Stolberg's change of religion attracted great attention. Many of his numerous friends deserted and some abused him, such as Gleim, Jacobi, and others, or turned with bitter opposition against the pamphlet "Wie ward Fritz Stolberg ein Unfreier?". He was charged, and this charge is now even repeated, with having been a Catholic for years before he publicly left the Protestant Church. Men who judged of the facts as they were, as Freiherr von Stein, Goethe, and others, found in his conversion a kind spirit and imputed no ignoble motive to it. They were entirely justified in so doing, for even after his conversion and notwithstanding his genuine piety Stolberg was never able to rid himself altogether of the syncretism of the paternal home. Both in days of good and ill health he sought edification, after his conversion as before, from Protestant hymns and sermons. Even when dying, besides the prayers and hymns of the Church, he read aloud to him Klopstock's poems and passages from the writings of "Wandsbecker Boten", the well-known freemason, Claudius. He was also a warm friend of the later Bishop Sailer. Sailer's orthodoxy was doubted in his own day, but without reason; whatever be thought of his peculiar mysticism, he was a strong believer in the primary virtues of the pope, and a defender of the Church against State encroachments.

As regards Stolberg's literary works, there is no doubt that the quantity exceeded the quality. They may be divided thus: translations, as "Homer" (1778) "Plato" (1796); "Echoes" (1802); poetry as "Ballads" (1779); "Iambics" (1794), "Plays" (1787); "Travels" (1791); novels, as "The Island" (1788). After his conversion he devoted himself chiefly to the preparation of a "Geschichte der Religion Jesu Christi" (1806—), which is marked by a warmth of tone, although not without errors in investigation. Of his works wrote of the Great (1816); a life of St. Vincent de Paul; translated portions of the works of St. Augustine, and also wrote meditations on the Holy Scriptures, which, however, together with the "Büchlein der Liebe", and the polemical pamphlet "Kurze Abfertigung des langen Schmähens des Hofepfrer von Voss" did not appear until after his death. At five Stolberg was deeply influenced by the ideas of Klopstock. However, the poet soon abandoned the antique poetic measures and successfully adopted German rhyme. Most of his poetry is now out of date and scarcely half-a-dozen of his "Lieder" are known to the present generation. Aside from his devotional writings, his historical works are considered well done. At times credulity and lack of critical discernment mar his descriptions of travel and historical writings. Probably his best work is contained in his devotional writings, but even these are not entirely satisfactory, especially the translation of the numerous passages from the Bible, which at times are not very correct.

See the histories of German literature, both the earlier histories and the more modern ones; of the modern ones, in particular the works of Engel and Barrow, and especially Kunze, Geschichte der deutschen Dichtung, III (Stuttgart, 1834), 175 sqq.; Erich Geschicht der deutschen Litteratur, Lat. 1, Die deutsche Geschichte des Mittelalters (Leipzig, 1854), 73-128. Of other works: Menzel, Neues Geschichte der Deutschen, XII, pt. II (Breslau, 1848), 49; Menzer, Geschichte der deutschen Geschichte (Leipzig, 1862); Hennes, Stolberg in den letzten Jahrzehnten seines Lebens (Mains, 1875); Iden, Aus Friedrich Leopold von Stolbergs Jugendjahre (Frankfort, 1870); Jannsen, Friedrich L. Graf zu Stolberg (Freiburg, 1876-77); Hellinghausen, Fr. L. Graf zu Stolberg u. J. H. Voss (Münster, 1892); Iden, Briefe Fr. L. Graf zu Stolberg u. der Steninger an J. H. Voss (Münster, 1891); Romantik, Conversationsbild, I (Ratisbon, 1889), 1-49.

Pius Wittmann.

Joseph, son of the poet Friedrich Leopold, b. 12 August, 1804; d. 5 April, 1839. In 1849 he was president of the general assembly of Catholic Associations held at Ratisbon (2-5 October). At this congress the St. Boniface Association was founded, and Stolberg was elected its first president. In the winter of 1849-50 he made a laborious journey to all the episcopal sees of Germany, and until his death was constantly active in the interests of the association. Since 1894 his son Hermann (b. at Westheim in Westphalia, 26 February, 1843) has been president of the St. Boniface Association.

Katharina, sister of Friedrich Leopold, b. at Bramstedt, 5 December, 1751; d. at Peterswaldau, 22 February, 1832. Gifted with a highly poetical nature, she was one of the most learned women of her day. As she was more the brother and lived with him after the death of his wife, his conversion aroused in her an intense struggle be-
Stole, a liturgical vestment composed of a strip of material from two to four inches wide and about eighty inches long. It has either a uniform width throughout, or is somewhat narrower towards the middle, widening at the ends in the shape of a trapegium or spade. A small cross is generally sewed or embroidered on the stole at both ends and in the middle; the cross, however, is prescribed only for the deacon, who, at Mass, before the priest kisses the stole before putting it on. There are no express precepts concerning the color of the material of the stole, but silk, or at least a half-silk fabric, is most appropriate. Stoles for festivals are generally ornamented with embroidery, especially what are called "vesper" stoles.

Present Use.

The stole is worn only by deacons, priests, and bishops. Deacons and priests it is the specific mark of office, being the badge of the diaconal and priestly orders. The wrongful use of the stole by subdeacons, therefore, would imply the usurpation of a higher order, and would constitute an irregularity. Deacons wear the stole like a sash, the vestment resting on the left shoulder and thence passing across the breast and back to the right side. The stole of the priest extends from the back of the neck across the shoulders to the breast, where the two halves either cross each other or fall down straight according as the stole is worn over the alb or the surplice. The stole is worn by a bishop in the same manner as a priest, except that it is never crossed on the breast, as a bishop wears the pectoral cross. As a mark of order the stole is used in a special ceremony, at the ordination of deacons and priests. At the ordination of deacons the bishop places it on the left shoulder of the candidate, saying: "Receive from the hand of God the white garment and fulness of duty, for God is mighty enough to give His grace in rich measure." At the ordination of priests the bishop draws the part of the stole that rests at the back of the candidate's neck forward over the breast and lays the two ends crosswise, saying:

"Receive the yoke of the Lord, for His yoke is sweet and His burden is light." The Sacred Congregation of Rites has given a large number of decisions concerning the use of the stole. As a general rule it may be stated: the stole is only used, and must be used, at a function peculiar to the deacon, priest, and bishop, a function that presupposes the order (e.g., at the celebration of Mass, when the Blessed Sacrament is touched, when the sacraments are administered), but, not for example, in Vespers. The wearing of the stole by the bishop at Solemn Vespers is an exception; its use by a priest while preaching depends on local custom. The stole is not a specific mark of parochial jurisdiction.

The use of the stole is also customary in the Oriental rites, in which, in the West, it is one of the chief liturgical vestments (Greek, ἱματιον, the deacon's stole, and θιαρακχιας, the priest's stole; Armenian, արան; Syrian and Chaldaic, արոր; Coptic, ὑπαρασχύλου). According to present Oriental custom the stole is a strip of silk about seven or eight inches wide, having at the upper end a hole through which the head is inserted; when the stole is inserted (Syrian, Coptic, and Armenian custom) or opens down the front from the opening for the head (Greek custom). Among the Chaldeans (Nestorians) the stole of the priest resembles that used in the West, and, like this, crosses over the breast. The deacon's stole generally hangs from the left shoulder both in front and at the back, but in certain rites is first wound like a sash around the breast and back. Among the Syrians and Chaldeans the subdeacon also uses the stole, but he first twists it like a scarf around the neck, the ends being then let hang from the left shoulder in front and behind.

History.

We possess few references to the stole anterior to the ninth century. In the East, however, it is mentioned very early, the deacon's stole being frequently referred to even in the fourth and fifth centuries. The priest's stole is not mentioned in the East until the eighth century. The stole is first mentioned in the West in the sixth and seventh centuries (Synod of Braga, 563; Fourth Council of Toledo, 633; Gallican explanation of the Mass), but then as a thing which had long been in use. The earliest evidences of the use of the stole at Rome date from the second half of the fifth century and the beginning of the ninth. But in the ninth century, subdeacons and acolytes still wore both the planets and the stole, although, to distinguish them from the deacons, priests, and bishops, there were definite limitations to their use of the latter vestment. After the ninth century the stole is frequently mentioned, and even then the manner of its use was essentially the same as to-day. In the ninth and tenth centuries in the Frankish Empire the priests were commanded to wear the stole constantly as a badge of their calling, especially when on a journey. In Spain and Gaul in the pre-Carolingian period, the deacons wore the stole over the tunic like the Greeks; in Southern Italy this practice was continued until at least the thirteenth century; at Milan the stole is still worn over the dalmatic. The custom for the priests to wear the stole crossed in front of the breast at Mass was known as early as the Synod of Braga (875), but did not become general until the late Middle Ages.

Development.

Very little is known concerning the nature of the stole in the pre-Carolingian period. Originally it was probably a cloth folded into the form of a band, and gradually developed into a simple band. In the eleventh and twelfth centuries the stole was very long, and at the same time extremely narrow. It was customary, even in the ninth century, to ornament the ends with fringe, tassels, or little bells. Towards the thirteenth century the ends came to be trapezium-shaped; in the fourteenth century this.
shape disappeared, and until the sixteenth century the stole was a strip of material of uniform width, and only ornamented with fringes at the ends. During the course of the sixteenth century it began again to be customary to broaden the ends of the stole; the eighteenth century produced the ugly stoles, in which the ends seemed to spread out into huge spades; these were also called "pocket stoles". It was not until the sixteenth century that the use of the ornamental trimming of a garment, called "stole", which in the course of time disappeared leaving behind only this trimming, has been abandoned. The theory that traced the stole to the Jewish praying mantle has also been given up. At the present time the stole is either traced back to a liturgical napkin, which deacons are said to have carried, or to a neckcloth formerly peculiar to priests, or it is regarded as a liturgical badge (introduced at the latest in the fourth century) which first came into use in the East, and then in the West. It was also brought, as it would seem, to Rome, where it was not at first adopted as a badge of the higher orders of the clergy, but as a distinctive mark of the Roman clergy in general. The giving of the stole to the candidate at ordination in Rome was intended to convey a double symbolism; first, that the elevation to the clergy of the Roman Church occurred de benedictione S. Petri, and secondly that by ordination the candidate entered the service of St. Peter, that is of the Roman Church. It was also customary before the ordination to lay the orarum upon the Confessio of St. Peter. This liturgical badge was called orarum on account of its similarity to the secular orarium both in shape and material, and in the way it was worn. (For further details as to the various hypotheses concerning the origin of the name, cf. J. Braun, "Die liturgische Gewandung", 606-20.) The name "stole", as the designation of the orarium, is of Gallic origin, not Roman. As early as the ninth century the expression "stole" prevailed in the Latin Church; it made its entrance into English about the tenth century, and here also came rapidly into general use. From the thirteenth century the name orarium appears only in isolated instances.

JOSEPH BRAUN.

STOLZ, ALBAN ISIDOR, Catholic theologian and popular author. b. at Bühl, Baden, 3 Feb., 1808; d. at Freiburg, 16 Oct., 1883. He first studied at the gymnasium at Rastatt (1818-27), and then proceeded to the University of Freiburg, where, after attending lectures in jurisprudence for a brief period, he devoted himself to the study of theology (1827-30). Owing to the unfortunate condition of the theological faculty of Freiburg, he fell into scepticism, and could not bring himself to enter the clerical seminary; but after studying philology at Heidelberg from 1830 to 1832 he regained his former faith. Having determined to embrace the clerical state, he entered the ecclesiastical seminary at Freiburg in the autumn of 1832. In August, 1833, was ordained to the priesthood. During the following eight years he was engaged in parochial work, being curate first at Rotenheim in the Murgthal, and from June, 1835, at Neustadt, in the District of Bühl. In the autumn of 1841 he was appointed instructor in religion at the gymnasium of Bruchsal, and on 1 March, 1845, teacher of moral and pastoral theology at the theological college of Freiburg. From May, 1845 he was temporal director of the institution, but his appointment as permanent director was prevented by opponents holding Liberalist views. In 1845 he became doctor of theology, and in the autumn of 1847, despite the opposition to his appointment, was made professor of pastoral theology and pedagogics by the newly founded university. On 13 October, 1848, he was named ordinary professor, and during 1850-80 he was rector of the university. He was made honorary doctor of the theological faculty of the University of Vienna in 1865, and in 1868 archiepiscopal spiritual counsellor. In both the charitable and social fields and in the promotion of the government of the Church; in 1851 he founded at Freiburg the Catholic Journal of the Men's Association after the model of Kolping's, and conducted it as director and later as diocesan president. He likewise introduced into Freiburg the Society of St. Vincent de Paul, of which he remained director until his death. He devoted all the receipts from his writings to the assistance of the poor and charitable institutions, to the needs of the Church, and to home and foreign missions.

As a theologian Stols was too self-opinionated, his theological teachers having failed to give him any fundamental training, and he lacked the exact knowledge of east of the actual matters of the Roman clergy in general. The giving of the stole to the candidate at ordination in Rome was intended to convey a double symbolism; first, that the elevation to the clergy of the Roman Church occurred de benedictione S. Petri, and secondly that by ordination the candidate entered the service of St. Peter, that is of the Roman Church. It was also customary before the ordination to lay the orarum upon the Confessio of St. Peter. This liturgical badge was called orarium on account of its similarity to the secular orarium both in shape and material, and in the way it was worn. (For further details as to the various hypotheses concerning the origin of the name, cf. J. Braun, "Die liturgische Gewandung", 606-20.) The name "stole", as the designation of the orarium, is of Gallic origin, not Roman. As early as the ninth century the expression "stole" prevailed in the Latin Church; it made its entrance into English about the tenth century, and here also came rapidly into general use. From the thirteenth century the name orarium appears only in isolated instances.

STONE

4th ed., 1908), and “Düre Kräuter” (1877; 4th ed., 1908), consist of excerpts from his diaries.

Stolz also wrote a number of pamphlets and brochures, some of polemical and some of moral and ascetic contents, collected under the titles "Kleidung, Gewissen, und Unglück" (2 collections, 1868 and 1887; 4th ed., 1909). His works were issued in nineteen volumes in Freiburg (1871-95), exclusive of the "Legende" and the explanation of the catechism; a popular edition of his works has appeared in twelve volumes (1898-1909).

From his papers was added an autobiographical "Nachtegeburt meines Lebens. Nach dem Tode des Verfassers herausgegeben und durch Erinnerungen an Alvar Stolz ergänzt von Jakob Schmitt" (Freiburg, 1885; 2nd ed., 1908), and "Predigten" (ed. Julius Mayer, Freiburg, 1908). Another valuable contribution is the correspondence of Stolz with the convert, Julie Meinke, edited by Mayer under the title "Führung" (Freiburg, 1909). Extracts from the writings of Stolz are given in the works "Edelsteine aus reicher Schatzkammer. Eine Sammlung schöner Stellen aus den Schriften von Alvar Stolz. Ausgewählt von Heinrich Wagner" (Freiburg, 1906; Sv. Petri, Stockholm), which is roughly correct in its title, as it contains Biblical, Glaubens- and Sittenlehre, aus den Schriften von Alvar Stolz. Geistlichen und Lehrern sowie dem christlichen Volke gewidmet von Karl Teich" (Freiburg, 1909).

Friedrich Lauchert.

STONE. CORNER OR FOUNDATION.—A rite entitled "De beneficium et impositione Primarium Lapidis pro ecclesia edificanda" (Of the blessing and laying of the Foundation Stone for the building of a church) is provided in the Roman Pontifical. As it appears in the same form in the "Giunta Pontificale" of 1520, it is probably at least as old as the time of Patriarchio Piccolomini (fifteenth century), and it may in substance go back two centuries farther to the time of Durandus of Mende (see Catalani, "Pont. Rom.", II, 31). The rite itself is simple enough. Before the work of building a church is set about the rubric directs that adequate provision should be made for its maintenance, also the foundations are to be marked out subject to the bishops. After the laying of the foundation stone, a wooden cross set up to indicate the place where the altar is to stand. In the function which ensues the bishop first blesses holy water with the ordinary forms, then sprinkles the place where the cross stands and afterwards the foundation stone. Upon the stone itself he is directed to endow masses on each side with a knife, and then he pronounces the following prayer: "Bless, O Lord, this creature of stone [reaturam istam lapidem] and grant by the invocation of Thy holy name that all who with a pure mind shall lend aid to the building of this church may obtain sufficient for the healing of their souls. Through Christ Our Lord. Amen." After the litany of the Saints, followed by an appropriate antiphon and Psalm cxxvi, "Unless the Lord build the house" etc., the stone is lowered into its place with another prayer and again sprinkled with holy water. More antiphons and psalms follow, while the bishop once more visits the foundation and divides them into three sections and ending each little tour with a special prayer. Finally the "Veni Creator Spiritus" is sung, and two short prayers. Then the bishop, if he deems it opportune, sits down and exhortation the people to contribute to the fabric, after which he pronounces his blessing and the proclamation of an indulgence.

In the Middle Ages this or some analogous rite was not unknown, but the number of Pontificale which contain anything of the sort is comparatively small (Martene, for example, in his "De ritibus" gives no specimen of the forms used in any such function.) One of the few that provide such a rite is Archbishop Cupidoni's "De festis et octanis in episco- pis Sarum in the early fifteenth century. The function in its details differs considerably from that just described. The only feature that is quite identical is the prayer above quoted, "Benedic, Domine, creau- turam istam lapidem", for blessing the stone, but it is accompanied in the English version with much longer prayer, containing many Scriptural allusions, among the rest, one to the "stone rejected by the builders". Moreover, in England the stone is anointed with chrism while a prayer is said which has reference to this ceremony. Of all this there is no trace in the Roman type of service.

It is not easy to assign a date to the beginning of this practice of blessing the foundation stone. An interesting fragment of evidence is, however, furnished by what is apparently the inscribed foundation stone of the first church of St. Mark atVenice. (See the paper of F. Douce in "Archaeologia", xxvii, 217 sq.) The stone is roughly circular in shape, seven inches in diameter, and only half an inch thick, we have probably to do with a tablet let into the foundation stone proper. It has a roughly scratched head (of St. Mark?) and the inscription in ninth-century characters: ECCL. S. MARTI PRIMAM PETRAM DUX IO. PARTICULO. On the right side is the word Off. The Doge, John Particisco, dedicated the first Church of St. Mark in A. D. 828. Of course this inscription does not make reference to any religious ceremony, but, as forms for the dedication of a church were employed much before this date, it seems unlikely that such a function should not have been accompanied by at least some simple form of ecclesiastical blessing. Moreover, the English liturgist Belethius in the twelfth century was evidently familiar with a rite of this kind: "When the foundations have been dug", he says, "it is necessary that the bishop sprinkle the place with holy water and that he himself, or some priest at his bidding, should lay the first stone of the foundation, which ought to have a cross engraved upon it. And it is absolutely necessary that the church should be built towards the east." (Belethius, ii; P. L., CCII, 10). Similar language is used by Sicardus (P. L., CCXIII, 17 and 20) and Durandus (Rationale, II, 295) in the thirteenth century.

A question arises connected with the practice (1) of laying money upon the stone as a contribution to the fabric of the church and (2) of enclosing coins within or beneath it as evidence of the date. The former custom might not improbably be traced to the terms of the prayer quoted above, which, in blessing the foundation stone, in particular invokes special favours upon all "who with pure mind lend their aid to the building of this church." It is curious, however, that in the one detailed description which we possess of a pagan ceremony of the same sort, viz., that which preceded the restoration of the Roll of the Capitol in the time of Vespasian (Tacitus, "Hist.", IV, 53), we find not only that the foundations were washed with lustral water, but that this attention was especially centred upon the great stone (ingens saxum) which was dragged into its place by magistrates and people together. Moreover, gold unwrought and virgin state were scattered upon the foundations. Stranger still, a similar ceremony seems to have prevailed in ancient Assyria, where an inscription of Nabopolassar (604 B. C.) describes how that monarch, in building a temple to Merodach, cast gold and silver upon the foundations (Schrader, "Keil-Schriftliche Bibliothek", III, 6). Further, the ceremonial rite of laying a foundation stone seems to reach back to the time of Sargon, c. 8800 B. C. (ibid., pp. 85-93). The custom of placing
coins in or under the foundation stone, now very general, needs further elucidation. The earliest definite instance at the moment discoverable is an entry in an account-book at Bruges, which records that, when the palace of the magistrates of the Frano was rebuilt in 1519, an angel (coin) was paid out to be placed under the foundation stone (W. H. J. Weale in "Notes and Queries", 27 Aug., 1870, p. 184). It is just conceivable that this burial of gold and silver may represent the human sacrifice in which a human victim was immolated and buried under the masonry; but the evidence of any widespread custom of this barbarous kind is by no means so conclusive as is maintained by such writers as Tylor (Primitive Culture, 1883, p. 104 sq.) and Trumbull (The Threshold Covenant, pp. 45-57).

For the ecclesiastical see see Donzaint, Commentary on the Pentateuch Romanum, II (Rome, 1799), l-32; Bury, Symbolik (Budapest, 1902), 114 sq. Cf. also Douce in Archæologia, XXXVI (London, 1836), 217 sq.; Trumbull, The Threshold Covenant (Edinburgh, 1889), 45-57.

HERBERT THURSTON.

STONE, MARY JEAN, b. at Brighton, Sussex, in 1853; d. at Battle, Sussex, 3 May, 1906. She was educated at a Calvinist school in Paris and at Aschaffenburg in Germany, where she acquired an intimate knowledge of French, German, and Italian. In Germany Miss Stone was brought into touch with the Catholic religion, and exchanged Protestantism for the "free atmosphere", as she expressed it, of the Catholic Church. She was received into the Church by Monsignor Ketteler, then Bishop of Mainz. Her historical studies, for which, perhaps, she is best known to the public, were on her return to England, encouraged by the fathers of the Society of Jesus. Her talent and painstaking method of research earned her a speedy recognition in her "Mary the First, Queen of England" (1898). This is a study of the unhappy queen which takes first rank amongst historical biographies. Miss Stone also wrote "Faithful unto Death", a study of the martyrs of the Order of St. Francis during the Reformation period (1892); "Eleanor Leslie", a memoir of a noted Scottish convert to the Church (1898); "Reformation and Renaissance", a study of the periods indicated (1904); "Studies from Court and Cloister", reprinted essays, of which perhaps the most interesting are those on "Margaret Tudor", "Sir Henry Bedingfeld", and a "Missing Page from the Idylls of the King" (1905); "The Church in English History", a history text-book for members of the Society of Jesus (1907). Of her "Cathedral Pole", begun for the St. Nicholas Series, was interrupted by her death. She was a frequent contributor to the greater periodicals, the "Dublin Review", "Month", "Blackwood's", "Cornhill", etc., and contributed several articles to The Catholic Encyclopaedia.

G. FLAGGATE.

STONES, MARMADUKE, Jesuit, b. at Draycot, 28 Nov., 1748; d. at St. Helens, 21 Aug., 1834. He was educated at St. Omers, shared in the historic exodus to Bruges, 10-17 August, 1762 (see Saint Omers, College Op), entered the Society of Jesus in 1767, later became a master at the Liége Academy. In 1790 he succeeded as president to Father William Strickland, who then became procurator at London; with his assistance Father Stone succeeded in 1805 in fully guiding the English ex-Jesuites through more than a score of tempestuous years (see Milner, John; Poynier, William). Father Stone's confères, though held together by a common vocation and their still uncanceled vows, were not allowed by the brief of suppression to reunite for purposes of government. He could therefore only urge by the pen, a difficult task, the cause of science; no easy task when one remembers the exterior difficulties, the adventuresome ardor that animated the young men of his college staff, and the peculiar ways into which the middle-aged missionaries were prone to subside. When dealing with the obloquy, he could claim no rights, not even those essential to religious bodies. Fortunately, they were not hostile, though their views on Jesuit property and privileges caused Father Stone much trouble.

On 14 July, 1794, the College at Liége was transferred to Stonyhurst (q. v.). In spite of the magnitude of the task, it was accomplished in good order; and schools reopened 22 October following. A rescript from Propaganda (14 Feb., 1796) confirmed Stonyhurst in all the privileges of Liége. Though it was impossible to hope for a restoration of the Society during the Revolutionary and Napoleonic wars, it was not impracticable to work for a reunion with the Russian Jesuits, whose corporate existence had lately been recognized at St. Petersburg; and Father Stone was successful. On 19 May, 1803, having made his profession, he was declared provincial, and admitted others to their vows, for England, Ireland, and Mary- land; on 29 September a novitiate was opened at Hodder, Rome, however, gave no public recognition of the restored order, though the pope privately expressed his pleasure. The Bull of Restoration finally came (7 August, 1814), the interpretation was added (2 Dec., 1816), that it was to apply only where the secular government wished: in England, therefore, the Jesuits were to be regarded as still in their old position (see Society of Jesus). The College had grown from 52 pupils, when it was opened to England and the Jesuit missions had prospered steadily. Father Stone, notwithstanding his years, continued to act as college minister till 1827, when he finally retired to St. Helens. Here the good news reached him (1829) that the English Jesuits had at last been formally recognized. Though he might not look an ideal leader, Father Stone was wonderfully adapted to his circumstances; his unfailing kindness, simplicity, sincerity, patience, and self-devotion were irresistible. If he acted slowly, he made no mistakes; he was capable of undertaking great enterprises, and of carrying them through with strong tenacity of purpose.

J. H. POLLEN.

STONES, Precious, in Bible.—Precious stones are remarkable for their colour, brilliancy, or rarity. Such stones have at all times been held in high esteem everywhere, particularly in the East. We gather from various passages of Sacred Scripture that very early the Orientals appropriated them for divers ornamental uses: rings, bracelets, collars, necklaces; the crowns of kings as also their garments and those of their officers and of the priests were set with precious stones. The Hebrews obtained their precious stones from Arabia, India, and Egypt. At the time of the Exod. Egypt was flooded with riches, and we know how the Israelites on leaving the land possessed themselves of many precious stones according to the commandment of God (Ex., iii, 22; xii, 35-36). Later when they were settled in Palestine they could easily obtain stones from the merchant caravans travelling from Babylonia or Persia to Egypt and those from Saba and Rehema to Tyre (Ezech., xxvii, 22). Solomon even equipped a fleet which returned from Ophir laden with precious stones (III Kings, x, 11).

The precious stones of the Bible are chiefly of interest in connexion with the breastplate of the high-priest (Ex., xxviii, 17-20; xxxix, 10-19), the treasure of the King of Tyre (Ezech., xix, 10-17), the foundations of the New Jerusalem (Tob., xiii, 18-17), in the Greek text, and more fully, Apoc., xxi, 18-21). The twelve stones of the breastplate and the two stones of the shoulder-ornaments seem to have been
considered by the Jews as the most precious; they undoubtedly serve as the standard of whatever is beautiful and rich beyond measure; both Ezek., xxviii, 13, and Apoc., xxi, 18–21, are patterned after the model of the amethyst; no wonder therefore that the Semites entering its composition should have been the objects of a considerable amount of literature from the fourth century. That such a literature should have arisen is of itself convincing proof that the identification of the stones was no easy problem to solve. It must be remembered that so too in the Septuagint translation the stones to which the Hebrew names apply could no longer be identified, and the translators rendered the same Hebrew name by different Greek words. So also did Josephus who, however, claimed he had seen the actual stones. This, coupled with the fact that the late Biblical lists, although vividly depending on that of Exodus, exhibit here and there notable changes, makes the task of identifying the stones a very arduous one. It should be noticed that the ancients did not classify their precious stones by analyzing their composition and crystalline forms: names were given them from their colour, their use, or from some special property, and it happens that stones of the same or nearly the same colour, but of different composition or crystalline form, bear identical names. Another difficulty is due to the names having changed in the course of time: thus the ancient chrysolite is our topaz, the sapphire is our sapphire. Hence we know most of the stones accounted precious in Egypt, Assyria, and Babylonia. Owning to the neighbourhood and influence of these countries on Palestine, it is highly probable that the store of substances called in the Bible "desirable stones" (Is., liv, 12) must be contained in the fair long list of the precious and ornamental stones of the Assyro-Babylonians and the Egyptians.

This is not the place to enter upon a critical and exegetical discussion of the Biblical passages above referred to, where lists of precious stones are given. It will be sufficient to treat briefly of these stones according to the alphabetical order of the English names.

Agate, Heb. אגר; Sept. δρυκόλεος; Vulg. achates (Ex., xxviii, 18; xxxix, 12, in Heb. and Vulg.; also Ex. xxviii, 13, in Sept.).—This is the second stone of the third row of the rational, where it very probably represented the tribe of Scewr. The derivation of the Hebrew word is unknown, but to have been acknowledged to be the agate. Fürst (Hebr. u. Chald. Wörterb.) derives אגר from אגר, "to flame"; it may also be referred to Saba (אגר), whence caravans brought the stone to Palestine. The Greek and Latin names are taken from the river Achates, the modern Dera, a short distance above the town of Tiberias (Theophrastus, De lapid., 38; Pliny, Hist. nat., XXXVII, liv.). The stone belongs to the silex family (chalcedony species) and is formed by deposits of siliceous beds in hollows of rocks. To this mode of formation are due the bands of various colours which it contains, and its notable luster is susceptible of a high polish. To this stone various medicinal powers were attributed until far into the Middle Ages. It was supposed to render the action of all poisons void, to act as a check against the infection of contagious disease; if held in the hand or in the mouth it was believed to alleviate fever. The eagle, it was said, placed an agate in its nest to guard its young against the bite of venomous animals. The red agate was credited with the power of sharpening the vision. At present agate and onyx differ only in the manner in which the stone is cut; if it is so cut as to show the layers of colour, it is called agate; if cut parallel to the lines, it is merely an agate that was banded with well-defined colours was the onyx. The banded agate is used for the manufacture of cameos.

Amethyst, Heb. אֲמוֹתִי; Sept. ἀμέθυστος, also Apoc., XIV, 20; xxii, 30, where it is the twelfth and last stone of the foundation of the New Jerusalem. It is the third stone in the third row of the rational, representing the tribe of Issachar (Ex., xxviii, 18; xxxix, 13); the Septuagint interprets it among the Heb. names of the Kings of Tyre (Ezech., xxviii, 13). The Greek name alludes to the popular belief that the amethyst was a preventive of intoxication; hence beakers were made of amethyst for carousals, and invertebrate drinkers wore amulets made of it to counteract the action of wine. Aben- esar and Kimchi explain the Hebrew of דֵּשֶׁת, "to embrace," "to embrace," in its first meaning signifies "to be hard" (Fürst, Hebr. Handwörterbuch). We have no reason to doubt the accuracy of the translation since we find a general agreement among the various versions; Josephus (Ant. Jud., III, vii, 6) also has "amethyst"; the Targum of Onkelos and the Syriac Version have "cal's eye", indicating the colour. The amethyst is a brilliant transparent stone of a purple colour resembling that of diluted wine and varying in shade from the violet purple to rose. There are two kinds of amethysts: the oriental amethyst, a species of sapphire, is very hard (cf. Heb. וֹרָם, which is hardly distinguished from the diamond; the occidental amethyst is of the silex family, hence different in composition from the oriental stone. But the identity of names is accounted for by the identity of colour. The occidental amethyst is easily engraved. It is in demand of various sizes. Its shape is different from the round pebble to the hexagonal, pyramid-capped crystal.

Beryl, Heb. בָּרֶל; Sept. βηρολος; Vulg. berylclus.—In the breastplate this stone occupied the third place of the second row and was understood to represent Nephthali (Ex., xxviii, 19; xxxix, 13); according to the Septuagint it is the second of the fourth row, and third of the fourth according to the Vulgate; Ezech., xxviii, 13, mentions it in the third place; it is cited also in the Greek text of Tob., xiii, 17, but is wanting in the Vulgate; Apoc., xxi, 20, gives it as the eighth stone of the foundation of the New Jerusalem. There is great difference of opinion as to the exact Hebrew correlatives of this word. The best supported is בָּרֶל, though בָּרֶל also does not lack probability. בָּרֶל has likewise been suggested, but without sufficient reason, it seems, for to this Hebrew בָּרֶל must correspond jasper, Gr. jasper, Lat. jaspis. This mistaken idea rests probably from the supposed fact that the term בָּרֶל must have occupied the same position as in the original. This is not the case, as a comparison of the Greek and Latin translations shows; in the Vulgate, indeed, we find jasper in the same position as בָּרֶל, whereas the Greek βηρολος does not correspond to an Latin berylclus; the same way has been hastened as regards the translation of the Hebrew into Greek, especially as in the old manner of writing and the two words בָּרֶל and בָּרֶל might be easily confused. The authority of Josephus is here of little weight, for he most likely quoted from memory, the position of the word being at variance from his text in the Targum of Jud., V, v, 7; Ant. Jud., III, vii). Our choice, therefore, is limited to the two words בָּרֶל and בָּרֶל. By comparing various texts of the Vulgate—the Greek is very inconsistent—we find that בָּרֶל is always translated by onyx; this alone seems sufficient to render the opinion that the beryl corresponds to Heb. בָּרֶל. That the beryl was among the stones of the rational appears beyond doubt since all translations mention it. The etymology giving us no special help, by elimination we come to the generally accepted conclusion that beryl and בָּרֶל stand for each other. The beryl is a species of jasper, phryne, and glauca. The beryl and the emerald are of the same species. The difference between the beryl, the aqua marine, and the emerald is determined by the colouring matter and the peculiar shade of each.
berries, though sometimes white, is usually of a light blue varying into a yellowish green; the emerald is more transparent and of a finer hue than the beryl; as a gem, it is more glittering here than the and the aqua marine is a beautiful sea-green variety. The emerald derives its colour from a small quantity of oxide of chromium; the beryl and aqua marine from a small quantity of oxide of iron. The beryl occurs in the shape either of a pebble or of a hexagonal prism. Its metamorphic stone, slate, schists, gneiss, and granite. In ancient times it was obtained from Upper Egypt and is still found in the mica slate of Mt. Zaborah. The largest beryls known have been found in Acworth and Grafton, New Hampshire, and in Royalston, Massachusetts, United States of America; one weighing 2900 lb., measured 8 inches in length, 32 inches through one direction and 22 in another transverse. The beryl has been employed for cabalistic uses (Aubrey, "Miscellaneous").

CARBUNCLE. Heb., "הנ"מ; Sept., ἀβραυ (Ex., xxviii, 18; xxxix, 11; Ezech., xxviii, 10; omitted in Ezech., xxviii, 16; Vulg., carobiausus). This word, the stone of the second row of the rational; it represented Juda, and is also the eighth stone mentioned of the riches of the King of Tyre (Ezech., xxviii, 13), being, not a native product, but an object of importation (Ezech., xxviii, 16); it is perhaps the third stone of the fourth era, like the Saba; the ancient authors are far from agreeing on the precise nature of this stone. It very probably corresponds to the ἄβραυ of Theophrastus (De lap., 18), the *carbunculus* of Pliny (Hist. nat., XXXVII, iii), the chorkelonioum of Petronius, and the andriouan of the Arabs. If so it is a red glowing stone, probably the Oriental ruby, though the appellation may have been applied to various red gems. Theophrastus says of it: "Its colour is red and of such a kind that when it is held against the sun it resembles a burning coal." This description tallies fairly well with that of the Oriental ruby. He relates also that the most perfect carbuncules were brought from Carthage, Marseilles, Egypt, and the neighbourhood of Siena. Carbuncules were named differently according to the place whence they came. Pliny (Hist. nat., XXXVII, xxx) cites the lithizeotes, or Indian carbuncules, the amethystion, the amethyst, of which the amethyst has, and the stites. Most probably, then, the name of carbuncle applied to several stones.

CARNELIAN. Heb., מֶשֶן from מְשָׁן, to be red, especially "red blooded"; Sept. and Apoc. ραφάν; Vulg. sardius; the first stone of the breastplate (Ex., xxviii, 17; xxxix, 10) representing Ruben; also the first among the stones of the King of Tyre (Ezech., xxviii, 13); the sixth foundation stone of the celestial city (Apoc., xxi, 19). The word ραφάν has sometimes been rendered sardonix; this is a mistake, for the same word is equivalent to carnelian in Theophrastus (De lap., 55) and Pliny (Hist. nat., XXXVII, xxxi), who derive the name from that of the city of Sardes where, they say, it was first found. The carnelian is a siliceous stone of the species of chalcedony. Its colour is a flesh-red hue, varying from the palest flesh-colour to a deep blood-red. It is of a conchoidal structure. Usually its colour is without clouds or veins; but sometimes delicate veins of extremely light red or white are found arranged much like the rings of an agate. Carnelian is used for rings and seals. The finest carnelian are found in the East Indies.

chalcedony. Apoc., xxi, 19, χαλκός; Vulg. chalcedonioum, the third foundation stone of the celestial Jerusalem. Some claim that writing χαλκόν is erroneous, and that the stone could be called χάλας, the carnelian. Though this view is countenanced by few MSS., yet it is not devoid of reason; for whilst the other eleven stones correspond to a stone in the rational it is singular that this should be the only exception.

Moreover the ancients very often confounded the names of these two stones. The chalcedony is a siliceous stone. Its name is supposed to be derived from Chaledon, in Bithynia, whence the ancients obtained the stone. It is a species of agate and bears various names according to its colour. It is usually made up of concentric circles of various colours. The most valuable of these stones are found in the East Indies. Setts for rings, seals, and, in the East, cups and beakers are made of chalcedony, slate, schist, gneiss, and granite. In ancient times it was obtained from Upper Egypt and is still found in the mica slate of Mt. Zaborah. The largest beryls known have been found in Acworth and Grafton, New Hampshire, and in Royalston, Massachusetts, United States of America; one weighing 2900 lb., measured 8 inches in length, 32 inches through one direction and 22 in another transverse. The beryl has been employed for cabalistic uses (Aubrey, "Miscellaneous").

CHONCHOD. Heb., כֹּךְ (Is., liv, 12; Ezech., xxviii, 16; Sept., θυγατ (Is., liv, 12); Vulg. jaspis (Is., liv, 12), chodchoud (Ezech., xvii, 16). This word is used only twice in the Bible. The chodchoud is generally identified with the Oriental ruby. The translation of the word in Is. both by the Septuagint and the Vulgate is not uncertain as the word is not transliterated; the Greek χρύσε is explained by considering how easy it is to mistake a χ για την στις. "What chodchoud signifies," says St. Jerome, "I have until now not been able to find" (Comment. in Ezech., xvii, 16, in P. L., XXV, 255). In Is. he follows the Septuagint and takes chodchoud by Hiphil. The word is probably derived from יָשָּׁב, "to throw fire," the stone was therefore brilliant and very likely red. This supposition is strengthened by the fact that the Arabic word kadżadżat, evidently derived from the same stem as chodchoud, designates a bright red. It was a colour akin to the one of the Oriental ruby, perhaps also the carbuncle (see above).

CHRYSOLITE. Heb., כְֹ֔רֶשׁ (Ex., xxviii, 20; xxxix, 13; Ezech., i, 10; x, 9; xxviii, 13; Cant., v, 14; Dan., x, 6; Sept., χρυσόλευκος (Ex., xxviii, 20; xxxix, 13; Ezech., xxviii, 13); χρυσόλευκος (Cant., v, 14; Dan., x, 6); χρυσόν (Ezech., i, 10; x, 9); Vulg. chrysollithus (Ex., xxviii, 20; xxxix, 13; Ezech., x, 9; xxviii, 13; Dan., x, 6); hyacinthus (Cant., v, 14); quass visio marit (Ezech., i, 10); Apoc., xx, 20, χρυσόλευκος; Vulg. chrysollithus.

This is the tenth stone of the rational, representing the tribe of Zabulon; it stands fourth in the enumeration of Ezech., xxviii, 13, and is given as the seventh foundation stone of the celestial city in Apoc., xxi, 20. In none of the Hebrew texts is there any hint as to the nature of this stone; however, since the Septuagint habitually translates the Hebrew word χρυσόλευκος, except where it merely transliterates it and in Ezech., x, 9, since, moreover, the Vulgate often use very few exceptions, and Aquila, Josephus, and St. Epiphanius agree in their rendering, we can safely accept the opinion that the chrysollith of the ancients, which is our topaz, was meant. The word tharsis very likely points to the place whence the stone was brought (Tharsis). The modern chrysollith is a greyish or yellowish gem having a prism terminated by two triangular pyramids. The topaz, or ancient chrysollith, is an octagonal prism of an orange-yellow colour; it is composed of alumina, silica, hydrofluoric acid, and iron. It is found in Ceylon, Arabia, and Egypt, and several species were admitted to exist (Pliny, "Hist. nat.", XXXVII, xiv). In the Middle Ages it was believed to possess the power of dispelling the fears of night and of driving away devils; it was also supposed to be an excellent cure for the diseases of the eye.

CHRYSOPRASUS. Greek, χρυσοπράσος, the tenth foundation stone of the celestial Jerusalem (Apoc., xxi, 20). This is perhaps the agate of Ex., xxviii, 20, and xxxix, 13, since the chrysoprasus was not very well known among the ancients. It is a kind of green agate, composed mostly of silica and a small percentage of nickel.

CHRYSOLITE. Heb., כֹּרֶשׁ (Job, xxviii, 18; Prov., xxv, 7; Ezech., xvi, 16; Sept., χρυσόλευκος; Vulg. chrysollithus, sericin.—The Hebrew word seems to come from כֹּרֶשׁ or כְֹ֔רֶשׁ, "to be high," probably denoting a resemblance to a tree. It may also be that the name came from a strange country, as did the coral itself. It is
obvious that the ancient versions have completely missed the sense; they even felt it so well that in one place they merely transliterated the Hebrew word. In Ezech., xxvii, 16, coral is mentioned as one of the articles brought by the Syrians to Tyre. The Philistians referred to “emerald” and “glittering coral” in their references to sea-gems. These corals were obtained by Babylonian pearlfishers in the Red Sea and the Indian Ocean. The Hebrews made apparently very little use of this substance, and hence it is seldom mentioned in their writings; this explains also the difficulty felt by the translators in rendering the word. Gesenius (Thesaurus, p. 1113) translates פֶּלֶם (Job, xxviii, 18; Prov., iii, 15; vii, 11, xx, 15; xxxi, 10; Lam., iv, 7) by “red coral”; but many maintain that the pearl is meant in these passages. The coral spoken of in the Bible is the precious coral (corallium rubrum), the formation of which is well known. It is a calcareous secretion of certain polypies, having a tree-like formation. At present coral is found in the Mediterranean, the northern coast of Africa furnishing the dark red, Sardinia the yellow or salmon-coloured, and the coast of Italy the rose-pink coral. One of the greatest coral-fisheries of the present day is the Torre del Greco, near Naples.

The Hebrew word פֶּלֶם (Job, xxviii, 18; Prov., iii, 15; Lam., vii, 11; Psalm, iv, 7) (Ezech., i, 12, 22) both words signify a glassy substance; Sept., γαβίλ, Vulg., eminentia (Job, xxviii, 18; κόσμῳστος, cristallus (Ezech., i, 22). This was a transparent mineral resembling glass, most probably a variety of quartz. Job places it in the same category with gold, onyx, sapphire, glass, coral, topaz, etc. The Targum renders the פֶּלֶם of Ezech., by “ice”; the versions translate by “crystal”. We find crystal again mentioned in Apos., iv, 6; xxi, 22; xxi, 22. In Ps. cxviii, 17, and Ezech., xlix, 22, there can be no question but that ice is meant. The word פֶּלֶם, Job, xxviii, 18, which signifies crystal, occurs in various places.

DIAMOND, Heb. אֶפֶלַת; Sept., διαμάντις; Vulg., adamas, adaman[tus] (Ezech., iii, 9; Zech., vii, 12; Jer., xvii, 1). Whether or not this stone is really the diamond cannot be ascertained. Many passages in Holy Writ point indeed to the qualities of the diamond, especially in hardness (Ezech., iii, 9; Zech., vii, 12; Jer., xvii, 1). In the last Jeremias informs us of a use to which this stone was put, which agrees admirably with the use to which the diamond is put at this day: “The an of Juda is written with a pen of iron, with the point of a diamond”. But although diamond is used to engrave hard substances, yet it should be remarked that there is no stone of the same purpose. Septuagint omits the passages of Ezech. and Zech., while the first five verses of Jer., xvii, are missing in the Cod. Vaticanus and Alexandrinus, but are found in the Complutensian edition and in the Syriac and Arabic Versions. Despite the qualities mentioned in the Bible, the stone spoken of in the places referred to may be the limpid corindon, which exhibits the same qualities, and is used in India for the same purposes as we use the diamond. The diamond was not very well known among the ancients; and if we add to this reason the similarity between the words σμῖλος, the Egyptian name for corundum, and the Hebrew אֶפֶלַת, we must conclude that the limpid corindon was intended. Aben-Ezra and Abarbanel translate אֶפֶלַת by “diamond”, but פֶּלֶם we have shown above to be the best sense of the word and is made mostly of a white transparent colour, but sometimes tinted. The white diamond is the most precious, owing to its beauty and rarity. South Africa contains the largest diamond fields.

EMERALD, Heb. אֹרֵב; Sept., ὀρέβιος; Vulg., smaragdus; the third stone of the rational (Ex., xxviii, 17, 19); represents the tribe of Levi; in Ezech., xxviii, 13, the ninth stone in Ezech., xxviii, 13, and the fourth foundation stone of the celestial Jerusalem (Apos., xxi, 19). The same precious stone is also mentioned in Tob., xii, 18 (Vulg. 21); Jud., x, 21 (Vulg. 19); and in the Greek text of Eclus., xxiii, 8, but there is no indication of it in the MS. B. of the Hebrew text, found in the Genizah of Cairo in 1896. That פֶּלֶם (Job, xxviii, 18) is practically all versions, as well as Josephus (Ant., Jud., iii, vii, 5; Bell. Jud., v, v, 7) translate it thus. The Hebrew root פֶּלֶם, from which it is probably derived, signifies “to glitter”, which quality agrees eminently with the emerald. The word may also come from the Sanskrit marakata which is certainly the emerald; the Gk. form differs but is practically distant from the Hebrew that no similarity can be found between them. In Job, xii, 21; Jud., x, 19; Eclus., xxiii, 8; and Apos., xxi, 19, the emerald is certainly the stone spoken of. The word פֶּלֶם also has sometimes been translated by smaragdus; but this is a mistake, for פֶּלֶם is the carbuncle. The emerald is a green variety of beryl and is composed of silicate of alumina and glaucescence. Its form is a hexagonal crystal; its colour is a brilliant reflecting green. The stone admits of a high polish. The emerald is found in metamorphic rocks, granites, and mica schistes; the finest specimens come from Muso, Bogota, South America.

HYACINTH, Greek ὑάκινθος; Vulg., hyacinthus (Apos., xxi, 20); the eleventh stone of the foundation of the heavenly city. It corresponds very probably to Heb., the ligniris of Ex., xxviii, 19; xxxix, 12 (St. Epiph., De duodecim gentibus in P. G., XLIII, 300). The stone spoken of in Cant., x, 14, and called hyacinthus in the Vulgate is the ruby, which has been shown above to be the chrysolite. The exact nature of the hyacinth cannot be determined, the name having been applied to several stones of similar colours, and most probably designating stones of the same hardness as the flower hyacinth. Hyacinthus is a zircon of a crimson, red, or orange hue. It is harder than quartz and its cleavage is undulating and sometimes lamellated. Its form is an oblong quadrangular prism terminated on both ends by a quadrangular pyramid. It was supposed to be a talisman against torments.

JASPER, Heb. אֲרָבָא; Sept., ἄρβα; Vulg., jaspis; the twelfth stone of the breastplate (Ex., xxviii, 18, xxxix, 11), representing Benjamin. In the Greek and Latin texts it comes sixth, and so also in Ezech., xxviii, 13; in the Apocalypse it is the first (xxi, 19). Despite this difference in position it is undoubtedly the ἄρβα of the Hebrew text. The jasper is an anhydrate quartz composed of silica, alumina, and iron. There are jaspers of nearly every colour. It is a completely opaque stone of a conchoidal cleavage. It seems to have been obtained by the Jews from India and Egypt.

LIGURUS, Heb. מְגִלֵּר; Sept., διαμάντις; Vulg., ligurius; the first stone of the third row of the rational (Ex., xxviii, 19; xxxix, 12), representing Gad. It is missing in the Hebrew of Ezech., xxviii, 13, but present in the Greek. This stone is probably the same as the hyacinth (St. Epiph., loc. cit.). This identification is admitted by tradition. We find that the twelve foundation stones of the celestial city in Apos., xxi, 19-20, correspond to the twelve stones of the rational, from which it would appear that the ligurus is the same as the hyacinth. Some have identified it with the turmaline, a view rejected by most authorities.

ONYX, Heb. אֹרֵב; Sept., ὀρέβιος; Vulg., lapis onychius; the eleventh stone of the breastplate in the Hebrew
and the Vulgate (Ex., xxviii, 20; xxxix, 13), representing the tribe of Joseph; in the Sept. it is the twelfth stone; in the Targum it is fifth, in the Talmud it is fourth; but the twelfth in the Greek, it is called sardonix and comes in the fifth place in Apoc., xxi, 20. The exact nature of this stone is disputed. Many think, because the Greek word βηρυλλος occurs instead of the Hebrew בְּרֵי ל בַּתִּית, that the beryl is meant; but this is not so (see above, on Beryllum). The Vulgate makes the equivalent of the Hebrew בְּרֵי ל בַּתִּית. True, this alone would be a weak argument; but we have other and stronger evidences in the fact that the Hebrew word occurs frequently in Holy Writ (Gen., ii, 12; Ex., xxv, 7; xxv, 9, 27; I Par., xxxiii, 2, etc.) and on each occasion, as in Job, xxxvi, 16, it is translated in the Vulgate by lapis myochinae (lapis sardonicus in Job, xxxvi, 16). The Greek is very inconsistent in its translation, rendering δηλιγχων differently in various texts; thus in Gen., ii, 12, it is δηλιγχων ρηθαι in Ex., xxv, 7; xxxvi, 9; δηλιγχων in Ex., xxviii, 9; xxxvi, 27; xxxvi, 6; σώλων, a mere transcription of the Hebrew word in I Par., xxxix, 2, and δηλιγχων in Job, xxxvi, 16. The other Greek translators are more uniform: Aquila has σάρδονες; Symmachus and Theodotion have δηλιγχων; the paraphrase of Onkelos had δηλιγχων, the Syriac berula, both of which evidently are the Greek βηρυλλος, "beryl." Since the translations do not observe the usual order as they read through the stones of the rational (see Beryllum above), we are in no way bound to accept the Greek βηρυλλος as the translation of בְּרֵי ל בַּתִּית, and relying on the testimony of the various versions we may safely hold the onyx is the stone signified by בְּרֵי ל בַּתִּית. The onyx is a variety of quartz analogous to the agate and other crypto-cristalline species. It is composed of different layers of variously coloured carnelian much like banded agate in structure, but the layers are in even or parallel planes. Hence it is well adapted for the cutting of cameos and was much used for that purpose by the ancients. The colours of the best are perfectly well defined, and are either white and black, or white, brown, and black. The best specimens are brought from India. Sardonix has a structure like onyx, but is composed usually of alternate layers of white chalcedony and carnelian, although the carnelian may be as broad as the white layer. The white, brown, and black chalcedony. The ancients obtained the onyx from Arabia, Egypt, and India.

Pearl.—The pearl can hardly be termed a stone; we may nevertheless, by giving the word "stone" a broad meaning, treat here of the pearl, as we have treated of coral (see above), also Furst "Hassemer, Werther, etc., which Gesenius renders by "red coral"; "כֶּרֶם, Esth., i, 6, which is translated in the Vulg. by lapis parius, "marble"; the Arabic dar, however, means "pearl," and thus also Furst renders the Hebrew word. In the New Testament we find the pearl mentioned in Matt., xiii, 45, 46; I Tim., ii, 9; etc. The pearl is a concretion consisting chiefly of carbonate of lime found in several bivalve mollusks, but especially in the articula margarifera. It is generally of a whitish blue, sometimes showing a tinge of pink; there are also yellow pearls. This gem was considered the most precious of all among the ancients, and was obtained from the Red Sea, the Indian Ocean, and the Persian Gulf. The most of the pearls of the ancients were obtained in the Persian Gulf, and especially in the Gulf of Persia. The pearl is of great value, and is used in jewelry.

RUBY.—This may have been either the caruncle or the chodchod (see above). There is, however, a choice between the oriental ruby and the spinel ruby; but the words may have been used indiscriminately for both. The former is extremely hard, almost as hard as the diamond, and is obtained from Ceylon, India, and China. It is considered a most precious gem.

SARDION, Heb. מַגֵּד; Septuag. κρύσταλλος; Vulg. saphirius.—The sapphire was the fifth stone of the rational (Ex., xxviii, 19; xxxix, 13), and represented the tribe of Dan. It is the seventh stone in Essech., xxi, 14 (in the Hebrew text, for it occurs fifth in the Greek text); it is also the second foundation stone of the wall of the celestial Jerusalem (Apoc., xxi, 20). The oriental sapphire is a hyaline corindon of a beautiful blue colour; it is composed of nearly pure alumina, its colour being due to the presence of oxide of iron. The ancients gave the name of sapphire also to our lapiz-lazuli, which is likewise a blue stone, often speckled with little white spots which give it the appearance of being sprinkled with gold dust. It is composed of silica, alumina, and alkalai; it is an opaque substance easily engraved. Which of these two is referred to in the Bible? Both may be meant, but the lapiz-lazuli seems more probable, for as often as its qualities are described, it is spoken of as being easily engraved (Lam., iv, 7; Ex., xxviii, 17; xxxix, 13). The sapphire was obtained from India.

SARDONYX; Sard.—These two words are often confounded by interpreters. The sard is the carnelian, while the sardonix is a species of onyx.

TOPAZ, Heb. מַכֻּל; Septuag. µεντός, Vulg. topazius, the second stone of the second foundation (Ex., xxviii, 17; xxxix, 19), representing Simeon; also the second stone in Essech., xxviii, 13; the ninth foundation stone of the celestial Jerusalem (Apoc., xxi, 20); also mentioned in Job, xxviii, 19. This topaz is generally believed to have been the chrysolite rather than our topaz. The oriental topaz is composed of nearly pure alumina, silica, and fluoric acid; its shape is an orthohombic prism with a cleavage transverse to its long axis. It is extremely hard and has a double refraction. When rubbed or heated it becomes highly electric. It varies in colour according to the country from which it comes. The Australian topaz is green or violet, the Tasmanian clear, bright, and transparent; the Saxon pale violet; the Bohemian sea-green and the Brazilian red, varying from a pale red to a deep carmine. The ancients very probably obtained it from the East.

STONING in Scripture.—Palestine being a very rocky country, the abundance of stones made it natural to use them as missiles. Stone throwing might be merely a mark of hatred and contempt (II Kings, xvi, 42), or the meanest carrying out murderous intentions against which provision had to be made in the Law (Ex., xxi, 18; Num., xxxv, 17). Stoning to death which was at first an expression of popular fury analogous to "lynching," later came to be a natural and legally recognized method of execution. It was thus regulated by law as an appointed means of capital punishment (Deut., xvii, 5-7; Acts, vii, 58). Death by stoning is prescribed in the Pentateuch as the penalty for eighteen different crimes including Sabbath-breaking, but for one crime only—murder—is it the penalty prescribed in all the codes. The execution of the criminal usually took place outside the city walls, and according to Josia, xix, 2, the stones were to cast the first stone: "Thou shalt bring forth the man or the woman, who have committed that wicked thing, to the gates of thy city, and they shall be stoned. By the mouth of two or three witnesses shall he die who is to be slain. . . . The hands of the witnesses shall be first upon him to kill him, and
STONYHURST COLLEGE, WEST FRONT

STONYHURST COLLEGE, FROM THE SOUTH
afterwards the hands of the rest of the people". (Deut. xvii, 5-7). Stoning is also mentioned in Acts, vii 55-58, as the means by which Stephen the first Christian martyr was put to death: "And casting him forth without the city, they stoned him."

James F. Driscoll.

Stonnes, James, English priest, b. 1513; d. after 1588. He was ordained at Durham by Bishop Tunstall in 1539. After Elizabeth's accession he never entered the church, but wandered about Durham and Yorkshire, with occasional visits to Lancashire, where he was known as Uncle James, saying Mass as often as the opportunity of time, place, and company gave leave. He was eventually arrested by the Earl of Derby about midnight 19 Nov., 1585, at the house of a very poor man, a victualler, and an under-tenant, living eight miles from the earl's seat, Newpark, in the Parish of Ormskirk, Lancashire. As he would not commit himself to the royal supremacy, though he acknowledged the queen as temporal sovereign, and wished she might have Nestor's years, and as he confessed that he regarded her ecclesiastical policy as contrary to God's law, and refused to give up the use of the Mass, he was committed to the New Fleet, Manchester, where, as he was then aged 72, it is probable he died. At the time of his arrest he had with him, an alab, a surplice or amice, a thread girdle, a vestment, a stole, a fannet, "a Corpus and a Corpus Case", a super-altar, a tin chalice with its own two little pewter boxes in a leather case for oil and chisim, a crewet, two little pewter bottles for wine, three crucifixes, an Agnus Dei, "a pithouse with the pope's name in the Calender in many places", a piece of an old primer in parchment, a piece of an old book of sermons, and an old Mass-book.

John B. Wainwright.

Stonyhurst College.—The history of Stonyhurst as a school dates back to a period considerably prior to its foundation on English soil in 1794. Stonyhurst is the lineal descendant of the college founded by Father Robert Persons in 1592, at St. Omer in Artois, for English boys, compelled by the penal laws of Elizabethan times to seek on the continent that religious education which was denied them at home. Driven from St. Omer in 1762 by the hostility of the Parliament of Paris, the college was transferred to Bruges, which was under the protection of the Empress Maria Theresa till dispersed by the suppression of the Society in 1773. Within the same year, however, the staff and students had reassembled and continued their collegiate life at Liege under the patronage of the prince bishop of that city. The approach of the French revolutionary armies in 1794 again compelled the college to seek a new home, and this time it found one in its native land at the mansion of Stonyhurst Hall in Lancashire, which had been placed at the disposal of the community by Mr. Thomas Weld of Lulworth, heir of the Shireburns of Stonyhurst, at the personal cost of the college. By a strange coincidence Stonyhurst Hall had been rebuilt by Sir Richard Shireburn in 1592, the very year of the foundation of St. Omer; so that the scholastic life of the college, which has now been established at Stonyhurst for 117 years, but reached to 2000 years at Lulworth, is coeval with that of its present domicile.

The character of the education given at Stonyhurst has, needless to say, varied with the requirements of the time. The predominant position occupied by classical educational ideals in the earlier half of the nineteenth century—a predominant use of the Ratio Studiorum of the Jesuits—has gradually been modified to the development of the study of modern languages and of science, and the demands of public examinations. Hence the curriculum of Stonyhurst at the present day differs in no essential particular from that of the leading public schools in England. It includes classical literature and the chief European languages, history, geography, mathematics, physics, chemistry, astronomy, philosophy, and ancient and modern history. At the Stonyhurst School, as at the Royal College of Surgeons, as well as at the Universities, advanced courses in these subjects are followed by students of the Society, who are engaged in such additional subjects as pedagogy, biology, anthropology, etc. The "Philosophers", numbering usually about twenty, possess the status of university students. They have private rooms and private theses, are quite separate from the rest of the school, though they may join the "Higher Line" in games. Their studies include courses of philosophy, law, and political economy; in addition to the usual literary and science classes. The rector of Stonyhurst is one of a limited number of headmasters to whom the War Office has granted the power of giving direct nominations to the Royal Military College, Sandhurst. This privilege is reserved for those schools where the officers' training corps—of which Stonyhurst has three full companies—attains a certain standard of strength. The college has also been represented at the Royal College of Physicians (London) and the Royal College of Surgeons (England) as a school for preparing candidates for medical diplomas and exempting them from part of their professional course.

The influence exerted in the course of its history on Church, State, science, and art, by a college which has for so long held a prominent place in the education of English Catholics, may best be gauged by the number of distinguished alumni who have risen to eminence in these departments. Among the early sons of Stonyhurst, when the establishment was still at St. Omer, are eighteen members now belonging the illustrious Venerable—fourteen Jesuits, three Franciscans, and one secular priest—besides three who died in prison for the Faith. Father Emmanuel Lobb, who received into the Church the Duke of York, afterwards James II, and Father Edward Petre, the confessor of the same king, were St. Omer men. The unspeakable Titus Oates also spent some time there as a kind of "parlour-boarder", and contemporary letters make it clear that he was intensely unpopular with the boys. The peculiar dress worn at that date by the boys of St. Omer is referred to by Massinger in his play "King Henry VIII". It was not conspicuous among the St. Omer men of a later date than the first bishops of Baltimore, John Carroll and Leonard Neale. In more modern times Stonyhurst counts among its pupils Cardinal Weld, Bishop Riddell (Vicar Apostolic of the Northern District), Cardinal Vaughan, Bishop William Vaughan of Plymouth, Bishop Clifford of Clifton, Archbishop Porter of Bombay, Archbishop Gillow of Puebla (Mexico), and Archbishop Maguire of Glasgow. Among distinguished laymen who received their education here may be mentioned Charles Waterton, the famous naturalist (the "W" of Thackeray's "Newcomes"); Richard Lalor Sheil, the great parliamentary orator of the 1840's; Dr. George Oliver, the antiquary and Church annalist; Sir Frederick Weld, successively Premier of New Zealand, Governor of Tasmania, and Governor of the Straits Settlements, in which last-named colony another Stonyhurst man, Sir Thomas Siddreaves, was Chief Justice; Sir William Stone, former judge of the Supreme Court, Ceylon; the Rt. Hon. Sir Nicholas O'Conor, British Ambassador at St. Petersburg and Constantinople; General Sir Montague Gerard,
the Old Masters; and vestments of great intrinsic and historical worth.

FRANCIS IRWIN.

Stork, AMBROSE. See PELARGUS, AMBROSE.

STOSS. Veit, sculptor, b. at Nuremberg in 1438; d there in 1533. In 1477 he established a large workshop at Cracow, Poland, but in 1496 he returned to Nuremberg. With Adam Kraft and Peter Visher, he is considered the most important representative of the late Gothic sculpture in Germany. A quick, skilful workman, of great technical ability, in his youth he carried naturalism to the extreme, while often there was a lack of spirituality. Perhaps this may be traced to a trait of his own character as in the documents of the same era he is spoken of as a "restless, unquiet citizen." A certain lack of repose is evident, especially in his treatment of the drapery, while in his entire handling of the figure he is very independent of the Gothic style and carries out his designs in his own manner throughout. His later works, however, show an undoubted depth of feeling. Moreover, the question as to the number of his productions is not yet satisfactorily settled; the latest investigation regards him as the creator of most of the works of the celebrated Vishcher, whom it represents as merely the bronze-founder who carried out Stoss's designs. His earliest work (1477) is the celebrated altar of the Blessed Virgin in the Church of Our Lady at Cracow, which is made in three parts, as an altar with wings. In the centre is seen the almost life-size figure of the
Stradivari, ANTONIO, the famous Cremonese violin-maker, b. in 1649 or 1650; d. at Cremona, 18 or 19 Dec., 1737. He was the son of Alessandro Stradivari and Anna Moroni. As there is no evidence of his birth and baptism in any of the parish registers of Cremona, it is supposed that he was born in some village near that town. In 1667 he began to make stringsed instruments. Some violins, dated in the seventies, and signed by him, are supposed to exist, but evidences of Stradivari's workmanship are to be found in many violins of this date which are signed by Nicholas Amati. It is probable that during the years 1679-79 he worked as a pupil in Amati's workshop. In 1679 he made a violin for Prince Domenico, and his fame as a violin-maker was soon established. He now began to show his originality, and to make alterations in Amati's model. The arching was improved, the various degrees of thickness in the wood were more exactly determined, the formation of the best altered, and the varnish was more highly coloured. From 1698 to 1725 Stradivari produced his finest instruments, and carried his manufacture to the highest possible finish, the outlines are designed with taste and purity, the wood is rich and carefully selected, the arching falls off in gentle and regular curves, the scroll is carved with great perfection, and the varnish is fine and supple. The interior workmanship is no less perfect, the degrees of thickness are carefully adjusted, and are remarkable for a precision which could only have been attained by much study and experiment. Everything has been foreseen, calculated, and determined with certainty. The instruments produced from 1725-30 are not so fine. After 1730 many are signed "sub disciplina Stradi-vari", and were probably made by his sons, Omobono and Francesco.

Stradivari fixed the exact shape and position of the sound-holes, and his model has been copied by many makers since his time. He also settled the shape and details of the bridge, which cannot be altered in the slightest degree without some way injuring the tone of the instrument. The only essential part of the violin which has had to be changed since Stradivari's time is the bass-bar. On account of the gradual rise in pitch the increased pressure of the strings demands an increased power of resistance in the bar underneath the bridge, hence it has been necessary to replace all the old violins with violoncellos. Stradivari was buried in the Basilica of San Domenico.

Elizabeth Lorin.

Stradivari Family, The. — The name Stradivari goes back to the Middle Ages; we find it in various ways, Stradivare, Stradiverto, Stradivirtus. Fétis professes to find it in the municipal archives of Cremona for the years 1127 and 1186. The name was certainly borne by more or less distinguished citizens of Cremona during the twelfth and thirteenth centuries. Signor Mandelli, in his history of Cremona, states that in the church of St. Egidius at Nuremberg (1518): the archangel, a finely conceived figure, and Mary, are surrounded by a huge wreath of roses in which are woven the Seven Joys of Mary; the figure of the Blessed Virgin is however somewhat commonplace. Other documents of this work especially the inscription on the altar and the memorial tablet of Konrad Imhoff, now in the national museum at Munich, and the reliefs of the Carrying of the Cross and the Burial of Christ in the Church of Our Lady at Nuremberg. Of the altar which he carved, mention should be made of those at Schweinsberg and of that in the Church of St. Egidius at Nuremberg.

David, Veit Stoss und seine Schule (Leipzig, 1903); Idem, Veit Stoss (Bielefeld, 1906); Strakle, Die Wahrheit über Peter Vucher (Cremona, 1910).

Benda Kleinschmidt.

Francesco Stradivari, son of Antonio, b. 1. Feb. 1671; d. 11 May, 1743. He followed his father's calling, and was the only one of Stradivari's sons to inherit any part of his father's skill in making stringed instruments. He made very good violins; some are signed by himself, and others, made with the help of his brother Omobono, are signed "sotto la disciplina d'Antonio Stradivari". His work is quite distinct in character from Antonio's. Both Francesco and Omobono were oversetly gifted by the genius of their father; they produced good work, if not of the highest quality.

Omobono Stradivari, son of Antonio, b. 14 Nov., 1679; d. 8 June, 1742. He also followed his father's trade, and made some violins in conjunction with his brother Francesco. He was chiefly engaged in the repair and fitting up of instruments; possibly he made bows, instrument-cases—which were specially designed for wealthy patrons, and often things of great value and beauty—and various fittings, such as bridges, pegs, tail-pieces, etc.

Paolo Stradivari, the youngest son of Antonio by a second marriage, b. 26 Jan., 1708; d. 14 Oct., 1776. He was a cloth merchant, and the only son of the great Stradivari who married. On the death of Francesco, Paolo received the collection of tools, moulds, patterns, drawings, correspondence, and memoranda left by his father, and also several instruments, including the famous "Messiaen" Strad of 1716, and the univalved "Messie" violin of 1716. In 1775 this collection of relics was sold by Paolo to the Count Cioce de Salabue, and afterwards passed into the hands of the late Marquis Alessandro Dalla Valle. Cesare
Stradivari, a grandson of Paolo, b. in 1789, was celebrated as a physician.

ELIZABETH LORKIN.

**Strahov, Abbey of**, a Premonstratensian abbey at Prague, Bohemia, founded in 1140 by Bishop Henry Zdik of Olmütz, Bishop John of Prague, and Prince

Ladislaus II. A colony of monks from Steinfeld, near Cologne, was brought here, and Gero, a canon of Cologne, became its first abbot. This new abbey was very short time flourished to such an extent that some of its members were soon appointed bishops of Prague.

During the twelfth, thirteenth, and fourteenth centuries the abbots of Strahov took keen interest in the public affairs of the kingdom, and their names are often mentioned in public documents and grants of special privileges.

On 19 Oct., 1259, the abbey was destroyed by fire, but Abbot John I (1250-66) built a new and magnificent church. The monastery suffered greatly during the plundering reign of the king's regent, Otto of Brandenburg and that of Henry of Carinthia. It, however, again flourished under Charles IV. On 8 May, 1420, the Hussites set fire to the buildings, and looted and destroyed everything. The main cause of anger of the fanatics against the abbey was that John Zelezny, Bishop of Leitomischl, a Premonstratensian, was one of the accusers of Hus at the Council of Constance.

From this time onward Strahov continued to decline, and its lands were gradually stolen and sold, until in 1577 and 1578 not one of its members remained, and the meager income was turned over to the chaplain of the Emperor Ferdinand I. Later a Premonstratensian, John Lobelius, who subsequently became Archbishop of Prague, gathered monks from various monasteries, colonized Strahov anew, infusing into it new physical as well as spiritual life. Lobelius rebuilt the church and a greater part of the monastery, and Abbot Caspar of Questenberg (1620-40) completed the work. During the bombardment of Prague in 1842 Strahov suffered greatly; the damage, however, was soon repaired. When the Emperor Joseph II suppressed 58 abbeys in Bohemia, Strahov was saved from a similar fate by Abbot Wenceslaus Mayer (d. 1800), who had won favour even at the hostile Court by the interest that he took in fostering schools and education. Abbot Zikmund Starý (1879-1906) built the new church and improved the old church. The present abbot, Method Zavoral, is a man of great ability as a preacher.

The monastic Church of the Assumption, built in 1601-1605 by Abbot Lobelius, is beautifully decorated by numerous frescoes; the pictures on the arched ceiling symbolize some of the invocations contained in the Litany of the Blessed Virgin, and on the side walls are scenes from the life of St. Norbert. These beautiful frescoes are the work of the Prague artist Georg Wilhelm Neuherz (d. 1743). The Chapel of St. Norbert has the saint's relics in a casket of copper and bronze, richly gilded. The organ is the work of the Strahov monk Lohel Oehlerlagel (d. 1774).

The monastic library contains upwards of 110,000 volumes, of which 1200 are incunabula. Of these there are about sixty unique volumes. Of the many rare manuscripts the most precious is the "Evangelistarium" of the sixth century, written in uncial letters and still well-preserved. Among others may be mentioned: "Geraci Chronicon", Codex Strahovianus from 1220; the "Pontificale" of Bishop Albert of Sternberg, made in 1376; the "Missale" of the Premonstratensian Abbey of Louky of 1480; the miniature manuscript of the Bible of the thirteenth century, written by a nun of the cloister of Doksany; "Sich's Graduale" of 1610, weighing fifty pounds. The art gallery has the original painting of Dürrer's "Blessed Virgin of the Rosary", of 1506, with the master's own portrait; and paintings by Correggio, Van Dyck, Holbein, van Aachen, Reiner, Skréta, Brandl, etc.

MAYER, Historische Beschreibung der vom Amt, Maulbronn, in Deutschland, aus den Kloster-Credite, der heil. churck. Kanonien am Berge Stm zu Prag im Jahre 1724 in Prag am gestellten Kalkmahleret (Prague, 1797); WETRAUCH, Gesch. des
Strain, John, Archbishop of St. Andrews and Edinburgh, b. at Edinburgh, 8 December, 1510; d. there, 2 July, 1583. Educated at Edinburgh High School, at the Marischal Seminary, and at the Scots College, Rome, he was ordained priest in 1533 and after work in Edinburgh and Dumfries, was appointed to the mission of Dalbeattie, where he laboured for twenty-three years. Transferred to Dumfries in 1537, he was appointed in the following year president of Blair College, Aberdeen; and on the death of Bishop Gillis in 1584 he was nominated to succeed him as vicar Apostolic of the eastern district, named Bishop of Abila, and consecrated by Pius IX at the Vatican on 25 September. During his nineteen years' episcopate he saw the number of clergy and missions largely increased in his district; many schools were opened, and several religious communities, both of men and women, introduced. The bishop laboured long and strenuously for the restoration of the regular hierarchy to Scotland; and it was greatly due to his effects that the restoration took place, under Leo XIII, in 1878. He became himself the first Archbishop of St. Andrews and Edinburgh, and held his first diocesan synod in 1881. His death occurred whilst Catholic Scotland was preparing to celebrate with befiting honour the golden jubilee of his ordination.

Catholic Directory for Scotland (1894), 199-80; The Tablet, LXI (7 July, 1883), 26.

D. O. Hunter-Blair.

Stranham, Edward, Venerable, English martyr, b. at Oxford about 1554; suffered at Tyburn, 21 January, 1586. He was educated at St. John's College, Oxford, becoming B. A. in 1575-6; arrived at Douai in 1577, and went with the college to Reims in 1578, whence he came back to England owing to illness. In 1579, however, his return to Reims, and was ordained priest at Soissons in Dec., 1580. He left for England, 30 June, 1581, with his fellow-martyr, Nicholas Woodfen, of London Diocese, ordained priest at Reims, 25 March, 1581. In 1583 Stranham came back to Reims with twelve Oxford converts. After five months the three went to Paris, where he remained about eleven months at death's door from consumption. He was arrested in Bishopsgate Street Without, London, 17 July, 1585, while saying Mass, and was condemned at the next assizes for being a priest. Details of his career will be found in the article mentioned below.

Wainewright in Downside Review (1911) s. v., and the authorities there cited.

John B. Wainewright.

Strasburg, Diocese of (Argentenensis), a German diocese immediately dependent on the Papal See. According to legend the Diocese of Strasburg was founded in the third or fourth century. St. Arbogast and Florentius were distinguished bishops of the sixth or seventh century. The first bishop known to history is Ansoald, one of the signers of the Acts of the Council of Paris of 614. His successor Eddo or Heddo, of the ducal family of Etichos, organized his ecclesiastical diocese in conjunction with St. Boniface, aided by the Carolingians. The boundaries then given remained essentially the same throughout the Middle Ages. On the left bank of the Rhine the diocese extended over the present Province of Alsace with exception of the southern-eastern part between the Ill, Blind, and Rhine; on the right bank it extended from the Rhine to the crest of the Black Forest, and southward from the mouth of the Murg to the Elz. This territory was divided into seven archidiaconates, of which one included Strasbourg, and one the region on the right bank of the Rhine. This diocese remained substantially the same from the eleventh century to the French Revolution.

Charlemagne granted Bishop Heddo unlimited jurisdiction in the valley of the Breusche, and in 775 the bishop received freedom from customs duty throughout the empire for himself and his vassals (hominis ecclesiae). By the Treaty of Verdun (843) the Diocese of Strasburg fell to the empire of Lothair; in 870 it became part of the east Frankish kingdom, later the Holy Roman Empire, so that the German character of the diocese was preserved. Both Lothair and Louis the German granted their forefathers had granted to the Church of Strasbourg. Bishops Udo (950-55) and Erchanbold (965-91) restored Church discipline which had fallen into decay at the beginning of the tenth century. Emperor Otto I granted Udo the ownership of the royal mint at Strasburg; Otto II (974) confirmed this gift and gave the bishop the right to establish a mint in any town of the diocese he desired. In 982 Otto II granted Erchanbold absolute jurisdiction over the city of Strasbourg and its environs, thus forming the main foundation of the secular supremacy of the bishop. Emperor Henry I of Habsburg (1002-1022) confirmed fel propemors Henry II and Conrad II a large number of grants, including the old Abbey of St. Stephen with all its rights. A new cathedral, to replace the one destroyed in 1002 by Hermann of Swabia, was begun by Werner I in 1015 and dedicated in 1031. The bishop gave to the library of the minster numerous manuscripts which he had collected in Italy. During the conflict of investitures the bishops generally sided with the imperial party: Werner II (1065-79); Theobald (1079-82), who took part in the election of the anti-pope Clement II; and Otto of Hohenstaufen (1082-1100), who accompanied Godfrey of Bouillon on the First Crusade. Gebhard I (1131-41) and Burkhard I (1141-62) were zealous promoters of Church reform; during the episcopate of Berthold I of Teck (1223-44), about 1230, the new orders of Franciscans and Dominicans settled at Strasbourg, the city of Strasbourg having an episcopal administration, and in the twelfth century it prospered greatly. Its efforts to abolish episcopal suzerainty and to obtain new privileges were especially successful during the Conflict of Investitures. The town-council acquired great independence and the right of co-optation. The right of the bishop to appoint the council had been reconfirmed in 1214 by charter of Emperor Frederick II. At the beginning of his episcopate Walter of Geroldsweck (1260-63) wished to enforce this right, to dispose of communal property, and to regulate the taxes. The populace, siding with the council and the patricians, defeated the episcopal forces at Haunberg, 8 March, 1262, thus practically establishing the independence of the city. The succeeding bishop, Henry of Geroldsweck (1263-73), made a treaty in 1263 by which at the close of the official year the council elected its own successors, and the citizens themselves had the right to settle all questions regarding communal property. The bishop retained only the right to appoint the town magistrate, the castellan of the castle, the official in charge of the collection of the customs, and the superintendent of the mint. These offices, except that of magistrat, gradually sank in importance, and the bishop no longer attended the town council. Conrad of Lichtenberg (1273-99) completed the rebuilding in Gothic style of the nave of the minster, and began the construction of the beautiful west façade. Bishops Johannes of Dorpfheim (1306-28), chancellor of King Albert II, and Berthold II of Buchsee (1328-53) were both capable administrators, appointed by
the pope. Notwithstanding their share in imperial politics, these bishops found time to hold synods and labour effectually for church discipline in the diocese. In 1399 John I of Luxemburg (1555–68), Count of the Landgraviate of Lower Alsace from the Counts of Oettingen. A land-register, that gave exact information concerning the secular possessions of the diocese, was drawn up during his administration. The diocese included: Lower Alsace the districts of Benfeld, Markolsheim, Schirmbeck, Dachstein, Koberberg, Wanzemau, and Zabern; in Upper Alsace the stewardship of Ruffach; in the present Duchy of Baden the districts of Oberkirch and Ettenheim. The episcopal possessions in Alsace were only exceeded in area by those of Hamburg. With shrewd policy the bishops had opportunistically broken the power of the local governors, and had successfully opposed the restoration of imperial administrative suzerainty over diocesan territories. Under John's successors began the decline of the diocese, promoted by unhappy political conditions and by the Great Schism. This decay was especially rapid during the episcopate of William of Diest (1394–1439), who, to carry on innumerable private and public wars, frequently mortgaged and squandered the episcopal lands. His successors, who, with the aid of the cathedral chapter, finally paid off his debts, were: Rupert of the Pfalz (1440–78), who called the celebrated preacher Geiler von Kaysersberg (q. v.) to the pulpit of the minster; Albert of the Pfalz (1478–1506); and William III of Honstein (1507–47).

Soon after 1520 the Reformation gained many adherents in the city of Strasbourg, owing to the labours of Luther's friends, Wolfgang Capito and Martin Bucer, the efforts of the preacher Matthias Zell and of the Humanists Sturm and Hedio. In 1529 the council abolished the Mass; in 1531 the city joined the Smalkaldic League, whereupon the bishop transferred his see to Zabern. Despite the vigorous opposition of William of Honstein and Erasmus of Limburg (1541–68), all the secular lordships of the diocese in Lower Alsace adopted the new doctrine, except the landgrave; even part of the cathedral chapter became Protestant. John IV of Manderseid-Blankenheim (1569–92) summoned the Jesuits to Molsheim to check the apostasy, and encouraged the Counter-Reformation. But, in his death pangs, a double death, the Protestant cathedral canons chose John George of Brandenburg as administrator; the Catholic canons, Cardinal Charles of Lorraine. The struggle between the two candidates, called the Bishops' War of Strasbourg (1592–1604), caused the diocese great misery. Christ-Lorraine was victorious. Catholic ownership was further secured in the successive election of two Austrian archdukes as bishops: Leopold (1607–25), a brother of Emperor Ferdinand II, and Leopold William (1625–62), one of Ferdinand's sons. During the Thirty Years' War the territory was so ravaged by Ernst of Munsfeld, the Swedes, and the French, that the population decreased 75 per cent. In 1660, during the episcopate of Charles Egon of Fürstenberg (1663–82), whose sympathies were French, Louis XIV seized all the territory of the diocese on the left bank of the Rhine under pretence of 'reunion'; the city of Strasbourg became a French possession in 1681. The bishop retained the internal administration of his possessions in Alsace and the title of landgrave. The districts on the right bank of the Rhine remained within the German Empire, and the bishop was still their ruler as prince of the empire. The occupation of the city by the French brought the minister once more into the hands of the Catholics. William IV of Fürstenberg (1682–1704) established the seminary for priests at Strasbourg and placed the Jesuits in charge of it. The succeeding four bishops belonged to the French princely family of de Rohan; the last of those, Louis René de Rohan (1779–1802), was involved in the notorious affair of the diamond necklace. In 1790 the Constituent National Assembly secularised the Alsatian possessions of the diocese and Rohan transferred his see to the German portion of his bishopric. In Strasbourg Brendel, a constitutional bishop, was elected; Eulogius Schneider, whom he appointed vicar-general, consecrated Catholic priests who refused to take the oath, until the overthrow of the Reign of Terror in Paris put an end to this injustice.

By the Concordat of 1801 the Diocese of Strasbourg received new boundaries, extending the jurisdiction of the bishop over and beyond Alsace to the Lake of Bienne in Switzerland, and south-westerly as far as Montbéliard. Rohan having resigned at the request of the pope, Peter Saurine (1802–13), former constitutional bishop, became Bishop of Strasbourg. The districts on the right bank of the Rhine fell to Baden on account of the secularization of the German Church in 1803. The diocese, which had been a suffragan of Mainz until 1562, became (1822) a suffragan of Besançon; it was reduced in size towards the south and south-west. Bishop Andreas Rasse (1842–87) endeavoured to revive Catholicism in Germany, to promote the education of the clergy, and to establish religious associations. When Alsace became a German possession in 1871, the diocese received its present extent and was declared directly dependent on the Holy See by Decrees of 10 and 14 July, 1874, and by the Treaty of Paris of 7 October, 1874. Rasse was succeeded by Peter Paul Stumpf (1887–90), and the present bishop, Adolf Fritzen, consecrated on 21 July, 1891. Bishop Fritzen has especially encouraged Catholic associations, the Catholic press, Church liturgy and psalmody. In 1902 he established a theological faculty at the University of Strasbourg.

Statistics.—The Diocese of Strasbourg includes the departments of Upper and Lower Alsace in the German Crown-Province of Alsace-Lorraine. In 1911 it contained 57 deaneries, 710 parishes, 283 curacies, 710 parish priests, 454 curates and ecclesiastics in other positions, 92 priests retired or on leave elsewhere, 106 regulars, and 846,100 Catholics, while 350,000 of the population belonged to other faiths. The bishop is appointed by the pope in agreement with the German Emperor, and the cathedral chapter is appointed by
the bishop. In regard to educational and charitable institutions and religious houses of the diocece, see Amadeo-Lob rhains. The most important church is the minster at Strasbourg, the oldest part of which belongs to the eleventh century. The crypt is Romanesque, the upper part of the choir and the transepts belong to the Transition period, the nave is Gothic. The famous façade is the chief work of Erwin of Steinbach (1284-1318). The north tower, about 455 feet high, was completed in 1429-39 by Johann of Halts of Cologne. The minster is rich in monuments of all ages: are: St. Martin at Colmar, St. George at Schlattstadt, St. Theobald at Thann, St. Nicholas at Haguenau, St. Leodegar and the Church of Our Lady at Gelweiler, Old and New St. Peter at Strasbourg, etc. Much frequented places of pilgrimage are: Drei Aehren near Colmar, St. Odiliens near Barr, Dusenbach near Rappoltsweiler, St. Morand near Altkirch, etc.

Stratonicea, a titular see in Caria (Asia Minor) suffragan of Stauropes. Stratonicea or Stratonicea was founded perhaps on the site of the more ancient Idrissa, in the interior of Caria, south-east of Mylissa, and south of the Msysa, by Antiocchus Soter, who named it after his wife Stratonicia. His successors embellished it with magnificent monuments, and it became one of the chief towns of Caria. Later it was ceded to the Byzantine kings lived in it in their time, and while there married the daughter of one of the principal citizens. Later it sustained a vigorous siege by Labienus. It is mentioned as a free town by Pliny. Some of its coins have been found. Near the city was a temple of Zeus Chrysoceuros, where the confederated Carian towns held their assemblies. Today it is the small town of Elbas, near the town of Moushla, visayed of Smyrna. It has extensive ruins, a theatre, tomb, columns, etc. The "Notitiae episcopatum" mention the see till the thirteenth century among the suffragans of Stauropes. Only three of its bishops are known, by their signatures at consecration: Theodippeus, at Chaldon, 451; Theodippeus, at Constantinople, 692; Gregory, at Nicea, 757.

Streber, Franz Ignaz von, numismatist and theologian, b. at Reisbach, Lower Bavaria, 11 Feb., 1758; d. Munich, 28 April, 1841. In 1768 he was appointed curate of the cathedral of Strasbourg, in 1782 he was appointed professor of the cabinet of coins of the elector. His work was to unite the Mannenheim or Palatinal collection with the Munich or Bavarian collection of the Wittelsbach line, which had been in disorder since the Thirty Years' War, and to arrange the combined collection in scientific order. On account of the disturbances caused by war he was obliged to carry off and re-arrange it anew. He wrote a history of the royal Bavarian cabinet of coins, and several treatises on Bavarian and Greek numismatics, most of which appeared in the transactions of the Academy of Munich.

Streber, Franz Seraph, numismatist and nephew of the above, b. at Deutenkofen, Lower Bavaria, 26 Feb., 1805; d. at Munich, 21 Nov. 1864. He first studied theology and philosophy, then archaeology and numismatics, and wrote in 1830 as his dissertation for obtaining the degree of Doctor of Philosophy at Erlangen a paper on the genealogy of the Burgraves of Nuremberg. In 1854 he became a member of the Academy of Munich. In 1835 he was made professor of archeology at the University of Munich, of which he was twice rector, 1880 and 1881, and in 1830 assistant, and in 1841 curator of the royal cabinet of coins. He also worked on the numismatic collection of Vienna and prepared a critical catalogue of 18,000 Greek coins and a numismatic-iconographic lexicon with drawings of about 6000 Greek coins belonging to the Viennese and Munich collections. In 1849 he published the "Numismata Graeca," which corrected false and inexact designations of coins; this was crowned with a prize by the Academy of Paris as was also his important investigation concerning what are called the rainbow patina, which he was the first to recognize as Celtic (vol. IX of the Annuals of the Munich Academy to the year 1853). Further papers on Celtic, Greek, and medieval coins, also on archaeology, mythology, and the history of art, appeared chiefly in the publications of the Munich Academy. He also drew up a "Promemoria" that is preserved among the records of the royal cabinet of coins, as to the expenses and the plan of a monumental work covering the entire field of Greek numismatics that was to take the place of the old work by Eckelh and be about one-half larger. Streber was also prominent in politics as a strong supporter of the ecclesiastico-conservative party. He founded the association for a constitutionally-monarchical and religious freedom, and wrote many political memorials at its request.

Transactions of the Academy of Munich, I (1865), 2061 sqq.; Histor.-politische Blatter, LV (1865), 55 sqq.

Streber, Hermann, son of Franz Seraph Streber, b. at Munich, 29 Sept., 1839; d. at Tols, 9 Aug., 1896. He entered the Ludwigsymposium in 1850, but a nervous fever prevented him from qualifying for the university through the usual final school examination. From this ailment he never completely recovered. Entering the university by a private examination in 1851, he devoted over twenty years to the study of philosophy and theology, attending besides historical lectures. During this period he compiled a description and catalogue of the ancient coins in the Royal Cabinet of Medals. In 1861 he entered the archiepiscopal seminary at Freising, and in 1864 was ordained priest. Owing to the death of his father he was unable to pursue his original intention of studying numismatics. In 1867 he was appointed religious teacher at the Wirkelsymposium. Having received six months' leave of absence in 1880, he won the doctorate in theology in Rome (Jan., 1899). He then resumed his duties, but was dismissed in June, 1870, when he was dismissed for alleged "intriguing in favour of the dogma of infallibility". He was then named pastor of Wolfersdorf, near Freising. Invited by Professor Hergenröther to assist him in editing the new edition of the "Kirchenlexikon", 

AUG. V. LOEHR.
Streicher resigned his parish, and settled in Würzburg. When Hergenröther was summoned as cardinal to Rome, Streicher moved to Bonn to the papal court and performed notable services in perfecting the "Nomenclator". He wrote many articles for the "Kirchenlexikon", the direction of which was for a time entirely in his hands. In 1892 illness forced him to withdraw to his brother's house at Tüls, where he lived in retirement until death.

Streicher, Henry. See Victoria Nyanza, Vicariate Apostolic of Northern.

Strossmayer, Joseph Georg (Joseph Juraj), Bishop of Diakovar, b. at Esseg in Croatia-Slavonia, 4 February, 1815; d. 8 April, 1905. He came from a family of German peasants who had emigrated into Croatia. After attending the gymnasium of his native town, he studied theology in the seminary at Diakovar and the higher seminary at Budapest, where he obtained the degree of Doctor of Philosophy when only twenty years of age. In 1838 he was ordained priest and was for two years vicar at Peterwardein. In 1844 he went to the Augustinianate at Vienna; in 1842 obtained the degree of Doctor of Theology, and was then made professor at Diakovar. In 1847 he became court chaplain, prefect in the Augustinianate and professor of canon law at the University of Vienna. On 18 November, 1849, he was appointed Bishop of Diakovar, and was consecrated on 8 September, 1850. At the same time he was Apostolic Administrator of Belgrade-Semendria in Servia. In 1898 the pope conferred the pallium upon him. At the Vatican Council he was one of the most notable opponents of papal infallibility, and distinguished himself as a speaker. The pope praised Strossmayer's "remarkably good Latin". A speech in which he defended Protestantism made a great sensation. Afterwards another speech, delivered apparently on 2 June, 1870, was imputed to him. It is full of heresies and denies not only infallibility but also the primacy of the pope. He was created a cardinal in 1871.

In politics he was an active supporter of the Croatian national party and Pan-Slavism. He exerted himself to advance his people in civilization, yet he strengthened national hatreds by his political agitation. He used the large revenues of his diocese to found primary schools, a seminary, the academy for southern Slavs at Agrag (1867), the university (1874), and a picture gallery also at Agrag. Under his direction Augustin Theiner edited the "Vetora monumenta Slavorum meridionalium" (1863). During 1866-82 he built a fine and splendidly ornamented cathedral. He sought to win the Servians, who were not Uniates for the use of the latter, from the Old Slavonic liturgy.

KLEMENS LÖFFLER.

Stuart, Henry Benedict Maria Clement, cardinal, Duke of York, known by the Jacobites as Prince Charles Edward Stuart, Henry IX, King IV of Scotland, Ireland, England, and France, and Ireland; b. at Rome, 11 March, 1725; d. at Frascati, 13 July, 1807. He was the second son of James Francis Edward Stuart, the Chevalier de St. George, and Clementina, daughter of Prince James Sobieski. In 1745, when hopes of a Stuart restoration ran high, he visited France, hoping to embark with French troops to the assistance of his brother Charles Edward. Having spent several months at Dunkirk without effect, he returned to Rome with the intention of entering the ecclesiastical state. In 1747, at the age of twenty-two, he was created cardinal, and during the following year he received Holy orders, being ordained priest on 1 September. He was immediately made archbishop of the Vatican Basilica, and shortly afterwards cardinal camerlengo. In Nov., 1758, he was consecrated titular Archbishop of Corinth, and on 13 July, 1761, became Cardinal-Bishop of Frascati. Being sincerely pious and earnest, he proved a zealous administrator of his see, reforming the clergy, and founding a seminary which he endowed with a magnificent library. At the French Revolution he lost his French benefices, sacrificed many other resources to assist the pope, and finally was reduced to poverty by the seizure of his Frascati property by the French. Old and infirm, he fled to Padua and thence to Venice. King George III then came to his assistance, aiding him with a life-annuity till he was able to return to Frascati in 1800. His kindness the cardinal bequeathed to the Prince of Wales, afterwards George IV, the crown jewels of James II. In September, 1803, he became Bishop of Ostia and Velletri, and Dean of the Sacred College, though he still resided at Frascati. At his death the Stuart papers in his possession were bought by George IV for the Royal Library, and others are now in the British Museum. There are three pictures of him in the National Portrait Gallery, London, and one at Blair's College, Aberdeen. The cardinal lies buried in St. Peter's at Rome, where Canova's monument preserves his memory.

EDWIN BURTON.

Stuart, Mary. See Mary Queen of Scots.

Studion (Studium), the most important monastery at Constantinople, situated not far from the Propontis in the section of the city called Prasamathia. It was founded in 422 or 423 by the consul Studius (Sudius), a Roman who had settled in Constantinople, and was dedicated to St. John the Baptist. Its monks came from the monastery of Accemete. At a later date the laws and customs of Studion were taken as models by the monks of Mount Athos and of many other monasteries of the Byzantine Empire; even to-day they have
influence. The Studites gave the first proof of their devotion to the Faith and the Church during the schism of Acacius (484–519); they also remained loyal during the storms of Iconoclastic dispute in the eighth and ninth centuries. They were driven from the monastery of Studion and the city by Emperor Constantine Copronymus; and after his death, they did not return. Abbot Sabbas zealously defended the Catholic doctrine against the Iconoclasts at the Seventh Ecumenical Council of Nicaea (787). His successor was St. Theodore of Studion to whom the monastery owes the most of its fame, and who especially fostered study. During St. Theodore’s administration also the monks were harassed and driven away several times, some of them being put to death. Theodore’s pupil Naucratius re-established discipline after the Iconoclastic dispute had come to an end. Abbot Nicholas (848–51 and 855–58) refused to recognize the Patriarch Photius and was on this account imprisoned in the Studion. He was succeeded by five abbots who recognized the patriarch. The brilliant period of the Studion came to an end at this time. In the middle of the eleventh century, during the administration of Abbot Simeon, a monk named Nicetas Pectoratus (Stethatos) made a violent attack on the Latin church. In the year 1025, he was deposed from the Sabbath, and the marriage of priests. In 1054 he was obliged to recant in the presence of the emperor and of the papal legates and to throw his book into the fire, but he began the dispute again later. As regards the intellectual life of the monastery in other directions it is especially celebrated for its famous school of calligraphy which was established by St. Theodore. In the eighth and eleventh centuries the monastery was the centre of Byzantine religious poetry; a number of the hymns are still used in the Greek Church. Besides St. Theodore and Nicetas, a number of other monks added to the evidence in this connexion. In 1204 the monastery was destroyed by the Crusaders and was not rebuilt until 1290; the greater part of it was again destroyed when the Turks captured Constantinople (1453). The only part now in existence is the Church of St. John Baptist, probably the oldest remaining church in Constantinople, a basilica which still preserves from the early period two stories of columns on the sides and a wooden ceiling, which is now the mosque Imrâcher-Dechamish. Möller, Studium cunobium Constantinopolitanum (Leipzig, 1708); Alte Kirch. Beiträge von Constantinopel (Berlin, 1854), 38–41; Plate II–IV; Marin, De Studio cunobio Constantinopolita (Paris, 1897).

Stuhlweissenburg (Székes-Pérényvár) Diocese of (Alba Regiaensiis), in Hungary, and Suffragan of Gran. It was formed in 1777 from the Dioceses of Györ and Veszprém. In earlier times there was here a collegiate chapter of the Diocese of Veszprém, founded in 1006 by King St. Stephen; it was under a provost and was endowed with great privileges, the provost being chosen by the chapter, and the members of the chapter by the provost. Provost, chapter, and church were exempt from the jurisdiction of the bishop and directed directly by the pope. The chapter members were recruited from the chief families, and were once about forty, but in 1543, during the invasions of the Turks, the chapter became extinct, though the provosts and canons were yet nominated. The Provost of Stuhlweissenburg, according to the last years of the eighteenth century, was here some time royal chancellor. The archives of the chapter were the most important in Hungary, and preserved a copy of the Golden Bull of 1222, the Magna Charta of Hungary. During the invasion of the Turks these archives were destroyed. The central, in which the royal insignia were preserved, was later enlarged by the kings of Hungary and richly decorated. In 1601 it was destroyed by the Turks. From 1380 to 1527 Stuhlweissenburg was both coronation and burial place for the Hungarian kings. The diocese includes the entire County of Fejér and a part of the ancient County of Pila, also the Island of Cecepel in the Danube. Budapest, the capital of Hungary, though territorially within this diocese, is subject to the Archbishop of Gran.

The first Bishop of Stuhlweissenburg was Ignatius Naxy (1777–1789). Among his successors are Joseph Kopácsy (1821–1825), afterwards Archbishop of Gran; Vincent Jekelfalussy (1866–1874), the first Hungarian bishop to promulgate the dogma of the infallibility without previously asking the royal consent (ac placet regium), and whom the emperor, however, rehired. In 1901 Bishop Julius Városy was appointed Archbishop of Kalocsa. At present the see is ruled by Ottokar Prohaska, a famous preacher and leader of the Hungarian Catholic movement. The diocese is divided into arch-deaconries; the parish priests number 92, and the clergy 152. In the diocese are 8 abbeys and 5 provostships, 4 monasteries for men and 12 for women, in all 100 members. Right of patronage belongs to 46 persons. Since 1841 the cathedral chapter, at the head of which is a chief provost, consists of 8 canons; the Catholic faithful are 230,305.

A. ÁLDÁSY.

Stylites (PILLAR SAINTS) were solitary who, taking up their abode upon the top of a pillar (εὐθός), chose to spend their days amid the restitutes thus entailed and in the exercise of other forms of asceticism. This practice may be regarded as the climax of a tendency which became very pronounced in Eastern lands in the latter part of the fourth century. The duration and severity of the fasts then practised almost without exception in the monasteries (Butler; Palladius, I, 188, 240–1), and the general respect of the accounts preserved to us is now hardly disputed. Besides the mortification of the appetite, submission to restraints of all kinds became at this period an end in itself. Palladius tells us (ch. xivii) of a hermit in Palestine who dwelt in a cave on the top of a mountain and who for the space of twenty-five years never turned his face to the West. St. Gregory of Nazianzus (P. G., XXXVII, 1456) speaks of a solitary who stood upright for many years together, absorbed in contemplation, without ever lying down. Theodoret assures us that he had seen a hermit who had passed ten years in a tub suspended in mid air from poles (Philosthenes, ch. xxviii).

There seems no reason to doubt that it was the ascetical spirit manifested in such examples as these which spurred men on to devise new and more ingenuous forms of self-crucifixion and which in 423 led Simon Stylites the Elder (q. v.) first of all to take up his abode upon the top of a pillar. Critics, it is true, have recalled a passage in Lucian (De Syria Dea, ec. xxviii–xxix) which speaks of a high column at Hierapolis to the top of which a man ascended twice a year and spent a week in converse with the gods, but even such an authority as Nöldeke thinks it unlikely that Simeon had derived any suggestion from this pagan custom, which certainly had died out before his time. In any case Simeon had a continuous series of imitators, more particularly in Syria and Palestine. St. Daniel Stylites may have been the first of these, for he had been a disciple of St. Simeon, and had led a rigorous way of life shortly after his master died. Daniel was a Syrian by birth but he established himself near Constantinople, where he was visited by both the Emperor Leo and the Emperor Zeno. Simeon the Younger (q. v.), like his namesake, lived near Antioch; he died in 596, and had, for a long while, been hardly less famous Stylites in St. Alypius, whose pillar had been erected near Adrianople in Paphlagonia.
Saint Alypius after standing upright for fifty-three years found his feet no longer able to support him, but instead of descending from his pillar lay down on his side and spent the remaining fourteen years of his life in the Christian faith.

St. Luke the Younger, another famous pillar hermit, whose life has recently been printed for the first time in the "Analecta bollandiana" (1909, pp. 5-56), lived in the tenth century on Mount Olympus, but he also seems to have been of Asiatic parentage. There were many others besides these who were not so famous and even women Stylites were also known. One or two isolated attempts seem to have been made to introduce this form of asceticism into the West but it met with little favour. In the East cases were found down to the twelfth century; in the Orthodox Russian Church it lasted until 1481, and among the Ruthenians even later. There can be no doubt that for the majority of the pillar hermits the extreme austerity of which we read in the lives of the Simeons and of Alypius was somewhat mitigated. Upon the summit of some of the columns for example a tiny hut was erected as a shelter against sun and rain, and we hear of other hermits of the same class among the Monophysites, who lived inside a hollow pillar rather than upon it; but the life in any case must have been one of extraordinary endurance and privation. Probably the best justification of these excesses of austerity is to be found in the fact that, like the great renunciation of St. Melania the Younger (see Cardinal Rampolla's "Sta Melania Giunio"), they did, in an age of terrible corruption and social decadence, impress the need of penance more than anything else could have done upon the minds and imagination of Oriental Christians.

HERBERT THURSTON.

STYRIA (GER. STEIERMARK), a duchy and Austrian crownland, divided by the River Mur into Upper and Lower Styria. The province is rich in minerals, as iron ore, brown coal, etc. Its area is 8980 sq. miles, and in 1910 it had 1,441,604 inhabitants. Of the population 68 per cent are Germans, and 32 per cent Slovaks. The Slovaks, who are a branch of the Slavonic race, are widely scattered in the northern and western portions of the province, in Lower Styria. Ninety-eight per cent of the population is Catholic; one per cent Protestant; the rest are Jews or belong to the Orthodox Greek Church. The capital of the province is Graz (132,000 inhabitants); it is the residence of the government and the seat of the administrative province. In the Roman era Styria was a part of Noricum. During the great migrations various German tribes traversed the region, and about a.d. 600 the Slavs took possession of it. Styria came under the supremacy of Charlemagne as a part of Carantania (Carinthia). Large numbers of Germans, especially Bavarians, came into the country, settled in colonies in it, and made it Christian. The work of conversion was carried on mainly from Salzburg; Bishop Virgilus of Salzburg (745-84), an Irishman, was largely instrumental in converting the country to Christianity, and gained for himself the name of Apostle of Carantania. The Patriarchs of Aquileia also shared in the work. In 811 Charlemagne made the Drave River the boundary of the Dioceses of Salzburg and Aquileia. In the tenth century a part of Styria was separated from Carinthia under the name of the Carinthian Mark; it was also named the Windisch Mark. The margraves ruling the mark took from the name of the fortified castle of Steier the title of Margraves of Steiermark, and the country received in German the name of Steiermark. During the reign of Margrave Ottokar II (1104-92) Styria was raised to a duchy by the Emperor Frederick Barbarossa in 1180. With the death of Ottokar the first line of rulers of Styria became extinct; the region fell to the Babenberg family who then ruled in Austria. In a short time this family became extinct also, and Styria has passed under the control of Hungary (1254-60), and of King Ottokar of Bohemia; finally in 1276 it came into the possession of the Habsburgs, whose property it still remains. During the years 1379-1439 and 1564-1619 it was ruled by princes of its own from a branch of the Habsburgs. At the time of the Turkish invasions in the sixteenth and seventeenth centuries the land suffered severely. The Turks made incursions into Styria nearly twenty times; churches, monasteries, cities, and villages were destroyed and plundered, while the population was either killed or carried away into slavery.

The Reformation made its way into the country about 1530. During 1564-90 the country was ruled by Duke Karl, whose wife was the Duchess Maria of Bavaria, a courageous champion of Catholicism. He introduced the Counter-Reformation into the country on the basis of the Religious Peace of Augsburg of 1555. In 1573 he summoned the Jesuits and in 1586 he founded the University of Graz. In 1598 his son and successor, Ferdinand, suppressed all Protestant schools and expelled the foreign teachers and preachers. The common people again accepted with but slight opposition the Catholic faith. The Protestant doctrines were maintained only in a few isolated mountain valleys, as in the valley of the Inn and the valley of the Mur. The nobility were not forced to return to the Catholic faith. A large number of noble families, consequently, emigrated from the country; but most of them either returned, or their descendants did so, becoming Catholics and recovering their possessions. In the second half of the seventeenth century the Protestant spirit broke out again, especially in the distant valleys in the mountains, owing to events in the Duchy of Salzburg. The agitators from the Protestant districts of Germany were expelled, and the peasants who would not give up Protestantism were condemned to compulsory emigration to Transylvania. It should be remembered that the harsh laws issued by the Catholic rulers of Styria and Austria were the application of the axiom then current in European national law: cuius regio ejus religio, and that the Protestant princes suppressed and persecuted Catholicism and its adherents much more severely in their territories. The
Edict of Toleration issued by the Emperor Joseph II in 1781 put an end to the religious contest of more than two hundred years. The Protestants then received the right to found parish communities and to exercise their religion there undisturbed. On account of the constitutions gained by the German people in 1848 all the provinces of the Austrian Empire were reduced to complete liberty of religion and of conscience, parity of religions, and the right to the public exercise of religion. As regards the present relation between Church and State, the Church and the schools, conditions are the same as in the other sections of Austria.

Ecclesiastically the province is divided into two prince-bishoprics, Seckau and Lavant. Ever since the time of their foundation both have been suffragans of the Archbishop of Salzburg. The Prince-Bishopric of Seckau was established in 1218; since 1276 the see of the prince-bishop has been Graz. The Prince-Bishopric of Lavant was founded as a bishopric in 1228, and raised to a prince-bishopric in 1446; since 1847 Marburg on the Drau has been the see of the prince-bishop. There are in the entire Duchy of Styria 96 deaneries and 551 parishes, altogether 1163 parochial districts, each district containing on an average 1151 Catholics. Styria contains many old and celebrated houses of the orders, as: the collegiate foundation of the Reformated Augustinian Canons of Vars (founded 1163); the Benedicteine abbeys at Admont (1074); at St. Lambrecht (1066); at Seckau founded as a house of the Augustinian Canons 1140, suppressed in 1782, from 1833 a monastery, since 1887 abbey of the Beuronese Benedicteines); the Cistercian abbey at Rein (1120); the Franciscan monastery at Graz (since 1515; founded in 1230 as a monastery of the Minorites); at Maria-Lankowitz (1436), at Maria-Nazareth (1632); the Minorite monasteries at Graz (1526), and of St. Peter and Paul at Pettau (1239); the Capuchin monasteries at Cilli (1611), Leibnitz (1634), Hartberg (1654), and Schwanberg (1706); the collegiate foundations of the Redemptorists at Mautern (dating from 1526; founded in 1670 as a Franciscan monastery); and at Hain (1504); the Trappist Abbey of Maria-Erlösung at Reichenberg (1851; abbey since 1891), etc. There are also many houses of female orders and congregations. The Catholic societies and confraternities are large and numerous.

Hermann Sacher.

Suárez, Francisco, Doctor Eximius, a pious and eminent theologian, as Paul V called him, b. at Granada, 5 Jan., 1548; d. at Lisbon, 25 Sept., 1617. He entered the Society of Jesus at Salamanca, 16 June, 1564; in that city he studied philosophy and theology from 1565 to 1570, and was ordained in 1572. He taught philosophy at Avila and at Segovia (1571), and later, theology at Avila and Segovia (1575), Valladolid (1576), Rome (1580-85), Alcalá (1585-92), and Coimbra (1597-1616). All his biographers say that he was an excellent religious, practicing mortification, laborious, modest, and given to prayer. He enjoyed such fame for wisdom that Gregory XIII attended his first lecture in Rome; Paul V invited him to refute the errors of King James of England, and wished to retain him near his person, to profit by his knowledge; Philip II sent him to the University of Coimbra to give prestige to that institution, and when Suárez visited the University of Barcelona, the doctors of the university went out to meet him, with the insignia of their faculties. His writings are characterized by depth, penetration and clearness of expression, and they bear witness to their author's exceptional knowledge of the Fathers, and of heretical as well as of ecclesiastical writers. Bossuet said that the writings of Suárez contained the whole of Scholastic philosophy. Werner (Franz Suárez, p. 90) affirms that if Suárez be not the first theologian of his age, he is, beyond all doubt, among the first; Grotius (Ep. 154, J. Cordesio) recognizes him in one of the greatest of theologians and a profound philosopher, and Mackintosh considers him one of the founders of international law.

In Scholasticism, he founded a school of his own, "Suarism", the chief characteristic principles of which are: (1) the principle of individuation by the proper concrete entity of beings; (2) the pure potentiality of matter; (3) the singular as the object of direct intellectual cognition; (4) a conceptual distinction between essence and existence; (5) the existence of created beings; (6) the possibility of spiritual substances only numerically distinct from one another; (7) ambition for the hypostatic union as the sin of the fallen angels; (7) the Incarnation of the Word, even if Adam had not sinned; (8) the solemnity of the vow only in ecclesiastical law; (9) the system of Congrumin that modifies Molinism by the introduction of subjective circumstances, as well as of place and of time, propitious to the action of efficacious grace, and with predestination ante pravisa metro; (10) possibility of holding one and the same truth by both science and faith; (11) belief in Divine authority contained in act of faith; (12) production of the body and blood of Christ by transubstantiation as constituting the Eucharistic sacrifice; (13) the final grace of the Blessed Virgin Mary superior to that of the angels and saints combined.

Suárez classes were established in several universities—Valladolid, Salamanca (1720), Alcalá (1734) —and various Scholastic authors wrote their works ad mentem Suaræsi. Charles III suppressed those classes throughout his dominions by a royal decree.

From Deschers's "Recueil de Portraits" 1773
of 12 August, 1768, and prohibited the use of Jesuit authors, and therefore of Suárez, in teaching. It is obvious, says Cardinal González, that, in so many volumes written by Suárez, there are to be found some matters of little utility, or the practical or scientific importance of which are not in proportion to the time and space which such volumes (e. g. Physics) is also charged with being somewhat diffuse. His book "De Defensione Fidei" was burned at London by royal command, and was prohibited by the Parliament of Paris (1614) on the ground that it contained doctrines that were contrary to the power of sovereigns.

WORKS.—Suárez published his first work, "De Deo Incarnato," at Alcalá, in 1590; he published twelve other volumes, the last of which, "De Defensio Fidei," written against the King of England, was published at Combra, in 1613. After his death the Jesuits of Portugal published ten other volumes of his works, between 1619 and 1655. Of all of these works, two different editions were made; the first, at Venice, 23 volumes in folio (1740-1757); and the second in Paris (Vives), 28 volumes (1786-1861). In 1859 Mgr Manlou published another volume in folio, containing six short treatises that had not been printed in the book "De la Verdad" (Paris: Vol. LXIV, pp. 151-175) gave an account of the manuscripts of Suárez, noting the fact that they were numerous and that he himself possessed seventy-five of them. Many of these and others besides were found by Father Rivière. The works of Suárez were held in the highest esteem in his day, as is shown by the numerous partial editions that were made of them (Lyons, Salamanca, Madrid, Combra, Mayence, Cologne, Paris, Evora, Genoa), as also by the fact, related by his biographers, that one of the wings of the old college of the Jesuits at Salamanca was reserved for the production of his works.

A compendium of the theology of Suárez was published by Father Noél, S.J. (Madrid, 1732); a short epitome of his theological disputes, by the Portuguese Father Francis Suárez, S.J. (Lisbon, 1820); and a compendium of the metaphysics, by Father Gregorio Iturria, S.J. (Madrid, 1901).

SUBCINCTORIUM. See MANIPLE.

SUBDEACON. The subdeacon is the lowest of the sacred or major orders in the Latin Church. It is defined as the power by which one ordained as a subdeacon may carry the chalice with wine to the altar, prepare the necessaries for the Eucharist, and read the Epistles before the people (Ferrarius, op. cit. infra, No. 48). According to the common opinion of theologians at present, the subdeaconship was not instituted by Christ, nor are there any sufficient grounds for maintaining that it had an Apostolic origin. There is no mention of the subdeaconate in Holy Scripture or in the authentic writings of the Apostolic Fathers. These authorities make reference only to bishops, priests, and deacons. At the Council of Trent (Sess. XX, tom. 17, de ref.) says that "the functions of Holy orders from the deaconship to the ostiariate were laudably sanctioned in the Church from the times of the Apostles"; but these words simply indicate that the "functions" were so exercised (that is as part of the diaconate); it was only in the course of time that they were separated from the office of deacon and committed to inferior ministers. This explains why some theologians, e. g. Suarez, think that the inferior function of the subdeacon is as Divine institution, that is, they look on it as made up of functions proper to deacons. Asparri (op. cit. infra, I, No. 35) says: "The Church, in the institution [of the subdeaconship] proceeded thus. She wished to commit to the deacons the inferior functions of the diaconate, both because the deacons, with the increase of the faithful, could not suffice for their many and grave duties, and because she wished that others, received among the clergy and marked with the clerical tonsure, should ascend through minor orders, only after trial, to major orders. Imitating the Divine Law of the first three grades (bishop, priest and deacon), she decreed that the power of performing these functions should be conferred by external rites similar to those by which major orders were bestowed." The subdeaconate is most probably, some say certainly, not a true sacrament, but a sacramental institution. If it is not a true sacrament, it is because the Church has so wished, for she could institute a sacramental similar to a sacrament externally without thereby obliging us to hold that it imprints an indelible character on the soul of the recipient. Wernz (op. cit. infra, No. 158) says: "Since ordinations below the diaconate are most probably not true sacraments, but rather sacramentals, they do not imprint the true sacramental character, hence, if they are conferred validly, they give a power of order instituted solely by human law and circumscribed by its limits."

Historically, the earliest mention of the subdiaconate seems to be found in the letter of Pope Cornelius (A. D. 255) to Fabius of Antioch, in which he states that there are among the Roman clergy forty-six priests, seven deacons, and seven subdeacons. There is nothing to indicate, however, that the subdeaconate is not older than the third century. That there were subdeacons in the African Church in the same century is evident from the letters of St. Cyprian (e. g. ep. 8). The fourth Council of Carthage also mentions them in 398. The Synod of Elvira (305) in Spain does the same (c. 30). Their existence in the Oriental Church is to be found in the letters of Sts. Caecil (ed. by the Council of Council of Ledecia, cap. 21) in 361. At present, among the Greeks and other orientals, as also formerly in the Western Church, subdeaconship is only a minor order. It has been counted among the major orders in the Latin Church, however, for nearly seven centuries. It seems to have been elevated to the rank of a sacred order in the thirteenth century, but it is impossible to fix the precise date. Urban II, at the close of the eleventh century, expressly limited the sacred orders to priesthood and diaconate, and in the middle of the twelfth century, Hugh of St. Victor still calls the subdeacon a minor order. But at the end of the twelfth century, Peter Cantor (De verbo mirifico) says that the subdeaconate had lately been made a sacred order. Early in the thirteenth century, Innocent III authoritatively declared that the subdeaconship was to be enumerated among the major orders and that subdeacons could be chosen to the episcopal chair. At the Council of Bologna (9 Aug. 1352, de etc., l. 14). The reason for this change of discipline was probably not because subdeacons were bound to celibacy, for this obligation began to be imposed upon them in the Latin Church in the fifth and sixth centuries (Thus Leo I in 468 (in c. 1, dist. 32) and the Council of Orleans in 588), but more likely because their functions brought them so closely into the service of the altar.
Subdeaconship is conferred when the bishop gives the empty chalice and paten to the candidate to be touched, saying: "See what kind of ministry is given to you, etc." Two ceremonies following, the presentation of the chalice on the right hand and the imposition of the vestments, are not essential and need not be supplied if omitted (S. C. C., 11, March, 1820). Then the bishop gives the candidate the Book of Epistles to be touched, saying: "Take the Book of Epistles and receive power to read them in the holy Church of God and the living and the dead in the name of the Lord." In case of omission, this rite must be supplied and is probably an essential part of the ordination (S. C. C., 11 Jan., 1711). In the Greek Church, there is a laying on of hands and a suitable prayer, but there is no imposition of hands in the Latin Church. The age of fourteen is required from the N.S. the Bishop of Ely in England (A. D. 1204) is cited as requiring that if the laying on of hands in the subdeaconship be omitted, it must be afterwards supplied (cap. i, x, de sacr. non interend. i. 6), but there seems no doubt that the word "deaconship" was in the original Latin of the pope (i). The duties of a subdeacon are to serve the deacon at Mass; to prepare the bread and wine and sacred vessels for the Holy Sacrifice; to present the chalice and paten at the Offertory and pour water into the wine for the Eucharist; to chant the Epistles solemnly; to assist at the absolution in the Church; and to assist in the desecration of the altar, and guard the gates of the sanctuary during the Holy Sacrifice. In the ancient Roman Church, the subdeacons administered in great part the temporal goods of the Holy See and were often employed on important missions by the popes. A candidate for the subdiaconate must have been ordained a subdeacon and have received minor orders. He must have the knowledge befitting his grade in the Church and have entered on his twenty-second year. He must also have acquired a title to orders. After ordination, he is bound to celibacy and to the recitation of the Divine Office.

WILLIAM H. W. FANNING.

Subiaco (SUPLACUM, SUBLACUM, SUBLACUM), a city in the Province of Rome, twenty-five miles from Tivoli, received its name from the artificial lakes of the villa of Nero and is renowned for its sacred grotto (Sacro Speco), the Abbey of St. Scholastica, and the archbishop's residence and Church of St. Andrew, which crowns the hill. When St. Benedict, at the age of forty, retired from the world, he lived for three years in a cave above the River Anio, supplied with the necessaries of life by a monk, St. Roman. The grotto became the cradle of the Benedictine Order. St. Benedict was able to build twelve monasteries and to place twelve monks in each. The one at the grotto has always had, but for a short existence, in 584 we find a record of its reparation. In this year Leo IV is said to have consecrated an altar to Sts. Benedict and Scholastica and another to St. Sylvester. Another restoration took place in 1083 under Abbot Humbert of St. Scholastica, and John V, created cardinal by Gregory VII, made the grotto the terminus of a yearly procession, built a new road, and had the altars reconstituted. Shortly before 1200 there existed a community of twelve, which Innocent III made a priory; John XXII in 1312 appointed a special abbot. A new road was built by the city in 1888. The sacred grotto is still viewed by pilgrims and on 27 October, 1909, Pius X granted a daily plural indulgence to those who receive Holy Communion there and pray according to the intention of the Holy Father (Acta Ap. Sedis, II, 406). A short description of the grotto, the church, and chapels, is given by Chandelery, "Pilgrim Walks in Rome" (New York, 1906), p. 469. The Abbey of St. Scholastica, about a mile and a half below the grotto, was built by St. Benedict himself (about 566). It was consecrated by the Roman patricians, Tertullian and Equitius. The second abbott, St. Honoratus, changed the old monastery into a chapter room and built a new one, dedicating it to Sts. Cosmas and Damian. It was destroyed by the Lombards in 601 and abandoned for a century. By order of St. Bonifacius VII in 1080 it was rebuilt by Abbot Stephen and consecrated to Sts. Benedict and Scholastica. Demolished in 840 by the Saracens and again in 981 by the Hungarians, it rose from its ruins. Benedict VII consecrated the new church, and henceforth the abbey was known by the name Sts. Scholastica. In 1098 Leo IX came to Subiaco to settle various disputes and to correct abuses; a similar visit was made by Gregory VII. Special favour was shown by Pascal II, who took the abbey from the jurisdiction of the Bishop of Tivoli and made it an abbacy nullo. Its temporal welfare was also restored to Innocent III, among others, Innocent III, at his visit in 1205, increased the death duties of the abbey. With the decline of religious fervour, strifes and dissensions arose to such an extent that Abb0 Bartholomew in 1364, by command of the pope, had to dismiss some of the incorrigible monks and fill their places with religious from other monasteries. Numbers were reduced in front of the walls, and for many decades Subiaco was a centre of German thrift, science, and art. Still, it seems the discipline was not satisfactory, for Urban VI (1378-89) abolished the abbey for life, took away from the monks the right of election, and gave the administration and revenues of the monastery to the Bishop of Rome. In 1455, gave the abbey in commendam to a cardinal. The first of these was the Spanish Cardinal Torquemada and the second Rodrigo Borgia (later Alexander VI), who remodelled the Castrum Sublacense, once the summer resort of the popes, and made it the residence of the commendatory abbots.

