only he is placed provisionally under the sign of the cross of the place, to which he is subject in virtue of the vow of obedience. In most instances the religious lays aside his habit, retaining privately however something indicative of his religious affiliation. At the expiration of the time of until the religious returns to his cloister, unless this temporary secularisation be granted in preparation for perpetual secularisation, e.g., to allow a religious priest to find a bishop who will consent to receive him in his diocese. Perpetual secularisation on the other hand wholly removes the subject from his order, whose habit he puts off, and of which he no longer has the right to ask his support, without previous agreement. But the one secularised does not cease to be a religious; his vows remain a permanent obligation and he thus continues to observe the essentials of a religious life. The vow of chastity being purely negative is observed in the world as in the cloister; the vow of poverty remains, but it binds the subject to his bishop, whom he owes, not only canonical obedience, like every cleric, but also the full religious obedience vowed at profession. The vow of poverty necessarily undergoes alleviation with respect to temporal goods, but binds as to capacity of apostolical service as well as to his own personal needs, which are readily granted at need. In the absence of induits the property of the secularised person goes to his order (S. C. Bishops and Regulars, 6 June, 1836).

But the most important aspect of perpetual secularisation as regards regulars is the regulation of their ecclesiastical status. The regular ordained to poverty, the religious ordained to a common revenue depend not on a bishop, but on their superiors. If they pass by secularisation into the secular clergy they cannot remain without an ordinary and must necessarily be attached to a diocese. Formerly it was admitted that the one secularised fell once more under the jurisdiction of his original order, but what was at first that ordinary's right eventually became a responsibility (cf. S. C. Bishops and Regulars in Coloniæ, 24 Feb., 1883), and this discipline aroused just complaints (cf. postulatum of the Bishops of Pistoia and Siena, 1869). However, the "admodum" given by the Congregation of Bishops and Regulars (4 Nov., 1892) declared that every religious cleric who desired to be secularised or to leave his congregation must first find a bishop willing to receive him among his own clergy, and if prior to this he left his house he was suspended. Now no bishop is compelled to receive a religious into his diocese; if he admits him it is on the same condition as a cleric. This is why by commonly established law it is secure for himself an ecclesiastical patronage; in dioceses where this law is not observed religious acquire the same rights and contract the same obligations toward the bishop as incorporated secular clerics. Though he may perform sacerdotal duties and receive legitimate ecclesiastical laws he cannot until he incur receive a residential benefice or a cure of souls (S. C. of Regular Discipline, 31 Jan., 1889).

To prevent persons from becoming religious in order to attain ordination under the easiest conditions with the intention of subsequently seeking secularisation and entering ordinary political life, the C. C. of Regular Discipline of 15 June, 1809, decided that to all Regulars of temporary or perpetual secularisation or dispensation from perpetual vows be de facto annexed, even if they are not expressed, the following clauses and prohibitions, dispensation from which is reserved to the Holy See; these religious are debarred from: (1) every office (and if they are eligible to benefices) every benefice in major or minor basilicas and cathedrals; (2) every position as teacher and office in greater or lesser clerical seminaries; in other houses for the instruction of clergies; in universities or institutes conferring degrees by Apostolic privilege; (3) every office in episcopal curia; (4) the office of the community of religious houses of men or women, even in diocesan congregations; (5) habitual dwelling in localities where there are houses of the province or mission left by the religious. Finally if the religious wishes to return to his order he has not to make again his novitiate or his profession, but takes rank from the time of his return.

The word secularisation has a very different meaning when applied not to persons but to things. It then signifies ecclesiastical property become secular, as has occurred on several occasions in consequence of governmental usurpation (see Laicisation). The word may also signify the suppression of sovereign or of feudal right belonging to ecclesiastical dignitaries as such. The chief ecclesiastical principalities of the Holy Roman Empire, notably the electorates, were secularised by the Decree of 25 Feb., 1803. The word secularisation may also be applied to the secularisation of the property by the Church of its goods to purchasers after governmental confiscations, most frequently after a merciful composition or arrangement. Concessions of this kind were made by Julius III for England in 1554, by Clement XI for Saxony in 1714, by Pius VII for religion in 1837, of the Church's property in 1866, and finally by Pius XI for France in 1907.

Cf. the canonists under the title De statu monachorum, III, III, tit. 38; GRIMMARI, Constitutiones canonicorum, conciliis (Freiburg, Paris, 1868); BOUTE, De iure regulorum (Paris, 1807); VERMESSEB, De relig. instit. et personne (2nd ed., Bruges, 1806); NERONIA, De jure practico regulorum (Rome, 1801).

Secundinus, Saint. See Sichinall, Saint.

Sedgwick (Sedgewick), Thomas, regius professor of divinity at Cambridge, 1537, rector of Stanhope, Durham, and vicar of Gainford, Durham, both in 1558; d. in a Yorkshire prison, 1573. He was deprived of the three prebendaries noted above soon after Elizabeth's accession, and was restricted to within ten miles of Richmond, Yorkshire, from 1562 to 1570, when he seems to have been sent to prison at York. An unfriendly hand in 1563 describes him as "learned but not very wise". He argued against Cranmer, Archbishop of Canterbury, and Ridley in April, 1554, when he was incorporated D.D. at Oxford. He had been rector of Edwartin, Suffolk, 1552, Lady Margaret professor of divinity, 1554, vicar of Enfield, Middlesex, 1555, and rector of Toft, Cambridgeshire, 1556, but had given up these four prebendaries before Queen Mary died.
SEDIA

John B. Wainwright.

Sedia Gestatoria, the Italian name of the portable papal throne used on certain solemn occasions in the pontifical ceremonies. It consists of a richly-adorned, silk-covered armchair, fastened on a super- danum, on each side of which are two gilded rings; through these rings pass the long rods with which twelve footmen (pulafrentieri), in red uniforms, carry the throne on their shoulders. Two large fans (flabellae) made of white feathers—a relic of the ancient liturgical use of the flabellum, mentioned in the "Constitutiones Apostolicae", VIII, 12—are carried at the sides of the Sedia Gestatoria. This throne is used more especially in the ceremonies at the coronation of a new pope, and generally at all solemn entries of the pope to St. Peter's or to public consistory. In the first case three bundles of tow are burnt before the newly-elected pontiff, who sits on the Sedia Gestatoria, whilst a master of ceremonies says: "Sanete Pater sic transit gloria mundi." (Holy Father, so passes the glory of the world.) The second time the newly-elected pope, and formerly in some countries the newly-elected bishop, to his church can be, in some instances, traced back very far and may be compared with the Roman use of the Sedia curulis, on which newly-elected consuls were carried through the city. Already Eumenius, Eusebius, and Leo I. were regarded as "pro synode" ("P. L.", LXIII, 206; "Corpus Script. eccl.", VI, Vienna, 1882, 328) "Gestatorim sellam apostolicæ confessionis" alluding to the candelæ S. Petri, still preserved in the choir of St. Peter's at Rome. This is a portable wooden armchair, inlaid with ivory, with two iron rings on each side. Besides the present constant use of the Sedia Gestatoria at the coronation of the pope (which seems to date from the beginning of the sixteenth century), etc., it served in the past on different other occasions, for instance when the pope received the yearly tribute of the Kingdom of Naples and of other fiefs, and also, at least since the fifteenth century, when he carried the Blessed Sacrament publicly, in which case the Sedia Gestatoria took a different form, a table being adjusted before the throne. Pius X made use of this on the occasion of the Eucharistic Congress in 1911.

Livius Oliger.

Sedilia (plural of Latin sedile, a seat), the name given to seats on the south side of the sanctuary, used by the officiating clergy during the liturgy. The seats are found in the catacombs, where a single stone seat at the south end of the altar was used by the celebrant. Similar single seats are found in Spain (at Barcelona, Saragossa, Toledo, and elsewhere) and England (at Lenham and Beckley). In course of time the number of seats was increased to three (for celebrant, deacon, and sub-deacon), which is the number usually found, though sometimes where are four and even five. They became common in England by the twelfth or thirteenth century, and were frequently recessed in the thickness of the wall of the church. In other European countries they are comparatively rare, movable wooden benches or chairs being usual. Some early examples are merely stone benches, but the latter ones were almost invariably built in the form of niches, richly decorated with carved canopies, moulded shafts, pinnacles, and tabernacle work. The piscina was often incorporated with them, its position being east of the sedilia proper. Four seats, instead of three, are found at Durham, Furness, and Ottery, and five at Southwell, Padua (S. Maria), and Esslingen. In many cases they are on different levels and the celebrant occupied the highest, i.e., the easternmost. But when they were all on the same level, which is said to indicate the date at which priests began to act as assistants at Mass, there is some doubt as to which was the celebrant's. If there were only three, it was probably the central one, as in the present Roman usage, but with four or five nothing can be stated with certainty, though possibly the "easternmost" was considered the highest in dignity.

Mention may here be made of the royal chair of Scotland given by Edward I to Westminster Abbey to be used as the celebrant's chair, and it is probably the same seat, on the south side of the high altar, that figures in the "Issal Roll".

G. Cyprian Alston.

Seduction (Lat. seducere, to lead aside or astray) is here taken to mean the inducing of a previously virtuous woman to engage in unlawful sexual intercourse. Two cases are distinguishable. The seducer may have brought about the surrender of his victim's chastity either with or without a promise of subsequent marriage. For the purpose of this article we do not suppose the employment of violence, but only persuasion and the like. The obligation of restitution in either hypothesis for the bodyd damage wrought, considered specifically as such, cannot be imposed. The obvious reason is that its performance is impossible. We are speaking of course only of the court of conscience. In certain cases the civil tribunal may justly mulct the seducer to make pecuniary compensation, and he will be bound to obey. If the woman has been lured into carnal relations by the promise of marriage, it is the generally received and practically certain teaching that the man is bound to marry her. This is true, independently of whether she has become pregnant or not. Granted that the bargain is a vicious one, still she has executed her part of it. What remains is not sinful, and unless it is carried out she is subjected to an injury repayable ordinarily only by marriage. This doctrine holds good whether the promise be real or only feigned.

Moralists note that this solution does not cover every situation. It will not apply, for instance, if the woman can easily gather from the circumstances that her seducer has no serious intention to wed her, or if he is vastly her superior in social position, or if the outcome of such an union is likely to be very unhappy (as it will often be). None the less, even in these conditions, the betrayer may at times be obliged to furnish other reparation, such as money for her.

Decorated Gothic Sedilia Ruins of Holycross Abbey, Thurles
Sedulius, Christian poet of the fifth century. The name of Celsius, which at times precedes that of Sedulius, finds but little confirmation in the manuscripts. All our information regarding his personal history comes from two sources. Isidore of Seville in his Etymologies, Book IX, assigns Sedulius a seventh place, before Possidius, while Avitus and Dracoundius have respectively the twenty-third and twenty-fourth places. On the other hand, some manuscripts of Sedulius contain a biographical notice which may have been written by Gennadius. This account represents Sedulius as a layman, who lived at first in Italy and was devoted to the study of philosophy; consequently he probably wrote his works in Achaea during the reign of Theodosius the Younger (d. 450) and of Valentinian III (d. 455).

The principal work of Sedulius is a poem in five books called "CarmenPaschale." The first book contains a summary of the Old Testament; the four others a summary of the New Testament. A prose introduction dedicates the work to a priest named Macedonius. The author says that he had given himself at first to secular studies and to the "barren diversions" of secular poetry. The poem is skilfully written and is more original than that of Juvencus. Sedulius takes for granted a knowledge of the story of the Gospels, and this enables him to treat his subject more freely. He gives his attention chiefly to the thoughts and sentiments which would naturally arise from meditations on the sacred writings, but his style is low, and his verse is awkward. He never gives the various parts and making of them a coherent recital. He follows usually the Gospel of St. Matthew. His ordinary method of exegesis consists of allegory and symbolism. Thus the four Evangelists correspond to the four seasons, the twelve Apostles to the twelve hours of the day and the twelve months, the four arms of the cross to the four cardinal points. The style is a skilful imitation and shows evidences of an extensive reading of Terence, Tibullus, Ovid, Lucan, and above all of Virgil. At times the rhetoric is unfortunately influenced by what he has read, as in the ten lines (lines 1024) of invective against Judas. It is, however, in the prose paraphrase of the "Carmen," the "Opus paschale," that the most unfortunate impression is produced. In the poem the language of Sedulius is dignified and almost classic, in the prose version it becomes diffuse, puerile, and incorrect. The prose version of the "Carmen" was written at the request of the priest Macedonius in order, as it appears, to fill up the gaps of the poem. Facts scarcely indicated in the "Carmen" are treated at length in the "Opus," and the expressions borrowed from the Bible give the work a more ecclesiastical character.

Sedulius also wrote two hymns. One is epanaleptic in form, that is, in the distich, the second half of the pentameter repeats the first half of the hexameter. Up to line 48 the subject is the author's designation of himself as, the victim of the Old Testament and the realities of the New, a theme very favourable to epanalepsis. The poem is not on the interest for the history of typography. In the sequence of these hundred other antitheses are utilised, notably those of the benefits of God and of the ingenuity of man. The oppositions are seeking an abecedarian. It is composed of twenty-three strophes, each of which commences with a letter of the alphabet. The strophe is made of four iambic dimeters (eight syllables). The structure of these lines is generally correct, excepting an occasional hiatus and the lengthening of syllables when in difficulties. The best edition of the "Carmen," treated very freely, for in 92 lines 40 relate the childhood of Christ. The diction is at the same time simple and distinguished, the style easy and concise. These qualities led the Church to take parts of this hymn for its offices: A solis ortus cardine" for Christmas, and "Hostis Hareos Deum" under the form of "Crudelis Herodes Deum" for Epiphany. It has also taken two lines of the "Carmen," (II, 63-64) to serve as the Introit in the Masses of the Blessed Virgin, "Salve Sancta Parens." The best edition of Sedulius is that of J. Huemer in "Corpus scriptorum" (Vienna, 1885). From a note which is found in several manuscripts we learn that the works of Sedulius were edited as early as the fifth century by Turycius Rufius Asterius (consul in 494), author of a superscription in the Medicean manuscript of Virgil.

Sedulius was a native of Madaura, and the author of "De Sedulio poetae vita et scriptorium commentatio" (Vienna, 1778); Boissière, "Le Carmen paschale et Opus paschale" in Journal des savants (Paris, Sept., 1881), 553; Gomme in Revue de philologie, VI (Paris, 1885), 29.

Paul Lejay.

Sedulius Scotus, an Irish teacher, grammarian, and Scriptural commentator, who lived in the ninth century. Sedulius is sometimes called Sedulius the Younger, to distinguish him from Celsius Sedulius, also, probably, an Irishman, the author of the "Carmen Paschale," and other sacred poems. The Irish form of the name is Siadhal, or Siadall. Sedulius the Younger flourished from 840 to 860. There are, altogether, six Siadhalas mentioned in the "Annales of the Four Masters" between the years 785 and 855. Of these, one was present at a council at Rome in 711, and another was Abbot of Kildare, and died in 773. The best known, however, and the most important, was neither of these. Another Siadhal, during the reign of the Emperor Lothair (840-855), was one of a colony of Irish teachers at Liège. It appears from the manuscript record of the ninth century that there was a teacher at St. Lambert, Liège, who was known as Sedulius Scotus, and was a priest and a poet. But he was a student of Greek, and, according to Montfaçon, it was he who copied the Greek Psalter now no. 8047 in the "Bibliothèque de l'Arsenal." His poems, to the number of ninety, are published by Traube in the "Poetae Hævi Carolini," which is a portion of the "Monumenta Germaniae Historica." It is quite probable that, towards the end of his days, he went to Milan, following the example of his countryman, Dungal, who established a school at Pavia. When and where he died is unknown. Sedulius's most important works are his treatise "De Rectoribus Christianorum," a commentary on Ormundo's "Rudimenta," and an introduction to the logic of Aristotle, and a scriptural commentary "Collectanea in omnes beatii Pauli Epistolae." The first of these is a noteworthy contribution to Christian ethics. It is the first, apparently, of a long line of treatises written during the Middle Ages for the instruction of Christian princes and rulers, a dissertation on the duties peculiar to that
state of life, a "Mirror for Princess", as such works came to be called at a much later period. Sedulius's work shows, among other remarkable traits, a deep moral feeling, a realization of the fact that the mission of the State is neither purely economic on the one hand nor exclusively ecclesiastical, on the other. The question of the relations between Church and State had, indeed, been raised, and Sedulius, it need hardly be said, does not hesitate to affirm the rights of the Church and defend them. He is not on the side of those who, seeing in Charlemagne the ideal of a pontiff and ruler in one person, were in favour of the idea that the prince should in fact be supreme in matters religious. On the contrary, he is in favour of a division of temporal and spiritual powers and requires of the prince a careful observance of the Church's rights and privileges. The description of the qualifications of the queen (pp. 34 sq. in Hellmann's ed.) is not only Christian in feeling and tone, but also humanistic, in the best sense of the word. The commentary on "Iasgo" which is so characteristic because it seems to exhibit a knowledge of the Greek text of this work, although in the ninth century and for at least three centuries after the ninth, the "Iasgo" was known in Western Europe in the Latin version only: Not the least interesting of the writings of Sedulius is his "Iasgo," as it is called in the "'Neuues Archiv," II, 188, and IV, 315. In them are narrated the vicissitudes of the Irish exiles on the Continent, and an insight is given into the attitude observed towards these exiles by the authorities, civil and ecclesiastical, as well as by the people.

WILLIAM TURNER.

Seekers, an obscure Puritan sect which arose in England in the middle of the seventeenth century. They represented an Antinomian tendency among some of the Independents, and professed to be seeking for the true Church, Scripture, Ministry, and Sacraments. In his contemporary account Richard Baxter says of them: "They taught that our Scripture was uncertain; that present miracles are necessary to faith; that our ministry is null and without authority, and our worship and ordinances unnecessary or vain, the Church, ministry, scripture and ordinances being lost, for which they are now seeking." He adds the abuse that they "are by another name, principally hatched and actuated this sect, and that a considerable number that of were profession were some Papists and some infidels" (Life and Times, 76). According to Baxter, they amalgamated with the Vannists. Weigarten considers that they held Millenarian views. Probably the name denotes a school of thought rather than a definitely-organized body.

Baxter, Reliquiae Baxteriana (London, 1696); Weinergarten, Die Revolutionarkirchen Englands (Leipzig, 1866).

EDWIN BURTON.

Seekos, Francis X., b. at Fussen, Bavaria, 11 January, 1819; d. at New Orleans, La., 4 Oct., 1867. When a child, asked by his mother what he intended to be, he pointed to the picture of his patron, St. Francis Xavier, and answered, "I am to be another St. Francis." He pursued his studies in Augsburg and Munich, and entered the Congregation of the Most Holy Redeemer, offering himself for the American mission; he arrived in America on 17 April, 1843. The following year, 15 May, 1844, he made his religious profession in the Redemptorist novitiate, Baltimore, and seven months later he was ordained by Archbishop Eccleston of Baltimore. He was assigned to St. James's, Baltimore. In May, 1845, he was sent to Pittsburgh, where he had as superior Ven. John Neumann. In 1851 Father Seekos was appointed superior of the Pittsburgh community, where he laboured untiringly for nine years. His confessional was constantly besieged by crowds of people of every description and class. It was said by many that he could read their very souls. From Pittsburgh, he was transferred to St. Alphonnos'a, Baltimore, where he fell dangerously ill. On his recovery he was appointed prefect (spiritual director) of the professed students, and he succeeded in winning the love and esteem of all who were privileged to be under his spiritual guidance. In 1850 his name was proposed for the vacant See of Pittsburgh, but humbly refused the honour. The year 1862 found him again at mission work. In 1866 he was summoned to Detroit, and in September of the same year to New Orleans, Louisiana. The cause of his beatification is in progress.

CORNELIUS J. WARRIEN.

Searth, a Chaldean see, appears to have succeeded the See of Arzou in the same province, several of the Nestorian bishops of which in the fifth and sixth centuries are known (Chabor, "Synodicon orientale," 608), as are also a large number of Jacobite bishops (Voyage de l'Orient Chretien, VI, 192). The diocese began to have Catholic titulars in the time of Julius III. Searth is now the chief town of a sandjak in the vilayet of Bitlis, containing 15,000 inhabitants. It has fine orchards and vineyards, is an industrial centre containing much gypsum, and manufacturing arms and printing presses. The Dominicans have a mission there; the Catholic bishop, Mr. Adolphi Scher, is well known by his editions of Syriac texts. American Protestants have schools supported by their missionary societies. The diocese contains 3000 faithful, 20 priests, 24 churches or chapels, 43 stations, and 3 primary schools.

Sézé, Diocese of (Sagulum), embraces the Department of Orne. Re-established by the Concordat of 1802, which, by adding to it some parishes of the dioceses of Bayeux, Lisieux, Le Mans, and Chartres, and by cutting off some districts formerly included in it, made it exactly coextensive with the department. It is suffragan to the Archdiocese of Rouen. Mgr. Duchesne is of opinion that for the period anterior to 900 no reliance can be placed on the episcopal catalogue of Sézé, which we know by certain compilations of the sixth century. This catalogue mentions Sigisbald and Saint Latuinus (Lain or Latuin) as the first two bishops of the see. Saint Landry, martyr, would be the third. Some historians say that Sigisbald lived about 451, and Landry about 480; others, relying on a later tradition, assign Saint Latuinus to the first century and make him a missionary sent by Saint Clement. The first Bishop of Sées historically
known, according to Mgr. Duchesne, is Passivus, who assisted at four councils after the year 533. As bishops of Séz, the following merit mention: St. Ravennens (date uncertain), whom Mgr. Duchesne does not include in the episcopal list; St. Aunobertus (about 689); St. Lotharius and St. Goderandus (Chrodogang), assassinated, whose double episcopacy Mgr. Duchesne assigns to the close of the seventh or the beginning of the eighth century; St. Adalhelmus (Adelin), author of a work on the life and miracles of St.

from the twelfth century; that of Alençon was begun in the fourteenth. The following saints are the object of special devotion: SS. Ravennus and Rasaphus, martyred in the diocese about the beginning of the third century; St. Céronne (d. about 490), who founded two monasteries of nuns near Mortagne; St. Cenervis, or Cénet (d. about 668), born at Spoleto, founder of the abbey of St. Cenere, near Alençon; St. Adelinus (Adelinus), St. Chrodogang, and her aunt, St. Lantulda, abbesses of the two monasteries of Alençon (end of the seventh or beginning of the eighth century); St. Evremond (d. about 720), founder of the monastery of Fontenay les Louvets and Montmavre; St. Osmond, Bishop of Salisbury (d. 1066), won, as Count of Alençon, had followed William the Conqueror into England.

The chief pilgrimages in the diocese are: Notre-Dame des Champs at Séz, Notre-Dame du Vallet, Notre-Dame du Repos, near Alençon; three very ancient shrines; Notre-Dame de Ligneronelles, a pilgrimage of the seventh century; Notre-Dame de Recovranse, at Les Tournes, dating beyond 990; Notre-Dame de Longy, established in the sixteenth century; Notre-Dame du Lignon, a pilgrimage of the seventeenth century. In 1884 Mgr. Buguet, curé of Montleogne chapel, founded an expiatory society for the abandoned souls in Purgatory, since erected by Leo XIII into a Primera Primaria archconfraternity; which publishes six bulletins in different languages and has members in every part of the world. Notre Dame de la Chapelle Montleogne is also a place of pilgrimage. The Grande Trappe of Soligny still exists in the Diocese of Séz, which before the application of the law of 1901 against religious congregations had different teaching congregations of brothers, in addition to the Redemptorists. Among the congregations of nuns originating in the diocese may be mentioned: the Sisters of Providence, a teaching and nursing institute founded in 1683 with mother-house at Séz; the Sisters of Christian Education, established in 1817 by Abbé Lefosse, mother-house at Argentan, and a branch of the order at Farnborough in England; the Sisters of Mercy, founded in 1818 by Abbé Bazin to nurse the sick in their own homes.

At the close of the nineteenth century the religious congregations had in the diocese: 18 insectary schools, 3 scanty schools, 3 woman orphanages, 1 school for the blind, 1 for the deaf and dumb, 4 boys' orphanages, 11 girls' orphanages, 2 orphans, 16 hospitals, 16 convents of nuns devoted to the care of the sick at home, and 1 insane asylum. At the time of the destruction of the Concordat (1802) the diocese contained 326,352 inhabitants, 45 cures, numerous buildings for parishes and vicarates towards the support of which the State contributed.

GEORGES GOUAY.

Segarelli, Gerard. See Apostolici.

Seghers, Charles John, Bishop of Vancouver Island (to-day Victoria), Apostle of Alaska, b. at Ghent, Belgium, 26 Dec., 1839; d. in Alaska, 28 Nov., 1866. Left an orphan at a very early date, he was brought up by his uncle. After having studied in local institutions and in the American Seminary at Louvain, he was ordained priest on 31 May, 1863. On 14 Sept. of the same year, he went to Alaska, where for the space of ten years he was engaged in valuable missionary labours among the pioneer whites and the natives. On 23 March, 1873, he was appointed to succeed Bishop Demers (q. v.). One of the first cares of his new prelate was to visit the territory of Alaska, after which he turned his attention towards the west coast of Vancouver Island.
where he established missions for the Indians. In 1877 he again repaired to Alaska, and evangelised in succession St. Michael's, Nulato, Uluuk, Kaltung, Nuklukayet, and various other points along the Yukon. He did not return to Victoria before 20 Sept., 1878. He was then named coadjutor to the Arch- 

discipleship of Oregon City, whom he succeeded 12 Dec., 1880. After meritorious apostolical and field of action, as no titular could be found for his old diocese of Victoria, he generously volunteered to return thither, with a view to following up his work in 

Alaska. This act of disinterestedness deeply touched Leo XIII, and on 2 April, 1885, Archbishop 

Seghers again took possession of his former see. Whites and Indians then received the benefit of his 

ministrations, and two missions were founded (1885) in Alaska, one at Sitka, the other at Juneau. But in the 
course of his fifth expedition to that distant land he was heartlessly murdered by a white companion 
named Fuller, whose mind had become more or less unbalanced under the stress of the hardships of the 
journey and the evil counsels of an American who foresaw in the coming of the two Jesuit priests the 
archbishop had brought with him an implied reproach. The remains of the bishop were ultimately 

transferred to Victoria.

Sealings, Paolo, the elder, Italian Jesuit, preacher, 

missionary, ascetical writer, b. at Neutino, 21 

March (cf. Masesi) 1624; d. at Rome, 9 Dec., 1694. He studied at the Roman College, and in 1637 

took the Society of Jesus, not without opposition from his father. The eloquent 

Oliva was his first master in the domain of 

religious life; Sforza Pallavicini taught him 
thology. Under such guides his virtues and 

studies developed to maturity. He lectured on 

humanity for several years, and was 

ordained priest in 1659, by 

careful study of 

Scripture, the 

Fathers, and the 

Orations of Cicero, 

he had prepared himself for the 
pulpit, for which he had ever felt 

a strong attraction. He volunteered for the foreign 
missions, but Tuscany, the Papal States, and 

the chief cities of Italy were to be the scene of his labours. He preached at first in the great cathedrals, and then for twenty-seven years (1665–92) gave popular mis-

sions with an eloquence surpassed only by his holiness. His "Quaresimale" (Florence, 1679, tr. New 

York, 1874) had been read and admired by Antonio 
Pignattelli, who as Pope Innocent XII summoned the 

missionary to preach before him, and made him theologian of the Penitentiary. Segneri's "Quaresimale" 

Masesi; states distinctly that "Le Prediche dette nel 
palazzo apostolic" (Rome, 1694) won the admiration 
of the pontiff and his Court.

After St. Bernardine of Siena and Savonarola, 

Segneri was Italy's greatest orator. He reformed 

the Italian pulpit. Marinii and the Marinisti with 

the petty tricks and simpering graces of the "Scel- 
cento" had degraded the national literature. The pulpit even was infected. Segneri at times stumbled 

into the defects of the "Scientistii", but his occasio-
nal bad taste and abuse of profane erudition cannot blind the impartial critic to his merits. The "Quaresimale", the "Prediche", the "Pane-
gyrici Sacri" (Florence, 1689), translated by John 

Perry, London (1877), stamped him as a great orator. His qualities are a vigour of reasoning, a 

strategist's marshalling of converging proofs and arguments, which recall Bourdaloue; a richness of 
imagination which the French Jesuit does not possess; a deep and melting pathos. He is particularly 

cognizant in refutation of the dissensions of the party; he unites a Dorian harmony of phrase; he is full of 

unction, priestly, and popular. He has two sources of inspiration: his love of God and of the people 

before him. To his oratorical powers, he added the 

seal of an apostle and the austerity of a great 
penitent. All this readily explains his wonderful 
success with people naturally emotional and deeply 

Catholic. Entire districts flocked to hear him; 

extraordinary graces and favours marked his career. 

His triumphs left him simple as a child. In 

his theological discussion with his superior-general 

Jeronimo Gonzales, who was chiefly interested in 

Probabilism, he combined the respect and obe-

dience of the subject with the reasonable and 

manly independence of the trained thinker (cf. "Lettere sulla Materia del Probabile" in vol. IV of "Opere", 

Venice, 1748). Segneri wrote also "Il penitente istruito" (Bologna, 1669); "Il confessore istruito" 

(Brescia, 1672); "La Manna dell'anima" (Milan, 

1683, tr. London, New York, 1892); "Il Cristiano istruito" (Florence, 1686); "L'Incredulo senza 

scusa" (Florence, 1690). His complete works (cf. Sommervogel) have been frequently edited: at 

Parma, 1701; Venice, 1712–55; Turin, 1856, etc. "Il Quaresimale" has been printed at least three 
times. Some of Segneri's works have been translated 

into Arabic. Hallam criticises Segneri unfairly; 

Ford is more just in his appreciation.

John C. Reville.

Segni (Signinii), in the Province of Rome. The 
city, situated on a hill in the Monti Lepini, 

overlooks the valley of the river Sacco. There still 
exist the double enclosure of a cyclopean wall and the 
gates, the architrave of which is a large monolith; one 
of these is the famous Porta Saracinesca. There 

are also the ruins of a church (St. Peter's) and some 

underground excavations, which recall Etruscan 

influence. Under Emperor Trajan, and perhaps of 

Etruscan origin, it became a colony. With other Latin cities it 

rebelded against Rome more than once. On several 

occasions it served as a place of refuge for the popes, 

and Eugenius III erected a palace there. In the 
thirteenth century it came into possession of the Conti 

Marsi, which family gave four members to the papal 
ranks. In 1658 it was sacked by the forces of the
SEGORBE

Duke of Alba in the war against Paul IV; immense booty was captured, as the inhabitants of the other towns of the Campagna had fled thither. Segni is the birthplace of Pope St. Vitalianus and of the physician Elio Clei. The Cappella Conti in the cathedral is worthy of admiration. The first bishop of Segni is St. Rufini (about 494); among his successors are: St. Bruno (1079), who wrote an excellent commentary on the Scriptures; Trasmundo (1123), deposed for supporting Anacletus II, the anti-pope; on his repentance he was restored; under John III (1188), St. Thomas Becket was canonised in the cathedral (1173); Lucio Fanini (1492), renowned for his erudition; Frà Bernardino Callini (1541), wrote the life of St. Bruno; Giuseppe Panfili, O.S.A. (1570), deposed and imprisoned on account of his misdeeds; Paolo Ciotti (1784), who governed the diocese with great wisdom during the Revolution. The diocese is immediately subject to the Holy See; it contains 12 parishes; 58 secular and 18 regular priests; 20,000 inhabitants; 3 houses of religious and 8 of nuns; a college for young boys and 5 educational establishments for young girls.

U. BENIGNI.

SEGORBE (or CASTELLÓN DE LA PLANA), DIOCESI

SEGÖVIA

The restoration was completed in 1534; and in 1795 the nave was lengthened, and new altars added, in the episcopal of Lorenzo Hdaedo. Segorbe possessed a castle, in which King Martin of Aragon lived and held his court; but the demolition of this building was begun in 1785, and its materials were used for the construction of the hospital and Casa de Misericordia. The seminary is in the Jesuit college given by Carlos III. The convents of the Dominicans, Franciscans, the Augustinian nuns, and the Charterhouse (Cartuja) of Valdecristo have been converted to secular uses.

RAMÓN RUIZ AMADO.

SEGÓVIA, DIOCESE OF (SEGÒVIENSES, SEGÓVILA), in Spain, is bounded on the north by Valladolid, Burgos, and Soria; on the east by Guadalajara; on the south by Madrid; on the west by Ávila and Valladolid. It extends through the civil Provinces of Segovia, Valladolid, Burgos, and Ávila. The episcopal city has a population of about 15,000. In ancient times this region was within the country of the Arevaci, and, according to Pliny, belonged to the juridical conventus of Clunia in Hispania Carthaginensis. As to the origin of the diocese, the spurious chronicle attributed to Flavius Dester pretends that its first bishop was Hierotheus, the master of Dionysius the Areopagite, and disciple of St. Paul. This tradition, propagated by false chronicles, has been refuted by a Segovian, the Marqués de Mondejar. It is more probable that Segovia belonged to the Diocese of Palencia until the year 527, when, a certain bishop having been consecrated in violation of the canon law, the metropolitan of Toledo, Montanus,

assigned to him for his becoming support the cities of Segovia, Coa, and Britalbo, which he was to keep for life. As Segovia had him for its bishop until his death, which did not take place for some length of time, it then claimed the right to name a successor, a demand favoured by the great size of the Diocese of.
In 1192 the fifth Bishop of Segovia from the restoration had been succeeded by Gonzalo; he was followed by Gonzalo Miguel, who lived until 1211.

On the re-establishment of the see, attention was naturally turned to the rebuilding of the cathedral. Certain documents of 1136 speak of the Church of S. Maria as in course of being founded, and in 1144 it is mentioned as having been founded, from Diego de Colmenares, the historian of Segovia, infers that it must have been finished at that time. It certainly was not consecrated, however, until 16 July, 1229, by the papal legate, John, Bishop of Sebina. Situated on an esplanade to the east of the castle, it retains only a suggestion of its Byzantine structure, as it was entirely destroyed in the War of the Commons, when the Comuneros used it as a base of attack on the neighbouring castle. The relics and treasures of the basilica were saved in the church of S. Clara, in the Plaza Mayor, to which they were transferred in solemn procession on 25 October, 1522. About 1470 Bishop Juan Arias Dávila undertook the construction of a fine cloister, which, in 1524, Juan Campero caused to be removed, stone by stone, to the site of the new cathedral. The structure of the cloister being closely connected with the episcopal dwelling, the same bishop, Arias Dávila, transferred the latter to the west of the church and there the bishops continued to reside even after the cathedral was transferred, until, about the year 1750, they moved into the episcopal palace in the Plaza de San Esteban, during the episcopate of Bishop Murillo y Argáiz. The older dwelling was not totally demolished until 1816.

The old cathedral having been irreparably destroyed, Bishop Fadrique de Portugal selected, as a foundation for the new, the Church of S. Clara, which the nuns had left when they were incorporated with the community of S. Antonio el Real. On 24 May, 1525, Diego de Rivera, Bishop of Segovia, inaugurated the laying of the foundations, and on 8 June solemnly
blessed the first stone and, with Gil de Hontañón as master, began the works of the western side at the spot called Puerta del Perdón (the Gate of Pardon). Hontañón was succeeded, after six years, by his colleague, Onís Obispo. On 14 August, 1558, the new church was consecrated, and the mortal remains of Pedro, son of Enrique II, as well as of many prelates, were transferred to it. Not until the entry of Anne of Austria, bride-elect of Philip II, in 1570, were the ruins of the old cathedral razed, so as to erect a new one. In August, 1580, Rodrigo Gil laid the foundations of the main choir. In 1615 the tower, burned down the year before, was constructed under the direction of Juan de Magarrun. The baroque stone portal of the north transept was designed in 1720 by Pedro de Bruxelas. Francisco de Campo Agüero and Francisco Viadero executed the sacristy, the sanctuary, the archivolt, and the chapter house. The brilliant windows which give its character to this cathedral are the work of Francisco Herrán. The style of the structure is pure Gothic, with three naves and lateral chapels. It was completed in 1585, and its floor was flagged between 1780 and 1792. The retablo, executed by Sabatini in 1768, at the expense of Carlos III, is out of harmony with the style of the magnificent church. Among the churches, the last one on the Gospel side, with the "Nuestra Señora de Piedad" of Juan Juní of Valladolid, merits special notice. In the church which is gained on entering the cloister is the "Cristo del Consuelo", as well as the tombs of Bishops Raimundo de Losans and Diego de Covarrubias.

Segovia has some very old parish churches, which, with their square Romanesque towers, were certainly built before the end of the thirteenth century. The celebrated one is that of San Miguel; its Gothic structure collapsed in 1532, and the rebuilding of it in its present form was completed in 1558. It contains the tomb of the famous Andrés Laguna, physician to Julius III and to Charles V. San Esteban, opposite the bishop's palace, has the most beautiful Byzantine tower in Spain. In San Juan de los Cabaleros (St. John of the Knights) reposes the remains of Diego de Colmenares, the historian of Segovia, who was parish priest of that church. The parish churches of San Gil and San Blas dispute between them the honour of having been the local cathedral. The former was rebuilt in the thirteenth century by Bishop Raimundo de Losans. They are both in ruins. King Juan I instituted in the cathedral of Segovia an order of knighthood, that of the Holy Spirit (1390).

The city possesses a famous Roman aqueduct, probably built by Trajan in the Piazza del Assequej; its arches are 92 feet in height; it is 3000 (Spanish) feet in length, and has one hundred and seventy arches, thirty-six of which were reconstructed by Juan de Escobedo, a Hieronymite friar (1484-1489). The castle (el castro) of Segovia, which Alfonso VI caused to be built in 1076, is a remarkable structure. It is a rectangular tower, known as that of Don Juan II, and several other round ones surmounted with high conical roofs. In it Carlos III established the Artillery Academy which remained there until 1862, when a conflagration occurred which compelled its removal to the old Franciscan convent. The seminary, founded by Bishop Antonio Marco de Llanos (1791), is under the invocation of Sts. Frutos and Idefonso. In this diocese is the royal estate of San Ildefonso, or La Granja, the summer residence of the kings of Spain, built by Philip V on the site of an ancient hermitage dedicated to St. Ildefonsus, and an estate (granja) granted to the Catholic monarchs by the Hieronymites of Parral. Part of the royal estate, too, is formed by the collegiate church founded by Philip V and restored by Fernando VII.

RAMÓN RUIZ AMADO.

Segur, Louis Gaston de, prelate and French apologist, b. 15 April, 1820, in Paris; d. 9 June, 1881, in the same city. He was descended on his paternal side from the Marquis of Segur—Minister of France and of Minister of Louis XVI, who occupied this position during the participation of France in the war of emancipation of the United States—from the Comte de Segur, companion of Lafayette in America, and on his maternal side was descended from the Russian Prince Rostopchine who was forced to surrender to Napoleon in 1812. After his humanism was practiced from a comparative indifference to religion he experienced a remarkable fervour; entering the diplomatic service, he was made attaché to the Embassy at Rome in 1842, but the following year he left this post and even gave up painting, for which he had excellent taste and much talent, to go to Lyons to study at the Seminary of St. Sulpio and to prepare himself for the priesthood, to which he was ordained in 1847. Thereforeforth he dedicated himself to the evangelisation of the people in Paris; the children, the poor, the imprisoned soldiers to whom he was the volunteer and gratuitous chaplain, the lunatics, occupied his ministrations, or rather he professed to be auditor of the Rota for France at Rome. He remained in this position for four years, honoured with the affectionate esteem of Pius IX and with the friendship of many personages of the pontifical and diplomatic Court. He united with his judicial functions some political negotiations which Napoleon III had confided to him, and also ministrations to the French soldiers in the garrison at Rome. Attacked with blindness, he was obliged to resign from his duties in 1856; he returned to Paris with the honours and privileges of the episcopate, the title and reality of which his infirmity prevented him from receiving. His life was devoted to his official duties and to religious works. The chief among these was the patronage of young apprentices, the union of workingmen's societies, ecclesiastical vocations and seminars, military chaplaincies, and the evangelisation of the suburbs of Paris. He gave untintedly his time, his care, his preaching, his money, and that of others, of whom he asked it without false pride. Among his undertakings, and one which most occupied him, was the work connected with the St. Francis de Sales Association, for the defence and preservation of the Faith. After founding this devotion he established it in forty days in France in less than a year after its foundation (1859), and was able also to gather and distribute 30,000 francs in alms. Mgr de Séguir worked incessantly for its development. When he died it numbered 1,900,000 associates, collected annually 360,000 francs, and extended its activities in France, Belgium, Italy, Spain, and even to Canada. Besides his apostolate and ministry he was also engaged in writing. In 1851 he published in a modest form "Réponses aux objections les plus répandues contre la religion"; it met with considerable success. At the time of his death 700,000 copies had been sold in France and Belgium without counting the many editions in Italian, German, English, Spanish, and even in the Hindu language. After his affliction with blindness his works multiplied noticeably; some were destined to make known or defend Catholic ideas on various questions which occupied public attention; others to extend or to confirm his apostolate of preaching in forming souls to piety or to the interior life. To the first category belong among others the "Causeries sur le protestantisme" (1898); "le Pape" (1860); "le Denier de Saint Pierre"
SEÚR

(1861); "la Divinité de Notre Seigneur Jesus Christ" (1862); "les objections populaires contre l'encycylque [Quanta cura]" (1869); "Les Francs-Maçons" (1867); "le Pape est infâme" (1870); "l'Ecole sans Dieu" (1873). To the second class belong among others: "les Instructions familières sur toutes les vérités de la religion" (1863); "Notions fondamentales de philosophie mathématique" (1864); "Jésus vivant en nous" (of which an Italian translation was put as the Index) (1869); "La piété enseignée aux enfants" (1864). One need not seek in these works vast learning nor didactic discussions. The author did not strive for this; he intended his apologetic books for the people and his brief pamphlets, vigilant, full of vivacity and spirit, written with a frankness wholly French in a popular style, sprinkled with caustic irony and Parisian pleasantries. In his ascetical works he aimed above all to spread the true principles of Catholic spirituality in opposition to the old traditions of Jansenism and Gallicanism. His seal was crowned with success, his little books attained numerous editions. Thus at his death there had been sold 44,000 copies of his "Instructions familières", his works "Le Pape", "La Communion", and "La Confession" were issued to the number of thousands of volumes. His complete works have been edited in ten volumes (Paris, 1876–7); since have appeared "Cent cinquante beaux miracles de Notre Dame de Lourdes" (2 vols. Paris, 1882); "Journal d'un voyage en Italie" (Paris, 1852); "Lettres de Mgr de Séguir" (2 vols. Paris, 1853).

SEÚR, SOPHIE ROSTOPCHINE, COMTESSE DE, b. 1797; d. 1874. Her father was General Rostopchine who ordered the city of Moscow to be set on fire after the battle of Borodino (1812) and thus compel Napoleon to begin his disastrous retreat from Russia. She married Eugène Comte de Séguir, grandson of Louis Philippe de Séguir, and nephew of Philippe Paul de Séguir, one of the most brilliant officers in the imperial army and author of "Histoire de Napoléon et de la grandeur et de la décadence de l'empire de Russia" (2 vols. Paris, 1851–2), and of more than fifteen editions and was translated into most of the European languages. Mme. de Séguir was a woman of culture and uncommon literary talent. She contributed a number of stories to the "Bibliothèque Rose", a collection of short novels for young people, and among them are "Nos aventures sur la péninsule" (Paris, 1852); "Le Géant de Donkérinke" (Paris, 1864); "Un bon petit diable" (Paris, 1865); "Les vacances" (Paris, 1885); "Le mauvais génie" (Paris, 1887).

S. VAÎTÉL.

SEIDL, JOHANN GABRIEL, poet, author of the present Austrian national hymn, b. at Vienna, 21 June 1804; d. there, 17 July, 1875. The family of Seidl was of Swiss origin, Johann's grandparents having
Evangelists and Apostles at Castel Gandolfo, and at a later date, when Overbeck's strength was no longer equal to the task, Seits, with the aid of his gifted son, Ludwig Seits, completed Overbeck's frescoes in the cathedral at Diakovar by filling the gaps with compositions of his own. With the help of his son, Seits painted a cycle of pictures of saints, for Herder of Freising. Besides some secular compositions, the genre pictures of the life of the common people at Rome, he treated pre-eminently scenes and persons of the Old and New Testaments. His pictures of the "Adoration of the Shepherds", "Christ as the Friend of Children", "Awakening of the Young Man of Nazareth", "The Baptism of Moses", "The Finding of Moses", are entirely in the spirit of Overbeck. A "Mater Amabilis" aroused much admiration; an enthroned Madonna went to England. The "St. Anthony, and St. Benedict", as engraved by the Capuchin Bernardo da Monza, had a wide popularity. Good pictures also are: "Translation of St. Catherine to Sinai by angels", and especially a round picture of "Rest during the Flight to Egypt". In this three angels worship Christ, who lies with outstretched arms on the lap of the mother, while at some distance is Joseph with the beast of burden. In the Trinità de' Monti at Rome he painted in fresco the return of the prodigal son and Christ with heart aflame.

G. GIEEMANN.

Sejni (Augustów) Diocese of (Sezjenski, or Augustovien), a diocese in the northwestern part of Russian Poland near the border of East Prussia, German Poland. Its territory formerly belonged to the Diocese of Vilna, but upon the first partition of Poland it fell to Germany. Consequently a separate ecclesiastical jurisdiction was desired, and so Pius VI, on 27 March, 1798, carved out the new diocese and established its see at the Camaldolese monastery of Wigry, a village about ten miles east of the present city of Suwałki. This monastery of Camaldoli was founded under the patronage of King Jagiello in 1418, and the Church of Our Lady, which became the cathedral, is now the parish church of Wigry. The first bishop of the diocese was the celebrated preacher Michael Francis Karpowicz (b. 1744; d. 1805). His successor was John Clement Golaszewski (b. 1748; d. 1820), who enlarged the Wigry cathedral. After the third partition of Poland that territory was taken by Russia, and in 1818 the Church throughout the Polish kingdom was reorganized. By a Bull of Pius VII Warsaw was made the metropolitan see and the see of Wigry was changed to Augustów, a city founded in 1561 by King Sigmund Augustus, after whom it was named, which is still the largest place in that section (population 85,690). The new cathedral and chapter were inaugurated on December 8, 1819. The next bishop, Ignatius Cazyński, the first to rule the newly named diocese, did not remain at Augustów, but changed his place of residence in 1823 to Sejni, a town founded in 1522 by King Sigmund I, and which is about twenty miles east of Suwałki, the capital of the district. The succeeding bishop, Nicholas John Manugiewicz, established the diocesan seminary in 1830, and for many years resided sometimes at Augustów and then at Sejni. His successor was Stanislaus Choromanski, afterwards Archbishop of Warsaw. The next bishop, Straszynski, made the old Dominicans' monastery the new episcopal residence, and it was consecrated to St. Stanislaus on 4 February, 1837. He was in frequent collision with the Russian authorities, and on his death in 1847 the see was kept vacant by the Russian Government until 1863. Constantine Lubierski was then made bishop, and on his death in 1869 at Nowgorodie was succeeded by Bishop Wierzbowski. His successor was Anthony Baronowski, and the present bishop (1911) is Anthony Karaf. Sejni has the cathedral church, chapter and consistory, the diocesan seminary and the hospital of St. Simon managed by the Sisters of Charity. The diocese is divided into eleven deaneries and has a Catholic population of 692,250. There are 119 parish churches and 20 substations, besides 105 chapels and 500 oratories. The deanery has 332 secular priests, 4 regulars, 86 seminarians, 24 lay religious, besides 8 nuns and 26 Sisters of Charity. Owing to the Russian regulations against receiving novices and postulants, the regular clergy and monastic institutions are dying out.

Andrew J. Shipman.

Sekanas (or more properly Tahe-keth-neh, "People on the Rocks", i.e., the Rocky Mountains), a Déné tribe whose habitat is on both sides of the Rockies, from 52° to 57° 30' N. lat. By language they are an eastern tribe, and it is not much more than 130 years since a portion of their congeners, having come into possession of fire-arms through the Canadian fur traders, made such reckless use of the same that the westernmost bands had to cross the mountains to get out of their reach. These quondam aggressors originally roamed along the Athabasca and Beaver Rivers, and they are to-day known by the name of Beavers, claiming now the valley of the Peace between Fort Dunvegan and Fort L. Athabasca. Another split in the Sêkanas ranks, which was due to an insignificant incident, brought into existence still another tribe, whose members were ultimately admitted into the Blackfeet Confederacy under the name of Sarcee. The Sêkanas proper are to-day more than 450; the Beavers, perhaps 550, and the Sarcee, 190. By natural disposition as much as from necessity the Sêkanas are invertebrate nomads. They have no fixed abodes, and therefore no villages, or even chiefs in the strict sense of the word. The best related among the fathers of families are their own headmen, and their rôle is restricted to directing the movements of their respective bands. Yet the Sêkanas are scrupulously honest and moral, though theirs is the only Déné tribe in which polyandry is known to have existed in pre-missionary times. Superstitious and naïve to a degree, they received the Gospel without question; but after having forsaken their consequent nomadic habits, have conspired to make the establishment of permanent missions among them difficult. However, most of them are to-day under the influence of the Catholic priest. Even the Beavers, who are less religiously inclined, have steadfastly resisted the advances of the Protestant ministers.

Seleucians, a Gnostic sect who are said to have flourished in Galatia. They derived their name from Seleucus, who, with a certain Hermias, is said to have propounded and taught their peculiar heresies. According to Philostratus (Liber Diversarum Hæreserum, LV) the teaching of these heresies was based on the crudest form of Dualism. While they maintained that God was incorporeal, they asserted that matter was coeternal with Him. They extolled fire and air as manifestations of God as well as of matter. In their system the souls of men were not created by God, but were formed from earthly constituents—fire and air—by angels. Christ, they said, did not sit at the right hand of the Father in Heaven because (Psalm xvi, 6) "He hath set his tabernacle in the sun" must be interpreted to mean that Christ
Selecua

Selecua Trachem, metropolitan see of Isauria in the Patriarchate of Antioch. The city was built by Seleucus I, Nicator, King of Syria, about 300 B.C. It is probable that on its site existed one or two towns called Olbia and Hyria, and that Seleucus merely united them, giving them his name. At the same time the inhabitiants of Seleucia and the region around it is to be attached to a method of chronology which seems rather arbitrary, the date assigned by Philastrius to the Seleucians, viz. after the reign of Decius, would exclude the supposition that they confounded them with the followers of Hermogenes.

Patrick J. Healy

Selecua Pieria, titular metropolis of Syria Prima. The city was founded near the mouth of the Orontes, not far from Mount Casius, by Seleucus Nicator about 300 B.C. According to Pausanias, Damascene, and Malalas, there appears to have been previously another city here, named Palaeopolis. Seleucia was a commercial port of Antioch, Syria, with which it communicated by the Orontes; it was at the same time a naval port. The first colonists were the Greeks of Antigonia in Greece, also some Jews. It was taken and retaken by the Lagids and the Seleucids until 219, when it again fell into the power of the kings of Syria. Then it obtained its freedom and kept it until the fall of the Roman occupation. It long enjoyed the right of coinage. Of its famous men, Apollonius, a physician of Antiochus (third century B.C.), is known, also Firmus who aroused Palmyra and Egypt against Rome in 272 a.d. The harbour was enlarged several times, e.g., under Diocletian and Constantius. Saint Paul and Saint Barnabas stopped at Seleucia (Acts, xiii, 4) but nothing indicates that they made any converts. In the Apocryphal Acts of Saint Ignatius of Antioch, this city is also mentioned. The oldest bishop known is Zenobius, present at Nicaea in 325. There is mention of the Eusebian, the Arian, and Biz Rh in the fourth century, with twelve others found in Le Quen (Orients Christianus, II, 777-780). In the sixth century the "Notitia episcopatum" of Antioch, gives Seleucia Pieria as an autocephalous archbishopric, suffragan of Antioch (Echoes d'Orient, X, 144); the diocese existed until the tenth century, and its see is known (Echoes d'Orient, I, 173). For some Latin titularies see Eubel, "Hierarchia catholica medii aevi", I, 468. During the Byzantine occupation from 970, followed soon after by the Frankish occupation, Seleucia regained its importance; during the Crusades its port was known by the name of Saint Simeon. The Greek-Arabic schismatic patriarchate of Antioch had since the sixteenth century united the title of Seleucia Pieria to that of Zahleh in Lebanon.

S. Vallete

Selecua

left His body in the sun. They did not practise baptism, basing their refusal to do so on the words of John the Baptist (Matt., iii, 11): "He shall baptize you with the Holy Spirit", by which they understood the present world, while Resurrection they explained as being merely the procuration of children which went on daily, not the triumph over death with the expectation of a glorious immortality. The doctrines of Seleucus and his adherents were the source of another series of heresies taught by some of their disciples who called themselves Proclinisiantes or Hermoenites. These latter rejected the Scriptures with the exception of the Book of Wisdom. They denied that Christ appeared in the flesh and that he was born of a virgin. They also rejected the dogmas of the Resurrection and Judgment. According to Philastrius they perverted large numbers. It must be said that a great deal of uncertainty exists regarding the history and real character of this heresy. Some recent authors, because of the fact that the doctrines of the Seleucians so closely resembled those of Hermogenes, and because Hermogenes is mentioned by Philastrius, conclude that these two were one and the same heresy. This assumption is plausible but there are vital differences between the teaching of Hermogenes and that of the Seleucians as, for example, on the subject of Christ as Creator which, together with the virgin birth is the core of the heresy. If an apology is to be attached to a method of chronology which seems rather arbitrary, the date assigned by Philastrius to the Seleucians, viz. after the reign of Decius, would exclude the supposition that they confounded them with the followers of Hermogenes.

Patrick J. Healy

Selecua Pieria, titular metropolis of Syria Prima. The city was founded near the mouth of the Orontes, not far from Mount Casius, by Seleucus Nicator about 300 B.C. According to Pausanias, Damascene, and Malalas, there appears to have been previously another city here, named Palaeopolis. Seleucia was a commercial port of Antioch, Syria, with which it communicated by the Orontes; it was at the same time a naval port. The first colonists were the Greeks of Antigonia in Greece, also some Jews. It was taken and retaken by the Lagids and the Seleucids until 219, when it again fell into the power of the kings of Syria. Then it obtained its freedom and kept it until the fall of the Roman occupation. It long enjoyed the right of coinage. Of its famous men, Apollonius, a physician of Antiochus (third century B.C.), is known, also Firmus who aroused Palmyra and Egypt against Rome in 272 A.D. The harbour was enlarged several times, e.g., under Diocletian and Constantius. Saint Paul and Saint Barnabas stopped at Seleucia (Acts, xiii, 4) but nothing indicates that they made any converts. In the Apocryphal Acts of Saint Ignatius of Antioch, this city is also mentioned. The oldest bishop known is Zenobius, present at Nicaea in 325. There is mention of the Eusebian, the Arian, and Biz Rh in the fourth century, with twelve others found in Le Quen (Orients Christianus, II, 777-780). In the sixth century the "Notitia episcopatum" of Antioch, gives Seleucia Pieria as an autocephalous archbishopric, suffragan of Antioch (Echoes d'Orient, X, 144); the diocese existed until the tenth century, and its see is known (Echoes d'Orient, I, 173). For some Latin titularies see Eubel, "Hierarchia catholica medii aevi", I, 468. During the Byzantine occupation from 970, followed soon after by the Frankish occupation, Seleucia regained its importance; during the Crusades its port was known by the name of Saint Simeon. The Greek-Arabic schismatic patriarchate of Antioch had since the sixteenth century united the title of Seleucia Pieria to that of Zahleh in Lebanon.
Seleucids

S. Vaillé.

Seleucids, the name given to the Macedonian dynasty, which was founded by Seleucus, a general under Alexander the Great, and ruled over Syria from 312 B.C. In 321 Seleucus received the satrapy of Babylonia from Antipater, administrator of Alexander’s empire. After being temporarily supplanted by Antigonus, he returned to Babylon after the battle of Gaza (312), from which his rule is dated (the first year of the Seleucid era). Seleucids I尼卡托 (312–281 B.C.) assumed the title of king in 306. He first subdued Upper Asia as far as the Indus and Jaxartes. The battle of Ipsus brought Syria under his dominion, although he had to recognize the supremacy of Egypt over Phoenicia and Palestine. By a victory over Lysimachus he conquered the greater part of Asia Minor (261), but a little later, when he encroached on European territory, he was murdered by Ptolemy Ceraunus. Besides various other cities, Seleucus founded the city of Antioch on the Orontes and Antioch on the Tigris and Antiochia on the Orontes. He was succeeded by his son, Antiochus I Soter (281–61), who, through fear of the Parthians, transferred his residence to Antiochia. Under Soter’s son, Antiochus II Theos (261–46), began the wars with the Parians for the possession of Syria, and Antiochus II Callinicus (246–26), succeeded. To avenge the death of his sister and to assure his possession of Syria, King Ptolemy III Euergetes made a successful campaign against Seleucus, advancing victoriously as far as the Euphrates. The eastern provinces passed gradually into the hands of the Parthians, and portions of the western were lost to Attalus II of Pergamum. While in flight after a battle in which he had suffered defeat at the hands of Attalus, Seleucus was killed by a fall from his horse. Seleucids III Сирокнос (236–24), the elder son of Seleucus, succeeded, and on his assassination the crown fell to Antiochus III the Great (224–187). To secure possession of Cilicia-Syria and Palestine this monarch began a war with Ptolemy V; although defeated at Raphia (217), the battle of Paneas (198) resulted in his favour, Palestine thenceforth belonging to the Syrian Empire. Interference in the affairs of the

west led to a war with Rome. After the battle of Magnesia (199) the king had to accept harsh conditions and surrender his possessions in Cilicia Minor north of the Taurus. Antiochus was unable to conquer Parthia, which his father had lost. During an attempt to plunder a temple in Elam, he was slain by the natives. He was succeeded by his elder son, Seleucus IV Philopator (187–75). Seleucus secured the throne of his youngest brother Antiochus the Great by a hostage in Rome, by sending his own son Demetrius thither instead. Before Antiochus arrived home, Seleucus was murdered by his minister Heliodorus; the former was thus able to take possession of the throne, which really belonged to his nephew Demetrius.

Antiochus IV Epiphanes (175–144) was an ambitious prince, of a truly despotic nature and fond of display. Entanglements with Egypt gave him the occasion to make repeated successful inroads into that country, and in 156 he might have succeeded in securing possession of it, had not the Romans compelled him to withdraw (embassy of Popilius Lænus). His hostile measures against the Jews, whom he tried to hellenise by sheer force, resulted in the Maccabean rising (see MACHABEES, THE). He died at Taibe in Persia, while on a campaign against the Parthians. His son Antiochus V Eupator (164–62) was a minor, and was simply a tool in the hands of a certain Antiochus, archistrategus Lysias. Both were removed by the son of Seleucus IV, Demetrius I Soter (162–15), who had previously lived as a hostage at Rome. Alexander Balas, who claimed to be a son of Antiochus IV, rebelled in 151, and Demetrius fell in battle. His son Demetrius continued the war against Alexander Balas (150–45) in union with the Egyptian king Ptolemy VI. Conquered by the latter near Antiochia, Alexander fled to Arabia, and was there treacherously murdered. Demetrius II Nicator (145–38 and 129–25) found his right to the throne contested by Sappho (surnamed Tryphon), a general of Balas, in league with the son of the latter’s son Antiochus VI, a minor. Later (141), setting aside his ward, Tryphon strove to secure the throne for himself. When Demetrius II was captured during an expedition against the Parthians and cast into prison, his brother Antiochus continued the war against Tryphon and committed suicide (138). Antiochus VII Sidetes (138–29) was killed during a campaign against the Parthians. Demetrius II, who had been released from captivity during the war, now became king for the second time (129–25). An anti-king in the person of Alexander Zabinas and a party of Antiochus Balas was set up in 128 by the Egyptian king, Ptolemy VII Physcon. Conquered near Damascus, Demetrius had to flee, and was murdered when he attempted to land in Tyre. He was followed by his elder son Seleucus V, who, at the instigation of his own mother, was removed shortly after his accession. His younger brother, Seleucus VI Philometor (125–113) conquered Alexander Zabinas and had him executed (125), but he himself was driven from his throne by his maternal half-brother Antiochus IX Cyriacus (113–95), the youngest son of Antiochus VII. Returning, however, after two years, Grypus succeeded in winning for himself the larger part of Syria, the kingdom being thus divided.

On the death of Antiochus VIII (98) his domains and claims were inherited by his elder son Seleucus VI. Defeated by Seleucus near Antiochia in 95, Antiochus IX committed suicide to escape imprisonment. Nevertheless, his son Antiochus X Philometor (95–87) fought on the same year, and the latter had to flee to Cilicia, where he died. His two brothers Antiochus XI and Philip continued the war, but were defeated, and during the flight Antiochus XI met death in the waves of the Orontes. Philip continued the war, and succeeded in securing possession of at least a portion of
Syria, while the fourth son of Antiochus VIII, Demetrius III Euerthus, was elevated to the rank of king in Damascus by Ptolemy Soter II of Egypt. Antiochus X was finally overcome by the brothers, Philip and Demetrius. Concerning his death we have conflicting reports. According to Appian he was first completely ousted by Tigranes (see below), although he seems to have asserted himself in a portion of Syria. 

Failing in his design of reconquering Judaea, Demetrius endeavoured to supplant his brother Philip, besieging him in Berenice, but was surrounded by the Parthians whom Philip had summoned to his aid, and forced to surrender. He died at the Court of the Parthian king. Philip now marched on Antiochia, secured possession of the city, and thenceforth held sway over Syria (about 88). In Cilicia-Syria and Damascus, however, appeared a new pretender in his youngest brother, Antiochus XII Dionysius, who made himself king of these parts, but later fell in a campaign against the Nabateans (about 84). Meanwhile, King Tigranes of Armenia appeared from the north, and in 83 succeeded in possessing himself of the kingdom. After overcoming Tigranes in 69, Lucullus granted this realm to the son of Antiochus X, Antiochus XIII Asiaticus, the last of the Seleucids. In 64 Pompey made Syria a Roman province, and Antiochus XIII was murdered a short time afterwards.

FRANZ SCHÜLLEIN.

Self Abandonment. See QUIETISM.

Self-Defence.—Ethically the subject of self-defence regards the right of a private person to employ force against any one who unjustly attacks his life or person, his property or good name. While differing among themselves on some of the more subtle points, moralists comprised in this topic, our moralists may be said to be unanimous on the main principles and their application regarding the right of self-defence. The teaching may be summarised as follows:

I. DEFENCE OF LIFE AND PERSON.—Everyone has the right to defend his life against the attacks of an unjust aggressor. For this end he may employ whatever force is necessary and even take the life of an unjust assailant. As bodily integrity is included in the good of life, it may be defended in the same way as life itself. It must be observed, however, that no more injury may be inflicted on the assailant than is necessary to defend oneself. If, therefore, he can be driven off by a call for help or by inflicting a slight wound on him, he may not lawfully be slain. Again the unjust attack must be actually begun, at least morally speaking, not merely planned or intended for some future time or occasion. Generally speaking one is not bound to preserve one's own life at the expense of the assailant's; one may, out of charity, forego one's right in the matter. Sometimes, however, one may be bound to defend one's own life to the utmost on account of one's duty of state or other obligations. The life of another person may be defended on the same conditions by us as our own. For since each person has the right to defend his life unjustly attacked, what he can lawfully do through his own efforts he may also through the agency of others. Sometimes, too, charity, natural affections, or official duty imposes the obligation of defending others. A father ought, for example, to defend the lives of his children; a husband, his wife; and all ought to defend the life of one whose death would be a serious loss to the community. Soldiers, police officers, and private guards hired for that purpose are bound in justice to safeguard the lives of those entrusted to them.

II. DEFENCE OF PROPERTY.—It is lawful to defend one's material goods even at the expense of the aggressor's life; for neither justice nor charity require one should sacrifice possessions even though they be of less value than human life in order to preserve the life of a man who wantonly exposes it in order to do an injustice. Here, however, we must recall the principle that in extreme necessity every man has a right to appropriate whatever is necessary to preserve his life. The starving man who matches a near breather as an unjust aggressor; consequently it is not lawful to use force against him. Again, the property which may be defended at the expense of the aggressor's life must be of considerable value; for charity forbids that in order to protect ourselves from a trivial loss we should deprive our neighbor of his life. Thefts or robberies, however, of small values are to be considered not in their individual, but in their cumulative, aspect. A thief may be slain in the act of carrying away stolen property provided that it cannot be recovered from him by any other means: if, for example, he can be made to abandon his spoil through fright, then it would not be lawful to shoot him. If he has carried the goods away to safety he cannot then be killed in order to recover them; but the owner may endeavor to take them from him, and if the thief resists with violence he may be killed in self-defence.

III. HONOUR.—Since it is lawful to protect the legitimate defence of one's material goods, it is evidently also lawful to do so in defence of chastity which is a good of a much higher order. With regard to honour or reputation, it is not lawful to kill one to prevent an insult or an attack upon our reputation which we believe he intends, or threatens. Nor may we take a life to avenge an insult, etc.

This proceeding would not be defence of our honour or reputation, but revenge. Besides, in the general estimation honour and reputation may be sufficiently protected without taking the life of the offender.

JAMES J. FOX.

Selgas y Carrasco, José, poet and novelist, b. at Lorca, Murcia, Spain, 1824; d. at Madrid, 5 Feb., 1882, he received his early training at the Seminary of San Fulgencio; his family being in straitened circumstances, he was obliged to cut short his studies in order to contribute to its support. Going to Madrid, he there occupied minor Government positions, but engaged in journalistic. As a journalist Conservative he assailed the Liberals in the articles which he wrote for the periodical "El Padre Cobos" and other newspapers. He acted as secretary for Martínez Campos when the latter was Prime Minister. The Spanish Academy made him

691

SELA
Seligne, a titular see in Isauria, near the Gulf of Adalia. Selinus, mentioned by Ptolemy, V, 8, 2, Pliny, V, 22, and other ancient geographers, was a port on the east side of Cilicia at the mouth of a river of the same name. Its situation on a steep rock, whence its Greek name, rendered it almost impregnable. The only known fact of its history is that Trajan died there in 117. Then it took the name of Trajanopolis, but the old name prevailed, as is shown by coins and other documents. Later it became to Selinopolis, containing 8000 inhabitants, Turks and Greeks, mostly farmers or fishermen.

In the ninth century it became an autocephalous archbishopric and under Marcus Commensus a metropolitan without suffragans. It would be easy, therefore, to add to the list of its bishops given by Le Quien one of its members. Selgas belongs among the minor writers. His repute depends upon his lyrics and his short tales rather than upon his more ambitious novels. The best of his verse, which is generally marked by a decided moral tone, may be found in his two collections, "La Primaveras" and "El Estio," both put forth in 1850. After his death there appeared the volume of poems entitled "Flores y Espinas." Of his longer novels there may be mentioned the "Dos Rivas" and "Una Madre," both rather tedious to the modern reader. In his short tales he is most successful when he indulges in the sentimental; he is less attractive when he gives utterance to his pessimistic feeling. At times his sentimentalism and pessimism become even morbid. A number of his journalistic articles have been brought together in several of the volumes of his collected works, as "Rojas sueltas," "Estudios sociales," etc. They illustrate his ultra-Conservatism in politics.

J. D. M. FORD.

Selugio, Giulio Lorenzo, canonist and archaeologist, b. at Naples, 10 August, 1728; d. there, November, 1772. He entered the "seminary" of the ordo, in 1744, and was ordained in 1752. He subsequently devoted himself to the study of history, philosophy, and the Oriental languages. He became censor of books and synodal examiner for the Diocese of Naples, and wrote the notes for the Italian edition of the ecclesiastical history of the Arabian historian, Mabrokh. He was learned in canon law; in 1764, he published "Institutionum canonarum libri tres" (Padua, 1770) and conferences in civil law, interesting from the standpoint of contemporary Neapolitan law. Mambachi's work on Christian antiquities being unfinished, Selvaggio resolved to treat the same subject in a smaller work, but he died before finishing it. His friend, Canon Kalephati, continued the publication of the "Antiquitatum ecclesiasticarum institutiones" (6 vols., Naples, 1772-8), prefacing them with a biography of the author: "Commentarius de vita et scriptis J. L. Selvaggi..."

HUNTER, Nominae, III (Innsbruck, 1845), 172-74.

S. MAERRE.

Selymbria, a titular see in Thracia Prima, suffragan of Heraclea. Selymbria, or Selymbria, the city of Selys on the Propontis, was a colony of the Megarians founded before Byzantium. It was the native place of Proculus, a disciple of Hippocrates; there Xenophon met Medodes, the envoy of Persia, whose arms he recorded in 410 B.C. Alcibiades, who commanded in the Propontis for the Athenians, was not allowed to enter the town, but the inhabitants paid him a sum of money; somewhat later he captured it by treachery and left a garrison there. In 351 B.C., Selymbria was an ally of the Athenians and in 243 was perhaps attacked by Philip. In honor of Eudoxia, wife of the Emperor Arcadius, it was called Eudoxiopolis, still its official name in the seventh century, doubtless together with the older one which finally survived. In 805 it was pillaged by the Bulgarian king, Kroum. Michael III constructed a fortress the ruins of which are still existing there. The town is often mentioned by the Byzantine historians; in 1096 Godfrey of Bouillon ravaged the country. Cantacuzenus celebrated the marriage of his daughter Theodora and the sultan Orkan with great pomp at Selymbria. The Turks captured the town in 1453. It is now Sibiri, chief town of a district in the west of Adrianople, containing 8000 inhabitants, Turks and Greeks, mostly farmers or fishermen.

In the tenth century it became an autocephalous archbishopric and under Marcus Commensus a metropolis without suffragans. It would be easy, therefore, to add to the list of its bishops given by Le Quien...
in "Orients Christianus", I, 1137. The oldest known is Theophilus transferred from Apamea (Soerenes, "Hist. eccl.", VII, xxxvi). We may mention before the Schism: Romanus, 448, 451; Sergius, 80; George, 692; Epiphanius, author of a lost work against the Iconoclasts. Simeon assisted in 679 at the Councils of Antioch which re-established Photius. Under Michael Paleologus, the Metropolitan of Selymbria, whose name is unknown, was one of the prelates who signed a letter to the pope on the union of the Churches. In 1347 Methodius was one of the signatories at the Council of Constantinople which deposed the patriarch John Valesius of the Palamites. The death of Ignatius, who wrote a "Life of Constantine and Helens" is unknown, perhaps about 1431. Among the bishops omitted by Le Quien must be mentioned Philotheus, who lived about 1365, the author of the panegyric on St. Agathonicus, a martyr of Nicomedea who suffered at Selymbria under Maximian, and of the panegyric on St. (? ) Macarius, a monk of Constantinople towards the end of the thirteenth century (Krumbacher, "Gesch. der byzant. Litteratur", Munich, 1897, 205). S. PÆTRIDÆS.

Serm (ζωή, "name", "fame", "renown"; in Septuagint, ζήσα; A. V., Shem), son of Noe; according to Gen. x, 21, the eldest. His birth and generations are recorded in Gen. x, 31; xi, 10 sqq. (cf. I Par., 1, 17 sqq.; Luke, ii, 36). He lived to be six hundred years of age. An incident, narrated Gen., ix, 18 sqq., discloses his filial reverence. His reward was a blessing of great import (cf. Esclus, xii, 19.). Noe's prophetic words (according to Massor. Text), "Blessed be Yahweh, the God of Sem (for the glory of a nation is its God), designate, in a special manner, Yahweh as the God of Sem and, consequently, Sem as the bearer of the Messianic promises. Having enumerated the Semitic nations, whose habitat extended over the central portions of the then known world (Gen., x, 21-31), the Sacred Writer resumes (xi, 10 sqq.) the genealogy of the descendants of Arphaxad, the direct ancestor of Abraham, David, and Christ.

THOMAS PLESSMANN.

Semarians and Semianism, a name frequently given to the conservative majority in the East in the fourth century as opposed to the strict Arians. More accurately it is reserved (as by St. Epiphanius, "Psi", lxxiii) for the party of reaction headed by Basil of Ancyra in 358. The greater number of the Eastern bishops, who agreed to the deposition of Arius, were in 355 and opposed the Arians to communion at Jerusalem on their repentance, were not Arians, yet they were far from being orthodox. The dedication Council of Antioch in 341 put forth a creed which was unexceptionable but for its omission of the Nicene "Father" in "One Subsisting". Even disciples of Arius, such as Contatius of Laodicea (335-47), and Eusebius of Sebaste (c. 356-80), joined the moderate party, and after the death of Eusebius of Nicomedia, the leaders of the court faction, Ursacius, Valens, and Germinius, were not tied to any formula, for Constantius himself hated Arianism though he disapproved it. When Ancyra was deposed in 336, he was succeeded by Basil. Marcellus was reinstated by the Council of Sardics and the pope in 343, but Basil was restored in 350 by Constantius, over whom he gained considerable influence. He was the leader of a council at Sirmium in 351 held against Photinius who had been a deacon at Ancyra, and the canons of this synod begin by condemning Arianism, though they do not make a great coming to the Nicene Creed. Soon afterwards a meeting of the Arian bishops was arranged at Ancyra in 353. And there, in 355, a council of the Arians was held at Ancyra in 353. There was a dispute over the formula of the Nicene Creed, following the "Life of Constantine and Helens", in which homoeousia and homoeousias were both rejected. Eusidus, a violent Arian, seised the See of Antioch, and supported Arians and his disciple Eunomius.

In the Lent of 353 Basil with many bishops was holding the dedicatory feast of a new church he had built at Ancyra, when he received a letter from George of Laodicea relating how Eudoxius had approved Arians, and begging Macedonian of Constantinople, Basil, and the rest of the assembled bishops to decree the expulsion of Eudoxius and his followers from Antioch, else that the publicans in sequence the Synod of Ancyra published a long reply addressed to George and the other bishops of Phoenicia, in which they recite the Creed of Antioch (341), adding explanations against the "unlikeliness" of the Son to the Father taught by the Arians (Anomoeans, from "διδάσασθαι") and showing that the very name of father implies a son of like substance (διδασκαλίας, or δύναμις κατ' οὐδένα) Anathematisms are appended, in which Anomoeanism is explicitly condemned and the teaching of "likeness of substance" enforced. The nineteen of these canons forbids the use of also of κατὰ τὸν θεόν and ἀναθεμάτως; this may be an afterthought due to the instance of Macedonians, as Basil does not seem to have insisted on it later. The legates were dispatched to the Court at Sirmium—Basil, Eustathius of Sebaste, an ascetic of no dogmatic principles, Elesius of Cysicus, a follower of Macedonius, and Leontius, a priest who was one of the emperor's chaplains. They arrived just in time, for the emperor had been lending his ear to an Eudoxius; but he now veered round, and issued a letter (Sosomen, IV, xiv) declaring the Son to be "like in substance" to the Father, and condemning the Arians of Antioch. According to Sosomen it was at this point that Liberius was released on a sign his three formulae combined by Basil; against this story see Liberius, Pope. Basil persuaded Constantius to summon a general council, Ancyra being proposed, then Nicomedia; but the latter city was destroyed by an earthquake. Basil, therefore, was again at Sirmium in 355, where the Arianizers had meanwhile regained their footing. With Germainius of Sirmium, George of Alexandri, Ursacius and Valens, and Marcus of Arethusa, he held a conference which lasted until night. A confession of faith, ridiculed under the title of the "dated council," was drawn up by Marcus on 22 May (Hilary, "Fragment. xvi"). Arianism was of course rejected, but the ἐν οἴκῳ κατὰ τὸν θεόν was not admitted, and the expression κατὰ τὸν θεόν ἄλλων, "like in all things," was substituted. Basil was disappointed, and added to his signature the expression that the words would be "only in will, but in existence and being (κατὰ τὸν θεόν κατὰ τὸν θεὸν)". Not content with this, Basil, George of Laodicea, and others published a joint explanation (Epiph., lxxiii, 12-22) that "in all things" must include "in substance." In the court party it was agreed that two councils should be held, at Rimini and Seleucea respectively. At Seleucia (359) the Semarians were in a majority, being supported by such men as St. Cyril of Jeru-
Salem, his friend Silvanus of Tarasus, and even St. Hilary, but they were unable to obtain their ends. Basil, Silvanus, and Eusebius, therefore, went as envoys to Constantinople, where a council was held (360) which followed Rimini in condemning 

homoousias together with 

homoousios, and allowed 

homoousios alone, without addition. This new phrase was the invention of Acacius of Cæsarea, who now deserted the extreme Arians and became leader of the new "Homoian" party. He procured the exile of Macedonius, Eusebius, Basil, Eustathius, Silvanus, Cyrus, and others.

Eusebius died at the end of 361. Under Julian the exiles returned. Basil was probably dead. Macedonius organized a party which confessed the Son to be 

céa 

tà 

ó 

ý 

wò 

AKE, while it declared the Holy Ghost to be the minister and servant of the Father, and a creature. Eusebius joined him, and so did Eustathius for a time. This remnant of the Semiarian party held synods at Zele and elsewhere. The accession of Jovian, who was orthodox, induced the versatile Acacius, with Meletius of Antioch and twenty-five bishops, to accept the Nicene formula, adding an explanation that the Nicene Fathers meant by 

homoousias that which signifies, from the Greek words homo (same) and ouo (nature) had taken up the original formula of the Semiarians. In 365 the Macedonians assembled at Lampus under the presidency of Eusebius, and condemned the Councils of Ariminum and Antioch (360), asserting again the likeness in substance. But the threats of the Arians, which Valens caused Eusebius to sign an Arian creed at Nicomedia in 363. He returned to his diocese full of remorse, and begged for the election of another bishop; but his diocesans refused to let him resign. The West was at peace under Valentinian, so the Semiarians sent envoys to that emperor and to the pope to get help. Liberius refused to send envoys until the Semiarians first presented an explanation of the confession of faith which included the Nicene formula. He seems to have been unaware that the party now rejected the Divinity of the Holy Ghost; but this was perhaps not true of the envoys Eustathius and Silvanus.

On the return of the legates, the documents they brought were received with great joy by a synod at Tyana, which embraced the Nicene faith. But another synod in Caria still refused the

homoousia. For the rest of the history of the sect, who are now to be called Macedonians, see

PNEUMATOMACHI.

JOHN CHAPMAN.

Semidouble (SemiduMélex). See Feasts, Ecclesiastical.

Seminary, Ecclesiastical.—I. Terminology.—The word seminary (Fr. séminaire, Ger. Seminar) is sometimes used, especially in Germany, to designate a group of university students devoted to a special line of work. The same word is often applied in England and the United States to young ladies' academies, Protestant or Catholic. When qualified by the word ecclesiastical, it is reserved to schools instituted, in accordance with a decree of the Council of Trent, for the training of clergy. It differs therefore from the novitiate and the scholastate where members of religious orders receive their spiritual and intellectual formation. In the ecclesiastical seminary both go together. Hence, a faculty of theology in a university is not a seminary; neither is it to be supposed that an ordinand, where ecclesiastical students live together while attending lectures of the faculty of theology in the State universities.

An ecclesiastical seminary is dioecesan, interdiocesan, provincial, or pontifical, according as it is under the control of the bishop of the diocese, of several bishops who send there their students, of all the bishops of an ecclesiastical province, or of the Holy See. A seminary which receives students from several provinces is called an interdiocesan seminary; if from states of the same country is called a central, or a national, seminary.

A theological seminary (grand séminaire) provides courses in Holy Scripture, philosophy, theology etc., and gives young men immediate preparation for ordination. A preparatory seminary (petit séminaire) does only a collegiate course as a preparation for entrance into the theological seminary. The word seminary when used alone designates either a theological seminary or a seminary including both the collegiate and the theological courses.

In this connexion it should be noted that the same "college" is sometimes given to institutions which offer no collegiate courses in the usual sense of the term, but receive only ecclesiastics who intend to study philosophy and theology. Such are all Halloways, Clongowes, Ireland, the Irish colleges on the Continent, and the various national colleges in France. It is important that they should be regarded as reality seminaries as regards both instruction and discipline. On the other hand there are seminaries which provide undergraduate courses as preparatory to philosophy and theology, thus combining in one institution the work of the petit séminaire and that of the grand séminaire.

II. Purpose of Seminary Education.—A seminary is a school in which priests are trained. A priest is the representative of Christ among men: his mission is to carry on Christ's work for the salvation of souls; in Christ's name and by His power, he teaches men what they ought to believe and what they ought to do; he is the symbol of the One who forgives sins and gives back the Blood of Christ. He is another Christ (acessori Christiatus). His training, therefore, must be in harmony with this high office and consequently different in many ways from the preparation for secular professions. He must possess not only a liberal education, but also professional knowledge, and moreover, like an army or navy officer, he needs to acquire the manners and personal habits becoming his calling. To teach candidates for the priesthood what a priest ought to know and to make them what a priest ought to be is the purpose of seminary education; the content and end every seminarian in the form of studies and discipline must be directed.

III. Life in the Seminary.—When a boy of intelligence and piety shows an inclination to become a priest, he is sent after graduation from the grammar or high school to pursue a classical course, either in a preparatory seminary or in a Catholic mixed college where lay as well as ecclesiastical students receive a classical education. This course, successfully completed, prepares him for admission into the theological seminary. The year opens with a retreat of eight or ten days, during which by meditations, conferences, visits to the Blessed Sacrament, recitation of the office, consultations with his spiritual director, his mind and heart are brought under the influence of the great truths of religion, so as to make him realise and feel the importance of his seminary training. Then begins the ordinary routine of the seminary, interrupted only by visits to Church and classes in pastoral science, the first term, and by the retreats which precede the Christmas and Trinity ordinations. The receptions of Holy orders are the greatest and the most joyful events of the year, for they keep before the mind of the student the goal of all his efforts, the priesthood. During the second year, besides the usual work, he gets a month off for a holiday: the morning is devoted to recreation, or to some favourite study; in the afternoon there is usually a walk, and at times the students visit ho-
pitals or other institutions, where they acquire a fore-
taste and gain some experience of their future work
among the sick and the poor. On Sunday they all
assist at a solemn High Mass and at Vespers, and in
some places they also attend a conference on Holy
Scripture. The summer vacation, lasting about three
months, permits them to visit the general practice in Italy,
or at home, as is commonly done in the United States and other countries.

The ordinary working day is divided between
prayer, study, and recreation. Summer and winter,
the student rises at 5 or 5:30 a.m., makes his medita-
tion for a half-hour, then has breakfast, receives
Communion. Breakfast is about two hours after
rising. In the forenoon there are two classes of one
hour each, while two hours also are devoted to private
study. After dinner there is about an hour of recrea-
tion. In the afternoon four hours are devoted be-
tween class and study, and as a rule another hour of
study follows supper. A visit to the Blessed Sacra-
ment, the recitation of the Rosary, and spiritual read-
ing take place in the afternoon or evening; and the day
closes with night prayer. Thus the student has de-
veloped about three hours to exercises of piety and nine
hours to work. After six years of this manner of life,
most of them retire from the world, and in the
society of fellow students animated by the same
purpose and striving after the same ideals, he is deemed
worthy of receiving the honour and capable of bearing
the burden of the priesthood: he is an educated Chris-
tian gentleman, he possesses professional knowledge,
he is ready to live and to work among men as the am-
bassador of Christ.

IV. HISTORY.—A. Late Origin.—This system of
seminary education, which has now become an essen-
tial feature of the Church's life, had its origin only
in the sixteenth century in a decree of the Council of
Trent. It would therefore be unfair to assign to Holy
orders only such as have been con-
cluded chiefly through diocesan priests, the Apostles
and the early popes and bishops always gave special
care to the selection and training of the clergy. St.
Paul warns Timothy not to impose hands lightly on
any man (1 Tim., v. 22).

In the scanty records of the early Roman pontiffs we invariably read the number
of deacons, priests, and bishops whom they ordained.
But although the training of the clergy was ever held
to be a matter of vital importance, we should look in
vain during the first centuries for an organized sys-
tem of clerical education, just as we should look in
vain to find a school that occupies an independent
place in St. Timothy's call before the training
B. Individual Training in Early Times.—Before
St. Augustine no trace can be found of any special in-
stitutions for the education of the clergy. Professors
and students in the famous Christian schools of Alex-
andria and Edessa supplied priests and bishops; but
these schools were intended for the teaching of cate-
chumens, and for general instruction; they cannot,
therefore, be considered as seminaries. The training of
priests was personal and practical; boys and young
men attached to the service of a church assisted the
bishop and the priests in the discharge of their func-
tions. If ready by the exercises of the duties of the
minor orders, they gradually learned to look after
the church, to read and explain Holy Scripture, to
prepare catechumens for baptism and to administer
the sacraments. Some of the greatest bishops of the
period had moreover received a liberal education in
pagan schools, and before ordination spent some time
in studying the cardinal exercises, and meditation on
Holy Scripture.

C. From St. Augustine to the Foundation of the
Universities.—St. Augustine established near the
cathedral, in his own house (in domo ecclesie), a mo-
nasterium clericorum in which his clergy lived together.
He readily desired to unite the community life with the exercise of
the ministry. In a few years this institution gave
ten bishops to various sees in Africa. It was, how-
ever, rather a clergy house than a seminary.

The example of St. Augustine was soon followed at
Milan, Nola, and elsewhere. A council held in 529
at Vaison, in Southern Gaul, exhorted parish priests to
adopt a custom already obtaining in Italy, to have
young clerics in their home and usually receive
Communion. Breakfast is about two hours after
rising. In the forenoon there are two classes of one
hour each, while two hours also are devoted to private
study. After dinner there is about an hour of recrea-
tion. In the afternoon four hours are divided be-
tween class and study, and as a rule another hour of
study follows supper. A visit to the Blessed Sacra-
ment, the recitation of the Rosary, and spiritual read-
ing take place in the afternoon or evening; and the day
closes with night prayer. Thus the student has de-
veloped about three hours to exercises of piety and nine
hours to work. After six years of this manner of life,
most of them retire from the world, and in the
society of fellow students animated by the same
purpose and striving after the same ideals, he is deemed
worthy of receiving the honour and capable of bearing
the burden of the priesthood: he is an educated Chris-
tian gentleman, he possesses professional knowledge,
he is ready to live and to work among men as the am-
bassador of Christ.

place in St. Timothy's call before the training
B. Individual Training in Early Times.—Before
St. Augustine no trace can be found of any special in-
stitutions for the education of the clergy. Professors
and students in the famous Christian schools of Alex-
andria and Edessa supplied priests and bishops; but
these schools were intended for the teaching of cate-
chumens, and for general instruction; they cannot,
therefore, be considered as seminaries. The training of
priests was personal and practical; boys and young
men attached to the service of a church assisted the
bishop and the priests in the discharge of their func-
tions. If ready by the exercises of the duties of the
minor orders, they gradually learned to look after
the church, to read and explain Holy Scripture, to
prepare catechumens for baptism and to administer
the sacraments. Some of the greatest bishops of the
period had moreover received a liberal education in
pagan schools, and before ordination spent some time
in studying the cardinal exercises, and meditation on
Holy Scripture.

C. From St. Augustine to the Foundation of the
Universities.—St. Augustine established near the

number of youths, in a college to be chosen by the bishop for that purpose; poor dioceses may combine, large dioceses may have more than one seminary. (2) In these institutions are to be received boys who are at least twelve years of age, can read and write passably, and are disposed to persevere in the service of the Church; children of the poor are to be preferred. (3) Besides the elements of a liberal education [as then understood], the students are to be given professional knowledge to enable them to preach, to conduct Divine worship, and to administer the sacraments. (4) Seminaries are to be supported by a tax on the income of bishoprics, chapters, abbey, and other benefices. (5) In the government of the seminary, the bishop is to be assisted by two commissions of priests, one for spiritual, the other for temporal matters.

So well did the Fathers of Trent understand the importance of the decree, so much did they expect from it, that they congratulated one another, and several declared that, had the council done nothing else, this would be more than sufficient reward of all their labours. An historian of the council, Cardinal Pallavicini, does not hesitate to call the institution of seminaries the most important reform enacted by the council.

F. Execution of the Decree of Trent in various Countries.—To provide for the carrying out of this important decree, Pius IV forthwith instituted a commission of cardinals. The following year (April, 1564), he decreed the foundation of the Roman Seminary, which was opened in Feb., 1568, and which for more than three centuries has been a nursery of priests, bishops, cardinals, and popes. St. Charles Borromeo, Cardinal Archbishop of Milan, who had taken a leading part in the work of the Council of Trent, was also most zealous and successful in enforcing its decisions. For his large diocese he established three seminaries: one of them furnished a complete course of ecclesiastical studies; in another, a shorter course was provided, especially for those destined to country parishes; the third was for priests who needed to make up the deficiencies of previous training. For these institutions St. Charles drew up a set of regulations, which have been ever since an inspiration and a model for all founders of seminaries. In other parts of Italy the decree of Trent was gradually put into effect, so that the smallest of the three hundred dioceses had complete seminaries, including both collegiate and theological departments.

In Germany, war and the progress of heresy were serious obstacles to the carrying out of the decree of Trent; still seminaries were founded at Eichstadt (1564), Münster (1561), and Prague (1531).

In Portugal the Venerable Bartholomew of the Martyrs, Archbishop of Braga, established a seminary a few months after the close of the Council of Trent.

Various attempts by French bishops ended in failure, until St. Vincent de Paul and Father Olier opened seminaries in Paris (1642), and helped to establish them elsewhere in France. A feature of these seminaries was their organization. For the teaching of the theology, all were seminaries complete seminaries, including both theological and philosophical departments.

In Paris the students of St-Sulpice usually followed lectures at the Sorbonne; some courses given at the seminary completed the course of philosophical studies, whereas in the Spiritual conferences, etc. provided for their moral and religious formation. In other places, especially when there was no university, a complete course of instruction was organized in the seminary itself. As there was no Church law requiring students to spend a fixed time in the seminary before ordination, and as the powers of the bishops were not always respected, the curates, some of the clergy, previous to the French Revolution, were not trained in these institutions.

In England and Ireland persecution prevented the foundation of seminaries; before the French Revolution priests for the English mission were trained at the English College of Douai. Irish aspirants to the priesthood, leaving Ireland at the peril of their lives, went chiefly to the colleges at Louvain, Salamanca, and Fribourg, and erudition by Irish exiles and other generous benefactors, to prepare for a life of sacrifice often ending in martyrdom.

G. Attempts at Secularization.—Towards the end of the eighteenth century, the Emperor Joseph II attempted to bring into requisition all the religious houses in Austria, Northern Italy, and the Netherlands under the control of the State. Students were forbidden by law to frequent the German College in Rome; episcopal seminaries were suppressed, and in their place central seminaries were founded at Vienna, Budapest, Pavia, Fribourg, and Louvain, in which all clerical students were forced to receive their education under the control not of the bishops but of the state. Professors and text books were chosen by state officials, who also regulated the discipline. Against this usurpation, protests came not only from the Holy See and the bishops, but also from the people; at Louvain the central seminary was burnt down, but it had to be abandoned, and the successor of Joseph II allowed the bishops to possess and rule their own seminaries.

The tendency to interference, however, remained, and has since shown itself in various German states. In the early years of the nineteenth century the effect of secularization was adopted by the Bavarian Government. Protestants or Free-thinkers were appointed teachers in the faculty of theology and the seminaries; regulations were drawn up for the choice of superiors, discipline, plan of studies, examinations, admission, and dismissal of students. After a long conflict a concordat was signed in 1817, by which the rights of bishops to erect and control seminaries were recognized. The same struggle occurred in other German states. The conflict became specially acute in 1873, when the Prussian Government in the famous May Laws issued a scheme which prescribed a regular course in a gymnasmum, three years theology at a state university, and then examination before state inspectors, as essential conditions of appointment to any ecclesiastical position. Education in seminaries might be accepted as equivalent if the bishops submitted the rules to the State for approval. As they refused to comply, the seminaries of Treves, Gnesen, Posen, Strasbourg, and others were closed. Negotiations between the Government and the Holy See were opened after the election of Leo XIII. Among the points on which the Church could never yield, the pope laid stress upon the rights of bishops to have seminaries and to control the education of their clerics. The more vexatious measures were abolished, and harmony was restored between Church and State.

H. Present Conditions in Germany.—At present nearly all ecclesiastical students make their college course in a public gymnasmum, together with lay students. The training of priests and seminarians for the teaching of the theological faculties and parochial schools there are two systems. The first consists of a course of three years in one of the faculties of theology, in the State universities of Bonn, Breslau, Freiburg, Munich, Münster, Tübingen, or Würzburg. The appointment of professors in these faculties is made by the Government, but while they have no control over the persons, who can moreover forbid their students to attend the lectures of objectionable teachers. While at the university, the students usually live together in a Konviktschule under one or two priests, but they enjoy about as much liberty as lay students. After completing their course they spend a year or eighteen months in a pre-seminary (provisorium), to learn ceremonies, ascetic and pastoral theology, and thus prepare immediately for ordination. For this system, which
has many strong advocates, the following advantages are pointed out: it develops intellectual and moral initiative, accustoms the students to live in the world, and gives them the prestige of a university education. Its opponents insist: That it is not in harmony with the decree of Trent and the subsequent instructions of the Holy See, urging bishops to establish seminaries; moreover, many would be seen that the diocesan seminaries were replaced by that of a board of all the bishops interested. These views being freely expressed in "The Tablet" (London), Dr. Bourne, the future successor of Cardinal Vaughan at Westminster, then rector of the Southwark Seminary, set forth in the same periphrastic the reasons for divine discipline, i.e., the authority of the Council of Trent and of the provincial councils of Westminster, the possibility of giving in most dioceses the elementary yet solid instruction needed for the ministry, and of sending some of the most gifted students to some foreign Catholic universities where they would receive higher instruction than could be provided in a central seminary in England. Cardinal Vaughan having secured the approbation and encouragement of Leo XIII for his project determined, together with four other bishops, to send his theological students to Oscott, which thus became the diocesan seminary for St. Edmund's College. It was established in 1897 a central seminary for six dioceses. No change, however, was made in the faculty, and the administration continued in the main to be diocesan. Shortly after the cardinal's death, a theological seminary for the Archdiocese of Westminster was opened in connection with St. Edmund's College, Maynooth. (2) Ireland.—Irish colleges on the Continent, which harboured about five hundred students, having been closed by the Revolution, it became necessary to provide in Ireland for the training of the clergy. A college opened at Carlow in 1793 was soon closed through fear of Government prosecution. Re-established later, the college was given over to the Jesuits for training. The foundation of a Catholic college being made legal by an Act of Parliament, Maynooth was opened in 1795 with forty students. It has rapidly developed, especially during the last years of the nineteenth century. The missionary college of All Hallows was founded in 1842, and placed in 1892 under the direction of the Vincentians; it has sent hundreds of priests to Australia, New Zealand, South Africa, and the United States. Besides these and other institutions, most of the dioceses have their preparatory seminaries. There are also some Irish students at Salamanca, and at Rome. The Irish College in Paris has been closed in consequence of the Separation Laws in France. (4) Canada.—The Jesuits established a college at Quebec in 1637. Bishop Laval founded a theological seminary in 1663 and in 1665 a preparatory seminary, in which the students which followed the classes of the Jesuit College. When the latter was suppressed after the English conquest, the preparatory seminary became a mixed college. In 1852 the seminary and college of Quebec were raised to the rank of a university, with the title of Laval in honour of the founder. At Montreal a college was founded by the Sulpicians in 1787, a separate theological department was established in 1840, and the seminary of philosophy in 1847. More recently theological seminaries have been opened at Ottawa by the Oblates and at Halifax by the Eudistes, and one is being erected at Toronto. Until recently, in several dioceses in Canada, candidates for the priesthood received their training not only in regular but in mixed colleges where, after finishing their classical course, they read theology, whilst discharging the duties of prefect or teacher. Upon the advice of the Congregation of the Propaganda, the Provincial Council of Montreal (1895) decreed that ecclesiasties studying for the priesthood can only be prefects and not teachers; it also decreed that before
ordination they must spend three years in a regular seminary.

(5) United States.—In colonial days, Spanish Jesuits and Franciscans laboured in Florida, Louisiana, New Mexico, and California; missionaries from France and Canada were the pioneers in Maine, New York, and the Mississippi Valley; the Maryland missions, under the jurisdiction of the Vicar Apostolic of Loudoun, were in charge of English Jesuits. When John Carroll was appointed Bishop of Baltimore, one of his first cares was to provide the means for the training of a native clergy. In England, where he went to receive episcopal consecration, he obtained from a friend a generous gift for his future seminary, and an offer of an offer of the lease of a house in the name of Father Emery, superior of St-Sulpice, to send some members of his society to establish a seminary at Baltimore. In his first address to his clergy and people on his return to America, Bishop Carroll mentioned among the duties of his pastoral office the institution of a seminary “for training up ministers for the sanctuary and the services of religion that we may no longer depend on foreign and uncertain coadjutors”.

The following year (1791) Father Nagot, with three other Sulpicians and four students, reached Baltimore and opened the first Seminary of the Most Holy Names of Jesus and Mary. The institute stands to-day. In this first American seminary Bishop Carroll ordained, 25 May, 1793, his first priest, Rev. S. Badin, who for over half a century laboured on the missions of Kentucky. The lack of a sufficient number of ecclesiastical students forced the Sulpicians to receive lay students also, even Protestants, so that St. Mary’s became a mixed college and, until the classical department was closed in 1852, had but few seminarians. In order to foster and preserve ecclesiastical vocations, Father Nagot opened (1807) at Pigeon Hill, Pennsylvania, a preparatory seminary which was the following year transferred to Mount St. Mary’s, but this institution soon became (like St. Mary’s at Baltimore), and has remained to this day (1911), a mixed college with a theological seminary, the students of which help in carrying on the work of the collegiate department. A more successful attempt to have a purely preparatory seminary was made by the Sulpicians in the foundation of St. Charles’s College; opened in 1848, it has always been destined exclusively for aspirants to the priesthood.

As new dioceses were created, the first care of the bishops was to provide a clergy. Shortly after their consecration the bishops usually sent circuit priests, while at home they spared no pains to train a native clergy. Bishop Flaget went to Bardstown in 1811 with three students, the nucleus of St. Thomas’s Seminary which for half a century was the nursery of many pioneer priests and bishops of the West. It was closed in 1866. The seminaries were likewise established: by Bishop Englehard at Charleston (1822); Bishop Dubourg at St. Louis (1818); Bishop Fenwick at Cincinnati (1829); Bishop Fenwick at Boston (1829); Bishop Kenrick at Philadelphia (1832); Bishop Dubois at New York (1832); Bishop Blake at New Orleans (1848); Bishop O’Connor at Pittsburgh (1844); Bishop Whelan at Richmond (1842) and Wheeling (1850); Bishop Henni at Milwaukee (1846); Bishop Lefebre at Detroit (1846); Bishop Timon at Buffalo (1847); Bishop Rupp at Cleveland (1849); Bishop Loras at Dubuque (1849). As a rule these seminaries were begun in or near the bishop’s house, and ran under the bishop as the chief instructor. The more advanced students helped to instruct the others, and all took part in the services of the cathedral. Their education, like that given to priests in the Early Church, was individual and practical; their intellectual training may have been somewhat deficient, but their priestly character was moulded by daily intercourse with the self-sacrificing pioneer bishops and priests.

Most of these imperfectly organised seminaries, after doing good service in their day, have long ceased to exist, while a few have been transformed into modern institutions. The diocesan seminary of New York was transferred (1836) from Nyack to Larcheville, in the Thousand Islands, and later on to Fordham (1840). In 1864 a seminary was established in or near the provinces of New York and Boston; the latter established its own seminary in 1884, and in 1897 the New York seminary was transferred to its present location at Dunwoodie. The theological seminary at Philadelphia, which commenced with five students in the upper room of the Philadelphia Hotel, the name of Father Emery, superior of St-Sulpice, to send some members of his society to establish a seminary at Baltimore. In his first address to his clergy and people on his return to America, Bishop Carroll mentioned among the duties of his pastoral office the institution of a seminary “for training up ministers for the sanctuary and the services of religion that we may no longer depend on foreign and uncertain coadjutors”.

The Seminary of St. Francis, Milwaukee, started in 1846 with seven students in a wooden building attached to Bishop Henni’s house, was through the efforts of Dr. Salzmann removed to the present building, which was dedicated in 1856. In San Francisco, after several unsuccessful attempts under Bishop Amat and Archbishop Abenedt, a preparatory seminary was opened by Archbishop Riordan in 1867; to this place was added in 1872 the theological seminary. The St. Paul Seminary, opened by Archbishop Ireland in 1884–86, has done excellent service in educating priests for many of the western dioceses.

Among the leaders in the development of ecclesiastical education in America the late Bishop MacQuaid deserves a prominent place. He was the first president of St. Mary’s College (1858), and later on as Bishop of Rochester he established the preparatory Seminary of St. Andrew, 1871, and the theological Seminary of St. Bernard. The latter, which opened in 1893 with thirty-nine students, numbers now over two hundred from various dioceses. The Josephium, founded at Columbus (1875) and p. 12 the immediate direction of Propaganda (1892), provides a free and complete course for priests destined for the American missions, especially in German-speaking congregations. The Polish college and seminary at Detroit has been established to meet the special needs of Polish Catholics in the United States.

Religious orders had their full share in this growth of seminaries. The Vincentians, who have always considered the training of the clergy as an essential part of their work, opened the seminary at St. Louis (1816) which has been under their care ever since. They also undertook to educate the French Catholics in the United States from 1838 until its suppression. They founded Niagara (1867), which has been raised to the rank of a university and maintains an important theological department. For ten years they were in charge of the seminary at Philadelphia. They have erected the diocesan seminary at Bensalem from the beginning, and they have recently opened a theological seminary at Denver. The Sulpicians, a society of secular priests founded especially for training the clergy, besides their own theological and preparatory seminary in the Archdiocese of Baltimore, also opened and directed for some years the diocesan seminaries of Boston and New York (Dunwoodie). They have also been in charge of the seminary of San Francisco since its inception. The Benedictines, in keeping with the tradition of their early monastic schools, have trained students for the diocesan priesthood along with the members of their order at St. Vincent’s, Pennyslvania (1857), and Belmont, North Carolina (1878). The Franciscans have a theological seminary connected with their college at Allegany, New York (1859). The Oblates have recently (1908) opened a theological seminary at Saint Ambrose, Texas. In their colleges all over the country the Jesuit Fathers have given to
a large proportion of the American priests their classical training; their Holy Cross College at Worcester has been since 1835 a nursery of the New England clergy. For many years, not a few American priests have received their theological training from the Jesuits of Innsbruck. The growth of seminaries in America did not until recently keep pace with the need of priests; many have come from Ireland, Germany, France and other countries of Europe, while American students have sought their education in the famed seminaries of St. Louis in Louvain in 1857 and Rome in 1859, or in other institutions on the Continent. About two thousand American priests, moreover, have been educated in the Sulpician Seminary at Montreal. Of late years the need of preparatory seminaries has been more keenly felt, and an exhortation in an address of Bishop John Kenrick to the members of the Philadelphia Chancery College, 27 March 1885, in the minutes of the Diocesan Board of Education of Philadelphia, and in the Circular of the Diocesan Board of Education of the Diocese of St. Louis, appeal to all the clergy in the dioceses of the United States to aid in establishing a more efficient system of primary seminaries.

Some of these are merely day schools and, whilst having certain advantages, fail to effect the separation of aspirants to the priesthood from the world, as contemplated by the Council of Trent. Since 1890 the annual reports of the seminary department of the Catholic Educational Association have been found in some degree of value in raising the standard of ecclesiastical education. Carefully prepared papers have been read and discussed on the various topics of training, such as entrance requirements, discipline, examinations and the teaching of the various branches of the seminary curriculum: Holy Scripture, dogmatic and moral theology, natural sciences, and social problems.

V. ECCLESIASTICAL LEGISLATION ON SEMINARIES.

A. Sources.—The general laws of the Church on the subject of seminaries are found in the decrees of the Council of Trent, and in various documents issued by the Holy See. At no time has the question of clerical training been of so much attention or brought forth so many decrees as under Leo XIII and Pius X. Some of their acts refer only to Italian seminaries, others to the whole Church. They will, doubtless, be embodied in the Code of Canon Law now in preparation. Meanwhile, the most important issued between 1905 may be found arranged in logical order in M. Bargilla's handy little volume "De Institutione Cleriorum." In Apostolic letters to the bishops of France (22 Jan., 1885), of Bavaria (22 Dec., 1886), of Poland (19 March, 1889), of Brasil (18 Sept., 1890), Leo XIII insists on the right and duty of bishops to establish seminaries where future priests may be trained in science and holiness. The various branches of study in the seminary were the object of specific instructions. Thus he prescribed the study of St. Thomas's philosophy ("Eterni Patris", 4 Aug., 1879), encouraged historical research (18 Aug., 1883), gave directions for Biblical studies ("Providentissimus Deus", 18 Nov., 1893), and instituted a special commission to foster them (90 Oct., 1902). Towards the end of his long pontificate, Jan. 23 (1903), he directed the bishops to the Italian bishops (8 Sept., 1899 and 3 Dec., 1902), in which the training of the clergy is treated at length.

Pius X even more than his predecessor has taken a lively interest in the education of priests. Convinced that the restoration of all things in Christ requires first of all the good training of the clergy, he urged the bishops in his first Encyclical (4 Oct., 1903) to consider the care of their seminaries as their first duty. He himself has brought about various reforms in Italy. Ecclesiastical students in Rome must live in a college, and before ordination undergo examination. As many dioceses in Italy cannot support well-equipped seminaries, the Holy Father has suppressed some and united others. A central seminary has been opened at Capua and placed under the direction of the Jesuits; others have been entrusted to the Vincentians. In order to raise the standard of studies a detailed programme has been issued for all Italian seminaries; it prescribes a course of five years in the seminaries, three years in the collegiate seminary, a year of preparation, and four years of study of theology. To this has been added a set of regulations for the discipline and moral training of the students, in which no detail is omitted (10 May, 1907; 18 Jan., 1908). Other acts of Pius X extend not only to Italian but to all seminaries of students, various branches of studies, etc.; they all tend to protect the faith of the students against Modernistic tendencies and to train a more learned and more pious clergy. On the occasion of the golden jubilee of his priesthood the Holy Father addressed to the clergy of the world (4 Aug., 1906) an exhortation in which he reminded them that the Church has a special care of the formation of the body of Christian priests, to whom it entrusts the sacred mission of the apostles, and instructed them accordingly to provide for the education of the clergy.

Special regulations for the United States were enacted in the second and third Plenary Councils of Baltimore in 1884 and 1894. These leave undetermined many details of seminary discipline, which are left to the discretion of the bishop.

Several methods, all based on the famous "Institutes" of St. Charles and varying only in non-essential points, have been and are still in force. Among the American diocesan regulations are those framed by Bishop John Eudes, Father Olier, and St. Alphonsus. None of these is imposed by the Church or generally adopted in all its details.

B. Foundation of Seminaries.—The decree of the Council of Trent imposes on every bishop the duty of having a seminary, that is, a school exclusively destined to prepare candidates for the priesthood. It should provide a thorough course of ecclesiastical training, and therefore, according to the present discipline, include academic, collegiate, and theological courses. The ideal Tridentine seminary is an institution like Overbrook (Philadelphia) or Menlo Park (San Francisco), where the future priests of the diocese are received from the grammar school and kept until ordination. The Church, however, does not condemn, and Leo XIII has expressly approved the separation of the preparatory from the theological seminary; even in this case, they are not forming but one diocesan institution, under the bishop with the same advisory board. For the foundation and support of the seminary the tax on benefices, authorized by the Council of Trent, is not practicable in America; the bishop has to depend on the generosity of the faithful; he may prescribe an annuité of duties in the parish and have it collected, or fix the amount to be contributed by each parish. Poor dioceses may combine their resources to found an interdiocesan seminary, to be controlled by the several bishops interested.

The controversy on the question of central versus diocesan seminaries has never been raised in this country. It belongs only to the Holy See and to the bishop to decide whether it is practicable for a given diocese to have its separate seminary. In the United States the majority of dioceses are now, and many will long remain, incapable of supporting a seminary. Interdiocesan seminaries, such as the Council of Trent recognizes and such as are now being established in Italy, are practically unknown. In their places there are seminaries such as St. Paul, Rochester, New York, founded and controlled by one bishop, but receiving students from other dioceses; and likewise seminaries in charge of religious orders or societies of secular priests, the students of which belong to various dioceses: such are St. Mary's and Mount St. Mary's, New York City, St. Vincent's (Pittsburgh), Our Lady of Angels (Buffalo), etc. Though such institutions were not contemplated by the Council of Trent, they have the earnest approval of the bishops and of the Holy See.

C. Obligation of Seminary Training.—A student could obtain all the knowledge necessary for a priest by following classes in a college and lectures in a university, without living in the seminary; but since the Council of Trent, the sovereign pontiffs and the bishops have constantly endeavoured to have candidates for the priesthood spend some time in a seminary so as to acquire, along with knowledge, habits of piety and self-discipline, the bishop has felt that the principles of the Tridentine Decrees would be defeated if residence in the seminary were left to the option of the students. It is the desire of the Holy See, based on the Council of Trent and repeatedly expressed, especially by Leo XIII and Pius X, that future priests be trained from early years apart from lay students. The same idea is enforced by the third Plenary Council of Baltimore, when it declares that the custom which obtains in some parts of the country of having aspirants to the priesthood take their classical course in a mixed college is not in perfect harmony with the mind of the Church, and when it urges the foundation of a preparatory seminary in every diocese or at least in every province (nos. 139, 153). Where this decree cannot be carried out, colleges receiving young men who study for the priesthood must strictly observe the regulations prescribed for preparatory seminaries, relating to discipline, religious instruction, and the programme of studies (ibid., no. 153). With still greater insistence does the Church demand residence in a seminary from the students of theology, even if they follow the lectures of a Catholic university. Thus Pius X has ordered all ecclesiastical students in Rome to live in one of the colleges established for them; a similar instruction has been given for the ecclesiastical students at Fribourg. The Council of Baltimore required all aspirants to the priesthood to go through the six years of training prescribed for all American seminaries (no. 155). The bishop can dispense in rare cases, and for grave reasons.

D. External Conduct of Seminarians.—All matters referring to seminaries are under the supreme direction of the Consistorial Congregation in Rome. Diocesan seminaries are controlled by the bishop, who appoints and removes professors, determines in detail the regulations to be followed, and watches over the temporal administration, studies, discipline, and piety. Nothing of importance can be done without his advice and consent; to him belongs the final decision on the admission and dismissal of students, as well as on their call to orders. In provincial or interdiocesan seminaries this power is vested in the board of superintendents or in the presidents of the bishops. For the diocesan seminaries, the bishop is bound by the common law of the Church to seek, though not bound to follow, in matters of temporal administration the advice of a commission composed of two canons of the cathedral (one chosen by himself, the other by the chapter) and of two other priests of the episcopal city, one chosen also by the bishop, the other by the clergy. For spiritual matters the advice of two canons chosen by the bishop is likewise necessary. In the United States the bishop must have in the management of his seminary at least one adviser for spiritual matters, and another for temporal matters; both are chosen by himself with the advice of the diocesan consultants (Council of Baltimore, no. 180).

Although no text of ecclesiastical law forbids the bishop to entrust the direction of the diocesan seminaries to religious orders or congregations, this cannot be done without the approval of the Holy See; for the bishop has no power to give up for himself and his successors the right to appoint the rector and teachers; neither can he set aside the law of the Council of Trent, requiring the advice of consultants in the management of the seminaries, while religious congregations in taking charge of a seminary assume the appointment of the faculty, and in governing it do not admit the interference of a diocesan commission. Several religious orders or societies, however (Eudists, Lazarists, Marists, Oratorians, Sulpicians), have a general permission from the Holy See to accept the seminaries entrusted to them. A contract between the bishop and the society determines the conditions under which the seminary is accepted and must be governed (Council of Baltimore, no. 180).

E. Internal Administration of Seminaries.—Two systems prevail. In one the management of the seminary is in the hands of the rector, who alone under the bishop governs the seminary, calls to orders, admits and dismisses the students; a treasurer has full charge of temporal matters, while to a spiritual director is entrusted the formation of the students in piety. The professors are merely teachers.

In the other system, all the professors have a share in the administration of the seminary; and all important matters are decided by a vote of the faculty. The professors are spiritual directors and confessors of the students. Of course, they have no voice in the faculty meetings when questions concerning their penitents are concerned. A Decree of the Holy Office (5 July, 1899) forbids superiors of seminaries and colleges in Rome to hear the confessions of their students. With the special organization of those colleges, such a practice could easily interfere with the liberty which the Church assures to all in the sacred tribunal. Although this decree has not been officially extended beyond those colleges, its spirit should be observed in others similarly organized.

F. Admission and Dismissal of Students.—"Let those be received," says the Council of Trent, "who having been born for diocesan seminaries, the least attained their twelfth year, are able to read and write passably, and whose naturally good disposition gives token that they will always continue in the service of the Church." It is the wish of the council that the children of the poor should be preferred. To-day an ordinary grammar school instruction is required for admission into the preparatory seminaries. As
regards vocation, all that can be expected is not indeed certainty, but probability. Still, preparatory seminaries must be maintained on their proper lines, and receive only candidates for the priesthood. Parents and parish priests are urged to encourage and to help boys who by their intelligence and piety give hope that they are called to the priesthood (Council of Baltimore, no. 136). No one should be admitted to a theological seminary unless he has completed six years of college, and passed a successful examination (ibid., nos. 145, 152). A student from another diocese cannot be received without first obtaining information from his bishop. If it appears that he was dismissed from the seminary (as unfit for the priesthood) he should not be admitted at all (Congregatio de Pontificiis, Decretum, 1877, c. 1. 3). Dismissing a student from the seminary means no more than that the student is not considered fit for the priesthood; it does not necessarily reflect on his character as a Christian layman.

G. Intellectual Training.—In the preparatory seminaries the aspirant to the priesthood follows the ordinary academic and collegiate course for six years; he studies Christian doctrine, Latin and Greek, English and at least one other modern language, rhetoric and eloquence, history and geography, mathematics and natural sciences, Gregorian Chant and book-keeping (Council of Baltimore, nos. 145, 146). The course is divided into a course of six years, four years academic and four years collegiate, teach philosophy and science in the junior and senior years; but as a rule this is not accepted by seminaries as the equivalent of two years of philosophy. The Council of Baltimore requires ecclesiastical students to spend six years in the theological seminaries. There they receive a special moral training which cannot be given in a mixed college, and they are taught philosophy with a view to the study of theology. In the theological seminary two years are devoted to the study of philosophy, Scripture, Church history, and natural sciences in their relation to religion. During the last four years the course of study includes Holy Scripture, with Greek and Hebrew, apologetics, dogmatic, moral, and pastoral theology, Church history, and, in some institutions, liturgy and canon law. The courses given in these various branches have a twofold purpose: to equip the student with the knowledge necessary for the discharge of the ordinary functions of the ministry; and to give brighter students the foundation of more scientific work, to be pursued in a university. The seminary trains general practitioners, the university forms specialists; the seminary gives the elements of all the sciences (ibid., 1892, c. 1. 3). Dismiss a student from the seminary means no more than that the student is not considered fit for the priesthood; it does not necessarily reflect on his character as a Christian layman.

Seminary training is by training seminarians in Christian virtue is the seminary discipline. The student is separated from the world and subjected to a rule of life which, leaving nothing to caprice, determines what he has to do at every moment of the day. Classes, studies, exercises, classes of piety follow one another at regular intervals, and punctual attendance is expected of all. Fidelity to seminary rules, extending over several years, prompted by a sense of duty, and inspired by the love of God, cannot fail to produce habits of regularity, self-control, and self-sacrifice.

Instructions on Christian perfection, on the dignity and duties of the priesthood are daily given in spiritual conferences and readings. These are supplemented by retreats, taken at least once a year, before ordinations, and by private consultations of each student with his spiritual director. Even more efficacious than instruction and discipline is the direct intercourse of the soul with God in prayer, meditation, and the reception of the sacraments. Nowhere, perhaps, has the Decree of Pius X on the frequent communion produced more abundant fruit than in seminaries. The students gladly avail themselves of the special encouragement given to them to receive Our Lord daily. By this close communion with our great High Priest, even more than by their willing acceptance of all the restraints of seminary life, they gradually become what they are called upon them by ordination. Thus the seminary becomes a nursery of faithful representatives of Our Lord for the salvation of men; they go forth, the light of the world and the salt of the earth.

History fully bears out the words of the learned historian and great bishop, Hefele: “If the Catholic world has had for the last three hundred years a more learned, a more moral, a more pious clergy than that which existed in almost every country at the time of the so-called Reformation, and whose tepidity and faithlessness contributed largely to the growth of the schism, it is wholly due to the decree of the Council of Trent, and to it we in this age owe our thanks” (“Tübingen Quartalschrift”, no. 1, p. 24).

A. VIÉRAN.

Semipelagianism, a doctrine of grace advocated by monks of Southern Gaul at and around Marseilles after 428. It aimed at a compromise between the two extremes of Pelagianism and Augustinianism, and was condemned as heresy at the Ecumenical Council of 428, which was to meet in 429, and he and his disciples, remaining over more than a hundred years. The name Semipelagian- ism was unknown both in Christian antiquity and throughout the Middle Ages; during these periods it was customary to designate the views of the Massi- lians simply as the "religion of the Pelagians" (re- ligion des Pelagistes), or else as the "religion of St. Augustine and Dulcius." The latter term is used in St. Augustine (Ep. cxxv, n. 7, in P. L., XXXII, 1066). The most recent investigations show that the word was coined between 1590 and 1600 in connexion with Molina's doctrine of grace, in which the oppo- nents of this theologian believed they saw a close resemblance to the heresy of the monks of Marseilles (cf. "Révue des sciences philos. et thés.," 1907, pp. 506 sqq.). After this confusion had been exposed as an error, the term Semipelagianism was retained in learned circles as an apt designation for the early heresy only.

I. HISTORY OF SEMIPELAGIANISM (A.D. 420-30).—In opposition to Pelagianism, it was maintained at the General Council of Carthage in 418 as a principle of faith that Christian grace is absolutely necessary for the correct knowledge and performance of good, and that perfect sinlessness is impossible on earth even for the justified. Since the clarification and refutation of St. Augustine's doctrine of grace, the anti-Pelagians could without reproof continue their opposition to other points in the teaching of the African Doctor. This opposition Augustine was soon to encounter in his immediate neighbourhood. In 420 he found himself compelled to direct to a certain Vitalis of Carthage, who was an opponent of Pelagius and recognised the Synod of Carthage (418), paternal instructions concerning the necessity of grace at the very beginning of the assent of the will in faith and concerning the absolute gratuity of grace (Ep. cxxvii in P. L., XXXIII, 978 sqq.). As is clear from the tenor of this writing, Vitalis was of the opinion that the beginning of faith springs from the free will of nature, and that the essence of "preventive good" is the freely an- nouncing of the Christian doctrine of salvation. On the basis of such faith man, as Vitalis held, attains justification before God. This view was entirely "Semipelagian." To controvert it, Augustine pointed out that the grace preceding faith must be an interior illumination and strengthening, so that the preaching of the Word of God could not, unassisted, accomplish this; consequently the implanting of grace in the soul by God is necessary as a preliminary condition for the production of real faith, since other- wise the customary prayer of the Church for the grace of conversion for unbelievers would be super- fluous. Augustine also introduces his view of an absolute predestination of the elect—without however especially emphasizing it, by remarking: "Cum tam multi salvi non fiant, non quia ipsi, sed quia Deus non vult" (Since so many are not saved, not because the themselves do not will it, but because God does not will it). Vitalis was induced to have repented and to have disclaimed the "error of Pelagius".

The dispute, which broke out within the walls of the African monastery of Hadrumetum in 424, was not so easily settled. A monk named Florus, a friend of St. Augustine, had while on a journey sent to his fellow-monks a copy of the long epistle which Augustine had addressed in 418 to the Roman priest, afterwards Pope Sixtus III (Ep. cxxxv in P. L., XXXII, 874 sqq.). In this epistle all merit before the reception of grace was denied, faith represented as the most gratuitous gift of God, and absolute election to grace was not suppressed. The manuscript was to great angry by this letter, "more than five monks" inflamed their companions to such an extent that the tumult seemed destined to overwhelm the good abbot, Valentinus. On his return, Florus was loaded with the most violent reproaches for sending such a pro- vision, and the majority, who were followers of Augustinian, were accused of maintaining that free will was no longer of any account, that on the last day all would not be judged according to their works, and that monastic discipline and correction (correc- tio) were valueless. Informed of the outbreak of novices and an unresistible movement for the rejection of the order of Felix, Augustine sent the monk to the monastery in 426 or 427 the work, "De gratia et libero arbitrio" (P. L., XIV, 861 sqq.), in which he maintains that the efficacy of Divine grace impairs neither the freedom of the human will nor the meritoriousness of good works, but that it is grace which causes the merit in us. The work exercised a calming influence on the heated spirits of Hadrumetum.

Apprised of the good effect of this book by Florus himself, Augustine dedicated to the abbot and his monks a second doctrinal writing, "De correctione et gratia" (P. L., XIV, 815 sqq.), in which he explains in the clearest fashion his views upon grace. He informed the monks that correction is by no means superfluous, since it is the means by which God works. As for the freedom to sin, it is in reality not freedom, but slavery of the will. "True freedom of the will is that exercised by grace," marks Augustine, "not from the slavery of sin. Final perseverance is likewise a gift of grace, inasmuch as he to whom God has granted it will infallibly persevere. Thus, the number of those predestined to heaven from eternity is so determined and certain, that "no one is added or subtracted." This second work seems to have been also received approvingly by the meditated monks; not so by subsequent ages, since this ominous book,
together with other utterances, has given occasion to the most violent controversies concerning the efficacy of grace and predestination. All advocates of heretical predestinarianism, from Lucidus and Gotteshalk to Calvin, have appealed to Augustine as their master-partisan who, as we see in Augustine's teaching at most only a predesti-
lation to glory, with which the later "negative repro-
bation" to hell is parallel. Augustine is entirely free from Calvin's idea that God positively prede-
tined the damned to hell or to sin. Many historians of dogma (Harnack, Loofs, Rottmann, etc.) have passed over what is called "the different emphasis on the work, maintaining that the Doctor of Hippo, his rigorism in his age, has here expressed more clearly the notion of "irresistible grace" (gratia irresistible), on which Jansenism later erected, as is known, its entire heretical system of grace. As the clearest and strongest proof of this contention, the following passage (De correptione et gratia, xxxviiii) is cited:"Subventum est igitur infinitati voluntas-
tias humanae, ut divina gratia indeclinabiler et in-
superabiler ageretur et ideo, quamvis infima, non tamen deforect neque adversatiae aliqua vincentur. It is generally assumed that the "irresistible grace" is a special feature of the "Jansenian grace" (or Jansenism)? The mere analysis of the text informs us better. The antithesis and the position of the words do not allow us to refer the terms "inevitabile et uncoquerabile" to the grace as such, they must be referred to the "human will" which, in spite of its infirmity, is by grace, made "unyield-
ing and uncoquerable" against the temptation to sin. Again the very easily misunderstood term ageretur is not to be explained as "coercion against one's will" but as "infallible guidance", which does not exclude the continuation of freedom of will (cf. Maubach, "Die Ethik des hl. Augustinus", II, Frei-
berg, 1906, p. 35).

The monks of Southern Gaul, who dwelt in peace at Marseilles and on the neighbouring island of Lérinum (Lérins), read the above-cited and other passages of Augustine with other and more critical eyes than the monks at Hadrumentum. Abbot John Cassian of the monastery of St. Victor at Marseilles, a celebrated and holy man, was, together with his fellow-monks, especially repelled by the arguments of St. Augustine. The Massilians, as they were called, were known throughout the Christian world as holy and virtuous men, conspicuous for their love for asceticism. They had heartily ac-
quised in the condemnation of Pelagianism by the Synod of Carthage (418) and the "Tractatio" of Pope Zosimus (418), and also in the doctrines of original sin and grace. They were, however, convinced that Augustine in his teaching concerning the necessity and gratuitousness of divine grace (gratia procedens seu proveniens) far overshoot the mark. Cassian had a little earlier expressed his views con-
cerning the relation of grace and freedom in his "Con-
ferences" (Collatio xcv in P. L., XLIX, 477 sqq.). As a man of Eastern training and a trusted disciple of Cyril of Alexandria, he had taught that the free will was to be accorded somewhat more initiative than he was accustomed to find in the writings of Augustine. With unmistakable reference to Hippo, he had endeavoured in his thirteenth conference to demonstrate from Biblical examples that God fre-
ces the good impulses, the "light" of the will, before coming to its assistance with His supernatural grace; while the grace often preceded the will, as in the case of Matthew and Peter, on the other hand the will frequently preceded the grace, as in the case of Zacchaeus and the Good Thief on the cross. This was also recognized in better Augustine: it was really the will "Pelagianism" To such a man and his adherents, among whom the monk Hilarus (already appointed Bishop of Arles in 428) was conspicuous, the last writings from Africa must have appeared a masked reproof and a downright contradiction.

Thus, from being half friendly, the Massilians developed into determined opponents of Augustine. Testimony as to this change of feeling is supplied by two non-partisan laymen Prosper of Aquitaine and a certain Hilarus, both of whom in their enthusiasm for the newly-blossoming monastic life voluntarily shared in the daily duties of the monks. In two dis-
tinct writings (St. Augustine, Epp. cxxvii-xxvii in P. L., XXXIII, 1002-12) they gave Augustine a master-of-fact report of the theological views of the Massilians. They make no pressure on the work, the following picture, which we complete from other sources: (1) In distinguishing between the beginning of faith (initium fides) and the increase of faith (aumentum fides), one may refer the former to the power of the free will, while the faith itself and its increase is absolutely dependent upon God; (2) the gratuity of grace is to be maintained against Pelagius in so far as every strictly natural merit is excluded; this, however, does not prevent nature and its works from having a certain claim to grace; (3) as regards final perseverance in particular, it must not be re-
garded as inevitable, as a special "gracious grace" of man may of his own strength persevere to the end; (4) the granting or withholding of baptismal grace in the case of children depends on the Divine pre-
sence of their future conditioned merits or merits.

This fourth statement, which is of a highly absurd nature, has never been condemned as heresy; the three other propositions contain the whole essence of Semipelagianism.

The aged Augustine gathered all his remaining strength to prevent the revival of Pelagianism which had then been hardly overcome. He addressed (420 or 423) to Prosper and Hilarus the two works "De predestinationibus sanctorum" (P. L., XLIV, 959 sqq.) and "De dono perseverantiae" (P. L., XLIV, 993 sqq.). In refuting their errors, Augustine treats his opponents as erring friends, not as heretics, and humbly adds that, before his episcopal consecration (about 398), he himself had been caught in a "simi-
lar error", until a passage in the writings of St. Paul (I Cor. iv, 7) had opened his eyes, "thinking that the faith, by which we believe in God, is not the gift of God, but is in us of ourselves, and that through it we obtain the gifts whereby we may live temperately, moderately, and seriously for the common sanct., iii, 7). The Massilians, however, remained un-
appeased, the last writings of Augustine making no impression upon them. Offended at this obstinacy, Prosper believed the time had arrived for public polemics. He first described the new state of the question in a letter to a certain Rufinus (Prosper Aquit. , "Ep. ad Rufinum de gratia et libero arbitrio", in P. L., XLI, 77 sqq.), lashed in a poem of some thousand hexameters (Ipsi ѧϰρατος, "hoe est de ingratis", in P. L., LI, 91 sqq.) the ingratitude of the "enemies of grace", and directed against an "uninformed" and "instructed" himself—his "Epigranumata in oblectatores Augustini" (P. L., XLI, 149 sqq.), written in elegiacs. At the time of the composition of this poem (420-30), Augustine was still alive.

II. THE CULMINATION OF SEMIPELAGIANISM (430-510).—On 20 Aug., 430, while the Vandals were besieging the capital city, St. Augustine died. As his sole champions, he left his disciples, Prosper and Hilarus, on the scene of conflict in Southern Gaul. Prosper, rightly known as his "best disciple", alone engaged in writing, and, immersed as he was in the rich and almost inexhaustible mind of the greatest of all, he often devoted the utmost pains to soften down with noble tact the roughness and abruptness of many of his master's propositions. Filled with the con-
viction that they could not successfully engage such learned and respected opponents, Prosper and Hilary journeyed to Rome about 431 to urge Pope Celestine I to take official steps against the Semi Pelagians. Without issuing any definitive decision, the pope contented himself with an exhortation to the bishops of the East (P.L., L, 529 sqq.), and passed on the memorable controversy with Augustine from calumny and imposing silence on the innovators. On his return Prosper could claim henceforth to be engaging in the conflict "in virtue of the authority of the Apostolic See" (cf. P. L., LI, 178: "ex auctoritate apostolice sedis"). Hilary, however, more to a mere admissio an erroris adhaerenti- tion he fought on his behalf. Thus, about 431-32, he repelled the "calumniis of the Gauls" against Augustine in his "Responsiones ad capitula objectionum Gallorum" (P. L., LI, 155 sqq.), defended temperately in his "Responsiones ad capitula objectionum Vincentianarum" (P. L., LI, 177 sqq.), the Augustinian teaching concerning predestination, and finally, in his "Responsiones ad excerpta Genu- sium" (P. L., LI, 187 sqq.), explained the sense of excerpts which two priests of Genoa had collected from the writings of Augustine concerning predestination, and which Prosper had interpreted. About 433 (434) he even ventured to attack Cassian himself, the soul and head of the whole movement, in his book, "De gratia et libero arbitrio contra Collatorem" (P. L., LI, 213 sqq.). The already delicate situation was thereby embittered, notwithstanding a friendly concluding sentences of the work. Of Hilary, Prosper’s friend, we hear nothing more. Prosper himself must have regarded the fight as hopeless for the time being, since in 434—according to Loofs; other historians give the year 440—he shook the dust of Gaul from his feet and left the land to its fate. Settling at Rome in the papal chancery, he made no further attack on Pelagianism, but was engaged in controversy, although even here he never wearied of propagating Augustine’s doctrine concerning grace, publishing several treatises to spread and defend it. The Massilians now took the field, confident of victory. One of their greatest leaders, the celebrated Vincent of Lerins, under the pseudonym of Peregrinus made in 434 concealed attacks on Augustine in his classical and otherwise excellent work, "Commencitorium pro catholicae fidei veritate" (P. L., L, 637 sqq.) and in individual passages frankly espoused Semi Pelagianism. This booklet should probably be regarded simply as a "polemical treatise against Augustine".

That Semi Pelagianism remained the prevailing tendency in Gaul during the following period, is proved by Arnobius the Younger, so called in contrast to Arnobius the Elder of Sicca (about 303). A Gaul by birth, and alighted in exaggis, Arnobius wrote about 460 extensive explanations of the Psalm ("Commentarii in Psalmos" in P. L., LIII, 327 sqq.) with a tendency towards allegorizing and open titles at Augustine’s doctrine of grace. Of his personal life nothing is known to us. Certain works from other pen have been wrongly ascribed to him. Thus, the collection of scholia ("Aliae etiam ad res ad quae voluntas simulacra" in P. L., LIII, 569 sqq.), formerly attributed to him, must be referred to the pre-Constantine period, as B. Grundl has recently proved (cf. Thi. Quartalschr. 1897, 555 sqq.). Likewise, the work "Condictus Arnobii episcopi Egiptini" (P. L., LIII, 239 sqq.) cannot have been written by our Arnobius, inasmuch as it is entirely Augustinian in spirit. When Bäumer wished to assign the authorship to Faustus of Ries ("Katholik" II, Mains, 1857, pp. 398 sqq.), he overlooked the fact that Faustus adopts this distinctive Augustinian viewpoint. Still, that, in any case, so dilettante a writing as the above could not be ascribed to the learned Bishop of Ries.

The true author is to be sought in Italy, not in Gaul. His chief object is to prove against Monophysitism, in the form of a disputation, the agreement in faith between Rome and the Greek champions of Orthodoxy, with Athanasius and Cyril of Alexandria. Naturally Arnobius overcomes the Egyptian Semi Pelagianism in order to present the "Catholic Arnobius" as an obscure monk living in Rome. Until recent times the authorship of the work called the "Liber predestinatus" was also commonly ascribed to our Arnobius. The sub-title reads: "Predestinaturorum heres et belli Augustini" (P. L., LIII, 687 sqq.). Dating from the fifth century and divided into three parts, this work, which was first published by J. Simond in 1643, attempts under the mask of ecclesiastical authority to refute Augustine’s doctrine of grace together with the heretical Predestinarianism of pseudo-Augustine. As the third part is not merely Semi Pelagianism but undisguised Pelagianism, von Schubert has of late rightly concluded ("Der sog. Predestinatus, ein Beitrag zur Gesch. des Pel- agianismus", Leipzig, 1903) that the author wrote about 440 in Italy, perhaps at Rome itself, and was one of the associates of Eucherius of Emesia (for further particulars see PREDESTINARIANISM).

The most important representative of Semi Pelagianism after Cassian was undoubtedly the celebrated Bishop Faustus of Ries. When the Gallic priest Lucidus had drawn on himself, on account of his heretical predestinationism, the condemnation of two synods (Aries, 473; Lyons, 474), Faustus was commissioned by the assembled bishops to write a scientific refutation of the condemned heresy; hence his work, "De gratia libri II" (P. L., LVIII, 783 sqq.). Agreeing neither with the "pistifer doctor Pelagius" nor with the "error predestinazioni" of St. Augustinus, he resolved directly on the line of John Cassian. Like him, he denied the necessity of prevenient grace at the beginning of justification, and compares the will to a "small hook" (quedam voluntatis anula) which reaches out and seizes grace. Of predestination to heaven and final perseverance as a "special grace" (gratia specialis, personalis), he will not hear. That he sincerely believed that by these propositions he was condemning not a dogma of the Church, but the false private views of St. Augustine, is as certain in his case as in that of his predecessors Cassian and Hilary of Arles (see above). Consequently, their objectively excusable action has not prevented France from honouring these three men as saints even to this day. The later Massilians were as little conscious as the earlier that they had strayed from the straight line of orthodoxy, and the infallible authority of the Church had not yet given a decision.

One should, however, speak only of a predominance, and not of a supremacy, of Semi Pelagianism at this period. In proof of this statement we may cite two anonymous writings, which appeared most probably in Gaul itself. About 430 an unknown author recognized by Pope Gelasius as "probus ecclesiastic magister", composed the epoch-making work, "De vocatione omnium gentium" (P. L., LI, 647 sqq.). It is an honest and skilful attempt to soften down the contradictions and to facilitate the passage from Semi Pelagianism to a moderate Augustinianism. To harmonize the doctrine of redemption with restricted predestination, the anonymous author distinguishes between the general provision of grace (benignitas generalis) which excludes no one, and the special care of God (gratia specialis), which is given only to the elect. As suggestions for the text, he adds that 'nh in the Augustinian sense, we may say that this work stands on Augustinian ground (cf. Loofs, "Dogmengesch.", 4th
ed., Leipzig, 1906, p. 391). Another anonymous writing dating from the middle of the fifth century, recently discovered in the possession of the Beato Augustine, and by the Academy of Vienna, bears the title: "Hypomnesticon contra Pelagianos et Caelestianos" (Corpus scriptor. ecclesiast. latin., X, 1611 sqq.). It contains a refutation of Semipelagianism, as it condemns the foundation of predestination on the "faith foreseen" by grace which has been nullified. But it also sharply denounces the iniquity of grace and predestination to hell. As the ground for eternal damnation the Divine foresight of sin is given, although the author cannot help seeing that eternal punishment as the consequence of sin is settled from all eternity. A third work deserves special attention, inasmuch as it reflects the views of Rome towards the end of the fifth century; it is entitled: "Indiculus seu præsteriorum Sedis Apostolice episcoporum auctoritatis" (in Denzinger-Bennwalt, "Enchiridion", Freiburg, 1908, nn. 129-42), and emphasizes in twelve chapters the powerlessness of man to raise himself, the absolute necessity of grace for all salutary works, and the special grace-character of final perseverance. The "deeper and more difficult questions" concerning grace, as they emerged in the course of the discussion, were passed over as superfluous. The Augustinian standpoint of the compiler is as unmistakable as that of the Semipelagian tendency of the whole work. Regarded in earlier times and to some extent even to-day as a papal instruction sent by Celestine I to the bishops of Gaul together with the document mentioned above, this appendix, or "indiculus", is now considered unauthentic and its origin referred to the end of the fifth century. It is certain that about A.D. 510 this work was recognized as of the official expression of the views of the Apostolic See.

III. Decline and End of Semipelagianism (519-30).

—Not at Rome or in Gaul, but after a roundabout passage through Constantinople, the Semipelagian strife was to break out with new violence. It happened in this wise: In 519, Scythian monks under Johannes Maxentius who was versed in Latin literature, appeared at Constantinople with the intention of having inserted in the symbol of the Council of Chalcedon (451) the Christological formula, "Unus de a. Trinitate in carne crucifixo est", in view of the Tropaeum (496), which, as the next clause the fanatical monks saw the "standard of orthodoxy", and regarded the solemn reception of the same into the symbol as the most efficacious means of overthrowing Monophysitism. With their untimely proposition they imported even the papal legate, who were entrusted with the negotiations for the re-establishment of official relations between Rome and Byzantium. When Bishop Possessor from Africa approached the hesitating legates with quotations from the works of the recently-deceased Faustus of Riez, Maxentius did not hesitate to denounce Possessor and his abettors curtly as "inimici Pelagianorum" and "aphelii Maxentii", "Ep. ad legatos" in P. G., LXXVI, 85). Thus the question of the orthodoxy of Faustus suddenly arose, and simultaneously that of Semipelagianism in general; henceforth, the conflict never abated until its final settlement. As no decision could be reached without a concurrence of Rome, Maxentius started for Rome in June, 519, with several fellow-monks to lay their petition before Pope Hormisdas. During their fourteen months' residence at Rome they left no means untried to induce the pope to recognize the Christological formula and to condemn Faustus. Hormisdas, however, refused to yield to either request. In the end, to Bishop Possessor of 20 Aug., 520, he complains bitterly of the tactless and fanatical conduct of the Scythian monks at Rome (cf. A. Thiel, "Epistola Romana. Pontif. genuine", I, Brunsberg, 1888, 929). As for Faustus, Hormisdas declares in the same letter that his works certainly contain much that is debatable and even heretical, but he is also included among the recognized writings of the Fathers. The sound doctrine on grace and freedom could be taken from the writings of St. Augustine.

This evasive answer of the pope, showing no inclination to meet their wishes, was far from pleasing these Semipelagians, who proceeded. But it also alarmed the Church, and the following year for support Maxentius formed a league of the African bishops, who, in consequence of the Vandal persecution of the Catholics under King Thrasamund (496-523), were living in exile on the Island of Sardinia. Fulgentius of Ruspe, the most learned of the exiles, inquired into the matter on behalf of his fellow-bishops. In a long epistle (Fulgentius, Ep. xvii, "De incarnatione et gratia", in P. L., LXV, 451 sqq.), he justified the Scythian monks by approving the orthodoxy of the Christological formula and the condemnation of Faustus of Riez. Unfortunately his polemical work in seven books against Faustus is lost, but in his numerous writings, which he composed partly during his exile in Sardinia and partly after his return to Africa, there breathes a spirit so truly Augustinian that he has been rightly called the "epitomizer of Augustine". The blow dealt to Faustus had its effect both in Gaul and at Rome. Notwithstanding a passage of Lérimus, subscribed to the Augustinian doctrine of grace, and his views were shared by many of the Gallic episcopate. Other bishops were indeed still inclined towards Semipelagianism. At a Synod of Valence (528 or 529) Cesarius was attacked on account of his teaching, but was able to reply effectively. Having been assured of the deaconry and even of a seat in the Apostolic See, he summoned 3 July, 529, the sharers of his views to the Second Synod of Orange, which condemned Semipelagianism as heresy. In twenty-five canons the entire powerlessness of nature for good, the absolute necessity of prevenient grace for salutary acts, especially for the beginning of faith, the absolute gratuity of the first grace and of final perseverance, were defined, while in the epilogue the predestination of the will to evil was branded as heresy (cf. Denzinger-Bennwalt, nn. 174-200). As Pope Boniface II solemnly ratified the decrees of Orange, the heresy was thus raged and the see of Orange was raised to the rank of an ecumenical council. It was the final triumph of the dead Augustus, the "Doctor of Grace".

Semites.—The term Semites is applied to a group of peoples closely related in language, whose habitat is in Asia and partly Africa. The expression is derived from the Biblical table of nations (Gen., x), in which most of these peoples are recorded as descendants of Ham's sons. Jacob's wife Sarah's name was proposed at first for the languages related to the Hebrew by Ludwig Schöbler, in Eichhorn's "Repertorium", vol. VIII (Leipzig, 1781), p. 161. Through Eichborn the name then came into general usage (cf. his "Einleitung in
Semites

das Alte Testament" (Leipzig, 1878), p. 45, in his "Gesch. der neuen Sprachenkunde," pt. I (Göttingen, 1875), p. 221. He fixed the term. Since then the name has been generally adopted, except that modern science uses it in a somewhat wider sense to include all those peoples who are either demonstrably of Semitic origin, or who appear in history as completely Semitised.

Classified in history as all Western Asia (east Asia Minor, was Semitic. From the philological point of view the Semitic peoples are divided into four chief groups: Babylonian-Assyrian Semites (East Semites), Chanaanic Semites (West Semites), Aramaic Semites (North Semites), and Arabian Semites (South Semites). The last-named groups are divided into North and South Arabsians, of which last the Abyssinians are a branch. The first three groups are usually termed North Semites, in contrast to the Arabian group, or South Semites. But the classification of the Babylonian with the Aramaic and Chanaanic Semites is not permissible from the philological point of view.

Territory.—The great mountain-chains which begin at the Syro-Cilician boundary, and then curving towards the south-west extend to the Persian Gulf, separate on the north and east the territory of the Semites from that of the other peoples of Western Asia, including the Arabian peninsula and the civilized countries extending to the east and west and the Arabian Peninsula which joins it on the south. The lowlands to the east are formed by the Euphrates and the Tigris, and include the homes of two very ancient civilizations, in the north the rapidly undulating Mesopotamia, in the south the low Babylonian plain; the land extending to the west from the lower Euphrates is called Chaldea. These are the territories of the East Semitic tribes and states. On the west lies Northern Syria, then the Lebanon Mountains with the intervening Celo-Syria, the oasis of Damascus, the seat of an ancient culture, the Hauran, and in the midst of the desert the oasis of Palmyra (Tadmor). These territories were at a later period occupied principally by Aramaic tribes. The territory on the coast extending westwards from Lebanon and Palestine, which joins it on the south, are the principal states of the Chanaanic Semites. The mountainous countries extending to the west of the Arabian Semites, belong to Arabia proper, the territory of the South Semites.

Original Home.—The tribes which inhabited these territories, and to some extent still inhabit them, show in language, traits, and character a sharply characterized individuality which separates them distinctly from other peoples. Their languages are closely related to one another, not being almost independent branches of language, like the great groups of Indo-Germanic languages, but rather dialects of a single linguistic group. Physically also, the Semitic type is a uniform one. In its purest form it is found in the Hebrew. Also the phonetics and partly also the grammatical structure of the Semitic language, are most purely, as the vocabulary is most completely, preserved. From these as well as from other circum-stances the conclusion has been drawn that Asia should be considered the original home of the Semitic peoples, but the answer to this has been given by the Semitic peoples, which became so numerous in ancient Eastern Asia, that they were a race of nomads in a state of transition to settled life, whose invasions were directed against the East as well as the West. About this time there con-
stantly appear in Babylonia the names of gods, rulers, and other persons of a distinctly Chanaanic character. To these belong the so-called first Babylonian dynasty, the most celebrated representative of which is Hammurabi. Its rule probably denotes the high tide of that new invasion of Babylonia, which also strongly influenced Assyria. In time the new stratum was absorbed by the existing population, and thereby became a part of Babylonian Semitism. Through the same invasion the civilized territory of the West received a new population, and even Egypt was affected. For the Hyksos (seaward kings), who claim as their only the last offshoot of that Chanaanic invasion, and in their rulers we see a similar phenomenon as that of the Chanaanic dynasty of Babylonia. As regards the Semites in Chanaan itself, the earliest wave of the invasion, which in consequence of subsequent pressure was ultimately pushed forward to the coast, is known to us under the name of the Phenicians. A picture of the conditions of the races and principalities of Palestine in the fifteenth century B.C. is given in the Tel-el-Amarna letters. In them we find a series of Chanaanic glosses, which show that even at that time the most important of those Semitic principalities had been developed, which gave their distinctive character to the best known Chanaanic dialects, the Phenician and the Hebrew. Further examples of Chanaanic language of the second millennium, especially as regards the vocabulary, are the Semitic glosses in the Egyptian. To the Chanaanic races which lived in Palestine belong also the Hebrew immigrants under Abraham, from whom again the Moabites and Ammonites separated. A people closely related to the Hebrews were also the Edomites in the Seir mountains, who later appear under the name of Edomeseans in Southern Judea. These inhabitants had before them been settled by the Horites, who were partly expelled, partly absorbed by the Edomites. A last wave of the immigration into Chanaan are the Israelites, descendants of the Hebrews, who after centuries of residence in Egypt and after forty years of nomadic life in the desert, returned to the land of their fathers, of which they took possession after long and weary struggles. That the influence of Chanaanic Semitism extended far into the North is proved by the two Zendiairi inscriptions: the so-called Hadad inscription of the ninth century, and the Panamimu inscription of the eighth century, the language of which shows a Chanaanic character with Aramaic elements. On the other hand, the so-called building inscription of Bir-Rok b, dating from the last third of the eighth century, is purely Aramaic—a proof that the Aramaization of Northern Syria was in full progress.

Aramaic Semites. These represent a third wave of Semitic immigration. In cuneiform inscriptions dating from the beginning of the fourteenth century B.C. they are mentioned as Ahlamti. Their expansion probably took place within the fifteenth and fourteenth centuries B.C. from the plain between the mouth of the Euphrates and the mountains of Edom. As Ammon and Moab, under the reign of Solomon (1030 B.C.) the Edomites were pressed far into Mesopotamia and became a public scourge, in consequence of which the stream of immigration could not longer be restrained. During the new expansion of Assyrian power under Tiglath-Pileser I (1118-1093 B.C.) this reports enumerate victories over the Aramaeans. Their further advance into the territory of the Euphrates was checked by the Euphrates, which placed about 1100-1000 B.C. By the ninth century all Syria was Aramaicized; many small states were formed, principally successors of the Hittite Kingdom. The most important Aramean principality was that of Damascus, which was destroyed by Tiglath-Pileser of 733. In like manner Assyria states succumbed. A new rebellion was suppressed by Sargon, and with this the rule of the Arameans in Syria ended. In the meanwhile, the Aramean element in Mesopotamia was constantly growing stronger. At the beginning of the ninth century we hear of a number of small Aramean states or Bedouin territory. They were subdued under Assurnasirpal (Assur-nasir-pal III) (884-860), and the independence of their princes was destroyed by his successor Salmanasar (Shalmanezer) II. Nevertheless, the immigration continued. In the struggles of Assyria the Arameans of Mesopotamia always made common cause with their enemies, and even under Assurbanipal they were prominent. From this time we hear nothing more of them. They were probably absorbed by the remaining population. Their language alone, which the Arameans in consequence of their numerical superiority forced upon these countries, survived in the sphere of the North Semitic civilization, and was not obliterated until the Islam's conquest. The potent Arabic displaced the Aramaic dialects with the exception of a few remnants. Since the second half of the eighth century the use of Aramaic as a language of intercourse can be proved in Assyria, and about the same time it certainly prevailed in Babylonia among the commercial classes of the city. In the West also their language extended in a southerly direction as far as North Africa. For Aramaic had become the general language of commerce, which the Semitic peoples of Western Asia found themselves compelled to adopt in their commercial, cultural, and political relations. The Aramaic-speaking population were absorbed by the other peoples of the existing civilized lands. They developed a distinct nationality in Damascus. In Mesopotamia itself, in the neighbourhood of Edeessa, Mardin, and Nisibis, Aramaic individuality was long preserved. But the culture of the country was afterwards strongly permeated by Hellenism. One of the last political formations of the Arameans is found in Palmyra, which in the first century B.C. became the centre of a flourishing state under Arabian princes. It flourished until the ambitious design of Odenathus and Zenobia to play the leading part in the East caused its destruction by the Romans. A small fragment of Aramaic-speaking population may be still found in Ma'ula and two other villages of the Anti-Lebanon. So-called New Syrian dialects, descendants of the East Aramaic, are spoken in Tusr'Abdin in Mesopotamia, to the east and north of Moeul, and in the neighbouring mountains of Kurdistan, as well as in the plains of Elam and Northern Mesopotamia. Of these Aramaico-speaking Christians a part lives on what was clearly ancient Aramaic territory; but for those on Lake Urmia we must assume a later immigration. Nestorian bishops of Urmia are mentioned as early as A.D. 1111.

Aramaic-Azranian Semites. (a) Arabs, the most powerful branch of the Semitic group of peoples, are indigenous to Central and Northern Arabia, where even to-day the original character is most purely preserved. At an early period they pressed forward into the neighbouring territories, partly to the North and partly to the South. In consequence of the differences they are divided into North and South Arabsians. Northern Arabia is composed partly of plains and deserts, and is, therefore, generally speaking, the home of wandering tribes of Bedouins. The South, on the other hand, is fertile and suitable for settled population. For this reason there are many early towns in Syria, and the sites of ruins and inscriptions bear witness to the high culture which once prevailed. The natural richness of the country and its favourable situation on the coast made the South Arabsians at an early period an important commercial people. In the fertile lowland of the Euphrates, the city of Dyrhoma of Ma'in (Minsmes) flourished. It is generally dated as early as the middle of the second millennium before
Christ, although for the present it is better to maintain a somewhat sceptical attitude as regards this hypothesis. At all events, the Mineans were the original inhabitants of the territories which along the eastern coast, emigrated from North-eastern Arabia. To the south and south-east of the Mineans were the Katabans and the Hadramotites, who were cognate in language and who stood in active commercial relations with Ma'in, under whose political protection they seem to have lived. The spirit of enterprise of this kingdom is shown by the foundation of a commercial colony in the north-western part of the peninsula in the neighbourhood of the Gulf of Akabah, viz., Ma'in-Musseran (Mirzamitmic, Egypt Ma'in). The downfall of the Ma'in kingdom was, according to the usual tradition, the result of the death of the Sabean kingdom. The Sabaeans had likewise emigrated from the North, and in constant struggles had gradually spread their dominion over almost all Southern Arabia. Their capital was Ma'rib. Their numerous monuments and inscriptions extend from about 700 B.C. until almost the time of the Byzantine conquest. At this period they received a heavy blow by the loss of the monopoly of the carrying trade between India and the northern regions, when the Ptolemies entered into direct trade relations with India. Still the Sabean Kingdom maintained itself, with varying fortune, until about A.D. 400. The byzantine power was constantly under foreign domination, at last under Persian. Ultimately, Southern Arabia was drawn into the circle of Islam. Its characteristic language was replaced by the Northern Arabic, and in only a few localities of the southern coast are remnants of it to be found: the so-called Hausi in Mahraland and the Socotri on the Island of Socotra. Northern Arabia had in the meanwhile followed its own path. To the east of Musrran to far into the Syrian desert we hear of the activity of the Arbi (at first in the ninth century B.C.), from whom the entire peninsula finally received its name, Assurbanibal, especially boasts of important victories over them in his struggles with them for the mastery of Edom, Moab, and the Hauran (c. 650). Some of the tribes possessed the germ of political organization, as is shown in their government by kings and even queens. While these ancient Arbi for the most part constituted tribes, certain of their dominants became settled and achieved a high culture. Thus, about B.C. 200 we hear of the realm of the Nabatæans in the former territory of the Edomites. From their clif-town of Petra they gradually spread their dominion over North-western Arabia, Moab, the Hauran, and temporarily even over Damascus. Their prosperity was chiefly due to their carrying trade between Southern Arabia and Mediterranean lands. The language of their inscriptions and coins is Aramaic, but the names inscribed upon them are Arabic. In A.D. 106 the Nabatæan Kingdom became a Roman province. Its annexation caused the prosperity of the above-mentioned Palmyra, whose antiquities and dynasty were likewise descended from the Arbi. Subsequent to these many other small Arabian principalities developed on the boundary between civilized lands and the desert; but they were for the most part of short duration. Of greatest importance were two which stood respectively under the dominion of Byzantine Empire and the Persian Kingdom as buffer states of those great powers against the sons of the desert: the realm of the Ghassanites in the Hauran, and that of the Lihmites, the centre of which was Hira, to the south of Babylon. In the sixth century A.D., when Southern Arabia had outlived its political existence, Northern Arabia had not yet found a way to political union, and the entire peninsula threatened to become a battle-ground of Persian and Byzantine interests. In one district alone, the centre of which was Mecca, did pure Arabism maintain an independent position. In this city, A.D. 570, Mohammed was born, the man who was destined to put into motion the last and most permanent of the movements which issued from Arabia. And so in the seventh century another evolution of Semiticism took place, which in the victorious power of its attack and in its mighty expansion surpassed all that had gone before; the offshoots of which pressed forward to the Atlantic Ocean and into Europe itself.

(b) Abyssinians.—At an early epoch South Arabian tribes emigrated to the opposite African coast, where Sabean trade colonies had probably existed for a long time. As early as the first century A.D. we find in the north of the Abyssinian mountain-lands the Semitic realm of Aksum. The conquerors brought with them South Arabian letters and language, which in their new home gradually attained an individual character. From this language, the Ge'ez, wrongly called Ethiopian, two daughter-languages are descended, Tigre and Tigrinya. The confusion of this kingdom with its Ethiopia probably owes its origin to the fact that the Semite emigrants adopted this name from the Graeco-Egyptian sailors, at a time when the Kingdom of Meroë was still in some repute. And so they called their kingdom Yëtëopyëa. From Aksum as a base they gradually extended their dominion over as far as Abyssinia, the most powerful Christian country of the period. The Christian Church, with the remnants of a purer Semitic type, while the southern is strongly mixed with Hamitic elements. At an early date the south must have been settled by Semites, who spoke a language related to Ge'ez, which was afterwards to a great extent influenced by the languages of the native population, particularly by the Agau dialects. A descendant of this language is the Amharic, the present language of intercourse in Abyssinia itself and far beyond its boundaries.

See the articles on the separate titles treated above; also MARDER, Historien aegypt. Seehunde des Orients (1885); MYTHES, Gesch. des Allerumtes, I (1909), extending to the sixteenth century B.C.; BARTON, Sketch of Semitic Origins (New York, 1909).

F. SCHÜRMANN.

Semitic Epigraphy is a new science, dating only from the past fifty years. At the beginning of the eighteenth century European scholars sought in vain to decipher two Palmyran inscriptions which had been discovered at Rome. At the end of the century Swinemund England and the Abbé Barthélemy succeeded in reconstructing the alphabet with the assistance of thirteen new bilingual texts copied at Palmyra by Wood. Thenceforth it was evident that the assistance inscriptions would be to the philological and historical knowledge of the ancient Orient. They are, moreover, of great utility in Biblical criticism. The true founder of this science was W. Gesenius, who collected and commented all the Phoenician inscriptions then known in his remarkable work "Scriptura linguesque Phenicie monumenta" (Leipzig, 1837). Since then attention has been devoted to the research of the geographical monuments, and the most prominent Orientalists are successfully applying themselves to deciphering and explaining them. In 1867 the Académie des Inscriptions et Belles-Lettres of Paris undertook the publication of a "Corpus inscriptionum semiticarum", in which the monuments should be collected, translated, and reproduced in facsimile by the most perfect processes. The publication, which is now all desirable care, is regularly continued, despite the enormous expenses it involves. To afford an idea of Semitic epigraphy we shall follow the plan adopted in this work, which does not treat of the numerous inscriptions in cuneiform characters, these falling within the province of the Assyriology. We shall therefore deal with the branches which belong to the group of North Semitic languages.

I. PHENICIAN INSRIPTIONS.—These are numerous
and important, since on the one hand this great nation of navigators has not left us any other monuments of its language, and on the other hand the alphabet of these inscriptions is the prototype of all the Semitic, Greek, and Latin alphabets. A.—The Phoenician inscriptions properly so-called, i.e., those in Phoenicia, are neither the most numerous nor the most ancient. The longest, such as that of the sarcophagus of King Eshmunazar (at the Louvre) and those of the foundations of the temple of Eshmun at Sidon, date only from the Ptolemaic period. The stela of Jehumelke, King of Gebal (Bibl. nat., dated from the fourth century of our era). Another, found at Hasseanbeyl, dates from the seventh or eighth century. Several seals and carved stones are also of great antiquity; but the oldest of all inscriptions is a mutilated bronze tablet (now in the Louvre), discovered in 1577 in the Island of Cyprus and which bears a dedication to the god Baal of Lebanon; it belongs to at least the ninth century B.C. The different colonies founded by the Phoenicians have furnished several hundreds of inscriptions, discovered in Cyprus, Sicily, Sardinia, Malta, etc. Most of them are older than those of Phoenicia; that of Nola (Sev. Ant. France, 1865) is from the eighth century. They are generally funerary or religious texts, except those of Cyprus, which furnish historical documents.

B. Punic Inscriptions.—This name is given to numerous Phoenician inscriptions found in North Africa and especially in the ruins of Carthage. They are more than 3,000 in number. If we except several hundred consisting of religious texts (temple dedications, tariffs for sacrifices), epigraphs of great persons (suffetes, priests, etc.) all the others are votive offerings to the goddess Tanit or god Baal-Hammon, and give no information save the name of the one offering the little stone stela on which the dedication is inscribed.

C. Neo-punic Inscriptions.—These are distinguished by the more cursive form of the writing and also by the language: they are of greater philological interest, some of the letters performing the office of vowels. Their contents are the same as those of the other document; historical inscriptions (such as that of Micipsa), dedications of monuments, epitaphs, votive offerings, and religious consecrations. They are derived for the most part from the vicinity of Constantine and from Tunis, some are from Sardinia and Sicily. About 200 are known, belonging to the period between the Carthaginian and the end of the first century of the Christian era.

II. ARAMAIC INSRIPTIONS.—A. Ancient Aramaic.

—The most ancient monuments of western Aramaic which have reached us are a small number of lapidary inscriptions. The most important come from Northern Syria; these are: the inscription of Hadad (eighth century, thirty-four lines), those of Panamu (twenty-three lines) and of Barekub (twenty lines), kings of Sam'al, contemporaries of Thelathaphlaasar III; they were discovered at Zingeri and are in the Berlin Museum. Two stelae found at Nerab in 1891 are now in the Louvre; the first is a mutilated stela (thirty-five lines) erected by Zakir, King of Hamath, a contemporary of Jos, King of Israel (eighth century), was discovered. Inscriptions of the fourth and fifth centuries B.C. have been discovered in Cilicia and Syria. Those of Arbasos in Cappadocia belong only to the second century. The great stela of the Louvre, formed at Taurus in the fifth century, has three lines of writing; it belongs to the fifth century. Other inscriptions, most of them in the British Museum, are of Egyptian origin; that found at Sakkara dates from 482, another found at Assouan, from 458. Besides these large monuments there is a series of smaller ones, such as cylinders, weights, coins, several of which are contemporary with the oldest inscriptions.

B. Papyrus and Ostraka.—Directly connected with inscriptions through language and period are the Aramaic texts written on papyrus and discovered in Egypt. Nearly all of them proceed from the Jewish military colony established in the Island of Elephantine (Philoe). Four large sheets in the Museum of Cairo, found in 1894, contain the documents (sale, gift, release, marriage contract, etc.) proceed from the same Jewish family and are dated (471–411 B.C.). Other leaves, in greater number but less complete, belong to the Museum of Berlin and have just been published (1918) by M. Sachs. Of the last three concerning the worship and the sanctuary of Jahweh at Elephantine are of great interest to Biblical study. There are besides letters, account, lists of colonists, and what would not be looked for, fragments of the history of the sage Ahiyak and a partial translation of the celebrated inscription of Darius, written in cuneiform characters on the rocks of Behistoum in Persia. Elephantine has furnished also a large number of fragments of pottery, commonly called ostraka, bearing inscriptions in ink, of the same date as the papyri. Several hundred are preserved in the collection of the Corbus J. B. at Paris. Thanks to all these documents we are assured of the knowledge of the exact idea of the Aramaic language in the period prior to the Scriptural Books of Ezechias and Daniel.

C. Nabatean Inscriptions.—These hitherto discovered are about 400 in number, apart from the Sinaic inscriptions. Most of them have been found at Bostra and in the neighbouring regions, at Petra, the capital of the Nabatean kingdom, even in Arabia, at Ma'ain and especially at Hegra and its neighbourhood. But the Nabateans, like all merchant peoples, left traces outside their own country, and inscriptions have been found in Egypt, Phoenicia, and in Italy at Tusculum and Rome, where their colony was established. The rocks of Sinai bear numerous and celebrated inscriptions, which the tradition of the Alexandrine Jews, as reported by Cosmas Indicopleustes, regarded as Hebrew and as dating from the time of Moses. Forster in his famous books published at London (1851, 1856) endeavoured to explain them in this sense, and his ridiculously audacious attempt was repeated by Sharpe ("Hebrew Inscriptions from Mount Sinai", London, 1875). As early as 1840 F. Beer had established that they were Nabatean inscriptions, which is undoubtedly true. Some of them are dated, the oldest from the year 150 of our era, the most recent from 260; all these have been preserved for over 400 years. As a general rule they consist only of proper names accompanied by a religious formula. About 2000 of them have been published in the "Corpus". With the aid of inscriptions and coins it has been possible to reconstruct an almost uninterrupted series of the Kings of Nabatenee, from Nabada I (90 B.C.) to Malik III (A.D. 106, the date of the Roman conquest).

D. Palmyran Inscriptions.—The oldest is dated from the year 9 B.C.; the most recent from A.D. 271, the others range themselves in the intervening space of 600 years at least. About 900 are known to us. Many are bilingual, Greek and Palmyran. The longest and most curious (at the Hermitage Museum, St. Petersburg) is a customs tariff drawn up in Greek and Palmyran and promulgated by the local Senate in 137. The others are: honorary inscriptions carved on the axes of statues erected in honour of the leaders of caravans who had successfully conducted great commercial expeditions; religious inscriptions: dedications of temples, columns, votive altars, etc.; very numerous funeral inscriptions carved on the doors of tombs or beside the bust of the dead carved in relief. Many of these monuments, arranged at Palmyra itself, are scattered throughout the museums of Europe and America. As a whole they
furnish very valuable information concerning the religion, history, and civilization of the Palmyrans. Inscriptions have also been found in the vicinity of Palmyra or in distant countries whither the Palmyrans went either for commerce or as archers in the Roman armies. This explains the presence of Palmyran inscriptions in Egypt, Algeria, Rome, Hugle, and Israel.

2. Syriac Inscriptions.—Few belonging to the pagan period remain. The oldest is probably that of a queen (Helen of Adiabene, first century), carved on a sarcophagus in the Louvre, discovered at Jerusalem in the so-called Tomb of the Kings. The others come for the most part from Edessa or its environs. Some were certainly derived from Egyptian models, and accompanied by portraits of the dead. Those of the Christian period, recovered throughout Syria and Mesopotamia, consist chiefly of dedications of churches or convents, and of epitaphs. One of the most interesting dedications (in the Museum of Brussels) comes from Zabed, south-east of Aleppo; it is trilingual, Syriac, Greek, and Arabic. Hundreds of funeral inscriptions have been discovered in the Nestorian cemeteries of Semirjetich, north of Mashhad; they are mingled with Turkish and Mongolian names and date from the thirteenth and fourteenth centuries. The oldest Syriac inscription is the stele of Si-engan-fou, the authenticity of which no one now dreams of contesting. It is dated 731, and recalls the introduction into China of Christianity, at that time very flourishing. The inscriptions on the stele of the kings of Edessa make it possible to fix the chronology of these princes.

F. Mandate Inscriptions.—The oldest and longest (278 lines) is on a tablet preserved in the British Museum; the others (about 50) are engraved or painted in ink on large terra-cotta vessels, found chiefly at Khouabir in Lower Babylonia. All these inscriptions have a character similar to those of inscriptions in formularies against evil spirits. They date from the period of the Sassanid Kings.

III. BIBLICAL INSCRIPTIONS. A.—Those which are of real philological or historical interest for their contents or antiquity are but few in number. The inscriptions found in the Jewish catacombs of Rome and Venosa, Italy (fourth-fifth century of our era), and those carved on tablets found in Babylonia (same period) are of only secondary interest. Much more important are those which have been collected in Palestine, among which are several dedications of stones, documents of the Christian period, dedications of tombs somewhat prior to our era, epitaphs graven on small stone coffers, called ossuaries which mostly belong to the first century of our era. Lapidary inscriptions have been found at Gezer, one fixing the limits of the city, the other containing a fragment of a calendar which may date from the ninth century B.C.; it was discovered in 1908. There have been found about a hundred archaic signets belonging to the period of the Kings of Judah and Israel. But the two most celebrated Hebrew inscriptions are that of the aqueduct of Siloe at Jerusalem and the famous stela of the Mesopotamian king Menas, found at Dhiban beyond the Jordan. The inscription of Siloe, discovered in 1880 and later taken to Constantinople, was graven on the rock to commemorate the opening of the subterranean aqueduct which King Ezechias (720-691) had constructed in order to bring water into the city. The stela of King Menas relates how this prince, a tributary of Israel, made himself independent during the reign of Ahab (875-853). From a paleographic and historical standpoint this inscription (now at the Louvre) is the most valuable monument of Semitic epigraphy.