Many of these abbots cared but little for the religious life of the monks and looked only for the revenues. As an example, Pompeo Colonna, Bishop of Rieti, commendatory abbot since 1506, squandered the goods of the abbey and gave the income to his enemies. The reform of the monastery by Julius II readjusted matters and restored the monastic possessions. For spiritual benefit a union had been made between Subiaco and the Abbey of Farfa, but it lasted only a short time. In 1514 Subiaco joined the Congregation of St. Justina, St. Scholastica, and the other abbots general of the Abbacy of St. Scholastica, while a cardinal remained commendatory abbots. Even after this union there were continual quarrels between Subiaco and Farfa, Subiaco and Monte Cassino, the Germans and the Italians. After this but little is known about the abbey until the middle of the nineteenth century, when in 1851 some of the monasteries of Italy, with consent of the Holy See, formed a separate province, though still belonging to the Congregation of St. Justina. Soon other monasteries in various parts of the world wished to join this union, and Pius IX, by decree of 9 March, 1872, established the Cassinese Congregation of primitive observance. This congregation, known also as the Congregatio Sublacensis, has had a marvellous growth for, according to the "Familiae Confessoriae" of 1910, it embraces 35 monasteries in 5 provinces, with a total of 1080 religious. The troubles of Subiaco did not cease for by order of Pius VII, the property of the abbey declared a national monument, and the religious tolerated as custodians of the same. At first but few monks remained, but in 1897 there was again a community of 25 and the "Familiae Confessoriae" of
**SUBREPTION**

1910 notes 21 priests, 10 clerics, 8 lay brothers, and 3 novices. On 7 January, 1909, Pius X restored to the monks the right of electing their own abbot. On the 28th, they elected Lawrence Salvi. The pope confirmed the right on him, and on 17 Feb., and four days later Salvi received the abbatial benediction. In 1904 Luigi Cardinal Macchi resigned his office as commendatory abbot, and Pius X retained the position for himself, ordering the Acts of the Curia to bear the heading: “Pius X, Abbas Subretti, et dicto nomine, etc.” The abbacy suite comprises 24 parishes, 91 priests (Benedictines, Franciscans, Capuchins, and secular), and 23,000 inhabitants [Annuaire Pont. Eccles. (1911), 339].

The episcopal functions are performed by Victor M. Corvais, O.S.B., titular Bishop of Tripoli. The library is open to visitors. The cathedral of the city is dedicated to the Assumption of the Blessed Virgin Mary. It was erected in 1599 and consecrated in 1697.

To-day the printing press is doing valuable work; in 1906 appeared “Petri Boherii in Regularum S. Benedicti Constitutionum nunc primum editum cura et studio P. Allodi.”

**SUBREPTION**

**Subreption** (Lat. subreptio), in canon law, the concealment or suppression of statements or facts that according to law or usage should be or could be contained in an application or petition for a rescript. In its effects subreption is equivalent to obreption (q. v.), which consists in a positive allegation of what is false. Subreption may be intentional and malicious, or attributable solely to ignorance or inadvertence. It may affect the primary or substantial reason or motive of the grant, or constitute merely a secondary or impellent cause of the concession. For the effect of subreption on the validity of grants see Rescripts. Decretalula, 1, 3, c. 20, De Rescriptis, and canones generally.

**A. B. MERSHMAN.**

**Subsidies**

Subsidies, Episcopalian (Lat. subsidia, tribute, pecuniary aid), subvention); since the faithful are obligated to the support of religion, especially in their own diocese, a bishop may ask contributions for diocesan needs from his own subjects, and particularly from the clergy. These offerings as far as possible should be voluntary, rather than taxes or assessments strictly so called. Of the contributions given to specific projects the normal amount is usually based on the contributions of other benefactors, provided the donor does not wish his name to be publicly known or the work to be done in a particular church. On the other hand, a grant made to a specific purpose is a special contribution.

Under ordinary circumstances, a grant made to a specific purpose is a special contribution.

**A. B. MERSHMAN.**

**SUBSTANCE**

Substance (Lat. sub-stantia, substantia), the first of Aristotle’s categories, signifies being as existing in and by itself, and serving as a subject or basis for accidents and accidental changes.

Substance, being a genus supremum, cannot strictly be defined by an analysis into genus and specific difference; yet a survey of the universe at large will enable us to form without difficulty an accurate idea of substance. Nothing is more evident than that things change. It is impossible for anything to be wholly and absolutely in a single state; on the other hand, all the changes are not equally profound. Some appear to be purely external: a piece of wood may be hot or cold, lying flat or upright, yet it is still wood; but if it be completely burnt so as to be transformed into ashes and gases, it is no longer wood; the specific characteristics of what we describe as wood have totally disappeared. Thus there are two kinds of changes: one affects the radical characteristics of things, and consequently determines the existence or non-existence of these things; the other in no way destroys these characteristics, and so, while modifying the thing, does not affect it fundamentally. It is necessary, therefore, to recognize in each thing certain secondary realities (see Accident) and also a permanent fundamentum which continues to exist notwithstanding the superficial changes, which serves as a basis or support for the secondary realities—what, in a word, we term the substance. Its fundamental character consists in its being, and by itself, and not in another subject as accidents are.

The Scholastics, who accepted Aristotle’s definition, also distinguished primary substance (substantia prima) from secondary substance (substantia secunda):
CHURCH OF ST. SCHOLASTICA  
BERNINI'S STATUE OF ST. BENEDICT  
SUBIACO  
MONASTERY OF ST. BENEDICT  
THE SACRED GROTTO
the former is the individual thing—substance properly so called; the latter designates the universal essence or nature as contained in genus and species. And, against Aristotle, they say that an infinite number of substances is absolutely impossible. The latter are often called _substantiae separatae_, to signify that they are separate from matter, i.e., neither actually conjoined with a material organism nor requiring such union as the natural complement of their being (St. Thomas, "Contra Genere", II, 91 sqq.). St. Thomas further teaches that the same substance cannot properly be applied to God, not only because He is not the subject of any accidents, but also because in Him essence and existence are identical, and consequently He is not included in any genus whatever. For the same reason, it is impossible that God should be the formal being of all things (esse formale omnium), or, in other words, that one and the same existence is that which is common to Him and them (op. cit., I. 25, 26).

In the visible world there is a multitude of substances numerically distinct. Each, moreover, has a specific nature which determines the mode of its activity and at the same time, through its activity, becomes the subject of activity itself. Our existence does not constitute the substance; this exists independently of us, and our thought at most acquires a knowledge of each substance by considering its manifestations. In this way we come to know both the nature of material things and the nature of the spiritual substance within us, i.e., the soul. In both cases our knowledge may be imperfect, but we are not thereby justified in concluding that only the superficial appearances or phenomena are accessible to us, and that the inner substantial being, of matter or of mind, is unknowable.

Since the close of the Scholastic period, the idea of substance and the doctrines centring about it have undergone profound modifications which in turn have led to a complete reversal of the Scholastic teaching on vital questions in philosophy. Apart from the traditional concept formulated above, we must note especially the doctrine that persists and is defined as substance or being that so exists as to require nothing else for its existence. This formula is unfortunate: it is false, for the idea of substance determines an essence which, if it exists, has its own existence not borrowed from an ulterior basis, and which is not a modification of something else. For instance, even in the case of the pure determinista, either the manner in which actual existence has been given to this essence or the way in which it is preserved. The Cartesian definition, moreover, is dangerous; for it suggests that substance admits of no efficient cause, but exists in virtue of its own essence. Thus Spinoza, following in the footsteps of Descartes, declared that substance is that which is conceived in itself and by itself, and thence deduced his pantheistic system according to which there is but one substance—in i.e., God—all things else being only the modes or attributes of the Divine substance (see PANVMIC). Leibniz's definition is also worthy of note. He considers substance as "a being gifted with the power of action". Substance certainly can act, since action follows being, and substance is being by par excellence. But this property does not go to the basis of reality. In every finite substance the power to act is distinct from the substantial essence; it is but a property of substance which can be defined only by its mode of existence.

II.—The most important question concerning substance is that of its reality. In ancient days Heraclitus, in modern times Hume, Locke, Mill, and Taine, and in our day Wundt, Mach, Paulsen, Ostwald, Ribot, Jodl, Hoffding, Eisler, and several others deny the reality of substance and consider the existence of substance as an illusory postulate of naive minds. On this basis of this radical skepticism, the idea of substance and accident. They hold that, apart from the accidents, substance is nothing, a being without qualities, operations, or end. This is quite erroneous. The accidents cannot be separated thus from the substance; they have their being only in the substance; they are not the substance, but are by their very nature modifications of the substance. The operations which these writers would thus attribute to the accidents are really the operations of the substance, which exercises them through the accidents. Finally, in attributing an independent existence to the accidents, they simply transform them into substance, thus establishing just what they intend to deny. It can be said that whatever exists is either a substance or in a substance.

The tendency of modern philosophy has been to regard substance simply as an idea which the mind indeed is constrained to form, but which either does not exist objectively or, if it does exist, cannot be known. According to Locke (Essay II, 23), "Not imagining how simple ideas can subsist by themselves, we accustom ourselves to suppose some substratum wherein they do subsist and from which they do result; which therefore we call substance; so that if any thing remains of the substance, as well of the substance in general, he will find he has no other idea of it at all, but only a supposition of he knows not what support of such qualities, which are capable of producing simple ideas in us; which qualities are commonly called accidents." He protests, however, that this statement refers only to the idea of substance, not to its being; and he claims that "we have as clear a notion of the substance of spirit as we have of body" (ibid.). Hume held that the idea of substance is "nothing but a collection of simple ideas that are united by the imagination and have a particular name assigned to them, by which we are able to recall, either to ourselves or others, that collection" (Treatise, bk. I, pt. IV); and that the soul is "a bundle of conceptions in a perpetual flux and movement".

For Kant substance is a category of thought which applies only to phenomena, i.e., it is the idea of something that persists in all changes. Substantiality and immortality of the soul cannot be proved by the pure reason, but are postulated by the moral law which pertains to the practical reason. J. S. Mill, after stating that "we may make propositions also respecting those hidden causes of phenomena which are named substances and attributes", goes on to say: "No assertion can be made, at least with a meaning, concerning those unknown and unknowable entities, except in virtue of the phenomena by which alone they manifest themselves to our faculties" (Logik, bk. i, I, c. v); in other words, substance manifests itself through phenomena and yet is unknowable. Mill defines matter as "the quality of sensation", so that no substantial bond is required for material objects; but for conscious states a tie is needed in which there is something "real as the sensations themselves and not a mere product of the laws of thought" ("Examination", c. xi; cf. Appendix). Wundt, on the contrary, declares that the idea (hypothetical) of substance is necessary to connect the phenomena presented in outer experience, but that it is not applicable to our inner experience except for the psycho-physical processes (Logik, I, 484 sqq.). This is the basis of Actualism, which reduces the soul to states. Herbert Spencer's view is thus expressed: "Existence means nothing more than persistence; and hence, in mind, that which persists in spite of all changes, and maintains the unity of the aggregate in defiance of all attempts to divide it, is that of which existence in the full sense of the
word must be predicated—that which we must postulate as the substance of mind in contradistinction to the varying forms it assumes. But, if so, the impossibility of knowing the substance of mind is manifest” (Princ. of Psychol., Pt. II, c. i). Elsewhere he declares that it is the same Unknowable Power which manifests itself alike in the physical world and in consciousness—a statement wherein modern Agnosticism returns to the Pantheism of Spinoza.

This development of the concept of substance is inevitably hard; it shows to what extremes subjectivism leads, and what inconsistencies it brings into the investigation of the most important problems of philosophy. While the inquiry has been pursued in the name of criticism, its results, so far as the soul is concerned, are distinctly in favour of Materialism; and while the aim was supposed to be a negative one on a firmer basis, the outcome is Agnosticism either open or disguised. It is perhaps as a reaction against such confusion in the field of metaphysics that an attempt has recently been made by representatives of physical science to reconstruct the idea of substance by making it equivalent to “energy” or “force”. The attempt so far has led to the conclusion that energy is the most universal substance and the most universal accident (Ostwald, “Vorlesungen über Naturphilosophie”, 2nd ed., Leipzig, 1902, p. 146).

For the theological significance of substance see Ecclesiology; Secular Administration; Soul; Spiritualism; Balmain, Fundamental Philosophy, II (new ed., New York, 1903); John Hick, General Metaphysics (3rd ed., New York, 1927); C. W. van der Lugt, The Metaphysics of the School (London, 1870-79); Mericke, Ontologie (Leipzig, 1906); Lorentz, Philosophia theoricae institutiones (Rome, 1660); Willems, Institutiones philosophicae (Paris, 1670); and also the bibliography of references in Ehrlich, Wörterbuch der philosophischen Begriffe, III (Berlin, 1910).

Suburbanian Dioceses, a name applied to the dioceses nearest Rome, viz. Albano, Frascati (Tusculum), Palestrina, Sabina, Ostia and Velletri, Porto and S. Rufina, the bishops of which form the order of cardinal bishops (see Cardinal). The See of Albano (Albanenses) has its cathedral, on the site of the aqueduct built by Constantine, on the Appian Way, about ten miles from Rome. The name corresponds to the Latin aeger Albanus which commemorated the ancient city of Alba Longa, famous in Roman history. The diocese now comprises twelve parishes, and has a population of 41,000. Frascati, the ancient Tusculum, is in the Alban Hills, twelve miles from Rome. The diocese (Tusculum) contains eight parishes and has a population of 16,000; within its limits is the famous Basilian Abbey of Grottaferrata (q. v.). The capital of the Diocese of Palestrina (Prenestinenses) is the ancient Preneste, on the Via Labicana. The diocese, divided into twenty-four parishes, has a population of 45,700. The Diocese of Sabina (Sabinienses) was formed out of three oldest dioceses: S. Maria in Vescovio, Coreese, and Mentana. Coreese is the ancient Cures, which was, in remote ages, the Sabina capital; hence, obviously, the name Sabina. This, the largest of the suburbanian dioceses, contains some 55,000 inhabitants, in thirty-five parishes. Ostia and Velletri (Ostien-sis et Veltierinensis) was formed in the twelfth century by the union of the Diocese of Velletri (the ancient Velitrae of the Volscians) with that of Ostia. The latter place was the seaport of ancient Rome. This diocese has sixteen parishes with a population of 5,700. Porto, opposite Ostia at the mouth of the Tiber, was the Roman port (portus) constructed by the Emperor Claudius. The Basilica of St. Rufina and Seicundus, about fourteen miles from Rome, on the Via Aureliana, having become the see of a bishop in

the fifth century, this see was eventually united with that of Ostia. The diocese (Portuensis et S. Rufina) has eighteen parishes with a population of about 5000.

The term ecclesia suburbicaria occurs first in Rufinus [Hist. eccl., I (x), 6], where he refers to the sixth canon of Nikea treating of the extension of the jurisdiction of the Roman Church. The term is certainly more restricted in meaning than in the passage from Rufinus, and so must have been employed as it was used in Roman public law. In fairly recent times the expression was used synony-mously with suburbicarius, that is, in the immediate vicinity of Rome, to signify the above-men- tioned dioceses.

Naturally these dioceses had a certain importance in the Church of Rome. Some authorities have suggested that the bishops were merely auxiliaries of the pope with jurisdiction, subject, however, to his. Certainly they had some prerogatives. For instance, the Bishop of Ostia, in the eleventh century, consecrated the pope; in the twelfth century, the Bishop of Albano recited the second prayer in the consecration ceremony, and the Bishop of Porto the third. In the eighth century we read (Vita Stephani, III) of the most ancient custom in virtue of which seven of these bishops, called hebdomadarii, celebrated Mass in turn in place of the pope and were called episcopi cardinales, from being permanently attached to the cardo, that is, the cathedral church of Rome; but we are not told who they were. In the eleventh century there were seven (six after the union of Porto and Silva Candida). Besides the titles episcopi hebdomadarii (twelfth century) and cardinales Romano Sedia they were also known as Vicarii and Cooperatores popes and episcopi romani. The last title must have had a wider signification, as it was used of other bishops besides those of the suburbicaries. In the eleventh century, Tivoli, Gabii (united later with Palestrina), Levicium (united with Tusculum), Villesti, Nepi, and Segni. In addition to the districts already mentioned these bishops had others. For instance the Bishop of Porto had ordinary delegated jurisdiction in Trastevere, and the Bishop of Silva Candida in the region of Tivoli. The Bishop of Porto, opposite Ostia at the mouth of the Tiber, was the Roman port (portus) constructed by the Emperor Claudius. The Basilica of St. Rufina and Seicundus, about fourteen miles from Rome, on the Via Aureliana, having become the see of a bishop in
the necessary for the government of his diocese, such as other resident bishops have, with the following restrictions: (5) the auxiliary governs the diocese in the name and place of the cardinal; (6) with the death or transfer of the latter the jurisdiction of the successor begins; (7) his missionary work is in the diocese as administrator Apostolic; (7) he must make an annual report to the cardinal on the moral and economic conditions of the diocese; (8) where possible, a part of the episcopal palace shall be set aside for the suffragan and the Curia; (9) the blessing of the holy oils, the pontifical celebrations on the feast of the episcopal palace, the blessing of Mass for the people is imposed on the cardinal, who (11) has the right of having his coat-of-arms on the palace, the cathedral, and other customary places; (12) the episcopal throne is reserved to the cardinal whose name alone is mentioned in the canon; (13) the cardinal, even when absent from the diocese, can grant an indulgence of 200 days; (14) if the cardinal is in the diocese he alone may ordain, or grant permission to ordain, pontifically; (15) the auxiliary may not assign a chapel in the chapter church to any parish reserved to the Holy See without the consent of the cardinal; (16) the cardinal may personally supervise and visit the diocese; (17) the cardinal retains the right of assisting at marriages and of administering the other sacraments. The auxiliary is charged especially with examining candidates for tonsure and the other orders; but he may not confer or authorize the conferring of orders without the permission of the cardinal; (18) the diocesan synod is to be held with the consent and in the name of the cardinal, who alone has the right of approving and promulgating its decrees; (19) uniting or dividing benefices, even parochial, requires the consent of the cardinal, who (20) is to be consulted on appointments to offices and chairs in the seminary; (21) after the death or transfer of the suffragan, the cardinal through his vicar general shall provide for the government of the diocese till the appointment of a new suffragan; (22) when a cardinal-bishop dies, the same ceremonies shall take place as are customary on the deaths of resident cardinal-bishops.

SUDAN, VICARIATE APOLITIC OF.—The Vicariate of Sudan or Central-Africa (Sudanensis et Africae Centrales), in North-Eastern Africa, includes the whole Anglo-Egyptian Sudan, the part of Egypt south of Aswan, the French territory from Fezzan to 10° N. lat., parts of Adamaa and Sokoto on Lake Chad, and the Nile Province of Uganda Protectorate. It was erected on 3 April, 1846, by Gregory XVI., and in 1868 the Emperor Francis Joseph of Austria took the mission under his protection. From 1833 to 1898 the Sudan (then an Egyptian province) was closed by the insurrection of the Mahdi Mohamed Ahmed and his successor Khalifa Abdullahi, and the missionaries were compelled to work outside the circuit of their jurisdiction in Egypt. On 2 Sept., 1898, the African mission was united, which in 1899 had begun operations for the recovery of the lost provinces, completed the overthrow of the Khalifa, although he was not slain until November of the following year. The country still suffers from the effects of the Dervish operation, during which it was largely depopulated, wide tracts having gone out of cultivation and trade having been abandoned. In 1899 mission work was recommenced. The two religious congregations, the Sons of the Sacred Heart and the Pious Mothers of Nigeria furnish missionaries and sisters to the vicariate, and the two periodical papers “La Nigeris” (Verona) and “Stern der Neger” (Brixen) print articles about this mission. The number of inhabitants is uncertain, perhaps about eight millions. The mission work is in the heathen part with the Shillouki Dinka, Nuer, Jur, Golo, Nyan-Nyan, and other negro tribes. In the northern and Mohammedan part are some European and Oriental Catholic immigrants. Statistics:stations at Assuan, Omdurman, Kharlémou (central station); Lut and Afigo (White Nile); and, Kayango, and Cleveland (Bahrel-Ghazal); Omach and Gulu (Uganda); besides twenty-five localities provided

SUGAR (SUCER), JOHN, VENERABLE, b. at Wombourn, Staffordshire, 1558; suffered at Warwick, 16 July, 1604. He matriculated at Oxford from St. Mary Hall, 30 October, 1584, and is described as dexteril. He left without taking a degree, it is said because he disliked the Oath of Supremacy; but it appears that he acted as a Protestant minister at Cannock, Staffordshire, for some time. He was ordained priest from the English Colledge, Douai (1601), and sent on the mission the same year. He was arrested 8 July, 1603, at Rowington, Warwickshire, with Venerable Robert Gresswell (Grissold), a native of Rowington (in the service of Mr. Sheldon of Broadway, Worcestershire), who was in attendance on him. After a year's imprisonment at Warwick they were condemned there 14 July, Sugar for being a priest, and Gresswell for assisting him. Sugar was cut down before he was fully dead. Gresswell was offered his life if he would promise to conform.

J. B. WAINWRIGHT.
SUGER

Suger, Abbot of St-Denis, statesman and historian, b. probably at or near St-Denis, about 1081; d. there, 13 Jan., 1151. Towards 1091 he was offered to the monastery of St-Denis where he became a fellow-student of King Louis VI. From 1104 to 1106 he attended another monastic school, perhaps that of St-Benoît-sur-Loire near Orleans. He became secretary to Abbot Adam of St-Denis in 1106, was named provost of Berneval in Normandy towards 1107 and of Toury in Beauce in 1109. Louis VI sent him (1118) to the Court of Gelasius II at Maguelonne in Southern France, and later to that of Callistus II at Rome. During his stay at Rome (1121–22) he was elected Abbot of St-Denis, and ordained to the priesthood on his return. He attended the First General Council of the Lateran in 1123, and so favourably impressed Callistus II that eighteen months after his return to France this pope, desirous of conferring new honours (probably the cardinalate) upon him, invited him to Rome. Suger proceeded as far as Lucca, but retraced his steps upon receipt of the news of the pope's death. Henceforth most of his time was spent at Court until 1127, when he initiated, and subsequently successfully carried out, the reform of his monastery. He continued to remain, however, the constant adviser of Louis VI and of his successor Louis VII. During the latter's absence on the Second Crusade he was appointed regent of the kingdom (1147–49). He had opposed the king's departure on the ground that the powerful and turbulent vassals were a danger to the royal power; but so sanguine was his administration that the king, upon his return, bestowed upon him the title of "Father of the Country". Although the crusade ended in failure, Suger equipped an army and was about to depart for the Holy Land when he died. As a statesman he sought to strengthen the royal power, to improve agriculture, commerce, and trade, and to reform the administration of justice. As abbot he not only introduced thorough-going reforms, but also completed in 1144 the new monastic church. He has left an account of the consecration of this edifice, "Libellus de consecratione eccle. S. Dionysii", and a memoir of his own abbatial administration, "Libr. de rebus in administratione sua gestis". Of greater importance for the knowledge of the period are his "Vita Ludovici Grossi rex", a eulogistic but reliable life of Louis the Fat, and "Historia Ludovici VII", a history of Louis VII, which in its present form is the work of a Burgundian monk of St-Germain-des-Prés. We also possess of him some letters, official documents, and a will of the year 1137.

The complete works of Suger were published by de la Marche, Oeuvres complètes de Suger (Paris, 1867); they are also in P. L., Clxxxvi, 1211-1468; Budé, Oeuvres complètes de Suger (Paris, 1855); Cartellieri, Atti Suger von St-Denis (Berlin, 1888); Marmont, Early Chronicles of St. Denis (London, s. d.), pp. 50-59; Moulinier, Les Sources de l'Hist. de France, l. ii, nos. 1845-50.

Suggestion. See Psychotherapy.
kill himself if ordered to do so by the judge? Some authors answer this question in the affirmative, basing their argument on the right which society possesses to punish certain malefactors with death and to commission any executioner, hence also the malefactor himself, to carry out the sentence. We share the most widely accepted opinion, that this practice, prevalent in certain countries of the East, is not lawful. Violating it means that malefactor and victim recognize the distinction between the subject of a right and that of a duty, hence in the present case between the one who punishes and the one who is punished. Finally, the same principle which forbids anyone to personally repay his own death also forbids him to advise, direct, or assist with the direct intention of suicide, that another should slay him.

B. Positive but Indirect Suicide committed without Divine consent is also unlawful unless, everything considered, there is sufficient reason for doing what will cause death to follow. Thus, it is not a sin, but an act of exalted virtue, to go into savage lands to preach the Gospel, or to the bedside of the plague-stricken, to minister to them, although they who do so have before them the prospect of inevitable and speedy death; nor is it a sin for workmen in the discharge of duties to climb on roofs and buildings, thus exposing themselves to danger of death, etc. All this is lawful provided it is done without the implicit and expressed consent of the persons in question. In theory the persons in question have not in view either as end or means the evil result, that is, death, that will follow, and, moreover, if there be an evil result it is largely compensated for by the good and useful result which they seek. On the other hand there is sin in exposing oneself to danger of death to display courage, to win a wager, etc., because in all these cases the end does not in any way compensate for the danger of death that is run. To judge whether or not there is sufficient reason for an act which will apparently be followed by death, all the circumstances must be weighed, namely, the danger to which the act is likely to lead, the greater or less certainty of its being attained, the greater or less danger of death, etc., all questions which may in a specific case be very difficult to solve.

Negative and Direct Suicide without the consent of God constitutes the same sin as positive suicide. In fact man has over his life only the right of use with corresponding obligations to preserve the object of God's dominion, the substance of his life. Hence, it follows obviously that he fails in this obligation of usufructuary who neglects the necessary means for the preservation of life, and if he with the intention of destroying the latter, and consequently violates the rights of God.

D. Indirect and Negative Suicide without the consent of God is also an attempt against the rights of the Creator and an injustice towards Him whenever without sufficient cause it brings about all the means of preservation of which he should make use. If a man of usufructuary is obliged in justice to preserve his life, it follows that he is equally bound to make use of all the ordinary means which are indicated in the usual course of things, viz.: (1) he should employ all the ordinary means which nature itself provides, such as to eat, drink, sleep, and so on; (2) moreover, he should avoid all dangers which he may easily avoid, e. g. to flee from a burning house, to escape from an infuriated animal when it may be done without difficulty. In fact to neglect the ordinary means for preserving life is taking one's life into one's own hands, an act which is not true with regard to extraordinary means. The theologians teach that one is not bound in order to preserve life to employ remedies which, considering one's condition, are regarded as extraordinary and involving extraordinary expenditure; one is not obliged to undergo a very painful surgical operation, nor a considerable amputation, not to go into exile in order to seek a more beneficial climate, etc. To use a comparison, the lessee of a house is bound to take care of it as a good father of a family to make use of the ordinary means for the preservation of the property, for instance, to extinguish a fire which he may easily extinguish, etc., but he is not bound to employ means considered extraordinary, such as to procure the latest novelties invented by science to prevent or extinguish fire.

The principles which have been outlined in the four propositions or divisions above given should serve for the solution of particular cases; however, the application may not always be equally easy, and thus a person may by an objectively unlawful act take his life and nevertheless consider it permissible and even an act of exalted virtue. It may be that by performing or omitting a certain act a person may injure his health and shorten his life. To apply the foregoing principles: it is first of all clear (1st and 3rd propositions, A and C) that one may not have in view this hastening of death, but, this hypothesis aside, it may be said on the one hand that to expose oneself without sufficient reason to a considerable shortening of life constitutes a serious injury to the rights of the Creator; but on the other hand if the danger of death be not imminent, although it is to be feared that life may be shortened even by several years, it is not a sin deliberately and only in the view of the result in theory the persons in question have not in view either as end or means the evil result, that is, death, that will follow, and, moreover, if there be an evil result it is largely compensated for by the good and useful result which they seek. On the other hand there is sin in exposing oneself to danger of death to display courage, to win a wager, etc., because in all these cases the end does not in any way compensate for the danger of death that is run. To judge whether or not there is sufficient reason for an act which will apparently be followed by death, all the circumstances must be weighed, namely, the danger to which the act is likely to lead, the greater or less certainty of its being attained, the greater or less danger of death, etc., all questions which may in a specific case be very difficult to solve.

II. Frequency of Suicide; Chief Causes.—The plague of suicide belongs especially to the period of decadence of the civilized peoples of antiquity, Greeks, Romans, and Egyptians. The Christian Middle Ages were unacquainted with this morbid tendency, but it has reappeared at a more recent period, has developed constantly since the Renaissance, and at present has passed on this interest among all civilized peoples, that it may be considered the special evil of our time. At present the increase in the tendency to suicide is, with that to mental alienation, the saddest and thereby the most important characteristic fact of our era (Masaryk, 140). The officially established number of suicides during the nineteenth century, about one million and a half, of which 1,300,000 were in Europe. Again Father Krose estimates the real number for Europe alone at two millions. During the last ten years of the nineteenth century there were 400,000 suicides, of which France and Germany alone furnished half. The following details are given by Nieuwborne and Jacott. Taking the countries in the order of the frequency of the rate of suicides, and taking as a scale the number of the latter to the million of inhabitants, we have the following results for the last ten years of the nineteenth century: France, 239; Denmark, 234; Switzerland, 232; Germany, 206; (in Saxony especially the minister rate was 308, which figure rose to 325 for 1901-05); Austria, 158; Sweden, 147; Hungary, 145; Belgium, 124; England, 84; Norway, 63; Italy, 60; Scotland, 50; Low Countries, 56; Russia, 32; Ireland, 20; Spain, 21. But, as is shown by other indications furnished by various authorities for the years 1901-05 (54 sq.), this figure has risen in recent years to an alarming extent. For instance, England in 1905 had risen to 103 to the million inhabitants; Switzerland to 232; the Low Countries to 64; and Ireland to 53. In the United States the annual average of suicides from 1901-5 was 4545 or 1.66 per million of population; in 1906, the latest available statistics,
the number of suicides was 8332, or 116 per million of population.

In this number must obviously be included the suicides attributable to madness, but the number is so large a number of physicians, moralists, and jurists who, led into error by a false philosophy, lay it down as a general rule that suicide is always due to dementia, so great is the horror which this act inspires in every man of sane mind. The Church rejects this theory and, while admitting exceptions, considers that it is the duty of those who, impressed with despair or anger, attempt their life often act through malice or culpable cowardice. In fact, despair and anger are not as a general thing movements of the soul which it is impossible to resist, especially if one does not neglect the helps offered by religion, confidence in God, belief in the immortality of the soul and in a future life of rewards and punishments. Widely different reasons have been advanced to explain this frequency of suicide, but it is more correct to say that it does not depend on any one particular cause, but rather on an assemblage of factors, such as the social and economic situation, the misfortunes of a large number, a more feverish pursuit of what is considered happiness, often ending in crude deceptions, the ever more refined search for pleasure, a more precocious and intense stimulation of sexual life, intellectual overwork, the influence of the Press and the sensational news which every day provides, the ravages of heredity, the ravages of alcoholism, etc. But it is undeniable that the religious factor is by far the most important, as statisticians prove (cf. the detailed investigations of Jacquot); the proportion of suicides in Protestant countries being as a general rule greater than that in Catholic countries, and the increase in suicides keeping step with the de-Christianization of a country.

France presents a painful example parallel to the systematic de-Christianization; the number of suicides for each 100,000 of population has increased from 3.32 in 1852 to 29 in 1900. The reason is obvious. Religion alone, and especially the Catholic religion, instructs us with regard to the true destiny of life and the importance of death; it alone furnishes a solution of the enigma of suffering, inasmuch as it shows man living in a land of exile and suffering as a means of acquiring the glory and happiness of a future life. By its doctrines of the efficacy of repentance and the practice of confession it relieves the moral suffering of man; it forbids and prevents to a large extent the disorders of life; in a word it is of a nature to prevent the causes which are calculated to impel a man to the extreme act. For the science of moral theology is also of moral philosophy, especially in reference to the principles as well as the frequency and causes of suicide: WALSER in Socialistik (2nd ed., Freiburg, 1903), v. SELBEMANN, MAARTEN, Der Selbem, als sociales Massenerscheinungen der modernen Gesellschaft (Vienna, 1881); MONTI-SERRE, Suicide, International Scientific Series (New York, 1882); BAILLY, Modern Social Conditions (New York, 1906); SCHAFER, ETHOS, Socialistische (Leipzig, 1906); KROO, DES SELBEMANN IM 19. JH. FRIEBURG (Freiburg, 1906); NIEBURG, Begriffe der Handwoordenboek (Tilburg, 1910); JACQUARD, BOUSAN DE STATISTIQUE MORALE: I, Le Suicide (Brussels, 1906).

A. VAN DER HEEREN.

Suidas (Σουίδας, Σοῦδας), author of, perhaps, the most important Greek lexicon or encyclopedia. Nothing is known of Suidas himself except that he lived about the middle of the tenth century, apparently at Constantinople, and that he was probably an ecclesiastical person devoted to literary studies. But his lexicon is one of the most valuable documents of Greek philology, grammar, and literary history. He uses material from the classical period down to his own time, a long chart of Eustathius of Thessalonica (c. 1192), quote from him. Suidas’s lexicon is something between a grammatical dictionary and an encyclopedia in the modern sense. He explains the source, derivation, and meaning of words according to the philology of his period, using such earlier authorities as Harpokration and Hellaios. There is nothing specially important about this part of his work. It is the articles on literary history that we cannot tolerate. In theory, given a supply of details, and to some extent quotations, from authors whose works are otherwise lost, he uses older scholia to the classics (Homer, Thucydides, Sophocles, etc.), and for later writers, Polybius, Josephus, the ‘Chronicon Paschale’, George Syncellus, George Hamartolus, and so on. His lexicon represents a convenient work of reference for persons who played a part in political, ecclesiastical, and literary history in the East down to the tenth century. His chief source for this is the encyclopedia of Constantine VII Porphyrogenitus (912-96), and for Roman history the excerpts of John of Antioch (seventh century). KRAMER (op. cit., 566) counts two main sources of his work: Constantine VII for ancient history, Hamartolus (Georgios Monarchos) for the Byzantine age. The lexicon is arranged, not quite alphabetically, but according to a system (formerly common in many languages) called canceled (cancellaria); namely, the letters follow phonetically, in order of sound (of course in the pronunciation of Suidas’s time, which is the same as modern Greek). So for instance α comes after μ, τ, φ after κ, ω after ο, and so on. The system is not difficult to learn for modern readers, the initial letter of each letter followed by the one of the work is rearranged alphabetically. Suidas contains much material for church history among his biographical articles. But there is very little of this kind that is not also known from other sources. His lexicographical skill may fulfill its original purpose as a convenient work of reference. D. MOSCARANO Chalkodrò published the editio princeps at Milan in 1499. GAISFORD, Suidas lexicon (vols., Oxford, 1836); BERGERY, S. lexicon (Leipzig, 1854); BERKER, Suidas lexicon (Berlin, 1854); FABRICIUS-HERLING, Bibliotheca graeca (Hamburg, 1790-1800); V. 359-565; F. G. K. VON IVANOVICH, De Suidas (1898); VON IVANOVICH, Selecta (1871); KRAMER, Suidas lexicon (Munich, 1897), 652-70.

ADRIAN FORTESCUE.

Suidbert (SÜDBERT), Saint, Apostle of the Frisians, b. in England in the seventh century; d. at Suidberts-Insel, now Kaiserswerth, near Düsseldorf, 1 March, 715. Born, as ironical legend relates, in Connacht, now St. Egbert (q. v.). The latter, filled with zeal for the conversion of the Germans, had sent St. Wilibert, or Wibert, to evangelize the Frisians, but owing to the opposition of the pagan ruler, Rathaert, Suidbert was unsuccessful and returned to England. Egbert, a friend of Suidbert and his twelve companions, among whom was St. Suidbert. They landed near the mouth of the Rhine and journeyed to Utrecht, which became their headquarters. The new missionaries worked with great success under the protection of Pepin of Heristal, who, having recently conquered a portion of Frisia, compelled Rathaert to cease harassing the Church. Suidbert laboured chiefly in North Brabant, Guelderland, and Cleves. After some years he went back to England, and in 693 was consecrated in Mercia as a missionary bishop by St. Wilfrid of York. He returned to Frisia and fixed his see at Wijkhuijs Duurstede on a branch of the Rhine. A little later, entrusting his flock of converts to St. Willibrord, he proceeded northward, and the Rhine and the Lippe, among the Bructeri, or Boruertabi, in the district of Berg, Westphalia. This mission bore great fruit at first, but was eventually a failure owing to the inroads of the pagan Saxons; when the latter had conquered the land Suidbert withdrew to a small island in the Rhine, six miles from Düsseldorf, granted to him by Pepin of Heristal, where he built a monastery and ended his days in peace. His relics were rediscovered in 1286 at Kaiserswerth and are still venerated there. St. Suidbert of
SULLIVAN

Sulpicians in the United States.—The Sulpicians came to the United States at the very rise of the American Hierarchy. When the French Revolution was threatening to involve them in the impending ruin of the Church the superior-general, Father Emery, looking for a place of refuge abroad, was meditating an establishment at Gallipolis, a French settlement on the Ohio; but the papal nuncio at Paris, Cardinal Dognani, made the happier suggestion of Baltimore, which had just been erected into the first American see. An interview in London between Bishop Carroll, who had gone to England (1790) for episcopal consecration, and Father Nagot resulted in the bishop gladly accepting the offer of Father Emery to found a theological seminary at Baltimore. On 10 July, 1791, four Sulpicians landed at Baltimore: Francis Charles Nagot, Superior, Anthony Garnier, Michael Levadoux, and John Tessier. They purchased the One Mile Tavern on the edge of the city, dedicated the house to the Blessed Virgin, and in October opened classes with five students whom they had brought from France. This was the beginning of St. Mary's, the first American seminary, which today stands on the same spot. The number of Sulpicians was augmented the following year by the arrival of Flaget, David, Chicoisneau, Maréchal, Richard, and Giquard, and in 1795 by the accession of Dubourg, nearly all of whom were destined to become important figures in the history of the American Church. These ten or eleven new

in the episcopal see of that city. The present Cathedral of Notre-Dame stands as a monument to his episcopal administration. Its construction was begun and almost entirely finished up by Alexander III, in 1163, laid the cornerstone of the magnificent edifice, and in 1185 the Patriarch of Jerusalem, Heraclius, officiated in the completed sanctuary. Maurice de Sully also rebuilt the episcopal palace in which the nobility and clergy met in 1179 at the coronation of Philip Augustus as joint ruler with his father Louis VII. He enjoyed in a high degree the confidence of both rulers, accompanied Louis to his meeting with Frederick Barbarossa at Saint-Jean-de-Loene in 1162, and was one of the guardians of the royal treasury during the crusade (1190).

In the controversy between St. Thomas Becket and King Henry II he energetically defended the former and, in three letters still extant, pleaded his cause with Alexander III. He forbade the celebration of the feast of the Immaculate Conception in his diocese, but is said to have strongly supported by appeals to Holy Writ (Job, xix, 25-27) the doctrine of the resurrection of bodies, against some sceptical noblemen. Although he retained the administration of his diocese, he retired, late in life, to the monastery of Saint-Victor, where he died. Maurice de Sully is also the author of a treatise on the Canons of the Mass, preserved in manuscript at Bourges. Numerous sermons, some in Latin, others in vernacular, are also attributed to him. Those written in the Latin tongue were not directly destined for the people, but rather for the use and study of the clergy. The French sermons do not seem to be in their present form the original work of Maurice de Sully; they are more commonly considered as reproductions made by ecclesiastics from his Latin collection. No critical edition of these sermons has yet been published; his three letters to Alexander III are printed in P. L., CC, 1419-22, as are also some of his official documents (CCV, 397-414).

BAUARD, MAURICE DE SULLY (Orleans, 1802); MONTET, MAURICE DE SULLY, évêque de Paris, 1890-96 (Paris, 1890); MÉTIER, Les manuscrits des sermons français de Maurice de Sully in Romani, XXIII (1894); HATT, Notre-Dame de Paris (London, 1902).

N. A. WEBER.

Sulmona.—See Valva and Sulmona, Diocese of.
workers were a large accession to the small body of American priests, then only about thirty-five, who were endeavouring to serve a diocese extending from the Atlantic to the Mississippi Valley. Paris was in its infancy; there was no organized community of priests (since the suppression of the Jesuits), no teaching sisterhood, no Catholic schools. An academy for boys was about to open at Georgetown. Non-Catholic education in Maryland was almost as backward as it was in the South. In both those conditions the Sulpicians (see below) furnished students to the seminary. Still, Bishop Carroll had the consolation of seeing thirty priests ordained from there before his death in 1815.

The seminary became solidly established, although the number of ordinands was reduced to only two or three a year. A high priest support up to 1817 was Father Ambrose Maréchal, whose abilities raised him in that year to the Archbishopric of Baltimore. In 1822 St. Mary's Seminary was endowed by Pius VII with all the privileges of a Catholic university. The third superior, Father Louis Regis Deloulu (1829–49), a man of exceptional ability and character, exerted an influence not only on the seminary and college over which he presided, but on the general affairs of the Church in America. St. Charles' College was founded during his administration. St. Mary's College was under his guidance. He was succeeded by Father Francis L'Homme (1849–60). The Irish immigration, the spread of Catholicism, and the foundation of St. Charles' College, contributed to render the seminary as fruitful in vocation in the one decade of Father L'Homme's administration as it had been in the preceding sixty years. Two directors at St. Mary's, Fathers Alphonse Flamant (1856–64) and Francis Paulinus Dissez (1857–1907), deserve mention here as men who deeply influenced the American Church. A half-century of teaching at St. Mary's made Father Dissez one of the best known and most venerated priests of America.

St. Mary's prospered and grew under the fourth superior, Father Joseph Paul Dubreul (1860–78), and still more under his successor, Father Alphonse Magnien (1878–1902), who saw an enrollment of over three hundred students. Father Dubreul built the central portion of their present dormitory. In 1876 the teaching was completed by Father Magnien. All that remains from the old days is the sisters' house, in which Mother Seton began her work as a Sister of Charity, and the seminary chapel, built in 1806, which long served as a parish church and was awarded in those days as a gem of architecture. Both Dubreul and Magnien had the marked types of the true ecclesiastic, and moulded the character of hundreds of priests now living. Probably no priest in our day was better known or better loved by priests than the good and genial "Abbe" Magnien. He was the close friend and trusted adviser of Cardinal Gibbons, who said of him some time after his death: "I had been so much accustomed to consult the venerable Abbé on important questions, and to lean upon him in every emergency, that I feel as if I had lost my right arm. He was indeed divinitum animae meae." The present superior, Father Edward Randall Dyer, D.D., was appointed in August 1902, after Father Magnien's health had failed. St. Mary's Seminary has given over thirty bishops and eighteen hundred priests to the Church of America, of whom more than fourteen hundred are still living. The largest of our American seminaries, and national in its scope, it draws its students from all parts of the country. It has always taken a leading part in the seminary conferences of the Catholic Educational Association. It was the scene of the Third Plenary Council and of many notable ecclesiastical gatherings. Its archives and library are rich in materials of early American Church History.
St. Mary's College, Baltimore.—The impossibility of getting students for the seminary led the fathers to teach Latin to a few boys in 1798–99, in the hope of recruiting them, and also for financial reasons, the Society of St. Sulpice in 1826 made an amicable separation from Mount St. Mary's, which has continued the noble spirit of Brûté and Dubois and done invaluable services to the Church of America.

St. Charles' College, Ellicott City.—Persisting in the effort to establish a purely clerical college, according to the spirit of their vocation and the mind of the Church, the Sulpicians, in 1831, laid the cornerstone of St. Charles' College, near Ellicott City, Maryland. The ground, together with a small sum of money, had been donated by Charles Carroll of Carrollton, who wished to witness the cornerstone laying. Lack of funds long delayed the completion of the college. It was opened in 1848 with four students by the Rev. Oliver Jenkins, who became its first president. In ten or twelve years the students numbered over a hundred. Here, at last, was a strictly clerical college, firmly established, giving a solid classical education and maintaining the purest traditions of clerical discipline and spirit. St. Charles' became well known throughout the country, no section of which has not been well represented among its student body. The enrolment for years has been about two hundred. It has shown itself to be a strong support for the American Church and pointed the way to the clerical colleges now becoming numerous and most helpful.

Father Jenkins remained president till 1869, though he had been temporarily replaced by the Revs. G. Raymond (1849–51) and S. Ferté, D.D. (1851–52). His successors have been Father Féret (1869–79), Revs. P. P. Denis (1876–86), F. M. L. Dumont (1886–94), Charles B. Rex (1894–97), Charles B. Schrants (1897–1906), and F. X. McKenny. To the older generations of students the best remembered of the professors is Father J. B. Menu, who for forty years (1849–88) "handled Latin and Greek into the most stubborn heads". The best known to the outside world is Father John Tabb, a true poet, whose exquisite lyrics have won him a secure place in English literature. The spacious building, with its beautiful chapel, its libraries, and valuable documents, was destroyed by fire in 1916. Classes were resumed in a few weeks in temporary quarters at Cloud Gap, near Baltimore. On that spot the fathers have now begun (1912) the construction of a new and greater St. Charles.

St. John's Seminary, Brighton, was opened in 1884 and entrusted by the Most Rev. John William, Bishop of Boston, to the Sulpicians, whose pupil he had been at Montreal and Paris. Its presidents have been the Very Revs. John Hogan (1884–89, 1894–1901), Charles B. Rex (1889–94), Daniel E. Maher (1901–06), and Francis F. Havey (1906–11). In June, 1911, at the request of the Most Rev. William H. O'Connell, Archbishop of Boston, the Sulpicians withdrew from the seminary.

St. Joseph's Seminary, Yonkers.—Archbishop Hughes, who had been their pupil at Mount St. Mary's, had desired the Sulpicians, in 1862, to assume charge of the seminary about to be opened at Troy, New York. This wish was carried out only in 1896, under Archbishop Corrigan, when St. Joseph's Seminary was transferred to Dunwoodie, Yonkers, New York. The first rector was the Very Rev. E. R. Dyer, 1896–1902. Called to the presidency of St. Mary's Seminary, Baltimore, he was succeeded by the Rev. James F. McLaughlin, who had been hundred priests; Father Driscoll and four of his associates withdrew from the Society of St. Sulpice, and were accepted by Archbishop Farley into his diocese, continuing their work in the seminary, which thus passed from the charge of the Sulpicians.

St. Patrick's Seminary, Menlo Park.—The Sul-
Sulpicians, whose houses had hitherto been located in the Atlantic states, accepted a call to the Far West in 1898. Most of the students for the San Francisco archdiocese had for many years been sent to St. Mary's Seminary, Baltimore. A long-cherished desire of Archbishop Riordan was realized when St. Patrick's Seminary was opened 20 Sept., 1898, under the care of the Sulpicians. The institute immediately assumed a magisterial seminary or college and a seminary proper, of philosophy and theology. It began with only three classes of the college department, the succeeding classes in the college and seminary being added according as the students were prepared. Very Rev. A. J. B. Vilbert was the first president of the seminary, which had established at the beginning, seven professors, four of whom were Sulpicians, and twenty-eight students. He was succeeded in 1911 by Rev. John J. Doran, S.S.S. The theological department was opened in 1904, when Very Rev. Henry A. Arrynac, S.S.S., D.D., became president of the seminary. The magnificent structure was greatly damaged in the earthquake of 1906, but was soon restored, thanks to the characteristic energy of Archbishop Riordan. There are at present over 100 students in this flourishing and hopeful young seminary.

Catholic University.—Leo XIII, in granting a constitution to the Catholic University of America, laid upon the Sulpicians the duty of caring for the discipline and spiritual direction of the ecclesiastical students and of assisting them in the choice and pursuit of their studies. Divinity College was opened in Oct., 1889, under Very Rev. John B. Hogan, who remained president till 1894. His successors have been Very Revs. F. M. L. Dumont (1894–1911), and John F. Fenlon.

St. Austin's College.—The aspirants to the Society of St.-Sulpice pursue their studies in the seminary, under the direction of the clerical work; but, cently, the American aspirants generally were sent to Rome or Paris for post-graduate studies after ordination and to the Solitude at Isy, near Paris, for their novitiate. In Oct., 1901, the American scholasticate of the Sulpicians, known as St. Austin's College, was opened near the Catholic University, Washington, D.C. The students, who are received only after having completed their seminary studies, follow courses at the university in philosophy, theology, science, or letters, to prepare themselves for work in college or seminary. It has been presided over by Very Revs. James F. Doyle (1920–30), Daniel F. Duffy (1902–7) and John F. Fenlon (1904–11), and Francis P. Havey. In 1911 the first American novitiate of the Sulpicians, known as the Solitude, was begun in this house under Father Havey as director.

The government of the Sulpician houses in the United States was, until recent years, dependent directly upon the superior-general in Paris. In 1903 the President of St. Mary's Seminary, Father Dyer, was appointed vicar-general of the Superior of St.-Sulpice, an office reassembling that of provincial in a religious order. He governs ordinary Sulpician affairs in the United States with the advice and assistance of his council. In the early days of the American hierarchy several Sulpicians were among its members: Maréchal (1817–25), and Eclecton (1834–51), Archbishop of Baltimore; Flaget, first Bishop of Bardstown (1810–90), with David (1819–41), and Chabrat (1834–47), as coadjutors; Dubourg, Bishop of New Orleans; and the Bishop of Béthisy, who died in 1833; Dubois of New York (1826–42); Brulé, first Bishop of Vincennes (1834–39), who, with Flaget and David, is well remembered for great sanctity of life; Chance, first Bishop of Natchez (1841–52); Vérot, Bishop of Savannah (1852–62); afterwards first Bishop of Augusta (the advice), of which he was vicar Apostolic in 1858; and O'Farrell, Bishop of Trenton (1881–94). More than twenty American archbishops, past and present, and more than sixty bishops have received their clerical formation, at least in part, in Sulpician houses at home or abroad. All the rectors of the Catholic University have been their pupils. Father David, sent by Father Emery with Bishop Flaget to establish a seminary, founded St. Charles's College in Omaha, and Father Augustin, whose house almost single-handed for many years. The college had only three priests when he arrived in 1810; he trained up forty-seven, mostly natives, of whom the most illustrious is Martin J. Spalding. To this little-known seminary is attributed the greatest part in the preservation and spread of Catholicism in Kentucky.

Five seminaries in all, Baltimore, Bardstown, Brighton, Emmitsburg, Dunwoodie, and Menlo Park, were founded or directed by Sulpicians, and their traditions and spirit have been carried into many new institutions by their alumni. Largely through their efforts, the Propagation of the Faith was established in this country and for a long time developed. The Sisters of Charity at Emmitsburg were established by their direction and co-operation, and united, through Father Delou, to the foundation of St. Vincent de Paul at Paris. Father Joubert founded the coloured Sisters of the Good Shepherd at Baltimore, and Father David the Sisters of Nazareth, in Kentucky. Bishop Dubourg introduced the Vincentians into the United States, also the Religious of the Sacred Heart. He was the founder of St. Louis Latin Academy which developed, under the Jesuits, into the St. Louis University. On Flaget's invitation, many Religious Sisters came to this country. In the early days the Sulpicians ministered to the coloured Catholics of Baltimore, and since the foundation of St. Joseph's Seminary for work among the negroes, its students have made their seminary studies at St. Mary's. The work of the Negro and Indian on the West Coast has always been carried on in connexion with St. Mary's Seminary. The fathers of the seminary have acted as secretaries or theologians in the synods and in the provincial and plenary councils of Baltimore. The literary productions of the Sulpicians have, almost without exception, grown directly out of their work as educators; they have written books on Latin grammar, history, ancient and modern, English literature, liturgy, rubrics, dogmatic and moral theology. Holy Scripture, devotion, etc. They have translated many standard French works into English, and English into French, for the benefit of their students. Father Hogan, whose " Clerical Studies " is the classic of its subject, and Father Adolphe Tanqueray, whose text-books on dogmatic and moral theology are used in numerous seminaries throughout the world.

Sulpicia Severus, an ecclesiastical writer, B. of noble parents in Aquitaine c. 360; d. about 420–25. The scanty information which we possess concerning his life is derived mainly from his friend Paulinus of Nola and Orosius. He enjoyed excellent educational advantages, studied jurispru-
Sulpicius was renowned as an eloquent lawyer. His marriage with the daughter of a wealthy consular family seemed to seal his earthly happiness. His wife, however, was snatched away by a premature death; and Sulpicius, at 7300 Sestri Redivivi, led a brief period of bachelor life and returned to his legal career and followed his friend Paulinus into monastic retirement. Through this sudden change of life he incurred his father's displeasure, but was encouraged in his determination by his mother-in-law. He became a personal friend and enthusiastic disciple of St. Martin, and lived near Meaux, in the region of Toulouse and Lus in Southern France. His ordination to the priesthood is vouched for by Gennadius, but no details of his priestly activity have reached us. According to the same Gennadius he was caught in the toils of Pelagianism towards the close of his life and, upon discovering his error, subjected himself to lifelong silence in expiation of his imprudence in speech.

The following works are undoubtedly genuine:

1. "The Chronicle";
2. "Life of St. Martin";
3. two dialogues, formerly divided into three; (4) three letters.

The "Chronicle" extends from the Creation of the world to A.D. 400, but omits the historical events recorded in the New Testament writings. It was published in 403 and has been preserved in a single eleventh-century manuscript. It is a source of primary importance for the history of Priscillianism and contains considerable information on the political history of Gaul. Moreover for the Middle Ages was his "Life of St. Martin," as were also the dialogues and letters which relate to the same subject. The biography was written during the lifetime of the saint, but was published only after his death. Like the dialogues, it abounds in miscellaneous reflections, and three letters, seven others have been attributed to Severus. These are rejected as spurious by some critics, whilst the genuineness of the first two is admitted, rightly it would seem, by others. The "World Chronicle" of the so-called Sulpicius Severus has nothing to do with the subject of this biography; it was written in Spain in the sixth century. Sulpicius Severus has been rightly styled the Christian Sallust; his diction, notably in the "Chronicle," is elegant and remains the reader of the classical age.

He works are to be found in P. L., XX, 95-248; later edition by E. Graf and E. Kühner, 12 vols. (Berlin, 1850-1862). Erich LESSING, Erich Lessing, "Obenauf den Chronik des Sulpicius Severus" (Berlin, 1861); BARDENHOWER, C., Studien, Philologie (St. Louis, 1899), 421-55; BENNETT in Brix. Ch. J. H. S. v. Severus. II. N. A. 190.

Sulpicius.—Two bishops of Bourges bore this name. (1) The first, St. Sulpicius the Severe, wrongly identified with Sulpicius Severus, the historian of St. Martin, was raised to the see in 594. He was, says St. Gregory of Tours, a man of high birth, one of the first senators of Gaul, of great oratorical talent, and expert in the art of poetical rhythms. The See of Bourges having become vacant with the death of Remigius, several candidates offered gifts to the Bishop of Paris to secure the assistance of his favour. But the latter rejected all these simoniacal gifts to favour the election of Sulpicius. He was elected, given Holy orders, and consecrated bishop. Shortly afterwards he held a council in Auvergne, to adjust the dispute which had arisen between two of his suffragans, Aix and Poitiers, and required the bishops of Cahors, with regard to parishes for which they contended. The council decided that the Bishop of Cahors should retain the contested parishes, which the Bishop of Reims had not proved that he or his predecessors had long possessed. Sulpicius assisted at a Council of Maiquet in 595, and in 597 he inserted the Roman Martyrology on 29 January.

(2) Sulpicius the Pius (or the Débonnaire), b. at Vatan (Diocese of Bourges), of noble parents, before the end of the sixth century, devoted himself from his youth to good works and the study of Holy Scripture. Austregisilus, Bishop of Bourges, ordained him cleric of his church, then deacon, and finally made him director of his episcopal school. Clovis II, King of the Franks, who had heard of his merits spoken of, summoned him and made him chaplain of his armies. But at the death of Bishop Austregisilus (c. 624) he was recalled to Bourges to take his place. Sulpicius thenceforth laboured with much zeal and success to re-establish ecclesiastical discipline in the see, and to suppress the opposition of the Jews. In 626 he assisted at the Council of Clichy and held several others with the bishops of his province, but nothing of them remains. He intervened with King Dagobert in behalf of his flock, of whom a too heavy tax was exacted. At the request of the same king he attended to the See of Cahors his treasurer St. Didier, who was his personal friend, and there are extant three letters which he addressed to him. Towards the end of his life Sulpicius took a coadjutor, Vulfoinule, and retired to a monastery which he had founded near Bourges. There he died on 17 Jan., 646, while a mission of MSS. of the Hieronymian Martyrology indicate as his feast. In his honour the church bearing his name was built in Paris, from which the Society of St. Sulpice derives its own.

SUMMA (Sommale), compendiums of theology, philosophy, and canon law which were used both as textbooks in the schools and as books of reference during the Middle Ages. Some historians of theology cite Oregi's "Summule" as the first summary of Catholic theology. Others consider that the first in point of time is "De Trinitate" by St. Hilary of Poitiers. Quite recently the distinction has been accorded to Radulfus Ardens, an eleventh-century theologian and preacher, a native of Beaulieu, author of a comprehensive "Speculum divinorum." In this wide sense of the word, however, the encyclopedic treatises of St. Isidore, Rabanus, Maurus etc., entitled "De Etymologis" or "De Universo" might also be considered as summaries.
of theology and philosophy. In the stricter sense of the word, "Summa" is applied to the more technical systematic compendiums which began to appear in the twelfth century. An alternative title is "Sentences" (Liber Sententiarum), the diminutive, "Summulae," being of later origin. What is peculiar to these "summissae" or "sententiaries," as the authors of these works are called, is the adoption of the method of the Indo-European "De Divinis," "De Passibus," "De Ali et Ratione Utii," and used by Abelard in his "Sic et Non." This consisted in an exposition of contradictory views, the affirmative and negative; and progress towards the final form of the thirteenth-century "Summae" is marked by the greater care with which, as time went on, to express in a systematic manner the apparent contradiction among the conflicting opinions presented. Besides this method of exposition, the twelfth-century summissae adopted dialectically as a means of elucidating, not only philosophical, but also theological truth. Finally the summissae adopted more or less unanimously a fixed division of the field of theology and philosophy, and adhered more or less closely to a definite order of topics. Here, of course, there was room for individual preferences in the matter of arrangement and sequence of problems, as we see when we compare with one another the "Summae" even of the same school.

The first great summiss is Peter Lombard (died 1160), author of the "Books of Sentences" and eponymated "Master of Sentences." The order of topics in the "Books of Sentences" is as follows: In the first place, the topics are divided into res and signa, or things and signs. Things are subdivided into I, the object of our happiness, God—to this topic Peter devotes the first book; II. Means of attaining this object, viz., creatures—the topic treated in the second book; III. Virtue, men, and angels, that is, special means of happiness and subjects of happiness—the topic of the third book. The fourth book is devoted to signs, namely, the sacraments. How far Peter Lombard was influenced by earlier summissae, such as Robert Pullen, Hugh of St. Victor, and the author of the "Summa Sententiarum" which was immediately inspired by Abelard's word, historians have not determined. Generally accepted is the view that Lombard was not entirely original. He deserves his renown as the first grand summiss chiefly because, in spite of the opposition which his work met during his lifetime, its influence grew greater in time, until in the thirteenth century it was universally adopted as a text-book among all schools. Scholasticism have said about the dryness and unattractiveness of the medieval "Summae," these works have many merits from the point of view of pedagogy, and a philosophical school which supplements, as Scholasticism did, the compendious treatment of the "Summae" with the looser form of treatment of the "Questiones Disputatae" and the "Opuscula", unites in its method of writing the advantages which modern philosophy derives from the combination of textbook and doctor's dissertation. For a description of the "Summa Theologica" of St. Thomas, the most perfect specimen of this kind of literature, see Tommaso Aquinas, Saint. The term "Summulae" was used, for the most part, to designate the logical compendiums which came to be adopted as texts in the schools during the thirteenth century. The best known of these is the "Summulae Logicales" of Peter Hispanus, after whom they are called.

William Turner.

Summer Schools, Catholic.—A Catholic summer school is an assembly of Catholic clergy and laity held during the summer months to foster intellectual culture in harmony with Christian faith by means of lectures and special courses along university extension lines. It first took form in the Champaign Summer School which was founded at New London, Connecticut, 1892, and located permanently in 1893 at Cliff Haven, N. Y. The Catholic Summer School was established at Madison, Wisconsin, 1895, and is now permanently located at Milwaukee; the Winter school of New Orleans was founded in 1896, and the school at St. Louis and Summer School in 1897. The chief feature of Catholic intellectual and sociological work in the United States is the natural development and coalescence of various tendencies previously existing in the Church, viz., reading circles, university extension, summer institutes.

(a) The reading circle has its germ in the Christian family. St. Philip Neri strongly urged the advantage of reading circles for people in the world. As a student at the Sorbonne, Frederick Ozanam organized a circle of this nature which was the origin of the Conference of St. Vincent de Paul. In the United States the reading circle appeared during the early part of the last century in the young men's lecures where courses of lectures and literary exercises were held. In 1864 Very Rev. Isaac Hecker founded a library in connection with the Sunday-school of St. Paul's Church, New York City, and prescribed that the reading and discussion of a book should form part of the programme. A few years later, strongly advocated through the "Catholic World" the establishment of these circles in every parish. Warren Mosher took up the work, and in April, 1889, organized the Catholic Educational Union. In June, 1889, the Paulists founded the Columbian Reading Union with Rev. Thomas McMillan as president. These unions have for their aim the propagation and unification of reading circles. The movement spread, and in Jan., 1891, the "Catholic Reading Circle Review" was established by Mr. Mosher as the organ of reading circles; it afterwards became the organ of the union. The Catholic Reading Union, the Columbian Reading Union, and the "Reading Circle Review" were strong advocates of a summer assembly. Thus, in germ, the Cliff Haven Summer School was an annual convention of the members of reading circles.

The purpose of university extension is to bring the university into touch with the people and make its influence of wider scope. This is attained through a body of organized teachers formed from graduates of the university, who travel through the country and give series of lectures; attendance at these lectures with examination may entitle to a university degree. Thus the university is brought to people who otherwise could not have access to it. The phrase itself became current through discussion on university reform in England, begun in 1850, and resulting in the new statutes of 1880. The movement spread to America and became a part of American university life. Thus the Cliff Haven Summer School received from the Regents of the University of the State of New York, 9 Feb., 1893, a charter by virtue of which it received legal existence as a corporation under the laws of the State of New York, and was classified as a part of the system of the university. Under university extension should be included the Association Catholique de la Jeunesse Francaise organized in 1886, the School of Social Science of Munich-Ingolstadt founded in 1893 under the auspices of the Catholic Volksverein, and the Institute of Social Science established by Archbishop Farley at New York in 1911.
(c) The idea of summer institutes is not new to Catholic education. It has long been a recognized feature in the religious educational bodies of the Catholic Church, each teaching congregation holding summer institutes of its own members. In more recent years these teachers' institutes became diocesan in form, e.g., in Rochester, Long Island, and Philadelphia.

In 1911 the Catholic University at Washington opened a summer institute which was attended by 284 teachers from 23 religious bodies, representing 56 dioceses and 31 states with 9 from Canada and 1 from England. The same year the De Paul University of Chicago opened a summer institute in attendance with 125.

The following year an offer, made by the Delaware and Hudson Company through its agent, of 450 acres of land on the shore of Lake Champlain, three miles south of Plattsburg, N. Y., was accepted. The sessions of 1893, 1894, and 1895, were held in Plattsburg. In 1896 the session was held on the assembly grounds, named Cliff Haven. With the approbation of Leo XIII and Pius X, of the Apostolic delegates, Cardinal Satolli, Cardinal Martellini, and Cardinal Archbishop Paleoclinio, and of the hierarchy of the United States, the foundation of the Cliff Haven Summer School has grown, and it now has property valued at $500,000; courses of lectures covering eleven weeks, and an attendance of about 10,000. With a daily program of lectures, concerts, dramatic recitals, and social gatherings, it brings together in social intercourse Catholic teachers from all parts of the country and offers a stimulus and an opportunity for study along lines of interest and thought. Its main purpose is to give from the most authoritative sources among our Catholic writers and thinkers, the Catholic point of view on all the issues of the day in history, literature, philosophy, art, politics and economic problems that are agitating the world, upon the relation between science and religion; to state in the clearest possible terms the underlying truth in each and all of these subjects; to remove false assumptions; and to correct false statements. It thus meets a recognized want of clergy and laity, is an important popular educational centre in America, and has contributed much to organize Catholic intellectual forces and to solve the problems of American life.
from falling into the excesses of Jewish Sabbatarianism in the observance of the Sabbath, and yet we find St. Cessarius of Arles in the sixth century teaching that the holy day of the Church had decreed that the whole glory of the Jewish Sabbath had been transferred to the Sunday, and that Christians must keep the Sunday holy in the same way as the Jews had been commanded to keep holy the Sabbath Day. He especially insisted on the people hearing the whole of the Mass and not leaving the Church after the Epistle and Gospel had been read. He taught them that they should come to Vespers and spend the rest of the day in pious reading and prayer. As with the Jewish Sabbath, the observance of the Christian Sunday began with sundown on Saturday and lasted till the same time on Sunday. Until quite recent times some theologians taught that there was an obligation under pain of venial sin of assisting at Vespers as well as hearing Mass, but the opinion rests on no certain foundation and is now commonly abandoned. The common opinion maintains that, while it is highly becoming to be present at Vespers on Sunday, there is no strict obligation to the method of attending the Sunday from sunset to sunset continued in some places down to the seventeenth century, but in general since the Middle Ages the reckoning from midnight to midnight has been followed. When the parochial system was introduced, the laity were taught to attend Masses and the recitation of the Word of God on Sundays in their parish church. However, toward the end of the thirteenth century, the friars began to teach that the precept of hearing Mass might be fulfilled by hearing it in their churches, and after long and severe struggles this was expressly allowed by the Holy See. Nowadays, the precept may be fulfilled by hearing Mass in any place except a strictly private oratory, and provided Mass is not celebrated on a portable altar by a privilege which is merely personal.

The obligation of rest from work on Sunday remained somewhat indefinite for several centuries. A Council of Laodicea, held toward the end of the fourth century, was content to prescribe that on the Lord's Day the faithful were to abstain from work as far as possible. At the beginning of the sixth century St. Cessarius, as we have seen, and others showed an inclination to the law of the Jewish Sabbath for the observance of the Christian Sunday. The Council held at Orleans in 538 reprotested this tendency as Jewish and non-Christian. From the eighth century the law began to be formulated as it exists at the present day, and the local councils forbade servile work on Sunday. The public and solemn taking of oaths is not a large body of civil legislation on the Sunday rest side by side with the ecclesiastical. It begins with an Edict of Constantine, the first Christian emperor, who forbade judges to sit and townspeople to work on Sunday. He made an exception in favour of agriculture. The breaking of the law of Sunday rest was punished by the Anglo-Saxon legislation in England like other crimes and misdemeanours. After the Reformation, under Puritan influence, many laws were passed in England whose effect is still visible in the stringency of the English Sabbath. Still more in this the case in Scotland. There is no federal legislation in the United States on the observance of the Sunday, but nearly all the states of the Union have statutes tending to repress unnecessary labour and to restrain the liquor trade. In other respects the legislation of the different states on this matter exhibits considerable diversity. The continent of Europe in recent years there have been several laws passed in the direction of enforcing the observance of Sunday rest for the benefit of workmen.

Supererogation, WORKS OF. See WORKS, GOOD.

Superior, Diocese of (Superiorense), situated in the northern part of Wisconsin, comprises the following counties: Ashland, Barron, Bayfield, Burnett, Douglas, Iron, Oneida, Polk, Price, Rusk, Sawyer, St. Croix, Taylor, Vilas, and Washburn. In area it covers 15,715 square miles, and has its episcopal residence in the city of Superior. On 3. May, 1905, the diocese was established, being formed from the northern part of the Diocese of La Crosse (see La Crosse, Diocese of) and the northwestern part of the Diocese of Green Bay (see Green Bay, Diocese of).

When Superior, which is one of the suffragans of Milwaukee, was formed, there were 39 secular and 17 regular priests attending to the needs of the people in 93 churches and 33 stations. The Catholic population at the time was about 38,000. Besides the English-speaking congregations there were then as there are at present churches in which the spiritual wants of Germans, Poles, French, Italians, Slovaks and Bohemians were looked after. The spiritual and secular needs of the Indians of the district have been well taken care of. There are flourishing industrial schools at Odonah, Bayfield, and other places, that are under the charge of the Sisters of St. Francis and are attended by the Franciscan Fathers. The bishop, ably seconded by his clergy, has started throughout the diocese wherever it was possible parochial schools for the Christian education of the young. In consequence the various cities and towns have one or more such bringing excellent results, considering the meagre resources available. At Superior and Ashland especially the schools are well attended.

The first bishop of the diocese, still in office, is the Rt. Rev. Augustin Francis Schinner, D. D. He was consecrated 25 July, 1905, and appointed to the see of Superior 13 May of the same year. He came to Superior from Milwaukee, where he had held the position of administrator of the archdiocese after the death of Archbishop Katzer. Bishop Schinner was born in Milwaukee 1 May, 1863. He entered the seminary at St. Francis, Wis., and at the age of twenty-two on 7 March, 1886, was ordained priest by Archbishop Heiss of Milwaukee. For about a year he was pastor of the church at Superior, and was then made a professor at St. Francis Seminary, Milwaukee. In 1891 Archbishop Katzer selected him as his secretary, and in 1895 he was made vicar-general of the archdiocese, holding the same position under Archbishop Messmer, until his appointment as Bishop of Superior.

There are now in the diocese the following religious communities of men: Franciscans, Jesuits, Servites; and of women: Franciscan Sisters of the Perpetual Adoration, Sisters of St. Agnes, Sisters of St. Dominic, Poor Handmaids of Jesus Christ, Sisters of St. Francis, School-Sisters of St. Francis, Franciscans of Charity, School-Sisters of Notre Dame, Sisters of the Sorrowful Mother, Sisters of the Divine Saviour, Sisters of St. Joseph. There are (1911): secular priests, 56; priests of religious orders, 23; churches with resident priests, 56; missions with churches, 65; chapels, 5; stations, 23; high schools, 1; Burnt schools, 22; pupils, 1981; 4686; industrial schools, 2; inmates, 225; orphans, 45; total number of young people under Catholic care, 5094; hospitals, 5; Catholic population (Census of 1910): White, 48,028; Indians, 3015. Catholic Church in Superior, Wis. (Superior, 1905).

JOHN J. DRISCOLL.

Supernatural Order, the ensemble of effects exceeding the powers of the created universe and
gratuitously produced by God for the purpose of raising the rational creature above its native sphere to a God-like life and destiny. The meaning of the phrase fluctuates with that of its antithesis, the natural order. Those who conceive the latter as the world of the action of immortal beings, or as the necessary mechanism of cause and effect to the exclusion of the free agency of the will, or again as the inherent forces of the universe to the exclusion of the extrinsic concurrence of God, quite consistently call supernatural all spiritual facts or voluntary determinations or Divine operations. There is no objection to that way of speaking provided the assertion of the supernatural so understood be not made, by a fallacious transference of meaning, to screen the negation of the supernatural as defined above. Catholic theologians sometimes call supernatural the miraculous in which certain effects, in themselves natural, are produced, or certain endowments (like man’s immunity from death, suffering, passion, and ignorance) that bring the lower class up to the higher though always within the limits of the created, but they are careful in qualifying the former as accidents supernatural (per accidens) and the latter as absolutely supernatural (proternaturale). For a concept of the substantially and absolutely supernatural, they start from a comprehensive view of the natural order taken, in its simplest acceptation, for the aggregate of all created entities and powers, including the highest natural endowments of which the rational creature is capable, and even such Divine operations as are demanded by the effective carrying out of the cosmic order. The supernatural order is then more than a miraculous way of producing natural effects, or a notion of relative superiority within the created world, or the necessary concurrence of God in the universe; it is an effect or series of effects substantially and absolutely above all nature and, as such, calls for an exceptional intervention and gratuitous bestowal of God and rises in a manner to the Divine order, the only one that transcends the whole created world. Although some theologians do not consider impossible the elevation of the irrational creature to the Divine order, v.g., by way of personal union, nevertheless it stands to reason that such an exalted privilege should be reserved for the rational creature capable of knowledge and love. It is obvious also that this uplifting of the creature to the Divine order cannot be by way of absorption of the created into the Divine or of fusion of both into a sort of monistic identity, but only by way of union or participation, the two terms remaining perfectly distinct.

Not being an a priori conception but a positive fact, the supernatural order can only be known through Divine revelation properly supported by such Divine evidences as miracle, prophecy, etc. Revelation and its evidences are called extrinsic and auxiliary supernatural, the elevation itself retaining the name of intrinsic or, according to some, theelementary supernatural. The essential instances of such elevation: the hypostatic union or the assumption of the Sacred Humanity of Christ into the personal dignity of the Son of God; the calling of the faithful angels to the beatific vision whereby they see always the face of the Father who is in heaven (Matt., xxviii, 10), and the elevation of man to the state of grace here and glory hereafter. The hypostatic union and the angelic supernatural are both closely connected with our own elevation. From St. John (i, 12-14) we know that the hypostatic union is the ideal and instrument of it, and St. Paul and St. Peter (i, 10, 11) declare that “all ministering spirits, sent to minister for them, who shall receive the inheritance of salvation” (Heb., i, 14). Leaving for separate treatment the auxiliary supernatural (see Revelation; Miracle; Prophecy), the hypostatic union (see Incarnation), and the angels’ elevation (see Angels), this article deals with the supernatural order in man both in its history and analysis.

Briefly, the history is this: From the beginning, man was raised, far above the claims of his nature, to a life which made him, even here below, the adopted child of God, and to a destiny which entitled him to the beatific vision and love of God in heaven. To these strictly supernatural gifts by which man was truly made partaker of the Divine nature (II Pet., i, 4) were added preternatural endowments, that is immunity from ignorance, passion, suffering and death, which left him “little lower than the angels” (Ps. viii, 6; Hebr., ii 7). Through their own fault, our first parents forfeited for themselves and their race both the God-like life and destiny and the angel-like endowments. In His mercy God promised a Redeemer who, heralded by ages of prophecy, came in the fulness of time in the person of Jesus Christ, the incarnate Son of God. By His Incarnation, labours, passion, and death, Jesus Christ restored mankind to its former Divine sonship and heavenly inheritance, if not to its quasi-angelic perfection. The virtue of Redemption being applied to us through the joint ministrations of the inner Spirit and of the visible Church, in the form of actual help, habitual sanctity, and the power of meriting Heaven.

An analysis of the supernatural order, barely inaugurated by the Fathers, but brought to a great perfection by the Schoolmen and post-Trinitarian theologians, discloses the various elements that make up order, that is an end, means, and laws. The end is man’s destination to see God face to face and to love Him correspondingly. If, as will be shown, the intuitive vision of God is our true destiny and moreover transcends our highest natural powers, then we must be given means capable of attaining that end, that is, supernatural. Those means can be no other than our own actions, but invested with a higher power that makes them meritorious of Heaven. Grace, both actual and habitual, is the source of that meriting power: while habitual grace, with its train of infused virtues and faculties raises our mode of being and operating to a sphere which is God’s own, actual grace spurs us on to justification and, once we stand justified, sets in motion our supernatural powers causing them to yield good and meritorious results. Beyond these general features of the supernatural order, special reference will be made to the express warnings against errors and the establishment of the Catholic doctrine

I. Errors.—The theories denying or belittling the supernatural order may be classified from the standpoint of both their historical appearance and logical sequence, into three groups according as they view the supernatural (1) in our present de facto condition, (2) in the original status of man, (3) in its possibility and evidences.

To the first group belong Pelagianism and Semi-pelagianism. Influenced, no doubt, by the Stoic ideal and their own ascetic performances, the Pelagians of the fifth century and later elevated the human nature to such a point as to pronounce natural to it both the beatific vision and the human acts by which it is merited. They were condemned by the Councils of Mileve and Carthage, 418. Less daring, the Semi-
pelagians, censured by the Council of Orange (529), subtracted from the supernatural only certain phases of man's life as the beginning of faith and final perseverance. To this group belong also, in a manner, the later Church of the Reformers of the sixteenth century, the Bejards condemned by the Council of Vienne (1312), for claiming that the rational creature possesses beatitude in itself without the help of the lumen gloriae and Eckhart, whose identification of the Creator and the creature in the act of contemplation was disowned by the Scholastics.

To the second group belong the early Reformers and the Jansenist School, though in different degrees. Misinterpreting the still imperfect terminology of the Fathers who called natural, in the sense of original, the elevation of our first parents, the early Reformers held, as it were, to mystic teaching and contrary to the Scholastics, that elevation was not supernatural. Their error, rejected by the Council of Trent (Sess. V, decretum de peccato originali, can. 1), was taken up again, but in a more refined form, by Baisus who, indeed, designated as supernatural man's original condition but nullified the meaning of the word by stating that our last original elevation was demanded by and due to the normal condition of humanity. In spite of his condemnation by Pius V (Denzinger, 9th ed., nos. 901, 903, 906, 922) he was followed by the Jansenist Questnet and the pseudo-Sanctori, also by the former censured by Clement XI (Denzinger, 1249, 1250), and by the latter by Pius VI (Denzinger, nos. 1379, 1380, 1383).

A confusion between the moral and the supernatural order, frequently found in the Baianist and Jansenist writings, was reproduced more or less consciously by some German theologians like Stattler, Hermes, Guenther, Reiner, etc., who affirmed the supernatural character of the other gifts but contended that the adoption to eternal life and the partaking of the Divine nature, being a moral necessity, could not be supernatural. That revival of an old error found a strong and successful opponent in Kleutgen in the second volume of his theology on the supernatural.

To the third group belongs the Rationalist School from Socinus to the present Modernists. While the foregoing errors proceeded less from a direct denial than from a confusion of the supernatural with the moral order, the Rationalists, on the contrary, held it in its entirety, on the plea of philosophical impossibility or critical non-existence. The Syllabus of Pius IX and the Vatican Constitution "De fide catholica" (Denzinger, n. 1655) checked for a while that radical Naturalism which, however, has reappeared lately in a still more virulent form with Modernism. While there is nothing common between Roolmi and the present Modernists, he may, all unwittingly, have paved the way for them in the following vague Subjectivist proposition: "The supernatural order consists in the manifestation of Being in the plenitude of its reality, and the direct manifestation of a God-like sentiment, inchoate in this life through the light of faith and grace, consummated in the next through the light of glory" (36th Roolmianni proposition condemned by the Holy Office, 14 Dec., 1887). Preserving the dogmatic formula while voiding them of their contents, the Modernists constantly speak of the supernatural, but they understand thereby the advanced stages of an evolutive process of the religious sentiment. There is no room in their system for the objective and revealed supernatural; their Agnosticism declares it unknowable, their Immanence derives it from our own vitality. Their system maintains it in term of subjective experience and their criticism declares non-authoritative the documents used to prove it. "There is no question now," says Pius X, in his Encyclical "Pascendi" of 8 Sept., 1907, "of the old error by which a sort of right to the supernatural was claimed for human nature. We have gone far beyond that. We have reached the point where it is affirmed that our most holy religion, in the man Christ as in us, emasculated the supernatural. Moreover, the Pelagian controversy of the sixteenth century, the Bejars condemned by the Council of Vienne (1312), for claiming that the rational creature possesses beatitude in itself without the help of the lumen gloriae and Eckhart, whose identification of the Creator and the creature in the act of contemplation was disowned by the Scholastics."
to the whole actual creation might become natural to some possible higher creature, has never been formally condemned by the Church; it is however unani-
mously rejected by theologians, as it seems less con-
formable to Scripturist sayings and tends to destroy the Divine worship and the real nature of the supernatural order. (3) The philosophical possibility and the critical 
ascertainment of the supernatural order are the central point of Christian apologetics. Against the 
predominant views of the Rationalists who pro-
ounce it inessential, or unnecessary, or mischievous, or even impossible, the Divines urge, and for a 
good purpose, the critical value of the records on 
which it rests, its quasi-necessity for the correct con-
duct of life, the profits it brings to its recipients, and 
the utter want of foundation of its so-called anti-
nomies. Having thus cleared the ground, they 
proceed to collect and interpret and organize the 
various data of Revelation, the result being a harmo-
nious and truly grandiose system of life. 

From the commonly received axiom that “grace 
does not destroy but only perfects nature” they 
establish between the two orders a parallelism that is 
not mutually conflicting. Between the Schoolmen’s po-
tentia obedientialis and even conations (appetitus naturalis) towards 
the supernatural. To those traditional methods and 
views some Christian writers have, of late, 
enriched and evolved a new one on the theory which, they claim, will bring the supernatural 
home to the modern mind and give it unquestionable 
credentials. The novel theory consists in making 
nature postulate the supernatural. Whatever be 
the legitimacy of the purpose, the method is ambiguous 
and hardly justifies. Between the Schoolmen’s potentia 
obedientialis and appetitus moralis and the Modernist tenet according to which the supernatural “ema-
nates from nature spontaneously and entirely” there is 
space and distance; at the same time, the Catholic 
apologist who would attempt to fill some of the space 
and cover some of the distance should keep in mind 
the admonition of Pius X to those “Catholics who, 
while rejecting immanence as a doctrine, employ it 
as a method of apologetics, and who do this so 
imprudently that they seem to admit that there is 
in human nature a true and rigorous necessity with 
regard to the supernatural order, are not endowed with 
a capacity and suitability for the supernatural 
such as has at all times been emphasized by Catholic 
apologists” (Encyclical “Pascendi”).

SUPERSTITION

Superstitia. See SURPRISE.

Superstition [from superstisio, “to stand in terror 
of the deity” (Cicero, De Nat. deorum, v. xiii, 117); or from superstes, “surviving”: “Qui toto 
sensu perambulant et immolabant, ut simi: sub scribunt superstitios esse, i.e. “those 
who for whole days prayed and offered sacrifice that 
their children might survive them, were called super-
stitious” (Cicero, ibid., II, xxvii, 72). Cicero also 
drew the distinction: “Superstitio est in quo timor 
imaginum, religio quae deorum cultus pio contin-
tetur”, i. e. “the superstitious are those who, in 
who the bases fear of the. According to Isi-
dore of Seville (Etymolog. 1, 8, c. iii, sent.), the word 
comes from superstitio or superstinaia: “Superstitio 
est superius observantia in cultu super statuta seu 

instituta superiorum”, i. e. “observations added on to 
prescribed or established worship” is defined by St. 
Thomas (II-II, Q. xxi, a. 1) as “a vice opposed to 
religion by way of excess; but not because in the worship 
of God it does more than true religion, but because it 
offers worship to God in an improper manner”. 
Superstition sins by excess of religion, and this differs 
from the vice of irreligion, which sins by defect. The 
thetical virtue of religion stands midway between 
the two. (II-II, Q. xxi, a. 1.)

St. Thomas, Divine Worship and the Real Nature of the Supranatural Order.
swift air, or the circle of the stars, or the great water, or the sun and moon, to be the gods that rule the world" (Wisdom, xiii, 1-2). It is to this ignorance of the true God, coupled with an inordinate veneration for human idols and deeds, and the love of artistic representations appealing to the senses, that St. Thomas ascribes the origin of idolatry. While these are dispositive causes, the consummative cause, he adds, was the influence of demons who offered themselves as objects of worship to erring men, giving answers through mechanisms and disguises which to men seemed marvellous (II-II, Q. xiv, a. 4).

These causes explain the origin and spread of superstition in the pagan world. They were to a large extent eliminated by the preaching of Christianity; but so deep-rooted was the tendency to which they gave rise, and so much of the ancient practices survived, especially among peoples just emerging from barbarism. It was only by degrees, through the legislation of the Church and the advance of scientific knowledge, that the earlier forms of superstition were eradicated. But the tendency itself has not wholly disappeared. Side by side with the rationalistic philosophy and the rigorous scientific methods which are characteristic of modern thought, there are still to be found various sorts of superstition.

So far as this includes the worship of things other than God, it is not only an essential part, but the foundation of the Gothic system of which set up humanity as the object of religious worship (see Positivism). Nor can Pantheism (q. v.), which identifies God and the world, lead consistently to any but superstitious practices, however it may in theory disclaim such a purpose. The human mind, by a natural inclination, tends to this, and if it is convinced that Agnosticism is true and that God is unknowable, it will, sooner or later, devise other objects of worship. It is also significant that just when many scientists supposed that belief in a future life had been finally proved an illusion, Spiritism (q. v.), with its doctrines and practices, should have gained such a strong hold not only on the ignorant, but also, and in a much more serious sense, on leading representatives of science itself. This may indeed be interpreted as a reaction against Materialism; but it is none the less, at bottom, an evidence of man's restless desire to penetrate, by any and every means, the mystery that lies beyond death. While it is easy to condemn Spiritism as superstitious and vain, the condemnation does not do away with the fact that Spiritism has become widespread in this age of enlightenment. Now as in the past the rejection of Divine truth in the name of reason often opens the way to new practices which are at once unworthy of reason and dangerous to morality.

SINFULNESS OF SUPERSTITION IN GENERAL.—Superstition of any description is a transgression of the First Commandment: "I am the Lord thy God,—thou shalt not have strange gods before me. Thou shalt not make to thyself a graven image, nor the likeness of anything that is in heaven above, or in the earth beneath . . . thou shalt not adore them nor serve them" (Exod., xx, 2-5). It is also against the positive law of the Church, which visits the worst kinds of superstition with severe punishments, and against the natural law inasmuch as it runs counter to the dictates of reason in the matter of man's relations to God. Such objective sinfulness is inherent in all superstitious practices from idolatry down to the vainest of vain observances, of course in very different degrees of gravity. With regard to the subjective guilt, much depends on them it the love borne in mind that no sin is mortal unless committed with full knowledge of its grievous wickedness and with full deliberation and consent. Of these essential factors the first is often wanting entirely, and the second is only imperfectly present. The numerous cases in which the event seemed to justify the superstitious practice, and the universality of such incongruous beliefs and performances, though they may not always induce inculpable ignorance, may possibly obscure the knowledge and weaken the will for those who use similar means to blind faith with mortal sin. As a matter of fact, many superstitions of our own day have been acts of genuine piety at other times, and may be so still in the hearts of simple folk.

SPECIAL SUPERSTITIONS.—The principal species of superstition, viz., idolatry, divination, occult arts, have received adequate treatment in other articles. Something remains to be said on (1) cultus indebitus, or the pious vagaries which people intermingle with Catholic religion; (2) vain observances in daily life.

(1) Improper worship (cultus indebitus) consists in holding fast to practices of the ancient pagans. Food, for example, is an ancient practice of true religion. Such false elements, be their origin culpable deceit or inculpable credulity, vitiate the virtue of religion by substituting error for truth in the service of God. A layman performing priestly functions, a pardoner selling spurious indulgences, a fanatic devotee inventing false miracles and answers to prayers in order to introduce or spread his own favourite devotion, wholesale believers in supernatural apparitions, visions, revelations, which serve no good purpose—all these are guilty of superstition, at least material. As regards formal guilt, this is greater: in the case of those who, in apparent answer to prayers in order to introduce or spread the practice of true religion. The worship of imaginary saints or relics, devotion based upon false revelations, apparitions, supposed miracles, or false notions generally, is usually excusable in the worshipper on the ground of ignorance and good faith; but there is the excise for those who use similar means to exploit popular credulity for their own pecuniary profit. The origins of such falsehoods are liars, deceivers, and not rarely thieves; but a milder judgment should be pronounced on those who, after discovering the imposture, tolerate the improper cultus. For it is no easy matter, even for the highest authorities, to eradicate beliefs or to check the growth of devotions which have taken a strong hold on the popular mind: the long struggle of the Inquisition with the Spiritual Franciscans, who, on the assumption that the rule of St. Francis was a direct revelation from heaven, taught that poverty was an exaggerated importance, and cheerfully went to the stake rather than relinquish their ways, is but one example among scores that could be cited. There is always the fear of uprooting the wheat with the tares, and the hope of seeing the improper worship die a natural death, for devotions also have their changing seasons. The pope and the bishops are charged by the rightful authorities to act in these matters, for to them belongs the regulation of worship, both public and private, and it is the duty of every Catholic to abide by their decision.

The same reflections apply to another kind of improper worship, the cultus superfetius which consists in expecting from certain pre-arranged circumstances a greater efficacy of the religious performance; e. g., to expect a greater benefit from Masses said before sunrise with a certain number of candles disposed in a certain order, by a priest bearing a special saint's name or being of the supposed stature of Christ. Ternions, novenas, First Friday Communions, nine consecutive First Friday Communions, Saturday fasting, though they seem to attach special importance to number and dates, are approved by the Church, because these dates and numbers are convenient for shaping and regulating certain devotions which are connected with holy places, holy shrines, holy wells, famous relics, etc. are commonly treated as superstitions by non-Catholics who either reject all worship of saints and relics or assume pious frauds on the part of the priests who benefit by the
THE LAST SUPPER

PAINTING BY E. VON GEBHARDT, BERLIN
Supper. It must be admitted that these hallowed spots and things have occasioned many legends; that popular credulity was in some cases the principal cause of their celebrity; that here and there instances of fraud can be adduced; yet, for all that, the principle of superstition, the worship of the dead, and his good intentions, are not impaired by an undercurrent of error as to facts. If superstition there be, it is only material. Moreover, the Church is always careful to remove any fraud or error inconsistent with true devotion, although she is tolerant of "pious beliefs" which have helped to uphold Christian piety. Thus, ages of saints and relics are suppressed as soon as discovered, but belief in the private revelations to which the feast of Corpus Christi, the Rosary, the Sacred Heart and many other devotions owe their origin is neither commanded nor prohibited; here each man is his own judge.

(2) Turning now to vain observances in daily life, properly so called, we first meet with the superstitions observed in the administration of justice during many centuries of the Middle Ages, and known as ordeals or "judgments of God." Among the early Germans a man accused of a crime had to prove his innocence, not by his acquittal by the judgment of his accusers. The oath of a free man strengthened by the blood of friends, sufficed to establish his innocence, but when the oath was refused or the required number of "compurgators" failed, the defendant, if he were a free man, had to fight his accuser in single combat, and the blood of both had either to find a champion to fight for them or to quench the blood of friends, and thus he proved his innocence, and the oath of friends, sufficed to establish his innocence, but when the oath was refused or the required number of "compurgators" failed, the defendant, if he were a free man, had to fight his accuser in single combat, and the blood of both had either to find a champion to fight for them or to quench the blood of friends, and thus he proved his innocence. This judicial combat the early German laws recognized as legitimate means to discriminate between guilt and innocence. The casting or drawing of lots, trial by fire in several forms—holding a hand in fire for a determined length of time; passing between two piles of burning wood with no covering for the body except a shirt impregnated with wax; carrying with the naked hand a red-hot iron weighing from one to three pounds a distance of from nine to twelve paces; walking barefoot over nine red-hot ploughshares disposed in a line nine steps long. At the root of these and many analogous practices (see Ordeals) lay the firm belief that God would work a miracle rather than allow the innocent to perish or the wicked to prevail. These judgments of God" gave rise to new superstitions. "The judgments of God" gave rise to new superstitions. These judgments of God gave rise to new superstitions. They were tried in various forms, being a kind of trial by ordeal in a particular way, the trial being not for innocence but for guilt. The trials would often put more confidence in charms, magic formulas, and ointments than in the intervention of Providence. The ordeals gradually gave way before the rationalistic temper of modern times; trials by torture, which survived the ordeals, seem to have been inspired by the same ideas that God will work a miracle rather than allow the innocent to perish or the wicked to prevail. The power of the evil eye (fascinatio) has been believed in for a long time, and is still dreaded in many countries. The number of times is counted in the ordeals of men who profess not to fear God, and the process of superstition can only be accounted for by natural causes, although it would be rash to deny all supernatural intervention (e.g. in the phenomena of Spiritualism). When the object is to ascertain, or to effect in a general way, one of two possible events, the law of probabilities gives an equal chance to success and failure, and success does more to support than failure would do to destroy superstition, for, on its side, there are arrayed the religious instinct, sympathy and charity, confidence and distrust, encouragement and discouragement, self-suggestion and—perhaps strongest of all—the desire for vindication (St. Thomas, Summa H. II., q. 12, art. 26; St. Alphonse Liguori, Thes. Mor., IV., ed. La Noue, Lyons, 1878, contains many references). Freiberg, Prospe. Bibliothek. x. v. Superstition; Stack, Die Abpflanzen (2d ed., 1884); Tietze, Tract. des Superstitionen (2 vols., Paris, 1879; 2 more vols., Paris, 1870) (a work of immense erudition, but put on the Index by decree of 13 Feb., 1702, and 10 May, 1757; Brand, Observations on Popular Anomalies, (London, 1888) (a work of great merit); Gipfert, Moralphilosophie, I (2nd ed., Paderborn, 1890). J. WILHELM.

Supper, The Last, the meal held by Christ and His disciples on the eve of His Passion at which He instituted the Holy Eucharist.

Time.—The Evangelists and critics generally agree that the Last Supper was on a Thursday, that Christ suffered on Friday, and that He was crucified and died on the dead on Sunday. As to the day of the month there seems a difference between the record of the synoptic Gospels and that of St. John. In consequence some critics have rejected the authenticity of either account or of both. Since Christians, accepting the inspiration of the Scriptures, cannot admit contradictions in the sacred writers, various attempts have been made to reconcile the statements. Matt., xxvi, 17, says, "And on the first day of the Azymes"; Mark, xiv, 12, "Now on the first day of the unleavened bread, when they sacrificed the pasch"; Luke, xxii, 7, "And the day of the unleavened bread came, on which the sacrifice should be killed." From these passages it seems to follow that Jesus and his disciples conformed to the ordinary custom, that the Last Supper took place on the 14th of Nisan, and that the Crucifixion was on the 15th, the great festival of the Jews. This opinion, held by Tolet, Cornelius a Lapide, Patrizi, Coruy, Hengstenberg, Ohlshausen, and Tholuck, is confirmed by the custom of the early Eastern Church, according to which, looking to the day of the month, celebrated the commemoration of the Lord's Last Supper on the 14th of Nisan, without paying any attention to the day of the week. This was done in conformity with the teaching of St. John the Evangelist. But in his Gospel, St. John seems to indicate that Friday was the 14th of Nisan, for (xviii, 28) on the morning of this day the Jews "went not into the hall, that they might not be defiled, but that they might eat the passch." Various things were done on this Friday which could not be done on a feast, viz., Christ is arrested, tried, crucified; His body is taken down "(because it was the passacaee) that the bodies might not remain upon the crosses on the sabbath day (for that was a great sabbath day)"; the shroud and ornaments are bought, and the body is expected to be embalmed.

The defenders of this opinion claim that there is only an apparent contradiction and that the differing statements may be reconciled. For the Jews calculated their festivals and Sabbaths from sunset to sunset; thus the Sabbath began after sunset on Friday and ended at sunset on Saturday. This style is employed by the synoptic Gospels, while St. John, writing about twenty-six years after the destruction of Jerusalem, when Jewish laws and customs no longer prevailed, may well have used the Roman method of computing time: from midnight to midnight. The word pasch was not exact; it referred to the pasch lamb on the eve of the feast, but, as used in the Scriptures and in the Talmud, it is a wider sense for the entire festivity, including the chasigah; any legal defilement could have been removed by the evening ablutions; trials, and even executions and many servile works, though forbidden on the Sabbath, were not forbidden on festivals (Num., xxviii, 16; Deut., xvi, 23). The word passacaee may denote the preparation for any Sabbath and may be the common designation for any Friday, and its connexion with pasch need not mean preparation for the pasch. But Friday is regarded as a Sabbath, and hence this Sabbath was a great Sabbath. Moreover it seems quite certain that if St. John intended to give a different date from that given by the Synoptics and sanctioned by the custom of his own
Church at Ephesus, he would have said so expressly. Others accept the apparent statement of St. John that the Last Supper was on the 13th of Nisan and try to reconcile the account of the Synoptics. To this class belong Paul of Burgos, Maldonatus, Petavius, Hardouin, Tillemont, and others. Peter of Alexandria (P. G., XXII, 78) says: “In previous years Jesus had kept the Passover and eaten the paschal lamb, but on the day before He suffered as the true Paschal Lamb He taught His disciples the mystery of the type.” Others say: Since the Pasch, falling that year on a Friday, was reckoned as a Sabbath, the Jews, to avoid the inconvenience of two successive Sabbaths, had postponed the Passover for a day, and Jesus adhered to the day fixed by law; others think that Jesus anticipated the celebration, knowing then at the proper time He would be in the grave.

PLACE.—The owner of the house in which was the upper room of the Last Supper is not mentioned in Scripture; but he must have been one of the disciples, since Christ bids Peter and John say, “The Master says”. Some say it was Nicodemus, or Joseph of Arimathaea, or the mother of John Mark. The hall was large and furnished as a dining-room. In it Christ showed Himself after His Resurrection; here took place the election of Matthias to the Apostolate and the sending of the Holy Ghost; here the first Christians assembled for the breaking of bread; hither Peter and John came when they had given testimony after the cure of the man born lame, and Peter after his liberation from prison; hence perhaps was the council of the Apostles held. It was for a while the only church in Jerusalem, the mother of all churches, known as the Church of the Apostles, or of Sion. It was visited in 404 by St. Paula of Rome. In the eleventh century it was destroyed by the Saracens, later rebuilt and given to the care of the Augustinians. Restored after a second destruction, it was placed in charge of the Franciscans, who were driven out in 1661. At present it is a Mohammedan mosque.

SEQUENCE OF EVENTS.—Some critics give the following harmonized order: washing of the feet of the Apostles, prediction of the betrayal and departure of Judas, institution of the Holy Eucharist. Others, believing that Judas made a sacrilegious communion, place the institution of the sacrament before the departure of Judas.

In ART.—The Last Supper has been a favourite subject. In the catacombs we find representations of meals giving at least an idea of the surroundings of an ancient dining hall. Of the sixth century we have a bas-relief in the church at Monza in Italy, a picture in a Syrian codex of the Laurentian Library at Florence, and a mosaic in S. Apollinare Nuovo at Ravenna. One of the most popular pictures is that of Leonardo da Vinci in Santa Maria delle Grazie, Milan. Among the modern school of German Pietists, the Last Supper of Gebhardt is regarded as a masterpiece.

Supremi disciplinae, Motu Proprio of Pius X, promulgated 2 July, 1911, relating to Holy Days of obligation. On Holy Days of precept a twofold duty is incumbent on the faithful, of hearing Mass and of abstaining from servile work. Owing particularly to the high cost of living and to the necessity of earning the due season for crops, fruits, etc., the discipline of the Church has tended to lessen the number of Holy Days in certain countries. Pius X deemed it advisable to extend this policy to the Universal Church, thus effecting greater uniformity. Aside, then, from all Sundays, the obligation of hearing Mass and abstaining from servile work is now continued on the days: Christmas, New Year’s Day or the feast of the Circumcision, Epiphany (6 Jan.), the Assumption of Our Lord, the Immaculate Conception (8 Dec.), the Assumption of the Blessed Virgin (15 Aug.), the feast of Sts. Peter and Paul (29 June), and, finally, the feast of All Saints (1 Nov.). Where, however, any of the above feasts has been abolished or transferred, the new legislation is not effective. In the United States consequently the Epiphany and the feast of Sts. Peter and Paul are not days of precept (see Third Plenary Council of Baltimore, tit. 111, c. 1, p. 17). Feast of Holy Cross, Ascension, Holy Days of obligation. Bishops may, if they choose, transfer the celebration of these patronal feasts to the following Sunday in accordance with liturgical laws. If it is desired in certain countries or dioeceses to retain as days of precept one or other feast abrogated by the Constitution “Supremi disciplinae”, permission must be obtained from the Holy See.

There is no longer any obligation, as formerly in many countries, of assisting at the Holy Sacrifice or abstaining from servile work on the feast of St. Joseph (19 March), the Baptism of Our Lord (24 June), or Corpus Christi. According to the present Motu Proprio the feast of St. Joseph, with an octave, is to be celebrated on the Sunday following 19 March, unless that date fall on Sunday; the Nativity of St. John the Baptist is to be celebrated on the Sunday preceding the feast of Sts. Peter and Paul (29 June); Corpus Christi on the first Sunday after Trinity Sunday. Scarcely, however, was the “Supremi discipline” promulgated, when (S. R. C., 24 July) it was modified as follows: The solemn commemoration of St. Joseph without an octave remains on 19 March. The octave of the feast of the Patronal Saints, which on the third Sunday after Easter is raised to a double of the first class, a primary feast with an octave. Likewise the feast of Corpus Christi with its privileged octave is observed as formerly on the Thursday after Trinity Sunday, but the solemnity of the feast
is transferred to the following Sunday. Liturgical questions, to which the above changes gave rise, were settled by a Decree of the Sacred Congregation of Rites, 28 July, 1911.

The present Motu Proprio institutes another important change in legislation. As fasting and fasting are incompatible Pius X has abolished the obligation of fasting as well as that of abstinence for the Universal Church, should such obligation coincide with any of the eight feasts, as above. According to the "Nouvelle Revue Théologique", November, 1911, by decree of the S. Cong. of the Council, 28 August, 1910, this dispensation is not for feasts already suppressed, like the Epiphany in the United States. The same general dispensation from the laws of abstinence and fasting is granted by the Holy Father on patronal feasts, abolished by the present Constitution, should they be celebrated solemnly and with a large concourse of the faithful.

Andrew B. Merrin.

Sura, titular see in Augusta Euphratesensis, sub-fragum of Hierapolis. Sura, situated on the banks of the Euphrates, at the intersection of the roads from Palmyra and Beroca or Chalce, was a military station, and at the beginning of the fifth century was the acme of importance of the long XVI Plane Firma. In his second Syrian campaign Charoeos assaulted the town; the Armenian, Arsaces, the magister militum, directed the defence; when he fell the inhabitants sent their bishop to Charoeos as an envoy; but the latter, incensed by the resistance he had encountered, sent a barbarian to direct the annihilation of the town, which had held out only half an hour. Justinian erected powerful fortifications there. Its ruins, of little importance, are near the present military post of El Hamman, not far from Rekka in the vilayet of Aleppo. Le Quien, "Oriens christianus", II, 949 mentions three bishops of Sura: Uranius, represented by Metropoleion, 401; Marion, exiled as a Monophysite in 518; and the one who was envoy to Charoeos, whose name is unknown. See is mentioned in the "Notitiae episcopatuum" of the Patriarchate of Antioch in the sixth and seventh centuries. Vaullier in Echo d'Orient, X (Paris, 1907), 94, 145; Sertu, "Diot. of Greek and Roman Geog., s. v.; Müller, "Notitiae Episcopatuum", ed. Döll, I, 985; Chapel, "La frontier de l'Euphrate a la conque arabe" (Paris, 1907), 89-88 and passim.

S. Pétredes.

Suri, Jean-Joseph, b. 1600; d. at Bordeaux, 1665. He belonged to the Society of Jesus, and enjoyed great celebrity for his admirable virtues, his trials, and his talents as a spiritual director. Bossuet declared him "consumed with spirituality". At the suggestion of the Fathers of the Province of Aquitaine, assembled in provincial congregation (1755), the father general ordered his name inscribed in the "Mémolage de l'assistance de France". At the age of eight he took a vow of chastity, at ten he was taught to meditate by a Carmelite. Having been sent to Loudun to exorcise certain Ursulines tormented by the evil one, Bossuet so greatly enraged the sacrileges intended for three desecrated hosts that he immediately made an offering of his own spirit to be possessed by demons in expiation for this frightful crime. His prayer was granted, and for more than twenty years he was harassed by evil spirits, plunged in the depths of the abyss. At no time, however, did this state of obsession prevent his devoting himself to preaching. It is true he was unable to prepare himself for this by any reading or study, but on entering the pulpit and making the sign of the cross a wonderful transformation was manifest. His vigorous mind instantly gained the ascendency; his powerful voice and facile oratory won universal attention and admiration. His physician declared it miraculous. Even in writing or dictating, his hand was so rapidly gifted with Divine inspiration. He was healed eight years before his death and was thenceforth absorbed in the abundance of Divine communications. His principal works are: "Catéchisme spirituel" (Paris, 1659), published by the Prince de Conti, anonymously; "Fondements de la vie spirituelle" (Paris, 1667); "Cantiques spirituels" (Paris, 1670); "Dialogues spirituels" (Paris, 1704); "Lettres spirituelles" (Paris, 1695). His "Catéchisme spirituel" is on the Index, but with certain modifications soon to be made, it will be taken from the list.

Surius, Laurentius, hagiologist, b. at the Hansseatic city of Lübeck, 1522; d. at Cologne, 23 May, 1578. It is not certain whether his parents were Catholics or Lutherans. According to a letter written to him by Peter Canisius ("Epistolae" ed. Braunberger, I, 36), he was born a heretic and was brought into the Church by Canisius. Surius studied at the universities of Frankfort-on-the-Oder and Cologne. In the latter university Peter Canisius was a fellow-student. Surius also met there Justinus Justus, a Jesuit, who induced him to enter the Carthusian monastery at Cologne, in 1542. The greater part of his life after this was spent in his monastery, where he was a model of piety, of rigid observance of the rules of the order, and of earnest work as a scholar; for these reasons he was held in high esteem by St. Pius V. He devoted himself chiefly to the domains of church history and hagiography, and wrote a large number of works on these subjects. He also translated into Latin many works, mainly ascetical and theological. Among these translations should be mentioned writings by Tauler, Heinrich Seuse, Ruybroeck, Gropper's work on the reality of Christ's Flesh and Blood, the sermons of Michael Sidonius, the apologies of St. Philip, and an oration by Martin Eisenmire. He completed the "Institutiones" of Florentius of Haelem, prior of the Carthusians of Louvain, and edited a new edition of the "Hermiophantia" of St. John Chrysostom. He wrote against Sidelanus his "Commentarius brevis rerum in orbe gestarum ab a. 1500 ad a. 1564" (Cologne, 1568), which was continued by others. He was also the author of a collection of the Acts of the councils: "Concilia omnium temporum generalia tum provincialia" (4 vols., Cologne, 1567). His most important and still valuable work is his collection of the lives of the saints, "De probatis Sanctiorum historias ab Al. Lipomano olim conscriptis nunc primum a Laur. Suriuo emendatis et auctis"; the first edition of which appeared in six volumes at Cologne in 1570-77. He began a second edition which he finished after his death. He entered the Carthusian monastery, Messoner, who added a seventh volume (Cologne, 1582). A third edition with an improved text appeared at Cologne in 1618; a new and revised edition was published (1875-80) at Turin in thirteen volumes. Notwithstanding the liberties taken by Surius with the text of the manuscripts he used, his work has rendered great service and has furnished many narratives concerning the lives of the saints that have been published in various languages.

J. P. Kirch.

Surplus, a large-sleeved tunic of half length, made of fine linen or cotton, and worn by all the clergy. The wide sleeves distinguish it from the rochet and
the alb; it differs further from the alb inasmuch as it is shorter and is never girded. It is ornamented at the hem and the sleeves either with embroidery, with lace-like insertions, or with lace. The lace should never be more than one inch wide; otherwise the real vestment is necessarily too much shortened by this merely ornamental addition. The surplice belongs to the liturgical vestment in the strict sense, and is the vestment most used. It is the choir dress, the vestment for processions, the official dress of the lower clergy, the vestment worn by the priest in administering the sacraments, when giving blessings, at Benediction of the Blessed Sacrament, etc.; in the last-mentioned cases it is the substitute for the alb, which, according to present custom, is worn only at Mass and a few other functions. The blessing of the surplice by the bishop or by authorized priest is proper, but not strictly prescribed. As the distinctive sacerdotal dress of the lower clergy the bishop, after giving the tonsure, places it on the candidate for orders with these words: "May the Lord clothe thee with the new man, who is created in righteousness and true holiness after the image of God."

HISTORY.—The time of the introduction of the surplice cannot be exactly determined. Without doubt it was originally merely a choir vestment and a garment to be worn at processions, burials, and on similar occasions. As a liturgical dress in this sense it was the custom of Hungary and France in the eleventh century, but is not found in Italy until the twelfth century. The surplice may have been used in isolated cases during the twelfth century instead of the alb in administering the sacraments and at blessings, but this use did not become general until the thirteenth century; it appeared latest probably in Italy and especially at Rome, where it was hardly customary at these functions before the end of the thirteenth century. Towards the close of the twelfth century the surplice was already the distinctive dress of the lower clergy, even though this was not the case everywhere. However, the placing of the surplice on the clerics after the giving of the tonsure (cf. above), is first testified by the Pontificals of the fourteenth and fifteenth centuries.

The name of the surplice arises from the fact that it was worn by the clergy, especially in northern Europe, over the "spice," the usually customary fur clerical "spice," "fracticum." This is stated by Durandus, and by the English grammarian Gerandus, both of whom lived to the thirteenth century. The fur clothing not only led to the name of the surplice, but was probably also the cause of its appearance. For it is evident that a large-sleeved, ungirded tunic was better suited to go on under an opposite than a narrow-sleeved, girded alb. It seems most probable that the surplice first appeared in France or England, whence its use gradually spread to Italy. It is possible that there is a connexion between the surplice and the Gallican alb, an ungirded liturgical tunic of the old Rite, which was the successor of the Carolingian era by the Roman Rite. The founding of the Augustinian Canons in the second half of the eleventh century may have had a special influence upon the spread of the surplice. Among the Augustinian Canons the surplice was not only the choir vestment, but also a part of the habit of the order. In this surplice the bishops were wont frequently to mention of a "cotta." It is possible that between the superpelliciun and the cotta there may have been some small difference (perhaps in length or width), but most probably these terms were only different names for the same liturgical vestment (cf. Braun, op. cit., p. 189)."n
Originally the surplice was a full-length tunic—that is, it reached to the feet. In the thirteenth century it began to be shortened, although in the fifteenth century it still reached halfway between the knee and ankle. In the sixteenth and seventeenth centuries it became steadily shorter until it fell a little above the knee; in the eighteenth century, however, it was finally so reduced that it reached only just below the hips. As the length of the surplice was lessened, the length and breadth of the sleeves were naturally reduced, so that in this respect also there is a great difference between the original surplice and that of the eighteenth century. More striking than these minor alterations of size were other changes made in the surplice, some of which appeared as early as the thirteenth century, and by which its entire shape and appearance was more or less altered, various forms of the surplice being produced. Thus, surplices appeared with slit-up sleeves (as with wings of materials rather than sleeves); then surplices which, besides being slit up on the under side of the sleeve, were also open at the sides, the surplice being thus like scapulars in form. Also surplices without sleeves, having mere slits for the arms; finally surplices resembling the medieval bell-shaped chasuble with only an opening for the head for the lower clergy—the so-called "horn," in the sixteenth and seventeenth centuries, especially in Venetian territory. These variations met with the disapproval of provincial and diocesan synods, but their prohibitions had no permanent effect. The scapular-like band that took the place of the surplice on non-liturgical occasions is not a curtailment of the surplice, but a substitute for it.

ORNAMENTATION.—In the Middle Ages the surplice apparently seldom received a rich ornamentation. In pictures and sculpture it appears as a garment hanging in many folds, but otherwise plain throughout. There is a surplice at Neustift near Brixen in the Tyrol that dates back to the twelfth (or, at least, to the thirteenth) century; it is the only medieval surplice that we possess. This surplice shows geometrical ornaments in white linen embroidery on the shoulders, breast, back, and below the shoulders, where, as in the albs of the same date, large full gorges have been inserted in the body of the garment. After the lacy industry developed in the sixteenth century the hem and sleeves of the surplice were often trimmed with lace—at a later period, unfortunately, too often at the expense of the vestment itself. It is not likely that there was a definite fashion for the surplice in folds until the close of the Middle Ages. This custom had vogue especially in Italy, but it frequently degenerated into undignified straining after effect and effeminate display.

JOSEPH BRAUN.

Susa (Heb. שׁוֹסָה; Gr. Σοῦσα, Σοῦσα), the capital of the Kingdom of Elam, and from the time of Cyrus, or more probably of Darius I, the winter residence of the Persians (cf. 2 Chron. 36, 16 f.); was the seat of Eueles (Dan., viii, 2, 16; Pliny, "Hist. Nat." VI, 27), which was probably a branch of the Chosapes, now the Kerkha, formerly connected with the Pasitigris, now the Karun. After an existence of more than fifteen centuries the city was destroyed by Assurbanipal about 647 B. c., but it rose from its ruins, and under Persia rule enjoyed an extended period of prosperity, but soon decay under the Seleucids, and after the destruction of the Sassanid monarchy by the Arabs it was gradually abandoned. The "castle" (II Esd., i, 1; Dan., vii, 2, or acropolis, was distinct and separated from the city, though in the Book of Esther the Vulgate renders the distinction by אֶרֶץ (ix, 12; the "castle", and not the city, is meant). Here Darius I built a vast palace, in which under his successor occurred the events nar-
rated in the Book of Esther. The ruins of the acropole, covering about 300 acres, have been explored by Williams and Loftus, and more thoroughly by Dieulafoy and de Morgan. The excavations have yielded some important finds, among others the code of Hammurabi.

**SUSANNA.** See Daniel, Book of.

**SUSO, HENRY.** See Henry Suso, Blessed.

**Suspension**, in canon law, is usually defined as a censure by which a cleric is deprived, entirely or partially, of the use of the power of orders, office, or benefice. Although ordinarily called a censure because it is generally a medicinal punishment inflicted after admonitions and intended to amend the delinquent, yet it is not necessarily so for it is occasionally employed as a chastisement for past and even as the time of St. Cyprian (d. 258), we read of clerics deprived of the income of their charges and also of suspension from the determined functions for which one had been ordained. We know also that clerics were sometimes temporarily deprived of Communion (Can. Apost., 45; Conc. Triv. c. 21). The Council of Nicaea (Can. 1) in 315 decrees perpetual suspension from all functions for certain misdemeanours, while the Fourth Council of Carthage (can. 68), by forbidding a delinquent bishop to ordain, gives an example of partial suspension. Again, the Third Council of Orange (can. 19) in 538 decrees suspension from orders but not from stipend, and the Council of Narbonne (can. 11) suspends certain clerics from receiving the fruits of their benefices.

When a suspension is total, a cleric is deprived of the exercise of every function and of every ecclesiastical right. When it is partial, it may be only from the exercise of one’s sacred orders, or from his office which includes deprivation of the use of orders and jurisdiction, or from his benefice which deprives him of both administration and income. When a suspension is decreed absolutely and without limitation,
it is understood to be a total suspension. A partial suspension deprives a cleric of the use of that power only which is expressed in the sentence. A cleric does not incur an irregularity when he violates a suspension imposed for a former transgression, because then there is no violation of a censure. The same holds good if he has been suspended for some defect of mind or body not blameworthy. Irregularity is contracted when a cleric performs a solemn act of sacred orders, from the use of which he had been suspended. Thus, if a bishop forbidden to celebrate Mass pontifically were to perform such a function, he would not incur irregularity because he does not thereby exercise any substantial act of episcopal ordination. As the Church cannot deprive a suspended cleric of the power of sacred orders, but only forbids their use, it follows that acts of sacred orders remain valid after suspension. On the other hand, acts of jurisdiction become null and void after a suspended cleric has been denounced by name, because the Church has power to deprive one totally of jurisdiction. Suspension ex informato conscientia has the same effect as a formal suspension, but it is not inflicted by judicial sentence, but as an extraordinary remedy, without the canonical monitions being necessary, and it is imposed for occult but grave crimes.

When a cleric has been suspended from the income of his benefice, it is not the Church's desire that he be reduced to actual want. Consequently sufficient support is to be given to him, provided he has no means of his own and be willing to amend. Even when he does not turn from his evil ways, the clerical dignity requires that he be not suffer to fall into extreme want or danger of starvation. The principal grounds on which suspension is incurred ipso facto in the present discipline of the Church are found in the Decrees of the Council of Trent and in the Constitution "Apostolice Sedis Moderationis", though a few others have been added. A cleric is relieved of suspension, if it was a censure, by the absolution of him to whom it was reserved in case of reservation. When it was inflicted for a definite time or under a certain condition, it ceases of itself when the limitation is fulfilled. If the suspension was perpetual and depended on account of a former crime, it may be removed by mere dispensation of the proper authority.

SUTRI. See Nemi and Sutri.

SUTTON, Robert, Venerable, priest, martyr, b. at Burton-on-Trent; quartered at Stafford, 27 July, 1537. He is not to be confused with the Venerable Robert Sutton, who was a companion of the Venerable William Hartley (q. v.). He took the degree of M. A. from Christ Church, Oxford, 9 July, 1567, and became Rector of Lutterworth, Leicester-shire, in 1571, but was converted by his younger brother William, afterwards S.J. With his younger brother Abraham, who matriculated from Hart Hall in 1576, and 25, he arrived at Douai, 23 March, 1576 (1576). They were both ordained subdeacons at Cambrai in September, deacons in December, and priests in the following February; having said their first Masses, 7 March, 1577, they left Douai, 19 March, 1577 (1578). Robert was arrested at Stafford, and condemned merely for being a priest. He was cut down alive. After the lapse of a year Catholics managed to secure one of his quarters, when the thumb and index-finger were found to be intact. Abraham Sutton gave the same account, but his thumb and index-finger were also found to be intact.

Sutton, Sir Richard, co-founder of Brasenose College, Oxford, date of birth unknown; d. September or October, 1524. He was the younger son of Sir William Sutton, of Sutton, Leicestershire. It is not known where he was educated, but he devoted himself to the legal profession, became a member of the Inner Temple, and achieved considerable success. In 1498 he was a privy councillor and held the valuable position of steward of the monastery of Sion, near London, to which house he gave benefactions of land. The chief work of his life was the building and endowment of Brasenose College, which he carried out in conjunction with Bishop Smyth of Lincoln. The college was founded in 1508, and during the following years Sutton bought for its endowment estates in Middlesex, Leicestershire, Oxfordshire, and Essex. These he formally made over to Brasenose in 1519, and in May, 1523, Brasenose Hall and Little University Hall, which he had leased from the university, were conveyed to the new college. His other benefactions during life or at death included the foundation of a chantry at Macclesfield, or Sutton, the making of a book of hours, the purchase of the Gifford fields, London, and donations or legacies to Corpus Christi College, Oxford, the Temple (wherein he held high office) and Clement's Inn, London, the monastery of Sion, and Macclesfield Grammar School. He was knighted by Henry VIII between May, 1522, and March, 1524. From his will it would seem that in earlier life he had been of strong Yorkist sympathies.

SWAN, ORDER OF THE, a pious confraternity, indulged by the pope, which arose in 1440 in the Electorate of Brandenburg, originally comprising, with the Elector Frederick at their head, thirty gentlemen and seven ladies united to pay special honour to the Blessed Virgin. It spread rapidly, numbering in 1454 about 300 chapters, i.e. 1 (Catholic) branch established in the Margraviate of Anspach (1465) and in the possessions of the Teutonic Order in Prussia. But Protestantism, by suppressing devotion to Mary, abolished the confraternity's raison d'être. In 1843 King Frederick William IV of Prussia, in his infatuation for the Middle Ages, thought of re-establishing this order, but this was never more than a
\textbf{Swastika.} See Cross and Crucifix, \textit{The}.

\textbf{Sweden.} See Cross and Crucifix, \textit{The}.