B. Sabean Inscriptions.—These are few in number and of more or less recent date; they have been discovered in Palestine and Damascus. Save that in the Church of the Holy Sepulchre at Bologna, which remains an enigma, they consist of quotations from the Pentateuch.

The next section of this article will deal with inscriptions which belong to the South Semitic languages.

HIMYARITE INSCRIPTIONS. A.—Minean and Sabaean Inscriptions.—The generic term Himyarte designates the proto-Arabic monumental inscriptions which have been discovered, especially in the past half-century, in the south of the Arabian peninsula. The Mineans and Sabeans are the tribes whose dialect seems to have predominated. The appearance of the writings is very similar to those of the Mineans, and a number of documents (2000 inscriptions and 400 coins), the length of the texts (often twenty to thirty lines), and especially the unwonted abundance of historical details endow this epigraphy with a special and long unsuspected character. It supplements the deficient information of ancient authors and enables us to reach a more or less exact knowledge of the social condition and religion of the tribes which occupied these regions during the two or three centuries prior to the Islamite movement. There have already been recovered the names of more than fifty kings or princes of these tribes, all of them tributary.

B. Lihyanite Inscriptions.—Specimens of an alphabet, derived from the Himyarte but more cursive, are found in numerous graffito on rocks or single stones throughout the Arabian peninsula. They emanate from nomadic tribes who wrote their names at different migrations. These inscriptions are called Tamudean or Lihyanite from the names of their authors.

C. Sabaite Inscriptions.—These derive their name from the Saba, a desert and volcanic region north-east of Bostra, where they abound (about a thousand). Their origin is the same as that of the above, but the alphabet is slightly different... They are short graffito similar to the Nabatean inscriptions of Sinai. They seem to have been written in the second to fourth century of our era, like the Lihyanite inscriptions.

D. Ethiopic Inscriptions.—These are still fewer in number and all posterior to the conversion of Ethiopia to Christianity. The more notable inscriptions found at Aksum (fifth-sixth century) contain valuable historical details. The writing is similar to that still in use, a derivative of the Himyarte.

II. ARABIC INScriptions.—These are very numerous, but the most recent are of little interest. The most ancient, however, are useful for the study of the language and history. The oldest (found at Nema in the Hauran, now at the Louvre) is written in Nabatean characters. It dates from A.D. 328. There are a few of the period prior to Islam. Those which were written in the first centuries of the Muslim invasion are in monumental letters called Cufic (from the name of the town of Cufa in Babylonia). They have been found on the mosques, tombs, public buildings, various articles of furniture, dishes, lamps, swords, etc. Arabic letters and inscriptions are often intertwined to form decorative motifs, which makes reading of them difficult. It will be readily perceived that a collection of the numerous inscriptions on the monuments erected by the Arabs in the conquered countries would be of great service in arranging or completing the details of their history; hence the Academy of Inscriptions has decided to add this collection to the "Corpus", which is first intended to comprise only the texts prior to Islam.

An almost complete bibliography down to 1888 (1254 articles) for North Semitic epigraphy will be found in LAMBERTH, 1791. There is no bibliography for South Semitic epigraphy. Corpus Inscriptionum Semiticarum (Paris, 1841);—Corpus Inscriptionum Semiticarum (Paris, 1848);—Corpus Inscriptionum Hebraicarum (Hebr.);—Corpus Inscriptionum Nabatencarum (Paris, 1900);—Corpus Inscriptionum Syriacarum (Berlin, 1911);—Littmann, Semitic In-
Semmelweis, Ignaz Philipp, physician and discoverer of the cause of puerperal fever, b. at Ofen (Buda), 1 July, 1818; d. at Vienna, 13 August, 1865. The son of a German merchant, he became a medical student at Vienna in 1837, and after he had taken a philosophical course at Pesth, continued his medical studies there, obtaining his degree in medicine at Vienna on 31 April, 1844, as obstetrician on 1 August, 1844, and as surgeon on 30 November, 1845. On 27 February, 1846, he was made assistant at the first obstetrical clinic of Vienna, and on 10 October, 1850, lecturer on obstetrics. A few days after this appointment, for reasons unknown, he removed to Pesth where he made his residence; he was physician at the hospital of St. Roch on 20 March, 1851, and on 18 July, 1852, was appointed regular professor of theoretical and practical obstetrics. Early in 1855 he realized the terrible epidemic at the Vienna hospital among lying-in women was caused by infection from the examining physicians, who had previously made pathological dissections, or who had come into contact with dead bodies without thorough cleansing afterwards. After Semmelweis had introduced the practice of washing the hands with a solution of chloride of lime before the examination of lying-in women, the mortality sank from 18 per cent to 2-4 per cent. He also soon formed the opinion that not only infection from septic virus caused puerperal fever but that it also came from other causes of putridity. His dislike of public speaking and his fear of writing work which might be misunderstood are seen in the recognition he deserved was so long in coming and why his views were misunderstood. Many scholars, among them the doctors of the Academy of Paris and even Rudolph Virchow at Berlin, regarded him unfavourably. The petty persecution and malice of his opponents excited in Semmelweis a sensitiveness that increased from year to year. The first account of his discovery was published by Professor Ferdinand Hebra in December, 1847, in the journal of the Imperial and Royal Society of Physicians of Vienna (December, 1847), followed by a supplementary statement in the same physician in April, 1848. In October, 1849, Professor Josef Skoda delivered an address upon the same subject in the Imperial and Royal Academy of Sciences. Unfortunately, Semmelweis had neglected to correct the papers of these friends of his, and thus failed to make known their mistakes, so that the inference might be drawn that the public infection of puerperal fever. It was not until 15 May, 1850, that Semmelweis could bring himself to give a lecture upon his discovery before the Society of Physicians; this address was followed by a second on 18 June, 1850. The medical press noticed these lectures only in a very unfavorable manner. In 1851 he published his work: "Die Aetologie, der Begriff und die Prophylaxis des Kindbettfiebers" (Vienna), in which he bitterly attacked his supposed and real opponents. It was not until after his death that Semmelweis found full recognition as the predecessor of Lister and the pioneer in antiseptic treatment. Besides the above he wrote: "Zwei offene Briefe an Dr. Josef Fiask, der vor einigen Jahren Hafnarvon Breslau und Hofrat Dr. Friedrich Wilhelm Scanzoni" (Pesth, 1861); "Zwei offene Briefe an Dr. Eduard Kaspar Jakob von Siebold und Hofrat Dr. Fr. W. Scanzoni" (Pesth, 1861); "Offener Brief an sämtliche Professoren der Geburtshilfe" (Ofen, 1862).

Semmes, Raphael, naval officer, b. in Charles County, Maryland, U. S. A., 27 September, 1809; d. at Point Clear, Alabama, 26 August, 1877. His family were descendants from one of the original Catholic colonists of Maryland, from which state he was appointed a midshipman in the U.S. Navy 1 April, 1828. He served until 1832, when he was given leave of absence extending until July, 1835, during which time he studied law and was admitted to practice. Rejoining the navy, he served with distinction, attaining the rank of commander, until the outbreak of the Civil War, when he resigned and cast his lot with the seceding state of Alabama, of which he became a citizen in 1841. He was appointed commander in the Confederate States Navy 25 March, 1861; Captain, 21 August, 1862; Rear-Admiral, 10 February, 1865; and retired to civil life after the surrender of the forces under General J. E. Johnston at Greensboro, North Carolina, 26 April, 1865. As commander of the Confederate privateer Sumter he destroyed, during six months in 1861, eighteen ships, and the next year, taking command of the Alabama, he began the famous cruise during which he captured sixty-nine vessels and inflicted a blow on the seacarrying trade of the United States from which it has not yet recovered. After the Alabama was sunk off the French coast by the Kearsarge, 19 June, 1864, he escaped to England, whence he later returned to Virginia and was engaged in the defences about Richmond. At the end of the war he went to his home in Mobile, Alabama, and opened a law office. He also edited a paper, and for a time was a professor in the Louisiana Military Institute. His destruction of the mercantile marine during his cruise in the privateer Alabama so embittered northern public opinion against him that, although he was pardoned with other prominent Confederate leaders under the amnesty proclamation of President Johnson, his political disabilities were never removed. He was the author of "Service Afloat and Ashore During the Mexican War" (1851); "The Campaign of General Scott in the Valley of Mexico" (1852); "The Cruise of the Alabama and Sumter" (1884); and "Memoirs of Services Afloat during the War between the States" (1889).

Sdfia, Balázsár, Indian missionary and philologist, b. at Barcelona, Spain, about 1500; d. at Gu-
rumbaré, Paraguay, 19 July, 1614. He entered the Jesuit novitiate at Tarragona, Aragon, in 1608. Before he volunteered for his studies under the Guaraní missions, he was distinguished and beloved among the Indians for his virtues and for his courage in defense of the natives against the slave-dealers, declining offered preferment at Sinte Fé in order to remain with his mission work. After ministering without fear to the sick and poor among the Indians, he was seized with a fever, for which no medicine could be procured, and succumbed to it after intense suffering. His remains were afterwards taken up and reinterred at the Jesuit college at Asunción.

LORD, Hist. de la Comp. de J. en Paraguay, II (Madrid, 1754–5).

JAMES MOONEY.

**Sesan**, Saint, bishop and confessor, b. at Magh Leaca, Klir, Co. Clare, c. 485; d. 1 March, 560, his feast day being 10 June. He was prophetically announced by St. Patrick on his visit to the Holy Fidgent (Co. Limerick), and as a boy he was placed under the guidance of a saintly abbot called Cassian, finishing his studies under St. Naal, at Kilmanaugh, Co. Kilkenny. He commenced his public ministry by founding a church at Enniscorthy, in 510 (or 512), and the parish is still known as Templeshannon (Teampull Sesan). He then visited Mevanea, Rome, and Tours, and returned to Ireland in 520. Having founded churches at Inniscarra (Co. Cork), at Inistioge, at Deer Island, Inismore, and Mutton Island, he finally settled at Iniscathay, or Scattery Island, Co. Clare. He was visited by St. Ciaran and St. Brendan, and other holy men, who had heard of his sanctity and miracles. Scattery Island became not only a famous abbey but the seat of a bishopric with St. Senan as its first bishop. This event may be dated as about the year 535 or 540, and St. Senan’s jurisdiction extended over the existing Barony of Moyarta and Clonderslaw in Thomond, the Barony of Connello in Limerick, and a small portion of Kerry from the Feal to the Atlantic. The legend of “St. Senanus and the Lady”, as told in Tom Moore’s lyric is founded on the fact that he was warned not to enter Scattery Island; not even St. Cenna was permitted to land there, yet St. Senan founded two convents for nuns, and was actually on a visit to one of them when he died. He was buried in the abbey church of Iniscathay on 8 March, on which day his feast is observed. The Diocese of Inniscathay continued till the year 1190 when it was suppressed. It was, however, restored by Pope Innocent VI, and continued as a separate see under Bishop Thomas (1358–68). In 1378 his possessions were divided, and the island remained a portion of Killaloe, being subsequently merged into the parish of Iniscathay, one of the earliest parishes in Ireland and doubtless the forerunner of the great Diocese of Inis Cathay in the Irish life of St. Senan.

**Senanque**, Cistercian monastery and cradle of the modern Cistercians of the Immaculate Conception, situated on the rivulet Sénanole, Diocese of Avignon, founded on two abbeys founded by St. Alphonse, Bishop of Cavaillon, and Raymond Berenger II, Count of Provence. The original community came from the Cistercian abbey of Mazan, in 1148, under Peter, their first abbot. In the beginning their poverty was extreme, until the Lords of Simiane became their benefactors, and built, with the assistance of the neighbouring nobility, a spacious monastery, according to the rule of Citeaux. The attraction of St. Bernard’s name drew numerous postulants to the new foundation, so that in a short time the community numbered more than one hundred members, enabling them, in 1152, to found the monastery of Chambons, in the Diocese of Viviers. Little by little, however, it suffered the fate of so many abbeys of those times, and weakened in fervour and numbers; after it had been governed by thirty regular abbots, it fell in commendam in 1506; having, at that time, not more than a dozen members. When suppressed by the Revolution, 1792, it was but one monk remaining of the whole community.

In 1854 Abbé Barnoun, of the Diocese of Avignon, bought the abbey, which was in a state of perfect preservation, and established a community there. The object of the founder was to institute a medium regime more severe than the customary, but less strict than the Reform of La Trappe. After a short time in the Novitiate of Sta. Croce in Gerusalemme (Rome), having obtained approbation for his monastery, Abbé Barnoun was professed in 1857, taking the name of “Mary Bernard”. A new decree, in 1867, erected the house into a particular congregation affiliated to the Cistercians of the Cistercians of the Immaculate Conception of N. D. de Sénanque”, with a vicar-general, elected for six years, at their head. Dom M. Bernard, the founder, first filled this office (1868). After establishing several other subordinate monasteries, he began the celebrated Abbey of Lérins, and was authorized to make his residence there. His successors followed him in this, until compelled by the persecutions of 1902, to leave the country, transferring the community to N. D. du Suffrage, Province of Lérins, Spain, where they are now established.

Red Jacket

From a Painting by Weir, 1838

The Seneca held the western frontier or “door” of the confederacy, their original territory lying between Seneca Lake and Genesee River, with four principal villages. By conquest and absorption of the Neutrals in 1651 and the Erie in 1656 they acquired possession of the country westward to Niagara River and Lake Erie and correspondingly increased their own strength. In 1658 one of their four towns was made up entirely of captives. More than a century later they had some thirty villages, in a few of which, several on the upper Alleghany. They took a prominent part in all the tribal and colonial wars waged by the confederacy up to the close of the Revolution, taking sides like the other allied tribes almost uniformly for the English, first against the French and later against the Americans. The single exception was in 1763 when they suddenly rose against the English troops newly established in their territory, surprising and destroying two entire detachments. Their country was wasted in 1657 by Denonville and again in 1717 by the American General Sullivan, who destroyed nearly every village, cornfield, and orchard in their country, thus compelling them to peace. As a tribe they did not fly to Canada, as did the Mohawk and Cayuga in the English alliance, but remained in their own country, where they still reside on three reservations, Allegany, Cattaraugus, and Tonawanda, with a total population of 2755. About 220 more are with others of the Six Nations in the Grand River in Canada, while another 380 of a mixed band, formerly resident in Ohio and known as “Seneca of Sandusky,” are now settled in north-eastern Oklahoma. These last appear to be the descendants of early captives incorporated by the Seneca. The Seneca colonies among the 4000 or more Catholic Iroquois of the mission colonies of Caughnawaga, St. Regis, and Lake of Two Mountains, in Canada and northern New York, cannot be estimated, but is probably relatively less than that of the other tribes.

The Seneca came later under Catholic influence than the other Iroquois. The first converts of their tribes were instructed by the famous Fathers Moreau and Chaumonot, while on a journey to the Iroquois country in 1654. Two years later, on their own invitation, Father Chaumonot visited their country and was well received, organizing a temporary mission among the numerous Christian Huron captured. In 1655 the tribe was baptized at Montreal, and shortly afterwards the tribe, which had been for several years at war with the French, asked for peace and missionary teachers. In November, 1658, Father Jacques Fremin dedicated the first mission chapel among the Seneca under the invocation of St. Michael, at Gandougouar (Kana-

garo). In the next year Father Julien Garnier estab-

lished Conception mission at Gandachiragou and began a dictionary of the language. In 1670 a third mission, dedicated to St. James, was begun by Father Pierre Rafféz in another town of the tribe. For a few years the mission flourished, in spite of more than ordinary opposition from the heathen party, until the increasing drunkenness of the Iroquois towns and growing hostility towards the French (which latter was instigated by the English colonial Government) led to the determination to draw off the Christian Iroquois from the rest and colonize them in new mission towns south of St. Lawrence. As a result, several Christian Iroquois colonies were established, the earliest and most important being that now known as Caughnawaga, originally founded at Laprairie in 1669. Very few Christians were thus left among the confederates, but the missionaries remained among the Seneca until the eve of another general Iroquois war, in 1683, when they were ordered out by the hostiles. The leading event of this war was Denonville’s invasion of the Seneca country in 1687.

No Catholic work was subsequently attempted in the tribe, with the exception of a visit, in 1751, by the Sulpician Father Picquet, who drew off a number to his mission at Ogdenburg. The few Seneca on the Six Nations reserve in Ontario are under Episcopal influence. The Christian portion of those in New York are chiefly of the Congregational denomination, principally owning to the labours of the Reverend Asher Wright, who laboured among them over forty years (1831-75) until his death, mastering the language, in which he published a number of religious and educational works. The body of the tribe is still attached to its primitive paganism. A few of those in Oklahoma are connected with the Catholic mission of St. Mary’s at Quapaw.

See bibliography under Iroquois, particularly Jesuit Relations and Shea, History of the Catholic Mission.

James A. Meehan

Seneffelder, Alots, principally known as the inven-

tor of ethnography, b. at Prague, 6. 6. 1753; d. Munich, 26 February 1834. His father, an actor at the Royal Theatre of Munich, was playing at Prague at the time of the birth of his son. The young Seneffelder studied at Munich, and received a scholarship of 120 florins a year for his diligence, which enabled him to study jurisprudence at Ingolstadt. The death of his father in 1767 brought him to open his studies in order to help support his mother and a family of eight sisters and brothers. After attempting to become an actor, he took up dramatic writing, at which he was at first fairly successful. Because of difficulty in finding a publisher, he tried to devise means for printing his editions, and, with the assistance of experiments with etching and copper-plates until he discovered, in 1796, that Kilimbine-stone could be used for the purpose. He soon found that
etching was not necessary, owing to the fact that grease and water do not mix. By his method the marking is done upon the stone with a greasy composition of soap, wax, and lamp-black, and then the plate is washed over with water, which soaks into the unmarked parts of the stone. The printing ink is then applied and adheres only to the marked places, while the water protects the rest of the plate; a number of impressions can then be obtained. This process he called "chemical" printing. The numerous improvements and developments of the art made by him were rewarded in later years by the gold medal of the "Society of Encouragement" of England, the highest medal of the "Polytechnische Verein für Baiern", the gold honorary medal of the order for Civilserdienst of the Bavarian Crown, and various other prizes.

In spite of great financial difficulties, continued discouragement, and repeated disapprovements, he remained unselshly devoted to high ideals. In his autobiography (introduction to "Lehrbuch") he expresses the desire that his invention "may bring to mankind manifold benefits and make it easy to raise it upon a nobler plane, but may never be misused for evil purpose. May the Almighty grant this! Then blessed be the hour in which I made my invention!"

His principal publication was "Vollständiges Lehrbuch der Steindruckerei" (Munich and Vienna, 1818). This was translated into French (Paris, 1819), English (London, 1819), and Italian (Naples, 1824).

Senegambia, Vicariate Apostolic of (Senegal), to which is joined the Prefecture Apostolic of Senegal, consists of the countries of French West Africa, including the islands of Réunion and the Comoros. It was erected in the fourteenth century by the Norman Jehan Prunaut was brought to an end by the troubles of the Hundred Years' War. Portuguese caravels first appeared off Gambia and Sierra Leone in 1482, and in 1446 occurred the first sale of the natives of these regions in the public market of Lagos, Portugal. So great were the profits of the traffic that it was certain that the English were determined to share them and in 1558 the Royal Chartered Company was organised, the major share of the gains going to Queen Elisabeth. The Dutch followed in 1617. Then the French under Couxin renewed their commercial relations with the country, but they also planted the seeds in the missionary work of which they took possession and erected a chapel. In 1637 the newly-founded Congregation of Propaganda sent a company of Norman Capuchins to "Old Guinea", others soon following, but the Dutch poisoned one of the missionaries and expelled the others. War broke out between France and Holland in 1672, and Admiral d'Estrees captured all the trading-posts of Senegal. The Dominicans thereupon entered the country under French protection and in 1686 the Franciscan Observants also began mission work there. Temporal affairs especially under the direction of the devout André Brue, head of the Company of Senegal, were admirably administered at this period, but the religious welfare of the natives was not wholly neglected. In 1758 the towns of St. Louis and Gorée were captured by the British, Gorée alone being restored to France by the Treaty of Paris in 1763, in which year Senegal was made a prefecture Apostolic.

Despite the promises made by the British Government on the occasion of the treaty, the Catholics of St. Louis were hindered in the practice of their religion. Although they were allowed to assemble, the British governor would not permit them to have either church or priest. Père Bertaut, a member of the Congregation of the Holy Ghost, to whose initiative after the Revolutionary period was due the re-establishment of his order and to whom Propaganda confided the religious interests of numerous French colonies, was, in April, 1778, shipwrecked off the African coast, with his companion, Père de Glicourt. They were taken captive by Moors and carried to St. Louis, where the governor refused to recognize them. Although they were able to labour zealously and with success among the Catholic population. But they were soon despatched to Gorée, whence they returned to France, and sought an immediate audience with the Minister of War, in which they described the disabilities of the Catholics of St. Louis. The result was the sending of a French fleet under the command of Comte du Vaudreuil and on 28 January, 1779, the French Protectorate was restored; Père de Glicourt returned as Prefect Apostolic of Senegal, making his residence at St. Louis, while his companion Père Sévénou went to Gorée. Despite theable services which it was now placed, the mission had to pass through many years of hardships, owing to poverty, disputes between the prefects Apostolic and the governors, and mistakes in the ecclesiastical administration. Although in 1821, under the administration of Mgr Barnère, the construction of the churches of Gorée and St. Louis was favourably considered, in 1822 there was a priest in Senegal. But the Sisters of St. Joseph of Chuy had arrived in 1819 and in 1822, their foundress, Mère Javoisy, went in person to establish a house at Gorée. In 1841 the Brothers of Ploermel were sent to the Mission. On the appointment of Père Jacob Libermann to the post of prefect of the mission, a change took place, not only in the reorganisation of the colonial clergy but also in the intercourse between the civil and ecclesiastical powers, while the movement was inaugurated for the emancipation and moral regeneration of the slaves. When the emancipation decree of the provisional Government was published, 27 April, 1848, 9800 slaves and 550 encagés were freed in St. Louis and Gorée alone and were assembled by the vice-prefect Apostolic for a solemn Te Deum.

In accordance with the plan of reorganisation recommended by Père Libermann the Vicariate Apostolic of the Two Guineas and Senegambia was erected 22 Sept., 1846, consisting of the territory between the Prefecture of Senegal and the Diocese of Landa. The religious service of the country was confided to the Fathers of the Congregation of the Holy Ghost, the first titular being Mgr Berthier, appointed Gorée, 9 April, 1847. He died on 19 November following, and was succeeded by Père Bessieux who proceeded to Gaboon, which he had already evangelised, leaving his coadjutor, Mgr Kobes, at Dakar, since 1895 the official seat of the Government of French West Africa. Mgr Kobes may be considered the real founder of the Mission of Senegambia, becoming vicar Apostolic when in 1863 it was separated from the
Two Guineas. He increased the establishments of the Sisters of St. Joseph and invited to Dakar the Sisters of the Immaculate Conception, founded at Casreres in 1836 by Mère Marie de Villeneuve. Encouraged by him, Père Barbier founded at Dakar (24 May, 1858) the Daughters of the Holy Heart of Mary, composed of native women, who have rendered inestimable services among Europeans as well as among their own race. A seminary for native clergy was inaugurated and is now situated at Ngosobil. Mgr Kobés made an energetic effort to establish the cotton industry among the natives, by a severe or locust plague caused it to be abandoned. Mgr Kobés died 11 Oct., 1872, and was succeeded by Mgr Duret, who had been Prefect Apostolic of Senegal and now united both jurisdictions. At his death (29 Dec., 1875) he was succeeded by Mgr. Dubain (1876–80), who fixed his residence at Dakar, which has since remained the residence of the vicar Apostolic. Chief among his mission foundations was that at the ancient trading-post of Rufisque (1873). His successors were Mgr Riehl (1884–86), Mgr Picarda (1887–89), Mgr Barthel (1889–99), Mgr Buléon (1899–1900), Mgr Kunemann (1891–98). The present vicar Apostolic is Mgr Jean Schall, Titular Bishop of Telleron.

In the Vicariate Apostolic of Senegambia there are 5,000,000 inhabitants, of whom 19,000 are Catholics, 2740 of this number belonging to Senegal. There are 39 European priests, 6 native priests, 53 brothers, 106 sisters, 16 churches or chapels and 16 stations, 24 schools, 100 agricultural societies, 15 dispensatories, 7 hospitals or infirmaries. In Senegal there are churches at St. Louis and Gorée, and 50 stations where the natives are taught. Civilly, Senegal forms a separate colony while Senegambia belongs to that of Upper Senegambia and the Niger, formed 8 April, 1904, by the Anglo-French convention of 1899.

Sens, Archdiocese of (Sennones), comprises the Department of the Yonne. It was suppressed by the Concordat of 1802 which annexed to the Diocese of Troyes the Dioceses of Sens and Auxerre and by a somewhat complex combination gave the title of Bishop of Sens to the Bishop of Troyes, and the purely honorary title of Archbishop of Sens to the Archbishop of Paris, otherwise deprived of all real jurisdiction over Sens. The Concordat of 1817 re-established the Archdiocese of Sens and the Diocese of Auxerre, but this arrangement did not last. The law of July, 1821, the pontifical brief of 4 Sept., 1821, the Act of the 20th of October, 1824, transferred the Diocese of Auxerre and gave to the Archdiocese of Sens as territory all the Department of the Yonne, and as suffragan the Dioceses of Troyes, Nevers, and Moulins. A papal Brief of 3 June, 1823, gave to the Archbishop of Sens the title of Bishop of Auxerre.

I. The Diocese of the See.—The history of the religious beginnings of the Church of Sens dates from Sts. Savinian and Potentian, and through some connecting legends also has to do with the Dioceses of Chartres, Troyes, and Orléans. Gregory of Tours is silent with regard to Sts. Savinian and Potentian, the Bishops of the Hieronymian Martyrology, which was revised somewhat before 600 at Auxerre or Autun, ignores them. The cities of Chartres and Troyes have nothing relative to these saints in their local liturgy prior to the twelfth century, and that of Orléans nothing prior to the fifteenth, which recalls the preaching of Altinus, Eoaldnius, and Serotonius, the companions of Sts. Savinian and Potentian, in the middle of the fifth century. In the seventh century there was in the cemetery near the monastery of Pierre le Vif at Sens a group of tombs among which have been recognised those of the first bishops of Sens. In 847 the solemn transfer of their bodies to the church of St-Pierre le Vif originated great popular devotion towards Sts. Savinian and Potentian. In 848 Wandelbert of Prum named them the first patrons of the church of Sens. Ado, in his Martyrology published shortly afterwards, speaks of them as envoyos of the Apostles and as martyrs. The Martyrology of Usuardus, about 875, indicates them as envoyos of the "Roman pontiff" and as martyrs. In the middle of the tenth century the relics of these two saints were hidden in a subterranean vault of the Abbey of St-Pierre le Vif to escape the pillage of the Hungarians, but in 1031 they were placed in a beautiful reliquary executed by the monk Odoranne. This monk, in a chronicle published about 1045, speaks of Altinus, Eoaldnius, and Serotonius as apostolic companions of Savinian and Potentian, but does not regard them as having been sent by St. Peter.

In a document which, according to the Abbé Bouvier, dates from the end of the sixth century or the beginning of the seventh, the name of St. Potentian is found. A brief of Pope Gregory the Great to Mgr Duchesne was written in 1046 and 1079 under the inspiration of Gerbert, Abbot of St-Pierre le Vif, is developed for the first time a vast legend which traces to Sts. Savinian and Potentian and their companions the evangelization of the churches of Orléans, Chartres, and Troyes; in this document Mgr Duchesne calls the Gerbertine legend. After some uncertainties and hesitations this legend became definitely fixed in the chronicle of Clarius, compiled about 1120. It is possible that the Christian Faith was preached at Sens in the second century, but we know from Sidonius Apollinaris that in 475 the Church of Sens had its thirteenth bishop, and the list of bishops does not permit the supposition that the episcopal see existed prior to the second half of the third century or the beginning of the fourth. Among the bishops of Sens in the fourth century may be mentioned: St. Severinus, present at the Council of Arles in 344; St. Ursinus (336–37), exiled to Phrygia under Constantius through the influence of the Arians, visited by St. Hilary on his return to Sens after three years of exile, and who about 386 founded at Sens the monastery of Sts. Gervasius and Protasius. In the fifth century: St. Ambrose (d. about 440); St. Agnellus (Agnerius), bishop about 475; St. Heraclius (487–515), founder of the monastery of St. John the Evangelist at Sens. In the sixth century: St. Paul (515–25); St. Leo (530–41), who sent St. Appas to evangelize Melun; St. Arthemius, present at the councils of 581 and 585, who admitted to public penance the Spaniard, St. Bond, and of a criminal made a holy hermit, trusting to an apocryphal charter, believed to have been founded under Clovis; he secured from the king authorization to coin money in his diocese; St. Annobertus (about 639); St. Gondelbertus (about 642–3), whose episcopate is only proved by tradition; the Hieronymian Martyrology, which traditions date from the eleventh century; St. Arroul (654–7); St. Emmon (655–75), who about
the end of 668 received the monk Hadrian, sent to England with Archbishop Theodore: perhaps St. Æme (about 676), exiled to Péronne by Ebroln, and whose name is suppressed by Mgr Duchesne as having been interpolated in the episcopal lists in the tenth century; St. Véron, of Fontenelle, who soon left the See of Sens to evangelise Frisia and died at Fontenelle before 704; St. Gerie, bishop about 696. In the eighth century: St. Ebbo, at first Abbot of St-Pierre le Vif, bishop before 711, and who in 731 placed himself at the head of his people to compel the Saracen, to raise the siege of Sens; and successor St. Murulf.

In the ninth century great bishops occupied the See of Sens: Magnus, former chaplain of Charlemagne, bishop before 802, author of a sort of handbook of legislation of which he made use when he journeyed as missus dominicus, or royal agent for Charlemagne, died after 817; Jeremias, ambassador at Rome of Louis the Pious in the affair of the Iconoclasts, died in 828; St. Almeric (829–36), former Abbot of Ferrières, and consecrated Abbot of St. Maur des Fossés at Paris in 832; Vénilon (837–85) anointed Charles the Bald, 6 June, 843, in the cathedral of Orléans, to the detriment, of the privilege front of the See of Reims; his chorepiscopus, or auxiliary bishop, was Audradae, author of numerous theological writings, among others of the poem “De Fonte Vita,” dedicated to Hincmar, and of the “Book of Revelations”, by which he sought to put an end to the divisions between the sons of Louis the Pious. In 859 Charles the Bald accused Vénilon before the Council of Savonnières of having betrayed him; the matter rightly itself, but opinion continued to hold Vénilon guilty and the name of the traitor Ganelon, which occurs in the “Chanson de Roland” is but a popular corruption of the name Vénilon. Ansegisus (871–85), at the death of Louis II, Emperor of Italy, negotiated at Rome for Charles the Bald and brought thence the letter of John VIII inviting Charles to come and receive the imperial crown. He himself was named by John VIII primate of the Gauls and Germania and vicar of the Holy See for France and Germany, and at the Council of Ponthion was solemnly installed above the other metropolitan despite the opposition of Hincmar; in 880 he anointed Louis III and Carloman in the abbey of Ferrières. It was doubleless in the time of Ansegisus, while the See of Sens exercised a real primacy, that a cleric of his historical work known as the “Ecclesiastical Annals of Sens” or “Chronique des Archevêques de Sens”, an attempt to write the history of the first two French dynasties.

Vautier (887–923) anointed King Eudes in 888, King Robert in July, 922, and King Raoul, 13 July, 923, in the Church of St-Médard at Soissons; he doubtless inherited from his uncle Vaujaler, Bishop of Orléans, a superb Sacramentary composed between 855 and 873 for the Abbey of St-Amand at Puelle. This Sacramentary, which he gave to the church of Sens, forms one of the most curious monuments of Carolingian art and is now in the library of Stockholm. The bishops of Sens may also be mentioned: St. Anastasius (967–76); Sevinus (976–99), who presided at the Council of St-Basle and brought upon himself the disfavour of Hugh Capet by his opposition to the deposition of Arnoul; Gelduinus (1032–49), deposed for simony by Leo IX at the Council of Reims. The second half of the eleventh century was fatal to the Diocese of Sens. Under the episcopate of Richerius (1063–96), Urban II withdrew primatial authority from the See of Sens to confer it on that of Lyons, and Richerius died without having accepted this decision; his successor Daimbert (1098–1122) was consecrated at Rome in March, 1099, only after having given assurance that he recognized the primacy of Lyons. Bishop Henri Sanglier (1122–42), caused the condemnation by a council in 1140 of certain propositions of Abelard. The see regained great prestige under Hugues de Toucy (1142–68), who at Orléans in 1152 crowned Constance, wife of King Louis VII, despite the protests of the Archbishop of Reims, and under whose episcopate Alexander III, driven from Rome, installed the pontifical Court at Sens for eighteen months after having taken the advice of the bishops.

Among later bishops of Sens were: Guillaume aux Blanches Mains (1165–76), son of Thiabaud IV, Count of the Champagne, uncle of Philip Augustus, and first cousin of Henry II, who in 1172 in the name of Alexander III placed the Kingdom of England under

THE CATHEDRAL, SENS

an interdict and in 1176 became Archbishop of Reims; Michael of Corbeil (1194–9), who combated the Manichean sect of “Publicans”; Peter of Corbeil (1200–22), who had been professor of theology of Innocent III; Pierre Roger (1229–30), later Clement VI; Guillaume de Brosse (1330–8), who erected at one of the doorways of the cathedral of Sens an equestrian statue of Philip VI of Valois, to perpetuate the remembrance of the victory won by the clergy over the pretensions of the legist Pierre de Cugnietre; Guillaume de Melun (1344–75), who together with King John II was taken prisoner by the English at the battle of Poitiers in 1356; Guy de Roye (1385–90); Henri de Savoisy (1413–22), who at Troyes in 1420 blessed the marriage of Henry VI of England with Catherine of France; Etienne Tristan de Salazar (1475–1519), who concluded the first treaty of alliance between France and the Swiss; Antoine Duprat (q. v.) 1525–35, made cardinal in 1527; Louis de Bourbon Vendôme (1535–57), cardinal from 1517; Jean Bertrand (1557–60), cardinal in 1556; Louis de Lorraine (1569–73), Cardinal de Guise from 1553; Nicolas de Pellevé (1562–92), cardinal from 1570; Jacques Davy, Cardinal du Perron (1606–18); Langue de Gergy (1730–53), first biographer of Marie Alacoque and member of the French Academy; Paul d’Albert (1753–88), Cardinal de Luynes after 1756 and member of the French Academy; Loménie de Brienne (1788–93), minister of Louis XVI,
cardinal in 1788, and who during the Revolution swore to the civil constitution of the clergy but refused to consecrate the first constitutional bishops, was in 1791 declared a traitor, his titles withdrawn and his bones exhumed. The last of the bishops of Toulouse to become constitutional Bishop of Toulouse, was twice imprisoned by the Jacobins and died in prison of apoplexy; Anne, Cardinal de la Fare (1821–9), cardinal in 1823; Victor Felix Bernadou (1867–91), cardinal in 1888.

The Archdiocese of Sens, which perhaps became a metropolitan see at the middle of the fifth century, until 1622 numbered seven suffragans: Chartres, Auxerre, Meaux, Paris, Orléans, Nevers, and Troyes; the Diocese of Bethlem at Clamecy (see NEVERS) was also dependent on the metropolitan see of Sens. In 1822 Paris having been raised to a metropolitan see, the Sees of Chartres, Orléans, and Meaux were separated from the Archdiocese of Sens. As indemnity the abbey of Mont Saint-Martin in the Diocese of Cambrai was united (1688) to the archiepiscopal revenue.

II. DIOCESE OF AUXERRE.—The "Gestes des évêques d'Auxerre," written about 875 by the canons Rainogala and Alagus, and continued later down to 1278, gives a list of bishops which, save for one detail, Mgr Duchesne regards as accurate; but the chronological data of the "Gestes" seem to him very arbitrary for the period prior to the seventh century. No other church of France glorifies in a similar list of bishops. As for the archives, or registers of the Middle Ages this multiplicity of saints was remarkable. St. Peregrinus (Pélérin) was the founder of the see; according to the legend, he was sent by Sixtus II and was martyred under Diocletian in 303 or 304.

After him are mentioned without the possibility of certainly fixing their dates: St. Marcellianus, St. Valerianus, St. Heliandus, St. Stetricus (d. 418), who had been ordained deacon and tonsured by St. Heliandus and who thus affords the earliest example of ecclesiastical tonsure mentioned in the religious history of France; the illustrious St. German of Auxerre (q. v.; 418–45); St. Elladius; St. Fraterius; St. Censarius, to whom about 475 the priest Constantius sent the Life of St. Germain; St. Ursus; St. Theodosius, who assisted in 511 at the Council of Orléans; St. Gregory; St. Optatus; St. Droctovaldis; St. Eleutherius, who assisted at four Councils of Orléans between 535 and 549; St. Thomas; St. Ambrose; St. Amandus; St. Wilhelmus; 573–605), uncle of St. Louis, Archbishop of Sens; St. Desiderius (Didier); St. Palladius, who assisted at several councils in 627, 650, and 654; St. Vigilius, who was assassinated about 684, doubtless at the instigation of Gilmer, son of Waraton, mayor of the palace; St. Tetricus (692–707); Venerable Aidulf (perhaps 751–80); Venerable Maurin (perhaps 766–94); Blessed Aaron (perhaps 794–807); Blessed Angelelmus (807–28); St. Heribaldus (829–57), first chaplain of Louis the Pious, and several times given ambassadorial charges; St. Abbo (857–69); Blessed Christian (900–71); Ven. Wibaldus (854–87). Hildeswig, widow of the Picts, had in her possession the relics of St. German; St. Geran (909–14); St. Betto (933–61); Ven. Guy (933–96); Bl. John (997–998); Ven. Humbaud (1095–1114), drowned on the way to Jerusalem; St. Hugues de Montaigu (1116–1136), a friend of St. Bernard; Bl. Hugues de Mâcon (1137–51), Abbot of Pontigny, often charged by Eugene III with adjusting differences and settling border in monasteries; Ven. Alanus (1152–67), author of a life of St. Bernard; Ven. Guillaume de Toucy (1167–81), the first French bishop who went to Rome to acknowledge the authority of Alexander III.

Among later bishops may be mentioned: Hugues de Fleury (d. 1233–1239), known as the "hammer of heretics" for the vigour with which he sought out in his diocese the sects of the Albigeneses and the "Capitâtes"; Guillaume de Segnielay (1207–20), who took part in the war against the Albigeneses and in 1220 became Archbishop of Paris; Ven. Bernard de Sully (1234–44); Guy de Mello (1247–70), who was proclaimed a heretic by Alexander III; Bl. Charles de Sacy against Manfred; Pierre de Mornay (1296–1306), who negotiated between Boniface VIII and Philippe le Bel and in 1304 became chancellor of France; Pierre de Cros (1349–51), cardinal in 1350; Philippe de Lenoncourt (1560–62), cardinal in 1588; Philibert Babou de la Bourdaisière (1562–70), cardinal in 1561; the Hellenist Jacques de Biebot (1578); Bl. Robert of the works of Plutarch and Diodorus Siculus, tutor of Charles IX, grand almoner of Charles IX and Henry III; Charles de Caylus (1704–54), who made his diocese a centre of Jansenism and whose works in four volumes were condemned by Rome in 1754. The Cathedral of St. Peter of the Sens, founded in the Carolingian period, rebuilt under Louis VII and Philip Augustus, is regarded by several archeologists as the most ancient of pointed style churches. When in 1241 the Dominicans brought to Sens the Crown of Thorns which St. Louis had obtained from Baldwin II, the king went at the head of a procession to within five leagues of Sens, took the relic, and with his brother Robert entered the city barefoot and deposited the relic in the metropolitan church until the Sainte Chapelle of Paris was built to receive it. The cathedral of Auxerre, completed in 1178, contains numerous sculptures in the Byzantine style. The Diocese of Sen and Auxerre contained illustrious Abbeys; for that of Ferrières, located in a region which now depends on the Diocese of Orléans, see Ferrières. The Abbey of St-Pierre le Vif dates from the sixth century, but M. Maurice Prou has proved that the diploma of Clovis and the testament of "Queen" Theodeclinde, in the archives of the monastery, lack authenticity. The Théodeclinde who founded the monastery was not the daughter of Clovis but his granddaughter, the daughter of Thierry first king of Austrasia. The schools instituted by Rainard, Abbot of St-Pierre le Vif, were celebrated during the Middle Ages. The Abbey of St. Columba, the great primitive saint of the City of Lyons, was founded about 590. Her "Passion" dates beyond doubt from the end of the sixth century, in the time of Bishop St. Lupus, who translated the relics of St. Columba to the monastery church. It is probable that her martirolym took place in the time of Clovis II, when the abbey had been allowed to Rimini, Barcelona, and Cordova. The Acts of the martyrdom of Sts. Sanctian, Augustine, and Beata, companions of St. Columba, seem to date from the end of the eighth century or the beginning of the ninth century. In the Abbey of St. Columba, whose third church was consecrated 23 April 1164, by Alexander III, were buried Rainard, King of France and Richard, Duke of Burgundy. The Abbey of St-Germain de Daxerour, founded in 422 by the bishop St. Germain, in honour of St. Maurice, took the name of St. Germain when it was rebuilt by Queen Clotilde about 500. In 850 Abbot Conrad, brother-in-law of Charles the Simple, had a relic of St. Germain among the relics in which were deposited many bodies of saints. Urban V was Abbot of St-Germain before becoming pope; King Charles VI of France did not disdain the honour of seeing his name inscribed among those of the monks. The crypts were ravaged by the Calvinists in 1567. The abbey followed the Benedictine rule; it was twice reformed, from 998–9 by St. Mayeul of Cluny and his disciple Heldricle, and in 1029 by the Benedictines of St-Maur.

The Abbey of St-Edmond of Pontigny, the second daughter of Citeaux, was founded in 1114 by Thibaud the Great, Count of Champagne. Hugh, Count of Mâcon, one of the first components of St. Bernard, was the first abbot. Louis VII, King of France, was its benefactor. St. Thomas Becket took refuge at Pontigny before seeking shelter at
In the thirteenth century Stephen Langton and later St. Edmund, Archbishop of Canterbury, had built the Benedictine abbey of St. Michel at Tonnerre. The abbey was founded about 800 on the site of a hermitage dating from the time of Clovis I; it was restored about 980 by Milo, Count of Tonnerre. In the fifteenth century Cardinal Alain, legate of Calistus III, numbered it among the twelve most illustrious abbots of Gaul. The papal legation of Avalon, now in the Diocese of Sens, and formerly dependent on the Diocese of Autun, possesses the celebrated monastery of Véselay. It was founded about 880 under the protection of Christ and the Blessed Virgin by Gerard, Count of Roussillon and his wife, Bertha; Gerard declared the abbey dependent on the Holy See as legate of St. Louis of Toulouse, pope, Nicolas I in 887 and Charles the Bald in 898 confirmed the donation. Eudes, the first abbot, offered hospitality to John VIII, who in 879 consecrated the first church of the monastery. The Norman invasions laid waste the monastery, but it was restored under Abbot Geoffroy, installed in 1037. Under this abbot the cult of St. Magdalen appeared for the first time at Véselay; a letter of Leo IX (1050) shows that the name of St. Magdalen was part of the official title of the abbey.Mgr. Duchesne has shown that the monks of Véselay, at this date, constructed a first account and the old church of St. Maximin under Magdalen, at St. Maximin in Provence, had been opened and their bodies removed to Véselay; shortly afterwards a second account relates that there was taken away only the body of St. Magdalen. For two centuries the account of the monks of Véselay was accepted; Buls of Lucius III, Urban III, and Clement III confirmed the statement that they possessed the body of St. Magdalen. The tomb of the saint was visited in the twelfth century by a host of illustrious pilgrims; "All France\", writes Hugo of Pothiers, "seems to go to the solemnities of the Magdalen."

In 1096 Abbot Artaud, who was later assassinated, had begun the construction of the Basilica of the Madeleine, which was dedicated in 1104 by Paschal II; his successor, Renaud de Semur, later Archbishop of Lyons, completed it, raised it from its ruins after the great fire of July, 1130, and also built the abbatial château. Alberic, a monk of Cluny, named abbot of Véselay in 1122, built the nave, choir, and narthex, or church of the catherineums, the doorways of which have marvellously wrought arcivoltas and which was blessed by Innocent II in 1132 during his sojourn at Véselay; he died a cardinal and Archbishop of Ostia. Under Abbot Pontius of Montboisier, a former monk of Cluny, the abbey emancipated itself from Clunian rule, declared its autonomy as against the claims of the bishops of Autun, and victoriously resisted the encroachments of the counts of Nevers. The second crusade was preached in 1146 by St. Bernard in the abbatial château amid such enthusiasm that the assisants tore their garments to make a crusade and distribute them to the crowd. Guillaume IV of Nevers sought to be reigned on the monks of Véselay, and his provost, Lébard, defying excommunication, forced the monks to take flight, but in 1186 Louis arranged a peace between the Comte de Nevers and Abbott Guillaume de Mello. On Pentecost, 1186, St. Thomas à Becket from the pulpit of Véselay pronounced excommunication against the clerics who, to gratify King Henry II of England, had violated the rights of the Church. Louis VII came himself to Véselay at Epiphany, 1187, to celebrate the reconciliation between the monks of Véselay and Count Guillaume IV, and in payment of his crimes Guillaume IV set out for the Holy Land where he died in 1188.

Under the rule of Abbot Girard d'Arey (1171-96), Philip Augustus and Richard Coeur de Lion met at Véselay in July, 1190, to arrange for the third crusade. In place of the Romanesque apse burnt in 1165, Girard had built the choir to-day admired as one of the most beautiful specimens of Burgundian architecture and falsely attributed to Abbot Hugh, his successor. St. Louis came to Véselay in 1267 for a solemn feast organized by the monks for the recognition of the relics of St. Mary Magdalen at which Simon de Brion, the future Martin IV, represented St. Louis as legate of the Holy See at the abbey of St. Mary Magdalen at Véselay. This benevolence of the kings of France and the constant menace which the abbey endured from the counts of Nevers led the monks of Véselay and the pope to accept the act whereby Philip III in 1268 declared himself protector and guardian of the Abbey of St. Mary Magdalen at Véselay and allowed the abbot to be taken prisoner with John II of France at the battle of Poitiers, occupied himself after two years of captivity in England with fortifying the monastery against an English attack; he rendered it impregnable and in gratitude Charles V made him a member of the royal council. The claims put forth by the Dominicans of Provence, beginning in 1279, that they possessed the body of St. Mary Magdalen injured the prestige of Véselay during the fourteenth and fifteenth centuries. In 1538 a Bull of secularization sought from Paul III by Francois I and the monks themselves transformed the abbey into a parish church. Odet de Chatillon, brother of Coliny and Abbot of Véselay, subsequently became a Calvinist. The Huguenot masters of Véselay converted the Madeleine into a storehouse and stable and burned the relics. During the Revolution the ancient monastery buildings were sold at auction. In 1876 the future Cardinal Bernardou, Archbishop of Sens, determined to restore the pilgrimage of St. Mary Magdalen at Véselay and brought thither a relic of the saint which Martin IV had given to the Chapter of Sens in 1281.

A certain number of saints are honoured with a special cultus or are connected with the history of the diocese: St. Jovinian, martyr, lector of the church of Auxerre (third century); Sts. Sanctian, Augustine, Felix, Aubert, and Beata, Spaniards, martyred at Sens; St. Sidronius (Sidroine), possibly martyred under Aurelian, whose martyrdom is considered by some as authenticated; St. Martial, supposed to have been martyred at Auxerre about the end of the third century; Sts. Magnentia and Maxima, virgins consecrated by St. Germain (fifth century); St. Mamertinus, Abbot of St. Germain (fifth century); the priest St. Marien (sixth century); St. Romain, d. at the beginning of the sixth century in the abbey, which he founded in Auxerre, and in which St. Mauritius learned there to carry on a vision of the death of St. Benedict; St. Severin, d. at Château Landon, Diocese of Sens (506); St. Eligius (588-659), who administered the monastery of St. Columba before becoming Bishop of Noyon; St. Mathurin, a priest of Sens, d. 688; St. Paternus, a Benedictine, natives of Cluny, in the abbey at St-Pierre le Vi, and assassinated at Serges (eighth century); St. Robert, Abbot of Tonnerre, founder of the Abbey of Molènes and of the Order of Citeaux (1018-1110); St. Théerry, Bishop of Orléans, reared at the monastery of St-Pierre le Vi, and d. in 1027 at Tonnerre; Bl. Alpaise, of Tonnerre (end of twelfth century); St. Guillaume, Archbishop of Bourges, previously a monk at Pontigny (d. in 1209). Jean Lebeuf (1857-1790), who in 1743 wrote the "Mémoire contenant l'histoire ecclésiastique et civile d' Auxerre", was a member of the Academy of Inscriptions. The chief pilgrimage of the Diocese of Sens are: Notre Dame de Bellevue at Tronchay; Notre Dame de Champrond at Vienne; the tomb of St. Columba at Sens; the altar of Sts. Savinian and Potentian at Sens, which according to legend is the stone on which St. Savinian fell. Before the application of
the Associations’ Law of 1901, there were in the Diocese of Sens: Augustinians of the Assumption; Lazarists; Oblates of St. Francis de Sales; Missionaries of the Sacred Heart of Jesus and of the Immaculate Heart of Mary founded by Fr. Muard (1800–54) with mother-house at Pontigny; and Benedictines of the Sacred Heart of Jesus and of the Immaculate Heart of Mary founded at “La Pierre qui Vire” by the same Fr. Muard. Two congregations of women originated in the diocese: the Sisters of Founder founded in 1819 with mother-house at Sens; the Sisters of Ste-Colombe. In 1828, Abbé Grapinet established a community at Ste-Colombe. At the end of the nineteenth century the religious congregations directed in the Diocese of Sens: 53 infant schools, 4 orphanages for boys, 8 orphanages for girls, 2 workrooms, 2 organizations of rescue, 5 houses of religious for the care of the sick in their homes, 16 hospitals or infirmaries. In 1905 (end of the period of the Concordat) the diocese numbered 334,668 inhabitants, 49 parishes, 440 filial churches, and 4 vicariates remunerated by the State.

_Sens, Councils of.—A number of councils were held at Sens. The first, about 600 or 601, in conformity with the instructions of St. Gregory the Great, especially advised a war against heresy. St. Columbanus refused to attend it because the question of the date of Easter, which was to be dealt with, was dividing Franks and Bretons. A series of councils, most of them concerned with the privileges of the Abbey of St. Pierre-le-Vif, were held in 657, 669 or 670, 846, 850, 852, 853, 862, 863, 986, 996, 1048, 1071, and 1140. The council of 1140, according to the terms of the letter issued by Archbishop Henri Sanglier, seems to have had no object but to impart solemnity to the exposition of the relics with which he enriched the cathedral; but the chief work of this council, which included representatives from the Frankish and Roman dioceses, and at which St. Martin of Tours was present, was the condemnation of Abelard’s doctrine. The latter having declared that he appealed from the council to Rome, the bishops of both provinces, in two letters to Innocent II, insisted that the condemnation be confirmed. Dr. Martin Deutsch has placed this council in 1141, but the Abbot Vacandar has proven by the letter from Peter the Venerable to Héloïse, by the “Continuatio Premonstratensis”, by the “Continuatio Valcellensis”, and the list of the priors of Clairvaux, that the date 1140, given by Baroniun, is correct. The council of 1198 was concerned with the Manichean sect of Poplicani, spread throughout N’Mary, and in which the桌上 Nevers and the Abbot of St-Martin de Nevers were said to have belonged. After the council Innocent II charged his legate, Peter of Capua, and Eudes de Sully, Bishop of Paris, with an investigation. Councils were also held in 1216, 1224 (for the condemnation of a book by Scotus Erigena), 1239, 1253, 1269, 1290, 1320, 1400, 1468; most of them for disciplinary measures.

GEORGES GOTAU.

Sentences (L. _sententia_, judgment), in canon law the decision of the court upon any issue brought before it. A sentence is definitive or interlocutory. It is definitive or final, when it defines the principal only, or question in controversy. A definitive sentence is absolute, if it acquits the accused; condemnationary, if it declares him guilty; declaratory, if it assert that the accused committed a crime, the penalty of which is incurred _ipsa facto_. An interlocutory sentence is pronounced during the course of a trial to settle some incidental point arising. It is of two kinds: merely incidental; or related to an issue of the case. _De sermo_, sentence pronounced if a definitive sentence, affecting the main cause at issue, e.g., a declaration that the court is incompetent. A final sentence must be definitive, unconditional, given by the judge in court, in the presence of the parties concerned or their agents, in writing or dictated to the clerk to be inserted in the minutes of the trial; it must be in keeping with the charge or complaint, stating, if condemnationary, the sanction of law for the punishment imposed and once pronounced, it cannot be revoked by the same court. Interlocutory sentences are given without special formalities, and if merely incidental, must be recorded by the judge who issues them (c. 4202).

_Acquiescence, De sermo, Doctrinae-Memoriam, Canonical Procedure, etc._

ANDREW B. MEEHAN.

_Sépt-Fons, Notre-Dame de Saint-Lieu, in the Diocese of Moulins in France, was founded (1132) by Guichard and Guillaume de Bourbon, of the family of Bourbon-Lancy, which gave kings to France, Italy, and Spain; this gave rise to the name “Royal Abbey.” Thanks to the liberality of the founders, and to the energy of the abbot and community, the church was soon completed and dedicated to the Blessed Virgin; the monastery, with all the regular structures prescribed by the rule, was completed at the same time. After exhibiting generosity at the beginning, their founders and friends seem to have neglected them, for the monks found the burden of poverty so heavy, that they were even compelled to sell part of the lands to supply the necessities of life. Until the Reform of 1663, the number of religious never exceeded 15. They were much encouraged, in their early days of trial, by a visit of St Bernard (1138). At first the monastery was only known under the name of “Notre-Dame de Saint-Lieu”; it was only after a century that “Sépt-Fons” derived either from seven fountains or from seven canals leading water to, the Abbey. Adrian III took the monastery under his protection in 1158; and Alexander III ratified the foundation by Bull in 1164.

After the middle of the fifteenth century the incessant wars did not spare the abbey; frequently the religious were forced to leave it and see it despoiled of its goods, and its buildings demolished. Inevitably, under such circumstances, relaxation entered the monastery. In 1556 Eustache de Beaufort, at the age of 20 years, was made Abbot; there was no improvement; but after that time he resolved on a complete change. His religious—there were then but four—refusing to accept the new rule, were each granted a pension and dismissed. It was not long before a number of novices presented themselves for admission. They were sent to La Trappe, to make their religion, and then took the vows of the Abbey of Rancé. Dom Eustache also visited the celebrated reformer for counsel and advice, in 1687. After this, with the royal aid, Sept-Fons was rebuilt on a grander scale and prosperity continued until the monastery was consecrated at the Revolution, 1791. In 1845, when the Trappists of the Abbey of LaCharité were ordered to abandon their monastery, their Abbot—Dom Stanislas, purchased the ruins of the ancient Abbey

GEORGES GOTAU.
of Sept-Fons, removed his community thither, and rebuilt the church and regular structures. In 1847 he was elected vicar-general of the Congregation of the Ancient Reform of Our Lady of La Trappe, which followed the constitutions of the Abbots of Bec. In 1848, when the two congregations were united in one order, the then Abbots of Sept-Fons, Dom Sebastian Wyatt, was elected first abbot-general, and, a little later, Abbé of Citeaux. Its most noted foundations are N.-D. de la Consolation near Peking, China, and N.-D. de Maristella, Estado de S. Paulo, Brazil, N.-D. de Saint Lieu (Moulins, 1846); La Trappe, by a Sept-Fons Trappist (Paris, 1870); Sept-Fons-Pontétourne, now the monastery of Upper Panonnia, 1850; MAUPERTUIS, Histoire de la reforme de l'Abbaye de Sept-Fons (Paris, 1703); MARIQUE, Annales cisterciens (Lyons, 1842); GIBOUCHE, Acta IV; Brossa, Annales d'Aiguebelle (Vienna, 1863); TALLOM, Notices sur les monastères de l'ordre de la Trappe (Paris, 1855); FANNENSCHMIDT, Illustrirter Gesch. der Trappisten (Paderborn, 1873); URBAIN, Mémoires manuscrits sur N. D. du Gard et N. D. de Sept-Fons (1910); Decretum apostolicum qui constituit sunt duas congregationes B. M. de Trappe in Gaula (1847).

EDMOND M. OBERECHT.

Septimius Severus, founder of the African dynasty of Roman emperors, b. at Lesbos Magna in Africa, 11 April, 146; d. at York, England, 4 February, 211. Severus came from a family that had become Roman citizens. In his career as an official at Rome and in the provinces he had been favoured by the Emperor Marcus Aurelius. In the reign of Commodus he was appointed governor of the fourth province which gave him the opportunity to become acquainted with affairs in the East. He married Julia Domna, a member of a priestly family of Emesa, who was the mother of Caracalla and Geta. When the Emperor Pertinax was killed by the mutinous soldiers at Rome, Severus, who was the governor of Upper Panonnia, was proclaimed emperor at Carnuntum by the legions on the Danube. The fact that the leaders of the troops in the eastern and western parts of the empire were at once ready to follow him is evidence that Severus himself had shared in the conspiracy against the dead emperor, Severus had clear political vision, still he cared nothing for the interests of Rome and Italy. He nourished within himself the Punic hatred of the Roman spirit and instinct and furthered the provincials in every way. He was revengeful and cruel towards his opponents, and was influenced by a blindly superstitious belief in his destiny as written in the stars from the moment he was proclaimed emperor. He was the first Roman emperor on the model of an Oriental despotism. The troops in the East had proclaimed as emperor the capable governor of Syria, Pescennius Niger; the legions in Britain, the governor Claudius Albinus. On the other hand the soldiers in Italy and the senators came over to the side of Severus; Julianus, the prefect of the Praetorian Guard, was executed. Severus rested his power mainly upon the legions of barbarian troops; he immobilized them upon the coinage, granted them, besides large gifts of money and the rights of marriage, a great number of privileges in the military service. Cities living on the borders were able to force Rome to do their will. The Praetorian Guard was made into a troop of picked men from the provinces; in the first years of the emperor's reign his commander was the shrewd Ceasarius Fulvius Plautianus, who exerted a great influence over Severus. After making careful preparation for the decisive struggle, and having secured his opponent in Britain by the bestowal of the title of Cæsar, Severus entered upon a campaign against his dangerous rival Niger. He defeated Niger's subordinate Asellius Eæmusius at Cythericus and Niger himself at Vesontio. He then advanced into Britannia, established the new Province of Orchoene and the new legion called the Parthian. He divided several old provinces into smaller administrative districts. After

this, while at Antioch, he declared war against Albinus and returned to Europe by forced marches. In 197 the decisive battle was fought with Albinus near Lyons in Gaul. Albinus had under him the legions of Britain, Gaul, Germany, and Spain, yet in spite of severe losses Severus was the conqueror. Albinus was killed, his adherents were utterly destroyed in a bloody civil war, and their property was confiscated for the emperor. The common soldiers received the right of entering the Senate and the equestrian order. For the greater security of the imperial power the Parthian legion was garrisoned upon Mount Alba near Rome. Severus went in triumphal arch that still exists, and strengthened his hold on his hordes of mercenaries by constant gifts of money and the bestowal of favours detrimental to military discipline. The Senate was replaced by the Consistorium principis, one of the members of which was the Papianus. Severus himself suffered for years from rheumatic gout; Severus went to Britain, where trouble had broken out, in order to give occupation to his sons, who were at deadly enmity with each other. He restored Hadrian's Wall, and strengthened again the Roman power in Britain. SCHILLER, Gesch. der röm. Kaiserzeit, I (Gotth., 1833); RAVELLE, La religion à Rome sous les Sévères (Paris, 1888); NEUMANN, Der Kaiserring und die allegorische Kirche (Leipzig, 1899); DE CAVALLERI, La Passio SS. KARL HÖRBER.

Septuagesimina (Lat. septuagesima, the seventieth) is the ninth Sunday before Easter, the third before Lent, known among the Greeks as "Sunday of the Prodigal" from the Gospel, Luke, xv, which they read on this day, called also Dominica Circumdedentui by the Latins, from the first word of the Introtit of the Mass. In liturgical literature the name "Septuagesima" occurs in the Vulgate and in the Greek Gospels. Why the day (or the week, or the period) has the name Septuagesima, and the next Sunday Sexagesima, etc., is a matter of dispute among writers. It is certainly not the seventieth day before Easter, still less is the next Sunday the sixtieth, fifteenth, etc. Amarius, "De ecc. off," I, I, would make the Septuagesima mystically represent the Babylonian Captivity of seventy years, would have it begin with this Sunday on which the Sacramentaries and Antiphonaries give the Introtit "Circumdedentui me undique," and end with the Saturday after Easter, when the Church celebrates the "Edit fecit Dominus ponit lumen." Perhaps the word is only one of a numerical series: Quadragesima, Quinquagesima, etc. Again, it may simply denote the earliest day on which some Christians began the forty days of Lent, excluding Thursday, Saturday, and Sunday from the observance of the fast.

Septuagesima is to-day inaugurated in the Roman Martyrology by the words: "Septuagesima Sunday, on which the canticle of the Lord, Alleluja, ceases to be said". On the Saturday preceding, the Roman Breviary notes that after the "beneficiatus" of Vespers two Alleluiae are to be added, that thereafter it is to be omitted till Easter, and that the place "Laus tibi Domine" is to be said at the beginning of the Office. Formerly the farewell to the Alleluia
was quite solemn. In an Antiphony of the Church of St. Cornelius at Compìgne we find two special antiphons. Spain had a short Office consisting of a hymn, chapter, antiphon, and sequence. Missals in Germany up to the fifteenth century had a beautiful sequence. In French churches they sang the hymn of the Lamentations (Gueranger, in subsec. 14), which was well-known among the Anglo-Saxons (Rock, IV, 69). The "Te Deum" is not recited at Matins, except on feasts. The lessons of the first Nocturn are taken from Genesis, relating the fall and subsequent misery of man and thus giving a fit preparation for the Lenten season. In the Mass of Sunday and ferias the Gloria in Excelsis is entirely omitted. In all Masses a Tract is added to the Gradual.

Francis Mershman.

Septuagint Version, the first translation of the Hebrew Old Testament, made into popular Greek before the Christian era. This article will treat of: I. Its antiquity; II. Its text; III. Its origin; IV. Its value; V. Its critical value; VI. Its language.

I. Historical Importance of the Septuagint. The importance of the Septuagint Version is shown by the following considerations: A. The Septuagint is the most ancient translation of the Old Testament and consequently is invaluable to critics for understanding and correcting the Hebrew text, the latter, such as it has come down to us, being the text established by the Masoretes in the sixth century a. d. Many textual corrections, additions, omissions, or transpositions must have crept into the Hebrew text between the third and second centuries B.C. and the sixth and seventh centuries of our era; the MSS. therefore, which the Seventy had at their disposal, may in places have been better than the Masoretic MSS. B. The Septuagint Version accepted first by the Alexandrian Jews, and afterwards by all the Greek-speaking countries, helped to spread among the Gentiles the idea and the expectation of the Messias, and to introduce into Greek the theological terminology and concepts that made it possible to propagate the Gospel of Christ.

C. The Jews made use of it long before the Christian era, and in the time of Christ it was recognized as a legitimate text, and was employed in Palestine even by the rabbis. The Apostles and Evangelists utilized it also and borrowed Old Testament citations from it, especially in regard to the prophecies. The Fathers and the other ecclesiastical writers of the early Church drew upon it, either directly, as in the case of the Greek Fathers, or indirectly, like the Latin Fathers and writers and others who employed Latin, Syriac, Ethiopian, Arabic and Gothic versions. It was held in high esteem by all, some more inspired. Consequently, a knowledge of the Septuagint helps to a perfect understanding of these literatures.

D. At the present time, the Septuagint is the official text in the Greek Church, and the ancient Latin Versions used in the Western Church were made from it. The earliest translation made in the Latin Church, the Vetus Itala, was directly from the Septuagint: the meanings adopted in it, the Greek names and words employed (such as: Genesis, Exodus, Leviticus, Numbers ['Apdous], Deuteronomy), and, finally, the pronunciation given to the Hebrew text, passed very frequently into the Itala, and from it, at times, into the Vulgate. The Vetus Itala is especially so in the Psalms, the Vulgate translation being merely the Vetus Itala corrected by St. Jerome according to the hexaplar text of the Septuagint.

II. Origin of the Septuagint. A. According to Tradition. The Septuagint Version is first mentioned in a letter of Aristaeus to his brother Philoctates. This letter is not much esteemed, and the date of the version. Ptolemy II Philadelphus, King of Egypt (284-247) had recently established a valuable library at Alexandria. He was persuaded by Demetrius of Phalarus, chief librarian, to enrich it with a copy of the sacred books of the Jews. To win the favor of Ptolemy, the high priest of Egypt, Aristaeus, an officer of the royal guard, an Egyptian by birth and a pagan by religion, emancipated 100,000 slaves in different parts of his kingdom. He then sent delegates, among whom was Aristaeus, to Jerusalem to ask Eleazar, the Jewish high-priest, to provide him with a copy of the Law, and Jews capable of translating it into Greek. The embassy was successful: a richly ornamented copy of the Law was sent to him and seventy-two Israelites, six from each tribe, were deputed to go to Egypt and carry out the wish of the king. They were received with great honour and during seven days astonished everyone by the wisdom and learning exhibited. Ptolemy then assigned to each of them which they were asked; then they were led into the solitary island of Pharos, where they began their work, translating the Law, helping one another and comparing their translations in proportion as they finished them. At the end of seventy-two days their work was completed. The translation was approved by the presence of the Jewish priests, princes, and people assembled at Alexandria, who all recognized and praised its perfect conformity with the Hebrew original. The king was greatly pleased with the work and had it placed in the library. The version of a legendary character, Aristaeus's account gained credence; Aristobulus (170-150), in a passage preserved by Eusebius, says that "through the efforts of Demetrius of Phalarus a complete translation of the Jewish legislation was executed in the days of Ptolemy"; Aristaeus's story is repeated almost verbatim by Flavius Josephus (Ant. Jud., XII, ii), and substantially, with the omission of Aristaeus's name, by Philo of Alexandria (De vita Mosis, II, vi). The letter and the story were accepted as genuine by many Fathers and ecclesiastical writers till the beginning of the sixteenth century; other details serving to emphasize the extraordinary origin of the version were added to Aristaeus's account. The seventy-two interpreters were inspired by God (Tertullian, St. Augustine, the author of the "Cohortatio ad Graecos" [Justin?], and others); in translating they did not consult with one another, they had even been shut up in separate cells, either singly, or in pairs, and their translations when compared were found to agree entirely both as to the sense and the expressions employed with the original text and with each other (Cohortatio ad Graecos, St. Irnenaus, St. Clement of Alexandria). St. Jerome rejected the story of the cells as fabulous and untrue ("Pref. in Pentateuchum" Adv. V. Rufinus, II, xxxv), likewise the alleged inspiration of the Septuagint. Finally the seventy-two interpreters translated, not only the five books of the Pentateuch, but the entire Hebrew Old Testament. The authenticity of the letter, called in question first by Louis Vivès (1492-1540), professor at Louvain and D. S. Augustin, made by St. Jerome in a whole letter of Jos. Scaliger (d. 1609), and especially by H. Hody (d. 1705) and Dupin (d. 1719) is now universally denied.

Criticisms. — (1) The letter of Aristaeus is certainly apocryphal. The writer, who calls himself Aristaeus and says he is a Greek and a Jew, rarely gives us that he is a genuine Jew; he recognizes the God of the Jews as the one true God; he declares that
God is the author of the Mosaic law; he is an enthusiastic admirer of the Temple of Jerusalem, the Jewish land, and the people, all of whom are clearly arrogant assertions; it is difficult, moreover, to admit that the Alexandrian Jews adopted for their public worship a translation of the Law, made at the request of a pagan king; lastly, the very language of the Septuagint Version betrays in places a rather imperfect knowledge both of Hebrew and of the city of Palestine and corrections more closely with the vulgar idiom used at Alexandria. Yet it is not certain that everything contained in the letter is legendary, and scholars ask if there is not a historic foundation underneath the legendary details. Indeed it is likely — as appears from the peculiar character of the language, as well as from what we know of the origin and history of the version — that the Pentateuch was translated at Alexandria. It seems true also that it dates from the time of Ptolemy Philadephus, and therefore from the middle of the third century B.C. Even Aristotle's Aristeas, as given in the legendary account (Bratianu, Vigouroux, n. 105) is seems impossible to decide definitely; the Talmudists tell us that the Pentateuch was translated by five interpreters (Sophere, e. c.). History gives us no details, but an examination of the text shows that in general the authors were not Palestinian Jews called to Egypt; and differences of terminology, method, etc., prove clearly that the translators were not the same for the different books. It is impossible also to say whether the work was carried out officially or was merely a private undertaking, as seems to have been the case with Ecclesiasticus; but the different books when translated were soon put together — the author of Ecclesiasticus knew the collection and were received as official by the Greek-speaking Jews.

III. SUBSEQUENT HISTORY. — Recensions. — The Greek version, known as the Septuagint, welcomed by the Alexandrian Jews, spread quickly throughout the rest of the Hellenistic countries in which it was utilized by different writers, and supplanted the original text in liturgical services. Philo of Alexandria used it in his writings and looked on the translators as inspired Prophets; it was finally received even by the Jews of Palestine, and was employed notably by Josephus, the great Palestinian Jew, as the basis of his works. The writers of the New Testament made use of it, borrowing from it most of their citations; it became the Old Testament of the Church and was so highly esteemed by the early Christians that several writers and Fathers declared it to be inspired. The Christians had recourse to it constantly in their controversies with the Jews, who soon recognized its imperfections, and finally rejected it in favour of the Hebrew text or of more literal translations (Aquila, Theodotion).

Critical corrections of Origen, Lucian, and Hegesippus. — On account of its diffusion among the hellenizing Jews and early Christians, copies of the Septuagint were multiplied; and as might be expected, many changes, deliberate as well as involuntary, crept in. The necessity of restoring the text as far as possible to its pristine purity was felt. The following is a brief account of the principal attempts at correction.

A. Origen reproduced the Septuagint text in the fifth column of his Hexapla; marking with obelisks the texts that occurred in the Septuagint without being in the original; adding according to Theodotion's version, and distinguishing with asterisks and metoboli the texts of the original which were not in the Septua-
The most celebrated MSS. of the Septuagint known are the Vatican, "Codex Vaticanus" (fourth century); the Alexandrian, "Codex Alexandrinus" (fifth century), now in the British Museum, London; and that of Sinai, "Codex Sinaiticus" (fourth century), published an edition corrected in accordance with the Hebrew; this retained the name of "Sinaiticus," after its author. In the time of St. Jerome it was in use at Constantinople and Antioch. C. Finally, Hosius, an Egyptian bishop, published about the same time, a new recension, employed chiefly in Egypt.

Manuscripts.—The three most celebrated MSS. of the Septuagint known are the Vatican, "Codex Vaticanus" (fourth century); the Alexandrian, "Codex Alexandrinus" (fifth century), now in the British Museum, London; and that of Sinai, "Codex Sinaiticus" (fourth century), published by Tischendorf in the convent of St. Catherine, on Mount Sinai, in 1844 and 1849, now in part at Leipzig and in part at St. Petersburg; they are all written in uncial and capitals. The "Codex Sinaiticus" is the purest of the three; it generally follows the more accurate text, while the "Codex Alexandrinus" borrows much from the hexaplar text and is changed according to the Masoretic text. (The "Codex Vaticanus" is referred to by the letter B; the "Codex Alexandrinus" by the letter A, and the "Codex Sinaiticus" by the first letter of the Hebrew alphabet "Aleph" by G.) The Bibliothèque Nationale in Paris possesses also an important palimpsest MS. of the Septuagint, the "Codex Ephraemi rescriptus" (designated by the letter C), and two MSS. of less value (64 and 118), in cursives, one belonging to the tenth or eleventh century and the other to the thirteenth (Bacces and Vigouroux, 12th ed., n. 109).

Printed Editions.—All the printed editions of the Septuagint are derived from the three recensions mentioned above. A. The editio princeps is the Complutensian or that of Alcalá. It was from Origen's homilies, but the letters printed in 1516, 1518, and 1524, it was not published till it appeared in the Polyglot of Cardinal Ximenes in 1520. B. The Aldine edition (begun by Aldus Manucius) appeared at Venice in 1518. The text is purer than that of the Complutensian edition, and is closer to Codex B. The editor says he collated another MS. but does not specify it. It has been reprinted several times. C. The most important edition is the Roman or Sixtine, which reproduces the "Codex Vaticanus" almost exclusively. It was published under the direction of Cardinal Caraffa, with the help of various savants, in 1568, by the authority of Sixtus V. to assist the religious who were preparing the Latin Vulgate edition ordered by the Council of Trent. It has become the textus receptus of the Greek Old Testament and has had many new editions, such as that of Holmes and Pearson (Oxford, 1798-1827), the seven editions of Tischendorf, which appeared at Leipzig between 1850 and 1897, the last two published after the death of the author and revised by Neale, the four editions of Swete (Cambridge, 1887-95, 1901, 1909, 1909), etc. D. Grabe's edition was published at Oxford, from 1707 to 1720, and reproduced, but imperfectly, the "Codex Alexandrinus" of London. For partial editions, see Vigouroux, "Dict. de la Bible," 1842 (1843), etc. IV. CRITICAL VALUE.—The Septuagint Version, while giving exactly as to the form and substance the true sense of the Sacred Books, differs nevertheless considerably from our present Hebrew text. These discrepancies, however, are not of great importance and are only matters of interpretation. They may be thus classified: Some result from the translators having had at their disposal Hebrew manuscripts differing from those which were known to the Masoretes; sometimes the texts varied, at others the texts were identical, but they were read in different order. Other discrepancies are due to the translators personally; not to speak of the influence exerted on their work by their methods of interpretation, the translators' different views of the text and their different views on the order of the Masoretes, because they read the texts differently; that was natural, for, Hebrew being written in square characters, and certain consonants being very similar in form, it was easy to confound them occasionally and give an erroneous translation; moreover, their Hebrew was written without any spacing between the various words, they could easily make a mistake in the separation of the words; finally, as the Hebrew text at their disposal contained no vowels, they might supply different vowels from those used later by the Masoretes, and so make their reading of the text at present the Greek text exactly as it was written by the translators; the frequent transcriptions during the early centuries, as well as the corrections and editions of Origen, Lucian, and Hesychius impaired the purity of the text: voluntarily or involuntarily the translators altered the text, with insertions, additions, and omissions to creep into the primitive text of the Septuagint. In particular we may note the addition of parallel passages, explanatory notes, or double translations caused by marginal notes. On this consult Dict. de la Bible, art. crit., and Swete, "An Introduction to the Old Testament in Greek".

LANGUAGE.—Everyone admits that the Septuagint Version was made in popular Greek, the σαρήν διάλεκτον. But is the Greek of the Old Testament a special idiom? Many authorities assert that it is, though they disagree as to its real character. (The "Dict. de la Bible" s. v. Grec biblique,) asserts that it was "the hebraicing Greek spoken by the Jewish community at Alexandria," the popular Greek of Alexandria "with a very large admixture of Hebrewisms." The same dictionary, s. v. Septuagint, mentions that "in the papyri the Greek of the Septuagint is merely the ordinary vernacular Greek, the purest form of the time. Deissmann bases his theory on the perfect resemblance of the language of the Septuagint and that of the papyri and the inscriptions of the same age; hence he believes that it is the Greek of the Septuagint, which at first sight seem to favour the theory of a special language, a hebraicing Greek, are sufficiently explained by the fact that the Septuagint is a Greek translation of Hebrew books.

Serafies (Seraium), Archidioecese of, in Bosnia.

The healthy growth of the Church in Bosnia was blighted and stunted by Arianism and the disturbances caused by the wandering of the nations. Irresolvable, however, was the damage inflicted by the Orientals; to this day for three-fourths of the population are Greek Orthodox, calling themselves Servians, and their religion and language Servian. From the earliest times the Church of Christ opposed the Bogomiles, a branch of the Manicheans, who, varying as to time and place, dress and nomenclature, are well nigh a historical puzzle. They have been called Paulicians, Phaldaites, Encratites, Marcionites, Christopolites, and, after a certain Bulgarian priest, Bogomiles. They were very numerous in Bosnia, as is proven by the great number of Bogomile graves. From 1292 onwards the Franciscan monks, with the regular clergy in attending to the needs of the faithful.

When in 1463 Stephan Tomasevic, the last native sovereign of Bosnia, was taken prisoner by the Turks and decapitated, there were many Catholics who, in order to save their possessions, renounced their faith and became Mohammedans, "now known as 'Begi'." Nearly all the Bogomiles became Mohammedans at the same time, and the few who remained true to their faith were degraded to the position of "rayahs" i.e. serfs possessing no civil rights. The Catholic Church of Bosnia suffered the most severe hardships during the succeeding four centuries. The faithful lost their possessions, were pushed to the rear when permission, build themselves even a hut, much less a church. From 1683 onwards, repeated inhuman oppressions drove them frequently to have recourse to arms, but each time only to make their position worse than before. The Franciscan Friars alone saved the Church in Bosnia. They disguised themselves as Turks and were addressed by the Catholics as wacij (uncle). Often they were compelled to hold services and to bury their dead at night in the woods and caves. They lived in the direst poverty and very many of them became martyrs. The old people instructed the youngest generation to the Scriptures passed on to them from month to month in the catechism, and during Lent the Franciscans examined the pupils. Nearly all Catholics in Bosnia bore a cross tattooed on breast or hand.

The subjection of the Bosnian people to the House of Habsburg marks the beginning of its growth in religion and culture. In the 16th century the European powers charged Austria-Hungary with the military government of Bosnia and Herzegovina, and in 1908 these two countries were declared part of the empire. In 1881 His Apostolic Majesty founded the ecclesiastical province of Sarajevo, and appointed as archbishop J. Statkovic, professor of theology at Agram. Native Franciscans were elevated to the sees of Mostar and Banjaluka. The Society of Jesus took over and has retained charge of the seminary for priests in Sarajevo, which supplies the entire province, and in Travnik conducts a seminary for boys, the gymnasium of which is frequented by pupils of all religions. The Franciscans have two schools for the preparation of the young postulants of the order, while the Sisters of Charity conduct 32 Catholic primary schools.

The Archdiocese of Sarajevo has 180,000 Catholics, with 50 priests and 110 friars.

SERAPHIC ORDER. See FRIARS MINORS, ORDER OF.

Seraphim.—The name, a Hebrew masculine plural form, designates a special class of heavenly attendants of Yahweh's court. In Holy Writ these angelic beings are distinctly mentioned only in Isaiah's description of his call to the prophetic vocation (Isa. 6:2, 3). In a vision of deep spiritual import, granted him in the Temple, Isaías beheld the invisible realities symbolised by the outward forms of Yahweh's dwelling place, of his altar, his ministers, etc. While he stood gazing before the priest's court, there arose before him an august vision of Yahweh sitting on the throne of His glory. On each side of the throne stood mysterious guardian angels, each supplied with six wings: two to bear them up, two veiling their faces, and two covering their feet, now naked, as became priestly service in the presence of the Almighty. His highest servants, they were there to minister to Him in His glory, each calling to the other: "Holy, holy, holy, Yahweh of hosts; all the earth is full of His glory."

These were seraphim, one of whom flew towards Isaiah having in his hand a live coal which he had taken from the altar, and with which he touched and purified the Prophet's lips, that henceforth these might be consecrated to the utterances of inspiration. Such, in substance, is Isaiah's symbolic vision from which may be inferred all that Sacred Scripture discloses concerning the seraphim. Although described under a human form, with faces, hands, and feet (Is., vi, 2, 6), they are undoubtedly existing spiritual beings corresponding to the spiritual personifications as is often asserted by advanced Protestant scholars. Their number is considerable, as they appear around the heavenly throne in a double choir and the volume of their chorus is such that the sound shakes the foundations of the palace. They are distinct from the cherubim who carry veil God, and show the presence of His glory in the earthly sanctuary, whilst the seraphim stand before God as ministering servants in the heavenly court. Their name too, seraphim, distinguishes them from the cherubim, although it is confessedly difficult to obtain from the single word in Isaiah's language all the ideas mentioned a clear conception of its precise meaning. The name is oftentimes derived from the Hebrew verb seraph ("to consume with fire"), and this etymology is very probable because of its accordance with Isa., vi, 6, where one of the seraphim is represented as carrying celestial fire from the altar to purify the Prophet's lips. Many scholars prefer to derive it from the Hebrew noun saraph, "a fiery and flying serpent," spoken of in Num., xxi, 8; Isa., xiv, 29, and the brass image of which stood in the Temple in Isaiah's time (IV Kings, xviii, 4); but it is plain that no trace of such serpentine form is in Isaiah's description of the seraphim. Still less probable are the views propounded of late by certain critics and connecting the Biblical seraphim with the Babylonian Sharrapu, a name for Nergal, the fire-god, or with the Egyptian griffins (serep) which are placed at Beni-Hassan as guardians of graves. The seraphim are mentioned at least twice in the Book of Ezekiel (xii, 3, 2), together with and distinctly from the cherubim. In Christian theology, the seraphim occupy with the cherubim the highest rank in the celestial hierarchy (see CEERUBIM), while in the liturgy (Te Deum; Preface of the Mass) they are represented as repeating the Trisagion exactly as in the Septuagint, 3 times.

Commentaries on Isaiah: KRABERBAUER (Paris, 1887); DELLITZSCH (tr. Edinburgh, 1890); DURM (Gottingen, 1892); BEIN-
Seraph, Bishop of Thmuis in Lower Egypt, date of birth unknown; d. after 362. His parents were Christian and he was educated among the clergy of Alexandria, probably under the direction of St. Athanasius, who always held him in high esteem. After presiding over a monastery for some years, he was consecrated Bishop of Thmuis some time before 343, for in that year he attended the Council of Sardica as a defender of the Nicene Faith. In 355 St. Athanasius sent him and four other Egyptian bishops on an embassy to Emperor Constans (337–61) that they might plead on his behalf, and refute the charges which the Arians had brought against him. Serapion was deprived of his see in 359 by George, the anti-Patriarch of Alexandria, and sent into exile, hence the title "Confessor" conferred upon him by St. Jerome and the Roman Martyrology (21 March). In 364 the same George addressed to him a letter on the death of Arius (P. G. XXV, 685–90) and four dogmatic epistles, of which one was on the Son of God and three on the Holy Ghost (P. G. XXVI, 529–676). Serapion was a man of great purity of life and extraordinary eloquence. St. Jerome calls him a "scholasticus", or scholar, and says that he wrote a treatise against the Jewish heretics, another on the office of bishops and many useful letters to different parties. The work on the Psalms is lost; the treatise on the Manichaeans was published from the editio princeps of Basnage (1728) by Migne (P. G. XL, 599–924) and, with the addition of a newly-discovered fragment, by Schelkle (Bibliotheca sacra, 1854, pp. 479–91). Of his letters there remain: one to a certain bishop Eudoxios, otherwise unknown (P. G. XL, 923–925); a letter to the solitaries of Alexandria on the dignity of the religious life (ibid., 925–42); a fragment of his twenty-third letter (Pitra, Analecta sacra II, xiv), three fragments extant only in Syriac (Pitra, op. cit., IV, 214–5, and on the Father and the Son, first published in 1898 by Wobbermin from MS. 149 of the Convent of Laura on Mount Athos (Texte und Untersuchungen, XXV, 6196), or in the Didascalia (in the Didascalia) or rector. Though some attribute the discovery of this work to Wobbermin its text had already been published in 1894 by Dmitrievskii in the periodical Trudy, of the ecclesiastical academy of Kiev; and by Poulav in the known P. G., (from the same MS. 57). This eucharistic section contains thirty prayers, eighteen of which refer to the Mass, seven to baptism and confirmation, three to Holy orders, two to the anointing of the sick, and one to the burial of the dead. These prayers were arranged in their proper liturgical order by Brightman, and in this order they were published (text and Lat. tr.) by Pitra in his Didascalia, under the title "Sacerdotalis Sporitius". They have been translated into English by Wordsworth in his work, "Bishop Serapion's Prayer Book". This eucharistic is a most important document for the history of the Egyptian liturgy in the fourth century.

Serapion, Bishop of Antioch (190–211), is known principally through his theological writings. Of these Eusebius (Hist. eccl., V, 19) mentions a private letter addressed to Caricus and Pontius against the Montanist heresy; a treatise addressed to a certain Dominus, who in time of persecution abandoned Christianity for the error of "Jewish will-worship" (Hist. eccl., VI, 12); a work on the Docetic Gospel attributed to St. Peter, in which the Christian community of Rhoeus in Syria is warned of the error of this Gospel. These were the only works of Serapion with which Eusebius was acquainted, but he says it is probable that others were extant in his time. He gives two short extracts from the first and third.

Seraphin, S. b. at Montegranaro, 1540; d. at Ascoli, 12 Oct., 1604. He was born of a poor, pious family, and in his youth was employed as a shepherd, an occupation which gave him much leisure for prayer and other pious exercises. Upon the death of his parents he was subjected to harsh and cruel treatment by his eldest brother. At the age of sixteen, Seraphin entered the Order of Friars Minor Capuchin. He was distinguished from the first by his humility, mortification, and obedience as well as charity, which towards the poor knew no bounds. He had a special devotion to the Blessed Eucharist and to Our Lady. Seraphin was endowed with the gift of reading the secrets of hearts, and with that of miracles and prophecy. Although unlettered, his advice was sought by secular and ecclesiastical dignitaries, and was a fruitful source of virtue to souls. His tomb is in the convent at Ascoli. He was canonized by Clement XIII on 16 July, 1767. His feast is celebrated in the Franciscan Order on 12 October.

Clary, Lives of the Saints and Blessed of the Three Orders of St. Francis, 1847, p. 292; Velie, Leben der Heiligen aus dem Kapuzinerorden, I (1865), 229–70; Stamp, Vita di S. Serapino da Montegranaro, Laoco Capuccino (Bologna, 1904).

Ferdinand Heckmann

SERAPHIN

Serafim da Ferguson, B.P. a Urbino, 1494; d. a Pesaro, 9 Sept., 1478. Her parents were Guido Antinio of Montefeltro, Count of Urbino, and Cattarina Colonna. She was brought up at Rome by her maternal uncle, Martin V. In 1448 Seraphina married Alexander Sforza, Lord of Pesaro. Ten years afterwards her husband gave himself up to a dissolute life. All the efforts of Seraphina to reform him were in vain. Instead he had insults and ill-treatment laid upon her, and even attempted her life, and finally forced her to enter the convent of the Poor Clares at Pesaro. Her life there was one of incessant prayer especially for the conversion of her husband, which was finally granted. In 1475 Seraphina was elected abbess of the monastery at Pesaro. Her conduct, exalted, was such that after her death, she was found incorrupt, and is preserved in the cathedral at Pesaro. She was beatified by Benedict XIV in 1754, and her feast is kept on 9 September throughout the Franciscan Order.

Ferdinand Heckmann

Serafin, S. B. di Tusino in Lower Egypt, date of birth unknown; d. after 362. His parents were Christian and he was educated among the clergy of Alexandria, probably under the direction of St. Athanasius, who always held him in high esteem. After presiding over a monastery for some years, he was consecrated Bishop of Tusino some time before 343, for in that year he attended the Council of Sardica as a defender of the Nicene Faith. In 355 St. Athanasius sent him and four other Egyptian bishops on an embassy to Emperor Constans (337–61) that they might plead on his behalf, and refute the charges which the Arians had brought against him. Serapion was deprived of his see in 359 by George, the anti-Patriarch of Alexandria, and sent into exile, hence the title "Confessor" conferred upon him by St. Jerome and the Roman Martyrology (21 March). In 364 the same George addressed to him a letter on the death of Arians (P. G. XXV, 685–90) and four dogmatic epistles, of which one was on the Son of God and three on the Holy Ghost (P. G. XXVI, 529–676). Serapion was a man of great purity of life and extraordinary eloquence. St. Jerome calls him a "scholasticus", or scholar, and says that he wrote a treatise against the Jewish heretics, another on the office of bishops and many useful letters to different parties. The work on the Psalms is lost; the treatise on the Manichaeans was published from the editio princeps of Basnage (1728) by Migne (P. G. XL, 599–924) and, with the addition of a newly-discovered fragment, by Schelkle (Bibliotheca sacra, 1854, pp. 479–91). Of his letters there remain: one to a certain bishop Eudoxios, otherwise unknown (P. G. XL, 923–925); a letter to the solitaries of Alexandria on the dignity of the religious life (ibid., 925–42); a fragment of his twenty-third letter (Pitra, Analecta sacra II, xiv), three fragments extant only in Syriac (Pitra, op. cit., IV, 214–5, and on the Father and the Son, first published in 1898 by Wobbermin from MS. 149 of the Convent of Laura on Mount Athos (Texte und Untersuchungen, XXV, 6196), or in the Didascalia (in the Didascalia) or rector. Though some attribute the discovery of this work to Wobbermin its text had already been published in 1894 by Dmitrievskii in the periodical Trudy, of the ecclesiastical academy of Kiev; and by Poulav in the known P. G., (from the same MS. 57). This eucharistic section contains thirty prayers, eighteen of which refer to the Mass, seven to baptism and confirmation, three to Holy orders, two to the anointing of the sick, and one to the burial of the dead. These prayers were arranged in their proper liturgical order by Brightman, and in this order they were published (text and Lat. tr.) by Pitra in his Didascalia, under the title "Sacerdotalis Sporitius". They have been translated into English by Wordsworth in his work, "Bishop Serapion's Prayer Book". This eucharistic is a most important document for the history of the Egyptian liturgy in the fourth century.

Sermo, la, diocese of (de Sergey, SERENOPOLITANA), embracing Atacama and Coquimbo provinces (Chile), suffragan of Santiago, erected 1 July, 1840. The boundaries of the diocese were successively extended on 26 March, 1844; on 5 June, 1844, the first bishop, José Agustín de la Sierra, was installed. Mgr. Jara, fifth bishop, was
apostle on 31 Aug., 1909. The diocesan territory exceeds 60,000 sq. miles, with a population (Catholic) of about 250,000. There are 64 secular, 35 regular priests; 30 parishes; 145 churches and chapels. The town of Lee, Sermon on the Mount, has about 30,000 inhabitants, has its own bishop, having an imposing castle (2d erected 1444–60); boasts a seminary with 160 students; affords good educational facilities—nearly in technical branches; and supports hospitals, an orphan asylum, lazaretto, and foundling house. Sisters of Mercy, of the Good Shepherd, and of the Congregation of Pius X are here.

J. McInerney, A.M., P. J. MACAULEY.

Serjeant, John, b. at Barrow-upon-Humber, Lincolnshire, in 1623; d. in 1710, not, as Dodd assents, in 1707 (MS. "Obituary of the Old Chapter"). He was son of William Serjeant, a yeoman, and was educated as a Anglican at St. John's College, Cambridge, graduating in 1642–3. Being appointed secretary to Bishop Morton of Durham, he was employed in patriotic and historical researches which resulted in his conversion. He then went to the English College, Lisbon, became a Jesuit and was ordained priest (24 Feb., 1859). He taught humanities till 1652, when he became procurator and prelate of studies. In 1653 he was recalled to the English mission, where he made many converts; but the year following he returned to Lisbon to resume his former offices and to teach philosophy. In 1655 the chapter, recognizing his unusual ability, elected him a canon and appointed him secretary. For the next twenty years he was actively engaged in controversy with Stillington, Tillotson, and other Anglican divines, also with the Catholic theologians who opposed the views of Thomas Blacklow. At the time of the Oates Plot he entered into communication with the Frivol Privy Council, which greatly scandalized the Catholics, but some of the incidents which happened suggest that his mind was unbalanced at the time. He avoided arrest by passing as a physician under the names of Dodd, Holland, and Smith. His peculiar temperament, with a mind bent on work, increased in his later years, and he fell into a state of nervous irritation, saying and writing things which caused great offence and pain, even to his friends. He was a voluminous writer, leaving over fifty works, either published or in MS. His chief writings are: "Schism Decrata", "Schism...", "Heresy...", "Schism..." (1664); "Vindication of Benedict XII. Bull" (Paris, 1659); "Reflections upon the Oath of Supremacy and Allegiance" (1661); "States Ap..." (London, 1661); "Tradidi Vobis" (London, 1662); "Sure-Rooting in Christianity" (London, 1661), a system of controversy, for which he was attacked by Peter Talbot, Archbishop of Dublin, and in defence of which Serjeant wrote several pamphlets; "Solid Grounds of the Roman Catholic Faith..." (1668); "Faith Vindicated..." (1667); "Reason against Rallery..." (1662); "Error Non-plust..." (1673); "Methodus Compendiosa" (Paris, 1674); "Clypeus Septemp..." (Paris, 1677), a defence of his own authorship; and is called "Catholic Letters" in reply to Stillington (London, 1687–8); "Method to Science..." (London, 1696); a series of works against Cartesian philosophy, Idee Cartesiana..." (London, 1698); "Non Ultra..." (London, 1699); "Rallery..." (London, 1699); "A Account of the Transactions relating to the English Secular Clergy..." (London, 1706); other pamphlets relating to the chapter, some of which, with replies thereto, were suppressed by the orders of the chapter. There is an original painting at the English College, Lisbon. The Jes. Literary Life of the Rev. John Serjeant, written by Serjeant himself in 1700, and printed in The Catholic (1816); Dooc. Church History, I (Brussels sees Wolverhampton, 1739–40); Woon, Athens Omnium (London, 1882); Memoirs of English Catholics (London, 1819); G illusion, Bibliogr. Ann. Enc. Cath., a. v. Cappy, Kirk's Historical Account of Lisbon College (London, 1820); Cooper, Dict. Nat. Biog. 6.

EDWIN BURTON.

Serjeant, Richard, Venerable, English martyr, executed at Tyburn, 20 April, 1588. He was probably a younger son of Thomas Serjeant, of Stoke, Gloucestershire, by Katherine, daughter of John Tryc of Hardwick. He took his degree at Oxford (20 Feb., 1570–1), and arrived at the English College, Reims, on 25 July, 1581. He was ordained subdeacon at Reims (4 April, 1582), deacon at Soissons (9 June, 1583), and priest at Laon on 10 May, 1584. He first gave Mass on 21 April, and left for England on 10 September. He was indicted at the Old Bailey (17 April, 1588) as Richard Leo alias Long. With him was condemned and suffered Venerable William Thomson, a native of Blackburn, Lancashire, who arrived at the English College, Reims (on 28 May, 1583), and was ordained priest in the Reims cathedral (31 March, 1583–4). Thomson was arrested in the house of Roger Line, husband of the martyr Anne Line (q. v.), in Bishopsgate St. Without, while saying Mass. Both were executed merely for being priests and coming into the realm.

John B. Wainwright.

Sergiopolis, a titular see in Augusta Euphratensis, suffragan of Hierapolis. Under its native name Rhessa, it figures in Ptolemy, V, xiv, 19; as Rasa in the "Tabula Peutingeri", as Rosafa in the "Notitia dignitatum" of Constantine Porphyrogenitus. The latter places it in the equites promoti indigena, i.e. the natives promoted to Roman Knighthood. This name signifies in Arabic causeway, paved or flagged road, and a military station, mentioned by Strabo (Corpus inscript. lat. III, 6719) who calls the town Strata Diaeteriana. Procopius speaks of a region called Strata (see Clermont-Ganneau, "La voie romaine de Palmyre a Rassapha" and "Rassapha et la Strata Diaeteriana" in "Recueil d'archeol. orientale", IV, 69–74, 112). It is commonly admitted that Rassapha is identical with the Rassaph (IV Kings, xix, 4). The titles of Cassandae to King Ezechias mentioned as having recently fallen into the hands of the Assyrians; the native name occurs also several times in the cuneiform inscriptions under the forms Rassappa, Rasappa, or Rassapi, and a certain number of its Assyrian governors from 839 to 737 B.C. are known. The town was then an important commercial centre [Schrader, "Kellinschriften und Geschichtsforschung" (Giessen, 1878), 167, 199]. At Rassapha in the reign of Assurbanipal the soldier Serjius, after whom the town was officially named, was martyred on 7 Oct.; Rassapha contained a Roman fortress at that time. Its first bishop was appointed shortly after 438 by John of Antioch, in spite of the opposition of the Metropolitan of Hierapolis, on whom that church had till then depended, for he had, he declared spent three hundred pounds of gold on it (Manie, "Concil. collectio", V, 915, 943). A little later Maruanes of Rhassaph was consecrated at the Council of Antioch (Manie, op. cit., 137, 138). The metropolis of Dura, a suffragan sees figures in the "Notitia episcopatum" of Antioch in the sixth century ("Echos d'Orient", X, 145). It had obtained this title from Emperor Anaeas tus I (491–518), according to a contemporary (Cramer, "Anecdota", II, 12, 100); at the Fifth general council (553) Abraham signed as metropolitan (Manie, op. cit., IX, 390). The favours of Apas-
tasius obtained for the town the name of Anastasio-
opolis, while it still retained at the beginning of the seven-
th century (Gelasius I, 14.6; Greg. Cypriani De Per-
orbis romanis), 45). We may mention also Bishop Cadi-
lius, who, at the time of the siege of the town by Shah
Chosroes, (543), ransomed 1200 captives for two
hundred pounds of gold (Procopius, “De bello pers.”
II, 5, 20), and the metropolitan Simeon in 593.
(“Chronicon” III, 238): this proves that
Christianity continued to exist even under Musul-
man domination. Procopius (“De aedificis,” II,
ix), describes at length the ramparts and buildings
erected there by Justinian. The walls of Resapha
which are still well preserved are over 1600 feet in
length and about 1000 feet in width; round or square
towers were erected about every hundred feet; there are also ruins of a church with three apses.

S. VAILLÉ.
SERGIUS and Bacchus, martyrs, d. in the Dioecle-
itian persecution in Coele-Syria about 303. Their
martyrdom is well authenticated by the earliest mar-
yterylogies and by the early veneration paid them, as
well as by much historic tradition. The offices of
the troops on the frontier, Sergius being
primicerius, and Bacchus secundarius. According to
the legend, they were high in the esteem of the Cesar
Maximianus on account of their bravery, but this fa-
vour was turned into hate when they acknowledged
their Christian faith. When examined under torture
they were beaten so severely with thongs that Bacchus
died under the blows. Sergius, though, had much
more suffering to endure; among other tortures, as the
legend relates, he had to run eighteen miles in shoes
which were covered on the soles with sharp-pointed
nails that pierced through to the foot. He was finally
beheaded. The burial-place of Sergius and Bacchus
was pointed out in the city of Resaph; in honour of
Sergius the Emperor Justinian changed the name of
the city to Sergiopolis and made it the see of an arch-
diocese. Justinian also built churches in honour of
Sergius at Constantinople and Acre; the one at Con-
stantinople, now mosques, is a great work of the
fourth century. In the East, Sergius and Bacchus were
universally honoured. Since the seventh century they
have a celebrated church at Rome. Christian art rep-
resents the two saints as soldiers in military garb with
branches of palm in their hands. Their feast is ob-
served on 7 October. The Church calendar gives the
two saint’s Marcellus and Apollus on the same day as
Sergius and Bacchus. They are said to have been
converted to Christianity by the miracles of St. Peter.
According to the “Martyrologium Romanum”, they
suffered martyrdom soon after the deaths of Sts. Peter
and Paul and were buried near Rome. Their exist-
ence is not genuine and agree to a great extent
with those of Sts. Nereus and Achilleus. The veneration
of the two saints is very old. A mass is assigned to
them in the “Sacramentarium” of Pope Gelasius.

or, 1898; Altorf, Ethnographie italica (Bonn, 1898-1900), 1102; Bibliotheca hagiographica graec (2nd ed.,
Bruna, 1899), 229-30; cf. for Marcellus and Apollus: Ada 85, October, 1899, 386-87; K. Kienthelm, Hagiograph. lat., 780.
KLEMENS LÖFFLER.
SERGIUS I, Saint, Pope (837-701), date of birth
unknown; consecrated probably on 15 Dec., 867; d. 8
Sept., 701. While Pope Constantine lay dying, the archde-
acon Pascal offered the exarch a large sum to bring
about his election as his successor. Through the ex-
arch’s influence the archdeacon was accordingly elected
by a number of people; about the same time another
faction elected the archpriest Theodore. The mass
of clergy and people, however, set them both aside
and chose Sergius, who was duly consecrated. Sergius,
the son of Tiberius, was a native of Antioch; he was
educated in Sicily, and ordained by Leo III.
The new pope had numerous relations with England
and the English. He received Ceddwalla, King of the
West Saxons, and baptized him (685); and he
chose Sergius, who was only consecrated, Archb.
He ordered St. Wilfrid to be restored to his see,
greatly favoured St. Aldhelm, Abbot of Malmesbury,
and is credited with endeavouring to secure the Vener-
able Bede as his adviser. Finally he consecrated the
Englishman Willibrord bishop, and sent him to presch
Christianity to the Franks. In his last will and testa-
ment Justinian wanted him to sign the decrees of the so-
called Quinisext or Trullan Council of 692, in which
the Greeks allowed priests and deacons to keep the
vows they had married before their ordination, and which
aimed at placing the Patriarch of Constantinople on
a level with the Pope of Rome. When Sergius re-
fused to acknowledge this synod, the emperor sent
an officer to bring him to Constantinople. But the
people protected the pope, and Justinian himself was
soon afterwards deposed (695). Sergius succeeded
in extinguishing the last remnants of the Schism of
the Three Chapters in Aquileia. He repaired and
enlarged many basilicas decrees De civitate, De
and the Mass, and instituted processions to various
churches.

HORACE K. MANN.
SERGIUS II, Pope, date of birth unknown; conse-
creted in 844, apparently in January; d. 27 Jan.,
847. He was of noble birth, and belonged to a
family which had two other popes in the Grisons.
Educated in the schola cantorum, he was patron-
ized by several popes, and was ordained Cardinal-
priest of the Church of Sts. Martin and Sylvester
by Paschal. Under Gregory IV, whom he
succeeded, he became archpriest. At a prelimi-
ary meeting to designate a successor to Gregory,
the name of Sergius was accepted by the majority; but
a mob endeavoured by force to place a deacon, John,
on the pontifical throne. He was, however,
shut up in a monastery, and Sergius was duly con-
secrated. From one obviously very partial edition of
the “Liber Pontificalis” it would appear that
Sergius, owing to deference to the placidness of the
table, had no taste for business, and entrusted the
management of affairs to his brother Benedict;
and that, owing to attacks of gout, he was helpless
in body and irritable in mind. His brother usurped
all power, and made the getting of money his one
concern. As all this is in sharp contrast with the
character given to Sergius by the other editions of
the “Liber Pontificalis”, there can be no doubt about
its gross exaggeration. As Sergius was, after a disputed
election, consecrated without any reference to the
Emperor Lothaire, the latter was indignant, and sent
his son Louis with an army to examine into the valid-
ity of the election: But Sergius succeeded in pacify-
ing Louis, whom he crowned king, but to whom he
would not take an oath of fealty. He also made the
king’s adviser, Drogo, Bishop of Metz, his legate for
France and Germany (844). Before he died he wit-
tnessed the terrible raid of the Saracens on the Ro-
man territory (846), which nearly resulted in the cap-
ture of the City. Despite the resistance of the schola
of the foreigners at Rome, the pirates sacked the
basilica of St. Peter and St. Paul, and were only
prevented by its strong walls from plundering Rome
itself. Churches, aqueducts, and the Lateran Basilica
were improved by Seriugius, who, on his death, was buried in St. Peter's.

HORACE K. MANN.

Seriugius III, Pope, date of birth unknown; consecrated 29 Jan., 904; d. 14 April, 911. He was a Roman of noble birth and the son of Benedict. He became a strong upholder of the party opposed to the Roman pontiffs. His party was not ultimately successful, the writings of its supporters, if they ever existed, have perished. Hence, unfortunately, most of our knowledge of Seriugius is derived from his opponents. Thus it is by an enemy that we are told that Seriugius was made Bishop of Caere by Formosus in order that he might never become Bishop of Rome. However, he seems to have ceased to act as a bishop after the death of Formosus, and was put forward as a candidate for the papacy in 898. Failing to secure election, he retired, apparently to Albéric, Count of Spoleto. Disgusted at the violent usurpation of the papacy by Formosus, the Romans threw him into prison, and invited Seriugius to take his place. Seriugius at once declared the ordinances conferred by Formosus null; but that he put his two predecessors to death, and by illicit relations with Marosia had a son, who was afterwards John XI, must be regarded as highly doubtful. These assertions are only made by bitter or ill-informed adversaries, and are inconsistent with what is said of him by respectable contemporaries. He protected Archbishop John of Ravenna against the Count of Istria, and confirmed the establishment of a number of new sees in England. He opposed the crossing of the Rhine, as they struck his niece from the dittychs, but he showed his good sense in declaring valid the fourth marriage of the Greek emperor, Leo VI. Seriugius completely restored the Lateran Basilica, but he was buried in St. Peter's.

L., CXXXI; Letters of St. Nicholas I, the Mystic in LABBE, Concil., IX, 1246 sqq.; FEDELE, Ricerche sulla storia di Roma e del popolo nel secolo X (Arch. Rom., de storia et opinione, 1177), 77 sqq.; MANE, Lives of the Popes in the early Middle Ages, IV (St. Louis, 1910), 119 sqq.

HORACE K. MANN.

Seriugius IV, Pope, date of birth unknown; consecrated about 31 July, 1009; d. 12 May, 1012. Peter Pig's Snout (Bucco Porco) was the son of Peter the shoemaker, of the ninth region of Rome (Pina), and before he became Seriugius IV had been bishop of Albano (1004-9). He checked the power of the Patriarch, John Crescentius, who dominated Rome by strengthening the party in favour of the French. Little is known of the doings of Seriugius except that by grants of privilege, the papyrus originals of some of which still exist, he exempted several monasteries from episcopal jurisdiction. Though his own temporal power was small, various nobles placed their lands under his protection. He showed himself to be a great friend of the poor in a time of famine, and was buried in the Lateran Basilica.

Liber Pontific., II, 297; Letters, Privileges of Seriugius, in P. L., CXXXIX; MANE, Lives of the Popes in the early Middle Ages, V (St. Louis, 1910), 142 sqq.

Seriugius, Patriarch of Constantinople. See MONETHLITES and MONOTHELITES.

Seripando, GIBOLANO, Italian theologian and cardinal, b. at Troja (Apulia), 6 May, 1493; d. at Trent, 17 March, 1563. He was of noble birth, and intended by his parents for the legal profession. After their death, however, and at the age of fourteen he entered the Augustinian Order, at Viterbo, where he joined the study of Greek and Hebrew to that of philosophy and theology. After a short stay in Rome, whither he had been called by his superior general, he was appointed lecturer at Siena (1515), professor of theology at Bologna (1517), and vicar-general (1532), which last charge he filled with great credit for two years. He won such reputation for eloquence by his discourses in the principal cities of Italy, that the Emperor Charles V often made it a point to be present at his sermons. Elected superior general in 1539, he governed for twelve years, with singular prudence, zeal, and piety. He attended (1546) the sessions of the Council of Trent, where he distinguished himself by his zeal for the purity of the text of Holy Writ, and also by his mystical views on original sin and justification. Paul III sent him as his legate to the emperor and to the King of France, after which mission he was offered the Bishopric of Aquila. Seripando not only declined this dignity, but even resigned his charge of superior general (1541), and withdrew into a small convent, from the retirement of which he was called (1553) on a mission from the city of Naples to Charles V. Upon completion he was appointed Archbishop of Salerno. He proved a zealous and efficient pastor. A few years later (1561) Pius IV made him cardinal and second legate of the Holy See at the Council of Trent. Upon the death of the pope, Gonzaga, he became first president of the same Council. Seripando was an elegant and prolific writer, and a vigorous controversialist, rather than an orator. The following are his principal published works: "Novae constitutiones ordinis S. Augustini" (Venice, 1549); "Oratio in funerem Caroli V imperatoris" (Naples, 1559); "Prediche sopra il simbolo degli Apostoli, etc." (Venice, 1567); "Commentarius in D. Pauli epistolam ad Galatas" (Venice, 1569); "Commentaria in D. Pauli epistolam ad Romanos et ad Galatas" (Naples, 1601); "De arte orandi" (Lyons, 1670); and several of his letters, included by Lagonarino in "Poggiani epist. et orationes" (Rome, 1762).

FRANCIS E. GIGOT.

Seroux. See HOMILITICS.

Serroux d'Aigincourt, JEAN-BAPTISTE-LOUIS-GEOFFREY, b. at Beauvais, 5 April, 1730; d. at Rome, 24 September, 1814. He was a descendant of the counts of Namur. He entered the French cavalry while a young man, but soon resigned in order to devote himself to his family. Louis XV appointed him collector of the taxes. A disciple of Count de Caylus, the archaeologist, in 1777 he visited England, Belgium, Holland, and a part of Germany; in 1778 he went to Italy, where he devoted himself particularly to the study of the Catacombs of Rome. He formed the plan of imitating for Christian art the work which Winkelman had done for ancient art, and of studying Christian art from its antiquity up to the Renaissance. This task, in which Louis XVI was also interested, was far from being finished at the time of his death. During the Revolution, d'Aigincourt's property had been confiscated; however, during the Empire, the sale of his work brought the distinguished archaeologist once more into comfortable circumstances. D'Aigincourt lacked Winkelman's critical acumen. The reproductions published in his "Histoire de l'art" are imperfect and at times even altered. He took the paintings from the walls of the Catacombs and in this way often caused their destruction. His work is entitled: "Histoire de l'art pendant les monuments, depuis sa decendance au IVe siecle jusqu'au renouvellement au XVIe" (Paris, 1825).

LECLERCQ, Manuel d'archéologie chrétienne, I (Paris, 1907), 15 sqq.

R. MAERR.
Serpiere, ALESSANDRO, b. at St Giovanni in Marignano, near Rimini, 31 Oct., 1823; d. at Riese, 22 Feb., 1885. His early education was received at Rimini from the brothers Speranza, priests. His classical studies he made at the College of the Scolopiani at Urbino, of which the distinguished Latin scholar, Father Angelo Boccardi, was then rector. He began their novitiate at Florence, 30 Nov., 1838. From 1840-43 he studied philosophy and the exact sciences at the Ximian College and observatory, whose rector, the able astronomer and geometer, Father Giovanni Inghirami, was at the same time professor of higher mathematics and astronomy. Serpiere was one of the eldest students of the observatory, and soon after his ordination, 1857, he was appointed professor of threshold in mathematics and philosophy at the college of Siena. Here he became known as a model teacher on account of his lucid style of exposition, his eloquence, and his affable manners. In Nov., 1846, his superior appointed him professor of philosophy and physics at the college of Urbino, while two months later the Papal Government called him also to the chair of physics in the university of the same city. On 27 Aug., 1848, he was ordained priest, and in Nov., 1857, he became rector of the college. He continued in this position and acted at the same time as professor of astronomy, 1854, when the municipal authorities justified him of the impending secularization of education, both in the primary schools and in the colleges, inviting him however to remain as professor. This unjust decree caused him and his colleagues to give up their positions at the college. The sorrow caused by this event had an almost fatal effect upon his health, which had not been good for some time. Appointed to the rectorship of the Collegio della Badia Fiorentina, he died in the following year after a short illness.

Serpiere's chief merits as an astronomer lay in the observation of shooting stars. His first treatise on this subject dates from 1847 in the "Annali di fisica e chimica" of Macr. focchi. In August, 1850, he discovered that the August meteorites originate in a radiant not far removed from 28 Persei (hence "Percides", Ann. di Tortolino, 1850). In the same year he established an observatory at Urbino, and thereafter published regularly in his monthly bulletin the results of his meteoric observations. These were of great assistance to Schiaparelli in the formulation of his theory on the shooting stars. Serpiere himself expressed some interesting views on this subject in his bulletin in 1867. Urged by Father Sceggi, he went to Reggio in Calabria to observe the total eclipse of the sun in 1870, and to ascertain with exactness the northern limit of the scope of totality. The results of his survey, published in 1871, reconfirmed the solar corona caused by the electrical influence of the sun and other planets on the sun (Rendic. Int. Lomb., 1871). When Schiaparelli called his attention to the magnificent work by the American, George Jones, comprising 228 drawings of the zodiacal light as observed at different times and from different places (published at Washington at the expense of the Government), he at once submitted it to a searching analysis. This led him to his theory, in which he explains this phenomenon as light of the earth produced and maintained in the atmosphere by special solar radiations ("La luce zodiacale studiata nelle osserv. di G. Jones", 138 pp. in "Mem. Soc. Spett. Ital.", 1876–81).

Serpiere's greatest achievements are in the field of seismology. His study of the earthquake of 12 March, 1875, is, in the opinion of de Rossi, a model of science. In this he introduced the concept of the seismic radiant. The so-called premonition on the part of animals he explains by the hypothesis of a preceding electrical disturbance. His master-work is his study on the earthquake of 17 and 18 March, 1875, which caused great devastation in his home city and in other places. In this study he embodies 240 documents coming from 100 different places, and in it his theory of radiance is proved in a striking manner. He also wrote two memora on the terrible catastrophe of Casamicciola. His complete seismological studies, for which he received the gold medal at the General Italian Exhibition at Turin (1864), were republished in 1870 by F. C. Among his works on physics must be mentioned: a study on the wave phenomenon of Foucault (Ann. Tortolino, 1851); a treatise on the simultaneous transmission of opposing electric currents in the same wire (Carr. ac. di Roma, 1855), a lecture on the unity of natural forces (La forza e le sue trasformazioni, 1868). His work on the electric phenomena of the earth ("Il apparsione delle elettrodi", 1882), is noted for its system, clearness, and conciseness. It has been translated into German by Reichenthal (Vienna, 1884). His last work, on absolute measures ("Le misure assolute", etc., Milan, 1884), gives in condensed form the principal theories on physics, in particular of electric currents. It has been translated into French by Gauthier-Villars (1886) and into German (Vienna, 1885).

J. Stein.

Serra, JUANPERO, b. at Petra, Island of Majorca, 24 Nov., 1713; d. at Monterey, California, 28 Aug., 1754. On 14 Sept., 1730, he entered the Franciscean Order. For his proficiency in studies he was appointed lector of philosophy before his ordination to the priesthood. Later he received the degree of Doctor of Theology from the Lullian University at Palma, where he also occupied the Duns Scotus chair of philosophy until he joined the missionary college of San Fernando, Mexico (1749). While travelling on foot from Vera Cruz to San Berna
tal, he injured his leg in such a way that he suffered from it throughout his life, though he continued to make his journeys on foot whenever possible. At his own request he was assigned to the Sierra Gorda Indian Missions some thirty leagues north of Querétaro. He served there for nine years, part of the time as superior, learned the language of the Pame Indians, and translated the catechism into their language. Recalled to Mexico, he became famous as a most fervent and effective preacher of missions. His zeal frequently led him to employ extraordinary means in order to move the people to penance and moved him to break his crutch with a stone child in the pulpit, scourge himself, or apply a lighted torch to his bare chest. In 1767 he was appointed superior of a band of fifteen Francisceans for the Indian Missions of Lower California. Early in 1769 he accompanied Portola's land expedition to Upper California. On the way (14 May) he established the Mission San Fernando de Velicatá, Lower California. He arrived at San Diego on 1 July, and on 16 July founded the first of the twenty-one California missions which accomplished the conversions of all the natives on the coast as far as Sonoma in the north. These established by Father Serra or during his administration were San Carlos (3 June, 1770); San Antonio (14 July, 1771); San Gabriel (8 Sept., 1771); San Luis Obispo (1 Sept., 1772); San Francisco de Asis (8 Oct., 1776); San Juan Capistrano (1 Nov., 1776); Santa Clara (12 Jan., 1777); San Buenaventura (31 March, 1779). He was the first vicar apostolic of California, and presidio of Santa Barbara (21 April, 1782), and was prevented from locating the mission there at the time only through the animosity of Governor Philip de Neve. Difficulties with Pedro Fages, the military commander, compelled Father Serra in 1773 to lay the case before Viceroy Bucareli. At the capital of Mexico, by order of the viceroy, he drew up his
“Representación” in thirty-two articles. Everything save two minor points was decided in his favour; he then returned to California, late in 1774. In 1778 he received the faculty to administer the Sacrament of Confirmation. After he had exercised his privilege for a six hundred miles, in order to suspend administering the sacrament until he could present the papal Brief. For nearly two years Father Serra refrained, and then Viceroy Majorca gave instructions to the effect that Father Serra was within his rights. During the remaining three years of his life he once more visited the missions from San Diego to San Francisco at the latest, and at the latrocinium in 1768 to confirm all who had been baptized. He suffered intensely from his crippled leg and from his chest, yet he would use no remedies. He confirmed 8309 persons, who, with but few exceptions, were Indians converted during the fourteen years from 1770. Besides extraordinary fortune, his most conspicuous virtues were inestimable zeal, love of mortification, self-denial, and absolute confidence in God. His executive ability has been especially noticed by non-Catholic writers. The esteem in which his memory is held by all classes in California may be gathered from the fact that Mr. Stanford and Catholic, had for years past erected to him at Monterey a bronze statue of heroic size represents him as the apostolic preacher in Golden Gate Park, San Francisco. In 1884 the Legislature of California passed a concurrent resolution making 29 August of that year, the centennial of Father Serra’s burial, a legal holiday. Of his writings many letters and other documents are extant. The principal ones are his “Diario” of the journey from Loreto to San Diego, which was published in “Out West” (March to June, 1902), and the “Representación” before mentioned.

Zephyrin Engelhardt.

Serrae, titular metropolitan see in Macedonia, more correctly Serrhae, is called Siris by Herodotus (VIII, 115), Sirae by Titus Livius (XLV, iv, iv). Inscriptions show the official spelling to have been Sirhha or Sirrhæ; the form Serrhae prevailed during the Byzantine period, while the corresponding name of St. Byzantius was Serrhaeus (s. v.). The city, now called in Turkish "Sërhis", is in Eastern Macedonia, about forty-three miles north-east of Salonica in the plain of Smyrnon, on the last outposts of the mountains which bound it on the north-east. On his return to the Hellepont, Xerxes left some of his ships flying at Serrae, and here also P. Æmilius Paulus, after his victory at Pydna, received a deputation from Perusius. The city possessed great strategic importance under the Byzantine Empire in the wars against the Servians and Bulgars. It was captured by the latter in 1206 and again in 1306 by the Venetian Empire, who later recovered it. After the Servian, Kral Stephen Dushan, captured it in turn, it was crowned there in 1345, established a Court on the model of that of Byzantium, and married the daughter of Andronicus II. In 1373 it was captured by a Greek apostate in the service of Sultan Murad I. In 1420 Stephen Tzimiskes of Hungary was present at the Ottoman Empire, the Sultan Bayazet had his camp at Sërhas, where he assembled his Christian allies shortly before the Battle of Nicopolis. Sërhas is now the capital of a sanjak in the vilayet of Salonica. It has about 30,000 inhabitants, of whom 13,000 are Turks and the same number Greeks, with a large number of Jews and a few of the textile and agricultural products. At first Serrae was a suffragan of Thessalonica, remaining so probably until the eighth century, when Eastern Illyricum was removed from Roman jurisdiction and attached to the Patriarchate of Constantinople. It figures in the "Notitiae episcopatuum" as an autocephalous archidiocece as early as the tenth century, perhaps even earlier. At the end of the next century it had become a metropolitan see without suffragans, and such is still its status for the Greeks. Le Quien (Oriens Christi, II, 87) gives a list of fourteen bishops, but a much more complete list is given in Papageorgiou's article cited in the bibliography. The oldest of these bishops is Maximianus or Maximus, present at the Latrocinium of Nicaea (691) and at the Council of Chalcedon (451). A gap intervenes till the end of the tenth century, when Leontius assisted at a council of Constantinople. Among the other titulars was Nicetas, formerly a deacon of St. Sophis, Constantinople, and eventually Metropolitan of Heraclea (Pontus), at the end of the eleventh century. He was a prolific writer [see Krumbacher, "Gesch. der byzant. Litt." (Munich, 1897), 137 sqq., 211 sqq., 215 sqq., 587, etc.]. Under Michael Palaeologus, a metropolitan of Serrae whose name is unknown, was among the advocates of union with Rome. In 1111 Manasses became Patriarch of Constantinople after the name of the see of "Hermopolis catholica medii aevi", I, 473, mentions two Latin metropolitans: Arnulfus in 1225 and Pontius in 1358. Servants of Mary. See Servites, Order of.

Servants of the Most Blessed Sacrament. CONGREGATION OF THE, an order of nuns, founded by the Venerable Pierre-Julien Eymard (q. v.) in 1858, assisted by Mother Margaret of the Blessed Sacrament, with the authorization of Mgr. Morlot, Archbishop of Paris. A Decree of Pius IX (21 July, 1871) canonically erected it into a religious congregation, and on 8 May, 1885, Leo XIII approved the constitutions. The aim of the society is to render “for all else in love and perpetual adoration to Our Lord Jesus Christ, abiding perpetually in the Most Blessed Sacrament of the Altar for the love of men”. “The Congregation of the Servants of the Most Blessed Sacrament devote themselves with all their souls and all their strength to propagate the practice and knowledge of the Eucharistic devotion, especially by means of the People’s Eucharistic League” in the way that was erected by a Rescript of August 2, 1872 (Bishops and Regulars), by Retreats of Adoration, and the work of the worship of Jesus Christ”; that is, by work for poor churches, as well as by catechetical instruction to children and to poor or ignorant adults. Each sister is required to make three adorations in the twenty-four hours, of which two are in the day and one at night. The Divine Office is said in choir. The community is contemplative and cloistered. The mother-house is in Angers, France. The congregation was established at Chicoutimi in 1956, and spread to missions at Lyon (France), founded 29 June, 1874; Paris, founded 1 May, 1876; Binche (Belgium), founded 17 November, 1894. In October, 1903, at the request of Mgr Labrecque, Bishop of Chicoutimi, a house was established at Chicoutimi on the banks of the Saguenay. The first exposition took place on 22 November, 1903, in the chapel of the Superior of the Council, who for several months extended hospitality to the newly-arrived community. On 25 March, 1906, it took possession of a new convent and on 18 June, 1906, the chapel of the Eucharistic Heart of Jesus was consecrated. Canada has now its novitiate. The community numbers those who have professed of the perpetual vows, and fifteen novices.
SERVETUS, Michael. See Calvin, John.

Servia, a European kingdom in the north-western part of the Balkan Peninsula.

I. History.—The greater part of the territory of the present Kingdom of Servia belonged, at the beginning of the Christian era, to the Roman Province of Moesia, the western part to the Province of Dacia. Under Roman supremacy a number of cities arose along the Danube and the Morava, and the country attained to a considerable height of economic prosperity and intellectual development. Christianity found entrance into the Roman districts of the Balkan Peninsula at an early date; it suffered its first check in this region from the persecutions of the emperors. Martyrs are not mentioned until the reign of Diocletian, when several suffered death for Christ at Singidunum (Belgrade). During the migrations the country was traversed in succession by Ostrogoths, Huns, and Lombards. In 550 it was conquered by the Emperor Theodoric, and became part of the East Roman Empire. Soon after this, the Avars fell upon the land, devastating and burning wherever they went, and turned the region into a wilderness. In the seventh century the forefathers of the present Serbs, a tribe of the southern Slavs, migrated into the country, which received the name of Servia. During the Middle Ages and well into modern times the term included not only the present Servia, but also Bosnia, Herzegovina, Montenegro, and the northern parts of Macedonia and Albania. In the early centuries of their history the political cohesion of the Serbs was slight; the political organization was based upon the family clan, the sadruga. The sadruga was composed of about fifty or sixty persons, who bore a common name and obeyed an elder who was the representative of the clan in dealings with outsiders or with the gods. All members of the clan had the same rights and were entitled to a share of the common possessions. Several such family-clans formed a tribe whose affairs were managed by a council of the family elders. At the head of the tribe was a Zupan, elected by the elders of the families. The religion of the Serbs was a natural religion. They worshipped their gods in the open air and accompanied their sacrifices with singing. They had no images, temples of common worship with all Slavs they believed in a life after death.

At various times during the first centuries of their history they were obliged to acknowledge the supremacy either of the Eastern Empire or of the Bulgarians. For short periods also they were able to maintain their independence. They accepted Latin Christianity in the eighth century, during the period of Bulgarian suzerainty. Until the union of Servia with the Greek Orthodox Church, the Servian Church was under the control of the Latin Archbishop of Spalato and, later, the Latin Archbishop of Antivari. After the death of the most powerful of the Bulgarian princes, Ivan Alexander (922), the Servian Zupan Oselaw was able, for the first time, to unite several Servian tribes against Peter, the weak ruler of the Bulgarians. However, the destruction of the Bulgarian kingdom by Basil II, Bulgaroktonos, the Byantine emperor (976–1025), re-established Byzantine supremacy over the whole Balkan Peninsula. Although the extensive sway of the Eastern Empire led to repeated revolts of the Serbs, the supremacy of Constantinople continued until the twelfth century. For a time indeed the Grand Zupan Michael (1050–80) was able to maintain his independence; he even received the title of a pontiff, the pope of the Slavonic Church. In the twelfth century the family of the Nemanyich, to whom the union of the Serbs is due, became prominent inServian history. Urosch, who was Zupan of Rassa from about 1120, entered into friendly relations with the Hun-
lutun (1282–1321), while retaining for himself the title of king. The separation from Rome was completed during the reigns of these two princes and has continued from that period until the present day, although several popes have exerted themselves to reestablish the union, e.g., Nicholas IV (1292), Benedict XI (1303), and Clement V (1309).

Stephen Milutin conquered several provinces of the Byzantine Empire, and advanced victoriously as far as Mount Athos, besides receiving Bosnia, without striking a blow, as the dowry of his wife, a daughter of the Hungarian king, Stephen V. During his reign and that of his brother, Stephen I, Serbia (1321–31) and Servia gained a European reputation and was the leading power of Eastern Europe. The son carried on a successful war against the revived Bulgarian kingdom and broke its power forever. Stephen IV, Urosh, was willing, in 1323, to unite with Rome and abandon the schism in order to secure the aid of Western Europe against the claims to the throne of his half-brother Vladislav; but this union with Rome was only of short duration. As in the latter years of his reign he showed a preference for the son of a second marriage, his eldest son Stephen Duschan rose against him and threw him into a prison, where he was seized by the princes Stephen and Marko. Duschan was called a ringleader in his death. The constant aim of the Servia was to establish a Greater Servia, which should unite all the peoples of the Balkan Peninsula, to conquer Constantinople, and to win for himself the crown of a new Oriental empire with its center at Constantinople. Taking advantage of the civil war in the Eastern Empire he was able, in 1336–40 and in 1345, to conquer Albania, Macedonia, Epirus, and Thessaly, and undertook thirteen campaigns against Constantinople in which he advanced as far as the imperial capital. He was also known as "Tear of the Serbs and Greeks"; this is translated in Latin documents as "Imperator Rascie et Romanie". At the same time, in a Servian synod, he had the Servian Archbishop of Ipek created an independent "Metropolitan of the Serbs and Greeks", notwithstanding the anathema of the Church of Constantinople. The new head of the Servian Church had twenty metropolitan bishops and dukes under him.

Stephen Duschan's reign has been called the Golden Age of Servia, because he gave the country a better administration and judicial system, sought to improve education, mining, commerce, etc., and, in 1345, he laid the foundation of the Kingdom of Servia. He was very hostile to the Catholic Church. Article 6 of his code punished with death any Servian who adhered to the "Latin heresy", or any Latin ecclesiastic who sought to make proselytes. Yet he repeatedly entered into relations with the pope in order to gain aid from Western Europe against the constantly increasing danger of Turkish invasion, and held out the prospect of union with the Latin Church. The great kingdom he had created soon fell to pieces during the reign of his weak son, Urosh V (1356–71). Vlaskin, a Servian noble, rose against Urosh as a rival and gained almost the entire country for his cause; the strength of the kingdom was frizzled away by internal disorders and civil wars, and thus the way was prepared for the Turks. Vlaskin lost both the throne and his life at the battle on the Maritsa River (28 September, 1371), in which he fell. Two years later, Urosh V also died, and with his death the Nemanjic dynasty became extinct. The nobles disputed over a successor; Lazar Gobijanovitch, one of the most prominent, formed an alliance with the Bulgarians, Albanians, and Bosniacs, and defeated a vice-roy of the Turkish Sultan, Amurath I. However, the Serbs suffered a severe defeat on 15 June, 1389, in the terrible battle on the Plain of Kosovo (the Plain of the Blackbirds). Lazar and a large number of the most distinguished Serbs were taken prisoners and were beheaded during the night after the battle. The land was defenseless against the Turks, and Servia independence was in abeyance for four hundred years. Amurath's successor, Bajazet, divided the country between a son and a nephew of Lazare, both of whom were obliged to pay tribute to the Turks and to take part in the Turkish military expeditions. In 1459 Mohammed II put an end to the sovereignty of these two rulers. Servia was formally incorporated into the Turkish Empire and was divided into pashalis. Many Servians were destroyed, many others fled to Hungary, some 200,000 persons were dragged away as slaves. The Servian Patriarchate of Ipek was also suppressed, and the Servian Church was placed under the control of the Greco-Bulgarian Patriarchate of Schiria. In 1537 the Patriarchate of Ipek was re-established, and remained independent until its second suppression in 1766.

For more than two hundred years the name of Servia almost entirely disappeared from history. However, the Turks maintained only a military occupation of the country; they wrung large sums of money from the people, and took large numbers of young men to be trained as Janissaries. But they could not claim any land for themselves, and thus the Serbs under the Turkish yoke were able to preserve their language, customs, religion, and the memory of the heroic age of their country until the hour of deliverance. The folk-songs, which celebrated the exploits of their most famous heroes, did much to preserve the national consciousness during the worst periods of oppression, by keeping before the people the recollection of Servia's history and past greatness. The first hope of deliverance from the Turkish yoke came from Austria which, under Charles of Lorraine, repeatedly defeated the Turks in the years 1683–1699 at Slavonie and in the session of several provinces. When, in 1690, the Emperor Leopold I issued a proclamation declaring that he would protect the religion and the political rights of all Slavonic peoples on the Balkan peninsula, and called upon them to rise against the Turks, about 30,000 Servian and Albanian families, led by their patriarch, emigrated from Servia. After Leopold had given them the desired guarantees they crossed the Save and settled in Slavonia, in Syria, and in some of the Hungarian cities, where their descendants now form a considerable portion of the population. Their rights have always been protected by the emperors, and the name of a Servian patriarch was established at Constantinople. The victories of Prince Eugene of Savoy forced Turkey to surrender all of Servia to Austria by the Treaty of Passarowitz (1718). But the Austrian Government was not able to win the sympathy of its new subjects, and, after the unsuccessful war of Charles VI against Turkey (1739–39), Servia was retracted to that power.

Although the Serbs themselves had contributed largely to the restoration of the Turkish supremacy, their loyalty was ill repaid by the cruelties of the Janissary revolt. At the request of the Greek Orthodox Church, the Patriarchate of Ipek was again suppressed, in 1766, and the Servian Church was placed directly under the Patriarch of Constantinople, who sent as bishops to Servia almost exclusively men of Greek nationality, who were hostile to Servian efforts for liberty. During the war against Turkey carried on by Joseph II and the emperor Charles VI, in 1799, the Serbs rose in favor of Austria. In 1804 a general revolt was provoked by the atrocities of the Janissaries. The head of the rebellion was George Petrovitch, who was also called Karageorge (Black George). A series of victories delivered the country from the Turkish soldiers, and in 1807 even Belgrade was taken. The people, however, were not sufficiently supported by Russia, and could not complete
freedom. By the Treaty of Bucharest, in 1812, the Serbs were guaranteed complete amnesty and granted a measure of internal self-administration, but were obliged to remain under Turkish suzerainty. As the Turks did not keep their promises a new revolt broke out in 1815, the leader of which was Milos Obrenovitch, Karageorge having been assassinated. On 9 May, 1817, Milos proclaimed the freedom of Servia at Belgrade by an assembly of Servian nobles and ecclesiastics, and was recognized by the Porte in 1820. By the Peace of Adrianople (1829), Servia received the right to elect its own princes, the right of self-administration, in short internal autonomy, but was obliged to pledge itself to pay a fixed tribute to the Porte. The Treaty of Akerman (1826) and the Peace of Adrianople (1829) also granted the people of Servia freedom of worship and the right to elect their bishops. In 1832 a concordat was made with the Greek Patriarch of Constantinople which regulated the relation of the Servian to the Greek Orthodox Church; the Archbishop of Belgrade received the title of Metropolitan of Servia, and was henceforth to be elected without the participation of the Patriarch of Constantinople; the election, however, must be announced to, and confirmed by, the patriarch, who had the privilege of confirming it and recommending a new metropolitan. Milosch was recognized by the Porte as hereditary prince; in 1834 the Turkish military occupation of Servia was limited to Belgrade.

Influenced by Russia, Milosch ruled as an absolute prince without calling any national assembly; he seized commercial monopolies for his own benefit, and in this way so irritated the people that in 1835 a revolt broke out. He was finally obliged to grant a constitution, which, however, the Turkish Government replaced, in 1838, by the Organic Statute (Ustav). This statute, replacing the National Assembly with a senate provided with extensive powers, satisfied neither the people nor the prince. Milosch swore to observe the Organic Statute, but did not keep his oath and, after a fresh uprising, in 1839, abdicated in favour of his eldest son Milan I. Milan died in three months and was followed by his incapable and tyrannical brother Michael, who, in 1842, was forced by his own abdicating brother and the national assembly convoked 11 September, 1842, elected the son of Karageorge, Alexander Karageorgevitch, Prince of Servia. He was confirmed by the sultan, but only with the title of Beschoss (overlord). In his home policy he followed Austria and, influenced by Metternich, his government was rigidly conservative, which made him unpopular among the Serbs and in Russia. When, in 1858, the Senate wished to force him to retire, he sought protection with the Turkish garrison at Belgrade. Thereupon the National Assembly (Skupashina) deposed him as a fugitive, and called to the throne Milosch Obrenovitch, now eighty years old and a man of thirty-three. Michael was followed, in 1860, by his son Michael, who had been forced to abdicate in 1842. Under him the organization of the army was carried out, notwithstanding complaints from the Porte, and the efforts of the Serbs to become entirely independent of Turkey became constantly more evident. Urged by Austria, the Turks, in 1867, withdrew their last garrison, that of Belgrade, from the country, in order to allay the national excitement. Notwithstanding the success that had been attained, a conspiracy was formed against the ruling prince, who was killed on 29 June, 1868, in the park at Topcider. Then abdicated Milan II, the sole surviving member of the Obrenovitch family, Milan II, then a student in Paris.

During Milan's minority a new constitution was granted to the country by the regent Ristitch. When, in September, 1874, the Christians of Bosnia and Herzegovina rose against the Turkish yoke, and the revolt constantly spread, Milan believed the occasion favourable to gain the independence of the country, while augmenting it with Bosnia, Herzegovina, and Old Servia, thus founding a Great Servia. In July, 1876, he began war against the Turks, without being able to gain any success in battle. Nevertheless, when war broke out between Turkey and Russia in 1877-78, he joined the Servian army in Bulgaria captured several places which the Turks were on the point of abandoning. In the Peace of San Stefano, Servia gained not only the recognition of its complete independence, but also considerable additions to its territory, which was still further increased by the Congress of Berlin. In return it was obliged to grant unconditional and many formal deviations and assume a part of the Turkish national debt. On 21 August, 1878, the independence of the country was formally proclaimed. One of Milan's first acts was to obtain for the Servian Church complete independence from the Greek Church and its release from the obligations it had assumed in 1832. In 1879 he compelled the Greek Patriarch of Constantinople, Joachim III, to recognize the Servian Church as independent and self-governing, and to renounce all rights over it. Since then the relations between the two Churches have been friendly. On 6 March, 1882, Milan ascended the throne of the new monarch. In 1883-84 new negotiations with the Turks, thinking to exploit the embarrassment of Bulgaria, which after the annexation of Eastern Rumelia was threatened by the Turks and deserted by Russia, he declared war on that principality, although ill prepared for it. Led by their courageous ruler, Alexander of Battemberg, the Bulgarians gained a brilliant victory over the Servians at Slivnitz, and only the interference of Austria, which hastily sent Count Khevenhüller to the Bulgarian head-quarters and checked Prince Alexander, saved Servia.

In his home policy, too, Milan sheltered himself under the protection of Austria and opposed his own people. The Serbs, greatly embittered by the Austrian occupation of Bosnia and Herzegovina, became more and more favourable to the Radical and Russophile party, while the king's position was rendered increasingly difficult by the agitation of political party leaders who were under Russian influence, and the bad influence of his son-in-law and heir, Milan's quarrels with his wife Natalie, the daughter of a Russian colonel, led to the dissolution of the marriage by the metropolitan. When the Liberal party, which had been the support of Milan and Ristitch, was defeated in the elections of 1888, and the radical movement by a political conference, Milan abdicated, 8 March, 1889, in favour of his only son Alexander, a minor, and then left the country. In 1892 he gave up his Servian citizenship. The sorely distracted country had still less internal peace during Alexander's reign. The regency during his minority was carried on mainly by Ristitch. In 1899 the imperial succession king, Michael, aged 33, died, 1895, 54 years old, declared himself of age, and forced the regency to retire. Alexander recalled his father from Paris to help him against the Radicals and the menace of anxiety. Milan returned to Belgrade, 21 January, 1894, at once assumed control of the administration, did away with the democratic Constitution of 1889 by a coup d'état, restored that of 1889, and limited the constitutional liberties and the suffrage. In 1897 he also assumed supreme control of the army.

However, the friendly relations between father and son were ruptured in 1900 by the marriage of Alexander with the widow of ill repute named Dragas Maschin. Milan broke off all connexion with his son and left the country for good (d. at Vienna, 11 February, 1901). After that, Alexander ruled despotically, contrary to the Constitution. By two political strategems a new constitution was forced on the country in 1901, but was
set aside after two years. The king lost whatever sympathy was still felt for him on account of the undignified manner in which the queen, in 1901, divorced the country into ones expecting an heir to the throne. When at last the queen formed a plan to have one of her brothers, Lieutenant Nikodem Lunjevitsa, who was hated in the army, made heir to the throne, a revolt broke out. In the night of 10–11 June, 1903, a number of officers, who had formed a conspiracy under the aegis of the Serbian National Assembly, murdered the king and queen, the queen’s two brothers, and three ministers. The following day the army proclaimed Peter Karageorgevitch, son of the former Prince Alexander Karageorgevitch, king, and the National Assembly confirmed the choice on 15 June, after restoring the Constitution of 1889.

Even under the new dynasty the country has not yet (1911) found peace and economic development. Peter’s position was from the beginning made more difficult by the fact that he was rightly regarded as an accessory to the murder of his predecessor, and was, moreover, completely controlled by the assassins during the first years of his reign. These murderers claimed the chief positions in the army and the civil service; on account of his connexion with them Peter’s administration was only recognized by the Powers after the lapse of some time, the last power to recognize him being Great Britain (1906). The country was kept in a state of crisis by the struggle between political parties, while cabinet changes and dissolutions of the Chamber followed in rapid succession. In foreign affairs, Servia was soon involved in an economic and political dispute with Austria-Hungary, with which it carried on its main export trade. When Servia formed a customs union with Bulgaria, in 1906, a customs war with Austria-Hungary began, which inflicted severe damage on the economic life of the country. Relations with Austria-Hungary were still further strained by the zealorous agitation for a Great Servia carried on among the related peoples of Montenegro, Macedonia, Bosnia, and even Croatia. In October, 1908, Austria completed the annexation of Bosnia and Herzegovina; this brought the anti-Austrian feeling in Servia to fever-heats, as the Serbs believed they had a moral claim on these countries inhabited by related peoples. The Servian Government opposed to this, protested against what it alleged to be an infringement of the Treaty of Berlin of 1878. It also formed an alliance with Montenegro, called out the reserves, and set about raising a war loan. Servia was openly supported by Russia, and secretly encouraged by Great Britain. It demanded from Austria-Hungary thecession of a strip of territory to connect Servia, by way of the Sandjak of Novi Bazar and Bosnia, with Montenegro and the Adriatic; it also demanded the autonomy of Bosnia and Herzegovina under the supervision of the European Powers.

In the spring of 1909 war seemed inevitable. However, Greece, which declared itself ready to support Austria-Hungary with arms if the latter were attacked by Russia in a war with Servia, led Russia to change its position and forced Servia to yield. Servia was obliged to acknowledge formally the annexation of Bosnia and Herzegovina, to renounce economic and territorial compensation, and to express the desire to renew friendly relations with the dual monarchy. At the same time the Crown Prince George was obliged to renounce his right to the succession in favour of his brother Alexander. George had had a large share in urging a war and was greatly disliked by the Serbs on account of his wild behaviour, his extravagance, and brutal conduct. Since then the relations between Servia and Austria-Hungary have become more friendly, and the customs war was settled in the early part of 1911 by a commercial treaty.

II. Actual Conditions.—Servia has an area of 18,650 square miles; on 31 December, 1900, the population was 2,492,882, distributed in 509,470 households. By language Serbs, 89,873 Rumanians, 7494 Germans, 2151 Albanians, 1956 Magyars. Divided by religions, 2,460,515 belonged to the Serbo-Orthodox Church, 10,423 were Roman Catholics, 1399 Protestants, 3056 Turkish Mohammedans, 11,689 Mohammedan Gypsies, while 71 belonged to various other religions. At the beginning of 1910 the Ministry of Finance reported a national debt of 2,655,660. According to the Constitution of 2 January, 1889, Servia is a constitutional monarchy, hereditary by primogeniture in the male line in the Karageorgevitch family. The king shares the legislative power with a national assembly, the Skuphestina; this consists of 150 deputies elected for four years. The right of suffrage is exercised by every Servian citizen who is twenty-one years of age and pays a national tax of at least 15 pence, as well as all members of the clergy who have reached their majority, irrespective of taxation. Those who are eligible as deputies who are thirty years old and pay an annual state tax of 30 pence. A “Great Skuphestina”, consisting of twice the ordinary number of deputies, is elected for certain special occasions, as for making changes in the Constitution, electing a king when there is no heir to the throne, etc.

The national religion of Servia is that of the Orthodox Greek Church. All denominations permitted by the Government enjoy complete freedom and protection, so far as their exercise does not contravene morals and public order. However, all attempts to influence the members of the State Church to adopt other creeds are forbidden. All church organizations are under the supervision of the Ministry of Worship and Education, which also watches the correspondence of all Servian with foreign ecclesiastical authorities. The control of the Orthodox Church is in the hands of a synod consisting of the five bishops of the country under the presidency of the metropolitan, the Archbishop of Belgrade. This synod elects all the bishops, issues all the edicts for the guidance of the Church, and has a share in drawing up all laws referring to the Church and clergy. The metropolitan is elected by a special synod consisting of the active bishops, all archimandrites and arch-priests of the subdivisions of the synod, the head of the Synodical Powers, and Saba, and several lay adherents of the Orthodox Church. The choice of this synod requires the confirmation of the king. In 1907 there were 750 churches and chapels, 64 monasteries, 1042 priests, and 98 monks. The Orthodox Church is supported partly by the revenues of the church lands, partly by additional sums granted by the State. The value of the church lands is nearly 345 million marks; that of the monastery lands makes an additional 250 million marks.

Since 1848 the Catholic Serbs, who are in large part subjects of the Austro-Hungarian Monarchy, have been under the spiritual direction of the Titular Archbishop of Diakovo, in Slavonia. Although freedom of religion was constitutionally guaranteed by the Congress of Berlin, the position of the Catholic Church is a disadvantageous one, as the Orthodox clergy put various difficulties in the way of parochial work. In the course of the nineteenth century negotiations were several times begun for the erection of a Latin bishopric in Servia. Bishop Strossmayer, of Diakovo, especially tried repeatedly to attain this end, but all efforts were in vain. In 1890 the Holy See gave its consent to the erection of a bishopric for Servia, but the movement has failed on account of the opposition of the Servian Government to the idea of such difficulties. There are only three parochial stations for the Catholics of Servia, and the expenses of these are largely borne by the Austro-Hungarian Government. The title of Catholic Primate of Servia is borne by the
Archbishop of Antivari, who, since March, 1911, has been Father Matthew Cardun of the Dalmatian province of the Franciscans.

(For a list of works, see p. 571, and the work contains a bibliography of Servia.)

Joseph Lins

Servite Order of (Servants of Mary), is the fifth mendicant order, the objects of which are the salvation of souls, its members: preaching the Gospel, and the propagation of devotion to the Mother of God, with special reference to her sorrows. In this article we shall consider: (1) the foundation and history of the order; (2) devotions and manner of life; (3) affiliated associations; (4) Servites of distinguished age.

Foundation and History.—To the city of Florence belongs the glory of giving to the Church the seven youths who formed the nucleus of the order: Buonfiglio dei Monaldi (Bonifilus), Giovanni di Buonagunta (Bonajuncta), Bartolomeo degli Amidei (Amideus), Ricovero dei Lippi-Uggucioni (Hugh), Benedetto dell’ Antella (Manetti), Gardinardo di Sostegno (Sosteneus), and Alessio de’ Falconieri (Alexius); they belonged to seven patrician families of that city, and had early formed a confraternity of laymen, known as the Ladeis, or Praisers of Mary. While engaged in the exercises of the confraternity on the feast of the Assumption, 1253, the Blessed Virgin appeared to them, advised them to withdraw from the world and devote themselves entirely to eternal things. They obeyed, and established themselves close to the convent of the Friars Minor at La Camarzia, a suburb of Florence. Desiring stricter seclusion than that offered at La Camarzia, they withdrew to Monte Senario, eleven miles north of Florence. Here the Blessed Virgin again appeared to them, conferred on them a black habit, instructed them to follow the Rule of St. Augustine and to found the order of her servants (18 April, 1240). The brethren elected a superior, took the vows of obedience, chastity, and poverty, and admitted associates.

In 1243, Peter of Verona (St. Peter Martyr), Inquisitor-General of Italy, recommended the new foundation to the pope, but it was not until 13 March, 1256, and about the same time a Rescript was issued confirming the Order of the Servites as a separate body with power to elect a general. Four years later a general chapter was convened at which the order was divided into two provinces. Tuscany and Umbria, the latter of which St. Marce- lus directed, while the latter was given into the care of St. Sostene. Within five years two new provinces were added, namely, Romagna and Lombardy. After St. Philip Benizi was elected general (5 June, 1267) the order, which had long been the object of attack from jealous eyes, was protected from crisis of its existence. The Second Council of Lyons in 1274 put into execution the ordinance of the Fourth Lateran Council, forbidding the foundation of new religious orders, and absolutely suppressed all mendicant institutions not yet approved by the Holy See. The aggressors renewed their assaults, and in the year 1276 Innocent V in a letter to St. Philip declared the order suppressed. St. Philip proceeded to Rome, but before his arrival there Innocent V had died. His successor lived but five weeks. Finally John XXI, on the favourable opinion of three consistorial advocates, decided that the order should continue, but they disappeared under Martin IV (1281), and though other popes continued to favour the order, it was not definitively approved until Benedict IX issued the Bull, "Dum levamus" (11 Feb., 1304). Of the seven founders, St. Alexis alone lived to see their order decreed as fitted to the dignity of an order. He died in 1310.

We must here make mention of St. Peregrine Laziosi (Latioi), whose sanctity of life did much towards increasing the repute of the Servite Order in Italy. Born at Forli in 1255, the son of a Ghibelline leader, Peregrine, in his youth, bitterly hated the Church. He was tossed about between the warring parties, and at the request of Martin IV, had gone to preach peace to the Forlivese. Peregrine’s generous nature was immediately aroused by the mildness with which St. Philip received the attack, and he begged the saint’s forgiveness. In 1283 he was received into the order, and so great was his humility it was only after much persuasion he consented to be ordained a priest. He founded a monastery in his native city, where he devoted all his energies to the restoration of peace. His humility and patience were so great that he was called by his people a second Job. He died in 1345, and is venerated at Forli to the present day. He was canonized by Benedict XIII in 1726, and his feast is celebrated on 30 April.

One of the most remarkable features of the new foundation was its wonderful growth. Even in the thirteenth century there were houses of the order in Germany, France, and Spain only in the four-teenth century the order had more than one hundred convents including branch houses in Hungary, Bohemia, Austria, Poland, and Belgium; there were also missions in Crete and India. The disturbances during the Reformation caused the loss of many Servite convents in Germany, but in the South of Europe the order met with much success. The Con vent of Santa Maria in Via (1563) was the second house of the order established in Rome; San Marcello had been founded in 1386. Early in the eighteenth century the order sustained losses and confiscations from which it has scarcely yet recovered. The flourishing convent of St. Bonaventure in Capocorvi was destroyed by the plague which swept Marseilles in 1720. In 1783 the Servites were expelled from Prague and in 1785 Joseph II desecrated the shrine of Maria Wald rast. Ten monasteries were suppressed in Spain in 1835. A new foundation was made at Brussels in 1891, and at Rome the College of St. Alexis was opened in 1895. At this period the order was introduced into England and America chiefly through
the efforts of Fathers Bosio and Morini. The latter, having gone to London (1864) as director of the affiliated Sisters of Compassion, obtained charge of a parsonage from Archbishop Marsh in 1877. His work progressed; besides St. Mary’s Priory at Longport, convents were opened at Bognor (1882) and Begbroke (1886). In 1870 Fathers Morini, Ventura, Giribaldi, and Brother Joseph Camara, at the request of Rt. Rev. Bishop Melcher of Green Bay, took up a mission in America, at Neenah, Wisconsin. Father Morini founded a «Society of Mary Magdalen», and the «Society of the Lady of Sorrows». A novitiate was opened at Granville, Wisconsin, in 1892. The American province, formally established in 1896, embraces convents in the dioceses of Chicago, St. Louis, Milwaukee, Superior, and Denver. In 1910 the order numbered 700 members, consisting of 698 nuns of, of which 58 were in Italy, 17 in Austria-Hungary, 4 in England, 4 in North America, 1 in Brussels.

DEVICTIONS: MANNER OF LIFE.—In common with all religious orders strictly so called, the Servites make solemn profession of the three vows of poverty, chastity, and obedience. The particular form of the vow of obedience is first to obey the Servite bishop, then to obey the Servite provincial, and then all men through devotion to the Mother of God, especially in her desolation during the Passion of her Divine Son. The Servites give missions, have the care of souls, or teach in higher institutions of learning. The Rosary of the Seven Dolours bears the name of Matria. The facts of the order are Advent, Lent, and the vigils of certain feasts. All offices in the order are elective and continue for three years, except that of general and assistant-generals which are for six years. The canonical Servite saints are: St. Philip Benizi (feast 29 Aug.), St. Peregrine Latiario (30 April), St. Juliana Falconieri (19 June), and the Seven Holy Founders (12 Feb.).

AFFILIATED ASSOCIATIONS.—Connected with the first order of men are the cloistered nuns of the second order, which originated with convents of St. Philip Benizi. These sisters have convents in Spain, Italy, England, The Tyrol, and Germany. The Mantellate, a third order of women founded by St. Juliana (see MARY, SERVANTS OF), have houses in Italy, France, Spain, England, and Canada. In the United States they are to be found in the dioceses of Sioux City and Belleville. They number in all three hundred, as a confraternity of the Seven Dolours, branches of which may be erected in any church.

SIRENIS DISTINCTION.—A few of the most distinguished members are here grouped under the heading of that particular subject to which they were especially devoted towards the end of their life. Their obits have been canonized and several beatified. Sacred Scripture.—Angelo Torsani (1562?); Feliciano Capitoni (1577), who wrote an explanation of all the passages misunderstood by Luther; Jerome Quaini (1683); Angelus Montanarius (1600), commentary in 5 vols.; James Tavanti (1607) who composed a Manual of the Spiritual Life (25 vols.); Julius Anthony Roboredo (1728). Theology.—Laurence Optimus (1380), "Commentarium in Magistrum Sententiarum"; Ambrose Spiera (1454); Marino Salvinii (1476); Jerome Amidei (1543); Laurence Massacchi (1600); Gerardus Baldi (1669), who was styled by his contemporaries "eminens inter theologos"; Amideus Chirolli (1707), celebrated for his "Lumina fidei divinae"; Julius Arrighetti (1705); Callixtus Lodgerius (1710); Gerard Capasii (1737), who was by Benedict XIV called the most learned man of his day; Mark Strugell (1761); Cesare Squarcia (1769). Canon Law.—Paul Auguste (1769), who composed a Manual of the Spiritual Life (25 vols.); Dominik Brancasocini (1689), "De jure doctoratus"; Paul Canciani (1795), "Barbarorum legum antiquae"; Theodor Ruprechz, eighteenth-century jurist; Pontius Murra (1822), prefect of the Sapienza before 1870.

Philosophy and Mathematics.—Urbanus Averroistus, commentator of Averroes; Andrew Zaini (1423); Paul Albertini (1746), better known as Paolo Veneto; Philip Bagetti (1511); John Bostius; Drousanius (1525), the "Italian Archimedes"; Benedictus Securini (1745); Raymond Adami (1792); Angelo Ventura (1738). History and Hagiography.—James Philip Landrofio (1628); Octavio Bagetti (1565); Raphael Maffei (1577); Archangelus Gianzi (1632); Philip Ferrari (1629); Archangelus Garbi (1728); Placidus Bonifazi (1728); Josephine Galanie (1710). Fine Arts.—Alexander Mellini (1554) choir-master at the Vatican; Elias Zoto, John Philip Dreyer (1772); Paul Bonfichi, who received a pension from Napoleon Bonaparte for his musical compositions; Ambrose of Racconigi, Cornelius Candidus, Jilis of Milan, Germanus Sardius, poets; Ambrosio Mario Dei and Gabriel Mattei, painters; Angelus Montanarius (1663), architect and sculptor, among whose works are the Neptunus of Messina, the arm of Laocoön in the Vatican, and the Angels on the Ponte Sant'Angelo.

(Florence, 1837); SPOKA, Lebensbilder aus dem Serviten-Orden (Innsbruck, 1853); SOUILLER, Storia dei Serviti (Munich, 1866); IDELI, Vie de S. Philippe Benizi (Paris, 1888); LEPICIER, Sainte Julienne Falconieri (Brussels, 1867); LEHOUX, Hist. des sept missions fondationnaires (Paris, 1888); DECONCIN, Rosses de la Matria (Brussels, 1905).

Patrick J. Griffin.

SERRUS SERVORUM DEI, (SERVORUM OF THE SERVANTS OF GOD), a title given to the popes themselves in documents of note. Gregory the Great was the first to use it extensively, and he was imitated by his successors, though not invariably till the ninth century. John the Deacon states (F. L., LXXV, 87) that Gregory assumed this title as a lesson in humility to John, the Pastor. Prior to the controversy with John (595), addressing the Synod of 591, Gregory employed this phrase, and even as early as 587, according to Ewald ("Neues Archiv für ältere deutsche Geschichtskunde", III, 545, a. 1878), while still a deacon. A Bull of 570 begins: "Joannes (III) Episcopus, servus servorum Dei". Bishops actuated by humility, e. g. St. Boniface [Jaffe, "Monum. Magus" in "Bibl. der. Ger.", III (Berlin, 1866), 57, 177 etc.], and the archbishops of Benevento; or by pride, e. g. the archbishops of Ravenna as late as 1122 [Muratori, "Antiq. Ital." V (Milan 1741), 177; "Dissertazioni", II, diss. 36]; and even canon rulers, e. g. Alphonsus (1151-1203), and Emperor Henry III (b. 1017), applied the term to themselves. Since the twelfth century it is used exclusively by the pope. (See BULLS AND BRIEFS).

Do Clericis, Glossarium med. et inf. lat. Andrew B. Meieran.

Sessa-Aurunca, Diocese of (Stessana), in Campania, Province of Caserta (Southern Italy). The city is situated on a hill in the midst of a fertile plain, and possesses a large and beautiful cathedral, built in 1113. A city of the Aurunci, it became a Roman colony 313 B.C. It was the birthplace of the poet Lucilius and of the philosopher Agostino Nifo. Local legend relates that the Faith was preached in Sessa (the Latin name of the city) by St. Peter himself. The inhabitants venerate as patron saints their Bishop, St. Claudio, a martyr of the third century. There still remain ruins of the ancient basilica dedicated to him, with which catacombs are still connected (cf. "Nuovo Bulletinio d’Archeologia Cristiana", 1897, p. 140). The first bishop of certain date was Fortunatus (499); but until the end of the tenth century the name of the bishop is unknown. Of the others we mention: Ervino (1171), who rendered great services to the city; Pandulfio (1224), who donated the pulpit, adorned with mosaics, in the cathedral; Giovanni (1259), who embellished
the cathedral; Angelo Gerardini (1462), a learned humanist; Galeazzo Florimonti (1552), who played an important role in the intellectual life of the city; and many others, including Paul III and Julius III, and published various works; Giovanni Placidi (1656), founder of the seminary; Ulisse Gherardini (1624), who restored the cathedral and the episcopal residence; Francesco Granata (1758), who promoted study in the seminary, and wrote various works. Later, Giuseppe Pietro de Felice (1797), who was cast into prison by the revolutionists; and Ferdinando Girardi (1848), exiled in 1860. The diocese is suffragan of Capua; it contains 42 parishes with 56,750 souls and 90 secular clergy.

U. BENIGNI.

Sestini, Benedict, astronomer, mathematician, b. at Florence, Italy, 20 March, 1816; d. at Frederick, Maryland, 17 Jan., 1890. He entered the Society of Jesus at Rome on 30 Oct., 1839, and studied at the Roman College where he followed the courses of Father Carassa, the distinguished professor of mathematics; endowed with mathematical ability, supplemented by keen sight and skill as a draughtsman, he was appointed assistant to Father De Vico, director of the Observatory. He was ordained in 1844, and filled the chair of higher mathematics at the Roman College, where the Revolution of 1848 caused his precipitate flight from Rome; coming to America he lived at Georgetown College, except for a few years, until 1869. He was stationed at Woodstock, Maryland, at the opening of the scholasticate, and remained there until 1884. On account of failing health, he was transferred in 1885 to the novitiate, Frederick, Maryland, where paralysis terminated his career. In astronomy, his principal work is his "Catalogue of Star-Colors", published in his "Memories of the Roman College", 1845 and 1847. The second memoir contains the first list of the stellar sources, with notes, except the twelve celestial charts that accompanied the first. The Revolution broke out at Rome when the second memoir was in the printer's hands, and prevented the completion of the work. The catalogue is important for two reasons: it is the first general review of the heavens for star-colours, embodying the entire B. A. C. Catalogue from the North Pole to 30 degrees south of the Equator; then, as the observations are now about seventy years old (having been made from 1844 to 1846), the "Catalogue" will be invaluable for deciding the question whether the stars vary variable in colour. For these reasons it has been republished, with notes, at the Vatican Observatory, as No. III Publications, 1911. It is remarkable how few are the errors of identification, in view of the then existing difficulties, and how closely Sestini's general scale of colours agrees with that of the Potsdam catalogue.

At Georgetown Observatory, in 1890, Sestini made a series of sunspot drawings, which were engraved and published (44 plates) and "Appendix A" of the Naval Observatory volume for 1847, printed in 1853. His last scientific work as an astronomer was the observation of the total eclipse of 29 July, 1878, at Denver, Colorado. A sketch of the corona as it appeared to him was published in the "Catholic Quarterly Review". From his arrival at Georgetown (1848) until his retirement from Woodstock (1884) he had been almost constantly engaged in teaching mathematics to the Jesuit scholastics, and he published textbooks on algebra, geometry and trigonometry, analytical geometry, infinitesimal calculus, and astronomy. These were works of sterling merit, but they never became popular with students or teachers; their severe analytic method was repellent to practical American taste; he had no sympathy with commercial mathematics, and furthermore the make-up of the books was not as attractive as the ordinary high-school and college textbooks. He wrote treatises on the physical science of the day the titles of some of which were: "Theoretical Mechanics" in 1878; "Animal Physics" in 1874; "Principles of Cosmography" in 1878. He founded the American "Messenger of the Sacred Heart" in 1860, and retained editorial control of it until 1885; he was also head director of the Apostleship of Prayers in the United States. He was an indefatigable worker and had many difficulties to contend with in launching and sustaining the " Messenger", and in directing the League of the Sacred Heart, but he was supported in his labours by his own devoted and ardent zeal for the glory of God. In his last years said of him that he had two passions—one for pure mathematics, and the other for the pure Catholic religion.

BIBLIOGRAPHY, Bibliotheca de la C. de J., VII, 1156; Woodstock Letters, NIX, 220; XXX, 32; Messenger of the Sacred Heart news series, V (1890), 161, 343, 435, 488.

E. I. DEVITT.

Setebo Indians, a considerable tribe of Panoan linguistic stock formerly centering about the confluence of the Manoa with the Ucayali River, Loreto province, north-eastern Peru, and now engaged in rubber gathering. There are two villages at the confluence of the latter river to or below, its junction with the Maranon. They speak the same language as their neighbours the Pano, Conibo, and Sipibo, whom they resembled in their primitive-custom and belief as now in their more civilized condition. The first entry of the upper Ucayali country was made early in the seventeenth century by gold hunters from Peru, whose treatment of the wild tribes had the effect of rendering the Indians bitterly hostile towards the Spaniards. In 1657, however, the Franciscan Father Alonso Caballero with two other priests and three lay brothers, passing through the country of the cannibal Cachibo, reached the Setebo on the Ucayali. After a year or more of patient effort they succeeded in gathering a part of the tribe into two mission villages. These had but a brief existence; they were attacked and destroyed by the more powerful Sipibo, hereditary enemies of the Setebo, the five religious in question and many of the Indians of the second attempt made under Father Lorenzo Timeo, with several other Franciscans, attended by an escort of soldiers and two hundred Christian Indians from Central Peru. Two missions were established, but only to meet the fate of the first at the hands of the cannibals. In 1661 the Setebo were driven to the Huallaga with a part of their neophyte flock. Other attempts at establishment on the Ucayali within the next forty years were frustrated by hostile attacks and by smallpox epidemics, particularly a great smallpox visitation which desolated the whole region in 1670. Within this period eight missionaries were slain in the Setebo country, one of them, Father Jeronimo de los Rios, being devoured by cannibals in 1704. In 1736 the Setebo were still further decimated in a bloody engagement with their inextirpable enemies the Sipibo.

In 1761 another Franciscan mission entry into the Setebo territory was made by Fathers Francisco de San José and Miguel de Salcedo, accompanied by about one hundred Christian Indians, and, as interpreter, a young girl of the tribe who had been taken prisoner in a previous expedition and who was baptized under the name of Ana Rosa. Through the offices of the religious officers, she was identified with the chief of one band, and on her invitation established a mission chapel in his village under the name of San Francisco de Manoa. They were greatly pleased to find that the Indians still retained a deep reverence for the cross, which they had set up in front
of their houses and in their fields, and retained also a few words of Spanish greeting as heirlooms of earlier missions. In 1764 Father Fresnedas bravely ventured among the Sipibos and succeeded in bringing about a period of peace with the Catholic Faith. Delayed by her daughter’s illness and then by her own, she sailed for home accompanied by Antonio Filicchi, and reached New York on 3 June, 1804. Her sister-in-law, Rebecca, died in July. A time of great spiritual perplexity began for Mrs. Seton, whose prayer was, “If I am right Thy grace sustains me; if I am wrong, Oh, teach my heart to find the better way.” Mr. Hobart (afterwards an Anglican bishop), who had great influence over her, used every effort to dissuade her from joining the Catholic Church, while Mr. Filicchi presented the claims of the true religion and arranged a correspondence between Elizabeth and Bishop Cheverus. Through Mr. Filicchi she also wrote to Bishop Carroll. Elizabeth meanwhile added fasting to her prayers for light. The result was that on Ash Wednesay, 14 March, 1805, she was received into the Church by Father Matthew O’Brien in St. Peter’s Church, Barclay St., New York. On 26 March she made her first Communion with extraordinary favour; even the faint shadow of this sacrament in the Protestant Church had had such an attraction for her that she used to hasten from one church to another to receive it twice each Sunday. She well understood the storm that her conversion would raise among her Protestant relatives and friends at the time she most needed their help. Little of her husband’s fortune was left, but numerous relatives would have provided amply for her and her children if she had not this barrier been raised. She joined an English Catholic gentleman named White, who, with his wife, was opening a school for boys in the suburbs of New York, but the widely circulated report that this was a proselytising scheme forced the school to close.

A few faithful friends arranged for Mrs. Seton to open a boarding-house for some of the boys of a Protestant school taught by the curate of St. Mark’s. In January, 1806, Cecilia Seton, Elizabeth’s young sister-in-law, became very ill and begged to see the estranged convert; Mrs. Seton was sent for, and became the curate’s constant visitor. Cecilia told her that she desired to become a Catholic. When Cecilia’s decision was known threats were made to have Mrs. Seton expelled from the state by the Legislature. On her recovery Cecilia fled to Elizabeth for refuge and was received into the Church. She returned to her brother’s family on his wife’s death. Mrs. Seton’s boarding-house for boys had to be given up. Her sons had been sent by the Filicchis to Georgetown College. She hoped to find a refuge in some convent in Canada, where her teaching would support her three daughters. Bishop Carroll did not approve, so she relinquished this plan. In July, 1806, Father Dubourg, S.S., from Mary’s Baltimore, met her in New York, and suggested opening in Baltimore a school for girls. After a long delay and many privations, she and her daughters reached Baltimore on Corpus Christi, 1808. Her boys were brought
there to St. Mary’s College, and she opened a school next to the Chapel of St. Mary’s Seminary and was delighted with the opportunities for the practice of her religion, for it was only with the greatest difficulty that she had been able to get daily Mass and holy communion in New York. The convent life for which she had longed ever since her stay in Italy now seemed less impracticable. Her life was that of a religious, and her quaint costume was fashioned after one worn by certain nuns in Italy. Cecilia Conway of Philadelphia was sent for. She came and convinced Father DeRosa that she had the qualifications for fulfillment of her religious vocation, joined her; soon other postulants arrived, while the little school had all the pupils it could accommodate.