\textbf{Sweden.} The largest of the three Scandinavian countries and the eastern half of the Scandinavian peninsula, lies between 55° and 68° north latitude and 12° and 24° east longitude. It is bounded on the west by Norway, the Skager Rack, and the Cattegat, on the east by Russian Finland and the Baltic. (For map see DENMARK.) Including the Islands of Gotland and Öland, Sweden has an area of 172,276 square miles, of which 73,040 are forested land; 15,000, water; over 20,000, farming and grass land, while what is left consists of barren land, moorland, and pasture land. Although the elevation of the land is on the whole considerably higher than that of Denmark, still the country lacks the mountains that characterize Norway; it is, however, in part that there are found some mountain peaks, as Sulitjelma, which rises to a height of 6150 ft. and glaciers such as Sylljell. The ground consists chiefly of primitive rock, granite, and gneiss, the disintegrated parts of which form the soil. In Gottland and Öland, however, and in Gotland in particular, no country in Europe, with the exception of Russia, has larger lakes than Sweden. The largest is Lake Wenner (2200 square miles), the most beautiful is the Western (733 square miles), the one containing the greatest number of islands and most frequented is Lake Malar. Stockholm, the beautiful capital of Sweden, is situated on the outlet that connects Lake Malar with the sea. The country's many, and generally swift, rivers not only form beautiful waterfalls, as Trollhetten, Tannforsen etc., but also contain in their great abundance of water about 5,000,000 horsepower. Lakes and rivers are frequently connected with one another and with the sea by canals; one of the most important is the Göta Canal. The climate is relatively mild, especially in the southern provinces and Gotland. The rainfall is fairly regular. In summer the days are not only long and bright, but also very warm. In the northern part of Sweden the sun does not set from the first of May to the middle of July. Naturally the winter is a complete contrast to this: for months the land is covered with heavy snow, and the water has a thick covering of ice.

Sweden is very heavily wooded; in the south the forests consist chiefly of beeches and oaks; in the highest altitudes when you take the place of firs; birches are found below 69° N. lat. The forests and open country give shelter and food to large numbers of wild animals; besides hares and deer there are also reindeer and squirrels. Formerly wolves and bears were numerous, but now they are only found in the most remote parts of the country, and will before long disappear. In Southern and Central Sweden the same varieties of grain and vegetables are cultivated as are grown in Germany, Denmark, and Northern France. In sheltered places grapes are grown as high as 69° N. lat. and at times are sweet in this latitude, but are not suitable for wine. Much attention is given to the breeding of cattle and the making of butter and cheese. The mines, especially at Gellivare, yield a large quantity of fine iron ore. The river and high-sea fishing (salmon, cod, herring) has sustained large proportions. The Scandinavian exhibition held in 1897 showed the extraordinary development of manufacture during the last hundred years. The most valuable exports are wood, either in the rough or worked, and iron in the ore or in bars; the annual value of the export of the first is 200,000,000 kronen and of the second 100,000,000 kronen. Butter and cheese to the value of about 40,000,000 kronen are exported annually; live-stock, hides, and fish, 20,000,000 kronen. The value of the most important imports is as follows: coal, 66,000,000 kronen; all sorts of groceries and manufactured goods, 50,000,000 kronen; grain, 52,000,000 kronen. Traffic and commerce are promoted by the numerous canals and the excellent roads; by a large number of railways, having a length altogether of 8694 miles and owned partly by the State and partly by private citizens; by an excellent postal, telegraph, and telephone system. In 1909 the Swedish merchant marine included 1800 sailing vessels with 200,000 tons, and 1200 steamships with 583,000 tons. In 1908 more than 35,000 ships entered or left Swedish ports. The unit of coinage is the krone, which equals 100 öre or 1 1/2 marks of the German coinage, and equals 27 cents in U. S. money.

Weights and measures follow the metric system.

The great majority of the population of 5,500,000 persons consists of Swedes (Swear and Götar), and of people of Danish descent settled in the southern provinces who are now Swedish in speech and thought. The Swedes are a brave, thrifty, and industrious people, though they understand Swedish, still hold to their own customs and languages. Officially nearly the entire population belongs to the Lutheran State Church. Nevertheless, large numbers are indifferent or have no belief; the sects are steadily multiplying. The few thousand thousand Protestants are scattered throughout the country and regularly organized parishes exist only at Stockholm, Gothenburg, Malmö, Norrköping, and Göteborg. The number of marriages (33,000) is increasing, while the annual birth-rate changes but little. Divorce has become quite frequent. Emigration, however, has declined. As regards education and training, there are five schools of high rank, including the two well-endowed universities Upsala and Lund; a large number of technical schools, gymnasiums, primary and itinerant schools. The national wealth is estimated at four milliards; the national debt in 1910 amounted to 527,000,000 kronen.

Sweden is a constitutional monarchy; the crown is hereditary in accordance with the law of primogeniture. The Parliament consists of two houses, and the king has the right of veto. Administration and justice in Sweden, like the same departments of government in England, have retained many German features. For administrative purposes the kingdom is divided into twenty-five districts, called län, each of which is governed by a landshöfding. Justice is administered by district and upper courts. For ecclesiastical purposes Sweden is divided into twelve dioceses, each containing a large number of parishes; at the head of each diocese is a bishop. The primate of Sweden is the Archbishop of Upsala; the king is the summus episcopus. In Sweden liability to military service lasts twenty years; twelve years are spent in the first levy (Bevering), eight years in the reserve. The time of actual service is short, being barely one year in the first instance, and the officer is rated as having completed a thorough military training. In times of peace the army numbers 66,000 men, of whom 6000 serve in the cavalry, 7000 in the artillery, 2000 in the engineer corps. In war time the army can easily be doubled. The Swedish navy is small but good; it is only used for coast defence. Its equipment consists of 1000 officers and non-commissioned officers and 4000 marines and sailors. The national colours are yellow and blue. The battleflag is blue with a yellow horizontal cross that runs out into a tongue; the two blue sections of the flag likewise end in tongues. The flag of the merchant marine is square, blue in colour with a yellow horizontal cross. There are several decorations of honour, the highest being the Order of the Seraphim. The Order of Charles XIII is only intended for Freemasons. The present King of Sweden is Gustavus V,
who was born 16 July, 1858, and is a member of the Bernadotte family; in 1887 he married Princess Victorïa of Baden.

Gustav V: Karta åf Sverig, for Northern Sweden (issued by the Topographical Corps); NATURBOEK, Sveriges geologi (Stockholm, 1894), gives the geology and physical geography of the country. This is supplemented by a geografía (Stockholm, 1899), and maps by the Geological Survey. Sveriges geografi i Blandad, Sveriges land och folk (Stockholm, 1901); Hist. statlit, Handbuck; Sveriges Tjur/köningenens Reskåndeväckler (Stor, the Swedish-Turk jurist, 1899), especially vol. 1; Sweden; Svenska Tur/köningenens Värnare (Stockholm, 1895), especially vol. 1, Stockholm containing many illustrations; Svenska Tur/köningenens Historier (Uppsala, the Swedish Turcologist, 1892); Studier ur en släktens historia (Stockholm, 1898), contribution to historical geography. J. M. E. Feuer, och statskildsd ter, Erkenntnisse über die Schweiz (3 vols. and index, Stockholm, 1889-96); BAUKONSTNER, Nordiska Fakturer: Durch Skandinavien nach S. Peterburger, 1 (1889), 272-248, (treats of Sweden); WITTMAN, Durch Schweden (1883); Stockholm Kommunalkalender (Stockholm, 1911), with 5 small maps.

ECCLESIASTICAL HISTORY.—Nothing positive is known as to the religious ideas of the prehistoric inhabitants of Sweden during the Stone and Bronze Ages. It is hardly possible, however, to doubt that they believed in a life after death, as they were accustomed to offer sacrifices of games and to place in these graves the weapons, tools, utensils, and ornaments of those there buried. Their religion was an ancestral worship. Light or its chief representative, the sun, appears to have received as Ty-deus, equivalent perhaps to Zeus, the veneration of these people. Two symbols from the Stone Age, the wheel and the axe. Subordinate to this may have been a form of worship paid to individual trees, springs, rivers, and lakes, as striking natural phenomena, which is not entirely extinct even yet. For example, sacrifices are offered in "fair-wings," (Alfasmirn), and despite attempts to dispel superstitions by the schools the belief in house spirits and forest spirits is still to be found here and there. Great fires are still kindled about Easter time, just as was customary thousands of years ago. At a later date than that above-mentioned the sun-god was regarded from varying points of view and received various names. This led gradually to a number of gods: Thor, Odin, and Frey, or Freyr. However, Thor, not Odin, always remained the chief god; he was the god of lightning and of strength. It is indeed asserted that the worship of Odin came from the South; this is contradicted by the feet and greatest temple stood in Upsala, and that the Scandinavians were the chief worshippers of this god. Among the Germans Wodan, as he was called by them, was treated with but little respect; this is especially true of the tribes of Southern Germany. Moreover, the Scandinavian mythology, as it has come down in the two Eddas, is totally lacking in unity and is in part influenced by Christian ideas. Bloody sacrifices, generally animals, as horses or dogs, were offered to the gods to conciliate them or to gain gifts from them. At times human beings were sacrificed, as bondmen, freemen, and even kings, who in the literal sense of the word were killed with the sword. Those dedicated to Odin were hung in his groves. Once in nine years the feast of the equinoxes was celebrated with special and horrible pomp. On each of the nine days of sacrifice at least one human being was killed, besides large numbers of animals. Dozens of bodies often hung from the trees. A distinct sacrificial order seems to have been unknown, and the chiefs of the tribes offered the sacrifices themselves. The first contact with Christianity arose from the expeditions of the Vikings. In this way the Scandinavians became acquainted with the higher civilization of the southern races; some of the northern warriors were baptized. Thus gradually the ground was prepared for the seed of the Gospel. The first effort to convert the country to Christianity was made by the Frank, Anagar. At the request of Swedish nobles he was commissioned by the Emperor Louis the Pious to go to Sweden and reached the commercial town of Birka in Maelarw in 630, after a hard and dangerous journey. Here at the consent of King Björn he preached zealously for more than a year. Twenty-three years later, when he was in the meantime become Archbishop of Hamburg-Bremen, returned to Sweden, and by his shrewdness and gentleness overcame the hostile efforts of the worshippers of the heathen gods. His successor as archbishop, Rimbert, also sought to carry on the work of conversion among the Scandinavians. However, internal turmoil and wars soon destroyed what the two pious men had built up. It was not until the beginning of the eleventh century that the Church resumed the work. German and English missionaries competed with one another in preaching the Word, and not without results. In 1006, Olaf Skötkonung was baptized by Siegfried at Husaby in Western Gotland. But the Church made very slow progress. In the reign of King Stenkel a diocese was founded at Skara. In the reign of Yngi the Old, the new faith gained the mastery. The English missionaries David and Eelk, the German missionaries and the Swede Botvid preached chiefly in Södermanland, Vastmanland, and Norrland. The first-mentioned died a natural death, the others gained the crown of martyrdom. Still heathenism maintained itself for a long time in isolated spots in the valleys among the mountains.

Naturally the leaven of the Gospel penetrated the hearts of the battle-loving warriors very slowly, and the majority of the baptized were only half Christians. Their knowledge of religion must have remained very limited on account of the lack of printing and schools. The secular clergy, and later the monks especially, sought with praiseworthy zeal to raise the neophytes to a higher spiritual and moral level. They opposed with growing success drunkenness, violence, polygamy, and the exposure of children. A second diocese was established at Linköping in the reign of Sverker the Old. Both here and in the monasteries (Alvastra, Nydala, Varnhem, etc.) promising youths were instructed in religion as well as in secular knowledge. The lack of written word was supplied by zealous preaching of the doctrine of salvation. The poor and sick were tenderly cared for. Christianity introduced the church building as it has come down to us, and the organization of the Church made rapid progress. The first national synod was held at Linköping in 1152 under the presidency of the papal legate, Bishop Nicholas of Albano. Soon after this Upsala was made the see of a diocese; its first bishop, Sven, an English monk, as it has come down in the two Eddas, is totally lacking in unity and is in part influenced by Christian ideas. Bloody sacrifices, generally animals, as horses or dogs, were offered to the gods to conciliate them or to gain gifts from them. At times human beings were sacrificed, as bondmen, freemen, and even kings, who in the literal sense of the word were killed with the sword. Those dedicated to Odin were hung in his groves. Once in nine years the feast of the equinoxes was celebrated with special and horrible pomp. Soon after this Upsala was made the see of a diocese; its first bishop, Sven, an English monk, as it has come down in the two Eddas, is totally lacking in unity and is in part influenced by Christian ideas.
the reign of King Magnus Eriksson; she also exerted influence as a writer on mystical subjects, and died at a great age at Rome during the latter part of the fourteenth century. At a later date she was canonized as a saint.

The civil wars which wasted the country for hundreds of years were alike injurious to faith and morals. In the course of time the possessions of both nobility and clergy became very great; consequently Margaret, queen of the united Scandinavian countries at the close of the sixteenth century, found it necessary to confiscate a part of these lands, which frequently had been gained by doubtful means. On the other hand there were also excellent princes of the Church, as for example, Archbishop James Ulfsson, for whom may be claimed the honour not only of establishing the first printing press in Sweden in 1453, but what is more, that of founding the University of Upsala. The last Catholic Bishop of Linköping, Hans Brask, also showed much ability and was as zealous in his episcopal duties as in his promotion of learning. However, the great lack of the true Apostolic spirit among the other Church dignitaries is shown by the fact that Archbishop Brask and Bishop Carl Bjerke were sent against their kings. In addition, Bishop Hemming Gud did everything he could in 1500 and the following years to overthrow the union of the three kingdoms, and then made common cause with the Danes, while Archbishop Gustavus Trolle, who was a strong supporter of the unity, was deprived of his see on the instructions of the Swedish national council. This last procedure led to the interference of the pope, an act which though just was ill-timed. The victorious King Christian II was guilty of great cruelty to his former foes, largely due to the influence of Archbishop Trolle, and this made the Catholic principle very unpopular among a large portion of the population. Consequently Gustavus Eriksson (Vasa), who was elected king in 1523 on account of having incited and led a successful revolution against the domination of Denmark, found the way only too well prepared for the overthrow of all religious conditions.

The first representative of what is called the "ideas of the Reformation" was Olavus Petri, the son of a smith, who was born in 1497 at Örebro. He was a pupil of Luther at Wittenberg and returned home in 1519. As cathedral canon at Strängnäs he won over to the cause of preachers (1520) the diocese of Uppland. Very soon the new ruler saw how advantageous it would be to him if he were able to crush the power of the bishops and to confiscate the lands of the Church. As early as 1524 Gustavus Vasa broke off the official connexion of the country with the Roman Curia and permitted Olavus to preach the heretical principles of his former teacher openly in the chief church of Stockholm. Prelates who held strictly to the Faith, as Bishop Peter Jakobsson (Sunnanwälder) and the cathedral provost Knut of Västerås, were accused of treason and executed without any further legal process. At the Diet of Västerås in 1525, three years later Gustavus Vasa was able, by skilful dissimulation, to obtain the passage of laws which made him the summo episcopus of the Swedish Church and brought the Church into helpless subordination to the State. In order to dupe the people the Masse, veneration of saints, and pilgrimages were not discontinued at first, ecclesiastical vestments and ceremonies were also retained almost without change. But at the same time, the king and the nobility appropriated as much of the Church lands for themselves as was possible, taking twelve thousand large peasant farms. Even the sacred bells and images were seized by Vasa. Many monks and nuns were driven out of their monasteries; a number, including all the members of the Franciscan monastery at Raumö, were killed under circumstances of great cruelty. In order to win over the priests they were permitted to marry, and a great effort was made to win over the common people to the new doctrine by translating the Bible into the vernacular. The attempts of the Dalecarlians and Småland, who held to the Church, to check the rapid advance of Protestantism were fruitless. The most prominent leaders of the Catholic party, Bishop Brask of Linköping, Bishop Haraldsson of Skara, "Lagman" Ture Jonsson, and others, were obliged to flee. Nils Decque, a peasant of Småland, who for some time successfully led his countrymen against the king, was finally killed in battle at a Diet held at Västerås in 1544 nearly all the feast days were suppressed and all Catholic customs excepting a few were done away with. The declaration was also made that the country would "never again abandon the word of God and the pure Gospel".

The two chief reformers of Sweden were Olaf and his brother Lars (Lenfæt). Gustavus Vasa had made the latter Archbishop of Upsala after the flight of the last lawful bishop, John Magni. Three years before the second Diet of Västerås the two brothers fell into disgrace with the king and were condemned to death; however, upon the payment of a large fine they were pardoned. They were near adherents of the princesy tyrant upon two Germans, Konrad of Pyhö and Georg Normann, until Konrad was also sent to prison. The skill and success with which Gustavus "purified" the Church is shown by the fact that, although originally almost penniless, at his death the crown possessed 1,000,000 daler (over $6,250,000 at the present value of money), and 5,000 large farms. This landed property was afterwards called the "Gustavian patrimony". After his death ecclesiastical matters remained for a time as he had left them. However, his son, John III, who had married a Catholic, Katherine Jagellon of Poland, was strongly inclined to the Catholic Church. At the Diet held in Stockholm in 1577 he forced the Protestant clergy to consent to a new liturgy (Röda Boken) and new ecclesiastical regulations. The negotiator for the papacy, Antonio Possevino, S.J., was even able to persuade the monarch to enter the Catholic Church and to begin negotiations with the pope. As, however, the pope could not consent to the Swedish demands, no permanent agreement was made. After John's death his brother Charles called a church assembly at Upsala in 1593 which was largely composed of the Diocese of Västerås, while the other dioceses were only scantily represented. The members of the assembly repudiated John's liturgy and, in order to avoid all dissension, the "unchanged Augsburg Confession" was made the religion of the State. Severe punishment was the penalty of apostasy from it, while the exercise of any other form of worship was strictly forbidden. In the Province of Finland, just as in Sweden, Protestantism was introduced by force; it was not until towards the end of the sixteenth century, however, that there were no longer nuns at Vadstena and Nämdal and that Catholicism came to an end.

In this period the intolerance of Protestantism was so great that Sigismund, son of John III, who was also King of Poland and a Catholic, was not allowed to hold Catholic services in private, and the expulsion of all non-Lutherans was decreed. After Sigismund's overthrow in 1588 and deposition in 1599 a number of the noblest men of the country were executed on account of their loyalty to their king and their Church. Draconian laws were to put an end forever to "popery". Conversion to Catholicism was punished with loss of all civil rights and perpetual banishment. Foreign ecclesiastics who remained in the country to carry on a propaganda were to be punished with severe imprisonment and heavy fines, and even to be expelled. Conditions did not become better until two hundred years later when, in 1780, King Gustavus III at the request of the Estates granted the free exercise
of their religion to "Christians of other faiths" who desired to settle in Sweden for the sake of carrying on commerce or manufactures. In consequence of this, Rome in 1783 appointed a vicar Apostolic for Sweden, who, however, could effect but little, as up to the year 1860 natives of Sweden were forbidden to enter the Catholic Church under penalty of expulsion from the country. In the year 1877 the members of the National Church who are over eighteen years of age may join other religious societies. All proselytizing by the dissenters is forbidden. Moreover, there still exist a series of juggling enactments, which have lately been multiplied, so that there is very little actual religious freedom. According to the literal interpretation of the Constitution, the Church is all power in Sweden; it may be appealed to in all offices, except the Council of State, but this is not carried out in practice, and in this regard no change will be made within the near future.

Those desiring the history in detail of the development of the Lutheran State Church of Sweden will find it given very exactly and with copious foot-notes in the excellent work of the Anglican Bishop of Salisbury, Dr. John Wordsworth, quoted in the bibliography. It is only necessary to remark here that gradually new life sprang up from the ruins of the Catholic Church organization. The University of Uppsala, which had been founded at Lund; in these schools as well as in a number of sees men excellent in their way carried on fruitful labours; missions to the heathen were begun in Sweden earlier than elsewhere—for example, the missions to the Laplanders and the Indians. However, there was no lack of strife and sectarian movements in the Church (Rietzian, Moravianism, Swedenborgianism, etc.); since the middle of the eighteenth century Rationalism and Infidelity have assumed formidable proportions. Freemasonry is strong in Sweden, and among its members are many clergy, clergymen and even bishops. The mass of teachers in the higher schools and many preachers reject belief in the Trinity and regard Christ simply as a sage and philanthropist. Even the instruction for confirmation is at times made use of to sow the seeds of doubt in youthful hearts; matters have gone so far that a bishop declared, without exciting much opposition, that the Apostles' Creed was unnecessary. The number of the unbaptized is constantly increasing. Attendance at church and at the Communion service (8 per cent of the normal attendance) is rapidly declining of late years. Among many intense love of pleasure and intemperance, the widespread tendency to criticize the practice of abortion in many places, every third child is illegitimate. These things lead many of the better classes to join the sects, among which the largest memberships belong to the Methodists and Baptists.

The number of clergymen grows continually less, and those who still hold to the Confession of the State Church are hampered in their efforts to maintain religion by the fact that their energies are largely absorbed by matters of secular administration. Consequently the men who courageously fight for their convictions deserve all the more credit, even though they are at the present opponents of Rome. It is due to them that of late far more than formerly efforts have been made to renovate all the churches, and to build new ones, and to improve church music and religious art; as regards the liturgy, a desire to revive the old forms has of late become apparent. Much is done for music by the State, as evidenced by the seminaries of Lunds, which, notwithstanding their separatistic inclinations, work in union with the State Church in this matter. The various missionary associations labour among the heathens in South Africa, the Congo State, India, China, and Japan. In Palestine the effort is made with but slight success, to bring the "pure Gospel" to Roman Catholics and Or thodox Greeks. The same effort in Abyssinia is defeated by the conservatism of the Coptic Christians. Missions are also established for converting Jews and Mohammedans although little has been accomplished. On the other hand, home missions and work among the Swedes, especially in America, have made considerable progress.

THE NATIONAL CHURCH OF SWEDEN

Intricacies, The National Church of Sweden in Plate LXXI, XIX (London, Oxford, Milwaukee, 1911), 449: "REUTER-

DARL, Sveriges Kyrka nis klag. (5 vol., Ger. tr., Berlin, 1857)." goes on in 1533: "CORNELIUS, Historia ecclesiastica... (Upsala, 1886); TREDHER, Sweden u. seine Stellung z.B. Stift unter S. Johann III. Sigismund u. Karl IX. (1858); BLAUPED, Drogla Sveriges krona, 1 (Paris, 1886); Anon, Bedrag till kyrkans bebyggelse (1894); BLEIK, De kristna kyrkan i Sverige under medeltiden (1893); DALN-ER, Bedrag till Sveriges kyrkobyggningsfonder (Upsala, 1894); Anon, Bedrag till kyrkans ordning i Sverige (1895); BLEIK, De franka klostren i Sverige (Aroba Krönika, 2 vol., 1892-95); INZEL, Sveriges Birgitta (1893); FLAVION, Sveriges Birgitta de Souda (Paris, 1892); BINDER, Dansk Birgittas lejlighed (1891); SELIN, The national Church of Sweden, the Arch Monastery of Omberg, Alvastra (1890); SCHUETZ, Olavus Pietrus (Stockholm, 1900); LUTINHOUER, Die evangelische lutherische Kirchengemeinde sekretariate in Schweden, with the supplement. Den Kyrkjos godsetemnet och kyrkokretser (1890); RUNNER, Statistisk studier rörande Svenska Kirkan, 1897; BÖHLER, Bedrag till kyrkans bebyggelse (1893); ROEDER, Den Sveriges Bibelklubsakorupprekhet; Kiliansk Mission (1875); PARSONS, Evangeliska Föreningen, uppfriskning, för kyrkobyningsfonder (1894); ANBERSTEDT, Uppsala universitets historia (5 vol., 1877-1910); ANDERSSON, Uppsala Universitets ministirskolling, 1874-1879; GAFOS, Universitetsbiblioteket (1891); WERBAND, Die fasther (1868-1868); continued by TAWER (Lund, 1897).

POLITICAL HISTORY.—It will probably never be possible to determine when Sweden was first inhabited. However, the large number of objects found by excavating just the belief that several thousand years before Christ there were people living along the sea-shore (Baltic, Cattegat) and by the lakes to whom the use of metals was unknown. With constantly increasing skill they manufactured weapons and utensils from bronze and even iron. The metals were obtained by hunting and fishing. The raising of cattle and agriculture seem to have become customary very slowly. The dead were buried either in a recumbent or sitting position, in curiously formed stone chambers over which at times mounds of earth of considerable size were raised. Scientific men do not agree as to the original home from which the prehistoric inhabitants of Sweden came. It seems hardly probable that they all spread from the south to the north. Still this may be true of the inhabitants of the present Provinces of Skåne, Blekinge, and Halland. The Scandinavians are known to the age of bronze. Some two thousand years before our era men learned how to fuse copper and tin, as is proved by great numbers of utensils, as knives, daggers, swords, and shields that have been preserved, which were sometimes very ingeniously made. Gold also began to be used in this period. Bronze was gradually replaced by iron. Roman traders brought into the country not only articles produced by Roman skill in art but also gold coinage. Up to this time the people had tried to preserve the memory of important events by primate marks (höllfrisningar) scratched on rocks; they now learned from the Roman traders the use of letters, but turned these into runes. The runes were introduced into rune writing that was long in use. The earliest historical knowledge of Scandinavia and its inhabitants is due to Roman writers. Tacitus (Germania, c. xiv) is the first to call the people "Suiones". How closely this tribe living north of Lakes Wetter and Vemmer was related to the Catholic Church and by the Gauls to Egils and west, and how it was able to absorb the latter and give its own name to the combined body will always remain obscure.

About the fifth century the Christian era the civilisation of the country had greatly advanced; this is proved by numerous remains of gold utensils, ornaments, rune stones with inscriptions, burial urns, and
other articles. Just as in the later Bronze Age, the bodies of the dead were sometimes burned, sometimes buried; however, the latter custom had the greater prevalence. The Swedes had only a small share in the Viking Age of the ninth century. It was not until about the year 1000, when Olaf Skottkonung was baptized by the Anglo-Saxon missionary Siegfried, that Christianity was fairly established. Olaf's family, of whose deeds little is known, died out with Emund the Old (1080). At that time the Kingdom of Sweden included only the present northern provinces, while Skåne, Blekinge, and Halland belonged to Denmark and remained united with this country for centuries. The vast forests were largely the cause of the individual development of the tribes, who were separated from one another by rivers, rendering a common administration for all much more difficult. As roads were lacking, the rivers and lakes were used to connect the different parts of the country. In regard to the government, the election of the king customary in earlier times gave way to a settled succession to the throne. Naturally the machinery of government in the provinces was not established with the initiative and force of the ruler, whose commands might, indeed, not be carried out at all or only in part by the great officials or jarls. The various provinces had each its own laws (lag), and the lagmen, or expounders of the law, exerted much influence. They were often appointed to make their offices hereditary. The provinces were divided into hundreds (härads) at the head of each of which was a högding, whose chief duty was to maintain peace and order. For a long time the father of the family still remained the master within his house. The people were divided into the higher and lower freemen (odalbönder and bönder) and the serfs (troladar), and generally lived together on farms or in villages. The houses were built of wood or clay and were covered with shingles or straw. Even at this time, however, there were larger places with occasional stone buildings, as Skara, Linköping, Orebro, Strängnäs, Vasterås, Upsala, Sigtuna, a little later in the twelfth century, which rose rapidly into prominence. The national character showed sharp contrasts: harshness and gentleness, loyalty and deceit, magnanimity and revengefulness. No observer doubts that the gradual improvement in public morals was due to the influence of the Church.

After the old ruling family was extinct a chief named Stenkil was chosen king. He was connected with the former rulers by his wife who was the daughter of Emund the Old, and was an ardent supporter of Christianity. During his reign the first diocese, Skara, was established in eastern Gotland. However, as the actual Sweden (Uppland) still held to heathenism, rival rulers appeared, and for more than twenty years internal strife prevailed. Finally Inge, the second son of Stenkil, was able to defeat his opponents and bring about a complete victory for Christianity. With the death of a nephew, Inge the Younger, in 1125, the family of Stenkil came to an end. The East Goth Sverker, who married Inge's widow, was able for a time to re-establish the unity that had been disturbed, but his son Charles could not maintain himself. On the other hand Erik, a Swede from Bohuslän, won the throne. Erik undertook a crusade in Finland and after his return was killed in a battle (1160) with a Danish pretender Magnus Henriksson. In the following year Magnus was killed by the people. Sverker's son Charles obtained the ascendency, but he had to give way in 1167 to Knut Eriksson. During Knut's administration the first Swedish money was coined and Stockholm was founded. After Knut's death Sverker Karlsson, the son-in-law of Birger, was chosen counsellor, but Knut obtained the throne (1194), although Knut had left children. Birger owed this success to the clergy, whom he favoured on all occasions. A war broke out between Knut's sons and Sverker after Birger's death; Sverker was obliged to flee, and when he sought with Danish aid to regain the throne he suffered a decisive defeat at 1236 near Falköping. Two years later he also lost a battle near Gestiren, when he was killed. His successful rival Erik Knutsson, the first King of Sweden to be crowned, died in 1216. He was followed by John Sverkersson, at whose death in 1222 the family of Sverker became extinct. Erik, the pre-eminent son of Erik Knutsson, now came to the throne, but he proved an incompetent ruler and was for a time deposed. By the marriage of his sister Ingeborg with the vigorous Jarl Birger of the Folkunger family he sought to gain Birger for his cause. In 1249 Birger won Sweden, which never before had been united, and in 1250 he was crowned the King of Sweden. Erik died, and the nobles of the kingdom elected Birger's son Waldemar. During Waldemar's minority his father carried on the administration with success and skill, maintained good relations with the adjoining countries, and sought to preserve peace by wise laws. His brother Magnus, who from 1266, was very unlike his father and had, therefore, to yield the administration to his more strenuous brother Magnus, later called Laduläs.

Magnus was the first to call himself "King of the Swedes and Goths". He continued the work of his father, was able to prove himself son of Emma, Birger's sister, and was heir to a generous land grant by his sister. Magnus' reign lasted from 1275 to 1290 and was not without difficulties. The unfortunate quarrel between the brothers ended apparently four years later with a settlement whereby Birger received a part of the country. However, he missed the power he had regained to obtain revenge, and allowed his two brothers to die of starvation in prison. At this the king proved to his subjects that he was a king and elected Magnus (1319), the three-year-old son of the late Duke Erik. Shortly before this Magnus had become heir to the throne of Norway by the death of his childless relative King Hakon. When in 1322 Magnus came to power he had the opportunity for the first time to unite temporarily the Danish Provinces of Skåne and Blekinge with his kingdom. His reign was marked by many misfortunes; in particular, the pneumonic plague carried off two-thirds of his subjects. Although the king did much for Sweden by introducing common law and suppressing serfdom, yet he was hardly able to maintain himself in his own country, still less in Norway, especially as he came into disagreement with the pope. He found himself obliged to recognize his son Hakon as King of Norway (1343) and to accept his son Erik as co-regent of Sweden (1356). After Erik's death he reigned jointly with Hakon over Sweden and Norway. Hakon, married Margaret, the youthful daughter of King Waldemar of Denmark, the way was prepared for the future union of the three countries.

Discontent with the growing power of the king led the Swedish nobles to revolt against Magnus and offer
the crown to Duke Albert of Mecklenburg, who was able, with the aid of German ruling princes, to overthrow Magnus and Hakon (1364). However, as Denmark was obliged by agreements made before the election to leave uncovered the greatest expanse of the nobles, while the brutality of his vassals and mercenaries aroused universal indignation, it was resolved to elect Margaret Regent of Sweden. In 1375 Margaret had followed her father in the government of the Kingdom of Denmark, and in 1387, after the death of her son Olaf, she had been named regent in Norway as the fully authorized and rightful ruler. Albert was defeated by Margaret's army (1389) and was taken prisoner. For a time his adherents continued the struggle for supremacy as pirates (the Vitallians), but finally, in 1385, Queen Margaret came into possession of Eric's regency. She was a woman of great talent and masculine energy, she personally superintended the entire government, and it is said she never considered the private interests above the public good. As monarch she was a model of justice, and sought to increase the power of the Crown at the expense of the nobility; her one mistake was that she granted the Danish element too much influence and thus estranged the Swedes. During Margaret's last years Eric began to share in the government, and it was owing to him that a long war between the Counts of Holstein and with the Swedes. His attempt to raise a tax from all vessels passing the Oresund made the Hanseatic League his enemy. Only the ability of his wife, Philippa, the daughter of an English nobleman, prevented Copenhagen from falling into the hands of the enemy. Under Eric's autocratic rule the internal government grew worse from year to year, and the growing discontent of the people found vent in bloody revolts. Under the leadership of Engelbrechtsen the Dalcarians drove away all the Danish supervisors and chose a head of their own (until 1440 the nobles alone were from the time being held to the king, but they sought to weaken his power by means of agreements, and as Eric did not keep these promises, allegiance to him was declared to be no longer necessary at the Diet of Arboga (1436) and Charles Knutsson was elected as administrator or stadholder of the kingdom. Although the democratic spirit was no longer so strong, the efforts to reconcile king and people had no lasting success, and Eric was deposed in 1439. He also lost the crowns of Norway and Denmark. Denmark elected Duke Christopher of Bavaria king; he was recognized by Sweden in 1440, and later by Norway. The new king recognized Charles as his rival. In 1449 he was elected king of Norway (1450-48), and was crowned in 1450. In 1448 he was elected king of Sweden (1450) and Sweden (1497). When, however, he was defeated in a battle with the Dalsmarchers, Sweden again abandoned its allegiance to him (1501) and on the death of Sten Sture the Old in 1503 the Swedes made Svante Sture the administrator of the country (1503); after this latter's sudden death in 1512 the government passed to Sten Sture the Younger. The son of the late King Hans, Christian II, sought the arms of the Union to forestall Sweden, but he was not supported particularly by Archbishop Gustavus Trolle of Upsala, against whom the hatred of all the friends of Sture was naturally directed. The Danish troops which landed at Stockholm in 1517 were soon defeated and driven back, and the next year Olaus Magnus. Early in 1521 the Swedes defeated at Brännyrka. The national Swedish party deposed and imprisoned the dignitaries of the Church without any regard to canon law, consequently the pope excommunicated its leaders, placed Sweden under an interdict, and commissioned King Christian to exact the money to meet the most pressing needs. Christian sent a large army into WesternGotland, and after successful skirmishes the Swedes were overwhelmingly defeated at Upsala. Stockholm alone held out for a time, but when Christian approached the city with a strong fleet, it was obliged to surrender. The council of war decided to appoint a king for the time being, and chose King Eric as regent. Unfortunately the adherents of the Union were not content with what had been attained; Archbishop Trolle demanded the punishment of Christian and the imprisonment of his bishops for their actions in these. Bishops Matthias of Strangnas and Vincent of Skara, and a large number of nobles, councillors, and citizens were executed as proclaimed rebels and heretics, and their property was confiscated. While on his return to Denmark the king had various persons executed, hoping in this way to suppress the spirit of insurrection forever. In this way the Swedish people were finally subdued.

In January of the next year a peasant insurrection broke out in Dalmar, which spread rapidly. Gustavus Erikssson (Vasa) became the leader of the insurgents, who soon numbered 15,000 men. Vasa had lost his father and brother-in-law in the slaughter at Stockholm, and had been taken prisoner at Brännyrka as the chief standard-bearer, but had made his escape. His strength grew as leader of the rebellion through several fortunate skirmishes, and as he succeeded in winning over the influential Bishop Hans Brask to his cause, a popular assembly at Ronneby in Skåne knighted him as King of Sweden in 1523. A year later he was unanimously elected king at Strangnas. He gained Stockholm and Calmar during the summer months of 1523, and Oland and Finland also acknowledged his sovereignty. At the same time his position was by no means a favourable one, for he faced the medals of rebellion (1449-48) and the efforts of the nobles. The condition of the peasants grew worse. His efforts, however, to establish a settled code of law are very creditable to him.

After Christopher's death the Union fell rapidly to pieces, as the Swedes elected Charles Knutsson, who has already been mentioned, as king, and the Dane and Norwegian Christian of Oldenburg. In 1457 the latter was able to obtain his election in Sweden also, but he could not make any headway against King Charles or Sten Sture the Old, the successor of Charles in the administration of the country. Christian I was followed in Denmark by his son Hans (1481), who gradually gained recognition in Norway (1483) and Sweden (1497). When, however, he was defeated in a battle with the Dalsmarchers, Sweden again abandoned its allegiance to him (1501) and on the death of Sten Sture the Old in 1503 the Swedes
he allowed the one university, Upsala, to sink into decay. The preachers frequently received mere pittance, and in many cases stood on a low moral and intellectual level. On the other hand much was done to improve agriculture, mining, and commerce, as well as to develop industry. However, the monarch gave much more thought to his own advantage than to the well-being of the nation. When he died in (1660) he was the richest prince in Europe.

Among the later rulers of Sweden only one was a Catholic, Sigismund; two princesses of the royal family, Cecilia, daughter of Gustavus I, and Cecilia, daughter of Gustavus II Adolphus, became converts in their later years. The nation was permanently separated from Rome, consequently it is only necessary here to treat the later history of the country very briefly, especially during the period of the "great powers" it is closely connected with that of Europe. The sons of Gustavus Vasa ruled Sweden from 1560 to 1611. Erik, the first to come to power, was half-crazy, was soon deposed by his brother John, and died in prison. On account of mental deficiencies Magnus never came to the throne. On the other hand the other two sons, Olof and Carl, who both inherited both the good and bad qualities of his father, was able to drive his Catholic nephew Sigismund from the throne and to leave it to his son Gustavus II Adolphus, whose share in the Thirty Years War was of much more far-reaching importance. The conversion to Catholicism of his daughter Christina was of as little political importance as the earlier conversion of the most beautiful of Gustavus Vasa's daughters, Cecilia. Cecilia was the ancestress of the Catholic heroes, Margrave Leopold William and Louis William of Baden; she outlived all her brothers and sisters and died at Brussels in 1694.

The guilty family of Vasa was succeeded by relatives who were descendants of the Wittelsbach Palatinate family (1654-1718). The successful warrior Charles X Gustavus reigned only six years. During the reign of Charles XI a large part of the earlier territorial possessions was lost; the imprudence and recklessness of his son Charles XII almost ruined Sweden, although at first he gained some temporary and brilliant successes. These two kings ruled as absolute monarchs and cut down greatly both the rights and possessions of the nobility. The succeeding kings Charles XIII, Fredrikk, and Charles XIV, son of Frederick of Holstein Gottorp, were limited in their sovereignty by political parties (Hats and Caps). Gustavus III (1771-92), son of the last-named sovereign, restored the former splendour of the monarchy, but was assassinated when barely forty-six years old. During his reign the first breach was made in the rigid system of the state Church. His son and successor Gustavus IV Adolphus (1792-1809), of honourable but obstinate character, was naturally not the one to direct state affairs skillfully in an era of universal upheaval. He was deposed by a military conspiracy (1809). His successor, Duke Charles (King Charles XIII), sought to secure peace for the country by the surrender of territory which he could not hold. As he was childless, he first adopted Prince Christian Augustus of Augustenberg and, after the sudden death of this heir, the French marshal, Jean Bernadotte, who accepted the election as crown prince and became a Protestant to secure the succession to the throne for himself and his descendants. Even during the lifetime of his adopted father he was the real ruler. As the representative of the interests of his country he came into collision with the Prussian general, who took part in the Russian invasion of 1812, and sent 30,000 men to the Army of the North. After the battle of Leipzig he led his troops (of whom he had taken great care) against the Danes. Denmark was made to sign the Treaty of Kiel (1814) in which it yielded Norway to Sweden. The unwilling Norwegians only consented under pressure of circumstances, and their differences with Sweden were never fully settled. Finally, in 1905, the Norwegian Storting proclaimed the independence of Norway, but Sweden had to the country. Conditions in Sweden have greatly improved under the new ruling family, although friction, especially at first, arose between ruler and people. Jean Bernadotte was the richest prince in Europe.

The present king is Gustavus V Adolphus.

For further bibliography see Dahlmann-Waite, Quellenschatz der deutschen Gesch. (7th ed., Göttingen, 1898).

Art.—Even as early as the end of the ancient Stone Age, probably a thousand years before Christ, the people of Sweden showed a desire to improve the shapes of utensils in common use, as is evidenced by the discovery of numerous utensils belonging to this long past era. There was a steady improvement in the form of axes, especially of copper axes. Vessels of clay were not only adorned with graceful designs, but at times they were also ornamented with more or less skillful drawings of animals. In the Bronze Age the sense of beauty rapidly increased; weapons and ornaments (rings and diadema) were depicted a high degree of art. Although in part this was plainly due to the influence of foreign skill in art. On the other hand the representations of the human form showed decided clumsiness for a long time. In this period use was also made of the higher metals, gold and silver, especially in ornaments consisting of rings and diadems; the weapons first made of bronze and afterwards of iron. Apparently articles made of glass were brought from other lands. The Runic alphabet was first employed in the early Iron Age; the runes were cut on
memorial stones that had been formerly without inscriptions. During the era of the Migrations and of the Viking expeditions, they became acquainted with artistic models; this is shown especially in the ornamental work. The final victory of the Roman-Christian civilization exerted a profound influence upon technical artistic skill and the tendencies of art. Although goldsmiths and armorsmiths were still held in high repute, and the memory of unusually skilful masters was preserved in song, nevertheless from now on art was above all employed in the service of religious ideas. The royal palaces and princely dwellings, which were chiefly built of wood, have disappeared. In Norway a number of the old churches have disappeared, but in Sweden only the unimposing little chapel of Hedared, situated between Borás and Alingsås, has withstood the storms of time. On the other hand there are a number of tasteful stone churches in various architectural styles and sometimes very interesting details such as doorways, arcades, tabernacles etc. Some, as the Romanesque cathedrals of Lund and Linköping (Transitional Period) and the Gothic cathedral of Uppsala, fall but little below the celebrated architectural works of more southern countries in size and splendour. Among the churches worthy of notice are those at Skara, to which belong the foundations of the churches at Varnhem and Sko (Cistercian), Sigtuna (Dominican), and Vadstena (Brigittine), also several churches, which are in good condition, as the Tyska Kyrkan or the Church of the Virgin at Visby, and some preserved as ruins, especially on the Island of Gotland. The majority of the country churches were built in the Romanesque period; many of them were altered later during the Gothic era. At times the churches are round in shape with remarkably heavy walls; apparently they were used when occasion required for purposes of defence. A number of churches, as those at Råda, Risinge, Arboga etc., were adorned with frescoes which were afterwards covered with whitewash. Of later years the whitewash has at times been removed and the pictures thus exposed have been skillfully renovated. The churches were also adorned with stone and wood carvings, such as images of Saints, angels, and heavenly figures, candelabra, baptismal fonts of stone or metal, reliquaries, hanging chandeliers and standing candelabra, chalices and patens, costly ciboria, monstrances, and ostensories, processional crosses, censers, organs, bells, superb vestments, etc. Notwithstanding the thorough "purification of the Church" undertaken by Gustavus Vasa, enough remains to show that in Sweden also during the Middle Ages there was a sense of pious sacrifice and of purified art. As everywhere else the effect of what is called the "Reformation" was at first destructive, and for centuries nothing new of importance was produced in the domain of ecclesiastical art. It is only of late years that a more and more marked change for the better has appeared. Here and there, however, the altars of Catholic origin have been brought from old louver-rooms and garrets and restored to their former places. Mosaic work is also used. A continuously increasing number of orthodox pastors make use of embroidered vestments in the services of the Church and there are signs of a ritualistic movement, which, however, is energetically attacked by the liberal and unorthodox clergy.

LITERATURE.—In pre-Christian times there was no real literature in Sweden as neither written language nor runes came into use until quite a late period. The oldest known evidence of a historical character, the so-called "Röksten" from East Gotland, appeared probably about the year 900. It recounts in alliterative verse the heroic deeds of a king; later inscriptions have also the same theme. They may be assumed with certainty that there were songs of gods and heroes that were orally preserved, but of which next to no traces now remain. The first to arouse the intellectual life of the nation were the Catholic priests, especially the monks, who practised and taught the art of writing with intense energy. They wrote chiefly in the language of the Church; in all countries these Latin and exclusively religious works are very similar and therefore will not be considered here. Gradually, however, the language of the priests came to possess a picturesque and powerful force for literary purposes. It became a serviceable instrument for the expression of higher ideals and noble sentiments. Thus the way was prepared for a literature in the Swedish language. The early writings in Swedish were very largely practical. Thus the curial literature, conceptions of law, etc. became the models for a code of laws in the twelfth and thirteenth centuries, as the "Västgötalagen" and "Ostgötalagen", the "Uplandslagen" and "Gutalagen". A treatise of the thirteenth century called "Öm styrelsi Konunga och höftinga" gives rules for right living. The "Revelations" (Uppländska Tevelevsionerna, d. 1373), which are at times very extravagant in style, have been translated into many languages. Of the writings of Magister Mathias, cathedral canon of Linköping and father-confessor of St. Birgitta, there is still in existence a translation of the Bible, besides several sermons and edificatory works. The first connected accounts of historical events were two chronicles in rhyme, the chronicle of Erik and that of Karl. The first relates in doggerel the quarrels of the Folkunger family up to the year 1319 and gives, in particular, a vivid description of the so-called Schirmagliefen of King Magnus. The second, which covers the era, 1380-1452. Poems of imaginary adventures and French metrical romances, as "Ivan och the Lion", "Pleur och Blanchefeuer", were imitated in Sweden, and history in a romantic garb, as the legend of Alexander or that of Duke Frederick of Normandy etc., was also recounted by Swedish writers. Among the most important of these early poets should be men-
SWEDEN

ROMAN CATHOLIC CHURCH

SWEDENBORGIANS

SWEDEN, VICARIAT APOSTOLIC OF. See Sweden.

SWEDENBORGIANS, the believers in the religious doctrines taught by Emanuel Swedenborg. As an organized body they are called Sweden-

bogians, which seems to assert the human origin of their religion, but wish to be known as the "Church of the New Jerusalem," or "New Church," claiming for it divine inspiration and promulgation through human instrumentality. 

I. Leipzig. — Emanuel Swedenborg was b. at Stockholm, 29 Jan., 1688; d. in London, 29 March, 1772. His father was Dr. Jesper Sweden-

berg, who later became the Lutheran bishop of Skara. Swedenborg's life falls into two very distinct periods: the first extends to the year 1745 and reveals him as an antiquarian and chemist, a natural philosopher, and in the second he appears as a writer on theological subjects. Endowed with extraordinary talents, he completed his university course at Upsala in 1710 and travelled for four years in England, Holland, France, and Germany. Shortly after his return to Sweden, he secured the position of assistant on the Board of Mines (1716). He gave signal proof of his engineering ability during the siege of Fredericksball (1718) by inventing a means to transport boats and galleys overland for a distance of fourteen miles. His family was ennobled in 1719, a distinction indicated in the change of the name from Swedenberg to Swedenborg. He declined (1724) the chair of mathematics at the University of Upsala and published at Leipzig in 1743 his important "Philoso-

phy of Mineral and Vegetable Products" ("Opuscula de mineralia"). A year later appeared his treatise "On the Infinite and Final Cause of Creation" which includes a discussion of the relation between the soul and the body. Another scientific journey took him to Denmark, Germany, Holland, France, and Italy, and in 1740-41 appeared his larger anatomical works ("De synonyma regni animalis"). The trend of his thoughts became distinctly religious in 1734 and exclusively so in 1745. He alleged that at the latter date Our Lord appeared to him in London, initiated him into the spiritual sense of the Scriptures, and commissioned him to expound it to his fellow men. With this vision there began, he declared, an intercourse with God, angels, and spirits which was to terminate only with his death. In 1747 he resigned his assessorship and, at his request, received a pension of the half of his salary. He now spent his time at the royal libraries of the Uppsala, the Stockholm, and Amsterdam, and wrote in Latin his voluminous theological works. These soon attracted the attention of the Lutheran clergy of Sweden; a commission was instituted in 1771 to examine them, but took no action against their author. At his death Sweden-

borg received the Lord's Supper from a Protestant clergyman, to whom he affirmed his final attachment to his religious principles. He was never married, was simple in his habits, worked and slept without much regard to day or night, and lay at times in a trance for several consecutive days. In 1908 his remains were transferred from London to Sweden and deposited in the cathedral at Upsala.

II. DOCTRINAL PRINCIPLES:— Swedenborg and his followers hold that as the Christian religion succeeded the Jewish so the Swedenborgian teaching supplemented the Christian. This new dispensation promulgated by Swedenborg is, according to them, based on a Divinely revealed interpretation of the Sacred Scriptures. Some of the characteristic features of this new religious system are presented in the following outline. God is Love Itself and Wisdom Itself. His Power is from and according to these as they flow into creative act. This creative act does not consist of three distinct Divine persons as Catholic belief has it, but is understood in the sense that in the incarnation the Father or Jehovah is essentially the Divine Being, while the Son is the human (or sub-spiritual) element assumed by the Godhead in order to become present among men. The Holy Spirit is the Divine Presence and Power consequent upon this assumption and resultant transfiguration (glorification in Sweden-

borgian language) of the human element which thus became "a Divine Human" with all power in heaven and on earth. Jesus Christ is, therefore, not the incarnation of a second Divine person, but of the Divine as a whole; he is between the Father, the Son (assumed humanity), and the Holy Spirit (Divine-human power). Life does not exist except in Him or from Him, and cannot be created. Its presence in created forms is accounted for by continuous Divine influx.

On this earth man enjoys the highest participation of life, but he is greatly inferior, in this respect, to the races undoubtedly inhabiting other planets, e.g., Jupiter, Mercury. His three constituent elements are soul, body, and power. Originally granted full freedom in the use of his faculties, he erroneously conceived that he held them by his own merit and fell away from God. The Lord, after the fall, did not abandon the sinner, but appeared to him in the form of an angel and gave him the law to reclaim...
him from his evil ways. These efforts were useless, and God clothed Himself with a human organism and redeemed man, opening anew his faculties to the influx of Divine life. Men are admitted into the New Church through baptism; they are strengthened in the real spiritual change because they desire the requisite liberty. The hope of reward is not to be recommended as an incentive to virtue, for good actions are vitiating when prompted by motives of self-interest. Death is the casting off by man of his material body which has no share in the resurrection. Immediately after death all human souls enter into the intermediate state known as the world of spirits, where they are instructed and prepared for their final abodes, heaven or hell. We need not expect the Last Judgment for it has already taken place; it was held in 1787 in Swedenborg’s presence. No pure spirits exist any more, and the human body having left the human race, have organic forms, and experience sensation. The liturgy of the New Church is modelled on the Anglican service. The Church organization in Great Britain is congregational; in the United States most of the various religious societies are governed by associations under the charge of general pastors, while the “General Church” (see below) is avowedly episcopal in government.

III. History of the New Church; Statistics, Educational and Publishing Activities.—Swedenborg made no attempt at founding a separate Church, his doctrine not being to universalize and make libraries in the hope that they might be of service; he wanted it to be taken up by others. How far this was accomplished he seemed to hold that his followers would be members of any Christian denomination. His view was, in many respects, so entirely new that their adoption was not an easy work in the making of a distinct religious body inevitable. Few accepted his opinions completely during his lifetime. They found zealots advocates, however, in two Anglican clergymen, Thomas Hartley, rector of Winwick in Northamptonshire, and John Clowes, rector of St. John’s at Manchester. Their influence enabled his works to spread in England through the efforts of Clowes, who never separated from the Church of England, Lancashire became at an early date the Swedeborgian stronghold which it still remains to-day. The formal organization of the New Church took place in 1787, and James Hindmarsh, a former Methodist preacher, was chosen by lot to officiate at the inaugural meeting. The first public service was held in 1788 in a chapel at Great Eastcheap, London. Swedenborgian societies were soon formed in various English cities, and in 1789 the first general conference of the New Church met in the presence of 500. Members of the Church and adherents did not increase rapidly. The conference has held annual meetings ever since 1815. Its minutes for 1809 contain the following statistics for England: 45 ministers, 70 societies, 6,665 registered members, and 7,907 Sunday scholars.

In America the Swedenborgian doctrines were first introduced in 1784 at public lectures delivered in Philadelphia and Boston. The first congregation was organized at Baltimore in 1792. Since then the principles of the New Church have spread to many states of the Union. The first general convention was held in 1817. It meets annually at various places, and is mainly composed of delegates sent by the various state organizations. In 1890 the General Church of Pennsylvania severed its connexion with the convention and assumed in 1897 the name of the General Church of the New Jerusalem. It numbered, in 1911, 24 ministers, 16 churches, and 890 communicants; whereas the main body had 107 ministers, 130 churches, and 8,000 communicants (Statistics of Dr. H. K. Carroll, in “The Christian Advocate”, N. Y., 25 Jan., 1912). Congregations of the New Church have been formed in various states and membership is small. In Germany the Protestant prelate Oettinger translated (1765–86) numerous writings of Swedenborg, but the most important name identified with the history of the denomination in that country is of Immanuel Tafel (1796–1863), professor and librarian of Tübingen, who devoted the latter half of his life to the spread of Swedenborg’s thoughts. His efforts were mainly literary; but he also organized a congregation in Southern Germany. The religion was proscribed in Sweden until 1866, when greater religious freedom was granted; the churches are still very few, and the membership insignificant. New Churchmen claim, however, that there as well as in all other countries the influence of Swedenborg cannot be gauged by the enrolled membership, because many communicants of other denominations hold Swedenborgian views.

The denomination maintains for the training of its ministers the New Church College at Jersling, London, and the New Church Theological School at Cambridge, Mass. A preparatory school is located at Waltham, Mass., and an institution for college and university studies at Urbana, Ohio. The General Church conducts a seminary at Bryn Athyn, Pa., and maintains several parochial schools. The denomination has displayed a remarkable publishing activity. The Swedenborg Society was founded in London in 1810 for the printing of Swedenborgian literature and in celebration of its centenary the International Swedenborg Congress met in the English metropolis in 1870. Other publishing agencies are the Church Union of Boston, the American Swedenborg Printing and Publishing Society of New York, and a publishing house at Stuttgart, Germany. A monumental edition of Swedenborg’s scientific works is in course of publication under the auspices of the Swedish Royal Academy of Sciences. His theological works are available in complete Latin and English editions and have been partly published in numerous modern languages, including Hindu, Arabic, and Japanese. The New Church publishes two quarterly reviews, some monthly magazines, and several weekly pamphlets.

1. TAFEL, Documenta concerning the Life and Character of Swedenborg (London, 1875–77).
2. Numerous Biographies of Swedenborg have been written, of which the following may be noted: Fletcher (ibid., 1859); Hyde (ibid., 1893); White (ibid., 1897); Worcester (Boston, 1883); Wilkinson (London, 1886); Cowper (Philadelphia, 1896); Throsfield (London, 1899), translated into French by Ballet (Paris, 1890); Brya (Paris, 1901); in German by Raus (Schwebisch Hall, 1861).
3. These biographies usually contain an exposition of Swedenborg’s doctrine; a more complete presentation will be found in his own works, particularly in: Christian Religion; Arcana Coelestia; The Apocalypse Revealed; The Apocalypse Explained; Divine Love and Wisdom, Divine Providence, Heaven and Hell. Paradise, Outlines of the Religion and Philosophy of Swedenborg (Boston, 1894); Transactions of the International Swedenborg Congress (London, 1910).

Gers, Emanuel Swedenborg, seine Werke u. sein Verhältnis zur Kirche (Steyer, 1879); Möhler, ed., Robertson, Symbolism (3rd ed., New York, 1879).
Sweynheim (Schweinheim), Konrad, printer, b. at Schwanheim, Frankfort, Germany; d. in Rome, 1477. Sweynheim and Arnold Pannartz of Prague, both of whom were ecclesiastics, were the first printers in Italy. At the invitation of Cardinal John Puercrema, they established a printing-press for books in 1464 at the Abbey of Subiaco; in 1467 they removed their press to the Massimi Palace at Rome, and carried on the business jointly until 1472. The first books they printed were: "Donatus" (1464); Cicero’s "De oratore" and "De divinorum institutione libri septem" of Lactantius (1465). During the years 1464-72 they issued over 12,000 copies of thirty-seven works, these works being chiefly the classics and the Fathers. This shows the remarkable skill of the two printers, who were entirely dependent on themselves. Before General Besnier (the cutter, the type-founder, and the type-setter of the undertaking, while Pannartz had charge of the actual printing and of matters connected with it. The dies cut by Sweynheim deserve especial attention as they embody the preliminary steps of the present type for Latin characters. Sweynheim's typographic capitals are the first to show the forms used in the Roman inscriptions on stone, while some of his small letters repeat the characters used in manuscripts of the ninth to tenth centuries. He designed another type; it is to be found in his third book, that of Lactantius, and the type copies the forms of Greek characters found in manuscripts of the seventh to the eighth centuries. Notwithstanding the greatest industry and technical skill the two printers had no pecuniary success.

In 1472 their patron and protector, the great humanist editor and proofreader, Bishop John Andreas Bussi of Aleria, secretary of the Vatican Library, asked Sixtus IV to aid them. The papal assistance was given in the form of an expectancy. Sweynheim received a canonry in the collegiate Church of St. Victor at Mainz to whose secular brotherhood the inventor of the new type, Gutenberg also belonged. In 1472 Sweynheim and Pannartz dissolved partnership. Sweynheim worked until his death as engraver on the maps of the "Cosmography" of Ptolemy. He was the first to apply copper engraving to the production of maps; twenty-seven of the beautifully executed plates of the edition of the "Cosmography" of 1478 are his work. Especially characteristic of Sweynheim as a maker of matrices is the fact that the beautiful even writing of the names of places are stamped in the engraved plate by means of individual dies. It is certain that Sweynheim was in close correspondence with the bishop until his death, although he did not return there to enjoy his benefice. There is no doubt that he learned the art of printing at Mainz.

Heinrich W. Wallau

Swinhorn Indians. A tribe of Salishan linguistic stock, closely connected with the Skagit. They formerly held the territory about the mouth of the river Skagit together with the adjacent portion of Whidbey Island, and are now gathered upon a reservation in the same territory, near Mount Vernon, Skagit County, north-western Washington. They were missionized about 1850, by Father Casimir Chirouse and the Oblates; Skagit the entire tribe, to the number of 267 in 1910, is now civilized and Catholic. They are one of the tribes included under the jurisdiction of Tulalip agency. For history and general description see Tulalip Indians.

James Mooney

Swithin (Swithin), Saint, Bishop of Winchester; d. 2 July, 802. Very little is known of this saint's life, for his biographers 'constructed' their 'Lives', long after his death and there is hardly any mention of him in contemporary documents. Swithin was one of the two trusted counsellors of Egbert, King of the West Saxons (d. 839), helping him in ecclesiastical matters, while Ealstan of Sherborne was his chief advisor in secular business. For probably entrusted Swithin with the education of his son Ethelwulf and caused the saint to be elected to the Bishopric of Winchester in succession to Helstan. His consecration by Ceolnoth, Archbishop of Canterbury, seems to have taken place on 30 Oct., 852. On his death-bed Swithin begged that he should be buried outside the west wall of the cathedral with Mainz until his pass over his grave and raindrops from the eaves drop upon it. More than a century later (931) his body was translated with great pomp to a shrine within the new church erected by Bishop Ethelwulf (d. 984). A number of miraculous cures took place and Swithin was canonized by popular acclamation. In 1068 his remains were again translated to the new church built by Bishop Walkelin. The shrine was destroyed and the relics scattered in 1538. It has often been said that the saint was a Benedictine monk and even Prior of Winchester but there is no evidence for this statement. From the first translation of his relics in
SWITZERLAND

984 till the destruction of the shrine St. Swithun was the patron of Winchester Cathedral. He is best known from the popular superstition attached to his name and expressed in the following rhyme:

St. Swithun's day if thou dost rain
For forty days it will remain;
St. Swithun's day if thou be fair
For forty days 'twill rain nae mair.

There have been many attempts to explain the origin of this belief, but none have proved generally satisfactory. A similar belief attaches in France to St. Juno, the feast of Sts. Germanus and Protasius, and to other feasts in different countries (see "Notes and Queries" 1885, XII, 137, 253). St. Swithun's feast is kept on 15 July, the date of his first translation, and is retained in the Anglican Calendar.

The materials for the saint's life will be found in Acta SS., July, i, 321 sqq. See also Pottinart, Winchester, 1888: Hunt in Dict. Nat. Biog., s. v. Swithun; Hardy, Descriptive Catalogue, i (1802), ii, 519 sqq.

Raymund Webster.

SWITZERLAND, a confederation in the central part of Western Europe, made up of twenty-two cantons, three of which are divided into half-cantons. The confederation has an area of 45° 49' 15" north latitude, and 5° 57' 25" and 10° 29' 40" longitude east of Greenwich. Its area is 15,976 square miles. The name comes from the designation of one of the original cantons, Schwyz (Schwi), which was extended in the course of time to the entire confederation.

PHYSICAL GEOGRAPHY AND ETHNOGRAPHY.—As regards its physical geography, Switzerland is divided into three divisions: the Alps, the central region, and the Jura. The Swiss Alps form a part of the great curve of the Alpine chain of central Europe; they extend from Mont-Dolent in the chain of Mont Blanc in the west to Piz Mondon in the Lower Engadine, and have a length measured in a straight line of 170 miles. The smaller part of the Jura range, including, however, its highest peaks, is on Swiss soil. Between the Alps and the Jura extends the central region, which is traversed by countless valleys and includes about 30 per cent of the entire area of Switzerland. The highest peak of the Swiss Alps is Monte Rosa, 15,217 ft. The rivers which have their sources in Switzerland belong to one or another of the following four river-basins: the basin of the Rhine, the waters of which flow into the North Sea; the basin of the Rhone, which carries its waters to the western Mediterranean; the basin of the Po, which empties into the eastern Mediterranean, and the basin of the Inn, which empties into the Danube and with this into the Black Sea. The three river-basins first mentioned have a common watershed, the range of the Gothard. Switzerland also contains a large number of lakes, the largest of which are on the edge of the Alps and Jura, such as Geneva or Leman, Constance, Neuchâtel, Lucerne, Lugano, Maggiore, and Zurich. The lofty mountain chain of the Swiss Alps above a definite height is permanently covered with snow which feeds the glaciers. Switzerland contains altogether not less than 1777 glaciers, which cover an area of 700 sq. miles. Taken altogether 25.5 per cent of the area of Switzerland is completely unproductive.

The climate of Switzerland is not uniform. The differences in temperature of the various parts are conditioned by the drain which vary from 581 feet to 15,217 feet above sea-level, and by the Alps, the southern slopes of which have a Mediterranean climate, while their northern slopes show that of central Europe. These striking differences determine the character of the flora and fauna. With the exception of the western part of Switzerland, on the seashore all European types of flora are to be found. The species of animals characteristic of the Alps are: the alpino, the ibex, the marmot, the golden eagle, and several other species of birds. Of the productive area 3300 sq. miles are covered with forests, 8427 sq. miles are farm and pasture lands, and 108 sq. miles are planted with vineyards.

In 1850 the total population of Switzerland was 2,874,742 persons; the census of 1910 showed 3,755,293 inhabitants; on 1 December, 1910, the total population (those actually present in the different localities) was altogether 3,755,002 persons. The original inhabitants of Switzerland were predominately of Celtic race, although south of the Alps the Italian Lepontii lived in Ticino, and the Grisons was inhabited by the Rhaetians. A mixed population appeared in most parts of the territory owing to the Roman supremacy, the arrival of the Burgundians in the south-western district and of the Alamanni in other parts of the country. Four different languages appeared: German in the districts inhabited by the Alamanni, French in the western regions, where the scantly Burgundian population intermarried with the romanized Helvetii, Italian in Ticino, and Rhaeto-Romanic in the Grisons. According to the last census the inhabitants were classified, by native tongues, as follows: Of 3,755,002 inhabitants, 2,690,154 spoke German, 326,444 French, 301,325 Italian, 39,834 Romanic; 26,445 spoke other languages.

POLITICAL HISTORY.—In the prehistoric era the territory of the present Switzerland was partly inhabited far up into the valleys of the Alps, as is evident from remains found in various caves and gravels. Switzerland entered its historical era with the overthrow of the western Helvetii by Caesar in the year 58 n. c. The entire country came under the control of the Roman Empire after the eastern districts were conquered by Drusus and Tiberius in 15 n. c. On the organisation of the Roman provinces before 146, the north-western part of the territory of Switzerland belonged to the Province of Germania Superior, the south-western section (Geneva) to the Province Narbonensis, the eastern and the greater part of the south-eastern region to the Province of Rhaetia. The region of the south-western Alps was divided into special administrative districts, of which the district of the "Alpes Pinniae" included the present canton of Valais and the adjoining portions of Savoy. In the reorganisation of the empire by Diocletian the Province of Rhaetia and the district of the "Alpes Pinniae" were left as they were, the north-western part of the country was included in the Province of Maxima Sequanorum, the south-western section in the Province Viennensis, the southern point of Ticino to Liguria, a province of Northern Italy.

During the migrations the territory of Switzerland was occupied by two German tribes: The Burgundians, who had settled in 443 south of Lake Geneva, pushed northwards and occupied the south-western and western regions of Switzerland. They mingled with the Romanic population and quickly adopted the Romanic tongue and customs, so that the language of this section remained Romanic (French). In the fifth century the Alamanni pushed forward as far as the Alps and completely destroyed Roman civilisation, so that the language of this section became German. At the beginning of the sixth century all Switzerland north of the Alps fell under the supremacy of the Frankish Kingdom. At a later date, in the middle of the 7th century, the Franks, the districts of Switzerland south of the Alps also came under the Frankish mastery. Thus Switzerland belonged to Charlemagne's great empire and shared its fortunes. In the partition of the Frankish Empire by the Treaty of Verdun in 943 the central part of Switzerland came into the possession of the emperor, the western part to the Kingdom of Lorraine, and later to France. The power of the counte
grew constantly, and in 888 Count Rudolph of the Gallician family founded the Kingdom of Burgundy, of which western Switzerland formed a part. The German regions of Switzerland fell to the Duchy of Swabia in 917. In the ninth and tenth centuries several dynasties rose to power and importance, as: the Houses of Zähringen (extinct 1218), of Lenzburg, of Kyburg, and of Burgundy. The inheritance of the Lenzburg family fell to the counts of Habsburg. In the twelfth and thirteenth centuries there were some twenty great feudal ruling families in the present Switzerland. The counts of Zähringen sought to secure their supremacy against the attacks of the rural nobility by founding cities, as Freiburg in 1136, and later Aarau, in 1191. The dioceses and abbeys also gradually acquired secular power and rich possessions. When Duke Burkhard of Swabia died childless in 973 the duchy reverted to the German Empire. In 1093, after the death of King Rudolph III of Burgundy, his kingdom also fell to Germany, as Rudolph left it to the empire by will. Consequently the whole of present Switzerland, with the exception of Ticino, which was a part of Lombardy, belonged to the German Empire.

The inhabitants of the Alpine valleys of central Switzerland sought to protect their ancient rights against the growing power of the Empire. In 1291 the people of Uri received from the German emperor, Henry, a charter which released them from the control of the counts of Habsburg; this is the first document by which the freedom of the early League of Switzerland was established. Schwyz received a similar charter in 1240 from Emperor Frederick II. In this way the territories of Uri and Schwyz were immediately independent of the empire. The people of these two territories, the inhabitants of Unterwalden had also founded a provincial confederation. During the era of the struggle for the empire, Burgundy, Habsburg strengthened his power in Switzerland; when in 1273 he became Emperor of Germany, his conquests transferred the centre of the power of the Habsburgs to Austria. Nevertheless, the emperor vigorously maintained his supremacy over his possessions in Switzerland. Directly after Rudolph's death (1291), the inhabitants of the districts combined in the original Swiss League sought to make use of the opportunity to secure their rights and privileges. On 1 August, 1291, the representatives of the provincial associations formed by Uri, Schwyz, and Unterwalden met and renewed the League that had been formed for the purpose of league. They united to protect their rights and privileges against all attacks. The establishment of the League has been poetically embellished by the well-known story of the struggle of William Tell and his companions against the governor, Gessler, who oppressed the people. Adolph of Nassau, who was elected King of Germany after the death of Rudolph of Habsburg, confirmed the charters of Uri and Schwyz, as did King Henry VII of Luxemburg on 3 June, 1309; at the same time Henry extended the rights and privileges contained in the charters to Unterwalden. After the death of Henry VII (1313) an old dispute as to the rights over the march between Schwyz and the Abbey of Einsiedeln broke out again and the confederated Swiss attacked the abbey, for which they were excommunicated by the Bishop of Constance and put under the ban of the empire at the same time. Louis of Bavaria, who was made King in 1320, and his son Frederick, Duke of Swabia, acting for the Emperor, attempted to overthrow the League and to punish its members for the attack on Einsiedeln, but his army was defeated by the Swiss at Morgarten on 15 November, 1315. On 9 December, 1315, Schwyz, Uri, and Unterwalden renewed the League and confirmed the same by additional regulations. In the truce concluded with the Duke of Austria the independence of the League was in some degree recognised. The further development of political independence of the League, and the Habsburgs connected with it led to the union with the forest districts of the city of Lucerne in 1332, the city of Zurich in 1351, and the city of Glarus and the city of Zug in 1352, all these new members joining the League. In 1353 the city of Bern joined the League, and the old Confederation of eight cities and districts came into existence. The war with the League was renewed by Duke Leopold III of Austria, but in the battle near Sempach in 1386 his army was defeated and he himself was killed. This victory greatly strengthened the independence of the eight members of the Swiss League. The Austrians were again defeated in 1388 at Naefels, during the war with Glarus, which had declared its independence. In this way the freedom and independence of the eight communities were secured and a new compact made on 10 July, 1393.

The confederate states of the League encouraged the inhabitants of neighbouring territories in their struggles for political freedom. The city of St. Gall, which had been a free city of the empire from 1251, sought to make itself as independent as possible of the mastery of the prince-bishop. The inhabitants of Appenzell, who were subjects of the Abbot of St. Gall, also did the same; they gained their freedom and overthrew the lordship of the abbey by success in battle. In 1411 seven of the confederated communities (Berne not taking part) formed an agreement with Appenzell, by which it was taken under the protection of the League; in 1412 a league was formed with the city of St. Gall, and in 1455 these treaties were changed into the "Everlasting Compact". The inhabitants of Upper Valais, who were subjects of the Bishop of Sion (Sitten), also gained for themselves a certain amount of political freedom, which they successfully defended in battle; they then formed a compact with the districts of Uri, Unterwalden, and Lucerne (1403 and 1416). The districts of Uri and Obwalden won territories south of the Alps in the Val Leventina (1403); some years later (1411) the League occupied jointly the Val d'Ossola and in 1419 became the protector of the Bishop of Basel. In 1422, the League was defeated by the Duke of Milan and in 1426 it gave up its rights to the Val Leventina and the Val d'Ossola. During the Council of Constance Duke Frederick of Austria was declared under the ban of the empire by Emperor Sigismund. The Swiss League, by the order of the emperor, seized the Swiss lands of the duchy; Berne took the cities of Aargau; Lucerne and Zurich took other cities and territories; the League conquered jointly other cities belonging to the Habsburgs. Thus the members of the League obtained subject lands, sometimes subject to the authority of an individual member of the League, sometimes ruled jointly by several members; this changed the former basis of the League, Count Frederick of Toggenburg, who had great possessions, had made various treaties with different members of the League. When he died without male issue in 1436, a dispute arose, and Zurich, Lucerne, and Unterwalden became involved in a war with Schwyz. Zurich formed an alliance with the Emperor Frederick III against the other members of the League, and in the war which followed (1443) Zurich was defeated, while a general of the emperor defeated the League at Muhlberg. In 1450 Zurich's alliance with the emperor and its alliance with the emperor. Various districts that had been subject to the counts of Toggenburg fell
to Schwyz, Glarus, and Appenzell. In 1460 the districts of Thurgau and Sargans were occupied by the League as common property.

A new opponent of the Swiss Confederates now appeared in Duke Charles the Bold, of Burgundy. The Confederates formed an alliance with France and re-occupied the Swiss territory. Charles was allied, on his side, with the Duke of Savoy. The Swiss severely defeated Charles in the battles of Grandson and Murten in 1476. The city of Fribourg had taken part with the confederated Swiss and the two cities of Berne and Fribourg now took possession on several occasions. They were, however, the inhabitants of Upper Valais conquered Lower Valais, that belonged to Savoy. In 1841 the cities of Fribourg and Solothurn (Soleure) were taken as members into the League of the Confederates. The Burgundian War had brought the confederated districts into alliance with France, and consequently their connexion with the German Empire grew weaker and weaker. When in 1495 Emperor Maximilian sought to reorganize the empire, the Confederates were unwilling to recognize the changes. In the struggle, called the Swabian War between the Swiss Confederates and the protectorate of the Swabian Electorate, the Confederates triumphed. The Treaty of Basle of 1499 granted the Confederates almost complete independence from the German Empire by releasing them from the jurisdiction of the imperial chamber. Later, in the Peace of Westphalia of 1648, the political separation of Switzerland from Germany was recognized by several decrees. On account of the Swabian War, the cities of Basle and Schaffhausen joined the Confederation in 1501, and in 1513 Appenzell also accepted as a district belonging to it, so that the Confederation now included thirteen districts. In addition to the Countship of Neuchâtel became an associate member by several municipalities, the canton of Berne was joined as associate members by the three leagues of the Rhastian Alps: the "Grauer Bund", the "Zehngerichtenbund" (League of the Ten Jurisdictions), and the "Gottschaubund".

Upper Valais and other spiritual and secular lordships also became associate members. There was no central organized authority over all. The individual members formed special alliances among themselves; their common affairs were discussed at the assembly of the members, which was a congress of sovereign states. In addition to the representatives of the three leagues, the members of the Confederation most of the associate districts of the Confederation had also the right to send representatives. Other territories were subject lands of one or several members of the Confederation, or belonged in common to the entire Confederation of the thirteen districts. Geneva had formed an alliance with Fribourg and Berne for the protection of its liberties against the bishops and dukes of Savoy; this made it an associate member. From this time on the Swiss Confederates took an important part in the general politics of Europe, especially in the wars in Italy. The Confederates acquired possessions south of the Alps in 1481. However, at the battle of Marignano in 1515, the Swiss troops were severely defeated, which put an end to Swiss intervention in European politics.

The inner organization of the different districts of the Confederation varied greatly. Some had a democratic organization; others the rule of the patrician town council was aristocratic. In the course of the eighteenth century many disputes arose in the cities on account of the despotic patrician government. After the outbreak of the French Revolution this state of affairs led to the interference of France, and in 1798 the territories of the Confederation were occupied by French troops. After the dissolution of the governments, the "indivisible Helvetic Republic" with a new Constitution was proclaimed. All the confederated districts and the former subject lands were incorporated in the Republic. The opposition of the original Swiss League was crushed by the French army, the Helvetic Republic was entirely dependent on France. New quarrels constantly arose in Switzerland over the Constitution. Napoleon, therefore, on 19 February, 1803, issued the Act of Mediation, by which a confederation of nineteen cantons was constituted under the protection of France. The Diocese of Basle, the city of Geneva, Ticino, and Valais were annexed by France; the Principality of Neuchâtel was given to Marshal Berthier. In 1815 the Congress of Vienna gave back to Switzerland the lost district of Graubünden, and in 1830. Half the cantons received democratic constitutions; this caused a civil war in Basle that divided the canton into two half-cantons (city of Basle and rural Basle). At the same time a movement for the revision of the Treaty of Confederation of 1815 was started in Switzerland. On November 30, 1831, ten cantons formed an agreement among themselves. The Catholic cantons opposed a revision because they feared that it would not only result in a reduction of cantonal sovereignty, but also lead to interference with their religious freedom. The Articles of Baden, agreed to in 1833, were introduced in the relations between Church and State and greatly impaired ecclesiastical rights. In December, 1845, the seven Catholic cantons, namely, Uri, Schwyz, Unterwalden, Lucerne, Zug, Fribourg, and Valais, united in a league, called the "Sonderbund" (separate league), for the protection of their sovereignty and of their territories. The majority of the cantons decided at the Diets of August, 1846, and of July, 1847, that this league should be dissolved, because it was not compatible with the Treaty of Confederation of 1815. At the same time the same majority voted for a revision of the Constitution, and the impossibility continued presence of the Jesuits in Switzerland. The seven Catholic cantons made ready for war. At the Diet held in October, 1847, their representatives moved that their sovereignty and their ecclesiastical rights be recognized, and that the question as to the Jesuits be removed from the subjects for discussion. The motion was rejected, and the protesting deputies of the seven cantons left the Diet. The civil war, called the War of the Sonderbund, now broke out. The Catholic cantons were defeated, and the war ended without much bloodshed. Radical government was introduced in the Alps in 1848, but these administrators were later set aside by the popular majorities of the Catholic Conservative party. The expenses of the war to the amount of five million francs were imposed upon the defeated cantons, the result of which was their economic impairment. The Jesuits were driven out and about fifty monasteries and religious foundations were suppressed. It was a victory of Radical Liberalism over the Conservative party. In 1848 Neuchâtel freed itself from Prussia and adopted a new republican Constitution. On 12 September, 1848, the new Constitution of the Confederation was proclaimed, and in future a Federal Constitution of Switzerland similar to the United States. The individual cantons retained, indeed, their sovereignty and their separate Constitutions, but the exercise of sovereignty was
THE CATHEDRAL OF SAN LORENZO, LUGANO, 1517
limited by the federation. There was an assembly to represent the individual states called the Council of States (Ständerat), and one to represent the entire Swiss nation called the National Council (Nationalrat). The Federal Assembly is the legislative body of the Confederation. The executive authority was in the hands of a body called the Federal Council. The cantons, however, still retained the right of levying taxes, of police supervision, of the administration of justice, and religious affairs, and all legislation regarding schools. The Constitution of Switzerland also allowed the cantons to keep their executive, judicial, and legislative bodies, and their traditional privileges.

The Constitution was revised in 1874, and on 9 April of this year the new Constitution was accepted; with a few partial changes it is still in existence. It rests on the principles of a decided centralization as regards the army and the judiciary, and, unfortunately, contains also severe articles directed against the Catholic Church (prohibition of houses of Jesuits, of the founding of new monasteries, etc.). A federal supreme court was established for the entire Confederation. In many of the cantons a strong movement began for making the cantonal constitutions more democratic, and during the last decades new constitutions have been introduced. The Federal Court, for each of the states, created a common code of law for civil and criminal cases was transferred to the Confederation. The railways were made state property by the purchase of the larger railways from the companies owning them, the purchase being confirmed in 1898; in this way their administration belongs to the Confederation.

The Commonwealth—Switzerland forms a federation made up of the following twenty-two cantons, three being divided into half-cantons. The cantons have sovereign authority in all matters which are not under the jurisdiction of the Confederation. These competences, however, frequently conflict, as in matters respecting the army, sanitary officers, and police supervision of foreigners. The decisions of the Federal Government are generally executed by the cantonal Governments. The main matters under the jurisdiction of the Confederation are: Intercourse with other countries; executive and the enforcement of the foreign policy; with the exception of the Federal Court, the organization of the courts belongs to the cantons; the army, all legislation, and the supervision of public works; the manufacture and sale of powder, white coal, and wine; the manufacture and sale of alcohol. Trade inspection is also largely regulated by federal law, and the Government has the right to introduce sickness and accident insurance; a law in reference to these was accepted by the nation in 1912. Since they were made state property the larger, standard-gauge railways have been nationalized in the last-mentioned year. The Constitution of the Confederation guarantees freedom of faith and conscience, as well as freedom of worship. Notwithstanding this, the Constitution forbid the reception of Jesuits and affiliated orders and the founding of new monasteries, while the establishment of new dioceses in Switzerland is made dependent on the consent of the Confederation. All these special ordinances refer only to the Catholic Church.

The federal authorities are: (1) legislative; (2) executive; (3) judicial. (1) The legislative authority is the Federal Assembly, composed of two concurrent chambers: the National Council and the Council of States. The National Council is elected directly by the people for three years, there being a deputy for each 30,000 inhabitants, or for a fraction over 10,000 inhabitants of a canton. For this purpose Switzerland is divided into federal electoral districts. The election is direct and the ballot secret. All Swiss citizens over twenty years of age, who are not prevented by cantonal laws from exercising political rights, are entitled to vote. All citizens entitled to vote are also entitled to hold office. The Council of States consists of 44 deputies, of whom each canton appoints two, and each half-canton one. The members of the Council of States are elected, according to the law of each canton, either by the people of the canton, or by the cantonal council, which is the cantonal legislative body.

The passage of a law requires the agreement of both the States and National Councils. These two councils unite in the Federal Assembly for certain matters, especially for the election of the executive authorities and of the members of the Federal Council. Petitions may be submitted for settling disputes as to jurisdiction between federal authorities. The nation has the right of the referendum; when 30,000 citizens entitled to vote, or eight cantons of Switzerland, make the demand, any federal law and any generally binding federal ordinance, if not of a pressing nature, must be laid before the nation, so that the latter by a majority vote can accept or reject it. In 28 cases during the years 1874–1906 in which the referendum vote was taken, the law or the federal decision was rejected in 19 cases.

The people also have an initiative in matters respecting the Federal Constitution, inasmuch as 50,000 citizens entitled to vote may petition for a change in the Constitution upon a definite point. The Federal Assembly also can present a similar demand for a change in the Constitution.

(2) The executive authority is the Federal Council, which is composed of seven members, elected for a term of five years, the Federal Assembly for one year. Any citizen eligible to the National Council can be elected to the Federal Council. The president of the Federal Council is elected each year by the Federal Assembly, as is also the vice-president; the president cannot be re-elected for the ensuing year. The Federal Council presides over the Federal Assembly, yet the rejection by the chambers of a bill offered by a member of the Federal Council does not necessitate the dismissal of the respective member. The executive administration of the Confederation is divided into seven departments, each of which is under the direction of a member of the Federal Council; the Department of Foreign Affairs, which is always under the direction of the president of the Confederation; the Department of the Interior, which controls the numerous federal subventions, supervises game and fish inspectors, weights and measures, and directs the sanitary inspectors and the execution of the laws respecting food; the Department of Justice and Police; the Military Department; the Department of Finance and Customs; the Department of Commerce, Industry, and Agriculture; the Post-Office and Railway Department. (3) The judicial authority is the Federal Court, the jurisdiction of which is limited to the execution of the laws. Up to 1912 the court consisted of nineteen members; when the number was raised to twenty-four, to which should be added nine substitute members. The federal judges are elected for six years by the Federal Assembly. The court is divided into three sections;
one for appeals in the domain of public law and certain matters of civil law, the second for the other appeals in civil law, the third for complaints respecting the labor law, and the fourth for grievances caused by the financial law. For criminal cases there is a criminal court of three judges and twelve assessors. The federal attorney-general is appointed by the Federal Council.

The Constitutions of the Swiss cantons are in all cases democratic. However, great differences are to be found in the various cantons in regard to the cantonal Constitution, taxation, communal Government, etc. In the larger cantons the legislative body is a council elected by the people, called the Cantonal Council, or the Great Council. The members of the cantonal Governments are elected either by this council or directly by the people. The smaller cantons have as the legislative body the cantonal assembly, composed of all the active citizens of the canton, which elects the cantonal authorities. The chief political parties of Switzerland, as represented in the Federal Assembly, especially in the chamber called the National Council, are: (1) The Radical or Progressive-Democratic party that avowedly strives after greater centralization; this principle is especially advocated by the Radicals of German-Switzerland. At times this part shows anti-Catholic tendencies, as was particularly evidenced in the War of the Sonderbund, and was caused by the Old Catholic movement; during the last twenty years, however, this hostility has not been so marked. This party is the dominating one throughout the entire Confederation. (2) The Catholic-Conservative party. (3) The Liberal-Conservative, or Protestant party. Both the Catholic- and Liberal-Conservative parties are Federalists, but they stress upon the rights of cantonal sovereignty. (4) The Social-Democratic party.

Ecclesiastical History.—There is no doubt that Christian missions were started in the territory of the present Switzerland as early as the third century, but it was not until after the Constantinian era that they made decided progress. The missionaries of Christianity entered the country by three main roads: by way of the valley of the Rhone to Geneva, from Italy over the Great St. Bernard to Valais and into western Switzerland to the Helvetii, and over the passes of the Alps by way of the Grimsel into central Switzerland to the Rhodians. After the political repartition of the Roman Empire during the reign of Diocletian, the earliest Catholic dioceses appeared in the course of the fourth century: in Valais the Diocese of Octodurum (Martigny), the see of which was transferred in the sixth century to Sion; in the sixth century the Diocese of Genava (Genoa) was founded in the Civitas Genavensium, which belonged to the great territories of the Allobroges; western and central Switzerland received the Diocese of the Helvetii, that was established in the Civitas Helvetiorum; its bishop lived now at Avenicum (Avenches), now at Yvoirese (Windsch), until at a later date, between the years 585 and 650, the see was transferred to Lausanne, and the northern part of the region, that had been taken by the Alamanni, was assigned to the Diocese of Constance. In the north-west the Diocese of Basle, the origin of which is obscure, was established in the Civitas Raumtorum. A part of the present Swiss Jura belonged to the Diocese of Besançon; towards the east, in Rhaetia, the Diocese of Chur (Coire) was established. The territories south of the Alps belonged in part to the Dioceses of Como and Milan. A famous shrine was built over the tomb of Mauritius and his companions (St. Mauritius in Valais); in 515 the Burgundian King Sigismund founded an abbey at this spot, the oldest monastery on Swiss soil.

The occupation of western Switzerland by the Burgundians, although they were Arians, led to no serious interruption of the life of the Church. At the beginning of the sixth century King Sigismund became a Catholic; this was quickly followed by the adoption of the Catholic Faith by the Burgundians. Out of the 534 laws of oblige belonged to the Kingdom of the Franks, as they took part in the religious development of this kingdom. The Alamanni were still heathen and when they migrated into northern and north-eastern Switzerland they destroyed, along with the Roman civilization, almost the entire organization of the Church. After the Franks subjugated the Alamanni in 496 the Irish missionaries began to labour in their territories. In the sixth century the Diocese of Constance was founded for Alamannia; it included those parts of Switzerland occupied by this people. St. Columba went to Ireland, St. Gall and the Irish Churchlabourn on the shores of Lake Constance and on those of Lake Zurich. When about 612 Columba went to Italy, Gall remained behind and founded a monastery, from which developed the celebrated Abbey of St.-Gall. The monastery of Reichenau was of great importance in the further spread of Christianity on Lake Constance. Other monasteries were founded in eastern Switzerland, among them Pfaeffers and Dissen, and in the tenth century Einsiedeln. In western Switzerland famous abbeys were established in the territory of the Burgundians, as St.-Imier, St.-Benoite, and St.-Saccine; these, however, did not appear until the Frankish era. As times went on the growth of religion and civilization brought rich possessions and large secular power to the bishops and abbots.

The great movement for the reformation of the monasteries during the tenth century, in which Chuni led the way, reached western Switzerland and caused the founding of new and important abbeys, such as Lausanne in Vaux, St.-Victor in Geneva, St.-Alban in Basle, and others. Several more Benedictine abbeys were established in the twelfth century; among these were Muri in Schaffhausen, Fischingen at Thurgau; some Cistercian abbeys were also founded, as Lausanne in Fribourg, St.-Urbain in Lucerne, and Wettingen in Aarau, while the Premonstratensians and Carthusians established numerous monastic houses in various districts of Switzerland. The change in monastic life introduced in the thirteenth century by the Franciscans and Dominicans, who settled in the cities and villages, brought about a change in the situation in Switzerland at an early date. Both Franciscan and Dominican monasteries sprang up in numerous cities, at Basle, Zurich, Berne, Schaffhausen, Solothurn, Chur, Fribourg, Lausanne, Geneva, and others. Among the knightly orders, the Knights of St. John of Jerusalem had the Diocese of Constance and the territory of Switzerland endowed with large revenues. Other orders had a few monasteries. There were also large numbers of convents for women. Besides the monasteries there were houses of Augustinian canons in Switzerland, a few of which still exist in the Catholic cantons. They a rich religious life sprang up in the various districts of Switzerland around the numerous religious foundations of various kinds, the sees of the dioceses, the abbey and other monasteries, and the religious institutions of the cities.

The Protestantism movement of the sixteenth century began in Germany and Switzerland with the position taken by Zwingli in Zurich at the same time that it appeared in Germany. At first the religious innovation met with but little success. On 8 April, 1524, the five districts of Uri, Schwyz, Unterwalden, Zug, and Lucerne decided to retain the old, true Christian Faith and to plete the territory of the same their monasteries. At the Diet of the Confederation held at Lucerne on 20 April of the same year this decision was adopted by all the districts excepting Zurich and Schaffhausen. During this period Anabaptists made their appearance, especially in St.-Gall and the Grisons, and Anabaptist communities were established in
several districts including Schaffhausen and Appenzell. A peasant revolt broke out, partly in connexion with the Anabaptist movement; this outbreak, however, was mainly settled by negotiations after serfdom had been abolished. Notwithstanding the decisions of the Diet of 1524 and all efforts made by the Catholic party to extend the Reform, the sect spread to other Swiss cities and territories. The heretical doctrine was introduced into the city of St. Gall by Joachim von Watt (Vadianus) and his followers; in 1528 all Catholics were excluded from the council, and only the abbey remained loyal to the Catholic reform, in accordance with the constitution of the monastery (q. v.); in the following year St. Gall into Appenzell and spread among the communions of Appenzell-Ausserrhoden. Through the influence of Zurich, Protestantism was introduced into Topgenburg, which belonged to the Abbey of St. Gall, and into Thurgau, so that in 1525 the majority of the inhabitants of both these districts belonged to the new faith. Protestantism also found entrance into Glarus, Sargans, and the valley of the Rhine, as well as into the Grisons. In these districts, however, the adherents of the heretical doctrine could not attain absolute control. The cities of Basle and Schaffhausen also fell away from the Catholic Faith; much was done for the spread of the Reformed religion in the Oberland (Oekanwend) at the same time (q. v.). For a considerable time Berne waivered, but in 1528 the two new churches urged by Francis Kolb, N. Manuel, Berchtold Haller, and Johann Haller conquered, and the heretical doctrine was introduced by force in all the territories of Berne. The districts that had become Protestant united both with one another and with foreign Protestant cities. The five Catholic districts of Switzerland, mentioned above, had also united in defence of the old Faith in their territories, and had formed an alliance with Austria. Zwingli sought to force them to subside, and this alliance was finally dissolved by the battle of the two wars of Kappel (1528–31), which ended in the victory of the Catholic districts by the battle near Kappel in 1531, in which Zwingli was killed. In the second Peace of Kappel which was now signed (1531) the Catholic Faith was completely restored in the common dependencies of Baden, Freiamt, and Rapperswyl, and numerous parishes in Thurgau; the valley of the Rhine became Catholic again and the monasteries were re-established. The Protestant Faith was recognized by the Constitution; in the religiously mixed districts and in the German subject lands the parishes remained with the minor faith to belong, but the free exercise of the religion of the minority was protected; the districts which were entirely Protestant or entirely Catholic retained their respective confessions, and the alliance of the Zwinglian districts was dissolved. In the meantime the heretical doctrine had been carried from Berne into French Switzerland. Among the lordships belonging to the Bishop of Basle in the Jura the new faith made its way into the Münsterthal, Biel, the city of Neuchâtel, and also in the district of Neuchâtel. In 1536 Berne conquered the district of Vaux and introduced Protestantism into it by force, as well as in the lands that Berne owned in common with Fribourg. Berne also supported the adherents of the new faith, which in 1535 had gained the supremacy in the possessions of its ally Geneva, where Calvin soon made his appearance and where he established a new centre of French Protestantism. In religious matters the Confederation was now divided as follows: the five districts of Uri, Schwyz, Unterwalden, Zug, and Lucerne with their dependencies (among them Ticino), also Fribourg, Solothurn, the allied Valais, the Abbot of St. Gall, and the cantons of Glarus, Sargans, the city of St. Gall, and Switzerland in the era of the Council of Trent. St. Charles Borromeo (q. v.) laboured with great success, as did also Bishop Christopher Blarer of Basle. Of great value in this work was the summoning of the Jesuits, of whom the most important was Peter Canisius (q. v.); in the year 1554 they opened flourishing colleges in numerous cities, as Lucerne, Fribourg, Porrentruy, Siders, Brig, Sion, and Solothurn. The Capuchins also entered Switzerland at the same time, and erected their first monastery on Swiss soil at Altorf in 1579; this was gradually followed by the founding of nearly thirty more houses, so that their spiritual labours embraced the larger part of the Catholic districts of the Confederation. Another important factor in the revival of ecclesiastical and religious life was the establishment of a permanent papal nunciature to the Confederation with its seat at Zurich (from 1579). The Collegium Helvetica at Milan and the Collegium Germanicum, both of which had a number of free scholarships for Swiss theologians, did much for the thorough education and earnest religious training of the clergy. The revival of Catholic life was vigorously supported by zealous and orthodox priests, such as provost Schenewy at Fribourg, and Catholic statesmen, such as L. Pfyffer, of Lucerne, and M. Lussey in the forest districts that had formed the original Swiss League. The internal reform of the Church based on the decrees of the Council of Trent made its way throughout Catholic Switzerland to the great benefit of the Holy Catholic population. The seven Protestant districts formed the Borromean League in 1586 to prevent the further advance of Protestantism. The subject lands of Bormio, Chiavenna, and Val Tellina, which had belonged to the Grisons since 1512, remained loyal to the Catholic Faith. They were hard pressed, and the attempts to spread the heretical doctrine in these regions also were supported in every possible manner by the Protestant majority in the Grisons. During the violent political disputes which raged in the Grisons during the seventeenth century a revolt broke out in Val Tellina. The knight Eduard of Gresso put down the rising in 1637 and a large part of the Protestant population was killed (the Valtelline Massacre). This led to a war between the Protestant and Catholic districts and their foreign allies, the final end of which was that the Val Tellina and the other Italian subject lands were lost to the Confederates. After the Peace of Kappel of 1531 the Catholic districts had the majority in the Diet of the Confederation, a point of much importance in the garrisoning of the lands held in common that separated Berne and Zurich from each other. These two powerful Protestant members of the Diet sought an occasion to change this state of affairs. The suppression of a Protestant community in Arth, that belonged to Schwyz, gave rise to a dispute between the Catholic and Protestant districts which led to the two Villmergen wars (1656 and 1712). The Catholic districts conquered in the first war; disturbed again in Toggenburg, and the second war had as political questions were especially prominent. This latter war ended in the victory of the Protestant districts, and it was followed by a new partition of the common lordships in favour of the conquerors, as well as by the granting of complete parity to the Protestant inhabitants of the subject lands. This treaty divided the Confederation into two distinct confessional groups. The hostility to the Church shown in the French
Revolution was also evidenced in the measures adopted by the Helvetic Republic in Switzerland. By a decree of 1798 the possessions of all Swiss monasteries were declared to be national property, and a further decree suppressed, in theory, all monasteries. The monks and canons were permitted to exercise their ecclesiastical jurisdiction only through delegates who were nominated by the Helvetic Directory. The decree respecting the monasteries was not executed. By the Act of mediation of 1803 the property of the monasteries was returned to them, and the monasteries could be reopened. Only the venerable Abbey of St-Gall was definitely suppressed. Part of the abbey lands were incorporated in the state property of the Canton of St-Gall, and part were reserved as a special fund for the Catholics of the canton. After the turmoil of the Napoleonic era and after the suppression of the Diocese of Constance the ecclesiastical administration was gradually reorganized during the period of Restoration. By an agreement of 28 March, 1828, the Diocese of Basel was re-established, with the see at Solothurn (Soleure). The Swiss portion of the Diocese of Constance was united with the Diocese of Lausanne, and the bishop, whose see was Fribourg, received the title of Bishop of Lausanne and Geneva. The Diocese of Sion (Sitten) was left essentially as before. In 1836 Pope Gregory XVI erected the Vicariate Apostolic of St-Gall, which was later changed into the Diocese of St-Gall. The Diocese of Constance, which continued to exist, received new boundaries by agreements made with the cantons that had formed the original League. In 1888, after long negotiations, the Canton of Ticino was released from its diocesan connexion with Como and Milan and made a diocese which was, however, united with Basel; it is ruled by an Apostolic administrator with the rank of a bishop. The War of the Sonderbund greatly damaged Catholic interests in Switzerland. Not only were the Jesuits driven out and their flourishing schools suppressed, but most of the monasteries in the Catholic cantons were also suppressed by the violent radical Governments that had come into power. Even at a later date the Cantons of Thurgau, Zurich, Solothurn, and Aargau secularized the monasteries in their territories and confiscated the monastic possessions. During the nineteenth century some sixty monastic institutions were suppressed throughout Switzerland. In the canton of Lucerne a determination of the spirit of nominalism became apparent, and the free exercise of ecclesiastical authority was frequently prevented. The Catholic minority in the Protestant cantons was oppressed in various ways. This was especially the case on the appearance of Old Catholicism which caused a regular persecution of Catholic priests and people in some cantons, especially Berne and Geneva. The opposition which sprang up in various countries to the definitions of the Vatican Council also manifested itself in Switzerland, and small Old Catholic parishes were formed in various places. The Old Catholics of Switzerland unite in the “Roman Catholic Apostolic Episcopal Church” which received formal recognition both from the Federal Council and from the Governments of several cantons. The Governments of the Cantons of Berne and Geneva settled renegade priests over Catholic parishes by force; churches, parsonages, and the church property were given to these priests and their few adherents by the administrative authorities. A Christian Catholic theological faculty for the training of Old Catholic priests was established at the University of Berne; this faculty still continues a languishing existence.

Churches in the Bernese Jura and in Geneva were returned to the Catholics, frequently, though, under great material sacrifice by the latter. The Old Catholic movement in Switzerland, as everywhere else, began very soon to decline. Of late years the attempt has been made to gather the Old Catholics of separate Church and State. This separation has been carried out practically in Geneva and Basel. Catholic life has greatly developed in Switzerland notwithstanding the difficulties caused by the War of the Sonderbund and the persecution caused by the Old Catholic movement. Among the larger Catholic organizations which extend over the whole of Switzerland mention should be made of the Catholic People’s Union; this society unites the individual organizations into one large association, and labours with much success in the fields of religion, charity, social work, and education. The section for home missions, which aids Catholic parishes in the diaspora, distributed for this purpose the sum of 202,720 francs in 1910, and helped 105 mission parishes. The historical section supports the “Zeitschrift für schweizerische Kirchengeschichte”. In addition to the People’s Union mentioned, a body is united with the Diocese of Basel, which is active in all of the Swiss universities, in several foreign ones, and in the Swiss lycées, and which has a large membership.

A matter of much importance for Catholic life was the founding of the cantonal University of Fribourg (q.v.). Of the 76,396 ecclesiastics in Switzerland 7,363 are Old Catholic. Of the 756,972 inhabitants of Switzerland on 1 December, 1910, 2,108,590 were Protestants, 1,590,792 were Catholics, 19,023 Jews, and 46,597 belonged to other confessions or to none. A comparison of the number of Catholics with that of the Protestants at the census of 1900 shows that the Catholics have increased at a more rapid rate within the last ten years than the Protestants. This arises mainly from the fact that the adjacent parts of the neighbouring countries are all Catholic, so that immigration almost always increases only the Catholic population. The Catholic inhabitants of Switzerland belong to the following dioceses: (1) Basle-Lugano; in this diocese the Diocese of Basle includes the Cantons of Solothurn, Lucerne, Zug, Berne, Aargau, Thurgau, Basle, and Schaffhausen, while the Diocese of Lugano embraces the Canton of Ticino. (2) Chur, which includes the Canton of the Grisons, Surselva, Ur, Unterwalden (both Obwalden and Nidwalden), and the Principality of Liechtenstein. (3) Lausanne-Geneva, which includes the Cantons of Fribourg, Vaud (with exception of a few parishes which belong to Sion), Neuchâtel and Geneva. (4) St-Gall, which includes the cantons of St-Gall, and the two half-Cantons of Appenzell. (5) Sion, which includes the Canton of Valais and the Catholic parishes of the governmental department of Aigle in the Canton of Vaud. In addition there are: the exempt episcopal Abbey of Saint-Maurice in Valais, the abbot of which is always the titular Bishop of Bethlehem, the exempt Abbey of Einsiedel, the Bishops of the Great St-Bernard, and two prefectures Apostolic in the Grisons, namely Mioso-Calanca, and Rheinau.

With the exception of the Moravians and the two Lutheran parishes in Geneva, all the Protesants of Switzerland belong to the Evangelical Reformed Church. The great majority of these belong to the “National Churches”, of which there are fifteen, which are organized according to cantons. There are numerous differences in details in the constitutions of these cantonal National Churches. Besides these there are also large independent Protestant Churches and Evangelical Societies, which have a right to the title of Church. In the census the Old Catholics are not counted as independent confessions, but are enumerated among the Catholics. Altogether they number about 30,000 persons (more exact statistics are not obtainable). Four
years ago the list of Old Catholic clergy gave 58 names; in the summer half-year of 1910 the Old Catholic theological department at Berne had three Swiss and six foreign students. In addition to the Old Catholic bishop, the Christian Catholic National Church is administered by a national synod which meets annually; besides the Old Catholic priests and the bishop its membership includes delegates elected by the parishes. The latter are not only restricted to twenty-two communities which are organized in accordance with the laws of the Confederation for associations.

J. P. KIRSCH

Sword, Knights of the. See MILITARY ORDERS, THE.

Sydney, Archdiocese of (Sydneyensis).—The vast territories formerly known as New Holland and Van Diemen's Land and since 1900 as The Commonwealth of Australia were erected into the Vicariate Apostolic of New Holland in 1834. John Bede Polding (q.v.), a Benedictine, was appointed vicar Apostolic. He was consecrated bishop in London on 29 June, 1834. Dr. Polding visited Rome in 1841-2, and at his suggestion new sees were erected in Hobart and Adelaide. A few years later Melbourne and Brisbane were also detached from the Vicariate. In 1850 the dioceses were erected at Maitland, Goulburn, Bathurst, Armidale, Lismore, and Wilcannia; these form at present the suffragan sees of Sydney, which was erected into an archdiocese on 15 February, 1842. The archdiocese stretches along the Pacific coast from Red Head on the north to Cape Howe on the south, and inland to the Dividing Range. When Dr. Polding landed at Sydney, there were only four priests in the district; Father Ulhanneth, an English Benedictine who had come to Australia in 1833, was vicar general, assisted by Fathers Therry, McNicoll, and Delaney, all English. There was only a Dominican. The official census of 1833 gave the population of the colony as 60,794, the Protestants of all denominations being 43,096 and the Catholics 17,283. The government allowance in the same year for the maintenance of the Church was $4000; whilst to the Church of England, exclusive of its royal endowment, the government assigned $50,555. There were 10 Catholic schools receiving about $2000 from the Government, whilst the Protestant schools were allowed $28,680, in addition to a grant of $16,500 for the building of the Protestant King's School at Parramatta. Dr. Ulhanneth sailed for England and Ireland to see if any assistance could be obtained for the increasing demands of the diocese. He availed himself of this opportunity to publish a pamphlet setting forth the sad condition of the convents, and the maladministration of affairs in official quarters. Seventy-five thousand copies of this pamphlet were circulated in England and throughout the Continent, and its effect was seen in the altered conditions of administration soon after introduced. His mission was successful, and in 1841 Dr. Polding reported to Propaganda that the diocese had 24 priests, a community of nuns, 6 churches completed and 6 others in course of erection, with several small chapels, and 31 schools.

During a visit to Rome in 1846-47 Dr. Polding secured the appointment of Dr. David O.S.B., titular Bishop of Maltha, as coadjutor bishop. He, however, died in Sydney in 1854. In 1873 Archbishop Roger Bede Vaughan was appointed coadjutor, and he succeeded Dr. Polding on 16 March, 1877. He was remarkable for his eloquence, and upheld with great vigour the Catholic cause in the matter of religious education. On 19 April, 1883, he sailed for England via San Francisco, but died two days after his arrival in Liverpool (18 August). Patrick Francis Moran (see below), Bishop of Ossory, Ireland, was appointed to the vacant see, his Brief being dated 21 March, 1884. In 1888, Dr. Higgins was consecrated Archbishop of Sydney and translated to the See of Rockhampton in Queensland. Most Rev. Michael Kelly, titular Archbishop of Achruda, was appointed coadjutor in 1901. The cathedral under the invocation of Our Lady Help of Christians, begun as far back as 1820 by Father Therry and completed by Archbishop Polding, was destroyed by fire on 29 June, 1865. It was rebuilt according to plans by Wardell, and consecrated by Archbishop Vaughan on 8 September, 1882. Archbishop Moran landed at Sydney on 8 September, 1884. The following year he was summoned to Rome to be promoted to the cardinalate. He convened and presided at the first (1885), second (1889), and third (1911) eighty synods, all Australians, and has since its opening furnished one hundred and thirty priests to the Australian mission. A preparatory ecclesiastical college at Springwood, in the Blue Mountains, was opened last year. It is erected on a site of six hundred acres, the purchase of the land and the erection of the building being a further gift of the cardinal to the diocese. There are two Catholic weekly newspapers: "The Catholic Press" and "The Freeman's Journal"; there is also the quarterly "Australasian Catholic Record", besides, some minor monthly publications. The Melbourne Club, organized in 1910, has a considerable enrolment.

When the Dr. Polding was appointed vicar Apostolic, several English Benedictines volunteered for the Australian mission. Some years later, at Dr. Polding's petition, St. Mary's was declared a Benedictine cathedral, the adjoining presbytery raised to the dignity of a deanery, and it was hoped by the archbishop that the whole diocese would be efficiently served by an Anglo-Australian Benedictine community. This, however, was soon found to be impracticable. From the first many difficulties beset the Benedictine Order in Sydney. The community was finally dissolved by Archbishop Vaughan, himself a Benedictine, and missions were assigned to
its priests in the ranks of the secular clergy. The religious orders of men are at present represented by the Marist Fathers, who entered on their missionary work in 1837, the Jesuits, Franciscans, Missionaries of the Sacred Heart, Vincentians, Passionists, Missionaries of the Divine Word, and Capuchins. In 1883 the members of the religious orders numbered 41; at present they are 79. The Irish Congregation of Sisters of Charity was the first of the orders of nuns to arrive (1 January, 1839) in Australia. For some years their special care was devoted to the female convicts. Later they engaged in the work of education, took charge of St. Vincent's Hospital, the first Catholic hospital in Australia, and visited the prisons. The congregation now numbers in Australia 320 nuns (in Sydney 235). The Benedictine Nuns arrived in Sydney in 1849, and at their monastery of Subiaco devote themselves to the higher branches of education. The Good Samaritans, a purely Australian order instituted in Sydney in 1857, are spread through other dioceses, and number in Sydney 220. The Sisters of St. Joseph are also an Australian institute spread through several dioceses, numbering in Sydney 255. Other religious orders of nuns are the Sisters of Mercy, Religious of the Sacred Heart of Jesus, Poor Clares, Carmelites, Nursing Sisters of the Little Company of Mary, Little Sisters of the Poor, Sisters of St. Brigid, Dominican Nuns, Institute of the Blessed Virgin of Loreto, Sisters of Our Lady of the Sacred Heart, and Marists. At the close of Archbishop Vaughan's episcopate the number of nuns in the diocese was 252; at present (1911) they number 1400. St. John's college is associated with the Sydney University. The Jesuits have the flourishing College of St. Ignatius at Riverview, and the High School of St. Aloysius at Milson's Point. The Marist Brothers have a novitiate besides the College of St. Joseph, the High School at Darlinghurst, and several parochial schools. The Christian Brothers from Ireland were the first teaching religious order to come to Australia. Three Brothers accompanied Dr. Polding to Sydney in 1843, and within a few months they had three schools; sufficient means for their support were lacking and they returned to Ireland in 1844. They returned to Sydney in 1887, and have now a novitiate, two flourishing high schools, and eight parochial schools. The Patrician Brothers have also a flourishing college and some parochial schools. The total number of teaching Brothers at the close of Dr. Vaughan's episcopate was 78; they now number 220.

In 1883 there were 10,936 children in the schools of the diocese; there are at present 25,000. Official returns published last year (1910) in connexion with the cardinal's silver jubilee set forth that during those twenty-five years of his administration 100 churches and 150 schools have been erected or enlarged; 60 parochial schools; 45 presbyteries had been provided, and 34 new parochial districts organized. In 1885 there was only one Catholic orphanage and that was maintained by the Government. In 1888 the government aid was withdrawn and the orphanage was closed. Since then a new orphanage has been established and 2 Catholic industrial schools. In 1885 there was only one Catholic hospital, St. Vincent's; it has since then been considerably enlarged, and five other hospitals have been built. A Home for the Aged Poor has also been established, and several other charitable institutions.

In 1911 the Archdiocese of Sydney contained: 175,000 Catholics; churches, 189; districts, 75; priests, secular, 120, regular, 79; religious men, 220, women, 1374; seminaries, 3; colleges, 7; boarding schools (girls) 25; superior day schools (boys), 4; (girls), 47; primary schools, 290; poor schools (girls), 2; (boys), 1; orphanages, 7; industrial schools, 3; total number of pupils in Catholic schools, 25,000; hospitals, 8; Hospice for the Dying, 1; Foundling Hospital, 1; Home for the Aged Poor, 1; Home for the Blind, 1; Magdalen Retreats, 2; Servants' Home, 1; Home for Mental Invalids, 1; St. Charles' Villa for Aged and Infirm Priests, 1.

Patrick Francis Cardinal Moran, third Archbishop of Sydney, b. at Leighlinbridge, Ireland, 16 Sept., 1830; d. at Manly, Sydney, 16 Aug., 1911. He was the only son of Patrick Moran and Alice Cullen, sisters of Cardinal Cullen. Of his three brothers, two became nuns, one of them offered her life to God for the cholera patients whom she nursed, and died the last victim of the plague in Ireland. Both his parents died before his eleventh year. He left Ireland in 1842 to pursue his studies in Rome. His "Acta Publica" in universal theology was so masterly as to gain for him the doctorate by acclamation. Among the principal objectors was Cardinal Joachim Pecci, afterwards Leo XIII, who was impressed by the genius of this Irish student. He was appointed vice-rector of the Irish College, and also filled the chair of Hebrew at Propaganda, and was some time vice-rector of the Scots College. In 1886 he was appointed secretary to Cardinal Cullen and professor of Scripture at Clonliffe College. He founded the "Irish Ecclesiastical Record". In 1889 he accompanied Cardinal Cullen to the Vatican Council, and was appointed procurator for one of the absent bishops. Selected as coadjutor Bishop of Ossory, he was consecrated Bishop of Ossory. The diocese was distracted by dissensions between the infirm bishop, Dr. Walsh, and some of his priests and people. Dr. Moran ruled with a firm yet benign hand, and his episcopate was fruitful of much spiritual and temporal advancement in the diocese. He established many religious institutions. At Callan he founded the convent of St. Brigid's Apostolic School, which has blessed with the missionary spirit so many distant lands. He introduced the Sisters of Mercy also into the Irish workhouses, and transformed those dens of misery into homes for the indigent and outcast. He founded several industrial schools for boys and girls, under the guidance of the Sisters of Charity, and was the pioneer in that grand network of child industrial training which has since become the pride of Ireland. He completed the chancel of and adorned the Kilkenny Cathedral, and founded the public library and archaeological society. He always defended the rights of the people and cham-
pioned Home Rule. He knew Ireland and loved her deeply. He was consulted by W. E. Gladstone prior to the introduction of his Home Rule Bills and his knowledge of the complex industrial and economic conditions of the country was a source of wonder to the prime minister, who ever afterwards cherished for him a profound respect and affection. His great diplomatic skill secured for him the confidence of the Irish hierarchy, and he represented them in many of the international conferences of Catholic laymen. Though the Benham of the episcopate, he was selected as one of the secretaries to the first National Synod of Maynooth. The Brief of Dr. Moran's translation to Sydney was issued 21 March, 1884. In the archbishop's farewell audience with Leo XIII it was made evident that the intrigues of parties, the interference of government agencies, and the influence of high ecclesiastics had made the matter almost impossible of decision by Propaganda. In the presence of others the Holy Father said clearly, "We took the selection into Our own hands. You are Our personal appointment." In his first outward journey he drew up that spiritual program which grew so much of his life after life. "I must esteem nothing save the service of the Redeemer, everything else is beside my mission; ich dien [I serve] in its highest meaning must be my motto ... To do the will of my Divine Master must be my life, my light, my love, my all." He crossed the Pacific to Australia and visited all the dioceses of New Zealand. In the following year he traversed 6000 miles to consecrate Dr. Gibney at Perth. In subsequent years he went to Ballarat, Bathurst, Bendigo, Hobart, Goulburn, Lismore, Melbourne, and Rockhampton for the consecration of their respective cathedrals. In 1908 he revisited and dedicated the cathedral of Auckland, and in the last year of his life he again covered 6000 miles to consecrate Dr. Chne Bishop of Perth. He consecrated fourteen bishops, ordained nearly five hundred priests, dedicated more than five hundred churches, and professed five thousand nuns. The thirty-two charters which he founded in the city of Sydney remain as the crowning achievement of his life. As a statesman he forecasted the necessity of Australian federation, an Australian navy, and an Australian citizen soldier. By sheer force of character the two questions suffered also, and lived long enough to see a Federal Labour Ministry remodelling the class legislation of past centuries and equitably the rights of the working classes, the first unit of an Australian navy patrolling Australian waters, and the first 100,000 Australian yarns spun. After the conclusion of the Lough Derg dispute, Bishop Charles Hoare, Bishop of Ardagh, was first named to assist Cardinal Moran in the administration of the archdiocese. He was unable to leave Ireland, and Rt. Rev. Dr. Higgins was appointed auxiliary bishop March, 1889. He was transferred to the See of Rockhampton on 4 May, 1899, and now occupies the See of Ballarat. On 20 July, 1901, Dr. Kelly, rector of the Irish College, Rome, was appointed auxiliary, cum jure successionis, and succeeded the cardinal at his death. A quarter of a million people witnessed the funeral procession through the heart of the city of Sydney. By permission of the State Government and of the municipal authorities he was interred with the pioneer priests in his beloved St. Mary's Cathedral.

DENIS F. O'HARAN.

SYENE, a titular see in Thebae Secunda, suffragan of Ptolemais. Syene (Egyptian, Souanou, Coptic, Susan) was originally the market-place of the Island of Elephantine (in Egypt). Abu-sa-ras, Abou was the capital of a principality, then the chief town of the nome. It is not known at what epoch its suburb across the Nile commenced to grow at its cost; for a long time the two cities were treated as one, Souanou being the port and city of work. The reason was that the quarry of the island furnished the most beautiful stone of Egypt; they supplied a certain kind of red granite called syenite, out of which were cut the obelisks, monolithic temples, the colossus, etc. From the time of the ancient empire royal Egyptian envoys went there to look for the stone destined for the sarcophagi of the king. These quarries were in full activity in the Roman epoch, and syenite was exported throughout the empire. Another celebrated place in Syene was a pit, which was incorrectly thought to have been placed exactly under the equator. For this reason it was chosen by Eratothenes as the starting point of his measure of the surface of the earth (230 a. c.). The Syene of the Romans to the south-west of the present city, suffered much from the incursions of the Blemmyes, and from the pest; its inhabitants abandoned it to live in the higher parts built by the Saracens. This new city which was at first very prosperous, then became the burial place of the Fatimite dynasty. Taken and retaken by the Qenous or Barabra of Lower Nubia, and by the Haouarah of Upper Egypt, it was nearly ruined and did not regain its importance until the Sultan Selim established a Turkish garrison there (1517). The Arabians named the city is Anoub. Here, while the French were fighting the Mamlukes, on 16 May, 1799. This city of about 10,000 inhabitants, and which may be reached by a railroad, as is situated to the south of the first cataract of the Nile, is very interesting on account of its picturesque aspect and the strange character of its population composed of Arabs, Barbarins, negroes, Bisharis, and Ababdih; curious bazaars and quays; remains of Roman quays, inscriptions on rocks, little temple of Isis, Arabian ruins and cemetery. The places of interest in the neighbourhood are the old quarries, the Island of Elephantine (to-day Geziert Asouan), an old necropolis, the beautiful Coptic convent of St. Simeon, and the famous Island of Philae. Syene is mentioned by the Prophet Ezekiel, who threatened Egypt with devastation "from the tower of Syene, even to the borders of Ethiopia" (Ezech., xxix, 10). See St. Menas and the modern city and the place where the Vultur differs from the Hebrew and the Greek text. Le Quien (Oriens christ., II, 613) mentions two bishops of Syene: St. Ammonius, martyr at Antinoe where he had a church, and Befan, a Jacobite (1086). The Synagoge of the Coptic church tells "us that the city had a bishop from
the time of the Patriarch Timothy, one of the succes-
sors of St. Athanasius.

S. PÉTRAUDS.

**Sykes, Edmund,** b. at Leeds; martyred at York Tyburn 23 March, 1586-7; was a student at the College at Reims, where he was ordained 21 Feb., 1581, and sent to the English Mission on 5 June following. He laboured in his native Yorkshire with such zeal and sacrifice, that his strength failed. Arthur Webster, an apostate, took advantage of his illness to betray him, and he was committed to the York Kildon by the Council of the North. But his illness he consented to be present at the heretical service, but he refused to repeat the act and remained a prisoner. After confinement for about six months, he was again brought before the Council and sentenced to banishment. On 23 Aug., 1585, he was transferred to the Castle of Kingston-upon-Hull, and within a week shipped beyond the seas. He made his way to Rome, where he was entertained at the English College for nine days from 15 April, 1586, his purpose being to atone for his lapse by the pilgrimage, and he also entertained some thoughts of entering the Church. The Roman Bishops understood that it was God's will that he should return to the English mission, and reaching Reims on 10 June, he left again for England on 16. After about six months he was betrayed by his brother, to whose house in Wath he had resorted, and was sent a close prisoner to York Castle by the Council. He was arraigned at the Lent Assizes, condemned as a traitor on the score of his priesthood, and on 23 March, 1586-7, was drawn on the hurlde from the castle yard to York Tyburn, where he suffered the death penalty. **J. L. Whitfield.**

**Syllabus (συλλάβος, "collection"),** the name given to two series of propositions containing modern religious errors condemned respectively by Pius IX (1864) and Pius X (1907).

**The Syllabus of Pius IX.**—A. History.—The first impulse towards the drawing up of the Syllabus of Pius IX came from the Provincial Council of Spoleto in 1849. Probably on the motion of the Cardinal Archbishops of Perugia, Pecci (later on Leo XIII), a petition was laid before Pius IX to bring together under the form of an encyclical the errors of the time and to condemn them. The preparation began in 1852. At first Pius IX entrusted it to Cardinal Fornari, but in 1854 the Commission which had prepared the Bull on the Immaculate Conception took matters in hand. It is not known how far the preparation had advanced when Gerbet, Bishop of Perpignan, issued, in July, 1860, a "Pastoral Instruction on various errors of the present" to his clergy. With Gerbet's "Instruction" begins the second phase of the introductory history of the Syllabus. The "Instruction" had grouped the errors in eighty-five theses, and pleased the pope so much, that he set it down as the groundwork upon which a fresh commission, under the presidency of Cardinal Cetinari, was to labour. The result of their work was a specification, or cataloguing, of sixty-one errors with the theological qualifications. In 1862 the whole was laid before three hundred bishops who, on the occasion of the canonisation of the Japanese Martyrs, had assembled in Rome. They appear to have approved the list of theses in its essentials. Unfortunately, a weekly paper of Turin, "Il Mediatore," hostile to the Church, published the wording and qualifications of the theses, and thereby gave rise to a far-reaching agitation against the Church. The pope allowed the storm to subside; he withheld the publication of these theses, but kept to his plan as to what was essential.