Mr. Cooper, a Virginian convert and seminarian, offered $10,000 to found an institution for teaching poor children. A farm was bought half a mile from the village of Emmitsburg and two miles from Mt. St. Mary’s College. Meanwhile Cecilia Seton and her sister Harriet came to Mrs. Seton in Baltimore. As a preliminary to the formation of the new community, Mrs. Seton took vows privately before Archbishop Carroll and his daughter Anna. In June, 1805, the community was transferred to Emmitsburg, and Father DeRosa was in charge of the new institution. The great fervour and mortification of Mother Seton, imitated by her sisters, made the hardships of their situation seem light. In Dec., 1809, Harriet Seton, who was received into the Church at Emmitsburg, died there, and Cecilia, on Dec. 13, 1810. Harriet was postulated in 1810 by the community to obtain in France the rules of the Sisters of Charity of St. Vincent de Paul. Three of these sisters were to be sent to train the young community in the spirit of St. Vincent de Paul, but Napoleon forbade them to leave France. The letter announcing their coming is extant at Emmitsburg. The rule, however, with some modifications, was approved by Archbishop Carroll in Jan., 1812, and adopted. Against her will, and despite the fact that she had also to care for her children, Mrs. Seton was elected superior. Many joined the community; Mother Seton’s daughter, Anna, died during her novitiate (12 March, 1812), but had been permitted to pronounce her vows on her deathbed.

Mother Seton and the eighteen sisters made their vows on 19 July, 1813. The fathers superior of the community were the Bulpicians, Fathers Dubourg, David, and Joseph Manigault. The youth of the province, however, and the spirit of St. Vincent’s Sisters of Charity, forty of whom he had had under his care in France, the fervour of the community won admiration everywhere. The school for the daughters of the well-to-do prospered, as it continues to do (1912), and enabled the sisters to do much work among the poor. In 1814 the sisters were given charge of an orphan asylum in Philadelphia; in 1817 they were sent to New York. The previous year (1816) Mother Seton’s daughter, Rebecca, after long suffering, died at Emmitsburg; her son Richard, who was placed with the French Fathers, died with their caves; after his mother, William, the eldest, joined the United States Navy and died in 1868. The most distinguished of his children are Most. Rev. Robert Seton, Archbishop of Philadelphia (author of a memoir of his grandmother, “Roman Essays”, and many contributions to the “American Catholic Quarterly” and other reviews), and William Seton (q. v.).

Mother Seton had great facility in writing. Besides the translation of many ascetical French works (including the life of Saint Vincent de Paul, and of Mlle. De Grève) for her community, she has left copious diaries and correspondence that show a soul on fire with the love of God and seal for souls. Great spiritual desolation purified her soul during a great portion of her religious life, but she cheerfully took the royal road of the cross. For several years the saintly bishop (then Father) Bruti was her director. The third time she was elected mother (1819) she protested that it was the election of the dead, but she lived for two years longer, after her removal to Baltimore, before she died. Her perfect sincerity and great charm aided her wonderfully in her work of sanctifying souls. In 1880 Cardinal Gibbons (then Archbishop) urged that steps be taken towards her canonization. The results of the official inquiries in the case of Mother Seton, held in Baltimore during several years, were brought to Rome by special messenger, and placed in the hands of the postulator of the cause on 7 June, 1911.

Her cause is entrusted to the Priests of the Congregation of the Mission, whose superior general in Paris is also superior of the Sisters of Charity with which the Emmitsburg community was united in 1850, after the withdrawal of the greater number of the sisters (at the suggestion of Archbishop Hughes) of the New York houses in 1846. This union had been contemplated for some time, but the need of a stronger bond at Emmitsburg, shown by the New York separation, enabled it. It was accepted with the loss of only the Cincinnati congregation of six sisters. With the Newark and Halifax offshoots of the New York community and the Greenburg foundation from Cincinnati, the sisters originating from Mother Seton’s foundation number (1911) about 6000. The original Emmitsburg community now wears the cornette and observing the rule of 1812. She is the only one of the founders who passes any of the others in number. It is found in about thirty dioceses in the United States, and forms a part of the worldwide sisterhood, whilst the others are rather diocesan communities.

B. RANDOLPH.

Seton, William, author, b. in New York, 28 Jan., 1835; d. there, 15 Mar., 1905. His father was William Seton, captain in the U. S. Navy, son of Elisabeth Ann Seton (q. v.), his mother was Emily Prime. Burke’s Peerage (1900) recognized him as the head of the principal family of the Seton line of the earls of Winton in Scotland. He was educated at St. John’s College, Fordham, at Mt. St. Mary’s, Emmitsburg, Md., and at the University of Bonn. He travelled extensively abroad before entering a law office in New York. Soon after his admission to the bar he answered Lincoln’s first call for troops in 1861. Disabled for a time by wounds received in the Battle of Antietam, where he fought as captain of the Forty-first New York Volunteers, French’s Division, Sumner’s Corps, he returned to his father’s home, Cragdon, Westchester Co., New York, but went back to the front to be captain of the 16th Artillery. After the war he devoted himself chiefly to literature, publishing two historical novels, “Romance of the Charter Oak” (1870) and “Pride of Lexington” (1871); “The Pioneer”, a poem (1874); “Rachel’s Fate” (1882); “The Shamrock Gone West” and “Moiras” (1884). About 1886 he went to Europe for serious study in paleontology, psychology, etc., and thereafter usually spent the greater part of each year in France in such pursuits. His forte was presenting scientific matters in attractive English. He issued a brief work, “A Glimpse of Organic Life, Past and Present” (1897). He was a frequent contributor of scientific articles to the “Catholic World” "The Building of the Mountain", a novel, was in the press at the time of his death. His Alma Mater, Mt. St. Mary’s, conferred on him the degree of L.L.D. in
1890. He outlived by ten years his wife Sarah Redwood Parrish, a Philadelphian convert from the Society of Friends. Their only child William died in infancy. He did much charitable work, especially in obtaining employment for the poor. He is buried with the Settons at Mt. St. Mary’s, Emmitsburg, Maryland.

B. Randolph.

_SETTIGNANO_, DESIDERIO DA, b. at Settignano, Tuscany, 1428; d. at Florence, 1463. He is said to have been the son of a stone-cutter and was admitted to the association of “Maestri di Pietra” (stone-workers) in 1438. He studied under Donatello, from whom no doubt he acquired the characteristics of fineness, joyfulness, elegance, and distinction which cause his work to be often confounded with his master’s. In spite of his brief life his name ranks among those of the great artists of his day. His chief productions are: the architectural tomb covered with fine sculpture of Carlo Maruffini, secretary of the republic, in the Church of Sta Croce; a marble tabernacle at San Lorenzo with a charming standing figure of the Child Jesus; a very interesting bust of Marietta Strozzi in the Medici Palace; a graceful relief of the Madonna over an infant on the corner of the Palazzo Panciatici; portrait bust of a young girl in the Bargello; the wooden statue of the Magdalen over her altar in the Church of Sta Trinità (finished by Benedetto da Maiano); and a bust in the Palazzo Pubblico at Forlì. Besides these, mention should be made of a number of works attributed to Desiderio by some authorities and by others to Donatello or his school—a Pietà in San Lorenzo, Florence; a Beato d’Este in the Louvre; a Virgin and Child in the South Kensington Museum, London; a portrait bust of a young woman in the Museum, Berlin; the “Child Laughing” in the Benda Collection, Vienna; and the tondi that are regarded as a relic of Sta Cecilia in the collection of Lord Wemys, London.

M. L. Handley.

_SEVEN_ BRANCH CANDLESTICK, one of the three chief furnishings of the Holy of the Tabernacle and the Temple (Ex., xxv, 31-40; xxxvii, 17-24). In reality it was an elaborate lampstand, set on the south side of the Holy Place so as to face the loaves of proposition. It was beaten out of finest gold. A central shaft, together with three pairs of branches curving upward from out the shaft, all exquisitely ornamented and surmounted with stands, held in a line the seven golden lamps that gave light to the sanctuary. The priests dressed the lamps in the morning and set them on the lampstand in the evening (Ex., xxx, 7, 8). All night long the seven lamps were kept burning (Ex., xxvii, 21; Lev. xxv, 3; I Kings, ii, 3). Now Josephus (Antiq. Jud., III, viii, 3) tells us that three lamps were lighted. Levites of the family of Caath cared for the golden lampstand on the march (Num., iii, 31). It was among the spoils brought by Vesperian and Titus to grace their triumph at Rome, and may be seen sculptured upon the Arch of Titus.

_SEVEN CHURCHES OF ASIA_. See APOCALYPSE.

_SEVEN DEACONS_, the seven men elected by the whole company of the original Christian community at Jerusalem and ordained by the Apostles, their office being chiefly to look after the poor and the common affairs. The number of believers at Jerusalem had grown very rapidly, and no ordinary men had been made that the poor widows of Hellenistic Jews were neglected. The Apostles, not desiring to be drawn away from preaching and the higher spiritual ministry to care for material things, proposed to the believers to transfer such duties to suitable men, and selecting seven such men they ordained them to minister (Acts, vi, 1-6). This was the first separation of an ecclesiastical, hierarchical office from the Apostolate in which up to then the ecclesiastico-religious power had been concentrated. The "seven men" were "full of the Holy Ghost" and therefore able partially to represent the Apostles in more important matters referring to the spiritual life, as is in the case of St. Stephen (q. v.) at Jerusalem, of St. Philip in Samaria, and elsewhere. Nothing further is known of several of the seven deacons, namely Nicanor, Timon, and Parmenas. Philip, who is called the "Evangelist," preached with much success in Samaria (Acts, viii, 5 sq.), so that the two Apostles Peter and John went there later to bestow the Holy Ghost on those whom he had baptised. He also baptised the eunuch of the Queen of the Ethiopians (Acts, viii, 26 sqq.). According to the further testimony of the Book of the Acts (xxi, 8 sqq.) he lived later with his disciples at Crete, where he is said to have passed into eternity. His feast is observed on 6 June, by the Greek Church on 11 October. In later narratives Prochorus is said to be one of the seventy disciples chosen by Christ; it is related that he went to Asia Minor as a missionary and became Bishop of Nicomedia. The apocryphal Acts of John were wrongly ascribed to him [cf. Lapidus, "Apokryphische Apostelsgeschichten und Apostellegenden", I (Brunswick, 1883), 355 sqq.]

In the second half of the second century a curious tradition appeared respecting Nicholas. Ireneus and the anti-heretical writers of the early Church who follow him refer the name of the Nicolaitans, an immoral sect that are regarded as early as the Apocalypse of John, to that of Nicholas and trace the sect back to him (Ireneus, "Adv. her.", I, xxvi, 3; III, xi, 1). Clement relates as a popular report (Stromat., II, xx) that Nicholas was reprieved by the Apostles on account of his jealousy of his beautiful brother. On this he set free and left it to every one to marry her, saying that the flesh should be maltreated. His followers took this to mean that it was necessary to yield to the lusts of the flesh (cf. the Philo-Semitism, VII, 36). This narrative points to a similar tradition, such as is found in Ireneus respecting the Nicolaitans. How far the tradition is historical cannot now be determined, perhaps the Nicolaitans themselves falsely ascribed their origin to the Descent of Nicholas [cf. Wohlenberg, "Nikolas von..."].

Seven Gifts of the Holy Ghost. See HOLY GHOST.

Seven Robbers (Septem Latrones), martyrs on the island of Corcyra (Corfu; i.e., the second century. Their names are Saturninus, Inasichous, Faustianus, Januarius, Marsalius, Euphrasius, and Mammianus. The Greek monologists inform us that Sts. Jason and Soeipater, who had been instructed in the Christian religion by the Apostles or by Christ Himself, came to the Island of Corcyra to preach the Gospel of Christ. After making numerous conversions they were cast into a dungeon where the above-mentioned seven robbers were imprisoned. They succeeded in converting the robbers who were then taken outside the city and martyrized by being cast into caldrons that were filled with seething oil and pitch. Some Greek monologists mention them on 27, others on 29, April. In the Roman martyrology they are commemorated on 29 April.

Seven Virgins of Anchises. SAINT. See THEODATUS OF ANCHISES, SAINT.

Severian, Bishop of Gabala in Syria, flourished in the fourth and fifth centuries. Concerning his life before his episcopal consecration, nothing has come down to us. He was regarded by his contemporaries as a good preacher, and was known as the author of Biblical commentaries and sermons: “Vir in divinis Scripturis eruditus et in homilii declarator admirabilis fuit” (Gennadius, “De script. eccles.,” xxii, in P. L., LVIII, 1073). Fостьer has preserved his name on account of the prominent but regrettable rôle which he played in the deposition and banishment of St. John Chrysostom. Invited by the great oratorical and financial success attained in Constantinople by his fellow-Syrian, Antiochus, Bishop of Potamois, Severian came to the capital about 400, provided with a series of Greek sermons. Invited by Chrysostom to preach, he succeeded in spite of his strong Syrian accent, in winning the approval of his hearers (Sosomen, “Hist escl.,” VIII, x). Owing to the strained relations between Chrysostom and the Emperor Eudoxia, Severian had to declare for one of the parties, and, since he allowed himself to be swayed by personal interest, his choice was soon made. Nevertheless, the unsuspecting Chrysostom, when ecclesiastical affairs necessitated a journey into the Province of Asia in 401, appointed his guest his representative for liturgical functions. Severian took advantage of Chrysostom’s absence and was soon engaged in open conflict with Seraphon, archdeacon and administrator of the ecclesiastical property and the episcopal palace, who remained true to Chrysostom. The resulting scandal and general excitement were so great that on his return (401) Chrysostom requested Severian to return again to his diocese (ibid., “VI, xii: Sosomen, VIII, x”). The peace thus effected was not lasting. Severian commenced anew his intrigues, and at the Synod of the Oak was one of Chrysostom’s most active opponents. He also signed the lampoon against Chrysostom which Theophilus of Alexandria (q. v.) sent to Pope Innocent (Palladius, “Dialogus,” III, in P. G., XVI, 14). He even ventured to proclaim to the people from the pulpit that this synod of his party was immediately after the first banishment of Chrysostom, and to proclaim the removal of the archbishop a just punishment for his pride. Rapid flight alone saved him from violence at the hands of the enraged populace (Sosomen, VIII, xvi). Shortly after Chrysostom’s return from his first exile, we find Severian with Acacius of Beroea and Antiochus of Potamois at the head of the party opposed to the archbishop. It was this party which on the night of Easter Sunday, 404, incited the attack on the catechumens and clerics of Chrysostom, and finally approached the emperor directly to procure the final banishment of their hated opponent (Palladius, III, IX, loc. cit., 34, 31 sqq.). On the death of Flavian (404), the friend of Chrysostom, this same triumvirate proceeded to Antioch, and, in defiance of justice and right, consecrated in an underhand fashion Porphyryus (Chrysostom’s opponent). Bishop of Antioch (Palladius, XVI, loc. cit., 34, 35 sqq.). Thus ends Severian’s story.

Of the later period of his life and activity, as little is known as concerning the first period. According to Gennadius (loc. cit.) he died during the reign of Theodosius II (408-50).

Writings.—(1) Sermons. Of these the following are extant: “Oratione sex in mundi creationem” (P. G., LVI, 429-500); “Oratio de serpente, quem Moyes in cruce suspendit” (ibid., 500-516); “In illud Abrahæ dictum: Pone manum tuæ sub femur meum” (ibid., xxiv, 2) (583-64); “De fœco arefactæ” (ibid., LIX, 855-90); “Contra Judæos” (ibid., LXI, 788-9); “De sigillis librorum” (ibid., LXIII, 531-44); “In Dei apparitionem” (ibid., LXV, 26); “De pace” (ibid., LII, 425-28), completed by A. Papadopoulos, “Ἀνελθεὶς λεγομενοῦσας σταγχωλαγί” (I. S. Petersburg, 1891), 15-28; “De nativitate Christi,” edited under Chrysostom’s name by Saville, VII, 307, but attributed by Theodoret (Ersmines, III, in P. G., LXIII, 308) to Severian; fifteen homilies in an Old Armenian translation, edited by J. B. Aucher, “Severian ... homiliae nunc primum editae ex antiqua versio ... in latinitatem sermonem translatae” (Venice, 1827), of which no. 7 is the homily “In Abrahæ dictum: Pone manum ... et no. 10 the homily of St. Basil on Baptism (P. G., XXXI, 423-44). The Codex Ambrosianus of Milan, c. 77 supp. (VII-VIII sect.) contains eighty-eight “sermones sancti Severiani”; the “Homiliarium Lacense” (Berlin Cod. lat. 941) has addresses of Peter Chrysologus under the name of “Severianus episcopus.” (2) The commentaries of Severian are all lost; but he had composed such on Genesis, Exodus, Deuteronomy, Job, the Epistles to the Romans, the Galatians, 1 Corinthians, II Thessalonians, and the Colossians (cf. Coemans Indiceplustes, “Topographia chrhist.”, i, c. x, in P. F., LVII, 375, 417). Gennadius, “De sancto,” i, xxii.

Severinus, SAINT. See AUSTRO-HUNGARIAN MONARCHY, THE.

Severinus, Pope. The date of his birth is not known. He was consecrated seemingly on 26 May, 840, but died 2 Aug., 840. Severinus, a Roman and the son of Abienus, was elected as usual on the third day after the death of his predecessor, and envoys were at once sent to Constantinople to obtain the
confirmation of his election (Oct., 338). But the emperor, instead of granting the confirmation, ordered Severinus to sign his Ethicon, a Monothelite profession of faith. This the pope-elect refused to do, and the Emperor Leontius, after receiving an order to comply, plundered the Lateran Palace. All was in vain; Severinus stood firm. Meanwhile his envoy at Constantinople, though refusing to sign any heretical documents and deprecating violence in matters of faith, behaved with great tact, and finally secured the imperial blessing. Hence, after a vacancy of over a year and seven months, the See of Peter was again filled, and its new occupant proceeded at once to declare that as in Christ there were two natures so also were there in Him two wills and two natural operations. During his brief reign he built the apse of the old St. Peter's in which Christ was buried.

Severus, Alexander, Roman emperor, b. at Aeso in Picardy, 208; murdered by his mutinous soldiers at Sicula on the Rhine, 235 (Sickling in main). He was the son of Genesius, Marcusianus, and Julia Mammæa, and was known in youth as Alexianus. When Elagabalus, his cousin and father by adoption, was murdered in 222, Alexander succeeded to the imperial throne. His education had been carefully supervised by Mammæa at Antioch, whence she invited him, some time between 218 and 228, the great Christian teacher, Origen. Eusebius relates (Hist. ecc., VI, xxxviii) that she was "a very religious woman," and that Origen remained some time with her, instructing her in all the things she could to glorify the Lord activities of Mammæa at Antioch. This does not, however, follow that she was a Christian. Her son Alexander was certainly very favourable to the Christians. His historian, Lampridius, tells us several interesting details concerning this emperor's respect for the new religion. He placed in his private oratory (lauzarium) images of Abraham and Christ before those of other renowned persons, like Orpheus and Apollo; of Tyana (Vita Alex., xxii); he tolerated the free exercise of the Christian faith ("Christianos esse pas- sus est," ibid., xxii); he recommended in the appointment of imperial governors the prudence and solicitude of Christians in the service of the State (ibid., xiv); he caused to be adjudged to them (ibid., xilix) a building site at Rome that the tavern-keepers (carpontarii) claimed, on the principle that it was better that God should be in some way honoured than that the site should revert to such use; he caused St. Paul's to be restored (Take, v, 31): "And as you would that men should do to you, do you also to them in like manner" to be engraved on the walls of the palace of the Caesars; he even cherished the idea of building a temple to Our Lord, but refrained when it was said to him that very soon all the other divinities would cease to be honoured (ibid., xilii). In spite of these signs of imperial goodwill, the Christians continued to suffer, even in this mild reign. Some writers think that it was then that St. Cecilia died for the Christian faith. His principal jurisconsult, Ulpen, is said by Lactantius (Inst. Div., V, ii) to have ceased, in his work on the duties of a proconsul (De officio proconsulis), all anti-Christian imperial legislation (rescripta principium), in order that the magistrates might more easily apply the common law (ut doceret quibus oportet eos passus affici qui se culturos Dei conferrentur). Fragments of this cruel code, from the seventh of the (ten) lost books of Ulpen on the emperor Honorius of Rome in the years of gestes" (I, tit. xvi; xvii, tit. II, 3; xviii, tit. IV, 1, and tit. xiii, 6). The surname "Severus," no less than the manner in which both he and Mammæa met their death, indicate the temper of his administration. He sought to establish at Rome good order and decency in public and private life, and made some use of his power as censor morum by nominating twelve officials (curatores urbis) for the execution of his wise regulations. He seems to have been one of the most intense of the prevailing religious "syncretism" or eclecticism, established at Rome by his predecessor Elagabalus as the peculiar contribution of this remarkable Syro-Roman family to the slow but certain transformation of the great pagan Empire into a mighty instrument of the salvation of souls. The measures by which he sought to reach this were then reaching fullness. All historians agree as to his life, and the moral elevation of his public and private principles; Christian historians are usually of opinion that these elements of virtue were owing to the education he received under the direction of Origen. Severus of Antioch. See EUTYCHIANISM; MONOPHYESM AND MONOPHYESM.

Severus Anastasius Endelechus, Christian rhetorician and poet of the fourth century. It is possible that his true name was Endelechus and that he adopted the other names after his conversion to Chris- tianity. In the MSS. of the "Metamorphoses" of Apuleius, the subscription of the corrector and re- viser Sallustius, declared in 395 of the rhetorician Endelechus in the forum of Mars (which is the forum of Augustus): "in foro Mar- tis controversiam declamans oratoris Endelechiou." This rhetorician is certainly identical with the poet. He was probably of Gallic origin. He was a friend of St. Paulinus of Nola, with whose lyric of Theodosius and even to him the idea of this work. We are in possession of Endelechus's "De morte bonum," an idyl in thirty-three Aesopean strophes, in which the shepherd Bucolus explains to his companion Ægon that he is sad because his flock are dying of contagion. Titurus enters leading his flock which remains healthy amid the epidemic. He explains that this miracle is due to the Sign of the Cross made on the forehead of the animals, whereupon Ægon and Bucolus decide to become Christians. This little poem is chiefly interesting because it shows the influence of paganism in the groundwork on which the Christian preaching sought to overcome it. It was discovered in an unknown MS. and published by P. Pithou in 1566. Riese reprinted it in the "Antologia Latina" (2nd ed., Leipzig, 1906, n. 963).

Sévigné, Marie de Rabutin-Chantal, Madame de, writer, b. at Paris, 6 Feb., 1626; d. at Angers, 18 April, 1696. She was the granddaughter of St. Jane Frances de Chantal. Her father died the year after she was born, her mother in 1632. She was placed under the guardianship of her maternal uncle, the Abbé de Coulanges, who placed her education in charge of Messrs. Monseigneur de Coulanges, a French monk, fifty years old, fluent in Latin, Italian, and Spanish. At eighteen she married the Marquess Henri de Sévigné, who did not make her very happy, and who was slain in a duel after seven years of marriage. She had a daughter (1646) and a son (1648). In 1669 her father married the Count de Grignan, who was a grandson of the counts de Grignan. The comte de Grignan went to rejoin her husband in 1671, which was a great sorrow to her mother. It may be said that her love for her daughter filled Mme de Sévigné's life. On four occasions Mme de Grignan returned to the north (1674,
Seville, Archdiocese of (Hispalensis), in Spain, is bounded on the north by Badajoz; on the east by Cordova and Malaga; on the south by Cadiz, on the west by Portugal. It comprises portions of the civil provinces of Seville, Cadiz, Cordova, Huelva, and Malaga. Its episcopal city has a population of some 144,000. Its suffragans are Badajoz, Cadiz and Ceuta, the Canaries, Cordova, and Tenerife.

In Roman times Seville was the capital of the Province of Baetica, and the origin of the diocese goes back to Apostolic times, or at least to the first century of our era. St. Gerontius, Bishop of Italia (about four miles from modern Seville), preached in Baetica in Apostolic times, and within the limits of the diocese must he left a pastor of its own to Seville. It is certain that in 303, when Sts. Justa and Rufina, the potters, suffered martyrdom for refusing to adore the idol Salambo, there was a Bishop of Seville, Sabinus, who assisted at the Council of Ileria (267). Before that time Marcellinus had been bishop, as appears from a cata

logue of the ancient prelates of Seville preserved in the "Codex Emilianus", a manuscript of the year 1000, now in the Escorial. When Constantine brought peace to the Church Evodius was Bishop of Seville; he set himself to rebuild the ruined churches, among them he appears to have built the church of San Vicente, perhaps the first cathedral of Seville. In the time of Bishop Sympronius Serapion, it was considered the metropolis of Baetica, and was the bishop when the barbarians invaded Spain. Marcius was bishop in 428, when Gunderic wished to seize the treasures of the Church of San Vicente; Sabinus II was dispossessed of his see by Recilia the Suevian (441) and recovered it in 461. Zeno (472-483) was appointed vicar but soon stayed at Livry (Seine et Oise) or at the Château des Rochers (Ille-et-Vilaine). But wherever she was, the memory of her daughter was with her. Her maternal love is unparallelled. Arnaud d'Andilly reproaches the Marchioness with loving "as a lovely pagan" her whom Bussy-Rabutin calls "the prettiest girl in France". As a matter of fact this absorbing and somewhat impassioned affair caused her much suffering owing to the enforced separations, but unlike vulgar passions, it was never egotistical. Naturally it inspired the correspondence of the Marchioness, but this correspondence is also a picture of the lovely period at which it was written, or rather it is an eloquent echo of what was said and thought at the court and in the distinguished world frequented by its author. Her style is marked by simplicity, movement, and humour, displaying a constant creation of words, not with regard to new terms, but the placing of the old, and the use to which they were put. The author manifests her gaiety, her natural disposition to look on the best side of things, while her irony and wit, though sometimes light, are always healthy. Exuberant and independent in speech, Mme de Sévigné was always dignified in conduct, with serious tastes beneath her worldly manner. Sincerely religious, she had a special devotion to Our Lady of Provence. She displayed this devotion to her last hour in a manner which impressed the Count de Grignan. "She faced death", he says, "with astonishment firmness and submission".

Georges Bertrin.

Seville, 744 SEVILLE

1676, 1677, and 1680), and three times her mother went to visit her in the south (1672, 1690, and 1694). From the last of these visits she was not to return. Stricken at the bedside of her sick daughter—although this was disputed at the end of the nineteenth century—she died at Grignan at the age of seventy. As soon as she became a widow Mme de Sévigné, without favouring them, found numerous aspirants to her hand, among them the Prince de Conti, and her cousin, Bussy-Rabutin. She lived mostly at court, visiting her friends Mme de La Fayette, Mme de Larcheoucauld, Mme de Pompone etc. As early as 1677 she went to reside at the Hotel Carnavalet, of which she remained the lessee until her death, but she often stayed at Livry (Seine et Oise) or at the Château des Rochers (Ille-et-Vilaine). But wherever she was, the memory of her daughter was with her. Her maternal love is unparallelled. Arnaud d'Andilly reproaches the Marchioness with loving "as a lovely pagan" her whom Bussy-Rabutin calls "the prettiest girl in France". As a matter of fact this absorbing and somewhat impassioned affair caused her much suffering owing to the enforced separations, but unlike vulgar passions, it was never egotistical. Naturally it inspired the correspondence of the Marchioness, but this correspondence is also a picture of the lovely period at which it was written, or rather it is an eloquent echo of what was said and thought at the court and in the distinguished world frequented by its author. Marcius was bishop in 428, when Gunderic wished to seize the treasures of the Church of San Vicente; Sabinus II was dispossessed of his see by Recilia the Suevian (441) and recovered it in 461. Zeno (472-483) was appointed vicar but soon stayed at Livry (Seine et Oise) or at the Château des Rochers (Ille-et-Vilaine). But wherever she was, the memory of her daughter was with her. Her maternal love is unparallelled. Arnaud d'Andilly reproaches the Marchioness with loving "as a lovely pagan" her whom Bussy-Rabutin calls "the prettiest girl in France". As a matter of fact this absorbing and somewhat impassioned affair caused her much suffering owing to the enforced separations, but unlike vulgar passions, it was never egotistical. Naturally it inspired the correspondence of the Marchioness, but this correspondence is also a picture of the lovely period at which it was written, or rather it is an eloquent echo of what was said and thought at the court and in the distinguished world frequented by its author. Her style is marked by simplicity, movement, and humour, displaying a constant creation of words, not with regard to new terms, but the placing of the old, and the use to which they were put. The author manifests her gaiety, her natural disposition to look on the best side of things, while her irony and wit, though sometimes light, are always healthy. Exuberant and independent in speech, Mme de Sévigné was always dignified in conduct, with serious tastes beneath her worldly manner. Sincerely religious, she had a special devotion to Our Lady of Provence. She displayed this devotion to her last hour in a manner which impressed the Count de Grignan. "She faced death", he says, "with astonishing firmness and submission".

Georges Bertrin.
Yacub. The famous tower called the Giralda is due to Almansor. In order to secure the liturgical orientation, when the mosque was converted into a cathedral, its width was made the length of the new church; and it was divided into two parts, the lesser part, on the east, being separated from the rest by a balustrade and grating, to form the chapel royal.

This cathedral having become too small for Seville, the chapter resolved in 1401 to rebuild it on so vast a scale that posterity should deem it the work of madmen. Only the Giralda and the Court of Oranges were left as they were. The work was commenced in 1403 and finished in December, 1506. The dome was as high as the lower parts of the Giralda; it fell in, however, in 1511, and was restored by Juan Gil de Mon-

The Torre del Oro, Seville

tañon in 1517. The principal façade, which looks to the east, extends the whole width of the building, and is as high as the naves, to which its five divisions correspond. The decoration of the upper part, including the rose window, are eighteenth-century work. The plan of the building is a rectangle, 380 by 250 feet, the chapel royal projecting an additional 62 feet to the east. It is roofed with seventy ogival vaults, supported by thirty-two gigantic columns. In the windows above the door of the bell-tower is preserved the original design of the Giralda, which, it is said, was constructed by Gever, to whom are attributed the invention of algebra, and the origin of the name (Al-Geber). Where the bell-chamber now is there stood another rectangular mass, surmounted with four enormous balls, or apples, of bronze. In the interior is an enormous spike which serves as an axis, from which thirty-five sloping planes radiate. In 1668 Fernán Ruiz, by order of the chapter, added ninety-two feet to the height of the tower, giving it its present form, and setting up the giraldillo, gyrating statue of Faith, which serves as a wind-vane. This statue, cast by Bartolomé Morel, measures over 13 feet in height and weighs 25 quintals (about 2840 lb.). The magnificent reedos of the high altar was designed

by Danchart in 1482 and is the largest in Spain. In the sacristy beyond it are preserved the "Alphonse Tables" (Tablas Alfonsoñas), a reliquary left by the Wise King. The splendid stalls of the choir are the work of Nufro Sánchez, who wrought them in 1475. The Plateresque screen which closes the front of the sanctuary was designed by Sancho Muñoz in 1510. The chapel of S. Antonio holds Murillo’s famous picture of the saint’s ecstasy and the Infant Jesus descending into his arms. The chapel royal contains the tombs of St. Ferdinand, Alfonso the Wise, and Beatriz, consort of the latter, while in the pantheon, behind the sanctuary, lie the remains of Pedro I, his son Juan, the Infante Fadrique, Alfonso XI, and other princes.

After the cathedral, the Alcázar is the most noteworthy building in Seville. No other Mussulman building in Spain has been so well preserved. Inhabited for a time by the Abbatid, Almoravid, and Almohad kings, its embattled enclosure became the dwelling of St. Ferdinand, and was rebuilt by Pedro the Cruel (1359-84), who employed Granadan and Mohammedan subjects of his own (mudejares) as its architects. Its principal entrance, with Arabian façade, is in the Plaza de la Monteria, once occupied by the dwellings of the hunters (monteros) of Espinosa. The principal features of the Alcázar are the Court of the Ladies, brilliantly restored by Carlos I, with its fifty-two uniform columns of white marble supporting interlaced arches, and its gallery of precious arabesques; and the Hall of Ambassadors, which, with its cupola, dominates the rest of the building, and the walls of which are covered with beautiful azulejos (glazed tiles) and Arab decorations. The University of Seville was founded by Archbishop Rodrigo Fernández de Santesaías, in virtue of an ordinance of the Catholic Sovereigns dated 22 Feb., 1502, and two Bulls of Julius II, of 1505 and 1506. It could not compete, however, with the powerful institutions of Salamanca and Alcalá. The same Archbishop San-
taels founded the Colegio Mayor, or "Great College" called the Maese Rodrigo. Carlos III took away the general studies from this college, ordering them to be transferred, in 1771, to the professed house of the Jesuits conveyed by him. Among the churches of Seville those worthy of mention are: Santa Ana en Triana, thirteenth-century Gothic, built by order of Alfonso X; S. Andrés, which preserves some considerate traces of the mosque it originally was; S. Esteban, with its mudjar door and paintings by Zurbarán; S. Ildefonso, perhaps the oldest church in Seville, dating, like S. Isidoro and the formerly Maestraic church of S. Julián, from the Visigothic period. S. Lorenzo possesses the "Christ carrying the Cross" of Jan Martines Montañés which is called el Gran Poder (The Great Power). Other churches are the Magdalena, S. Marcos, Sta. Marina, S. Martín, S. Nicolás, etc. The picture gallery contains more Murillos than any other gallery in the world; indeed, to know this master it is necessary to visit Seville. The archiepiscopal palace (seventeenth-century) has a fine Platresque doorway. The ecclesiastical seminary, first established at San Lúcar de Barrameda, in 1830, in the archiepiscopal of Cardinal Francisco Javier de Cienfuegos y Yovellanos, was transferred to Seville in 1848, under Archbishop Judas José Romero, and established in the Plaza de Maese Rodrigo; it now occupies the palace of San Telmo, which belongs to the dukes of Montpensier. The Archives of the Indies, preserved in Casa Lonja, contain immense treasures in the way of documents for the history of early Spanish missions in America and Asia. Among the beneficent institutions are the Hospital de Las Cinco Llagas (or Las Sangres), that of S. Lázaro, that of El Cristo de los Doloros, etc.

Ramón Ruiz Amado.

Seville, University of.—In the middle of the thirteenth century the Dominicans, in order to prepare missionaries for work among the Moors and Jews, organized schools for the teaching of Arabic, Hebrew, and Greek. This co-operated in this work and to enhance the prestige of Seville, Alfonso the Wise in 1254 established in that city "general schools" (escuelas generales) of Arabic and Latin. Alexander IV, by bull of 21 June, 1260, recognized this foundation as a general literature studium and granted its members certain dispensations in the matter of residence. Later, the cathedral chapter established ecclesiastical studies in the College of San Miguel. Rodrigo de Santedalu, archdeacon of the cathedral and commonly known as Maese Rodrigo, began the construction of a building for a university in 1472; in 1502 the Cathedral College established the royal decree creating the university; and in 1505 Julius II granted the bull of authorization; in 1509 the college of Maese Rodrigo was finally installed in its own building, under the name of Santa María de Jesús, but its courses were not opened until 1516. The Catholic Majesties and the pope granted the power to confer degrees in logic, philosophy, theology, and canon and civil law. It should be noted that the college mayor de Maese Rodrigo and the university possessed, although housed in the same building, never lost their separate identities as is shown by the fact that, in the eighteenth century, the university was moved to the College of San Hermenegildo, while that of Maese Rodrigo remained independent, although languishing.

The influence of the University of Seville, from the ecclesiastical point of view, though not equal to that of the Universities of Salamanca and of Alcalá, was nevertheless considerable. From its lecture halls came Sebastián de Corte, Riquelme, Rioja, Luis Germán y Rimbón, founder of the Horatian Academy, Juan Sánchez, professor of mathematics in San Telmo, Martín Albert Carbañal, Cardinal Belluga, Cardinal Francisco Solís Polo, Marcelo Doye y Pelayo, Diego de Torrijos, Francisco Aguilar Riberón, Abate Marchena, Alberto Lima, and many others who adorned in the magistracy, or were distinguished ecclesiastics. The influence of the University of Seville on the development of the fine arts, was very great. In its shadow the school of the famous master Juan de Mañara was founded, and intellects like those of Herrera (q. v.) Arquijo, and many others were developed, while there were formed literary and artistic clubs, like that of Pacheco, which was a school for both painting and poetry. During the period of secularization and nationalization (1836-57) the University of Seville passed into the control of the State and received a new organization. At present it comprises the faculties of philosophy and letters, law, sciences, and medicine, with an enrollment (1910) of 1100 students.

At the same time that the royal university was established, there was developed the Universidad de Mareantes (university of sea-farers), in which body the Catholic Majesties, by a royal decree of 1503, established the Casa de Contratación with classes of pilots and of seamen, and courses in cosmography, mathematics, military tactics, and artillery. This establishment was of incalculable importance, for it was there that the expeditions to the Indies were organized, and there that the great Spanish sailors were educated. This species of polytechnic school, which, according to Edén, Bourné, and Humboldt, taught a great deal to Europe, following the fortunes of Spanish science, fell into decay in the seventeenth century.

SEXAGESIMA

SEXAGESIMA. (Lat. sexagésima, sixtieth), is the eighth Sunday before Easter and the second before Lent. The Ordo Romanus, Alcuin, and others count the Sexagesima from this day to Wednesday after Easter. The name was already known to the Fourth Council of Orleans in 541. For the Greeks and Slavs it is Dominica Carnisprivi, because on it they began, at least to some extent, to abstain from meat. The Symmachus calls it Dominica secundae et munera sancta, or the non corrupti adventus Domini. To the Latins it is also known as "Exsurge" from the beginning of the Introit. The stazio was at Saint Paul's outside the walls of Rome, and hence the oratio calls upon the doctor of the Gentiles. The Epistle is from Paul, II Cor., xii, and the description of his sufferings is thought to refer to the Church. The Gospel (Luke, viii) relates the falling of the seed on good and on bad ground, while the Lessons of the first Nocturne continue the history of man's iniquity, and speak of Noah and of the Deluge. (See SEXTAGESIMA.)

FRANCIS M. BUTLER.

Sexburga, Saint, d. about 699. Her sisters, Sta. Ethelburga and Seathrid, were both Abbessess of Faremontier in Brie, St. Withburga was a nun at Ely, and St. Etheldreda became Abbess of Ely. Sexburga was the daughter of Anna, King of the East Angles, and of Deyberth, King of Kent. She lived with her husband for twenty-four years, and by him had two sons, Egbert and Lothar, both successively Kings of Kent, and two daughters, both of whom became nuns and saints: St. Eorcengota, a nun of Faremontier, and St. Ermenhild, who married Wulfhere, King of Mercia, and after his death became the Abbess of Ely. After the death of her husband in 684, Sexburga founded the Abbey of Minster in Sheppey; after a few years there she removed to Ely, and placed herself under her sister Etheldreda, then Abbess. The "Liber Eliensis" contains the farewell speech made by Sexburga to her nuns at Minster, and an account of her reception at Ely. St. Etheldreda died, probably in 679, and Sexburga was elected abbess. She was still alive and acting as abbess in 695, when she presided at the translation of St. Etheldreda's relics to a new shrine she had erected for her at Ely, which is included in the collection of which the present city of Grantham. Sexburga was buried at Ely, near her sister St. Etheldreda, and her feast is kept on 6 July. There are several lives of St. Sexburga extant. The one printed in Capgrave, "Nova Legenda", and used by the Bulliandists seems to be taken from the Cotton MS. (Thb. E. 11) in the British Museum. There is another Latin life in the same collection (Cotton MS., Calig. A. 8), but it is so damaged by fire that it is useless. At Lambeth there are fragments of an Anglo-Saxon life (MS. 427).

A. S. BARNES.

Sext.—I. Meaning, Symbolism, and Origin.—The hora sexta of the Romans corresponded closely with our noon. Among the Jews it was already regarded, together with Terce and None, as an hour most favourable to prayer. In the Acts of the Apostles we read that St. Peter went up to the higher parts of the house to pray (x, 9). It was the middle of the day, also the usual hour of rest, and in consequence for devout men, an occasion to pray to God, as we are taught by the spirit, and therefore the Church dwell constantly on the symbolism of this hour; their teaching is merely summarised here: it is treated at length in Cardinal Bona's work on psalmody (ch. viii). Noon is the hour when the sun is at its full, it is the image of Divine splendour, the plenteud of God, the time of grace; at the sixth hour Abraham received the three angels, the image of the Trinity, at the sixth hour: Adam and Eve ate the fatal apple. We should pray at noon, says St. Ambrose, because that is the time when the Divine light is in its fulness (In Ps. cxviii, vers. 62). Origen, St. Augustine, and several others regard this hour as favourable to prayer. Lastly and above all, it was the hour when Christ came to the Cross; memory excelling all the other left a still visible trace in most of the liturgy of this hour.

All these mystic reasons and traditions, which indicate the sixth hour as a culminating point in the day, a sort of pause in the life of affairs, the hour of repose, could not but exercise an influence on Christian praying, inducing the Church to retain this hour as a prayer. As early as the third century the hour of Sext was considered as important as Terce and None as an hour of prayer. Clement of Alexandria speaks of these three hours of prayer ("Strom.," VIII, vii, P. G., IX, 455), as does Tertullian ("De orat.," xxiii-xiv, P. L., i, 1191-93). Long previous the "Didache" had spoken of the sixth hour in the same manner (Funk, "Doctrina XII Apostolorum," V, XIV, XV). Origen, the "Canons of Hippolytus," and St. Cyprian express the same tradition (cf. Bäumer, "Hist. du breviaire," 1, 68, 69, 73, 75, 186, etc.). It is therefore certain that the hour of Sext at the sixth hour was well-established in the third century and even in the second century or at the end of the first. But probably most of these texts refer to private prayer. In the fourth century the hour of Sext was widely established as a canonical hour. The following are very explicit examples. In his rule St. Basil made the sixth hour an hour of prayer for the monks ("Regulae fusius tractatae," P. G., XXXI, 1013, sq.), Cassian treats it as an hour of prayer generally recognised in his monasteries (Instit. Conob., III, iii, iv). The "De virginitate" wrongly attributed to St. Athanasius, but in any case dating from the fourth century, speaks of the practice of Sext as do also the "Apostolic Constitutions," St. Ephrem, St. Chrysostom (for the texts see Bäumer, op. cit., I, 131, 145, 152, etc., and Lecquerq, in "Dict. d'arch. chrét.," s. v. Bréviaire). But this does not prove that the observance of Sext, any more than Terce, None, or even the other hours, was universal. Discipline on this point varied widely according to the regions and Churches. And in fact some countries may be mentioned where the custom was introduced only later. That the same variety prevailed in the formule of prayer is shown in the following passages:

II. Variety of Prayers and Formule.—Despite its antiquity the hour of Sext never had the importance of those of Vigils, Matins, and Vespers. It must have been of short duration. The oldest testimonies mentioned seem to refer to a short prayer of a private nature. In the fourth or fifth century the following centuries the texts which speak of the compositions of this Office are far from uniform. Cassian tells us that in Palestine three psalms were recited for Sext, as also for Terce and None (Instit., III, ii). This number was adopted by the Rules of St. Benedict, Columbanus, St. Isidore, St. Fructuus, and to a certain extent by the Roman Church. However, Cassian says that in some provinces three psalms were said at Terce, six at Sext, and nine at None. Others recited six psalms at each hour and this custom became general among the Gauls (cf. Hesle-Lecerq, "Hist. des conciles," II, 189; Lecerq, in Act. SS., 1919, 1290; Martz, in De Arcangelis, ii, 220; Richard, iii, 20; IV, 27). In Martz will be found the first versions in different Churches and monasteries. With regard to ancient times the "Peregrinatio Sylviae" tells us that at the hour of Sext all assembled in the Anastasis where psalms and anthems were recited after which the bishop came and blessed the
people (cf. Cabrol, "Etude sur la Pelerinage", Paris, 1896, 45-48). The number of psalms is not fixed, but is generally 114. The Rule of St. Benedict gives the detailed composition of this Office. We quote it here because it is almost the same as the Roman Liturgy, either the latter borrowed from St. Benedict, or St. Benedict was inspired by the Roman usage. Sext, like Terce and None, was composed at most of three psalms, of which the choice was fixed, the Deus in adjuvium, a hymn, a versicle (capitulum), a versicle, the Kyrie Eleison, and the customary concluding prayer and dismissal (xvii, cf. xviii).

In the Roman Liturgy Sext is also composed of the Deus in adjuvium, a hymn, three portions of Ps. cxvii, the versicle, the short response, and the versicle to the prayer. In the Greek Church Sext is composed like the other lesser hours of two parts; the first includes Ps. lxi, lxvi, with invitatory, tropes, and conclusion. The second, of Messarion which is very similar to the first, consists of Ps. lv, lxvi, and lxix. In the modern Monastic Office Sext consists only of Ps. lxi, three "octosyllabes" of Ps. cxvii, two verses, the hymn, the supplication, the capitulum, the Pater Noster, and the benediction.

FERNAND CABROL.

Sexton (Old English servecin, servestin, through the French sacrésatien from Lat. sacrésatia), one who guards the church edifice, its treasures, vestments, etc., and as an inferior minister attends to burials, bell-ringing and similar offices about a church. In ancient times, the duties of the modern sexton, who is generally a layman, were part of the functions of the clerical order of osticarii. The clerics called osticarii had the keys of the church committed to them and were responsible for the guardianship of the sacred edifice, the holy vessels, books, and vestments. They opened the church and summoned the faithful to the Divine Mysteries. Others of them were specially deputed to guard the bodies and shrines of the martyrs. According to the Council of Trent (Sess. XXXIII, cap. xvii, De Ref.), the sexton or sacristan should be a cleric, but it allowed him to be a married man, provided he received the tonsure and wore the clerical dress. It was customary, however, these conditions have ceased to be effective, and at present the office is usually held by a layman. In many cathedral churches, e.g. in Austria and Germany, the title of sacristan or custos is still held by a priest, who is generally one of the dignitaries of the cathedral chapter, and has supervision of the fabric of the cathedral and of the buildings that serve for the residences of canons and parochial vicars. This official has special charge of the cure of souls and sees also to the solemnizing of the great church festivals. He generally has an assistant, whose particular duty it is to watch over the performance of the Divine services in choir. According to a decree of the Roman Rota, the sacristan of a cathedral church should always be in priest's orders. In Rome the office of sacristan in the Apostolic palace is always committed to a member of the Order of Hermits of St. Augustine, by a Decree of Pope Alexander VI. The sacristan of the conclaves for the election of a new pope has all the privileges of the conclavists.

Sfondrati, Celestino, Prince-abbot of St. Gall and cardinal, b. at Milan, 10 January, 1644; d. at St. Gall, 4 September, 1708. He was from the Milanese family of the Sfondrati, of which Cardinals Francesco and Paolo Sfondrati and Pope Gregory XIV were members. At the age of twelve he was placed in the school at Rorschach, on the Bodensee, which was conducted by the Benedictines of St. Gall, and on 26 April, 1659, he took the Benedictine habit at St. Gall. When twenty-one he returned to Milan and entered the small country church near Rorschach for a short time, whereupon Abbot Gallus appointed him his vicar-general. In 1686 Pope Innocent XI created him Bishop of Novara, a dignity which he accepted only with reluctance. He was, however, prevented from taking possession of his see by being elected Prince-abbot of St. Gall on 17 April, 1687. As abbot he set an example of great piety and mortification to his monks, and watched carefully over the observance of monastic discipline; as prince, he ruled mildly and rendered himself dear to his people by his great charity, which he had a special opportunity of exercising during the terrible famine in 1688; and piety, as well as his able literary works in defence of the papal authority against the principles of Gallicanism, induced Pope Innocent XII to create him cardinal-priest on 12 December, 1695, with the titular church of St. Cecilia in Trastevere. But he had scarcely reached Rome when his health began to fail. He died nine months after receiving the purple and was buried in his titular church. His chief works are: (1) "Cursus theologicus in gratiam et utilitatem Fratrum Religiosorum" (10 vols., St. Gall, 1670), published anonymously; (2) "Disputatio juridica de lege in presbutione fundata" (St. Gall, 1681, 2nd ed., Salem, 1718), a moral treatise against Probabilism; (3) "Regale sacrodoti Romano Pontifici assertum" (St. Gall, 1684; 1693; 1749), published under the pseudonym of Eugenius Lombardus, an able defence of the papal authority and privileges against the Four Articles of the pierws Germain de Clergy (1682); (4) "Cursus philosophicus monasterii S. Galli" (2 vols., St. Gall, 1686; 1698); (5) "Gallia vindicata" (2 vols., St. Gall, 1688; 1702), another able treatise against Gallicanism, in particular against Maibourg; (6) "Legatio Marchionis Lavardini ejusque cum Innocentio XI diesidium" (St. Gall, 1692), a short treatise concerning the "franchise" (les franchises) of the French ambassadors at Rome; (7) "Nepotismus theologicae expenseus" (St. Gall, 1692); (8) "Innocentia vindicata" (St. Gall, 1695; Graz, 1708), an attempt to prove that St. Thomas held the doctrine of the Immaculate Conception; (9) "Modus predestinationis ex se, litteris, doctrinaeque SS. Augustini et Thome, quantum homini licet, dissolutus" (Rome, 1697; Cologne, 1705), a posthumous work against the Jansenists, in which the author expounds the difficult question of grace and predestination in the sense of Molina and the Jesuits. It called forth numerous rejoinders but found also many defenders [see Dunand in "Revue du Clergé Français", III (Paris, 1895), 316-26].

MICHAEL OTT.

Shakespeare, The Religion of.—Of both Milton and Shakespeare it was stated after their deaths, upon Protestant authority, that they had professed Catholicism. In Milton's case (though the allegation was made and printed in the lifetime of contemporaries,
and though it pretended to rest upon the testimony of Judge Christopher Milton, his brother, who did become a Catholic) the statement is certainly untrue (see The Month, Jan., 1909, pp. 1–13 and 92–93). This emphasizes the need of caution—the more so that Shakespeare at least had been dead more than seventy years when Archdeacon Ben Jonson, who was in his supplementary notes to the biographical collections of the Rev. W. Fulman that the dramatist had a monument at Stratford, adding the words: "he dyed a Papist". Davies, an Anglican clergyman, could have had no conceivable motive for misrepresenting the matter in these private notes and was not living in Gloucestershire he may be echoing a local tradition. To this must be added the fact that independent evidence establishes a strong presumption that John Shakespeare, the poet's father, was or had been a Catholic. His wife Mary Arden, the poet's mother, undoubtedly belonged to a family that remained consistently Catholic throughout the reign of Elizabeth. John Shakespeare had held municipal office in Stratford-on-Avon during Mary's reign at a time when it seems agreed that Protestants were rigorously excluded from such posts. It is also certain that in 1592 John Shakespeare was present at the death of his father, the elder, and had attended the interment. The records herefore present who were thought to forbear coming to church for fear of process of debt". Though indications are not lacking that John Shakespeare was in very reduced circumstances, it is also quite possible that his alleged poverty was only assumed to cloak his conscientious scruples.

A document, supposed to have been found about 1750 under the tiles of a house in Stratford which had once been John Shakespeare's, professes to be the spiritual testament of the said John Shakespeare, and assuming it to be authentic it would clearly prove him to be a Catholic. The will, in any case, that in 1598 he stood godfather to a child of Henry Walker, as shown by the parish register, that in 1814 he entertained a preacher at his house "the New Place", the expense being apparently borne by the municipality, that he was very familiar with the Bible in a Protestant version, that the various legates and executors of his will cannot in any way be identified as Catholics, and also that he seems to have remained on terms of undiminished intimacy with the elder Mrs. Hall, being apparently rather Puritan in her sympathies. Again Shakespeare was buried in the chancel of the parish church, though it is admitted that no argument can be deduced from this as to the creed he professed (Lee, op. cit., p. 220). More significant in this capacity is the fact that in 1598 he stood godfather to a child of Henry Walker, as shown by the parish register, that in 1814 he entertained a preacher.
Shamanism should think sympathetically and even tenderly of the creed in which his father and mother had been brought up, a creed to which they probably adhered at least in their hearts. The fact in any case remains that the number of Shakespearean utterances expressive of a fundamental doubt in the Divine economy of the world seems to go beyond the requirement of mere historical Christianity. The introduction of theInto the mouths of characters with whom the poet is evidently in sympathy. A conspicuous example is the speech of Prospero in "The Tempest," probably the latest of the plays, ending with the words:—

"We are such stuff—
As dreams are made on; and our little life
Is rounded with a sleep."

Whether the true Shakespeare speaks here no one can ever tell, but even if it were so, such moods pass and are not irreconcilable with faith in God when the soul is thrown back upon herself by the near advent of suffering or death. A well-known example is afforded by the case of Littre. The most serious and original contribution made from a Catholic point of view to the question of Shakespeare's religious beliefs is that of Professor H. S. Bowdler, The Religion of Shakespeare (London, 1899). In the present writer's judgment, the evidence given by Professor Bowdler, though not conclusive, is by far the most cogent of the two, and is not dissimilar in spirit to that of Professor T. W. Smartphone, The Religion of Shakespeare (London, 1899). Professor Smartphone, the author of Shakespeare's Religion (London, 1899), has maintained that Shakespeare's religious beliefs were derived from the dualistic system of the Gnostics, and that he was actuated by a desire to make the Christian church a more rational and scientific institution. In view of this, it is suggested that the passage from "The Tempest" quoted above may be interpreted as a reflection of Shakespeare's own views on the nature of religion and the role of the individual in shaping one's own destiny.

Professor Smartphone, the author of Shakespeare's Religion (London, 1899), has maintained that Shakespeare's religious beliefs were derived from the dualistic system of the Gnostics, and that he was actuated by a desire to make the Christian church a more rational and scientific institution. In view of this, it is suggested that the passage from "The Tempest" quoted above may be interpreted as a reflection of Shakespeare's own views on the nature of religion and the role of the individual in shaping one's own destiny.

Shamanism (from Shan or Saman, a word derived by Bantiroff from Manchu saman, i.e., an easterner) is a religion with a people called the Tung-ak, from Shan's a Tungwese word; others say a later diacritic form of the Sanskrit saman, i.e., a worker or toiler), a vague term used by explorers of Siberia in the eighteenth and nineteenth centuries to designate not a specific religion but a form of savage magic or science, by which physical nature was believed to be brought under the control of man. It prevails among Turanian and Mongolian tribes and American Indians, and blends with their varied religious beliefs and customs. Thus the Turanians believe the shamans were a class created by the heaven-god Tengri to struggle for man's good against the evil spirits. The Buddhist Mahayana terms such a shaman, i.e., the black faith, the Chinese tao-t'ien, i.e., dancing before spirits. The shamans are variously designated, e.g., by Tatars kam, by Samoyeds taryg, by Ostjas tadic, by Burjatas boe, by Yakut Turks agun, by American Indians medicine men. In the Bhagvata Purana the Jains are called shamans. In Hindu the term "shaman" means an idolater. In Tibet Shamanism represents a Buddhism degenerated into demonology. Thus the Mongols say that shamans are closely allied with Odokil, or Satan, who will not injure any tribe that obeys its wizard. (1) Shamanism rests for its base on the animistic view of nature. Animism (q.v.) teaches that primitive and savage man views the world as pervaded by spiritual forces. Fairies, goblins, ghosts, and demons hover about him waking or sleeping: they are the cause of his mischaps, losses, pains. Mountains, woods, forests, rivers, lakes are conceived to possess spirits, i.e., the so-called of the Yakuts, and to be living, thinking, willing, powerful beings like himself. These powers are not idly active, they are the mere extension of the shaman's will. The shaman by appropriate words and acts uses his power to shield man and envelops him in a kind of protective armour so that the evil spirits become inactive or inoffensive. His role is that of antagonist to the spirits and of guardian to ordinary man. The Esquimaux believe all the things in the world have a collective mind, and one is a shaman is a sort of controller of malign spirits who are everywhere. These minor spirits are subject to the great spirit Tung-Ak, yet must be propitiated. The shaman alone is supposed to be able to deal with Tung-Ak, though not superior to him. Tung-Ak is a name for Death, who ever seeks to harry the lives of people that their spirits may go to dwell with him. Ellis says that spirits far from friendly compassed the lives of the Polynesians islanders on every side. The gods of the Maori were demons thronging like moquitos and ever watchful to inflict evil; their designs could be countered only by powerful spells and charms. In Kamchatka every corner of the land is inhabited by.Tung-Ak, to be full of spirits more dreaded than God. The Navajo, Ojibwas, and Dakotas Indians have a multiplicity of spirits, both evil and good, and filling all space, which can be communicated with only after due preparation by the persons who have power to do so, i.e., med or jejeolated. (2) The main principle of Shamanism is the attempt to control physical nature. Hence the term embraces the various methods by which the spirits can be brought near or driven away. The belief that the Shaman presides over this magic act is universal among the indigenous peoples of the world. The shaman is the intermediary who acts in the name of all the souls. He is the guardian of the dead and the dead are the protectors of the living. In some cases initiation is required. Thus with the Navajo and Ojibwas they have successfully passed through the four degrees of the medowis are called med, and are considered competent to foresee and prophesy, to cure diseases and to prolong life, to make fetishes, and to aid others in attaining desires not to be realized in any other way. They who have received instruction in one or two degrees usually practice a specialty, e.g., making rain, finding game, curing diseases. For these women are eligible. Between the dark, shadowy, uncharted regions of the world with no system of initiation, e.g., an individual announces himself a jomak and performs feats of magic in substitution of his claim. Among the Australians the birrurk were supposed to be initiated by wandering ghosts. The Dakotas believe the medicine men to be saved from (from yakut, i.e., godman) by mystic intercourse with supernatural beings in dreams and trances. Their business was to discern future events, lead on the war-path, raise the storm, calm the tempest, converse with thunder and lightning as with familiar friends. Father Le Jeune speaks that the Shoshone men of the Iroquois employ all the attributes of Zeus. Tiele says that the magical power possessed by the shaman in common with the higher spirits and does not differ from theirs; in religious observances the magician priests entirely supersede the gods and assume their forms (Science of Religion, II, 106).
gift of shamanism is not hereditary, but the protecting spirit of a shaman who dies is reincarnated in some member of the same family. To them, the protecting spirit is an indispensable attribute of the shaman. They believe that the shaman has an amulet which protects him; thus in Koryak, the image of an animal protector, e.g., totemism. Hence the shamans are graded in power according to the ie-kyla, e.g., the weakest have the ie-kyla of a dog, the most powerful that of a bull or an eagle. The amadôti is a being completely different, and generally is the soul of a dead shaman. Every position has a new protector, but that of the shaman is of a kind apart. With the American Indians the guardian spirit, from whom the novice derives aid, is more generally secured from the hosts of animal spirits; it can also be obtained from the local spirits or spirits of natural phenomena, from the ghosts of the dead or from the greater deities.

In the practice of his art the Shaman is regarded as:
(a) A healer, hence the term “medicine man”, and the secret medicine societies of the Senecas, and of other American tribes; the Alaskan Tungusks are principally healers.
(b) An educator, i.e., the keeper of the ritual, or the veneration of objects that are considered sacred, of divination; he is the repository of the tribal wisdom.
(c) A civil magistrate; as seers possessing secret knowledge with power at times of assuming other shapes and of employing the souls of the dead, they are credited with ability to detect and punish crimes, e.g., the Angaput wizards among the Esquimaux.

In Siberia every tribe has its chief shaman who arranges the rites and takes charge of the idols; under him are local and family wizards who regulate all that concerns birth, marriage, and death, and consecrate dwellings and food. (d) A war-chief; thus with the Dastarkas and Chechens the head war-chief must be a medicine man. Hence the shaman possesses great influence and in many cases is the real ruler of the tribe.

The means which the shaman uses are:
(a) Symbolic magic, on the principle that association in thought must involve similar connexion in reality, e.g., the war and hunting dances of the Red Indians, placing magical fruit-shaped stones in the garden to insure a good crop, to bring about the death of a person by making an image of him and then destroying it or rubbing red paint on the heart of the figure and thrusting a sharp instrument into it.
(b) Fasting with incantations, regarded as Shamen's incantations usually in some ancient or unmeaning language and with the Yakuts very obscene. Thus the song that salved wounds was known to the Greeks, e.g., the Odyssey, and to the Finns, e.g., the epic poem Kalewala. Among the Indo-Europeans the incantations are known as mantra, and are usually texts from the Vedas chanted over the sick. With the New Zealanders they are called karakias. In ancient Egypt, according to Maspero, the gods had to obey when called by their own name. At Eleusis not the name but the intonation of the voice of the master of the mysteries was the mystic element. In India, on the spirit the shaman imitates the various sounds of objects in nature wherein the spirits are supposed to reside, e.g., the whispering breeze, the whistling and howling storm, the growing bear, the screeching owl. (c) Dances and contortions with use of rattle and drum and a distinctive dress decked with snakes, stripes of fur, little bells. Among the Ojibwas at the sound of the sacred drum every one rises and becomes inspired because the Great Spirit is then present in the lodge. The frenzy and contortions lead to an ecstatic state which is considered of the greatest importance in the rites. They are used as stupor. The spiritual flight in search of information is characteristic of the Siberian shaman; it is rare in America. Vambéry cites a whole series of shamanistic ceremonies, e.g., tambourines and fire-dances, practised by the ancient sak-uyeur. Shaman incantations are found in the cuneiform inscriptions of the Medes at Susa. Sacrifices, gifts of beads and tobacco, and a few drops of the novice's blood form part of these rites with the American Indians. (d) Possessions of spirits; thus in Koryak, the image of an animal protector, e.g., totemism. Hence the shaman possesses a more powerful demon whose strength he is able to wield. This is also the belief of the Yakuts.

(3) Shamanism is closely akin to Fetishism, and at times it is difficult to tell whether the practices in the one or to the other. Both spring from Animism; both are systems of savage magic or science and have certain rites in common. Yet the differences consist in the belief that in Fetishism the power resides in the instrument or in particular substances and passes into or acts upon the object, whereas in Shamanism the will-effort of the magician is the efficient factor in compelling souls or spirits or gods to do his will or in preventing them from doing their own. Hence in Fetishism the emphasis is laid on the thing, although fasting and incantations may be employed in making the fetish; in Shamanism the prime factor is the will or personality of the shaman, although he may employ the like means. Therefore we cannot admit the statement of Peschel who refers to Shamanism everything connected with magic and ritual.

Criticism.—(a) The reasons which prove Animism to be false destroy the basis on which Shamanism rests.
(b) Shamanism takes for granted the theory that fear is the origin of religion. De La Saussaye holds that the concept of God cannot arise exclusively from fear produced by certain biological phenomena. Robertson Smith teaches that from the earliest times, religion, distinct from superstition is essentially the relation of man to a god and in its roots, through the operation of the divinities, of itself to kindred and friendly beings, and that it is not with a vague fear of unknown powers but with a loving reverence for known Gods that religion in the true sense of the word began (Religion of the Semites, 2nd ed., p. 54). Tiele says "worship even in its most primitive form always contains an element of veneration" and calls sorcery "a disease of religion" (Science of Religion, II, 136, 141).

(c) Shamanism is not a religion. The religious priest beseeches the favour of the gods; the shaman is believed to be able to compel and command them to do his will. Hence de La Saussaye regards Shamanism not as a principal form of religion but for important phenomena and tendencies of Animism.

JOHN T. DIBOLL.
poise of Hillel in character and teaching. Stern and severe in living the law to the letter, he was strict to an extreme in legal interpretation. The tale tells that, on the feast of the Tabernacles, his daughter-in-law gave birth to a child; straightway Shammai had the child brought to her, and washed her hands with boughs, so that the child might celebrate the feast in an improvised sukka (tent or booth) and might not fail of keeping the law of Leviticus (xxiii, 42).

The strictness of the master characterizes the school of Shammai as opposed to that of Hillel. The differences between the two schools had regard mainly to the interpretation of the first, second, third, and fifth parts of the “Misnha”-i.e., to religious dues, the keeping of the Sabbath and of holy days, the laws in regard to marriage and purification. The law, for example, to prepare no food on the Sabbath had to be observed by not allowing even the beast to toll; hence it was argued that an egg laid on the Sabbath might not be eaten (Edyoth, iv, 1). Another debate was whether, on a holy day, a ladder might be borne from one dower-cote to another or should only be glided from hole to hole. The need of fringes to a linen night-dress was likewise made a matter of difference between the two schools (Edyoth, viii, 2). In these and many other discussions we find much straining out of gnats and swallowing of camels (Matt., xxiii, 24), much pain taken to push the Mosaic law to an unbearable extreme, and no heed given to the practical reform which was really needed in Jewish morals. It was the method of the school of Shammai rather than that of Hillel which Christ condemned. On this account non-Catholic scholars generally make Him out to have belonged to the school of Hillel. This opinion has been shared in by a few Catholics (Gigot, "General Introduction to the Study of the Holy Scripture" New York, 1900, p. 222). Most Catholic exegetes, however, refuse to admit that Christ belonged to any of the fallible Jewish schools of interpretation. He established His own school—to wit, the infallible teaching body to which He gave the Old Testament to have and to keep and to interpret to all nations without error.

Shammai, John W. See HARRISBURG, DIACONATE OF.

Shan-tung, Vicariate Apostolic of Eastern.

—This mission was separated in 1894 from Northern Shan-Tung and erected into a vicariate Apostolic. It includes the three civil Prefectures of Yen-Chu-Fu, Lai-Chu-Fu, and Teng-Chu-Fu. There are about 10,000,000 inhabitants. The climate is very healthy.

In 1897, two Catholic Fathers Francis Xavier Nies and Richard Henle, were attacked and massacred in the village of Chiang-Kia-Chwang. This double murder led to the occupation of Kiao-Chau on 14 Nov., 1897, by the German fleet. In 1899 the territory occupied by the German Government was separated from Northern Shan-Tung and confided to the mission of Southern Shan-Tung. The Vicariate Apostolic of Eastern Shan-Tung is entrusted to the Franciscan Fathers. The actual vicar Apostolic is Rt. Rev. Mgr. Cesarius Schang, titular Bishop of Vag, b. 3 July, 1855, appointed 22 May, 1906. He resides at Chiao-T'un. In 1902 the mission had: 18 European Franciscan Fathers; 5 native priests; 10,300 Catholics; 9,200 catechumens; 94 churches and chapels. In 1910 there were: 24 European Franciscan Fathers; 6 native priests; 15,000 Catholics; 9,230 catechumens; 183 churches and chapels.

Shan-tung, Vicariate Apostolic of Northern.

—In 1894, the then Vicar Apostolic of Shan-tung, Rt. Rev. Mgr. D. Cosi, elected as pro-vicar
Apostolic for the southern part of his vicariate Father John Baptist Anser, a member of the Steyl Seminary. Father Anser with another missionary of the same seminary went to this part of the mission, where the Catholic religion had been scarcely preached before. Later, other missionaries of the same society came, and in 1886 the Vicariate Apostolic of Southern Shantung was erected. In 1888 the four civil districts of Kiao-Chau, Tsi-Mei, Kau-Mi, and Chung-chong, belonging to the German Government, were added. The climate is temperate, and there are 12,000,000 inhabitants. The mission is entrusted to the priests of the Divine Word of Steyl. The actual vicar Apostolic is Rt. Rev. Mgr. Augustine Henning. Shantung Missionary Band of Hesians, appointed June 14, 1904. He resides at Yen-Chu-Fu. In 1904 the mission had: 37 European priests; 11 native priests; 26,300 Catholics; 40,400 catechumens; and 130 churches and chapels. In 1908 there were: 46 European priests; 12 native priests; 35,301 Catholics; 39,538 catechumens; 131 church buildings; 1 seminar, with 6 students; 1 preparatory seminary, with 50 students; 8 Chino-German schools, with 323 students; 107 schools for catechumens, with 1384 students; 2 schools for catechists, with 194 students; 33 Chinese schools, with 350 pupils; 1 college for European students, with 8 students; 2 orphanages for children, with 88 inmates; 1 hospital; 6 orphanages, with 425 orphans; 3 Marianist Brothers; 12 sisters of the Franciscan Missionaries of Mary; 6 Servants of the Holy Ghost.

Missiones Catholicae (Rome, 1907). V. H. MONOANAR.

Sharpe, James (alias Pollard), b. at York, 1577; d. at Lincoln, 1630. Converted when young, he made his priestly studies at the English College, Valladolid, was ordained in 1604, and returned to England in 1606. Here a long and well-deserved trial awaited him. Believing that he might assist his parents to the Faith, he visited them at Everingham, but was inaudibly kept a prisoner at home, and subjected to every possible pressure to induce him to renounce the Faith. Disputations and entreaties alternated with threats, the use of force and constant surveillance; 1 his mother conjured him on her knees to yield; his father begged the authorities rather to keep him close in England, than to let him go into exile. But the "Annals" of his College attests that Sharpe was a man "of great courage and learning." His constancy prevailed. He was eventually taken to the Archbishop's palace and, having endured the tortures of the Society of Jesus (1608), he became professor of Scripture at Louvain for three years, after which he returned, and worked on the English until his death. He wrote "The Trial of Protestant Private Spirit." (s. l. 1630).

Shea, John Dawson Gilmary, historian, b. in New York, 22 July 1824; d. at Elizabeth, New Jersey, 22 Feb., 1892. The name Gilmary (Sons of Mary) was assumed at a late period of his life. Young Shea was a pupil of the Sisters of Charity, and a graduate of the Columbia College grammar school, of which his father was principal. At an early age he became a clerk in a Spanish merchant's office, where he learned to write Spanish fluently. When only fourteen he contributed an article to the soldier-cardinal Albornos to the "Young People's Catholic Magazine" (1838). Subsequently he studied law, and was admitted to the bar in 1846. In the following year he entered the novitiate of the Society of Jesus at Fordham, New York, and remained a member of the order until 1852. As a Jesuit he was associated with the scholarly Father Martin, S.J., Rector of St. Mary's College, Montreal, under whose inspiration was developed his natural taste for literary and historical studies. In 1852 he left the Society, and presently began a systematic study of the early Indian missions in America. The results of his researches soon appeared in the pages of the "United States Catholic Magazine", published in Baltimore. Shea's first noteworthy publication was the "Discovery and Exploration of the Mississipi Valley with the original narratives of Marquette, Allouez, Membré, Hennepin, and Anastase Douay" (1852). The "Westminster Review" of 1854 described it as "a most valuable and interesting volume" (July, 1853), and the London "Athenaeum" (1853, p. 132) also spoke highly of it. In 1854 he published the "History of the Catholic Missions among the Indian Tribes of the United States, 1529-1854," a work of much labour and research. In the "Creemosy Series" of twenty-six small volumes, he initiated in 1857 the republication of rare and valuable pamphlets touching upon the voyages of early explorers to America. In 1859 followed "A Bibliographical Account of Catholic Bibles, Testaments and Other Portions of Scripture," translated and published in the United States; he also edited an edition of Challoner's Bible. In 1860 appeared the first issue of his "Library of American Linguistics," a series of fifteen volumes of grammars and dictionaries of Indian languages. Besides "The Life of Pius IX," "The Catholic Church of New York City" (1872), "The Hierarchical of the Catholic Church in the United States" (1880), Shea compiled many school histories and text-books; he also published numerous translations and adaptations, and contributed historical articles to Justin Winsor's "History of America," the "Catholic World," and the "U. S. Catholic Historical Magazine," of which he was the founder and first editor. He also edited for a number of years Sadlier's "Catholic Directory and Almanac." The articles on the Indians in the "Encyclopedia Brittanica" and "American Encyclopedia" are all from his pen, and he was looked upon as the best informed man in America on everything pertaining to the aborigines. The notes, biographical sketches, and bibliographical accounts of works upon aboriginal history scattered throughout his various publications will be very serviceable for future historians. The preparation of the "History of the Catholic Church in the United States" (4 vols., 1880-92) extended over many years and entailed immense labour. He was practically a pioneer in this field, as the very sources of information had to be unearthed. This work will stand as a monument to his untiring industry. Most of his time was meanwhile claimed by his position as editor and Frank Leslie's secular publications. In 1888 he became editor of the "Catholic News," in which position he continued up to the time of his death. St. Francis Xavier's College, Fordham University, and Georgetown conferred on him the degree of LL.D. in recognition of his work as a Catholic historian, and the University of Notre Dame awarded him the first "Letars" Medal (1893).

EDWARD P. SPILLANE.

Shae, Sir Ambrose, b. in Newfoundland, 17 Sept., 1815; d. in London, 30 July, 1905. At the age of twenty-two he embarked successfully on a journalistic career for a period of eight years, and thereafter devoted himself to mercantile pursuits. In 1848 he was elected to the House of Assembly of Newfoundland and, with the exception of a short period in 1869, he was continuously a member until 1886. In 1855, and again in 1860, he was chosen its speaker. He successfully negotiated the admission of Newfoundland into the reciprocity treaty arrangements in 1855; was an unofficial member of the executive government in 1864; and went as delegate from Newfoundland to the Quebec conference on confederation in 1864. In 1883 he was appointed commissioner for Newfoundland to the International Fisheries Exhibition in London, and hereafter he was sent to Washington, where he successfully brought the State department into harmony with Canada for the extension of the Washington Treaty, 1885. For distinguished services rendered, he was honoured with the Knight Commandership of the Order of St. Michael and St. George in 1883. In 1887 he was appointed Governor of the Bahamas Islands, and in that position achieved signal success in bringing new life and activity into a commercially stagnant colony. He initiated the sial fibre industry, organised a public bank, laid the Bahamas-Florida cable, and fostered commercial enterprise in every department of the colony's industries, and by his prudent and progressive administration built up a lasting reputation as a most energetic governor. After his retirement in 1895 from the governorship to private life, he lived the last years of his active and successful career in London. In life religion was to Sir Ambrose a fact as real as were his duties in the various positions of responsibility held by him, and his fine character was strengthened and balanced by an ever-present consciousness of deep religious responsibility.

Sheehan, Richard A. See Waterford, Diocese of.

Shell, Richard Lalor, dramatist, prose writer, and politician, b. at Drumdowny, County Kilkenny, Ireland, 17 August, 1791; d. at Florence, Italy, 25 May, 1851. His father, Edward Shell, who had been a successful merchant at Cadiz, Spain, returned to Ireland and purchased the estate of Bellevue, near the city of Waterford. Richard received his early education at home from a French priest, an émigré. When eleven years old he was sent to a Catholic school kept by a French nobleman, at Kensington, London, and a few years later to the Jesuit College at Stonyhurst, in Lancashire. In 1807 he entered Trinity College, Dublin, "with a competent knowledge of the classics, some acquaintance with Italian and Spanish, and the power of reading and writing French as if it were his mother tongue". Graduating in 1811, he went to London to study law and was admitted to the Irish Bar in 1814. Meanwhile his father's affairs had over taken his family, and he could not look to his father for support. Having a literary bent, he turned to dramatic composition and produced a number of plays some of which were quite successful, the most popular being "Adelaide", "The Apostle", and "Evadne". Financially they were very successful. His chief fame, however, as a literary man came through his "Sketches of the Irish Bar"—a series of articles contributed to the "New Monthly Magazine", which were published in two volumes after his death. They give considerable information of the leading men and events of the times. Early in life, even while at college, he had become interested in politics. The Catholic Board, the leaders of public opinion in Ireland, were divided as to the best policy to be pursued in the struggle for Catholic Emancipation. Shell sided with those who were in favour of conciliating Protestant opinion, especially in granting the king a veto power over the appointment of the Catholic bishops. But O'Connell, wearied of the old method of petitioning and salaming which had degraded Catholics in their own esteem and had procured from their rulers nothing but contempt, favoured more active measures. O'Connell's method prevailed, and Shell would have nothing to do with it. After a few years, however, convinced that nothing short of strenuous agitation would succeed, he joined heartily with O'Connell in all his plans for Catholic Emancipation, demanding it not as a favour but as a right. In the Catholic Association, which succeeded the Catholic Body in 1823, Shell was next to O'Connell the leading power. At the request of this organization he drew up a petition to Parliament setting forth the manifold abuses of justice in Ireland. Early in 1825 he went with several others to London to protest against the contemplated act of the English Government of suppressing the Catholic Association which had enrolled a host all Ireland in its effective plan of campaign. In 1826 he contributed to "L'Étoile", a French periodical, a number of articles on the condition of Ireland. Written in French and unsigned, they were translated and published in leading periodicals in England and on the Continent, and accomplished their purpose—to gain a hearing for Ireland.

That Shell was fearless and had the courage of his convictions was manifested on many occasions, especially by his scathing denunciation of the Duke of York, by his public address on the Irish patriot Theobald Wolfe Tone, and by his boldy coming before the people of Kent, England, who had assembled at Pe nenden Heath to protest against any relaxation of the laws against Catholics. Though his request for a hearing on behalf of Catholic Ireland was not granted, his speech, which was already in press, appeared in a
London newspaper as a part of the proceedings. Of this speech Jeremy Bentham, the philosopher, said: "So masterly a union of logic and of rhetoric scarcely have I ever beheld." In the historic Clare election of 1828 Sheil took a leading part. Under his influence the Catholic Association resolved to oppose the re-election of Mr. Veesey Fitzgerald because he had taken official anti-Catholic Government of the Duke of Wellington. Finding no Protestant candidate to make the fight, Sheil conceived the bold project of having O'Connell, "the uncrowned king of Ireland," enter the contest, though he knew well that no Catholic would consent to take the anti-Catholic test oath required of members of Parliament. But he knew well that the demand of 6,000,000 united Irish Catholics for justice—a demand which even an anti-Catholic Parliament and an anti-Catholic king would probably grant for fear of a general uprising. At the close of the poll when the returns showed the triumphant election of the Liberator, Sheil in a remarkable address to the landlords assembled pointed out the folly and injustice of wreaking vengeance on their tenants.

The Clare election brought on the Catholic Relief Bill of 1829 and opened to Sheil a career in Parliament where for eighteen years he served with distinction, first as Member for Port Said, then for Tipperary, and later for Dungarvan. His most important speeches in the House of Commons were on "The Church of Ireland," "Repeal of the Union," "Orange Lodges," "Corr Laws," "Voters by Ballot," and "Income Tax." In spite of a harsh voice and other natural defects, he became a leading orator in a Parliament noted for its eloquence. This is the testimony of two experts of such different schools as Mr. Gladstone and Mr. Disraeli. His speeches were always well prepared. He was very resourceful in the use of metaphor and antithesis and also in working out an idea to carry great weight, as in his famous reply to Lord Lyndhurst's accusation that the Irish were "aliens in blood, and aliens in religion." After some hesitation, he joined his old friends in demanding the restoration of the Irish Parliament, but the crushing defeat of the measure in 1834 caused him to look upon the agitation for repeal as but an unattainable fantasy. From this time on, he cast his lot with the Tory party, and accepted office under the Government. For this he has been severely condemned as a mere officeseeker who thought more of his own interests than of his native land. Yet he acted as counsel for John O'Connell, son of the Liberator, in the famous state trial in 1824 of the 18 rebels in behalf of Irish Emigration. But evidently holding office moderated his zeal as a critic of the Government except when the Tories were in power. In November, 1850, Sheil accepted the post of British plenipotentiary at the Court of Tuscany, Italy, where he died six months later. His body was conveyed to Ireland and buried at Long Orchard, County Tipperary.

Sheldon, Edward, translator, b. at Beoley, 23 April, 1590; d. in London, 27 March, 1687. He was the third son of Edward Sheldon of Beoley, Worcestershire, and Elizabeth Markham his wife. He studied at Oxford and afterward at Gray's Inn, London, completing his education by a foreign tour. Having married Mary (or Anna) Maguire, then folks, daughter of Lionel Wake of Pkedington, Northamptonshire, by whom he had nine sons and four daughters, he led a quiet life on his estate at Stratton, Gloucestershire. In 1641, being molested because of his religion, he removed to London where he lived in retirement till his death. He translated four works from the French: "The Holy Life of M. De Renclos" (1653); "The Rule of Catholic Faith," by P. Verdu (1660); "The Counsels of Wisdom," by Nicholas Fouquet, Marquis of Belle Isle (1680); and "Christian Thoughts for Every Day of the Month" (1680).

Shefley, Anthony, Bishop. See Leigh, Richard, VENERABLE. See Leigh, Richard, VENERABLE.

Shelley, Richard, English confessor; d. in Marshalsea prison, London, probably in February or March, 1585–6. Third son of John Shelley of Michelgrove, Clapham, Sussex, he was for some time abroad in attendance on his uncle Sir Richard Shelley, Knight of St. John, the last Grand Prior of England. He was given permission to return to England in May, 1583, which he did shortly afterwards. Two accounts are extant of the petition he presented on behalf of his persecuted fellow-Catholics. One is by Peter Penkevel, who was his servant in the Marshalsea at the time of his death. This is printed by Father Pollen. Peter Penkevel says he came to London about 1584, that Mr. Ralph Fletcher and others were prisoners in the Marshalsea: but Robert Bellamy was not committed there till 30 January, 1585–6. So Penkevel must be wrong in his dates, and all that he knows about the petition, which was presented (as he says, to the queen) nearly a year previously, is mere hearsay. Strype on the other hand seems to have seen the petition, and according to him it was presented to Parliament. The only result was that Richard Shelley was sent to the Marshalsea, 16 March, 1584–5. There he remained till his death, which probably took place in February or March, 1585–6. He was certainly alive and in the Marshalsea in November, 1584. Richard Shelley is Peter Penkevel's servant, and Peter Penkevel came to him, and "shortly after died, a constant confessor in the said prison". This Richard Shelley must be distinguished from the Richard Shelley of Findon, Sussex, and All Cannings, Wilts (second son of Edward Shelley of Warmington, Sussex, and brother of V. Shelley, or Shelley the martyr), who was committed to the Marshalsea for his religion, 13 August, 1580. Mass was said in his chamber there by the priest William Hartley, 24 August, 1582. He was still there 8 April, 1584, but was liberated soon after. He was again in prison in 1586, 1587.

Shem. See SEM.

Shen, Vicariate Apostolic of Northern—In 1640 the Christian religion was preached for the first time in the Province of Shen-ai. It was, by turns, looked upon with favour and disfavour by the emperors of China. The Province of Shen-ai belonged to the Vicariate Apostolic of Shan-ai until 1841. By a Decree of 3 February, 1841, it was erected as a separate vicariate Apostolic. It kept the Province of Shan-ai and Kung-Ku-Nung until 1878. By a Decree of 6 July, the province was divided into two vicariates Apostolic, Northern and Southern Shen-ai. The Vicariate Apostolic of Northern Shen-ai includes the five Prefectures of Si-nan, Feng-teang, Tung-chu, Yen-nan and Yen-lin. The climate is healthy, but very cold in winter. There are about 7,000,000 inhabitants. The mission is entrusted to the Franciscan Fathers. The present vicar Apostolic is the Rt. Rev. Maurice Gabriel, consecrated in 1908. He resides at Si-nan. In 1903 the missions numbered: 10 European Franciscan Fathers; 21 native priests; 23,600 Catholics;
2,500 catechumens; 160 churches and chapels. In 1810 there were: 18 European Franciscan Fathers; 28 native priests; 25,116 Catholics; 4,627 catechumens; 203 churches and chapels. On May, 1911, the Vicariate Apostolic of Northern Shen-esi was divided in two missions, Northern and Central Shen-esi.

Shen-esi, Vicariate Apostolic of Southern.—The southern part of Shen-esi was entrusted in 1885 to the Servite Fathers and Paul, established at Rome by Pius IX, 1874. In 1887 this section was erected as a vicariate Apostolic including two civil prefectures, Han-chung and Singan. The climate is damp and changeable. There are about 5,000,000 inhabitants. The present vicar Apostolic is the Right Rev. Mgr. Pietro Giuseppe Borelli, titular bishop of Achantum, d. 7 January, 1886; consecrated in 1895. He resides at Tcheg-kow. In 1885 the mission numbered: 2 European missionaries, 3 native priests, 32 churches, 2 chapels, 7700 Catholics, 100 catechumens, 2 schools for boys, 4 schools for girls, 1 seminary, with 9 students. In 1910 there were: 1 European priest, 3 native priests, 50 church schools, 22 chapels, 11,489 Catholics, 6305 catechumens, 19 schools for boys, 17 schools for girls, 1 seminary, with 20 students, 1 orphanage for boys, with 74 inmates, 1 orphanage for girls, with 350 inmates.

Shepherd, John, musical composer, b. about 1512; d. about 1563; one of the great English musicians who rank with Tallis, Whyte, Taverner, Farrant, Edwards, and Byrd. He was educated at St. Paul's music-school under Thomas Mulliner, and was appointed organist and master of the choristers of Magdalen College, Oxford, in 1542, which position he held, with a short intermission, till 1547. His attention was not wholly given to music; at this date, for example, he was also employed as a feliciter's College, in 1549, retaining it for two years. On 21 April, 1554, he petitioned—as a student of music for twenty years—the University of Oxford for the Degree of Mus.D., and he was one of Queen Mary's Chapel Royal from 1553 to 1558. Among the New Year's gifts to Queen Mary, on 1 January, 1557, there was an entry in the Chapel Royal books that "Shepherd of the Chapel gave three Rolls of Songs". He was certainly alive in 1562, but there is no record of him after that date, from which it is concluded that he died, or resigned, in 1563. There exist numerous compositions ascribed to him, and the MSS.—testifying to Shepherd's undoubted powers. His "Eumerions" for five voices, to be found in Burney's "General History of Music", is a fair specimen of sincere and straightforward writing. In the British Museum there are some of his masses and motets, all for four voices, while The Royal College of Music, London, has four of his Latin motets. The Music School, Oxford, possesses much of his church music, including a delightful Magnificat. Hawkins has printed two of his pieces, and Morley names him among the distinguished musicians of the sixteenth century.

Shelburne's Crusades. See PASTOUREAUX, Crusade of the.

Sherborne Abbey, Dorsetshire, England, founded in 1067 by Sherborne (aek-barn), clear brook was originally the episcopal seat of the Bishop of Western Wessex, having been established as such by St. Aldhelm (705). The Benedictine Rule was introduced by Bishop Wulfey III, who also governed the monastery as abbot, the monks forming his "choristers.

The office of abbot was once separated from that of bishop by Roger of Caen (1122), when the see was removed to Sherborne, and the abbey church ceased to hold cathedral rank. The original Saxon Church of St. Aldhelm having become too small, Bishop Roger replaced it by a larger Norman one, and this was subsequently so rebuilt and altered, that it is now almost entirely perpendicular in style. A Lady-chapel was added in the thirteenth century, and later on a great restorant on the proper status of the church, and remained the property of the monastic. Their differences led to serious disturbances which were eventually settled through the intervention of the bishop. A great fire occurred in 1457, said to have been caused by a parishioner, and this may perhaps have necessitated more rebuilding than had been originally contemplated. At the dissolution of the monastery (1536) the abbey and its lands were bought by Sir John Horsey, Knight, from whom the parishioners purchased the abbey church for the sum of £300, and since two churches were not now of so great a need as at first, the whole of which there had been some contention, was forthwith demolished. The conventual buildings, chiefly of the thirteenth, fourteenth, and fifteenth centuries, were handed over to the school, which had existed there since 703, and which in 1550 was refounded, receiving a new charter from Edward VI. These buildings have been added to from time to time, and Sherborne School now ranks amongst the leading public schools of England. The abbey church remains the parish church of the town, having been judiciously restored in recent years. Though Nor- man in plan, its perpendicular, its windows by fine, and the fan-vaulting of the choir absolutely univalled.

Shefford, Henry, English Methodist preacher, b. 1738; d. 1809. He was one of the preachers in the New Church, founded by John Wesley, and succeeded Charles Wesley as one of the chief leaders of that body. He was a scholar as well as a preacher, and was regarded as one of the ablest of the New Church preachers. He was also a writer, and published several works, including "The Christian's Interest", "The Christian's Guide", and "The Christian's Advocate".

Sherborne (Sherrbourne), Diocese of, in the Province of Quebec, suffragan of the Archdiocese of Montreal, erected by Pius IX, 28 Aug., 1874, formed of parts of the Dioceses of Three Rivers, St. Hyacinthe, and Quebec, and including that part of the Province of Quebec known as the "Petit Duché", remaining for the fertility of their soil, for their industry, and commerce. At present it comprises 74 parishes. The first missionaries who visited the territory now within the limits of the Diocese of Sherbrooke were Rev. Jean Raymbault (1818-23), John Holmes (1822-27), and Michael Power (1827-31), Hugh Paisley (1831-34), Hubert Robson (1832-34). The last three died, martyrs of their. See the events of the Sherbrooke fire in 1847. From 1834 till 1874 a great many missionaries laboured with indefatigable zeal attending the Catholic population, which was thinly scattered over this immense tract of land. Roads in many places were unknown, and the missionaries had to travel on horseback or on foot, through dense forests infested with wolves, bears, and other savage animals.

Bishops of Sherbrooke.—(1) Antoine Racine, b. at St. Ambroise, Quebec, 26 Jan., 1822; ordained priest at Quebec, 12 Sept., 1844; consecrated bishop of Sherbrooke, 1 Sept., 1874; consecrated by Cardinal Taschereau, 18 Oct., 1874; governed the See of Sherbrooke during nineteen years; d. 17 July, 1893. The following extract from his funeral oration, delivered by Mgr. Bernard O'Reilly, gives us an idea of the precepts this good bishop fulfilled in his life: "of reverent, grave, and unblemished man, a man adorned with every virtue, and with all the graces of wisdom; a man modest, affable and
of the most perfect moderation in his lofty dignity; a man who is an enemy to contention and trouble, an angel of peace and conciliation; a man who is a stranger to self-interest and generous toward the Church and the poor; a man full of the knowledge of Holy Writ, of the meaning of the Divine Word in all his pastoral teaching; a man solely intent on sanctifying his people, on rearing a clergy of model priests by giving them in his own person the example of the most edifying zeal and of a shining piety!"

(2) Paul S. La Rocque, b. at Saint Marie de Monnoir, October 21, 1824; m. Emily A. La Rocque, 9 May, 1869; elected Bishop of Sherbrooke, 6 Oct., 1893; consecrated on the 30 Nov. of the same year. Bishop La Rocque has continued the good work undertaken by his predecessor, and Sherbrooke is progressing wonderfully.

Statutes.—When the diocese was erected, in 1874, there were but 28 secular priests and 26 parishes with resident priests; to-day there are 122 secular priests, 74 parishes, and 8 missions. The Catholic population in 1874 numbered 29,000; now it is 55,000. In 1874 there were only 150 schools with an attendance of 4,000 pupils; now there are 369 schools, 1 college, 1 seminary, 12 academies, and 9 boarding-schools, with an attendance of 16,000 pupils. The Brothers of the Sacred Heart have 10 schools in the diocese. In all the principal towns there are convents wherein young girls get an excellent training. The different orders of nuns who have houses in the diocese are: Congregation of Notre Dame, Sœurs de la Présentation, Sœurs de l'Assomption, Sœurs des SS. Noms de Jésus-Marie, Filles de la Charité de S. C. de Jésus, Sœurs de la Charité, Sœurs du Précieux Sang, Sœurs de la Sainte Famille, whose mother-house is in Sherbrooke. The Missionaires de la Salette have charge of the Sacred Heart Parishes, Stanstead. The Redemptorists Fathers have also taken charge of a pariah, and in the future their novitiate will be in Sherbrooke instead of Montreal.

The Irish Brothers of the Presentation are opening a school in the city of Sherbrooke for the English-speaking children. The diocese also has an Old Folks' Home, an Orphans' Home, and a hospital second to none in the Dominion of Canada. J. C. McCES.

Sheridan, Philip Henry, b. at Albany, N. Y., U. S. A., 6 March, 1831; d. at Nonquitt, Maine, 8 August, 1889. His family were among the Catholic pioneers who moved to Somerset, Ohio, during his boyhood; he entered the U. S. Military Academy in 1848 from that state and graduated in 1853, receiving the rank of brevet second lieutenant of infantry. In the following year he was sent to Texas and there, and in Oregon, served with much credit in settling difficulties with the Indians. At the outbreak of the Civil War he was made chief of the Second Michigan Volunteer Cavalry. Rapid promotion followed, that of brigadier-general in July, and the command of a division of the Army of the Ohio in September; in the operations in the South-west, during the two following years, he greatly distinguished himself. Appointed commander of all the cavalry of the Army of the Tennessee, he was thereafter one of General Grant's chief relliances in his operations in Virginia against Lee. During a brief absence of Sheridan in Washington, General Early attacked the Union Army near Cedar Creek, 19 October, 1864, and was at first victorious. Sheridan arrived during the retreat, rode at full speed from Winchester, arrived in the field, and rallying his men, converted the disaster into a complete victory. General Grant writing of this feat said: "Turning what bid fair to be a disaster into a glorious victory, stamps Sheridan what I have always thought him, one of the ablest of generals."

In November, 1864, his commission of major-general in the regular army was awarded him. His raids during the early part of 1865, to destroy the railroads and the other remaining avenues of supply to Lee's army, contributed much to the final surrender of the Confederate Army at Appomattox in April. After the war Sheridan was appointed to command the military department in Louisiana, Texas, and Missouri, and during 1870-1, at the period of the Franco-Prussian trouble, visited Europe where he was received with distinguished consideration at the headquarters of the German Army, and was present at several important battles of the campaign. He was promoted to the rank of lieutenant-general in 1869, succeeding General Sherman as commander-in-chief of the army in 1883, and shortly before his death, on 1 June, 1888, was confirmed as general of the army.

Sherwood, William, Bishop of Meath, d. at Dublin, 3 Dec., 1482. He was an English ecclesiastic who obtained the see by papal provision in April, 1460. Of his earlier life nothing is known. He soon fell into conflict with Edward enveloping Earl of Desmond, who was deputy to George, Duke of Clarence, Lord-Lieutenant of Ireland. The earl

John T. BAINES.
accused the bishop of instigating the murder of some of his followers, and in 1464 both went to England to lay their grievances before the king. Edward IV upheld the earl, who was supported by the Irish parliament, and acquitted him of all charges of disloyalty and treasonable relations with the Irish people. But when in 1467 he was disgraced, and succeeded by the Earl of Warwick, Bishop Sherwood was suspected of leading the opposition, which finally brought the earl to the scaffold. Some years after his rival’s death, Sherwood himself was appointed deputy, but his own rule was so unpopular that in 1477 he was removed from office, having governed for two years. He held the Chancellorship of Ireland from 1475 to 1481. He lies buried at Newtown Abbey near Trim. *Annals of the Four Masters (Dublin, 1846–41); Guillaum * observer of Ireland (Dublin, 1865); *Kinsirion in Dict. Nat. Bioq., Register of St. Thomas Abbey, Dublin (4th S. London, 1889) gives text of an agreement between Sherwood and the abbey.

EDWIN BURTIN.

**Shevbread.** See LOAVES OF PROPORTION.

**Shields, James, military officer, b. in Dungannon, County Tyrone, Ireland, 12 Dec., 1810; d. at Ottumwa, Iowa, 1 June, 1879. He emigrated to the United States in 1826 where he at once proceeded to study law and began practising at Kaakaskia, III., in 1832. He was elected to the state Legislature in 1836; became state auditor in 1839 and judge of the state supreme court in 1843. He was fulfilling his duties as commissioner of the general land-office when war with Mexico was declared, and he was commissioned brigadier-general by President Polk, 1 July, 1846. General Shields served with distinction under Taylor, Wool, and Scott, and gained the brevet of major-general at Cerro Gordo, where he was shot through the lung. He was again severely wounded at Chapultepec, and was mustered out in 1848. The same year he was appointed Governor of the Territory of Oregon, which office he soon resigned to represent Illinois in the United States Senate as a democrat. After the expiration of his term he removed to Minnesota and was United States senator from that state from 1855 to 1860, when he removed to California. On the breaking out of the Civil War, he was appointed brigadier-general of volunteers, 19 August, 1861. He fought gallantly in the Shenandoah Valley campaign, opening hostilities at Winchester, though severely wounded the preceding day in a preliminary engagement. While in command at Port Republic he was decisively beaten by General Jackson and resigned his commission, 28 March, 1863. He returned to California whence he removed to Carrollton, Mo., where he continued the practice of law. He subsequently served his state as a railroad commissioner and was a member of the Legislature from 1874—79. He was United States senator from Missouri at the time of his death. A monument was erected to him in St. Mary’s Cemetery at Carrollton, which was unveiled by Archbishop Glennon on 12 Nov., 1910.

**Jarvis Keiley.**

*Shi-koku,* one of the four great islands of Japan, has an area of 7022 square miles, not counting the smaller islands which depend upon it. Its population according to the census of 1900 was 3,198,500. The name *Shi-koku* signifies “Four Kingdoms”, the island having been divided, from ancient times, into the four provinces of: Awa, in the east; Settsu, in the northeast; Tosa, in the north; and Tamba, in the south. In 1868 at the Restoration of Japan the names of these four provinces, as of all others in the empire, were changed, and the island is now divided into the four prefectures of: Tokushima-Ken (formerly Awa), Kagawa-Ken (Sanuki), Ehime-Ken (Tamba), and Kochi-Ken (Tosa). The population of inhabitants to the square mile for the island is 176; in the Prefecture of Kagawa it rises to 418, a higher figure than in any other prefecture of Japan. The climate is very temperate and salubrious, and the Province of Tosa is the only one in the empire where two crops of rice are grown every year. The country is very mountainous, rising at some points to 3000 and 4000 feet, and even to 6480 feet at Tatsuschi-Yama in the Prefecture of Ehime, which is the highest point of the island. The population is most dense on the southeast. The four prefectures have many good schools, primary and secondary, normal schools; but there are no universities, the public libraries are very insignificant, and the charitable institutions and social organizations are embryonic where they are not altogether wanting. There are good roads but no railroads, although the project of one has been approved by the Government for about ten years past. Various lines of steamers, making the passage daily in six hours or little more, connect all the provinces of Shi-koku with the great ports of Kobe and Osaka. Shi-koku is the territorial district of the eleventh division of the army; the bulk of the troops are quartered at Matsuyama and Zentsu (Kagawa); but, as in the three other provincial capitals there is a regiment of about 1500 men. The principal cities are: Tokushima (Tokushima-Ken), pop. 65,561; Kochi (Kochi Ken), pop. 39,781; Takamatsu (Kagawa-Ken), pop. 43,489; Matsuyama (Ehime-Ken), pop. 42,338.

**Religion.—** The Prefecture Apostolic of Shi-koku was established by a Decree of Pius X, 28 Feb., 1904, and its administration given to the Spanish Dominicans of the Province of Smo. Rosario de Filipinas. Before this it had been administered by the Missions Etrangeres de Paris, being regarded as part of the Diocese of Osaka, under the care of Mgr. Chaton, the present Bishop. The evangelisation of the island began in 1882, when Father M. Plessis, in spite of great difficulties, founded in the city of Kochi the first chapel, under the invocation of the Twenty-six Martyrs of Japan. In 1889 and 1898 the residences of Father Plessis and Father Chaton were burnt by the people, and the missionaries were driven from the islands. In 1881 and 1889 they were permitted to reside in the hospital of Takamatsu, but in 1898 they were again driven from the hospital. There is an orphanage for boys, and the confraternity of the Most Holy Rosary is established at Kochi. The official residence of the prefect Apostolic, the Very Rev. José M. Alvarez (appointed 2 Oct., 1904), is the city of Tokushima. The statistics of the mission in 1911 were: Dominican missionaries, 6; Christians, 394; baptisms, 86; communions, 889; confirmations, 17; marriages, 4; interments, 6. The inhabitants of Shi-koku profess various forms of Buddhism; some few profess Shiitism. Both of these creeds are constantly falling into decay, and as it is very difficult to investigate the statistics of religious indifference gains ground among the youth of Japan.

**José M. Alvarez.**

**Shintoism.** See Japan.
Shrewsbury, Diocese of (SALOPPENSIS), one of the thirteen English dioceses created by Apostolic Letter of Pius IX on 27 Sept., 1850. It then composed the English counties of Shropshire and Cheshire, and the Welsh counties of Carnarvon, Flint, Denbigh, Merioneth, Montgomery, and Anglesey. When on 4 March, 1896, Leo XIII formed the Vicariate of Wales, these Welsh counties were separated from this diocese, so that now only Shropshire and Cheshire are included under the jurisdiction of the Bishop of Shrewsbury. Before the Reformation, Cheshire and the portion of Shropshire north and east of the River Severn were under the Bishop of Coventry and Lichfield, and the rest of Shropshire was under the Bishop of Hereford. On the creation of the Diocese of Chester by Henry VIII, Cheshire was withdrawn from the old Diocese of Coventry and Lichfield. When Pope Innocent XI in 1688 divided England into four vicariates, Shropshire was in the Midland, and Cheshire in the Northern District, and when eight vicariates were formed by Gregory XVI in 1840, Shropshire was part of the Central Districts, and Cheshire part of the Lancashire District. The diocese takes its name from Shrewsbury, the county town of Shropshire, and is under the patronage of Our Lady Help of Christians, and St. Winefride. The latter saint was chosen because her body had been translated from Gwytherin, in Denbighshire, to Shrewsbury in 1188, and her devotion is shown by the honour and solemnity with which the Benedictine abbey founded by Roger, Earl of Montgomery, in 1083, where it remained until her shrine was plundered at the dissolution of the monasteries.

The first bishop of the diocese was James Brown (1812–51), president of Rugby School, who was consecrated 27 July, 1851. Out of a total population of 1,062,617, Catholics numbered about 20,000. There were 30 churches and chapels attended by resident priests, and 6 stations; 1 convent, that of the Faithful Companions of Jesus, in Birkenhead, to which was attached a boarding-school for young laity, and also a small school for girls. There were Jesuits at Holywell, who also had a college at St. Beuno's, Flintshire, and a Benedictine at Acton Burnell. When Dr. Brown celebrated the jubilee of his consecration, the secular priests had increased to 60, and the regulars to 32. Instead of one religious house of men and one of women, there were now four of men, and nine of women; and many elementary schools had been provided for the needs of Catholic children. In 1852 the bitter feeling caused by the re-establishment of the hierarchy found vent in serious riots at Stockport. On 29 June a large mob attacked the Church of St. Philip and James; they broke the windows and attempted to force in the doors, but before they could effect an entrance, Canon Randolph Firth, the rector, succeeded in removing the Blessed Sacrament, and secreting it with the...
chalcies, etc., in a small cupboard in the side chapel. He was compelled to flee immediately to the bell-tower, and, whilst the rabble were destroying whatever they could lay their hands upon, he made his escape along the roof, and descended by the spouting at the back of the presbytery. Much of the church furniture, with vestments, etc., was piled up in the street and burned. At St. Michael’s, the Host was desecrated, and the pyx and ciborium carried away.

On the death of Dr. Brown, Rev. Edmund Knight (1827–1905), who was vicar auxiliary from 1879, was translated to this see 25 April, 1882, and, on his resignation in May, 1895, was succeeded by Right Rev. John Carroll (1838–97), who had been coadjutor since 1883. He was followed by Right Rev. Samuel Webster (1827–1904), who died from 1897 till his death in 1906. His valuable library on Egyptology, his favourite study, was bequeathed to the new Capuchin foundation at Cowley College, Oxford. The present ruler of the diocese, 1911, is Right Rev. Hugh Singleton (b. 1851).

The Catholic population of the diocese is now 58,013, Shropshire contributing under 3000, partly on account of agricultural depression and the consequent flocking to industrial centres. There are 90 clergy, 16 convents, representatives of 4 orders of men, 8 secondary schools for girls, an orphanage and industrial school for boys, a home for aged poor, a home for the insane, and a seminary for orphanage erected in memory of Bishop Knight. At Oakwood Hall, Romiley, a house of retreats for working-men has been opened and has already done important work; and at New Brighton, the nuns of Our Lady of the Canaene have opened a house of retreats for working-women and ladies. Shropshire is singularly rich in archeological interest, its pre-Reformation parish churches, the noble ruins of monasteries round the Wrekin, the Roman city of Uriconium (Wroxeter), the lordly castle of Ludlow, giving the county a place apart in the heart of the antiquity. In Shrewsbury itself, where once Grey, Black, and Austin Friars and the Black Monks of St. Benedict had foundations, there is now a beautiful little cathedral, built by E. Welby Pugin. Chester, too, with its quaint streets, black and white houses, and venerable cathedral and city walls, claims the visitor’s attention. The body of Dr. Brown, brought back from Genoa, it rested in the old chapel in Queen’s Street on its way to Ireland.

JOSEPH KELLY.

Shrines. See Pilgrimages.

Shrines of Our Lady and the Saints in Great Britain and Ireland.—1. Sanctuaries of Our Lady.—(1) Abingdon.—St. Edward the Martyr. In 1043, St. Edred at Canterbury, both encouraged pilgrimages to Our Lady of Abingdon, causing it to be resorted to by crowds of pious persons. (2) Canterbury.—At the east end of St. Augustine’s monastery was an oratory of Our Lady built by King Ethelbert in which reposed the bodies of many saints. The old Chronicle informs us that "in it the Queen of heaven did often appear; in it was the brightness of miracles made manifest; in it the voices of angels, and the melodious strains of holy virgins were frequently heard". (3) Caversham, Berks.—A chapel of Our Lady in the church of the Augustinians was a centre of great devotion. Rich offerings were made by Countess Isabel of Warwick, Elisabeth of York, queen-consort of Henry VII, and by Henry VIII in his youthful days. The entire image was plated with silver. (4) Coventry.—A celebrated image of Our Lady was here greatly venerated.

With it are associated the glorious names of Leofrì, Earl of Mercia, and his wife, the Countess Godgifu (Godiva). The splendid abbey church founded by them in 1043 surmounted all others in the land in princely, even royal magnificence. It was an image of the glory of England and contained dazzling treasures. On her death Godgifu sent a rich chapel of precious gems to be hung round Our Lady’s neck; no description of this image has reached us. The church was entirely demolished by Henry VIII. (5) Ely.—In the abbey church was venerated a magnificent image of Our Lady seated on a throne with her Divine Child in her arms, the whole marvellously wrought in silver and gold. Hither came King Canute on the feast of Our Lady’s Purification (1020?). (6) Evesham.—The name of this renowned sanctuary perpetuates the vision of Our Lady to a peasant named Eoves. An abbey church was here built by Earl Leofric and the Countess Godgifu and enriched with a splendid image of Our Lady and Child, beautifully wrought of gold and silver. At once it became an object of popular devotion and attracted numerous pilgrims. (7) Glastonbury was the most ancient and venerable sanctuary of Our Lady in England (see GLOSTONBURY ABBEY). In 530 St. David of Menevia, accompanied by seven of his suffragan bishops, came to Glastonbury, invited thither by the sanctity of the place, and consecrated a Chapel of Our Lady there in his absence. As a mark of his devotion to the Queen of Heaven, he adorned the golden sanctuary with a sapphire of inestimable value, known as the Great Sapphire of Glastonbury. The Silver Chapel of Our Lady was stored with costly gifts, the value of which, at our present standard, amounted to a prodigious sum. Among the Saxon kings who came hither on pilgrimage may be mentioned Athelstan and Edgar the Peaceable, the latter laying his sceptre on the Blessed Virgin’s altar and solemnly placing his kingdom under her patronage. (8) Ipswich.—There were four churches of Our Lady in Ipswich, but the greatly renowned miraculous image was in St. Mary’s chapel, known as Our Lady of Grace. The numerous miracles wrought there were proved genuine by Blessed Thomas More in one of his works. Cardinal Wolsey ordered a yearly pilgrimage to be made to Our Lady’s sanctuary by the students of the college at Ipswich. In the thirteenth year of Henry VIII this image was conveyed to London and burnt at Chelsea, the rich offerings and jewels going to the king’s treasure. (9) Tewkesbury.—The church, founded in 715 by two Mercian dukes, Oddo and Dodd, enshrined within its walls a statue of Our Lady that was held in the greatest veneration. Isabella Beauchamp, Countess of Warwick, gave a chalice and other valuable presents to this sanctuary in 1439. The statue had the good fortune to escape destruction at the time of the Reformation, probably owing to the reluctance of the magistrates to arouse the indignation of the populace, who regarded it with extraordinary veneration. In the reign of James I a Puritan inhabitant of the town got possession of this relic of the old religion, and to mark his contempt for it caused it to be hollowed out and used as a trough for swine. Terrible punishments overtook him and all the members of his family. (10) Walsingham was the most celebrated of all the English sanctuaries of Our Lady. So great was the veneration in which it was held that it was called the ‘‘Holy Land of Walsingham’’. About 1061 a little chapel, similar to that of the Holy House of Nazareth (dedicated to Loreto) and dedicated to the Annunciation, was built here by Rychold (Recholdis) de Faverches, a rich widow, in consequence, it is said, of an injunction received from Our Lady. Within the chapel was a wooden image of the Blessed Virgin and Child. Pilgrims flocked from all parts of England and from
the Continent to this sanctuary, and its piety became one of the richest in the world. Among the royal and noble patrons were: Henry III, who came in 1243; Edward I in 1272 (? and 1296; Edward II in 1315; his consort, Isabella of France, in 1332; Edward III in 1361; Edward IV and his queen in 1469; Henry VII in 1487; Henry VIII in 1511, walking barefoot from Bisham Hall, on which occasion he presented Our Lady with a new cope. On the 13th of April, 1514, Queen Catherine of Aragon in 1514. About 1538 the venerated image was brought to London with that of Our Lady of Ipswich, and both were publicly burnt at Chelsea in presence of Cromwell. Fifteen of the canons of Walsingham were condemned for high treason; five were executed. All the jewels and treasuries of the faithful found their way into Henry VIII's coffers.

(11) Worcester.—St. Mary's Minister at Worcester is of ancient date, and pre-eminent amongst its benefactors were Leofric and Godgifu, Earl and Countess of Mercia. The celebrated image of Our Lady and the Holy Child was carved of wood and of large size; it stood over the high altar and could be seen from all parts of the church. The apostate Bishop Latimer, writing to Cromwell, refers to this statue in coarse terms, and expresses a hope that with its sisters of Walsingham and Ipswich it may be burnt in Smithfield. The shrine, Our Lady's Rock, was frequently mentioned among the sanctuaries which were regarded by the English with special veneration. In the inventory of the treasures of the cathedral appropriated by Henry VIII, there is mention of the "great image of Our Lady, sitting in a chair, silver and gilt, having a crown on her head, silver and gilt, set with stones and pearls, and her Child sitting on her knee with one crown upon His head, with a diadem set with pearls and stones, having a ball with a cross, silver and gilt, in His left hand". Of St. Hugh of Lincoln it is said that "for the glory of the ever-Virgin Mother of the True Light, he crowned the lights which usually burned in her church with a host of others". Besides the above, there were many other remarkable sanctuaries of Our Lady in England, to which Catholic pilgrims resorted before the unhappy days of the Reformation.

(12) Aberdeen.—Our Lady at the Bridge of Dee, described as Our Lady at the Brig, is mentioned in 1459. Near to the church was a well dedicated to the Blessed Virgin, where miraculous favours were obtained. In the cathedral were four altars of Our Lady, each with her image, one being of silver. (2) Edinburgh: Our Lady of Holyrood. In the Market Street, opposite the Blackfriars Church, there is an image of Our Lady and Child, carved in wood, which formerly was in Holyrood. For many years it was in the possession of the earls of Aberdeen and subsequently was purchased by Mr. Edmund Waterton, who presented it to the above church. (3) Haddington.—After defeating the Scots at Haldon Hill in 1333 Edward III ravaged the Lowlands, and part of his army (says the chronicler of 1355) "spoiled the Kirk of Our Lady of Haddington, and returned with the spoil thereof to their ships". But the sacrilege did not go unpunished, for a violent north wind rose and buried the ships upon the sands and rocks. (4) Musselburgh.—The church, dedicated to Our Lady of Loreto, was most famous and resorted to by numerous pilgrims, whose piety was rewarded with miraculous favours. The fury of the Calvinist reformers destroyed the sanctuary, and in 1590 the materials were used in building the Tolbooth.

C. Ireland. — (1) Dublin.—A statue of the Virgin Mother was greatly venerated in St. Mary's Abbey and mention is made of it by Simmel in 1487. In 1541 the abbey was destroyed, its property sequestrated, and the image partly burnt. Part of it, however, was saved and is now venerated in the Carmelite church. (2) Muckross, formerly Irrelagh.—The image of Our Lady was here greatly venerated. When the English were devastating the abbey and had torn down and trampled on the crucifix, some of the friars carried off the image of Our Lady and hid it at the foot of a dead tree. Soon the dead tree revived and leaves sprouted in abundance, forming a shelter to the concealed image. On the 13th of April, St. Patrick's Day, an image of the Blessed Virgin held in great repute to which people from all parts of Ireland, princes and peasants, rich and poor, came on pilgrimage, and to which was attributed miraculous power. (4) Trim, the most celebrated sanctuary of Our Lady in Ireland, stood in the abbey of the canons regular of St. Trinian. Pilgrims flocking to the shrine was a rich man who was struck with a sword in the country and enriched it with their offerings. Many and great miracles are said to have been wrought here. The image of Our Lady of Trim shared the fate of Our Lady of Walsingham, being publicly burnt in 1539.

OUPPEREBRO, Aida Mariana (Munich, 1672); WATERTON, Pietas Mariana Britannica (London, 1879); NORTON, Celebrated Sanctuaries of the Madonna (London, 1888).

II. SHRINES OF THE SAINTS.—(1) St. Thomas à Becket, Archbishop of Canterbury, was martyred in Canterbury Cathedral in 1170. His sacred body, at the council of Lyon in 1244, was buried in the shrine and subsequently was shorty after taken up and laid in a sumptuous shrine in the east end. Innumerable miracles were wrought at his tomb and pilgrims from all parts of England and the continent flocked thither to implore his aid. So great were the offerings made by them that the church abounded with more than princely riches. The shrine was covered with plates of gold and enriched with jewels, rubies, sapphires, diamonds, and great oriental pearls (Morris, "Life of St. Thomas", 391). It was an object of the unceasing veneration of all Christendom until the well-known sacrilegious profanation under Henry VIII. (2) St. Edward the Confessor, d. 5 Jan., 1066. William the Conqueror, who ascended the throne in October of the same year, caused the saint's coffin to be inclosed in a rich case of gold and silver. In 1102 the body was found to be incorrupt, the limbs flexible, and the clothes fresh and clean; several remarkable miracles took place at the tomb. Two years after death his body was solemnly translated to a shrine of surpassing magnificence, which was despoiled in the reign of Henry VIII. (3) St. Patrick, Apostle of Ireland, d. 463 at Down in Ulster, where his body was found in a church of his name in 1185. It was then reverently translated to a shrine not unlike another part of the same church. On St. Patrick's Purgatory, see PILGRIMAGES.

(4) St. Wulstan, Bishop of Worcester, and one of the last of the Anglo-Saxon bishops, d. in 1093, and was canonised in 1203. His venerable remains, clothed in pontifical vestments, were exposed in the church for three days to satisfy the devotion of the people, after which his friend, Robert, Bishop of Hereford, to whom he had appeared in a vision, came to celebrate his obsequies. His tomb in Worcester Cathedral was for centuries a centre of attraction to numerous pilgrims, whose piety was rewarded with many miraculous favours. It was rifled of its treasures and despoiled by Henry VIII about the year 1539. (5) St. Gilbert of Sempringham.—At the time of his death (4 Feb., 1189) many persons testified that they saw marvellous lights flashing from the sky, indicating that a great servant of God was quitting this world. His body was buried at Sempringham, where it was reported to have occurred at his tomb. (6) St. Kenigern of Scotland (d. 800) spent the closing years of his life in Glasgow, where he was visited by St. Columba of Iona. His tomb in the crypt of his titular church in Glasgow was long famous for
miracles, but is now despoiled of ornament and left without honour, except by the few Catholics who chance to visit the cathedral. (7) St. Cuthbert of Lindisfarne, see Lindisfarne. (8) St. Alban, protomartyr of England, d. 304. In the time of Constantine the Great a magnificent church was erected on the place of his martyrdom, where his tomb became illustrious for miracles. The pagan Saxons having destroyed this edifice, Offa, King of the Mercians, erected another in 703 on the spot, which became the head of the Benedictine communities in England. (9) St. Swithin, see Swithun, Saint. (10) St. Osmund, Bishop of Salisbury, d. 1099. In 1457 his remains were translated from Old Sarum to the new cathedral in modern Salisbury, and there deposited in the chapel of Our Lady. (11) St. Oswald, King of Northumbria, murdered in 642. His mutilated body found a resting place in Bardney Abbey, Lincolnshire, whence, during the Danish invasion, it was removed to Gloucester Cathedral. See Oswald, Saint. (12) St. Aidan, Bishop of Lindisfarne, d. 651 within a tent set up for the burial on the field of the battle of the Northumbrians at Bamborough. It is related that St. Cuthbert, then a shepherd boy in the mountains, saw in vision his blessed spirit carried by angels into heaven. He was first buried in the cemetery in Lindisfarne, but when the new Church of St. Peter was built there, his body was removed and placed on the right hand of the altar. A portion of his relics was afterwards taken to Iona. (13) St. Ninian, Bishop of Galloway.—His tomb, where miracles were wrought, was venerated at Whithorn till the change of religion. (14) St. Thomas, Bishop of Hereford.—The narrative of numerous miracles obtained at his tomb in the cathedral church at Hereford filled the volumes. A large relic is preserved at Stonyhurst College. (15) St. Wilfrid, Bishop of York, d. 709 at Oundle in Northamptonshire. His sacred relics were carried to Ripon and deposited in the Church of St. Peter, built by him. In the time of the Danish wars they were translated by St. Odol to Canterbury. (16) St. Winefrida, virgin and martyr, d. 600. Her holy death place at Gwytherin in Wales, whence her body was translated to Shrewsbury in 1138, and there deposited in the church of the Benedictine Abbey. At the dissolution of the monasteries her shrine was plundered and desecrated in other places. The Holy well is the place of pilgrimage in Great Britain that has survived the shock of the Reformation. (17) St. Hugh, Bishop of Lincoln, d. 1200, in London. His funeral was attended by John of England, William of Scotland, who had dearly loved the saint, three archbishops, fourteen bishops, abbeys, a hundred red abbots, and a great number of earls and barons of the realm. Many and great miracles took place at his tomb in Lincoln Cathedral. Eighty years after his deposition the venerable body, found to be incorrupt, was translated to a richer shrine, which was plundered by Henry VIII some centuries later. (18) St. Edmund.—The holy king was martyred by the Danes 870. The saint's head, which had been struck off, was carried by the infields into a wood and thrown into a brake of bushes, but miraculously found by a pillar of light and deposited with the body at Haxton. The sacred treasure was conveyed to St. Edmundsbury, where the church of timber erected over it was replaced in 1020 by a stateless edifice of stone. In 920, for fear of the Danes, the body was conveyed to London, but subsequently translated again to St. Edmundsbury. The abbey church that enshrined his remains was one of the richest and most ancient in England.

Shroud, The Holy.—This name is primarily given to a relic now preserved at Turin, for which the claim is made that it is the actual "clean linen cloth" in which Joseph of Arimathea wrapped the body of Jesus Christ (Matt., xxvii, 59). This relic, though blackened by age but (8) St. Alban, protomartyr of England, d. 304. believed that it was the authentic shroud of Jesus Christ. The pope, without absolutely prohibiting the exhibition of the shroud, decided after full examination that in future when it was shown to the people the priest should declare in a loud voice that it was not the real shroud of Christ, but only a picture made to represent it. The authenticity of the documents connected with this appeal is not disputed. Moreover, the grave suspicion thus thrown upon the relic is immensely strengthened by the fact that no intelligible account, beyond wild conjecture, can be given of the previous history of the shroud or of its coming to Lirey.

An unbroken controversy followed and it must be admitted that though the immense preponderance of opinion among learned Catholics (see the statement by P. M. Baumgarten in the “Historisches Jahrbuch”, 1903, pp. 319-43) was adverse to the authenticity of the relic, still the violence of many of its position of the limbs, etc.; the representation no doubt was made exactly life size. Secondly, the impressions are only known to us in photographs so reduced, as compared with the original, that the crudeness, aided by the softening effects of time, entirely disappear.

Lastly, the difficulty must be noticed that while the witnesses of the fifteenth and early sixteenth centuries speak of the image as being so vivid that the blood seemed freshly shed, it is now darkened and hardly recognizable without minute attention. On the supposition that this is an authentic relic dating from the year A.D. 30, why should it have retained its brightness through centuries under the influence of climate for fifteen centuries, and then in four centuries more have become almost invisible? On the other hand if it be a fabrication of the fifteenth century this is exactly what we should expect.

Baumgarten stated in 1903 that more than 3000 articles, books, etc., had at that time been written upon the Holy Shroud. The most important is CHERVALIER, Études critiques sur l'origine du saint sarrau (Paris, 1900). Some useful details are added by MÁLY, Le saint sarrau de Turin est-il authentique? (Paris, 1902).

BAUMGARTEN in Historisches Jahrbuch (Munich, 1903) shows that the preponderance of Catholic opinion is greatly against the authenticity of the shroud. See also BILANIUK in Shroud and Science, XIII (1920) and THURSTON in The Mouth (London, Jan., and Feb., 1903) and in Revue du clergé français (15 Nov. and 15 Dec. 1902).

An animated discussion may be mentioned. VANEL, Le linçol du Christ (Paris, 1902), also in English translation; MACKEY in Dublin Review (Jan., 1903); cf. JÖHNNIS in Nieder (Paris, 1902 and 1910); TIDWELL in The Month (London, Nov. 11, 1910); LOTUS, La photographie des documents nouveaux et concluants (Paris, 1910), the promise of “new and conclusive documents” is by no means unfulfilled.

GARBOLD in The Tablet, CXVII (1 and 8 April, London, 1911), 429-34, 522-4. Of other books may be mentioned: PILLETTO, Encyclopaedia del tesoro (Bologna, 1896 and 1900); MALLORTE, Jésus Christi estampé sous vêtements imparfaits (Venice, 1896); CHIFFLET, De lintex sepulchralibus (Aixioper, 1624).

HERBERT THURSTON.

Shrove tide is the English equivalent of what is known in the greater part of Southern Europe as the “Carnival”, a word which, in spite of wild suggestions to the contrary, is undoubtedly to be derived from the “taking away of flesh” (carnem levare) which marked the beginning of Lent. The English term “shrove tide” (from “to shrive”, or hear confessions) is sufficiently explained by a sentence in the Anglo-Saxon “Ecclesiastical Institutes” translated from Theodulfus by Abbot Ælfric (q.v.) about A.D. 1000: “The week immediately before Lent everyone shall go to his confesser and confess his deeds and the confesser shall so shrive him as he then may hear by his deeds what he is to do [in the way of penance]”. In this name shrove tide the religious idea is uppermost, and the same is true of the Carnival (p. 705 of the fast). It is intelligible enough that before a long period of deprivations human nature should allow itself some exceptional licence in the way of frolic and good cheer. No appeal to vague and often inconsistent traces of earlier pagan customs seems needed to explain the general observations of a carnival celebration. The only clear fact which does not seem to be adequately accounted for is the widespread tendency to include the preceding Thursday (called in French Jeudi gras and in German feter Donnerstag—just as Shrove Tuesday is respectively called Mardi gras and fester Dienstag) with the Monday and Tuesday which follow Quinquagesima. The English custom of eating pancakes was undoubtedly suggested by the need of using up the eggs and fat which were, originally at least, prohibited articles of diet during the forty days of Lent. The same prohibition is, of course, mainly responsible for the association of eggs with the Ember days festival at the other end of Lent. Although the observance of Shrove tide in England never ran to the wild excesses which often marked this period of licence in southern climes, still various sports and especially games of football were common in almost all parts of the country, and in the households of the great it was customary to celebrate the evening of Shrove Tues-

THE DISCIPLES PREPARING CHRIST'S BODY FOR BURIAL, AND EXACT REPRESENTATION OF THE HOLY SHROUD.

Giulio Clovio, the Royal Gallery, Turin.

assailants prejudiced their own cause. In particular the suggestions made of blundering or bad faith on the part of those who photographed the shroud were quite without excuse. From the scientific point of view, however, the difficulty of the “negative” impression on the cloth is not so serious as it seems. This shroud like the others was probably painted without fraudulent intent to aid the dramatic setting of the Easter Sequence:

Dic nobis Maria, quid vidisti in via Angelioces testes, sudarium et vestes.

As the word sudarium suggested, it was painted to represent the impression made by the sweat of Christ, i.e. probably in a yellowish tint upon unbleached linen, the marks of wounds being added in brilliant red. This yellow stain would turn brown in the course of centuries, the darkening process being aided by the effects of fire and sun. Thus, the lights of the original picture would become the shadow of the image as we now see it; but even in 1598 Paleotto's reproduction of the images on the shroud is printed in two colours, pale yellow and red. As for the good proportions and aesthetic effect, two things may be noted. First, that it is highly probable that the artist used a model to determine the length and
day by the performance of plays and masques. One form of cruel sport peculiarly prevalent at this season was the bull-baiting, though it does not seem then to have been confined to England. The festive observance of Shrove tide has become far too much a part of the life of the people to be summarily discarded at the Reformation. In Dekker's "Seven Deadly Sins of London", 1600, we read: "they presently, like pretences upon Shrove-Tuesday, take the game into their own hands, in what they list"; and we learn from contemporary writers that the day was almost everywhere kept as a holiday, while many kinds of horseplay seem to have been tolerated or winked at in the universities and public schools.

The Church repeatedly made efforts to check the excesses of the carnival, especially in Italy. During the sixteenth century in particular a special form of the Forty Hours Prayer was instituted in many places on the Monday and Tuesday of Shrove tide, partly to draw the people away from these dangerous occasions of sin, partly to make expiation for the excesses committed. By a special constitution addressed by Benedict XIV to the archbishops and bishops of the Papal States, and headed "Super Bacchanalibus", a plenary indulgence was granted in 1747 to those who took part in the Exposition of the Blessed Sacrament which was to be carried out daily for three days during the carnival season.

In the Liber Missarum Monarchiae Britannicae et Poloniae, II (Innsbruck, 1897), 55-70; THURSTON, Land and Holy Week (London, 1926, 2nd ed., 1934), 119-120; THOMSON, The History of the English Church and People (London, 1817), IV, 381; RAINMACHERE in the Encyclopedia of Religion and Ethics, s. v. Carnival, can only be mentioned to caution the reader against the unsupported assumptions upon which the whole treatment of the subject is based.

HERBERT THURSTON.

Shushan. See SUSA.

Shuswap Indians (properly Su-Ked-Kum, a name of unknown origin and meaning), a tribe of Salishan linguistic stock, the most important of that group in British Columbia, formerly holding a large territory on middle and upper Thompson River, including Shuswap, Adams, and Quesnel Lakes. On the south they bordered upon the Okanagan and Thompson River Indians; on the west, the Lillooet; on the north, the Chilcotin; and on the east extended to the main divide of the Rocky Mountains. They are now gathered upon a number of small reservations at Kamloops, Okanagan and Williams Lake agencies, besides a small detached band of about sixty domiciliated with the Kutenai farther to the south. From perhaps 5000 souls a century ago they have been reduced, chiefly by smallpox, to about 2200. The principal bands are those of Kamloops, Adams Lake, Alkali Lake, Chilko Creek, Nechako, Spallumcheen, and Williams Lake. What little is known of the early history of the Shuswap consists chiefly of a record of unimportant tribal wars and dealings with the traders of the Hudson Bay Company, which established Fort Thompson at Kamloops as early as 1810. The work of Christianization and civilization began in the winter of 1842-43 with the visit of Father Modeste Demers, who accompanied the annual Hudson Bay caravan from Fort Vancouver on the Columbia to the northern posts, and spent some time both going and returning among the Shuswap at Williams Lake, preaching and instructing in a temporary chapel built for the purpose by the Indians. About two years later the noted Jesuit missionary, Father F. J. de Smet, and his fellow-labourers established several missions in British Columbia, including one among the Shuswap. These were continued until about 1847, when more pressing need in the south compelled a withdrawal, and for some years thereafter occasional visits were made.

In 1862 a rush of American miners into the newly discovered gold mines in the Caribou mountains at the head of Fraser River brought with it a terrible smallpox visitation by which, according to reliable esti-

mate, probably one-half the Indians of British Columbia were wiped out of existence, the Shuswap suffering in the same proportion. In the meantime the Oblates had entered the province and in 1867 Father James M. McGuckin of that order established the Saint Joseph Mission on Williams Lake for the Shuswap and adjacent tribes, giving attention also to the neighbouring white miners. A few years later the

mission had two schools in operation served by six Oblate fathers and lay brothers and four Sisters of Saint Anne. Father McGuckin was in charge until 1883 and was succeeded by Fr. A. G. Morice, noted for his ethnologic and philologic contributions, including the invention of the Déné Indian syllabary. Another distinguished Oblate worker at the same mission was Fr. John M. Le Jeune, editor of the "Kamloops Wawa", published since 1891 at Kamloops, in the Chinook jargon, in a shorthand system of his own invention.

In their primitive condition the Shuswap were without agriculture, depending for subsistence upon hunting, fishing, and the gathering of wild oats and berries. The deer was the principal game animal and each family group had its own hereditary hunting ground and fishing place. The salmon was the principal fish and was dried in large quantities as the chief winter provision. Among roots the lily and the camas ranked first, being usually roasted, by an elaborate process, in large covered pits. Considerable ceremony at-

Siamb, Vicariate Apostolic of.—Siam, “the land of the White Elephant” or the country of the Muang Thai (the Free), is situated in the south-eastern corner of Asia, lying between 4° and 21° north lat. and 97° and 107° east long. It is bounded on the north by Tong-kang and the southern states of Burma, on the east by Annam and Cambodia, on the south by the Gulf of Siam and the Malay Peninsula, and on the west by the Indian Ocean, and thus forms a buffer state between French and British possessions.

From north to south Siam measures in length some 1130 and in breadth some 508 miles, covering an area of some 242,580 square miles, about the size of Spain and Portugal, and is divided into 41 provinces. Its population is estimated to be between six and nine million inhabitants, of whom a third are Siamese, a quarter Chinese or of Chinese descent, whilst the rest is made up of Burmese, Cambodians, Laotines, Malays, Pegus, Tamils, and Europeans. The Siameses are described as light-hearted, pleasure and feast-loving people, as clever gold and silversmiths, possessing great taste for art and skill as painters, decorators, and carvers in wood, stone, plaster, and mosaic. They are, however, not fond of work nor is it necessary for them to be so, for they have few wants for housing, clothing, fire and food, and toil and trouble lessened them with a perpetual summer and a fertile soil, yielding rich harvests of rice and pepper, whilst the mountains abound in teak and yellow wood, box and ebony, sapan and padoo. The chief commerce is in silk, which is carried on along the Memon River and its numerous affluents and canals. The chief religion is Buddhism, which, according to the latest annals, was introduced as far back as 636. With perhaps the exception of Tibet, there is no country in the East where Buddhism is so intensely interwoven with the life of a nation from the king to the lowest subject, and nowhere has it played such an important rôle in the national life, so that every male subject, the king and the crown prince not excepted, has to live in a Buddhist monastery and join the ranks of the talapoons for a short period. Up to a few years ago these Buddhist monasteries were the only establishments for education, which were restricted to the male population. Though Buddhism is the acknowledged religion of the state and towards it the Government allows some $20,000,000 yearly, all other religious creeds are granted full liberty of worship, nor does any one incur disabilities on account of his religious beliefs. The king, being the highest “supporter of the doctrine”, stands at the head of the religion and appoints all religious dignitaries, from the four Somdet Phra Chao Rajagona (archpriests) downwards.

Little is known about the early history of the country. It was first called Siam by the Portuguese (1511) and other nations who came into contact with it. Before Ayuthia or Yuthia was established as the capital (1350), the country was divided into a number of separate principalities bound together by race, language, religion, and customs. A continual migration from the north to the south took place till in 1353 a branch of the Thai establishment itself to Ayuthia. The history of Siam as a dominant power begins with Phra-Chao Utong Somdetch Pra Rama Tibusao I (1351-71) and it was ruled by thirty-four kings (1351-1767) belonging to three different dynasties. During the invasions of the Burmese (1757–82), Ayuthia was destroyed and the new Siamese capital was established at Bangkok, “the Venice of the East”. As early as 1511 the Portuguese made a commercial treaty with Siam and subsequently the Japanese, the Dutch, and the British entered into commercial relations with it. But the present flourishing commerce was not only due to from 1851, when King Mongkut opened Siam to Europeans and to European trade, favoured European factories, and made himself acquainted with Western civilization. After his death in 1868, his eldest son, Chulalongkorn (d. 1910), succeeded as the fiftieth ruler of Siam, and during a reign of forty-two years money himself one of the rich princes who ever sat on an Asiatic throne, a king of European education and manners, to whose energy and initiative Siam owes much of her prosperity: railways, telegraphs, army (20,000 men), navy (37...
When in 1690 peace and order were restored, Bishop Lanoe resumed work till his death in 1696. His successor, Bishop Louis of Cric (1700–27), was able to continue it in peace. But after his death the rest of the century is but the history of persecutions (those of 1729, 1755, 1764 are the most notable), either by local mandarins or Burmese invaders, though the kings remitted more or less from time to time. In 1800 Father Corre resumed the missions in Siam and thus paved the way for the new vicar Apostolic, Mgr Lebon (1772–80). But a fresh persecution in 1775 forced him to leave the kingdom, and both his successors, Bishops Condé and Garnault, were unable to do much. During the Burmese wars the Christians were reduced from 12,000 to 1000, while Bishop Flores was left in charge with only seven native priests. It was only in 1826 and 1830 that a fresh supply of European missionaries arrived, among them Fathers Bouchot, Barbe, Bruguier, Vachal, Grandjean, Pallecoix, Courtevey, etc. In 1832 the last Catholic from the Apostolic of Siam, and the missions began to revive. Under him Siam numbered 6500 Catholics, 11 European and 7 native priests. His successor, Bishop Pallecoix (1840–62), author of "Description du royaume Thaï ou Siam" and "Dictionnaire siamois-latinum-français-anglais" (30,000 words), was one of the most distinguished vicars Apostolic of Siam, the best Siamese scholar, and a missionary among the Laotians. He induced Napoleon III to renew the French alliance with Siam and to send an embassy under M. de Montigny to Siam in 1856. On 8 July, 1856, King Mongkut signed a political-commercial treaty with France, by which it was agreed to the Catholic missionaries by Phra-Narat in the seventeenth century were renewed. The bishop was highly esteemed by the king, who personally assisted at his funeral and accepted from the missionaries as a token of friendship the bishop’s ring. Thanks to the broad-mindedness of Kings Mongkut (1826–68) and Chulalongkorn (1868–1910), the Catholic Church in Siam has enjoyed peace under Pallecoix’s successors, Bishops Dupont (1862–72) and Vey (1875–1909). Owing to the complications between France and Siam, in 1894, the missionaries had to endure the ill-will of local mandarins, though Siam was made a mission by the newly-founded Society of Foreign Missions of Paris. In 1873 Father Laneau was consecrated titular Bishop of Metelopolis and first Vicar Apostolic of Siam, and ever since Siam has been under the spiritual care of the Society of Foreign Missions. King Phra-Narat (1857–97) gave the Catholic missionaries a hearty welcome, and made them a gift of land for a church, a mission-house, and a seminary (St. Joseph’s colony). Through the influence of the Greek or Venetian, Constantine Phaulkon, prime minister to King Phra-Narat, the latter sent a diplomatic embassy to Louis XIV in 1684. The French king returned the compliment by sending M. de Chaumont, accompanied by some Jesuits under Fathers de Fontenay and Tachard. On 10 December, 1688, King Phra-Narat signed a treaty at Louvois with France, wherein he allowed the Catholic missionaries to preach the Gospel throughout Siam, exempted his Catholic subjects from work of the native mandarins, provided that disputes between Christians and pagans. But after the departure of M. de Chaumont, a Siamese mandarin, Phra-phetrascha, got up a revolution, the prime minister was murdered, King Phra-Narat deposed, Mgr Laneau and several missionaries were taken prisoners and ill-treated, and the Christians were persecuted.
Sibbel, Joseph, sculptor, b. at Dilmen, 7 June, 1850; d. in New York, 10 July, 1907. As a boy he evinced the inclination for cutting ornaments and figures from clay. At the age of 10, he drew the attention of his father, who urged the parents of the boy to send him to Münster, Westphalia. At the establishment of the wood-carver, Friedrich A. Ewertz, Sibbel developed a genius for ecclesiastical sculpture. He spent his leisure time in visiting the studio of the sculptor Ackerman, where he acquired the study of sculpture. In 1873 he emigrated to Cincinnati, Ohio. Here he joined several other artists from the same workshop, who had established an atelier for ecclesiastical sculpture, mostly in wood. When this enterprise failed, he tried his hand at secular sculpture with a certain success. When this ended, in 1877, he took a trip to Italy. In New York, where he established the studio from which issued his many works. Here the difficult task confronted him of competing with the mechanical manufacture of pseudo-art with which the churches were being filled, and which gave them a stereotyped and monotonous decoration. To emulate foreign ecclesiastical decoration was his aim. His first work in New York was a lectern, cast in bronze, for the Episcopal Steward Memorial Cathedral in Garden City, Long Island. Here the young artist broke loose from the ordinary form by placing religious groups in front of the stand. Before the altar, he designed an upright figure of the Saviour blessing a group at His feet. The sermon desk proper he adorned with a symmetrical group of three figures, typifying youth, maturity, and age, listening to the word of God from above.

It was not until 1882 the furnishing for the cathedral at Hartford, Connecticut, a series of alto-relievoe, prominent among which was an altar picture representing the Child Christ disputing with the Scribes in the temple, that the Catholic churches began to appreciate him. These and a series of Stations of the Cross were cast in imitation alabaster, and attracted great attention. Still more admirable was his colossal statue of Archbishop Feehan of Chicago. His works showed complete emancipation from the conventionality of the cloister-art of modern times. His best-known work is the heroic and delicately wrought statue of St. Patrick in St. Patrick's Cathedral, New York. There are to be added to his statues of St. Anselmo, St. Bernard of Clairvaux, St. Alphonson Liguori, and St. Bonaventure.

The two heroic panels, representing "Our Lady Comforter of the Afflicted" and "The Death of St. Joseph", erected in the Church of St. Francis Xavier at St. Louis, Missouri, in 1884, are of great importance. His latest work was the interior and exterior statuary decoration of St. Paul's Cathedral in Pittsburgh. Among these statues are represented the Apostles and Doctors of the Church, executed in Indian lime-stone. In the conception of each statue there is an expression of new idea. Most noteworthy is the marble statue representing Purgatory. Here the artist represents in two figures a very complex idea. Out of the flames of torture there rises a female figure, symbolical of a liberated soul casting off the veil of darkness and beholding the light of eternal reward. Below, there appears a still afflicted soul, represented by a wan male figure imploiting intercession. Characteristics of Sibbel's works is the pleasing tendency toward freedom from conventionality. They evidence originality of design, though still in accord with history and tradition. His statues are pervaded by a pleasing realistic spirit, which gives to the dull and lifeless marble a form that appeals to the heart and inspires devotion and prayer.

Armin Sibbel.

Siberia, a Russian possession in Asia forming the northern third of that continent; it extends from the Ural mountains to the Pacific Ocean and from the coast of the Arctic Ocean to about 50° north latitude. It has an area of 4,796,730 square miles and in 1897, 7,755,225 inh. In 1909, the population included: 4,659,423 Russians, 29,177 Poles, 5,424 Germans, 61,279 Finno-Ugrians (Mordvinians, Ostiaks, Syryrians, etc.), 476,139 Turko-Tatars (Tatars, Yakuts, Kasakkiarrhis), 288,559 Burias, 11,931 Samoyedese, 66,306 Tunguses, 197,170 Palso-Aziatics, 24,871 Japanese, 29,769 Tukchtkis, Ghilyaskys, etc., 41,112 Chinese, 25,963 Koreans. According to religion the population was estimated later thus: 5,201,250 Orthodox Greeks, 227,720 Raskolnikis, 52,530 Catholics, 13,370 Protestants, 30,550 Jews, 1,068,800 Mohammedans, 224,070 Buddhists, etc. In 1889 the census was begun with the object of ascertaining the actual population. In 1909 the population was estimated to number about 7,878,500 persons. For purposes of administration Siberia is divided into four governments and six departments.

The Siberian Catholics belong to the Archdiocese of Mohillef; according to the Mohillef year-book for 1910 they number almost 74,000. They are largely Poles or the descendants of Poles and Ruthenians who were banished to Siberia on account of their religion; this was especially the case when the Emperor Nicholas I sought in 1827-39 to convert the Uniat Ruthenians and Lithuanians by force to the Orthodox Church, and when thousands of Catholics and several hundred priests were deported to Siberia after the Polish revolt of 1863. Great difficulties are connected with the pastoral care of the Catholics on account of the small number or priests and the great extent of territory which the priests must traverse. Very often priests have to serve a real nomad life in order to be able to visit the members of their flock at least once a year. When a priest leaves his presbytery at Easter he often does not return from his pastoral tour until Easter of the next year. The priests often break down under the strain of their toil, although they receive relatively good support from the Government which grants them 800 roubles, 30 dessiatines (81 acres) of land, and refunds the expenses of their journeys. On account of the great distances a canonical visitation of the churches of Siberia by a Catholic bishop was not possible until in 1909, when Bishop Johannes Cieplog, coadjutor of Mohillef, traversed all Siberia and Saghalian. In addition to this canonical visitation interest in the Church among Catholics has been greatly quickened by the missions held by the Redemptorists in 1908, by permission of the Government, in all towns where there were Catholic communities; Catholics came to these services from great distances. An actual organization of the ecclesiastical administration for the Catholics of Siberia will only be possible when an independent diocese is established for Siberia with its see at Irkutsk or Nischni Tschelabinsk. This is what the Holy See desires to do, but the plan will probably not be carried out soon on account of the attitude of the Russian Government towards the Catholic Church. During the seventh decade of the last century the Catholics had the use of only five churches while now according to the
year-book for Mohileff of 1910 there are in Siberia, including Omak, that geographically belongs to Siberia but is assigned by the Russian government to Central Asia, 27 Catholic priests, 73,800 Catholics, 7 parishes with as many parish churches, 15 dependent communities, and 21 chapels. The parishes are: Irkutsk, Krasnoysk, Omak, Tchita, Tobolek, Talas, and Vladivostok.

History.—Siberia does not appear in the light of history until a late era. When and whence the original inhabitants migrated to their present homes cannot be definitely ascertained. While the peoples near the polar circle from the beginning until now have been largely migrating by the incursion of the herds of herdsmen who probably emigrated from Central Asia to Siberia, have gradually risen to a somewhat higher level of civilization. In such tribes, as the Yakuts, the memory of the migration from the south still exists. During the great migrations from Central Asia the tribes living on the plateau of Asia were generally drawn into the movement and became incorporated into the empires of nomads that arose in the course of centuries. The tribes in north-western Siberia also, that are grouped together as Ugrians, generally shared this fate. When in the thirteenth century the Mongols of Central Asia advanced as conquerors on the west and east the western tribes of western Siberia also. After the fall of the Mongolian empire these tribes belonged to the Mongolian Kingdom of Kiptchak that included besides western Siberia the lowlands of Eastern Russia and the steppes as far as the Sea of Aral and the Caspian. Western Europe came first into connexion with the Ugric tribes by the trade in skins which adventurous merchants of the Russian city of Novgorod carried on as early as the twelfth century with the tribes east of the Urals and on the borders of the Arctic Ocean. These commercial relations led to the establishment of permanent agencies in western Siberia by the merchants of Novgorod. These agencies were maintained during the domination of the Mongols, so that the connexion of western Siberia with the Ugrians was not interrupted even then.

At the fall of the Kingdom of Kiptchak, which Timur brought under his control, the leaders of the three principalities of the country of the Ugrians. The most powerful of these rulers was On, living at the beginning of the fifteenth century, who opposed the Novgorodians. His son Taibuga drove the Novgorodians entirely from the country and founded a small kingdom of which was the core of the Russian principality of Kaza, the Mongolian ruler of Kazan, this kingdom was obliged to pay tribute in 1465 to Russia, which had now made its appearance as a new power in eastern Europe. The Russian grand duke, Ivan III (1462-1506), who had conquered Novgorod in 1478, took up the old claims of this commercial city to the sovereignty of western Siberia. He invaded the territory on the lower course of the River Obi in 1499. The Tatar khan to transfer his capital from Tyumen to the Tobol River, where he built the city of Iaker or Sibir. In the middle of the sixteenth century (about 1563) a Uebeke called Köstum, or Kutchum, seized Sibir, took the title of Emperor of Siberia, and soon entered on a plan of conquest. He advanced across the Ural, devastating and plundering as he went, towards Perm, which was reached by 1567. The tsar of Russia, Sirotenko of Stroganoff had brought the entire Siberian trade under their control in order to play off one enemy against the other. Sirotenko took into his pay the Cossacks of the Volga, who had repeatedly made marauding expeditions towards Perm. A horde of about 7000 Cossacks under the command of the Hetman Yermak and in the pay of the Sirotenko family, undertook an expedition into Siberia. In 1589 Yermak carried Tyumen by storm, in 1581 he advanced to the mouth of the Tobol River, and in October of that year completely defeated Kutchum’s army on the Teubschenberg near the present city of Tobolsk. On 26 October Yermak entered the city of Sibir.

As Yermak received no further aid either from the Stroganoff family or from the Cossacks still living on the Volga, he turned to the Russian tsar, Ivan the Terrible, and did homage to him as the ruler of the new Siberian empire. Yet Russia gave him very little help, and after a time Sibir was lost. In 1584 Yermak was killed by his own men, but Ivan III had set for him. Soon, however, the knowledge that there in the east there was a wide field for conquest made headway in Russia. The Russians perceived, moreover, that this country gave an opportunity to employ usefully the restless Cossacks, and the conquests in Siberia were resumed. In 1588 Sibir was taken again and in 1589 Kutuch Khan who had ruled in the south was driven to the northern slope of Asia. In order to give permanence to the conquest of the new territory large numbers of Cossacks and soldiers of the body-guard were constantly dispatched to Siberia; these advanced along the large rivers towards the west and southeast, penetrating ever deeper into the proper of the Russian supremacy. The Government soon began also to establish Russian peasants in these regions. As early as 1590 nearly thirty peasant families were aided to migrate to Siberia; in 1592 the first exiles were deported from Uglich to Siberia. Slowly but steadily the Russians pushed towards the east. In 1632 Yakutsk on the Lena was founded; in 1643 the first Cossacks advanced to the upper Amur and descended along it to the Sea of Okhotsk. In 1644 the fortress Nishne-Kolymsk was built where the Kolyma flows into the Arctic Ocean. In 1652 Irkutsk was founded at the confluence of the Selenga and Lena, brought under Russian supremacy. The aboriginal tribes with which the Russians came into contact frequently fought them courageously, opposing especially the exactment of the tribute in pelts, but their small numbers and the European arms of the Cossacks lead to their defeat. Along with their care for the extension and security of the Russian dominion the Russians combined care for the economic development of the newly-won regions. Whole caravans of country people and women intended for the Cossacks were sent to Siberia at government expense to promote agriculture and to accustom the Cossacks to a settled mode of life; this was at the same time a means of securing payment of taxes. The migration of peasants to Siberia was encouraged by releasing those who went from the yoke of serfdom. Consequently at the beginning of the eighteenth century, there were already 250,000 Russians in Siberia. In 1621 the Siberian exarchate was established for the religious and moral needs of the settlers and for missionary work among the natives.

The Russians came into contact with the Chinese for the first time in the districts along the Amur River. Although in 1689 the Russians were forced to restore their conquests on the upper Amur to the Chinese, the relations between the two powers were, in general, friendly. In 1728-9 the two countries made the first settlement of their boundaries. To protect the southern border against the incursions of the Kirghises and Kalmyks the Russians founded many permanent towns, forts, and fortresses, such as Semipalatinsk, and other places. Thenceforward the disturbances on the border gradually ceased and the order thus established permitted the Russian Government to take up the scientific exploration of the enormous region, the greater part of which was totally unknown. The most important of these scientific expeditions was the journey of the Danish captain Vitus
Bering during the years 1733–43, in which distinguished scholars from all parts of Europe took part. Bering himself proved the connexion of the Pacific and Arctic Oceans by Bering Strait; as early as 1648 the Cossack Dejneff had discovered this strait and had announced his discovery, but the fact had been forgotten. The economic development of the country was aided by the discovery in 1722 of the Eastern mineral lodes under the Ural mountains. From 1754 the Russian Government began the systematic exiling of convicts and prisoners of war to Siberia, where they were partly settled on the land and partly employed in the mines. The colonizing of free peasants was also taken up again systematically. Consequently by the end of the eighteenth century the Russian population of Siberia was about 1,500,000 persons.

In the second and third decades of the nineteenth century the Russian supremacy over the nomadic Kircin tribes living on the south-western steppes was strengthened, and important settlements were established (1824 Kokhtchta, 1829 Akmolinsk). The discovery in 1849 of the estuary of the Amur River by a Russian ship led to a renewed strengthening of the Russian settlements along the Amur; this impulse was powerfully aided by the desire to have a large stretch of coast along an ocean. In 1849 the Russian flag was hoisted at the mouth of the river; in 1851 a bay near the coast of Korea was occupied, and here later Vladivostok was built, in 1854 a fleet under Count Nikolai Muraviev Amurski was sent from the upper Amur to its mouth and the post of Nikolaiavsk was more strongly fortified. The Chinese Government indeed made a complaint, but as it could not venture to go to war it acknowledged, in the Treaty of Pekin, 2 November, 1860, Russia's right to the Amur and the entire basin of the Ussuri River, together with all the coast down to Korea. As by the founding of Vladivostok a port nearly far from ice was secured, Russian commerce in this quarter could continue for some time. In the interior of Siberia there was a great increase of the colonizing movement in the nineteenth century; from the thirties especially there was a great number of exiles. Numerous Decembrists, Lithuanians, and Ruthenians, who had opposed the forcible union with the Orthodox Church, and the Jews who had joined in the revolt, were banished to Siberia. The importance of exile as a factor in colonizing was lessened by the fact that the exiles were not permitted to settle on independent estates but were obliged to live in small towns already established. Moreover a large part of the exiles amassed in mind and body by their previous terrible sufferings in the Russian prisons and by the long and severe transportation to Siberia. Consequently it was of much more importance for the development of the country that a constantly increasing stream of free peasants migrated from the most widely differing parts of Russia to Siberia, especially after the suppression of serfdom in Russia in 1861. This migration has continued in diminished numbers up to the present time; it has been greatly encouraged by the law of 1889 by which every Russian emigrant who has received the permission of the Government to go is granted 15 dunhines (40½ acres) of farming land as his own property, besides three years without taxes and nine years release from military duty.

While the European population has rapidly increased, the native population has constantly declined. Among the causes for this decline, outside of the small natural increase of the aborigines, are such diseases as typhus and tuberculosis, introduced by Europeans, the injury done by brandy, the decline of the chase, and the steady advance of the Russian peasant. The construction of the great Siberian railway, which was begun in 1891 and completed in 1904, has opened immense possibilities for the economic development of the country and has enabled Siberia to overcome quickly the injuries caused by the defeat of Russia in the war against Japan during the years 1904–5. The intellectual life of Siberia has also been gradually raised, a result brought about partly by the large number of educated exiles. A further aid has been the establishment of a university at Tomsk in 1888, of a high-school for Eastern Siberia at Vladivostok in 1899, of a polytechnic in 1900, and a high-school for women in 1907, both the last named institutions being at Tomsk. The very decided limitation of the exile of convicts which will soon be followed by the revocation of the law of exile, will contribute greatly to the elevation of the moral level of the population of Siberia.

JOSEPH LINS.

SIBOUR, MARIE-DOMINIQUE-AUGUSTE, b. at Saint-Paul-Trois-Châteaux (Drôme, France), 4 August, 1702; d. in Paris, 3 January, 1857. After his ordination to the priesthood at Rome in 1818, he was assigned to the Archdiocese of Paris. He was named canon of the cathedral of Nîmes in 1823, became favourably known as a preacher, and contributed to "L'Avenir". In 1837, during a vacancy, he was chosen administrator of the Diocese of Nîmes, and two years later was raised to the episcopal See of Digne. His administration was marked by his encouragement of ecclesiastical studies, a practical desire to increase the importance of the functions exercised by his cathedral chapter, and a faithful observance of canonical forms in ecclesiastical trials. The same principles acteduate him in his rule of the Archdiocese of Paris, to which he was called largely because of his prompt adhesion to the new government after the Revolution of 1848. He held in 1849 a provincial council in Paris, and in 1850 a diocesan synod. In 1853 he officiated at the marriage of Napoleon III, who had named him senator the previous year. Although in his answer to Pius IX he declared the definition of the Immaculate Conception an imprudence, he was present at the promulgation of the Decree and shortly afterwards solemnly published it in his own diocese. The benevolent co-operation of the imperial government enabled him to provide for the needs of the poor churches in his diocese and to organize several new parishes. He also aimed at introducing the Roman Rite in Paris and was pro-
growing favorably in this direction when he was killed by an interdicted priest named Verger.

N. A. WEBER.

Sibylline Oracles is the name given to certain collections of supposed prophecies, emanating from the sibyls or divinely inspired seers, which were widely circulated in antiquity. The derivation and meaning of the name Sibyl are still subjects of controversy among antiquarians. While the earlier writers (Euripides, Aristophanes, Plato) refer invariably to "the Sibyl," later authorities speak of the different places where they were said to dwell. Thus Varro, quoted by Lactantius (Div. Instit., I, vi) enumerates ten sibyls: the Persian, the Libyan, the Delphian, the Cimmerian, the Erythrean, the Samarian, the Cumaean, and those of the Hellespont, of Thrysis, and of Tibur. The Sibyls most highly venerated in Rome were those of Cume and Erythrea. In pagan times the oracles and predictions ascribed to the sibyls were carefully collected and jealously guarded in the temple of Jupiter Capitolinus, and were consulted only in times of grave crises. Because of the vogue enjoyed by the sibyls and Oracles and because they had in shaping the religious views of the period, the Hellenistic Jews in Alexandria, during the second century a. c. composed verses in the same form, attributing them to the sibyls, and circulated them among the pagans as a means of diffusing Judaistic doctrines and teaching. This custom was continued down to Christian times, and was borrowed by some Christians so that in the second or third century, a new class of oracles emanating from Christian sources came into being. Hence the Sibylline Oracles can be classed as Pagan, Jewish, or Christian. In many cases, however, the Christians merely revised or interpolated the documents of the Sibyls, and it is only fair to the early Christian authors, most of whom were not students of the sibyls, that they should not be held responsible for the genuine elements of the books. Some of the books are of great historical interest. For instance, the one under the name of Iechothous is the earliest reliquary hymn, but this contention has no evidence in its favour. It dates most probably from the third century. The books are usually numbered, and the number of the books is usually the same as the number of the chapters, except for the last one, which is a separate book.

Patrick J. Healy.

Sicard, Bishop of Cremona (Italy) in the twelfth century, a member of one of the principal families of that city, d. 1215. After having pursued his studies in different cities, he was made subdeacon by Lucius III in 1182, after which he returned to his native city, and was ordained priest by Offredus, Bishop of Cremona. He was made Bishop of Cremona in 1185. During his lifetime he was entrusted with many important missions by the Holy See, and enjoyed the confidence of the Emperor Frederick I. He was famed as an historian, canonist, and liturgiologist. His "Chronicon" containing a summary account of the history of the world down to 1185, is valuable because of the light it throws on the Crusade.
SICHEM

Sicca Veneria, a titular see in Africa Proconsularis, suffragan of Carthage. Sicca was an ancient important city of Numidia, very probably of Phoenician origin, on the Bagradas, on the road from Carthage to Hippo Regius and from Musti to Cirta. It got its name from a celebrated temple of Venus. It was to Sicca, after the first Punic War, that the Carthaginians sent the mercenaries whose discontent they feared. Included later in the proconsulate it received from Augustus the title of colony. It had moreover been colonized by the Sittians of Cirta, whose name Colonia Cirta Nova and Colonia Julia Veneria Cirta Nova Iulia, it is sometimes even called simply Cirta. Around the temple of Serapis was a vast temple of Serapis dedicated to Serapis and Serapis-BPCR. Six of its bishops are known: Castus, at the Council of Carthage, 255; Patritius in 349; Fortunianus mentioned in 407, present in 411 at a conference of Carthage and spoke by of St. Augustine, "Retractiones" XLI; Urbanus in 418, mentioned in 430 by St. Augustine, "Epistula" 139; Paul in 460; Zosimus in 464. The town commanding the principal natural roads leading from Algeria to Tunisia preserves a great strategic importance till the French occupation; the Arabs called it Shikka Benar, or Shab Benar, but it is better known as Le Ksour. It is the chief town of the eastern "El-Kous, of which the narthex is at present used as a chouf, and several inscriptions left in the Basilica 107 3/4 feet by 52 feet ending in an aper; the flooring was in mosaics; the baptistery of Dar el-Djur; a monastery below Ain Hadjema; and especially the Basilica of St. Peter of Dar el-Kous, of which the narthex is at present used as a church. Many of its inscriptions are Christian; the most curious ruins are however those of the Basilica 1381 feet, for 54 3/4 feet, the naves are roofless, but the aper is intact.

SICHEM

Sichem (A. V. Shechem), an Israelite city in the tribe of Ephraim, the first capital of the Kingdom of Israel. Its position is clearly indicated in the Bible: it lay north of Bethel and Silo, on the high road going from the northern boundary of the Philistines, and the city lay between Mt. Ebal and Mt. Gerizim, as by the Medeba map, which places Zarka also called Zerza between the Tour Gerizim (Ebal) and the Tour Gerizim (Garizim). We may therefore admit unhesitatingly that Sichem stood on (St. Jerome, St. Ephraemaeus), or very close to (Eusebius, "Onomast."

The city of Sichem, the name of which (Heb. shkem—shoulder, saddle) appears to have been sug-

Of Frederick I. He also composed an important work on the liturgy, "Mitrale, seu de officii ecclesiasticis summa," in nine books; and a "Summa Canonum," or handbook of canon law, based on the so-called "Decretum Gelosianum" of Nicholas II.

S. Petri DEubos.

Sichem is situated on the slope of Mount Gerizim, opposite the city of Nablus, the Neapolis, or Flavia Neapolis of early Christian ages.

That the city of Sichem, the name of which (Heb. shkem—shoulder, saddle) appears to have been sug-

gusted by the configuration of the place, existed in the time of Abraham is doubted by a few who think it also refers to in Gen., xvi, 6, by application; but there can be no question touching its existence in Jacob's time (Gen., xxxvi, 18, 19); in the time of the Israelites, mentioned in the El-Amarna letters (letter 289), and is probably the Seatama of the old Egyptian traveller Mohar (fourteenth century b. c.; Müller, "Asien u. Europa," p. 394, Leipsig, 1893). Owing to its central position, no less than to the presence in the neighbourhood of places hallowed by the memory of Abraham (Gen., xii, 6; xxxiii, 18, 19; Gen. xxxiv, 5; xxv, 18-19; xxvi, 2, etc.), and Joseph (Jos., xxxiv, 32), the city was destined to play an important part in the history of Israel. There it was that, after Gedeon's death, Abimelech, his son by a Schemite concubine, was made king (Judges, ix, 1-6), but the city having, three years later, risen in rebellion, Abimelech took it, utterly destroyed it, and burnt the temple of Bealberith where the people had fled for safety. When and by whom the city was rebuilt is not known; at any rate, Sichem was the place appointed, after Solomon's death, for the meeting of the people of Israel and the distribution of the twelve tribes. During the time of the ten northern tribes, and Sichem, fortified by Jeroboam, became for a while the capital of the new kingdom (I Kings, xii, 1; xiv, 17; II Par., x. 1). When the kings of Israel moved first to Theresia, and later on to Samaria, Sichem lost its importance as a capital, but was not deserted. In the war of Jerusalem (587 b. c.; Jer., xii, 5). The events connected with the restoration were to bring it again into prominence. When, on his second visit to Jerusalem, Nehemiah expelled the grandson of the high priest Eliejahub (probably the Manasse of Josephus, "Antiq," XI, vi, vii), he refused to separate from his wife Sanballat's daughter, and live with the many Jews, priests and laymen, who sided with the rebel, these betook themselves to Sichem; a schismatic temple was then erected on Mount Garizim and thus Sichem became the "holy city" of the Samaritans. The latter, who were left unmolested while the orthodox Jews were chafing under the heavy hand of Antiochus IV (Antiq., XII, v, 5) and welcomed with open arms every renegade who came to them from Jerusalem (Antiq., XI, viii, 7), fell about 128 b. c. before John Hyrcanus, and their temple was destroyed ("Antiq.," XII, ix, 1).

From that time on, Sichem was in the fate of the other cities of Samaria: with them it was annexed, at the time of the deposition of Archelaus, in A. D. 6, to the Roman Province of Syria. Some, no doubt, of its inhabitants (whether Sichem of John, iv, 5, is the same as Sichem or a place near the latter we shall leave here undecided) were of the number of the "Samaritans" who believed in Jesus when He tarried two days in the neighbourhood (John, iv), and the city must have been visited by the Apostles on their way from Samaria to Jerusalem (Acts, vii, 25). Of the Samaritans of Sichem not a few rose up in arms against Mt. Garizim at the time of the Garizim, after the death of Antiochus (A. D. 67); the city was very likely destroyed on that occasion by Cerealis ("Bell. Jud.", III, vii, 32), and a few years after a new city, Flavia Neapolis, was built by Vespasian a short distance to the west of the old one, some fifty years later Hadrian restored the temple on Mt. Garizim, and dedicated it to Jupiter (Pion Cass., xy, 12). Neapolis, like Sichem, had very early a Christian community and had the honour to give to the Church her first apostle, St. Justin Martyr; we hear even of bishops of Neapolis (Labbe, "Conc." I, 1475, 1489; II, 325). On several occasions the Christians were permitted to hold mass in Sichem, and in 474 the emperor, to avenge an unjust attack of the sect, deprived the latter of Mt. Garizim and gave it to the Christians who built on it a church dedicated to the Blessed Virgin (Procop., "De
SICILY

Sicily, the largest island in the Mediterranean; it is triangular in shape and was on that account called Trinacria by the ancients; it is separated from the mainland by the Strait of Messina, rather less than two miles wide. Its area, including the adjacent islands, is 9,935 square miles. The northern chain of mountains, running from Cape Peloro (Messina) to Lilibeo (Gela), is 106 miles long; the adjacent islands are the Sicilian Appenines. The most elevated peaks are the Pizzo dell'Antenna (6,278 feet), near the middle of the range, and Monte St. Salvatore (6,265 feet); the remainder of the island is an undulating inclined plain sloping to the Ionian and Mediterranean Seas. Not far from the eastern coast rises the extinct volcano Etna, still active, 10,865 feet high, formed by successive eruptions and having a circumference of 87 miles at its base; it is covered with perpetual snow; on its slopes there are rich pastures, vineyards, gardens, arable lands, and forests; and vegetation flourishes up to an altitude of about 8,200 feet. The chief Sicilian rivers are the Giaretta falling into the sea near Catania; the Anapo, flowing for a short distance underground and emptying into the sea near Syracuse; the Salso; and the Platani. The two principal lakes are those of Lentini and Pergusa; on the southern coast there are very many lagoons and unhealthy marshes. Among the adjacent islands are the Lipari group (Zolian Islands) and Ustica in the Tyrrenian sea; the Egadi (Favignana, Marittimo, Levanzo) and the Formiche (Anta) near the western extremity; Pantelleria (the ancient Corcyra) between Malta and Tunisia. The northern and eastern coasts are generally sandy and the adjacent islands are shallows and have many sandbanks (Pesci, Porcelli, Stato, Madrepore). Considering the size of the island, it has many good harbours: Messina is the most important for commerce; Empedole, the sulphur-exporting centre; Palermo, for oranges and lemons; Trapani, wines. Besides these there are Syracuse, Augusta, Catania, Milazzo, Licata, and Lipari. The climate is temperate, the mean summer maximum being 93.2° Fahrenheit; but Sicily suffers considerably from the sirocco.

The wealth of the country is chiefly dependent on agriculture, maritime trade, and mining, especially sulphur. Though in antiquity Sicily was the granary of Rome, the production of grain (22,275,000 bushels) is not sufficient for the home consumption, a fact to be explained either by the increase of population, or by the system of large estates, or by the primitive methods employed. The vintage amounts to about 6,535,000 bushels. There is a large export of fruits, including oranges and lemons, and of carob beans. Sicily produces three-quarters of the world's sulphur; in 1905 it amounted to 3,949,864 tons, of which 1,629,344 came from Caltanissetta, and 1,039,005 from Girgenti. Among the other mineral products are: antimony from Melpignano, from Mazzarino, and asphalt from Syracuse (105,217 tons); rock-salt (12,730 tons). Fishing, especially tunny-fishing, is very profitable; but the sponge trade is decreasing (1900 tons in 1899, but only 172 in 1909).