The third phase of the introductory history of the Syllabus begins with the appointment of a new commission by Pius IX; its most prominent member was the Barnabite (afterwards Cardinal) Bilio. The commission took the wording of the errors from a commission which Pius IX and appended to each of the eighty theses a reference indicating its content, so as to determine the true meaning and the theological value of the subjects treated. With that the preparation for the Syllabus, having occupied twelve years, was brought to an end. Of the twenty-eight sessions which Cardinal Fornari had drawn up in 1852, twenty-two retained their place in the Syllabus; of the sixty-one theses which had been laid before the episcopate for examination in 1862, thirty were selected. The promulgation, according to the original plan, was to have taken place simultaneously with the proclamation of the dogma of the Immaculate Conception; in the event it was ten years later (8 December 1864) that Pius IX published the Encyclical "Quanta Cura," and on the same day, by commission of the pope, the secretary of State, Cardinal Antonelli, sent together with an official commissary of the bishops the list of the propositions condemned by the Holy See. The title of the document was: "A Syllabus containing the most important errors of our time, which have been condemned by our Holy Father Pius IX in Allocutions, at Consistories, in Encyclicals, and other Apostolic Letters." The reception of the Syllabus among Catholics was assured through the love and obedience which the children of the Church bear towards the vicar of Christ on earth. They were, besides, prepared for its contents by the various announcements of the pope during the eighteen years of his pontificate and, as a matter of fact, no sooner had it made its appearance than it was solemnly received in national and provincial councils by the episcopate of the whole world. Among the enemies of the Church, no papal utterance had stirred up such a commotion for many years; they saw in the Syllabus a formal rejection of modern culture, the destruction of the modern State. In Russia, France, and also in those parts of Italy then subject to Victor Emmanuel, its publication was forbidden. Bismarck and other statesmen of Europe declared themselves against it. And to the present day, it is a stumbling-block to all of false faith in the Church in her doctrine. B. Binding Power.—The binding power of the Syllabus of Pius IX is differently explained by Catholic theologians. All are of the opinion that many of the propositions are condemned if not in the Syllabus, then certainly in other final decisions of the infallible teaching authority of the Church, for instance in the Encyclical "Quanta Cura." There is no agreement, however, on the question whether each thesis condemned in the Syllabus is infallibly false, merely because it is condemned in the Syllabus. Many theologians are of the opinion that to the Syllabus as such an infallible teaching authority is to be ascribed, whether due to an ex-cathedra decision by the pope or to the subsequent acceptance by the Church. Others question this. So long as Rome has not decided the question, everyone is free to follow the opinion he chooses. Even should the Church make a propositional condemnation of propositions that unchangeableness peculiar to infallible decisions, nevertheless the binding force of the condemnation in regard to all the propositions is beyond doubt. For the Syllabus, as appears from the official communication of Cardinal Antonelli, is a decision given by the pope speaking as universal teacher and judge to
C. Contents.—The general contents of the Syllabus are summed up in the headings of the ten paragraphs, under which the eighty theses are grouped. They are: Pantheism, Naturalism, Absolute Rationalism (1-7); Moderate Rationalism (8-14); Indifferentism and Irreligion (15-26); Socialism, Communism, Secret Societies, Bible Societies, Liberal Clerical Associations (reference is made to three Encyclicals and two Allocutions of the pope, in which these tendencies are condemned); Errors regarding the Church and its rights (19-38); Errors on the State and its Relation to the Church (39-55); Errors on Natural and Christian Ethics (56-64); Errors on Christian Marriage (65-74); Errors on the Temporal Power of the Pope (75-76); Errors in Connection with Modern Liberalism (77-80). The content of any one thesis of the Syllabus is to be determined according to the laws of scientific interpretation. First of all, one has to refer to the papal documents connected with each thesis. For, in accordance with the peculiar character of the Syllabus, the meaning of the thesis is determined by the meaning of the document it is drawn from. Thus the twelfth thesis, "The pope cannot and must reconcile himself with, and adapt himself to, Progress, Liberalism, and Modern Civilization," is to be explained with the help of the Allocution "Jumuldum cernimus" of 18 March, 1861. In this allocution the pope expressly distinguishes between true and false civilization, and declares that history witnesses to the fact that the Holy See has always been the protector and patron of all genuine civilization; and he affirms that, if a system designed to de-Christianize the world be called a system of progress and civilization, he can never hold out the hand of peace to such a system. According to the words of this allocution, then, it is evident that the eighteenth thesis of the Syllabus applies to false progress and false Liberalism and not to honest pioneer-work seeking to open out new fields to human activity.

Moreover, should a thesis, according to the papal references, be taken from a condemned book, the meaning of the thesis is to be determined to that which it has in the condemned book. For the thesis has been condemned in this particular meaning and not in any other which might possibly be read into its wording. For instance, the fifteenth thesis, "Everyone is free to adopt and profess that religion he pleased holds to be true", admires itself in a right interpretation. For man can and must be led to the knowledge of the true religion through the light of reason. However, on consulting the Apostolic Letter "Multiplices inter", dated 10 June, 1851, from which this thesis is taken, it will be found that not every possible meaning is rejected, but only that particular meaning which, in 1848, Vigil, a Peruvian priest, attached to it in his "Defensa". Influenced by Indifferentism and Rationalism, Vigil maintained that man is to trust to his own human reason only and not to a Divine reason, i.e. to the truthful and omniscient God Who in supernatural revelation speaks for the truth of a religion. In the sense in which Vigil's book understands the fifteenth thesis, and in this sense alone does the Syllabus understand and condemn the proposition.

By the Church in opposition to each thesis is contained in the contradictory proposition of each of the condemned theses. This opposition is formulated, in accordance with the rules of dialectics, by prefixing to each proposition the words: "It is not true that ... ." The doctrine of the Church which corresponds, for instance, to the fourteenth thesis is as follows: "It is not true, that 'philosophy must be treated independently of supernatural revelation.' In itself no opposition is so sharply determined as by the contradictory proposition of the foregoing statement. However, the practical use of this negation is not always easy, especially if a compound or dependent sentence is in question, or a theoretical error is concealed under the form of an historical fact. If, as for instance in thesis 42, the proposition is that civil and ecclesiastical laws the rights of the State should prevail, be condemned, then it does not follow from this thesis, that, in every conceivable case of conflicting laws the greater right is with the Church. If, as in thesis 45, it be denied that the entire control of the public schools belongs exclusively to the State, then it is not maintained that their control does in no way concern the State, but only the Church. If the modern claim of general separation between Church and State is rejected, as in thesis 55, it does not follow that separation is not permissible in any case. If it be false to say that by marriage its very nature is subject to the civil power (thesis 74), it is not necessarily correct to assert that it is in no way subject to the State. While thesis 77 condemns the statement that in our time it is no longer expedient to consider the Catholic religion as the only State religion, the exclusion of the Catholic cult may prove expedient, if certain conditions be realized.

D. Importance.—The importance of the Syllabus lies in its opposition to the high tide of that intellectual movement of the nineteenth century which strove to sweep away the foundations of all human and Divine order. The Syllabus is not only the defence of the inalienable rights of God, of the Church, and of truth against the abuse of the words freedom and culture on the part of unbridled Liberalism, but it is also a protest, earnest and energetic, against the attempt to eliminate the influence of the Catholic Church on the life of nations and of individuals, on the family and the school. In its nature, it is true, the Syllabus is negative and condemnatory; but it received its complement in the decisions of the Vatican Council and in the Encyclicals of Leo XIII. It has not only influenced absolutely its field, but has for its influence on the life of the Church towards the end of the nineteenth century; for it threw a sharp, clear light upon reef and rock in the intellectual currents of the time.

II. THE SYLLABUS OF PIUS IX.—A. History.—The Syllabus of Pius IX is the Decree "Lamentabili sane exitu", issued on 3 July, 1907, condemning in sixty-five propositions the chief tenets of Modernism. This Decree, later on called the Syllabus of Pius X on account of its similarity with the Syllabus of Pius IX, is a doctrinal decision of the Holy Office, i.e. of the Roman Congregation which, watches over the purity of Catholic doctrine concerning faith and morals. On 4 July, 1907, Pius X ratified it and ordered its publication; and on 18 November, 1907, in a Motu Proprio he prohibited the defence of the condemned propositions under the penalty of excommunication, reserved ordinarily to the pope. The Decree is supplemented by the Encyclical "Pascendi" of 8 September, 1907, and by the oath against Modernism prescribed on 1 September, 1910. Thus, the Syllabus of Pius IX is the first of a series of ecclesiastical pronouncements dealing with the condemnation of Modernism, whilst the Syllabus of Pius IX summarizes the condemnations previously passed by the same pope.

B. Contents.—By far the greater number of the theses of this Syllabus are taken from the writings of Loisy, the leader of the Modernists in France; only a few are from the works of other writers (e.g.,
thesis 6, Fogazzaro; 26, Le Roy). As a rule the quotation is not literal, for it would have been possible only in a few cases to express the unimportant short proposition. According to their contents the theses may be divided into six groups. They condemn the doctrine of the Modernists on ecclesiastical decisions (1-8), and on Holy Writ (9-19); the Modernist Philosophy of Religion (20-26) and Modernist Church History (27-28); the origin of the sacraments (29-31) and the evolution of the Church with regard to its constitution and doctrine (32-65). In detail the Syllabus of Pius X condemns the following assertions: ecclesiastical decisions are subject to the judgment of scientific science; faith does not demand “excessive simplicity or ignorance is shown by those who believe that God is really the Author of Holy Scripture” (9); God neither inspired (in the Catholic sense of the word) the sacred writers nor guarded them from all error; the Gospels in particular are not books worthy of historic belief, as their authors have consciously, though piously, falsified facts (10-19); Revelation can be nothing else than the consciousness acquired by man of his relation to God, and does not close with the Apostles (20-21); “The Dogmas, which the Church proposes as revealed to man, were not inspired by the human mind through laborious process of thought” (this second-second thesis, with the somewhat crude expression, “truths fallen from Heaven”, is taken from Loisy’s “L’Evangile et l’Eglise”); one and the same fact can be historically false and dogmatically true; faith is based upon a number of probabilities; dogmatic definitions have only a passing practical value as norms in life (23-28); the Divinity of Christ is a dogma which the Christian consciousness deduced from its idea of the Messiah; the real, historical Christ is inferior to the Christ idealized by faith; Jesus Christ cursed; his resurrection is no historical event; His vicarious death is a Pauline invention (27-38); the sacraments were not instituted by Christ, but are additions made by the Apostles and their successors, who, under the pressure of events, interpreted the idea of Christ (30-51); Jesus Christ did not think of founding a Church; the Church is a purely human society subject to all the changes of time; of the Primacy, Peter himself knew nothing; the Church is an enemy of scientific progress (5-57); “Truth is as changeable as man, because it is evolved with him, and by him” (58); there are no immutable dogmas; they have developed and must develop with the progress of the centuries (59-63); “Scientific progress demands a reform of the Christian dogmatic conception of God, creation, revelation, the Person of the Word incarnate, and redemption” (64); “The Catholicism of to-day is hence only a partially true and false science knowledge; unless it be transformed into a Christendom without dogmas, i.e. a broad and liberal Protestantism” (65).

C. Binding Power.—Many theses of the Syllabus of Pius X, as all Catholic theologians affirm, are heresies, i.e. infallibly false; for their contradictory is dogma in many cases even fundamental dogma, or an article of faith in the Catholic Church. With regard to the question, whether the Syllabus is in itself an infallible dogmatic decision, theologians hold opposite opinions. Some maintain that the Decree is infallible on account of its confirmation (4 July, 1908), and the pope’s letters; others defend the opinion that the Decree remains nevertheless the doctrinal decision of a Roman Congregation, and is, viewed precisely as such, not absolutely immune from error. In this theological dispute, therefore, liberty of opinion, which has always been safeguarded by the Church, in undecided questions, still remains to us. Yet all theologians agree that no Catholic is allowed to maintain any of the condemned theses. For in the decrees of a Vatican Congregation we have the verdict of a scientific commission, which gives its decisions only after close investigation, but also the pronouncement of a legitimate religious authority competent to bind the whole Church in questions within its competence (cf. what has been said above regarding the Syllabus of Pius X). By granting to the Encyclical, Nevertheless, the Syllabus was published at the most opportune moment. The Catholics of those countries in which Modernism had worked its ill effects felt relieved. By this Decree the tenets of religious evolutionism were laid before them in short and clear words. It was to the signification and the bearing of isolated Modernist views, appearing now here, now there, had not always been fully grasped. Now, however, everyone of good will had to recognize that the Modernists, under the plea of assimilation to modern ideas of development, had tried to soil the foundations of natural and supernatural knowledge. Moreover, to the whole Catholic world the Decree sounded a note of warning from the supreme pastor and drew attention to the excellent principles of scholastic theology and to the growing importance of a thorough schooling in exegetical criticism and in the history of dogma, which the Modernists had abused in the most unparanormal manner.

A. HAA.

**Sylvester I, Saint, Pope (314–335), date of birth unknown:** d. 31 December, 335. According to the "Liber pontificalis" (ed. Duchesne, I, 170) he was the son of a Roman named Rufinus; the legendary "Vita beati Sylvestri" calls his mother Justa. After the death of Miltiades (Melchiades) Sylvester was made Bishop of Rome, and occupied this position twenty-one years. This was the era of the Great, when the public position of the Church so greatly improved, a change which must certainly have been very noticeable at Rome; it is consequently to be regretted that there is so little authoritative information concerning Sylvester's pontificate. At an early date legend brought into formation with the first Christian emperor, but in a way that is contrary to historical fact. These legends were introduced especially into the "Vita beati Sylvestri" (Duchesne, loc. cit., Introd., cix sq.) which appeared in the East and has been preserved in Greek, Syriac, and Latin versions; "Constitutio, 150" contains the account of an alleged Roman council which belongs to the Symmachian forgeries and appeared between 501 and 505, and also in the "Donatio Constantini". The accounts given in these writings concerning the persecution of Sylvester, the healing and baptism of Constantine, the crown of the pope, the rights granted to the latter, and the council
CONSTANTINE HOLDING THE BRIDLE OF ST. SYLVESTER'S HORSE
XII-CENTURY MOSAIC IN THE CHAPEL OF S. SYLVESTER, CHURCH OF THE SANTI QUATTRO CORONATI, ROME
of 275 bishops at Rome, are entirely legendary. The pope, however, took part in the negotiations concerning Arianism and the Council of Nicaea, and the expression "Sylvester" was probably appended upon him before the council. The pontiff also sent legates to the first oecumenical council. Still it is not certain whether Constantine had arranged beforehand with Sylvester concerning the actual convening of the council, nor whether there was an express papal confirmation of the degrees beyond the signatures of the papal legates (cf. Funk, "Kirchenrecht und Abhandlungen und Untersuchungen", I, 95, 501 sq.).

During Sylvester's pontificate were built the great churches founded at Rome by Constantine, e.g. the basilica and baptistery of the Lateran near the former imperial palace where the pope lived, the basilica of the Sessorian palace (Santa Croce in Gerusalemme), and several cemeterial churches over the graves of martyrs. No doubt the pope helped towards the construction of these churches. Sylvester's memory is especially connected with the titular Church of Equitius, which takes its name from a Roman presbyter who is said to have erected this church on his property. It was situated near the thermae of Diocletian, and still exists. Parts of the present building may date from the fourth century. No doubt the pope contributed to the development of the liturgy of the Church at Rome. During his reign, moreover, the first martyrology of Roman martyrs was probably drawn up. Sylvester is connected also with the establishment of the Roman schools of singing. On the Via Salaria he built a cemeterial church over the Catacomb of Priscilla, the ruins of which have lately been brought to light. In this church he was buried. His feast is given under 31 December in the "Deposito episcoporum", or list of the burial days of the Roman bishops, which was compiled barely a year after his death; the same date is given in the "Calendar" of Philemon. This day, therefore, is doubtless the "birthday" of Sylvester. For his possible relations with Armenia, see Gregorius the Illuminator.

Sylvester II (Gerbert). Pope (999–1003), b. at or near Aurillac, Auvergne, France, about 940–50, of humble parents; d. at Rome, 12 May, 1003. Gerbert entered the service of the Church and received his first training in the Monastery of Aurillac. He was then taken by a Spanish count to Spain, where he studied at Barcelona and also under Arabian teachers at Cordova and Seville, giving much attention to mathematics and the natural sciences, in which he made unusual progress. From Spain he proceeded to Rome with Bishop Hatto of Vich, who had been his chief theological instructor, and John XIII recommended him to the Emperor Otto I, who sent him to Reims to the archdeacon Geranus. There he was soon appointed a teacher in the cathedral school by Archbishop Adalbero. He undertook Gerbert's education. When Adalbero wished Gerbert to be his successor, but when the former died in 988 Arnulf, a natural son of King Lothaire, was raised to the see at the instigation of Hugh Capet. Arnulf was deposed in 991 by a synod held near Reims for alleged treason. em For the sake of the king and God he supported the chie success. Although Gerbert soon held a provincial synod, having injured the property of the Church and those decisions were confirmed at another synod held at Chela under the presidency of Robert, King of France, there was much opposition to his elevation to the See of Reims. Consequently John XV sent Leo, Abbot of Sts. Boniface and Alexius at Rome, as legate to France. On 2 June, 995, Leo held a synod at Mouzon. Gerbert appeared personally to defend himself, but was temporarily suspended from his episcopal office. He was restored to his sees but was sent by further synod (concilium Causiensis), held on 1 July, 995, at which Gerbert was present, declared Arnulf's deposition and Gerbert's elevation illegal and invalid.

Gerbert now went to the Court of the youthful Emperor Otto III, whose teacher he became and whom he accompanied to Italy for the coronation. As the Archbishopric of Reims was not restored to Gerbert, he remained in Italy, and in 998 Gregory V appointed him Archbishop of Ravenna. Gerbert attended the Roman synod before which the marital affairs of King Robert of France were laid. When Gregory V died on 18 February, 999, Gerbert was elected his successor through the influence of the emperor, and took the name of Sylvester. He was the first French pope. The new head of the Church administered his high office with great earnestness and a profound sense of responsibility. His discourse upon the episcopal office shows what his view of the chief spiritual duties of the Church was ("De officiis episcoporum", P. L., CXXXIX, 169 sq.). He took energetic measures against the abuses in the life of the clergy caused by simony and concubinage, and was anxious that only capable men of spotless lives should receive the episcopal office. His relations with Otto III were very friendly, and the emperor supported the pope's political ideas. Otto gave the pope eight Italian countships, which had formerly belonged to the States of the Church, by a deed of gift the genuineness of which, however, is questioned (Wilmans, "Jahrbücher des deutschen Reiches unter den sächsischen Kaisern", II, pt. II, 239 sq.). At the same time the emperor declared the Donation of Constantine to be a forgery. During Otto's residence at Rome in the winter of 1000–1001 Sylvester held a Roman synod on 1 February, 1001, in the presence of the emperor, at which among other matters the affairs of the convent of Ganderstein were discussed. A revolt at Rome directed against the emperor forced Otto and the pope to flee. Sylvester was obliged to remain away for several months, during which the city suffered from party quarrels. On 27 December he called a second synod at Todi on account of the difficulties at Ganderstein, and shortly after was present at Otto's death.

Sylvester regulated important ecclesiastical matters in various countries. Soon after his elevation to the papacy he confirmed anew his former opponent Arnulf as Archbishop of Reims, and in the Bull which
he sent to him gives clear proof that he had now abandoned his earlier position in regard to the authority of the papal decisions concerning the disputed see. He established an ecclesiastical nuncio for Poland at Gnesen, and one for Hungary at Gran. On 27 March, 1600, he granted the title of king to the ruler of Hungary and appointed him papal vicar for his country. He energetically maintained church discipline in the question of the marriage of the king Robert, and on 12 June took Bertha away. Sylvestre returned to Rome soon after Otto's death, although the leaders of the different parties of nobles still retained all their power. A little later he died. His epitaph has been preserved (cf. Forcellini, Iscrizioni delle chiese di Roma, VII, 799). Sylvestre divided a testamentary bequest, "De sancto et sanguine Domini", Sylvestre wrote a series of works principally on philosophical, mathematical, and physical subjects; they are to be found in P. L., CXXXIX; Olleris, "Œuvres de Gerbert, pape sous le nom de Sylvestre II" (Paris, 1867); "Opera mathematic"; ed. Bubnov (Berlin, 1891); "Lettere de Gerbert", published by Havet (Paris, 1889). He was held in high repute for his learning; the common people regarded him as a magician in a league with the devil, and many legends grew up around his name.

He is said to have introduced the use of Arabic figures in the whole of Europe, and to have invented the pendulum clock.

J. P. Kirsch.

Sylvestre, Bernard, of Chartres, more properly, of Tours, a twelfth-century philosopher of Neo-Platonic tendencies. Little is known about him. Between the years 1145 and 1153 he composed a work called "De Mundi Universitate," which he dedicated to Thierry (Theodoricus) of Chartres with the words "Terroir veris scientiarum titulis Doctori famosissimo Bernardus Silvestris opus est gravis." From this inscription it is inferred that Bernard was probably a pupil of Thierry or of some other member of the famous School of Chartres. He is not, however, to be confused with Bernard of Chartres, who died in 1125, and is the author of a work "De Expositione Porphirii. The treatise on De Mundi Universitate" was published by Barach, "Bibliotheca Philosophorum Medie Ætatis," I, Innebruck, 1876), is divided by its author into two books, the first of which, "Megas cosmus, seu Major Mundus," is an address of Nature to Intellect, and the second, the response of Intellect to Nature in a style and method of composition remarkable of Marcianus Capella. The contents are very curious indeed. There is a good deal of Neo-Platonism and Neo- Pythagoreanism, philosophical tendencies which are very rare in the twelfth century, and practically unknown outside the School of Chartres. It is not at all impossible that Bernard, like the pantheists, Amaury and David, who were his con-temporaries, was influenced by the writings of Eriugena. His philosophy is an attempt to account for the universe of nature (physics) by describing the emanation of the intellectual, according to the least valuable portions are those in which the author describes the mountains, rivers, animals, and plants, although the allegorical, poetical manner of the poem very often obscures the meaning. The pantheistic drift of Bernard's philosophy is clear from the expression "Deus omnem creaturam" in which he turns towards the traditional theology he seems to adopt a sceptical attitude: "Si theologer fidem praebas argumenta." His favourite philosopher is Plato, although it is clear that he is not acquainted with any of the "Dialogues", except, perhaps, "Theaum". Cerst, Elucid, of the Church of Chartres, says: "De Woul, Hist. of Medical Philosophy, tr. Coffey (New York, 1900), 230 sq.; Turner, Hist. of Philosophy (Boston, 1903). 306. William Turner.

Sylvestre Gossolini, Saint, founder of the Sylvestrines, b. of the noble family of the Gossolini at Osimo, 1177; d. 26 Nov., 1267. He was sent to study jurisprudence at Bologna and Padua, but, feeling within himself a call to the ecclesiastical state, abandoned the study of law for that of theology and Holy Scripture, giving long hours daily to prayer. On his return home we are told that his father, angered at his change of purpose, sought to expel him, refused to give him food. Sylvestre now accepted a canonry at Osimo and devoted himself to pastoral work with such zeal as to arouse the hostility of his bishop, whom he had respectfully rebuked for the scandals caused by the prelate's irregular life. The saint was threatened with the loss of his canonry, but decided to leave the world on seeing the decaying corpse of one who had formerly been noted for great beauty. In 1227 he retired to a desert place about thirty miles from Osimo and lived there in the utmost poverty until he was recognized by the owner of the land, a certain nobleman named Conrad, who offered him a better site for his hermitage. From this spot he was driven by ducunt and next established himself at Grotta Fucile, where he eventually built a monastery of his order. In this place his penances were most severe, for he lived on raw herbs and water and slept on the bare ground. Disciples flocked to him seeking his direction, and became necessary to choose a rule. According to the legend the various founders appeared to him in a vision, each begging him to adopt his rule. St. Sylvestre chose for his followers that of St. Benedict and built his first monastery on Monte Fano, where, like another St. Benedict, he had first to destroy the remains of a pagan temple. In 1247 he was appointed Archbishop of Monte IV, at Lyons, a bull confirming his order, and before his death founded a number of monasteries. An account of his miracles and of the growth of his cultus will be found in Bolzoni. His body was disinterred and placed in a shrine (1275-85) and is still honoured in the church of Monte Fano. Clement IV recognized the title of blessed popularly bestowed on Sylvestre, who was inscribed as a saint in the Roman Martyrology by order of Clement VIII (1592). His office and Mass were extended to the Universal Church by Leo XIII. His feast is kept on 26 November.

Raymund Webster.

Sylvestrines, a minor monastic order or, strictly speaking, congregation following in general the Rule of St. Benedict but distinct from the Black and white. The term congregation is used of Benedictine congregations. The Sylvestrines were founded by St. Sylvestre Gossolini on Monte Fano near Fabriano in 1231. The Rule of St. Benedict was observed in its primitive form, but in many points the founder went considerably beyond it in point of austerity, laying special stress on the strict-
SYLVIAI

SYMBOLISM

est observance of poverty. At the death of St. Sylvester in 1267 eleven monasteries were under his leadership of which some had been founded by him, while others, though of older foundation, had adopted his institute. The congregation had been formally established by Innocent IV in 1257, five years before the founder’s death. Except for a few houses in Portugal and Brazil and the Ceylon foundation mentioned below, there have been no Sylvesterine monasteries outside Italy. Under St. Sylvester’s immediate successors in the generalship, Giuseppe della Serra (d. 1415), Giuseppe Barbaratto (d. 1408) and Andrea Giacomoco di Fabrianzo, the biographer of the founder, a number of houses were founded in the March of Ancona, Tuscany, and Umbria. Since 1568 the congregation has possessed at Rome the Church of San Stefano del Cacco in the neighbourhood of the Pantheon; the first possession of the Sylvesterine in Rome was the Church of San Giacomo in Settimania (or alla Lungara), granted to St. Sylvester himself by the Chapter of St. Peter’s.

At the present day, besides the Roman monastery at San Stefano, which is the residence of the abbot-general and assistant as the master of the order, the Sylvesterines have monasteries at Fabriano, Savo Ferrato, Perugia, Osimo, Serra San Quirico, and Matelica. Since 1855 they have also had a large mission in Ceylon with its headquarters in the Abbey of St. Anthony at Kandy. At the present day (1911) the congregation numbers some 100 members, of whom about 70 are choir monks; of the total about 40 are in Ceylon. The chief Sylvesterine saints are: the founder, St. Bonifius, Bl. Giovanni del Bastone, and the Bl. Giuseppe and Ugo di Serra San Quirico. The congregation is governed by an abbot-general assisted by a vicar; the head of each monastery is either an abbot or titular abbot. These officials were formerly elected for life, they were made triennial by Paul II in 1543, but since 1690 have been elected every four years. The Constitutions are still those which were confirmed by Alexander VIII in 1690 after the severance of the short-lived union between the Sylvesterine and Vallumbrosan orders (1662-80). The Sylvesterine habit is similar in form to that of the Cassinese Benedictines but blue in colour; habits are strictly observed and flesh meat is never eaten except in case of illness. A convent of Sylvesterine nuns was founded at Serra San Quirico during the life of the founder, but the only convent now under Sylvesterine rule is that of San Benedetto in Perugia. The arms of the order are three green hills on a blue ground, surmounted by a golden crescent with two rose branches in flower at its side.

There is no satisfactory history of the order. The above is taken from H. Beimker, Ordini e Congregazioni, I (2nd ed., Padua, 1906); H. Wolf, Histoire des ordres monastiques, VI (Paris, 1865); F. Fani, Storia storica della Congregazione dei Monaci Silvestrini (Rome, 1708); Costituzione della Congregazione di S. Benedetto di Monte Pino (Camerino, 1610; Rome, 1690).

RAYMOND WEBSTER.

SYLVIAI, FRANCIS, theologian, b. at Braine-le-Comte, Hainault, Belgium, 1581; d. at Douai, 22 Feb., 1649. He was remarkable from an early age for his love of study and his piety. After completing his humanities at Mons, he studied philosophy at Louvain and theology at Douai, in a seminary founded for the province of Cambrai in connection with the faculty of theology. While studying theology he taught philosophy at the royal college. On 9 Nov., 1610, he was made doctor of theology with the highest honours. The faculty of theology wished to retain this promising scholar, but there was no chief vacant. An eminent professor, Bartholomew de Lintra, resigned his position in favour of Sylvius, but, upon the death of Estius (20 Sept., 1613), the great light of the University of Douai, Sylvius succeeded him and later was called to direct the episcopal seminary in which he had been a student. He was appointed (1 Feb., 1618) canon of the collegiate Church of St. Amat, and finally dean (28 Jan., 1622), and to this title was added that of vice-chancellor of the cathedral. Henceforth his chief task was the discharge of his duties, his life was tranquil and undisturbed for thirty years until his death. He was buried in the choir of the Church of St. Amat, and an epitaph engraved on his tomb recalled, with his titles and qualities, his attachment to St. Augustine and Thomas Aquinas. As a man of one and a lucid interpreter of the other, also his life as directed towards the poor and religious, whom he made his heirs.

To his piety and austerity, which were admirable, he united an unchangeable attachment to sound doctrines. At the commencement of his works, as at the beginning of his lectures, he never failed to profess his intention to remain always united to the Faith, and submissive to the authority of the Roman Church. When in 1646 the theologians of Louvain sought to win the University of Douai over to Jansenism, Sylvius opposed them vigorously; but throughout the controversy he preserved the moderation and sweetness of character; always remaining from angry responses to the attacks of his opponents. He gained his reputation as a theologian chiefly through his commentary on the “Summa” of St. Thomas Aquinas. With that of Cajetan it ranks among the best, and many even prefer it on account of its clearness and fullness; besides, Sylvius wrote after the Council of Trent, and profited by its decisions. It contained four folio volumes, which he was prevailed upon to publish. He wrote also several treatises on dogmatic theology and controversy, and some on moral theology. Among his other works may be mentioned: (1) an edition with valuable notes of Binsfeld’s “Enchiridion theologiarum pastoralium”, which had great success in Belgium and France, where it was the first manual of theology used by seminarists; (2) resolutions of cases of conscience, in which he showed himself a Probabilist, moderate, solid, and clear. He wrote also commentaries on Genesis, Exodus, Leviticus, and Numbers, the learning, conciseness, and penetration of which were praised by Calmet. He adapted the “Instructions” of St. Charles Borromeo for use of the Church in Belgium, and he made additions to the “Summa Conciliare” of Zarra. His works were recommended by Pierre Norbert d’Elbeque at Antwerp in 1698, in six folio volumes, the first of which contains the life of Sylvius. This edition was reproduced at Venice in 1726; it is the best, though the editor omitted the works of Sylvius against Jansenism.

Forense, Bibliotheca Belgica (Brussels, 1739), t. IV, 309, Huster, Nomenclator.

ANTOINE DEGERT.

Symbolism may for our present purpose be defined to be the investing of outward things or actions with an inner meaning, more especially for the expression of religious ideas. In a great measure, symbolism is essential, to every kind of external worship and we need not shrink from the conclusion that in the matter of baptisms and washings, of genuflexions and other acts of reverence, of lights and sweet smelling incense, of flowers and white vestures, of unisons and the imposing of hands, of sacrifice and the rite of the communion banquet, the Church has borrowed, without hesitation, from the common stock of significant actions known to all periods and to all nations. In such matters as these Christianity claims no monopoly. Religious symbolism is effective precisely in those spheres which would otherwise be purely rational and simple to appear to the intelligence of the people. Hence the choice of suitable acts and objects for this symbolism is not so wide that it would be easy to avoid the appearance of an imitation of
paganism even if one deliberately set to work to invent an entirely new ritual.

In any case the Old Testament, and more particularly the religious worship of the Old Testament, is full of situations that may be interpreted by a consideration of the early chapters of Genesis. We cannot fail to recognize the symbolic element which pervades them. When we read for example how “God created man to his own image”, or how He “formed man of the slime of the earth and breathed into his face the breath of life”, we must hardly doubt that it was upon the underlying moral lesson rather than upon the material fact suggested by the words that the attention of the writer was concentrated. Still more clearly the words “sitteth at the right hand of God the Father Almighty”, by which the Creed recalls the historic use of the word “sitting”. Of special interest is the clear statement that the worship proper comes forward as a suppliant expectant of good gifts. In the act of blessing the hand is laid upon the head of the recipient or at least is stretched towards him (Gen., xlviil, 14; Lev., ix, 22; IV Kings, xiii, 16; etc.) with the suggestion that the one passes over to the person so blessed. The rite of circumcision is in like manner a reminder of the covenant between God and Abraham (Gen., xvii, 11), and all the Jewish festivals beginning with the Pasch are similarly commemorative of God’s mercies to His people. So again of the leaves of proposition (Lev., xxiv, 5 sq.) we are told, “Thou shalt burn upon them the clearest frankincense, that the bread may be for a memorial of the oblation of the Lord”. Although nothing more is said as to the precise significance of this offering which was to remain from sabbath day to sabbath day in the Holy of Holies, it is clear that it could have served no utilitarian purpose and that its object was purely symbolical. Again the same may be said of the whole sacrificial ritual of the Old Testament, and in the case of the incense the words of Ps. cxl, 2, “let my prayer be directed as incense in thy sight; the lifting up of my hands, as evening sacrifice” (cf. Apoc., v, 8; viii, 3), seem to be an attempt to declare the spiritual meaning underlying the outward sign. In any case the atmosphere of mystery which surrounded the ark of the covenant and later on the Temple and all the adjuncts of its imposing worship must have been a fertile soil for the growth of a teaching rich in symbolic interpretation. That the rabbis clearly saw this was evident from the Talmud that an explanation would readily be evolved to meet the case. Coming to Christian times the conditions of self-effacement and frequently recurring persecution under which the faithful lived in the first ages of the Church must have helped much to develop any tendencies towards a symbolic treatment of religious truths which they had derived from Judaism. In point of fact the life of the Catacombs and the Discipline of the Secret (v, 1), which partly grew out of it, necessitated a veiling of Christian beliefs under types and figures. Moreover, so far as regards any graphic presentation of these mysteries in sculpture and painting, it seems intrinsically probable that the faithful deliberately availed themselves of such symbols. They thereby attracted too much attention and that consequently they gave the preference to representations which had some pagan analogue. In the earlier period no representations of the Crucifixion are found, and hardly any of the cross, at least in a large and conspicuous form; neither are the episodes of Christ’s life commonly depicted realistically and historically, but only conventionally. But the type of the Good Shepherd carrying the sheep on his shoulders occurs only in the representation of an inscription. This was well be due to its resemblance to the pagan figures of Hermes Kriophorus or Aristæus, which at this period were much in vogue. The Christian understood clearly the reference to the loving self-sacrifice of Our Saviour, but pagan curiosity was not aroused by anything. Hence when external circumstances required, that is in the later scenes with fish and bread (see Eucharist, Early Symbols of the), which spoke so eloquently to the faithful of Holy Communion and the marriage supper of the blessed in heaven, seemed to the Roman of the second and third century, who paid homage to the pagan gods with banquets as well as sacrifices, a perfectly natural decoration for a funeral chamber. Even the fable of Orpheus was borrowed pictorially and referred to Christ. Similarly the story of Eros and Psyche was revived and Christianized, serving to remind the believer of the resurrection of the body and eternal bliss. Yet even in the case of the Twelve Apostles probably the attraction was more because the twelve Dios Maiiores were often also grouped together. Again the figure of the Orans (q. v.), the woman with arms uplifted in prayer, was quite familiar to classical antiquity. Though the precise significance attached to it as found in the Ecce hominem the figure was perhaps partlyinterpreted to awaken some spiritual idea in the minds of the initiates. Similarly the fish symbol (see Fish, Symbolism of the), representing Christ, the anchor of hope, the palm of victory, were all sufficiently familiar as emblems among pagans to excite no particular attention. Hence the Franciscans were mistaken when they breathed so unmistakably the atmosphere of early Christian symbolism as the epitaph of Aberecius (q. v.) with its allusions to the Fish (Christ) in the Eucharist, the shining seal (baptism), the chaste shepherd (Christ), etc., it has been possible for writers like Ficker to deny its Christian significance though in defiance of all probability as Zahn, Duchesne, and many other writers have shown. From whatever cause it arose the strong symbolic colouring of religious practice during the first ages of Christianity is disputed by hardly anyone, and it was manifestly in accordance with the demand of the external forces that the Church assumed the dress and assumed the atmosphere of the Pastors of Hermas, and of other early apocryphal writings. From this it is certain that the tradition thus created only deepened and spread throughout both the early and the later Middle Ages. The tendency seems to have been particularly fostered by the allegorical exegesis of the theologians of Alexandria, of which the writings of St. Jerome and St. Gregory the Great helped to make familiar to western Europe. The works of Isidore of Seville and of St. Bede helped in the same direction. Neither must the so-called “Clavis” attributed to St. Melito of Sardis be left out of account. There is no attempt to identify it with the genuine work of St. Melito which bore a corresponding name, but the Clavis gathered up a variety of symbolical interpretations current in St. Augustine and the Fathers, and it seems to be of fairly early date (cf., however, Rotmann in Theol. Quartalschrift,” 1896, lvii, 149—29). With regard to the early rite of the Church, the part that symbolism plays in all connected with the sacraments need not be insisted on. The outward sign of the sacrament was itself symbolical. But there was much more than this. In the case of baptism, for instance, nearly all the ceremonial is of foreign origin. The exorcistic of Satan by blowing or breathing, the giving of salt (sa salt purification), the rite of the Eucharists, and the use of spittle, imitating the action of Our Lord in some of His miracles, the ancient practice of turning to the West when renouncing
Satan but of facing eastwards in making the profession of faith, the white robe or chrysom bestowed as an emblem of innocence, the lighted candle typical of the illumination of faith (hence the baptised were early called chrismati), the libation of milk and honey to the newly-baptized infant are all in the highest degree symbolical. In confirmation we have the marking of the Sign of the Cross upon the brow and the use of oil representing the fatness and abundance of grace. The blow upon the cheek, significant of the way in which the revoked Christians were treated, if of much later date and probably imitated from the sword blow by which the young Teutonic warrior was dubbed a knight. The laying of the hand upon the penitent's head, which was practised almost everywhere during the Middle Ages when absolution was given, no doubt symbolized the imparting of grace, as the imposition of hands undoubtedly does in the Sacrament of Orders. Even in the ritual of matrimony such a pagan practice as the giving of the espousal ring, which was probably in the beginning part of the arrhazé, was invested at a later period with the mystic meanings of permanent fidelity.

That much of the symbolism which is found in the medieval liturgists was invented ex post facto cannot be doubted. We may readily allow that the greater part of the ceremonial practices now adopted by the Church were utilitarian in their origin. For example, the processions and censers before described, which he had been using the thurible or at least taking up the offerings of the faithful; it was not until later that this act was connected by the liturgist with spiritual purification or even with the hand-washing of Pilate. At the same time it is possible to exaggerate the utilitarian explanation, and the liturgist Claude de Vert, who laid so much stress upon this aspect of the matter, in some instances went too far. For example, de Vert held that the candle given to the newly-baptized was only meant to help them to find their way back from the baptistery to the sanctuary in the darkness of the Easter vigil. But the very early use of the above-mentioned term φωτισθήσεσθαι (illuminated) for a baptized person shows the extravagance of this explanation and, as Le Brun sagely pointed out, the catechumens would have needed candles as much to find their way to the baptistery as to return from it. What actually happened before the baptistry was regarded as the extinction of the Tenebrae candles one by one had originally no symbolical reference to the abandonment of Christ by His disciples but was simply due to the fact that fewer candles were needed as dawn approached and the office drew to an end, or again in his contention that the noise made at the end of Tenebrae had no reference to the earthquake on Canaary night but was simply the signal for departure given by the celebrant after an interval of silent prayer, may like many other familiar problems be left an open question.

It is perhaps most of all in the matter of liturgical vestments that the tendency to attach symbolical meanings to garments, originally intended for utilitarian and practical purposes, shows itself most conspicuously. The prayers recited by the celebrant in assuming these attributes a mystical significance to each, thus the chasuble which covers all denotes charity, and the girdle self-restraint and continence, while medieval liturgists have devised many more; but modern authorities are agreed that in hardly any case has a vestment been adopted in the Church for mystical reasons. The amice, for example, was simply a cloth used like a modern collar to protect the rich chasuble or tunic from contact with the skin. It was only afterwards that the priest was hidden to regard it as a "helmet of salvation to overthrow the assaults of the evil one". And the same holds true of all the rest. Of the pallium, a white woollen band encircling the neck and hanging before and behind, it can at least be said that from the time of St. Gregory the Great it has been sent by the pope to archbishops with the distinctly expressed purpose of symbolizing the archiepiscopal jurisdiction conferred upon them, a purpose for which it was expressly laid "upon the Body of Blessed Peter" in the "confession" of the great Roman basilicas" (see Tenebrae).

In any account of Christian symbolism an important place must always be given to the Church, and that whether the institution or the material building regarded. It is considered by some that the veiled Orans, already spoken of, which appears so frequently in the catacombs represents the Church (see the Pastor of Hermas, iii, 3, 10, and compare the term Virgin Mother τοποθετημένη used of the Church in the second century; Eusebius, "Hist. Eccl.", V, i, 43). This is not certain, but the Church in early mosaics is undoubtedly often personified, as indeed we should expect from the early and widely-read visions contained in the Pastor of Hermas (see Hermas), and sometimes we find not one, but two, contrasted figures representing respectively the Church of the Gentiles and the Church of the Circumcision. The contrast is also presented to us in the towns set over against each other and duly labelled Bethlehem and Jerusalem, or even more frequently in the confronting portraits of St. Paul and St. Peter. At a later date also, beginning early in the Middle Ages, we repeatedly find two contrasted types, but here the Church and the Gentiles are represented. The Church is a crowned and often sceptred figure with a chalice emblematic of her sacramental system. The Synagogue, on the other hand, has lost her crown, her staff is broken, and her attitude betokens defeat. These figures are constantly to be found on either side of early medieval representations of the Crucifixion. Here there is plain opposition between the two types (see Sauer, "Symbolik", p. 247), whereas in early Christian imagery the Church of the Circumcision and the Church of the Gentiles are depicted as constitutive parts of the one Kingdom of God upon earth. This example shows that continuity between primitive and medieval symbolism must not always be assumed, though in many cases we can securely trace back a type to its origins in the earliest ages.

Another early and accepted emblem of the Church was the ship. In the Apostolic Constitutions (II, 35), the bishop is said to be compared to a helmsman, a reference made by the author to the physical or spiritual guidance of the Church, and the ship is compared to the helmsman to the Ark of Noe. In any case the ship was a recognized Christian symbol and Clement of Alexandria approved it for a signet ring. "Let the dove or the fish", he says, "the vessel flying before the wind,—or the marine anchor be our signets" (Padd. III, ii; P. G., VIII, 633), and numerous representations of ships, sometimes serving as the design for a lamp, with the figure of Christ or St. Peter as helmsman are preserved to us. The name which we still retain for the "nave" (French navire) of a cathedral is testimony to the persistence of the same idea. Moreover, from the spiritual Church, idealized as the heavenly Jerusalem, to the material edifice the transition was very easy. As early as the Pastor of Hermas the individual members of the Church were looked upon as the stones of which the spiritual building was fashioned, the thought being perpetuated at all time in the magnificent hymn "Caelestis urbs Jerusalem". No wonder that the liturgists of the Middle Ages found no more fruitful theme than the interpretation of every detail in the fabric and ornamentation of their great cathedrals. Moreover, in this case undoubtedly there was action and reaction. Not only did the teachers set themselves to give mystical explanations of what already existed, but their spiritual conceptions influenced the generations that came after, and
architects designed and built with the conscious purpose of rendering in stone the beautiful thoughts which gave them name. As soon as the church was "oriented", i.e. its chancel (apart from the Roman basilicas where the celebrant offered Mass facing the people) pointed to the East. Whether one is to recognize here the Christianization of a form of sun-worship, which some have traced to the influence of the emperor Constantine's belief whether the faith, looked eastward to greet the coming of the "Sun of Justice", the "Orient from on high", certain it is that already in the Apostolic Constitutions of the fourth century (II, xlvii) the church was built to face the East. The practice lasted on throughout the Middle Ages. From this indication of the purpose, in future it was to be understood that the icon in reading the Gospel turned himself sideways so as to proclaim the glad tidings to the barbarous races of the north. The great porch at the western end, on the other hand, faced the setting sun and led men's thoughts to the close of life. Hence it is that this became the conventional position for those magnificent sculptures or paintings of the last judgment found in many of our old cathedrals. With regard to the door itself there is frequently some significant scheme of decoration which emphasizes the idea that the door is Christ (Epistula ostium, John, x, 7) and this is alone sufficient justification for the veneration of the portals, one, two, or three in number, often encased in great arches and crowded with stone carvings of angels and saints.

In such liturgical treatises as the "Rationale" of Durandus every detail in the construction of the church has a special significance assigned to it. The roof represents charity which covers a multitude of sins; the beams which tie the building together be-token the champions of ecclesiastical right who defend it with the sword; the vaulting signifies the preachers who bear up the dead weight of man's in-firmity heavenwards; the columns and piers stand for the Apostles, bishops, and doctors; the pavement symbolizes the foundation of faith or the humility of the poor; and so on. In all this the mystical interpretation of numbers holds a great place. There are twelve consecration crosses, and this, besides a reference to the Twelve Apostles (in a room consecrated each year upon a shield borne by one of the Apostles), symbolizes the multiplication of the material world. Twelve is the product of three and four, and it consequently betokens the penetration of matter with spirit. So again eight denotes perfection and completion, for the visible world was made in seven days and the invisible kingdom of grace follows upon that. In this way the octagonal shape was judged specially appropriate for the baptistery or for the font, on the ground that this initiation into the supernatural order of grace completed the work of creation. Naturally five recalls the wounds of Christ, and five grains of incense are inserted cross-wise in the Paschal Candle, while ten, the number of the Commandments, is typical of the Old Law. Seven again has its own very special attraction as the number of the sacraments, of the gifts of the Holy Ghost, of the virtues and vices, and many other things. There can be little doubt that much of this symbolism of numbers is to be traced to Egypt and Assyria, where the movements of the seven planets, as men then counted them, were continuously studied and where the elements of three and four into which seven was divided lent themselves to other combinations also regarded as peculiarly sacred, for example the number sixty, the product of three, four, and five.

Of isolated pieces of symbolism of various kinds, medieval art and literature are full. The early monograms of Christ, sometimes spoken of as chi, rho, as it is a combination of these two letters X P, thus χρ or ρχ, sometimes again as the labarum and χρ in χρ, French as the chrisme, has been discussed under Coess (IV, 522). Another Christ emblem (besides Fiss, treated in a separate article) was the labarum, often associated with a flagellation and the place of the figure of Our Saviour, and it was represented in combination with the cross instead of the human form, being sometimes even surrounded by a cruciform nimbus. As there seemed a danger of the Sacred Humanity being lost in allegory, the Council of Trullo (691) decreed that the legend of the cross in future that would be put on the figure of Christ should be substituted. As for the first Person of the Blessed Trinity the earliest symbolical representation seems to be found in the Divine hand which is often seen extended from the clouds in early representations of the baptism of Our Saviour and of other operations of grace.

It is hardly needful to add that a vast chapter in the history of symbolism is supplied by the saints and their emblems. Almost everyone of the more familiar saints has some emblem, often more than one, by the presence of which his identity is made known. For example, the mitre signifies St. Jerome, the book or the gospels St. James, the special cross of St. Andrew, the lion of St. Jerome etc. might be quoted in illustration, but often also there are emblems common to a whole group of saints, the palm branch, for example being in general indicative of a martyr, and the deacon's being nearly always represented in their dalmatics. For the Evangelists there have been used from very early times certain conventional emblems—a winged man or an angel for St. Matthew, a winged lion for St. Mark, a winged calf for St. Luke, and an eagle for St. John. All these are taken from the description of the heavenly liturgy in Apocalypse iv, v, and must have been suggested by the vision of Ezekiel (Ezech., i, 10). In the art of the early Middle Ages these emblems play a very prominent part. Other forms of symbolism are of much later development, for example the type which has been called "the Eucharistic Ecce Homo" represents Our Saviour in the tabernacles, decorated with garments and standing in the tomb, not dead but living. In the paintings, etc., known as the Mass of St. Gregory which are popular in the fifteenth and sixteenth centuries, Our Lord is generally depicted in this way. Again Our Lady of the Seven Dolours, with the seven swords piercing her heart and the number seven is a type of our Lady. This of course is still more true of the pictures connected with the Sacred Heart. The monogram, I. H. S. surrounded by rays, which, from the fact that it was much used by the early Jesuits, has sometimes been supposed to be the peculiar device of the Society of Jesus, really owes its popularity to the preaching of St. Bernardine of Siena (q. v.) at the beginning of the fifteenth century. It represents the Holy Name written in a Greek abbreviated form and had originally nothing to do with Iesu Hominum, Salvator.

For another section of symbolism which is concerned with the mystical significance attached to the representations of animals, the reader is referred to the article BESTIARIES.

An excellent compendium of the whole subject is that of JENNER, Christian Symbolism (London, 1910); a fuller treatment is given by BAYER, Symbolik (Freiburg, 1902), which concerns itself chiefly with architecture. The same may be said of KAWER, Art and Culture (London, 1909), and of KURZ, Histoire et théorie du symbolisme religieux (4 vols., Paris, 1874), which is very diffuse. NIEBUHR, Het roemansche Kerkboekje (The Hague, 1908), is too slight and sketchy. For the later Middle Ages and for France in particular there are the two admirable books of MALE, L'art religieux, de la fin du moyen-âge (Paris, 1899), and L'art religieux depuis la fin du moyen-âge (Paris, 1901). See also ALLEN, Early Christian Symbolism in Great Britain and Ireland (London, 1897); HUTENBERG, La Cathédrale...
Peter outside the city walls. His opponents requested the king to call a synod for the investigation of the accusations and write a visitor for Rome. Symmachus agreed to the calling of a synod, but he and his adherents protested against the sending of a visitor. Theodoric, however, sent as visitor Bishop Peter of Altilim in upper Italy, who was to administer the Roman Church in the place of the accused pope. Peter came to Rome and in the presence of the commands of the king, allowed himself to be won over by the adherents of Laurentius, so that Theodoric at a later date dismissed him. Not long after Easter, between May and July, 502, the synod met in the basilicas of Julius (Santa Maria in Trastevere). The people declared before the synod that it had heard the case with his consent and that he was ready to answer the accusations before it, if the visitor were removed and he were re-established as the administrator of the Church. To this the majority of the bishops agreed and sent an embassy to the king to demand the execution of these conditions. Theodoric, however, refused, and demanded, first of all, an investigation of the accusations against the pope. A second session of the synod was held, therefore, on 1 September, 502, in the Sessorian basilica (Santa Croce in Gerusalemme), and the minority had the indictment made by the Laurentian party read aloud. Symmachus was required to go from St. Peter's to Ravenna in order to defend himself, but on the way there he was attacked by his opponents and maltreated, and, escaping only with great difficulty, returned to St. Peter's; several priests who were with him were killed or severely wounded. The Goths sent by Theodoric promised him a reliable escort but the pope now refused to appear before the synod, although invited three times. Consequently the assembled bishops declared at the third session, held about the middle of September, they could not pass judgment upon the pope, because he had appeared twice before his judges, and because there was no precedent showing that such an important of the Roman See had been subjected to the judgment of other bishops. They called upon the opposing clergy to submit to the pope, and requested the king to permit the bishops to return to their dioceses. All these steps were in vain; the majority of the clergy and people sided with Symmachus, and a majority of the clergy and a majority of the senators were at that time partisans of Laurentius. A fourth session, therefore, was held on 23 October, 502, called the "Synodus Palmaris" (Palmary synod) either from the place where it was held (ad Palmaria, Palma), or from the fact that the face of the Church was to be transferred to him; whoever returned to his obedience should escape punishment, but whoever undertook ecclesiastical functions at Rome without papal permission was to be regarded as a schismatic. The decision was signed by seventy-five bishops, among them the bishops of Milan and Ravenna. Many bishops now returned to their dioceses. The majority, however, met with the Roman priests in St. Peter's for a fifth session under the presidency of Symmachus on 6 November, 502. The edict issued by the prefect Basilus, in 493, regulating the administration of the affairs of the Church, had died, and Symmachus issued a new edict respecting the administration of this property, and especially in regard to its sale.

King Theodoric, not satisfied with the decision of the synod, although the great majority of the Italian episcopate was on the side of the pope, and nothing to carry out the new ordinances, Con-
sequently the opposition called its candidate Laurentius again to Rome. He resided in the Lateran palace, which was in the hands of his adherents, while Symmachus retained the house of the bishop (episcopium) near St. Peter's. The division continued for four years, during which both parties carried on a furious quarrel at Rome. Laurentius had his partisans declare the right of unity to be that of St. Paul Without the Walls. However, certain prominent persons exerted their influence in favour of Symmachus, as Bishop Avitus of Vienne, who, at the request of the Gallican bishops, addressed an urgent letter to the Senate on behalf of the rightful pope and for the maintenance of unity, which was won over a number of the adherents of the opposition. The greatest factor in the healing of the schism was the intercession of Deacon Dioscurus of Alexandria, who had come to Rome. He was commissioned by Symmachus to go to Theodoric, and won the king over to the side of the rightful pope. Apparently political motives were involved, as the king wished to take action against the Laurentian party, which inclined to Constantinople. He commanded Senator Festus, the head of the hostile party, to return all Roman churches to Symmachus. Laurentius having having been condemned by the senate, the king's command was executed without difficulty. The anti-pope, obliged to leave Rome, retired to a farm belonging to his protector Festus. Only a small party still held to Laurentius and refused to recognize Symmachus as Bishop of Rome; but it was insignificant and was reconciled later to Hormidas, the successor of Symmachus. During the schism a number of polemical writings appeared, as from the party of Laurentius the tract "Contra Synodum absolutiosis incongrue," to which Deacon Eunomius replied in "Libellus adversus elemosynaria," and from Symmachus, the "Liber pontificalis" (ed. Duchesne). While the author of the life of Symmachus in the completely preserved text of the "Liber pontificalis" is very favourable to this pope, the writer of another continuation of the papal biographies supports the cause of Laurentius ("Fragment Laurentien", ed. Duchesne in "Liber pontificalis", I, 44-46). During the dispute the adherents of Symmachus drew up four apocryphal writings called the "Syrmachian Forgeries"; these were: "Gesta synodi Sinuosseans de Marcellino"; "Constitutum Silvestri"; "Gesta Liberii"; "Gesta de purgatione Xysti et Polychironii accusacionis". These forgeries were found in "Epist. pontifii" (Paris, 1721), appendix, 29 sq.; cf. Duchesne, "Liber pontificalis", I, introduction, CXXXIII sq.; "Historia literaria des apocryphes symmachiens". The object of these forgeries was to produce alleged instances from earlier times to support the whole procedure of the adherents of Symmachus, and, in particular, the position that the Roman bishop could not be judged by any court composed of other bishops. Still these forgeries are not the first documents to maintain this latter tenet.

Symmachus zealously defended the supporters of the doctrine of the Arians. He defends, although without success, the opponents of the "Henotikon" in a letter to Emperor Anastasius I (491-518). At a later date many of the persecuted Oriental bishops addressed themselves to the pope to whom they sent a confession of faith. Shortly after 506 the emperor sent him a letter full of invitations, to which the pope sent a firm answer, maintaining forcibly the rights and liberty of the Church (Thiel, "Epist. rom. pont.", I, 700 sq.). In a letter of 8 October, 512, addressed to the bishops of Illyria, the pope warned the clergy of that province not to hold communion with heretics. Soon after the beginning of the dispute the bishops of Illyria, bishops of Arles and Vienne as to the boundaries of their respective territories. He annulled the edict issued by Anastasius II in favour of the Archbishop of Vienne and later (6 November, 513) confirmed the metropolitan rights of Archbishop Cassarius of Arles, as these had been fixed by Leo I. Moreover, he granted Cassarius the privilege of wearing the pallium, the first-known instance of such a grant by the Holy See to a bishop outside of Italy. In a letter of 11 October, 514, he tells the Emperor to represent the interests of the Church both in Gaul and Spain, to hold synods of the bishops in certain cases, to give letters of recommendation to clergy who journeyed to Rome. More important matters were to be laid before the Holy See. In the city of Rome, according to the Liber pontificalis, the pope took measures against the Manichaeans who ordered the burning of their books, and expelled them from the city. He erected or restored and adorned various churches. Thus he built a Church of St. Andrew near St. Peter's, a Basilica of St. Agnes on the Via Aurelia, adorned the Church of St. Peter's, completed rebuilt the Basilia of St. Sylvester and Martinian, and made improvements over the Catacomb of the Jordani on the Via Salaria. He built episcopal houses (episcopio) to the right and left of the parvis of St. Peter's. These buildings were evidently connected with the residence of the pope for several years near St. Peter's during the disorders of the time. He built new or restored for the poor near the three churches of St. Peter, St. Paul, and St. Lawrence that were outside the city walls. The pope contributed large sums for the support of the Catholic bishops of Africa who were persecuted by the rulers of the Arian Vandals. He also aided the inhabitants of the provinces of upper Italy who suffered so sorely from the invasion of the barbarians. After his death he was buried at St. Peter's. Symmachus is venerated in the Roman Church as a saint.

J. P. Kirsche

Symmachus the Ebionite, author of one of the Greek versions of the Old Testament included by Origen in his Hexapla and Tetrapala. Some fragments of this version survive in what remains of the Hexapla. Symmachus also wrote "Commentaries", not extant, apparently to support the heresy of the Ebionites by attacking the Gospel of St. Matthew. "Origen states that he obtained these and other commentaries of Symmachus on the Scriptures from a certain Julianus, who, he says, inherited them from Symmachus himself" (Eusebius, "Hist. Eccl.", VI, xviii). Palladius (Hist. Laus., lxxiv) found in a manuscript "very ancient and arranged in stichæ" the following entry under "Symmachus" (Pandecte): "Juliana, the virgin in Caesarea, when I was hiding there; who said she had received it from Symmachus himself the interpreter of the Jews". The date of Origen's stay with Juliana was probably 238-41, i.e. during the persecution of Maximin, but this tells nothing about the date of the version of the Scriptures which was known to Origen when he wrote (about 228) his earliest commentaries (see Swete, "Intro. to O. T. in Greek", p. 50). It used commonly to be accepted, on the supposed authority of St. Epiphanius (De mens. et pond., xvi), that Symmachus fleshed the text of the Hexapla (211), but the text of Epiphanius is full of the wildest blunders. The Syriac translator who (as was first pointed out by Lagarde), had less corrupt text before
him, reads Verus not Severus, and explains a little later that by this emperor is meant Marcus Aurelius (161–180). All that can be said is that there is nothing improbable about this date. Epiphanius says further that Symmachus was a Samaritan who having quarrelled with his own people went over to Judaism, but all other ancient authorities are unanimous in making him an Ebionite. From the language of manuscripts who speak of Symmachus (Ambrosian, or an extract of the text of Ep. ad Gallat.) Philastrius, Ixxii; St. Augustine, “Contra Faust.” XIX, iv, xii), Symmachus must have been a man of great importance in his sect, if not the founder of a sect within a sect. His version of the Old Testament was largely used by St. Jerome, who twice speaks of two editions of it. As a Christian, he himself aimed at words not at the slavish literalness of Aquila. “Aquila et Symmachus et Theodotio . . . diversum pene opus in codem opere prodiderunt, alio nitentem verbum de verbo exprimere, alio sensum potius sequi, tertia non multum a veteribus dispare.” (St. Jerome, “Prolog. in Euseb. Chronic.”). Harnack, Gesch. der altchristl. Lit. bis Eusebius (3 vols., Leipzig, 1893-1904); Dict. Christ. Biog., s. v. Hezilopus, Symmachus, Powel, Introductory to O. T. in Groridon, (1891); Mercati, L’età di Simmaco l’Interpret e S. Epifanio (Modena, 1892).

Symmachus Version. See Versions of the Bible.

Symphoros, Saint, martyred with her seven sons at Tibur (Tivoli) towards the end of the reign of Emperor Hadrian (117-138). The story of their martyrdom is told in an old Passio, the reliability of which is seriously questioned by many modern hagiologists. According to this Passio, Symphoros was a lady living at Tibur, the widow of the tribune, Getulius, who had previously been martyred by Emperor Hadrian at Gabii, now Torri, a town of the Sabines. When Hadrian had completed his costume, he went to Tibur and began its dedication by offering sacrifices, he received the following response from the gods: “The widow Symphoros and her sons torment us daily by invoking their God. If she and her sons offer sacrifice, we promise to give you all that you ask for.” When all the emperor’s attempts to have Symphoros and her sons to sacrifice to the gods were unsuccessful, he ordered her to be brought to the Temple of Hercules, where, after various tortures, she was thrown into the river (Anio), with a heavy rock fastened to her neck. Her brother Eugenius, who was a member of the council of Tibur, buried her in the outskirts of the city. The emperor then commanded her seven sons and being equally unsuccessful in his attempts to make them sacrifice to the gods, he ordered them to be tied to seven stakes which had been erected for the purpose round the Temple of Hercules. Each of them suffered a different kind of martyrdom. Crescens was pierced through the throat, Julian through the breast, Nemesius through the heart, Primitius was wounded at the navel, Justinus was pierced through the back, Strateus (Statæus, Estæctus) was wounded at the side, and Eugenius was left in two parts from top to bottom. Their bodies were thrown into a deep ditch at a place which the pagan priests afterwards called “Ad septem Biobhantōs.” (The Greek word βιοθάς, or rather βιοθαντός, was employed for self-murderers and, by the pagans, applied to Christians who suffered martyrdom). Hereupon the persecution ceased for one year and six months, during which time the martyrs were kept on the Via Tiburtina, eight or nine miles from Rome.

It is difficult to ascertain how much reliability these Acts possess. The opinion that they were written by Julius Africanus (third century) has been almost universally rejected, since neither Eusebius nor any other historian of that period makes the least allusion to any Acts of Roman or Italian martyrs composed by this African writer. The “Hieronymian Martyrology,” which was compiled by an unknown author in the second half of the fifth century, commemorates St. Symphoros and her sons on 18 July, but here the names of her sons are entirely different from those given in the Acts. One of the manuscripts (codex Bernensis) of this martyrology states that the Acts of Symphoros mention seven of her sons (the “Hieronymian Martyrologium,” edited by De Rossi and Duchene in Acts SS. Novembris II, I, 93). Since here the names of Symphoros’s sons are different from those of the Acts which we possess, there must have existed some other “Gesta” to which the author of the martyrology refers. In the same martyrology, on 27 June, are commemorated seven Christian martyrs, whose names are identical with those which our Acts assign to the sons of Symphoros. It is probable that the author of the Acts, hindered by the tradition that Symphoros had had seven sons who were martyred, made her the mother of the seven martyrs, whom he found mentioned in the martyrology on 27 June. If this is the case, we may infer, provided Symphoros had seven sons at all, that their names were not those mentioned in the Acts. Whether they were those assigned to them in the “Hieronymian Martyrology,” or whether the “Gesta” to which the author of the martyrology refers are authentic. Some hagiologists consider the seven sons of Symphoros, like those of Felicitas (q. v.), a mere adaptation of the seven sons of the Macedonian Mother. In the seventeenth century, Bosio discovered the ruins of a basilica at the place popularly called “le sette fratte” (the seven brothers), on the Via Tiburtina, nine miles from Rome. (Bosio, “Roma, Sotterranea,” 105-9). The Acts and the “Hieronymian Martyrology” agree in designating this spot as the tomb of Symphoros and her sons. Further discoveries, that leave no room for doubt that the basilica was built over their tomb, were made by Calvi. The remains were transferred to the Church of S. Angelo in Pescaria at Rome by Stephen (II) III in 752. A sarcophagus was found here in 1610, bearing the inscription: “Hic requiescunt corpora SS. Martyrum Simforosae, viri sui Zoticii (Getullii) et Filiorum eis a Stephano Papa translati. Turris. Dioecesu 7. Porta honores eis usque ad perpetuan praelium et patriae.” (Butler, Lives of the Saints, 18 July; Acts SS. Jul. IV, 350-9). MICHAEL OTT.

Symphon, Richard, Venerable. See Garlick, Nicholas, Venerable.

Synagogue, the place of assembling the Jews. This article will treat of the name, origin, history, organization, liturgy and building of the synagogue.

I. NAME.—The Greek συναγωγή, whence the Latin synagoga, French synagogue, and English synagogue, means a meeting, an assembly; and is used by the Septuagint to translate the Hebrew בְּנֵי יִשְׂרָאֵל, meeting-house, i.e., οἰκός συναγωγῆς. In the course of time, the single word synagogue came to mean not only the meeting-house but the teaching-house, the teaching thereof and, in the broadest sense, the body politic of the Jews. This broad sense of the word synagogue is seen in John’s use of συναγωγή, “excommunicated” or “put out of the synagogue” (cf. ix, 22; xii, 46; xvi, 2). Another Greek name for synagogue in use among Hellenistic Jews, is συναγώγη, shortened after the analogy of συναγωγή, from oikos
This rabbinical tradition is not reliable. It was probably during the Babylonian captivity that the synagogue became a national feature of Hebrew worship. Affar from their Temple, the exiled Jews gathered into local meeting-houses for public worship. Sacrifice was denied them; prayer in common was not. The longer their exile from the national altar of sacrifice, the greater became their need of houses of prayer; this need was met by an ever-increasing number of synagogues, scattered throughout the land of exile. From Babylonia this national system of synagogue worship was brought to Jerusalem. That the synagogue dates many generations earlier than Apostolic times, is clear from the authority of St. James: "For Moses of old time [καὶ γενέσεως Ἰσραήλ] hath in every city them that preach him in the synagogues, where he is read every sabbath" (Acts, xxv, 21).

III. History.—From the outset of Christianity the synagogue was in full power of its various functions; the New Testament speaks thereof fifty-five times. The word is used to denote the body politic of the Jews twelve times: twice in Matthew (x, 17; xiii, 34); once in Mark (xiii, 9); three times in Luke's Gospel (viii, 41; xii, 11; xxi, 12); and four times in his Acts (vi, 9; ix, 2; xxii, 19; xxvi, 11); and twice in the Johannine writings (Apop., ii, 9; iii, 9). The more restricted meaning of meeting-house occurs forty-three times in the New Testament—seven in Matthew (iv, 23; vi, 2; ix, 35; xii, 9; xii, 54; xxiii, 6); seven times in Mark (i, 21, 23, 29, 39; iii, 1; vi, 2; xii, 39); twice in Luke's Gospel (iv, 15; 16, 20, 28, 33, 38, 44; vi, 6; vii, 5; xi, 43; xiii, 10; xx, 46); and fourteen times in his Acts (ix, 20; xiii, 5, 14, 42; xiv, 1; xv, 21; xvi, 1, 10, 17; xvi, 4, 19, 26; xix, 8); twice in John (vi, 59; xvii, 20); once in James (i, 2). Our Lord taught in the synagogues of Nazareth (Matt., xiii, 54; Mark, vi, 2; Luke, iv, 16), and Capharnaum (Mark, i, 21; Luke, vii, 5; John, vi, 59). Saint Paul preached in the synagogues of Damascus (Acts, ix, 20), Salamina in Cyprus (Acts, xiii, 5), Antioch in Pisidia (Acts, xiii, 14), Iconium (xiv, 1), Lystra and Derbe (xvi, 13), Thessalonica (xvi, 17), Athens (xvii, 17), Corinth (xvii, 4, 7), and Ephesus (xviii, 19). It is worthy of note that despite his frequent use of the Jewish meeting-house, St. Paul in his stern antagonism never once deigns to make mention of the synagogue. He designates them by the term "circumcision", and not, as do the Evangelists, by the word "synagogue". And even in speaking of the Jews as "the circumcision", St. Paul avoids the received word ἱππτερεῖον, "a cutting around", a word employed by the Alexandrian Philo for Judaism and reserved by the Apostle for Christianity. The sworn foe of the "false circumcision" takes a current word ἱππεῖον, "a cutting down", and with the vigourous die of his fancy, stamps thereon an entirely new and exclusively Pauline meaning—the false circumcision of Judaism.

At the time of the destruction of Jerusalem (A. D. 70) there were in the city itself 394 synagogues, according to the Babylonian Talmud (Kebuth, 480), according to the Jerusalem Talmud (Megilla 73d). Besides these synagogues for the Palestinian Jews, each group of Hellenistic Jews in Jerusalem had its own synagogue—the Libertines, the Alexandrians, the Cyrenians, the Cilicians, etc. (Acts, vi, 9). Josephus speaks of the meeting of the synagogue which Agrippa I erected in Doris (Antiq., xix, vi, 9), of the Cerescan synagogue which revolted against Rome (Bell, Jud., ii, xiv, 4), of the great synagogue of Tiberias (Vita, 54), and of the synagogue of Antioch in Syria to which the sacred vessels were borne away in the time of the Seleucid War (Bell Jud., vii, iii, 3). Philo is authority for the existence, during the first century A. D., of many synagogues in Alexandria (Leg. ad Gaium, 20), and of not a few in Rome (Ibid., 23). In Northern Galilee, are numerous ruins whose style of architecture and inscriptions are indications of synagogues as sacred and, probably, the first century A. D. The Franciscans are now engaged in the restoration of the ruined synagogue of Tel Hum, the site of ancient Capharnaum. This beautiful and colossal synagogue was probably the one in which Jesus taught (Luke, vii, 5). Of the ruined synagogues of Galilee, that at Kefir Birrin is the most perfect, and preserved the most ancient inscriptions, recently discovered in Lower Egypt, tell of synagogues built there in the days of the Ptolemies. A marble slab, unearthed in 1902 some twelve miles from Alexandria, reads: "In honour of King Ptolemy and Queen Berenice, his sister and wife, and their children, the Jews (dedicate) this synagogue". Both the Jerusalem and the Babylonian Talmud make mention of numerous Galilean synagogues which were centres of rabbinical literary, and religious and political influence at Sceophoris, Tiberias, Scythopolis, etc. Every Jewish settlement was obliged by Talmudic law to have its synagogue; the members of the community could oblige one another to the building and maintaining thereof; indeed the members of the Jewish community were designated "sons of the synagogue". For further history of the synagogue, see Jews and Judaism.
claims that the Prophets handed down the Torah to the men of the Great Synagogue. "Aboth Rabbi Nathan" (a post-Talmudic treatise) paraphrases this statement by including the last three Prophets in this assemblage: Aggæus, Zacharias and Malachias received [the Torah] from the Prophets; and the men of the Synagogue revere [the Torah of] Aggæus, Zacharias and Malachias.

How long this supposedly authoritative body held control of the religion of Israel, it is impossible to tell. Jewish chronology from the Exile to Alexander's conquest is far clearer. Rabbi Jeremiah (Jerus. Talmud, Berakhot, 4b) said 100,000 elders upheld this body and instituted the prayers and benedictions of Kiddush and habdalah. The Talmud, on the contrary (Pesh. 2, 6), hands down Torah from the Prophets to the Zugoth (Pairs) without the intervention of the Great Synagogue. Be the Great Synagogue of Jewish tradition what it may, historical criticism has ruled it out of court. Ruenen, in his epoch-making monograph "Over die Mannen der groote synagoge" (Amsterdam, 1876), shows that a single meeting came to be looked upon as a permanent institution. The Levites and people met once and only once, probably on the occasion of the covenant observed by Jerome, (11 Kings xix. 17–18), and the important assemblage became the nucleus round which were wrapped the fables of later Jewish tradition. Such is the conclusion of W. R. Smith, "The Old Testament in the Jewish Church," p. 169; Ryle, "Canon of the Old Testament," p. 250; Buhl, "Canon and Text of the Old Testament," p. 326. Driver, "Introduction to the Literature of the Old Testament," 6th ed., p. 7.

IV. ORGANIZATION.—(1) Judicial.—The "sons of the synagogue" were governed by a council called beth din, "house of justice," or συνεδρίαν "council" (Joseph. Ant. i. 29 : Sanhedrin 1, 15). The members of this council were twenty-three in larger towns, seven in smaller; and were called ephoræ, "rulers" (Matt., ix. 18, 23; Luke, vii. 41), or ἡγούμενοι, "ancients" (Luke, vii. 5). The "rulers of the synagogue" had in their power to punish by excommunication, scourging and death. (a) Excommunication, from the root הָקָם, "to set on a seat," i.e., to pronounce, was termed ἁρμόνιον, Ἀρμόνια (see ANATHEMA). Both the Hebrew and Greek words mean that an object is "sacred" or "accursed" (cf. Arabic Ḥarm, the harem, a precinct sacred to the women of a household or the mosque of a community). (b) Scourging (ῥήταινα), Matt., xii. 29: (c) Death (ποιμάνειν, Blass), cf. Matt. xxi. 17; xxiii. 34; ἄρα, cf. Mark, xiii. 9; Acts, xxii. 19) was thirty-nine stripes (Makkoth, iii. 10; II Cor., ii. 24) laid on by the "servant of the synagogue," ἡμιασκός, ἐπερήμη, for minor offences. Three elders made up a tribunal competent to inflict the penalty of scourging. It is likely to this lesser tribunal that Our Lord referred: "Whosoever is angry with his brother shall be in danger of the judgment," ἐν τῷ δικαίῳ ἐστι τῷ ἐκκοινωνία (Matt., v. 22). (c) The death penalty was inflicted by the Sanhedrin in full session of twenty-three elders (cf. Sanhedrin 1, 4). To this penalty or to that of excommunication should probably be referred Our Lord's words: "And whosoever shall say to his brother, Rabaca, shall be in danger of the council," ἐν τῷ δικαίῳ ἐστι τῷ συνεδρίῳ (Matt., v. 22).

(2) Liturgical.—The "ruler of the synagogue," ἄρχοντας (Mark, v. 22, 35, 36, 38; Luke, vii. 49; xii. 29; xxii. 15; xxiv. 5-28: Sota, VII, 7) presided over the synagogue and its services. This presidency did not prevent the "sons of the synagogue" from freely officiating. Witness the freedom with which Our Lord and St. Paul stood up to explain the Scriptures in the various synagogues of Judea and the Diaspora. The ἀπόστολος, "servant," handed the scrolls to the readers and taught the children.

V. LITURGY.—There were five parts in the synagogue service: (1) the Shema' is made up of Deut., vii, 4–9; xi, 13–21; Num., xv, 37–41—two opening blessings for morning and evening, one closing blessing for morning and two for evening. These benedictions are named Shema' from the opening word, the imperative: "Hear, O Israel; Jehovah our God is one Jehovah." The origin of the Shema', as of other portions of Jewish liturgy, is unknown. It seems undoubtedly to be pre-Christian. For it ordains the wearing of the phylacteries or frontlets—prayer-bands borne upon the arm and between the eyes—during recitation of the great commandment of the love of God (cf. Deut., vi, 5; v, 13). These phylacteries (φιλατέρια) are called in the Talmud, "the prayer which is for the hand," דא רח ה' וד', and "the prayer which is for the head," שם אין א' וدليل. The wearing of the two bands was in vogue in Christian times (Matt., xxiii. 5; Josephus, "Antiquit." IV, viii, 13).

(2) The Prayer is called "the eighteenth," שומרי ת'רכין (Šemāneth terakhim), because of its eighteen benedictions and petitions. There are two recensions—the Babylonian, which is commonly in use, and the Palestinian, which Schechter recently discovered in a Cairo genizah (MSS-box). Dalman (Worte Jesu, p. 304) believes that it was used before the destruction of Jerusalem (A. D. 70). The twelfth petition of the Palestinian recension shows that the Christians were mentioned in this daily prayer of the synagogue:

"May the Christians and heretics perish in a moment; May they be blotted out of the book of life; May they not be written with the just." The Babylonian recension omits כָּלַד, Christians.

The Lord's prayer is made up, in like manner, out of petitions and praises, but in a very unlike and un-Jewish spirit of love and fervour. It points to a very solemn division of the law is divided into fifty-four sections, sedárum, which make up a pericope and sabbath reading of the Pentateuch. Special readings are assigned for special sabbaths; seven readers are called upon at random, and each reads his share.

(4) The Prophets.—Parallel to the pericope reading of Torah is a pericope reading from the Prophets, or second part of the Hebrew Canon. These sections are chosen with a view to exemplify or drive home the lesson from the Law which precedes. The name of the section from the Prophets, kaparot (from Hiph'il of כפר, "to discharge," indicates that at first the synagogue service here came to a close.

(5) The Scripture Lesson.—Even by the time of Christ, the exposition of Scripture was part of the synagogue liturgy (Matt., iv. 23; Mark, i. 21; vi. 2). Any of the brethren might be called upon to give the "word of exhortation" (Acts, xiii. 15). The Talmudic statute (Megilla, IV, 4) that was the meliturgeton, interpreter, paraphrase the section from the Torah one verse at a time and the section from the Prophets one to three verses at a time. These paraphrases are called drashot; a lengthy exposition of a section is called a "rash" or "rash el Ḫidr." These sections are usually drawn from one or other of Psalms cv–cvii, cx–cxxix, cxvi–cxxxiv, cxxxi, cxxxvi–cxl.

The precious chantings of verse after verse and the choir repeated the first verse of the psalm. At the end, he chanted the doxology and called upon the people to answer "Amen," which they did.

VI. BUILDING.—(1) Site.—In Palestine, the synagogues were built within the city. In the Diaspora,
SYNAUS

a site was generally chosen outside the city gate and either by the seaside or river-sides (Acts, xvi, 13). The Theosepta (Megilla, IV, 22) ordains that the synagogue be in the highest place of the city and face to the east. The ruins of Galilean synagogues show no observance of this ordinance.

Architecture.—Nothing seems to have been no established style of synagogue architecture. Until recent years, the synagogue has been built in whatsoever style had vogue in the place and at the time of building. The ruined synagogue of Merom is in severe Doric. That of Kafr Bir'im is in a Greek-Roman style. The collection of Corinthian and Ionic columns are quadrangular in form. On the main façade there are three doorways, each of which has a highly ornamented architrave; above the centre doorway is a carefully carved Roman arch. Later on, Russian synagogues were built in decided Russian style. In Strasburg, Munich, Cassel, Hanover, and elsewhere the synagogues show the influence of the different styles of the churches of those cities. The cruciform plan is naturally not followed; the transepts are omitted. Synagogues of Padua, Venice, Livorno and other Italian cities are in the Renaissance style. Since the expulsion of the Moors from Spain, Moorish forms have gradually come to be considered the distinctive trait of synagogue architecture. El Transito and Santa Maria la Blanca, both in Toledo, are two of the finest examples of this Moorish architecture under Jewish influence.

(3) Interior Setting.—The Ark, arnrum lebath, containing the sacred scrolls, stood at the eastern end opposite the entrance to the rectangular building. In the center was a raised platform (θήμα, ναός), and thereupon the lectern (ἰστροδότης, ναός). This elevated platform is also called “Almeam”, a word corrupted from the Arabic Al-minbar, the “chair”, the pulpit. The two most essential furnishings of the interior settings of the synagogue. The Ark was originally but a niche in the wall. In time, as the most dignified feature, it received most concern in the decorative scheme. Nowadays, it is raised on high, approached by three or more steps and covered by an elaborately embellished canopy. The Almeam, too, has undergone various embellishments. It is approached by steps, sometimes has seats, is railed in and at times surrounded by a grille, round about or on both sides of it, are the seats for the congregation (αλτρῶν, ναός). The first seats, πρωταναθέα (cf. Matt., xxii, 6; Mark, xi, 1; Luke, xix, 46) are the seats of the Ark; they are reserved for those who are highest in rank (cf. Theosepta, Megilla, IV, 21). Women, at least since the Middle Ages, sit in galleries to which they enter by stairways from the outside. These galleries were formerly set very high; but now are low enough to show both the Ark and the Almeam.

SYNAUX (SYNAYNAX), a titular see in Phrygia Pacatiana, suffragan of Laodicea. Nothing is known of the history of this city located by Ptolemy (V, ii, 22) in Great Phrygia, and in the sixth century by the Pseudo-Cassius (13), in Phrygia Pacatiana, to the metropolis being Laodicea. It is now Semao (or Simaio), chief town of a caza in the vilayet of Brousse near the springs of Semav Sou, formerly Maceustus; containing 5000 inhabitants all Musulmans. It has a few inscriptions but no ruins. Le Quien (Oriens christianus, I, 133) mentions the following bishops: Arabius, represented by his metropolitan at Chaleedon (451); Pronimus, at Constantinople (553); Stephanus, at Nicaea (787); Constantine at Constantinople (869); Sisinnius and Eusebius, supporters respectively of St. Ignatius and Photius, at the Photian Council of Constantinople (879); Isaac, at the Council of Constantinople (1551), which approved the doctrines of Palamas. To these may be added Theoden, whose name occurs in the Apocryphon (eighth century) “Corp. inser. grece,” 8666; perhaps the Stephanus mentioned in 787. In 1394 the See of Synaux was united to Philadelphia. In the seventh century it was still suffragan of Laodicea; it seems also that at this time it was united to the See of Anouye, mentioned by nostro. In the seventh century it was attached to the metropolitan of Heliopolis and remained so till its disappearance, as appears from the Greek “Notitice episcopatuum”; however, the Roman Curia’s official list of titular sees makes it suffragan of Laodicea.

S. PéTRIèRKS.

SYNAXARION (συναξάριον, collection), the name of a liturgical book of the Byzantine Church. The exact meaning of the name has changed at various times. Its first use was for the index to the Biblical and other lessons to be read in church. In this sense it corresponds to the Latin Capitolare and Comes (see LESSONS IN THE LITURGY). Then the Synaxarion was filled up with the whole text of the pericopes to be read. As far as the Holy Liturgy was concerned this meant that it was replaced by the “Gospel” and “Apostle” books. Synaxarion remained the title for the index to other lessons. Without changing in name it was filled with complete texts of these lessons in the same way. As the lessons in the Byzantine Divine Office are always lives of saints, the Synaxarion became the collection of short lives of saints and accounts of events whose memory is kept (like the lessons of our second nocturn). It is often compared to the Roman Martyrology. The parallel would be more exact, if we imagine the second nocturn lessons arranged together in a separate book. The mere index of such lessons is generally called μυπολόγιον ορταντιον, a book hardly needed or used, since the Typikon supplies all that is wanted. There are a great number of medieval Synaxaria extant in manuscript. They are important for Byzantine heortology and church history. The short lives that form the lessons were composed or collected by various writers. Of these Symeon Metaphrastes (q. v.) is the most important. The accounts are of very varying historical value. Emperor Basil II (976-1025) ordered a revision of the Synaxarion, which forms an important element of the present official edition (Analepta Bollandiana, XIV, 1895, p. 404). The Synaxarion is now not used as a separate book; it is incorporated in the Menia. The so-called “veto” of the saints is read in the Synaxarion, the sixth ode of the Canon. It is printed in its place here, and bears each time the name συναξάριον as title. Synaxarion then in modern use means, not the whole collection, but each separate lesson in the Menia and other books. An example of such a Synaxarion (for St. Martin I, 13 April) will be found in Notitia, op. cit., infra, I, 13. Such calendars extant in the Middle Ages were also called Synaxaria. Krumbacher (“Gesch. der byzantin. Lit.,” 2nd ed., Munich, 1897, pp. 738, 755) describes those composed by Christopher of Myttilene (d. about 1050) and Theodore Prodromus (twelfth century).

SYNAXARION

(συναξάριον)

S. PéTRIèRKS.
**SYNAXIS**

SYNAXIS (συναξία) from συνάξω means gathering, assembly, reunion. It is exactly equivalent to the Latin *collecta* (from *colegire*), and corresponds to synagoge (*συναγωγή*), the place of reunion. In Christian and liturgical use the Synaxis is the assembly for any religious function, either in the abstract sense (summoners for the people assembled (cf. German *Sammlung* and *Versammlung*). The verb *συνάξω* occurs frequently in the New Testament, for gathering together a religious meeting (*At* XI, 26; XIV, 27 etc.), as also for the Jewish services and councils (e.g. John, XI, 47). So also in the Apostolic Fathers (Didache, IV, 4; XIV, 1; Clement, XXXIV, 7; in general for the union of the church, Ignatius, *Magn.* X, 3). We must distinguish the liturgical (eucharistic) from the alliterative Synaxis, which consisted only of prayers, readings, psalms, out of which our Divine Office evolved. Dionysius the Pseudo-Areopagite uses this word only for the eucharistic service ("De eccles. hier.", iii, in P. G., III), and Cardinal Bona thinks that it may have a mystical meaning, as referring to our union with God or Communion (*Rerum liturg.*, I, iii, 31). But it occurs frequently for any religious assembly, and in this sense was adopted in the West by St. Benedict ("Regula* Venerab*.") and by John Cassian (*Collat.* IX, 34: "ad concluding symaxsin") ed. Hurter, Innsbruck, 1887, p. 315) etc. In this significance the word is now archaic in Greek and Latin. It is preserved, however, in the Byzantine Calendar as the title of a certain feast on which the people assemble in some particular church for the Holy Liturgy, and therefore corresponds to the Roman *stato*. Thus 4 January is the "Synaxis of the holy Seventy," the feast of the seventy disciples (Luke, x, 1, where the Vulgate has seventy-two, on which day the assembly was once made in some church at Constantinople) dedicated to them (Nilos, "Kalendarm. manus." I, 2ed ed., Innsbruck, 1896, p. 52); 26 December is the "Synaxis of the Theotokos and of Joseph the spouse and guardian of the Virgin," a feast in memory of the flight into Egypt, on which again the station was at a special church (ibid., 396).

ADRIAN FORTESEU.

**Synecclls** (συνεκκλής, from σύν, with, and ἐκκλής, the Grecized form of the Latin *called*, call). The name with which the early Church was given to those monks or clerics who lived in the same room with their bishops, and whose duty it was to be witnesses to the purity of their lives or to perform the daily spiritual exercises in common with them. In the Eastern Church they soon became the counsellors and confessors of the patriarchs and bishops, and exerted a great influence over them. They held the first place after their masters and had a seat and vote in the councils of the Church. In the course of time the patriarchs took two or more synecclls, the most distinguished of whom was called Protosynecclls (*σωτροσυνεκκλής*). Since the tenth century the influence of the synecclls seems to have diminished, but in the Greek Church they still exist. In the Latin Church they never became so important, though popes and bishops had synecclls as witnesses of their mode of life (Gregory the Great, *Epistolarum libri XIV* IV, xiv). They gradually developed into the consiliarii papales et cardinales (spiritual counsellors).

MICHAEL OTT.

**Syncretism**, George. See George Syncretus.

SYNCRETISM, from συνεργείω (not from συνεργασία).

An explanation is given by Plutarch in a small work on brotherly love ("Opera Moralia", ed. Reiske, VII, 910). He there tells how the Cretans were often engaged in quarrels among themselves, but became immediately reconciled when an external enemy approached. "And that is their so-called Syncretism."

In the sixteenth century the term became known through the "Adagia" of Erasmus, and came into use to designate the coherence of dissenters in spite of their difference of opinions, especially with reference to theological divisions. Later, when the term came to be referred to συνεργείως, it was inaccurately employed to designate the mixture of dissimilar or incompatible things or ideas. This inexact use continues to some extent even to our own day.

(1) Syncretism is sometimes used to designate the fusion of pagan religions. In the East the intermixture of the civilizations of different nations began at a very early period. When the East was hellenized under Alexander the Great and the Diadochi in the fourth century B.C., the Grecian and Oriental civilizations were brought into contact, and a compromise to a large extent effected. The foreign deities were identified with the native (e.g. Serapis = Zeus, Dionysus) and a fusion of the cults succeeded. After the Romans had conquered the Greeks, the victors, as is known, succumbed to the culture of the vanquished, and the ancient Roman religion became completely hellenized. Later the Romans gradually received all the religions of the peoples whom they subdued, so that Rome became the "temple of the whole world". Syncretism reached its culmination in the third century A.D. under the emperors Caracalla, Heliogabalus, and Alexander Severus (211-35). The countless cults of the Roman Empire were regarded as unessential forms of the same thing—a view which doubtless strengthened the tendency towards Monotheism. Heliogabalus even sought to combine Christianity and the cult of his own sun-god. Julia Mamia, the mother of Alexander Severus, attended in Alexandria the lectures of Origen, and Alexander placed in his *lararium* the images of Abraham and Christ.

(2) A modern tendency in the history of religions sees in the Biblical revealed religion a product of syncretism, the fusion of various religious forms unproved. As regards the Old Testament, the Chanaanite myth, the Egyptian, Old Babylonian, and Persian religions are regarded as the sources of Israelitish religion, the latter itself having developed from Fetishism and Animism into Polytheism and Monotheism. It is sought to explain the origin of Christianity from the fusion and development of Jewish ideas and the infux of Brahmanistic, Buddhist, Greco-Roman, and Egyptian religious notions, and from the Stoic and Philonic philosophy; it is held to have received its development and explanation especially from the Pra-Platonic philosophy. That Judaism and Christianity agree with other religions in many of their external forms and ideas, is true; many religious ideas are common to all mankind. The points of agreement between the Babylonian religions and the Jewish faith, which provoked a lively discussion some years ago after the appearance of Friedrich Delitzsch's "Babel und Bibel", may be explained in so far as they exist (e.g.) as due to an original revelation, of which traces, albeit tainted with Polytheism, appear among the Babylonians. In many cases the agreement can be shown to be merely in form, in content; in other it is doubtful whether the religious concept of the Babylonians and which borrowed. As to the special doctrines of the Bible, search has been vainly made for sources from which they might have been derived. Catholic theology holds firmly to revelation and to the foundation of Christianity by Jesus of Nazareth.

The Syncretism has been given to the theological quarrel provoked by the efforts of Georg Calixt and his supporters to secure a basis on which
the Lutherans could make overtures to the Catholic and the Reformed Churches. It lasted from 1640 to 1668. Calixt, a professor in Helmstedt, had through his travels in England, Holland, Italy, and France, through his acquaintance with the different Churches and their adherents, through his study, acquired a more friendly attitude towards the different religious bodies than was then usual among the majority of Lutheran theologians. While the latter firmly adhered to the “pure doctrine”, Calixt was not disposed to regard doctrine as the one thing necessary in order to be a Christian, while in doctrine itself he saw nothing but something of secondary importance. Consequently, he advocated unity between those who were in agreement concerning the fundamental minimum, with liberty as to all less fundamental points. In regard to Catholicism, he was prepared (as Melanchthon once was) to reconcile to the pope a princely human in origin, and he also admitted that the Mass might be called a sacrifice. On the side of Calixt stood the theological faculties of Helmstedt, Rinteln, and Königsberg; opposed to him were those of Leipzig, Jena, Strasburg, Giessen, Marburg, and Greifswald. His chief opponent was Abra- ham Calov, the Elector of Saxony was for political reasons an opponent of the Reformed Church, because the other two secular electors (Palatine and Brandenburg) were “reformed”, and were getting more and more the advantage of him. In 1649 he sent to the three dukes of Brunswick, who maintained Helmstedt as their common university, a communication in which he voices all the objections of his Lutheran professors, and claims that Calixt wished to extract the elements of truth from all religions, fuse all into an entirely new religion, and so provoke a violent schism. In 1650 Calov was called to Wittenberg as professor, and he signalled his entrance into official life with a vehement attack on the Syncretists in Helmstedt. An outburst of polemical writings followed. In 1650 the dukes of Brunswick answered the Elector of Saxony that the discord should not be allowed to increase, and proposed a meeting of the political councilors. Saxony, however, did not favour this suggestion. An attempt to convene a meeting of theologians was not more successful. The theologians of Wittenberg and Leipzig now elaborated a new formula, in which ninety-eight heresies of the Helmstedt theologians were condemned. This formula (compiled in 1655) was signed by everyone who wished to remain in the Lutheran Church. Outside Wittenberg and Leipzig, however, it was not accepted, and Calixt’s death in 1656 was followed by five years of almost undisturbed peace.

The strife was renewed in Hesse-Cassel, where Landgrave Wilhelm VI sought to effect a union between his Lutheran and Reformed subjects, or at least to lessen their mutual hatred. In 1661 he had a colloquy held in Cassel between the Lutheran theologians of the University of Rinteln and the Reformed theologians of the University of Marburg. Enraged at the action of the Syncretists in Calixt, the Elector of Wittenberg theologians in vehement terms called on the Rinteln professors to make their submission, whereupon the latter answered with a detailed defence. Another long series of polemical treatises followed. In Brandenburg-Prussia the Great Elector (Frederick William I) forbade (1663) preachers to speak of the disputes between the Evangelical bodies. A long preaching in Berlin (Sept., 1662–May, 1663) led only to fresh discord. In 1664 the elector repeated his command that preachers of both parties should abstain from mutual abuse, and should attribute to the other party no doctrine which was not actually held by such party. But this produced no effect. His intention to observe this regulation, was deprived of his position (e.g., Paul Gerhardt, writer of religious songs). This arrangement was later modified, in that the forms were withdrawn, and action was taken only against those who disturbed the peace. The attempts of the Wittenberg theologians to declare Calixt and his school un-Lutheran and heretical were now met by Calixt’s son, Friedrich Ulrich Calixt. The latter defended the theology of his father, but also tried to show that his doctrine did not differ from that of his opponents. Wittenberg found its new champion in Agiudius Strach, who attacked Calixt with all the resources of learning, polemics, sophistry, wit, cynicism, and abuse. The Helmstedt side was defended by the celebrated scholar and man of letters Michael Herrmann, who now recognized the danger that the attempt to carry through the “Consensus” as a formula of belief might lead to a fresh schism in the Lutheran Church, and might thus render its position difficult in the face of the Catholics. The proposals of Calov and his party to continue the refutation and to compel the Brunswick theologians to bind themselves under obligation to the old Lutheran confession, were therefore not carried into effect. On the contrary the Saxo theologians were forbidden to continue the strife in writing. Negotiations for peace then resulted, Duke Ernst the Younger of Saxony was for political reasons an opponent of the Reformed Church, because the other two secular electors (Palatine and Brandenburg) were “reformed”, and were getting more and more the advantage of him. In 1675 Calov then renewed hostilities. Besides Calixt, his attack was now directed particularly against the moderate John Museus of Jena. Calov succeeded in having the whole University of Jena (and after a long resistance Museus himself) compelled to resign. But this did not end the strife. The elector renewed his prohibition against polemical writings. Calov seemed to give way, since in 1683 he asked whether, in the view of the danger which France then constituted for Germany, a Calixtine Syncretism with “Papists” and the Reformed were still condemnable, and whether in deference to the Elector of Brandenburg and the dukes of Brunswick, the strife should not be buried by an amnesty, or whether, on the contrary, the war against Syncretism should be continued. He later returned to his attack on the Syncretists, but died in 1686, and with his death the strife came to an end. The real cause of the strife was that it lessened religious hatred and promoted mutual forbearance. Catholicism was thus benefited, as it came to be better understood and appreciated by Protestants. In Protestant theology it prepared the way for the sentimental theology of Pietism as the successor of fossilized orthodoxy.

KLEMENS LÖFFLER.

Synderosis, or more correctly syncretism, is a term used by the Scholastic theologians to signify the habitual knowledge of the universal practical principles of moral action. The reasoning process in the field of speculative science presupposes certain fundamental axioms on which all science rests. Since the principles for the most part cannot both be and not be at the same time, and self-evident truths like “the whole is greater than its parts”, these are the first principles of the specula-
tive intellect. In the field of moral conduct there are similar first principles of action, such as: "evil must be avoided, good done"; "Do not to others what you do not wish to be done to yourself"; "Parents should be honoured"; "We should live temperately and act justly". Such as these are self-evident truths in the field of moral conduct which any sensible man admits and understands. According to the Scholastics, the readiness with which such moral truths are apprehended by the practical intellect is due to the natural habit impressed on the cognitive faculty which they call synderosis. While conscience is a dictate of the practical reason deciding whether a moral action which the contemplative mind judges is right or wrong, synderosis is a dictate of the same practical reason which has for its object the first general principles of moral action.

T. SLATER.

Syndic, Apostolic.—A layman who in the name, and by the authority, of the Holy See assumes the care and civil administration of the temporalities and in particular the pecuniary alms destined for the support and benefit of Franciscan convents, and thence proceeds to the requirements of the orders of the Friars Minor corporate as well as individual ownership was forbidden by the constitution or the rule. During the first years of the order's existence, the literal observance of this precept, being feasible as well as possible, presented no difficulty; but as time went on, and the order developed as a vast organization, and spread over the whole world, countless difficulties had to be faced and fierce controversy arose, the quesito de paupertate lasting for centuries. To preserve and safeguard as far as possible the letter as well as the spirit of the complete "expropriation" advocated by St. Francis, the order had almost adopted the expropriation to themselves the ownership of all goods bestowed upon the friars. Thus the friars were legally regarded as mere users, the right of property being vested in the Roman pontiff, except in cases where the donors made explicit reservation in their own behalf. But as the civil administration of property in one's own interest is an act of ownership, and this was prohibited by the rule, such administration had to be exercised by a steward appointed, or at least authorized, by the Holy See.

According to the Decretal of Nicolás III, "Exitit qui seminat" (art. 12, n. 2), 14 August, 1279, the appointment of the syndics or syndicate rested with the sovereign pontiff or the cardinal protector,—sometimes bishops acted as their delegates in this matter; but Martin IV ("Exultantes", 18 January, 1283) empowered the superiors of the order—the general, the provincial, and the custodes—in their respective spheres of jurisdiction, to appoint and remove syndics as circumstances might require. The larger powers with which the syndic was invested by Martin IV and by his successors, Martin V ("Constitutiones Martiniani" in Wadding, "Annales", X, 301) and Paul IV ("Ex Clementi", 1 July, 1555), gave rise to the appointment of the syndics in opposition to syndicus communis. This latter, as constituted by Nicholas III ("Exitit") and Clement V ("Exivi de Paradiso", 6 May, 1312), could deal only with movable property (valuables excepted) and with purchase moneys. The Martian syndic on the other hand, as trustee and agent of the Holy See on behalf of the friars, might receive and dispose of all goods movable and immovable (money offerings, legacies, and renumeration) and, in pursuance of his trust, institute proceedings in the courts and take such other steps as might be deemed necessary to protect the interests of the order. In contrast with the Apostolic syndic his wife and children were accorded the enjoyment of all and sundry indulgences, pardons, and privileges which the friars themselves have obtained, or shall obtain, from the Holy See (Clement VII, "Dum Consideramus", 18 April, 1526), Bullarium Franciscanum (Rome, 1759-1908), passim; wearing, Annals, passim; Saint Bonaventure, Opera Omnia, VIII (Rome, 1822-1905), passim; Sacrorum Conciliorum, 1585, n. v. Syndicus; Marchant, Recluso Theol. de Institutions at Usu Synodicalis sec. Regulam PP. Min. (Antwerp, 1648), passim; and the decisions of the Rule (art. 44) including the following: if sometimes et alii, Hilarius de Parisius, Regula PP. Minorum (Paris, 1770); Brezzi, De Societatis Ordinis Canonici (London, 1899), 433-70; Holzfeffer, Annals Hist. Ord. PP. Minorum (Freiburg, 1909).

GREGORY CLEARY.

Syndicalism.—The term Syndicalism has been derived from the French syndicats, associations of workmen united and organized for the purpose of furthering the common economic interests. Syndicalism should therefore be synonymous with Industrial or Trade Unionism; but like "Socialism" the word has come to be used almost exclusively in a restricted sense and implies the principles expressed in theory and practice by French syndicates united in the Confédération Générale du Travail (General Confederation of Labour). Three influences have combined in the formation of this new system: revolutionary unionism, Anarchism, and Socialism. The theories of Proudhon together with those of Marx and Bakunine are here combined in the syndicalist agitation which has received the name of "direct action". There has been no scientific or purposeful adaptation of the various doctrines. The mere cooperation in the same syndicats by followers of these often most antagonistic leaders has gradually brought about an agreement upon fundamental principles of revolutionary action to which all could subscribe, while free divergence of opinion might still find its individual expression outside the Syndicalist movement. While Syndicalism has but recently forced itself into popular notice, it is not new in its doctrines, as Bakunine and other " Syndicalists" such as "national" of Paepe, Marx, and Bakounine. When this was finally swept away during the revolutionary period of 1870-71, the present syndicats were gradually constructed, and after countless vicissitudes the Socialist and Anarchistic elements were at last consolidated in the Confédération Générale du Travail.

The primary object of revolutionary Syndicalism is common to the various groups of which it is composed and consists in the destruction of the existing order of society, the expropriation and abolition of capital, and the elimination of the entire system of wages. Its chief method of attack is the use of strike tactics, while, like Socialism and Anarchism, it seems in patriotism one of its worst enemies. The State is to be violently combated even when it enacts measures beneficial to the labourer, since all reforms are said to be deceptive unless forced from it by the syndicalist workers themselves. There are but two divisions of mankind, the employers and the employed, and anything which can foment bitterness and disagreement between these two is a triumph for the worker. All this is pure Marxian doctrine. The method by which revolutionary Syndicalism would bring about its purpose is, i.e., the absolute rejection of all intermediary influences between the worker and his intended revolution. It disregards politics and parliamentary activity, repudiates intellectualism, and refuses to employ any agency except that of the workingman alone. Although direct action does not in itself imply violence, yet the employment of physical force is considered inescapable from its successful application. The particular form in which direct action is to find its adequate expression is the general strike. Each strike now takes on the nature of a skirmish preceding the great battle and becomes a battle in itself as far as its success or failure. It calls for the support of the entire working class, and the more severe the conflict the greater the class-consciousness that is developed.
The culmination of these minor conflicts is to be the great battle which is proposed as the immediate object of Syndicalism, the general strike. This idea had already been clearly formulated by the “International Syndicalist League” in France, and was adopted by the entire country and so render it helpless. The business and industrial sections of the cities will thus fall into the possession of the syndicats, who are at present to be prepared by education and class morality to take instant and successful control of all productive enterprises. The strike itself is to be brief, but intense. Two special theories are connected with the general strike. They are known as the minority and the myth theories. The syndicalists are only a small proportion of the French workingmen and without financial resources to sustain a prolonged strike. To answer the difficulties which this condition naturally suggests it is taught that their lack of resources will beget a spirit of recklessness, while their revolutionary education will infuse enthusiasm into the comrades, whose leaders they are destined to become. Thus the “conscious” or “bold” minority will suffice for the victorious second rank. The second theory is more properly Sorel’s “Réflexions sur la violence.” Myths are defined by him as “artificial combinations invented to give the appearance of reality to hopes that inspire men in their present activity.” Such a myth, he says, was for the early Christians the second coming of Christ and the Kingdom of Heaven; such for the syndicalist revolutionaries is the myth of the general strike which has no objective reality in the present.

We have hitherto advisedly spoken of “revolutionary” Syndicalism, since there is likewise a “reformist” element in the Syndicalist movement, or as it is more appropriately called, a “reformist revolutionary” group. It consists of a certain portion of the socialist following, whose ultimate object is identical with that of their comrades, the general strike and the social revolution; but who are opposed to the practice of violence, as inexpedient, and for the same reasons exercise no further pressure on governments. Sorel, dealing with other critical questions, such as patriotism and militarism. They believe likewise in securing a safe financial status for the syndicats and in fighting for present reforms. These reforms, however, are to be understood in a purely Socialist and Syndicalist sense. Nothing else is to weaken the syndicalist class and prepare for its destruction is to be accounted of any value; while no concession that can ever be gained is to be considered final. It is difficult to ascertain the exact strength of this reformist element. Although it is in nowise inconsiderable, yet the Confédération Générale du Travail has hitherto failed to exclusively revolutionary colours. The ultimate aim of Syndicalism, as far as this can be ascertained, is the establishment of an “economic federalism” in which the Bourses du Travail, or Labour Exchanges, which are affiliated with the Confédération Générale du Travail, are meant to play an important role. The units of society are to be the syndicats united in the trade federations, which in turn are to be centralized in the general confederation. The supreme thought of the present is, however, the general strike, and the syndicats united for this purpose are known as the syndicats rouges in distinction to the syndicats vertes, who are opposed to Syndicalism and favour the strike only as an extreme measure.

The term Syndicalism has not as yet been officially applied to any labour association in the United States; nevertheless the movement itself exists in the organiza-

sation of the “Industrial Workers of the World” and is likewise widely agitated under the form of industrial unionism by leading American socialists. In England a strong Syndicalist movement has sprung up since 1910, in which year the first number of his “Industrial Syndicalist.” While radical Socialists have been obliged to construct a new labour union in the United States, their fellows in England have striven to develop the existing unions in the direction of solidarity and “direct action.”

Synedrium. See Sanhedrin.

Synestes of Cyrene, Bishop of Ptolemais, neo-Platonist, date of birth uncertain; d. about 414. He was a younger son of an ancient family of Cyrene, claimed descent of the Heracleidae, the mythical founders of the city. Synesius pursued his higher studies at Alexandria, where he became a devoted disciple of the famous Hypatia, to whom several of his letters are addressed and for whom he entertained a lifelong devotion. First professor of literature in the army he settled in his native land, “studying philosophy, mathematics, astronomy, everything; farming, hunting, having many a brush with hordes of pillering Libyans; and every now and then uplifting the cause of some one who had undeservedly fallen into difficulties.” This kind of life, in every way suited to his tastes and disposition, was interrupted by a mission to Constantinople, the object of which was to present a gold crown to the new emperor, Arcadius, and obtain alleviation of the burden of taxation. Nearly three years he waited for an audience. The all-powerful Eutropius who sold the provinces to the highest bidder was not the man to allow the emperor to be troubled with complaints. Finally, Synesius obtained an audience and delivered his famous oration “On Kingship.” He left Constantinople in 400. According to some authorities before, and according to others in the meantime. In later part of his life, Synesius visited Athens. He has described the visit to two letters [54 and 135] to his brother, Eutopius. His reason for undertaking the voyage was, he jestingly said, that “a number of people, priests and private persons, had had revelations in dreams that, unless he did so, some great evil would befall him.” Then he would escape the present evils and would no longer have to receive people who had been to Athens and regarded themselves as demigods, and those who had not as demidonkeys or mules.” Athens was a disappointment. Like a beast that had been sacrificed, only the hide remained. At Alexandria, Synesius married a Christian by whom he had several children. During this period he did most of his literary work and carried on a large correspondence with his friends. Owing to the incapacity and cowardice of the military authorities, the desultory raids of the barbarians assumed almost the proportions of regular tactics. Synesius took a leading part in organizing defensive measures, levying volunteers, procuring arms, etc.

In 409 Synesius was elected Metropolitan of Ptolemais. The bishop-elect unboomed himself in a letter [Ep. cv] to Eutopius. The duties of a bishop were ungenial to him, fond as he was of his literary amusements as well as of his studies in the philosophy of the Stoics.
"Philosophy is opposed to the opinions of the vulgar. I certainly shall not admit that the soul is posterior to the body . . . that the world and all its parts shall perish together. The resurrection . . . I consider something else besides. I have not resolved . . . by the ideas of the multitude". He could keep silence but not "pretend to hold opinions which he did not hold". Theophilus, he said, must know everything and decide. Seven months elapsed between the writing of this letter and Synesius's consecration. That Synesius should yield was hardly surprising. His dogmatic perceptions were not keen enough to make him realize the falseness of his position as a bishop. Theophilus, the persecutor of the Originens, is the difficulty. Perhaps, like many masterful men, he could put the telescope to his blind eye and refuse to see what he did not wish to see. Perhaps the petitions in Synesius's letter were not his last word with regard to doctrinal questions. Baronis held that Synesius defamed himself to escape the episcopate, and this was also the opinion of Jeremy Taylor, "for all this Theophilus, Bishop of Alexandria, consecrated him, as knowing all this to be but stratagem and the arts of an odd fantastic humility" [Ducet dubitantium, iii, 2]. The "fantastic humility" solution of the problem has found very few supporters. As a bishop, Synesius devoted himself to the multifaceted duties of this office, without, however, concealing how uncongenial the business of bishops was to him. He warned and then excommunicated a blood-thirsty governor, denouncing the Eunomians, superintending the elections of bishops, etc. His latter days were embittered by the death of his three sons and the ruin of his country by the barbarians. His last letter was to Hilarius. He had been to him, "a mother, a sister, and a teacher". In his last hymn he recommends himself to Christ. It is a prayer that "his sins may be forgiven and that he may behold the glory of the Saviour!

The following are his writings: "De Providentia", first composed while in Constantinople, second part after return to Cyrene; a political pamphlet in which Gainas and Aurelian figure as Typhon and Osiris; "De regno", in which an ideal Roman emperor is presented in an oration, delivered before Arcadius; "De dono astrolabii", a treatise accompanying the gift of the planetarium of Constantinople. The following were written between 400 and 409: the "Cynogetics" (not extant), a treatise on the breeding of dogs; "De insomniis", a curious treatise on dreams. Divination, according to Synesius, following Plotinus, was possible because of the unity of nature. All points of the universe are sympathetically connected, and in the light of this there are indications of other things. "Dion", a vindication of his manner of life against stern asceticism; "Calviti Encomium", a facetious eulogy on baldness by a man who suffered from that complaint. The following belong to 409–14: two fragments of homilies; "Constitutio sive erogatio Anyth- a"; "Amorini" a gem who had been successful against the barbarians; "Catastasis", describing the ruin of Pentapolis. There are one hundred and fifty-five epistles and ten hymns written at different periods of his life, the latter valuable because of the light which they throw on his religious and philosophical views, the former, the most precious of his writings, because of the light they throw on the writer's personality, and the picture which they give of the age in which he lived.

The only complete edition of Synesius's writings is that published by Systaurus (Paris, 1612); the fourth edition (1624) of the Sixtus Kanthakon, published the De regno, De providentia, Calviti Encomium, and De providentia, with German translations and the additional a poem, Synesii opera omnia, Orations and homilies fragments (Landau, 1830). This volume contains the greater works but not the hymns or epistles. A synopsis of the Hymns was brought out by Bouliol,

Boul. Syllae postorbit. grc. XV (Paris, 1842); by Christ and

Pardimans in Anthologiae graecae carminum christianorum (Lep- zig, 1871). There is a French translation of the Epistles by Apay (Paris, 1870), very useful but not always trustworthy.

The religious views of the church of Synesius may be seen also Holstenius, Dissertation de Synesio et Fuga Episcopatus, which will be found in Readings edition of Synesius and Tho- mae, S. Cam. (Cambridge, 1790). Holstenius's work is a source of Baronis.

F. J. BACCHUS.

Synnada, titular metropolis in Phrygia Salutaris. Synnada is said to have been founded by Acamas who went to Phrygia after the Trojan war and took some Macdonald colonists. The consul Marcius Vulso passed through that city on his expeditions against the Galatians. It was situated in the south-eastern part of Eastern Phrygia, or, perhaps, more accurately, because it extended to the foot of the mountains of Pisidia. After having belonged to the kingdom of the Attali, it became the capital of a district of the province of Asia, except for two occasions during the last century of the Republic when it was temporarily attached to Cilicia. Under these two regimes Synnada was the centre of an important curia juricis, or judicial centre; it was to preside at this assembly that Ciceron stopped at Synnada on his way from Ephesus to Cilicia and on his return. Although small, the city was celebrated throughout Asia Minor for the richness of the churches which came from the quarters of the surrounding district of Dacimun. Under Diocletian at the time of the creation of Phrygia Pacatiana, Synnada, at the intersection of two great roads, became the metropolis. On its coins, which disappear after the reign of Gal- lienus, its inhabitants call themselves Dorian and Ionians. To-day it is the city of Schifou Kassab, situated five hours south of Afion Kara Hisar, vilayet of Broussa.

Christianity is introduced at an early date into Synnada. The "Martirologium Hieronymianum" mentions several of its martyrs. For St. Tropimous, honoured by the Latin and Greek Churches on 19 Sept., see "Acta SS.", VI Sept., 9 sq. A reliquary in the form of a sarcophagus containing some of the bones of this martyr has been discovered at Schifou Kassab and transported to the museum at Broussa; this sarcophagus once contained the body of Synesius; in the third century [see Mendl in "Bulletin de Correspondance Hellénique", XXXIII (1909), 342 sq.]. Eusebius (Hist. Eccl., VI, 19) speaks of its pious bishop Atticus who entrusted to the layman Theodore the duty of instructing the Christians. About 230–5 a council on the question of "bishopers" held there (Euseb. Hist. Eccl. VII, 7). St. Agapetus, mentioned in the Roman Martyrology on 24 March as Bishop of Synnada, belonged to Synnus. For a list of other bishops see Le Quen, "Oriens chrest.", I, 327. Mention must be made of Procopius (321); Cyriacus, friend of St. John Chrysostom; Theodorus and his competitor Agapetus, at first a Macdonald heretic; Severus (351); Marinianus (448–51), Theogenes (356); Severus (553); St. Paulus, during the reign of Maurice, honoured by the Greek Church on 13 May; Cosmas, 680; John, adversary of the Iconoclasts in the time of Patriarch Sym- nas; St. Michael, honoured by the Latin and Greek churches 23 May, died 23 May, 826, in exile for his zeal in defending the worship of images; Peter under Photius; John under Photius; Pantaleon under Leo the Wise; Leo under Basil II; Nicetas in 1082; and Conon at the Council of Sutri, 1084. If one can believe the apocryphal Acts of this council, which perhaps never occurred. The last Bishop of Synnada spoken of in the documents, without mentioning his name, probably lived under John Cantacuzenus (see "Cantacuz. Hist.", III, 73) and probably never lived at Synnada on account of the
Turkish conquest. Several years after (1355) the see was committed to the Metropolitan of Philadelphia. In conclusion may be mentioned St. Constantine, a converted Jew of Synnads, who lived in the city, became a hermit, he became a monk, and is honored by the Greek Church 26 December.

S. PETRIDES.

Synod (Gr. συνόδος, an assembly), a general term for ecclesiastical gatherings under hierarchical authority, for the discussion and decision of matters relating to faith, morals, or discipline. It corresponds to the Latin word concilium. The word synodus appears probably for the first time in the so-called Apostolic canons, while the word concilium was employed in the same meaning by Tertullian more than a century earlier. Synod and council are, therefore, synonymous terms. When the bishops of the whole world are congregated under the presidency of the pope, they are the council of the whole church, a term synodical, or general. It is only to such an assembly that it is lawful to apply the term sancta synodus (see Councils, General). If the bishops of an ecclesiastical province meet under the headship of their metropolitan, the council is termed provincial. When the hierarchs of all or several of a nation assemble, a council is called national, or, under certain circumstances, plenary. The regulations governing provincial and plenary councils are practically the same. In addition to those mentioned, there are other synods that are more difficult of classification, as synods of the East or the West, the council of the East in 1566, and the mixed councils of ecclesiastical and secular dignitaries who assembled together to make regulations for both spiritual and civil matters.

Different from all other councils is the diocesan synod. Other councils are assemblies of bishops who have a definitive vote in the matters under consideration, but in a diocesan synod there is only one voter and only one lawgiver, the bishop of the diocese. This article deals mainly with diocesan synods. In his book “De Synodo Diocesana” (lib. 1, c. 1) Benedict XIV thus defines a diocesan synod: “A lawful assembly, convoked by the bishop, of the priests and clerics of his diocese, and all other who are bound to attend it, for the purpose of doing and deliberating concerning what belongs to the pastoral care.” The Council of Trent (Sess. XXIV, c. ii., “De ref.”) requires that a diocesan synod be held once a year. This law is still in force, but a mild interpretation, introduced by custom, has been tacitly sanctioned by the Holy See. Usually, the date for holding the synod should be announced on the Feast of the Epiphany. A month before the opening the decree of convocation should be affixed to the cathedral doors, and it should be sustained on the successive Sundays in parish churches. When two dioceses are united under one bishop, the synod should be celebrated alternately in the cathedral of each such diocese. It belongs to the bishop to convocate the diocesan synod whether he be consecrated as yet or not. An archbishop, however, who has not yet received the pallium, has not the same right. Vicars-general can assemble a synod only in virtue of a special mandate of the bishop. When a diocese is vacant, the vicar capitular can and should hold a diocesan synod. If a year has elapsed since the celebration of the last one, the synod is to be convoked, and shall take place after the episcopal visitation of the diocese, as the bishop can then be better guided in forming his statutes.

When, however, the visitation has been neglected for years, it is considered more advisable to hold the synod first. As the bishop is the only law-giver at a synod, it belongs to him to draw up the various decrees which he may wish to promulgate at its sessions. While he convokes the synod by his own authority and is not required to consult his chapter concerning the location or its preparatory acts, yet he must ask the counsel of his chapter, or consultors as to the decrees he desires to enact, though he is not bound to follow their advice. The bishop is exorted, in the formation of his decrees, to hold private conferences with the prudent, learned, and pious clerics of his diocese, and then to consult his chapter concerning the proposed statutes. (See C. C. 26 Nov., 1689). Only in this way does the bishop deliberate with the clergy of his diocese at a synod, and though the finished decrees will receive all their authority from him, yet it is consonant with the mind of the Church that, in the formation of the statutes, the opinion of the clergy be heard and considered. Summonses to a diocesan synod should be given to the vicar-general, the members of the cathedral chapter, holders of benefices, and all others who have care of souls. If there is a custom to that effect, all the clergy of the diocese may be summoned. Regulars who have no right of attendance are not however, obliged to attend, unless they personally act as parish priests or curates. The bishop has power to punish with censures all those legitimately summoned who fail to attend. Laymen may also be invited by the bishop to be present at a synod; if there is a custom to that effect, or, when such circumstances can they acquire a right to such summons.

At the synod the decrees determined on by the bishop are promulgated, and a period of two months is allowed for having recourse against them to the bishop or the Holy See. All the clergy and laity of the diocese are bound by these decrees, and the bishop is bound by the decree for the administrative removal of parish priests. By the same papal Constitution, parochial consultants, who are to be assessors in case of recourse against a decree of removal, are also to be chosen by the synod from among the parish priests. Synodal witnesses are likewise chosen at some synods, whose main duty it is to help in the framing of deliberative questions or to report at the following synod what has been the effect of the decrees promulgated at the last assembly, or to suggest new ones. Synodal judges are also to be chosen, though they are rarely now employed. Their function is to expedite such cases as must be decided within the diocese, and to their judgment outside Rome by the Holy See. These judges should be at least four in number in every diocese, and their names must be forwarded to Rome as soon as selected. The subject-matter of the decrees framed at a diocesan synod is the common preservation of faith or discipline. Under no circumstances may such a synod define any new article of faith or decide any doctrinal point in dispute between Catholic theologians or frame statutes contrary to the common canon law of the Church.

Synods in general use are called Councils, General. The best work on diocesan synods is that of Benedict XIV, De Synodo Diocesana. Butz treats of these synods in his Conciliorum, II (3rd ed., Paris, 1889) 8th. Pare, Loc. Canonic, II (Rome, 1891) s. v. Concilium, art. 3; In Taunton, History of the Church (London, 1855-), ed. Clarke (Edinburgh, 1871—), and new French translation by Leclercq (Paris, 1907—).

W. H. W. Fanning.
SYNODAL 389 SYNOPSIS

SYNOADS, NATIONAL.——According to the recent canon law, national councils are the deliberating assemblies at which all the bishops of a nation are convened by the patriarch or primate (Cf. Bened. XIV, "De Synodo", I, i); but, in order to include the ancient national synods, it would be more correct to say a legitimate assemblage of the episcopate of a nation, the decisions of which are valid for an entire national Church. For the classic definition is far from being applicable to all the ancient national councils, as it is difficult to apply to all recognized ecumenical councils the present classic definition and conditions for such councils.

Councils are commonly divided into general or ecumenical, or particular; the latter are subdivided into national and provincial, according as they assemble the bishops of a whole nation or of an ecclesiastical province. Finally come the assemblies of the clergy of a diocese, which are called diocesan synods rather than councils. But writers point out that this classification is not and cannot be very exact. For instance, to what category belongs the Council of Arles of 314, at which Constantine in agreement with the pope convened all the bishops, or at least a representation, of the whole episcopate of his empire at that time? So also, with most of the national councils the assemblies of African bishops, it may be objected that Africa did not form a distinct nation in the Roman Empire. On the other hand, there have been councils which, while they did not assemble all the bishops of a nation, may nevertheless be regarded as real national synods; such were the reform assemblies held at the command of Charlemagne in 814 simultaneously at Arles, Reims, Mainz, Tours, and Châlons. Moreover, if in order to be national a council must be presided over by a patriarch or primate, we must remove from the list of national councils all the episcopal councils of the Visigothic Kingdom and Empire, for they were convened at the command of kings and emperors, and the Frankish Church never had any patriarchal or primate see whose bishop was qualified to convene or preside over the entire national episcopate. Besides the term "national" was not very widespread in ancient times, it being the custom to speak rather of "universal" or "plenary" councils as in Africa or Spain, but this word was not used as synonymous with ecumenical. It meant plenary for all the provinces of Roman Africa or for the whole Visigothic Kingdom, in the sense that the plenary assemblies of Carthage or Timothean were meetings of the episcopate of the United States.