At the census of 1901 the population was 3,558,124, or 350 persons to the square mile; allowing for a natural increase of 1.5 per cent. the inhabited area contains 4,200,000 inhabitants at present (1912). The percentages of illiterates are 70.9, under 21 years of age, and 73.2, over 21 years, so that Sicily is more backward than Sardinia, Abruzzo, and the Apulia. However, this is not due to a great lack of schools, as there are 4,156 elementary public, 953 private, and 310 evening schools; and of institutions for the poor: 44 royal gymnasia (2 pauperi, 27 non pauperi); 14 royal lyceums (2 pauperi, 8 non pauperi); 34 technical schools besides 6 non pauperi; 7 technical institutes; 3 universities (Palermo, Messina, Catania); and 1 conservatory of music (Palermo). Sicily is divided into six civil provinces, with 186 mandamenti, and 357 communes. It has 5 archbishops and 12 bishops: Catania, without any suffragans; Monreale, with Caltanissetta and Girgenti; Palermo, with Cefalu, Mazara, and Trapani; Syracuse, with Castiglione, Notto, Piazza Armerina. The Bishop of Acireale and the Prelate of S. Lucia del Mela are immediately subject to the Archbishop of Palermo. The parishes in Sicily are few in number and consequently very large. While in the Marches and Umbria the average number of persons in a parish is 600, in the Sicilian dioceses it is 7000 (9000 in Syracuse and 8000 in Palermo).

Harbour—According to the ancient writers, the first inhabitants of Sicily were the Sicani; later there came from the Italian peninsula the Siculi, who, however, do not seem to have been of the same race or to have had any national unity. The island was greatly frequented by Phenician merchants, as it lay in their way towards Africa and Spain, and was besides a centre of their trade. The presence of these traders is attested by Phenician inscriptions and coins as well as by articles of Phenician trade. The names, too, of the chief towns on the coast are of Phenician origin. With their trade they introduced the worship of Melkart (Heracles) and Astarte, especially at Mount Eryx (Monte S. Giuliano). While the Phenicians who came to the main island continued as foreigners, the smaller adjacent islands—Lipari, Egadi, Malta, Cosura—became thoroughly Phenician in population. The Greeks had established themselves at some of the ports as early as the time of the Trojan War. The Greek deep; this soil is well watered; when the Athenian Theocles was driven thither by a tempest. He induced the Chalcidians of Eubea to settle at Naxos and the Dorians to found a new Megara. Next year the Corinthians expelled the Siculi from the island of Ortygia, thus establishing the cradle of the city of Syracuse. In five years three colonies of Leonitini, Catana, Thapsos, Megara, and Hyblona all sprang up on the east coast of the island, and then the immigration into Sicily seems to have ceased for forty years. In 600 B.C. the Rhodians and Cretans founded Gela, on the river of that name (now the Terranova), and from Gela Agrigentum (Girgenti) was founded in 582, both on the south-west coast. At the point nearest to the peninsula the Cumani pirates had founded Zancle in the eighth century, and that settlement had received the name of Messana in 729 from Anaxilas, the tyrant of Reggio. Himera, on the north coast, was a colony of Zancle i.e. the Syracusans founded Agrigentum (664), Catana (644), Camarina (599). Selinus arose in 639, Lipara in 589. This active Greek colonization drove the Phenicians more and more towards the west of the island; Motye Solveis (Salunto) and Panormus (Palermo) remained the principal centres of their commerce. The Carthaginians then took possession of Siracusa (613) and 70 years later, using political power over the island, if the Phenician and Punic trade was not to be destroyed by the Greeks. They rejoiced at the disunion among the Greeks, who—particularly the Dorians and Ionians—had brought to the
island their mutual hatreds and jealousies. Moreover, in the principal cities—such as Girgenti, Messina, Catania, and Syracuse, the democratic and aristocratic governments had given way to the rule of tyrants, which resulted in frequent conspiracies, revolutions, and temporary alliances. During the sixth century B.C. it was chiefly Acraga, under the government of Phalaris (570-555), that upheld the prestige of Greece against Carthage. In 480 B.C., Hamilcar, invited by Terillus, tyrant of Himera, who had been overthrown by Theron, came with an immense army to restore Terillus, and later to subjugate the whole island. But Gelon, tyrant of Syracuse, having been called on for aid, inflicted a great defeat on Hamilcar. That victory—which was not the first gained by Gelon over the Carthaginians—assured to Syracuse the hegemony of the Greek cities of the island. Gelon's stirrings by the threats of the Syracusans, the Carthaginians again sought to subdue the whole island. In 406 came the turn of Acraga, the richest city in the island; the year following Gela and Camarina fell into the hands of the Carthaginians. In that year, however, Dionysius, having become master of Syracuse, made peace with the Carthaginians, and so stopped their victorious march. To prepare for renewed war with them, he strengthened and extended his power by taking Catania, Enna, Naxos, and Leontini. In 397 he expelled the Carthaginians from Motye. Himilco, the Carthaginian general, then attacked Syracuse, which seemed to prefer the gentle sway of the Carthaginians to that of its tyrant. But the stubbornness of the Spartan Pharaohidas and a pestilence gained Dionysius a victory (306) and supremacy over the Greek portion of the island. An attack on

brother Hiero being master of Gela and married to the daughter of Theon, tyrant of Acraga. Hiero succeeded him and defeated the Etruscans, enemies of the Cumans (474). The inhabitants of Catania and Naxos had to migrate to Leontini, and a Doric colony was established at Catania. But soon after Hiero's death (471) his brother Thrasybulus was expelled; democracy triumphed at Syracuse and the other Greek cities, and Greek unity was at an end. Dercitus, one of the chiefs of the Siculi, who were still masters of the interior, then conceived the hope of uniting his race and expelling all the foreigners from Sicily. He succeeded in taking Catania (451) and defeated the Syracusans who had come to the aid of Montyon; but in 452 he met with a reverse at Norme, and his army disbanded. The Siculi made no further efforts. The old rivalries broke out among the Greeks, and Athens intervened at the request of Leontini (427). For a moment the Sicilian Greeks recognized the danger of such intervention. At the Congress of Gela (424) a confederation of the Sicilian cities was formed for defence against all foreign powers. This alliance did not last long. The dispute between Selinus and Eggesta (416), and the aid given by Syracuse to the former, led to the war between Athens and Syracuse, in which the latter appealed to Sparta for help. The Syracusans were victorious on sea, and the Spartans on land (413). Eggesta then called upon the Carthaginians, and Hamilcar, the nephew of Hamilcar, destroyed Selinus and, a little later, Himera (409). Encouraged by these successes and

Messina by the Carthaginian Mago was repulsed (393). A peace having been concluded, which assured each side its own territory, Dionysius thought of conquering Italy. Two other wars (383, defeat of Cronium; 368, capture of Selinunte and Entella) gave him the advantage to his party. When Timoleon defeated Dionysius II (343), the petty tyrants of the various cities again appealed for help to the Carthaginians, who were again defeated at Eggesis (342). When Agathocles, the new tyrant of Syracuse, aspired to the supremacy of the island he had to fight the Carthaginians (312-306). Finally, however, the latter succeeded, by the treaty of peace, in securing their own possessions and the independence of the other Greek cities in the island,—preventing the union of the Greeks, among whom new tyrants arose, all fighting with one another. This led to the intervention of the Carthaginians, on the one hand, and on the other of Pyrrhus, King of Epirus, then at war with Rome (281-75). Pyrrhus caused the siege of Syracuse to be raised, stormed Eryx and Panormus, and cleared the enemy out of the whole island, with the exception of Lilybaeum. But when he began to appoint governors in Sicily, the Sicilians had recourse again to the Carthaginians and Pyrrhus returned to Italy (279). Meanwhile a military republic of Campanian mercenaries had been formed in Messina, and conquered almost the entire northern coast. Hiero II of Syracuse attacked these (269). Then some of the Mamertines, an Italic people, appealed for aid to
Rome, while others called upon Carthage. Both an-
swered the appeal, but wished to act alone. In 264
Appius Claudius landed an army and defeated the
Carthaginian and Syracusan forces which had set
up a new republic (263). Sixty-seven cities yielded to
the Romans; and even Hiero became their tributary
(263). In 262 Girgenti, then the centre of the Car-
thaginian military power in the island, was captured.
The victories of Myliss (268) and Panormus (254), and
the capture of the Egadi (241), secured to Rome the
possessions of the island, but the cities which volun-
tarily surrendered remained federated.
In the Second Punic War, Syracuse was allied with
Hannibal, but was retained by Marcellus (212). Sicily
became a Roman province and acquired great im-
portance as the granary of Rome. It was divided into
two parts, with the Doric and the Greek elements.
The latinity of the island continued, though the Greek
element never entirely disappeared, so that in the
Byzantine epoch the hellenization of Sicily progressed
easily. In proportion as the political greatness of
the Greek cities in the island increased, their artistic and
literary fame diminished. The greed and cupidity of the
Greek colonists of other Roman colonies (especially
the Aeolian) impoverished private individuals as well as
the temples. The land fell into the hands of a few
great landholders, who cultivated the rich soil by the
labour of immense bands of slaves. These slaves re-
belled in 135, proclaiming Eunus, one of their num-
bers, and thus defeated the Roman army on several
occasions, but in 133 he was vanquished by Rufius
Licinius Messa; the war ended with the capture of Tauro-
menium and Enna (132), and about 20,000 of the un-
fortunate slaves were crucified. A second furious re-
volt occurred between 103 and 100 under "King
Trypho" and the leadership of Athenio. During the
last triumvirate Sicily was the scene of a war between
the triumvirs and Sextus Pompey, who, victorious at
first, was finally defeated by Agrrippa in the naval fight
at Myliss (36 B.C.).
Another rebellion of the slaves took place under
Valerian, and in A.D. 278 the island was devastated by
a Frankish horde. From 440 on the Vandals re-
petently devastated the island, but they never ob-
tained complete control of it. In 476 they abandoned
it to Odoacer in return for an annual tribute, retaining,
however, the region about Lilybeum (Marsala). Theodoric recaptured Lilybeum and ceased paying tribute after the beginning of his reign; the Vandals
overran Sicily was seized by Belisarius for the Byzantines;
Totila regained it (550), but not for long. Mean-
while Christianity had been established in the island.
A few cities boasted of having been evangelised by St.
Peter and St. Paul or by the immediate disciples of
the Apostles (Catania, Messina, Palermo, Girgenti,
Taormina). St. Paul stayed three days at Syracuse,
without St. Luke's making any mention of his visiting
the brethren, as he does at Puteoli. That St. Paul
preached in Sicily, is recorded by St. Chrysostom.
The "Praedestinatus" mentions bishops of Palermo and
Lilybeum in the first quarter of the 5th century, but
paganism in the latter part of that century was flourish-
ing in the island. Pan-
teneus, the teacher of St. Clement of Alexandria and
director of the famous Alexandrian school was a Stel-
lian; Clement himself, in the voyages he made to in-
crease his knowledge of Christianity, visited Sicily.
Percy Paul in his letters of St. Cyril we learn that the
Church in Sicily was in frequent relations with the
Church in Rome and in Carthage, and that the ques-
tions discussed at those centres were followed with
interest in the island. Through the efforts of Hera-
cleion, the Gnostics made some progress there. Some
Christian communities are said to have existed at St.
Euplus and Syracuse (St. Lucy, St. Marcianus).
Christian cemeteries have been discovered at Ca-
tania, Girgenti (2), Lentini, Marsala, Massara, Messa-
sina, Palermo (5), Ragusa, Selinunte, Syracuse, and
its environs (Valley of the Molinello, Canicatti, the
Valleys of Priolo, Pantalica, St. Alano, etc.). Chris-
tian inscriptions, excepting those at Syracuse, are
scarcely in Latin. In the 5th century all the bishops of
Syracuse were immediately subject to the Bishop of
Rome, by whom ordination was conferred, and to whom a visit was to be made every five years at
least. For the election of bishops, at least in the
sixth century, the pope was accustomed to appoint a
pope of a city with the administration dur-
ing the vacancy, and presided at the election, which
was afterwards confirmed by the pope, when the
bishops-elect presented himself for ordination. At
the commencement of the Saracen invasion there were
the following sees: Syracuse, Palermo, Cefalù, Lily-
beum, Dрисапса, Lipari, and Lilybeum, Taormina, Catani,
Lentini, Therme (Sciacca), Al-
ese, Cronion, Camarina, Tindari (Patti), Malta.
Till after the time of St. Gregory, and probably down
to the eighth century, the Roman Rite was observed
in the island, and the liturgical language was Latin.
In the dogmatic controversies, the Sicilian bishops
were always on the side of the fathers (One Thomas
ofstand); except that in the fifth century Pelagianism (through
the personal efforts of Pelagius and Celestius) and
Arianism (one Maximinus their chief was aided by
the Vandals) obtained a foothold. Ecclesiastical
affairs were thrown into disorder by the Vandal incursions,
being administered by the king, who was not obliged to take.
St. Leo the Great introduced into Sicily the obligation of celibacy even for subdeacons.
Sicily was of great importance from the point of
view of the Roman Church on account of the great
amount of ecclesiastical property there, which was
divided into two patrimonies (Palermidium and Syra-
cusanum). Each patrimonium had a rector, with in-
ferior officers, defensores, notari, actionari, etc. The
rector was generally a subdeacon of the Church of
Rome, and was empowered to intervene in the eccle-
siastical questions of the various dioceses. The
Churches of Milan and of Melitene in Armenia also
had property in the island. Monasteries was first
introduced into Sicily by St. Hilariun. It was
greatly increased by the large number of bishops or
monks who were expelled from Africa or forced to
emigrate to escape the Vandal persecution. St. Ben-
idict sent a colony of his monks to Messina, under
Fulgentius. Place was given to the use of the pagan
(pagian or Slavicie) pirates. St. Gregory the Great
personally founded six monasteries, among
them that of St. Hermes in Palermo. The number of
monks was increased by the bands of pirates that flocked
from Palestine, Syria, and Egypt, when Islamism began its
triumphant march, and the Monothelites drove them from the Orient. Thus a strong
hearrizing element, which was certainly encouraged by
the Byzantine Government, settled in the island:
Greek replaced Latin in the liturgy in many of the
Churches. Leo the Isaurian (718-41) afterwards de-
clared Sicily and Southern Italy and Sardinia out of
the jurisdiction of Rome, but it is to be noted that
100 years later, Nicholas I protested against
this abuse. In the ninth century Syracuse was raised by
the Patriarch of Constantinople to the rank of met-
ropolis of Sicily and the adjacent islands.
Concerning the state of the Sicilian Church during
the Saracen domination we have no information:
not the name of a single bishop is known. In the
eleventh century the hierarchy seems to have been
extinct, so that Cardinal Humbertus (later of Silva
Candida) was appointed by Leo IX as Bishop of
Sicily, though he could not enter the island. The
donation attempt at Caltanissetta (St. Lucy, St. Musa-
ian) was in 689, after the assassination of the Emperor Constans II at Sy-
racuse. The Arabs subsequently made several de-
seants and raids on the island, but occupied it only
SICILY
when the Sicilians were weary of the Byzantine misgovernment. About 520 the patries Epiphanius, governor of Sicily, rebelled against the Empress Irene; but he was treated as a robber, and his brother was put to death. The Byzantines made a gallant effort to repel an enemy so much superior to themselves. Messina was taken in 831, Palermo in 832, Syracuse was reduced by famine only in 878, Taormina fell in 902, and it was not until 941, after a struggle of one hundred and fourteen years, that the Arabs completed the conquest of the island.

The Arab domination was a benefit to Sicily from the point of view of material prosperity. To a certain extent liberty was enjoyed by the Christian population. Only those found in arms were reduced to servitude. There were four classes of citizens: freeholders, freedmen, freedmen of a new rank, and non-freeholders. The land was divided into three departments, each under a governor: Val Demone in the north-east; Val Mazara in the north-west; Val di Noto in the south; a division that was maintained later by the Normans. In a census taken at this time there were in the island 1,590,665 Musulmans, 1,217,033 Christians, making a total of 2,807,698 inhabitants. The Byzantines were naturally desirous of reconquering the island, but the emperors of the West coveted it. Otho II had been negotiating with Venice about seizing it; Henry II, in the Treaty of Bamberg (1020), promised it to the popes. But it was the Normans who obtained it. Discord broke out in the Kebbidi family; probably resulting in the petty captain aspired to independence. Encouraged by these conditions, the Emperor Michael IV sent the catapan Leo Opus (1037) with a fleet, which, after varying fortunes, was forced to retire.

In the following year he sent George Maniakis with an army which contained some Normans who had chanced to be at Calabria. Messina and Syracuse were taken, and the Arabs badly defeated near Troina. But Maniakis offended the Normans; they returned to the peninsula, and then began their conquests there. The victories of Maniakis continued until 1040, but their fruits were short, as he was not very strong. Meanwhile the Normans had formed a state on the peninsula. Roger, brother of Robert Guiscard, crossed the Strait in 1060. In the following year, Bucemun, a Saracen noble, asked him for assistance. With this aid, the whole Val Demone was conquered within the year. If progress was not more rapid, it was because Roger had been recalled to Italy. We may mention the siege of Troina (1062), the battle of Cerami (1063), of Misilmeri (1068), the capture of Palermo (1072), which had been attempted previously by the Pisans (1063), the defeat of the Saracens in the Battle of Salapie (1080), Siracusa (1087), and Nota (1091). In thirty years the Normans had conquered the whole island. To ensure their conquest they had to grant religious liberty to the Mohammedans, whose emigration in a body would have been a great blow to the country. Sicily became subject to Roger, who assumed the title of "Great Count"; Robert Guiscard, who had aided him in the conquest, reserved certain rights to himself. Palermo continued to be the capital of the kingdom that followed the coming of the Arabs continued under the Normans, and later under the Swabians. Roger was succeeded by his son, Roger II, who in 1127 on the death of William II, became master of all the Norman territory and obtained from the antipope Anacletus II (1130) the title of King of Sicily, which title was to be the title of the Normans. The government of the island was almost always different from that of the other parts of the kingdom. As Robert Guiscard had recognized the suzerainty of the Holy See over Calabria and Aquileia, paying an annual tribute, so Roger II recognized it over Sicily and paid an annual tribute to it. Innocent III fixed the tribute for the whole kingdom at 1000 aurei. The official title was "the Kingdom of the Two Sicilies", thus marking the distinction between Sicily on the hither side and Sicily beyond the Paro (the Straits of Messina). The custom of naming the reigns of the Kings of Sicily continued to be called governments of Sicily. The Normans therefore considered that there were two Sicilies, one held by the Byzantines, and one held by the Arabs. For the Holy See the high communism over Sicily was not necessarily a source of constant trouble and war. (For the history of the kingdom down to the Sicilian Vespers, see Naples.) The admission of the burghers to the Sicilian Parliament by Frederick II, in 1241, deserves mention here.

Immediately after the first conquest of the island the Normans re-established the dioceses, and in all of them the Latin-Gallican Rite was adopted. The Norman kings, moreover, considered ecclesiastical affairs as part of the business of the State, and this caused incessant difficulties with the Holy See, which was forced to make many concessions. Thus, Urban II granted to Roger I the right of putting into execution the orders of the pontifical legates. On the other hand, we must consider as apocryphal the document known as the "Monarchia Sicula", containing all the ecclesiastical rights and privileges presumed and exercised by the King of Sicily, among which, in particular, is the legation munus, i.e., the right of the King to nominate the papa "actus natus" of the pope in that kingdom, whence it followed that the pope could not have any other legates in Sicily. The privilege granted by Urban II (1089) to Roger, confirmed and interpreted by Paschal II (1117), declares that Roger and his heirs held the same legatus (the position of acting in place of a legate), in the sense that what the pope would have done or ordered through a legate (qua per legatum actu sumus) was to be carried into effect (exhiberiolum) by the king's diligence (per vestram industrian). The pope certainly contemplated the possibility of sending the legates himself, while the interpretation put by Paschal II on the privilege. The kings, especially the Aragonese, claimed for themselves full ecclesiastical authority in the Kingdom of the Two Sicilies, excluding the right of the Holy See to intervene. On the other hand, it is an error to deny the authenticity of the privilege itself as granted by Urban II and Paschal II (Baronius, Orsi, and others). Philip II (1578) sought to have the "Monarchia Sicula" confirmed, but did not succeed, notwithstanding which, in 1579, he established the office of the "judex monarchiae sicula", who in the king's name, exercised the powers derived from the privilege of the Legation, and prohibited appeals to Rome from the decisions of that tribunal.

The disputes with the Holy See became exceedingly grave when Sicily was given to Amadeus of Savoy (1713). The judex monarchie claimed the right of absolving from censures reserved to the pope. Clem-
ent XI (1715) declared the "Monarchia" at an end. But Benedict XIII (1728) thought it advisable to come to an agreement, and granted the king the rich of nominating the judge of the Monarchy (always an ecclesiastic), who in that way became a delegate of the Holy See with supreme jurisdiction in ecclesiastical affairs. But the causes of disension were not removed, and in 1734, the pope, in accordance with the wishes of the Sicilians, confirmed the privileges of the Monarchy. The Sicilian Government protested, but, in the Law of the Guarantees (art. 15), it expressly renounced all claim to the privilege. The Sicilian Vespers resulted in once more separating the island from the kingdom, which was then held by the French. Peter of Aragon, who claimed the right, as heir of the House of Swabia, was summoned by the Sicilians, and defended the island against the Angevin fleet, in spite of the excommunication of Martin IV. His son James, in 1291, ceded the island to the pope, who wished to restore it to the Angevins, but the Sicilians, in the Parliament of 1296, proclaimed James's brother Frederick king. This caused a fresh war, which was ended by the Peace of Caltabellotta (1302), by which Frederick retained the title of King of Trinacria, but only for his life, and paid in return an annual tribute of 3000 ounces of gold to the Holy See. Contrary to the provisions of the peace, Frederick appointed his son Louis (1316), his eldest son, as regent, and, at (1342), his five-year-old son Louis, and to him again (1355) his brother Frederick III, then thirteen years of age.

Frederick II (Emperor Frederick II and Frederick I of Sicily) had restricted his own authority in favour of the Parliament. The barons profited by this to form four great divisions, over which they placed four great families, the Alagona, Chiaramonte, Palaci, and Ventimiglia, whose bloody wars desolated Sicily. Roberto and Giovanna of Naples tried to take advantage of this state of anarchy to recover the island, but without success. In 1377, Frederick III was succeeded by his only daughter Maria, who married (1392) Martin, son of Martin of Mombello, son of Peter IV of Aragon; in 1409 the kingdom passed by inheritance to the elder Martin, and thus the island was united to the Kingdom of Aragon and ruled by a viceroy. The attempt of Martin II to break the power of the barons gave rise to the idea of having a national king, and so one Peralta was proclaimed at Palermo. But Catania and Syracuse would have no Palermitan king; Messina submitted spontaneously to John XXIII, who declared the Aragonese line deposited. In 1412, however, the prevailing discord: in 1412 Ferdinand, son of Martin II, was acknowledged, and succeeded in curbing the powers of the Parliament. His son Alfonso I (1416-58) united the Kingdom of Naples (1422) with Sicily. On his death, Sicily was given to John of Aragon, whose son Ferdinand II (1479-1516) became King of Aragon and Castile (and of Naples, 1502). Sicily thus became a distant province of Spain. There were occasional Sicilian uprisings and conspiracies against Spanish rule: at Palermo, in 1511, there was a second Sicilian Vespers; and in 1517 the whole island was thrown into confusion by the conspiracy of Gian Lesca. Then followed the civil war between the Luna and the Perollo (1529), the attempt of the brothers Imperatori and Marcantonio Colonna to conquer the island, and incursions of the Turks.

More serious were the revolts at Messina, Palermo, and other cities, in 1647, caused by famine. At Palermo, Ventimiglia, a nobleman, was proclaimed king, and one Giuseppe Alessi captain of the people. Alessi met with the same fate as Maseaniello at Naples, being slain by the populace whose idol he had been. As Messina, alone of all the cities, had preserved its municipal liberty: the attempt to destroy this provoked a rising (1674), and annexation to France was proclaimed. Louis XIV agreed to this arrangement, but in 1876 withdrew his troops and warships from Messina. In 1713, by the Peace of Utrecht, Victor Amadeus II was made King of Sicily, and the Sicilians were contented with independence. But in 1718 war broke out again; Victor Amadeus had to abandon Sicily and Sardinia, and the former was given to Austria. In 1736 it was again united to Naples. The reign of the Bourbons was beneficial to the island. During the Parthenopcean Republic (1798), and the reign of Joseph Bonaparte and Murat (1806-15), Sicily was the asylum of the royal family, and was protected by the British fleet. At that time (1812) the island had a Constitution like that of the English Constitution. But, after the death of the Throne of Naples, Ferdinand IV revoked the Constitution, which indeed had not been very acceptable to the people; he also put an end to the Parliament and all the laws and privileges of the Sicilians, and the island was thus put on the same footing as all the other provinces of the kingdom (Organic Laws of 1817). This caused great discontent in Sicily.

When the Revolution of 1820 broke out at Naples, the Sicilians expected to obtain their independence; they received an evasive answer which diminished their hopes. General Florestano Pepe, sent into Sicily by the Neapolitan Parliament, was at first excluded from Palermo, but later admitted: he had given promises regarding their independence. These promises were not confirmed by the Parliament, which, to punish Palermo, declared Messina the capital of the island; widespread disorders followed, which made it easy for 12,000 Austrians to re-establish the authority of Ferdinand I in the island. The disturbances did not cease until they were put down by General Del Carretto. In 1847 a new agitation to obtain complete autonomy for Sicily, with its own Constitution, sprang up; but no one thought of Italian unity. On 10 July, 1848, Ferdinando Maria, Duke of Genoa, proclaimed King of Sicily, but he refused to accept the throne. Peace having been restored on the Continent, the island was recovered in a few weeks (March and April, 1849). Some disturbances (as at Bentivenga, 1850) were crushed. Meanwhile, the idea of Italian unity had spread among the Liberals, while the populace continued to look forward to Sicilian independence. In 1862 Garibaldi's "Thousand" landed in Sicily and soon won the island for Victor Emmanuel II. The bright hopes of independence and prosperity, however, were not fulfilled; there were risings against the Italian Government (1865-70), though they were crushed. Among ecclesiastical events it should be noted that, in the general re-organization (1818) of the Church in the kingdom, the Dioceses of Caltagirone, Nicosia, and Piazza Armerina were established; in 1844 those of Noto, Trapani, and Caltanissetta were added, and Syracuse was restored to metropolitan rank.

Sidon, the seat of a Melchite and a Maronite see in Syria. Sidon is the oldest city of the Phoenicians, and the metropolis of the most celebrated Phoenician colony established by this people (Strabo, XVI, i, 22). It is mentioned in the ethnological table of Genesis (x, 19);

the territory of the tribe of Jabulon reached even to the gates of this city (Gen., xlix, 15), but the Hebrew names are not mentioned (xvii, 6; Sidon, Judges, i, 31; iii, 3; x, 12; xviii, 7). The supremacy of the Sidonians continued until about 1252 B.C., when the Philistines, after partly destroying Sidon, built on the old foundations the city of Dor, above Jaffa. The Sidonians fled to Tyre, one of their colonies, which then became the leading city. They called the mother of the Phoenician cities, for Tyre, Carthage. Hippo were settled by emigrants from there, was noted for its bronze, its commerce, navigation, knowledge of mathematics and astronomy; it is mentioned with great praise by Homer (Iliad, xxIII, 743). Obedient to the Eastern Europeans, it is often mentioned in the Bible, but nearly always in terms of censure and as a subject of reproach (Joel, iii, 4, 5; Jer., xxv, 22; Eszech., xxvii, 30). Queen Jesabel, wife of Achab, was the daughter of a king of Sidon (III Kings, xvi, 31), for the city for a long time had its own rulers, although we find the inhabitants rendering service to David for the building of the temple (I Par., xxii, 4). Sidon was taken several times by the Assyrian kings, to whom its rulers paid tribute; finally in 675, when its name was changed to Ir-Assuraddon, and its inhabitants were killed, or carried away into captivity, in the 9th year of Josiah of Judah. Nineveh in the sovereignty of Asia (606 B.C.), Sidon allied itself with Tyre to throw off this yoke and that of Egypt (Ezech., xxvii, 8); the conqueror, Nabuchodonosor, turned his wrath on Tyre, and Sidon took advantage of this to recover some of its former glory. It was a willing subject of the Medes and Persians from 538 to 351 B.C., but, having revolted in the latter year against Artaxerxes Ochus, it was burned by its inhabitants, 40,000 of whom perished in the flames (Diod. Sic., xvi, xii-xlvi). Finally it passed under the rule of the Greeks, sometimes of the Saracens, sometimes of the Sicilians, sometimes of the Lagid, its commerce gradually hallowed; at this time it had a school of philosophy. Under the Romans Sidon assumed the name of Naurarchis, later that of Colonia Augusta, or Metropolis, and had its own coins. This period begins about 110 B.C.

Jesus visited the countries of Tyre and Sidon (Matt., x, 21; Mark, vi, 31), passing through Sidon after healing the Syro-Phoenician woman. St. Paul, returning to Rome from Cесarea, stopped with his friends at Sidon, where there were some Christian families (Acts, xxvii, 3). At an early date Sidon became a bishopric, subject to the Metropolitan of Tyre and included in the Patriarchate of Alexandria (present at the Council of Nicea, 325) is the first bishop of whom there is any record; the two most celebrated are Paul ar-Rāheb, an Arabic writer of the thirteenth century, and Euthymius, founder of the Basilian Order of St. Saviour, and one of the first organizers of the Melchite Church, about the latter part of the seventeenth century. For others see Le Quen, "Orients chr.," II, 811-14. Mention is also made of two native saints: the martyr Zeno-bius, in the reign of Diocletian (Eusebius, "Hist. eccl.," VIII, xiii,) and Seraphon (feast 21 March), a legateary captive. A great synod on the subject of Monophysitism was held at Sidon in 512. The city was unsuccessfully attacked by the Frankish king, Baldwin I, in 1108, and was captured by the Crusaders in 1111 after a long siege by land and water. From that time it was a dependency of the Latin Kingdom of Jerusalem, and in 1187 Sidon was surrendered to Saladin but who destroyed the ramparts, but it was retaken by the Franks in 1197, and held by them, notwithstanding temporary occupations by the Arabs and Mongols, until 1291, when Sultan El-Ashraf threw down the walls. In 1253 Saint Louis resided there for several months, and the Templars held possession of the greater part of the time. During the Frankish occupancy it was called in Latin Sagitta, and in French Segette, from its native name, Saïda. The Latin bishopric, suffragan of Tyre, was administered by the Patriarch of Jerusalem, and not by that of Antioch, as formerly; it was already in existence in 1131, having probably been founded some years previously. Dating from 1291 it was only a titular bishopric. For the Latin bishops see Du Cange, "Les Familles d'Outre-Mer," 1860, "Le Quen," 1735, and others. In 1319, Eubel, "Hierarchia catholica medii aevi," I, 473; II, 260; III, 318.

After the departure of the Franks, Sidon was a city of little importance, acting as a port for Damascus; under the Druse Ameer Pâkir-Ed Din (1395-1384) it became European, and after 1480, when the Genoese were driven thither, it became very prosperous. Its downfall began, however, when Djezzar Pasha expelled (1791) all Europeans from the pashalic, and settled at Saint Jean d'Acre; its ruin was completed by the commercial development of Beirut. In 1837 it suffered from an earthquake, and in 1840 from a bombardment by European fleets; in 1860 nearly 1800 Christians were massacred in its district. In the necropolis were found the painted sarcophagi, said to be of Alexander and the Wepers, now at the museum of Constantinople, and considered the most beautiful in the world. The Seljuk numbers 12,000 inhabitants, of whom 1200 are Melchite Catholics, 1000 Maronites, 250 Latins, 200 Protestants, and 800 Jews; the remainder are Moslems. The city, located in the midst of gardens and thus retaining its surnamme of "Flowery," forms a cross of the vilayet of Beirut. Although the harbour is partly blocked by sand, its commerce is of importance. The Maronite diocese numbers 40,000 faithful, 200 priests, and 100 churches. The Melchite diocese numbers 18,550 faithful, 42 churches, 50 priests, and 36 schools. The religious of the Basilian order of St. Saviour have their mother-house at Isra-el-Mokhilleh; they possess 4 dioceses and number 28 priests, 65 scholastics and novices, and 9 lay brothers. The Basilian Sisters number 30, in one convent. Protestants have made considerable headway in this diocese, which the native Catholic clergy have not as yet been able to counteract. The Franciscans, established there in 1827, conduct the Latin parish and school; for a time they had a house there since 1885; the Sisters of St. Joseph direct the dispensary and school for girls.

Sidon, situated on the coast of Paphlagonia, was a colony of Cuma in aelolia. Dating from the tenth century B.C., its coinage bore the head of Athena (Minerva), the patroness of the city, with a Paphlagonian legend. Its people, a piratical horde, quickly forgot their own language to adopt that of the conquerors. For rendering tribute to Alexander they were accorded a Macedonian garrison. A commercial and warlike city, with a powerful navy, it was in continual rivalry with Aspendus. In its waters the fleet of Antiochus the Great, commanded by Hannibal with Sidonian vessels upon the right wing, was beaten by the Rhodian Franks. It was renowned for its favours of pirates, above all, a notorious slave market. After the destruction of piracy elsewhere Sidon continued to derive considerable wealth and profit from both these sources. It was the capital of Paphlagonia, later of Pamphylia Prima. In the tenth century the Constantine, then the Persians and it was a nest of pirates. Its downfall was complete in the fourteenth century, its people having abandoned
it by degrees, owing to the Turkish invasions, and lack of water. At present the deserted ruins are called Eski Adala, Old Atlasia, in the sanjak of Adalia and the vilayet of Konia. They consist of a temple, theatre, agora, aqueduct, public baths, theatre, ampitheater, etc. and some inscriptions. Sidon is mentioned in I Machabees, XV, 23, among the cities and countries to which the Roman letter proclaiming their alliance with the Jews was sent. Christianity was early introduced into Sidon. St. Nicholas and St. Bertha were both buried there. John, the bishop of Sidon as Le Quien (Orients Christ., I, 995) believed. The first known bishop was Epiphanus, presiding at the Council of Ancyra, 314. Others are John, fourth century; Eustathius, 381; Amphilochius, 426-438, who played an important part in the history of the time; Constant, 556; Peter, 553; John, 680-692; Mark, 879; Theodore, 1027-1028; An- thimus, present at the Council of Constantinople where Michael Cerularius completed the schism with Rome, 1054; John, then counsellor to the Emperor Michael VII Ducas, presided at a council on the worship of images, 1052; Theodotus and his successor, Nicetas, both before 1056. Sidon hosted a council of Constantinople 1156. The “Notitiae Episcopatuum” continued to mention Sidon as a metropolis of Pamphylia until the thirteenth century. It does not appear in the “Notitia” of Andronikus II. From other documents we learn that in 1315 and some time thereafter, Sidon had hads of its own—the bishop of Sinope was called to the position, but was unable to leave his own diocese; this call was repeated in 1338 and 1345. In 1397 the diocese was united with that of Attalia; in 1400 the Metropolitan of Perge and Attalia was at the same time the Bishop of Sidon. Since then, the city has disappeared from history.

Sidon was the home of Eustachius of Antioch (see EUSTATHIUS), of the philosopher Trolius, the master of Socrates, himself a teacher; of the celebrated fifth-century ecclesiastical writer Philip; of the famous lawyer Tribonianus (sixth century).

S. Pétrides.

Sidonius Apollinaris (Caecius Sollius Modestus Apollinaris Sidonius), Christian author and Bishop of Clermont, b. at Lyons, 5 November, about 430; d. at Clermont, about August, 480. He was of noble descent, his father and grandfather being Christians and prefects of the pretorium of the Gauls. About 432 he married Papiannilla, daughter of Avitus, who was proclaimed emperor at the end of 455, and who set up in the Forum of Trajan a statue of his son-in-law. Sidonius wrote a panegyric in honour of his father who had become consul on 1 Jan., 456. A year had elapsed before Avitus was overthrown by Ricimer and Majorian. Sidonius at first resisted, then yielded and wrote a second panegyric on the return of Majorian's journey to Lyons (458). After the fall of Majorian, Sidonius supported Theodoric II, King of the Visigoths, and after Theodoric's assassination hoped to see the empire arise anew during the consulate of Anthemius. He went to Rome, where he wrote and wrote a second panegyric on the occasion of Majorian's journey to Lyons (458). After the fall of Majorian, Sidonius supported Theodoric II, King of the Visigoths, and after Anthemius' assassination in 488 he wrote a panegyric, and became prefect of the city. About 470 he returned to Gaul, where contrary to his wishes he was elected Bishop of the Arveni (Clermont in Auvergne). He had been chosen as the only one capable of maintaining the Roman power against the attacks of Eturic, Theodoric's successor. With the general Ecdicius, he resisted the barbarian army up to the time when Clermont fell, abandoned by Rome (474). He was for some time a prisoner of Eturic, and was later exposed to the attacks of two priests of his diocese. He finally returned to Clermont, where he died (Epist., IX, xii).

His works form two groups, the "Carmina" and the "Epistulae." The poems are the three panegyrics with their appendices; two epitaplium; an acknowledgment to Faustus of Reji (now Ries), a eulogy of Narsonne, or rather, two in honor of Narsonne, a description of the castle (burghs) of Leontius, etc. The letters have been divided into nine books, the approximate dates of which are: I, 469; II, 472; V-VII, 474-475; IX, 479. Although written in prose, these letters contain several metrical pieces. After his conversion to Christianity, Sidonius ceased to write prose poetry. The poems of Sidonius are written in a fairly pure latinity. The prosody is correct, but the frequent alliterations and the use of short verses in lengthy compositions betray the poet of a decadent period. The excessive use of mythological and allegorical terms and the elaboration of details make the reading of these works irksome. Most of his inspiration are usually Statius and Claudian. His defects are atoned for by powerful descriptions (sketches of barbarian races, landscapes, details of court intrigues) noticeable particularly in his letters, in the composition of which he took as models Symmachus and Pliny. His genuine letters, only somewhat retouched before their insertion in the collection. They abound in manerisms than the poems and contain also many archaic words and expressions borrowed from every period of the Latin language; he is very diffuse and runs to antithesis and plays upon words. He foreshadows the artificial diction of the "Hisperica Tamina," only the artistic skill of the painter and the story-teller makes up for these defects. Those letters exhibit a highly coloured and unique picture of the times. Sidonius wished to unite the service of Christ and that of the Empire. He is the last representative of the ancient culture in Gaul. By his works as well as by his career, he strove to perpetuate it under theegis of Rome; eventually he had to be content with saving its last vestiges under a barbarian prince.

The writings of Sidonius were edited by Simarono (Paris, 1653); for other editions see Luetgert, Dict. des lettres classiques d'Annonce à Aulèn (Paris, 1802), 60-88.

Paul Lefay.

Sidyma, a titular see in Lycia, suffragan of Myra; mentioned by Ptolemy, V, 3, 5; Piny, V, 28; Hierocles, 684, 15; Stephanus Byzantinus, s. v.; Cedrenus (ed. Bonn) 344. Near the sea and to the west of Patara it was built on the southern slope of Cragus, to the north-west of the etury of the Xanthus. Its history is unknown; its ruins, which survive to have been an unimportant city near the village of Doodoorog, in the vilayet of Koniah, and consist of a theatre, agora, temples, tombs, and some inscriptions. Le Quien, "Orients christianis" 1, 973, mentions three of its bishops: Hypatius, who signed the letter of the bishops of Lycia to the Emperor Leo, 458; Zemarchus, at the councils of Constantinople in 680 and 692; Nicodemus, at Nicea, 787; Eustathius, present at the Council of Seleucia, 359, was bishop both of Pinara and of Sidyma (see Le Quien, ibid., 975). The see is mentioned by the Greek "Notitiae episcopatum" until the thirteenth century.

Fellows, Lycia, 151 sqq.; Smith, Dict. of Greek and Roman Geog., s. v.; Ramsey, Asia Minor, 425; Teixeir, Asia Mineura, 675.

S. Pétrides.
Siena, (Sienensis) Archdiocese of, in Tuscany (Central Italy). The city is situated on three gently-sloping hills. The Public Library was donated by Archdeacon Bandini (1663). The Academy of Fine Arts, the Museum of the Cathedral, and the different churches of the city, illustrate almost completely the history of art in Siena; in no other city had art, especially painting, a more local character, and nowhere else did it remain so independent as in Siena. Gothic architecture produced here its most excellent monuments, both ecclesiastical and in civic buildings; and the Sienese architects laboured beyond the confines of their state (e.g. the cathedral of Orvieto). Sculpture received its first impulse from Niccolò and Giovanni Pisano, whose Sienese disciples carved the decorations of the facade of Orvieto cathedral. The most renowned sculptors of the fifteenth century were Jacopo della Quercia (1374–1438), one of the pioneers of the Renaissance; Lorenzo di Pietro; Antonio Federighi; Francesco di Giorgio (also an architect); Giacomo Cossarelli; and Lorenzo Mariani. Sculpture in wood is represented by the brothers Antonio and Giovanni Barili, Bartolomeo Neroni, and others. In painting Siena possessed in Duccio an artist who greatly surpassed his contemporaries in Florence, both for grace and in accuracy of design. Nevertheless, art developed more rapidly in Florence than in Siena. Simone Martini (1285–1344), immortalized by Petrarch, and a citizen of Siena, bears comparison with Giotto. Lippo Memmi (also a miniaturist), Pietro and Ambrogio Lorenzetti, imitated with facility the grandiose composition of the school of Giotto. But Bertolo di Fredi (1330–1410); Taddeo da Bartolo (1360–1422); and the fifteenth century painters, Domenico di Bartolo, Sano di Pietro, Vecchietta, Matteo, and Benvenuto di Giovanni, compared with the Florentines, seem almost medieval. Siena therefore turned anew to Florentine, Lombard, or Venetian painters, under whom the ancient fame of the city revived, especially in the works of Bernardino Fungai, Girolamo della Pacchia, and others. The most renowned representatives of the Renaissance in Siena are Baldassare Peruzzi, better known as the architect of the Basilica of San Pietro, Giovanni Antonio Bazzi, and Sodoma (1477–1549), a pupil of Raphael. With Domenico Beccafumi (1496–1551) begins the decadence. In the nineteenth century Paolo Franchi founded a school of painters closely related to the "Nazarenes" (a group of German painters of the early nineteenth century, who imitated the Italians of the fifteenth and early sixteenth centuries); the chapel of the Istituto di Santa Teresa gives a good idea of their art.

The cathedral of Siena is said to occupy the site of a temple of Minerva. The present building was begun in the early thirteenth century; the cupola was finished in 1414, but in 1538 it was decided to so enlarge the cathedral that the area then occupied by the nave should form the transepts of the new building. In fact the construction of the longitudinal nave, now in part incorporated in the Opera del Duomo, was actually commenced. Though the pontificate of 1349 compelled the citizens to desist from this plan, they determined to complete in a worthy manner the original design. As it stands the building is about 229 ft. long and 80 ft. wide—168 ft. in the transepts. The facade is decorated with bands of red, white, and black marble, tricuspoid, and richly adorned with sculptures (restored in 1899) and with other ornament which was contributed by the pavement is of admirable marble mosaic—the work of masters of the fifteenth century, which has been for the most part renewed. The pulpit, entirely in relief, is the work of Niccolò Pisano and his pupils; the high altar is by Petrucci, the bronze tabernacle by Vecchietta, and the carvings of the choir by the brothers Barili. The chapel of San Giovanni contains a statue of the saint by Donatello, besides statues by other sculptors, and frescoes by Pinturicchio. Scattered through the interior of the cathedral are statues of Sienese popes and the tombs of the bishops of Siena. The library of the cathedral possesses ancient choir-books and other manuscripts, and is adorned throughout with frescoes by Pinturicchio representing scenes from the life of Pius II—the gift of Pius III. In the centre is the library is the celebrated group of the Three Graces, presented by Pius II. In the Opera del Duomo are preserved the remains of the exterior sculptures and of the pavement of the cathedral, as well as paintings and sacred tapestries. In the Hospital of Sta Maria della Scala (thirteenth century) the church and the pellegrinario (a large sick room) with frescoes by Domenico di Bartolo are noteworthy; San Agostino possesses pictures and frescoes by Perugino, Sodoma, Matteo di Giovanni, and others. Beneath the choir of the cathedral is the ancient baptistery, now the parish Church of San Giovanni, with its remarkable font, ornamented with sculptures by Quercia, Donatello, and Ghiberti. In Santa Maria del Carmine the cloisters and the Chapel of the Sacrament are particularly interesting. The Oratory of San Bernardino contains works of the principal Sienese artists, especially of Sodoma and Beccafumi. The house of St. Catherine of Siena (Benincasa) has been transformed into a number of chapels, which centuries have vied in adorning. San Domenico (1293) possesses pictures by Sodoma, Fungai, Vanni, and others, and a tabernacle by Benedetto da Maiano. In the little church of Fontegiusta has frescoes by Fungai, Petrucci, and Lorenzo di Mariano. Scattered throughout the other churches are works of the fourteenth and fifteenth centuries. Outside of the city is the Convento dell'Osservanza, with majolicae by Andrea della Robbia and paintings
by Sodoma, Sano di Pietro, Taddeo Bartole, and others; here also are shown the cell of St. Bernardino of Siena, and the tomb of Pandolfo Petrucci. More distant from Siena are the Certosa di Fontignano, the Abbey of Sant’ Eugenio (730), and the monastery of San Galgano (1201).

Of the civic buildings we mention the Palazzo Pubblico (1289), with the Torre del Mangia (102 metres), at the foot of which in a form of a graceful loggia is the Capella di Piazza (1376–1460), adorned with frescoes and sculptures. In the interior of the Palazzo Pubblico, the halls of the ground and first stories (Sala della Pace, del Mappamondo, di Balia) are decorated with frescoes by painters named above and by others; the frescoes of the Sala Vittorio Emanuele are modern (Macciari and others). In front of the Palazzo Pubblico extends the great Piazza del Campo, where on the second of July and the fifteenth of August of each year are held the celebrated races—Corse del Palio—which by reason of the gay medley of the riders and their horses and the colorful and picturesque scenery attract a great number of strangers each year. (Heywood, "Our Lady of August and the Palio of Siena, 1889). The Fonte Gaia (Joyful Fountain) in the public square is the work of Jacopo della Quercia. Among the private palaces the following are of note: Spannochii, Casino de’ Nobili, Tolomei, Buonsignori, Piccolomini (the last named contains the public archives). The Monte dei Paschi is perhaps the oldest of all non-charitable houses of credit. It was founded in 1500, and was reorganized in 1654, when the pastures (pastichi) of the Maremma, from which it derives its name, were assigned in lieu of seigneuries.

In ancient times Siena, an Etruscan city, was of no great importance, hence remains of the Etruscan and Roman epochs are rare. It became a Roman colony under Augustus. Under the Lombards it was the seat of two pascoli (magistrates), one a judge, the other a minister of finance. Under the Carlovingians it was a country, which in 868 became hereditary in the family of Vinigino Ranieri, which soon in its various branches divided the territory. The power of the bishop increased in consequence, so that in the eleventh and twelfth centuries he became the sole ruler of the city and the surrounding territory, though he recognized the over-lordship of the margraves of Tuscany. At the death of Matilda (the last Countess of Tuscany, 1115) a municipal government already existed, and in 1125 consuls are first mentioned. Thenceforth the form of government changed continuously. In the beginning there were three consuls, later there were twelve, the office being restricted to members of noble families. At other times a dictator was named. Through donations, purchases, and conquests, particularly from various petty lords of the Maremma ever plotting against Siena, the territory of the republic creased. In its expansion Siena naturally conflicted with Florence. Thus in the struggle for Poggibonsi (1141) the Sienese won, but were conquered by the Florentines in 1445. The rivalry with Florence consequently determined the politics of Siena, which adhered to the imperial (Ghibelline) party. Nevertheless in 1194 the Sienese repulsed the army of Henry VI, who failed of his purposes (magistrate) for justice and war, although the administration remained in the hands of the consuls of the guild. A new change occurred in 1212, in which the administration passed to the Proveditori (purveyors) della Stockera, while the consuls were reduced in rank to simple councillors. In consequence the heads of government changed in rapid succession: the Twenty-seven, Twenty-four, Seventy, Thirty-seven. Meanwhile at the battle of Montaperto (1260) Siena, at the head of the Ghibellines of Tuscany, had humiliated the hated Florence. But in Siena itself the Guelphs, aided by Charles of Anjou, acquired the sovereignty in 1277.

The offices were all bestowed upon Guelphs, who for the most part were required to be merchants. Meanwhile the petty Ghibelline lords of the Maremma laid waste the territory of the republic, despite the mediation of Pope Nicholas III. The Guelph government of the "Fifteenth" (comprised in 282) lasted for seventy years. During this period occurred the war against the Bishop of Arezzo, head of the Ghibellines, who was conquered at Pieve al Toppo. Internal discord among the principal families, the recurrence in Siena of the conflicts between the Buonvisi (whites) and Nerli (blacks), for which the city was excommunicated by Clement V, the seditions of the butchers, doctors, and notaries, fomented by the nobles excluded from the government, failed to displace the Guelph merchants. It required the Great Pestilence of 1348, with its 30,000 victims in the city, and the advent of Emperor Charles IV to effect a change in the government. In 1355 the nobles and the common people rose in revolt, and instituted a mixed government of twelve plebeians and twelve nobles with four hundred councillors. But this lasted only a short time; in 1368 further changes were effected, and in 1369 was saddened by revolts and slaughter. The arbitration of Florence was of little avail. To these tumults and constitutional conspiracies within the city was added (1357) the rebellion of Montepulciano, fomented by Florence. A war with Florence arose in consequence, in which the Sienese, led by Gian Galeazzo Visconti, proclaimed in 1399 lord of Siena. But in 1404 they deserted Visconti, made peace with Florence, to whom Montepulciano was abandoned, and constituted a new government. From 1407–13 Siena was repeatedly assaulted by King Ladislas of Naples, on account of its adherence to the Conclavists. In the year 1480, on the accession of new tumults over the right to participate in the government, Pandolfo Petrucci acquired the upper hand, and in 1487 instituted a new and absolute government. Caesar Borgia secured the expulsion of Petrucci from Siena; but in 1503 the latter returned, assumed the title of Magnifico (Maremma of the Arts), and was more powerful than ever. His son Borghese Petrucci, who succeeded him in the signoria, was in 1516 expelled by order of Leo X, who intended to subject Siena to the Medici, hence the enmity that Cardinal Alfonso Petrucci bore him. Clement VII was on the side of the Medici as rulers when the victory of Pavia (1525) and succeeding events destroyed his hopes. The Spanish protectorate proved even more severe. Charles V wished to compel the Siennese (1550)
to construct a fortress for the Spanish garrison, whereupon they sought the aid of France, which sent a garrison of its own, so that the Spanish and Florentine troops abandoned the city. But Cosimo de' Medici was unwilling to relinquish his province. The diehard because the command of the garrison had been given to Pietro Strossi, a Florentine rebel, he invaded the territory of the Republic in 1554, and after several successful encounters, laid siege to the city, which surrendered, 17 April, 1555. Montacino, Chiusi, and Grosseto maintained themselves for a few months longer, but in 1559, when the treaty of the Peace of Cambrai, the French troops departed. Thus the Medici acquired finally the large territory now divided between the Provinces of Siena and Grosseto. Orbetello alone was given to Spain. The Siens soon accommodated themselves to the new regime, which left them much autonomy.

Among the renowned natives of Siena were Alexander III, Pius II, Pius III, Alexander VII; the hermits St. Galgano (1181) and St. Giacomo (eleventh century); St. Caterina Benincasa, St. Bernardino Albizzeschi, and St. Ambrogio Sansedoni. The heretics Socinus and Ochino were born at Siena. As first apostle of the Christian faith, Siena venerates St. Ansanus who suffered martyrdom under Diocletian. Bishop "Florianus a Sinna", present at the Council of Rome (313) is claimed by Siena as its first bishop, also by other cities of Italy. The first bishop of Italian date was Basilius (465). The Lombard invasion interrupted the episcopal succession in Siena; it was restored in 635 with Bishop Maurus, when Rotharis rebuilt the city. In 713 commenced the controversy concerning jurisdiction over certain lands between the bishops of Siena and Arezzo, which lasted for three centuries (712-1029). The bishops of Siena (Areodatus in 713, Ausfredus (752), Cantius (853), Lupis (881), Leo (1029) claimed ecclesiastical authority over all territory within political limits of the republic. The struggle was decided in favour of Arezzo. Other Siensie bishops were Giovanni (1056), founder of the monastery of Monte Celso, St. Rodolfo (1068), Guelfredus (1083), author and poet; Buonfiglio (1215) who opposed the heretical Patarini and reformed the clergy; Bernardo (1273) brother of B. Andrea Gallerani, founder of the hospital and brotherhood of the Misericordia (d. 1251); Ruggero di Casale, O.P. (1307), a learned theologian and historian, who in 1314 excommunicated the entire convent of Franciscans at Siena; Azzolino Malavolti (1357), who obtained from Charles IV privileges for the University. In 1384 the canons exercised for the last time their right to elect the bishop, the election not being confirmed. In 1477 Gregory XII residing at Rome named at Siena as bishop his nephew Gabriele Condulmer, afterwards Eugene IV; Pius II, a former Bishop of Siena (1449), made the see an archbishopric in 1459. The first archbishop was Cardinal Francesco Nanni Todeschini Piccolomini (afterwards Pius III), succeeded in 1503 by his nephew Cardinal Giovanni Todeschini. Francesco Brandini held the see from 1520 to 1588; Francesco M. Targui (1597), reformer and friend of St. Philip Neri, was bishop in 1597; Metello Bichi founded the seminary in 1613. Alessandro Petrucci (1615), emulating St. Charles Borromeo, was active in reforming the convents of women. Leonardo Marsili (1684) was much opposed by the comune and by the Grand Duke of Tuscany. Cardinal Felice Zondadari (1795-1823) suffered exile in France in 1809; Enrico Bindi (1871) was a man of letters. The suffragans of Siena are Chiusi and Pienza, Grosseto, Masse Marittima, Sovicille, Volterra, and Pigliano. The archdiocese has, besides the hundred and fourteen parishes, two hundred and twenty secular and seventy regular clergy, with 85,000 souls; 9 monasteries for men; 8 convents for women; 4 houses of education for boys and 5 for girls. There are four Catholic periodicals.

Siena, Council of (1423).—It was decreed in the Council of Constance that five years later another council should be called. In fact Martin V summoned it for Pavia, where it was inaugurated on 23 April, 1423. The general session had not yet begun when the pestilence broke out at Pavia, for which reason the transfer of the Council to Siena was decreed. The procedure of the Council was almost identical with that at Constance. Certain formalities of safe conduct issued by the city for the members of the Council were the cause of friction with the pope. On the eighth of November four decrees were published: against the Habsburgs and the Wyclifites; against those who continued the schism of Benedict XIII; on the postponement of the negotiation with the Greek schismatics, and on greater vigilance against heresy. Gallican proposals of reform were productive of discord with the French. On 19 February, 1424, Basle was selected as the place of the next Council. On 20 February the dissolution of the Council was decreed, but the Decree was not published until 7 March. The French would have preferred to continue the Council till the "reform" of the church "in capite et in memoria" (in its head and its members) had been accomplished, whether to avoid a new schism, or on account of fear of the pope (since Siena was too near the Papal States), they departed. The magistrates of Siena took care not to let anyone depart until he had paid his debts.

University of Siena.—The earliest notices of an advanced school (of grammar and medicine) at Siena

CHURCH OF ST. CATHERINE, SIENA

Occupying the house where the Saint lived
go back to 1241. In 1246 the Emperor Frederick II compelled the Siennese students at Bologna to abandon that city, which was hostile to him, and this fact must have contributed to enliven the school of Siena, which then had celebrated professors of law (Papio), or of medicine (Petrus Lupanus). In 1255 the institution received from Pope Innocent IV the usual privileges for its professors and students. He granted the "University of Masters and Doctors regular at Siena and of their scholars studying in the same to possess their benefices from certain city taxes, and appointed the bishop as their conservator. In 1275 and 1285 the Commune of Siena, by its own authority, without regard either to the pope or to the emperor, decided to enlarge the studios into a studium generale. Nevertheless, it remained incomplete; but through the emigration from Bologna of professors and students in 1321 it received an unexpected increase, and then had twenty-two professors—seven of Roman law, five of canon law, two of medicine, two of philosophy, one of notarial science, the others of grammar, i.e., of literature and the interpretation of the classics. But after three years' stay, the number of professors and the students departed, either because peace had been established at Bologna, or because Siena could not obtain from the Holy See the necessary privileges for a real studium generale. In 1397, however, Siena obtained a Bull from Charles IV, which, after declaring that the studium general was for Siena, but that a new bull into obscurity, proceeds to confer upon it de novo the privileges of a studium generale. As early as 1386 we find a chair for the interpretation of Dante. In 1404 Bishop Marmille instituted the Collegio della Sapienza for poor students. In 1408 Gregory XII confirmed these privileges granted by Charles IV, and established a faculty of theology.

Among the professors of the fourteenth century mention should be made of the jurists, Dino del Garbo, Neri Pagliaresi, Federico Petrucci, Pietro Ancharano, Ubaldo degli Ubaldi, Tommaso Corsini; the physicians, Ugo Bensi and Riccardo de Faro (oeculist); the grammarians, Nofrio and Pietro d'Oliva. Instruction was also given in mathematics and in astrology, in which latter study Guido Bonatti and Cecco d'Ascoli were famous. In the fifteenth century the following professors obtained celebrity: Nicolò de Tudeschi (il Panormitano), Francesco Acozoli, and Marco Maccia in law; Jacopo da Forlì and Antonio Sermoneta in medicine; Francesco Filelfo, the theologian Francesco della Rovere (afterwards Pope Sixtus IV), and Agostino Dati in literature. It should also be noted that Siena was conservative in letters as well as in art, for which reason Humanism was not able to obtain a foothold. Among the professors of the early sixteenth century were the jurist Claudio Tolomei, and the humanists Eutruio Asolano and Jacopo Griffoli.

After Siena had come under the Medici, these princes used every effort to promote its prosperity. Among its famous jurists were Silvio Papi and Antonio Acciaiuoli; but the seventeenth century brought also at Siena a general decline of studies. Medicine and the natural sciences claimed renowned devotees at Siena, such as the Camaldolese Francesco Pifferi, the mathematician Teolfo Gallacchi, the botanist Pirro Maria Gabrielli, founder of the Academia Fisicoveriti, and persons would be mentioned Marco Mura and Ottavio Nerusi, the mathematicians Fisoli and Bartaloni, and the botanist Bartalini. Among theologians Sixtus Senesina was renowned; the first professor of church history was Domenico Valentini (1743). The special chairs of moral theology and Holy Scripture were founded in 1776. Leopoldo de' Medici gave the university a new organization, and increased the number of chairs. The French occupation caused the closing of the university, which was, however, re-established in 1814. But in 1840 political reasons brought about the suppression of the faculties of literature, philosophy, mathematics, and natural science. And thus it remained, even after Tuscany was ceded to Piedmont, in which region the theological faculty was also disbanded. Among the more recent professors mention should be made of the jurist Francesco Antonio Mori, the political economist Alberto Rimieri de' Rocchi, the physician Giacomo Barello, and the theologian Luigi de Angelis.

In the present, the territory of Siena belongs to the so-called free universities; it has only the faculties of law and medicine, with a school of pharmacy. In jurisprudence there are 19 chairs, classified as 15 ordinary professors and 5 docents; in medicine 24 chairs, with 22 professors and 31 docents. The number of students enrolled in 1910 was 255.

U. BENIGNI.

Siena, Cyril (better known as Cyril of Barbela), missionary bishop, b. in Catalonia, date of birth unknown; d. after 1799, place and exact date equally uncertain. He was a member of the Capuchin Order, and in 1772 was sent to New Orleans as superior general but had not yet arrived in Echervierry, within whose jurisdiction Louisiana then was. Ecclesiastical and religious conditions were at that time very unsatisfactory. The mission was in charge of some Capuchins who were not always models of ecclesiastical virtue; their superior, Dagobert, required to be ignorant and untutored. Most Cyril the opposition both of Unzaga, the civil governor, and the people. In the hope that a responsible episcopal authority would remove these obstacles, Father Cyril was made titular Bishop of Tricali, and auxiliary of Santiago. His delegate eclesiastical authority extended over the seventeen parishes and twenty-one priests found in the territory now included in the States of Louisiana, Alabama, Florida, and those bordering on the western bank of the Mississippi as far as the Missouri. In 1772 he sent to St. Louis, then a hamlet of about two hundred inhabitants, its second pastor, Father Valentine. He also sent resident curates to the settlements of St. Augustine in Florida. During his administration, several Irish clergy were sent to Bishop Sieni of Charles III of Spain, to minister to the religious needs of the English-speaking Catholics; to each of them the king assigned an annual salary of 350 dollars, besides paying their passage.

In 1786 Siena issued a pastoral letter concerning the proper observance of Sunday as a day of rest and prayer. In 1788 New Orleans was swept by a great conflagration, on which occasion the brick church of the city perished (it was rebuilt in 1794). As a result of his visit he and his party had little progress on the one hand he failed to restore ecclesiastical discipline, and on the other displeased both Charles III and Bishop Trespalacios of Havana, to whose care the mission was committed since 1787. Finally a royal order (1789) banished him to his native province. In 1799 he was still in Havana on his way to Spain. Irrational writers of his own day, followed by some modern historians, depict him in harsh colours. He probably committed more than one administrative error, but he was esteemed a holy and simple-minded ecclesiastic.

A. FRANCON.
Sierra Leone, Vicariate Apostolic of (Sierra Leonis, Sierra-Leonensis), comprises the English colony of that name and the surrounding territory from French Guinea on the north and east to Liberia on the south and south-east. Freetown (population 90,000) is in lat. 8° 30' N. and long. 13° 14' W. of Greenwich. Its area is 30,000 square miles; population, 3,000,000. Its climate is most deadly and has merited for the colony the name "White man's grave". Yellow fever is endemic. Malaria and hemoglobinuria are prevalent.

After the American Revolution the English Government purchased from native chiefs a tract of land some twenty miles square, and established a colony for negroes discharged from the army and navy, and for liberated or runaway slaves who had sought refuge in England. In 1787 about 400 negroes settled there and founded Freetown. In 1808 it became a crown colony, and is so still. It has a completely-developed system of government.

Protestantism had exclusive control in the colony until Catholicism appeared in 1844. Amongst many sects Wesleyans predominate, though Anglicans are numerous and are well organized. In the surrounding territory the aborigines are pagans. Mohammedanism is spreading and becoming a dangerous enemy to Catholicism.

The history of West-African Catholic missions begins in 1843 with the foundation of the Vicariate Apostolic of Sierra Leone by Bishop Baronnet of Philadelphia with the Holy Ghost Fathers. This vicariate, which after Bishop Baron's departure in 1845 was completely entrusted to these fathers, was divided in 1858, and a special vicariate comprising Sierra Leone, Liberia, and French Guinea was confided to Bishop Breilhol, founder of the African Fathers of Lyons. He with his companions died two months after reaching Freetown, and the vicariate was given back to the Holy Ghost Fathers. At the earnest request of the Propaganda Fathers Blanchet and Koeberle, C. S. Sp., began work in 1844. The French Guinea mission was opened in 1878 from Freetown, and fostered until its erection into a prefecture in 1897. The Liberian mission was undertaken by Fathers Lorber and Bourseix, C. S. Sp., in 1884, but because of opposition they withdrew in 1888 and confined their efforts to Sierra Leone. Liberia was erected into a prefecture in 1893 and given to the Fathers of Mary. The present Vicar Apostolic of Sierra Leone was administered by the Holy Ghost Congregation since 1884, Fathers Blanchet and Brown having the title of pro-vicar Apostolic. After Father Brown's death in 1903, Rt. Rev. John A. O'Gorman of the American province of the congregation was named vicar Apostolic, and took charge at Freetown. Despite the difficulty of climate and religious opposition the vicariate has prospered. At Father Brown's death there were five missions; since Bishop O'Gorman's consecration six new ones have been added, making eleven in all. There are twenty-eight missionaries, six from the American province. Connected with each mission is a house, and with it a workshop, farm, or plantation. Thus with religious and secular instruction the boys receive a practical training. A high school for boys was built at Freetown in 1911.

There are four schools, one high school, and one orphanage for girls, in care of the Sisters of St. Joseph of Cluny. The Venerable Mother Javouhey, their foundress, laboured here herself in 1822. Since 1866 her daughters have been in continuous charge. With religious and secular education they teach cooking, sewing, and laundering.

Joseph Byrne.

Sigebert, Saint, king and martyr, date of birth unknown; d. about 637, was the stepbrother of Ealpold, king of the East Angles. During the reign of Redwald he lived an exile in Gaul where he received the baptism and became a monk at Echinodurum in Suffolk. Another prominent figure in Sigebert's revival was the Irish monk, St. Fursey, or Fursa, for whom he built a monastery at Burgh Castle in Suffolk. With the aid of St. Felix, Sigebert also established a school for boys on the model of the monastic schools in Gaul, the masters for it are said to have been supplied from Canterbury. The prospects of Christianity now seemed so bright that Sigebert felt justified in carrying out his long-chiselled design of retiring to a monastery. He therefore resigned the kingdom to his kinsman, Ecgric, received the tonsure, and entered a monastery, said to have been Bedrichsworth, which later became Bury St. Edmunds. Not long after, however, the pagan King of Mercia, invaded East Anglia, and Ecgric, finding himself unable to repel the invasion, joined with his subjects in begging Sigebert to lead them, as he had formerly been a most brave warrior. In spite of his great unwillingness, Sigebert was dragged from his cloister and compelled to march at the head of the army; but, to indicate his profession as a monk, he refused absolutely to carry any weapons of war and instead bore only a rod. In the ensuing battle his army was totally defeated, and he and Ecgric both perishing in the fight. In the "Acta Sanctorum" his life is given under date of 20 October, but the feast is not now observed even in England.

Sigebert of Gembloux, Benedictine historian, b. near Gembloux which is now in the Province of Namur, Belgium, about 1035; d. at the same place, 5 November, 1112. He was not a monk but seems to have been of Latin descent. He received his education at the Abbey of Gembloux and at an early age became a monk in this abbey; after this he taught for a long time at the Abbey of St. Vincent at Metz. About 1070 he returned to Gembloux, where he was universally acquired and venerated, and had charge there of the abbey school until his death. While at Metz he wrote the biographies of Bishop Theodoric I of Metz (964-85), of King Sigebert III, founder of the monastery of St. Martin at Metz, and also a long poem on the martyrdom of St. Lucia, whose relics were venerated at the church of St. Vincent. In addition to this he also wrote similar works for this abbey, namely: a long poem on the martyrdom of the Théban Legion, as Gembloux had relics of its reputed leader Exuperius; a biography of the founder of the abbey, Wiebert (d. 902); a history of the abbots of Gembloux, and selections of the biographies of the abbots of the two early bishops of Liège, Théodard and Lambert. Later he became a violent imperial partisan in the great struggle between the empire and the papacy. Of the three treatises which he contributed to the contest, one is lost; this was an answer to the letter of Gregory VII, written by the Pope in Metz, in which Gregory asserted that the pope has the right to excommuniate kings and to release.

R. G. Roger Hudleston.
subjects from the oath of loyalty. In the second treatise Siegbert defended the masses of married priests, the hearing of which had been forbidden by the pope in 1074. When Paschal II in 1103 ordered the Count of Flanders to punish the citizens of Lille by burning the emperor and to take up arms against him, Siegbert attacked the proceeding of the pope as unchristian and contrary to the Scriptures. His most celebrated work, "Chronicon sive Chronographia", is a chronicle of the world; it must be confessed that in this work he has not written history; he desired probably merely to give a chronological survey. Consequently there is only a bare list of events even for the era in which he lived, though the last years, including 1105–11, are treated more in detail. The chronicle gained a very high reputation, was circulated in numberless copies, and was the basis of many later works of history. Notwithstanding various oversights and mistakes the industry and wide reading of Siegbert deserve honourable mention. He also made a catalogue of one hundred and seventy-one ecclesiastical writers and their works from Gennadius to his own time, "De scriptoribus ecclesiasticis". In this list he mentions his own work.

P. L., CLX; HIBIUCH, De vita et scriptis Sieberti monachi Gomlacencis (Berlin, 1841).

KLEMMENS LÖFFLER.

Siger of Brabant, indisputably the leader of Latin Avverroism during the sixth and seventh decades of the thirteenth century. Many influential masters of art espoused his principles, and Pierre du Bois praised its practicality. Dante immortalized his name in these flattering verses of the "Divina Commedia: Paradiso", X, 136: 

Essa è la luce eterna di Sigeri
Che, leggendo nel vico degli strami,
Sillogize invioci venr.

His influence, through Thomas Aquinas, expressly refuted his teachings. There are few authentic details of the life of Siger of Brabant. He was a master of arts at Paris, and for ten years the guiding spirit of the agitation that troubled the university. From 1266 he was with the legate, Simon de Brie, in disciplinary affairs. From 1272 to 1275 he held in check the university, Albertic of Reims, placing himself at the head of the opposition, which he recruited from the Garlande Quarter (scholares galardes). Though condemned in 1270 Siger still continued the propaganda of his ideas, and his campaign of his opponents occurred the condemnation, in 1277, put an end to his teaching. He was brought before the tribunal of the Grand Inquisitor of France, was condemned, and took an appeal to the Roman Court. He died at Orvieto, between 1281 and 1284, having been assassinated by his secretary.

Of the works of Siger there are still extant: "De anima intellectiva"; "De animae universa"; "De intellectu" naturalis"; "De intellectu logicis"; "Quaesitio utrum hec sit vera: Homo est animal, nullo homin ex omnibus", and a collection of six "Impostitio de infinitio". The 'Quaesitio' has just been discovered by Felix of Rome, Siger was the adversary of Albertus Magnus and of St. Thomas Aquinas, "contra precipe visus Albertum et Thomam". His principal work (De anima intellectiva) called forth St. Thomas' treatise on the unity of the intellect (De unitate intellectus contra Avverroisticum: sive de unitate intellectus contra Avverroist philosophy,—the monism of the human intellect; one intellectual spirit for all men, separate from the body, is temporarily united with each human organism to accomplish the process of thought. Man is mortal, but the race is immortal. Hence the question of a future life is without meaning, immortality cannot be personal. The world is produced by a series of intermediary agencies; hence there is no providence in the government of men and of earthly things. All these productions are necessary, co-eternal with God. All is ruled by cosmic and psychical determinism. Celestial phenomena and the conjunction of the planets control the succession of events on our globe, and the destinies of the human race. Man is not a free agent. There is an eternality of civilizations and religions, the Christian religion included, which is governed by the reversibility of the stellar cycles. Siger wished to remain a professing Catholic, and to safeguard his faith he recourse to the celebrated theory of the two truths: what is true in philosophy may be false in religion, and vice versa. It is hard to tell whether such a mental attitude indicates fussy or sincerity. One is lost in conjecture as to the motive which impelled Dante, the admiral of Thomsiam, to place in the mouth of St. Thomas Aquinas the eulogy of Siger of Brabant, the apostle of Avverroism.

M. DE WULF.

Sigismund, King of Germany and Emperor of the Holy Roman Empire, b. 15 February, 1351, at Rimburgh; d. at Znaim, Bohemia, 9 December, 1437. He was the second son of the Emperor Charles IV, who betrothed him to Maria, the oldest daughter of King Louis of Hungary and Poland, and thus prepared the way for a great extension of the power of the House of Luxembourg. During the reign of his elder brother, King Wenceslaus II, there followed the death of the King of Hungary, to maintain his claims to Hungary though only after a hard struggle, and on 31 March, 1387, he was crowned King of Hungary. In 1389 he was obliged to defend the boundaries of his new kingdom against the Turks. In this year Sultan Amurath I had overthrown the Servian kingdom in the battle on the Plain of Kosovo (Plain of the Blackbirds). Amurath's son, Bajazet, defeated a Christian army under Sigismund at Nicopolis, and the lands along the Danube were only saved by the renewed advance of the Osmanli. In 1389 the clergy and nobility of Bohemia rebelled against his Governor. A second revolution in 1390 put an end to his rule. Sigismund took an active part in the Reformation of the Government by the favourites of King Wenceslaus; they were supported both by Jost of Moravia and Sigismund. After this the intrigues in the royal family of Luxembourg were incessant. When, therefore, King Wenceslaus was deposed as emperor in 1400 at Oberlaan, at the request of the electors, and Rupert was elected emperor in his stead, Wenceslaus appointed his brother imperial vicar for Germany and governor and administrator of Bohemia. However, the accord between the brothers was not of long duration, because Wenceslaus was not willing to confer the succession in Bohemia to his brother. A second time Sigismund was held prisoner by rebellious Hungarian subjects. The Emperor Rupert died on 18 May, 1410, at a time of intense excitement when the ecclesiastical confusion of the Great Schism had reached its height. There was a double election of a king of the Romans. On 20 September, 1410, Sigismund was elected king of the Bohemian and on 1 October, 1410, Jost of Bohemia, was also chosen. The empire, like the Church, had now three rulers. The death of Jost of Moravia made it easier for Sigismund to gain recognition, for the electors who had chosen Jost agreed to the election of Sigismund on 21 July, 1411. The new emperor was the King of Hungary and Master of Brandenburg, and thus had a dynastic power which
might have restored real power to the German Empire. He had large ambitions, his aim was to lead a united Christendom against the power of Islam, but he lacked steadiness and perseverance. Although highly talented he was too easily moved by the emotions. He also neglected to protect the base of his power, his hereditary possessions, which were disorganised by bad administration and civil disorder. The first matter of importance during his reign was the Great Schism.

To Sigismund, undoubtedly, belongs the credit of bringing about the great reform Councils of Constance and Basel. In 1414 he went to Italy on an expedition against Venice; while there he forced Pope John XXIII, who was hard-pressed by King Ladislaus of Naples, to call a council which met at Constance on 1 November, 1414. For a time Sigismund was the real head of the council, and this no doubt served to allow him more to emphasize the importance of Germany. However, the interest of the emperor in the council diminished in proportion as its proceedings failed to meet his views. The sole result of the council so far as Sigismund was concerned was that he brought upon himself the enmity of his Bohemian opponents, the sacrifices of John Hus. During the course of the council Sigismund turned his efforts at reform to internal policies, especially to the establishment of a general peace in the empire. He failed, however, in these efforts. Important consequences resulted from his granting Henry VII, King of England, the see of Nuremberg, the Mark of Brandenburg in fief, to which he added on 30 April, 1415, the electoral dignity and the office of lord high chancellor. In this way Sigismund gained support for himself against the independent policy of the electors. On the death of Wenceslaus (16 August, 1419), Sigismund became King of Bohemia; where, directly after the close of the Council of Constance, Hussite disorders had begun. The king sought to re-establish order by severe measures, but, as this method failed, Martin V at Sigismund's request proclaimed a crusade. Religious and national fanaticism brought a bloody victory to Ziska's hordes on 1 November, 1420, at Wyschehrad, and also on 8 January, 1422, at Deutschbroid. The position of Sigismund, who was now also threatened by the Turks, was an exceedingly precarious one. The only effective aid offered him was that of Duke Albrecht of Bavaria, to whom Sigismund had married his only daughter Elisabeth and who had married the presumptive heir of the Hungarian and Bohemian crowns. The Hussite armies now threatened the neighbouring German territories. Forthwith it became apparent how wretched was the military organization of the empire and how desperate were the divisions among the German princes. Attempts at reform began, but the emperor lacked the vigour to carry out these attempts. Sigismund's failure to effect the needed imperial reforms was not wholly due to weakness of character; the selfish policy of the estates opposed the insurmountable obstacles to his good intentions. The 1248 diet at Ulm and the elections of princes for the defence of the empire in their own hands. Though the coalition soon broke up, it had proclaimed the political programme of the following decades: reform of the empire with the controlling assistance of the estates. As Sigismund was unable to enforce these reforms he could bring about the reconciliation of Bohemia by way of negotiations only; these were entrusted to the Council of Basle. Probably to emphasise before the Councils his European position, Sigismund himself crowned King of Lombardy on 26 November, 1431, and German emperor at Rome, 31 May, 1433. Queries between the moderate Calixtines and the radical Taborites helped along the negotiations. By the so-called Compact of Prague the council brought back the Hussite movement, at least so far as essentials were concerned, to lines compatible with the authority of the Church. The only concession was the granting of the cup to the laity. At the Diet of Igland in 1436 after Sigismund had recognised the Compact of Prague he was acknowledged as regent of Bohemia. After this Sigismund returned to the innermost of his undertakings and retired to Bohemia. When however, his reactionary measures led to a fresh outbreak, in which his wife, Barbara of Città, joined, he retired to Zaarn where he died.

F. KAMPERER.

Signatur Gratia, Justitia. See Roman Curia.

Sign of the Cross, a term applied to various manual acts, liturgical or devotional in character, which have this at least in common that by the gesture of tracing two lines intersecting at right angles they indicate the figure of Christ and in a commonly and properly the words "sign of the cross" are used of the large cross traced from forehead to breast and from shoulder to shoulder, such as Catholics are taught to make upon themselves when they begin their prayers, and such also as the priest makes at the foot of the altar when he commences his mass, said of the words: "In nomine Patris et Filii et Spiritus Sancti". (At the beginning of Mass the celebrant makes the sign of the cross by placing his left hand extended under his breast; then raising his right to his forehead, which he touches with the extremities of his fingers, he says: In nomine Patris; then, touching his breast with the same hand, he says: et Fili; touching his left and right shoulders, he says: et Spiritus Sancti; and as he joins his hands again adds: Amen.) The same sign recurs frequently during Mass, e.g. at the words "Adjutorium nostrum in nomine Domini", at the "Indulgentiam" after the Confiteor, etc., as also in the Divine Office, for example at the invocation "Deus in adjuvatorum nostrum intende", at the beginning of the "Magnificat", the "Benedictus", the "Nunc Dimittis", and on many other occasions. Another kind of sign of the cross is that made in the air by bishops, priests, and others in blessing persons or material objects. The cross also appears in the liturgy of the Mass and in nearly all the ritual offices connected with the sacraments and sacramentals. A third variety is represented by the little cross, generally made with the thumb, which the priest or deacon traces for example upon the book of the Gospels and then upon his own forehead, lips, and breast at Mass, as also that made upon the lips in the "Domine labia mea aperies" of the Office, or again upon the forehead of the infant in Baptism, and upon the various organs of sense in Extreme Unction, etc. Still another variant of the same holy sign may be recognized in the "sign of the Cross" in the "Book" (thirteenth century) that the people at the end of the Gospel should trace a cross upon the beach or wall or a book and then kiss it. It was prescribed in some early uses that the priest ascending to the altar before the Introit should first mark a cross upon the altar-cloth and then should kiss the cross so traced. Moreover it would seem that the custom, prevalent in Spain and some other countries, according to which a man, after making the sign of the cross in the ordinary way, apparently kisses his thumb, has a similar origin. The thumb laid across the forehead forms an image of the cross to which the lips are devoutly pressed. Of all the above methods of venerating this life-giving symbol and adopting it as an emblem, the marking of a little cross seems to be most ancient. We have positive evidence in the early Fathers that such a prac-
tice was familiar to Christians in the second century. "In all our travels and movements," says Tertullian (De cor. mill., iii), "in all our coming in and going out, in putting on our shoes, at the bath, at the table, in lighting our candles, in lying down, in sitting down, whatever employment occupieth us, we mark our foreheads with the sign of the cross." On the other hand this must soon have passed into a gesture of benediction and protection from the whole Fathers of the fourth century would show. Thus St. Cyril of Jerusalem in his "Catecheses" (xiii, 36) remarks: "Let us then not be ashamed to confess the Crucified. Be the cross our seal, made with boldness by our fingers on our brow and in every corner; over our bread we eat and the wine we drink, in our houses and in going out; before our sleep, when we lie down and when we awake; when we are travelling, and when we are at rest." The course of development seems to have been the following. The cross was originally traced by Christians with the thumb or finger on their own foreheads. This practice was attested by numberless allusions in Patristic literature, and it was clearly associated in idea with certain references in Scripture, notably Ezek., ix, 4 (of the mark of the letter Tau); Ex., xvi, 9–14; and especially Apoc., vii, 3; ix, 4, xiv, 1. Hardly less early in date is the custom of marking a cross on objects. Tertullian speaks of the Christians "signando" (cursus lectionum tuum signatos, "Ad uxor.", ii, 5) before retiring to rest—and we soon hear also of the sign of the cross being traced on the lips (Jerome, "Epist. Pauli") and on the heart (Prudentius, "Cathech.", vi, 129). Not unnaturally if the object were more remote, the cross which was directed towards it had to be made in the air. Thus Epiphanius tells us (Adv. her., xxx, 12) of a certain holy man Josephus, who imparted to a vessel of water the power of overthrowing magical incantations by "making over the vessel with his finger the seal of the cross" pronouncing the while a formula of prayer. And a century later Sozomen, the church historian (VII, xxvii), describes how Bishop Donatus when attacked by a dragon "made the sign of the cross with his finger in the air and spat upon the monster." All this obviously leads up to the suggestion of a larger cross made over the whole body, and perhaps the earliest example which can be quoted comes to us from a Georgian source, possibly of the fourth or fifth century. In the life of St. Nino, a woman saint, honoured as the Apostle of Georgia, we are told in these terms of a miracle worked by her: "St. Nino began to pray and entreat God for a long time that the leprous man should be cured. And when he touched the Queen's head, her feet and her shoulders, making the sign of the cross and straightway she was cured" (Studia Biblica, V, 32).

It appears on the whole probable that the general introduction of our present larger cross (from brow to breast and from shoulder to shoulder) was an indirect result of the Monophysite controversy. The use of the thumb alone or the single forefinger, which so long as only a small cross was traced upon the forehead was almost inevitable, seems to have given way for symbolic reasons to the use of two fingers (the forefinger and middle finger, or thumb and forefinger) as typifying the two natures and two wills in Jesus Christ. But if two fingers were to be employed, the large cross, in which forehead, breast, etc. were merely touched, suggested itself as the only natural gesture. Indeed some large movement of the sort was required to make it perceptible that a man was using two fingers rather than one. At some point, perhaps, the greater part of the East, three fingers, or rather the thumb and two fingers were displayed, while the ring and little finger were folded back upon the palm. These two were held to symbolize the two natures or wills in Christ, while the extended third denoted the three Persons of the Blessed Trinity. At the same time these fingers were so held as to indicate the common abbreviation I X C (Iesus Nazarenus, Christus), the forefinger represented the I, the middle finger with the thumb standing for the X and the bent middle finger serving to suggest the C. In Armenia, however, the sign of the cross made with two fingers is still retained to the present day. Much of this symbolism passed to the West, though at a later date. The ultimate prevalence of the larger cross is due to an instruction of Leo IV in the middle of the ninth century. "Sign the chalice and the host," he wrote, "with a right cross and not with circles or with a varying of the fingers, but with two fingers stretched out and the thumb hidden with the sign by which the Trinity is symbolized. Take heed to make this symbol, for otherwise you can bless nothing" (see Georgi, "Liturg. rom. pont.", III, 37). Although this, of course, primarily applies to the position of the hand in blessing with the sign of the cross; it seems to have been adapted popularly to the making of the sign of the cross upon oneself. Aelfric (about 1000) probably had it in mind when he tells his hearers in one of his sermons: "A man may wave about wonderfully with his hands without creating any blessing unless he make the sign of the cross. But if he do the fiend will soon frighten on account of the victorious token. With three fingers one makes the sign of the Holy Trinity" (Thorpe, "The Homilies of the Anglo-Saxon Church," I, 462). Fifty years earlier than this Anglo-Saxon Christians were exhorted to "bless all their bodies seven times with Christ's rood token" (Blickling Hom., 47), which seems to assume this large cross. Bede in his letter to Bishop Egbert advises him to remind his flock "with what frequent diligence to employ upon themselves the sign of our Lord's cross", though here we can draw no inferences as to the kind of cross made. On the other hand when we meet in the so-called "Frayer Book of King Henry" in the eleventh century in a certain council of the English clergy to mark with the holy Cross "the four sides of the body", there is good reason to suppose that the large sign with which we are now familiar is meant.

At this period the manner of making it in the West seems to have been identical with that followed at present in the East, i.e. only three fingers were used, and the hand travelled from the right shoulder to the left. The point, it must be confessed, is not entirely clear and Thalhofer (Liturgik, I, 633) inclines to the opinion that in the passages of Belethus (xxxix), Sicardus (III, iv), Innocent III (De myst. alt., II, xiv), etc., to which reference was made in the last note, there is no proof of this, these authors have in mind the small cross made upon the forehead or external objects, in which the hand moves naturally from right to left, and not the big cross made from shoulder to shoulder. Still a rubric in a manuscript copy of the York Sagrada clearly requires the priest when signing himself with the paten to touch the left shoulder after the right. Moreover it is at least-clear from many pictures and sculptures that in the twelfth and thirteenth centuries the Greek practice of extending only three fingers was adhered to by many Latin Christians. Thus the compiler of the Ancren Ritwe (about 1200) directs his nuns at "Deus in adjuvatorium" to make a little cross first with the thumb and then "a large cross from above the forehead down to the breast with three fingers". However there can be little doubt that long before the close of the Middle Ages the large sign of two crosses, as it is made in the West with the open hand and that the bar of the cross was traced from left to right. In the "Myroure of our Ladye" (p. 80) the Bridgettine Nuns of Sion have a mystical reason given to them for the practice: "And then ye bless you with the synge of the holy cross, to chase away the fiend with all his deceytes. For, as Chrysostome sayeth, wherever the
fiends see the signe of the crosse, they flye away, dredding it as a staffe that they are beaten withall. And in thyse blessinge ye beginne with yorre hande at the hedde downerwaies, and then to the lefte side and byleeve that our Lord Jesu Christe ownde downe from the stand that is from the Father into erthe by his holy Incarnation, and from the erthe into the left syde, that is hell, by his bitter Passion, and from thence into his Father's right syde by his glorious Asension.

The manuell act of tracing the crosse with the hand of the thumb has at all periods been quite commonly, though not indispensably, accompanied by a form of words. The formula, however, has varied greatly. In the earlier ages we have evidence for such invocation as "The sign of Christ", "The seal of the living God", "In the name of Jesus", etc. Later we meet "In the name of Jesus of Nazareth", "In the name of the Holy Trinity", "In the name of the Father and of the Son and of the Holy Ghost", "Our help is in the name of the Lord", "O God come to my assistance". Members of the Orthodox Greek Church when blessing themselves with three fingers, as above explained, commonly use the invocations and of invocation: "Holy God, Holy Strong One, Holy Immortal One, Have mercy on us", which words, as is well known, have been retained in their Greek form by the Western Church in the Office for Good Friday.

It is unnecessary to insist upon the effects of grace and power attributed by the Church at all times to the use of the holy sign of the cross. From the earliest period it has been employed in all exorcisms and conjurations as a weapon against the spirits of darkness, and it takes its place not less consistently in the ritual of the sacraments and in every form of blessing and consecration. A famous difficulty is that suggested by the making of the sign of the cross repeatedly over the Host and Chalice after the words of institution have been spoken in the Mass. The true explanation is probably to be found in the fact that at the time these crosses were introduced (they vary too much in the early copies of the Canon to be of primitive institution) the clergy and faithful did not clearly ask themselves at what precise moment the transubstantiation of the elements was effected. They were satisfied to believe that it was the result of the whole of the consecratory prayer which we call the Canon, without determining the exact words which were used. It is true content to know that the Precious Blood is consecrated by the whole form spoken over the chalice, without pausing to reflect whether all the words are necessary.

Hence the signs of the cross continue till the end of the Canon and they may be regarded as mentally referred back to a consecration which is still conceived as incompleted. The process is the reverse of that by which in the Greek Church at the "Great Entrance" the highest marks of honour are paid to the simple elements of bread and wine in anticipation of the consecration which they are to receive shortly afterwards.

HERBERT THURSTON.

Signorelli, Luca, Italian painter, b. at Cortona, about 1441; d. there in 1523. He was a son of Egidio Signorelli, and his mother was a sister of the great-grandfather of Vasari, from whom we obtain almost all the important facts of his career. A pupil of Piero della Francesca, he was largely influenced in his early days by Pollaiuolo, by whom it seems probable that he may have been instructed. His early youth was probably spent in Florence, and his style of painting is essentially Florentine. In 1479 we hear of him in residence at Cortona, taking high office in the government of the town, and held in great consideration. In 1488, he was elected a burgher of Città di Castello, and three years later he was one of the judges of the designs for the façade of the cathedral at Florence. In 1497, he commenced his first great work at Monte Oliveto near Siena, where he painted eight frescoes; from thence he went to Orvieto, where he remained for five years, devoting himself to painting his magnificent frescoes of the Last Judgment, which are perhaps his most characteristic works. There he also painted his own portrait, with a few bold, clever strokes revealing a great deal of character. In 1508 he went as delegate from Cortona to Florence, and the same year passed on to Rome, where he executed work for Julius II in the Vatican, now unfortunately no longer in existence.

Having been swept away to make room for the paintings of Raphael and his scholars. Again in 1512 he left Cortona as a representative, bearing an address of congratulation, and went again to Rome, but obtained no new commissions, as other men had taken his place. He returned to Cortona, and there lived to the age of eighty-two, working almost up to the day of his death; he received the honour of a public funeral. Few men left a greater mark upon the art of the period than Signorelli. He is spoken of by Berenson as the "grandest illustrator of modern times", although "by no means the pleasanter". In another place the same critic speaks of his mastery over the nude and action, the depth of refinement of his emotions, and the splendour of his conception, remarking on the extreme power that Signorelli possessed of creating emotion and triumphing when representing movement. Art critics regard his "Pan" at Berlin as being one of the most wonderful works of the Renaissance and one of the most fascinating works of art that has come down to us in modern times; while his frescoes at Orvieto can only be described as magnificent, austere and strange no doubt, but marked by almost perfect genius, with full knowledge of the sense of form, and an awe-inspiring majesty. Signorelli stands out as a master of anatomy and almost the only person who could render complicated movement and crowded action, and in this special department he has rarely been equalled and never excelled. He cannot be properly appreciated without a journey to Cortona, and a visit to Orvieto. His works are scattered through all the little townships of Umbria, and can especially be studied in Loretto, Arezzo, Volterra, Fiesole, Arezzo, Monte Oliveto, and Borgo San Sepolcro, while other pictures by him are in the galleries of
SIGÜENZA

George Charles Williamson.

SIGÜENZA, DIocese OF (Seguitana, Segontia), in Spain, suffragan of Toledo, bounded on the north by Saragossa and Teruel, on the south by Cuenca, and on the west by Guadalajara and Segovia. It lies in the civil provinces of Guadalajara, Saragossa, and Segovia. Its episcopal city has a population of 5000. The site of the ancient Segontia, now called Villavieja, is at half a league distant from the present Sigüenza; Livy speaks of the town in treating of the wars of Cato with the Celtiberians. The diocese is very ancient: the fictitious chronicler, Sacedo, pretended that Sigüenza had been its bishop; but, apart from these fables, we find Protogenes as Bishop of Sigüenza at the Third Council of Toledo, and again the same Protogenes at Gundemar’s council in 610; Isidius assisted at the fourth, fifth, and sixth councils; Wideric, at the seventh to the tenth; Egica, at the eleventh; Ela, at the twelfth, thirteenth, and fourteenth; Gunderic, at the fifteenth and sixteenth. The succession of bishops continued under the Arab domination: after St. Eulogius, in 851, we find there Sisemund, a man of great sanctity. But later on Sigüenza was so completely devastated that it does not appear in the cities conquered by Alfonso VI when he subdued all this region. The first bishop of Sigüenza, after it had been re-peopled, was Bernardo, a native of Agen, who had been “capasculo” (corpus scholas—schoolmaster) of Toledo; he rebuilt the church and consecrated it on the Feast of St. Stephen, 1123, and placed in it a chapter of canons regular. He died Bishop-elect of Santiago. On 14 March, 1140, Alfonso VII granted the bishop the lordship of Sigüenza, which his successors retained until the fourteenth century.

After the long episcopate of Bernardo, Pedro succeeded, and was succeeded by Cerebruno, who began the building of the new cathedral. Jocelin, an Englishman, was present with the king at the conquest of Cuenca; he was succeeded by Arderico, who was transferred to Palencia; Martin de Hinojosa, the holy Abbot of Huerta, abdicated the see in 1192, and was succeeded by Rodrigo.

A large part in the civil wars of the thirteenth and fourteenth centuries. The fortress-palace of the bishops was captured in 1297 by the partisans of the Infantes de la Cerda, and in 1355 it was the prison of the unhappy Blanche of Bourbon, consort of Pedro the Cruel. In 1465 Diego López de Mendoza received the mitre, fortified the city, and died there. Pedro González de Mendoza, the Cardinal of Spain, held this diocese together with that of Toledo, and enriched his relations by providing establishments for them at Sigüenza. His successor, Cardinal Bernardo de Carvajal, was disposed of; as a schematic by Julius II, for his adherence to the Council of Constance. After that García de Losada, Fernando Valdés, Pedro Pacheco, and others held this wealthy see. The castle-palace, modified in various ways, suffered much from the storms of civil war, and was restored by Joaquín Fernández Cortina, who was bishop from 1548, and the restoration was continued by Bishop Gómez Salazar (1786–79).

The cathedral is a very massive Gothic edifice of ashlar stone. Its façade has three doors, with a railed court in front. At the sides rise two square towers, 164 feet high, with merlons topped with large balls; these two are crowned by a balustrade; over these crowns the façade, the work of Bishop Herrera in the eighteenth century. The interior is divided into three Gothic naves. The main choir begins in the transept with a Renaissance altar built by order of Bishop Mateo de Burgos. In the transept is the Chapel of St. Librada, patroness of the city, with a splendid reredos and the relics of the saint, all constructed at the expense of Bishop Fadrique de Portugal, who is buried there. What is now the Chapel of St. Catherine was dedicated to St. Thomas of Canterbury by the English Bishop Jocelin, who came with Queen Leonora. Cardinal Mendoza is interred in the main choir. Beyond the choir is an excellent pictorial scene of the centre; there is the sumptuous altar of Nuestra Señora la Mayor. Connected with the church is a beautiful Florid Gothic cloister, the work of Bernardino de Carvajal. The rich tabernacle, with its golden monstrance, was given by Cardinal Mendoza. This chapter house contains many excellent paintings. It is not known with any certainty at what period this church was begun, though it appears to date from the end of the twelfth century. The image of Nuestra Señora la Mayor, to whom the church is dedicated, dates from the end of the twelfth century; it was taken to the retro-cloth in the fifteenth century, the assumption being substituted for it on the high altar.

The Conciliar Seminary of San Bartolomé is due to Bishop Bartolomé Santos de Risoba (1651). There is a smaller seminary, that of the Immaculate Conception, and a college. The College of San Antonio de la Misericordia is a beautiful Gothic building, the University, founded in 1476 by the wealthy Juan López de Medina, archdeacon of Almagro, but its prosperity was hindered by the foundation of the University of Alcalá; in 1770 it was reduced to a few chairs of philosophy and theology, and was suppressed in 1837. Worthy of mention is the ancient regale of Nuestra Señora, which, according to tradition, had been originally the pre-cathedral; the Humilladero, a small Gothic hermitage; the Churrigueraesque convent of the Franciscans; the modern convent of the Ursulines, which was formerly the home of the churls; the hospital of the military barracks; and the Hieronymite college.

Ramón Ruiz Amador.

UNIVERSITY OF SIGÜENZA.—The building of the College of San Antonio Portaceli of Sigüenza, Spain, which was later transformed into a university, was begun in 1476. Its founder was Don Juan López de Menéndez, archdeacon of Almagro, and rector; the college was thus transformed into a university. A Bull issued by Paul III extended the course in theology, and, during the rectorate of Maestro Velozillo, the chair of physics was created, while a Bull of Julius II established the faculties of law and of medicine. Among the professors were Pedro Ciriaco, who enhanced the prestige of the university as a centre of learning; Don Francisco Delgado, Bishop of Lugo, who was rector, and under whom the university reached its period of greatest splendour; Don Fernando Velazquez, rector and professor, was sent by Philip II to the Council of Trent. There were also present at that council, as theologians, Don Antonio Torres, first Bishop of the Canary Islands, and Señor Torro, both professors of this university; Don Pedro Guerrero, Archbishop of Granada; the famous Cuesta; Tricio and Francisco Alvarez, Bishop of Sigüenza. It is thus evident that the influence of the University of Sigüenza in Church and State was considerable in the last years of the fifteenth century and the first years of the sixteenth; thereafter it fell into decay. It was suppressed in 1837.

Sikhs, the religion of a warlike sect of India, having its origin in the Punjab and its centre in the holy City of Amritsar, where sacred books are preserved and worshipped. The name Sikh signifies "disciple", and in later times the strict observers or elect were called the Khalas. The founder of the sect, Nanak (now called Sri Guru Nanak Deva), a Hindu belonging to the Kasastry caste, was born near Lahore in 1469. Being from childhood of a religious turn of mind, he began to wander through various parts of India, and perhaps beyond it, and gradually matured a religious system which, revolting from the prevailing polytheism, ceremonialism, and caste-exclusiveness, took for its chief doctrine the immanence of God in faith and good works, and the equality and brotherhood of man. The new religion spread rapidly, and, under the leadership of nine successive gurus or teachers, soon became an active rival not only to the older Hinduisms, but also to the newer Mohammedanism of the reigning dynasties. These disciples were therefore somewhat ill-treated by the governing powers. This persecution only gave fresh determination to the sect, which gradually assumed a military character and took the name of Sikhs or "champion warriors"; under Govind Singh, their tenth and last guru (b. 1660; d. 1708), who had been provoked by some severe ill-treatment of his followers by the Moslem rulers, they began to wage active war on the Emperor of Delhi. But the struggle was unequal. The Sikhs were defeated and gradually driven back into the hills. The profession of their faith became a capital offence, and it was only the decline of the Mogul power, after the defeat of Aurungzeb in 1707, which enabled them to survive. Then seizing their opportunity they emerged from their hiding places, organized their forces, and established a warlike supremacy over a portion of the Punjab round about Lahore.

A reversal took place in 1762, when Ahmad Shah Bahadur overran the Punjab and brought the Sikhs under tribute. Upon the Mahattas suprised the British, who received the allegiance of a portion of the Sikhs in 1803, and later on, in 1809, undertook a treaty of protection against their enemies, Ranjeet Singh, who, although himself a prominent Sikh leader, had proved overbearing and intolerable to other powers, was forced to marry the British forces, and the Indian and the Sikhs, with a view of opening the Indus and the Sutlej Rivers to trade and navigation, were entered into; but as these agreements were not kept, the British declared war on the Sikhs in 1845. By 1848, partly through actual defeat, partly through internal disorganization and want of leaders, the Sikh power was broken; they gradually settled down among the rest of the population, preserving only their religious distinctiveness intact. According to the census of 1881 the number of the Sikhs was reckoned at 1,553,436, which in the census of 1901 (p. 539) were 339,728. At the time of writing the census of 1911 is not yet published.

Their sacred books, called the "Granth" (the original of which is preserved and venerated in the great temple of Amritsar) consists of two parts: "Adi Granth", the first book or book of Nanak, with later additions compiled by the fifth guru, Arjoon, and with subsequent additions from later gurus down to the ninth, and contributions by various disciples and devotees; secondly, "The Book of the Tenth King", written by Guru Govind Singh, the tenth and last guru, and further with a view of insulating the sect. The theology contained in these books is distinctly monothetic. Great and holy men, even if divinely inspired, are not to be worshipped—not even the Sikh gurus themselves. The use of images is tabooed; ceremonial worship, asceticism, and caste-restrictions are explicitly rejected. The dead leaders are to be saluted simply by the watchword "Hail Guru" and the only material object to be outwardly revered is the "Granth", or sacred book. In practice, however, this reverence seems to have degenerated into a superstitious worship of the "Granth", and even a certain vague divinity is attributed to the ten gurus, each of whom is supposed to be a reincarnation of the first of the line, their original founder—for the Hindu doctrine of transmigration of souls was retained even by Nanak himself, and a certain amount of pantheistic language occurs in parts of the sacred hymns. Salvation is to be obtained only by knowledge of the word communicated through the Sat Guru (or true spiritual guide), reverential fear, faith and purity of mind and morals—the main principles of which are strictly inculcated as marks of the true Sikh; while such prevailing crimes as infanticide and sati are forbidden. They place some restriction on the eating of certain meats and alcohol, but shun the wealth of the Hindus.

They place some restriction on the eating of certain meats and alcohol, but shun the wealth of the Hindus.
Silence.—All writers on the spiritual life uniformly recommend, nay, command under penalty of total failure, the practice of silence. And yet, despite this, there is no rule for silence, nor is it in any way defended, as it was formerly in Germany, against those who have not even mastered its rudiments, let alone that of silence. Even under the old Dispensation its value was known, taught, and practised. Holy Scripture warns us of the perils of the tongue, as "Death and life are in the power of the tongue" (Prov., xiii, 21). No; but on the contrary, (as it is in the New Testament; witness: "If any man offend not in word, the same is a perfect man" (St. James, iii, 2 sq.). The same doctrine is inculcated in innumerable other places of the inspired writings. The pagans themselves understood the dangers arising from unguarded speech. Pythagoras imposed a strict rule of silence on his disciples; the vestal virgins also were bound to severe silence for long years. Many similar examples could be quoted.

Silence may be viewed from a threefold standpoint:
1. As an aid to the practice of good, for we keep silence with man, in order the better to speak with God, because an unguarded tongue dissipates the soul, rendering the mind almost, if not quite, incapable of prayer. The mere abstaining from speech, without this purpose, would be that "idle silence" which St. Ambrose so strongly condemns. (2) As a preventative of evil. Seneca, quoted by Thomas à Kempis complains that "As often as I have been amongst men, I have returned less a man" (Imitation, Book i, c. 20). (3) The practice of silence involves much self-denial and restraint, and is therefore a wholesome penance, and as such is needed by all. From the foregoing it will be readily understood why all founders of religious orders and congregations, even those devoted to the service of the poor, the infirm, the ignorant, and other external works, have insisted on this, more or less severely according to the nature of their occupations, as one of the essential rules of their institutes. It was St. Benedict who laid down the clearest and most strict laws regarding the observance of silence. In all monasteries, of every order, there are special places, called the "Regular Places" (church, refectory, dormitory etc.) and particular times, especially the night hours, termed the "Great Silence", when speaking is more strictly prohibited. Outside these places and times there are usually accorded "recreations" during which conversation is permitted, governed by rules of charity and moderation, though useless and idle words are universally forbidden in all times and places. Of course in the active orders the members speak according to the needs of their various duties. It was perhaps the Cistercian Order alone that admitted no relaxation from the strict rule of silence, which severity is still maintained amongst the Reformed Cistercians (Trappists) though all other contemplative Orders (Carthusians, Carmelites, Camaldolese etc.) are much more strict on this point than those engaged in active works. In order to avoid the necessity of speaking, many orders (Cistercians, Dominicans, Discalced Carmelites etc.) have a certain number of signs, by means of which the religious may have a limited communication with each other for the necessities that are unavoidable.

EDMOND M. OBRECHT.

Silesia.—I. PRUSSIAN SILESIA.—Prussian Silesia, the largest province of Prussia, has an area of 15,557 square miles, and is traversed in its entire length by the River Oder. In 1605 the province had 1,94,612 inhabitants, of whom 2,765,394 were Catholic, 2,120,361 Lutherans, and 46,845 Jews; 72·3 per cent were Germans, and nearly 25 per cent Poles. Agriculture is in a flourishing condition, 68 per cent of the area being under cultivation; the mining of iron, coal, and copper is largely carried on, and the manufacturing industry is considerable; among the articles manufactured are hardware, glass, china, linen, cotton, and woollen goods.

In the earliest period Silesia was inhabited by Germans, the tribes being the Lygii and the Slingsi. When during the migrations these peoples emigrated, the year 400, the region was lost to the Germanic races, and for about eight hundred years the region was Slavonic. The sole memorial of the Silingii is the retention of the name Silesia; the Slaves called Mount Zobten near Breslau "Sleni" (Silena), and the Gau surrounding Mount Zobten they called Ponsam. Of Silesia the region belonged politically at times to Poland and at times to Bohemia. Christianity came to it from Bohemia and Moravia. The apostles of these two countries, Cyril and Methodius (from 863), are indirectly also the apostles of Silesia. Until nearly the year 1000 Silesia had five parts, of the right bank of the Oder belonged to the Diocese of Posen which was established in 968 and was suffragan of Magdeburg; the left bank belonged to the Diocese of Prague, that was established in 973 and was suffragan of Mainz. The Emperor Otto III transferred his court on the left bank to the Oder to the Diocese of Meißen in 995. In 999 Silesia was conquered by the Poles. Duke Boleslaw Chrobry (the Brave) of Poland now founded the Diocese of Breslau; in the year 1000 this diocese was made suffragan of the new Archdiocese of Gnesen that was established by Otto III. In 1163, at the command of the German Emperor Frederick Barbarossa, Silesia was given dukes of its own who belonged to the family of the Piasts. With these rulers began the connexion with Germany and German civilization. Lower Silesia was governed by Boleslaw the Long, the companion-in-arms of the emperor. His successor, Henry the Old (1129–38), the husband of St. Hedwig. From about 1210 Henry began to bring German colonists into his territory and to permit them to found German villages and cities. Bishop Laurence of Breslau followed his example in the district under the control of his see, the castellany of Ottmachau. The margin did much to aid the work of the Minims and German tendencies, especially the Cistercians of the monastery of Leibus. These established no less than sixty-five new German villages and materially promoted agriculture and gardening, mechanical arts, mining, and navigation of the Oder. In the time of Henry II (1238–41), the son of St. Hedwig, Silesia and its western civilization were threatened by the Tatars. Henry met them in battle at Wahlstatt near Liegnitz and there died the death of a hero; his courageous resistance forced the barbarians to withdraw. Consequently 9 April, 1241, is one of the great days of Silesian history.

The German colonization was vigorously carried on and towards the end of the thirteenth century Lower Silesia was mainly German, while in Upper Silesia the Slavs were in the majority. Among the contemporaries of St. Hedwig (d. 1168) were the Counts Celsaus and Stenau, and both native of Upper Silesia. They entered the Dominican Order in Italy and then became missionaries. Celsaus laboured in Breslau, where his order in 1226 obtained the Church of St. Adalbert; he died in 1241. Hyscinth, who among other labours also preached in
Upper Silesia, died in 1257 at Craow. A third native saint of Silesia was a relative of Hysainith, Bronislawa, who became a Premonstratensian in 1217 and passed forty years in the practice of severe penances. Besides the monastery of Lebus the Cistercians had monasteries at Drzewica (1227), Hruszcz (1228), Rauden (1225), Himmelwitz (1280), and Gruszau (1292). The wealthiest convent was the Abbey of Trebnitz for Cistercian nuns founded by St. Hedwig who was buried there. Celebrated monasteries of the Augustinians were the one on the Sande at Breslau, which was founded in 1176 by Gisbert, who was transferred to Breslau about 1148, and that at Sagan, established in 1217 at Naumburg on the Bober and transferred to Sagan in 1294. There were also a large number of houses belonging to the Premonstratensians, Franciscans, and orders of knights, as the Knights of St. John of Jerusalem, Knights of the Cross, Knights Templar. Up to the middle of the fourteenth century forty-five monasteries for men and fourteen for women had been established. The ruling family, the Piasts, repeatedly divided their inheritance so that in the fourteenth century Silesia contained no less than eighteen, prince-bishops. It was the easier for the Bishop of Breslau as Prince of Neisse and Duke of Grottkau to become the most important of the ruling princes. Silesia came under the suzerainty of the kings of Bohemia in 1327-29. As Bohemia was controlled by Germany the change was more favourable for colonisation than if it had fallen to Poland. Silesia suffered terribly during the Hussite Wars (1420-37). The Hussites repeatedly undertook marauding expeditions, and hardly any city except Breslau escaped the havoc they wrought. About forty cities were laid in ashes. The clergy were burnt or put to death in other ways; the nobility grew poor; the peasants became serfs; the fields lay uncultivated; the "golden" Diocese of Breslau became a diocese of "filth". In 1469 Silesia came under the suzerainty of Hungary. However, as in 1526 Hungary, with Silesia, and Bohemia became at the same time possessions of the Habsburgs, from this time the province was once more regarded as a dependency of Bohemia.

The Reformation made rapid progress in Silesia. For the causes of this see BRESLAU, THE PRINCE-BISHOPRIC OF.

In the same article also the course of the Reformation and that of the counter-Reformation are described. A large share in the restoration and firm establishment of Catholicism is due to the Jesuits, who during the years 1622-98 established in Silesia nine large colleges, each with a gymnasium, four residences, and two missions, and brought under their control all the higher schools of the country. This control continued, as Frederick the Great continued his protection of the Jesuits, even after the suppression of the order, up to 1800. In the seventeenth century Silesia obtained great renown through the two Silesian schools of poetry, the chief of these poets being Martin Opitz, Friedrich von Weitena, and Andreas von Levetzow. In 1704 the Jesuit college at Breslau was changed into the Leopoldine University (see BRESLAU, UNIVERSITY OF). At the close of the three Silesian wars (1740-2, 1744-5, 1756-63) the greater part of Silesia belonged to Prussia. By this change Catholicism lost the privileged position which it had regained in the counter-Reformation, even though the war did not impair the possessions of the Church, as happened later (1810-40). In 1815 the Congress of Vienna enlarged Silesia by the addition of about half of Lausitz (Lusatia). During the decade of the forties the seceding German Catholics developed from a mere sect into a party. This party was founded at Laurahutte in Upper Silesia by the ex-chaplain, John Ronge. Finally a brief mention should here be made of the enormous economic de-

development of the province in the last fifty years, especially in the mining of coal, the mining and working of metals, and the manufacture of chemicals and machines. In Upper Silesia especially manufactures have advanced with American rapidity. Politically the province is nominally subject to the Prince Bishopric of Breslau with the following exceptions: the comissariat of Katescher, which consists of the Archipresbyterates of Katescher, Hultschin, and Leobschütz with 44 parishes and 150,944 Catholics, and belongs to the Archdiocese of Olmütz; the county of Glawa, which has 51 parishes and 146,773 Catholics, and belongs to the Archdiocese of Prague.

II. AUSTRIAN SILEZIA.—Austrian Silesia is that part of Silesia which remained an Austrian possession after 1763. It is a crownland with an area of 1987 square miles and a population of 727,000 persons. Of its population 84.75 per cent are Catholics; 14 per cent are Protestants; 44.69 per cent are Germans; 33.31 per cent Poles; 22.05 per cent Czechs. As in Prussian Silesia, agriculture, mining, and manufactures are in a very flourishing condition. The districts of Teschen and Neisse belong to the Prince Bishopric of Breslau, the latter has 29 parishes of Polish Poles. The Gorla and Zagradow belong to the Archdiocese of Olmütz.

KLEMMENS LÖFFLER.

Sileiæus, ANGELUS. See Angelus Sileiæus.

Siletz Indians, the collective designation for the rapidly dwindling remnant of some thirty small tribes, representing five linguistic stocks—Salishan, Yakonan, Kusan, Takelman, and Athapaskan—formerly holding the whole coast country of Oregon from within a few miles of the Columbia southward to the California border, extending inland to the main divide of the coast range, together with all the waters of Rogue River. Several of the tribes originally within the range of this territory are now entirely extinct. The others, all on the verge of extinction, are now gathered upon the Siletz Reservation, Lincoln County, North-west Oregon, with the exception of perhaps seventy on the adjoining Grande Ronde reservation to the east. The principal tribes on the credit of the land are the Tillamook (Sal.), Ailes, Saukawat (Yak.), Coe, Coquille (Kus.), Takelman or Upper Rogue River (Tak.), Six, Joshua, Tututini, Mackanotni, Shasta-coota, Chetto (Ath.). The Athapaskan and Takelman tribes were commonly designated collectively as Rogue River Indians.

Before the beginning of the era of disturbance the Indians of the territory in question may have numbered 15,000 souls. In 1782–83 a great smallpox epidemic, which swept the whole Columbia region, reduced the population by more than one-third. The arrival of trading vessels in the Columbia, dating from 1788, introduced diseases and diseases which soon spread and killed the blood of all the tribes, leading to their rapid and hopeless decline. A visitation of fever and measles about 1823–25 wiped out whole tribes, and by 1850 probably not 6000 survived. In that year gold was discovered in the Rogue River country, resulting in a new influx of people. On their final march "Gold Rushes", lasting almost continuously for six years, 1850–56. In these were the southern tribes of the Oregon coast probably lost over 1000 killed outright and more than that number through wounds, exposure, and starvation due to the destruction of their hunting and food resources. On their final march when they were removed by military force to the "Coast Reservation", which had been established under various treaties within the same period, and to which sev-
er tribes had already peaceably removed. The Coast Reservation originally extended some ninety miles along the coast, but by the throwing open of the central portion in 1865 was divided into two, the present Siletz agency in the north, and the Alsea subagency in the south. In 1876 the latter was abandoned, the Indians being concentrated upon Siletz Reservation, to which about the same time were gathered also several vagrant remnant bands farther up the coast.

On 1 Sept., 1857, the Coast Tribe Indians were officially reported to number: Siletz Reservation, 2049; Alsea, 690; refugee hostiles in mountains, about 250; remnant bands north of Siletz, 251; total, about 3240. Degraded, impoverished, and diseased, their condition could not be made lower, and their superintendents declared their conviction that any expectation of their ultimate civilization or Christianization was hopeless.

"They have acquired all the vices of the white man, without any of his virtues; and while the last fifteen years have witnessed the most frightful diminution in their numbers, their deterioration, morally, physically, and intellectually has been equally rapid. Starvation, disease, and bad whiskey combined is rapidly decimating their numbers, and will soon relieve the government of their charge."

Up to 1875 governmental provisions for moral or educational betterment was either lacking or entirely insufficient. The returns of the axioms in the darkness afforded by the visits at long intervals of the devoted pioneer missionary, Father A. J. Croquette, of the neighboring Grande Ronde Reservation, who continued his ministry to both reservations for a period of nearly forty years. Protestant work was begun under Methodist auspices about 1872, but no building was erected until about twenty years later. Each is now represented by a regular mission, the Catholic denomination being in charge of the Jesuits. The majority of the Indians are accounted as Christians, having abandoned the old Indian dress and custom, besides almost universally using the English language. There is also a flourishing government school. Notwithstanding that the Indians are reported as "above the average" in civilization and comfortable condition, there is a steady and rapid decrease, due to the old blood taint which manifests itself chiefly in tuberculosis, and to their species extinction. Approximate 3240 assigned to the reservation in 1857 had dwindled to approximately 1015 in 1880; 480 in 1900; and 430 in 1910, including mixed bloods. The work of assigning them to individual land allotments, begun in 1887, was finally concluded in 1907.

The various tribes differed but little in habit of life. Their houses were of cedar boards, rectangular and semi-subterranean for greater warmth. Rush mats upon the earth floor served for beds. Fish formed their chief subsistence, supplemented by acorns, camas root, berries, wild game, and grasshoppers; tobacco was the only plant cultivated. They had no weapons or armor and were expert bow and arrow makers. Their chief weapon was the bow, and protective body armour of raw hide was sometimes worn. The ordinary dress of the man was of deer skin, and the woman, a short skirt of cedar bark fibre. Hats were worn by both sexes. Hair flat-tening was not practiced, but tattooing was frequent. The dentalium shell was their most prized ornament and standard of value. Polygamy was common. The dead were generally buried in the ground, and the property distributed among the relatives. The government was simple and democratic, but captives and their children were held as slaves. There were no marriage alliances. Each Indian tribe group had its own myths and culture hero, or transformer, who prepared the world for human habitation. Among the Alsea these sacred myths could be told during only one month of the year. Among the principal ceremonies were the totemic and the girls' puberty dance.

SILET (Sileth, Siloam, Ἰωσαφάτος ἤ Ἰοαννάς, i.e. to conduct or send, connected with ἴσαιας a canal; hence the interpretation, τὸ Κολομβιόπυς τῆς Ἐλάδας [ὅ ιερα δύναται ἄντωντας], John, ix, 7; also in Sept., Josephus, and Tacitus Σωλόμον, r being changed to r for euphony sake or under the influence of ἰοάννα), in the Tyropean wall of Jerusalem, where Jesus Christ gave sight to the man born blind (John, ix, 1-7). Thanks to the excavations of Mr. Bliss and others, the identification of the present pool with the Siloam of Isaías (viii, 6) and John (ix, 7) is beyond all doubt. Near the traditional pool (both in John and Isaías), the Siloam found in 1896 the ruins of an ancient basin, 75 ft. north and south by 78 ft. east and west and 18 ft. deep, on the north side of which was a church with a nave. The pool connects with the upper source of the waters of Gihon (II Par., xxiii, 30) by a subterranean aqueduct (IV Kings, vi, 16); the king's aqueduct "(Jer. xi. 13, II Esd., ii, 14), 600 yards long, the fall of which is so slight that the water runs very gently; hence Isaías (viii, 6) compares the House of David to "the waters of Siloam, that go with silence" in 1896 the excavations of the German Palestinian Society uncovered in the Siloam pool near the outflow of the canal an inscription, which, excepting the Mess stone, the oldest specimen of Hebrew writing, probably of the seventh century B.C. The tower "in Siloam" (Luke, xiii, 4) was probably a part of the near-by city wall, as Mr. Bliss's excavations show that the pool had given its name to the whole vicinity, "the gate of the water of the tower Increased Fund, Quarterly Statement (London, 1882), 122 sq., 16 sq., 178 sq.; (ibid., 1883), 210 sq.; Revue biblique (Paris, 1887), 295-306; HARDIE IN VICTORIAN Dict. de la Bible, v. v. NICHOLAS REAGAN.

SILVEIRA, Gonçalo da, Venerable, pioneer missionary of South Africa, b. 23 Feb., 1556, at Alcântara, about forty miles from Lisbon; d. 16 March, 1561. He was the tenth child of Dom Luís da Silveira, first count of Sortelha, and Dona Beatrice Coutinho, daughter of Dom Fernando Coutinho, Marshal of the Kingdom of Portugal. Losing his parents in infancy, he was brought up by his sister Francisca, abd was entered in 1549 in the college of the Minho at Coimbra. At the dawn of the Christian Renaissance, when St. Ignatius, St. Philip, and St. Teresa were founding their institutes, even then Gonçalo was recognised as a youth of more than ordinary promise. Fr. Gonçalo was appointed pro-
SILVERIUS 793 SILVESTER

vinedal of India in 1555. The appointment was approved by St. Ignatius a few months before his death. Fr. Gonzalo's term of government in India lasted three years. He proved a worthy successor of St. Francis Xavier, who had left India in 1549, and his apostolic labours and those of the hundred Jesuits under him, were crowned with much success, yet he was not reconciled to the people. He used to say that God had given him the great grace of unsuitability for government—apparently a certain want of tact in dealing with human weakness.

The new provincial Fr. Antonio de Quadros sent him to the unexplored mission field of south-east Africa. Landing at Sofala on 31 December, 1550, Fr. Gonzalo went to Otomondela near Cape Commun. There, during his stay of seven weeks, he instructed and baptized the Makangara chief, Gamba and about 450 natives of his kraal. Towards the end of the year he started up the Zambezi on his expedition to the capital of the Monomatapa (q. v.) which appears to have been the N'Pande kraal, close by the M'Zingess river, a southern tributary of the Zambezi. He arrived there on 26 December, 1550, and remained until his death. During this interval he baptized the chief and a large number of his subjects. Meanwhile some Arabs from Mosambique, instigated by a certain Mbuga, sent spies to the missionaries, and Fr. Silveira was strangled in his hut by order of the chief. The expedition sent to avenge his death never reached its destination, while his apostolate came to an abrupt end from a want of missionaries to carry on his work.

JAMES KENDAL.

SILVERIUS, SAINT, POPE (538-37), date of birth and death unknown. He was the son of Pope Hormisdas who had been married before becoming one of the higher clergy. Silverius entered the service of the Church and was subdeacon at Rome when Pope Agapetus died at Constantineople, 22 April, 536. The Empress Theodora, who favoured the Monophysites, sought to bring about the election as pope of the Robert of Palmisia who was 70 years old, but had been subdeacon at Rome and had given her the desired guarantees as to the Monophysites. However, Theodatus, King of the Ostrogoths, who wished to prevent the election of a pope connected with Constantinople, forestalled her, and by her influence the subdeacon Silverius was chosen pope of a subdeacon. Such a nomination at Rome was unusual. Consequently, it is easy to understand that, as the author of the first part of the life of Silverius in the "Liber pontificalis" (ed. Duchesne, I, 210) relates, a strong opposition to it appeared among the clergy. This, however, was suppressed by Theodatus so that finally, after Silverius had been consecrated bishop (probably on 8 June, 536) all the Roman presbyters gave their consent in writing to his elevation. The assertion made by the author just mentioned that Silverius secured the intervention of Theodatus by payment of money is unwarranted, and is to be explained by the writer's hostile opinion of the pope and the Goths. The author of the second part of the life in the "Liber pontificalis" is favourably inclined to Silverius. The pontificate of this pope belongs to an unsettled, disorderly period and he himself fell a victim to the intrigues of the Byzantine Court.

After Silverius had become pope the Empress Theodora sought to win him for the Monophysites. She desired especially to have him enter into communion with the Monophysite Patriarch of Constantinople, Anthimus, who had been excommunicated and deposed by Agapetus, and with Severus of Antioch. However, the pope committed himself to nothing and Theodora now resolved to overthrow him and to gain the papal see for Vigilius. Troubles times befell Rome during the struggle that broke out in Italy between the Ostrogoths and the Byzantines after the death of Amalasuntha, daughter of Theodoric the Great. The Ostrogothic king, Vitiges, who ascended the throne in August, 535, besieged the city. The churches over the city walls in 536. Parts of the city were devastated, the graves of the martyrs in the catacombs themselves were broken open and desecrated. In December, 536, the Byzantine general Belisarius garrisoned Rome and was received by the pope in a friendly and courteous manner. Theodora sought to use Belisarius for the carrying out of plans to depose Silverius and to put in his place the Roman deacon Vigilius (q. v.), formerly aprosiasir at Constantineople, who had now gone to Italy. Antonina, wife of Belisarius, influenced her husband to act as Theodora desired. By means of a forged letter the pope was accused of a treasonable agreement with the Gothic king who was besieging Rome. It was asserted that Silverius had offered the king the leave of one of the city gates secretly open so as to permit the Goths to enter. Silverius was consequently arrested in March, 537, roughly stripped of his episcopal dress, given the clothing of a monk and carried off to exile in the East. Vigilius was consecrated Bishop of Rome in his stead.

Silverius was taken to Lycia where he was sent to reside at Patara. The Bishop of Patara very soon discovered that the exiled pope was innocent. He journeyed to Constantinople and was able to lay before the Emperor Justinian such proofs of the innocence of the exile that the emperor wrote to Belisarius commanding a new investigation of the matter. Should it turn out that the letter concerning the alleged plot in favour of the Goths was forged, Silverius should be placed once more in possession of the papal see. At the same time the emperor allowed Silverius to return to Italy, and the latter soon entered the country, apparently at Naples. However, Vigilius arranged to take charge of his unlawfully deposed predecessor. He evidently acted in agreement with the Empress Theodora and was sided by Antonina, the wife of Belisarius. Silverius was taken to the palace of the Emperor at Sirmium, where he remained for a short time and was then sent into exile in the East. Some of his followers were taken to Palmaria.

According to the same witness he was invoked after death by the believers who visited his grave. In later times he was venerated as a saint. The earliest proof of this is given by a list of saints of the eleventh century, compiled by M. Châtillon, in his "Les saints de l'Eglise" (1900), where Silverius occupies the 271st place. The "Martyrology" of Peter de Natalibus of the fourteenth century also contains his feast, which is recorded in the present Roman Martyrology on 20 June.

-- J. P. KIRSCH.

SILVESTER. See SILVESTRO.

SILVESTER, FRANCIS (FERRARINUS), theologian, b. at Ferrara about 1474; d. at Rennes, 19 Sept., 1526. At the age of fourteen he joined the Dominican Order. In 1516 he was made a master in theology. He was prior first in his native city and then at Bologna, and in the provincial chapter held at Milan in 1519 he was chosen Vice-
General of the Lombard congregation of his order. Having discharged this office for the allotted term of twelve years, he became regent of the college at Bologna, where he remained for a considerable time. Later he was appointed by Clement VII vicar-general of his entire order, and on 3 June, 1525, in the general chapter held at Rome, he was elected master general. As general of his order he visited nearly all the convents of Italy, France, and Belgium, restoring every convent whenever it was in need of repair. He was planning to begin a visitation of the Spanish convents, when a fatal illness carried him away. Albert Leander, his travelling companion, tells us that he was a man of remarkable mental endowments, that nature seemed to have enriched him with all her gifts. Silvester wrote many splendid works, principal among which is his monumental "Commentary on the Summa contra Gentiles of St. Thomas Aquinas" (Paris, 1552). Worthy of special mention are also his explanations of various books of Aristotle. In his "Topographia conventuum" (Rome, 1525), written in a style clear, forceful and elegant, he ably defended the primacy and the organisation of the church against Luther. Some have erroneously attributed this work to Silvester Prierias.

CHARLES J. CALLAN.

Silvia, Saint, mother of Pope St. Gregory the Great, b. about 515 (525?); d. about 592. There is unfortunately no life of Silvia and a few scanty notices are all that is extant concerning her. Her native place is sometimes given as Sicily, sometimes as Rome. Apparently she was of as distinguished family as her husband, the Roman regius consul Ascanius. She had, besides Gregory, a second son. Silvia was noted for her great piety, and she gave her sons an excellent education. After the death of her husband she devoted herself entirely to religion in the "new cell by the gate of blessed Paul" (colla nova juxta portam beat Pauli). Gregory the Great had a mosaic portrait of his parents executed at the monastery of St. Andrew; it is minutely described by Johannes Diaconus (P. L., LXXV, 229-30). Silvia was portrayed sitting with the face, in which the wrinkles of age could not extinguish the beauty, in full view; the eyes were large and blue, and the expression was grave, serious, and imperious. In the ninth century an oratory was erected over her former dwelling, near the Basilicas of San Saba. Pope Clement VIII (1592-1605) inserted her name under 3 November in the Roman Martyrology. She is entreated by pregnant women for a safe delivery. Acta SS., Nov., I, 659-62; WURMSSER-BECHER, Sulla ricostruzione di tre dipinti descritti da Giovanni Dacoano ed esistenti al suo tempo (sec. IX) nel cons. S. Andrea ad olivum Senise in Nuovo Bulletinio di archeologia cristiana, VI (Rome, 1900), 233-51.

KLEMENS LÖFFLER.

Silvius, Francis. See Sylvius.

Simeon (7372752), the second son of Jacob by Lia and patronymic ancestor of the Jewish tribe bearing that name. The original signification of the name is unknown, but the writer of Gen., xxx, 35-36, according to his wont, offers an explanation, deriving the word from shama, "to hear." He quotes Lia as saying: "Because the Lord heard that I was despised, he hath given this also to me; and she called his name Simeon" (Gen., xxix, 33). Similar etymologies referring to Levi and Judah are found in the two following verses. Simeon was born in 3144, according to the Bible, in 2857 from the year 3200. This places his brother Levi as the averager of their sister Dina who had been humiliated by Hemor, a prince of the Sichemites. By a strange surferfuge all the men of the latter tribe are rendered helpless and are slaughtered by the two irate brothers who then, together with the other sons of the patriarch, plunder the city. This act of violence was blamed by Jacob (Gen., xxxix, 30), though for a rather selfish reason; his disapproval on moral and ethical grounds was probably due to prophetic blessing of his twelve sons in Gen., xlix, 5-7. Regarding Simeon and Levi Jacob says: "Cursed be their fury, because it was stubborn; and their wrath because it was cruel; I will divide them in Jacob, and will scatter them in Israel."

In striking contrast between this earlier appreciation of the treacherous and bloody deed and that of the writers of post-Exilic Judaism, who have only words of praise for the action of the two brothers, and even consider them as incited to it by Divine inspiration (see Judith, ix, 2, 3). The same change of ethical sense may be gathered fully from the uncannibook of the Jubilees (xxx) and fraudulently in commemoration of the massacre of the Sichemites by Theodotus, a Jewish or Samaritan writer, who lived about 200 b.c. Simeon figures in only one other incident recorded in Genesis. It is in connexion with the visit of the sons of Jacob to Egypt to buy corn. Here he is detained by Joseph as a hostage while the others return to Chanaan promising to bring back their younger brother Benjamin (Gen., xlii, 25). According to some commentators he was selected for this purpose because he had been a principal factor in the betrayal of Joseph into the hands of the Madianite merchants.

The narrative, however, makes no mention of this, and it is but a conjectural inference from what is otherwise known of Simeon’s violent and treacherous character. (See Simeon, Tribe Of.)

Simeon, Holy, the "just and devout" man of Jerusalem who according to the narrative of St. Luke, greeted the infant Saviour on the occasion of His presentation in the Temple (Luke ii, 25-35). He was one of the pious Jews who were waiting for the "consolation of Israel" and, though advanced in years, he had received a premonition from the Holy Ghost, Who was in him, that he would not die before he had seen the expected Messias. This promise was fulfilled when through guidance of the Spirit he came to the Temple on the day of the Presentation, in order to take the Child Jesus in his arms. He recited the Canticle "Nunc dimittis" (q. v.) (Luke, ii, 29-32), and after blessing the Holy Family he prophesied concerning the Child, Who is "set for the fall, and for the resurrection of many in Israel," and regarding the mother whose "soul a sword shall pierce, that, out of many hearts, thoughts may be revealed." As in the case of other personages mentioned in the New Testament, the name of Simeon has been connected with untrustworthy legends, viz., that he was a rabbi, the son of Hillel and the father of Gamaliel mentioned in Acts, v, 34. These distinguished relationships are hardly compatible with the simple reference of St. Luke to Simeon as "a just man and devout." With like reserve may we look upon the legend of the two sons of Simeon, Charinus, and Leucus, as set forth in the apocryphal gospel of Nicodeum.

 Vigourow, Dictionnaire de la Bible, s. v.

JAMES F. DRISCOLL.

Simeon of Durham (Simeon), chronicler, d. 14 Oct., between 1130 and 1138. As a youth he had entered the Benedictine monastery at Jarro which was removed to Durham in 1074, and was professed in 1083 or 1086, subsequently attaining the office of precentor. His chief work is the "Historia ecclesiae Dunelmensis", written between 1104 and 1105, giving the history of the bishopric down to 1096. He also wrote "Historia regum Anglorum et Scotorum" (from 732 to 1129). The first part down
Simeon Stylites the Elder, Saint, was the first and probably the most famous of the long succession of stylites, or "pillar-hermits," who during more than six centuries acquired by their strange form of asceticism a great reputation for holiness throughout eastern Christendom. If it were not that our information, in the case of the first St. Simeon and some of his imitators, is based upon very reliable first-hand evidence, we should be tempted to regard much of what is told of them as the product of the domain of fable; but no modern critic now ventures to dispute the reality of the feats of endurance attributed to these ascetics. Simeon the Elder, was born about 388 at Sisan, near the northern border of Syria. After beginning life as a shepherd boy, he entered a monastery before the age of sixteen, and from the first gave himself up to the practice of an austerity so extreme and to all appearance so extravagant, that his brethren judged him, perhaps not wisely, to be unsuited to any form of community-life. Being forced to quit them he shut himself up for a number of years in a hut at Tell-Nehrin, where for the first time he passed the whole day without eating or drinking. This afterwards became his regular practice, and he combined it with the mortification of standing continually upright so long as his limbs would sustain him. In his later days he was able to stand thus on his column without support for the greater part of the day. On the ground of this fact, after three years in this hut, Simeon sought a rocky eminence in the desert and compelled himself to remain a prisoner within a narrow space less than twenty yards in diameter. But crowds of pilgrims invaded the desert to seek him out, asking his counsel or his prayers, and leaving him in some degree dependent for his own subsistence. This determined him to adopt a new way of life. Simeon had a pillar erected with a small platform at the top, and upon this he determined to take up his abode until death released him. At first the pillar was little more than nine feet high, but it was subsequently replaced by others, the last in being apparently over fifty feet from the ground. However extravagant this way of life may seem, it undoubtedly produced a deep impression on contemporaries, and the fame of the ascetic spread through Europe. Rome in particular being remarkable for the large number of pictures of the saint which there were to be seen, a fact which a modern writer, Holl, represents as a factor of great importance in the development of the veneration of the image (see the Philotessa in honor of P. Kleiner, p. 42-48). Even on the highest of his columns Simeon was not withdrawn from intercourse with his fellow men. By means of a small opening in the wall against the side, visitors were able to ascend; and we know that he wrote letters, the text of some of which we still possess, that he instructed disciples, and that he delivered addresses to those assembled beneath. Around the tiny platform which surmounted the pillar there was probably something in the nature of a balcony, but the whole was exposed to the open air, and Simeon seems never to have permitted himself any sort of cabin or shelter. During his earlier years upon the column there was on the summit a stake to which he bound himself in order to maintain the upright position throughout Lent, but this was an alleviation with which he afterwards dispensed. Great personal suffering is the mark of asceticism. Theodotius and the Emperor Eudocias manifested the utmost reverence for the saint and listened to his counsels, while the Emperor Leo paid respectful attention to a letter Simeon wrote to him in favour of the Council of Chalcedon. Once when he was ill Theodotius sent three bishops to beg him to descend and allow himself to be examined by them, but the sick man preferred to leave his cure in the hands of God, and before long he recovered. After spending thirty-six years on his pillar, Simeon died on Friday, 2 Sept., 459 (Lietzmann, p. 235). A contest arose between Antioch and Constantinople for the possession of his remains. The preference was given to Antioch, and the greater part of his relics were left there as a protection to the unwalled city. The ruins of the vast edifice erected in his honour and known as Qal'at Sim'am (the mansion of Simeon) remain to the present day. It consists of four basilicas built out from an octagonal central court towards the four points of the compass. In the centre of the court stands the base of St. Simeon's column. This edifice, says H. C. Butler, "unequestionably influenced contemporary and later church building to a marked degree" (Architecture and other Arts, p. 184). It seems to have been a subterranean cell of a permanent character which had borrowed little from Constantinople. St. Simeon's life is principally known to us from an account by Theodoret, who was a contemporary; also from the biography of the bishop Antonius and from independent sources. All these materials have been edited by Lietzmann in HARNACK AND GERHARDT, Texte und Untersuchungen, XXXII (Berlin, 1906). No. 4; Acts SS., Jan., 1, 234-74. See also DELAHAYE in Revue des questions historiques, LVIII (1895), 55-57; and Ludovici, Revue Biblique, Dec. 139 (1929). Holl in Philotessa P. Kleiner, p. 70. Geburtsort (Leipzig, 1907). Upon the architecture of Qal'am an see BUTLER, Architecture and other Arts of Syria (New York, 1904), 185-93, and Von der Syrie centrale, I (Paris, 1885), 141-54; JULIEN, Histoire de Syrie (Lille, 1893); 246-61; LACRIEMONGEN in Carols, Diac., 1 Chriti, 1, 2380-88.

HERBERT THURSTON.

Simeon Stylites the Younger, Saint, b. at Antioch in 521, d. at the same place 24 May, 597. His father was a native of Edessa, his mother, named Martha was afterwards revered as a saint and a life of her, which incorporates a letter of her son written from his pillar to Thomas, the guardian of the true cross at Jerusalem, has been preserved. Like his father Stylites, Simeon seems to have been drawn very young to a life of austerity. He attached himself to a community of ascetics living within the mandra or enclosure of another pillar-hermit, named John, who acted as their spiritual director. Simeon while still only a boy had a pillar erected with a small niche to that of John. It is Simeon himself who in the above-mentioned letter to Thomas states that he was living upon a pillar when he lost his first teeth. He maintained this kind of life for 68 years. In the course of this period, however, he several times moved to a new pillar, and on the occasion of one of these changes the Patriarch of Antioch and the Bishop of Seleucia ordained him deacon during the short space of time he spent upon the ground. For eight years until John died, Simeon remained near his master's column, so near that they could easily converse. During this period the writer was kept in some sort of check by the elder hermit. After John's death Simeon gave full rein to his ascetical practices and Evagrius declares that he lived only upon the branches of a shrub that grew near Theopolis. Simeon the younger was ordained priest and was thus able to offer the Holy Sacrifice in memory of his mother. On such occasions his disciple one after another climbed up the ladder to receive...
Communion at his hands. As in the case of most of the other pillar saints a large number of miracles were believed to have been worked by Simeon the Younger. In several instances the cure was effected by pictures representing him (Holl in "Philiotosia", 50). Towards the end of his life he occupied a column upon a mountainside near Antioch called from his miracles the "Hill of Wonders", and it was here that he died. Besides the letter mentioned, several writings are attributed to the younger Simeon. A number of these small spiritual treatises were printed by Cosma-Lusii ("Nova PP. Bib.", VIII, 1, 2, 3, pp. 441-460). There is also an "Apocalypse" and letters to the Emperors Justinian and Justin II (see fragments in P. G., LXXVII, pt. II, 3216-20). More especially Simeon was the reputed author of a certain number of liturgical hymns, "Troparias", etc. (see Pétrides in "Echo d'Orient", 1901 and 1902).

Simeon Styliitas III, another pillar hermit, who also bore the name Simeon, is honoured by both the Greeks and the Copts. He is hence believed to have lived in the fifth century before the breach which occurred between these Churches. But it must be confessed that very little certain is known of him. He is believed to have struck his lightning upon his pillar, built near Heges in Cilicia.

There is a long and dreary life of St. Simeon the Younger by Despoinas of Antioch, but we learn more from the Life of St. Michael of Arrigada, and from the Lives of Sts. Basil and Gregory by Scaliger. All these have been printed by the Roliandites, Acts SS. (1898), and by Capuchin Reformers of the Church of Jerusalem. Lives of Simeon have been published by PAPADOPULOS KARANOS in Wissensch. des freim. Protest. (1889), 141-150 and 601-604. See also ALLIOT, De Simeonis SS. Vita (Lipsiae, 1864), 17-22; KRAMER, L. M., sive de Byzant. Lit. (2nd ed., Lipsiae, 1887), 144-145 and 671; Phillotio P. Kleinert zum 70 Geburtstage (Leipzig, 1897).

HERBERT THURSTON.

SIMLA, ARCHIDIOCESE OF, in India, a new creation of Pius X by a Decree dated 13 September, 1910, formed by dividing off certain portions of the Archdiocese of Calcutta from the Diocese of the Diocese of the United States. By this arrangement the following places fall within the territory of the new archdiocese: Simla, the metropolitan city, where the Church of St. Michael and Joseph has been adopted as the pro-cathedral; Ambala, Hisar, Karmal, Patiala, Nabha, Sind, Loharu, and Maier Kotla, taken from the Archdiocese of Agra; and Mandi, Suket, Kulu, Lahul and Spiti, taken from the Diocese of Lahore. As yet the appointment of suffragans has been reserved to the future by the Holy See. As the two more ancient dioceses are confined respectively to the Italian and Belgian Franciscans of the Mission, the new archdiocese has been given to the care of the same Fathers of the English province. The first archbishop appointed is the Most Rev. Anselm E. J. Keane who, as Father Anselm of the Society of St. Paul of the Cistercian Order, was well known in England as a lector in logic and metaphysics, guardian of Crawley monastery in Sussex, a member of the Oxford Union Society, and provincial of the English province, before being called to Rome as coadjutor general of the order. Consecrated on 1 Jan., 1911, at Rome by Cardinal Gotti, assisted by the Abbot of Westminster and Archbishop Jaquot, after visiting England to select the cathedral of the new diocese, he arrived in Simla, where he was consecrated by the Metropolitan, and after some time at the seminary, conducted the regular classes until 1 March, when, having accepted the ecclesiastical see, he sailed for India on 10 April, and was welcomed with an imposing public reception on his arrival at Simla on 8 May.

The stations with resident clergy are: Simla, Ambala, Dagshai, Cashauli, and Subathu. The stations visited are: Jutogh, Solon, stations on the Kalka-Simla Railway, Patiala, Ropar, Sirmour, and Sinst. The principal educational establishments in the new archdiocese are at Simla and Ambala. At Simla the Nuns of Jesus and Mary (established in 1864) have some of the best schools in India for orphans, boarders, and the training of teachers. The Nuns at Tara Nuns at Tara Hall, Simla (established in 1896), have also first-class schools for boarders and day-scholars. There is a private school for boys under the care of the Capuchin Fathers at Simla.

ERNST R. HULL.

SIMON, SAINT AND APOSTLE.—The name of Simon occurs in all the passages of the Gospel and Acts, in which a list of the Apostles is given. To distinguish him from St. Peter he is called (Matt. x, 4; Mark, iii, 18) Kanana (κανανας), or Kananaes (καναναι), and Zeolotes (Ζεολότες: Luke, vi, 15; Acts, i, 13). Both synonyms have the same significance, and are a translation of the Hebrew Haman (the Zealou). The name does not signify that he belonged to the party of Zealots, but that he had zeal for the Jewish law, which practised before his call. Jerome and others wrongly assume that Kana was his native place; were this so, he should have been called Kanonas. The Greeks, Copts, and Ethiopians identify him with Nathanael of Cana; the first- mentioned also identify him with the bridegroom at the marriage of Cana, while in the "Chronicum paschale" and elsewhere he is identified with Simon the Clopas. The Abyssinians accordingly relate that he witnessed the crucifixion as Bishop of Jerusalem, after he had preached the Gospel in Samaria. Where he actually preached the Gospel is uncertain. Almost all the lands of the then known world, even as far as Britain, have been mentioned; according to the Greeks, he preached on the Black Sea, in Egypt, and in Morocco, and among the people of the Latin "Passio Simonia et Judae", the author of which was (Lipsius maintains) sufficiently familiar with the history of the Parthian Empire in the first century, Simon laboured in Persia, and was there martyred at Susian. However, Susian is probably to be sought in Colchis. According to Moses of Chorene, Simon met and preached among the Ambrosians in Iberia; according to the Georgians, he preached in Colchis. His place of burial is unknown. Concerning his relics our information is as uncertain as concerning his preaching. From Babylon to Rome and Toulouse we find traces of them; at Rome they are venerated under the Altar of the Crucifixion in the Vatican. His usual attribute is the saw, since his body is said to have been sawed to pieces, and more rarely the lance. He is regarded as the patron of tanners. In the Western Church he is venerated together with Jude (Thaddæus); in the East separately. The Western Church kept his feast on 25 October; the Greeks and Copts on 10 May.

SIMON, SAINT. See Peter, Saint.

SIMON, RICHARD. See Matthew, Biblical; Introduction, Biblical.

SIMONE DA ORSINO, a Lombard architect and builder of the fourteenth century whose memory is chiefly connected with the cathedral of Milan in the course of its erection. He was probably a native of the town of Orosino in the district of Como. His name is inscribed in 1357 on the list of masters of work at the Duomo, immediately after that of Mannone, who heads his associates, and it appears subsequently alternately with that of Nicola Bonaventure of Paris. Orosino is styled insegnerus. Another master of the same name, Paolo Orosino, was likewise employed upon the works of the cathedral in 1400 under the title of magister a lagnamine, perhaps master of the scaffolding.

M. L. HANDLEY.
SIMONIANES, a Gnostic, Antinomian sect of the second century which regarded Simon Magus as its founder and which traced its doctrines back to him. The Simonians are mentioned by Hegesippus (in Euseb. "Hist. eccle." IV, xvi); their doctrines are quoted and condemned in comp. with Simon Magus by Irenaeus ("Adv. haer.", I, xxiii), by the "Philosophumena" (VI, ix-xx; X, xii), and later by Eiphanius ("Haer.", xxi). In the "Philosophumena" Simon’s doctrine is described according to his reputed work, "The Great Declaration"; it is evident that we have here the doctrinal opinions of the Simonians as they had developed in the second century. According to these there was a perfect, eternal ungenerated being (fire), that contained an invisible, hidden element and a visible, manifest element; the hidden is concealed in the manifest; the action of both is similar to that of the intelligible and the sensible in Plato. From that which remains concealed of the ungenerated being six roots (powers) emanated in pairs and these pairs correspond at the same time to heaven and earth, sun and moon, air and water. In their potentiality is contained the entire power. This unlimited power is the "Standing One" (ενας), the "first power" (πρωτεύω) contained in the six days of creation. This seventh power existed before the world, it is the Spirit of God that moved upon the face of the waters (Gen., i, 2). When it does not remain in the six roots (in potentiality), but is actually developed in the world, it is in substance, magnitude, and perfection the same as the unlimited power of the ungenerated being (pantheistic emanation). As the female side of the original being appears the "thought" or "conception" (εφεσκαι), which is the mother of the sons. The "Standing One" is regarded as containing both sexes. The first six "powers" are followed by other less perfect forms (μορφαι εγενεσθαι), angels, demiurges who fashion the world, who is also the God of the Jews. The jealousy of the inferior spirits seems to have forced the "Ennoia" to take female forms and to migrate from one body into another, until Simon Magus, the great power sent forth by the original being, discovered her in Helena and released her. The deliverance was wrought by his being recognized as the highest power of God, the "Standing One". Men are also saved by accepting Simon’s doctrine, by recognizing him as the great power of God. The Old Testament and its law, by which men were saved, was only brought up in opposition (antinomianism) as the work of the inferior god of the Jews (the Demiurge). The Simonians used magic and theurgy, incantations, and love-potions; they declared idolatry a matter of indifference that was neither good nor bad, proclaimed fornication to be perfect love, and led very disorderly, immoral lives. In general, they regarded nothing in itself as good or bad by nature. It was not good works that made men blessed, in the next world, but the grace bestowed by Simon and Helena on those who united with them. The Simonians were also able to manifest under the image of Zeus, and Helena under that of Athena. The sect flourished in Syria, in various districts of Asia Minor, and at Rome. In the third century remnants of it still existed (Origen, "Contra Cels.", I, 57; VI, 11), which survived until the fourth century. Eusebius ("Hist. eccle." II, xiii) calls the Simonians the most immoral of his day. Connected with them were the Dositheans and Manandrians, who should be regarded probably as branches of the Simonians. Their names came from Dositheus and Meander, of whom the first, a Samaritan, was originally the teacher and then the pupil of Simon Magus, while Meander was a pupil and, after Simon’s death, his most important successor. Dositheus is said to have opposed antinomianism, that is, the rejection of Old Testament law. As late as the beginning of the seventh century Eulogius of Alexandria (in Photius, "Biblioth. cod.", 230) opposed Dositheans who regarded Dositheus as the great prophet foretold by Moses. Dositheus died a tragic death from starvation ("Pseudo-Clemen- Recognitions."). I, 57; 72; II, 11; Origen, "Contra Cels.", I, 57; VI, 11; "De principiis", IV, 17; "In Matth. Comm.", XXXII, P. L., XIII, 1843; "In Luc. Hom.", XXV, ibid., 1866; Eiphanias ("Haer.", XX). Like Simon, Menander also proclaimed himself to be the one Sower ("Lutheran"). In the same way he taught the creation of the world by angels who were sent by the Ennoia. He asserted that men received immortality and the resurrection by his baptism and practised magical arts. The sect named after him, the Menandrians, continued to exist for a considerable length of time.

See the bibliography to Simon Magnus.

J. P. KIRCH.

SIMON MAGNUS—According to the testimony of St. Justin ("First Apol.," xxvi), whose statement as to this should probably be believed, Simon came from Gilead (in the land of the Pachites in Scythia), and according to the country of the Samaritans. At the outbreak of the persecution (c. 37 A. D.) of the early Christian community at Jerusalem that began with the martyrdom of St. Stephen, when Philip the Deacon went from Jerusalem to Samaria, Simon lived in the latter city. By his magical and demonic arts of which he was called "Magus", and by his teachings in which he announced himself as the "great power of God", he had made a name for himself and had won adherents. He listened to Philip’s sermons, was impressed by them, and like many of his countrymen was baptized and united with the community of believers in Christ. Simon was a Samaritan, and his conversion was not the result of the inner conviction of faith in Christ as the Redeemer, but rather from selfish motives, for he hoped to gain greater magical power and thus to increase his influence. For when the Apostles Peter and John came to Samaria to bestow on the believers baptised by Philip the outpouring of the Spirit which was accompanied by miraculous manifestations, Simon offered them money, desiring them to grant him what he regarded as magical power, so that he also by the laying on of hands could bestow the Holy Ghost, and thereby produce such miraculous results as the Apostles of Christ. Peter rebuked him sharply, exhorted him to penance and conversion and warned him of the wickedness of his conduct. Under the influence of Peter’s rebuke Simon begged the Apostles to pray for him (Acts, viii, 9–29). However, according to the unanimous report of the authorities of the second century, he persisted in his false views. The ecclesiastical writers of the early Church universally represent him as the first heretic, the "Father of Heresies".

Simon is not mentioned again in the writings of the New Testament. The account in the Acts of the Apostles is the sole authoritative report that we have about him. The statements of the writers of the second century concerning him are largely legendary, and it is difficult or rather impossible to extract from them any historical fact the details of which are established with certainty. St. Justin of Rome ("First Apol.", xxvi; livi; "Dialogue c. Tryphonem", oxx) describes Simon as a man very wise, learned, and claiming to be a god. Justin says further that Simon came to Rome during the reign of the Emperor Claudius and by his magical arts won many followers so that these erected on the island in the Tiber a statue to him as a divinity with the inscription "Simon the magician." However, Peter was a popular candidate for one dedicated to Simon was undoubtedly one of the old Sabine divinity Semo Sanctus. Statues of
this early god with similar inscriptions have been found on the island in the Tiber and elsewhere in Rome. It is plain that the interchange of s and f in the Roman form and its modification by the scribes before him, to look upon the statue of the early Sabine deity, of whom they knew nothing, as a statue of the magician. Whether Justin's opinion that Simon Magus came to Rome rests only on the fact that he believed Roman followers had erected this statue, whether he based his knowledge of Simon from this point, cannot now be positively determined. His testimony cannot, therefore, be verified and so remains doubtful. The later anti-heretical writers who report Simon's residence at Rome, take Justin and the apocryphal Acts of Peter as their authority, so that their testimony is of no value. Simon brought with him, so Justin and other authorities report, the aman from Tyre called Helena. He claimed that she was the first conception (πρωτα) whom he, as the "great power of God," had freed from bondage.

Simon plays an important part in the "Pseudo-Clementines". He appears here as the chief antagonist of the Apostle Peter, by whom he is everywhere followed and opposed. The alleged magical arts of the magician and Peter's efforts against him are described in a way that is absolutely imaginary. The entire account lacks all historical basis. In the "Philosophumena" of Hippolytus of Rome (vi, vii—xx), the description and its followers becomes constantly smaller. He consequently left Rome and returned to his home at Gitta. In order to give his scholars there a proof of his higher nature and divine mission and thus regain his authority, he had a grave dug and permitted himself to be buried in it, after previously prophesying that after three days he would rise alive from it. But the promised resurrection did not take place; Simon died in the grave. The apocryphal Acts of St. Peter give an entirely different account of Simon's conduct at Rome and of his death (Lipsius, "Die apokryphen Apostelgeschichten und Apostellegenden", II, Pt. I (Brébionick, 1857).

In this section, the author discusses the struggle between Simon and the two Apostles Peter and Paul at Rome. By his magic arts, Simon had also sought to win the Emperor Nero for himself, an attempt in which he had been thwarted by the Apostles. As proof of the truth of his doctrines Simon offered to ascend into the heavens before the eyes of Nero and the Roman populace; by magic he did rise in the air in the Roman Forum, but the prayers of the Apostles Peter and Paul caused him to fall, so that he was severely injured and shortly afterwards died miserably. Arnobius reports this alleged attempt to fly and the death of Simon with still other particulars ("Adv. nations", ii, xii; cf. "Cerinthus, Apost."), vi, ix). This legend led later to the erection of a church dedicated to the Apostles on the alleged spot of Simon's fall near the Via Sacra above the Forum. The stones of the pavement on which the Apostles knelt in prayer and which are said to contain the impression of their knees, are now in the wall of the Church of Santa Francesca Romana.

All these narratives belong naturally to the domain of legend. It is evident from them, however, that, according to the tradition of the second century, Simon Magus appeared as an opponent of Christian doctrine and of the Apostles, and as a heretic or rather as the father of the apocryphal age. This view rests on the sole authoritative historical account of him, that given us by the Acts of the Apostles. It cannot be determined how far one or another detail of his later life, as given in essentially legendary form in the authorities of the second century and the following era, may be traced to historical tradition. But the historical records of the Roman Church and the like, as the historians who have denied the historical existence of Simon and his sect. This view, opposed to the account in the Book of Acts, and to the tradition of the second century, is now abandoned by all serious historians. Further this "legendary" Simon was made an essential link by the Tiberian School of B. R., and his followers for historical evidence of the alleged "Petrine" and "Pauline" factions in the early Church, which had fought with one another and from whose union the Catholic Church arose. For the same reason this school, especially Lipsius, assigns the labours of St. Peter at Rome, which it claims are first made known by these apocryphal writings, to the domain of legend. All these theories, however, are without basis and have been abandoned by serious historical scholars, even among non-Catholics (cf. Schmidt, "Petrus in Rom", Lucerne, 1892). A developed system of doctrines is attributed to Simon and his followers in the anti-heretical writings of the early Church, especially in Irenaeus ("Adv. haer.", I, xxii; IV, VI, xxxii), in the "Philosophumena" (VI, VII sq.), and in Epiphanius ("Haer.", XXII). The work "The Great Declaration" (Ἀνακοίνωσις προτευτημοναίος) was also ascribed to Simon, and the "Pseudo-Clementines" (Irenaeus, p. 45, Eusebius, p. 514, 2.) How far this system actually belonged to Simon cannot now be determined. Still Simon's name seems to have been a heathen Gnosticism, in which he proclaimed himself as the Standing One (ἄνωθεν), the principal emanation of the Deity and the Redeemer. According to Irenaeus he claimed to have appeared in Samaria as the Father, in Judea as the Son, and among the heathen as the Holy Ghost, a manifestation of the Eternal. He asserted that Helena, who went about with him, was the first conception of the Deity, the mother of all, by whom the Deity had created the angels and the sions. The cosmic forces had cast her into corporeal bonds, from which she was released by Simon as the great power. In morals Simon was probably Antinomian, an enemy of the Old Testament law. His magical arts were continued by his disciples; these led unbridled, licentious lives, in accordance with the principles which they had learned from their master. They daily rate they cured themselves Simonians, giving Simon Magus as their founder.

J. P. KIRSCH.

Simon of Cassia (Simone Fedati), Blessed, Italian preacher and ascetical writer, b. at Cassia, Italy; d. at Florence, 2 February, 1348. At an early age he entered the Order of Augustinian Hermits, where he became distinguished for learning and as a model of every monastic virtue. He displayed great ability as a preacher, and his sermons at Perugia, Bologna, Siena, and Florence bore much fruit. He was especially successful in his work among fallen women, making many conversions and founding for them a house of penance. He established at Florence a convent of women under the Augustinian rule. He was beatified by Gregory XVI in 1833. He wrote "De gestis Christi", a history of the Gospels in fifteen books wherein the mystical sense of the sacred narrat-
tive is simply but learnedly set forth. The work was published at Basle (1517), Cologne (1533, 1540), and Ratisbon (1733). "Expositio super evangelia" (Venice, 1488; Florence, 1496), of a work in Italian on the evils existing among the clergy (Milan, 1521; Turin, 1779), and a treatise "De beata Virgine" (Basle, 1517). Unpublished works of his are: "De doctrina christianae"; "De vita christianae"; "De cognitione poenitentiae"; "De expiatorio symboli"; "De speculo crucis"; "De confictibus christianorum".

HUNTER, Nomendator.

BLANCHE M. KELLY.

Simon of Cremaud, cardinal, b. near Rochecouart in the Diocese of Limoges before 1380; d. at Poitiers 14 Dec., 1422. He studied law at Orleans and later enjoyed an excellent reputation as a canonist. In 1382 he became Bishop of Agen, was transferred to Besiers in 1383, and to Poitiers in 1388. He never occupied the See of Sens to which he was named in 1390; but the following year he became titular Patriarch of Alexandria and Administrator of the Diocese of Avignon. His appointment to the archiepiscopal See of Reims (1409) was followed by his elevation to the cardinalate in 1413, and from that date until his death he was Administrator of the Diocese of Poitiers. A very prominent figure in the Great Schism, he resolutely championed the cause of Clement VII, but was a decided opponent of his successor, Benedict XIII. In diplomatic missions and at national synods he agitated in favour of the withdrawal from the latter's obedience. As a president of the Council of Pisa in 1409 he proclaimed the deposition of both Gregory XII and Benedict XIII, and secured the election of Alexander V. At the Council of Constance an extraordinary form of papal election, which granted a vote to certain national delegates along with the cardinals, was carried largely through his efforts. In writing, he was widely scattered and to some extent unedited, so he exaggerates the authority of the civil power to the detriment of the spiritual rights of the Apostolic See that some of his views are really schismatical. He has been rightly called a precursor of both theological and political Gallicanism.

N. A. WERBEL.

Simon of Cremona, a theological writer and celebrant, and a precentor belonging to the Order of St. Augustine, b. at Padua, 1390. He flourished in the second half of the fourteenth century, and the field of his labours was Northern Italy, especially the Venetian territory. Excerpts from his sermons were published under the title "Postilla super Evangelia et Epistolae Omnia Dominice" (Rheindt, 1485). He left several works in manuscript, among which may be mentioned "In Quatuor Libros Sententiarum," "Quaestiones de indigentia Portuiculae," and "Questions de sanguine Christi".

OEDENHOF, Bibl. August. (Innsbruck, 1766), 275 sqq.

JAMES F. DISCOILL.

Simon of Sudbury, Archbishop of Canterbury, b. at Sudbury, Suffolk, England, of middle-class parents, d. at Rome, March 13, 1353. After taking a degree in law Partington (d. in 1356). In 1361 he was made Bishop of London, after being chancellor of Salisbury. He was busy with John of Gaunt over negotiations with France in 1372-73, as well as over a complaint that his cathedral in London was neglected, the bishop enriched his native town by building and endowing a collegiate church on the site of his father's old house. Sudbury succeeded Langham as Archbishop of Canterbury in 1375, and his friendship with John of Gaunt and the Lancastrian party at once brought him into opposition with Courtenay, Bishop of London, and John of Wykeham, Archbishop of York. His claim to be titular of the see of Rome was rejected by the Council of Pisa, and his marriage to the daughter of the Earl of Lancaster and the influence of the court at his back, and escaped condemnation. Archbishop Sudbury became lord chancellor in 1380, on the resignation of Scrope, and this acceptance of office cost him his life a year later at the great uprising of the peasants.

On 11 June, 1381, the archbishop was with Richard II and his ministers in the Tower of London, when the peasants marched on the capital. On 14 June, while Richard was holding conference with Wat Tyler at Mile End, and agreeing to the demands of the peasants, a crowd invaded the Tower, crying "Where is the traitor to the kingdom? Where is the spoiler of the commons?" Neither a traitor, nor despoiler am I, but thy archbishop", came the reply. In vain the archbishop warned the mob that heavy punishment would follow his death; the hatred of the people against all whom they judged responsible for the poll-tax left no room for mercy in their breasts. The archbishop was dragged from his chamber to Tower Hill, and there with many blows his head was struck off—to be placed on London Bridge, according to the savage custom of the time. A few days later, when the rising was over, the head was taken down, and, with the archbishop's body, removed to Canterbury for burial. It was said that Sudbury, when Bishop of London, had discouraged pilgrimages to the shrine of St. Thomas at Canterbury; he was known to be the friend of John of Lancaster, and he had imprisoned John Ball, the peasant leader, as his predecessor had done, at Maidstone. But the fact that he was chancellor was the real cause of Sudbury's violent death. Nevertheless, there were many who loved the mild and gentle archbishop, and who counted him a martyr.

N. E. FADDEN, KNIGHT, CHRONOLOG. ANGLICAN., ed. THOMPSON; WALTERS, HIST. ANGLICAN.; HOIGEN, POLYCHRONIUM; all in Rolls Series. 'FROISSART, Stubble's Constitutional History. JOSEPH CLAYTON.

Simon of Tournai, professor in the University of Paris at the beginning of the thirteenth century, dates of birth and death unknown. He was teaching before 1184, as he signed a document at the same time as Gerard de Patura, who died as Bishop of Coventry. The chroniclers of the period, however, they differ on other points, are unanimous in proclaiming Simon's brilliancy in philosophy, which subject he taught for ten years. Later he lectured on theology with equal success. In his lectures he utilized the many works, including Aristotle's philosophical writings, which were being made known by the labours of the Arab translators. Simon's teachings aroused suspicion as early as the end of the twelfth century. His enemies were, probably, the opponents of the new philosophy; the accounts given by Thomas of Cantimpe and Matthew Paris, and Giraldus Cambrensis before them, though differing considerably as to details, agree at least in saying that Simon was struck dumb as a punishment for his blasphemy or his heretical assertions regarding the truths of the Christian faith. It would be difficult now to determine whether in private conversation Simon made use of the doctrine contained in his works; the latter, however, of which but few have been printed, are orthodox. They consist chiefly of a "Summa theologica" or "Sententias", various "Questions", "Sermons", and the "Expositio in symbola a. Athanasii" printed in the
The work entitled “De tribus impostoribus” was not written by Simon. A letter of Stephen of Tournaï, earlier than 1192, speaks in very flattering terms of a Simon, who is probably to be identified with the subject of this article.

J. De Ghellinck.

Simon Stock, Saint, b. in the County of Kent, England, about 1165; d. in the Carmelite monastery at Bordeaux, France, 16 May, 1265. On account of his English birth he is also called Simon Anglus. It is said that when twelve years old he began to live as a hermit in the hollow trunk of an oak, and later to have become an itinerant preacher until he entered the Carmelite Order which had just come to England. According to the same tradition he went as a Carmelite to Rome, and from there to Mt. Carmel, where he spent several years. All that is historically certain is that in 1247 he was elected the sixth general of the Carmelites, as successor to Alan, at the first chapter held at Aylesford, England. Notwithstanding his great age he showed remarkable energy as general and did much for the benefit of the order, so that he is justly regarded as the most celebrated of its generals. During his occupancy of the office the order became widely spread in southern and western Europe, especially in England; above all, he was able to found houses in the university cities of that era, as in 1248 at Cambridge, in 1253 at Oxford, in 1260 at Paris and Bologna. This action was of the greatest importance both for the growth of the institution and for the training of its younger members. Simon was also able to gain at least the temporary approbation of Innocent IV, for the altered rule of the order which had been adapted to European conditions. Nevertheless the order was greatly oppressed, and it was still struggling everywhere to secure admission, either to obtain the consent of the secular clergy, or the toleration of the other orders. In these difficulties, as Guilelms de Ales (shortly after 1291) relates, the monks prayed to their patroness the Blessed Virgin. “And the Virgin Mary revealed to their prior that they were to apply fearlessly to Pope Innocent, for they would receive from him an effective remedy for these difficulties”. (Cf. “Speculum Carmeli”, I, 101 sqq.; Zimmermann, 325; “Biblioth. Carmelit.”, I, 606). The prior followed the counsel of the Virgin, and the order received a Bull or letter of protection from Innocent IV against these molestations. It is a historical fact that Innocent IV issued this papal letter for the Carmelites under date of 13 January, 1252, at Perugia (“Registr. Innoc. IV.”, ed. Berger, III, 24, n. 5963).

Later Carmelite writers give more details of such a vision and revelation. Johannes Grosset wrote his “Viridarium” about 1490, and he relates that the Mother of God appeared to Simon Stock with the scapular of the order in her hand. This scapular she gave him with the words: “Hoc erit tibi et cunctis Carmelitis privilégium, in hoc habuit moriens salvabitur” (This shall be the privilege for you and for all Carmelites, that anyone dying in this habit shall be saved). On account of this great privilege many distinguished Englishmen, such as King Edward II, Henry, Duke of Lancaster, and many others of the nobility secretly wore (clam postremum) the Carmelite scapular under their clothing and died with it on (“Specul. Carmelit.”, I, 139; Zimmermann, 340). In Grosset’s narrative, however, the scapular of the order must be taken to mean the habit of the Carmelites and not as the small Carmelite scapular. As was the custom in medieval times among the other orders, the Carmelites gave their habit or at least the scapular to their benefactors and friends of high rank, that these might have a share in the privilege apparently connected with their habit or scapular by the Blessed Virgin. It is possible that the Carmelites themselves at that period wore the scapular at night in a smaller form just as they did at a later date and at the present time: namely, in about the form of the scapular for the present third order. If this is so they could give laymen their scapular in this form. At a later date, probably not until the sixteenth century, instead of the scapular of the order the small scapular was given as token of the scapular brotherhood (cf. Zimmermann, 351 sqq.; Wessels, “Anal. Ord. Carmel.”, 111 sqq.). To-day the brotherhood regards this as its chief privilege, and one it owes to St. Simon Stock, that anyone who dies wearing the scapular is not eternally lost. In this way the chief privilege and entire history of the little Carmelite scapular is connected with the name of St. Simon Stock. There is no difficulty in granting that Grosset’s narrative, related above, and the Carmelite tradition are worthy of belief, even though they have not the full value of historical proof (see SCAPULAR). That Simon himself was distinguished by special veneration of and love for the Virgin is shown by the antiophories “Flos Carmeli” and “Ave Stella Matutina”, which he wrote, and which have been adopted in the breviary of the Coiled Carmelites. Besides these antiphories other works have been incorrectly attributed to him. The first biographical accounts of Simon belong to the year 1430, but these are not entirely reliable. However, he was not at this time publicly venerated as a saint; it was not until 1435 that his feast was put in the choral books of the monastery at Bordeaux. It was introduced before 1458 into Ireland and, probably at the same time, into England; by a decree of the General Chapter of 1564 its celebration was commanded for the entire order.

Joseph Higgin.