This being understood, the canonical prescriptions regarding national councils are the same, proportionately speaking, as for general and provincial councils. To be legitimate their convocation must proceed from the authority having competent jurisdiction over the national church, either patriarch or primate (provided that these titles be not merely honorary). In default of this authority the convocation should proceed from the Holy See, as was done for the recent national convocation held below. This convocation was not competent that the "national council" of Paris of 1811 was not legitimate. To this convocation corresponds on the part of the bishops the obligation to appear in person at the assembly unless they have a legitimate reason. But representation of the episcopate will suffice, as was the case in Africa, according to canon ix of the Plenary Council of Milevis in 402. The presidency rightfully belongs to the delegates of the Holy See, if there are any; if not, to the patriarch or primate, or to the oldest metropolitan, as was the custom in the Frankish kingdom. A national council may discuss the ecclesiastical or mixed matters which have been the cause of the meeting; the decisions adopted become a law for the entire nation, but like those of provincial councils, and with much more reason, they must first be submitted to the approval of the Holy See.

No historical or canonical interest of any importance determines which of the ancient councils held at Antioch, Alexandria, and Constantinople may be classed as national councils. Obviously, the presence and authority of the patriarchs of the various churches rendered the meetings very easy. On several occasions the patriarchs of Constantinople convened the whole episcopate of the Byzantine Empire. But these councils have left no very distinct traces in the Greek canonical collections, whereas those of the Nestorian Church of the Persian Empire consist chiefly of the canons held at Seleucia (Cf. "Synodicon Orientalis", ed. Chatot, 1903). In the West also there was an important series of national councils, the most noteworthy being the assemblies of the episcopate of Christian Africa under the presidency of the Bishop of Carthage, especially the twenty-one plenary councils held during the episcopate of Aurelius (393-427), which form almost the entire canonical collection of Africa. In like manner the Spanish canonical collection is chiefly composed of the canons of the seventeen national councils which the episcopate of the Visigothic Kingdom held, nearly all at Toledo, most in regard to which it is not clear whether the Frankish councils consisted wholly of bishops, the kings and nobles of the kingdom assisted at those of Toledo, without, however, otherwise interfering in matters properly religious. The same was true of the Frankish national councils, where the episcopal assemblies were, as it were, duplicated by an assembly of nobles; occasionally, as at Mainz in 813, there was a third group, composed of abbots and monks. The list opens with three national councils which assembled the episcopate of the three kingdoms into which Gaul was divided at the beginning of the fifth century: a council of Mâcon (536) for the Visigothic Kingdom, of Paris (511), for the Kingdom of the Franks; Epson (517), for that of the Burgundians. Most of the Frankish councils held under the Merovingsians and Carlovingians assembled the episcopate of one, sometimes of several kingdoms. The king often assisted thereat and the conciliar decisions bearing on discipline were the subject of royal ordinances or capitularies. These double assemblies of bishops and comites (counts) were the usual method in the Frankish kingdoms, and Thomasin rightly regards them as the historical origin of parliaments. The acts of these meetings have not been gathered into a complete Canon of Frankish councils.

In recent centuries Catholic national councils have been resumed in the East and the West at the instance of the popes and under the presidency of their legates. Without going into details, the most noteworthy of these were: the provincial or national councils of Mount Lebanon, for the Maronites, in 1736, confirmed by Benedict XIV; those of 1803 and 1871 for the Albanians; those of Zamosk 1720 and 1891 for the Ruthenians; that of 1841 for the Melchites; that of Sciarua in the Lebanon (1888) for the Syrians; that of Cairo in 1898 for the Copts; that of Rome in 1911 for the Armenians; that of Palermo of 1844 to 1845; that of Baltimore (1852, 1866, 1884), and the plenary rather than national council of Latin America in 1899.

Synods, Mixed. See Councils, General, subtitle II.

Synoptics, the name given since Griesbach's time (about 1790) to the first three canonical Gospels. It is derived from the fact that they consist of histories differently from the evangelical narrative of St. John,—of being arranged and harmonized by section by section, so as to allow the eye to realize at a glance
SYNOPTICS

The numerous passages which are common to them, and also the portions which are peculiar either to only two, or even to only one, of them.

1. Differences and Resemblances.—Turning over the pages of an ordinary harmony of the four, or of a synopsis of the first three Gospels, which show in parallel columns the coincident parts of the evangelistic narratives, the reader will at once notice the large amount of matter which is common to the Gospels of St. Matthew, St. Mark, and St. Luke. Brief as these three sketches of Christ's life actually are, they run parallel to one another in no less than 330-370 verses or about one-third of their whole account of Christ's works while with him, with the omission of the incidents (68 verses), the whole contents of St. Mark are practically found in St. Matthew and in St. Luke. This agreement in the facts related appears all the more striking, because of the great amount of historical material which must have been at the disposal of each Synoptical writer. The Synoptists are, each and all, fully aware that Jesus healed vast numbers of various diseases; they nevertheless agree in selecting the same cases of healing for fuller record; and while they distinctly speak of His unceasing and extensive teaching, yet they usually concur in reporting the same matters more closely than can be observed between the first three Gospels with regard to the general conception and the order of the whole narrative. In all three, Christ's public life is distinctly connected with the preaching of St. John the Baptist, is chiefly confined to Galilee, and is set forth in certain epochs, as the early Galilean ministry, the crisis in Galilee, the ministry in Peræa and Jerusalem, and the tragic end in the Holy City followed by a glorious Resurrection. In constructing their several records, the Synoptists adopt the same general method of presentation, giving not a consecutive narration, but a result from many employed, but a series of little accounts which are isolated by peculiar introductory and concluding formula, and which repeatedly agree in details and in order even where a deviation from the chronological sequence is manifest. Together with all these resemblances, there is throughout the Synoptics a remarkable agreement in words and phrases, which can be more particularly realized by means of a Greek harmony or a close translation of the original text. This verbal agreement in the Greek Gospels is all the more surprising, as Jesus spoke in Aramaic, and as in most cases the same subject matter is referred to the same form of expression. Numerous differences are due to the common use of very peculiar terms and expressions, of identical variations from either the Hebrew or the Septuagint in quotations from the Old Testament.

The interconnexion of the Synoptics is not, however, simply one of close resemblance, it is also one of striking difference. When compared attentively, the three records appear distinct as well as similar in incidents, plan, and language. Each Synoptical writer introduces into his narrative fragments more or less extracted from the entire evangelic narratives of the other two Evangelists. St. Mark says nothing of the infancy and the early life of Christ, while St. Matthew and St. Luke, who speak of them, do not as a rule narrate the same facts. St. Mark does not even allude to the Sermon on the Mount, and St. Luke, when he does in detail, does so directly from Galilee to Jerusalem. On the other hand, Matt.Ix., 6, xii., 16, xvi., 45—vi., 26, record a series of Galilean incidents which are nowhere found in the third Gospel. Despite his obvious conciseness, St. Mark has two miracles and two parables wholly peculiar to himself. St. Matthew, who applies himself to the realization of the matter at hand, does not aim at brevity, and hence no reference to the Ascension. Moreover, in the very passages which indicate a close relation of the three, or at least two, Synoptics, in their sources, minor differences in the events recorded continually appear, which can be fully realized only through a diligent study of the parallel passages, or through the perusal of larger commentaries in which such constant differences are distinctly pointed out. At times the divergences are so great as to appear, at first, actual contradictions. Of this description are the differences noticeable between the genealogies of Jesus (Matt., i., 1—17; Luke, iii., 23—38), the accounts of the episode of the demoniac of Gerasa (Matt., viii., 25—34; Mark, v., 1—20; Luke, viii., 26—39), of the miraculous healing connected with Jericho (Matt., xx., 29—34; Mark, x., 46—52; Luke, xviii., 25—34), the reception of Jesus by James and John (Matt., xx., 20—28; Mark, x., 35—45), of the incidents relative to the Resurrection, etc. The general disposition of the events narrated betrays also considerable differences. Thus while St. Matthew devotes three successive chapters to the Sermon on the Mount (v—vii) and gives together the parables of the kingdom in one chapter (xiiii), St. Luke divides this twofold topic into several portions which he connects with distinct circumstances. It is well known too, that St. Matthew very often gathers together topics which are similar, while St. Mark and St. Luke follow a more chronological order, whenever it arise numerous transpositions which affect the general arrangement of the narrative.

Numerous variations can likewise be noticed in the particular arrangement of facts and words, for the elements of the one and the same episode often occupy a different place in one or other of the Synoptics, or either Evangelist suppresses or adds a detail which modifies the incident. Finally, the verbal differences between the first three Gospels are hardly less numerous and striking than their verbal resemblances. Each Synoptist has his peculiar and favourite words and expressions, which have been employed by recent Biblical scholars (Hawkins, "Horae synopticae"; Allen, on St. Matthew; Swete, on St. Mark; Plummer, on St. Luke). The verbal differences appear in the very passages which abound in verbal coincidences (cf. for instance, Matt., xviii., 2, 3; Mark, ix., 47, 48), the identity of expression never extending through passages of any length, and needless in reported discourses of Christ rarely beyond a few words at a time. This is often due to the use of synonymous terms, or of different tenses, or of different propositions, or of short glosses which either Synoptist deems an essential part of his own or is left out in the other. For instance, in Matt., ix., 6, βιος, in Mark, ii., 11, και ραββαίνεισ, in Luke, v., 24, εἰθησόσ; in Matt., iii., 16, "Spirit of God"; in Mark, i., 10, "Spirit"; in Luke, iii., 22, "the Holy Ghost"; etc. And what is of particular significance in this connexion, is the fact that the verbal differences occur when one should most naturally expect an absolute identity of expressions, as for instance, in the words of the institution of the Holy Eucharist, in the record of the title on the Cross, etc.

II. The Synoptic Problem.—These resemblances and differences, the extent and complexity of which grow upon the student who compares carefully the Synoptic Gospels and contrasts them with St. John's narrative, constitute a unique phenomenon in ancient and modern literature. They are facts which no one can refer either to mere chance, or to the direct influence of the one upon the other. The differences are too numerous and too striking to be regarded as explicable on the hypothesis that the first three Evangelists wrote independently of one another. On the other hand, the differences are at times so significant as to imply that they are due to the use of different documents on the one hand, or to the same in the case of the two genealogies of Jesus Christ. The harmony and the variety, the resemblances and the differences must be both accounted.
for. They form together a literary problem,—the Synoptic Problem, as it is called,—the existence of which was practically unknown to the ancient ecclesiastical writers. In point of fact, St. Chrysostom and St. Augustine are the only Fathers who have formed any connection with the Synoptic Gospels, and the writers of the Middle Ages do not seem to have taken into account these patristic views which, after all, were far from affording a complete solution of that difficult question. Subsequent leading scholars, such as Grotius, Rich, Simon, Le Clerc, have little more than a suspicion of the problem, and it is only in the course of the eighteenth century that the scientific examination of the question was actually started.

Ever since the last quarter of that century, the discussion of the origin of the mutual relationship between the first three Gospels has been carried on with great ardour and ingenuity especially in Germany. As might well be expected, the supposition that these Gospels are so like one another because their respective authors made use of each other's writings was first tried, and in settling the order, that in which the Synoptic Gospels stand in their present form, as fresh investigations brought new facts to light, new forms of hypothesis sought to satisfy the facts, with the gradual result that the domain of possibility well-nigh appears to have been measured out. Numerous and conflicting as the successive attempts at solution have been, their aggregate shows that a certain progress has been made in the discussion of the Synoptic Problem. The many relations of the question have come into clearer light, and the data for its solution have been revealing themselves while mere a priori views or unsound inferences have been discarded.

III. Solutions of the Synoptic Problem.—All attempts at assigning the cause of the resemblances and differences of the first three Gospels admit of being classified under three general heads, according as the relationship of the Synoptics has been explained by appealing to: A, oral tradition; B, mutual dependence; or C, earlier documents.

A. Oral Dependence.—The hypothesis of oral tradition implies that before our Gospels arose there were no written records of Christ's ministry, or at least none which was used by the Synoptists. It asserts that these Evangelists have drawn from narratives and sayings of Jesus which eye-witnesses of His public life handed on by word of mouth, and which gradually assumed a greater or less degree of fixity with constant repetition. According to this theory, the resemblances between the first three Gospels can be easily accounted for. The sections common to all are explained by a cycle of teaching probably formed in Jerusalem, actually made up of incidents and discourses connected with Christ's life from the baptism of John to the Ascension (cf. Acts, i, 21, 22), and faithfully preserved with regard to order and language by the trained retentiveness of Eastern memories.

In support of this theory the differences of the Synoptics are easily explained. Sections are found only in two, or one, of the Gospels because the bond established between the narratives was at times modified to suit the various circles of the hearers, and other differences in order or wording are due either to previous variations in oral tradition or to the personal initiative of the several Evangelists who fixed it in writing. This theory of an oral Gospel, handed on everywhere in very similar form, was enunciated by Herder, and chiefly elaborated by Gieseler and A. Wright. With differences in detail, it has been admitted by many conservative scholars (Schegg, Haneberg, Friedlieb, Kaulen, Cornely, Knabebauer, Meignan, Fillion, Fouard, Le Camus, Felten), and by many Protestant scholars (Credner, Guericke, De Wette, Ebrard, Lange, Hase, Wetzel, Thompson, Westcott, Godet, etc.). It undoubtedly points to a vera causa in the spread of the Gospel, and cannot be wholly left out of account in an endeavour to explain the origin of our written records of Christ's life. One of its claims to acceptance is that it supplies the only supposition that any of the Evangelists made wholesale use of Gospels of written records composed by others, and nevertheless did not reproduce them with greater fidelity. Appeal is also made in favour of this theory, to its simplicity, and to its aptness to account for the resemblances and the differences exhibited by the Synoptics.

By itself, however, the hypothesis of oral tradition can hardly be considered as an adequate solution of the Synoptical problem. First, it does not satisfactorily explain the selection of the material included in the first three Gospels. Oral tradition had undoubtedly preserved much more than the Synoptics record, and of this the Evangelists themselves were fully aware (Matt., xi, 21; xxiii, 37; Luke, x, 13; John, xxii, 25, etc.); whence then does it come that the framework of the Synoptic narrative is practically the same in all the first three Gospels, that it consists very largely of the same order and arrangement of the various courses, and gives no account of Jesus' ministry in Jerusalem, that is, of His ministry in the very place where the oral tradition is generally supposed to have been formed?

Secondly, the hypothesis of oral tradition does not account for the general identity of order noticeable in the Synoptics. The order of St. Mark is, as it seems, the fundamental order, and it can hardly be said to have been known simply as an oral tradition to St. Matthew and St. Luke, else the sequence of its sections, when additions were made by these two Evangelists, would not have remained as it has. Again and again, the thread of the common order is resumed at the point at which it had been left. On the supposition of a written source to which St. Matthew and St. Luke had recourse, this is natural enough. But if they depended on memory, the natural effect of the working of the laws of association, would be that when some fresh incident or some part of Christ's teaching was recalled, the old order would be disturbed more or less extensively than we notice it to be.

Thirdly, the verbal relationship between the Greek Gospels is not satisfactorily explained on the hypothesis of oral tradition. This oral tradition was primitively in Aramaic, and the coincidences in the Greek with regard to rare words, irregular arrangement of the sentence, etc., cannot be explained by supposing that our Gospels are independent translations of one and the same Aramaic oral tradition. It is true that in order to account for these coincidences in the Greek, the early formation of an oral Greek tradition which would more or less be the counterpart of the Aramaic one, and which would have been directly utilized by our Evangelists, has been postulated by the Synoptics. But it remains very doubtful whether such oral Greek tradition would really explain the coincidences in question; and it is quite certain that it would not satisfactorily account for the variations in Greek wording of such important passages as the words of the institution of the Holy Eucharist, of the Lord's Prayer, of the Beatitudes, of the title on the Cross, etc.

 Lastly, there are historical proofs of the existence of written documents at the time when our Synoptics were written (cf. Matt., xxiv, 15, 16; Mark, xiii, 14; Luke, i, 1), and the most natural supposition is that our Evangelists availed themselves of the phenomena disclosed by the attentive study of the first three Gospels render the supposition so probable, not to say necessary, that several advocates of the hypothesis of oral tradition (Eckermann, Fillion, Le
Camus, etc.), have been led to admit a limited use of written helps by the Synoptists.

B. Mutual Dependence.—The hypothesis of mutual dependence assumes that the authors of the Synoptic Gospels used each other's writings, each summary the author of the other, in accordance with certain arrangements, so that the second Evangelist (in the order of time) borrowed from the first, and the third from both first and second. According to it, the passages which are alike reproduced those of earlier writings; those which are divergent come from the personal memory of the author, or from document or tradition. This, it is said, is the most natural, as it is the oldest, manner of explaining the resemblances and differences of the first three Gospels. It is the most natural, inasmuch as if three other writers exhibited such a close resemblance in their works as the Synoptists do, it would readily occur to the reader's mind that they are not independent of each other. It is the oldest also, for it goes back to St. Augustine who formulated it in a general way in his "De consensus evangelistarum" (I, ii, 4), and who in describing the order of succession of the Synoptics, naturally followed the one embodied in the evidence of St. Luke, Mark, Luke. This order of succession has been accepted by many scholars, Catholic (Hug, Danko, Reithmayr, Patrizi, De Valroger, Wallon, Schanz, Coleridge, Baezues) and Protestant (Miller, Wetstein, Bengel, Credner, Hilgenfeld, etc.). But every other possible order of arrangement has found, in general data which in accordance with the views concerning the priority and order of sequence of the Synoptics. The order: Matthew, Luke, Mark, was advanced by Griesbach and has been adopted by De Wette, Bleek, Maier, Langen, Grimm, Pasquier. The arrangement: Mark, Matthew, Luke, with various modifications as to their internal evidence, is admitted by Ritschl, Reuss, Meyer, Wilke, Simons, Holtzmann, Weiss, Batiffol, Weissacker, etc. It is often designated under the name of the "Mark hypothesis" although in the eyes of most of its defenders, it is no longer a hypothesis, meaning thereby that it is an established fact. Besides these principal orders, others (Mark, Luke, Matthew; Luke, Matthew, Mark; Luke, Mark, Matthew) have been proposed, and more recent combinations (such as those advocated by Calmet, Zahn, Belser, and Bonaccorsi) have also been suggested. As regards the hypothesis of Evangelists borrowing from each other, the evidence of the Gospels, suffice it to say that it should not be really connected with the hypothesis of mutual dependence, inasmuch as its contention as to the origin of the canonical Gospels has nothing to do with the literal process of composition propounded by that hypothesis to explain the relationship of the Synoptics.

By itself alone, the theory of mutual dependence cannot be regarded as a full solution of the Synoptic Problem. Whichever order be adopted, there are always narratives where one of the Evangelists—and times, St. Mark himself,—is more complete than the one which claims his source and consequently is independent of him, so that in all such cases appeal must needs be made either to oral tradition or to non-canonical writings. Again, in any form of the theory, the differences in form of narration, especially where one reader seems irreconcilable with the other, and the differences in arrangement, where the temporal sequence is very close, remain unaccounted for. Obviously, there is little need to criticize all the forms of this hypothesis by bringing forward special instances of the general objections just mentioned. These forms of it, however, which have found most able and numerous advocates, may briefly be considered. Against the form which asserts that St. Mark made use of St. Matthew, and St. Luke made use of both, it may more particularly be urged: (1) that St. Mark bears in the Greek too manifest a stamp of originality that he should be regarded simply as the work of an abbreviator of St. Matthew; (2) that the use of both St. Matthew and St. Mark by St. Luke, even though we should suppose it to be a fact, is insufficient for explaining by itself alone the presence in our Third Gospel of an independent genealogy of Christ, the inser- tions by St. Luke of the anonymous record of Jesus's birth and infancy, his scattering of many of Christ's sayings grouped by St. Matthew in the Sermon on the Mount, his detailed account of the Pe- remain journey which is absent from both St. Matthew and St. Mark, etc.

The arrangement advocated by Griesbach, to wit, that St. Luke made use of St. Matthew and St. Mark utilized both, is likewise open to weighty objections. Plainly, the supposition that St. Mark followed and epitomized the other two Synoptics renders it more difficult to account for the freshness and power of his narrative; and in point of fact, it clearly appears that if a direct dependence is to be admitted at all, it is time and again not on the side of St. Mark's rugged style and shorter account of the Galilean ministry, but on the side of the smoother form and larger framework of St. Matthew and St. Luke. Again, the dependence of St. Mark on St. Matthew has unaccounted for the additions, transpositions, etc., already referred to. Finally, the following are the principal difficulties urged against the "Mark hypothesis". Its supposition that St. Mark is prior to the other two Evangelists, goes against the tradition of the St. Matthew (the Aramaic) as written first, and St. Mark's narrative as originating independently of any written Gospel. Again, the assumed priority of St. Mark to St. Matthew and St. Luke makes it hard to imagine on what principle the later two Evangelists partitioned between themselves practically all the content of St. Mark's writing. It is also urged that in the "Mark hypothesis" neither the simple dependence of St. Matthew on St. Mark alone, nor that of St. Luke on both St. Matthew and St. Mark can account for all the phenomena (additions, inversions, verbal changes, etc.), which are disclosed by an attentive study of the Synoptics.

C. Earlier Documents.—The documentary hypothesis is the prevalent theory among non-Catholics. Its general principle of solution of the Synoptic Problem is that in the composition of their writings, the first Evangelists have made use of earlier written material. The application of this general principle has given rise to a great number of suppositions, the principal of which may be briefly considered. Since Eichhorn (close of the eighteenth century), and especially since Resch (close of the nineteenth), attempts have been made to get behind our Greek Gospels to one or more Semitic documents used in them, and thus to account for the relationship of the Synoptics. This written source, the primitive contents and wording of which might still be detected, was Hebrew according to Resch and Abbott, Aramaic according to Kino, Hoffmann, and Hoffmann. In any case, it is the words and clauses in our Gospels is accounted for by the different translations given to the Aramaic or Hebrew words. It is undoubted that the recent advocates of the hypothesis of a Semitic source have displayed great learning and ingenuity in pointing out the Semitic expressions which might underlie the divers readings noticeable in parallel passages of the Synoptics. It is undoubted, too, that the general background of the Gospels is Semitic in thought and forms of expression, and even that Semitic documents (for instance, Christ's genealogies) have been used by their authors.

By itself alone, however, the theory of a Semitic source does not appear a satisfactory solution of the Synoptic Problem. It is not certain that the whole Semitic background of the Synoptics had assumed a written shape before it was utilized by the Evangel-
SYNOPTICS

The two main forms of the Synoptic Gospels, which are the "Two Document theory", according to which two large works form the main sources of the Synoptics. One work like our Gospel of St. Mark, if not identical with it, is the source of the narratives common to the first three Gospels, and the other, containing the Sayings of Jesus, is the source of the didactic matter common to St. Matthew and St. Luke. Modified in various ways, this solution of the Synoptic problem has had, and has yet, numerous advocates chiefly among Protestant scholars. In the eyes of all such critics, the theory of only two main written sources is especially commended for its simplicity and plausibility. The contents of the Synoptics comprise two classes of parallel sections: the one consists of narratives of actions and events found in all three Gospels; the other consisting of Christ's teaching appears only in St. Matthew and St. Luke. Now, as in the selection of material, the arrangement, and the language of sections parallel in all three, St. Matthew constantly agrees with St. Mark against St. Luke, and St. Luke with St. Mark against St. Matthew, but St. Matthew and St. Luke scarcely ever agree against St. Mark, the simplest supposition is that St. Matthew and St. Luke made independent use of St. Mark as we have it, or of a Gospel like it (Ur-Marcus). The freshness and power of St. Mark's narrative go also to prove its priority to that of the other Evangelists; so that the point of both Gospels is common to the first three Gospels. The great bulk of the additional matter found only in St. Matthew and St. Luke consists mainly of the words and discourses of Jesus, and although it is very differently given as to historic connexion and grouping, yet it is perhaps the knowledge of which by the Synoptists is still more questionable.

A more plausible form of the documentary hypothesis goes back in substance to Schleiermacher (1817). It maintains that, at an early period, many evangelical fragments, Greek as well as Aramaic, were scattered throughout the Churches,—traditions floating about of which written accounts had been made. These three Synoptists worked in their Gospels, together with materials which each had himself collected; and in this manner the coincidences and the differences of the Synoptics may be accounted for. This theory of a plurality of primitive documents,—what may be termed the "logia" theory,—is admitted by many scholars (Renan, Wrede, Schmiedel, Loisy, etc.). This form of the documentary hypothesis does not necessarily go against the inspired character of the Synoptic Gospels. The actual use of certain primitive documents, notably by St. Matthew and St. Luke, may also be readily granted. But tradition ascribes to St. Mark's Gospel a very different origin from the one supposed by this theory, and a careful study of the contents and the style of that Gospel has recently convinced several prominent scholars that the work is not a compilation from written sources. Again, it is not proved that because St. Matthew and St. Luke employed written documents, they exclusively confined themselves to the use of such sources. In their day, oral tradition was certainly much alive. At that time, the difference between oral tradition and a document written down in many cases was that it had been long stereotyped by frequent repetition. And it is not a safe position to deny the use of this tradition by St. Luke, in particular, that is, by a writer who would naturally utilize every source of information at his disposal. Finally, a constant appeal to new documents, essential, exact, and of which, cannot, many a time, be ascertained, gives to this theory no air of artificiality which recommends it little as an exact description of the actual manner in which the Synoptic Gospels were composed.

The last general form of the documentary hypothesis which remains to be examined is the "Two Document theory", according to which two large works form the main sources of the Synoptics. One work like our Gospel of St. Mark, if not identical with it, is the source of the narratives common to the first three Gospels, and the other, containing the Sayings of Jesus, is the source of the didactic matter common to St. Matthew and St. Luke. Modified in various ways, this solution of the Synoptic problem has had, and has yet, numerous advocates chiefly among Protestant scholars. In the eyes of all such critics, the theory of only two main written sources is especially commended for its simplicity and plausibility. The contents of the Synoptics comprise two classes of parallel sections: the one consists of narratives of actions and events found in all three Gospels; the other consisting of Christ's teaching appears only in St. Matthew and St. Luke. Now, as in the selection of material, the arrangement, and the language of sections parallel in all three, St. Matthew constantly agrees with St. Mark against St. Luke, and St. Luke with St. Mark against St. Matthew, but St. Matthew and St. Luke scarcely ever agree against St. Mark, the simplest supposition is that St. Matthew and St. Luke made independent use of St. Mark as we have it, or of a Gospel like it (Ur-Marcus). The freshness and power of St. Mark's narrative go also to prove its priority to that of the other Evangelists; so that the point of the material common to the first three Gospels. The great bulk of the additional matter found only in St. Matthew and St. Luke consists mainly of the words and discourses of Jesus, and although it is very differently given as to historic connexion and grouping, yet it is perhaps the knowledge of which by the Synoptists is still more questionable.

The "Two Document theory" is also claimed to explain the peculiar phenomenon of "doublets" in St. Matthew and St. Luke. Finally, it is said to be supported by tradition rightly interpreted. Papias, speaking of books about Christ written by St. Matthew and St. Mark, says: "Mark, being the interpreter of Peter, wrote carefully, though not in order, as he remembered them, the things spoken and done by Christ". "Matthew wrote the Logia in the Hebrew language, and every one translated them as he was able to." These traditions are, it is said, like the sources used by the Synoptists; and all the Logia are contended for by them as the fountains of evangelical written tradition. One can be distinctly named; it is practically our second Gospel. The other, according to Harnack, Wellhausen, Stanton, can still be reconstructed; it is a record of Logia chiefly embodied in our first Gospel (Ur-Mattheus) and also utilized by St. Luke.

The "Two Document theory" is advocated by many prominent critics (H. Holtzmann, B. Weiss, Wendt, Wernle, Soltau, Jülicher, Hawkins, etc.). Yet, is is not an adequate solution of the Synoptic problem. It leaves its defenders hopelessly divided on points of considerable importance, such as the compiliatory character of St. Mark's Gospel; the extent and exact nature of the Logian document (Q) utilized by our first and third Evangelists; the manner of its use by St. Matthew and St. Luke, respectively; the question whether it was used by St. Mark also; the number of the sources employed by St. Matthew and St. Luke; and Q, and St. Mark; etc. A greater difficulty sometimes urged against this theory, regards the priority of St. Mark, which its advocates treat as a point altogether settled. Tradition has it that St. Matthew's Gospel existed in a Semitic form before it was rendered into Greek, that is before it assumed the very extended form now available for a comparison, with St. Mark's narrative. Hence, it is claimed that St. Matthew's dependence in the Greek on our second Gospel is one arising from the fact that its Greek translation was made with the aid of our second Gospel, and leaving intact the priority of the earlier form of St. Matthew's Gospel to the composition of St. Mark's writing. Among other difficulties against the "Two Document theory" may be mentioned: (1) its inherent tendency to appeal to subsidiary written sources, the extent and nature of which cannot be determined; (2) its general disregard of the influence of oral tradition in the composition of the Synoptics; (3) its common, but very improbable, denial of St. Luke's dependence on both St. Matthew and St. Luke.

From the foregoing rapid survey of the attempts at solving the Synoptic Problem, it is plain that none of them has been entirely satisfactory. The historical information concerning the origin of our first three Gospels, incomplete; and every theory, one-sided. The satisfactory hypothesis, yet to be formulated, must be a combination hypothesis gathering and uniting, in due proportions, all the truths presented by the various opinions, and also a more thorough theory taking fully into account both
the data of Patristic tradition and those disclosed by literary analysis. Such theory, when framed, will undoubtedly supply the fullest vindication of the historical value of our Synoptic records.

The SYNONYM QUESTION in the BIBLICAL COMMUNITY.—The only decree thus far enacted by the Biblical Commission, which has a bearing on the Synoptic question, was issued 19 June, 1911. Its direct object is to affirm the traditional authorship, date of composition, and historical character of St. Matthew’s Gospel. Accordingly, it declares that the authors of the Gospels in the New Testament, including St. Matthew, who wrote before the other Evangelists and considerably before the destruction of Jerusalem, in the language of the Palestinian Jews for whom he composed his work. It authoritatively affirms that the original work of St. Matthew was not a mere collection of the sayings and deeds of Christ, but a Gospel substantially identical with our present Greek Gospel according to St. Matthew. It finally proclaims the historical character of our first Gospel and the genuineness of some of its portions (the first two chapters; dogmatic passages concerning the primacy of Peter, the baptism of Christ, and the passion and resurrection) as not questioned by modern critics. Hence it is plain that by this decree the Biblical Commission did not intend to deal with the Synoptic problem, to set forth an explanation of the resemblances and differences disclosed by a comparison of our first three Gospels. Yet this particular bearing on the theories of mutual dependence and earlier documents put forth as solutions of the Synoptic question. In deciding the priority of St. Matthew’s Gospel in its original language and substance, to the other evangelical narratives, the Biblical Commission has solemnly rejected any form of the theory which maintains that St. Matthew’s original work was not a complete Gospel or the first Gospel in the order of time. In fact those Catholic scholars who admit either of these theories regard our Greek Gospel according to St. Matthew as a work which goes back in its primitive Aramaic form to the Apostle of that name, and restrict its dependence on St. Mark to its extant Greek translation.

The (names of Catholic authors are marked with an asterisk.) Synoptists: Synoptica Synoptica, Sylloge Synoptica (London, 1880); Baur and HERDER, Synoptica (London, 1893); HUECK, Synopse (Tübingen, 1910); CAMERON* and COPPERFORD, Evangelia (London, 1910).

Introduction to N. T.—CONELLY (Paris, 1897); BURKE (Boston, 1897); GOEBEL (Neuss, 1904); BELLER* (Freiburg, 1905); GUTTENBERG* (Freiburg, 1906); JULIEN (Tübingen, 1906); ZAHN (tr. Edinburgh, 1909); BROMSE (tr. New York, 1911).

Works on the Synoptic Problem.—CALMAR, Comment* sur le tabernacle des anciens (Paris, 1899); WERNER, Die synoptische Frage (Freiburg, 1909); BONACCORSI, I tre primi evangelii e le critiche letterarie ove la questione sinottica (Monza, 1904); WILAMOWITZ, Einleitung in die drei ersten Evangelien (Berlin, 1905); WEINE, Die Quellen der synoptischen Übereinanderlieferung (Leipzig, 1908); NICOLAROT, Les procédés de rédaction des trois premiers évangélistes (Paris, 1908); HAWKINS, Homé synoptique (Oxford, 1909); BONKAMP*, Zur Evangelien Frage (Münster, 1909); HARRISON, The Sayings of Jesus (New York, 1908); IDEM, The Date of the Acts of the Apostles (New York, 1911); STANTON, The Synoptic Gospels as Historical Documents, II (Cambridge, 1909); CAMERON* and COPPERFORD*, Synoptica (Bruges, 1910); BURKITT, The Earliest Form of the New Life of Christ (New York, 1911); DAY, Oxford Studies in the Synoptic Problem (Oxford, 1911); PAPE, La théorie synoptique (Tours, 1911).

For a sound of the Biblical Commission see Acta Apostolica Sedis (Rome, 1911).

FRANCIS E. GIOTTO.

SYNTAGMA CANONUM, a canonical collection made in 1335 by Blastares, a Greek monk about whose life nothing certain is known. The collector aimed at reducing canon law to a handle and more accessible form than it appeared in the Nomocanon of Photius, and his compilation is an impressive presentation of the epitomes and synopses of the earlier writers, with St. Stephen (fifth century), Aristenus (1160), Arsenius (1255), etc. The author arranged his material in alphabetical order. He made 24 general divisions, each marked off by a letter of the Greek alphabet.

These sections he subdivided into 303 titles, themselves distinguished by letters; for example, the third section contains such topics as: πρό τού γάμου (about marriage), πρό τού γυναίκα (about women), etc. The titles ordinated by the Ecumenical Councils, as well as ecclesiastical law. Some titles however are purely ecclesiastical, others purely civil. The Church ordinances are quoted from previous collections, especially from the Nomocanon (883), while the extracts from the civil law are for the most part transcribed without any reference to their origin. The compilation soon came into general use. St. Blase preserved its authority even under Turkish rule. A translation into Servian followed close upon its first publication. It even worked its way into the political life of the Servian people through an abridgment which King Douchan appended to his code of laws (1599). From this the purity of ecclesiastical elements were excluded, but the civil law contained in the sixteenth century the Syntagmata was reproduced whenever adaptable to the social condition of the people. In the sixteenth century the Synagymata was translated into Bulgarian; in the seventeenth century into Russian.

SYNONYM, Middlesex, England, founded in 1415 by King Henry V at his manor of Ileworth. The "Monastery of St. Saviour and St. Bridget of Syon" was the only one in England belonging to the modified order of St. Augustine, as reformed by St. Bridget (see Buoridina), and comprised thirteen priors, four deacons, and eight lay brethren, besides sixty nuns. The property extended for half a mile along the bank of the Thames, near Twickenham; and the chief duty of the community was to pray for the souls of the royal founder and his near relatives and for all the faithful departed. Martin V confirmed the foundation in 1416, and the novice professed in 1420. Six years later the Regent (John, Duke of Bedford) laid the first stone of the chapel; endowments and benefactions rapidly flowed in, and towards the close of the century and a quarter which elapsed between its foundation and publication, the annual income of the monastery was estimated at £1730, equal in modern money to 100,000 dollars. The good observance of Syon was maintained to the last; and even Layton and Bedell, Henry VIII's servile commissioners, could find little or nothing to bring against the community. The Priories were nevertheless expelled in 1539, and the buildings seized by Henry, who imprisoned his fifth wife, Katherine Howard, in them for some months. The nuns retired to a house of their order in Flanders, but in 1557, on the accession of Queen Mary, they returned to Syon, and the greater part of their property was restored to them. At the queen's death, however, they were once more exiled, and after various wanderings in France and Spain settled in Lisbon, where they still own property. The Lisbon community returned to England in 1681, settling at Spetstisbury, Dorsetshire (transferred to Chudleigh, Devon, in 1887). The Ileworth monastery was granted by James I to the ninth Earl of Northumberland, whose descendants still hold it. The present mansion is mostly the work of Inigo Jones, the ancient mulberry-trees in the garden being, it is said, the sole relic of the conventual domain.

D. O. HUNTER-BLAIR.
Syra, Diocese of (Syrenus) a Latin diocese, suffragan of Naxos, comprising the Island of Syra of the Cyclades in the Aegean Sea. The island has an area of about thirty-one square miles and 32,000 inhabitants; it was first called Syris and also Syros, and appears to have been inhabited by the Phenicians. It was the country of the swineherd Eu- nuchus, who is said to have been the first to plant olives there (P. Vett. Max. i. 27); and of the philosopher Pherocles, the teacher of Pythagoras. It possessed two leading cities, Syros (now the modern Hermopolis) and another city on the western coast where stands to-day Maria della Grazia. The island played no rôle in antiquity nor was the Latin church established there until after the Conquest by the Turks in 1522, when the corsair Barbarossa took possession of it for the Turks; after 1821 it was annexed to the Hellenic kingdom. The Venetians established there a Latin bishopric which was subject to the Archbishops of Athens until 1525, afterwards to that of Naxos. The list of titulars may be found in Le Quen (Orients christianus, III, 865-868) and in the Hierarchy catholica medii evi, I, 492; II, 267; III, 324. The most celebrated among them is the Venerable John Andrew Carga, strangled by the Turks in 1617 for having refused to become a Mussul- man (Pétrides in "Revue de l’Orient chrétien", V, 407-422). From the occupation of the island by the Turks in the sixteenth century, the Greeks established there a metropolitan: Joseph (Le Quen, op. cit., II, 233) is the earliest known, with Symeon who died in 1594 (Ampelas, "Histoire de Syros", 411) and Ignatius in 1596 (Miklosich and Mueller, "Acta patriarchatus constantinopolitanus", V, 401). The island became for the most part Catholic (Riou, "Histoire de l’estat présent de l’Eglise grecque", 561; Hilaire de Barenton, "La France Catholique en Orient", 171-173).

Syra took no part in the Greek revolt of 1821; but here the refugees flocked and founded the town of Hermopolis, which rapidly became the leading port of Greece. Since 1870 the ports of Piraeus and Patras have greatly injured it from a commercial standpoint. The diocese numbers 8000 Catholics, 21 secular priests and 8 regulars, 7 parishes, 7 churches with a resident priest, 3 without a priest, and 56 chapels. The Greeks and Latins have each an establishment: the Sisters of Charity, 2 houses, one of which is a hospital; the Sisters of St. Joseph of the Apparition have a boarding-school.

SMITH, Dict. of Greek and Roman Geog., n. v.; LACROIX, Iss de la Grèce (Paris, 1853), 447-50; MANDAT-GIRANOT, Aux pays d’Homme (Paris, 1904), 78-92; Missions catholiques (Rome, 1907), 150; AMPLEAS, Hist. of Syros (Hermopolis, 1874), in Greek.

S. VALLET.

Syracuse, Archidioceze of (Syrycusan), in Sicily. The city is situated upon a peninsula extending into the Ionian Sea, near the mouth of the River Anapus, on the banks of which the papyrus plant is still cultivated. The territory produces all varieties of grains, vegetables, and fruits. Of the two harbours of the city, the principal one is the largest in Sicily and one of the largest of the Mediterranean; two islets, San Marciano and Castelluccio, render it secure without obstructing the entrance. At present the exports exceed the imports. The cathedral is built on the ruins of an ancient temple of Minerva, which was a hexastyle-peripteral with thirty-six columns of which only twenty-two remain. In front of the cathedral are statues of St. Peter and St. Paul by Marabitti; in the interior are several pictures (Madonna of the Pillar; Birth of the Virgin) by Agen- tino Scillia, who also painted the frescoes of the vault of the Chapel of the Blessed Sacrament and the silver statue of St. Lucy. The baptismal font is fashioned from a large Greek crater, resting upon seven small lions of bronze, found in the catacombs of San Giovanni. Among the furniture is a storied amber chalice. Other churches are: Santa Lucia, with a "Martyrium" of the saint by Guinacci; San Benedetto, containing a picture of the saint by Minniti; San Martino; San Spirito; San Domenico; II Gesù (the church of the Jesuits), with paintings of the Venetian School and a statue of St. Ignatius by Marabitti; the Church of Santa Lucia dei Riformati without the city, possessing a painting by Caravaggio. Among the civic buildings are the fort of Giorgios Manieakes and Palace Montaldo, in the Gothic and Moorish styles. The museum is rich in both Greek and Latin inscriptions (among which are many Christian inscriptions from the catacombs) and fragments of statues, including a Venus leaving the bath. The public library has an important collection of medals. Ancient ruins at Syracuse are much less numerous than one would expect. There are still to be seen: the amphitheatre (epoch of Augustus); the Greek theatre, excavated from the rock; sepulchres also excavated in the rock; the colossal altar of Hiero II, seven hundred and sixty feet long, upon which, after the expulsion of Thrasylalus, four hundred and fifty oxen were sacrificed; the "Latomie", i.e. caves in the rock where condemned prisoners of war and others were incarcerated, of which the most famous is the "Ear of Dionysius". The fountain of Arethusa, which issues forth in the ward of Ortygia (the present Syracuse), in antiquity was sweet but since an earthquake of the twelfth century has become salt. The Catacombs of San Giovanni, of Santa Maria del Gesù, and the catacombs Caesai, similar to those at Rome, are well known; besides these there have been discovered in the environs of Syracuse various tombs (Lentini, Valle del Molinello, Priolo, San Alfano, Palazzolo, etc.) which have rather the character of ancient tombs of the Sicelioti (aboriginal inhabitants). The present Syracuse occupies only a part of the ancient city. The latter was composed of five great quarters: (1) Ortygia, originally an island but after-
wards artificially joined with the mainland, the most ancient part of the city, containing the acropolis district, the temple of Apollo, the theatre, and the castel of San Giovanni; (3) Tyche, the most populous part, deriving its name from the temple of Fortune and containing the palaces of Dioeles and Dionysius, the lighthouse, and the Galeagro Tower; (4) Neapolis or Temenites, containing various temples, the theatre, the amphitheatre, and the Acropolis; (5) Euryalos, with the Temples of Juno and Neptune, the Acropolis, and the remains of the city, and the fortress Euryalos. All the city was surrounded by strong walls and beyond Epipolai was the castle of Labdelon. The circumference of the city was 180 stadia (20 miles). The name Syracuse is derived from the swamps of the valley of the Anapus. The ancient aqueduct is still in use.

When in 734 the Corinthian Archias approached the isle of Ortygia, it was inhabited by natives whom he expelled. The colony flourished amid continual penalties and by the assistance of the great leader, Duessa (450 B.C.), voluntarily surrendered to the Syracusans, who sent him to Corinth. The government was in the hands of the landowners (geomenoi), against whom in 484 the slaves revolted. The landowners were expelled, but were conducted back into the city by Gelo, tyrant of Gela, who in this manner became lord also of Syracuse. It was being easier, as he said, to govern one hundred rich than a single poor man, the poor were sold. Otherwise Gelo was an excellent ruler. He conquered the Carthaginians at Himera, aspired to dominion over the whole island, and was the symbol of virtue and honor of the city. Syracuse was the capital of Magna Graecia, and the birthplace of Dionysius. It was he who resuscitated the city by bringing in the inhabitants of Camarina, of Megara, of Eubea, and part of those of Gela. In 478 he was succeeded by his brother Hiero, who held a splendid court, favoured poets, orators, and philosophers. He contrived to avoid a war with Girondi, aided the Catanians to conquer the Etruscans by seas (474), and established his dominion as far as Mt. Etna. He should have been succeeded by his son, but his brother Tharstorus assumed the government, which he carried on with such cruelty and perjury that he was expelled after a year. Syracuse was again free, and the government then passed into the hands of Hieron II. Following the example of Athenian ostracism they introduced the practice of "petasism", according to which each man wrote on an olive leaf the name of the most powerful citizen; whoever obtained the greatest number of leaves was banished for five years. At first the democracy was in favor of the greatness of the city, which obtained a sort of hegemony over the Greek cities of Sicily, and also of Magna Graecia. The arts and literature flourished. The ambitious designs of the Syracusans at the expense of the Leonines (427) and of Egesta (410) caused the intervention of the Athenians, instigated especially by Alcibiades. In 415 a splendid fleet sailed for Sicily and anchored in the great harbour. The city would perhaps have fallen if the Spartans, led by Lysippos, had not come to the rescue. Finally, in September, 413, the Athenian army and fleet were totally destroyed, and the Syracusans went into the Latomie. Syracuse received from Dioeles a new constitution and new laws which were most severe. But soon the interference of Syracuse in the quarrels of Egesta and Selinus provoked the intervention of Carthage. The victories of the Carthaginians at Himera (480) gave the opportunity to Hermocrates, then an exile, to attempt to overturn the Government, an attempt which cost him his life (407). Dionysius, proceeding more craftily, first had himself elected prince of the island, and afterward the prince of the city. By flattering the common people and discrediting his colleagues he obtained for himself the sole command of the army and succoured Gela against Hannibal the Elder (406). On his return the people gave him unlimited powers. He surrounded himself with a bodyguard, fortified and enclosed the city, and with varying fortunes the Carthaginians, who were conquered at Motye in 397, and obliged to retreat from Syracuse, which they had besieged by land and by sea (396). Every reverse of the tyrant was followed by revolts, which were, however, always crushed with ease by him and his army; in 391 he was with the Carthaginians in 392, he attempted the subjection of Magna Graecia as well, until the activities of the Carthaginians called him back to Syracuse (383–68). Dionysius perfected the science and technic of war, favored poets and philosophers, and was a wise ruler, but he was suspicious and cruel.

He was succeeded in 368 by his son Dionysius II, a vicious young man, upon whom his uncle Dion and Plato in vain attempted to exercise a beneficent influence. Dion deposed him in 356, but imprudently rendered himself unpopular and was slain (350) by the Athenians. His daughter Hieron was turn expelled by Hipparchus, another son of Dionysius I (353–51). Nyseus followed in succession (350–47), but in 346 Dionysius II, who had remained in exile at Locri, expelled Nyseus, and resumed the government with greater tyranny than ever. The nobility conspired against him, and summoned Hiero, tyrant of Leonina, who succeeded in conquering and imprisoning Dionysius. Others, however, had applied for aid to Corinth, which in 345 sent Timoleon, who conquered Hieratae and the Carthaginians (340), and re-established the constitution of Dioeles. Agathocles shifted the scene of the war into Africa and thus liberalized his country. His star afterwards declined and he was killed by his nephew Archagathus (289). The city fell into a state of anarchy, ended in 288 by Hieratae, who was in turn deposed by Timoleon (280). In 271 it was found necessary to summon the aid of Pyrrhus, King of Epirus, who raised the siege of the city. The forces of the Mamertines gave occasion to Hiero II to oppose them successfully, and thus to acquire the government of Syracuse (269). This war brought him into opposition with the Romans, with whom he finally concluded peace by becoming their tributary, and even aided them in the war against Carthage. His nephew and successor, Hieronymus (216), changed the policy, forming an alliance with Hannibal, which policy was continued after his murder by the popular government. For this reason the city was besieged and blockaded in 214 by Claudius Marcellus, and finally taken and sacked in 212. The statues and other objects of art or of value were transported to Rome. Syracuse became the seat of the Roman government in Sicily, and remained such until the Byzantine epoch. During the Roman period the Latin language replaced the Greek, which was restored under Diodorus of Sicily in the 6th century. 668 the Emperor Constantine II resided here until he was slain by his general Mezesius, who in his turn was killed by the soldiery of Italy. News of these events brought over the Saracens from Africa, who sacked the city. A century later (878) the city was taken and pillaged for forty days by the Arabs. It declined, which began during the Roman period,
progressed more and more, particularly after Palermo became the capital. In the attempted reconquest by the Byzantines, George Maniakes, after having taken Messina, captured Syracuse (1035). In 1086 it was taken by Count Ruggero and from then on it followed the fate of Sicily. In 1194 it was besieged and captured by the Emperor Henry VI; on the other hand, in 1298, it successfully resisted the Aragonese fleet, and in like manner the blockade by the French admiral, Vivonno (1677). In 1504 it became the residence of the Spanish viceregal court; but after a century this honour was given to Palermo, whether the noble families were also transferred. In 1542 and again in 1693 it was damaged by earthquakes. In 1798 and 1805 the port of Syracuse was of great importance for the operations of the English fleet against the French.

Among the illustrious Syracusanos of antiquity were: the poets Theocritus, Callimachus, and Mecuchus; Epicharmus, the writer of comedies; the philosopher Philolaos; the orators Ctesias, Dion, and Lysias; the historian Flavius Vopiscus, and St. Miltiades, monk and Patriarch of Constantinople. (d. 1847). To be the second Christian bishop was founded by St. Peter, after that of Antioch. It also claims that St. Paul preached there. As the first bishop it venerates St. Marcianus, the date of whose life is not an easy matter to establish, since too little authenticity can be assigned to the list of the seventeenth bishops who were presented by the Emperor Theodosius. To whom the Emperor CONSTANTINE wrote a letter. In the times of St. Cyriac (the middle of the third century), Christianity certainly flourished at Syracuse, and the catacombs clearly show that this was the case in the second century. Besides its martyrdom, Syracuse boasts of not a few other martyrs, such as Sts. Benignus and Euphrasios (204), St. Bassianus (270); and the martyrdom of the deacon Euplius and the virgin Lucy under Diocletian are beyond doubt true. The names of the known bishops of the following century are few in number: Germanus (546); Eulalius (465); Agatho (553), during whose rule Pope Virgilius died at Syracuse; Maximianus and Joannes (586), who received letters from St. Gregory the Martyr; while another bishop was denounced by Pope Honorius for the protection which he accorded to women of the streets; St. Zozimus (609) succeeded the monseigneur of St. Lucia fuori-le-mura; St. Elias (d. 660). Of Marcinus II it is related that he was consecrated not at Rome, but at Syracuse, since the Emperor Leo the Isaurian (726) had removed Southern Italy from the jurisdiction of Rome, and had then elevated Syracuse to the dignity of a metropolitan see, over the thirteen other dioceses of Sicily. Stephen II (768) carried to Constantinople the relics of St. Lucy for safety against the Saracen incursions. Gregorios Asbestas (about 845) was deposed by St. Ignatius, Patriarch of Constantinople, and then became the principal abbot of the monastery of Phoebus. In 878 St. Sophronius, to whom the monk Theocleus, was committed to prison at Palermo where he died in a dungeon. Until the Norman Conquest the names of further bishops are not known. The series reopens in 1093 with Bishop Roger, who received the pallium from Urban II; in 1169 the Englishman Richard Palmer was also invested by papal authority. In 1188 the see became suffragan of Monreale. Among the bishops of this period are: Rinaldo de Lusio, killed in 1154; Pietro de Moneada (1313) and Ruggero Bellomo (1419), who restored the cathedral; Jacopo Venerio (1490), afterwards cardinal; Pietro de Urriol (1514), ambassador of Charles V to the Lateran Council; Gerolamo Bononi (1541), a distinguished reformer at the Council of Trent; Jacopo Orozio (1562), who introduced the Roman ritual in place of the Gallican, and who founded the seminary.

During the sixteenth and seventeenth centuries, celebrated synods were frequently held at Syracuse. Bishop Annibale Termine (1695) rebuilt the church, thirty-five monasteries, and the seminary, which had been destoyed by an earthquake. In 1818 the Diocese of Catania was erected from Syracuse. Piazza Armerina and Noto were made its suffragan sees, but the latter was detached in the same year.

The archiepiscopate has 31 parishes, 400 secular and 70 regular clergy, with 300,000 souls; six monasteries for men and eight convents for women; it publishes a Catholic weekly and "Il Foglio Ecclesiastico".

U. BENIGNI.

SYRACUSE, DIOCESE OF (SYRACUSENSIS), in the State of New York, comprises the counties of Broome, Chenango, Cortland, Madison, Oneida, Onondaga, and Oswego, and contains an area of 5626 square miles, a little more than one-ninth of the entire state. Out of a population of 609,041, about 161,000, or a little more than one-fourth, are Catholic, including Indians and Chinese. The native-born were without native priests until 1854, and the Onondagas occupied lands near the shores of the lakes which bear their names. The first choice of the Iroquois was the venerable Ato-ta-ho, a famous Onondaga chief. The Onondagas were the central nation of the League, and not far from the present episcopal city, on Indian Hill, between the ravines formed by the west and middle branches of Limestone Creek in the town of Pompey, about two miles south of Manlius, was the village of Onondaga, the seat of government for the League of the Five Nations. It is probable that some of the Franciscan Fathers of the Recollects, whom Champlain obtained from France in 1614 to minister to the French settlers and convert the natives, visited this territory and offered up the Holy Sacrifice of the Mass on the shores of Lakes Onondaga or Oneida, and perhaps in what is now Oswego as early as 1615. Father Kater, most of whom were converts of the real founder of the Church in the Diocese of Syracuse, Fathers Joseph Chaumonot and Claude Dablon were selected to begin the work of evangelization. They said Mass on the chosen site Sunday, 11 November, 1654. A little bark chapel was soon constructed with the assistance of the Indians. St. John the Baptist had been adopted as the patron of the mission, and it was doubtless under this first chapel on the soil of New York was dedicated. Another chapel was built for the French settlers, St. Mary’s of Ganantaa (Lake Onondaga). But these first missionaries among the Oneidas had but an ephemeral existence. The Iroquois were constantly incited against the French missionaries by both the Dutch and English in Albany. James II ascended the throne of England in 1685 and openly professed the Catholic Faith. While Duke of York (1682) he had appointed Colonel Thomas Dongan Governor of the Colony of New York. Dongan, an Irishman and a Catholic, presided over the first representative assembly of New York which gave us the charter of liberties. Loyal to his Faith and country alike he sought to preserve and perpetuate the Catholic missions in the Iroquois without the strength of the French influence in the colony. For this purpose he brought over with him three English Jesuits: Thomas Harvey, Charles Gage, and Henry Harrison. He established a Latin school in New York and placed it in charge
of these Jesuits. He planned also to establish a settlement of Irish Catholics in the interior of the colony, very likely somewhere within the limits of the present diocese. But when Dongan fell all prospect of liberty for Catholic worship in the colony of New York disappeared, and the hope was expressed that the Irish Catholics in the colony might have some degree of freedom.  

Governor Bellemont of New York secured the passage of a law by which the colonial legislature punishing with perpetual imprisonment any priest remaining in the province or coming after 1 November, 1700, and many times when he escaped imprisonment was liable to the penalty of death if he should be retaken. To harbour a Catholic was to incur a fine of £250 and to stand in the pillory for three days. Under these circumstances the Jesuit missions were necessarily closed among the Five Nations. The Mission of Ogdensburg, established a little later for the Onondagas and the Oneidas by Abbé François Picquet, a Sulpician, was finally abandoned in 1700, and the last chapter was closed in the story of the Jesuit missions among the Iroquois.

THE CHURCH AMONG THE WHITES.—Less than a century after the forced destruction of the missions among the Iroquois the firstwhitesettler came to Oriskany. Gradually, a few Catholics followed, John Cunningham of Utica being the first Catholic of whom history makes mention. Rev. Paul McQuade who was ordained in Montreal in 1808 was the first missionary. He was pastor of St. Mary's church, Albany, from 1813 to 1815, and made frequent visits to Utica. There is no record of where the first Mass was celebrated in Utica, but there is no doubt that it was in the home of John C. Devereux, one of the pioneer Catholics then (1816) a member of the board of trustees of St. Mary's Church, Albany. Rev. Michael Ormond, a native of Ireland, pastor of St. Mary's church, Albany, from 1817 to 1819, was the founder of the first parish in the Diocese of Syracuse, though not the first pastor. He celebrated the first public Mass in Utica, in the Court House, 10 January, 1819. He organized the Catholics, and it was decided to erect a church for Central and Western New York, at Utica. A corporation was duly formed under the name of the “Trustees of the First Catholic Church in the Western District of New York.” The first trustees were: Bishop Connolly, 18 August, 1821. While pastor of Utica, Father Faran visited Rochester, in 1820, and celebrated the first public Mass in that city. The first resident priest to attend the Catholics of Brooklyn was John C. Devereux and Nicholas Devereux of Utica; Michael Hogan of New Hartford; Oliver Western of Johnstown; Thomas McCarthy of Syracuse; John McQuire of Rochester; and Charles Carroll of Genesee River. The resident congregation did not exceed thirty. Rev. John Farnan, a native of Ireland, appointed pastor, began at once the erection of St. John's church, Utica, and the little chapel was dedicated by Bishop Connolly, 19 August, 1821. While pastor of Utica, Father Farnan visited Rochester, in 1820, and celebrated the first public Mass in that city. For that reason, Father Farnan was appointed first resident priest to attend the Catholics of Brooklyn. The list of the Catholic laymen of that early period, might be mentioned James Lynch and Thomas McCarthy of Syracuse, and Dominick Lynch of Lynvellsie, now Rome, N. Y. Dominick Lynch was one of the first trustees of St. Peter's church, Utica, and in 1790 when the Catholics of the United States presented the first petition for naturalization to George Washington, on his election to the presidency, he was one of the four laymen who signed it.

THE DIocese OF SYRACUSE.—The Diocese of Syracuse was projected by the Holy See, 12 September, 1880, and Rt. Rev. Peter McQuade, the present Bishop, appointed vicar-general of the Diocese of Albany, and rector of St. Peter's church, Troy, was nominated for the contemplated see. Father Ludden declined the honour. Thereupon, considerable correspondence passed between Archbishop Corrigan of New York and the Cardinal Prefect of the Sacred Congregation of the Propaganda in Rome. Finally, the Diocese of Syracuse was erected by Leo XIII, 20 November, 1886, and Father Ludden, in spite of his emphatic reply, was appointed Bishop of the new diocese, which he entered on 14 December, 1886. He was born 4 February, 1836, near Castletown, County Mayo, Ireland, and was ordained priest, 21 May, 1864, in the Grand Seminary, Montreal, by Bishop Bourget. He was rector of the Cathedral of the Immaculate Conception, Albany, under Bishop McQuade, and later President of the Catholic University of America. He was made Bishop of the Diocese of Albany by the late Bishop of Imera, 9 February, 1899. He was born in Ireland, 18 December, 1852, made his ecclesiastical studies in the Grand Seminary, Montreal, and was ordained to the priesthood in Albany, 19 February, 1882, by Bishop McQuade, of Albany. He was consecrated bishop 16 May, 1909, in the Cathedral of the Immaculate Conception, Syracuse, by Archbishop Farley of New York. St. John the Evangelist church in Syracuse was the pro-cathedral until 1903. At that time, Bishop Ludden purchased with his own money, property adjoining St. Mary's church, which had been planned and constructed by Rev. James A. O'Hara, D. D., for many years one of the most prominent figures in Central New York. He died 26 Dec., 1889. Bishop Ludden, at his own expense, erected on the property a new cathedral and consecrated it 25 September, 1910.

Among the pioneer priests of the diocese may be mentioned: Right Rev. David W. Bacon and the Right Rev. Francis P. McFarland; Fathers William Beecham, Thomas Daly, Michael Hackett, Michael Heas, Bartholomew F. Mcloghlin, Leopold Moxeygemma, O.M.C., Walter J. Quarter. The prominent laymen known to canon law include: Dr. William McGee in Utica; Mr. John Carton, John C. Devereux, Nicholas Devereux, Capt. David Dodge, Francis Kernan, James Lynch, John McCarthy, Thomas McCarthy, Peter McGuire, Michael McQuade, Francis Murphy, Owen O'Neil, Edward White.

There are many causes for the remarkable growth of the Catholic Church in Central New York. It was chiefly the Irish immigrants who dug the Erie Canal, which was begun 4 July, 1817, almost the exact date of the organization of the first church in the diocese. The salt springs of Syracuse discovered by Father Le Moyne in the middle of the 17th century, much to the wealth of Finger lakes and attracted many. When through tariff reduction this investment became no longer profitable, extensive cotton and woolen mills, foundries and factories of all kinds, were established. Another cause which contributed to the growth as well as to the cosmopolitan character of the people, was the immense press of immigration at different periods. The Germans began to come in small numbers, soon after the erection of the first church (1820). According to the official records, Rev. John Lewis Wariath was placed in charge of these immigrants as early as 1837. The Italian immigration began with the completion of the New York and Shore Railroad in the early eighties. The Poles began to locate in the diocese about a quarter of a century ago. They have now large and flourishing
parishes, churches, and schools in various parts of the diocese. The Lithuanians are, as yet, comparatively few in number. They have fine property, a temporary church, a resident priest in Utica, and give evidence of rapid progress. The Syrians belong to the same diocese, the Syro-Aramaic language, and are found chiefly in Syracuse and Utica. In the latter city, they have a handsome church, and a resident priest. They worship according to the Syro-Maronite Rite. The Slovaks began coming to the diocese only within the last few years. They are of the Latin and the Greek rite, and are found mainly in Syracuse and in Binghamton. In the latter city they have a resident priest and a flourishing parish.

Religious Communities.—Another important factor in the upbuilding of the diocese, was the work of the different religious communities devoted to education and charity. The Franciscan Fathers of the Order of Minor Conventuals came in 1859. The mother-house of the Order of the Minor Conventuals in the United States is located in Syracuse. The Christian Brothers have been labouring in the diocese for more than half a century. They have a large academy at Utica, and a school at Utica.

The Catholic Academy is the academic department for boys of the Utica Catholic Academy. The Sisters of Charity of St. Vincent de Paul (Emmitsburg) for more than three-quarters of a century have taught in Utica, and for most of that time in Syracuse, caring on the one hand for the education and building up of their school. The Sisters of St. Joseph, from St. Louis, Mo., have an academy for young ladies in Binghamton and have charge of many parochial schools. The Sisters of the Holy Name have an academy for young ladies at Rome. The Sisters of the Third Order of St. Francis have a home for hospital sisters in Syracuse.

Statistics for 1911 are: priests, regular 16, secular 115; parish churches, 75; mission churches, 34; chapels, 35; parochial schools, 25; parochial high schools, 4; academies, 4; orphan asylums, 5; maternity hospital, 1; infant asylums, 2; hospitals, 3. In the various religious orders there are: brothers, 33; sisters, 350; lay teachers, 8. The pupils in Catholic schools number 10,000. The Catholic population includes, English-speaking, 95,000; Italians, 25,000; Germans, 15,000; Poles, 120,000; Lithuanians, 100; Slavs (Latin and Greek), 200; Bohemians, 100; French, 20; Syrians, 700.

SYRIA.—GEOGRAPHY AND POLITICAL DIVISIONS, ANCIENT AND MODERN.—A country in Western Asia, which embraces all that was bounded on the north by the highlands of the Taurus, on the south by Egypt, on the east by Mesopotamia and the Arabian Desert, and on the west by the Mediterranean; thus including within its area the ancient and modern countries of Aram or North Syria, a portion of Asia Minor and Mesopotamia, Palestine, the Land of Canaan or Palestine, and even a section of the Sinaic Peninsula. Strictly speaking, however, and especially from the point of view of Biblical and classical geography, which is the one followed in this article, Syria proper comprises only that portion of the above-mentioned territories that is bounded on the north and north-west by the Taurus and Asia Minor, on the south by Palestine, on the east by the Euphrates and Mesopotamia, and on the west by the Mediterranean. The northern portion is elevated, the eastern is level, extending to the Syro-Arabian desert; the north-western is crowned by the Amanus and Taurus mountains, while the mountains of Lebanon and Anti-Lebanon are parallel ranges on the north of Palestine or south of Syria. Between these two ranges is the long narrow valley called Cæle-Syria (Hollow Syria). Its chief rivers are the Litany (Leontes), the Orontes (Al'Asi), and the Barada or Abana. Cæle-Syria varies in breadth from three or four miles to fifteen miles, and in some places broken by projecting spurs of the Lebanon ranges. At its northern end it curves round to the west and opens out to the Mediterranean. It has two slopes, a northerly and a southerly one, and both are fertile and beautiful. This valley was always an important route of travel between Mesopotamia, the Arabian desert, and Cæle-Syria. The width of Syria, however, is about 250 miles in length, and an average of 130 miles in breadth, having a total area of about 32,500 square miles. The most important towns of Syria in ancient times were Damascus, Karkamish, Hamath, Baalbek, Palmyra or Tadmor, Palmyra, Antioch, Seleucia, and Laodicea. The name Syria was formerly believed to be either an abbreviation of "Assyria" or derived from Taur (Tyre), hence Tsarya, and that it was of Greek origin. This, however, is untenable, as the name, in all probability, is derived from the old Babylonian name Suri, applied originally to the north-eastern region of the present Syria. Later on the name Syria was applied by the Greeks and Romans to the whole of Syria, or the country lying between the Euphrates, the Mediterranean, the Taurus, and Egypt. By the Babylonians and Assyrians it was called "Amurrum" (the land of the Amorites) and "Mari" (the land of the Amorites). The extreme northern part of it was also known as "Khatti", or the Land of the Hittites, whilst the southern region was known as "Kena'nu" or "Kanaan" (Palestine). In Arabic it is called either "Surīyya" (Syria), or Aj-Shām (the country situated to the left), in opposition to El-Yemen or So'f Arabia, which is situated to the right.

The political and geographical divisions of Syria have been numerous and constantly varying. In the Old Testament it is generally called "Aram", and its inhabitants, "Aramenae". But there were several Biblical Arams", viz. Aram of the Desert, i.e. Mesopotamia, Aram-Daron (the region of Harran), in the extreme north of Mesopotamia; Aram-Mak'ak, to the north of Palestine; Aram-beth-Rohob; Aram-Sobah; etc. The Syrian Aram, however, which corresponds to the classical Syria is called generally in the Old Testament "Aram of Damascus", from the principal city of the country. It is of these Arameans or Syrians, who occupied Central Syria, with Damascus as the capital city, that we hear most in the Old Testament.

During the Greek and Roman dominations the political divisions of Syria were indefinite and almost unintelligible. Strabo mentions five great provinces: (1) Comagene, a small territory in the extreme north, with Samosata for capital, situated on the Euphrates; (2) Seleucia, lying south of the former,
and subdivided into four districts according to the number of its chief cities, viz.: Antioch Epipodaphne; Seleucia, in Pieria; Apamea, and Laodicea; (3) Coele-Syria, comprising Laodicea ad Libanum, Chalceis, Abilene, Damascus, Ituraea, and others farther south, included in Palestine; (4) Phoenicia; (5) Judea. Inhabitants are shown and those of Strabo. It appears that each city on rising to importance gave its name to a surrounding territory, larger or smaller, and this in time assumed the rank of a province. Ptolemy mentions thirteen provinces: Cammagnae, Pieria, Cyzicus next; (2) Lydia, Galatia, of which the capital was Apamene, Laodicea, Phoenicia, Coele-Syria, Palmyrene, and Batanaea, and he gives a long list of the cities contained in them. Under the Romans, Syria became a province of the empire. Some portions of it were permitted to remain for a time under the rule of petty princes, dependent on the imperial government. Gradually, however, all these were incorporated, and Antioch was the capital. Under Hadrian the province was divided into two parts: Syria Major, on the north, and Syria-Phoenice, on the south. Towards the close of the fourth century another partition of Syria Major was made, one part being inferior to the other, but both were under an imperial civil government: (1) Syria Prima, with Antioch as its capital; (2) Syria Secunda, with Apamea as capital; (3) Phoenicia Prima, including the greater part of ancient Phoenicia, with Tyre as its capital; (4) Phoenicia Secunda, also called Phoenicia ad Libanum, with Damascus as its capital. During the Arabiаn domination, i. e. from the seventh to the fifteenth century, Syria was generally divided into six large districts (Giudae), viz.: (1) Filisht (Palestine), consisting of Judaea, Samaria, and a portion of the territory east of the Jordan, its capital was Rama, Jerusalem ranked next, and the districts called "Lophi" (Lophi), of which the capital was Tiberias, (2) Syria Major, which included Baalbek, Tripoli, Beirut, and the Haun; (3) Homs, including Hamah; (5) Qinnaser, corresponding to Northern Syria; the capital at first was Qinnaser, to the south of Aleppo, by which it was afterwards superseded; (6) the sixth district was the military frontier (and sem) bordering upon the Byzantine dominions in Asia Minor. Under the present Turkish rule, Syria is divided into the following six vilayets, or provinces: (1) the Vilayet of Aleppo, with the capital at Aleppo; (2) the Vilayet of Damascus, capital being Damascus; (3) the Vilayet of Beirut, capital being Beirut; (4) the Vilayet of Tripoli, with the capital being Tripoli; (5) the Vilayet of Damascus, capital being Damascus; and (6) the Vilayet of Beirut, capital being Beirut. The three former provinces comprise the eastern, the latter the western, Syria; and the former are included under the term "Greater Syria." Syria is divided into three main districts: (1) the Shammarite or Arabian tribes; (2) the Bedouins, and (3) the Druze. The settled population is of mixed origin, but the Bedouins are mostly of pure Arab blood. They are the direct descendants of the half-savage nomads who have inhabited Arabia from time immemorial. Their dwellings consist of portable tents made of black goats' hair. There are two main branches; one of these consists of the 'Arabah, who migrate in winter towards Central Arabia, while the other embraces those tribes which remain permanently in Syria. (3) The Turks are not a numerous class of the community of Syria. They are intellectually inferior to the Greeks, but are generally characterized by patriarchal simplicity of manner. There are two parties of Turks, the Old, and the Young, or Liberal Party. In Northern Syria, as well as on the Great Hermon, are still several nomadic Turkish tribes, or Turcomanes, whose mode of life is the same as that of the Bedouin Arabs. (4) The Jews who remained in the country are but few in number; most of those who now reside in Palestine are comparatively recent settlers from Europe. (5) The Franks (Europeans) form a very small proportion of the population. Distinct from them are the Christians, i. e. the Moslems or descendants of Europeans, who have entirely adopted the manners of the country.

Religions of Modern Syria.—In regard to religion the modern inhabitants of Syria consist of Mohammedans, Christians, and Jews. The first are divided into Sunnites or orthodox Mohammedans, Metawile, Nusairiyeh or Ansairiyeh, and Ismailiyeh. To these may be added the Druzes. The Christians include Roman Catholics of the Latin Rite; Greek Orthodox; Roman Catholic Greeks or Melchites; Maronites (all Roman Catholic); Roman Catholic Armenians; Maronite or Catholic Armenians; Schismatic Syrians, i. e. Monophysites, commonly called Jacobites; Schismatic Armenians, Catholic Armenians, and Protestants.

The Mohammedans or Moslems are and have been for the last twelve centuries the lords of the land and still constitute the great majority of its inhabitants. They are generally ignorant and fanatical, although of late education has spread among the better class in the larger towns. Till a few years ago they were inclined to look with contempt on all other peoples and religions. This, however, is gradually giving way to a more equal and friendly spirit. The Mohammedans of Syria have been making of late in the matter of schools, universities, hospitals, seminaries, and educational and commercial institutions. The Syrian Moslems are generally noble in bearing, polite in address, and profuse in hospitality; but they are regardless of truth, dishonest in their dealings, and partial in their conduct. In large towns the upper proportion of the upper classes are both physically and mentally feeble, owing to the effects of polygamy, early marriages, and degrading vices; but the peasantry are robust and vigorous, and much might be hoped from them if they were brought under the influence of liberal institutions. Examples around them of the industry and the enterprise of Western Europe. Experience, indeed, has already shown that they are not slow to adopt the improve-
ments of other lands. In religion the Mohammedans of Syria are Sunnites, or Traditionists—that is, in addition to the written word of the Koran, they recognize the authority of the Sunna, a collection of traditional sayings of the "Prophet", which is a kind of supplement to the Koran, directing the right observance of things not stated in that book. They are in general exact in the observance of the outward rites of their religion.

The Metauli (sing. Metaully) are the followers of 'Aly, the son-in-law of Mohammed. His predecessors, Abu Bekr, 'Omar, and Othman, they do not acknowledge, but hold the Emperor of Byzantium to be the lawful Imam; and they hold that the supreme authority, both in things spiritual and temporal, belongs of right to his descendants alone. They reject the Sunna, and are therefore regarded as heretics by the orthodox. They are allied in faith to the Shi'ites of Persia. They are almost as scrupulous in their ceremonial observances as the Hindus. The districts in which they chiefly reside are Ba'albek, where their chiefs are the noted family of Harfush; Belad Beshourah, on the southern part of the Lebanon range; and a district on the west bank of the Orontes at Antioch. They also occupy several scattered villages in Lebanon.

The Nusairiyeh.—It is not easy to tell whether these people are Mohammedans or not. Their religion still remains a secret, notwithstanding all attempts lately made to dive into their mysteries. They are represented as holding a faith half Christian and half Mohammedan. They believe in the transmigration of souls; and observe in a singular, perhaps idolatrous, manner a few of the ceremonies common in the Eastern Church. They inhabit a range of mountains extending from the great valley north of Lebanon to the gorge of the Orontes at Antioch.

The Khattars, who inhabit a few villages on the eastern slopes of the Ansairiyeh Mountains, resemble the Nusairiyeh in this, that their religion is a mystery. They were originally a religious-political subdivision of the Shi'ites, and are the feeble remnant of a people too well known in the time of the Crusades as the Assassins. They have still their chief seat in the Castle of Masyad, on the mountains west of Hamah.

The Druses (The generic name in Arabic is ed-Duruz, sing. Duruz).—The peculiar doctrines of the Druses were first propagated in Egypt by the notorious Hakim, third of the Fatimite dynasty. This khalif, calling himself a prophet, undertook to place the world in a new intellectual state. He taught that man is the microcosm of the universe, and that he must by his whole existence work out his salvation. He spurned all love of material wealth, and seemed to believe in the incalculable value of the outward pretensions of the new Egyptian prophet, but he added to his doctrines that of the transmigration of souls, which he had brought from his native country, and he carried his fanaticism to such an extent that the people at last turned out of Egypt. He took refuge in Wady el-Teim, at the western base of Hermon; and, being secretly supplied with money by the Egyptian monarch, propagated his dogmas, and became the founder of the Druses. His system was enlarged, and in some degree modified, by other disciples of Hakim, particularly by the Persian Hamzeh, whom the Druses still venerate as the founder of their sect and the author of their law. Hamzeh tried to gain over the Christians by representing Hakim as the Messiah whose advent they expected. For further details see DRUZES.

The Jews of Syria are of several different classes. The Israelites, or Spaniards, were the only Jews who immigrated after the expulsion of the Jews from Spain under Isabella I; most of them now speak Arabic, though some still speak a Spanish patois. The Ashkenazim are from Russia, Galicia, Hungary, Bohemia, Moravia, Germany, and Holland, and speak the dialect known as Yiddish. These again are subdivided into the Perushim and the Chasidim. The Jews of the East have retained their original character to a considerable extent, and are generally tall and dark in color, and live in the towns, generally in a quarter of their own.

History of Christianity in Syria.—The history of Christianity in Syria proper during the first three centuries and down to the Council of Nicea (A.D. 325) was chiefly about Antioch, while from the time of the Council of Chalcedon to the Arab invasion it was almost absorbed into that of the Antiochene Patriarchate (see ANTIOCH, THE CHURCH OF), just as the Christianity of Palestine is practically that of Jerusalem, of Egypt that of Alexandria, of the West that of Rome, of Mesopotamia and Persia that of Seleucia in Chios, and of the Byzantine Greek Church that of Constantinople. As Jewish Christianity originated in Jerusalem, so Gentile Christianity started at Antioch, then the leading city of the Hellenistic East, with Peter and Paul as its leading Apostles. From Antioch it spread to the various cities and provinces of Syria, among the Gentiles as well as among the Jews who, as a result of the great religious battles against the Romans in A.D. 70 and 130, were driven out from Jerusalem and Palestine into Syria. The spread of the new religion was so rapid and successful that at the time of Constantine Syria was honeycombed with Christian churches. The history of the Christian Church in Syria during the second and third centuries is rather obscure, yet sufficient data to furnish a fair idea of the rapid spread of Christianity in Syria during those two centuries have been collected by Harnack in his well-known work, "The Expansion and Extinction of Christianity in the First Three Centuries," (Eng. tr., 2nd ed., London, 1908, vol. II, pp. 120 sqq.).

Outside the gates of Antioch, that "fair city of the Greeks" (see Isaac of Antioch's "Carmen", 15, ed. Bickell, i, 294), Syria was the language of the people; in fact it was spoken by the lower classes in Antioch itself and only among the upper classes of the Greek towns was it displaced by Greek. The Syriac spirit was wedded to Greek, however, even here, and remained the predominant factor in religious and in social life, although at first and indeed for long it did not lock as if it would. Yet, in this Syrian element, to which the Christian Church, though not directly, refers to Edessa rather than from Antioch. The wide territory lying between these cities was consequently evangelized from two centers during the third century: from Antioch in the West by means of a Greek Christian propaganda, and from Edessa in the East by means of one which was Syriac-Christian. The inference is that the larger towns practically adopted the former, while the country towns and villages went over to the latter. At the same time there was also a Western Syrian movement of Christianity, though it did not amount to much, both in and after the days of the soul of Sants and Zeuxis, as the Persian Aksumite, or of the Syrian Christians. By about 325 the districts round Antioch seem to have contained a very large number of Christians, and one dated (331) Christian inscription runs as follows: "Christ, have mercy; there is but one God!"

Ptolemy's day these Syrian villages appear to have been practically Christian. Lucian, the priest of Antioch, declares in his speech before the magistrate in Nicomedia (311) that "almost the
greater part of the world now adheres to this Truth, ye world cities; even if any of this evidence seems suspect, there is no doubt regarding multitudes of country-folk, who are innocent of guile (pars paene mundi iam maior huic veritati adstipulatur, urbes integre, aut si in his aliquid suspicium videtur, cunctum, et non earum manus vel menticii); and although this may reflect impressions which he had just received in Bithynia, there was substantial ground for the statement in the local circumstances of Syria. The number of clergy in 303 throughout Syria is evident from Eus., H. E., viii, 18: "And in Syria numerous Anonymous ambassadors went, every place. The prisons, "hitherto reserved for murderers and rifles of graves, were now packed every-where with bishops, priests, deacons, lectors, and exorcists." Further data at our command are as follows: (1) Acts, xv, already mentions Churches in Syria besides Antioch. (2) Ignatius, a proconsul of Antioch (ap Philad., x) mentions "Churches in the neighbourhood" which had already bishops of their own. These certainly included Seleucia, the seaport of Antioch mentioned in Acts, xiii, 4. (3) Apamea was a centre of the Elkesiates. (4) Dionys. Alex., Ep. x, 11, H. E. viii, 10, 5, 9 and other Armenian Christians frequently sent contributions to the Syrian Churches. (5) The document of the Antiochene Synod of 285 (Eus., vii, xxx) mentions, in connexion with Antioch, "bishops of the neighbouring country and cities." The towns in the vicinity of Antioch, far and near, must already have had bishops, in all or nearly all cases, if country bishops were in existence. From Eus., vii, xii we learn that by about A. D. 200 there was a Christian community at Rhossus which was gravitating towards Antioch. (6) Two choræcasplici from Cilicia attended the council of Nicea, the Martyr. Hieron. (Achelis, "Mart. Hieron.," p. 168) is a martyrdom is noted as having occurred "in Syria province regione Apameae vico Aprosvacivti," but both these places are unknown. (7) Bishops from the following places in Cilicia-Syria were present at Nicea: Antioch, Seleucia, Laodicea, Apamea, Raphane, Hierapolis (= Mabug, Bambye), Hermopolis, Samosata, Doliche, Balanes Gabula, Zeguma, Larissa, Epiphania, Arethusa, Neocæsarea, Cyrrhus, Gindron, Arbockadam, and Gabala. These towns lay in the most diverse districts of this wide country, one in the Valley of the Orontes, in the Euphrates Valley, between the Orontes and the Tigris, and in the Euphrates, and in the north. Their distribution shows that Christianity was fairly uniform and fairly strong in Syria about 325, as is strikingly shown by the rescript of Daza to Sabinus (Eus., "H. E.," IX, ix), for we must understand the experiences undergone by the Churches of Syria in Antioch and Asia Minor, when we read the emperor’s words about almost all men abandoning the worship of the gods and attaching themselves to the Christian people. This remark is not one to be taken simply as a rhetorical flourish. For later speaking in one place about the first edict of Diocletian, Eusebius proceeds as follows: "Not long afterwards, as some people in the district called Melitene and in other districts throughout Syria attempted to usurp the kingdom, a royal decree went forth to the effect that the head officials of the churches everywhere should be put in prison and chains" (VII, 8). Eusebius does not use a single word, but the context makes it quite clear that the emperor held the Christians responsible for both of these outbreaks (that in Melitene being unknown to history). This proves that the Christians in Melitene and Syria must have been extremely numerous, otherwise a royal edict would not be necessary. Ancient outbreaks (which in Syria, and, one may conjecture, in Melitene also, originated with the army) with edicts against the Christian clergy. The Bishop of Rhossus was not at Nicea (Rhossus, however, may also be assigned to Cilicia). But, as we already know, Rhossus did possess a Christian Church about A. D. 200, which came under the supervision of the Church at Antioch. There was a Jewish Christian Church at Beroea (Aleppe) in the fourth century. The history of the Christians of Phoenicia have been important; cf. the experience of Julian there (Ep. xxvii, p. 516, ed. Hertzlein). As to Phoenicia, one of the most important provinces of Syria, the history of Christianity there is also obscure. Here again, we learn from the Acts of the Apostles that Christ’s teaching and the Christian mission reached the Phoenician cities at a very early period. When Paul was converted, there were already Christians at Damascus (Acts ix, 2, 10 sq., 19); for Christians in Tyre see xxi, 4; for Ptolemies see xxi, 7; for Sidon xxv, 3; and in general xi, 19. The metropolitan position of Tyre, which was the leading city in the East for manufactures and trade, made it the ecclesiastical capital of the province; but it is questionable if Tyre enjoyed this pre-eminence as early as the second century, for at the Palestinian Synod on the Eastern controversy Cassius, the Bishop of Tyre, and Clarus, the Bishop of Ptolemais, took part with the Council of Nicea. When the Synod of Cæsarea (Eus., "H. E.," V, xxv) to whom they seem to have been subordinate. On the other hand, Marinus of Tyre is mentioned in a letter of Dionysius of Alexandria (ibid., VII, v, 1) in such a way as to make his metropolitan dignity extremely probable. Martyrs in or from Tyre, during the great persecution, are noted by Eusebius, VIII, vii, 1 (VIII, viii), VIII, xii, 3. Origen died at Tyre and was buried there. It is curious also to note that the learned Antiochene priest Dorotheus, the teacher of Eusebius, was appointed by the emperor (Diocletian, or one of his immediate predecessors) to be the Bishop of Tyre, the dying en bloc Promathes in Tyre (Eus., "H. E.," VII, xxvi). A particularly libellous edict issued by the Emperor Daza against the Christians is preserved by Eusebius (IX, viii) who copied it from the pillar in Tyre on which it was cut, and the historian’s work reaches its climax in the great speech upon the reconstruction of the church at Tyre, "by far the most beautiful in all Phoenicia" (X, iv). This speech is dedicated to Paulinus, Bishop of Tyre, in whose honour indeed the whole of the tenth book of his history is written. Unfortunately we get no information whatever, in this long address, upon the Christian community at Tyre. We can only infer the size of the community from the number of Christians who may have stood where the ruins of the large crusading church now astonish the traveller (cf. Baedeker’s "Palestine," pp. 300 sqq.). Tyre as a Christian city was to Phoenicia what Cesarea was to Palestine. It seems to have blossomed out as a manufacturing and trading centre during the imperial ages, especially in the third century. A number of passages in Jerome give characteristic estimates of its size and importance. In Sidon Origen stayed for some time (Hom. xiv, 2, in Josuam), while it was there that the presbyter Zenobius (Eus., "H. E.," VII, xii, 9) died during the persecution. The Bishop of Tyre was also resident in Panes (Eus., "H. E.," VII, xvii, 18). Tripolis is mentioned even before the Council of Nicea (in "Marti. Pal.," III, where a Christian named Dionysius comes from Tripolis); the Apostolic Constitutions (vii, 46) declare that Martonbus was bishop of this town as early as 125. The Bishop of Tripolis during the persecution of the episcopi, the local bishop, opposed Arius (Theodoret, "H. E.," I, iv), though Gregory, Bishop of Berytus, sided with him (loc. cit.; for Berytus, see also
“Mart. Pal.”, iv). The local church was burnt under Julian (cf. Theod., “H. E.”, IV, xxi). Eusebius (VIII, xiii) calls Silvanus, at the period of the great persecution, bishop, not of Emesa but of “the churches round Emesa”. Emesa thus resembled Gaza; owing to the fact that no inhabitant of Emesa was allowed to reside within the town itself, they had to quarter themselves in the adjoining villages. Anatolius, the successor of Silvanus, was the first to take up his abode within the town. Theodoret (“H. E.”, II, vii), writing of the age of Julian, says that the church there was never burned (newly built). With regard to Heliopolis we have the same information, for the town acquired its first church and bishop, thanks to Constantine, after 325 (cf. “Vita Constant.”, III, lviii, and Socrat., I, xviii). The “Mart. Syriacum” mentions one martyr, Lucian, at Heliopolis. Christians also were deported (“Mart. Pal.”, XIII, ii) by Daza to Lebanon for penal servitude. One martyrdom makes it plain that there were Christians at Byblus. At Choda (Kabun), north of Damascus, there were also numerous Jewish Christians in the days of Eusebius.

We have no information in detail upon the diffusion and density of the Christian population throughout Palestine generally, or in the very few parts of Syria where information is available for Syria, a province with which Phenicia was at that time very closely bound up; even the Phenician tongue had long been dislodged by Syriac. From the letters of Chrysostom and the state of matters which still obtained in the second half of the sixth century, however, it is quite clear that Christianity got a firm footing only on the seaboard, while the inland districts of Phenicia remained pagan for the most part. Yet it was but recently, not earlier than the third century, that these Phenician-Hellenic cults had experienced a powerful revival. The situation is quite clear: wherever Christianity went it implied Hellenizing, and vice versa. Christianity, in the first instance, only secured a firm footing where there were Greeks. The majority of the Phenician towns where Christian bishops can be traced lay on the coast; i.e., they were towns with a strong Greek population. In the large pagan cities, Emesa and Heliopolis, on the other hand, Christians were not tolerated. Once we leave out inland localities where “heretics”, viz., Marcionites and Jewish Christians, resided, the only places in the interior where Christians can be found are Damascus, Paneas, and Palmyra. Otherwise it was the Greek element also existed (Mommsen, pp. 425 sq.; Eng. trans., II, 96 sq.). The national royal house in Palmyra, with its Greek infusion, was well disposed not towards the Greek but towards the scantily indigenous Christians of Syria, as may be inferred from the relations between Paul of Samosata and Zenobia, no less than from the policy adopted by Rome against him.

The Edict of Milan (A.D. 313) marks the beginning of the new period in the history of Syria-Christianity, during which the See of Antioch was filled by a succession of bishops illustrious throughout the Church, and the Church of Syria was involved in the most troublesome period of church history and theology, which marks the beginning of those fatal schisms, heresies, and Christological controversies that lasted for centuries. The See of the Syrian Church and the Churches of the East from the Church of Rome (See Arianism; Nestorianism; Monophysitism). The death of Severus (542), the deposed Monophysite Patriarch of Antioch, may be taken to mark the beginning of a new period in the history of the See of Antioch. Nor is the concession in the See of Antioch has been maintained to the present day. The death of the Emperor Maurice (A.D. 602) and the succession of his murderer, Phocas, gave the signal for the Persians to ravage the Roman dominions. Hitherto Mesopotamia had been the arena of war between the rival powers, and Dara, Amida, and Nisibis the keys of possession. But Heraclius came to the throne in 602 to find all Syria, Babylonia, and Persia in ruins. First the Holy City itself fell before the Persian general Shahrbaraz (614), and the Patriarch Zacharias of Jerusalem was carried off with the True Cross itself, to grace the infidel’s triumph. Never since Constantinople was built had there been such a disaster; and at Chalcedon itself, almost opposite the very walls of the capital, the Persians were overwhelmed by a rising of the Slavs and Avars, who threatened the city on the north side of the isthmus, and inviting them to join in its destruction. An insulting and blasphemous letter from the Persian king aroused the emperor and all Christendom; while from Constantinople to Arabia the Church poured forth her treasures of plate and money to help in the crusade. Constantinople was fortified and with a gigantic effort, worthy of the great conquerors of the world’s history, Heraclius drove back the Persians, cutting them off in Cilicia, and forcing them finally to make an abject appeal for terms of peace or capitulation. In 628, however, Chosroes had been already murdered by his son, who submitted to Heraclius (A.D. 628). The emperor returned, leaving the East in peace, to restore the Cross to its place in Jerusalem.

Meanwhile in an obscure corner of the empire Mohammed had been born, and in this very year sent round a letter demanding for a new creed the submission of the kings of the earth. “The year of flight” (A.D. 622) had passed, and Mohammed was at the head of a devoted band of followers, ready to conquer Arabia and perhaps the world. It was an epoch in the history of the world’s history, and twice the patriarchs of Jerusalem saw the abomination of desolation standing in the holy place, and thought the end of all things was near. Ten years after Shahrbaraz (637), when the glories of Heraclius paled before the storm of Arab conquest, Sophronius the Patriarch and Omar the Arab stood side by side at the altar of the Church of the Holy Sepulchre in Jerusalem. East of the Mediterranean the Roman Empire had given way for ever, and the Arab arms now ruled the Churches which the councils of two centuries before had cut off from the orthodox communion. For a few years it was the Melchite Church to whom the Eastern Churches were to acknowledge an unwilling homage, but to the sword of Islam. Byzantine history now affected them little, for the successors of Heraclius had enough to do to keep the Saracen fleeces away from the capital. The famous Iconoclastic controversy, begun by Leo the Isaurian, was continued for nearly a hundred years (720-802) by his successors. How little the second great controversy of the times affected the Syrians may be judged by their own language in regard to the “Procession of the Holy Ghost”. The words inserted in the Creed were the Church’s recognition of the Holy Spirit’s rupture, for which the rival claims of Gregory of Rome and John Scholasticius of Constantineople had paved the way; and the ninth century witnessed the unseemly recriminations and the final break between the two great communions.

In the seventh century the Syrian Christians fade from the general history of the Church. The Arabs were inclined to favour them as rivals of the Greeks, and early in the eighth century Walid secured the entry of their patriarch into Antioch, whence they had been driven by the Greeks since the death of Jacobus Baradusza. But he retained them only a few years, the first part of the perfidious which Abdalmalk and Yaziid ordered against the Christians; while in 771 the Khalif Abdullah took a census throughout Syria and Mesopotamia, ordering
all Jews and Christians, especially at Jerusalem, to be branded on the neck and forehead. A short-lived union between the Syrians and Armenians (762) was followed by persecution at the hands of the Greeks (750), who took away many Syrian and Armenian slaves from Mesopotamia to the West. Two centuries later, Nicaeopolis, Paphlagonia, and Cilicia were strongly persecuted by the Christians in Arabia, caused John Saragista, the Patriarch of the Syrians, to be brought to Constantinople, there to discuss with Polyaeactus, Patriarch of that city, the differences that divided them. In the letter written by John to Mennas of Alexandria we perceive how much the controversy had become a matter of popular excitement and how readily the Syrians clung to the words which Greek tyranny had made the badge of a rival party. The imprisonment of John, added to other acts of tyranny, confirmed their hatred of the Greeks, and made them prefer even the domination of the Moslem. From the eighth and ninth centuries down to our own times the history of Christianity in Syria is the history of Nestorianism and of the Nestorian Church, of Eutychianism and the Monophysite or Jacobite Syriac Church, of the Monophysite Armenian Church of Syria, of the Greek Schism and of the Byzantine, Russian, and other Eastern Orthodox sects and churches, and of the so-called Nestorian Church; the Schismatic and Melchite (Catholic) Greek Patriarchates of Antioch; the Syrian, Monophysite, and Catholic Patriarchates of Antioch, the Latin Patriarchate of Antioch, and the Maronite Church, for all which see respective articles.

**Statutes of the Various Christian Sects and Churches.**—The Christians of Modern Syria, schismatic as well as Catholic, are divided into the following sects and churches:

**Greek Orthodox, i.e., the Syrian Greek Schismatic Church.**—The Greek Orthodox of Syria are under the jurisdiction of the Patriarch of Antioch, whose residence is at Damascus and who has under his jurisdiction 2 suffragan or auxiliary bishops attached to him personally, and 13 eparchies, or archdioceses, 50,000 families, or about 250,000 subjects, most of whom dwell in Syria proper. Of these thirteen eparchies eleven are in Syria, one in Northern Mesopotamia, one in Armenia and Asia Minor. The Greek Orthodox of Syria have 5 schools with 810 pupils in Beirut; 24 in Damascus and surrounding villages, with 2215 pupils and 60 teachers; and 12 in Northern Syria with 2400 pupils and 90 teachers, with the 5 schools of Rome. The liturgical language is that of the Greek Church, and the liturgical language, Greek, with a great deal of Arabic, which is the vernacular of all the Christians of Syria.

**Greek-Melchites, i.e., Roman Catholic Syriacs of the Greek Rite.**—These are the inferior jurisdiction of the Greek-Melchite Patriarch of Antioch, whose residence is at Damascus, and who has under his patriarchal jurisdiction 4 archdioceses, 8 dioceses, 2 patriarchal vicariates (at Jerusalem and Alexandria), with a total of about 125,000 souls, divided as follows: (1) Archdiocese of Aleppo, 6 churches and chapels, 10,000 souls; (2) Archdiocese of Capuchin and Jesuit missionaries; (2) Archdiocese of Bostro and Hauran with 12,000 souls, 4 churches, 8 chapels, 15 priests and 4 schools; (3) Archdiocese of Home and Hamah, with 8000 souls, 20 churches and chapels, 20 priests and 18 schools, residence at Home; (4) Archdiocese of Tyre, with 7000 souls, 8 churches and chapels, 20 priests, of which 15 are Basilian monks, and 13 schools, residence at Sur (Tyre); (5) Diocese of Beirut and Djebeil, with 15,000 souls, one seminary at Ain-Tram, 150 parishes, 195 churches and chapels, and 19 schools, residence at Beirut; (6) Diocese of Damascus with 15,000 souls, 15 parishes, 9 churches and chapels, 17 priests, and 19 schools, residence at Gemaidat-Marjoun; (7) Diocese of Damascus, of which the patriarch himself is the ordinary, with one suffragan bishop, with 12,000 souls, 9 parishes, and 9 churches; (8) Diocese of Heliopolis or Baalbek, with 3000 souls, 9 parishes, 10 churches, 15 priests, and 8 schools, residence at Baalbek; (9) Diocese of Potemis or Saint John of Acre, with 9000 souls, 24 stations, 25 churches, 34 priests, and 6 schools, residence at Acre; (10) Diocese of Sidon, with 18,000 souls, 38 churches and chapels, 41 priests, 34 schools, residence at Sidon; (11) Diocese of Tripoli, erected in 1897; (12) Diocese of Zahle and Furzoul, with 17,000 souls, 30 churches and chapels, 35 priests, 12 schools, residence at Zahle. The two patriarchates with a total of 4 archdioceses, and 60 parishes in each, have a total of 260,000 souls, 103 priests, 200 schools, and 5000 pupils in the latter and four or five parishes in the former. The Greek-Melchites have also a patriarch with a church in Marseille, another in Paris (since 1889), and several in the United States. In Jerusalem they have the Seminary of St. Anne, founded in 1882 by Cardinal Lavigerie under the direction of the White Fathers. The number of these average between 126 and 150. They have also a seminary in Rome founded for them in 1577 by Gregory XIII, under the name of College of St. Athanasius; also a small seminary in Beirut, and a larger one at Ain-Tram. Three indigenous religious orders of the Franciscan, the Carmelite, and the Dominicans, still in existence among the Greek-Melchites in Syria, viz.: The Aleppine, with 40 monks and 18 nuns; the Baladites of the Order of St. John, with 90 monks and 42 nuns; and the Mokhallabis, or Salvatorians, with 200 monks and 25 nuns. The rules followed by these three orders are either those of St. Basil or St. George. From the time of Gregory XVI (1831-46) the patriarch of the Greek-Melchites is allowed to assume the official title of "Patriarch of Antioch, Alexandria, and Jerusalem."

**The Syrian Jacobites, i.e., Monophysites.**—They are under the jurisdiction of the Syrian Jacobite Patriarch of Antioch, whose residence is at Der-el-Zaefan or Mardin in Northern Mesopotamia. The Syrian Jacobites were formerly very numerous and scattered all over Western Asia, Egypt, and India, having had in the twelfth and thirteenth centuries as many as 20 metropolitans and 100 bishops or dioceses. At present, they have but 8 archbishops and 3 bishops with a total of about 80,000 souls, not including those of Malabar, in India, who are not under the direct jurisdiction of the Syrian Jacobite Patriarch of Antioch. The episcopal sees of this Church, with the 5 sees of Rome, are distributed between the patriarch and the titular bishop, with a total of 5000 souls, 11 churches, residence at Der-el-Zaefan. The patriarch resides at Mardin, all are situated in Mesopotamia, and in the extreme north-eastern section of Syria. Their liturgical language is Syriac (see MONOPHYSITES).

**Catholic Syriacs.**—These consist mainly of those Syrian Jacobites who in the last five or six centuries have gradually given up their Monophysite heresy, and embraced the Catholic Faith, though retaining their Syrian Rite, customs, and liturgy. In course of time they have become numerous enough to have a patriarch of their own with several dioceses and bishops. The sees of their own are four, in Palestine, Mesopotamia, and Babylonia. Their patriarch, whose official residence is at Mardin, but who lives sometimes in Mosul and sometimes in Aleppo or Beirut, in Syria, is officially entitled the "Syrian Patriarch of Antioch", having under his jurisdiction 6 dioceses with a total of 31 churches, 11 cities, 15 towns, and 18 schools, divided as follows: (1) Archdiocese of Bagdad, with 2000 souls, 3 churches, 6 priests, and 1 school; residence Bagdad; (2) Archdiocese of Damascus, with 4000 souls, 6 parishes, 6 churches, 12 priests, and 6 schools, residence Damascus; (3) Archdiocese of Beirut and Hamah, with 5000 souls, 5 churches, residence Home; (4) Diocese of Aleppo, with 4000 souls, 3 parishes, 3 churches, and 15 priests, residence Aleppo; (5) Diocese of Beirut, with 700
souls, 1 church, and 3 priests; (6) Diocese of Diarbekir, with 1000 souls, 3 parishes, 3 churches, and 7 priests. (7) Diocese of Djezie, with 2000 souls, 7 churches, 10 priests, and 6 schools, residence Djezié; (8) Diocese of Mardin, with 2000 souls, 9 churches, 25 priests, and 7 schools; (9) Diocese of Mosul, with 10,000 souls, 8 parishes, 12 churches, and 25 priests, residence Mosul. The liturgical language of this Church is Syriac.

Catholics of the Latin Rite.—The Catholicks of the Latin Rite in Syria are not very numerous and are under the jurisdiction of the Apostolic Delegate of Syria, whose residence is at Beirut (formerly at Aleppo). They number about 7000, scattered all over the large towns of Syria, and are either of Italian or French descent, having settled in Syria mainly for commercial or educational purposes. The so-called Latin Patriarchate of Antioch owes its origin to the times of the Crusades of the eleventh, twelfth, and thirteenth centuries, in connexion with the establishment of the Latin Patriarchate of Jerusalem, both of which are nowadays simply titular, without any jurisdiction, and their titulars reside in Rome. There are 30 Dioceses of the Latin Rite in Antioch, two of which are titular jurisdiction the following titular archbishopros: Apamea, Adana, Tarsus, Anazarbe, Seleucia, Irenopolis, Cyr, Hierapolis, Edessa, Amida, Nisibis, Emesa, Heliopolis, Palmyra, Damascus, Philadelphia, Bostra, Almire, Derbe, Epiphanias, Gabala, and Panopolis. Among these is the See of Armenian; for Chaldeans (Catholic) see Chaldean Christians. The last group of Christians in Syria, and, perhaps the most important one, consists of the Maronites of Mt. Lebanon. They form by far the largest Christian community of Syria, and are all in union with the Roman Catholic Church. (See Maronites.)

The latest approximate statistics of the population and various denominations in Syria are—total population, 3,226,160; Mohammedans, 2,200,450; Catholic Christians, 555,949; non-Catholic Christians, 455,389; Nusairiyeh, about 150,000; Isma'iliyeh, about 120,000; Druze, about 70,000; Jews, 65,240.

Catholic Missions in Syria.—The beginnings of Catholic missions in Syria may be appropriately traced back to the age of the Crusaders and the establishment of the Latin Patriarchate of Antioch in 1100, and that of the Vicariate Apostolic of Aleppo in 1150. The first mission of the Order of the Friars Minor was appointed either in 1100 (according to Le Quien) or 1098 (according to Mas Latrie) by Pope Urban II. The first appointees was Bernard, Bishop of Artesia, near Antioch. He died in 1132 and was succeeded by Raoul, from Dumfront in Normandy, who, owing to flagrant acts of imperimence and insubordination to the Holy See, was forced to resign in 1142. He was succeeded by Aimeric or Amaury, of Limoges, who, having incurred the displeasure of Renaud de Chatillon, Prince of Antioch, was persecuted, tortured, and finally compelled to flee to Jerusalem in 1150, and in the first year of his residence there, he was restored to his see by Baudouin II, Prince of Aleppo. Soon, however, Bohemond III, Prince of Antioch, drove Amaury out of his see and offered it instead, in 1161, to the Greek Patriarch, Athanasius. On the death of the latter in 1170, caused by a terrific earthquake, in which most of the Greek clergy also lost their lives, the Greeks lost their influence and power with the people. In 1196 Amaury himself died and was succeeded by Pierre d'Angouleme, Bishop of Tripoli. In 1204 Pietro di Capua, known as Pietro d'Amaury, was chosen Patriarch of Antioch. Bohemond IV, however, made an attempt to introduce the Friars Minor him with the Greek Patriarch, Simeon III; but he was excommunicated by the patriarch and by the pope himself, Innocent III, which caused the whole Latin clergy to rebel against the king. Pietro d'Amaury, nevertheless, was imprisoned by Bohemond and died in 1208, and was succeeded by the Latin Bishop of Jerusalem, Pietro di Capua, nephew of the deceased patriarch. Bohemond IV, however, refused to acknowledge him. In the meanwhile, after many quarrels and violence, King Bohemond and the Latin clergy agreed to the election of Philip of France, in 1233, as Patriarch of Antioch, after having succeeded in inducing the pope to create the Greek occupant of the see, the Patriarch Peter, a cardinal. Rainier died in 1228 and was succeeded in 1228 by Albert Resato, who was present at the Council of Lyons in 1245 and who died in 1252.

In the thirteenth and fourteenth centuries several Latin patriarchs occupied the See of Antioch, but were constantly harassed and molested by the native Greek clergy and by the Frankish princes themselves, who for political purposes were ever ready to sacrifice religious interests in order to secure the good will of the native Greek Syrians. In the year 1348, however, the Latin Patriarchate of Antioch came to an end, as far as effective jurisdiction was concerned, although it continued to exist till our own times simply as a titular dignity. The present Latin Patriarch of Antioch excepted. In the fourteenth century, however, when it was at its height, the Latin Patriarchate of Antioch had under its jurisdiction the Latin sees of Laodicea, Gabala, Antipatrus or Tortosa, Tripoli, Byblos, Seleucia, Tarsus, Corycos, Mamistra, Edessa, Apamea, Basra, Artesia, Armatha, Samarkand, Hama, Acre, Ulul, Cy, Nicocia, Paphos, Famagosta, and Limassol (see Le Quien, "Oriens Christianus", III, 1165-1232).

During these two centuries, the presence of so many Catholic bishops, clergy, and lay people of the Latin Rite in Palestine and Syria was productive of good Catholic misisonal results, as closely to the contact of the Latins with the various Oriental Schismatic Churches of the Near East, a large number of Greeks, Nestorians, Jacobites Syrians and Monophysite Armenians, not seldom led by their own bishops and clergy, embraced the Catholic Faith.

The second centre of Catholic propaganda in Syria was the Latin Vicariate Apostolic of Aleppo. This Vicariate was first established in 1762, extending its jurisdiction and its beneficial missionary influence over all Syria, Cyprus, Egypt, and Arabia, all of which provinces were then, by a special decree of the Council of Trent, declared to be within the Vicariate Apostolic of Constantinople. Its first occupant was the Lazarist Bussu. After his death, and, in fact, several decades later, in 1817, he was succeeded by Mgr. Gandolfi, of the Congregation of the Mission, who was replaced in 1827 by Mgr. Losanna, titular Bishop of Abydos. From 1827 down to 1896, owing to the special rights and privileges enjoyed by the Franciscans as the custodians of the Holy Land, all the Latin Vicars Apostolic of Aleppo were selected from the Franciscan order as follows: A. Fazio (1836-38); Father Fillardell (1839-52) who died a martyr of good Catholic mission in 1852; Pasquale Belloni (1853); S. Milani (1874-76); L. Piavi in 1877, who in 1889 was made Latin Patriarch of Jerusalem; and G. Bonfigli in 1890, who in 1896 was transferred to the Latin Vicariate Apostolic of Egypt. In the meanwhile the resident was transferred from Aleppo to Beirut, which was gradually becoming the most influential and progressive town of the Near East. In 1896 a French Dominican, Mgr. Charles Duval, for nearly thirty years missionary at Mosul, succeeded Bonfigli. Duval died in 1904 and was succeeded on January 17 of the following year, (1905) by Mgr. Frediano Gianelli, titular Bishop of Cibra, in order to the Vicariate Apostolic of Syria suffered several losses. In 1838 Egypt and Arabia were taken away; and in 1848 Jerusalem was elevated to the rank of Latin patriarchate with jurisdiction over Palestine, Southern
PHOENICIA, and the Island of Cyprus. But on the other hand the Vicariate Apostolic of Syria obtained full jurisdiction over all the Latins of this vicariate, that is to say the Druses, the Maronites, and the Druzes, under the control of the Franciscan friars, who supervise the work of the Holy See in the area.

Since their inception the vicars in Syria have played a significant role in the life of the Latin Church. They have a long history of service, and their work is primarily focused on the spiritual welfare of the faithful. Their influence extends to all corners of the country, from the coastal cities to the remote villages in the interior. They have been instrumental in establishing parishes, schools, and hospitals, and their work is supported by financial contributions from the faithful.

The Jesuits and the Lazarists, along with other religious orders, have a long history of service in Syria. Their work is focused on education, medicine, and spiritual care. They have established schools, hospitals, and orphanages, and their work is supported by financial contributions from the faithful.

During the last three centuries the Catholic missions in Syria have had to contend against heavy odds and difficulties occasioned by the changing political landscape of the region. The country has been occupied by various powers, and the Catholic Church has had to adapt to these changes. Despite these challenges, the Catholic Church has continued to thrive in Syria, and its influence is felt throughout the country.

The Jesuits alone have a long history of service in Syria, and they have established numerous schools and orphanages throughout the country. Their work is focused on education and spiritual care, and their influence is felt throughout the country.

The Lazarists, established in Syria in 1624, have a long history of service in the country. They have established schools and orphanages throughout the country, and their work is focused on education and spiritual care.

The Good Shepherd of Angers, an orphanage at Hammana with 150 inmates. Finally, the Mariamettes, an order of native nuns, established in 1800, have established a school for girls, and some 3500 pupils, scattered all over Syria; 1 at Beirut, 2 at Celip, 9 at Bikfaya, 1 in Damascus, 6 in Cairo, 2 at Home, 6 at Sayda, 6 at Tannal, and 8 at Zahlé.

For the religious history of Christian Syria see the bibliography appended to articles on the various Christian communities. For the history of the Druze see: Brockway, Early Christians; and the Druze, Early Christianity: An Historical Study (London, 1904); HINMAN, Mission and Expansion of Chris-
SYRIAC Hymnody.—To the general consideration set forth in the article HYMNODY AND HYMNOMY must be added some bearing particularly on the structure and liturgical use of hymns (madrathē), exclusive of poetical homilies or discourses (mimmār), which belong to the narrative and epic class, while the hymns are lyrical. The chief basis of Syriac metre is the fixed number of syllables of the verses, without distinction of long and short syllables, as in several modern languages. Verses composed of ten to twelve syllables are known, but the metres most used in hymnody are verses of twelve syllables formed of three equal measures (4+4+4), verses of seven syllables formed of two measures (3+3+4+4), and verses of five syllables also formed of two measures (2+3+3+3+2). These verses may be employed alone or grouped in strophes, the latter form being most frequent in hymns composed of verses of five and seven syllables. A strophe is generally composed of equal verses, but it sometimes happens that the first or the last verse is in a different measure from the other verses of the strophe. All the strophes of a hymn are usually of the same construction.

Besides variety of metre and division into strophes the Syrians prior to the ninth century knew no other artifice than the arrangement of acrostic poems. The acrostic played an important part in Syriac hymnody and its use, especially the alphabetic acrostic, seems to have been introduced in imitation of the Psalms and the Lamentations of Jeremias. Sometimes the acrostic is linear, simple when each verse begins successively with one of the twenty-two letters of the Syriac alphabet, multiple, when two, three, or more verses begin letter without reference to others. Sometimes it is strophic; sometimes it is strophic, when each strophe is marked by a letter of the alphabet. This letter may be only at the beginning of the first verse or it may be repeated at the beginning of each verse of the strophe. There may be two or more successive strophes beginning with the same letter, each letter regularly marking the same number of strophes throughout the poem which thus consists of forty-four strophes, of sixty-six, or of any other multiple of thirty-three. The name of the first strophe is usually the name of Jesus Christ, of Mary, or of the saint in whose honour the hymn is composed serves to form linear or strophic acrostics. St. Ephraem signed some of his poems with his acrostic.

From the ninth century the influence of Arabic poetry found itself in Syriac hymnody, especially by the introduction of rhyme; this manner of marking the final strophe of a verse had been hitherto unknown, the rare examples held to have been discovered among older authors being merely voluntary or fortuitous assonances. But the Syrians made varied use of rhyme. There are poems in which all the verses have the same rhyme as in the "Kaseida" of the Arabs; in others, and these are the more numerous, the verses of each strophe have a single rhyme which is not the same for all the strophes. In others the verses of a strophe rhyme among themselves, with the exception of the last, which repeats the last verse of the first strophe like a refrain. In acrostic poems the rhyme is sometimes supplied by the corresponding letter of the alphabet; thus the first strophe rhymes with a, the second with b, etc. In verses of twelve syllables formed of three tetrasyllabic measures the rhyme is at the end of each verse, so that it is repeated three times in each verse. There may also be a different rhyme for the first two measures and for the last. These are the most frequent combinations, but there are others.

Most ancient hymns, e. g. those of St. Ephraem, Narses, and Balai, although composed for one or two choirs, were not originally intended for liturgical use properly so called. They were addressed as much to the laity as to clergies, and date from a period when the codification of harmony, if we may so speak, was not yet regularly established. The result of adapting these hymns to liturgical offices was that they underwent various modifications: (1) in the assignment of authorship—the Syrian Jacobites and the Maronites in adopting those of Nestorian origin either suppressed the name of the author or substituted the name of one whom they considered orthodox, most frequently St. Ephraem; (2) in revision, those which were too long were trimmed, the first and last strophes were omitted, the metre was altered, and in other ways the term "Mother of Christ" was replaced by "Mother of God", etc.; (3) in general arrangement, especially by the addition of a refrain when there was none original. Thus a hymn by St. Ephraem the acrostic of which forms the name "Jesus Christ", begins with the strophe:

1. Jesus Our Lord the Christ [Father];
2. Has appeared to us from the bosom of His
3. He has come to deliver us from darkness,
4. And to illumine us with His resplendent light.

It was preceded by the following distich which forms the refrain:

1. Light is arisen upon the just;
2. And joy for those who are broken-hearted.
3. Likewise a hymn of Narses on the Epiphany begins:
4. Error like darkness,
5. Was stretched over creatures;
6. The light of Christ is risen
7. And the world possesses knowledge.
8. Its refrain is the following distich:
9. The light of the appearing of Christ
10. Has rejoiced the earth and the heavens.

Hymns do not occur only in the Office which corresponds to the Roman Breviary; the Syrians also made
use of them in various liturgical functions, such as funerals and marriage celebrations.

Simple hymns without refrain are called teshubtāt (glosifications); the name cola (voice) is given to the hymns in which the strophe is preceded by a sentence (metrical or not) expressing a thought in conformity with that of the strophe. It is in a manner an invitation from the first choir to which the second replies by strophe, e. g.:

First choir: Open to me the gates of justice.
Second choir: Open to us, Lord, the great treasure, (strophe of four verses).
First choir: And I will enter to praise the Lord.
Second choir: At the gate of thy mercies (etc., strophe of four verses).

Sometimes the strophes are interspersed with versicles from the Psalms.

The hymns in the Jacobite Office which conclude the part known as sedra and replace the short prayers of the Nestorian Office are called ba’uṭha (prayer, request). Most hymns of this class are in pentasyllabic verse and a work of the poet Balal (d. about 450). They show great simplicity of thought and language and consist of two strophes, generally of six verses each, sometimes of four, as for example:

During forty days Moses fasted on the mountain:
And with the splendour of its light
His countenance shone.

During forty days Ninive fasted:
And the Lord was appeased,
And annulled the sentence.

Instead of the ba’uṭha occasionally occurs a metrical composition called sebālata (stairs), which are factitious arrangements of verses borrowed from various sources and arbitrarily arranged by those who co-ordinated or revised the Offices, and are of no assistance in the study of Syriac hymnody. The saqīthā is less frequently replaced by the augūtha, a canticle in the form of a dialogue which recalls the “Victimae paschali” of the Roman Missal. All the poems of this kind known to us are of Nestorian origin, and are probably the work of Narses. They are uniformly constructed with an introduction and a dialogue; the introduction is composed of from five to ten strophes of four heptasyllabic verses; the dialogue between two persons or two groups of persons contains forty-four strophes (twenty-two for each interlocutor) similar to those in the prologue and forming an alphabetic acrostic. These compositions of rather lively measure are stamped by a certain grace. The subject is adapted to the feast of the day; thus in the canticle for Christmas the dialogue is between the Blessed Virgin and the Magi; for the Annunciation, between Gabriel and Mary; for the feast of the Syrian Doctors, between Cyril and Nestorius, etc. These three kinds of hymns correspond to the three subjects which form their usual theme, praise, prayer, and instruction, but as has been said the last-named was chiefly imparted by the mmurāt.

Extensive study of Syriac hymnody would show whether there is any relationship between it and Byzantine hymnody, an hypothesis which has had as many opponents as defenders; but this study has not yet been attempted, and it is an undertaking fraught with difficulty owing to the small number of documents published in satisfactory condition. Indeed the knowledge of hymns supplied by editions of the liturgical books of Unitatic Chaldeans, Syrians, or Maronites is inadequate for the reasons indicated above. The works of St. Ephraem which contain a large number of them (authentic or apocryphal) have not been critically edited. The Nestorian Breviaries which have most faithfully preserved the ancient texts have never been printed and MSS. are rare, while the Syriac liturgical books are few and have not been sufficiently studied.

Syriac Language and Literature.—Syriac is the most important branch of the group of Semitic languages known as Aramaic. In the time of Alexander the Great, Aramaic was the official language of all the nations from Asia Minor to Persia, from Armenia to the Arabian Peninsula. It was divided into two dialects: the western, used in Palestine and Syria by the Jews, Palmyrans, and Nabateans; the eastern, spoken in Babylonia by Jews, Mandaeans, Manicheans, and the peoples of Upper Mesopotamia. The Syriac language, as we know it from its literature, did not spring from the dialect spoken in Syria, but from the eastern Mesopotamian dialect. When the weakened Seleucids ceased to defend the Euphrates, small independent principalities were formed in that region. The most famous was the little Kingdom of Edessa which was the nucleus of the modern Diocese of Edessa. The Edessan language was used in all the Churches of the shores of the Mediterranean to the centre of Persia. The suppleness and flexibility of this dialect and its loose and variable syntax readily lent itself to the most different constructions, and offered to Christianity a more appropriate instrument than Greek for the expression of its sacred ideas. In Syria proper and western Mesopotamia Syriac was first used simultaneously with Greek, but after the Monophysite schism Greek gradually fell into disuse. The period from the middle of the fifth century to the end of the seventh was the most brilliant period of Syriac literature. The Arab invasion brought about the decadence by imposing Arabic as the official language; the latter rapidly came into general use, and Syriac was no longer spoken or understood by the people, although it was upheld as a literary language for four centuries longer, until the language became dead as a living tongue. Nevertheless, the destruction was not complete; Syriac, or rather Aramaic, modified according to the laws of evolution common to all languages, is still spoken in three villages in the neighbourhood of Damascus, in Tour Abdin (Mesopotamia, between
Nisibis and the Tigris), and in Kurdistan, especially in the neighbourhood of Ourniah. The language of this city is even in process of becoming a literary tongue, through the efforts of the missionaries (American Protestants and French Lazarists), who print numerous works in this dialect, Bibles, text-books, pamphlets, and reviews.

The works transmitted to us in the Syriac language form an essentially and almost exclusively Christian religious literature. After Latin and Greek there is none more useful to the exegete, the theologian, and the ecclesiastical historian. We know of more than 1,200 bishops and. from the fourth to the thirteenth century. The libraries of Europe and those of some eastern monasteries which are of easy access possess nearly 3,000 MSS., containing the greater part of these works. Our short list will take only the best-known authors and the most important works. Of pagan literature there remain only a few short inscriptions, most of them funerary, and a letter from Mara bar Serapion, Stoic philosopher of Samosata, to his son, written probably in the course of the third century (ed. Cureton, "Spicilegium Syr.," London, 1855). The writings of the Gnostic Bardeaneses of the same period, with a Gnostic hymn inserted in the Acta of St. Ignatius, form another connection with Pagan and Christian literature. The earliest monument of the latter is the version of the Bible called the Peschitta (simple), which is treated elsewhere (see VERSIONS OF THE BIBLE). It suffices to mention also the two oldest orthodox writers, Aphraates the Persian (d. 330), and St. Ephraem, the most brilliant of the Fathers of the Syrian Church (d. 373). Among the disciples of Ephraem was Mar Aba, the author of commentaries on the Gospels and of a homily on Job; Zenobius, deacon of Edessa, who wrote treatises against Marcion and Pamphylius and a "Life of St. Ephraem." He was also one of the Biblical commentators who, after having written against Marcion and the sceptics, Abamya, a nephew of Ephraem, has been wrongly identified with Cyrillona, an unknown author who wrote in 397 a poem on the two plagues of that period, the locusts and the Huna.

At the beginning of the fifth century there flourished at Edessa the famous school of the Persians, in which the doctrines of Theodore of Mopsuestia and Nestorius found fervent adherents. The bishop then was Rabballa, son of a pagan priest of Kenneshrin (Chalisa). He was elected by Eusebius as bishop of the city, distrusted to the poor, and embraced the ascetic life. In 412 Acacius of Aleppo appointed him Bishop of Edessa; he died in 435. After inclining to Nestorianism he became an ardent partisan of St. Cyril of Alexandria. His severity made him formidable to his clergy, and won for him the title "Pityrant of Edessa." At Constanti- nople he delivered a discourse against Nestorius, which was translated into Syriac, as well as several of his letters. He himself translated the treatise "Of the Orthodox Faith" which Cyril addressed to him. His extant works were translated by Overbeck (Of. St. Cyril of Alexandria, who favoured the Nestorians. Mari the Persian of Rewardarsh, to whom the celebrated letter of Ibas was addressed, wrote a commentary on Daniel and a controversial treatise against the Magians. He also commented the "lost" letters of Abraham Bar Kochba, who composed a letter to the Persians, 9 less noted for his writings than for his charity, which, won him a place in the Roman Martyrology (9 April). He must not be confounded with Acacius of Melytene who joined Rabballa in his warfare against Nestorianism, nor with Acacius of Seleucia, patriarch of the Nestorians (494-96), author of homilies on fasting and of tracts on the Mass. Mention must also be made of Ibas, Bishop of Nisibis, who in 496 promulgated the statutes of the school of that city (ed. Guidi). About the middle of the century lived Isaac of Antioch, called the Great and regarded as a saint. His history is unknown. The Syrians have attached his name to a considerable collection of metrical homilies (partly edited by Bickell, Giessen, 1573-77, and by Bedyan, Paris, 1670), but it is certain that several authors of the same name have been attributed to him. Among these are Isaac of Edessa, a Monophysite of the end of the sixth century, and Isaac of Amida. The last-named is the author of a poem on secular games (414) and on the taking of Rome (410). In the first half of the seventh century, Baucis, the bishop of Aleppo, the author of numerous poems which have been preserved in part. At the death of Ibas the doctors of the school of Edessa were expelled, and withdrew to the Persian Empire. Among them were Baraunus, who became Bishop of Nisibis and was noted for his despotism; we have six of his letters addressed to the Patriarch Acacius. He also wrote exhortations, funeral orations, and hymns; Narsai joined him and was the real founder of the School of Nisibis which continued the tradition of that of Edessa; he taught there for more than forty years. He was praised in most exalted terms by the Persian poet "the Poet of the East", "the Poet of Religion", "the Harp of the Holy Ghost". The Monophysites nicknamed him "the Leper". He died about 502. He is said to have composed commentaries on most of the books of the Old Testament, and 360 metrical discourses. Many of them have been edited by Mingana (Moscou, 1905). Mana, who became a bishop in Persia, was distinguished at Edessa for his translation of the works of Theodore of Mopsuestia.

Eliseus bar Kosby and Abraham of Beit Rabbab, the successors of Narsai in the direction of the school, continued the tradition against the Magians. Most of the Nestorian authors of the sixth century proceeded from this school. One of the most famous was the Patriarch Mar Aba I (540-52), a convert from Zoroastrianism; he studied at Nisibis, learned Greek at Edessa, and went to Constantinople; later he founded the School of Seleucia. He preached boldly against the Magi; Khusraw I exiled him; on his return to Seleucia he was thrown into prison, where he died. He is credited with a translation of the Scriptures, but there is no trace of it; he wrote Biblical commentaries, homilies, and synodal letters. He also wrote a commentary on the New Testament.

Paul the Persian, very learned in profane philosophy, composed a treatise on the "Logic" of Aristotle, dedicated to King Khusraw (ed. Land), and several other didactic works, preserved in part. His name is Paul, of Nisibis, a disciple of Mar Aba, was the author of Biblical commentaries. Theodore, later Bishop of Merw in 540, wrote a commentary on the Psalms and a reply to ten questions of Sergius of Rashaya. His brother Gabriel, Bishop of Hormisdarshir, wrote controversial books against the Manichaeans, and the solution of difficult Scriptural questions. To Abraham bar Kardash, a Nestorian, are attributed homilies, funeral orations, sermons, and a letter against Shiban, probably a Magian. Another Abraham, of Kashkar, founded and governed on Mount Iala near Nisibis a famous monastery called the Great Convent. The rules he established in 571 were published (Chabot, Rev. Orient 1898) with those of Dasko, his successor (583-604).

The physician Joseph, the successor of Mar Aba (552-67), is spoken of as the author of an apocryphal correspondence attributed to the Patriarch Papai (fourth century). Joseph Houzaya of Al-Ahwas was then teaching at Nisibis; he is credited with the creation of a grammatical treatise. He is also known as the inventor of the system of punctuation in use among the Nestorians, compiled in imita-
tion of the Masoretic signs, perhaps with the assistance of the Jews of Nisibis. Henana of Adiabene at the end of the sixth century drew to Nisibis a large number of disciples; his teaching caused serious disputes in the Nisorian Church, for he abandoned the doctrines of Theodore of Mopsuestia to attach himself to St. John Chrysostom. His doctrine, censured by Isbityahb I, was condemned by Sabrisho (596). Most of his literary work consists of Biblical commentaries. They are lost, but extensive fragments are inserted in the "Garden of Delights," a twelfth-century compilation, which has preserved numerous extracts from the oldest Nisorian exegeses. Under the Persian-Babylonian martyr of Persia (570-81), Barhebraeus, who became Bishop of Holvan, a partisan of Henana, wrote numerous controversial and exegetical works and a treatise "On the Reason of the Schools" (ed. Scher, Paris, 1909), which throws light on the history of Nisibis. We have the synodal letters, and twenty-two questions on the sacraments of the Patriarch Ishoyabeh I of Arzon (582-95).

At the end of this century the Syrians had a copious hagiographical literature, of which the oldest and most authentic portion consists of the Acts of the Martyrs of the persecution of Sapor II (see Persecution). To these is added a number of monographs, homilies, lives of saints, and biographies translated from the Greek, the whole forming a rich mine for the historian and the hagiographer. In this century also there were translated and were often re-written the Greek apocrypha of the Old and New Testament which have come down to us in Syriac, together with some native productions, such as the teaching of Addai. The curious romance of Julian the Apostate (ed. Hoffmann) dates from the sixth century as well as the valuable chronicle of Edessa and the large historical compilation (ed. Land) ascribed to Zacharias the Rhetorician; it consists in parts of original documents and partly of Greek sources of Persian origin.

While Mesopotamia and especially Persia were attached to Nestorianism, the western Syriacs embraced the Monophysite doctrines of Eutyches, propagated by the monk Barsama, condemned as a heretic by the Council of Chaledon (451), and in this they clung to the faith of the tradition of St. Cyril of Alexandria (see Monophysites and Monophysitism). All their theological and polemical literature was inspired by this doctrine, which was defended by talented writers. The foremost were James of Sarugh and Philiprees of Mabough. The latter, at Tabal in Mesopotamia, and Edessa in the time of Ibas, and later ardently embraced the Monophysite cause. Appointed Bishop of Mabough (Hierapolis) in 485, he went twice to Constantinople and was much esteemed by the Emperor Anastasius. He presided at the council which made the famous Severus Patriarch of Antioch (312). He was exiled by Justin and died at Gangres about 523. Despite his eventful life he was one of the most prolific and elegant of Syriac writers. Of his writings we possess liturgies and prayers, thirteen homilies (ed. Budge, London, 1894) which constitute a treatise of Christian ethics, a commentary on the Gospels (preserved only in part), a treatise on the Trinity and the Incarnation (ed. Vaschalde, Paris, 1907), some discourses, professions of faith, several short polemical treatises against the Catholics and the Nestorians, and numerous letters.

Philiprees wrote against Stephen bar Sualph, a pious monk, born at Edessa; on his return from a journey to Egypt he preached pantheistic doctrines. Driven from Edessa he withdrew to Palestine, where among the Origenistic monks he found a fertile field for his ideas (cf. Frothingham, "Stephen bar Sualph," Leyden, 1886). Many of his letters and mystical commentaries on the Bible remain, but he is the author of a book, "The Hidden Mysteries of the House of God", which he issued under the name of Hierotheus, the pretended master of Dionysius the Areopagite. This extensive treatise was very influential in the development in Syria of pseudo-Dionysian literature; it was afterwards forgotten, and in the thirteenth century Barhebraeus had great difficulty in securing a copy; this copy is now in the British Museum.

Among the other Monophysite writers of the sixth century were: Simeon of Beit Arash, a skillful dialectician who combated the Nestorians. He died at Constantinople in the reign of Justinian. His letters on the propagation of Nestorianism and on the Christian martyrs (570-81) are famous. John bar Cursus, Bishop of Tellah, expelled from his see in 521, died at Antioch in 538. He is the author of exhortations to the clergy and disciplinary questions, a profession of faith, and a commentary on the Trisagion. Paul, Bishop of Callinicus, deposed in 519, translated into Syriac the works of Severus of Antioch. Jacob Barbusadeus, the real founder of the Monophysite Church, from whom it derived its name of Jacobite, died in 578. His letters and profession of faith are preserved in Syriac translations. The lives of all these men are more or less well-known through these various monographs, and, as we have said, also here, and through the valuable historical works of John of Ephesus.

Sergius of Reshaina was a physician and a distinguished scholar; his friendship with the Nestorians and the part he played at the end of his life caused him to be suspected of having abandoned Monophysite doctrines. He studied at Alexandria, where he learned Greek. In 535 he was sent to Rome by Ephrem, Orthodox Patriarch of Antioch, and escorted Pope Agapetus to Constantinople. Here Sergius sought to expel the patriarch Severus of Antioch, who was Maurice of Alexandria, and was received by some of the monks met there. He died there in 536. His considerable literary work consists almost entirely of Greek translations remarkable for their fidelity; his version of the works of the pseudo-Areopagite greatly influenced the theology of the western Syriacs, and his translations of profane authors (Porphyry, Aristote, Galen, etc.) hold a special place in the body of Syriac translations.

A number of the works of Sergius have reached us; they have been published in part; mention must also be made of Rhoumedech of Tagrit (d. 575), who left philosophical and grammatical works; Moses of Antioch, translator of the works of Cyril of Alexandria; and the Patriarch Peter of Callinicus (578-91), whose theological writings against Damian of Alexandria and the Trithistae have reached us, together with some letters.

Among the Nestorians the literature of the seventh century begins with Babai the Great. Abbot of Mount Ida, who governed the Church of Persia during the vacancy of the patriarchal see (608-29) brought about by the hostility of Khusru II. He composed many works; his treatise on the union of the two natures of Christ which we possess is one of the most important works of Nestorian theology. He also composed a hymn and a dogmatic letter by the Patriarch Ishoyab II of Gedala (628-43). Ishoyab III of Adiabene (648-60) was a prolific writer, and remarkable for his studied style; he composed controversial treatises, funeral orations, hymns, numerous liturgical works, and the history of the martyr Ishacysan. We also have a collection of 104 of his letters (ed. Duval, Paris, 1904), which is important for the religious history of this period. Ishoyab energetically opposed Sahdona (Martyrius), Bishop of Mahoze, his former friend and his companion in the embassy from Boran to the Emperor Heraclius in 636. Sahdona became excommunicated by the Church, and numerous writings have been edited by Bedjan (Leipzig, 1902); it consists mainly of the end of a treatise in
moral and dogmatic theology of which the first seventeen chapters were assailed by Iosyobahy. To this period belong the two most original ascetic writers, Isaac of Nineveh and John of Phanek (often called John Saba); the works of the latter, many of which have been preserved, embrace all subjects relating to religion. Under Patriarch George (661–80) the monk Enanisho composed the work entitled "Paradise"; it consists of two parts, the first a translation of the "Lusiatic History" of Palladius and the "Monastic History" of Rufinus, the second a collection of apothegms from the Fathers, and questions concerning the life and death (ed. Leipsig, 1897). This work must not be confounded with the "Paradise of Orientals", which contains the lives of Eastern ascetics and was compiled by Joseph Haza (the Seer), an austere monk, the author of numerous ascetical treatises, and the warm partisan of Hanena, with whom he was condemned; he lived at the beginning of the seventh century.

The Jacobite writers of this period are less numerous: John I, Patriarch of Antioch 631–48, is the author of numerous liturgical prayers; Maranta of Tagrit (d. 649) left a liturgy, hymns, and commentaries; Severus Sebokt, his contemporary, contributed a commentary on St. Renatus on the banks of the Euphrates to philosophical and scientific studies; his works, which are partly preserved, exercised great influence on the following centuries. His letters deal with theological subjects. His disciple Athanasius of Balad, who became patriarch (634–83), likewise devoted himself to Greek philosophy. All these names were eclipsed by another of his disciples, James of Edessa, a writer distinguished for the extent and variety of his knowledge as for his literary talent.

During the seventh century public events had created new conditions in the lands where Syria was spoken. The end of the Roman domination in Syria almost coincided with the fall of the Persian dynasty of the Sassanides, and the Mussulman rule enforced the use of the Arabic tongue. These new conditions introduced a new character in literature, among Nestorians as well as Jacobites. Theological treatises were henceforth more didactic than polemic, and Biblical exegesis became chiefly grammatical and philological. The eighth century began a period of decadence. Among Nestorian writers were Babai of Gebilta, a reformer of religious music in the time of the Patriarch Rabbanakha (711–28); he was the author of a body of liturgical hymns, letters, and sermons, preserved in part; Bar Sahdeh, of Karka of Beit Sok, the author of an ecclesiastical history and of a treatise against Zoroastrianism, both lost; he lived in the time of the Patriarch Petition (731–40). About the same time David of Beit Rabban wrote "The Little Paradise", a kind of monastic history from which Thomas of Marga borrowed. Abraham bar Taschanda, a disciple of Babai, was the author of a book of exhortations, homilies, letters, "The Book of the Royal Way", and a commentary on the writings of the monk Marcus. Mar Abs II, who became patriarch at the age of 100 (741–81), wrote a commentary on the works of St. Gregory of Nazianzus, and another on the Dialectics of Aristotle, a "Book of Military Governors", demonstrations, and letters. His compatriot, Simeon bar Tabbsakhé, treasurer of the Caliph al-Mansur, was the author of an ecclesiastical history.

The martyrology of Nazianzus and later of Hovran, elected patriarch in 754 and immediately deposed, is regarded as the author of a treatise against the heretics. Cyprian, Bishop of Nisibis (741–67), composed a commentary on the theological discourses of St. Gregory of Nazianzus and a treatise on ordination. Abu Noah of Anbar, secretary of the Governor of Mosul at the end of this century, wrote a refutation of the Koran, a refutation of heretics, and a life of John of Dailam. The Patriarch Henanisho II (775–79) is the author of letters, hymns for the dead, metrical homilies, and canonical questions. He was succeeded by Timotheus, whose literary work excels that of all his contemporaries.

Timotheus I, a native of Hazza (near Arbelles), a disciple of Abrahim bar Daschand, became Bishop of Beit Barga; at the death of Henanisho he was elected patriarch by intrigue and the favour of the Governor of Mosul; he quieted the rivalry and was installed in 780, dying in 823. During his patriarchate the Nestorian missions in Central Asia received powerful encouragement from the Persians (cf. Leipsig, 1897). His literary work comprises an astronomical treatise entitled "Book of the Stars" (lost), two volumes of canonical questions, a controversy concerning the Christian faith maintained before the Caliph Al-Mahdi, a commentary on the works of St. Gregory of Nazianzus, and about 200 letters. Sixty of these letters, the controversy, and a large proportion of the questions are extant in various MSS. Through him was made the first collection of the Nestorian councils, which under the name "Synodion Oriental" (ed. Scher, Paris, 1908–11), contains synods convened by his predecessors from 410 to 775. It is the basis of the Nestorian canon law and the official exposition of its creed. About this time lived Theodorus bar Röf, the author of a book of scholia (ed. Scher, Paris, 1908–11), which contains scholia on the Old and New Testament, a treatise against the Monophysites, one against the Arians, a colloquy between a pagan and a Christian, and a treatise on heresies.

Ishodenah (or Denahisho), Bishop of Bassorah, composed an ecclesiastical history (lost), and the "Book of Chastity" (ed. Chabot, Rome, 1898), which contains 150 notices of the founders of Oriental convents.

The share of the Jacobites in the literary work of this period is far inferior to that of the Nestorians. With the exception of George, Bishop of the Arabs, a disciple of James of Edessa who is treated elsewhere (see Monophysites and Monophysitae), the writers are of only secondary importance. Of Elias, Patriarch of Antioch (709–24), we have an apology explaining why he abandoned the Diophysite doctrine; it is addressed to Leo, Diophysite Bishop of Harran and author of controversial writings. Daniel of Salah wrote an extensive commentary on the Psalms, in three volumes; he was not to have remained in the orthodox position, but the third in an Arabic version. David bar Paulus left a grammatical work, letters, a commentary on chapters of Genesis, a dialogue on the addition of the words "who was crucified for us" to the Sanctus. To him are also ascribed poems which seem to belong to a later period. A celebrated author was Theophilus of Edessa, called a Maronite by Bar-Hebræus, and Chalcedonian by Michael the Syrian; this distinguished astronomer, who was much esteemed by the Caliph al-Mahdi, died in 785. His works include astronomical treatises, a history, and a Syriac version of Homer, several quotations from which have been found. About 775 Lazarus of Beit Kandaña compiled a commentary on the New Testament, a portion of which (St. Mark, St. John, and ten Epistles of St. Paul) is extant. George of Beeltham, a monk of Kenneshré who became patriarch (758–90), is the author of a discourse on the life of some homilies (lost) and of a commentary on the Gospel of St. Matthew (partly preserved). His successor Syriacus (793–817) left a liturgy, canons, some homilies, and letters.

The ninth century witnessed a renaissance in scientific and historical studies. Among the Nestorians were the works of Greek physicians who enjoyed the favour of the caliphs of Bagdad; Gabriel Bokhsh (d. 826), John bar Mawwai (d. 857), Honein (d. 873),...
SYRIAC

and at the end of the century John bar Serapion were famous among Christians and Moussulmans for their medical and homiletic maxims known as “Centuries”; George, Metropolitan of Arbella (d. 987), is the author of a canonical collection and some hymns. To him is also attributed an interesting “Explanation of the liturgical offices”. Emmanuel bar Shahlaré (d. 990) wrote a treatise “On the Divine Liturgy”, divided into four parts and twenty-eight books; the second book is missing in all known MSS. Towards the end of the century Andrew, a grammarian, composed a treatise on punctuation and some hymns. At the same period at Bagdad where he taught, Abu’l Hassan, known as Bar Bahliu, compiled his treatise “Lexicon”. He wrote leges and potentia, collected, together with the lexicographical works of his predecessors, numerous notices on the natural sciences, philosophy, theology, and Biblical exegesis (ed. Duval, Paris, 1885–1901). At the end of the century John Bar Khalid wrote the life of the monk Joseph Bosnaya, in which he inserted a curious treatise on mystical theology. The following are the foremost Nestorian writers of the eleventh century. Elias of Tirhan, who became patriarch (1028–49), is famous for his treatise on grammar; he completed the canonical collection made by Timotheus; adding decrees, he wrote leges and potentiae. Emmanuel bar Shinaya, Metropolitan of Nisibis, is the most remarkable writer of this century. Appointed Bishop of Beit Nouhadré in 1002, and of Nisibis in 1008, he occupied the see more than forty years and survived the Patriarch Elias. He is the author of a Syriac grammar, an Arabic-Syriac grammar, hymns, medical homilies, letters, and a collection of canonical decisions. His most important work is his “Chronography”, written in 1019; it includes a chronicle and a treatise on the calendar (ed. Brooks-Chabot, Paris, 1909–10). Elias also wrote in Arabic several dogmatic and moral treatises. Abraham bar Bahriz, who became Bishop of Arbela and Mosul in 1030, is the author of a collection of “Laws and Judicial Sentences”. Among the Jacobites were: John of Maroun (d. 1003), the author of a commentary on the Book of Wisdom; and Ischo bar Shoushan, Patriarch of Antioch under the name of John (1064–75). He composed a treatise on the origin of the Syrian custom of mixing salt and oil in the Euchistic bread, four poems on the pillage of Neltene by the Turks (1058), and several letters in Syriac or Arabic. At the time of his death he was engaged in collecting the works of St. Ephrem and Isaac of Antioch.

In the thirteenth century the Nestorians also began to write in Arabic. Elias III Abulalin, Metropolitan of Nisibis and afterwards patriarch (1176–90), composed prayers and wrote letters. John bar Malkon, who took the name of Ishoiahb when he became Bishop of Nisibis (1190), is the author of a grammatical treatise. The monk Simeon of Shankawa about the same period wrote a chronological treatise and poem in enigmatic style. He is probably the author of the “Book of the Fathers”, which has been ascribed to Simeon bar Sabbšt (fourth century). His disciple John bar Zoubi is chiefly known for his grammatical works.

The Jacobites had able writers. John, Bishop of Harran and Mardin, wrote on the capture of Edessa by Zangui (1144). James bar Solib is the most prolific writer of the century. He took the name of Dionysius when he became Bishop of Mardin in 1166. Michael transferred him to Amid, where he died in 1171. His most important work is his commentary on the Old and New Testament, a vast compilation in which he cites or recapitulates the whole exegesis of the Western Syrians. Among his other writings were: a commentary on the “Centuries” of
SYRIAC

Evagrius, a commentary on dialectics, letters, an abridgment of the histories of the Fathers, saints, and martyrs, a collection of canons, several theological treatises, two liturgies, and an examination of the Mass (ed. Laboure, Paris, 1905); a voluminous treatise against the heresies, a treatise on Providence, holiness, and occasional verses. His commentaries and most of his other works are extant. Michael the Syrian (Michael the Great), the son of a priest of Nablus and a liturgist of the Pahlowi, was elected patriarch (1166–99). He is the author of several liturgical works, but his chief work is his "Chronicle" (ed. Chabot, Paris, 1898–1911). It is the most voluminous historical composition transmitted to us by the Syrians; that of Bar Hebræus is generally only a faithful abridgment of it.

Many earlier documents are inserted or summarised in it; the author furnishes valuable information concerning the historians who preceded him, and for his own period furnishes interesting details concerning the occupation of Edessa by the Crusaders, and the wars of the Musulman princes who occupied Asia Minor, especially those of Michael Chlora, who begins with the Creation and stops with the death of Saladin (1198). Theodore bar Wahboun, a disciple of Michael, who rebelled against him and had himself named patriarch by the dissatisfied bishops, is the author of a liturgy.

The thirteenth century marks the end of Syriac literature. Among the Jacobites were: James (Severus) bar Shakako, Bishop of Mosul (d. 1241), whose "Dialogues" are a philosophical course, and his "Book of Treasures" is a course in theology; Anan (John) bar Madan, who was Bishop of Mardin, Maphrian (1239–1262), and the author of numerous poems; and Maphrian Gregory bar Hebræus, a man of encyclopedic learning, whose name worthily terminates this list (see Bar Hebræus). Mention must be made of the book of the "Knowledge of Truth" (ed. Kayser, Leipzig, 1889), the author of which plans to assemble in one religious community Christians, Jews, and Musulmans; also of the chronicle, likewise anonymous, recently discovered by Mgr Rahmani. Among the Nestorians were Solomon, Bishop of Bassetro (c. 1222) whose chief work is the "Book of the Bee", an historico-theological compilation of a controversial nature (ed. Pottendorf, Budge, Oxford, 1886); George Warda and Khamis bar Kardahe, authors of numerous hymns in the Nestorian office. Gabriel Kamsa, author of a theological poem, and John of Mosul, who wrote edifying poems, belong to the second half of the century. The history of the Syriac Church (ed. Challoner, 1868) is a curious document; his successor Timothæus II is the author of a book on the Sacraments. Addisho bar Brika is the last writer deserving of mention. He was Bishop of Nasibis and died in 1318. His most useful work is his "Catalogue of writers", a sort of literary history of the East Syrians (ed. Assemani: "Bibliotheca Orientalis", III); he concludes with a list of his own numerous and various works: commentaries on the Old and New Testaments, a work on the Life of Christ, one against heresies, one on the mysteries of the Greek philosophers, twelve treatises on the sciences. These works of his have been lost, but we possess his "Nomocanon", or methodical collection of canon law, and his theological treatise called "The Pearl" (both edited by Mai, Rome, 1838), his "Rule of Ecclesiastical Judgments", a kind of code of procedure, fifty metrical homilies which form the "Book of the Para- dichos", and two poems on classical wisdom. From the fourteenth century Syriac literature produced no works of value. The few authors who cultivated it showed neither talent nor originality; nevertheless useful indications concerning local history may be found in their occasional writings.

The great services rendered to scholarship by translations which form a large part of Syriac literature should not be lost sight of; they include both profane and Christian works. The former were chiefly Greek scientific and theological works, principally those of Aristotle and his school. It was through this intermediacy that the Arabs became acquainted with scientific culture, and came into contact with Hellenic philosophy, so that the important part they played in the propagation of the sciences during the Middle Ages had its origins in Syriac literature. The "Romance of Alexander" and that of "Kalila and Dimna" were both translated from the Pahlawi about the sixth century. A portion of the works of the most celebrated of the Greek fathers of the fourth and fifth centuries were translated into Syriac; they possess only a secondary importance, whatever we have the original texts, but are of the greatest value when they represent lost works, as is the case with regard to the "Apology of Aristides", the festal letters of St. Athanasius, the treatise of Titus of Bosa against the Manichæans, the Theophyli of Eusebius, the commentaries of Cyril of Alexandria on St. Luke, the works of Severus of Antioch, the commentary of Theodore of Mopsuestia on St. John and his treatise on the Incarnation, the Apology of Nestorius, etc.

POWIA LANGUAGE: CHABOT, "Les langues et les littératures araméennes" (Paris, 1890); NOLDEKE, "Koptische syriac" (2nd ed., Leipzig, 1898); DUVAL, "Traité de grammaire syriaque" (Paris, 1881); PARKER SMITH, "Theoræsia syriaca" (Oxford, 1868–1901); ASSEMANI, "Bibliotheca orientalis" (8 vols., boards, 1758–1787); BICKELL, "Concises ac rei Syriacæ literariae" (Münster, 1871); NADEL, "Litteratur Syriaca" (2nd ed., London, 1894); DUVAL, "La Littérature syriaque" (3rd ed., Paris, 1907); BROCKELEMAN, "Die Syrache und die christo-lateinische Literatur" (Leipzig, 1899).

A complete and detailed bibliography will be found in NESTLE, WRIGHT, and DUVAL, op. cit.

J. B. CHABOT.

Syriac Versions of the Bible. See Versions of the Bible.

Syrian Rite, East, also known as the Chaldean, Assyrian, or Persian Rite. History and origin.—This rite is used by the Nestorians and also by the Uniat bodies in Syria, Mesopotamia, Persia, and Malabar, who have separated from them. The Syrian and Mesopotamian Uniates are now commonly called Chaldeans, or Syro-Chaldeans; the term Chaldean, which in the practice of the Eastern Rite is generally reserved to those denominations, denoted in Latin and other European languages Syriac nationality and the Syriac or Aramaic language (especially that form of the latter which is found in certain chapters of Daniel), until the Latin missionaries at Mosul in the seventeenth century gave it to the Catholic Church of the East and the Syrian Rite from the West Syrian Uniates, whom they call "Syrians", and from the Nestorians. The last call themselves "Syrians" (Surayi), and even "Christians" only, though they do not all repudiate the name "Nestorai", and distinguish themselves from the rest of Christendom as the "Church of the East" or "Eastern", as opposed to "Western", by which they denote Latin Catholics, Orthodox, Monophysites, and Protestants. In recent times they have been called, chiefly by Anglicans, the "Assyrian Church", a name which can be defended on archaeological grounds. Brightman, in his "Liturgies Eastern and Western", includes Chaldaean and Malabar Uniates and Nestorians under "Persian Rite", and Bishop Arthur Maclean of Moray and Ross (Anglican) who is probably the best living authority on the existing Nestorians, calls them "East Syrians", which is perhaps the most satisfactory term. The catalogue in Theurgies in the British Museum usually adopts the usual Catholic nomenclature, calling the rite of the East Syrian Uniates and Nestorians the "Chaldean Rite", that of the South Indian Uniates and schismatics the "Malabar Rite", and that of the West Syrian Monophysites and Uniates the "Syrian Rite".
a convenient arrangement in view of the fact that most printed liturgies of these rites are Uniat. The language of all three forms of the East Syrian Rite is Syriac, a modern form of which is spoken by the Nestorians and some of the Uniates. The origin of the rite is unknown. The tradition—resting on the legend of Abgar and of his correspondence with Christ, which has been shown to be apocryphal (see ABOAR, THE LEGEND OF)—is to the effect that St. Thomas, on his way to India, established Christianity in Mesopotamia, Assyria, and Persia, and left Adaeus (or Thaddeus), "one of the Seventy", and Maris in charge. To these the normal liturgy is attributed, but it is said to have been revised by the Patriarch Yeshuyah III in about 650. Some, however, consider this liturgy to be a development of the Chaldean.

After the Council of Ephesus (431), the Church of Seleucia-Ctesiphon, which had hitherto been governed by a catholicos under Antioch, refused to accept the condemnation of Nestorius, and cut itself and the Church to the East of it off from the Catholic Church. In 498 the Catholicos was written "before the East", and for many centuries this most successful missionary Church continued to spread throughout Persia, Tartary, Mongolia, China, and India, developing on lines of its own, very little influenced by the rest of Christendom. At the end of the seven centuries the conquests of Tamerlane all but destroyed this flourishing Church at one blow, and reduced it to a few small communities in Persia, Turkey in Asia, Cyprus, South India, and the Island of Socotta. The Cypriote Nestorians united themselves to Rome in 1445; in the sixteenth century there was a schism in the patriarchate between the rival lines of Mar Shimun and Mar Eli; the Christianity of Socotta, such as it was, died out about the seventeenth century; the Malabarese Church divided into Uniates and Schismatics in 1559, the latter deserting Nestorianism for Monophysitism and adopting the West Syrian Rite about fifty years later; in 1851 the Chaldean Unia, which had been struggling into existence since 1552, was finally established, and in 1778 received a great accession of strength in the adherence of the whole Mar Eli patriarchate, and all that was left of the original Nestorian Church consisted of the inhabitants of the Lakes of Van and Urmi and the Tigris, and an outlying colony in Palestine. These have been further reduced by a great massacre by the Kurds in 1843, and by the secession of a large number to the Russian Church within the last few years. About twenty years ago there was an attempt to form an "Independent Catholic Chaldean Church", on the model of the "Old Catholics". This resulted in separating a few from the Uniates.

MSS. AND EDITIONS.—The authorities for this rite are chiefly in manuscript, the printed editions being very few. Few of the manuscripts, except some lectionaries in the British Museum, are of the fifteenth century, and most, whether Chaldean or Nestorian, are of the seventeenth and eighteenth century. The books in use are: (1) Takhsha, a priest's book, containing the Eucharistic service (Qurbana or Qudasha) in its three forms, with the administration of other sacraments, and various occasional prayers and blessings. It is nearly the Euchologion of the Greeks (see CONSTANTINOPLE, RITE OF). (2) Khawa dhaqadham waddwathar or Qadamwadwath, "Before and After", contains the Ordinary of the Divine Office, except the Psalter, arranged for two weeks. (3) Doxologi (David), the Psalter, divided into halali, which answer more or less to the eudoeans of the Greeks. It includes the collecta of the halali. (4) Qiryana, Shikha w'Iseangilinya, lections, epistles, and gospels, sometimes together, sometimes in separate books. (5) Turgama, explanatory hymns sung before the Epistle and Gospel. (6) Khuda, containing the variables for Sundays, Lent and the Fast of the Ninevites, and other holy days. (7) Geza, containing variables for festivals except Sundays. (8) Abukhaima, a collection, so called from its compiler, Elias III, Abu Khalim ibn al-Khaditha, Metropolitan of Nisibis, and patriarch (1175-98). (10) Dua u'a d'Ninevay, rhythmic prayers attributed to St. Ephraem, used during the Fast of the Ninevites. (11) Takha d'amadha, the office of baptism. (12) Burakha, the marriage service. (13) Khamita, the burial service for priests. (14) Anidha, the burial service for lay people. (15) Takha d'aimidha, the ordination services. (16) Takha d'khusuwa, the Office of Pardon"', or the reconciliation of penitents. These last (11 to 16) are derived from the Takhsha.

Of the above the following have been printed in Syriac:

For the Nestorians.—The Takha, in two parts, by the Archbishop of Canterbury's Assyrian Mission (Urm), 1890-92. The Society for Promoting Christian Knowledge (London) has an English translation of the first part of the Takha, both parts "unmodified except by the omission of the heretical names" (Brightman); Dhaqadham waddwahtar, by the same (Urm, 1891); Dawa, by the same (Urm, 1891).

The Malabar Rite was revised in a Catholic direction by Alexio de Menezes, Archbishop of Goa, and the revision was authorized by the Synod of Diamper in 1599. So effectively was the original Malabar Rite abolished by the Catholics in favor of this revision, that by the schism between 1549 and 1649, being cut off from their own patriarch by the Spaniards and Portuguese, they put themselves under the Jacobite patriarch) in favor of the West Syrian Liturgy, that no copy is known to exist, but it is evident from the revised form that it could not have differed materially from the existing Nestorian Rite.

THE EUCHARISTIC SERVICE. Qurbana, "the Offering", udasha, "the Hallowing".—There are three Anaphora; that of the Apostles (Sta. Adaeus and Maria), that of Nestorius, and that of Theodore (of Mopoeustis) the Interpreter. The first is the normal form, and from it the Malabar revision was derived. The second is used by the Chaldeans and Nestorians on the Epiphany and the feasts of St. John the Baptist and of the Greek Doctors, both of which occur in Epiphany-tide on the Wednesday of the Fast of the Ninevites, and on Maudy Thursday
The third is used by the same (except when the second is ordered) from Advent Sunday to Palm Sunday. The same pro-anaphoral part serves for all three. Three other Anaphores are mentioned by Ebedyesheu (Metropolitan of Nisibis, 1299) in his catalogue, those of Bartolus and Tarsus; but they are not known now, unless Dr. Wright is correct in calling the fragment in Brit. Mus. Add. 14669, "Diodore of Tarsus".

The Mass is preceded by a preparation, or "Office of the Prothesis", which includes the solemn kneading and blessing of the bread. These among the Nestorians are leavened, the flour being mixed with a little oil and the holy leaven (malak), which, according to the legend, "was given and handed down to us by our holy fathers Mar Addai and Mar Mari and Mar Tuma", and of which and of the holy oil a very strange story is told. The real leavening, however, is done by means of fermented dough (khimira) from the preparation of the last Mass. The Chaldean Uniates now use unleavened bread.

The Mass itself is introduced by the first verse of the Gloria in Excelesia and the Lord's Prayer, with "familiar" verses consisting of a form of the Sanctus. Then follow:

(1) The Introit Psalm (variable), called Marmitha, with a preliminary prayer, varying for Sundays and greater feasts and for "Memorials" and ferias. In the Malabar Rite, Ps. xiv, c. and cxvi are said in the form of the Roman in the presence of the bishop and assistants. In the Lukanas, an antiphon beginning "To Thee, Lord", which occurs in other services also preceded by a similarly varying prayer.

(2) The Lukanas, an antiphon beginning "To Thee, Lord", which occurs in other services also preceded by a similarly varying prayer.

(3) The Lukanas, an antiphon beginning "To Thee, Lord", which occurs in other services also preceded by a similarly varying prayer.

(4) The Lections: These are four or five: (a) the Law and the Prophecy, from the Old Testament, (b) the Reading from the Acts, (c) the Epistle, always from St. Paul, (d) the Gospel. Some days have all five lections, some four, some only three. All have an Epistle and a Gospel, but, generally, when there is a Reading from the Law there is none from the Acts, and vice versa. Sometimes there is none from either Law or Acts. The first three are called Qohelethis, or of the Law, and (d) the Gospel. Before the Epistle and Gospel, hymns called Turqama (interpretation) are, or should be, said; but before the Epistle is invariable, that of the Gospel varies with the day. They answer to the Greek prooimia. The Turqama of the Epistle is preceded by proper psalm verses called Shiruqa (beginning), and that of the Gospel by other proper psalm verses called Zumara (song). The latter includes Alleluia between the verses.

(5) The Deacon's Litany, or Exekia, called Karasutha (proclamation). This resembles the "Great Synaxaristos of the Oregon. During it the proper "Antiphon [Unitha] of the Gospel" is said repeatedly.

(7) The Offertory. The deacons proclaim the expulsions of the unbaptized, and set the "hearem" to watch the doors. The priest places the bread and wine on the altar, with words (in the Nestorian, but not in the Chaldean Uniate Rite) which seem as if they were already consecrated. He says a "memorial of the Virgin Mary, Mother of Christ" (Chaldean; usual Malabar Rite, "Mother of God"); but according to Raulin's Latin of the Malabar Rite, "Mother of God Himself and of the Lord Jesus Christ". (Bartholomew, a proto or the Church (in the Malabar Rite, "of St. Thomas"). Then follows the proper "Antiphon of the Mysteries" (Unitha d'zai), answering to the Offertory.

(8) The Creed. This is a variant of the Nicene Creed. It is possible that the order or words "and was incarnate by the Holy Ghost and was made man, and was conceived and born of the Virgin Mary", may enshrine a Nestorian idea, but the Chaldean Uniates do not seem to have noticed it, their only concession being the addition of the Filioque. The Malabar Book has omitted this translation of the Latin. In Nestlé's translation of the Malabar Rite the Karasutha, the Offertory, and the Expulsion of the Unbaptized come before the Lection, and the Creed follows immediately on the Gospel, but in the Propaganda edition of 1774 the Offertory follows the Creed, which follows the prayer to the Holy Ghost immediately.

(9) The first Lavabo, followed by a Kushapa ("beseecching", i.e. prayer said kneeling) and a form of the "Orate frates", with its response. It is now that the variations of the three Anaphoras begin.

(10) The Kiss of Peace, preceded by a G'hantha, i.e., a prayer said with bowed head.

(11) The prayer of Memorials (Dukhrana) of the Living and the Dead, and the Diptychs; the latter is now obsolete among the Nestorians.

(12) The Anaphora. As in all liturgies this begins with a form of the Sursum corda, but the East Syrian form is more elaborate than in the Anaphora of Theodore. Then follows the Preface of the usual type ending with the Sanctus.

(13) The Post-Sanctus (to use the Hispanic-Gallican term). This is an amplification (similar in idea and often in phraseology to those in all liturgies of the type of the Roman) of the form of the priest in the Latin liturgy, a recital of the work of Redemption, extending to some length and ending, in the Anaphora of Nestorius and Theodore, with the recital of the Institution.

In the Anaphora of the Apostles the recital of the Institution is wanting, though it has been supplied in the Chaldean and Malabar Uniat liturgies and in the Anglican edition of the Nestorian book. Hammond (Liturgies Eastern and Western, p. lix) and most other writers hold that the Words of Institution belong to this Liturgy and should be supplied somewhere; Hammond (loc. cit.) suggests many arguments for their former presence. The reason of their absence is uncertain. While some hold that this essential passage dropped out in times of ignorance, others say it never was there at all, being unnecessary, since the consecration was held to be effected by the subsequent Epiklesis alone. Another theory, evidently of Western origin (A), holds that it is quite consistent with the general Eastern theory of consecration by an Epiklesis following Christ's words, is that, being the formula of consecration, it was held too sacred to be written down. It does not seem to be quite certain whether Nestorian priests did or did not insert the Words of Institution in old times, but it seems that many of them do not do so now.

(14) The Prayer of the Great Oblation with a second memorial of the Living and the Dead, a Kushapa.

(15) The G'hantha of the Epiklesis, or Invocation of the Holy Spirit. The Epiklesis formula itself is called Nikhi Mar (May He come, O Lord) from its opening words. The Liturgy of the Nile is vague as to the purpose of the Invocation that, when the Words of Institution are not said, it was difficult to imagine this formula to be sufficient on any hypothesis, Eastern or Western. The Anaphores of Nestorius and Theodore, besides having the Words of Institution, have definite Invocations, evidently copied from Antiochene or Byzantine forms. The older Chaldean and the Malabar Uniat books have inserted the Words of Institution with an Elevation, after the Epiklesis. But the 1901 Mosul edition puts the Words of Institution first.

(16) Here follow a Prayer for Peace, a second Lavabo and a censing.

(17) The Fraction, Consignation, Conjunction, and Conmixture. The Host is broken in two, and the sign of the Cross is made in the Chalice with one
half, after which the other half is signed with the half that has been dipped in the Chalice. The two halves are then reunited on the Paten. Then a cleft is made in the Host "qua parte intimata est in Sanguinis Christi," and the Chalice is poured out, and then the Chalice, after some intricate arranging on the paten.

(18) The Communion. The veil is thrown open, the deacon exhoists the communicants to draw near, the priest breaks up the Host for distribution. Then follows the Lord's Prayer, with Introduction and Embolism, and the "Agnus Dei," and then the "Antiphon of the Bema" (Communion) is sung. The Communion is in both species separately, the priest giving the Host and the deacon the Chalice. Then follows a variable antiphon of thanksgiving, a post-communion, and a dismissal. Afterwards the Mass is repeated, an unconsecrated portion of the holy loaf, is distributed to the communicants, but not, as in the case of the Greek αρρίσκον, and as the name of the latter implies, to non-communicants. The Chaldean Uniates are communicated with the Host dipped in the Chalice. They reserve what is left of the Holy Gifts, while the "sorost" (sorost), that is, the "sorost" priests consume all before leaving the church.

Properly, and according to their own canons, the Nestorians ought to say Mass on every Sunday and Friday, on every festival, and daily during the first, middle, and last week of Lent and the octave of Easter. During it is said on Sundays and the greater festivals, at the best, and in many churches not so often, a sort of "dry Mass" being used instead. The Chaldean Uniat priests say Mass daily, and where there are many priests there will be many Masses in the same Church in one day, which is contrary to the Nestorian canons. The Anglican editions of the liturgies omit the names of heretics and call the Anaphore of Nestorius and Theodore the "Second Hallowing" and "Third Hallowing." Otherwise there are no alterations except the addition of Words of Institution to the first Anaphore. The recent Uniat edition has made the same alterations and substituted "Mother of God" for "Mother of Christ." In each edition the added Words of Institution follow the form of the rite of the edition. The prayers of the Mass, like those of the Orthodox Eastern Church, are generally long and diffuse. Frequently Mass is said with a so-called Qanuna, which is said aloud, the rest being recited in a low tone. The Qanuna in form and usage resembles the Greek εικονια.

The vestments used by the priest at Mass are the Sudura, a girded alb with three crosses in red or black on the shoulders, the Urra, or chasuble, embroidered, but not by bishops (as in the West), and the Ma'apra, a sort of linen cope. The deacon wears the Sudura, with an Urara over the left shoulder.

THE DIVINE OFFICE.—The nucleus of this, as is usual, the recitation of the Psalter. There are only three regular hours of service (Morning, Midday, and Evening), with a rarely used Compline. In practice only Morning and Evening are commonly used, but these are extremely well attended daily by laity as well as clergy. When Nestorian monasteries exist (which is not the case) seven hours of prayer were the custom in theory, and three hours of the Psalter were recited at each. This would mean a daily recitation of the whole Psalter. The present arrangement provides for seven hulali at each full night service, ten on Sundays, three on "Memorials," and the whole Psalter on feasts of Our Lord. At the evening service there is a sort of "Vesper Service" (the fourth hour service), and varying with the day of the week, and also a Shuraya, or short psalm, with generally a portion of Ps. cxviii, varying with the day of the fortnight. At the morning service the invariable psalms are cxv, xc, cii, (1-5), cxxi, cxvii, cxviii, cxvii. On ferials and "Memorials" Pa cxvii is said after Ps. cxviii, and on ferials Ps. 1, 1-18, comes at the end of the psalms. The rest of the services consist of prayers, antiphons, litanies, and verses (γιγάντες), inserted, like the Greek εεκατάκλησις, but more extensively. Each of these is followed by the Doxology and a hymn on feast days. The Sundays the Gloria in Excelsis and Benedictus are said instead of Ps. cxvii. Both morning and evening services end with several prayers, a blessing, (Khudhama, "Sealing"), the kiss of peace, and the Creed. The variables, besides the psalms, are those of the feast or day, which vary very few, and those of the day of the fortnight. These fortnights consist of weeks called "Before" (Qdham) and "After" (Wahtar), according to which of the two choirs begins the service. Hence the book of the Divine Office is called Qdham u Wathar, or at full length Rihawa Qdham Waathar, the "Book of Directions," S.B.F.

THE CALENDAR.—The Calendar is very peculiar. The year is divided into periods of about seven weeks each, called Shuwa'; these are Advent (called Sabara, "Annunciation"), Epiphany, Lent, Easter, the Apostles, Summer, "Eliahs," and the Cross, "Moises," and the "Delegation" (Quinence), "Moses," and the "Delegation" have only four weeks each. The Sundays are generally named after the Shuwa' in which they occur, "Fourth Sunday of Epiphany," "Second Sunday of the Annunciation," etc., though sometimes the name changes in the middle of a Shuwa'. Of the most important movable feasts (dukhran), or saints' days, which have special lections, occur on the Fridays between Christmas and Lent, and are therefore movable feasts, but some, such as Christmas, Epiphany, the Assumption, and about thirty smaller days without proper lections are on fixed days. There are four shorter fasting periods besides the Great Fast (Lent); these are: (1) the Fast of Mar Zaya, the three days after the second Sunday of the Nativity; (2) the Fast of the Virgins, after the first Sunday of the Epiphany; (3) the Regulation of the Nineteens, seventy days before Easter; (4) the Fast of Mart Mariam (Our Lady), from the first to the fourteenth of August. The Fast of the Nineteens commemorates the repentance of Nineveh at the preaching of Jonas, and is carefully kept. Those of Mar Zaya and the Virgins are nearly obsolete. As compared with the Latin and Greek Calendar, that of the Nestorians, that of the Nestorian, is very meagre. The Malabar Rite has largely adopted the Roman Calendar, and several Roman days have been added to that of the Chaldean Uniates. The Chaldean Easter coincides with that of the Orthodox Eastern Church, as the Julian Calendar is used, but Easter is not calculated, not from the birth of Christ, but from the Seleucid Era, etc.

THE OTHER SACRAMENTS AND OCCASIONAL SERVICES.—The other Sacraments in use among the Nestorians are Baptism, with which is always associated an anointing, which as in other eastern rites answers to Confirmation, Holy Order and Matrimony, but not Penance or Unction of the Sick. The latter appears to be unknown to the Nestorians, though Assemani ("Bibliotheca Orientalis," pt. II, p. ccclxxii) considers it might be shown from their books that its omission was a modern error. The Chaldean Uniates now have a form not unlike the Byzantine and West Syrian. The nearest approach to Penance among the Nestorians is a form, counted as a Sacrament, for the reconciliation of apostates and excommunicated persons, prayers from which are occasionally used in cases of other penitents. Assemani's arguments (ibid., ccclxxi) for the Sacramental character of the practice of auricular confession among the Malabar Nestorians are not conclusive. The Chaldeans have a similar form to that of the Latin Rite. The Nestorians omit Matrimony from the list, and according to Ewoluesheh make up the number of the mysteries to
seven by including the Holy Leaven and the Sign of the Cross, but they are now rather vague about the definition or numeration. The only other rite of any interest is the consecration of churches. Oil, not chrism, plays a considerable part in the form of baptism, possibly in Confirmation, in the reconciliation of apostates, etc., in the consecration of churches, and the making of bread for the Eucharist. It is not used in ordination or for the sick. There are two sorts of oil; the one is ordinary olive oil, blessed or marked for the occasion, the other is the oil of the Holy Horn. The last, which, though really only plain oil, represents the chrism (or μύρος) of other rites, is believed to have been handed down from the Apostles with the Holy Leaven. The legend is that the Baptist caught the water which fell from the Body of Christ at His baptism and presented it to St. John the Evangelist, who added to it some of the water which fell from the pierced Side. At the Last Supper Jesus gave two loaves to St. John, bidding him keep one for the Holy Leaven. With this St. John mingled some of the Blood from the Side of Christ. After Pentecost the Apostles were filled with this water, and Saint John the Baptist took a horn of it, and the loaf they ground to pieces and mixed it with flour and salt to be the Holy Leaven. The Holy Horn is constantly renewed by the addition of oil blessed by a bishop on Maundy Thursday.

The baptismal service is modelled on the Eucharistic. The Mass of the Catechumens is almost identical, with of course appropriate Collects, psalms, Litanies, and Lectures. After the introductory Gloria, Lord's Prayer, Marmitha (in this case Ps. lxixxxiii) and its Collect, follow the imposition of hands and the sitting down in oil, after which follow an Antiphon of the Sanctuary and Ps. xlv, cx, cxxxi, with πιστις, Litanies, and Collects, then the Lakhumara, Trisagion, and Lectures (Epistle and Gospel), and the Karazutha, after which the priest says the prayer of the imposition of hands, and the unbaptised are dismissed. An antiphon answering to that "of the mysteries" follows, and then the Creed is said. The bringing forward of the Holy Horn and the blessing of the oil take the place of the Offertory. The Anaphora is paralleled by Sursum corda, Preface, and Sanctus, a Nisihi Mar, or Episkepsis, upon the oil, a commixture of oil with garment and a word of the oil by the Bishop's Prayer. Then the font is blessed and signed with the holy oil, and in the place of the Communion comes the Baptism itself. The children are signed with the oil on the breast and then anointed all over, and are dipped three times in the font. The formula is: "N., be thou baptized in the name of the Father, in the name of the Son, in the name of the Holy Ghost. Amen." Then follows the post-baptismal thanksgiving. Confirmation follows immediately. There are two prayers of confirmation and a signing between the eyes with the formula: "N. is baptized and perfected in the name, etc." It is not quite clear whether oil should be used with this or not.

The marriage service (Burakha, "Blessing") has nothing very distinctive about it, and resembles closely the Byzantine, and to some extent the Jewish rite.

In the orders of the Nestorians are those of reader (Qurya), subdeacon (Hwpalaqma), deacon (Shomasha), priest (Qashisha), archdeacon (Arkhidyakona) and bishop (Apisqupa). The degree of archdeacon, though it has an ordination service of its own, is only counted as a degree of the presbyterate, and is by some held to be the same as that of chorepiscopus (Kurapisqupa), which never involved episcopal ordination among the Nestorians. When a priest is engaged in sacramental functions, he is called Karrus (i.e., leper), and his bishop is similarly called Rab Kahni (Chief of the Priests, ἀρχιερεύς, pontifex). Quashisha and Apisqupa only denote the degree. Kahnuma, priesthood, is used of the three degrees of deacon, priest, and bishop. The ordination formula is: N. has been set apart, consecrated, and perfected to the work of presbyter (or of the presbyterate) and to the Levitical and Stephanite Office (or for the Office of the Aaronic priesthood), in the Name, etc. In the case of a bishop it is: "to the great work of the episcopate of the city of..." A similar formula is used for archdeacons and metropolitanas.

The consecration of churches (Siamithra or Qudashu Madhhibha) consists largely ofunctions. The altar is anointed all over, and there are four consecration crosses on the four interior walls of the sanctuary, and these and the lintel of the door and various other places are anointed. The oil is not that of the Holy Horn, but fresh oil is poured on the altar, which is then blessed.

HENRY JENNINGS.

Syrian Rite, West.—The rite used by the Jacobite sect in Syria and by the Catholic Syriacs is in its origin simply the old rite of Antioch in the Syriac language. In this framework the Jacobites have fitted a great number of other Anaphoras, so that now their Liturgy has more variant forms than any other. The oldest form of the Antiocchene Rite that we know is in Greek (see Antiocchene Liturgy). It was apparently composed in that language. The many Greek terms need in any case to show that this is derived from Greek. The version must have been made very early, evidently before the Monophysite schism, before the influence of Constantinople and Byzantine infiltrations had begun. No doubt as soon as Christian communities arose in Syria the country partook of the liturgical life of the cities (Antioch, Jerusalem, etc.) were said in Greek, were, as a matter of course, translated into the peoples' language (Syriac) for their use. The "Peregrinatio Silvis" describes the services at Jerusalem as being Greek; but the lessons, first read in Greek, are then translated into Syriac proper, perhaps (ed. Geyer, p. 99). As long as all Western Syria was one communion, the country dioceses followed the rite of their patriarch at Antioch, only changing the local elements. Modifications adopted at Antioch in
Greek were copied in Syriac by those who said their prayers in the national tongue. This point is important because the Syriac Liturgy (in its fundamental form) already contains all the changes brought to Antiochian-Orthodox rites, and is not the older pure Antiochene Rite, but the later Rite of Jerusalem-Antioch. The Syriac Liturgy in its Intercession, like the Greek "St. James," prays first not for the Church of Antioch, but for "the holy Sion, the mother of all churches" (Brightman, pp. 89-90). The fact that the Jacobites as well as the Orthodox have the Jerusalem-Antioch Liturgy, this is chief proof that this had supplanted the older Antiochene Use before the schism of the fifth century.

Our first Syriac documents come from about the end of the fifth century ("Testamentum Domini," ed. by Ignatius Rahmani II, Life of Severus of Antioch, sixth century). They give us valuable information about local forms of the Rite of Antioch-Jerusalem. The Jacobite sect kept a version of this rite which is obviously a local variant. Its scheme and most of its prayers correspond to those of the Greek St. James; but it has amplifications and omissions, such as the angel all located in the liturgy. In the early rite of the Jacobites after the schism made some modifications. We know this only in one point (the Trisagion). The first Jacobite writer on their rite is James of Edessa (d. 708), who wrote a letter to a priest Thomas comparing the Syrian Liturgy with the Greek (ed. by Rapisardi, 1930). The letter is exceedingly valuable and really critical discussion of the rite. A number of later Jacobite writers followed James of Edessa. On the whole this sect produced the first scientific students of liturgy. Benjamin of Edessa (period unknown), Lazarus bar Sabbatha of Bagdad (ninth century), Moses bar Kephas of Mosul (d. 908), Dionysius bar Mosaic of Amida (d. 1171) wrote valuable commentaries on the Jacobite Rite. In the eighth and ninth centuries a controversy concerning the prayer at the Fraction produced much liturgical literature. The chronicler of their Patriarch Michael the Great (d. 1199) discusses the question and supplies valuable contemporary documents. The oldest Jacobite Liturgy extant is the one ascribed (as in its Greek form) to St. James. It is in the dialect of Edessa. The pro-anaphoral part of this is the Ordo communis to which the other later Anaphoras are joined. It is printed in Latin by Rapisardi (pp. 69-110). This follows the Greek St. James (see Antiochene Liturgy) with these differences. All the vesting prayer and preparation of the offering (Proskomide) are considerably expanded, and the prayers differ. This part of the Liturgy is always most subject to modification; it began as private prayer only. The Monomenes comes later; the litany before the lessons is missing; the incensing is expanded into a more elaborate rite. The Trisagion comes after the lessons from the Old Testament; it contains the addition: "who wast crucified for us." This is the first known text of the highest form of Trisagion in Syriac. The clause was added by Peter the Dyer (Fullo), Monophysite Patriarch of Antioch (d. 488), was believed to imply Monophysism and caused much controversy during those times, eventually becoming a kind of watchdog to the Jacobites (see Zacharias Rhetor, "Hist. ecle.", P. G., LXXXV, 1165). The liturgy on the lessons of the Lord Kurillson said thrice. There is no chant at the Great Entrance (a Byzantine addition in the Greek Rite). The long Offertory prayers of the Greek Rite do not occur. The Epiklesis and Intercession are much the same in Greek. The Lord's Prayer follows. At Antioch, as in many the answer is Hallelujah instead of Kyrie eleison.

In this Syriac Liturgy many Greek forms remain: Stomen kalos, Kurillson, Sophia, Proscomenon, etc. Renaudot gives also a second form of the Ordo communis (II, 12-28) with many variants. To the Ordo communis the Jacobites have added a very great number of various Anaphoras, many of which have not yet been published. The Anaphoras are ascribed to all manner of people; they were composed at very different periods. One explanation of their attribution to various saints is that they were originally used on their feasts. Renaudot translated and published thirty-nine of these. After that of St. James follows (in his work) a shortening of the form of the first seven verses of the hymn; the other verses are added at the end. Then: (3) Liturgy of St. Xystus, which is placed first in the Maronite books; (4) of St. Peter; (5) another of St. Peter; (6) of St. John; (7) of the Twelve Apostles; (8) of St. Mark; (9) of St. Clement of Rome; (10) of St. Dionysius; (11) of St. Ignatius; (12) of St. Julius of Rome; (13) of St. Eustathius; (14) of St. John Chrysostom; (15) of St. John Chrysostom (from Chaldæan sources); (16) of St. Maruta; (17) of St. Cyril; (18) of Dioscor; (19) of Philoxenus of Hierapolis; (20) a second Liturgy also ascribed to him; (21) of Serverus of Antioch; (22) of James Bar-Salama; (23) of St. John Chrysostom; (24) of St. James of Botan and Serug; (25) of James of Edessa, the Interpreter; (26) of Thomas of Hesarea; (27) of Moses bar Kephas; (28) of Philoxenus of Bagdag; (29) of the Doctors, arranged by John the Great, Patriarch; (30) of John of Basora; (31) of Michael of Emesa; (32) of John of Bagdag; (33) of Gregory Bar-Hebræus; (34) of St. John the Patriarch called Acremetus (Greek); (35) of St. Dioscor of Kardou; (36) John, Patriarch of Antioch; (37) of Ignatius of Antioch (Joseph Ibn Wahib); (39) of St. Basil (another version, by Masius).

Brightman (pp. 87-89) mentions sixty-four Liturgies as known, at least by name. Notes of this bewildering number of Anaphoras will be found after each in Renaudot. In most cases all he can say is that he knows nothing of the real author; often the names affixed are otherwise unknown. Many Anaphoras are obviously quite late, inflated with long prayers and rhetorical expressions, many contain Monophysite ideas, some are insufficient at the consecration so as to be invalid. Baunstock ("Die Messe im Morgenland," 44-46) thinks the Anaphora of St. Ignatius most important, as containing parts of the old pure Antiochene Rite. He considers that many Anaphoras link the primitive authontic form with the latest form; that the Liturgy of Ignatius of Antioch (Joseph Ibn Wahib; d. 1304) is the latest. Most of these Anaphoras have now fallen into disuse. The Jacobite celebrant generally uses the shortened form of St. James. There is an ancient Armenian version (shortened) of the Liturgy of St. James in Edessa, with (since the fifteenth century) many Arabic substitutions in the lessons and proanaphoral prayers. The Lectionary and Diaconieum have not been published and are hardly known. The vestments correspond almost exactly to those of the Orthodox. Though there is a Latin Rite, there is a lack of a liturgical Calendar has few feasts. It follows in its main lines the old order of Antioch, observed also by the Nestorians, which is the basis of the Byzantine Calendar. Feasts are divided into three classes of dignity. Wednesday and Friday are fast-days. There are also the four fasts, as with the Orthodox. The Divine Office consists of Vespers, Compline, Nocturns, Lauds, Terce, Sext, and None, or rather of hours that correspond to these among Latins. Vesper always precedes the following day. The greatest part of this office (known in the West chiefly by the Uniat books and now by Dr. Baumstark's "Feiertage der Kirchenzeit der Jakobiten") consists of long poems composed for the purpose, like the Byzantine odes. Baptist is performed by immersion; the priest confirms at once with chrisma.
blessed by the patriarch. Confession is not much used; it has fallen into the same decay as in most Eastern Churches. Communion is administered under both kinds; the sick are anointed with oil blessed by the patriarch. There is an element of formalism in the service, the priests appear to have been instructed in it. The orders are bishop, priest, deacon, sub-deacon, lector, and singer. There are many choir-societies, not ordained bishop. It will be seen, then, that one little jaboticaba Church has followed much the same line of development in its rites as its powerful Orthodox neighbour.

The Syrian Uniates use the same rite as the Jacobites. But (as is the case with most Uniat Churches) it is better organized with them. There is not much that can be called Romanizing in their books; but they have the advantage of well-arranged, well-written books. All the best students of the West-Syrian Rite (the Assemani, Renaudot, etc.) have been Catholics. Their knowledge and the higher Western standard of scholarship in general are advantages of which the Uniates rather than the Jacobites profit. Of the manifold Syrian Anaphoras only—those of St. James, St. John, St. Peter, St. Chrysostom, St. Xystus, St. Matthew, and St. Basil. That of St. Xystus is attached to the Ordo communis in their official book: that of St. John is said on the chief feasts.

The lessons only are in Arabic. It was inevitable that the Syrian Liturgies, containing inter-preaching sources, should be examined at Rome before they were allowed to Uniates. But the revisers made very few changes. Out of the mass of Anaphoras they chose the oldest and purest, leaving out the long series of later ones that were unorthodox, or even invalid. In the seven kept for Uniat use what alterations have been made are in the commission of redounds to prayers, simplification of confused parts in which the Didascalia and the Euchologium had become mixed together. The only important correction is the omission of the fatal clause: "Who was crucified for us" in the Trisagion. There is no suspicion of modifying in the direction of the Roman Rite.

The other books of the Uniates, the Didascalia, office-book, and ritual are edited at Rome, Beirut, and the Uniat Patriarchal press at Sharfah; they are considerably the most accessible, the best-arranged books in which to study this rite.

The Syro-Malabar Rite has also been used at intervals by sections of the (schismatical) Malabar Church. Namely, as the Malabar Christians at various times made approaches to the Jacobite Patriarch or received bishops from him, so did they at such times use his Liturgy. Most of Malabar has now returned to the Nicene community; but there are still Jacobite communities using this rite among them.

The Maronite Rite is merely a Romanized adaptation of that of the West Syrians.

Szász, Diocese of (Szatmáriensis), in Hungary, suffragan of Eger, from which it was formed, by King Francis I, at the same time as the See of Rasa. The diocese includes the counties (Komitate) of Szász, Bereg, Máramaros, Ungorca, Ungvar, and a small part of the district of Szabolcs. The first bishop was Stephen Fischer (1504–7), later Archbishop of Eger. Of his successors may be mentioned: Peter Klobuścicky (1807–21), who rendered great service in the organization of the diocese; John Hám (1827–57), who gave great attention to education. Under them the cathedral was enlarged and renewed, and several other churches were built. Many of the valuable institutions of the See, their foundation to Hám, whose beatification is under consideration. Tiburtius Borosmíta (1806) is the present bishop. His residence is at a Szász, Német (Szatmár). The diocese is divided into 5 archdeaconries, and consists of 96 parishes. The clergy number 177.
are: 1 titular abbey, 2 titular provostships, and 15 monasteries with 703 members. The chapter consists of 6 members and 6 titular canons. Roman Catholics number 149,807; and Greek Catholics, 625,827.

A. ÁLÁDÁNY

Sze-ch'wan, Eastern, Vicariate Apostolic of.—The mission of Eastern Sze-ch'wan was separated from North-western Sze-ch'wan and erected in a vicariate Apostolic in 1856. Its first name was South-eastern Sze-ch'wan. There were nine European and ten native priests in 1840. Father Desflèches (1838-1905), titular Bishop of Sinita, was elected first vicar Apostolic. Missionaries and Christians had at first to undergo many persecutions. At last after the Franco-Chinese war, in 1860, they obtained entire freedom to preach the Christian doctrine. In 1860 the mission was divided in two vicariates Apostolic: Eastern and Southern Sze-ch'wan. The missionaries got from Chinese officials a piece of ground in the city of Ch'ung-k'ing, as compensation for the losses undergone by the mission. New persecutions broke out. At Yu-yang Father Eyraud was put in jail. Fathers Mathieu, Rouillat and Ridel were murdered. At Kien-Kiang Father Huet and Ta-yu were killed in 1873. On 8 March, 1876, the settlements of the Christians were pillaged at Kiang-pe. Father Coupat was elected coadjutor in 1882, and in 1883 succeeded Bishop Desflèches, appointed Archbishop of Mandalay in 1885. In 1896 the buildings of the mission at Ch'ung-k'ing were pillaged and destroyed. The bishop and missionaries had to retire into the Chinese tribunal. In 1891 the Right Rev. Mgr Chouvillon, titular Bishop of Dansara, succeeded Bishop Coupat. In 1898 Father Fleury was captured by Yu-man-tse and kept as prisoner for several months. The mission is confided to the Society of the Foreign Missions at Paris. The present vicar Apostolic is the Right Rev. Celestin-Felix-Joseph Chouvillon, consecrated titular Bishop of Dansara in 1891. He resides at Ch'ung-k'ing. In 1889 the mission numbered: 1 bishop, 32 missionaries, 33 native priests, 2 seminaries with 74 students, 151 schools with 19,633 pupils, 105 churches or chapels, 31,539 Catholics. In 1910, there were: 1 bishop, 51 missionaries, 46 native priests, 3 seminaries with 130 students, 341 schools with 5,365 pupils, 175 churches or chapels, 3 orphanages with 327 orphans, 40,587 Catholics.

Sze-ch'wan, North-western, Vicariate Apostolic of.—The mission of North-western Sze-ch'wan includes the territories known as Ch'wan-si and Ch'wan-pe, the cities of Kiong-chu, Ta-yien-hui, the Principlity of Mu-pin, and a part of the civil prefecture of Tschew. There are 25,000,000 inhabitants, 23,500,000 are Chinese and 1,500,000 are Barbarian Man-tse. On 17 August, 1658, the Holy See entrusted the mission of Sze-ch'wan to Bishop Pallu of the Foreign Missions of Paris, Vicar Apostolic of Tong-king. But neither Bishop Pallu nor his successor, Bishop de Lyonne (1699-1713) who was the first Vicar Apostolic of Sze-ch'wan, could get into the province. In 1707 Fathers de la Balluère and Basset, of the Society of the Foreign Missions of Paris, and Fathers Mathieu and Appiani, priests of the Congregation of St. Vincent de Paul, got into Sze-ch'wan where they found some Christians who had emigrated from other provinces. Father de la Balluère, elected vicar Apostolic in 1713, died in 1715 before being consecrated bishop. Father Mathieu was nominated to fill the vacancy. Bishop Myriopolis in 1717. Bishop Enjebert de Martillac succeeded him. He established the Institute of the Christian Virgins. The following four missionaries were elected as vicars Apostolic, but were not consecrated bishops: Fathers Lacorre, Mairgot (1752), de Raymond (1756), Kerhervé (1756). It is only from the year 1755 and the consecration of Bishop Pottier (1769-92) that really dates the existence of this mission. It numbered then about 4,000 Christians, including those of Yun-nan and Kwei-ch'ou. Fathers Delport and Devaux of the Society of the Foreign Missions of Paris, Bishop de Saint-Martin (1784-1801), coadjutor and successor to Bishop Pottier, was banished with Father Dufrasse. 40,000 pagans were christened. Bishop Dufrasse (1801-15) succeeded Bishop de Saint-Martin, Bishop Frenchant as coadjutor (1802-06). The Society of Sze-ch'wan was suppressed. The mission was well prepared and completed the organization of the mission. On 14 September, 1815, Blessed Gabriel Taurin-Dufresse, titular Bishop of Tabrasa, was sentenced to death and executed. He was beheaded in 1900. At the death of the bishop, Sze-ch'wan had only two missionaries, and the Christians were everywhere persecuted. This awful persecution came to an end only in 1840, two years after the death of Bishop Fontana (1820-38), whom Bishop Poreceau (1838-61) succeeded. In 1840 Yun-nan was separated from Sze-ch'wan; Kwei-chou was separated in 1846, South-eastern Sze-ch'wan in 1856, and Szechwan in 1858. Bishop Desflèches was succeeded in 1858, succeeded Bishop Poreceau in 1861. In 1864 the seminary of Mu-pin was burned and many Christians killed. On 28 May, 1895, the buildings of the Protestant at Chen-tu were destroyed and the following day the Catholic settlements had a similar fate. The mission of North-western Sze-ch'wan is entrusted to the Society of the Foreign Missions of Paris. The present vicar Apostolic is the Right Rev. Marie-Julien Dunand, consecrated in 1893 titular Bishop of Caloe. He resides at Chen-tu. In 1890 the mission numbered: 1 bishop, 27 missionaries, 39 native priests, 2 seminaries with 311 students, 418 schools with 30,323 pupils, 43 churches or chapels, 38,800 Catholics. In 1910 there were: 1 bishop, 39 missionaries, 49 native priests, 2 seminaries with 110 seminarians, 340 schools with 5,322 pupils, 5 orphanages with 962 orphans, 105 churches or chapels, 45,000 Catholics.

V. H. MONTANAR.

Sze-ch'wan, Southern, Vicariate Apostolic of.—On 24 January, 1860, the mission of Southern Sze-ch'wan was separated from Eastern Sze-ch'wan and erected into a vicariate Apostolic by a Decree of Pius IX. The Right Rev. Mgr Pichon, titular Bishop of Helenopolis, was the first vicar Apostolic. The mission numbered 12,000 Catholics and the bishop was the only European missionary with three native priests and four chapels. Bishop Desflèches gave him one missionary, Father Larcher, and one Chinese priest. In 1862 Bishop Pichon established a seminary at Ho-ti-keou. In 1871 he died in France, and Bishop Lepley succeeded him. Bishop Lepley was a member of the Society of the Foreign Missions of Paris. On 28 May, 1895, the buildings of the Protestants at Chen-tu were destroyed. The following day the settlements of Bishop Dunand were also ruined. About half of the Catholic settlements in the Southern Sze-ch'wan missions were destroyed. Bishop Chagnon escaped into the tribunal of Mei-chou. In July, 1899, a new persecution broke out. In 1900 the mission did not suffer much from the Boxers. In 1902 there was an awful persecution. Many Christians were killed. From 1895 till 1904 there were about thirty Christians murdered on account of their Faith. The mission is entrusted to the Society of the Foreign Missions of Paris. The present vicar Apostolic is Right Rev. Marc Chagnon, titular Bishop of Chersonesus, who resides at Sui-fu, and has as his
Székes-Fehérvar. See Stuhlweissenburg, Diocese of.

Szentiványi, Martin, b. at Szentiván, Hungary, 20 October, 1833; d. at Nagy-Szombát (Tynmau), 5 March, 1708. He entered the Society of Jesus in 1553, and was professor of Scripture for five years at Vienna and Nagy-Szombát, professor of mathematics and philosophy for nine years, and professor of canon law and theology for seven years. For twelve years he filled the office of chancellor of the University of Nagy-Szombát, and in addition was for nine successive years governor of the Paemaneum in Vienna and of the college at Nagy-Szombát. His numerous writings appeared in Hungarian, Latin, German, and Slovak, and some were translated into French. The most important are: "Curiosiora et selectiora variari scientiarum miscellanea in tres partes divisa" (Tynmau, 1689); "Dissertationes septem, etc." (Tynmau, 1689); "Rectus modus interpretandi scriptum" (Tynmau, 1690); "Summae in chronologie Hungaria" (Tynmau, 1697); "Hungaria in immaculatam conceptionem b. Marie virginis magis domine sue credens et iuvans" (Tynmau, 1701); "Doctrina fidei christiane" (Louvain, 1708); "Lutheranicum nunquam et nunquam" (Tynmau, 1702); "Relatio status future vitae" (Tynmau, 1690); "Disputationes historiae salutis de hæresiariis, hæresibus, et erroribus in fide, dogmatibus, hoc seculo nostro" (Tynmau, 1701); "Solutiones catholicae, etc." (Tynmau, 1701); "Quinquaginta rationes et motiva cur in tanta varietate religionum et confessionum fidei in christianitatis moderno tempore vigentium, sola religio Romana-catholica sit consensum et omnibus aliis preferenda" (Tynmau, 1701); German and Hungarian, Tynmau, 1702).

Szentvity, Magyar Irók (Hungarian Authors), XIII, 741–45, contains a complete list of his works and bibliography.

Szujski, Joseph, b. at Tarnow, 1835; d. at Cracow, 1883. He studied at Tarnow, then at Cracow (1854) and at Vienna (1858–9). He began his career as a poet, and continued to write verses till the end of his brief and fruitful life. Apart from many short lyrical poems, his first attempts were dramatic: "Samuel Colenso of Cheltenham," and a translation of the "Agamemnon" of Eschylus. Before his marriage (1861) he had also published his "Portraits, not by van Dyck," in which various types of Poles are characterised perhaps too roughly, but with acumen, often with accuracy. He began working at a newspaper, publishing two volumes in 1862, but was presently convinced of the necessity of independent research, of which volumes three and four (1864–6) give good evidence. The calamitous revolution of 1863 was a terrible blow to Szujski's buoyant hopes for Poland's future, and he resolved to devote his whole life to seeking the causes of his beloved country's misfortunes, with a view to her regeneration. At the time that he was publishing the poems: "The Serpent of the Tumbe", "The Lion", "Czechochowiak", "George Lubomirski", and "Wallace", he placed himself in the front rank of Polish historians by his work, "Some Truths of our History" (1865). "No nation," he said, "can fall save through her own fault, nor rise again, save by her own intelligence and spirit": and undoubtedly indicated all Poland's faults, not however omitting the means of reformation. He founded the "Polish Review" (1866), and the next year brought out "Hedwege" and "Twardowski", both dramas. When the use of the national language was restored in Cracow University, Szujski was named (1869) professor of Polish history; later, he was chosen rector. As early as 1872, he was the life and the moving spirit of the Academy of Sciences at Cracow in his capacity of secretary. About that time, for his researches were not confined to Poland, he published a sketch of the literary history of the non-Polish world; studies on Leon and Lucian; translations from Eschylus and Aristophanes; "Maryna Mnischowna", and "The Death of Ladislaus IV", dramas of his own, together with several other works. After his rectorate (1879) Szujski was made a peer. But his health, which had always been precarious, now failed completely, and consumption set in. He continued to work, however, till he could work no more.

As a historian, Szujski ranks with Kalinka. He united the most ardent patriotism with a supreme love for truth and a remarkable comprehension of political situations and the characters of those who played their part in them; consequently no one could explain so well as he the sequence of events and the causes which, for good or evil, influenced the nation. His history, first sketched in four volumes, from the sixteenth century on, was supplemented by three other volumes, entitled "Relating and searching": the most admirable part being those dealing with the Renaissance and the Reformation. It has been said of him that "the historian killed the poet"; and indeed he attempts to force into his historical dramas every incident relative to their literature in many other capacities: but he allowed history to dominate his art through a feeling of duty to his country. The lessons which he found in the annals of the nation he sought to reproduce upon the stage. He was himself well aware of his shortcomings, and believed his plays destined merely to pave the way for a simpler expression of patriotic feeling, without morbid sentimentality. Though sometimes lacking in style, due to the great amount of work which he undertook, Szujski was a great historian, a poet of high ideals and aspirations, and one to whom the Polish nation of the present day owes much.

Szymowicz, Simon, known also by the Latin name of Simonides, b. at Lemberg, 1558; d. 1629. He studied first at Lemberg, afterwards in the Cracow Academy, and then abroad in the Netherlands and in France. On his return, he became a private tutor among other young men, he taught to Székes-Fehérvar's father and the son of John Zółkiewski, who took Moscow. He enjoyed intimate relations with the famous John Zamoyski, whose son he
also educated; after which (1614) he retired to the country, where he remained until his death. He was never married. Szymonowicz may be styled the last of the Polish Humanists, to whom indeed he belongs both by his erudition and by the character of his creations. He spent the greater part of his life writing Latin poems, once much appreciated throughout Europe. The best of these are: "Flagellum Lavoria", a collection of odes dedicated to Zamoyski; "Ælinopean", in honour of one of Zamoyski's victories; "Joel Propheta", a paraphrase of the Book of Joel, inscribed to Clement VIII, whom our poet had known personally as a legate in Poland; "Hercules Prodiceus", written for his pupil, the young Thomas Zamoyski; and two dramas: "Pentheslea" and "Caestus Joseph".

His first Polish verses were written in 1606, in favour of the rebellion of Zebrzydowski. He also wrote a few fugitive poems, but his fame mainly rests on his "Idyls", which appeared in 1614. They were the first and still remain the best poems of the kind in the Polish language. They faithfully follow the old classical type, so often imitated by French and Italian Humanists in the fifteenth and sixteenth centuries; but under this form there is a true national element, and the Polish landscape and peasantry are gracefully described. Like Virgil's "Eclogues", all are short; several were composed on special occasions. Not all are uniformly beautiful, indeed the finest are often marred by weak passages. But they have the merit of simplicity, not unfrequent depth of feeling or pleasant wit and humour, profound political allusions, clarity of thought and a noble diction. His influence is visible in the writings of both the Zimorowicz, and also in Gavinski's "Idyls". More recently he has been imitated by Naruszewicz, and at times by Kniazin and Karpinski. In the nineteenth century Mickiewicz appreciated him admirably in his course of lectures on Slavic literature, and we may say, rediscovered him.

Szymonowicza (Zlocow, 1894); Chranowski, Terrzydy S. Szymonowicza Castus Joseph (Warsaw, 1892); Hartn, Szymonowica jako fala of (Lemberg, 1897).
Tabas, titular see in Caria, suffranguan of Stauropolis; according to Strabo (XII. 570, 576) it was located in a plain in Phrygia on the boundaries of Caria. Stephanus Byzantius (s. v.) mentions two cities of this name, one in Lydia, the other in Caria. Livy (XXXVIII. 13) says that it was on the frontier of Pisidia towards the coast of the Gulf of Pamphylia. The town in question, however, some coins of which are extant, was one which claimed to have been founded by one Tabus. Others derive its name from taba, which in Semitic languages means "good" and others from a native word taba, meaning "rock", which seems a probable derivation. In 189 B.C. the consul Gneus M. Antonius Volo, having defeated the natives who blocked his passage, exacted from Tabas a fine of 25 talents and 10,000 modii of wheat. Three bishops of Tabas are known: Rufinus, present at the Council of Ephesus (431); Severus, at Constantinople (535); Basilius, at Nicaea (787) (Le Quien, "Oriens christi.", I. 905). The "Notitia Episcopatarum" continue to mention Tabas among the suffragans of Stauropolis until the thirteenth century. Tabas is now the village of Davas which gives its name to a casa of the vilayet of Smyrna; some inscriptions and numerous ancient remains are found.

S. PÉTRIDÉS.

Tabasco, Diocese of (Tabassquensis), in the Republic of Mexico, suffranguan of the Archbishopric of Yucatán. It comprises the States of Tabasco, having an area of 10,872 sq. miles and a population (in 1910) of 183,903. The bishop and the governor reside at San Juan Bautista, founded in 1598 under the name of Villa de Felipe II, known as Villa Hermosilla in 1826, when it got its present name. The city has at present (1910) a population of 12,084 inhabitants. In the decree of Charles V, 19 September, 1525, we read: "At the request and with the express consent of the said Bishop Don Fray Julián Garcia, we declare, make known, and appoint as the boundaries of the said Bishopric of Yucatán and Santa María de los Remedios the following provinces and territories: First, the entire Province of Tlaxcaltecas, and San Juan de Ulúa with the Villa de Matlán and the Territory of Tabasco" etc. The Gospel was preached here in the early period of the Spanish conquest. In 1545 the Dominican Fathers going to Chiapas passed through Tabasco and in 1578 organized the house of Oxololán, the first vicar of which was Padre Tomás Agudo. In 1589 Tabasco must already have made considerable progress, for Philip II during the time of the Viceroy Velasco planned the erection of a see there. Philip III also intended to do so, in 1609, but was unsuccessful. Another futile attempt was made in 1680. Finally, in 1864, Mgr. Rodríguez de la Cadena, Apostolic Delegate of Mexico until 1911; to the See of Oaxaca from 1891 till 1906; and finally in 1866 to the See of Yucatán. The diocese contains: an ecclesiastical seminary with 6 students; 7 parochial schools; 4 Catholic colleges, and about 600 alumni; a Protestant college with 25 pupils; and 3 churches.

CAMILLO CHIVELLI.

Tabb, John Bannister, an American poet and educator, b. at "The Forest" near Richmond, 1845; d. at Ellict City, Md., 1906. Descended from one of the oldest and wealthiest Virginia families, he was carefully trained by private tutors. At the age of fourteen his sight was so poor that he had to give up his books, and for three years spent much time at the piano, becoming proficient in music. On the breaking out of the Civil War he enlisted under the Confederacy and served in the navy till taken captive, 4 June, 1864. He was sent to the "Bull-Pen" at Point Lookout, where he formed an enduring friendship with Sidney Lanier. Released from prison the following February, he was penniless. He undertook to fit himself for a musical career and to that end practiced seven hours a day. His patron failing, he was obliged to maintain himself as a teacher, securing a position at St. Paul's School, Baltimore. While there he fell under the influence of the Rev. Alfred Curtis, who later on was converted from Episcopalianism to the Catholic Church. Tabb followed his master into the fold in 1872. A few years later he entered St. Charles's College to prepare for the priesthood. On completing his classical studies he was retained by the faculty as teacher of English. Thus interrupted, his theological studies were not completed till the Christmas of 1884, when he was ordained. He continued to teach English Grammar at St. Charles's till a short time before his death, till he had become totally blind. His "Bone Rules" is counted a valuable contribution to his art. It is his only prose work. Father Tabb consecrated all his energies to the vocation of teacher. His poems were written here, there, and everywhere; but every one of them bears the stamp of a highly cultivated and gifted mind. They were contributed to the foremost magazines and were read with avidity. Concise and suggestive, these literary gems cling to the fancy and thus realize the modest ambition of their author as expressed in the opening poem of his "Later Lyrics":

"O little bird, I'd be
A poet like thee
Singing my native song,
Brief to the ear, but long
To love and memory."

In the lyric field he was greatly admired. Under his muse inanimate things took on life and beauty and the abstract became concrete and personal. His poems are collected in five volumes which were published in the following order: "Poems"; "Lyrics"; "Child Verse"; "Later Lyrics"; "Sonnets".

MERTHELL, "Father Tabb in The Catholic World" (Feb., 1910); DOUGAN, "Father Tabb in America" (5, 12, 19 Feb., 1910).

T. S. DOUGAN.

Tabbora, a titular see in Africa Proconsularis, suffranguan of Cartaghe. Tabbora or Talbora has been identified with two groups of ruins rather close to each other, now called Tembra, west of Bigga (ancient Bisica) in the valley of Wady Siliana, Tunis. Two
bishops are known: Marinus, present at the Conference of Carthage (411), where his rival was Victor, also rival of the Bishop of Brescia; and Constantine, who signed the letter from the bishops of the province to Paul, patriarch of Constantinople, against the Monothelites (646).

S. Pétridès.

Tabernacle (Tabernaculum) signified in the Middle Ages sometimes a ciborium-altar, a structure resting on pillars and covered with a baldachino that was set over an altar, sometimes an ostensory or monstrance, a tower shaped vessel for preserving vessels exhibiting relics and the Blessed Sacrament, sometimes, lastly, like to-day, it was the name of the vessel holding the pyx. That is, at the present time in ecclesiastical usage it is only the name for the receptacle or case placed upon the table of the high altar or of another altar in which the vessels containing the Blessed Sacrament, as the ciborium, monstrance, custodia, are kept. As a rule, in cathedrals and monastic churches it is not set upon the high altar but upon a side altar, or the altar of a special sacramentary chapel; this is to be done both on account of the glory of the Holy Sacrament and the vessel impeding the course of the ceremonies in solemn functions at the high altar. On the other hand it is generally to be placed upon the high altar in parish churches as the most befitting position ("Cerem. ep.", I, xii, No. 8; "Rit. rom.", lit. IV, i, no. 6; S. C. Episc., 10 February, 1579). A number of decisions have been given by the Sacred Congregation of Rites regarding the tabernacle. According to these, to mention the more important decisions, relics and pictures are not to be displayed for veneration either on or before the tabernacle ("Decret. auth.", nos. 2615, 2906). Neither is it permissible to place a vase of flowers in such a manner before the door of the tabernacle as to conceal it (no. 2067). The interior of the tabernacle must either be gilded or covered with white silk (no. 4035, ad 4); but the exterior is to be equipped with a mantle-like hanging, that must be either always white or is to be changed according to the colour of the day; this hanging is called the canopeum (no. 3520; cf. "Rit. rom., loc. cit."). A benediction of the tabernacle is customary but is not prescribed.

History.—In the Middle Ages there was no uniform custom in regard to the place where the Blessed Sacrament was kept. The Fourth Lateran Council and the Fourth General Councils of Lyons and Constance require only that the Host be kept in a secure, well-fastened receptacle. At the most they demand that it be put in a clean, conspicuous place. Only a few synods designate the spot more closely, as the Synods of Cologne (1281) and of Münster (1279), while condemned that it was to be kept above the altar and protected by locking with a key. In general, four main methods of preserving the Blessed Sacrament may be distinguished in medieval times: (1) in a cabinet in the sanctuary, a custom that is connected with early Christian usage; (2) in a cupboard in the wall of the church or in a projection from one of the walls which was constructed like a tower, called Sacrament-House, and sometimes reached up to the vaulting; (3) in a dove or pyx, surrounded by a cover or receptacle and generally surmounted by a small baldachino, which hung over the altar by a chain or cord; (4) lastly, upon the altar table, either in a ciborium or in a receptacle similar to a tabernacle, or in a small cupboard arranged in the reredos or predella of the altar. This last method is mentioned in the "Admonitio synodalum" of the ninth century by Regino of Prüm (d. 915), later by Durandus, and in the regulations issued by the Synods of Trier and Münster already mentioned. Reredoses containing cupboards to hold the Blessed Sacrament can be proved to have existed as early as the fourteenth century, as, for instance, the altar of St. Clara in the Cologne cathedral, although they were not numerous until the end of the fourteenth and beginning of the fifteenth century. The example set by the Church of St. Martin in Landshut, Bavaria, is an example of the combination of reredos and Sacrament-House. From the sixteenth century it became gradually, although slowly, more customary to preserve the Blessed Sacrament in a tabernacle that rose above the altar table. This was the case above all at Rome, where the tabernacle first came into use, and in Italy in general, influenced largely by the good example set by St. Charles Borromeo. The change came very slowly in France, where even in the eighteenth century it was still customary in many cathedrals to suspend the Blessed Sacrament over the altar, and also in Belgium and Germany, where the custom of using the Sacrament-House was maintained in many places until after the middle of the nineteenth century, when the decision of the Sacred Congregation of Rites of 21 August, 1863, put an end to the employment of such receptacles.

Tabernacle (Tabernaculum, tent) in Biblical parlance usually designates the movable tent-like sanctuary of the Hebrews before the erection of Solomon's Temple. The various expressions in the Hebrew text in reference to the Tabernacle (ʻohel, tent; 'oḥel mōʻed, tent of meeting; ʻoḥel ha-ĕduth, tent of the testimony; mishkan, dwelling; mishkan ha-ĕduth, dwelling of the testimony; mishkan ʻoḥel, dwelling of the tent; beth Yahweh, house of Yahweh; qodeš, holy, miqdash, sanctuary; hekal, temple), while enabling us to form a fair idea of this construction, raise, by the seeming confusion of the passages in which they severally occur, many problems with which all modern commentators of the Scriptures have to grapple. Thus, Exodus describes the ark as sheltered in a tent (xxxii, 7; Hebr. ʻoḥel mōʻed), whose position was "without the camp afar off" (Cf. Num., xi, 16 sqq.; 24–30; xii; Deut., xxxi, 14 sqq.), guarded by "mixed salt of the son of Nun" (11), and at the door of which Yahweh was wont to manifest himself to Moses (9–11; cf. Num. xii, 5; Deut., xxxi, 15). Thus also the Temple (Cf. 1 Kings, x, 17) was a tent (or better, perhaps, "tent of the oracle") was not identical with the tabernacle modern independent critics urge from the fact that this ʻoḥel mōʻed was in existence before Beseelel and Ooliab commenced the construction of the Tabernacle (Ex., xxxv–xxxvi) and that the customary place of the latter was in the very midst of the encampment (Num., ii, 1 sqq.; x, 15 sqq.). Much stress is laid upon this and other seeming discrepancies to conclude that the description of the tabernacle found in Ex., xxxv–xxxvi, xxxix–xl, is the work of the post-exilian authors of the Priestly Code.

Assuming, however, the historical accuracy of the Biblical narratives, we shall limit ourselves here to a brief description of that "portable sanctuary" of the Hebrews. In this sanctuary we should distinguish the tent or tabernacle proper from the sacred enclosure in which the tent or tabernacle was set up. The Hebrew term for tabernacle (Ex., xxvii, 9) was a rectangular space, measuring 100 by 50 cubits (probably the Egyptian cubit, 20¾ ins.), screened off by curtains of "fine twisted linen" (xxvii, 9), 5 cubits high, 100 cubits long on the north and south sides, 50 on the east and 15 on the west, and 20 cubits on either side of the entrance. The entrance was closed by a hanging of fine twisted
The tabernacle, Feast of, one of the three great feasts of the Hebrew liturgical calendar, even the greatest, according to Josephus (Jos., vii. 9, 10), is the chief religious feast of the Jews. The common name, Feast of Tabernacles—among Greek-speaking Jews ἱερὰ ἑορτή, that is, “the pitching of the tent” (John iv. 16)—recalls to mind the custom established by the law of Lev., xxiii, 40, of erecting on the roofs of houses and in the open fields booths of branches and foliage, where all who were not exempted through illness or weakness were obliged to live during the entire celebration. It is sometimes asserted that the origin of the feast was similar to our “harvest-home” festivities.

This naturalistic view, based on the assumption that the religious enactments of the Law are of relatively recent date and mere sacrificial ordinances, takes no account of the significance which at all times attached to the feast. True it is that one of the features of the celebrations was to be, after a fashion, a harvest-homage, and to offer the priests (Num., xxii, 29)—at the sacrifice of its dimensions from the date of the year (Deut., xvi, 13; Ex., xxiii, 16)—and it is perhaps owing to this special feature that the character of the feast was one of joy and merriment (cf. Ps. iv, 7–8, in Heb.; Joseph., Ant., VIII, iv, 1), and that numerous sacrifices were then offered (Num., xxii, 12–39), yet to the Jews the feast was not an abstract worship and primarily in commemoration of their forefathers’ indwelling in tents in the wilderness (Lev., xxiii, 43) and in thanksgiving for the permanent abode given them in the Promised Land, and, later on, after the erection of the Temple, for a permanent place of worship (cf. III Kings, viii, 2; xii, 32). The feast began on the fifteenth of the Tishri (about our September), and lasted six days. It was followed by the Feast of Booths, at which the whole people of Israel were thus present.
seven days (Lev., xxiii., 34-36). Every male Israelite was, according to law, obliged to go to Jerusalem, and "every one who was of the people of Israel" was bound to live in booths, which, though involving some discomfort, at the same time contributed much to the merriment attending the celebration. The distinctions between rich and poor were then somewhat obliterated, and all and everyone enjoyed the common festivity, and thus the feast had a most beneficial social influence. The first day was held most solemn and considered a sabbath, all servile work being forbidden on that day (Lev., xxiii., 39; Num., xxix., 35); during the whole octave numerous sacrifices were offered (Num., xxix., 12-39) and on the seventh (which was the great day of the feast) in John, vii., 37), was held a sabbath like the first and marked by special sacrifices of its own, the booths were broken up and the people returned home.

After the Exile, the feast was protracted to the twenty-fifth of the month, and two new rites were added, the old ceremonial. Every morning of the celebration a priest went down to the Siloam Fountain, whence he brought in a golden ewer water which was poured on the altar of holocausts amidst the singing of the Hallel (Psalms, cxix.-cxxvii) and the joyful sound of musical instruments. It was possibly the performance of this ceremonial (the institution of which may have been by Isra. xxi, 3) which afforded to the Lord the occasion to compare the action of the Holy Ghost in the faithful to a spring of living water (John, vii., 37-39). The other new feature added to the ritual of the feast was the illuminations of the women's court, together with the singing of the Psalms of the Degrees (Psalms, cxix.-cxxxiii) and the performance of dances or processions in the sacred precincts. On the eighth day a procession went seven times around the altar, the people carrying myrtle-boughs and palms and shouting: "Hosannah!" in memory of the fall of Jericho. This, that is the year of release, during the feast of Tabernacles, the Law was to be said to the people before all the people according to the command found in Deut., xxxi, 10. But this enactment was probably soon found to be impracticable; and thus the Jewish authorities arranged to read on every sabbath, commencing with the sabbath after the feast of Tabernacles in one year of release and ending with the feast of Tabernacles in the next year of release, a portion of the Law so calculated that the whole Pentateuch would be read through in seven years. Thus would in some way the commandment be fulfilled. Some theologians (the Jews of Palestine) lengthened the sections for each sabbath in such a manner that the entire Law could be read in three years (Talm. Babyl. Megillah, 29b). At present (and this custom seems to go back to the first century B.C.) the Jews have the Pentateuch so divided that they read it through every year, the first Parashah (division) being appointed for the sabbath after the feast of Tabernacles, and the last chapters for the last day of the feast in the next year, this being the day of "rejoicing in the Law".

Tabor. See Tabar.

Tacana Indians, the collective designation for a group of tribes constituting the Tacanan linguistic stock of linguists, occupying the upper valleys of the Beni and Madre de Dios Rivers, on the eastern slope of the Andes, Department of Beni, north-western Bolivia. The group includes: the Tacana proper, the Isiama, the Cavina, and the Aten or Loco, all missionized by the Franciscan Fathers of the College of Ocopa, Peru, about the end of the eighteenth century; the still uncivilized Tororoma and Araume and several others; and the more remote Sapibocana of the Moxos mission farther to the south. In 1832 the five Tacana missions contained 5304 Christian Indians, while the wild Tororoma were estimated at 1500. In 1852 the traveller Weddell spent some time at the mission of Guayay and has given us a good description of the Indians as he found them. In 1883 Heath reports them as greatly reduced, the 1000 Cavina of 1852 having dwindled to 70 souls. Like their neighbours, the Mozetena and Yurucara, the Tacana are noted for their light complexion, fine features, and tall stature, averaging over five and a half feet. Of their language, which is extremely guttural and jerky in pronunciation, we have vocabularies by Heath and Weddell, besides a small devotional publication. In their primitive condition they subsisted, and still do, by agriculture, hunting, and fishing, went naked except for feather decorations on dance occasions, and lived in small communities subject to petty chiefs. Some of their tribes were reputed cannibals. The civilized Tacana wear as their principal garment a sleeveless shirt or chemise, keeping the head and feet bare. They are expert at weaving and the art of straw hats, but are not industrious beyond their immediate needs.

Anthrop. Inst., XXI (1892); NOLLET, L'Homme Americain (Paris, 1839); WEDDELL, Voyages dans le Nord de la Bolivie (Paris and London, 1853).

JAMES MOONEY.

Tacape, titular see of Tripolitana in northern Africa. The official title of titular sees of the Roman Curia calls this see Tacape; the ancient milestones bear the name Tacaepa, Tacapa, Tacapes; the Greek name was probably Tacape. It is mentioned in numerous ancient geographical documents, but nothing is known of its history. It was located in the interior of Syrtis Minor in a fertile country, was provided with several roads, and was the commercial centre of the region. At first attached to Byzantium, in the third century it became a Roman colony and formed part of Tripolitana. It is now Gubes, chief town of a civil control and the seat of a military commandery which comprises all the southern part of Tunis. It has 1200 inhabitants of whom 400 are French and live in an oasis due to the desert. Nearby Gabes, with the neighbouring villages of Djerda (3000 inhabitants) and Mensel (300 inhabitants). Three of its bishops are known: Dulcius, legate of the bishops of Tripolitana to the Council of Carthage (403) and present at the Conference of Carthage in 411; Servilius, exiled by Huneric in 494; Caius or Gallus, legate of the bishops of his province to the Council of Carthage in 525. The see still survived under Justinian who fortified the town.

S. PETRÉSUS.

Taché, ALEXANDRE-ANTONIN, first Archbishop of St. Boniface, Manitoba, missionary, prelate, statesman, and writer of Western Canada, b. at Fraserville, Province of Quebec, 23 July, 1823; d. at St. Boniface, 22 June, 1894. By his father, Charles Taché, he belonged to one of the principal French Canadian families, and through his mother, Louise Henriette de La Broquerie, he was a descendant of Laverendrye (q.v.), the discoverer of the country in which he was to pass forty-nine years of his life. His classical studies were made at the College of St. Hyacinthe, whence he went (1 Sept., 1841) to the seminary of Montreal to study for the priesthood. Thence he passed to the novitiate of the recently-arrived Oblates of Mary Immaculate, and when Bishop Provancher obtained the co-operation of this Institute for his distant missions of the Red River, Brother Taché, though still a novice, was chosen to accompany this other Father Pierre Aubert, O.M.I. After a two months' journey through Canadian territory, Taché arrived at St. Boniface on 25 August, 1845. On the first Sunday following he was ordained deacon by Bishop Provancher, and, on 12 October of the same year, was promoted to the priesthood, pronouncing the final vows of an Oblate on the next day. For nine months he studied the Saulteaux language; this knowledge, however, was not to be of assistance to him years later, for in July, 1846, he was sent to Ile-à-la-Crosse. There he spent four years, learning the language of the Chipewyas, his new flock, among whom he laboured, literally changing the morals, no less than the creed, of the northern aborigines. On snow-shoes and by canoe he made long journeys for the benefit of the Cree, Chipewyas, Athabascans, and Caribou-Eaters, until, at the age of twenty-seven he was chosen as the coadjutor and future successor of Mgr. Provancher. In obedience to the founder of his congregation, Bishop de Mazenod, he crossed over to Marseilles, and was consecrated (23 November, 1851) titular Bishop of Arath. On 27 June, 1852, he was back at St. Boniface, and on 10 September, 1852, he arrived at Ile-à-la-Crosse. He then continued his missionary life, which was rendered locally all the more useful as the Indians had resented his departure and the presence of priests not familiar with their language. Absorbed was Taché in his apostolic labours that on the death of Bishop Provancher (7 June, 1853) he did not deem it incumbent upon himself to immediately return to St. Boniface. He went on with his peregrinations among Indians and half-breeds until in the course of 1854 he proceeded south to officially take possession of his see. On 5 June, 1855, he returned

ALEXANDRE-ANTONIN TACHÉ
First Archbishop of St. Boniface

S. PETRÉSUS.
north, going as far as Great Slave Lake, where he established a mission for the benefit of another Déné tribe. Then, as his diocese was becoming too large for one man to administer, he had one of his priests, Father Vital J. Grandin, O.M.I., appointed his coadjutor. Between 1860 and 1861 Mgr. Taché resumed his journeys among the natives, and, nine miles from the town, in a partial smallpox epidemic the name under which Father Lacombe was to establish under the name of St. Albert. Returning to St. Boniface, he learned of the destruction by fire (14 December, 1860) of his residence and the cathedral, the latter, whose bells have been sung of by the Quaker poet Whittier. With the pride of the settlement. He then passed into Canada. The East of the present Dominion was called, and, by his appeals, secured the means of commencing a new and more modest cathedral. He even went as far as Europe, and procured the erection, in the most northern part of his immense diocese, of a new vicariate Apostolic which was entrusted to the care of Bishop Paquin.

This division enabled Mgr. Taché to give more attention to the home, or southern, missions and the embryonic parishes of what is to-day Manitoba. This territory, then called Assiniboia, was peopled by a mixed population under the paternal rule of the Hudson’s Bay Company, many, assembled by a legation of the body of which the Bishop of St. Boniface was a member. A restless alien element, hailing mostly from Ontario, was at that time striving to change a political regime which was satisfactory to all classes of the local society, French and English, Catholic and Protestant. When the provinces of the east had been united into a confederation, one of the first cares of the new power resulting from the 1867 Act was to obtain from the Imperial Government the transfer, in consideration of £300,000, of Assiniboia and surrounding regions which had previously belonged to the Hudson’s Bay Company. The only people who inhabited those territories not consulted as to the advisability of this transaction, but the emissaries of Ottawa in the valley of the Red River acted so rashly and in such a domineering way towards the French and Catholic part of the population, at a time when the Federal authorities whom they represented had not as yet any jurisdiction over the country, that the discontent they caused culminated (11 October, 1869) in open revolt under Louis Riel. The Federal authorities begged Taché, who was then attending the Ecumenical Council of the Vatican, to intervene in the matter. On his way home the prelate had interviews with the governor-general and his ministers, and was assured by them of a full amnesty for the réfugiés in arms, if the latter would only send delegates to Ottawa to treat of the matters in dispute and would not oppose the coming of the military expedition that was dispatched to Red River under Wolsely. In the meantime the Provisional Government, regularly formed there by the properly elected representatives of both portions of the population, had found it necessary to execute a troublesome character named Thomas Scott. The bishop, arriving in his capital, 18 days after the execution, was timely, incensed as Riel had manifested his intention of resisting the progress of the Anglo-Canadian troops. After Taché’s intervention, which was based on the promise of an amnesty received at Ottawa, the métis could no longer be relied on to pursue an aggressive policy. Delegates were sent to Ottawa from his capital; their efforts resulting in the Manitoba Act.

Unfortunately, the authorities took the execution of Scott, a rabid Orangeman, as an excuse for refusing the amnesty to which they had solemnly pledged themselves. This was a great blow to Mgr. Taché’s prestige among his people. For years he laboured to secure for the leaders in the movement of resistance against the unwarranted aggression of the representatives of Ottawa that means of justice to which they thought they had a right. He would probably have been more successful had he shown himself less confident in their honesty in his dealings with politicians, and required written assurances when it was scarcely possible to refuse them. It was not till the end of October, 1874, that the menace of an invasion appeared imminent. One of Riel’s lieutenants, A. D. Lepine, had been condemned to death, a sentence which Mgr. Taché had had commuted into eighteen months’ imprisonment. Taché had been appointed Archbishop of St. Boniface on 22 September, 1871. Thenceforth his efforts were directly directed towards raising an emigration to the new ecclesiastical province and founding new parishes within his own archdiocese. In the midst of these labours the Saskatchewan Rebellion of 1885, under the same L. Riel who had directed the legitimate rising of 1869 (see SASKATCHEWAN AND ALBERTA), took place. Taché wrote (7 Dec., 1885) a little pamphlet, "La Situation," a masterpiece of its kind, in which he deplored the rebellion, yet remained to the end sympathetic to his former protégé. The latter had paid with his life (16 Nov., 1885) for excesses that were due to good intentions rendered ineffective by the weakness of his brain. From 13 to 24 July, 1889, were held at St. Boniface the sessions of its First Provincial Council. But soon after this joyous event the separate schools which were guaranteed by the provincial Constitution were ruthlessly abolished. The archbishop made numerous attempts to obtain redress, publishing several letters and pamphlets and trying to have the government settle his people; he also had appeals taken to the various courts, but the findings were contradictory, and therefore futile, until the Privy Council of the Empire acknowledged the reality of the grievances and pointed out the Federal Parliament should have the power to redress them (29 Jan., 1895). Taché did not live to see this tardy justice. The anxieties of the last few years had accentuated the ravages of a malady which carried him off, to the regret of friends and foes alike. Apart from the respectful tributes of the press, some 15,000 Protestants publicly testified after his death their recognition of his worth.

Archbishop Taché had to a considerable extent shaped the destinies of the Canadian West. He was a writer of no mean order. His literary productions have a special aroma of delicacy and, at times, quiet wit, which denote the keen interest of the author in the French is remarkably pure and free from foreign elements. Of his first book, "Vingt Années de Misions" (Montreal, 1866), 15,000 copies were sold, and it is now very rare. A short time later he published his "Esquisse sur le Nord-Ouest de l’Amérique", almost a classic on the subject; besides a second edition, it had the honour of an English translation. The harassing school persecution which began in the year 1890 was responsible for several public documents of Archbishop Taché’s, prominent among which is "A Page of the History of the Schools in Manitoba"; these documents, published in English and French, and regarded as a model of close dialectics and irrefutable logic.

A. G. Morice.

Taché, Étienne-Pascal, statesman, b. at St. Thomas (Montmagny, Province of Quebec), 5 Sept., 1792, son of Charles, and Catherine Michon; d. 20 July, 1865. Through his grandmother, he was a de-
 descendant of Joliet, the discoverer of the Mississippi. He served in the war of 1812 as lieutenant of the "Chasseurs canadiens". He was a self-made man, who after a mere elementary course succeeded in graduating at Philadelphia as a physician, and later in taking the foremost rank among the Canadian medical men.

After twenty-two years of successful medical practice, he entered politics as member of the Legislative Assembly at the first election following the Union (1841), which he had strenuously opposed. Re-elected in 1844, he accepted (1846) the post of adjutant-general of militia. In 1848 he became chief commissioner of public works in the Lower-Canada ministry, and helped to save the former's life during the violent sessions of 1849. M. Taché was a member of each successive Cabinet from 1848 to 1856. In 1858 he was knighted by Queen Victoria, and in 1860 appointed aide-de-camp to Her Majesty, with the rank of colonel in the regular army. In 1862 Pius IX bestowed on him the title of Commander of the Order of St. Gregory. He aided in reorganizing the militia at the time of the Trent affair. In 1864 he formed the Taché-MacDonald administration, and presided over the conference of the delegates of the British North American provinces called preparatory to confederation. Taché was ever a loyal Catholic.

LIONEL LINDSAY.

Taensa, a titular see in Mauretania Cesariensis, of which nothing is known. Its bishop David is mentioned as one of the bishops of Mauretania Cesariensis in the "Notitiae episcopatum" of 482. He is also the hundredth and fifth on the list of the bishops of that province who went in 484 to the conference of Carthage and were subsequently exiled by Honorius. His name is lowered by the wound probatus, showing that he died in exile for the Faith.

TOULCROTE, Géographie de L'Afrique chrétienne: Maurétanies (Montréal, 1894), 149.

S. PÉTRIDES.

Tennarum, a titular see in Greece, suffragan of Corinth. Tennarum, or Tenarus, was situated five English miles north of Cape Tenarum, now Cape Matapan. It contained a temple of Demeter, also one of Aphrodite. It is to-day the village of Kyparissos. After their freedom from the Spartan yoke, the maritime Macedians formed a confederation, and founded a capital, called Capo-Tenaro, i.e. new-Tennarum. From inscriptions we learn that this new city was really Tennarum, which still preserves its old name. However, there may have been two distinct cities, in close proximity; but there is no mention of Tennarum in the "Notitiae episcopatum", or of any of its bishops.

S. PÉTRIDES.

Taensa Indians, a tribe of Muskogean stock and somewhat superior culture, living when first known on the west bank of the present limits of Texas parish, Louisiana, and numbering perhaps 1200 souls, in several villages. The meaning of the name is unknown. In language, religion, and custom they were nearly identical with the celebrated Natchez, their near neighbours on the opposite bank of the Mississippi, a little lower down. The Taensa were sedentary and agricultural and expert canoe men, living in large houses described as having walls of earth, but more probably of logs plastered with clay, and roofed with mats of woven cane splits. Their chiefs exercised despotic power and were treated with great respect, in marked contrast to the custom among the northern tribes. On one occasion of a ceremonial visit to La Salle the chief was accompanied by attendants who, with their hands, swept the road in front of him as he advanced. Towards the French they manifested from the first a warm friendship, but although described by the early explorers as dignified, polished, docile, and even "humane", their religion, like that of the Natchez, was notable for its bloody rites. It has been said that these chief death dances, in the form of serpent. Their dome-shaped temple was surrounded by the figures of three eagles facing the rising sun, the outer walls and the roof being of cane mats painted entirely red, and the whole was surrounded with a palaestra of stakes, on each of which was set a human skull, the remains of a former sacrifice. Inside was a vast altar, with a cornice, the property of the village, and a perpetual fire guarded day and night by two old priests. When a chief died his wives and personal attendants were killed that their spirits might accompany him to the other world. At one chief's funeral thirteen victims were thus slaughtered. On another occasion Father Montigny, being present, interposed and prevented the sacrifice. Shortly afterwards, during a thunder storm, the temple was struck by lightning and entirely consumed. The high priest interpreted this as a sign of the anger of the god at the neglect of the ancient custom, and the chief's contemporaries called upon the workmen to bring their children into the fire. In response five mothers rushed forward and cast their infants into the flames and others were about to follow when the soldiers of Iberville's party interfered. The five mothers who had thus given their children to death were afterwards led in procession, clad in white robes woven from the fiber of the inner bark of the mulberry.

The Taensa may have been visited by De Soto's expedition in 1540, but their definite history dates from 1662, when the French commander La Salle, accompanied by Tonti and the Recollect Father Honorius Membre, stopped at their villages for a day or two descending the Mississippi and met a friendly reception. In 1686 Tonti again visited them, and in 1690 he made their villages the starting-point for his expedition to the west in search of La Salle. In 1698 they were terribly wasted by a smallpox epidemic which ravaged all the tribes of the lower Mississippi, but were still estimated at about 800. In the same year, Fathers F. J. de Montigny, Antoine Davion, and Thaumur de la Source were sent out from Quebec by the Seminary of Foreign Missions (missions Étrangères) of Rome, which had undertaken this work among the tribes. After a preliminary reconnaissance, Father Montigny, with powers of vicar-general from the Bishop of Quebec, went in 1699 to the Taensa, assigning Davion to the Tonica. Later on Father Buisson de St. Cosme, of the same seminary, arrived and was assigned to the Natchez. Father Montigny was well received, and, as has been stated, was able at the time to prevent the funeral slaughter on the death of the chief, as also to make peace between the Taensa and the Natchez. In 1700 they were visited by Iberville, governor of the Louisiana province of France, who, however, with Iberville himself was unfriendly to the Quebec order, and the Taensa and Tonica, while apparently kindly, were too much attached to their own ritual and custom to be moved. The murder of Father Foucault by a neighbouring hostile tribe, the Koros, in 1702, led to the withdrawal of the seminary priest and the abandonment of the missions.

In 1706 the hostility of the Chickasaw and Yassoo compelled the Taensa to abandon their villages and retire lower down the river. In consequence of their treacherous attack upon a tribe which had given them shelter, they were again forced to become fugitives and finally, in 1740, removed to the present village on the river near Mobile, Alabama, under the protection of the French. They were still mainly heathen. On the cession of Mobile to the English in 1763 they,
with several other small tribes, again moved over into Louisiana, settling on Red River, where they still resided in 1805, reduced then to 25 men or perhaps 100 souls. Some years later they removed south to Bayou Bous and thence to Grand Lake, and made this their permanent and final residence.

In 1880–2 considerable interest was aroused among philologists by the publication in Paris of what purported to be important material of the Taesna language, including papers, songs, a grammar and vocabulary, but which proved to be the fraudulent work of a young student named Parisot, or of some one else from whom the manuscripts had originally come. The deception was exposed by Brinton in 1885 and has been more recently pointed out by Swanton.

JAMES MOONEY.

Tahiti, Vicariate Apostolic of.—Tahiti, the most important of the Society Islands, has an area of 600 square miles and a population of 11,691 inhabitants, and lies between 17° 29' 30" and 17° 47' S. lat., and 151° 29' 53" and 151° 56' W. long. It is about 4,000 miles from the equator. This island was also claimed for Fernández Quiros, the pilot of the Mendana expedition from Peru to the Philippines, about 1600. Bourgainville, Cook, and other explorers made Tahiti famous in Paris as "La Nouvelle Cithère" and in London aroused an enthusiasm for "the 'veil,'" which led to the formation, by Dr. Harris of the London Missionary Society in 1794–95, and the despatch of the "Duff" in 1796 with some 60 persons, missionaries and teachers of trades and crafts, for the conversion of the island and its neighbours. The representatives of the society made little progress until Pomaré II, King of Tahiti, accepted Protestantism in 1815. Under his successors they gained great influence in the island government. In 1836 two priests of the Congregation of the Sacred Hearts of Jesus and Mary of Picpus arrived in Tahiti from the Gambier Islands, where Catholicism had gained a foothold. They were welcomed by Queen Pomaré, who gave them support and approbation of the English Protestant missionaries, and took their cause to Paris. In 1838 a French naval expedition exacted from Queen Pomaré an indemnity and guarantees for the future for French residents in the island. In 1841 a mission was established by the Congregation of Picpus. In 1842 Pomaré IV signed a convention with Admiral Dupetit-Thouars, establishing a French protectorate and guaranteeing full religious liberty in Tahiti, which was ratified by Louis-Philippe in 1843. An uprising of the natives against the protectorate resulted in an expedition, the flight of Queen Pomaré, and the forcible expulsion from the island of Rev. W. T. Pritchard of the London Missionary Society, whom the admiral held responsible for the revolt. This act was disavowed by the French Government and an indemnity paid by Crete Bary, alleged upon the claim that Pritchard at the time of his expulsion, had been appointed British consul.

In 1848 Tahiti with its dependent islands was detached from the Vicariate of the Marquesas, and placed under the able and scholarly Mgr Jaussen. In 1860 King Pomaré, with the consent of the French Government, ceded Tahiti to the French Republic. In 1887 the French Government secularized the schools. Upon the death of Mgr Jaussen in 1891 Mgr Verdier, his assistant since 1884, succeeded to his labours, made doubly difficult by the sectarian missions and the attitude of French officials. Since 1903 the various groups of French islands in Oceania, exclusive of New Caledonia and its dependencies, have been united in one homogeneous colonial establishment and administration.

The Vicariate of Tahiti covers the Society group, the Leeward and Gambier Islands, the Tuamotu group, Tubuai and Rapa, all belonging to France; the Cook and Penrhyn Islands, annexed to New Zealand in 1832; Pitcairn (unattached) and Easter Island, belonging to Chile. The Mission consists of: 1 bishop (Mgr Hermel, whose residence is at Papeete, the chief town of Tahiti), 1 coadjutor with right of succession, 30 priests and several brothers of the Congregation of Pepus; 6 brothers of Floëre; 12 churches with resident pastors; 50 other churches and chapels; 24 Sisters of St. Joseph of Chiny; 1 boys' school; 1 girls' school; 20 parochial schools; 2 hospitals. The total population of the vicariate is estimated at 31,000 inhabitants, with 7,700 Catholics.

W. F. SANDS.

Tāgi, Anna Maria Giustalda Antonia (maiden name Giannetti), Venerable Servant of God, b. at Siena, Italy, 29 May, 1769; d. at Rome, 9 June, 1837. Her parents, Luigi Giannetti and Maria Masi, kept an apothecary shop at Siena, but lost all their fortune and were obliged to go to Rome in search of a livelihood. Anna Maria was then five years old. Having been educated in all the domestic virtues, she was married in course of time, 7 Jan., 1789, to Dominico Tāgi, a retainer of the noble family of Chiigi, with whom she lived happily for forty-eight years. Hitherto nothing extraordinary had happened in her life. But one day while she knelt in prayer in the church of St. Peter's she felt a strong inspiration to renounce such little vanities of the world as she had allowed herself. She began to pay little attention to dress and to listen to the inner voice of grace. Soon afterwards she was received publicly in the Third Order of Friars in the Church of S. Carlo alle Quattro Fontane, and having found holy spiritual directors, she made rapid progress in the way of perfection. All the money she could spare she devoted to the poor and miserable, and though not rich she was very charitable. Of the hospitals she regularly visited, St. Giacomo, S. Luca, S. Sebastiano, S. Maria Maddalena, S. Maria del Popolo... Despite her love for the poor, she never neglected her own family. Of her children two died young, the others grew up in piety under the surveillance of the mother. But she never availed herself of her connexions with persons of good position to take her children out of their humble social environment. The whole family were wont to assemble for prayers in a small private chapel, and here, later on, Masi was celebrated by a priest who dwelt with the family. The great virtues of Anna Maria were rewarded by extraordinary gifts of God's grace. During many years she was having a loving and intimate dialogue with God and frequent visions in which she foresaw the future. She exercised a peculiar influence over individuals and converted many a sinner to God. During her life she suffered much both corporally...
and spiritually, and was at times measly calendiumed. But after death her name soon became venerated in Rome. Her body was several times transferred, and rests finally at St. Crisogono in Trastevere. The process of her beatification was begun in 1683, but has not yet been finished.

Tait Indians (Te-ti, "Those up river"), a collective term for those members of the Cowichan tribe, of Salishan linguistic stock, occupying the Lower Fraser River, Yale District, British Columbia (Canada), between Nicomen and Yale, where they border upon the Thompson River Indians. They have several small reserves within the jurisdiction of Fraser River agency, of which the principal are Chehalis (116), Chemn (95), Hope (79), and Yale (76). From perhaps 3000 souls a century ago they have decreased, through smallpox, disease, and former dissipation, since the occupation of the country by the whites, to 920 in 1890 and 575 in 1910. The Catholic faith was preached to them by the Oblates, beginning with Fr. Charles Grandier in 1809, at which time the whole Cowichan tribe was sunk in the lowest stage of degradation from drunkenness and association with depraved whites, drunken murders being of almost nightly occurrence. Within two years they were completely reclaimed, all Christians, sober and law-abiding; all due, according to Protestant testimony, "to the honest and persevering labours of a poor Catholic priest who receives no salary, and is fed by the Indians" ("The British Colonialist: Victoria, B. C., 26 March, 1864") quoted, Moore, History of the Church in Western Canada", II, 312). Of the whole number all but seventy-five are now Catholic, the others being Anglican or Methodist, and are officially reported as law-abiding, industrious, strictly moral, and generally temperate. Their principal educational centre is St. Mary's Mission, on the Fraser River, established in 1861 under the management of the Oblates assisted by the Sisters of St. Ann, besides a smaller and more recent mission school at Yale. Of the Cowichan language, which is spoken by a number of bands about Lower Fraser and on the opposite bank of the Strait of Georgia, there are recorded beyond some vocabularies by Tolmie and Dawson. A brief sketch of the ethnology of the tribe group is given by Bosa in "Reports to the British Association for the Advancement of Science". In their primitive customs and characteristics they resembled the cognate Songish, Squamish, Shuswap, and Lillooett.

James Mooney.

Takkali (more properly TAKHELL, plural TAKHELMA), the hybrid name by which the Carrier Indians of the northern interior of British Columbia were originally made known by the fur traders, who sometimes comprised under that denomination the Chilcotin and the Babine tribes as well. The Carriers proper inhabit more or less permanent villages distributed from the forks of Lake Tatla in the northern to the coast, lat. from 55° 15' to 52° 30' N. lat. They are subdivided into a number of septs, based mostly on differences in speech, all of which can be reduced to two main branches: the Lower and the Upper Carriers, the line of demarcation running between Stuart and Fraser Lakes. They number to-day some 1614 individuals, distributed in twelve villages. We may remark that under the fostering care of the missionaries, the population of some of these villages has of late years been increased. The relations of the Carriers with their southern neighbours, the Chilcotins, a rather restless horde now temporarily settled along the Chilcotin valley. As late as 1884 they still numbered fully 1800 souls; but attacks of small-pox and other causes have reduced their population to some 450. Some of the Babines in the north of British Columbia, and the whites, those amongst them who claimed as their home the valley of the lake called after them boasted alone a population of at least 2000. Together with their congeners on the Bulkley River they do not now number more than 530 souls.

Socially speaking, the Carriers and the Babines follow matriarchy, succession to titles and property being among them along the female line. They are in a way ruled over by a number of hereditary petty chiefs, who alone own the land on which their co-clansmen hunt for the benefit of their respective headmen. A number of clans divide into lineages or house in the eyes of the natives, the lineages are the source of a relationship which, as binding as regular consanguinity is with us. Before the advent of the missionaries the main duty of these chiefs, or noblemen, was the giving of noisy feasts called "potlatches" on the North Pacific coast, which consisted in the public distribution, to the members of clans different from that of the donors, of eatables, dressed skins, blankets, and other pieces of wearing apparel. These bounties usually celebrated the demise of some individual. They had to be scrupulously reciprocated as soon as a similar occasion presented itself to the recipient of the feast. The Chilcotins knew all of these "potlatches", but they claimed them inheritance followed patrilineal principles, and their chiefs had more power because less numerous and unconnected with the clan system. With them the son of a chief succeeded his father, instead of a nephew taking the place of his maternal uncle as among the Carriers and Babines. Likewise, while the two last-named tribes cremated their dead, the Chilcotins buried them, generally on hills or knolls. The members of the three tribes believed in the immortality of the soul and followed the religious system outlined in the article DÉVÉS, where the reason for the names of the Chilcotin clans will also be found.

The first contact of the Carriers with the whites dates from 1793; the Chilcotins first met them in 1808, and the Babines in 1812, while the first notions they obtained of the religion of the newcomers were derived from the Catholic servants of the traders among them. In 1842 the Carriers received their first missionary in the person of Rev. M. Demers (q. v.), and four years later Father J. Nobili not only retraced his itinerary but also evangelized the Babines. The good seed distributed by these apostolic men could not, however, come to full germination before the spring of 1878, when a permanent mission was established by Father J.-M. Le Jaqc, O.M.I., on the banks of Lake Stuart, whence the Carrier and Babine villages were periodically visited. The less sedentary Chilcotins had already received a few visits from this priest since 1867, the date of the foundation of St. Joseph's Mission, some distance from the mission of the Chilcotins. The Carrier Indians, especially, proved easily amenable to Catholic ways of thinking, and in the course of years all of them were fully converted to the Catholic religion. Such was the state of affairs among them when A. G. Morice left the north after a residence of nineteen years among the Carriers. A few years later, the Babines took more time to fully attain the moral standard presented to their appreciation. To-day all those aborigines are Catholics, and the conduct of
most of them is an honour to the Faith they profess.

A. G. MORRICE.

TALBOT, James, fourth son of George Talbot and brother of the fourteenth Earl of Shrewsbury (b. 1726; d. 1790), is chiefly known for having been the last priest to be indicted in the public courts for saying Mass. He was educated at Douai, to which college he was a great benefactor. In 1759, at the age of thirty-three, he was consecrated coadjutor bishop to Dr. Challoner. During his episcopate he was twice brought to trial, on the information lodged by well-known "information" payors, in 1769 and 1771 respectively. In each case he was acquitted for want of evidence, but the judge, Lord Mansfield, was plainly on his side, in consequence of which, though he was no friend to Catholics as such, his house was sacked during the Gordon Riots in 1780. On the death of Bishop James Teall, he became Vicar Apostolic of the London District, which he ruled for nine years. He lived a retired life at Hammersmith, his unbounded charity gaining for him the title of the "Good Bishop Talbot". His chief work during these years was the completion of the purchase of the property at Old Hall, Herts, where he had a preparatory academy which afterwards developed into St. Edmund's College. The penal law against Catholic schools still existed, and Bishop Talbot was again threatened with imprisonment; but he contrived to evade punishment. During the last years of his life the Catholic Committee was already threatening trouble. In order to control it, Bishop Talbot allowed himself to be elected a member; but it was soon evident that the laymen were beyond control. The crisis however had not yet arrived when Bishop Talbot died at his house at Hammersmith.

The connected account of his episcopate is in the Dawn of Catholic Revival (London, 1890). For details of his travels see Life and Times of Bishop Challoner (London, 1784); The Life and Times of Bishop Challoner (London, 1819); further allusions in Husenbeth, Life of Milet (Dublin, 1836); idem, History of Catholic Emancipation (London, 1858); Ward, History of St. Edmund's College (London, 1853); HALE and BURGESS, History of the London Society of the Catholic Emancipation (London, 1860); and also MELVINS, Obituary Sermon (MS. in Westminster Archives).

BERNARD WARD.

TALBOT, John, English Catholic layman, b. 1535(?); d. 1607(?). Only son and heir of Sir John Talbot, of Grafton, Worcestershire, he was the father, by Katharine, d. of Sir William Petre, of the Rev. George Talbot, Catholic priest, and ninth Earl of Shrewsbury. He became a member of Lincoln's Inn, 10 February, 1555-6. It was when passing through Smithfield, London, in July, 1580, with Mr. and Mrs. Talbot, that Bl. Robert Johnson, the martyr, was recognized by Siedd, the informer. Indeed, Fr. Persons, S.J., calls Bl. Robert "Mr. Talbot's priest" (Cath. Rec. Soc. 11, 27), though, as it appears he was, rather, Lady Petre's. Talbot was committed to the custody of the Dean of Westminster, 24 August, 1580, and afterwards removed to the house of his brother-in-law, Sir John Petre, in Aldersgate Street. On 1 October, 1581, the plague being then rife in the City, Talbot was attacked with the disease, or twelve miles of London. In 1583 the priest, Hugh Hall, confessed that he had in past years been entertained by him. Later Talbot was restricted to the house of one Henry Whitney, at Mitcham, Surrey, and two miles round it. In 1588 he was imprisoned in Wabecch Castle for having heard Mass contrary to the provisions of the statute 23 Eliz. c. i. From 9 Dec., 1588, to about 13 May, 1589, he was liberated on bail, owing to his own and his wife's bad health. He was then released for a short time at Cricknwell. On 12 March, 1589-90, he was ordered into confinement at the house of Richard Fiennes at Broughton in Oxfordshire, whence he was released on bail for a fortnight on 24 May, 1590. He was again out on bail on 20 December, 1590, and 22 July, 1591. In 1592 he was again at Bexley or Bickley? Kent. On 27 August, 1592, the recusant formerly imprisoned at Ely, Banbury, and Broughton were ordered back to their respective prisons, but an exception was made (17 September, 1592) in favour of John Talbot. However, next year we find him in Ely gaol. Thence he was liberated on bail for a considerable period to act as umpire in a family dispute. Later on he was allowed to take "the Bath", presumably at Bath, on account of his health. Between Michaelmas, 1593, and 10 March following, he paid £120 in fines for recusancy. Afterwards he was imprisoned in Banbury Castle, whence he was released on bail on 7 February, 1594; on 7, his leave being subsequently extended on 29 April, 1597, and 6 Nov., 1607. In 1601 he was living in Worcestershire and pressure was brought to bear on him to secure his influence to promote the candidature of Sir Thomas Leighton as one of the parliamentary representatives of the shire. In 1604 he was paying £20 a month in fines for his recusancy, the benefit of which was on 26 August granted to Sir William Anstruther, who on 13 October in the same year obtained his pardon. On the following 8 December a warrant was issued for the release to him of £100, due from him to the Crown in fines for recusancy. In 1605 he was suspected of complicity with the conspirators of the Gunpowder Plot, one of whom, Robert Winter, of Haddington, near Droitwich, had married his daughter Gertrude. Robert Winter, however, declared that he had said nothing on the subject to his father-in-law, knowing that he would not join the plot under any circumstances. Indeed he had actually driven the fugitive conspirators from his door. Talbot was, nevertheless, arrested, and on 4 December, 1605, examined. On 26 September, 1606, the value of his recusancy was granted to Lord Harrowby. His second return was on 24 October, 1615. Fourth Earl of Shrewsbury, he was, died in London in 1607, and he himself probably died about the same year.

JOHN B. WAINWRIGHT.

TALBOT, John, VENERABLE. See PALASON, THOMAS VENERABLE.

TALBOT, Peter, Archbishop of Dublin, 1669-1690; b. at Malahide, Dublin, in 1620. At an early age he entered the Society of Jesus in Portugal, where he pursued his sacred studies with great distinction. He was ordained a priest, and subsequently for some years held the chair of theology at the College of Antwerp. Meantime, through the Cromwellian usurpation, Charles II and the royal family were compelled to seek a refuge first in Paris and then at Cologne. Throughout the whole period of the king's exile, the four brothers Talbot, Dr. John, Sir Robert, and the eldest brother, Sir Robert Talbot, had held a high commission under Lord Ormond in the army in Ireland during the Federation period, and was now reckoned among the king's most confidential advisers. A
younger brother, Colonel Richard Talbot, was also remarkable for his devotion to the cause of the exiled monarch and stood high in royal favour. Under James II he became Duke of Tyrconnell and Lord-Lieutenant of Ireland. Dr. Talbot himself was constantly in attendance on the king and his Court. On account of his knowledge of the continental languages he was repeatedly dispatched on private missions to Rome, Lisbon, and Madrid, and in all of them gave abundant proof of ability and fidelity to the royal cause. It appears unquestionable that during his exile in Cologne, Charles II received instruction in the Catholic faith, and was privately received into the Church by Dr. Talbot. It was understood that he was asking for his Instruction whenever he was in a serious mood he was a Catholic, but when he was in a merry mood he bade adieu to all religion. Unfortunately this second mood generally prevailed, especially after the Restoration, and this explains why he needed to be again received into the Church on his death-bed by Father Hudleston, O.S.B. On the return of the king to London, Dr. Talbot received an appointment as Queen's Almoner, but the Clarendon and Ormond faction, that was then predominant, feared his influence with the king. A plot was devised against him. He was accused of conspiring with the aid of four Jesuits to assassinate the Duke of Ormond; so fierce was the persecution stirred up against him that he was forced to seek safety by resigning his position at Court and retiring to the Continent. The king allowed him a pension of three hundred pounds a year. Before his return to England Dr. Talbot had, with the approval of the General of the Jesuits, disavowed his connexion with the Society. He was appointed Archbishop of Dublin on 11 January, 1669, and was consecrated at Antwerp on 9 May the same year, by the Bishop of Antwerp, assisted by the Bishops of Ghent and Ferno. It was a promotion which was to do great good to the Church in Ireland. Lord Ormond was no longer in favour and was soon removed from the Viceroyalty, and those who succeeded him were supposed not to be so hostile to the religious interests of Ireland; they were even said to have received instructions from the king to be lenient in their dealings with his Irish Catholic subjects, and to show special favour to Dr. Talbot. The archbishop entered with great zeal on the administration of the diocese and was untiring in his efforts to promote the interests of his long persecuted flock. In the month of August, 1670, he held his first diocesan, a memorable event that gave joy to the Catholic body. It was opened with High Mass, which for forty years many of the faithful had not witnessed. To add to the solemnity, rich embroidery and other ornaments were sent from the viceregal castle to adorn the altar. One of the anecdotes that are related to Dr. Talbot tells of the difficulties that pressed upon the priests of those days in their endeavour to meet the wants of the faithful. On week days they had been accustomed to duplicate, whilst on Sundays they had to celebrate holy Mass three times. In the same year an assembly of the archbishop, bishops and representatives of the clergy was held in Dublin, having for its main purpose the consideration of a form or Declaration of Allegiance which was drawn up by Father Peter Walsh and his associate Remonstrants, and which was urged on the bishops for general acceptance by the Ormondist party, the better to sow discontents among the Irish Catholic community. It was rejected by the Council of Synod which was held in Dublin, having for its main purpose the rejection of the proposed form of allegiance. But, to prove that this was not done through any lack of loyalty, they drew up another Declaration expressive of their due allegiance, but omitting some phrases offensive to Catholics that had been cunningly inserted in the rejected Declaration. A fierce discussion was in consequence raised by the Remonstrants backed by the Ormondist party which distracted the country for several years. It was a question of precedence and of the primatial authority which gave rise to considerable discussion and led to an embittered controversy between the Archbishop of Dublin and Ven. Oliver Plunkett, Archbishop of Armagh. Both prelates considered that they were asserting the rights of their respective See to which they were appointed. The controversy lasted for some years and led to several tracts on the subject. Whilst this controversy lasted Dr. Talbot wrote some severe censures regarding the Archbishop of Armagh, but when in prison for the Faith in later years, he addressed to the Archbishop of Armagh, then a brother prisoner, an appeal for the good of the Church and the Country that had been formerly written, and the Ven. Oliver Plunkett, as we will now see, showed in a most practical manner how sincerely and affectionately he was reconciled to his former opponent. Another meeting of the Catholic clergy, convened by Dr. Talbot, at which it was resolved to send to the Court at London a representative who would seek redress for some of the grievances to which the Catholics of Ireland were subjected, gave great alarm to the Cromwellian settlers and to the Ormondist party. It was an attempt, they said, to reverse the Act of Settlement and to foster a fresh rebellion. An address was sent to the English Parliament, describing the king as being that by royal edict all the Catholic prelates and clergy, and in particular “Peter Talbot, pretended Archbishop of Dublin”, be banished from the kingdom, and further “that all convents, seminaries, and popish public schools be suppressed; that no Irish papist be admitted to in any corporation of this kingdom; that all the Irish Papists might be disarmed, and no Papist be either continued or admitted to be a commander or soldier in that Kingdom”. The king knew full well how groundless and absurd were the pretences for such a royal edict, but he was too weak to offer any resistance, and that in 1678 a fierce storm of persecution was let loose against the whole Catholic body in Ireland, and Dr. Talbot was compelled to seek safety in exile. During his banishment he resided generally in Paris; but by pastoral letters and written instructions he continued to do all that was in his power to guide and comfort his flock. In 1675 Dr. Talbot, worn out with infirmities, obtained permission to return to England only, and for two years he resided with a family friend at Poole Hall in Cheshire. Towards the close of 1677, he petitioned the Crown for leave “to come to Ireland as far as the influence of the Duke of York his petition was granted. Just then the "Popish Plot" was being organized by Lord Shaftesbury and Titus Oates, and very soon information was forwarded to the Lord-Lieutenant, the Duke of Ormond, to the effect that a rebellion was being planned. And that Peter Talbot, Archbishop of Dublin, was one of the accomplices, and that assassins were hired to murder the duke himself. Ormond replied that he had no apprehension whatever on these heads, and that as regards Peter Talbot there could be no foundation for them, as he was in a dying state. Nevertheless as it was necessary to give some colour to the existence of such a plot, on 8 October, 1678, he signed a warrant for the archbishop's arrest, and he writes on the same day to the Council in London: "I have sent a squadron of his Majesty's guard of home to apprehend Peter Talbot, the Titus Oates, was arrested at Carton near Maynooth at the house of his brother, Colonel Richard Talbot, and, as Carte attests, was removed to Dublin "in a chair, and committed close prisoner to the Castle with a person to attend him in his miserable and helpless condition, the violence of his distemper being scarce supportable and threatening his death at every
moment." For two years Dr. Talbot endured with heroic constancy all the sufferings of his painful disease and the hardships and filth of his loathsome dungeon. He died in prison in the beginning of November. The English Parliament had instructed the King to deliver the body of 20 Nov., 1690, to address Lord Sutherland, writes: "I have for two or three posts forgot to acquaint your Lordship that Peter Talbot, the Titular Archbishop of Dublin, is dead, and that care was taken to have the body looked upon by some that knew him." It is the tradition that he was interred in the churchyard of St. Andrew's, opposite to Lord Portlester's tomb. From his prison cell Dr. Talbot had written on 12 April, 1679, petitioning that a priest be allowed to visit him, as he was bedridden "these six months past" and was now in imminent danger of death. The petition was refused, but the venerable Oliver Plunkett, Archbishop of Armagh, was a prisoner for the Faith in an adjoining cell, and on hearing of Dr. Talbot's dying condition forced his way through the warders and administered to the dying prelate the last consolations of religion. Dr. Talbot may justly be styled a contemporary of St. Elthyn and Peter Martyr of Corinth.

WRITINGS.—Dr. Talbot, whilst living on the Continent, published several works, as well before his appointment to the See of Dublin, as during his years of exile. His principal writings are: "A Treatise on the Nature of Catholic Faith and Heresy with Reflections upon the Duty of the English Protestant in Church and Clergy" (8 vols., Rouen, 1657); "The Politician's Catechism", by N. N., printed at Antwerp (sic) in the year 1658; "The Nullity of the Prelate Clergy" (Brussels, 1659); "The Duty and Comfort of Suffering Subjects" (a pastoral letter to the Irish Catholics) Paris, 1673; "Black烈士 Heresies, Historia et Confutatio, Autore M. Lomino Theologo, Gandavi anno 1675" (mainly directed against Dr. Sargent; in the appendix is inserted a letter of the nuncio in Paris 26 July, 1676, congratulating Dr. Talbot on his excellent work and intimating that Sargent had retracted his erroneous propositions); "Primatus Dublinskien, vel summam rationum quibus ininititur ecclesia Dublinskien in possessione et persecutione sui juris ad primatum Hyberniae. In sulphis, Ex Officin Nicola de Rache, sub Bibliis aures, 1674" (an exceedingly rare work; there is a copy in the British Library of the propaganda of Rome, with the inscription, "Ex libris Jacobi Eustachi, Dublinskien, 1683")

PATRICK FRANCIS CARDINAL MORAN.

Talbot, Thomas Joseph, b. 14 February, 1727; d. at Hotwells, near Bristol, 24 April, 1755. Brother of the fourteenth Earl of Shrewsbury, and of Bishop James Talbot (q. v.), he was sent to Twyford School, and thence to Douai (1739). In 1745-46, together with his brother James, he made the grand tour under the tutelage of Alban Butler. He returned to Douai to study theology; and after ordination he spent some time at the College and Norbertine at Norwich. In 1754 he was placed at Brockhampton. On the expulsion of the Jesuits from France, Talbot was named President of the College of St. Omer's by the committee of the Parliament of Paris (August, 1702), a post which he accepted only after much hesitation with great reluctance. He was consecrated to the titular See of Aeon (March, 1766) as coadjutor to Bishop Hornyold, whom he succeeded in the government of the Midland District (26 December, 1778). His rule fell in a time of transition, when the desire and prospect of relief from the penal laws led many prominent Catholics to adopt a policy of passive resistance; the period of the Catholic Committees and the Cisalpine Club, for the difficulties of which his peaceful character was but ill-adapted. Although he joined the three other vicars Apostolic in condemning the proposed oath in 1789, he hesitated to promulgate the condemnation in his district, and in the second condemnation which the other vicars Apostolic published in 1791 he thought it neither expedient nor advisable. The explanation of this lack of firmness is to be found in his conviction that peace and concord could only be restored to the distracted Catholics by means of mutual concession and charity, a sentiment which almost all his letters manifest. Certainly the most memorable, as also the most permanent, act of his administration was his invitation to Dr. John Bey (November, 1781) to take charge of the mission of Oscott and to undertake there the training of students for the priesthood, whereby was made the beginning of Oscott College. Deeply characteristic of the man is his only recorded literary publication, a small treatise on "Almsgiving" which he translated from the French. He was buried in the vault under Trenchard Street church; in 1906 his remains were removed to Downside Abbey.

Talleyrand.-Périgord, Charles-Maurice de, Prince of Benevento, Bishop of Autun, French minister and ambassador, b. in Paris, 13 February, 1754; d. there, May, 1831. The eldest of an ancient French family, he was destined for Holy orders, owing to an accident which had made him lame. After having completed his studies at the Collège de la Sorbonne, he went to St-Sulpice and, against his inclination, became an abbe. He then read the "most revolutionary books", and at length, giving up his priestly life, plunged into the licentiousness of the period. Having, nevertheless, been ordained priest (1779) and appointed general agent of the clergy (1780) he rapidly acquired a reputation as a man of ability. The Assembly of the Clergy of France of 1782 appointed him their promoter, and in 1785 he became secretary. Owing to his notorious immorality he obtained an episcopal see only through a promise wrung from the king by his brother, the Comte D'Artois, Duke of Talleyrand. Consecrated on 16 January, 1789, and promoted to the Bishopric of Autun, he appeared in his diocese only to be elected a member of the "Etats Généraux". He soon became one of the most important personages in Europe, and utilized every opportunity to advance his private interests. Opposed in his heart to a revolution which he accused of having "dismembered France", he first advised Louis XVI to dissolve the Assembly, but believing the democratic movement irresistible he joined it. As a member of the Constitutional Committee, he took part in the Revolutionary Right's plot of May 1791. He extolled the abolition of the clergy and took the oath to the Civil Constitution. His chapter, however, having described him as deserving "infamy in this world and damnation in the next," he resigned his see. But he had consecrated several constitutional bishops, given Gobel the Bishopric of Paris, and was communicated by pontifical Brief of 13 April, 1791. In 1792 he was sent to London on an unofficial diplomatic mission and endeavoured to organize a Franco-English alliance. He did not, however, obtain more than a promise of neutrality. Finally banished by the Convention, he escaped to the United States. He returned to Paris in March, 1796, and, owing to the influence of Barras, was appointed Minister of Foreign Affairs. He immediately welcomed Bonaparte as the great auxiliary "who would make everything smooth". With Bonaparte
and Sieyès he prepared the coup d'état of Brumaire, after which he assisted the First Consul in the drafting of the Concordat. The pope meanwhile had released him from the ban of excommunication and restored him to secular life and the lay communion. Napoleon then compelled him (1803) to marry by civil law his mistress, Madame de Macunac, a divorcée, who had not lived with her former husband. As the principal agent in the treaties concluded by Napoleon, he obtained for his services a fortune of some sixty million francs. He was made grand chamberlain, vice-elector of the Empire, and Sovereign Benemerite of the Empire. However, he opposed the Franco-Russian Alliance and resigned the ministry in August, 1807. His opposition to the Spanish War in 1809 was the cause of his complete disgrace, and he awaited at Valençay at his hotel in the Rue St. Florentin the fall of Napoleon.

In 1814 the Emperor of Russia, his guest, "committed himself entirely into his hands". Once more leader of the provisional Government, he made the Senate establish a constitution to give power to Louis XVIII. On his appointment as Minister of Foreign Affairs he preserved to France its frontiers of 1792. At the Congress of Vienna he preserved the union of the great powers by secretly concluding a treaty with Austria and England. Again appointed minister of Louis XVIII (1815) he preserved his country from dismemberment, but left the presidency of the Council after the election of 22 August, 1815. As grand chamberlain and peer of France, he henceforward contented himself with watching and sententiously criticizing events. In 1830 Louis Philippe, whose accession he had favored, appointed him to the embassy of London, where the representatives of all the countries "bent before him". After having come into collision with England, he resigned office in November, 1834. In his magnificent "solitude" of Valençay he wrote his "Mémoires", in which he asserts he "never had betrayed a government which had not betrayed itself first", nor ever put his "own interests in the balance with those of France". Four hours before his death he signed, in the presence of Abbé Dupanloup, a solemn declaration in which he openly disavowed "the great errors which...had troubled and afflicted the Catholic, Apostolic and Roman Church, and in which he himself had had the misfortune to fall".

Gustave Gauthebot.

Tallis, Thomas, English composer, b. about 1514; d. 23 Nov., 1585. He was a chorister at Saint Paul’s Cathedral, London, becoming organist of Waltham Abbey in 1536. In 1540 his post was forfeited on the dissolution of the abbey, and in 1542 he appears as a gentleman of Chapel Royal, continuing as such under Henry VIII, Edward VI, Queens Mary and Elizabeth. Owing to his extraordinary eminence as a musician, he retained his Chapel Royal appointment un molested, although he steadfastly clung to the old Faith amid all the changes from 1545 to 1584. Like Byrd he was an avowed Catholic, and even Elizabeth herself conceived at the retention of Tallis in his court appointments. In conjunction with Byrd he obtained the valuable monopoly of printing music and ruling music paper, from 1575 till his death; he also given lands valued at 30 pounds sterling per year by Elizabeth, as well as various tithes. He was buried in Greenwich parish church. The musical epitaph which was placed over his tomb was subsequently set to music by De Cooke. His fecundity as a composer was enormous, and he wrote several tours de force including a forty-part motet "Spera aliam non habui". Many of his masses are of great merit, especially his "Salve intemperata" and his mass for four voices. Owing to his religious views most of his compositions were not printed during his lifetime, but in recent years his MS. work has received much attention from skilled editors. His Dorian service and five-part Litany are gems of musical art, but are not to be compared to his exquisite Latin motets, and above all his glorious "Lamentations". Some charming motets are included in his printed "Canzonets" (1576), but he is noted especially for his settings which are tinted to suit Anglican tastes, e.g. his "O Sacrum Convivium" adapted to "I call and cry" by Barnard. He essayed all the existing art-forms, including "Fancies for the Organ" and some virginal pieces. Unfortunately, he has been too frequently judged by his English services, but these were merely written ex officio and do not reveal the genuine Tallis, whose best contrapuntal work may be placed almost on a par with that of Palestrina.

Talmud.—I. Definition.—דַּקדְמַת, a post-Biblical substantive formation of פֵּרֵל, "to teach" originally signified "doctrine", "study". In a special sense, however, it meant the justification and explanation of religious and legal norms or Halakhoth ("conduct", signifying "the law in accordance with which the conduct of life is to be regulated"). When in the third century the Halakhoth collection of Jehuda I or the recorded Mishna became the chief object of study, the expression "Talmud" was applied chiefly to the discussions and explanations of the Mishna. For this reason it became the general designation for the Mishna itself and the collection of discussions concerned with it. For the latter, the designation Gemara, interpreted as "completion" from יⁿסא, "to complete", Aramaic ינכן, abbreviated ינן, subsequently became the accepted term. The word first found entrance into the Talmud editions through Christian censorship; manuscripts and the old printed editions use the expression "Talmud". We therefore understand by Talmud a compilation consisting of the Mishna, i.e. the codification of Jewish religious and legal norms, and of the Gemara, or the collection of discussions and explanations concerning the Mishna.

II. Origin of the Talmud.—Since Eneas the foundation of the Jewish religious community was the law. Everything was regulated in accordance with fixed norms; nothing could be added or changed in the law laid down by God. In the ever-varying conditions of life called for new ordinances, and these were decreed in accordance with the needs of the time and the special cases to be determined. There were thus formed a traditional law and custom orally transmitted. Every decree of this kind (halakah) continued as long as it was remembered or not; it was then immemorial and nothing further could be said in regard to its origin, was called הָלָכָה רְשָׁאָה, a law given to Moses on Mount Sinai. Even for ortho-
dox Judaism of to-day it is an article of faith that Moses, at the same time that he received the written law, recorded in the Pentateuch also received detailed explanations of the different laws which were handed down by tradition as oral law. In addition to this the scribes at an early period attempted, by interpretation of the Torah, to make the law applicable to the changed conditions of life, to base the new precepts at least retrospectively on the Torah, and to develop out of the earlier religious law. For this kind of Scriptural learning hermeneutic rules (Midrash) were at a later period established, at first seven, which were then divided into fourteen, and finally increased to thirty-two. All the older additions to the Torah as well as the constantly increasing new material were for a long time transmitted orally, and in form of midrash. The community found it hard to record it in writing. But it is at all events wrong to assume that there was a formal prohibition to record Halakhah in writing. The prohibition probably referred to written records intended for public use; for a fixed record of the traditional law would not have acted as a hindrance to its further development in accordance with the existing needs of the day. It is by no means improbable that the final reduction of the Mishnah was preceded by previous written records, especially after Rabbi Akiba, at the beginning of the second century, had divested the study of its previous midrash character and had undertaken to arrange the materials systematically. Among his pupils it was probably Rabbi Meir who continued these systematic labours. But of such collections only one finally attained canonical recognition, and therefore was called Mishnah par excellente, viz., the one edited about the end of the second century of our era by Rabbi Jehuda I, called Ha-nasi (the prince) or Ha-gadosh (the saint) or simply the Rabbi. This then is our Mishnah, the basis of the Talmud.

Rabbi Jehuda had adopted only a part of the doctrines which in course of time had been handed down in the different schools. Although he selected what was most important, he sometimes omitted much that seemed important to others; and, on the other hand, it was felt that even the unimportant should not be allowed to sink into oblivion. In consequence the collection which he edited, although not canonical, were nevertheless highly valued. All the Halakhah which were not included in the Mishnah of Jehuda received the name Baraitah (sing. Baraita, "omitted doctrine"). The most important Baraitah collection is the Tosaphoth.

The precise brevity of expression and the pregnant form in which the Mishnah has been written was Halakhoh made an interpretation of them necessary, while the casuistic features of the work were a stimulus to further casuistic development. In the profound study and explanation of its contents much weight was placed upon the Haggadah, i. e. the doctrines concerning the poet, the figure, and the Aram Tannaim (doubtful), concerning the fruits of the soil of which it is doubtful whether the tithes have been paid. (4) Kit'ayim (heterogeneus), concerning the unlawful combinations of plants, animals, and garments (cf. Lev. xix, 19; Deut. xxii, 19 sq.). (5) Shevith (seventh day). Subbatical year (Deut. xv, 1 sq.). (6) Tumuah (heaven offerings) for the priests (Num. xxvi, 8 sq.; Deut. xvii, 4). (7) Masroth (tithes) for the Levites (Num. xxvi, 21 sq.). (8) Ma'aser sheni (second tithe), (Deut. xiv, 22 sq.; xxvi, 12 sq.) which had to be spent in the land (Jer. xxxi, 18 sq.). (9) Orla (foreskin) concerning uncircumcised fruits and trees (Lev. xix, 23). (11) Bikkurim (first fruits) brought to the temple (Deut. xxvi, 1 sq.; Ex., xxiii, 19). A. Seder Zeraim (harvest), containing in eleven tractates the laws on the cultivation of the soil and its products.

(1) Berakhot (benedictions) blessings and prayers, particularly those in daily use. (2) Pe'a (corner), concerning the parts of the fields and their products which are to be left to the poor (cf. Lev. xix, 9 sq.; xxii, 22; Deut., xxiv, 19 sq.) and in general concerning the poor. (3) Demai (doubtful), concerning the fruits of the soil of which it is doubtful whether the tithes have been paid. (4) Kil'ayim (heterogeneus), concerning the unlawful combinations of plants, animals, and garments (cf. Lev. xix, 19; Deut. xxii, 19 sq.). (5) Shevith (seventh day). Subbatical year (Deut. xv, 1 sq.). (6) Tumuah (heaven offerings) for the priests (Num. xvii, 8 sq.; Deut. xvii, 4). (7) Masroth (tithes) for the Levites (Num. xxvi, 21 sq.). (8) Ma'aser sheni (second tithe), (Deut. xiv, 22 sq.; xxvi, 12 sq.) which had to be spent in the land (Jer. xxxi, 18 sq.). (9) Orla (foreskin) concerning uncircumcised fruits and trees (Lev. xix, 23). (11) Bikkurim (first fruits) brought to the temple (Deut. xxvi, 1 sq.; Ex., xxiii, 19).
treatises of the precepts governing rest on the Sab-
bath, the other feast and holy days, as well as fast
days. (1) Shabbath. (2) ’Erubin (combinations),
the means by which one could circumvent especially
onerous provisions of the Sabbath laws. (3) Pesachin
(eastern regulations). (10) Tractate of Yom tov (feast),
treats of half a shekel for the maintenance of Divine service
in the temple (cf. Neh., x, 33), based upon Ex., xxx,
12 sq. (5) Yoma (day), i. e. day of expiation. (6)
Sukka (Tabernacles), treats of the feast of Taber-
nacles. (7) Beca (eggs), taken from the first word
within the word be’ela (B of the treatise begins Yom tov (feast),
confounded with the kinds of work permitted or pro-
hibited on festivals. (8) Rosh hashana (beginning
of the year), treats of the civil new year on the first
of Tishri (Lev., xxii, 24 sq.; Num., xix, 1 sq.). (9)
Ta’aniuth (fasts). (10) Meqilla (roll) of Esther, re-
specting the laws to be observed on the feast of Purim. (11)
Mo’ed qatan (minor feast), the laws re-
ating to the feasts intervening between the first and
last days of the Passover and Sukkoth. (12) Hagiga
(feast-offering), treats (chaps. i and iii) of the duty
of pilgrimage to Jerusalem and the private offerings
on such occasions (cf. Deut., xvi, 18 sq.). The
members of the seven treatises in seven
treatises the laws of marriage and all pertaining thereto,
vows, and the marriage laws of the Nazarites. (1)
Jebamoth, levirate marriages (Deut., xxv, 5 sq.).
(2) Ketuboth (‘marriage deeds’ and marriage settle-
ments). (3) Nedarim (‘vows’) and their annul-
ment. (4) Nazir (Nazarite; cf. Num., vi). (5) Soha
(‘suspected woman’; cf. Num., v, 11 sq.). (6) Gutin
(letters of divorce; cf. Deut., xxiv, 1 sq.). (7) Giddushin
(betrothals).
D. Seder Neziqin (‘damages’), explains in eight
treatises civil and criminal law. In this institute are
included the Eduth, a collection of traditions, and the
Haggadic treatise, Aboth.
The treatises 1-3, Baba Kamma (the first gate),
Baba meci’a (the middle gate), and Baba bethra (the last
gate), originally formed a single treatise, the subdivi-
sion of which was caused by its great length
(30 chaps.). They treat of the laws of property,
inheritance, and obligation. Baba Kamma treats of
damages in a narrow sense (along with theft,
robbery, and bodily injury) and the right to dam-
gages; Baba meci’a is concerned chiefly with legal
questions in regard to capital and treats finding, de-
position of goods, and loans; Baba bethra deals with questions of social policy (possessions, limita-
tions, buying and selling, security, inheritance and
documents). (4) Sanhedrin, i. e. avoth avoth, treats of
the law courts, legal processes, and criminal justice.
(5) Makkoth (stripes), treats of punishment by
stripes legally authorized (cf. Deut., xxv, 1 sq.).
(6) Shevuoth (oaths). (7) Eduth (test), contain-
ing a collection of legal decisions gathered from
the testimonies of distinguished authorities. (8)
‘Aboda Zara (idolatry). (9) ‘Aboth (fathers) or
Pir’ah Aboth (sections of fathers) contains ethical
morals and warnings. (10) Horayoth (decisions),
concerning legal decisions and religious questions which were erroneously rendered.
E. Seder Qadoshim (sacred things), treats in twelve
treatises of the sacrifices, temple service, and dedi-
cated objects (1) Zebahim (animal sacrifices). (2)
Menahoth (meat offerings). (3) Hullin (things
profane) of the sacrifice of pure and impure animals
and of laws concerning food. (4) Bekhoroth (first
born) of men and animals (cf. Ex., xiii, 2, 12 sq.;
Lev., xxvi, 26 sq.; Num., vii, 16 sq.; xvii, 15 sq.;
Deut., xv, 19 sq.). (5) Arakah (valuations), that is
everything given in payment of persons and
things dedicated to God (Lev., xvi, 1 sq., xxvi,
15 sq.). (6) Temura (exchange) of a sacred object
(Lev., xxvii, 10-33). (7) Keritoth (excisions), con-
cerning the sins punished by this penalty, and
what was to be done when anyone intentionally com-
mited such a sin. (8) M’ti (violation) of a sacred
object (cf. Num., v, 6 sq.; Lev., v, 15 sq.). (9)
Tammid (continual sacrifice), concerning the
daily morning and evening sacrifice and the temple
service. (10) Zevahim (sacrifice of flesh), a
description of the temple and of the temple service.
(11) Quinim (‘nests’) of birds, of the sacrifices of
doves by the poor (Lev., i, 14 sq.; xii, 8). F. Seder
Teharoth (purifications), treats in twelve
treatises of the ordinances of cleanness and of puri-
fications. (1) Kol (dross; cesseus), treats of the con-
ditions under which domestic utensils, clothes,
etc., become uncleane. (2) Ohaloth (tents) of the
defilement of dwellings by a corpse (Num., xix,
14 sq.). (3) Negaim (leprous). (4) Para (red
heifer; cf. Num., xix). (5) Teharoth (purifications)
(supernaturally), treats of the lesser degrees of
defilement lasting only till sunset. (6) Mustoqot
(wells), the conditions under which wells and reservoirs are fit to be used for ritual purification. (7)
Niddah (menstruation). (8) Makaherin (preparers),
the conditions under which certain articles, by
coming in contact with liquids, become ritually
impure (Lev., xi, 34, 37, 38). (9) Zakkath (laws
afflicted with running issues; cf. Lev., xv). (10)
Tebul yom (immersed at day), i. e. the condi-
tion of the person who had taken the ritual bath, but
who has not been perfectly purified by sunset. (11)
Yaddim (hands), treats of the ritual uncleanness
of the hands and their purification. (12) ‘Ozain (stalks)
of fruits and shells and their ritual uncleanness.
In our editions the number of treatises is sixty-
three; originally there were only sixty, because the
four paragraphs of the treatise Baba kamma, Baba
bathra, Baba meci’a, likewise Sanhedrin and Mak-
hethoth, formed only one treatise. The Mishna exists
in three recensions: in the manuscripts of editions of
the separate Mishna, in the Palestinian Talmud in
which the commentaries of the Amora’im follow
short passages of the Mishna, and in the Babylonian
Talmud, in which the Gemara is appended to an
entire chapter of the Mishna. The contents of the
Mishna, aside from the treatises Aboth and Middoth,
are with few exceptions Halakhie. The language,
the so-called Mishna Hebrew or New Hebrew, is a
fairly pure Hebrew, not without proof of a living development—enriched by words borrowed from Greek and
Latin and certain technical terms which seem partly developed as imitations of Roman legal formulas. The Mishna is
cited by giving the treatise, chapter, and precept, e. g. ‘Berakhot, i, 1.
Among the commentators of the whole Mishna the
following deserve special mention: Maimonides, the
Hebrew translation of whose Arabic original is
printed in most editions of the Mishna; Obadiah di
Bertino (d. 1510), Jon Tob Lipmann Heller
d. 1654), Jisrael Lipschütz (his Mishna with
commentary) יְהוּדָה הָנָּבִי (6 vols., Königsberg, 1830–50).
The first edition of the complete Mishna was at
Nuremberg in 1492. D. 200 years later, in 1790,
there were 200 copies of this version. In 1826, 100
copies exist in great numbers. Of importance as a con-
firmation of the Palestinian version is the edition of W. H.
Lowe (Cambridge, 1882), after the Cambridge
manuscript. Also deserving of mention are: ‘Misna...
Latin'at donavit G. Lurenhusis’ (text, Latin
translation, notes, Latin translation of Maimonides
and Obadiah, 6 vols., Amsterdam, 1698–1703); ‘Mish-
nahjot’, with punctuation and German translation
in Hebrew letters, begun by Samtmir (Berlin, 1887—
still incomplete); Ger. tr. of the Mishna by Rabe
(6 parts, Onolzab 1700–83).
F. Talmud. —The TALMUD.—On the basis of the
Mishna, juridical discussions were continued, at
first in the schools of Palestine, particularly at Tibe-
ras, in the third and fourth centuries. Through the
final codification of the material thus collected, there
arose in the second half of the fourth century the so-called Jerusalem, more properly Palestinian, Talmud. The usual opinion, which originated with Maimonides, that its authorship is Rabbai, is untenable because of the names of the later scholars which occur in it. In the Palestinian Talmud the text of the Mishna is taken sentence by sentence, and explained with increasingly casuistic acumen. The Baraitoth, i.e. the maxims of the Torah not found in the Mishna, as well as the legal paragraphs are always given in Hebrew, and so are most of the appended elucidations; the remainder is written in a West Aramaic dialect (G. Dalman, "Grammatik des jüdisch-Palästinischen Aramäisch", Leipzig, 1905). Along with the Ha-lakha it contains rich Haggadic material. Whether the text of the Palestinian Talmud is in accordance with that of the Mishna is a matter of dispute. The only parts preserved are the commentaries on the first four Sedarim (with the exception of several chapters and the treatises Edyuyoth and Abot) and on the three first divisions of the tractate Nidda in the sixth Seder. The supposed wine-cup reflection (Gen. 49, 7) and thewarning (Lev. 17, 9) of the line, indicated by j (= jerus.) or pal.; e.g. pal. Makkoth, 2 Bl. 31d 56. Many scholars cite in the same manner as the Mishna, this but not to be recommended.

Several treatises are printed with Latin translations in Ugolini, "Thesaurus antiquitatum sacrarum", vols. XVI–XXX, Venice, 1755–65; Wünseche, "Der palästinische Talmud in seinen haggadischen Bestandteilen in Deutsche übersetzt" (Zurich, 1880).

V. BABYLONIAN TALMUD.—The Mishna is said to have been brought to Babylon by Aba Areka, generally called Rab (d. 247), a pupil of Rabbi Jehuda. In the schools there it became a norm of legal religious life and a bond of juridical tradition. Because of the hallowed character of the text, there was a greater tendency to preserve and propagate what had been handed down, the Babylonian Amora'im developed their interpretation of the law in all directions, which explains why the Babylonian Talmud acquired a greater significance for Judaism than the Palestinian. Thus the material preserved in the Babylonian Talmud was undertaken by R. Ashi (d. 427), head of the school at Sura, and by R. Abina or Rabbanina (d. 499), the last of the Amoraim. The scholars who lived after him (at the end of the fifth and in the first half of the sixth centuries), called Subera'i ("successors") or Amora'im ("Babylonian Amora'im") (this term is also used to designate the whole of the scholars who wrote and completed what had been written by the Amora'im), are to be regarded as those who really completed the Babylonian Talmud.

Like the Palestinian, the Babylonian Talmud does not include the entire Mishna. In the first and sixth divisions only the treatises Berakhot and Nidda are considered; in the second division Shegallim is omitted, in the fourth Edyuyoth and Abot, in the fifth Middath, Ginnim, and half of Tamid. It is indeed questionable if the greater number of these treatises were included in the Babylonian Gemara; Edyuyoth and Abot are excluded by reason of the subject matter, while the remainder treat for the most part ordinances which could not be applied outside of Palestine. The Babylonian Talmud therefore includes only 36% treatises, but is at least four times the extent of the Palestinian, although the latter deals with 39 treatises. The Haggada is even more fully represented than in the Palestinian. The language, excepting the legal paragraphs and the quotations of the earlier scholars and Palestinian rabbis, is that of the East Aramaic dialect of Babylonia. A Grammar of the Aramaic Idiom contained in the Babylonian Talmud", Cincinnati, 1900; M. L. Margolis, "Grammatik des babylonischen Talmuds", Munich, 1910). The Babylonian Talmud is cited according to treatise, folio, and page, as the content in nearly all the editions of the third Bomberg one (1548) is the same, e.g. Berakot 22a. In these editions there are usually appended at the end of the fourth Seder seven small treatises, partly from Talmudic, partly from post-Talmudic times, among which is the post-Talmudic treatise Sopherin (directions for the writer and public reader of the Tora). Among the commentaries the first place belongs to that of Rashi (d. 1105), completed by his grandson Samuel ben Me'ir (d. about 1174). Chiefly of a supplementary character are the works of the Tosaphists or authors of the Tosaphoth (additions), who lived in France and Germany during the twelfth and thirteenth centuries. They give amplifications and learned explanations of certain treatises. Other commentaries are enumerated by Strack, op. cit. infra, 149–51.

The Babylonian Talmud has often been printed, but until the present time a critical edition has remained unfulfilled. Material meant to fulfill this, furnished by Raphael Rabinovich, among others, in his "Variae lectiones in Mischna et in Talm. Babyl.", etc. (15 vols., Munich, 1868–86); Vol. XVI was edited by Ehrentreu (Przemysl, 1897). Serious mutilations and bungling changes in the text were caused by the Christian censorship, especially in the Basel edition (1578–81). The numerous bickerings among the Jews had the further consequence that they themselves practised censorship. The excised passages were partly collected in small treatises, published for the most part anonymously.

Errors.—Raphael Rabinovich, סֹדַרְשָׁטַר בְּפֶסַח הַבְּהֵר תּוֹטְפָּה (Ma'amor al hadpasoth ha-talmud), (Munich, 1877), a critical review of the editions of the Babylonian Talmud, as a whole or in part since 1848. The first complete edition appeared at Venice (Bomberg), (12 vols., 1520–23). The advantage of this edition consists in its complete character; the text itself is full of errors. A certain reputation of the Amsterdam edition (1644–48), in which the censored passages have been as far as possible restored. The edition of Frankfort (1720–22) served directly or indirectly as a basis for those which followed. Of the various editions may be mentioned those of Berlin (1862–68), Vienna (1864–79), and Vilna (1880–86). A quarto edition, the text after the "editio princeps", with the variants of the Munich manuscripts and a German translation, was begun by Lazarus Goldschmidt in 1897. Up to date 6 vols., containing the Institutes I, II, IV, V, and the two first treatises of III, have appeared. Unfortunately they were not completed by no means faultless. M. L. Rodkinson, "New Edition of the Babylonian Talmud", New York, 1896; M. Mielziner, "Introduction to the Talmud" (Cincinnati, 1894; New York, 1903); M. L. Rodkinson, "The History of the Talmud" (New York, 1903); H. L. Strack, "Einleitung in den Talmud" (Leipzig, 1908), pp. 139–175, containing an extensive bibliographical of the Talmud and of the questions concerning it.

P. Schürlein.

Talon, Jean, first intendant in exercise of New France, b. at Châlons-sur-Marne, 1625, of Philippe and Anne Beuvy; d. at Versailles, 23 Nov., 1691. After studying at the Jesuit college of Clermont, in Paris, he embraced the career of military administration, beginning as war commissary in Flanders (1654), where he acted as intendant to Turenne's
army. His success won Cardinal Mazarin’s favour, and he was promoted (1655) Intendant of the Province of Hainaut. Louis XIV and Colbert being determined to save Canada, then in great distress, Talon was appointed intendant the same day (23 May, 1659). He arrived in Canada and New France. They, with Tracy, lieutenant-general of all the French possessions in America, formed a powerful triumvirate. Talon’s faculties were most ample, comprising justice, police, and finance. Reaching Quebec in 1665, he immediately began clearing the town, and in the neighbouring country. In 1667, he had the first Canadian census taken; it gave only 3215 souls. Had his colonisation policy been adopted, New France would have had 500,000 inhabitants in 1760, instead of only 60,000. Talon shared the glory of Tracy and Courcelles’ expedition against the Iroquois (1665), by the preparation that had alone made it possible. He consented to remain after the two years of his term of office. The annexation of the New Netherlands to the French domain, which he suggested to Colbert, was not favoured by the king. He concurred (1669) in reorganizing the St Lawrence, and in reinforcing the settlement mentioned above. By his plan of grouping settlers round the city, a defensive corps of volunteer militia would have dispensed with reinforcements of regular troops. Three years of Talon’s administration had renewed the face of the country. Agriculture had progressed, cod and seal fishing were developed, shipbuilding began to thrive, and trade with the Antilles was inaugurated.

After returning to France (1668) he strove to promote Canada’s interests. Reappointed in 1670, he brought with him freedom of trade. He sent explorers north, west, and south. St-Lussur took possession of Lake Superior. Forts were built and the Kennebec route opened between Quebec and Acadia, lately restored to France by the treaty of Breda. Father Alban and his party reached James Bay and planted the cross in the far north. Jolliet, charged by Talon to find the north-west passage, discovered the Mississippi. At Talon’s bidding, New France set her seal on the three-fourths of North America. He returned to France in 1672, after having, during his last weeks in office, created many seignories for officers of the Carignan regiment, whereby contributing to the development of colonization and to the foundation of an aristocracy. During his seven years of office, Talon had traced a programme he had in 1665. By establishing administrative and judiciary institutions that lasted throughout the entire French regime, by encouraging industry and commerce, fostering charitable works, creating new centres of population, and fortifying the colony’s frontier, he prepared the way for a remarkable foresight for the future development of the country, and ranks among the foremost makers of Canada. Louis XIV created him Count d’Orsainville (1675), honouring him with several important dignities and ample emoluments. Talon generously used this money for the support of his efforts and those of his friends, likewise assisting the exiled followers of the Stuarts. Naturally influenced by the Gallican spirit of his age, he was inclined to magnify the royal authority in its centralizing and domineering attitude towards the Church. His excessive zeal for the financial prosperity of the State caused him to resent unreasonably the wise restrictions imposed by Bishop Laval on the liquor traffic with the Indians.

Talon, Pierre, a French-Canadian explorer, b. at Quebec, 1766, of Lucien and Isabelle Planteau; d. in France in the first half of the eighteenth century. He had emigrated with his family to New France, and they were all engaged to follow Cavalier de La Salle in his attempt to colonize Louisiana (1684). Shortly after landing there, Pierre Talon was sent to learn the language of the Cenis Indians, and spent six years in their country about one hundred leagues inland at the limits of La Salle’s discoveries. As the murder of the latter by one of his party, and the massacre of many of the colonists, in their first settlement by the Clamatoit Indians, the country was occupied by the Spaniards. Talon’s father had perished in the woods, but his brothers and sisters had been saved by Indian women, and he was invited in 1720 to return with the first to San Luis Potosi; and then to Mexico City, where they spent ten years. The vicerey took them all into his palace as servants and treated them well. Talon and his brother Jean-Baptiste enlisted as Spanish marines and embarked at Vera Cruz. When their vessel was captured by Captain Desaguiras, they begged to be sent back to Spain, but were enrolled in the Fougouerolles company of French marines. Talon, in his evidence sworn at Brest (1698), gives abundant details regarding the character, customs, and religious rites of the Indian tribes with whom he had lived, as well as of the fauna and flora of the south-west continent. The tribes he mentions are inscribed under the following names: Clamoets, Temeriouans, Tohos, Cenis, Ayennys, Amalchans, Cano- toinos, Psouitas, and Chomans. There is a great
probability, although Talon cannot affirm it as certain, that one of the rivers seen by him during his intercourse with the Indians was the Mississippi which La Salle supposed to have seen. The later discovery prevented the discoverer from seeing again.

LIONEL LINDSAY.

Tamanac Indians, a formerly important tribe of Caribian linguistic stock occupying the territory about the Cuchivero River, a tributary of the lower Orinoco, Venezuela. In 1749 they were in part, together with a part of the Saliva, gathered into the mission of San Luis del Encaramado (briefly Encaramado), established in that year by the celebrated Jesuit missionary and historian, Father S. Gili, on the east bank of the Orinoco, some distance above the Apyre. Father Gili resided with the tribe for eighteen years until the expulsion of the order, when the Jesuit missions of the Orinoco were turned over to the Franciscans. Change of administration, disorders of the revolutionary period and governmental neglect ruined the mission, while frequent fever epidemics and terrible loss of life during the War of Independence decimated the Orinoco tribes, and as early as 1840 the Tamanac were virtually extinct with the exception of a few scattered individuals. In culture and mode of living the Tamanac resembled the Maipure. They had a lengthy genealogy, with a deluge, in which a man and a woman saved themselves by climbing to the top of a high mountain called Tamanaca and miraculously created a new human race from the fruit of the mauritius palm. Hence the name of the tribe. Their great culture hero was Amalavaca, who came to them in a boat from the other end of the ocean and finally returned to Spain, saved from the storm after carrying numerous sacred pictographs upon now inaccessible cliffs in the Tamanac country. Hence the missionaries were supposed by some of the Indians to be messengers from their lost culture hero and benefactor. (See also MAIPURE; SALIVA.)

JAMES MOONEY.

Tamasaus, a titular see in Cyprus, suffragan of Salamis, was situated in the great central plain of the island, south-west of Soli, on the road from Soli to Tremithus. As there were copper mines in the neighbourhood, it is very probably the Temese, mentioned by Pausanias (3.18.1), which was in the Salamis and was the principal copper market of the island. To-day the three villages of Pera, Episkopi, and Politiko occupy the former site. The coins warrant our use of the spelling, Tamasaus. According to the legends of Saints Barnabas and Auxibius, the first consecrated bishop was St. Heracleides, later transferred to Salamis, where he was succeeded by St. Myron, like himself a martyr (27 September). Three other bishops are mentioned: Typhon present at the Council of Constantinople, 381; Epaphroditus at the Council of Chalcedon, 451; Nicetas in 1210. The see was suppressed by the Latins in 1512, and was re-established by Smith, Dict. of Gr. and Rom. Geog., s.v.; HACKETT, A History of the Orthodox Church of Cyprus (London, 1901). 240 sq., 313. Le Quien, Oriens christ., II. (343), in ed. DUVER, Notices de l'Antiquité, I, 958; DELIGEY in Analecta Bollandiana, XXVI (Brussels, 1907), 227.

S. PÉTRIDES.

Tamaulipas, Diocese of (Civitatissimi Vicarii sine Tamaulipensis), in the Mexican Republic, suffragan of Linares. Its area is that of the state of the same name, 31,756 sq. miles, besides two parishes in the northern part of the State of Vera Cruz; it has a population of 243,510 (Census of 1910). The residence of the bishop and governor is in Ciudad Victoria, 2467 feet above sea level, which has a population of 17,861 inhabitants (1910). Father Andrés Olmos, who was the first to preach the Gospel to the people now known as the above bishopric, came from Burgos, Spain, in 1528, and worked until 1571, when he died at Tampico, beloved by all. In 1530 the Franciscan Fathers founded the Guardianship of San Salvador, which comprised twelve convents, and were almost all situated in the territory now known as the State of Tamaulipas; a few of these convents, however, were situated outside of this territory, for instance, that of Osuala, which is now a parish, and which, although situated in the State of Vera Cruz, belongs to the Bishopric of Tamaulipas. In 1748 the Fathers of the Apostolic College of Nuestra Señora de Guadalupe de Zacatecas took charge of the missions; these were placed in the hands of the Fathers of the Province of Santo Evangelio de Mexico in 1768. This see was planned as early as 1722. In 1890 a see of the Diocese of Zapata was created in 1891 in Mexico City, and is now a part of it, and so remains to this day.

There are no seminaries in this bishopric, priests and rectors being furnished by the Diocese of Zamora and others. It is credited, however, with 3 parochial schools, and 6 Catholic colleges with 700 students; there are 10 Protestant colleges, numbering about 500 students, and 14 Protestant churches. Theiscopal city of Ciudad Victoria was founded in 1750 under the name of Santa Maria del Refugio de Aguayo, and has been known by its present name only since 1825.

CAMILLUS CHIVelli.

Tamburini, Michelangelo, fourteenth General of the Society of Jesus, b. at Modena, 27 Sept., 1648; d. 28 Feb., 1730. After having taught Scholastic philosophy and theology for twelve years, he was successively made rector of several colleges, and chosen by Cardinal Reynold of Este as his private theologian, held the offices of secretary general and vicar to Thyrus Gonzales, and finally, on the latter's death, was elected general on 3 Jan., 1706, a post which he occupied till his death. The reputation for solid virtue, patience, and courage, which he had acquired in the different positions which he held, was not in the least diminished in the long years of his generalate. During Tamburini's superiority, the apostolic activity of the Society was at its best; but, at the same time, could be seen signs of the storm which was, half a century later, to annihilate it. The Reductions of Paraguay were beginning to bear fruit; missionaries were laying down their lives for the beast-stricken in the Levant or were pushing into the steppes of Tibet amid untold hardships. Peter the Great, desirous of giving his barbarous subjects the benefits of true religion and genuine civilization, admitted the Jesuits into Russia. Jansenism, the Society's bitter foe, received its death-blow in 1708 by a Bull of Clement XI ordering the suppression of Port-Royal. Three Jesuits, Tolomei, Cienfuegos, and Salerno, were, in short succession, raised to the dignity of the cardinalate. John Francis Regis was bestowed Aloysius of Gonzaga's remains, and Kostka were given the honors of the altar. At the same time, future saints (St. Francis de Hieronymo and Bl. Anthony Balducci in Italy, Emmanuel Padial in Spain) were labouring with extraordinary success for the salvation of souls. But at this period, too, the debate over the Chinese Rites was at its height.
The Jesuit missionaries in China had been accused of not obeying the orders of the Supreme Pontiff. Tamburini, though naturally of a gentle disposition, could be firm when the honour of the Society was at stake. In the name of all the assistants and procurators at Rome, he protested to Clement XI, the fidelity and obedience of the whole Society to the Vicar of Christ. Thus ran the finishing sentence of his declaration: "But if, which God forbid, there be anyone among us who should harbour other thoughts or breathe other sentiments—for, where the number of subjects is so large, human prudence finds it difficult to prevent or hinder all such things—the General, in the name of the Society, declares, assures and protests that we will reprove and reject him even now, that he is worthy of chastisement, and that he cannot be regarded as a true and legitimate son of the Society of Jesus".

Cостинэйра-Дюл. Hist. de la Comp. de Jésus, IV-V; De Goul-herney, Minutage, Assistance d'Italie, 266-58; Sommervogel, Bibl. de la C. de J., VII, 1857-30.

A. C. Cotter.

Tamburini, Thomas, moral theologian, b. at Cala-tisetta in Sicily, 6 March, 1591; d. at Palermo, 10 October, 1675. He entered the Society of Jesus when fifteen years old; there he became distinguished for extraordinary virtue and a rare talent for teaching. After a successful course of studies, he held the professorship of philosophy four years, of dogmatic theology seven years, of moral theology seventeen years, and during thirteen years was rector of various colleges. His writings are: "Methodus expediens confessionis" (5 vols., Rome, 1647); "De communione" (Palermo, 1649); "Explicatio declarat. et demonstrat. et expiatoria" (Palermo, 1654, 1707; Milan, 1655; Munich, 1659); "De sacri. misse" (3 vols., Antwerp, 1656); "De bulla cruciata" with other works (Palermo, 1663); "Juris divini, naturalis et eccl. expositio" (3 vols., Palermo, 1659-60). All these works exhibited solidity of doctrine and elegance of style and went through several editions. Though severe towards himself, Tamburini, when deciding cases of conscience for others, was inclined to follow the milder views which he found reputable authors declaring probable. This is the basis of the accusation of laxity frequently brought against him, and led to his controversy with Vincent Baron. Tamburini published a refutation of the attacks of his adversary under the title, "Germana doctrina R. P. Th. Tamburini, S.J." In determining the value of Tamburini's works, it is well to recall the criticism of St. Alphonse Liguori in his "Theologia Moralis": "Let us add a word about this author [Tamburini], who is not estimated by many at its full value. It cannot be denied that he was apt to consider some opinions probable, while he do not disprove that note; hence he must be used with caution. But when Tamburini establishes his own opinions, he shows that he is a thorough theologian and solves the questions by reducing them to their last principles. Competent judges will find that the opinions which he then sets down as the more tenable are in the majority of cases the more correct."

John M. Fox.

Tametsi (Although), the first word of ch. i, sess. 24, De Ref. Matr., of the Council of Trent. This chapter contains the legislation of the Church which determines concerning clandestine marriage. It decrees thus: Those who attempt to contract marriage otherwise than in the presence of the parish priest or of another priest delegated by him or by the ordinary, and before two or three witnesses, the holy synod renders wholly incapable of contracting and declares such contracts null and void. The reader is referred to the article CLANDESTINITY for a complete study of this decree. In a modified form the prescriptions of "Tametsi" were extended to the universal Church by the decree "Ne temere". The chapter "Tametsi" declares that clandestine contracts of marriage freely entered into are valid, unless rendered null by the non-observance of regulations made by the Church, and anathematizes those who hold the contrary, as well as those who falsely assert the invalidity of a marriage contracted without parents' consent, or who affirm that parents by their approval or disapproval may affect the binding force of such contracts. It is declared, however, that the Church has always disapproved of marriages contracted secretly, or without the consent of parents. This same chapter of the Tridentine Council prescribes the promulgation of the banns of marriage, which is a repetition of the Fourth Lateran Council, the form expressing consent to be used, and the registering of the marriage in the parochial register. It declares also that any priest, secular or regular, other than the pastor, assisting at a marriage or giving the solemn nuptial blessing without proper delegation is suspended at once and remains under suspension till rightly absolved by the ordinary of the parish priest of the contracting parties. This censure, however, is no longer incurred, though punishment may be meted out to those who offend in this matter. Finally, "Tametsi" recommends those about to marry approach the Sacraments of Penance at the Eucharist, and that local customs and rites connected with marriage be observed. (See also MARRIAGE, MORAAL AND CANONICAL ASPECT OF.)

Andrew B. Meehan.

Tamisier, Marie-Marthe-Baptistine (called by her intimates Emilia), initiator of international Eucharistic congresses, b. at Tours, 1 Nov., 1834; d. there 20 June, 1910. From her childhood her devotion to the Blessed Sacrament was extraordinary; she called a day without Holy Communion a veritable Good Friday. In 1847 she became a pupil of the Religious of the Sacred Heart at Marmoutier, remaining there four years. Without any special attraction for the life of a religious she made three unsuccessful attempts to enter it; the third was in the Convent of Perpetual Adoration founded by Ven. Père Eyraud, who assured her she still belonged to our Lord in the Blessed Sacrament. A lady of wealth sought her aid in establishing a community devoted to the Blessed Sacrament; this plan also came to naught. She then (1871) went to live near the tomb of Blessed Jean Vianney at Ars. Coming under the direction of Abbé Chevrier of Lyons she found her true vocation, at once contemplative and active, in the Eucharistic cause. She had been prepared for it by many trials and disappointments. Throughout France and beyond, by extensive correspondence and by travel she spread the devotion. With the help of Mgr de Segur and Mgr
Richard, then Bishop of Bellay, pilgrimages were started to sanctuaries where Eucharistic miracles had taken place. Their success led to Eucharistic congresses. At the Lourdes Congress she was called the Jeanne d’Arc of the Blessed Sacrament, but her name was not publicly associated with the congresses until after her death. Canon Vaudon’s history of the congresses published just before her death, though giving a detailed account of her apostolic career, calls her only “Mlle...”. She lived for some years at Issoudun and ministered there to the Shrine of Our Lady of the Sacred Heart. All her spare means, though often surprising herself, she devoted to the education of poor aspirants to the priesthood.

B. RANDOLPH.

Tanagra, at titular see in Hellas, suffragan of Corinth; it was a town of Boiotia, in a fertile plain on the right bank of the Eoseus. It was also called Poemandroia and its territory Poemandria. In 457 B.C. the Athenians were defeated near Tanagra by the Laedermonians, but early in the following year they in turn defeated the Boiotians, thereby becoming masters of Boiotia. The city walls were destroyed. In 426 the Athenians invaded the territory of Tanagra and defeated the Tanagrians and their Athenian allies. The people of Tanagra were noted for their frugality, loyalty, and hospitality. Their land yielded little wheat, but the best wine in Bocotia, and the town was also noted for its fighting-cocks. Under Augustus Tanagra and Thebes were the chief towns of Boiotia. It had numerous temples, one of Dionysius with a famous statue by Calaminus and a remarkable Triton, other temples of Themis, Aphrodite, Apollo, Hermes Criphorus, and Hermes Promachus. The gymnasium contained a portrait of the poetess, Corinna, who was born at Tanagra and commemorated there by a monument. Pliny calls Tanagra a free state. It was still important in the sixth century, but must soon after have been destroyed by Slavic invasions. A station on the railway between Athens and Thebes is now called Tanagra; it connects with the village of Skimatar (650 inhabitants), about eight miles south of which are the ruins of the ancient town including the acropolis, necropolis etc. Excavations have made the tomb famous for the pretty little terra-cotta figurines which they contain. Duchemes has published (“Bulletin de correspondance hellénique”), III, Paris, 1879, 144) a Christian inscription dating from the fifth or sixth century. Only one bishop is known, Hesychius, who in 458 signed the letter from the provincial synod to the Pope Leo (Le Quien, "Oriens Christi", II, 212); the other bishop mentioned by him belongs to another see.

S. PÉTRIDES.

Tancred, Prince of Antioch, b. about 1072; d. at Antioch, 12 Dec., 1112. He was the son of Marquess Odo and Emma, probably the daughter of Robert Guiscard. He took the Cross in 1096 with the Norman lords of Southern Italy and joined the service of Uncle Bohemond. Having disembarked at Arlona (Epirus), they marched towards Constantinople, and Tancred soon attracted attention by his activity, bravery, and somewhat undisciplined zeal; according to his biographer, Raoul de Caen, he was noted also for his humanity and kindness towards the defenseless. He brilliantly repulsed the Byzantine army which attacked him, but he was crossing the Vardar (28 Feb., 1097), from which time Tancred became and remained the bitter enemy of the Greeks. Unlike Bohemund, he was the only one of all the leaders who refused to take the oath of fidelity demanded by Alexis Comnenus. He played an important part in the siege of Nicaea, and later, during the difficult march through Asia Minor, he led the way southwards and captured Tarsus which Baldwin tried in vain to wrest from him (Sept., 1097). While Baldwin advanced towards the Euphrates, Tancred seized the towns of Cilicia. He took an active part also in the siege of Antioch. In his march on Jerusalem he commanded the vanguard, and on 15 July, 1099, he entered the city, after making a breach in the gate of St. Stephen. He vainly endeavoured to save the lives of 300 Muslims who had taken refuge in the Mosque of Omar (Templum Domini). On the other hand he looted the treasures amassed in that building and distributed them among his knights. He received from Godfrey de Bouillon, who had been selected over him as king, the fiefs of Tiberias and Caifis. When Bohemund was captured by the Turks in July, 1100, Tancred assumed the government of the Principality of Antioch, and extended its boundaries at the expense of the Turks and the Greeks. During the war between Bohemund and Alexis Comnenus (1104–08) Tancred defended both the Principality of Antioch and the Countship of Edessa. He also strengthened the Christian power in those districts and refused to recognize the Treaty of Durazzo by which Bohemund had ceded the suzerainty of Antioch to the emperor. A skilled politician, he knew how to placate the Greeks and issued Greek money on which he is represented adorned with gold and jewels, wearing a turban surmounted by a cross. From: De Caen, Gesta Tancredii (the author went to Palestine in 1107 and was attached to the army of Tancred) in Hist. Occid. des Croisades, III, 537–601; Schumbecher, Numisma- tique de l’Orient latin (Paris, 1879), 45; De Sauley, Tancred in Biblioth. Ecole des Chartes (1843); O. de Sydow, Tancred (Leipzig, 1860); Rey, Hist. des princes d’Antioche en Règne Oriental Latin (1896), 334; Kegler, Bohemund u. Tancred (Tübingen, 1863); Chalandon, Essai sur le règne d’Alexis Comnenus (Paris, 1900); Steyenneo, The Crusaders in the East (Cambridge, 1907).

LOUIS BÜHIER.

Taney, Roger Brooke (pronounced Tawney), fifth chief justice of the Supreme Court of the United States, b. in Calvert County, Maryland, 17 March, 1777, d. at Washington, 12 October, 1864. He father, Michael Taney, was a gentleman of Catholic ancestry and education, and his mother, Monica Brooke, was also a Catholic. He was educated at pri-
vate schools and by tutors until 15 years old, when he entered Dickinson College, Carlisle, Pennsylvania. He obtained his B. A. in 1795, and in the spring of 1796 went to Annapolis to read law in the office of Jeremiah Townley Chase, one of the chief justices of the General Court of Maryland. Early in 1799 he was admitted to the bar. Dedicating his home in Calvert County to practice his profession, he shortly afterwards was elected to the House of Delegates, being then scarcely twenty-three years of age and the youngest member of the Assembly. In March, 1801, he went to Frederick to establish himself better in his legal practice, having been appointed for Frederick as one of the judges in the charges of being an accomplice of Aaron Burr. Taney was one of the counsel in his defence, and, together with John Hanson Thomas, succeeded in winning his acquittal. Both refused any fee for their service because they had shared the suspicion against the accused. Taney was defeated on the Federal ticket for member of the House of Representatives of the United States, but in 1816 was elected to the state Senate. At the March term, 1819, of the Frederick County Court, he successfully defended Jacob Gruber, a Methodist minister, who was indicted for inciting the disturbance of the slave house. In 1823, he moved to Baltimore, and was soon recognized as the leading lawyer of that city, being appointed in 1827 by Governor Kent as Attorney-General of Maryland, upon the unanimous recommendation of the Baltimore bar. President Andrew Jackson, a warm admirer of Taney, appointed him Attorney-General of the United States on 21 June, 1831, and, upon the refusal of William J. Duane, Secretary of the Treasury, to remove the government deposits from the United States Bank, the president removed Duane from office on 23 Sept., 1833, and, on the same day, appointed Taney in his stead. The latter assumed the duties of the secretaryship on the following day, and two days later gave the order for the removal of the deposits to take effect on the first of October following. His appointment to the office of Secretary of the Treasury having been made during a recess of Congress, his nomination was sent to the Senate by the president on 23 June, 1834, and was rejected after a heated debate. This was the first time in the history of the Government that a cabinet officer appointed by a president had been rejected. Taney immediately submitted his resignation to the Senate, and the latter accepted it with much regret. Judge Gabriel Duvall of Maryland, an associate justice of the Supreme Court of the United States, resigned in 1835, and President Jackson nominated Taney in his stead, but the nomination was not brought up in the Senate until the end of the session, and it was then indefinitely postponed, which amounted to a rejection. This was due to the fact that the Senate as then constituted was violently opposed on political grounds to the president. In the same year Jackson again named Taney for a place on the Supreme Bench, this time as Chief Justice Marshall's successor. The nomination was strongly opposed by Senators Webster and Clay, but was finally confirmed on 15 March, 1836, by a majority of fourteen votes.

In the outbreak of yellow fever of 1855, Justice Taney's wife, who never became a Catholic, was stricken and died at Old Point Comfort on 29 September, and their youngest child died the following day. The most famous case decided by the Supreme Court during Chief Justice Taney's incumbency was the case of Dred Scott v. Sandford, in which, delivered by Taney, has been much misquoted and misunderstood. Chief Justice Taney did much towards the building up of the system of practice in the Supreme Court, framing it after that of the English courts, yet so modified as to be adaptable to the changed conditions existing in the United States. His opinions were arrived at rather in the study and application of established legal principles to the questions presented to him than through exhaustive research of authorities. While giving due respect to former decisions, he did not rely slavishly upon precedents. By his dignified, though kindly, bearing, he always commanded the utmost respect for his Court. He had few, if any, personal enemies, and the purity of his private life was never questioned, even by his political opponents. Early in life he manumitted the slaves inherited from his father, and as long as they lived, he provided for the older ones by monthly pension. He gave his mother's grave, in accordance with his own request. There is a handsome statue of him in Mount Vernon Place, Baltimore.

J. P. W. McNeal.

**Tanagu, Cyprien,** genealogist, b. at Quebec, 1819; d. 1902. After a course of classics and theology at Quebec Seminary, he was ordained in 1843. The first twenty-two years of his priesthood were devoted to parochial work, especially at Rimouski, where he greatly contributed to the foundation of the future diocesan seminary. His early taste for genealogical studies fully manifested itself after his official appointment to the Dominion Statistics Department (1867). His whole time was henceforth spent in consulting and compiling parochial and historical records throughout Quebec, the United Provinces of Canada, Ontario, and the old French settlements in the United States. He also twice visited France for the same purpose. As the result of his labours he published (1871-90) his "Dictionnaire généalogique des familles canadiennes françaises depuis les origines de la colonie jusqu'à nos jours", comprising several large double column volumes of over six hundred pages: a colossal undertaking, fit for a numerous body of collaborators, which he achieved alone. Although he was unable to realize the latter part of his programme entirely and many inaccuracies have crept into his work, yet on the whole it is highly reliable and almost unique. Every French Canadian by completing from contemporary registers the information supplied by this dictionary can proudly trace back his genealogy to his ancestors from old France. It has proved valuable for the discovery of canonical documents to marriage and other acts. It has given birth to a copious genealogical literature of less comprehensiveness. In recognition of his labours the author received a prize from Leone XIII (1887). He likewise published "Répertoire du clergé canadien-français" (1888) and "A travers les registres" (1886).

Lionel Lindhart.

**Tanis,** a titular see, suffragan of Pelusium in Augustamnica Prima, capital of the fourteenth district
of Lower Egypt. Tanis (in Egyptian Zani, in Hebrew Zoan) was situated on a branch of the Nile, to which it gave its name. It was one of the oldest cities in the world, and it bore witness (Num., xiii, 23), and was probably inscribed on its earliest coinage. It was under Pharaoh Pepi I Merira of the sixth dynasty. It flourished especially under the pharaohs of the twelfth dynasty, under the Hyksos, or shepherd kings (fifteenth to seventeenth dynasties), under the pharaohs of the nineteenth, twenty-first, and twenty-third dynasties, who had made Tanis their capital. It was under the shepherd kings that the Jews installed themselves in Egypt in the land of Gessen, near Tanis, and it is in this city, which was the residence of Rameses II, that Moses and Aaron performed many wonders (Ps. Lxxvii, 12 and 43). It is a mistake to confound Tanis with the Tanis of the delta (Acts 1, 19 and 11) and situated very probably at Tell-Rotab. The Prophet Isaias (xix, 11-13; xxx, 4) denounced Tanis and the Jewish politicians who had recourse to its kings; so too Ezechiel (xxx, 14 and 18), who announced its approaching destruction. Jeremia, who also pronounced (xx, 16) anathemas against the city, was forced to follow the Jews thither after the conquest of Palestine by Nabuchodonosor (Jer., xxiii, 7-10; xlv, 1; xlv, 14). In these last passages however the term is used as a place-name. Taphon, in Latin Taphes, and it is not absolutely certain that this is the city, though the name and some identifying Taphes with Taphes Dafaneh, about seventeen miles from Shan or Tanis. The earliest Bishop of Tanis is Eudemon, a Melitene bishop at the beginning of the fourth century. Mention may be made also of Hermon, bishop in 362; Apollonius, present at the Robber Synod of Ephesus and Paul in 458. Besides these Le Gesen speaks of eight Jacobite bishops (Orients christ., ii, 535-38), the last of whom lived in 1086. About 870 the French monk Bernard visited Tanis, “in qua sunt christiani multum reliquias, nimia hospitalitie ferventes” (Tobler and Molinier, “Itineraria Hierosolimitana,” i, 313). At the present time Tanis is a poor village called San el Haggar containing 1570 inhabitants, near Lake Menzaleh. The ruins, situated about twenty minutes distance, consist of a large temple, and of other monuments not identified.

S. VAÏLIEZ.

TANNER, Adam, controversialist, b. at Innbruck in 1555; d. at Unken, 25 May, 1632. He entered the Society of Jesus in 1575, and taught at Salzburg, Hebrew, apologetics, and moral theology. When in 1601 the religious debate between Catholics and Lutherans was arranged at Ratisbon, Tanner aided his fellow Jesuit Greterer in proving that the dead word of the Bible could not be the supreme arbiter in matters of faith. He himself published an account of the proceedings (Mainz, 1602) and in subsequent apologetics hurled back the charges brought against the Catholics by the Reformers. In 1603, the Bavarian duke invited him to occupy the chair of Scholastic theology in the University of Ingolstadt. A stranger in no field of science and gifted with a keen intellect, Tanner now developed an increasing activity both in teaching and writing on theological subjects. In his “Anatomia confessionis augustanae” (Ingolstadt, 1613), he points out the fallacies of the Augsburg Confession, both from Luther’s own assertions and from the admissions he himself entertained. Against the so-called Ultraquists, he wrote several works, both in Latin and in German, defending the Church’s practice of giving Communion under one species only, and the sacrifice of the Mass. Other pamphlets were issued by him to clear his order from the false accusations of its enemies. When the conflict between the Venetians and Pope Paul V (q. v.) broke out, an able defence from his pen, “Defensionis concilii libertatis libri duo” (Ingolstadt, 1607), vindicated the Church’s freedom against the tyrannical aggressions of the State.

After fifteen years spent at Ingolstadt, he was called by the Emperor Matthias to the University of Vienna. While there he published his greatest work, “De Universa theologica scholastica” (Ingolstadt, 1626-7), which resembles the “Summa of St. Thomas not only in its arrangement, but also in its solidity of doctrine and conciseness of diction. Ferdinand II, Matthias’s successor on the throne of the Habsburgs, appointed him chancellor of the University of Prague. Fleeing from the Swedes, Tanner died at Unken, an insignificant village near Salzburg. There he still rests amid unlettered peasants in an unknown grave. But, as Cordara says, “his virtues, coupled with his eminent erudition, will ever be his most splendid epitaph and mausoleum.”

A. C. Cotter.

Tanner, Conrad, Abbot of Einsiedeln, b. at Arth in the Canton of Schwyz, 28 Dec., 1752; d. 7 April, 1825. He studied the classics and theology at Einsiedeln; made vows in the Order of St. Benedict on 8 Sept., 1772, and was ordained in May, 1777. He was engaged as treasurer and abbot of Einsiedeln and later at Bellinzona. In 1787 he held the position of librarian at his abbey, and in 1789 he was made director of the College at Bellinzona. During the Revolution Tanner fled to the Tyrol, taking with him the miraculous statue, the head of St. Meinrad, and other valuable relics, and remained there until he could restore the treasures to the abbey. He was appointed pastor of St. Gerold in Vorarlberg in 1802, where he remained for three years, until recalled to act as master of novices. At the death of Abbot Beat in 1808 Tanner was elected abbot. With great prudence he accommodated himself to the political situation and thus secured the existence of the monastery. He encouraged the pursuit of studies, renovated the buildings, and rebuilt the Holy Chapel which had been destroyed 1798 by the French. Although the village of Einsiedeln was no longer under his jurisdiction, he retained, in its place, which he manifested especially in the years of famine (1816 and 1817). It was the intention of Pius VII to create the new Diocese of Waldstätten out of the cantons Uri, Schwyz, and Unterwalden, to make Tanner bishop, and to constitute the monks of Einsiedeln as cathedral chapter. The matter was proposed in 1818, but was declined by the abbot and his capitulars. Tanner’s writings are: “Betrachtungen sur sittlichen Aufklärung im neunzehnten Jahrhundert” (5 vols., Augsburg, 1804-1808); “Bildung des Geistlichen durch Geistesübungen” (Augsburg, the , of which a fifth edition appeared at Freiburg in 1846; his pedagogical works were published by his successor, Abbot Celestine Müller.

FRANCIS MERSHAMAN.

Tanner, Edmund, Bishop of Cork and Cloyne, Ireland, 1574-1579; b. about 1526; d. 1579. The statement in his brief of appointment that he was born in the county of Cork is mere error. According to the chronicler, OS., he was born in the city of Cork, in the barony of Shillelagh, which is known of his early life. His surname was borne by persons of humble station at Calvertown, Co. Kildare, which, coupled with his familiarity with the Estoces of Baltinglas, may give colour to a surmise that he was a native of that district. In 1565
he was at Rome, being then probably in Holy orders, and entered the Society of Jesus; after a year in the Roman College he was sent to Dillingen University in 1567, and became "Doctor of" and for those of Cashel, Dublin, and its suffragan sees in the absence of their respective prelates. Not long after his reaching Ireland he was captured while exercising his functions at Clonmel, and was thrown into prison; here, as Holing tells, he was visited by a schismatical bishop whom he reconciled to the Church. A few days later he was himself released through the influence of a noble earl. Thereafter he did not venture into his own diocese, but as commissary-Apostolic he traversed the other districts assigned him, administering the sacraments and discharging in secret the other duties of his office. Four years he laboured thus in continual peril and distress, and at length succeeded to his privations and fatigues in the Diocese of Ossory, 4 June, 1579. Brudoin states that he died in Dublin Castle after eighteen months of imprisonment and cruel torture.

CHARLES MCNEILL

TANNER, MATTHAUS, b. at Pilsen in Bohemia, 28 Feb., 1630; d. at Prague, 8 Feb., 1692. He entered the Society of Jesus in 1646. The greatest part of his life was spent at Prague, where he taught humanities, philosophy, theology, and Scripture, was made rector of the imperial university, and guided for six years the Bohemian province of his order. Not only did Tanner burn to imitate the apostles and martyrs of the Society, but, to awaken in his brethren a like desire, he employed his leisure hours in recounting to them the lives and deaths of the most prominent sons of St. Ignatius. He published "Societas Jesu et vitae profissionem militantis" a history of the lives and deaths of those Jesuits who suffered martyrdom for the faith) and "Societas Jesu Apostolorum imitatrix" (describing the heroic deeds and virtues of the Jesuits who laboured in all parts of the world with extraordinary success for the salvation of souls) which inspired in this special and impressive form a reverence and devotion toward the holy sacrifice of the Mass. According to his biographer, he used to celebrate with such living piety that he was like a lodestone, attracting the faithful to the altar where he offered the sacrifice. To foster this reverence in others, he wrote two other works, "Explanations of the Bloody Sacrifice of Christ in the Unbloody Sacrifice of the Mass," which was re-edited three times, and a pamphlet proclaiming God's wrath against those who should dare to desecrate holy temples by their misbehaviour. His name became more widely known through his work, "Dialogus controversiarum" on the validity of the Holy orders conferred on Andrew Frommens during the lifetime of his wife.

A. C. COTTER

Tantum Ergo, the opening words of the penultimate stanza of the Vesper hymn (see Pange Lingua Gloriae et Virtutis) of Corpus Christi. This stanza and the closing one, or doxology ("Genitoris etc.") form a separate hymn which is prescribed for Benediction of the Blessed Sacrament (q. v.).

In private exposition, where permission has been obtained to give benediction with the pyx, the two stanzas are recited by the priest (or sung by a choir, if this is feasible): "Pange lingua..." (frequent, in Gregorian chant). In other expositions they must always be sung. Custom varies in respect of the method of singing. In some places the choir sings the stanzas; in others, the celebrant sings the opening words of each stanza, the choir continuing. The Ritual (Tit. IX, c. 5) speaks of all the clergy present singing the stanzas, and Schober (Ceremonies missarum solemnium et pontificialisum) commenting on this, suggests that either the celebrant and assisting clergy should intone the first line of the stanza, or the choir alone should sing both stanzas. A profound inclination of the head is made at the words "veneremur cernui" (Wapelhorst). "American Ecclesiastical Review" (XXI, 1858, 644) points out that the rubrics do not prescribe an inclination of the head at the words "veneremur cernui", although the practice is frequent. "Gar- dellini, in his "Commentary on the Clementine In- struction" (XXIV, 9-10), cites the custom of the churches of Rome; and the Rituals before his day make mention of the profound inclination at the Tantum ergo down to the word "cernui": "nam in verbo cernui completur dictio sensum, qui inclinationem postulat." Authorities differ as to the time for inclination. Martinuzzi delists the placing of the thurible before "Tantum ergo" and the incensing after "veneremur cernui". De Carpo suggests both either before "Tantum ergo" or after "veneremur cernui", according to the custom of the particular church. Wapelhorst, following De Herdt, directs that both take place when "Genitoris" is intoned.

The "magnificent doxology" (W. A. Shoults in Julian, "Dicit. of Hymnol.") is a fitting climax to the great hymn. It borrows, however, the expressions "Genitoris Genitoque..." "Procedenti ab utroque, Compar" from a Pentecost sequence by Adam of St-Victor. Dreyer, "Analecta hymnica", IV, 70, gives a sequence in honour of St. Agnes, in which occurs the stanza:

Genitoris Genitoque,
Psallat nostra concio;
Procedenti ab utroque
Compar sit laudatio;
Virginalis ipsum quoque
Laudent benedictio.

Of the musical settings, which are very abundant, the appropriate word must be one of caution in view of the direction of Pius X in his Instruc- tion on Sacred Music (22 Nov. 1905, No. IV): "In the hymns of the Church the traditional form of the hymn is to be preserved. It is not lawful, therefore, to compose, for instance, a Tantum ergo in such wise that the first strophe presents a romanza, a cavatina, an adagio, and the Genitoris an allegro..." Singenberger, "Guide to Catholic Church Music," (St. Francis Xavier College, Wisconsin, 1905), gives grade, voices, composer, etc., of more than six hundred settings of the "Tantum ergo" and the "Pange lingua", almost wholly of the German Cecilian School. Since 1903 many settings, also liturgically correct, have appeared by composers of other nationalities. The Vatican Graduale (1908) gives two plaintive melodies, or rather two forms of the same melody.

Neale, "Medieval Hymns and Sequences" (3rd ed., London, 1867, 178-81), discusses translations of the "Pange lingua", and, speaking of the penulti- mate stanza, remarks that the "Vesper file supplementum Sensum defectum" are "avoided by all" the four authors he mentions, and notes that "Cass- wall's translation, unshackled by rhyme, is nearest" to the original Latin: "Faith for all defects supplying, Where the feeble senses fail". Neale's own translation of this stanza is given, with slight alterations, in
"Hymns Ancient and Modern" in the (Baltimore) "Manual of Prayers", and in the "English Hymnal". Some of the earlier works in the two classes are:

"And where our sense is seen to fail, There must faith supply restore" (Primer, 1604); "And faith with all, those wants supply Wherein the senses feel defect" (Primer, 1619); "Let faith in Jesus Christ supply The senses' insufficiency" (Primer, 1683); "And faith for all darling sin, supply" While sinners lose in 'Anonyme' (Primer, 1706). One of the most recent translations is that of the revised Husbethen, "The Missal for the Use of the Laity" (London, 1903, 258): "Let us profoundly bend before This awful mystery, and adore; Let types of former days give way, Like darkness at the blaze of day; And sense's failings be supplied By faith, our firm support and guide." H. T. HENRY.

TANUCCI, Bernardo, Marchese, Italian statesman, b. at Stia in Tuscany, of poor family, in 1688; d. at Naples, 29 April, 1735. At the University of Pavia where certain benefactors enabled him to study, he was appointed in 1725 to a chair of law, and attracted attention in the republic of scholars by the vehemence, rather than by the erudition, with which he defended the authenticity of the Codex Pasarius of the Panteists. When Charles, son of Philip, of Spain, through his mother was about to conquer the Kingdom of Naples, he took Tanucci with him; he appointed him at first council of state, then superintendent of posts, and finally prime minister. On the last occasion the king ennobled him. As prime minister he was most zealous in establishing the supremacy of the State over the Church, and in abolishing the privileges of the nobility together with feudalism. He restricted the jurisdiction of the bishops, impeded the last increment of the so-called mortmain, and reduced the taxes belonging to the chancery of the Roman Curia. All this was sanctioned in the Concordat of 1741, the application of which, however, went far beyond the intentions of the Holy See. For controversies which might arise in consequence of the Concordat a mixed tribunal, composed of ecclesiastics and laymen, was constituted. But Tanucci went much farther, establishing the doctrine that not more than three out of four priests should be ordained for every thousand souls, which number was later reduced to five for each thousand. The Placit was rigorously enforced. The censures of bishops against laymen incurred by obedience to the state laws were annulled. Without permission of the king no act could not be executed. His hostile policy to the Church led Tanucci to neglect other interests, above all the foreign relations. In 1742 an English fleet seriously threatened the Neapolitan coasts, and the kingdom was saved only by the signature of an act of neutrality in the war between Spain and Austria. For the reformation of these laws he instituted a commission of learned jurists with instructions to compile a new code, which was, however, not put into force. When Charles III of Naples succeeded to the throne of Spain in 1759, Tanucci was made president of the council of regency instituted for the nine-year-old Ferdinand V. The latter, even when he attained his majority, preferred to hold aloof from the government business and plunged into the pleasures of the chase. Furthermore, the former King Charles III, although in Spain, continued his instructions to Tanucci to govern the kingdom. The latter could now with greater freedom take up his noble residence at the Court. The revenue from vacant bishoprics and abbeys—and as time went on their number always increased—were confiscated. Thirty-eight convents were suppressed; tithes were at first restricted, then abolished; the acquisition of new property by mortmain was forbidden, and new restrictions were made against the recruitment of the clergy. The Placit was even extended to ancient papal Bulls, and the principle was established that possessions of an ecclesiastical nature, not made or assented to by the king, could be revoked at pleasure by the same king or by his successors. In this manner it was possible to suppress or change testaments in favour of the Church at the pleasure of the king, who, according to Tanucci, possessed this power directly from God, and not through the papacy, without the royal permission. Matrimony was declared a civil contract by nature, from which principle the trial of matrimonial cases by civil courts was deduced. By the order of Charles III the Jesuits were suppressed and expelled from the Kingdom of Naples (1767).

This expulsion of the Jesuits was part of the movement of the Bourbon courts throughout Europe to destroy the Society, Pombal in Portugal, Aranda in Spain, Choiseul in France, and Tanucci in Naples acting in concert to this end. Searcely had Clement XIV been elevated to the pontificate than he was urgently solicited by the Bourbon courts to suppress the Jesuits, and no effort was left untried by the Bourbon ministers to accomplish this purpose. The pope pleaded time and patience in the examination of the charges against the Society, but was overborne by the incessant and menacing attitude of the Bourbon league against the Jesuits. With no less energy in the war upon the Society of Jesus than Pombal, Aranda, and Choiseul, with whom he was in close sympathy in their general hostility to the Church as well as in their determination to bring about the complete suppression of an order of men, whose widespread influence was a check upon their own high-handed methods against the freedom of the Church. To excommunication by Clement XIII Tanucci responded with the occupation of Benevento and Pontecorvo, which were not evacuated until after the suppression of the Jesuits in 1773. The protests of the bishops against many of the new teachings in the schools after the expulsion of the Jesuits were dismissed as invalid. One of the last of his acts was the abolition of the china, that is the annual tribute which the kings of Naples since the time of Charles of Anjou had paid to the pope as a reparation for the losses of the papal States. He also forbade the wearing of the china dress and in regard to the food taxes provoked popular revolutions on several occasions. But when, in 1774, Queen Caroline, an Austrian princess, entered the Council of State, the power of Tanucci began to decline. In vain he endeavoured to neutralise the influence of the queen, and in 1777 he fell into disgrace and was dismissed. Retiring into the country, he died neglected and childless.

Tanucci represents the Italian type of that unfortunate species of statesman of the eighteenth century the most prominent example of which was the notorious Pombal. Sectarian in fact and in morals, they were "anti-clerical" because they aspired to a universal tyranny of the State, in which the king should be a figurehead while the minister himself was the master. They desired to expel the Jesuits, accusing them, as one would say to-day, "of liberalism"; they ably prepared the way for the power of sects and the clash of revolutions.

LAZARETI (La Stera del marchese Tanucci (Novelle letterarie fiorentine) (Florence, 1783); COLETTA, Storia del regno di Napoli dal 1735 al 1799 (Capolago, 1834). See the documents on the suppression of the Jesuits. Among the publications of Tanucci are Epistolae de pontificium pia mini (2 vols., Florence, 1781).

U. BENIGNI.

TAOISM (Tāo-kia̍) is the second of the three state religions (San-kia̍) of China. This religion is derived from the philosophical doctrines of Lao-tze. "Lao-tze's Taoism", says Legge (Religions of China, 229), "is the exhibition of a way or method of living which men should cultivate as the highest and purest"
development of their nature". According to De Groot (Religious System of China, IV, p. 66): "The word Tao in the religious sense means the Way, Path or Method, but denoting in this peculiar case the way, course or movement of the Universe, her processes and methods. In other words, Taoism is the Religion of Heaven and Earth, of the Cosmos, of the World or Nature in the broadest sense of these words. Hence we may call it Naturalism."

Lao-tze, the equivalent to "the Old or Venerable Philosopher" (as taken as a title of respect), or to "Old Boy" (as literally translated), was born in the third year of Ting Wang, Prince of Chou, i.e., in 604, at K'ao-jin, in the Kingdom of Tsu, to-day Ho-nan Province. He composed "Record of Spirits and Immortals" (written in the fourth century A.D.), says that he was not born till his mother had carried him in her womb seventy-two years or, according to some accounts, eighty-one years old. "No wonder!" adds Legge (I. c., pp. 203-4), "the child should have had white hair,— an 'old boy' of about fourscore years!" This date of 604, in accordance with historical tradition, is not given by Sze-ma Ts'ien in the biography which he devoted to the philosopher in his "She-k'i" (Historical Memoirs); if this date be accepted, it is difficult to admit of the reality of the story of the meeting of Lao-tze and Confucius, 500 B.C.; if the latter was then fifty-one years old according to Chwang-tse, Lao-tze was then one hundred and four years old. The family name of Lao-tze was Li, his name Eul (meaning "Ear"), his honorary title Pe-yang, and his posthumous name Tsin (meaning "Flat-eared "). He was one of the "Sze", recorders, historiographers, keepers of the archives of Lo, the Court of the princes of the Chou dynasty. Foreseeing the decay of this dynasty, he gave up his office, and undertook a journey; at the Handou Pass, Ho-nan Province, the watchman, Yin Hi, begged him to write his thoughts for his own instruction before he retired from the world; consequently, Lao-tze wrote his work in two parts in the Tao and the Te, and having entrusted it to Yin Hi, he disappeared; the time of the death of the philosopher is not known. Lao-tze had a son of the same name, who was a general of the Tsin State, and who obtained the grant of land at Twan-k'an. His son named Chu had himself a child Kung; His, grandson of Kung, was an official under Emperor Hiao-wen-ti, of the Han dynasty. Kiao, son of His, became a minister of K'iang, King of Kiao-si, and, on his retirement, settled with his family in the Kingdom of Tei.

This story is too matter of fact and lacks the marvellous legend which should surround the person of the chief of a new religion. Legend was provided for. Ko Hung, already mentioned, had placed the legend of Lao-tze at the beginning of the "Shen-sion-ch'wan" (Records of Spirits and Immortals), and he says: "His mother carried him after the emotion she felt in seeing a large shooting star. He received from Heaven the vital breath; as he was born in a house whose proprietor was called Li (Pear tree), so he was named Li." Some authors say that Lao-tse was born before heaven and earth. According to others, he possessed a pure soul emanated from heaven. He belonged to the class of spirits and gods. The chief work of Lao-tze, in fact the only one which has been ascribed to him with some probability, is the "Te" (Tea). In the "China Review" (March-April, 1886), Dr. Herbert A. Giles published an article, "The Remains of Lao Tzu," to show by various arguments that the "Tao-teh-king" is a spurious work and that its now spurious portions have been mostly mistranslated. It was the starting-point of a controversy in which Dr. Chalmers, Dr. Legge, Dr. Edkins, and some other apologists took part. The authenticity of the work has been admitted by most of them. Wylie says (Notes on Chinese Literature, new ed., p. 216): "The only work which is known to be truly the production of Lao Keun is the 'Taou tih king', which has maintained its reputation and secured a popularity to a certain extent among reading men generally by every denomination."

Legge writes (Religions of China, p. 203): "No other work has come down to us from the Lao-tze, its author", and (Brit. Quart. Rev., July, 1873, p. 9): "We know that Lao Tzu wrote the 'Tao Te Ching'" (Tea Te Ching), and (p. 11): "The 'Tao Te Ching' is a genuine relic of one of the most original minds of the Chinese race, putting his thoughts on record 2400 years ago." The Chinese E. Faber (China Rev., XII, 241) said that "the doubts regarding the authenticity of our Canon."

Besides the "Tao-teh-king" a good many works treat of Taoism: the "Yin-fu-k'ing-kiai" which professes to be an exposition of the oldest Taoist record in existence; "Ts'ing-taing-king" (The Book of Purity and Rest); the "T'ai-hsi-kiai" (Respiration of the Embryo); the "Ts'ai-shang-Kan-ying-pien" (Tractate of Actions and their Retributions). The chief Taoist philosophers are: Tsou-yuen (400 b.c.), author of a work on the influences of the five ruling elements, influenced by Buddhist doctrines; Kwei-tze (350 b.c.); Shih-tze (280 b.c.), an orthodox Confucianist who writing on jurisprudence, a Taoist in other writings; Chwang-tse (330 b.c.), the author of the "Nan-hua" classic, the adversary to Mencius, and according to Eitel, "the most original thinker China ever produced"; Shi-tze (280 b.c.), a Taoist writer, influenced by the heterodox philosopher, Yang-chu (450 b.c.), the Apostle of Selfishness; the statesman Han-fei-tze (230 b.c.); Liu-ngan or Hwa-nan-tse (d. 112 b.c.), a cosmogonist. But the first disciples of Lao-tze were Kung-tse-lang-tze (570-543 b.c.), the chief expositor of Taoism as a distinct system, the sceptic Li-tze (500 b.c.), and Wen-tse (500 b.c.). The historian Sze-ma-ts'ien speaking of Chwang-tse says: "He wrote with a view to asperse the Confucian school and to glorify the mysteries of Lao Tze ... he preaches the unity of Heaven and Earth, who spreads at its own sweet will. Consequently, from rulers and ministers downwards, none could apply them to any definite use." Giles (Chinese Literature, 60) concludes from this passage: "Here we have the key to the triumph of the Tao of Confucius over the Tao of Lao Tze. The former is a religious system, the latter a practical system for every-day use."

As De Groot observes (I. c., IV, 67): "Taoism being fundamentally a religion of the Cosmos and its subdivisions, old Chinese Cosmogony is its Theogony. It conceives the Universe as one large organism of powers and influences, a living machine, the core of which is the Great Ultimate Principle (or T'ao-isth, comprising the two cosmic Breaths or Souls, known as the Yang and the Yin, of which, respectively, Heaven and Earth are the chief depositories. These two souls produce the four seasons, and the phenomena of Nature represented by the lineal figures called kua). In fact the Yang and the Yin produce by the power of their co-operation all that exists, man included. Ancient Chinese philosophy attributes to man two souls: (1) the shen, or immaterial soul, emanates from the ethereal, celestial part of the Cosmos, and consists of yang substance. When operating in a vital active state it is called k'or 'breath', and huan; when separated from it after death, it lives as a refugitive spirit, styled ming. (2) The kweii, the material, substantial soul, emanates from the terrestrial part of the Universe, and is formed of yin substance. In living man it operates under the name of po. On his death it returns to
the Earth" (De Groot, IV, p. 5). Thus the kuei is buried with the man and the shen lingers about the tomb. Marking the distinction between the two souls, there existed in the legendary period, according to the "Li-ki," a sacrificial worship to each soul separately: the huaus or k'i returns to heaven, the p'ok returns to earth. These two souls are interdependent; in fact all the viscera have a particular shen. "There are medical authors who ascribe to man an indefinite number of souls or soul-parts, or, as they express it, a hundred shen. Those souls, they say, shift in the body according to the age of the owner; so, e.g. when he is 25-31, 38th to 47th, and older, they dwell in his face and head, so that it is then very dangerous to have boils or ulcers there, because effusion of the blood would entail death. At other times of life they nestle under the feet or in other parts and limbs, and only in the 21st, 38th, 41st, and 50th years of life they are distributed equally through the body, so that open abscesses, wherever they appear, do not heal then at all. Such pathologic nonsense regulates, of course, medical practice to a high degree" (De Groot, IV, p. 75). The liver, the lungs, and the kidneys correspond to the spring, to the autumn, to the winter, as well as to the east, the west, and the north. The soul may be severed from a living man; the boy can still live when left by the soul, for instance during sleep; the soul of a dead man may be reborn into other bodies. Ghosts may enter into relation with the living, not only in dreams, but they may take revenge on their enemies.

At the head of the Taoist Pantheon is a trinity of persons: (1) Yuen-shi-tien-tsun, "the honoured one of heaven, first in time", residing in "the jade-stone region", who created the three worlds; (2) Ling-pan-tien-tsun, "the honoured one of heaven who is valued and powerful", residing in the "upper pure region", commanding heroes and heroes; (3) Tien-te, "the lord of heaven", who issued the ordinances of life and death. At the head of the Taoist Pantheon is the Deity of Taoist Temples. He is the "Heaven" (Tian), who is the supreme being of the universe. He is the "All-Powerful" (Di), who is the ruler of the world. He is the "All-Knowing" (Shen), who is the creator of the universe. He is the "All-Righteous" (Ren), who is the ruler of the world. He is the "All-Just" (Yi), who is the creator of the universe. He is the "All-Pure" (Zhi), who is the ruler of the world. He is the "All-Holy" (Ke), who is the creator of the universe. He is the "All-Merciful" (Sheng), who is the ruler of the world. He is the "All-Righteous" (Ren), who is the creator of the universe. He is the "All-Just" (Yi), who is the ruler of the world. He is the "All-Pure" (Zhi), who is the ruler of the world. He is the "All-Holy" (Ke), who is the ruler of the world. He is the "All-Merciful" (Sheng), who is the ruler of the world. He is the "All-Righteous" (Ren), who is the creator of the universe. He is the "All-Just" (Yi), who is the ruler of the world. He is the "All-Pure" (Zhi), who is the ruler of the world. He is the "All-Holy" (Ke), who is the ruler of the world. He is the "All-Merciful" (Sheng), who is the ruler of the world.
stands now at about 450. It was first visited by Coronado's men in 1540. About the year 1620 a Spanish Franciscan mission was established there under the name of San Jerónimo de Taos. In the great Pueblo revolt of 1680 the people of Taos took a prominent part, their town being the headquarters of Popé, the leader of the rebellion; some two resident natives were killed. On the reconquest of the country some fifteen years later, most of the missions were re-established, but under the attacks of the wild Ute and Navaho the prosperity of the Pueblo steadily declined. In 1847 the people of Taos resisted the American occupation, killing the newly-appointed governor and driving his number of auxiliaries. As a result their town was stormed by the American troops, and some 150 of the Indians were killed in addition to sixteen others afterwards executed for their part in the massacre. In 1910 troops were again called out to quell a threatened rising. In general culture and condition the Taos people resemble the other Pueblos, but are noted for their extreme tenacity of ancient custom, and for a greater boldness of spirit, probably due to the large admixture of Ute blood. The mission of San Jerónimo still exists, served by a secular priest, and the principal festival occasion is the patronal feast of San Jerónimo, 30 Sept., a leading feature being a relay of processions. Some of the old-time tribal rituals are still kept up by a large proportion of the people.

Miller, Plate. Study of the Pueblos of Taos in University of Chicago publications (Chicago, 1896); see also bibliography under Pueblo Indians.

James Mooney.

TAPARELLI (d'ARGELIO), ALOYSIUS (christened PROSPERO), philosopher and writer on sociological subjects, b. at Turin, 24 Nov., 1793; d. at Rome, 20 Sept., 1862; interred near the altar of St. Aloysius in the Church of St. Ignatius. His father, Cesare, was at one time ambassador of Victor Emmanuel I of Sardinia to the Holy See; and his brother, Andrea, was one of the Italian ministers of State. He was educated under the Calasanzians at Senis and in the Atheneum of Turin. He attended the military school of St.-Cyr at Paris for some months, but he was not destined to be a soldier. He entered the Society of Jesus at Rome in 1814. In his youth he played a bent for mechanics, painting, and music, and later invented a musical instrument which he called the violoscembolo (highly praised by Liszt and afterwards at his suggestion named the symphonium), and which was exhibited at the London Exhibition. He was the director of the Royal School of Restoration to the Jesuits by Leo XII. He taught philosophy for sixteen years at Palermo, and for many years afterwards was attached to the editorial staff of the "Civiltà Cattolica." His chief work, "Saggio teoretico di diritto naturale appoggiato sul fatto," i.e. "A Theoretical Essay on Natural Right from an Historical Standpoint" (2 vols., 7th ed., Rome, 1863), was in a way the beginning of modern sociology. It was translated into German (Ratisbon, 1845) and twice into French (Tournai, 1851; Paris, 1896). Herein was developed the position, at once widely accepted in conservative circles on the Continent, that the normal origin of civil government was by extension of paternal power through the patriarchial head of a group of families. This essay was later abridged into "An Elementary Course in Natural Right" (8th ed., Naples, 1860; also in French, Tournai, 1894; and in Spanish, Paris, 1875), which was in use as a textbook in the Jesuit colleges. Next in importance among his "Essai crítico degli ordinari rappresentativi nella società moderna," i.e. "Critical Examination of Representative Government in Modern Society" (2 vols., Rome, 1854; in Spanish, Madrid, 1867). Besides his striking monographs on "Nationality" (Rome, 1847), "Sovereignty of the People" (Palermo, 1848; Florence, 1849), and "The Grounds of War" (Genoa, 1847) he left a long list of articles in the "Civiltà Cattolica" chiefly on subjects in political economy and social right, as well as an equally long list of book reviews on kindred topics, which were acute and pene-trating essays.

Charles Macksey.

Tapestry.—A word of French origin naming a fabric in which the two processes of weaving and embroidering are combined. The woof is not made in the usual way by throwing the threads with a shuttle, but is added to the warp by the aid of a needle carrying a short thread of the colour called for by the design. The fabric produced by this method of work, in which richness of colour and the wide generation of tints is easily obtainable, is a mosaic made up of dyed threads. It is used for wall-hangings, floor and furniture coverings. It was so employed by the ancient Egyptians, passing from them through Western Asia to Europe. Here, during the later Middle Ages and the Renaissance the art of tapestry reached a high state of perfection, more particularly at Arras in France, so much so that arras-work came to be the common designation for all sorts of tapestry, no matter where made. In England, prior to the Reformation, the making of tapestry was the special handi-craft of the monastic houses and their arras-work was in very great demand for altarpieces, altar-frontals, antependiums, hearse-cloths, sanctuary carpets, palace wall and choir hangings. They were not only wrought along purely ornamental lines, but more often represented Biblical subjects, incidents in the lives of the saints, historic scenes, or illustrated by symbols some point of Faith.

Matthew Paris records the fact that, among other ornaments which, in the reign of Henry I, Abbot Geoffrey had made for his Church of St. Albans "were three tapestry reredoses: the first a large one wrought with the finding of the body of St. Alban; the other two figured with the parables of the man who fell among thieves and of the prodigal son." Antedating this gift, the Abbot Egestir gave to the Abbey of Croyland, some time before the year 992, "two large foot-clothes (tapestry-carpets) woven with lions to be laid out before the high altar on great festivals and two shorter ones found tacked round the altar for the feast days of the Apostles". A number of these early English tapestries, in a good state of preservation, were saved from the vandalism of the first Reformers, but the art of making tapestry declined before their mistaken zeal, so much so that, when tapestries were wanted to decorate the palace of Lords, representing the defeat of the Spanish Armada, the order had to be placed in Flanders. A number of great artists have made designs for tapestry work, notably Raphael, who, with the assistance of Francesco Penni and Giovanni da Udine, executed the coloured cartoons for the tapestries of the Corte, and gold that now hang in the Vatican at Rome, the most beautiful in existence. Raphael also prepared cartoons for other tapestries; the last he designed, twelve in number, were made for Francis I of France in 1519. He did not, however, live to finish the cartoons; his pupil, Giulio Romano, completed them. The tapestries made from them now hang in the Vatican, in the apartment of Pius V.

Caryl Coleman.
Tapis, Esteban, b. at Santa Coloma de Farnes, Catalonia, Spain, 25 Aug., 1754; d. 3 Nov., 1829. He entered the Franciscan Order at Gerona, 27 Jan., 1778, and joined the missionary College of San Fernando, Mexico, in 1778. Reaching California in 1780, he was in succession stationed at the Indian missions of San Luis Obispo till 1793; Santa Barbara till 1800; San Carlos till 1811; Purisima Concepción till 1813; Santa Ines in 1814; San Juan Bautista to the day of his death. He was three times elected presidencia of the Government, and it deemed it advisable to promote the officer to a post in Mexico. Father Tapis strenuously opposed taking the oath of allegiance to the so-called Republic of Mexico, to which he was nothing but an attempt at putting Voltairean principles into practice.

ZEPHYRN ELGELHART.

Tarabotti, Helena, nun and authorship, b. at Venice, 1605; d. there 1652. Obliged by her father, who was descended from a family of Bergamo, to enter the Convent of Sta. Anna at Venice, at the age of eleven years, she remained there, under the name of Arcangela, without any religious vocation. In earnest study, she amassed scriptural and classical knowledge, and through various works she became an author of some repute. Her first books betray an unsettled state of mind, but later she wrote treatises on the spiritual life in which, through the influence of Cardinal Cornaro, Patriarch of Venice, she finally found a sanctuary, more worthy of her works, partly pietistic, and among other works, are: "Antisatira d'Arcangela Tarabottii in risposta alla satira Menippea contro il luogo donnese di Francesco Buoninsegna," (Venice, 1644); "Lettere familiari di complemente," Venice, 1650; "Difesa delle donne contro Orsia Plata," Venice, 1651; "La seminola familiare," Venice, 1654; the last two were written under the name of Galerana Barcilloti. The books referring to spiritual life are: "La luce monacale"; "Via per andare al cielo"; "Paradiso monacale"; "Purgatorio delle mal maritate"; "Contemplazioni dell'anima amante.

Cicona, Delle Tavizioni Venetiane (Venice, 1824-67), I. 135-36, 164, 359; II. 430; V. 536-37, VI. 807-8; Dizionario geografico storico biografico italiano, part II (Florence, 1848), 1610; Cento, Parini e i Lombardi (Milan, 1858), 119.

LIVIAUS OLIGER.

Tarachus, Probus, and Andronicus, Saints, martyrs of the DIOCLETIAN persecution (about 304). The " Martyrology Hieronymian," contains the names of these three martyrs on four different days (the four days 5-11 October evidently signify no more than those of a special shrine of the martyrs in Palestine). There are two accounts of the glorious martyrdom of these three witnesses by blood, the first account being held by Ruhnart (Acta Martyrum, ed. Ratisbon, 448 sq.) to be entirely authentic. According to these Acts, Tarachus, a native of Claudiovilla in Isauria, Probus of Side in Pamphylia, and Andronicus, who belonged to a prominent family of Ephesus, were tried and horrify tortured three times in various cities, at Tarsus, and at Anazarbus of Cilicia. They were then condemned to death by wild beasts, and when the animals would not touch them in the amphitheatre they were put to death with the sword. Harnack, however, expressed doubts as to the genuineness of the account (Geschichte der Christlichen Literatur, pt. II: Die Chronologie, I, 476 sq., note S), and Dane- haye (Les légendes hagiographiques, 135 sq.) puts the martyrdom in the class of legends of martyrs that he calls "historical romances." At the same time, however, there can be no doubt as to the actual existence of the three martyrs. Their feast is celebrated in the Latin Church on 11 October, and in the Greek Church on 12 October.

Acta SS. October, V. 566 sq., earliest form of the Acts. P. G., CXV, 1068 sq., second form, Bibliotheca hagiographica press, ed. Tarentum, called Taras by the Greeks, was founded in 707 n. c. by some Spartans, who, the sons of free women and enslaved fathers, were born during the Messenian War. They succeeded in conquering the Menapii and Eubeans. Like Sparta, Tarentum was an aristocratic republic, but became democratic when the ancient nobility dwindled in wealth and esteem, and was praised by Aristotle. The people were industrious and commercial, employing a mercenary army commanded by foreign leaders, like the King of Sparta Archidamus II, Cleonymus, and later Pyrrhus. Alexander, King of Epirus, tried in vain to capture the city; he then became an ally of the Romans, and his death in a new expedition against the Tarentines led to the first dispute between the two republics. War resulted from the violation of a maritime treaty by the Romans (281). Tarentum engaged the services of Pyrrhus, who, victorious at first, was finally conquered at Beneventum (275); in the final peace, the Tarentines were taken by the Romans and included in the federation. Even in those early days it was renowned for its beautiful climate. In 208 it sided with Hannibal, but was retaken in 205, losing its liberty and its art treasures, including the statue of Victory. In ancient times its poets Apollodoros and Clitarchos were painters, Zeuxis, and its mathematician Archytas were renowned. The Byzantines captured Taranto in 545 during the Gothic wars, but abandoned it in 552. In 685 it belonged to Rômald, Duke of Beneventum. In 882 the Saracens, having been invited by Duke Radelchis to assist him, captured it and held it for some time. It was retaken by the Normans, who were forced to cede it to Otto II in 982; in 1080 it fell into the hands of Robert Guiscard, who made it the capital
of the Principality of Taranto, and gave it to Boemund, his son. When the House of Anjou was divided, Taranto fell to Durazzo (1394-1463). In 1504 Ferdinand, King of Naples, valiantly defended the extremity of his kingdom, but had to cede it to Charles V of Aragon. In 1801 it was taken by the French, who fortified it and gave it to the British, who, in 1803, left the town. The city was again taken by the British, remained there for several months. Taranto is the birthplace of the musician Paisiello.

According to the local legend, the Gospel was preached in Taranto by the same St. Peter who had consecrated the cathedral of Syracuse. The city was destroyed several times, and was chosen by the Emperor Constantine as one of the four basilicas of Rome. The emperor Anastasius I (491) grew up there.

According to the local legend, the Gospel was preached in Taranto by the same St. Peter who had consecrated the cathedral of Syracuse. The city was destroyed several times, and was chosen by the Emperor Constantine as one of the four basilicas of Rome. The emperor Anastasius I (491) grew up there.

The city of Taranto formed a separate parish divided into four pitiagerii, each of which contains a sub-pitiagerio. It includes the Islamist of S. Maria di Tiffano, where there are still some Albanians following the Greek Rite. The suffragan sees are Castellaneta and Oria. A particularity of the archdiocese is the presence of religious houses, of men and of nuns, and 220,000 inhabitants.

TARAPACÁ, VICARIATO APÓSTOLICO DE (DE TARA-

PACÁ), situated in Chile, bounded on the north by the cañon of the Camarones and on the south by the Loa River. It comprises the civil province of the same name, has an area of 19,305 square miles, and a population of 106,215 Catholics and 38,261 non-

Catholics. The diocese is divided into 11 parishes, and has 63 churches and chapels, and 30 secular and 14 regular priests. The male religious orders are represented by the Franciscans, Redemptorists, and Salesians; they have 4 houses and 24 members. The female orders are Sisters of the Good Shepherd of Angers, of St. Joseph of Cluny, and the Salesian Sisters of the Holy Cross. Their houses number 50 members and 26 houses. In Iquique the Salesian Fathers have a college for boys and the Salesian Sisters one for girls, the latter having more than 200 pupils. The Sisters of St. Joseph of Cluny have a school in Iquique, and a hospital and asylum for children in Iquique. The Sisters of the Good Shepherd have a house in Iquique. There are many societies and pious associations in the diocese, the principal being that of

Orden Social for men, the Centro Cristiano and the Society of St. Philomena for women in Iquique, and the Society of St. Andrew in Pica. There are 5 primary schools with 481 pupils. The State pays an annuity to the vicar Apostolic, and to the employees of the vicariate, the parish priests, and curates, and contributes in this way to the support of the churches. The vicariate was erected in 1882, when Chile took possession of the Province of Tarapacá, which had formerly belonged to Peru and to the Diocese of Arequipa. Five vicars apostolic have ruled the vicariate since its erection: Camilo Ortúzar; Ferminí Labarca; the present Bishop Rucker; Juan Cárdenas; titular Bishop of Antioch; and in the 11 parishes of the diocese. The principal cities are: Iquique (45,000 inhabitants) and Pisco (910 inhabitants). The population is composed mainly of miners and workers in the saltpetre beds, who are homeless and little given to the practice of their religion. To provide a remedy and alleviate this condition, missions are preached almost every year in the saltpetre works.

U. BENIGNI.

TARASCON, SAINT, Patriarch of Constantinople, date of birth unknown; d. 25 February, 806. He was the son of the Patriarch and Prefect of Constantinople, George, and his wife Eukratia, and entered the service of the State. In 784 when Paul IV Patriarch of Constantinople died, Tarasius was as an imperial minister, and a champion of the veneration of images. It may be that before his death the patriarch had recommended Tarasius as his successor in the patriarchate to the Empress Irene who was regent for her son Constantine VI (780-797). After the burial of Paul IV a great popular epidemic threatened the Magnaura Palace to discuss the filling of the vacant see. The empress delivered an oration on the new appointment to the patriarchate and the people proclaimed Tarasius as the most worthy candidate. The empress agreed but said that Tarasius refused to accept the position. Tarasius now made a speech himself in which he declared he felt himself unworthy of the office, further that the elevation of a layman was very hazardous, and that the position of the Church of Constantinople had become a very difficult one, as it was separated from the Catholica of Western Europe and isolated from the other Oriental patriarchates; and consequently he would insist on the position of patriarch on condition that Church unity be restored and that, in connexion with the pope, an eccumenical council be called. The majority of the populace approved of these views and the imperial Court agreed to it. So on 25 December, 784, Tarasius was consecrated patriarch. In 796 he sent the priest George as his legate to Hadrian I with a letter in which he announced his appointment. In his reply the pope expressed his disapproval of the elevation of Tarasius directly from the laity to the dignity of a bishop contrary to canonical regulation, but allowed Clement to rule in view of the orthodoxy of the new patriarch's views, and recognized him as patriarch. After this by joint action with the pope and the imperial Court Tarasius called the Second Council of Nicaea, the Seventh Ecumenical Council, which rejected Iconoclasm (q. v. Union with the Roman Church was restored.

After the synod the patriarch had a number of struggles not only with the Iconoclastic party of the capital but also with a party of Orthodox monks. First, the latter upbraided him for restoring to office the bishops who had formerly maintained Iconoclasm, but who had submitted to the decrees of the Council of 787. As, however, the new patriarch had no power to annul the decrees of the council the accusation was allowed to drop. Another accusation was much more serious,
nically, that Tarasius tolerated and encouraged simony, because those bishops who had given money to obtain their positions were only commanded by him to serve the emperor, and not by the patriarch in their offices. The patriarch defended himself in writing against this accusation which he denied in toto; moreover, he issued a severe synodal letter against Simonists. The monks, however, were not satisfied; they maintained their accusations and also attacked Theodore of Studium, who took part in these disputes, changed his opinion of Tarasius, and also of the Second Council of Nicaea, the eccumenical character of which he acknowledged. Many serious difficulties still existed in regard to Western Europe. There were also fresh disputes in Constantinople when the Emperor Constantine VI put aside his lawful wife and wished to marry Theodota, a relative of Abbot Theodore of Studium. Tarasius positively refused to perform the second marriage and expressed his displeasure at the conduct of the priest Joseph who had married the emperor. The zealous monks, whose leaders were the Abbots Plato of Saccacurium and Theodore of Studium, accused the patriarch of weakness, because he took no further steps against the emperor. They refused to have Church fellowship any longer with Tarasius, and were, consequently, violently persecuted by the emperor, who, however, also treated the patriarch harshly. After Irene had dethroned Constantine in 797, Tarasius deposed the priest Joseph and peace was once more restored between the patriarch and the monks. (See THEODORE OF STUDIUM).

In 802 Tarasius crowned as emperor Nicephorus, who had overthrown Irene, and for that he greatly disapproved the populace. The patriarch had nothing to do with the intrigues of the Court. His life was ascetic and simple, he checked the luxury of the clergy, preached with great zeal, and was very benevolent to the poor. After his death he was venerated as a saint. His name is also placed in the Roman Martyrology under the date of 25 February.

J. P. Kirsch.

TAZAROA, DIOCESE OF (TURAZONENSIS), comprises the Spanish provinces of Saragossa, Soria, Navarre, and Logroño. The city of Tarazona has a population of 86,500, and is situated on a conical point, surrounded by a beautiful open plain, through which the River Quela flows. Turiazo was one of the principal towns of the ancient Celtiberian province of the Celtiberians, and around which the continuations of the diocese and many very ancient cities: Bilbilis (Calatayud); Acue Bilbilitanorum (Alhama); Atacum (Ataca); Augustobriga (Muro); Bovera (Buvierca); Bursa (Borja); Caesamundum (Cascante); Gracia (Corella); Monobriga (Munobreja); and Verguemum (Verdejo).

Didymus the Syrian throughout the Cults of the diocese and its inhabitants had the privileges of citizenship. Its coat of arms bore the motto "Tubal-Cain built me and Hercules rebuilt me". Nothing definite is known of the origin of Christianity in Tarazona. Owing to its proximity to Saragossa it is supposed that it was visited at an early date by the disciples of St. James, but until the fifth century there is no reliable mention of a bishop of Tarazona. The chronicler Idatius names Leo and says that he lived in 449; the chronological list of bishops gives St. Prudentius, but the history of this saint is not accurately known. The Tarazona Breviary gives 390 as the date, but other sources place him as late as the ninth century. Idatius says that Leo was killed in an uprising led by a certain Basilius where the Bagandes took refuge in the cathedral, and in which a great number were killed.

St. Gaudens, a former monk of the Monastery of Asenense and a disciple of St. Victorius, was bishop in 530. He worked against the Arians, and died in his native city, Excoran. His remains were translated to the Monastery of San Pedro of Calatanoz, where King Sancho Ramirez had them removed to Montesarragón. St. Braulio, in his life of St. Emilianus, speaks of a Didymus, Bishop of Tarazona. A Bishop Stephen assisted at the Third Council of Toledo and at the Council of Saragossa; Floridius, at that of Gudemmar of Seville; and Elpidius of the Fourth Council of Toledo; Anthamus (883) sent a deacon to represent himself at the Thirteenth Council of Toledo; and Nepotianus assisted at the fifteenth and seventeenth. He seems to have been the last bishop of the Visigothic epoch. When the Moors took Tarazona they were able to hold it for a long time on account of a fortified position near the Moncayo, between the Douro and the Ebro. The names of its Mozarabic bishops have not come down to us, although it is very probable that they were such; on the other hand we know of the Mozarabic saints, St. Attalibius, Bishop of Zamora and St. Ilario de Calatayud. Alfonso I the Warrior (el Batallador) took possession of Tarazona in 1119, and named Miguel Cornel the bishop. Alfonso VII, in an effort to get possession of Tarazona, intruded a certain de Bujedo into the see; but de Bujedo repented shortly afterwards, restored the see to its rightful owner, Miguel, and retired to the Monastery of El Paupetum. The cathedral was recon- vened in 1139, and was presided over by the legate Guido, took from the jurisdiction of Tarazona most of the towns of Soria, but bestowed in its place the Archdeaconry of Calatayud. Miguel was the real restorer of the see. He governed for thirty-three years, and established the chapters of Tarazona, Calatayud, and Tudela, under the Rule of St. Augustine. In his time also were founded the Monasteries of Pitero and Veruela. Three bishops of the name of Frontin succeeded him: Juan (1173–94); Garcia, who was present at the battle of Las Navas, and Gareia II, the councilor of Jaime the Conqueror (el Conquistador). In a species of national council held at Tarazona, the marriage of Jaime to Leonor of Castile was declared null on account of the relationship existing between them. The Franciscans, Mercedarians, Dominicans, and the other orders established their establishments were established in the diocese at this time. Miguel Jiménez de Ureza, bishop from 1309 to 1316, was protected by Jaime II, and during the time of Pedro Peres Calvillo the war between Pedro IV the Cere- monious (el Ceremonioso) and Pedro the Cruel (el Cruzo) while took place, and the see was plundered, and its cathedral desecrated by the Castilians. The episcopal palace was burned, and the Zuda, sometimes also called Alcázar de Hércules, the palace of the Arab governors, was taken to replace it.

The following bishops are also worthy of special mention: Jorje Bardaji (1443–84), Bishop of an Ara- gonese magistrature; Cardinal Pedro Ferriz, favourite of Paul II and Sixtus IV; Guillén Ramon de Monaca; Pedro Ceburna, founder of the seminary and of the University of Saragossa (1555–97); Jerónimo Castillo y Salas, last Inquisitor-General of Spain (1513–55). The Church of the Magdalene was the ancient cathedral, but the Moors, objecting to its prominent position, compelled them to use a church on the outskirts of the town. In the records left by Miguel this was variously called Santa Maria de la Hidra, de la Vega, or de la Huerta, on account of its location. It was not until the time of Pedro de Atarés and wife of Borja, and had been commenced in 1152. Architecturally it is a combination of Byzantine and Gothic, with a high portico entrance and a high brick-trimmed tower. The centre nave with its pointed arches rises above the side aisles and merges into a spacious transept. In the
windows the Gothic gives place to the Platerescque, built in the side chapel dedicated to St. Lawrence, St. Andrew, the Roseary, St. Peter, the Beheading of St. John the Baptist, the Annunciation, St. Elisabeth, the Purification, and St. James, the Gothic prevails in the reredos and mausoleums. Bishop Moncada attempted to rebuild the beautiful cloister which had been destroyed in the War of Castile, but in the year 1529 this had not been completed. Besides the Church of the Magdalene, the Church of St. Michael, with its simple Gothic nave and that of the Conception nuns, are also notable. The Church of St. Francis is said to have been founded by St. Francis himself in 1211; and Cisterns were erected under Bishop of Toledo in the Chapels of La Piedad in 1495.

The episcopal palace, the ancient Azuda, is built upon a commanding eminence and has a beautiful view. Bishop Calvillo purchased this from the Aragonese governor, Jordan Pérez de Urzía, in 1386, and entailed it to the bishopric. The diocesan seminary, dedicated to St. Gaudioso, was founded in 1593 by Bishop Cerbuna. It has recently been extensively renovated. Mention should be made of the monastery of Nuestra Señora de Veruela, a Cistercian abbey founded by Pedro de Atarés, and now a Jesuit novitiate; also of the Church of Borja, ranking as a collegiate church. In 1449, Bishop Nicholas V (1449), favoured and protected by Alexander VI; and of the ancient collegiate church of Calatayud, Santa María de Mediavilla, whose priors ranked as mitred deans.

**Ramon Ruiz Amado.**

**Tarbes, Diocese of (Tarbie),** comprises the Department of the Hautes-Pyrénées (ancient territory of Bigorre), included in 1802 in the Diocese of Bayonne, re-established theoretically by the Concordat of 1817 and actually by the Bull of 6 October, 1822. The new Diocese of Tarbes lost twenty-one parishes which were added to the Diocese of Auch; twenty to the Archdiocese of Auch; but the parishes of the country of the Quatre Vallées and of the Vallée de Louron, formerly part of the bishopric of Comminges, were reunited to the Diocese of Tarbes, suffragan of Auch. Tradition has preserved the names of St. Girinus and St. Evre or Erox, as the first martyrs of Bigorre. The district was laid waste by the Vandals, who were afterwards put to flight by St. Missolinus, a priest; it was disturbed by the Priscillianist heresy and finally terrorised by the Arián Visigoths, who, in the reign of Ewaric, waged a bloody persecution against the Church. Mgr. Duchesne considers St. Justin whom the "Gallia Christiana" cites as the first in the list of bishops of Tarbes, to have been only a priest, and excludes from that list St. Faustus, who, in his opinion, is none other than the celebrated Faustus of Riez. He considers Aper, residing at the Council of Toulouse in 580, as the first historically known bishop of the see. Among the successors are cited: St. Landolus, bishop in 870; William I (1129-41) who helped to draw up the ancient "For de Bigorre," one of the oldest and most curious monuments of the law of the Middle Ages; Pierre de Foix (1462-64), cardinal in 1437; Gabriel de Gramont (1524-34), cardinal in 1531, who attempted to negotiate between Henry VIII and the Holy See to prevent a rupture.

A Benedictine monastery of St. Savin of Lavedan was founded by Charlemagne and shortly took the name of the hermit and miracle worker, St. Savin, who was one of its monks and died before 840; the abbot was lord of the territory and the villages under his obedience were called a republic. The Benedictine Abbey of Cresse and St. Savin of Lavedan were founded, one in 970 and the other before the eleventh century in honour of St. Orens, Bishop of Auch, who had lived as a hermit in the Lavedan. The monastery of St-Pé de Générés, was founded about 1032 by Sanche, Duke of Gascony; it was the cradle of the town of Saint-Pé. The priory of Sarrancolin was founded about 1050 in memory of St. Ebbons, who fought against the Moors in Catalonia and died at Sarrancolin. The Abbey of Escalade was founded in 1140; it was the daughter of the Cistercian Abbey of Morimond. St. Bertrand of Comminges was one of its monks; another, St. Raymond de Lescar, was sent by Louis XII to the King of France. The Abbey of Fiterre, and the celebrated semi-religious, semi-military order of Calatrava. St. Bertrand, Bishop of Comminges (1073-1123), preached the Gospel in the Vallée d’Azun in the Diocese of Tarbes. To make amends for the hostile reception that had been given him, the inhabitants pledged themselves to give the See of Comminges all the butter that should be produced in the territory of Azun during the week preceding Pentecost; this impost was paid down to 1789. As natives of Bigorre may be cited: Cardinal Arnaud d’Ossat (1536-1604), born at Larroque Magnoac, who, with an important part in the negotiations with Bernard Pierre Carasse, born at Tarbes at the opening of the sixteenth century, who, from being a warrior, became general of the Carthusians, revised the constitutions of the order, and was so illustrious in his day, that in 1582 Catherine de Medici visited La Chartreuse to see him.

The fame of the Diocese of Tarbes has been spread throughout the Christian world since 1858 by the pilgrimages and the miracles of Lourdes (q. v.). Mention must also be made of the pilgrimage of Notre Dame de Garaison at Monléon, dating back to the thirteenth century; of the pilgrimage to Preuilly near Eaux Bonnes, dating back to the sixteenth century; the pilgrimage to Mazères, near the vacant shrine of St. Liberata, perhaps a martyr under Julian the Apostate; the pilgrimage to Arreau, to the chapel of St. Exupérus, friend of St. Jerome, who died Archbishop of Toulouse, about 417, after combating the heresy of Vigilius. Before the application of the law of 1901 against the congregations there were in the Diocese of Tarbes, the Priests of the Immaculate Conception at Lourdes, Carmelites, and various teaching orders of brothers. Several congregations of nuns were founded in the diocese: the Sisters of St. Joseph, hospitaliers and teachers, with their mother-house at Cautans; the Sisters of Notre Dame des Douleurs, hospitaliers, with their mother-house at Tarbes, and a branch house in Cairo; the Sisters of the Immaculate Conception of Notre Dame de Lourdes and their mother-house in their own house. At the close of the nineteenth century the religious congregations directed in the diocese: 5 schools, 1 home for sick children, 1 school for the deaf and dumb, 6 girls’ orphanages, 6 workshops, 3 homes for the poor, 12 hospitals or hospices, 3 houses of retreat, 6 houses of nuns devoted to nursing sick and the aged; the time of the abrogation of the Concordat (1905) the Diocese of Tarbes contained 215,546 inhabitants, 28
Tarentaise, Dioecese of (Tarentaisesis), comprises the arrondissement of Moutiers in the Department of Savoie; it is also sometimes called the Diocese of Moutiers-en-Tarentaise, and is suffragan of Chambéry. Legend relates that the “Centrones” were evangelized in the fifth century by James the Assyrian, second successor of St. Honorat, bishop of Moutiers. He became the first Bishop of Darantasia or Tarentaise, the metropolis of the “Centrones”, and named St. Marcellus as his successor. The first document in which the Diocese of Tarentaise is reliably mentioned is a letter of Leo the Great (5 May, 450) which assigns to the Archdiocese of Vienne, among other suffragans, the Bishop of Tarentaise. The first historically known bishop is Sanctius who in 517 assisted at the Council of Epon. A plea was brought before the Council of Frankfort (794) against the decision of Leo I that had been confirmed by Popes Symmachus and Gregory the Great. Leo III partly acceded to this plea, but permitted a monastery within the suffragans, Aosta, Sion, and Maurienne, but maintained the primacy of Vienne. For four centuries this primacy was the cause of conflicts between the archbishops of Tarentaise and those of Vienne; subsequently Maurienne was again attached to the metropolis of Vienne.

The city of Darantasia was destroyed by the Saracens in the tenth century, whereupon the archbishops moved their residence to the right bank of the Isère, calling it their “moutier” (monastery), and it was at this place that the town of Moutiers began to be built in the second half of the tenth century. In the twelfth century the archbishops of Tarentaise were powerful sovereigns. In 1198 a bull of Frederick Barbarossa recognized the Archbishop of Tarentaise as immediate vassal of the empire and prince of the Holy Roman Empire in disregard of the pretensions of Humbert III, Count of Savoy, but in 1236 the temporal powers were transferred to the Bishop of Chambéry and the Count of Savoy, Amadeus VI, fixed the respective rights of the archbishops and the counts. Tarentaise belonged to France from 1536 to 1559, and from the sixteenth to the eighteenth century was on four occasions wrested for a time by France from the House of Savoy. In 1792 it formed the Department of Mont Blanc. The Treaty of Paris (30 May, 1814) gave it to the King of Sardinia, while the Plebiscite of 22 and 23 April, 1800, gave it to France. The Archdiocese of Moutiers in Tarentaise was suppressed in 1792 by the French Revolution. In 1825 a diocese was re-established at Moutiers, suffragan of Chambéry, and was maintained in 1860 in virtue of a special clause in the treaty ceding Savoy to France.

Among the archbishops of Moutiers in Tarentaise may be mentioned: St. Peter I (about 1130), the first Cistercian raised to the episcopate, who founded in a defile the Cistercian Abbey of Tamis, to serve as a shelter for pilgrims and travellers the Cistercian monk St. Peter II (1141-74) founded the charity of the "pain de Mai", which until the second half of the eighteenth century distributed bread at Moutiers at the expense of the archdiocese during the first twenty-eight days of May; it was he who wrote Alphambra II (1174-84), a manuscript treated of hunting; Cardinal Jean d’Arces (1438-54), who at the Council of Basle in 1440 supported Duke Amadeus of Savoy, antipope under the name of Felix V, against Eugène IV; Cardinals Christopher and Dominic de la Roche (1472-75 and 1475-85), whose tomb is located at Rome in a church which was once the Palazzo del Popolo is a splendid monument of the Renaissance; Germonio (1607-27), who played an important part in the seventeenth-century reform of the clergy and whose “Commentaries” and “Acta Ecclesiae Tarentensis” are important documents for the history of the church. As the diocese may be divided: Pope Nicholas II (1059), b. at Chevrion-Villette, the family of the lords of Miolans; Pierre d’Aigueblanche, who in 1240 became Archbishop of Hereford in England, and for twenty-five years was councillor and minister to Henry III of England; Blessed Peter of Tarentaise, who became pope in 1276 under the name of Innocent V.

The chief pilgrimages of the diocese are: Notre Dame de Briançon, which dates from the victory over the Saracens in the tenth century. Francis I and Henry IV visited this shrine; Notre-Dame des Vertannes, at Peisey, created in the eighteenth century, and at whose request the Feast of the Assumption was added; Notre-Dame de Vieu at St. Martin de Belleville; Notre-Dame de Beaufort; St. Anne at Villette dating from 1248. Before the application of the Law of 1901 regarding associations there were in the diocese Augustinians of the Assumption, Capuchins, and two orders of teaching brothers. The Sisters of St. Joseph, nursing and teaching sisters, separated in 1825 from the Congregation of Puy. Several hospitals and schools in Brazil are dependent on their motherhouse at Moutiers. At the end of the nineteenth century religious congregations in the diocese were charged with: 4 female schools, 2 orphanages for girls, 6 infirmaries or hospitals, 4 houses of retreat. In 1905 (end of the period of the Concordat) the diocese numbered 68,000 inhabitants, 7 parishes, 79 succursal churches, and 21 vicariates remunerated by the Government.

In the 14th century, a new wave of Targum translations began, including the Targumim of Ezra, Nehez, and the biblical Targum. These translations were made by rabbis and scholars to provide a more accessible and literal translation of the Hebrew text of the Bible. The Targumim were considered to be parallel to the Masoretic text and were used in Jewish liturgy and study. In the 19th century, the Targum was translated into modern languages as a way to make the Hebrew text more accessible to a wider audience. The Targum was considered to be a translation in the strict sense, preserving the meaning of the original text while adapting it to the contemporary language. This was achieved through the use of idiomatic expressions, metaphorical language, and other techniques to make the text more understandable and relevant to the audience.

In summary, the Targum is a translation of the Hebrew Bible into Aramaic, and it is considered to be a translation in the strict sense, preserving the meaning of the original text while adapting it to the contemporary language. The Targum is an important resource for understanding the Hebrew text of the Bible and its language, and it continues to be used in Jewish liturgy and study today.
TARGUM

TARGUM

state which portions are to be read aloud but not translated (cf. for instance "Meg.", IV, 10), and a warning is given against translations that are either too free, palliative, allegorical etc.

Another regulation was that the Targum was not to be written down ("Jer. Meg.", IV, 1 = fol. 74 d). This prohibition, however, probably referred only to the interpretation given in the synagogue, not to the use of the Targum in its employment in study. In any case, written Targums must have existed at an early date. Thus, for instance, one on the Book of Job is mentioned in the era of Gamaliel I (middle of the first century B.C.), which he, however, writes at "I do not write the recension of my father (Osm.)". "Tos. Sabb.", 13, 2 = p. 128, ed. Zuckermann). If Matt., xxvii, 46, gives the Aramaic form of Ps., xxi, 2, the last utterance of the Saviour upon the Cross, this shows that even then the Psalms were current among the people in the Aramaic language; moreover, Ezech., iv, 8, has a closer connexion with the Targum to Ps., lxvii, 19, than with the Masoretic text. In addition, the "Mishna Yadayim", IV, 5, and "Sabb.", XVI, also indicates the early existence of MSS. of the Targum. These MSS., however, were only owned privately not officially as for a longer period the Targum were without authoritative and official importance in the church. Various indications, however, show the great antiquity of the main contents of many Targums, their theology among other things. That as early as the third century the text, for instance, of the Targum on the Pentateuch was regarded by the synagogue as traditionally settled is evident from the "Mishna Massekim", p. 49d, ed. Kohn, 1863, fol. 49d; "Tos. Meg.", IV, 41. There are Targums to all the canonical books excepting Daniel, Ezra, and Nehemiah; for some books of the Bible there are several Targums. As regards age and linguistic character, they may be divided into three classes: (1) Targum of Onkelos and Targum of Jonathan; (2) Jerusalem Targums; (3) Targum on the Hagiographa.

The form of language used in the Targums is called specifically the "Targum dialect". It belongs to western Aramaic and more particularly to the Aramaic of Palestine. Its home is to be sought in Judea, the school of learning of the scribes. This must be borne in mind that this Targumic language does not represent the spoken Aramaic but is the result of the labours of scholars. Consequently the point under discussion turns on a literary Aramaic originally formed in Judea. This is particularly true of the two earlier Targums; the later ones show generally an artificially mixed type of language. The traditional pointing of the texts is valueless and misleading: a more certain basis was first offered by MSS. from Southern Arabia in which the pointing for the vowels was placed above the line. In Arabia the old traditional custom of retaining the Targum at the religious services had been retained, and consequently more interest was felt there in the pronunciation. It must be acknowledged, however, that this cannot be regarded as a direct reproduction of the Palestinian pronunciation; it may have sprung from a formal treatment of the Targum pronunciation is shared by all the Babylonian scholars. As regards the method of translation all Targums in common strive to avoid as much as possible anthropomorphisms and anthropopathic terms, as well as other apparently undignified expressions concerning, and descriptive of God. The Targum stands in the spoken Aramaic and Polyglot Bible, although the two do not always contain the same Targums or an equal number of them. See below for particulars as to individual editions.

I. THE TARGUM OF ONKELOS.—The official Targum to the Pentateuch (בֵּית פּוֹנְדַאך) is designated by the name of Onkelos (ומֶלֶם). In the Babylonian Talmud and in the Tosephtha, Onkelos is the name of a proselyte who is mentioned as a contemporary of the elder Gamaliel ("Aboda zara", 11a; cf. "Tos. Sabb.", 8 = p. 119, ed. Zuckermann). The labours of Onkelos are referred to in "Meg.", 3a, in the following words: "Rab Jeremiya, according to others Rab Hyya bar Abba says: 'According to the statement of (רַב הַיְיָ אוֹרֵב) of Rab Eliezer and Rab Josua, Onkelos the proselyte has said, הַיְיָ אָדָם, which is, has orally formulated, the Targum of the Torah'". Gaon Sar Shalom (d. 859) was the first who, taking this passage as a basis, called the text of the Targum of Onkelos. This he did in an opinion concerning the Targum which he evidently had before him at the time in a written copy. The designation that thus arose became customary through its acceptance by Rashi and others. It is evident, however, that in the passage mentioned ("Meg.", 3a) there has been a confusion with the name of Aquila, the translator of the Bible, for the former parallel passage of the Palestinian Talmud ("Meg.", I, 13 = fol. 71c) says the same of Aquila and his Greek translation of the Bible. Compare also Midrash, Tanchuma, Mishpatim, 112 (Habac. Rab., 1883, fol. 108). Thus it seems that in Babylonia the old and correct knowledge of the Greek translation of the proselyte Aquila was erroneously transferred to the anonymous Aramaic translation, that consequently Onkelos (instead of Akylas) is a corrupted form or a provincial modification of Aquila (אָקִילָא), as, for instance, the Tosephtha has אָקִילָא always (five times) for אָקִילָא. It is not necessary to discuss here early criticism of this point. The effort to prove the existence of an Onkelos distinct from Aquila is still made by Friedmann ("Onkelos und Akylas" in "Jahresber. der Israelit.-theol. Lehranstalt in Wien", 1896), but the proof adduced is not convincing (cf. Blau in "Jewish Quarterly Review", IX, 1897, p. 727 sqq.).

Thus it is not known who wrote the Targum named after Onkelos. In any case the Targum, at least the greater part of it, is old, a fact indicated by the connexion with Rab Eliezer and Rab Josua, and belongs probably to the second, or it may be to the first century of our era. It arose, as the idiom shows, in Babylonia but it received official recognition from the Babylonian Rabbis, and is therefore called by them הַיְיָ אוֹרֵב (our Targum), or is quoted with the formula יִהְיֶה בָּני אוֹרֵב (as we translate). Rab Natronay (d. 869) in speaking of this הַיְיָ אוֹרֵב says, that it is not permitted to replace it in the services of the synagogue by any other translation of the Pentateuch. The high reputation of this authorized Babylonian text is the fact that it has a Masorah of its own. The fixing of the written form, and thereby the final settlement of the text as well, should not be assigned to a date before the fifth century. The language is, in general, an artificial form of speech closely connected with the Biblical Aramaic. It is properly called "Babylonian Aramaic" by the Jewish people, but a copy made by scholars of the Hebrew original, of which the Targum claims to give the most
faithful reproduction possible. In doing this the Aramaic language is treated similarly to the Greek in the translation of Aquila, consequently the many Hebraic idioms. There is no positive proof (Dalman, "Gramm.", 13) of a corrupting influence of the Babylonian dialect as Noldeke held ("Semit. Sprachwiss.", 3rd ed., 1893, 390).

As regards the character of the translation it is, taken altogether, fairly literal. Anthropomorphic and anthropopathic expressions are avoided by roundabout expressions or in other ways; obscure Hebrew words are often taken without change into the text; proper names are frequently interpreted, as Shinar-Babylon, Ishmaelites-Arabs; for figurative expressions are substituted the corresponding literal ones. Haggadic interpretation is only used at times, for instance in prophetic passages, as Gen., xlix; Num., xxxv; Deut., xxxiii. This Targum was first printed at Bologna (1429) together with the Hebrew text of the Bible and the commentary of Rashi; later, in the Rabbinical Bibles of Bomberg and Buxtorf, and with a Latin translation in the Comptensian Polyglot (1517), and the Polyglots of Antwerp (1569), Paris (1645), and London (1657). Among separate editions, the Targum special mention should be made of that printed in 1557 at Sabbioneta. More modern editions are: Berlin, "Targum Onkelos" (2 vols., Berlin, 1884), in which Vol. I contains the text according to the Sabbioneta edition, and Vol. II, editions; the Yemanites at Jerusalem have printed with an edition of the Pentateuch (seefer Reiter tov) from MS. the Arabic translation by Saadya (Jerusalem, 1894-1901), in which publication the vowel pointing above the line has been changed to sublinear pointing; Barmstein, 'The Targum of Onkelos to Genesis' (London, 1896), on the text of the Yemanite manuscripts. In addition to the Latin translations in the Rabbinical Bibles there were also one by Fagius in Hamburg, 1546; there is also an English translation by Etheridge, "The Targum of Onkelos and Jonathan ben Uziel on the Pent., with the Fragments of the Jerusalem Targum", from the Chaldee (2 vols., London, 1862-65).

The Targum of Jonathan (Jonathan)—The Targum of the Prophets (especially historical books, posteriories, the actual Prophets) now in existence is ascribed to Jonathan ben Uziel, who is said on the authority of the Babylonian "Megillah", 3a, to have formulated it orally (דicit), in accordance with the instructions (יהוה) of Haggai, Zachariah, and Malachi, and given it to the first Christian century. The Babylonian Talmud in quoting passages from this Targum ascribes them to Rab Joseph bar Hiyya (d. 333), the head of the school at Pumbeditha. Rab Joseph was regarded as a great authority on the tradition of the Targum and his judgment on the translation of individual passages was eagerly listened to; he may perhaps be considered as the editor of the Targum. For Jonathan as for Onkelos the final settlement of the written form did not occur until the fifth Christian century. Cornill claims to show a "Einleitung", 2nd ed., 1893, p. 308) that the Targum on the Prophets is older than the Torah-Targum, but the proof produced is not convincing (Gen., 15, passim). Linguistically, this Targum approaches most closely that of Onkelos; in grammatical construction the two are alike but the words used differ, and this Targum is more paraphrastic. In the historical books Jonathan himself is often the exponent, but in the actual prophetic books the exposition is in reality Haggadic. The religious opinions and theological conceptions of the era that are interwoven with the words are very instructive, and are not free from later additions; from this cause arise the double translations of which the Targum contains several. The "Propheten priores" was first printed with the Hebrew text and the commentaries of Gimhi and Levi at Leiria, Portugal, in 1494. At a later date the whole Targum is printed in the Rabbinical Bibles of Bomberg and Buxtorf and in the Polyglott Bibles of Antwerp, Paris, and London. The last edition is that of de Lagarde, "Propheten chaldaisco sive codices Reuchliniani" (Leipzig, 1872). There are supplementary additions to this from an Erfurt MS. in "Svymmtica", i, 139. The Targum to the Haphtarot is to be found in what is called the Pentateuch edition of the Yemanites at Jerusalem. English translations are: Paulus, "The Chaldee Paraphrase on the Prophet Isaiah Translated" (London, 1871); Levy, "Targum on Isaiah," i (London, 1859); Schoff, "The Targum" (Cambridge, 1885); Hebraica, "Der Uber-Setzung (Berlin, 1899); IDEM, Das Targum zum Buch der Richter nach jemen. Uber-Setzung (Berlin, 1900); Wolfson, "Das Prophetae und Urim und Thummim in yemenit. Text"; T. B. Scholem, "Bilbemann, Das Targum zu Geschichte nach einer siidjemenitischen Rekonstruktion" (Stuttgart, 1909); IDGEM, "Das Targum zu Nahum" (London, 1857); Adler, "Targum to Nahum in Jew. Quart. Rev., VII (1896), 630 sqq.; Bacher, "Kritische Untersuchungen zum Prophetenpriores in ZDAJ, iv (1899), 159 sqq.; Frankel, "Zum Targum der Propheten" (Breslau, 1867).

II. The Jerusalem Targums.—This designation is not correct; the older and more correct name, בנוליוסי ויהושע בן נון, e. Palestinian Targum, is found for instance in the writings of Gaon Hai (d. 1038). At a later date this designation was displaced by the term "Nahal", just as before that the Targum of the Babylonian Talmud (פִּיטְכְרַסְהוּן, פִּיטְכְרַסְהוּן) is called in the writings of Gaon Sar Shalon (סֵהוֹר בַּשָּׁמְלָה). Fundamentally the language of these Targums is Palestinian Aramaic but of a very mixed type. Neither of them is homogeneous grammatically and lexically. Besides expressions that recall the Galilean dialect of the Palestinian Talmud a preference is shown for imitation of the language of the Targum of Onkelos, while there are also various terms belonging to the language of the Babylonian Talmud.

A. Targum Yerushalmi I on the Pentateuch.—This is generally called the Targum of Jonathan or of Pseudo-Jonathan, because it is cited in the first printed edition (Venice, 1591) under the name of Jonathan ben Uziel. This designation, however, rests on a mistaken solution of the abbreviation ירולו, that is, ירולו ייוער. The Targum could not have appeared in its present form before the second half of the seventh century. For example (Gen., xxi, 21), a wife and daughter of Mohammed are mentioned. Compare also (Gen., xxii, 26) the position of Esau and Ishmael as representatives of the Christian and the Mohammedan world. The Targum covers the entire Pentateuch. The only passages that are lacking are: Gen., vi., 15; x., 23; xvii., 4; xx., 15; xxvii., 12; xlii., 9; xlvii., 10-11; Exod., iv., 5; Lev., xxvi., 4; Num., xxii., 18; xxx., 206; xxi., 28; xxvii., 3-9. As to its form it is a free Haggadic treatment of the text, that is, an exposition rather than a translation. A large part of it is made up of legendary narratives; there are also dialogues, rhetorical and poetical digressions. The paraphrase also discusses religious and metaphysical conceptions, as the text of the Jewish mystics of the seventh century. This Targum was first printed: as "Yerushalmi", at Venice in 1591. It is also to be found in volume IV of the London Polyglott. A separate edition of this Tar-
gum was edited from the manuscript in the British Museum (MS. Addit. 27031) by Ginsburger, "Targum Jonathan ben Simeon zu Pentateuch." (Berlin, 1900). Compare this text of Barnstein in "Jew. Quart. Rev." XI (1899), 167 sqq. An English translation has been published by Etheridge (supra).

SECTION AND TRACTS. Under the Gesetz der Übersetzung des Judentums ist der Monatsheft für Geschichte der Judäischen Wissenschaft des Judentums (1897), 96 sqq., 138 sqq.; MARMBREAL, Studien zum Pseudo-Jonathan Targum (Freiburg, 1900).

B. Targum Yerushalmi II on the Pentateuch is also called the Fragmentary Targum, because the Targum on the entire Pentateuch has not been preserved, but only portions of it on numerous longer and shorter passages, frequently only the Targum on individual verses or parts of such. These fragments were first printed in the rabbinical Bible of 1517 as תרגום ירושלמי. In language, method of translation, and exegetical form they are related to the Pseudo-Jonathan. A perspicuously arranged compilation of the fragments that have been preserved is given by Ginsburger in the "ZDMG", LVII (1903), 67 sqq., and in loc. cit., LVIII (1904), 374 sqq., on a page that came from a geniza or repository in a synagogue for damaged manuscripts. A Latin translation from the Targum of 1517 was published by Tarnowski (London, 1849); English tr. by Etheridge (supra).

GiBSUBERGER, Das Fragmententargum (Berlin, 1890); (1) Targum according to Coll. 110 of the National Library at Paris; (2) various readings from 110; (3) quotations from old writers; matter supplementary to this work is given by Marx in Zeitschr. für bibl. Bibliographie (1893), 55-63.

Opinions concerning the connexion between the Targums Jerusalmi I and Jerusalmi II agree in general that both are to be traced to different versions of an old Jerusalem Targum. This is the view of Zuns (p. 73, and passim), and also that of Geiger, "Urschrift und Übersetzungen der Bibel" (Berlin, 1857), 454. Bassefroid (infra) reaches the conclusion that the basis of both the Fragmentary Targum and that of the Pseudo-Jonathan is a complete Jeru-
salem Targum of post-Talmudic origin, but that the two Targums, Jerusalmi I and II, presuppose the existence of the Targum of Onkelos. The Fragmentary Targum gives from this ancient Jerusalem Targum, according to Bassefroid, only matter supplementary to Onkelos, while Onkelos and the Jerusalmi II were derived from the Pseudo-Jonathan. In the preface to his edition of the Pseudo-Jonathan (see below) Ginsburger tries to prove that both the Fragmentary Targum and the Pseudo-Jonathan may be traced back to a very an-
cient Palestinian Targum, which was not influenced by the Pseudo-Jonathan of Onkelos. The Fragmentary Targum, in Ginsburger's opinion, rep-
resents a variant collection, not to Onkelos (as Bassefroid thinks), but to another recension of that ancient Jerusalem Targum. Ginsburger's views will have to be accepted as the more probable.

RASSEFROUD, Das Fragmententargum u. sein Verhältnis zu den anderen polyest. Targumim in Monatschrift für Gesch. u. Wissen-
schaft des Judentums (1898), 49 sq.; for Gesch. u. 241 sqq., 332 sqq., 396 sqq.; GiBSUBERGER, loc. cit., LXI (1897), 280 sqq., 346 sqq.; preface to Pseudo-Jonathan, ed. 1898 (Berlin, 1900) for the Jakobische Untersuchungen zur Sprache der jüdischenen Targum. Targums (Berlin, 1905).

C. Targum Yerushalmi III is the name assigned by Dalman (Gramm. 29) to fragments which are given in old editions of the Pentateuch, as Lisbon (1491), Sal-
tonica (1520), Constantinople (1546), Venice (1591), and in several MSS. Nearly all have been published by Ginsburger, "Das Fragmententargum" (1899), 71-74.

Tar. Jerum. Targum on Prophets and on individual books of the Hagiographa. As regards the Targums on the Prophets de Lagarde has given Reuchlin's notes from the "Neb'ilim Codex" in the introduction (pp. VI-XLI) to his "Propheten chaldaicae" (infra). There are frag-
ments on Hosea, Judges, Samuel, Kings, Isaiah, Jeremiah, Amos, Jonas, Zacharias. (Cf. Bacher in "ZDMG", XXVIII (1874), 1-72; XXIX (1875), 157 sqq., 319 sqq.)

III. TARGUMS ON THE HAGIOGRAPHA.—They are the work of various authors and have the character more or less of private undertakings, with the production of which the schools had nothing to do. Linguistically they are to be regarded as the work artificially produced of a late age. They depend in the main on the Jerusalem Targums and probably belong to the same era; the Targum on Chronicles may be somewhat later. Three groups are to be distinguished as regards linguistic character and relation to the original text: (a) Targums to Proverbs, Psalms, and Job; (b) Targums to the five Megilloth, that is, Ruth, Esther, Joel, Lamentations, Canticles; (c) Targums to the Books of Chronicles. The Targums mentioned under (a) adhere relatively close to the text of the Bible. The Targum to Proverbs is in language and contents very dependent on the text of the Syriac Peschito, and is but little more than a Jewish recension of the sangate. Nöldke in "'Merx' Archiv für wissenschaftl. Erforschung des A.T.", II (1872), 246 sqq.; Baumgartner, "Etude critique sur l'état du texte du livre des Proverbes" (Leipzig, 1890), 267 sqq.) Haggadic additions are found only occasionally in the Targum on the Psalms. In a number of passages a second translation is introduced with the remark "אף" that is, ליצרא על дальше תרגום khác (that is, "a second Targum"). The Targum to Job contains many more additions. There are also variants of the usual formula of citation אכו, and much oftener than in the Targum on the Psalms. In style and language this Targum resembles that on the Psalms, consequently both perhaps are the work of the same author.

(b) The Targums on the Megilloth are not in reality translations but rather Haggadic commentaries. The Biblical text is most clearly evident in the Targums to Ruth and to Lamentations. The Targum to Ecclesiastes is a tasteless declamation upon the text on which it is based; that on Canticles is an alle-
gorico-mystical Midrash. There are two Targums to Esther, the one closely resembles a paraphrase and has no legends interwoven with it; the other, called Tar
gum scheni, has altogether the character of a Midrash. There is a Targum only to a portion of the book, and part of it consists of stories, legends, and discourses that have but slight connexion with the contents of the book.

(c) A Targum on the Books of Chronicles was edited from a MS. in Erfurt by Matthias Beck (2 pts., Augsburg, 1680-83); a more complete and correct text taken from a MS. in Constantinople, edited by Wilkins, "Paraphrasis Chaldaica in librum priorem et posteriori Chronicorum" (Amsterdam, 1715).

All the Targums to the Hagiographa (excepting Chronicles) were printed for the first time in the Bomb-berg Bible in 1517; afterwards in the "Polychrom" of Antwerp, Paris, and London. A modern edition from the Bombberg text, with Chronicles from the Erfurt Codex, was edited by de Lagarde, "Hagiogra-
pha chaldaica" (Leipzig, 1873).
TARKIN, 458

he was the most renowned master-mason at Amiens at the time in which he lived. He was already famous in 1475, when he was summoned to inspect the cathedral of Amiens, which was needed to become ruinous in many places. Although he was not then entitled master-mason of the city, he was so in fact, as nothing of importance was done without him. In 1477 he was at Arras, at work for the King of France. In 1500 the plan of Martin Cambicke for the restoration and decoration of the cathedral of Beauvais was submitted to him. On 4 Nov., 1483, at the death of Guillaume Postel, Pierre Tarisel was appointed master-mason of the city of Amiens. His predecessors had been paid at the rate of 4s. per day; according to the accounts which have been preserved, Tarisel received 6s. The rate was again reduced to 4s. for his successor, which shows with what esteem his talent was regarded.

There is no document to show in what year he became master-mason of the cathedral; but it seems certain beyond doubt that he fulfilled these duties in 1482-83. On 7 March, 1497, Tarisiel was elected dean subject to the cathedral chapter. Shortly afterwards he undertook the task of restoring the cathedral. The second pillar of the choir, on the left, threatened to fall, but under Tarisiel's direction it was restored in 1497. The projecting arch and the arches near it were restored, and the outer wall was protected by buttresses. In 1503 the same was done for the remaining pillars. Between 1497 and 1503 the pillars of the transept "buckled", owing to the weight of the rear side arches, and cracks formed. The remedy was found in bands of Spanish iron, reaching from the transept to the ends of the choir, the nave, and the cross halls. The great iron chainwork upholching the four large pillars of the transept running the length of the triforium in four directions still exists, and is justly famous. All this was the work of Tarisel, by whom the cathedral of Amiens was saved from ruin in the fifteenth and sixteenth centuries, and which is a sufficient claim to renown.

M. VACCON.

Tarkin, Saint (Talarican), Bishop of Sodor (including the western islands of Scotland), was probably of purely Pictish origin, though the Aberdeen Breviary (1509) says he was born in Ireland. The legend in the Breviary states that he was raised to the episcopate by Pope Gregory II; and Adam of Kamp's Kalendar (1558) styles him "bishop and confess in Scotland under King Solvathus." The Bollandists, following the chronology of the Dairidic kings as adopted by Pinkerton and Skene, place the reign of Selvach from 706 to 726; and, as Gregory II was pope from 715 to 731, conclude that Tarkin became bishop about 720, a few years after the Columban monks of Iona had been induced by St. Egbert to settle on the Roman Rite. He is said to have offered the Holy Sacrifice every day, to have been noted for his zeal and his mortified life, and to have converted many pagans in the northern coasts of Scotland through his preaching and example. According to Dempster, he died in the Island of Lismore. Many churches subsequently founded in the Dioceses of Moray, Ross, and Aberdeen were dedicated in his honour. His name is perpetuated in the great district of which he governed (Sodor and Man), and in the parish of Keillarlaggan (Skye), and wells still known as "St. Tarkin's" at Fordye, Kilsyth, and elsewhere.

TARQUINI,

D. O. Hunter-Blair.

TARNOV, Dioece of (Tarnoviensis), in western Galicia, Austria. The See of Posen, founded in 968 by Duke Mieczyslaw, was the only one in Poland until 1100. In that year Otto III and Duke Boleslaw Chabry founded the Sees of Gnesen and Cracow, to which also belonged what is to-day western Galicia. When in the First Partition of Poland, in 1772, the latter fell to Austria, it was separated from the foreign See of Cracow, and the administration entrusted to the vicar-general. Johann von Duval, who resided at Tarnow. On the erection of the See of Tarnow in 1783, he became its first bishop. By the Third Partition of Poland in 1795, Cracow too fell to Austria, whereupon it was considered advisable after the death of the second bishop (1801) to divide the See of Tarnow between Cracow and Przemysl. By the Peace of Vienna in 1809 Austria was obliged to relinquish western Galicia and with it Cracow, both assigned to the Duchy of Warsaw. The Diocese of Tarnow thereupon came under Lemberg, whose bishop gave the management of it to the prior of Alt Sandek as his vicar-general. In the Congress of Vienna, Austria once more incorporated the Kingdom of Galicia. The Emperor Francis in 1822 gave Tarnow another bishop, Gregorius Thomas Ziegler. He had been a Benedictine at Wiblingen, but was at that time professor of dogma at Vienna. He established his residence in the former Benedictine monastery of Tyniec. This, however, was too near Cracow, and Ziegler removed thence to Bohchia and finally in 1826 back to Tarnow. There are to-day in this diocese 809,000 Catholics; 37.4% regular priests; 72 male religious and 344 nuns.

ZACZARAJewski, V. episcoporum Przemyslensium (Vienna, 1844), LVIII-LXIII.

CŒLESTIN WOLFGRUBER.

TARQUINI, Camillus, cardinal, Jesuit canonist and archeologist, b. at Marta in the Diocese of Montefiascone, Italy, 27 Sept., 1810; d. at Rome, 15 Feb., 1874. Tarquini entered the Society of Jesus on 27 Aug., 1837, but before his entrance he had published, as a thesis for his doctorate, a work on canon law: "Institutionum juris canonici tabula synoptica juxta ordinem habitum a Joanne Devoti" (Rome, 1835). As a professor, Tarquini held the chair of canon law at the Roman College, and he attracted notice by his masterly explanations of Sacred Scripture at the Gea. Besides his published works, he contributed many articles to reviews, notably to the "Civitá Cattolica". It is principally as a canonist that he achieved fame. His first work on the law of the church brought him to international celebrity was the Compendium Placitis, or Esguatitur, for papal Bulls (Rome, 1851), which was translated into German, Spanish, and French. This treatise is generally published as an appendix to his main work on canon law: "Juris ecclesiasticorum publicorum institutiones" (Rome, 1892), which has gone through fourteen editions.
TARRAGONA

The work was translated into French (Brussels, 1868). Other works on canon law are his treatise on the French Concordeat of 1801 (Rome, 1871), and a disquisition on the Pauline Privilege (published posthumously in 1888).

Though best known, perhaps, as a canonist, Tarquini was also an archeologist of no mean repute, especially on matters relating to the ancient Etruscans of Italy. His earliest archeological treatise is "Breve commento di antiche iscrizioni appartenenti alla città di Fermo" (1847). He began the Etruscan series of his works specifically with "Dichiarazione dell’ epigrafe del tempio di Tarraco" (1852), which was soon followed by a more general treatise: "Dissertazioni intorno ad alcuni monumenti etruschi" (Rome, 1892). The "Civiltà Cattolica" of 1857 and 1858 contains many of Tarquini’s articles on Etruscan antiquities, the most noted being: "Origini italiane e principalmente etrusche rivelate dei nomi geografici" (Ser. 3, Vol. VI); "I misteri della lingua etrusca" (Vol. VIII); "Iscrizioni etrusche in monumenti autofoni" (Vol. IX); "Di vasi etruschi divinatorii" (Vol. XI); "Iscrizione etrusca di Perugia" (Vol. XI); and "Sopra il semitismo della lingua etrusca" (Ser. 4, Vol. VII). He also wrote an Etruscan grammar and a dictionary of the Etruscan language. Other archeological treatises are: "Della iscrizione della cattedra Alessandra di San Marco" (1868), and "De l’origine des phéniciens et leur identité avec les Pasteurs qui en vahérent l’Egypte" (1870). Tarquini was a member of the Pontifical Roman Academy of Archology and of the Imperial and Royal Academy of Science of Lucca. He was also president of the historical and archeological sections of the Accademia de’ Quiriti. He was raised to the cardinalate by Pius IX with the diaconal title of St. Nicholas at the Tullian Prison on Dec. 2, 1873, only a few months before his death.

WILLIAM H. FANNING.

TARRAGONA. Archidioceze of (Tarracoensis), bounded on the N. by Barcelona and Lérida, on the E. by Barcelona, on the S. by the Mediterranean Sea and Tortosa, and on the W. by Tortosa. It comprises the civil Provinces of Tarragona and Lérida, and its capital city has 24,335 inhabitants. Its suffragans are Barcelona, Lérida, Gerona, Urgel, Vic, Tortosa, and Girona, and of the most important cities of Spain, probably of Iberian origin, as its coins and Cyclopean walls indicate. The Romans selected Tarragona as the centre of their government in Spain. In the division it was the capital first of Hither Spain (Hispania Citerior) and then of the Province of Tarragonensis. In the fifth century it was overrun by the Vandals, Suevi, and Alani. The Visigothic king, Euric, took possession of it in 475 and totally demolished it. During the occupation of the Visigoths it flourished once more, but the Arabs again destroyed it in 719. Tarragona is undoubtedly one of the most ancient in Spain, holding as it does the tradition of the coming of Sts. James and Paul. The visit of St. Paul to Tarragona is not altogether beyond the range of possibilities, supposing that he came from Rome to Spain, as he promised to do, in the Epistle to the Ephesians. St. Jerome affirms that it did. The first written testimony which we have concerning the bishops of Tarragona dates from the third century. This is in the Acts of the Martyrdom of the bishop St. Fructuosus and his deacons Augurinus and Eulogius. The list of the bishops of Tarragona, there were arges in St. Fructuosus, but it is supposed that other bishops have been named to us, preceeded him. The see of Tarragona, which was vacant at that time, was represented at the Council of Arles (314) by two procurators, the priest Probatus and the deacon Castorius. Himerius, who sent the priest Basianus to Pope St. Damasus, and who obtained a letter from Pope St. Siricius, was Archbishop of Tarragona in 384. It is also conjectured that the Hilarius who was the subject of the Decretal issued by Innocent I was also a Bishop of Tarragona. Ascacio was bishop in 456, and previous to 516 we find the name of Archbishop John, who, on 6 November, 516, assembled all the bishops of his province and held the first provincial council of Tarragona, at which ten bishops were present. In 517 he assembled another provincial council in Gerona.

Sergius, who was bishop from 535 to 546, held councils in Barcelona and Lérida. St. Justus, Bishop of Urgel, dedicated to him his commentary on the Song of Solomon. Tranquillus was bishop for many years previous to 560. He had been a monk in the Monastery of Asana under the direction of St. Victorinus. Artemius, bishop prior to 589, was not able to attend the Third Council of Toledo, but sent a substitute, Stephen. He called provincial councils at Saragoesa (599) and Barcelona. Eusebius (610–32) held the council of Egara (Tarrasa) to enforce the canons of the Council of Huesca. Audax (633–38) was present at the Fourth Council of Toledo, and Protasius (637–48) at the Sixth and Seventh. Cyprianus (650–55) sent representatives to the Thirteenth, Fourteenth, and Fifteenth Councils of Toledo, and Vera assisted personally at the Sixteenth and Seventeenth. In his time or in that of his successor, George, the Mohammedan invasion took place. Ludovico Pio appears to have temporarily taken possession of the city. A portion of its territory was bestowed on the Bishop of Barcelona, and the metropolitan rank was given to the Bishop of Narbonne, but was recovered in 759. Cesarius endeavoured to obtain recognition as titular Archbishop of Tarragona, but was not successful, although he was consecrated by the bishops of Leon and Galicia, and obtained from the pope the abbey of Santa Cecilia, which belonged to the Archbishop of Tarragona. Borrell, Count of Barcelona, induced...
Pope John XIII to confer the title of Archbishop of Tarragona on Bishop Attón of Vich, although he never was called Archbishop of Tarragona but of Ausona.

The Bishop of Vich, Berengarius of Rosanes, petitioned Pope Urban II for permission to promote a crusade for the reconquest of Tarragona. Count Berenguer Ramón II (the Fratricide) succeeded in taking the city and made it a fief of the Holy See. The pope, in recognition of the efforts of the Bishop of Vich, conferred on him the pallium as Archbishop of Tarragona, transferring to him all rights to the city and its churches which had previously belonged to the Holy See. The new bishop, however, was to remain in possession of the Church of Vich. A similar concession was granted to St. Olegarius, Bishop of Barcelona, who was permitted to retain possession of his former Church until he had obtained complete and peaceful possession of that of Tarragona, of which he had been named Archbishop. It was not until 1116 that Tarragona was definitively reconquered by Ramón Berenguer III (the Great). Bishop Berenguer had died in 1110, after having assisted, in 1096, at the Council of Nîmes convoked by Urban II. His successor in the See of Tarragona, St. Olegarius, had been a canon regular at St. Rufus in Provence, later an abbot, and then Bishop of Barcelona. To him is due the restoration of the metropolitan authority of Tarragona. In 1117 Count Ramón Berenguer III conferred on him the government of the city that he might endeavour to rechristen it, which work he carried on with great zeal. He assisted at the councils of Toulouse and Reims (1109), of the Lateran (1123), and of Clermont (1130), and accompanied the Count of Barcelona as pontifical legate in the war which ensued in the imposition of a tribute upon Tortosa and Lérida. The Norman Robert Burdet also joined the forces of the Count of Barcelona, established himself in Tarragona and obtained dominion over a great part of the city. The consequent dissensions among his sons led to the murder by them of Archbishop Hugh de Cervellón 22 April, 1171. On the death of St. Olegarius (6 March, 1137), Gregory, Abbot of Cuxana, succeeded him in the vacant See of Tarragona, and was the first incumbent of that see to receive the title of archbishop.

The dissensions between the archbishops and the kings, the outbreak of the jurisdiction over Tarragona granted to the bishops who had begun its resettlement, continued during the time of Alfonso II, who bestowed the city as a dowry on his wife, Doña Sancha, and of Pedro IV (the Ceremonious), who, after forcibly seizing the dominions of the archbishop, repented in his last illness and restored to St. Tecla, patroness of the city, all that he had unjustly acquired. By special privilege of the pope, all the kings of Aragon were crowned at Saragossa by the archbishop of Tarragona, until the metropolitan See of Saragossa was re-established. When Jaime I, a crusader, took the oath, the Archbishop of Tarragona, Don Aspargo Barca, carried him in his arms. Although he was far advanced in years, he wished to accompany the king in his expedition to conquer Majorca, and when Don Jaime refused his consent, he contributed a thousand marks in gold and twelve hundred armed men. In 1242 a provincial council was convoked at Tarragona to regulate the procedure of the Inquisition and canonical penalties. In 1312 a provincial council was assembled in the Corpus Christi Chapel of the cathedral cloister, to pass sentence on the Templars, whom it declared innocent. Don Pedro Zagarria, Archbishop of Tarragona, was one of the arbitrators at Caspe. One of the most celebrated prelates of Tarragona, Don Antonio Agustín (d. 1586), a native of Saragossa, was an eminent jurist, consultum and numismatist. He put an end to the struggles referred to in "Don Quixote", between the Narros and Cadells factions, which had disturbed the peace of Catalonia.

The cathedral, it is believed, was begun by St. Olegarius. The edifice is solid and elegant, combining the Romanesque, Arab, and Gothic styles of architecture, producing a very original and unique effect. Its façade is composed of three sections, and the ground plan, in the form of a Latin cross, has three naves and a wide aisle. The right nave is the chapel of St. Tecla, patroness of the city, begun in 1706 under the direction of José Prats and finished in 1776. The baptismal font is a magnificent marble basin found in the ruins of the palace of Augustus. The chapter house, celebrated for the councils held there, has a Byzantine door and a notable pavement.

Among the buildings worthy of mention are the Churches of San Pablo and Santa Tecla, the convent of the Poor Clares, near the walls, that of Santa Teresa, and the church of the Capuchins, the parish church of the port. The former Convent of San Francisco has been converted into government offices and a secondary school, the Jesuit college turned into barracks, their church, however, having been restored to them. The convent of the Dominicans is now the town hall, and the convents of the Mercedarians and Carmelites turned over to military uses. The archiepiscopal palace is situated on the site of the ancient tower, one tower of which still remains. The palace was rebuilt by Don Romualdo Mon y Valarde (1815–19). Near the sea, in the Roman amphitheatre, is the edifice called el Milagro (the Miracle), which belonged to the Knights Templar. It was afterwards used by the Trinitarian Fathers, and has since been converted into a penitentiary. The remains of many Roman buildings are to be found at Tarragona; the walls, the capitol, or citadel, the forum, the palace of Augustus, called the house of Pilate, the circus or amphitheatre, the aqueduct, known as the Puente del Diable, the so-called tower, or sempiternum, the arch of Sura, or of Bars, and the Aurelian Way. There is also a good archaeological museum. The conciliar seminary of San Pablo and Santa Tecla was founded in 1570 by the cardinal archbishop, Gaspar de Cervantes.
Tarsicius, a metropolitan see of Cilicia Prima. It appears to have been of Semitic origin and is mentioned several times in the campaigns of Salamanasar and Sennacherib. The Greek legend connects it with the memory of Sardanapalus, still preserved in the Dunuk-Taob, called tomb of Sardanapalus, a monument of unknown origin. When in the year 401 B.C., the younger Cyrus marched against Babylon, the city was governed by King Sennacherib. The name of the Persian monarch Tarsus was already Greek and had a tendency to become more and more Hellenized. Alexander the Great came near meeting his death there after a bath in the Cydnus, the modern Tarsus-Irmak. At literary schools, Tarsus rivalled Athens and Alexandria. It was then comprised in the kingdom of the Seleucides, took the name of Antioch, and the Bible (II Mach., iv, 30) records its revolt against Antiochus IV Epiphanes, about 171 B.C. Pompey subjected it to Rome. To flatter Caesar it took the name of Julopolis; it was there that Cleopatra and Anthony, and with some of their retinue, passed the famous feasts which they gave during the construction of their fleet. Tarsus was already the caput Ciliciæ, the metropolis, where the governor resided. When the province was divided it remained the civil and religious metropolis of Cilicia Prima. The greatest glory of Tarsus is that it was the birthplace of St. Paul (Acts, i, 11; xx, 39; xxii, 3), who took refuge there after his conversion (Acts, ii, 30), and wasconsolidated by Barnabas and Saul, who laboured there in 46 A.D. It is probable that at this time a Christian community was established there, although the first bishop, Helenus, dates only from the third century; he went several times to Antioch in connexion with the dispute concerning Paul of Samosata (Eusebius, 'Hist. eccl.', vi, xvi, vii, v). P. Quin (Oriens Christianus, 1879, ii, 76, 79) makes the interesting conjecture that twenty-two of its bishops, of whom several are legendary. Among them are Lupus, present at the Council of Ancyra in 314; Theodorus, at that of Nicea in 325; Hesiodus, condemned at Ephesus, and who appealed to the pope in 433; above all the celebrated exorcist Diodorus, teacher of Theodore of Mopsuestia and consequently one of the fathers of Nestorianism. From the sixth century the metropolitan See of Tarsus had seven suffragan bishoprics (Echtes d'Orient, X, 145): the Greek archdiocese is again mentioned in the tenth century (op. cit., X, 98), and has existed down to the present day, being comprised in the Patriarchate of Antioch. One of the first Tarsus many martyrs were put to death there, among them being St. Pelagia, St. Boniface, St. Marinus, St. Diomedus, and Sts. Cercylos and Julitta; several Roman emperors were interred there—namely, Tacitus, Maximinus Daza, and Julian the Apostate. The Araxes took possession of Tarsus from the Persians in the seventh century and kept it until 965, when Nicephorus Phocas annexed it again to the Byzantine Empire. The union continued for nearly a century. The crusaders captured it again from the Turks in 1097, and then it was disputed between Latins, Greeks, and Armenians of the Kingdom of Lesser Armenia; the last became definitively masters until about 1350, when it was sold to the Egyptians. Since then Tarsus has belonged to the Musulmans. About the end of the tenth century, the Armenians established a diocese of their rite, which still exists; St. Nerses of Lamborn was its most distinguished representative in the twelfth century. Tarsus, which has preserved its name, is a caza of the vilayet of Adana on the railroad from Adana to Mersina; the city numbers about 18,000 inhabitants, of whom 10,000 are Musulmans, the remainder are Greek or schismatic Armenians. Our few Catholic authors do not mention it.

S. Vallee.

Tartaglia (Tartalea), Niccolo, Italian mathematician, b. at Brescia, 1535; d. at Venice, 13 December, 1557. His father, Michele Fontana, died in 1506, leaving his widow, two sons, and two daughters in poverty. As a result of a blow across the mouth inflicted by some French soldiers at the sack of Brescia in 1512, Niccolò stammered in his speech, thus obtaining the nickname of Tartaglia, afterwards assumed by himself. He was self-taught. In 1521, he was teaching mathematics in Verona and in 1534 he went to Venice. By 1541, he had achieved the remarkable triumph of solving the cubic equation. In a mathematical contest with Antonio del Fiore, held in 1535, he had shown the superiority of his methods to the method previously obtained by Scipione del Ferro (1526) and known at that time to del Fiore alone. The glory of giving these results to the world was not for Tartaglia, as Cardan (q. v.) having in 1539 obtained a knowledge of them under the most solemn pledges of secrecy, inserted them, with some additional and with some mention of indebtedness, in his "Ars Magna", published in 1545. A long and bitter controversy ensued in which Cardan was supported by his pupil Ferrari. In 1548 Tartaglia became professor of Euclid at Brescia but returned, after eighteen months, to Venice, where he died. In his will he ex-
pressed the request to be buried in the Church of San Silvestro, which wish, according to Dr. Giuseppe Tari
tini ("Curiosità Veneziane") Venice, 1894), was fulfilled.

The published works of Tartaglia include: "Nuova Scienza", dealing with gunnery (Venice, 1537, French
translation by Rieffel, Paris, 1845–6); the first Italian translation of Euclid (Venice, 1543);

the earliest Latin version of some of the works of Archi
medes (Venice, 1543) "Questi ed Invenzioni Diverse", including problems in bullet
istics and fortification
(Venice, 1546, new ed., 1554); "Regola Generale per sol
levare ogni ad
nata Nave, intitolata la Travgliata Invenzione" (Ven-

ice, 1551, English version published by Salisbury, Lon-
don, 1564); "Ra
gionamenti sopra la Travgliata Invenzione" (Ven-

ice 1551); "Trattato Generale di Numeri e Misure" (Venice, 2 pts. in 1566, 4 pts. in 1576); "Trattato di ar
i

metica" (Venice, 1566, French tr. by Gosselin, Paris, 1578); "Opere del Famosissimo Nicolò Tartaglia" (Venice, 1606); and an English translation, by Lucas in 1588, of his writings on gunnery. A letter of Tartaglia's is in the archives of Urbino and another letter and his will are in the archives of Venice.

Tartaglia's "Questi" (Venice, 1554); Bittanti, Discorso di Nicolò T

taglia (Brescia, 1851); Buoncompagni, ed., Cremona e Bell

trami, Intorno ad un Testamento Inedito di Nicolò Tartaglia in Col

Tartini, Giuseppe, violinist, composer, and theoretist, b. at Pirano, Italy, 12 April, 18; d. at Padua, 16 Feb., 1770. He retired to the

desire of his parents that he enter the Franciscan Order, and matriculated at the University of Padua in

1710 as a student in jurisprudence. It was not long before he abandoned this for the study of music, especially the violin, and the art of fencing, in which latter he soon became a master. Having secretly mar
ried a relative of Cardinal Corno, and being accused of abduction, he fled to Assisi, where he found an asylum and a guide of the first order for his musical studies in the person of Padre Boemo. After two years he emerged from his seclusion—the charge against him having been proved—sent him to Padua, settling later in Ancona for several years. There he developed one of the greatest violin players of all time, and also continued his theoretical studies. In 1727 he was appointed solo violinist and orchestra conductor at the Cathedral of Padua, a position which he held for the entire period of twenty years spent in the service of Count Khayke at Prome, until the end of his life. He refused many flattering invitations to visit other countries. In 1728 Tartini established at Padua a school for violin-playing which has given to the world some of its greatest masters, among them Nardini, Pasqualino, Bini, and many others. The manner of bowing originated by Tartini is still standard. He published an enormous number of compositions for the violin and for several combinations of instruments. Of the former many are the repertories of present-day violin virtuosi. His single composition for the violin was a "Miserere" for four, five, and eight voices, which was performed by the Sistine choir in 1763. Although not the first to discover the so-called combination tone, or third tone, which results when two tones forming a perfect consonance are sounded, his name has always been associated with this discovery because he made it the basis of a new system of harmony. This system he laid down in his "Trattato di musica" in 1754.

Joseph Otten.

TASCHEREAU, Elzéar-Alexandre, Archbishop of Quebec and first Canadian cardinal, b. 17 February, 1820, at La Beauce, Province of Quebec; d. 1898, at Quebec. He entered the Seminary of Quebec in 1828, and graduated after brilliant studies in 1836. While pursuing further studies in Rome he was on the point of joining the Benedictines, owing to his friendship with Dom Guéranger. He reconsidered his decision, however, and returned to Quebec, was ordained priest at La Beauce, 10 Sept., 1842, and thenceforth devoted himself to the work of the seminary. He was successively occupied as disciplina

rian and professor, and as member of the seminary council was one of the founders of Laval University in 1852. In 1854 he again studied in Rome, residing at the French Seminary, where he took the degree of Doctor of Canon Law in 1856. He was superior, 1860–68. In 1869 and 1864 he returned to Rome in defence of the rights of Laval, and again in 1869, as theologian of Archbishop Baillargeron during the Vatican Council. In the same year he was re-elected superior of the seminary and Rector of Laval University, and in 1871 was made Archbishop of Quebec. In 1888 he gave leisure to the pastoral, taking his title from Santa Maria della Vittoria. He was particularly zealous in educational matters; the Seminary of Quebec found him at all times a devoted protector; he saved from extinction the classical college of Ste. Anne de la Pocatière, and aided the growth of new colleges at Lévis and Chicoutimi.

Mgr. Taschereau's episcopal administration was very fruitful. He founded at Quebec the Sacred Heart Hospital, canonically erected forty parishes, founded thirty missions, established various devotions, procured the creation of an episcopal see at Chicoutimi, consecrated seven bishops, ordained more than three hundred priests, convened three provincial councils, and introduced the Redemptorist Order into his dio
cese, giving it charge of the parish of St. Patrick, and of the shrine of Ste. Anne de Beaupré. He or

organized the memorable celebration of the second centenary of the foundation of the See of Quebec, con

secrated the new basilica of Ste. Anne de Beaupré, and performed the solemn translation of the remains of Mgr de Laval. He was much devoted to the Holy See, to which he paid episcopal visits in 1872, 1884, and 1888. He also welcomed at Quebec on three oc

casions the representatives of the Holy See, Mons.
TASMANIA

See HOBART, ARCHIDIOCESE OF.

Tasmania, Saint, Irish saint, b. in the first decade of the fifth century; d. about 497. He was one of St. Patrick's artificers. When St. Patrick founded the Church of Raholp he placed St. Tassach over it as first bishop. This ancient monastic site (Rath Na Tomhain, or an old fort, near the town of Clones) is the home of the ancient Saint. Its church, the cathedral of Clones, is a wonderful old building, a true relic of the past. In the year 1817, Tassach was canonized, and his feast is celebrated in the Church.

H. TETU.

Tassach's rule is for ever memorable for the fact that he was selected by the national Apostolic see to be with him in his last moments and to administer the Holy Viaticum. His great moment is chronicled in the book, "The Martyrology of Donegal!"; "Tassach of Raholp gave the Body of Christ to Saint Patrick before his death in the monastery of Saul". His feast is on 14 April.

Tassé, Joseph, writer and journalist, b. at Montreal, 23 Oct., 1848; d. 17 Jan., 1895; son of Joseph, and Adeline Dauvot. He received a classical education at Bourget College, Rigaud, Province of Quebec, and began his literary career at nineteen, as chief editor of "Le Canada", a tri-weekly, then daily, newspaper at Ottawa. In 1869 he became editor of "La Minerve", Montreal, the foremost Conservative organ, resigning in 1872. In 1878 he was elected member of the House of Commons for the City of Ottawa, and re-elected in 1882. He was appointed to the Senate in 1891. Besides contributing over a hundred articles to "La Revue canadienne", and presenting several important historical articles to the Royal Society of Canada, he wrote the following highly-appreciated works: "Phlémon Wright ou colonisation et commerce de bois" (1871); "Le chemin de fer canadien du Pacifique" (1873); "La Vallée de l'Outaouais" (1873); "Le 38e fauteuil" (1891). His most important work is "Les Canadiens de l'Ouest" (1878). Tassé lectured frequently and effectively in Canada and the United States. His style is characterized by clearness and warmth.

W. H. GRATTON-FLOOD.

Tassali, René-Prospé, French historian, belonging to the Benedictine Congregation of Saint-Maur, b. at Lonlay, in the Diocese of Le Mans, in 1697; d. at Paris, 1777. He was professed at the Abbey of Jumièges in 1718. United in close friendship with Saint Joseph, brother-religious, Dom Toussaint, he collaborated with him on a new edition of the works of Theodore the Studite, which task led them to visit Rome together. Their work was interrupted by a dispute between the Benedictine Abbey of St. Ouen and the church which was supported by the erudite Sass. Tassini and his friend wrote against Sass in defence of their brethren. They then resided at the Abbey of Rouen where they remained till 1747, when they were summoned to the convent of Saint-Germain-des-Prés, at Paris, by their general. To defend the authenticity of the deeds of their abbey they were obliged to make a deep study of diplomacy, a science dealing with diplomats, charters, and other official documents, which Mabillon had already set forth in his celebrated Latin work, "De re diplomatica". As a result of their researches they wrote the "Nouveau traité de diplomatique", six quarto volumes, which appeared between the years 1750 and 1765. Toussaint having died before the second volume was entirely printed, Tassin completed the great work alone, but he wished the name of his friend to be associated with all the volumes; these, consequently, are known like the first two as the work of "two Benedictines". Later Tassin wrote his "Histoire littéraire de la Congrégation de Saint-Maur" (Paris and Brussels, 1770, in quarto), a model history containing the lives and list of works, printed or in MS., of all the learned authors of the Congregation, from its formation (1618) till the time when Tassin wrote, together with a list of their works, printed or in MS. Several MS. works of Tassin are in the National Library at Paris.

Lionel Lindsay.

Tassino, Torquato, Italian poet, b. at Sorrento near Naples in 1544; d. at Rome, in 1595; son of Bernardo Tassino, who was also an author and of noble family, and of Porizia di Rossi. He enriched the Italian literature of the Renaissance with an epic glorifying the Crusades. The depth of his Catholic feeling accords well with the growing resistance to the Reformation depicted at Rome in the latter half of the sixteenth century. Educated at the Court of the Dukes of Urbino and later at Venice and the University of Padua, and soon carried away by the whirl of frivolous society, he manifested great procuracy, composing his poem "Rinaldo" before reaching the age of twenty. Already he had determined to celebrate in verse the prowess of Godfrey de Bouillon, and had composed the entire first canto. When he had settled at Ferrara in the suite of Cardinal Louis d'Este, he resumed his work. In 1570 he accompanied the cardinal on a voyage to France, and returned in time to hear at Rome the news of the victory of Lepanto. The atmosphere was suitable for the composition of the "Gerusalemma liberata", on which Tasso continued to work after his return to the Court of Duke Alphonso II at Ferrara. Moreover he composed an excellent pastoral, "Aminta" (1573). The poet had now abandoned the practice of consulting some learned friends, among others Mgr. Scipio Gonzaga, on the definitive form of his great work, and was very careful not to violate the rules of good literature then commonly accepted.

After 1575, in addition to his literary anxieties, Tasso suffered from intense religious scruples. His life had not been free from reproach; he had frequently been...
carried away by the storms of passion, and now he became an almost helpless victim of remorse of conscience. He was tormented by the thought of the liberties he had allowed himself in his poems, and consulted the inquisitors. Months of painful doubt followed, with happily a little respite which allowed him to complete his work, some dangerous passages of which he wished to justify by allegorical interpretation. In 1587 his anxieties returned with increased intensity. Court life became unsuitable for him under the circumstances. He began to travel and left Duke Alphonso, but only temporarily, for he returned a prey to a kind of mania about persecution which induced the duke, who had lost patience, to send him to St. Anne’s lunatic asylum. The publication of the “Gerusalemme liberata” was undertaken by his friends Angelo Ingegneri and Febo Bonna, the latter working almost in accordance with the wishes of the poet. When at length Tasso left the asylum and was received by the Gonzaga, he began about 1586 to revise his poem and after six years he transformed it into the “Gerusalemme conquistata”, an inferior work. It was, however, more satisfactory to certain critics, who had taken umbrage at the “Gerusalemme liberata”. Finally, accepting the invitation of Cardinal Aldobrandini, Tasso went to Rome, where he died in the Convent of Sant’ Onofrio, under the protection of the pope, the day before he was to be crowned as poet laureate.

Monument of Tasso in the Convent of S. Onofrio, Rome.

Gerusalemme liberata (Florence, 1865), critical edition by Solertti; translations of the epic by Smith (London, 1853) and James (London, 1855); Opere minori di T. Tasso (Bologna, 1865); Prosse diverse (Florence, 1872); Lettere di T. Tasso (Ravenna, 1880); T. Tasso e i benedettini di Gallassingi (Rome, 1888-1897); Bruzzi, Tasso and his Time (London, 1907).

GIUSEPPE GALLAVRESI.

TASSONI, ALESSANDRO, Italian poet, b. at Modena in 1565; d. there in 1535. He spent his life in the service of prelates and princes in Italy, acting as secretary or in some similar capacity. His fame depends chiefly upon the undoubted success of his mock-heroic poem, the “Sciccia rapita” (1614), which deals in a pretended serious way with a mighty struggle between the citizens of two adjoining towns in Italy over the purloining of a well-bucket. The comic and the serious are skillfully blended throughout and the methods of the ancient epic description are faithfully copied. While in a measure the poem develops gorms of the mock-heroic already perceptible in Italian literature back as far as the fourteenth century, it is more particularly significant as marking a natural outcome of poetizing an chivalrous, romantic subject. Ariosto and Tasso had treated, once these subjects ceased to be regarded with any degree of seriousness as meet for artistic treatment. The “Sciccia rapita” belongs to the same category as the ancient “Battle of the Frogs and Mice”, Lope de Vega’s “Catomaquia”, Boccaccio’s “Lufrin” and Pope’s “Rape of the Lock”, and ranks worthily with them. The patriotic Italian’s dislike of the arrogant invading Spaniard is clear in his “Philippiche contro gli spagnuoli”; his views on literary criticism and his disapproval of the bad taste of his time may be seen in his “Considerazioni sopra le rime del Petrarca” and his “Pensieri diversi”. There are various editions of the “Sciccia rapita”, e. g., Paris (1822); Modena (1744), with additions by Mazzoni; London (1857); and by Carducci; Florence (1887); with the addition of certain minor writings in prose and verse.

J. D. M. FORD.

TATIAN, a second-century apostate about whose antecedents and early history nothing can be affirmed with certainty except that he was born in Antioch and that he was trained in Greek philosophy. While a young man he travelled extensively. Disgusted with the greed of the pagan philosophers with whom he came in contact, he conceived a profound contempt for their teachings. Repelled by the grossness and immorality of the pagans and attracted by the holiness of the Christian religion and the simplicity and singleness of the Scriptures, he became a convert, probably about A. D. 180. He joined the Christian community in Rome, where he was a “hearer” of the apostles. He is no record of his being led by the latter. While Justin lived Tatian remained orthodox. Later (c. 172) he apostatized, became a Gnostic of the Encratite sect, and returned to the Orient. The circumstances and date of his death are not known. Tatian wrote many works. Only two have survived. One of these, “Oratio ad Graecos” (Προς Ἑλλήνας), is an apology for Christianity, containing in the first part (i-xxxii) an exposition of the Christian Faith with a view to showing its superiority over Greek philosophy, and in the second part a demonstration of the high antiquity of the Christian religion. The tone of the apology is bitter and denunciatory. The author inveighs against Hellenism in all its forms and expresses the deepest contempt for Greek philosophy and Greek manners.

The other extant work is the “Diatesseron”, a harmony of the four Gospels compiled in continuous narrative. The title was given by the editor, Tatian, to indicate the union of the four Gospels into one. The question regarding the language in which this work was composed is still in dispute. Lightfoot, Hilgenfeld, Bardenhewer, and others contend that the original language was Syriac. Harnack, Burkitt, and others are equally positive in thinking that it was composed in Greek and translated into Syriac at a later time of Tatian. There are only a few fragments extant in Syriac but a comparatively full reconstruction of the whole has been effected from St. Ephraem’s commentary, the Syriac text of which has been lost, but which exists in an Armenian version. Two revisions of the “Diatesseron” are available: one in Latin preserved in the “Codex Fuldenensis” of the Gospels dating from about A. D. 545, the other in an Arabic version found in two manuscripts of a later date. The “Diatesseron” or “Evangelio de Mahellete” (the Gospel of the mixed) was practically the only gospel text used in Syria during the first and fourth centuries. Rabba, Bishop of Edessa (411-435), ordered the priests and deacons to see that every church should have a copy of the separate Gospels (Evangelio de Mpharreshe), and Theodoret, Bishop of Cyprus (423-457), removed more than two hundred copies of the “Diatesseron” from his diocese. Several other works written by Tatian have disappeared. In his apology (xv) he mentions a work “on animals” and (xvi) one on the “nature of demons”. Another work in refutation of the calumnies against the Christians (xl) was planned but perhaps never written. He also wrote a “Book
TASSO'S CELL IN THE CONVENT OF S. ONOFRIO, ROME
of Problems" (Eus., "Hist. Eccl.", V, 13), dealing with the difficulties in the Scriptures, and one "On Perfection according to the Precepts of Our Saviour" (Clem. Alex., "Strom.", III, 12, 81).

Patrick J. Braly.

Tatyla, Jacobo. See Sansovino, Andrea Conucci.

Tatwin (Tatijini), Saint, Archbishop of Canterbury; d. 30 July, 734. A Mercian by birth, he became a monk at Briduun in Worcestershire. The Venerable Bede describes him as "a man illustrious for religion and prudence and excellently instructed in the sacred letters" (Hist. Eccl., V, xxii). He was elected to succeed Brithwald as Archbishop of Canterbury, and was consecrated there on 10 June, 731, afterwards receiving the pallium from the pope. (Symeon Dunelm., "Hist. Reg.", II, 30). During his brief episcopate of three years he blessed Notholda, the new abbey of St. Augustine's Abbey, which had succeeded Tatwin's, and he consecrated Bishop Lindsey and Selesy. After his death miracles were wrought through his intercession, an account of which was written by Goscelin. Certain rhymed encomiastic or riddles published by Giles in "Annales Bedwii", 1551, are ascribed to him, and he is said to have written some poems in Anglo-Saxon which have perished.

Taubaté, Diocese of (de Taubaté), in Brazil, South
America, established on 29 April, 1908, as a suffragan of São Paulo. The present incumbent and first Bishop of Minas N. de A. de Avila e Silva (b. 4 July, 1869; consecrated 8 Sept.,
1909) entered upon his duties on 21 Nov., 1909. In
the town of Taubaté, there are, besides the cathedral,
which is one of the finest in Brazil, the churches of
Sant' Anna, Nossa Senhora de Pilar, and Santa Clara,
built in 1788, and the chapels of the San Joseph in
San Isabel Hospital, and of the Mendicant Asylum.
The Catholic educational institutions in Taubaté are:
the Seminario Menor, under the Capuchin Fathers;
the College of Nossa Senhora do Bom Con-
selho, and the San Joseph School, both under the Sisters of
St. Joseph; the College Inmaculado Coração de Maria, and
the College de Santa Veronica, admin-
istered by the Third Order of St. Francis. The reli-
igious orders in the diocese are: Capuchins; Fran-
ciscans; and Sisters of St. Joseph. There are seven
religious associations or brotherhoods. The official
organ of the diocese is "O Labaro", which was
founded by Mgr. Nunez de Avila.

For bibliography see Brazil.

Julian Moreno-Lacalle.

Tauler, John, German Dominican, one of the
greatest mystics and preachers of the Middle Ages, b.
at Strasbourg about 1300; d. at the same place, 16
June, 1361. He was the son of a prosperous citizen of
that city. Apparently while still a youth he entered the
Dominican Order at Strasbourg, because according
to his own confession the ascetic life of the order at-
attracted him. It is possible that while taking the cus-
tomy eight-years' course of study at the monastery
he heard Eckhart preach. When a student at the uni-
versity of the order at Cologne, he became more closely
acquainted with Eckhart. In the same way he prob-
ably came to know Henry Suso at Cologne. Whether
he also studied at Paris is not certain. Finally he
returned from Cologne to Strasbourg. From about
1339 to 1347 or 1348 he lived at Basle where he and
Henry of Nordingen were the centre of the large
society called the Friends of God of Basle; these were
persons who favoured the mystical life and who gave
themselves this name from St. John, xv, 15. Tauler
then returned to Strasbourg as a preacher. Christina
Ebner praises his fiery tongue that kindled the entire
world; Rulman Merswin those him as confessor.
Later he lived for some time at Cologne. During the
last period of his life he was again at Strasbourg.

The "Meisterbuch" of the "Friend of God of the
Upland" gives an account of a master of the Scriptures
who attracted great attention in 1346 by his
preaching. One day a layman accused the master of
seemingly seeking his own honor rather than that of
God, saying also that probably he had not himself
begotten the burden of the inner voice. In making
any stipulations the master allowed himself to be
guided by the layman and learned from him to
forget the world and himself, to turn all his thoughts
upon God and to lead a life of the Spirit. For two
years he lived in seclusion. When after this he
preached again for some time and heard people say
that forty of his hearers went into convulsions and
twelve could hardly be revived. After the master
had lived and laboured for nine years more he fell
dangerously ill, and calling for the layman gave him a
written account of his conversion. To this account the
layman added five sermons of the master that he had
copied. It was customary at an earlier date to re-
gard Tauler as this master, and the "Meisterbuch"
was from the year 1498 included in the editions
of Tauler's sermons. In more recent times Preger has
also supported this opinion. But in the treatise
"Tauler's Bekenntung" Denifle has produced strong
proofs against attributing to Tauler the role of this
master; this view is now generally maintained.
The story told by the later Strasbourg chronicler, Speckle
(d. 1589) is a tissue of falsehoods; it relates that Taul-
er opposed the pope and the interdict that the pope
had laid upon Strasbourg in the struggle between the
papacy and the Emperor. Tauler's writings have not yet been subjected to a
thorough critical investigation. Much that is at-
thrusted to him is doubtful, much not genuine. He
certainly did not write the book of the "Nachahmung
der armen Lebendes Christi" or "Von der geist-
lichen Armen". The "Exercitatio vita et pas-
sione Jesu Christi" and the spiritual songs attributed
to him are also spurious. At the most he only wrote
a small part of the "Medulla anime" or of "In-
stitutiones divinas". Only the sermons, therefore, re-
main as the actual works of Tauler. The first edition
appeared in 1498 at Leiden, the second at York and
the second edition (Basle, 1521-22) added 42 more
some of which, however, even in the opinion of the editor
of the edition, were not Tauler's; in the third edi-
tion (Cologne, 1543) 25 new sermons were added, part
of which are also spurious. The Cologne edition was
translated into and rather popularised in Latin by
Laurentius Surius (Cologne, 1548). This Latin edi-
tion was the copy used for translations into various
foreign languages and for both Catholic and Protes-
tant translations into German. The modern editions
(Frankfort, 1826, 1864, 1872; Berlin, 1841) are based
on the early German editions. Lately, Ferdinand von
Bergher has prepared an edition (Berlin, 1910) based
on the Engelberg manuscript (the only one made at
Cologne and the oldest one that may perhaps repre-

XIV.—50
sent the collection revised by Tauler himself), also on the Freiburg manuscript, and on copies of the three manuscripts burned at Strasburg in 1870. This edition contains 81 sermons. The sermons are among the finest productions of the German language, of German fervour of belief, and of profound spiritual feeling. The language is quiet and measured, yet warm, animated, and full of imagery. Tauler is not so speculative as his teacher Eckhart, but he is clearer, more practical, and more adapted to the common people; with all this he united St. John's acumen. The expression used by Christina Ebner, that he had set the whole world afame by his fiery tongue, does not mean that he was a preacher of fiery, entrancing eloquence, but a preacher who warmed and inflamed the hearts of his hearers by the quiet flame of the pure love that burned in his words.

The centre of Tauler's mysticism is the doctrine of the visio essentiae Dei, the blessed contemplation or knowledge of the Divine nature. He takes this doctrine from Thomas Aquinas, but goes further than the latter in believing that the Divine knowledge is attainable in this world also by a select man, and should be sought by every means. God dwells within each human being. In order, however, that the transcendent God may appear in man as a second subject, the human, sinful activities must cease. Aid is given in this effort by the light of grace which raises nature far above itself. The way to God is through love; God reveals his highest development by His presence. Tauler gives advice of the most varied character for attaining that height of religion in which the Divine enters into the human subject. Something needs to be said as regards Tauler's position towards the Church. Luther praised him greatly, and Protestant have always had a very high opinion of him, and have included him among the "reformers before the Reformation". However, it is now conceded by Protestants that he was "in reality entirely mediavial and not Protestant". He was in fact a dutiful son of the Church and never thought of withdrawing his allegiance. He expresses his opinion very plainly in his sermon on St. Matthew. He set his face against all heresy, especially that of the Brethren of the Free Spirit. What attracted Luther was probably not Tauler's doctrine itself, but only here and there some subordinate thought. Perhaps it pleased him that the word indulgence was used only once in his works. Finally, he joined the congregation of the Oblates founded by Cardinal Manning at Bayswater, and in 1883 he was ordained priest. Three years later he left the Oblates, and went on the mission at Stoke Newington in North London. Here he built a new church, which was opened in 1888; but shortly afterwards he received serious injuries by accidental fall of some scaffolding, which brought on partial paralysis, and permanently incapacitated him from active work. He continued, however, to be busy with his pen. He was a man of wide reading, and wrote on a large number of subjects. For a while he lived at Bruges, where he founded and edited "St. Luke's Magazine"; but it had only a brief existence. Having partly recovered his health, he returned to England and devoted himself to the Jesuits and Benedictines, respectively, were to have been followed by a similar one on the English secular clergy, had he lived. Though he always professed to aim at setting forth truth unadorned and regardless of consequences, his partisan tone and apparent prejudice gave offence to many. Those who knew him best, however, testified to his singleness of purpose and genuine piety. He was also an authority on Church music and liturgy. His death took place somewhat suddenly, in London, from heart failure, at the age of fifty.

Publications: "History of Church Music" (London, 1817); "Lead Kindly Light" (London, 1893); "English Black Monks of St. Benedict" (London, 1898); "History of the Jesuits in England" (Lonndon, 1901); "Thomas Wolsey" (London, 1901); "Little Office B.V.M." (London, 1903); "The Law of the Church" (London, 1906); numerous articles in "Downside Review", "St. Luke's Magazine", "Irish Ecclesiastical Record", etc. He also translated Baccus, "The Divine Office" (1888); and Bourdalo, "The Lord's Prayer" (1894).

Bernard Ward.

Taveggia, Santino. See Krishnagar, Diocese of.

Taverner, John, composer, b. in the County of Norfolk, England, about 1475; d. at Boston, England, 1535 or 1536. He was organist of Boston Parish Church from 1500 to 1525, when he was appointed master of the choristers at Cardinal College, Oxford; and then to the Cardinal Wolsey. His name is famous in the choir of the choristers was fully equalled, if not eclipsed, by his powers as a composer of masses and motets. He continued at Oxford till 1533, and then retired to Boston. On the strength of a statement of Fuxe, in his so-called "Book of Martyrs", Taverner has been branded as a heretic, but it is more than probable that Fuxe confounded the composer with John Taverner, a correspondent of Cromwell, or else with Richard Taverner, a Canon of Wolsey's College, Oxford, who revised Matthew's Bible. He wrote nothing for the English Service, but he has bequeathed three masses, as well as several motets of others, and Latin Magnificats, that stamp him as a composer of the first rank. His beautiful four-part "In nomine" has been altered to fit two English anthems, "O give thanks" and "In trouble and adversity", in Day's "Morning and Evening Prayer" (1563). He contributed three songs to Wykyn de Worde's English song book, printed in 1530; but by far the greater part of his work is sacred. His "Gaude Maria Virgo", for three voices, and his "Mater Christi", for five voices, are good examples of his style, but he is best known by his Western Wynde mass. Although obscure and latter in life, the sixteenth century, Taverner showed some good pioneer work, which was afterwards successfully developed by Shepherd, Byrd, Tallis, and Whyte. He must not be confounded with a later John Taverner, who was appointed professor of music at Gresham College in 1610.

Tavistock Abbey, on the Tavy River in Devonshire, England, founded for Benedictine monks in 961 by Earl Ordgar of Devon, and completed by his son Oredulf in 981, in which year the charter of confirmation was granted by King Ethelred. It was endowed.
with lands in Devon, Dorset, and Cornwall, and became one of the richest monasteries in the west of England. The church, dedicated to Our Lady and St. Remigius, one of the early saints of Devon, was burned by the Danes in 997, but magnificently rebuilt under Livingus, the second abbot. He and his successor Aldred both became bishops of Worcester, and the latter is said to have crowned William the Conqueror. The thirty-sixth abbot, John Dymynston, was granted 458 to use as a centre around pontificalia; and the thirty-ninth, Richard Banham, was made a lord of Parliament by Henry VIII in 1513. Twenty-five years later the last abbot, John Peryn, with twenty monachs, surrendered the monastery to the king, receiving a pension of a hundred pounds. The abbey revenues at the dissolution were estimated at 2902. The monastic buildings, with the borough of Tavistock, were granted to John Lord Russell, whose descendant, the Duke of Bedford, still owns them. Nothing is left of the monastery except the refectory, two gateways, and a porch; the splendid abbey church has entirely disappeared.

D. O. HUNTER-BLAIR.

Tavium, a titular see in Galatia Prima, suffragan of Anncyra. Tavium, or Tavia, was the chief city of the Galatian tribe of Trocmi, and owing to its position on the high roads of commerce was an important trading post. There are still extant some of the coins of Marcus Aurelius and Elagabalus. In the area of Tavium there was a colossal statue of Jupiter in bronze, greatly venerated by the Galatians. There was some doubt about the exact site of the city, but it is to-day generally believed to be the ruins situated close to the village of Nefes Keui, inhabited during the winter by nomadic Turkish tribes, lying in a very fertile plain east of Halys in the caza of Songorluou and the vilayet of Angora. These ruins were partly used in building the neighbouring village of Yuzgd. We find there the remains of a theatre and possibly of a temple of Jupiter; these have a number of inscriptions, mostly Byzantine. In the ‘Notitia Episcopatuum’ this see is mentioned under ‘Thaumatis’ as the first sufficiency in Anncyra. We have the names of five bishops: Dicaicus, present at the Councils of Nicaea and Nice; Julian, at the Robber Synod of Ephesus (449), and at the Council of Chalcedon (451), and a signer of the letter from the Galatian bishops to the Emperor Leo (458); Anastasius, present at the Council of Constantinople (553); Gregory at the Council in Trullo (692); Philaretus at Constantinople (860).

Taxis Innocentiana, a Decree issued by Innocent XI, 1 Oct., 1675, regulating the fees that may be demanded for various acts, instruments, or writings. According to this Decree bishops or their officials are not allowed to accept anything though freely offered (1) for ordinations or anything connected therewith, such as dimissorial letters, etc.; (2) for institution to orders or major dignities, etc. In this last case, however, alms to be applied to pious uses may be demanded. A moderate charge, fixed by Innocent, may be exacted by the chancellor for expediting necessary documents, except those granting permission to say Mass, administer the sacraments, preach, etc. The Taxis Innocentiana is silent in regard to contentious matters, e.g. the charge for copies of the acts of ecclesiastical trials. Some maintained that the regulation was formulated for Italy only, but it evidenced the mind of the Church, and at least in substance was universal application. The Sacred Congregation of the Council on 10 June, 1896, modified the prescriptions of Innocent, decreeing that while taxes or fees may be imposed according to justice and prudence in matters pertaining to benefices and income, especially matrimony, yet the sacraments themselves must be conferred without charge and pious customs connected therewith observed. In other matters not directly affecting the administration of the sacraments, e.g. dispensations from the bans, it is decreed that: (1) laudable customs must be observed and allowances made for various circumstances of time, place, and persons; (2) the poor are not to be taxed; (3) in any case the amount demanded must be moderate, so that persons may not be deterred thereby from receiving the sacraments; (4) as regards matrimony the exacting of a particular charge there would be danger of concubinage; (5) in regard to benefices the tax must be in proportion to the fruits or income of the benefice in question; (6) all such fees are to be determined not by individual bishops but in provincial council, or at least in a special deliberation of the ordinary for the particular purpose. The approval of the Holy See is required for the fees determined upon. Rome’s sanction is given tentatively for five years to Italy, for ten years to other countries.

Andrew B. Meeran.

Tatster (Tatster), John de, sometimes inaccurately called Taxter or Taxton, was a thirteenth-century chronicler, of whose life or writings nothing is known except that he was professcd as a Benedictine at Bury St. Edmund’s 20 Nov., 1244. It is probable that he died in or about 1265, when his chronicle ceases. His work, which in the earlier part is compiled from Florence of Worcester, William of Malmesbury, and Ralph de Diceto, begins with the creation of the world. The value of the chronicle arises from Tatster’s account of his own times; and his description of contemporary events was subsequently used by Everaden, Oxenden, and Bartholomew Cotton. This part of his work has accordingly attracted more attention, and his chronicle for the period 1255–1268 has been printed by Luard in his edition of Cotton (Rolls Series). Tatster’s chronicle as a whole has never been printed, and exists only in two MSS., one in the British Museum (Cott., Julius, A. 1.), the other in the College of Arms (Arundelian MS., 6). A faulty MS. for the years 1173–1265 was printed in 1849 for the English Historical Society, and passages relating to German affairs have been included by Pertz in “Mon. Germ. Hist.: Script.,” XXVIII.

Edwin Burton.

Taylor, Frances Margaret (Mother M. Magdalen Taylor), Superior General, and foundress of the Poor Servants of the Mother of God, b. 20 Jan., 1832; d. in London, 9 June, 1900. Her father was a Protestant clergyman, the vicar of a Lincolnshire parish where her early years were spent in works of charity among the poor. She was a very capable woman, full of energy, with a wide sympathtic nature and a remarkably retentive memory. In 1854 her patriotism moved her to join Miss Nightingale’s staff of nurses, and to go with them to the Crimean War. This threw her into contact with Catholic priests, Sisters of Mercy, and soldiers, and
opened her eyes to the truth of the Catholic religion. After marriage she was received into the Church by Father Woollett, S.J. On her return to England she first worked among the poor of London, and made the acquaintance of Lady Georgiana Fullerton, with whose co-operation she laid the foundation of her institute. In addition to this, and to opening various refuges, convents, schools, etc., she did a great deal of literary work. She wrote a number of books and always employed her pen for the promotion of the Catholic religion. For some time she edited "The Lamp," and helped to start both "The Month," and "The Messenger of the Sacred Heart," to which, as to other Catholic papers and periodicals of the day, she contributed. She had been imbued from early youth by a devotion to the Sacred Heart, and was very active in spreading this devotion and the Apostleship of Prayer, especially in Ireland. In 1892 her health gave way, and the rest of her life was spent in suffering, borne with exemplary patience. She died in a home she had founded for penitents in Soho Square, London. Her works are: "Memoir of Father Dignam, S.J."; "Retreats given by Father Dignam, S.J."; "Conferences by Father Dignam, S.J."; "The Inner Life of Lady Georgiana Fullerton"; "Tyburn and Who Went Thither"; "Convict Stories"; "Lost"; and "Other Tales"; "Dame Dolores"; "Life of Father Curtis, S.J."; "Religious Orders"; "Holywell and its Pilgrims"; "The Stonleighs of Stonleigh"; "Irish Homes and Irish Hearts"; "Eastern Hospitals and English Nurses." The Messenger of the Sacred Heart (d. 1893); GILLOW, Bibl. Diet. Eng. Cath., s. v. Taylor, Frances Magdalen.
FRANCESCA M. STEELE.

Taylor, Hugh, Venerable, English martyr, b. at Durham; hanged, drawn, and quartered at York, 25 (not 26) November, 1585. He arrived at Reims on 2 May, 1582, and having been ordained priest, was sent thence on the mission to 27 March, 1585. He was the first to suffer under the Statute 27 Eliz. c. 2. Later passed. On 26 November, Marmaduke Bowes, a married gentleman, was hanged for having harboured him. Bowes is described by Challoner as of Angram Grange near Appleton in Cleveland, but is not mentioned in the will of Christopher Bowes of Angram Grange, proved on 30 Sept., 1588, nor in any other place. The sole evidence against him was that of a former tutor to his children, an apostate Catholic. Having been previously imprisoned at York with his wife, he was under bond to appear at the Assizes which began on 28 November at York, and on his arrival found that Taylor was about to be arraigned. Beith said he was a Catholic at heart, but had condemned the statutes against the Established Church. "Before his death he was made a member of the Catholic Church the which he boldly confessed with great alacrity of mind."

Challoner, A True Account of our Catholic Forefathers (London, 1827-7, I, 244; III, passim; CHALLONER, Missionary Priests, I (Edinburgh, 1877), no. 20; Knox, Douay Diaries (London, 1876), passim; FORSTER, Vietnam of Yorkshire in 1812 (1875), 497.

JOHN B. WAINWRIGHT.

Tebaldo, Antonio, Italian poet, b. at Ferrara, in 1465; d. in 1537. His family name (Tebaldi) he changed to Tebaldeo, in consonance with the practice of the Humanists, who sought to Latinize the form of their appellation as much as possible. After serving as tutor to Isabella d'Este and secretary to Lucrezia Borgia, he became an habitant of that city during the papacy of Pius II, who was one of the earliest of the popes who patronized this movement called Marinism or Secenzismo. To Tebaldeo has been ascribed a redaction of Poliziano's play, "Orfeo", which aims to make that piece accord better with the principles of classic composition. He figured among the writers of the time who engaged in this discussion in the "Psalterium" of the nature of the 'Missa' of the Italian. (See his verse in the edition of Venice, 1530, "Di M. Antonio Tebaldeo ferrarese l'operé d'amore.")

D'ANCONA, Del secentismo nella poesia cortigiana del secolo XV in Nuovissime Antologie (1878); CARPITA, Storia delle poetiche in Italia, in, 1865, 234; LUOZZO, I precettori di Isabella d'Este (Ancona, 1887).

J. D. M. FORD.

Te Deum, The, an abbreviated title commonly given both to the original Latin text and the translation of a hymn in its hymnical prose form, of which the opening words, "Te Deum laudamus", formed its earliest known title (namely in the Rule of St. Cæsarius for monks, written probably when he was Abbot of Lérins, before A.D. 502). This longer title is used in the "Rules for Virgins" composed by St. Cæsarius while Archbishop of Arles, and by his second successor in the same see, St. Aurelian, also in the Rule of St. Benedict; and generally in earlier centuries. It is sometimes styled "Hymnus Ambrosianus", the "Ambrosian Hymn"; and in the Roman Breviary it is still entitled, at the end of Matins for Sunday, "Hymnus SS. Ambrosii et Augustini". It is interesting to note that the title has been changed to "Hymnus Ambrosianus" in the Psalterium of the new Roman Breviary, but became obligatory only from 1 Jan., 1913. The Te Deum is found in the first part of the "Psalterium" ("Ordinarium", etc.) The tradition that it was spontaneously composed and sung alternately by these clerics in the night of St. Augustine's baptism (A.D. 387) can be traced back to the end of the eighth century, and is referred to in the middle of the ninth century by Hincmar of Reims (ut a majoribus nostris aurimus) in his second work, "De predestinatione" (P. L., CXXV, 290), and in an elaborated form in a Milanese chronicle attributed to Daitius, Bishop of Milan (d. about 552), but really dating only from the eleventh century (thus Mabillon, Muratori, Merati, etc.). This tradition is now generally rejected by scholars.

(a) It should naturally have held, from earliest times, a prominent place in Milan; but of the earlier manuscripts of the Te Deum which refer to the tradition in its titles, none has any connexion with Milan, while the "Milan Cathedral Breviary" text (eleventh century) has no title whatever. (b) The tradition ascribing the authorship to the two saints is not unique. Another tradition is represented by the remark of Abbo of Fleury (A.D. 985) in his "Quaestiones grammaticae" (P. L., CXXXIX, 532, § 19) concerning the erroneous substitution of "suscepturus" in the verse "Tu ad liberandum suscepturus hominem", etc., in what he styles "Dei palmodia copiosis illustrissimi Episcopi Hilarii membri". It may be added that an eighth- or ninth-century MS. of the hymn, now at Munich, refers to St. Hilary. (c) But neither to Hilary nor to Ambrose may the hymn be prudently ascribed, because although both composed hymns, the Te Deum is in its hymnical prose form, and not in the classical metres of the hymn, in the manner in which have been written by them. While, from the ninth century down to the present day, there is no century and no country of Western Europe that has not given its witness to the traditional ascription, the earliest MS., the "Bangor Antiphonary" (seventh cent.) gives the title "Te Deum in diebus Domini", while other early MSS. make no reference to the authorship, either giving no titles or contenting themselves with such general ones
as “Laudatio Dei” (MS. of eighth cent.), “Laus angelica” (twelfth cent.), “Laus angelorum” (twelfth cent.), “Hymnus matutinalis”... “Hymnus die dominico”, “Hymnus dominicalis”, etc. Other MSS. ascribe the hymn variously to St. Nicetius, Vicetus (obviously a slip of the pen for Nicetus), Nicetius, Nicetes, Neceta (all of these being thought identical with Nicetas of Nicetia, but with different names of the saint, there is little in this particular passage to strike the fancy of a hymn-writer, while it would be a very natural thing for a prose writer to borrow some expressions from such a widely-sung hymn as the Te Deum may have been. Moreover, if the hymn was borrowed from St. Cyprian, why did it not include the “virgines” instead of stopping with “martyrum”? Additional argument for a very early origin of at least the first ten verses of the hymn is found in comparisons between these and the texts and melody of the Prefaces, in the structure of the Gloria in excelsis, in the etiological character of the Te Deum, in the Greek translations.

This archaological argument cannot be stated intelligibly in a few words, but some of its bases may be mentioned: (a) If the Te Deum were composed in the latter years of the fourth century, it would be a unique exception to the hynmology of that time, which was all fashioned in the regular strophic and metric manner introduced and popularized by St. Ambrose. (b) From the point of view of melody, the hymn has three divisions: verses 1–13, 14–20, 21 to the end. The first melody (1–13) is apparently older than the second part (14–20). (c) From a study of liturgy, there are also three divisions: verses 14–21 exhibit perfect conformity with the laws of the “cursus”, or rhythm classes, which date from the fourth century, verses 1–10, however, have only five (4, 6 and 8–10) verses closed with the rhythmical cursus, and these five are supposed to be the result of accident; verses 22 to the end belong to a wholly different category, being taken mostly from the Psalms (xxvii, 9; cxliv, 2; cxxii, 3; xxxii, 22; xxx, 2). It is argued that, judged by melody and rhythm, the first ten verses form a complete hymn (verses 11–13 having been added subsequently as a doxology) to the Te Deum, with the second part (14–21) a hymn (added in the fourth century) to Christ. As noted above, the first ten verses offer (vv. 7–9) the parallelism with the words of St. Cyprian, and are, for the various reasons outlined, supposed to antedate the year 252. Speculation ascribes their authorship to Pope St. Anicetus (J. d. a. d. 168).

Three textual points may be noted here. “Unigenitus” in v. 12 is considered the original reading (“unicum” having supplanted it perhaps through the influence of the Apostles’ Creed, in which “unigenitus” was rare). In v. 21 nearly all MSS. read “munerari” (gloria munerarii) instead of the present “munerarii” (in gloria munerarii) which Blume has found in a twelfth-century MS., and which perhaps was suggested by the words in the Canon of the Mass: “in electorum tuorum jubes grae numerarii”, Verse 16, “Tu ad liberandum susceputurus hominem”, etc., offers much opportunity for critical discussion. Most of the old MSS. have “liberandum” (with “liberandum”, followed sometimes by “mundum”— Tu ad liberandum mundum susceputisti hominem); but “susceputurus”, contended for by Abbo of Fleury, Hincmar, and others, and quoted in a letter of Cyprian of Toulon (about 530), was probably the original word. The verse does not itself need emendation. A fifteenth-century translation runs: “When thou shouldest take upon Thee mankind for the deliver-
ance of men, thou horydest not the Virgin's womb". With similar accuracy a Sarum "Primer" of 1504 has: "Thou (when thou shouldst take upon our nature to deliver man) dydest not abhorre a virgin's womb". The last "Primer" of Henry VIII (1546) which is probably the first to introduce the word "quiescens" has: "Thou (when thou takest upon thee to deliver man) dydest not the Virgin's womb". The "Primer" of Rome of 1901 is laboriously accurate: "Thou, when about to take upon Thee man to deliver him, didst not fear the Virgin's womb". The "Massal for the Use of the Laity" (London, new ed. 1903, cxxxv) gives a new version in rhyme: "Thou, to redeem lost man from hell's dark doom, Didst not abhor the lowly Virgin's womb".

This is far removed from Dryden's version: "Thou, who to save the world's impending doom, Vouchsaist to dwell within a Virgin's womb".

The general rubrics (titulus XXXI) of the Roman Breviary direct that on Christmas and on Easter Sunday inclusively, or on certain days outside of Eastertide (namely from Low Sunday to Ascension Day except Rationg Monday) for the sake of greater explicitness, the rubrics add that it is not said on the Sundays of Advent, or from Septuagesima to Palm Sunday inclusively, or on certain days outside of Eastertide. It is said immediately after the last lesson, and before the third or ninth responsory, as the case may be, but on days when it is not said, its place is occupied by the responsory. The Te Deum is followed immediately by Lauds except on Christmas Day (when it is followed by the prayer, and by this Mass). In general, the Te Deum may be said to follow the same rubric as the Gloria in excelsis at Mass.

In addition to its use in the Divine Office, the Te Deum is occasionally sung in thanksgiving to God following spiritual blessings or occasion of days, and from the consecration of a bishop, the canonization of a saint, the profession of a religious, the publication of a treaty of peace, a royal coronation, etc., and then usually after Mass or Divine Office, or as a separate religious ceremony. When sung thus immediately before or after Mass, the celebrant, who intones the hymn, may wear the vestments appropriate in colour to the day, unless those should happen to be black. Otherwise, while the rubrics prescribe no special colour, violet is forbidden in processions of thanksgiving (pro gratiarum actione), green is inappropriate for days, and red (though permissible) would not suggest itself, unless some such feast as Pentecost, for example, should call for it. White, therefore, or gold, which is considered its equivalent, is thus left as the most suitable colour. The choir and congregation sing the hymn standing, even when the Blessed Sacrament is exposed, but kneel during the verse (Te ergo quiescamus ...). At the end the versicles "Benedicamus Patrem" etc. are added, followed by the single prayer "Deus cujus misericordie".

There is practically but one plain-chant melody for the hymn, varying greatly, however, in different MSS. The official and typical melody is noted in the Appendix (pro gratiarum actione) in two forms, the tonus solennis (in which every verse begins with preparatory or intoning notes) and justa morem romanum (in which the verse begins ex abrupto). Pothier notes a strong affinity between the melodies of the Te Deum laudamus, te dominum confitemur and those of the Preface, Per omnia . . . Sursum corda. He also points out (Melodies grégoriennes, 280) a psalmic rendering of the Te Deum in an MS. of the 12th century, with the introduction of a distinct antiphon-form at the words "Eterna fæte", etc., the antiphonal melody being three repeated. While the chant melody has been frequently used as a canito fermo for polyphonic Masses, the polyphonic settings are few compared with those of the Kyrie and Gloria. In the 19th century Italian composers of the seventeenth century made settings for several choirs with organ and orchestra. Cherubini's manuscript setting is lost. Bellini considered the finale of his own setting (for two choirs, orchestra, and organ) "undoubtedly his finest work". Sometimes the alternate verses only are set to music, so that another choir or the congregation may sing the other verses in plain-chant (as in the Miserere, q. v.). The Latin text has been translated into English and has received many settings in that language, and the Te Deum is one of the best. The Te Deums are famous. One interesting feature of the latter is that it borrows inspiration for ten of its numbers from a Te Deum composed by the Minorite Francesco Urio, an able Milanese composer of the seventeenth-eighteenth century. Perhaps the most important of the settings is that of J. S. Bach in his "Bach-Te Deum". The use in Church is that of Edgar TIMLE, written to celebrate the seventy-fifth anniversary of Belgian independence (1830-1905). It is composed for six-voiced mixed choir, orchestra, and organ.

There are about twenty-five metrical translations into English, including the numerous versions of Dryden, "Thee, Sovereign God, our grateful accents raise!", and that of the Rev. Clarence A. Walworth, commonly used in American Catholic hymnals, "Holy God, we praise Thy Name", but written before his conversion, as it appeared with date of 1853 in the "Evangelical Hymnal". There are also six versions into English based on Luther's free rendering into German. There are many German versions, of which the "Grosser Gott, wir loben dich!" is commonly used in Catholic churches. Probably the most recent Catholic translation is that found in the new edition (London, 1903) of the "Paulist Hymnal", the "Lord's Prayer" is there set to the words for the Use of the Laity", "We praise thee, God: we glorify thee, Lord."
Daniel gives (op. cit., 283) an imitation of the Te Deum (as
erected by St. Bonaventure) constructed into a Marian canticle: "Te Deum
Mariamne, omnis clavis et munus confensa, eum vacant
patris sponsam", etc., and remarks that, so far as he knew, it
had never been sung in public service at the
Church. H. W. (op. cit.) refers to this as a "travesty" of the
Te Deum, and expresses his gratification that the imitation had
never been used in a way which would have defiled the simple
Hymnody in Eccles. Review (June, 1895, 451-2), who refers to
Louv (Secretary of the "Henry Bradshaw Liturgical Text
Society") as the first to point out that in the Middle
Ages there was "so much dislike as now prevails, to retouch a
master-work that has been handed down through the
ages;" etc. Devy, Analect. hymn., XXXI, 214-2, gives a
"Te Deum" Marianum (from a fourteenth century MS.) in
three distinct digna laudibus et beneficiis\footnote{Thenceforth she practised her religion unfingly in the face of almost unbearable opposition, until finally her uncle's lodge ceased to be a place of protection to her and she was assisted by some Christian friends to escape to the Temple of St. Lawrence. Here she lived in the cabin of Anastasia Tegnathelihonga, a Christian squaw, her extraordinary sanctity impressing not only her own people but the French and the missionaries. Her mortifications were extreme, and Chaushe"rie says that she had remained the most perfect union with God in prayer. Upon her death devotion to her began immediately to be manifested by her people. Many pilgrims visit her grave in Caughnawaga where a monument to her memory was erected by the Rev. Clarence Walworth in 1884; and the Councils of Baltimore and Quebec have petitioned for her canonization.}\footnote{Walworth, Life and Times of Kateri Tekakwitha (Buffalo, 1881); Burtin, Vie de Catherine Tekakwitha, v"eg"e iroganais, (Quebec, 1894); Campbell, First Priests of North America, (New York, 1908).}\footnote{Blanche M. fied in Old High German "large," consequently the name meant "large lake." It was not the Agilolf

familly, as is erroneously supposed, but the family of the Hohn, one of the five old ruling families who had come into the country with the Bavarians. The story of the coloni

fing of the monastery with monks by St. Othmar of St. Gall is legendary and is based on chronicles of a later era. On account of the disorders caused by the

incursions of the Magyars at the beginning of the tenth century the founding of Tegernsee itself and the first decades of its history are hidden in deep obscurit

On the other hand, it is perfectly well established that the founders of the abbey ob

tained the relics of St. Quirinus, a Roman martyr, from Pope St. Paul I in 758, not from the Magyar

arians (741-52), and that these relics were translated from Rome to Tegernsee in the second half of the eight century and were placed in the Church of Our Saviour, the first church of Tegernsee. The first abbot was Adalbert who is mentioned in a charter of 804 as having died recently. As early as the year 770 Abbot Adalbert took part in the Synod of Dingolding, and just before the close of the eighth century (before 798) Adalbert and his "representative" Zacho were present at a synod at St. Emmeram in Ratisbon. At this synod they were obliged to promise to restore thirteen baptisteries that were in the possession of laymen but which had been claimed by Bishop Atto of Freising. This demand was a result of the efforts of the episcopate of Bavaria of that era to limit as much as possible the parochial labours of the monasteries. The decision, however, was not executed but was ad

justed by a settlement made at Tegernsee on 16 June

berville arrived to take charge of the mission which included the Turtle clan, and from him, at

her earnest request, Tekakwitha received baptism.}
In the early part of the tenth century the monastery of Tegernsee fell completely into decay on account of the disastrous defeat of the Bavarians by the Magyars in 907, whereby nearly all the religious foundations of Bavaria were entirely destroyed. Laymen with dogs and horses settled in the monastery of Tegernsee and finally a fire destroyed the buildings and with them the books and church vestments. When the monastery was restored by Emperor Otto II and Duke Otto of Bavaria in 979, all knowledge of its original foundation had disappeared at Tegernsee. In order to restore and maintain discipline the Emperor Otto called the monk Hartwich (979–982) of St. Maximinus at Trier to be Abbots of Tegernsee. The same charter that contains this appointment of 10 June, 979 (M.G. D.D.I, 1, 219, 199), also contains a grant from the emperor of the right of free election of the abbots, as well as freedom from taxes and the imperial protection, by which the abbey was withdrawn from the suzerainty of the rulers of Bavaria. Consequently the abbey became prosperous once more. Considerable information as to the efforts for reform of this abbey is given by a note in the manuscript of the Gospels, written in uncial characters referred to Tegernsee and is dated Munich (C.I.M. 19101). The note says: "Monastic reform was begun in this monastery by the reverend monk Hartwich of St. Maximinus on 6 May of the year 978. In the year 982 this same Hartwich received staff and benefice from Emperor Otto II and was consecrated by the very venerable Bishop Abrahm [of Götz, Bishop of Freising]. The monks made their profession". Abbots Hartwich had an excellent successor (982–1001) in the Benedictine monk Gobsbert of St. Emmeram, who had received his religious education at Augsburg. Gobsbert introduced the study of the classics at Tegernsee, especially Statioc, Peraeus, the letters of Horace and Cicero, and Boethius; the works of these men were read and copied. Particularly distinguished among the monks during the administration of this abbots was the poet and prose writer Fromund (d. 20 October, 1012), who in a manuscript still preserved at Munich (C.I.M. 19412) made a collection of letters and poems of his own and others. He also copied at Cologne the treatise of Boethius "On the Consolation of Philosophy" and brought the copy to Tegernsee. It was this Fromund who brought about the intellectual and literary connection between his abbey and churches of St. Emmeram at Ratibon, Feuchtwangen, Augsburg, and Würzburg. It was at this era also that the glass works were established at Tegernsee to make stained-glass windows for Bishop Gottschalk of Freising. The opinion that glass-staining was invented at Tegernsee is erroneous, for before this in the ninth century stained-glass windows can be proved to have existed at St. Gall and in Westphalia. This prosperous period under the immediate successors of Gozbert, namely St. Gotthard (1001–1002), Eberhard I (d. 4 March, 1004) and Eberhard II (d. 1012), did not last; after this the year 1031 Tegernsee was reformed, at the command of the Emperor Henry III, by the monks of Niederaltaich from which place monks, who were accompanied by Abbots Ellinger, were sent to occupy the Abbey of Tegernsee. Abbots Ellinger, however, met with opposition at Tegernsee and was obliged to retire from the monastic community. From this year on he did not venture to come back to Tegernsee until 1056, dying there in the same year. He was the abbots who began the "Urbars", or book of donations at Tegernsee, and who did so much at Tegernsee to improve and perfect technical skill. In 1015 a colony of monks from the monastery of Sts. Ulrich and Afra at Augsburg. The prestige of Tegernsee was still maintained in the twelfth century and continued up to the middle of the thirteenth century. In the imperial documents of the thirteenth century the names of the abbots of Tegernsee are often found signed as witnesses, as they were princes of the empire.

During the rule of Abbots Bertold I (1206–1217) the abbey was restored and settled in the monastery of Tegernsee and finally a fire destroyed the buildings and with them the books and church vestments. When the monastery was restored by Emperor Otto II and Duke Otto of Bavaria in 979, all knowledge of its original foundation had disappeared at Tegernsee. In order to restore and maintain discipline the Emperor Otto called the monk Hartwich (979–982) of St. Maximinus at Trier to be Abbots of Tegernsee. The same charter that contains this appointment of 10 June, 979 (M.G. D.D.I, 1, 219, 199), also contains a grant from the emperor of the right of free election of the abbots, as well as freedom from taxes and the imperial protection, by which the abbey was withdrawn from the suzerainty of the rulers of Bavaria. Consequently the abbey became prosperous once more. Considerable information as to the efforts for reform of this abbots is given by a note in the manuscript of the Gospels, written in uncial characters referred to Tegernsee and is dated Munich (C.I.M. 19101). Tehuanatepec, Diocese of (Tehuantepecensis), in the Republic of Mexico, suffragan of Oaxaca. Its area covers the southern part of the States of Oaxaca and Vera Cruz, through the Isthmus of Tehuantepec. Its population is about 200,000; the residence of the bishop, the city of Tehuantepec, has 10,000 inhabitants.

Burgos relates the following, which he deciphered from ancient Zapotecan pictures: A short time before the Spanish set foot on Mexican soil the subjects of the King of Tehuantepec begged him to make a sacrifice to their gods, and especially to the sun god. This the king did and then said: "The great God announces that the time has come when he shall be driven from this earth because his enemies shall soon arrive from the regions of the rising Sun; these men will be white, and none of the Kings of these regions shall be able to resist their strength or arms. They will subject us to misery and shall bring in their wake men who will be our priests and to whom those of us who shall remain will be forced to disclose our sins on bended knees."

On 24 April, 1522, Fray Bartolomé de Olmedo with Pedro de Alvarado arrived at Tehuantepec. The monarch, Cosijopii, a relative of the Emperor Montozuma, received them with open arms. He embraced the Catholic Faith, and a few years later erected at his expense in his royal city the convent of S. Domingo. The Franciscan Fathers, as well as the famous Dominican fray Bartolomé de las Casas, Bishop of Chiapas, preached the Gospel in Tehuantepec. The first priests to settle there were fray Gregorio Beteta and fray Bernardo de Albuquerque. A few years later an attempt was made by the descendants of the King Cosijopii to return to paganism, but this plot when discovered was quickly suppressed (in Mexico).

When the See of Oaxaca was created in 1555, the entire territory on which the city of Tehuantepec is situated belonged to it and remained so until 1891 when Leo XIII made it a separate see, suffragan of Oaxaca or Antequera. There are 5 parochial schools with about 600 pupils, 4 Protestant colleges with 70 pupils, and 3 Protestant churches. In the capital, Tehuantepec, there are 14 churches, among which that of Santo Domingo is noted for its phenomenal size and splendid construction. Coatzacoalcos (to-day known as Puerco Mexico) is known for the tradition that from this port the celebrated Quetzalcoatl sailed for his native land.

Tello (Eliud), Saint, "Archbishop" of Llandaff, b. at Ecuilua Gnuiia, near Tenby, Pembrokehire; d. at Llandido Yawr, Carmarthenshire, probably in or about 560, an old manuscript of the Book of Gwynfrig, said to be of the fourth century, contains a translation to the monastery church. The building was erected by Abbot Ayndorfer in 1450 to replace a wooden church.
Armoria, and became the mother of St. Ouduceas, Teilo's successor. The earliest extant biographies of the saint are late and uncertain. Educated under St. Dyfrig or Dubric (q. v.), at Henlant, Herefordshire, and under St. Paulus at Whitland, Carmarthenshire, he subsequently ruled the monastic school at Llandaff, named after him Bangu. The story of his life is about 518, and their consecration there as bishops by John III, Patriarch of Jerusalem, is not now generally credited; but it seems that about that date, when St. Dubric withdrew to Bardsey, St. Teilo succeeded him at Llandaff. In S47 the "yellowing" or "yellowing" began to ravage Wales, and shortly afterwards St. Teilo with many of his flock crossed to Armoria, where they were hospitably entertained by his friend St. Sampson, Abbot and Bishop of Dol. After seven years and seven months Teilo returned to Wales, and is said to have been elected to the archiepiscopate vacant by the death of St. David, and to have transferred it from Menevia (q. v.) to Llandaff (q. v.); but the more general modern opinion seems to be that in Wales at that epoch the episcopate was not yet diocesan.

The story of the three bodies of the saint, which were kept in the day after the death, was evidently invented to account for the fact that the churches at Llandaff, Llandilo Vawr, and Penally, all claimed to possess his body. Doubtless at his death his relics were widely distributed. To-day they are venerated at Landeleau (Finistère), Plogonnac (Finistère), and Saint-Téo (Côtes-du-Nord). Five parish churches in Brittany are dedicated to him (Landeleau, Leuhan, Montielte, Pledéiac, and Saint Téo) as well as a chapel between Plogonnac and Locronan. The modern Catholic church at Tenby bears the names of "Holyrood and St. Teilo". The dedication of twelve churches in the present Anglican Diocese of St. Davids is to the memory of the saint. From this origin to this zeal, Borlase argues his connexion with six dedications in Cornwall. It is stated that he was formally canonized, but no date is given. He is not infrequently represented in Breton churches as riding on a stag. His festival is, or was, kept in Wales and at Saint Téo on 9 February; at Dol, as a double, on 29 November; and in other places in Brittany on 5 November.

John B. Wainwright

Teology (from Greek τελειος, end, and μεσος, science) is seldom used according to its etymological meaning to denote the branch of philosophy which deals with ends or final causes. It means the doctrine that there is design, purpose, or finality in the world, that effects are in some manner intentional, and that no complete system of the universe is possible without reference to final causes (for the notion of final cause, see CAUSE). With mechanism (q. v.) teleology admits the determinism of physical efficient causes. It also acknowledges that the object of scientific research is to discover the laws of phenomena, and that any fact is scientifically explained when adequate scientific language is assigned to it. The conditions of its occurrence are known. But against mechanism, teleology claims that this determinism, these laws, and the mode of activity of efficient causes reveal the existence of a directive principle and of finality in the works of nature. Hence the question is not whether there are efficient or final causes, whether, for instance, man sees because he has eyes or has eyes in order to see. Final causes and efficient causes are not mutually exclusive. It must be admitted that any result in nature is to be ascribed to an unbroken chain of active causes, and the function of the final cause is not to supply any missing link but to explain how the activity of efficient causes is directed toward useful results. Nor can the teleologist be asked to indicate the end of every act of the will to which any act of human free will can be required to indicate the efficient cause of every phenomenon. Finally the problem does not refer to conscious and intelligent finality such as is manifested in human purposive actions, for it is obvious that in many of his actions man is guided by the idea of a pre-conceived plan which his conscious will does not express, just as human works are for something; the house is built to live in; the clock is made to keep time; the machine is constructed to perform some work; the statue is carved to realise some ideal; etc. Are we justified in speaking of the works of nature in the same way? When we speak of ends and purposes in nature do we not attribute to it that which is distinctly human? Do we not, carry too far the process of personification and analogy, and thereby incur the reproach of anthropomorphism? According to mechanists, because we foresee results we falsely conclude that nature strives to realise them. "Ends exist in the mind which studies nature not in nature itself but in its tendency to reverse the natural process, to look upon the effect as a cause, and from it to ascend the causal series regressively."

1. It is important at first to make a distinction between extrinsic and intrinsic finality. The former consists in realising an end which is outside of the being that realises it, and thus in contributing to the utility and welfare of other beings. In this way the mineral is utilised by the plant, and the plant by the animal. Or again the heat of the sun is a condition of growth and development. From this extrinsic finality results the subordinate, the lower, which is thus a means of the higher and order of the universe. But while extrinsic finality seems obvious in several instances many of its details escape us, and it is easy to make a wrong use of it by attributing false or childish ends to every being and event, and by taking a narrow anthropocentric view of finality. This abuse of final causes called for the vigorous protests of Bacon ("De Dignitate et Augmentis Scientiarum," III, iv), Descartes ("Principia Philosophia", I, 28; III, 2, 3; "Meditations", III, IV), Spinoza (Ethica, I, prop. 36, app.). The exclusive consideration of extrinsic ends contributed probably more than any other cause to the development of a critical teleology, which in the eighteenth century became no less critical than teleology fell at the time of the Renaissance. Yet, as Voltaire rightly remarks, it is clear that if the nose was not made to wear spectacles, it was made for the sense of smell (Dictionnaire philosophique, s. v. Causes finales). Here Voltaire appeals to the principle of intrinsic finality, which, according to Aristotle and St. Thomas, is primary, while extrinsic finality is derived and secondary.

Intrinsic finality consists in the fact that every being has within itself a natural tendency whereby its activity is directed towards the perfection of its nature. "Nature is its own end and all things that act, whether in the animal or vegetable kingdom, act either for an end or to an end, which it reaches through those operations. Just as everything is, such also are its
TELEPATHY

operations and its tendency to what is suitable to itself” (St. Thomas, “Contra Gentiles”, IV, xix). As the essence of many things comes from the ends from outside, but through their own nature. This teleological view does not suppose that every efficient cause in the world is directed immediately by an intelligence, but by its own natural tendency. The Divine plan of creation is carried out by the very beings themselves acting in conformity with their nature. When, however, this finality is called immanent, this expression must not be understood in a pantheistic sense, as if the intelligence which the world manifests were to be identified with the world itself, but in the sense that the immediate principle of the efficient cause is within the nature of the creature. II. Thus understood the principle of teleology seems almost obvious. Activity is essential to every being, and the same substance, placed in the same conditions, always acts in the same way. Its effect, therefore, does not happen by chance, for chance cannot account for fixity and stability. Within the substance itself must be found a principle of determination. Now what is a determination but an adaptation and an orientation toward an end? The fact that the world is governed by laws, far from giving any support to the mechanistic conception, is rather against it. A law, well summed up, is the expression of the constant manner in which causes produce their effects. To say that there are laws is simply to state the determinism of nature, and it is precisely to this determinism that St. Thomas appeals to establish teleology. “Every active cause acts for an end, otherwise from its activity one effect would not result rather than another, except by chance” (Summa Theol., I, Q. xliii, a. 4). And again: “It is necessary that every active cause should act for an end. For in a series of causes, if the first be removed, the others also are removed [i.e., fail to produce their effects]. But if in first place all causes act as if there were not a cause, the result that does not receive a form [i.e., does not change] except through the influence of an active cause. For nothing of itself passes from potentia to actus [see Actus et Potentia], and the active cause does not act except in consequence of the intention of an end. Otherwise, if the active cause were not determined to produce some particular effect, it would not produce this rather than some other. In order to produce a determined effect, it must, therefore, be determined to something in particular which serves as an end. As in rational beings this determination takes place through the rational soul, in other beings, so also in the passive place through a natural inclination which is called natural appetite” (Summa Theol., I-II, Q. i, a. 2).

Efficient causes are not indifferent, and their effects are not fortuitous. As a matter of fact, from the many individual activities of the various beings of the world order and harmony result in the universe. And when different forces converge toward a harmonious result, their convergence cannot be explained except by admitting that they tend to realize a plan. Life is essentially teleological. There is a co-ordination of all the organs, the functions of every one depending on those of the others, and tending to the welfare of the whole organism. Little by little the primitive cell develops according to the general type of the species and evolves into the complete organism. To Aristotle’s statement that “nature adapts the organ to the function, and not the function to the organ” (De nat. hum., II, 9—12, 222—228),—an objection which had been presented more forcibly by Aristotle himself (Phys., II, viii, 197)—Lucrètius replied: “Nothing in the body is made in order that we may use it. What happens to exist is the cause of its use” (De nat. rerum, IV, 843; cf. 822—56),—an objection which had been presented more forcibly by Aristotle himself (Phys., II, viii, 184). The function, it is true, is the result of the organ; the eye sees because it is an eye, and, in general, every function is an effect of active causes. But what is not explained by mechanism is the constancy of the laws of nature and the result of the constancy of the laws of nature and the resulting order of the world manifest the existence in every being of a principle of direction and orientation.

The fundamental defect of mechanism consists in giving exclusive attention to the analyzing of every effect into its causes, and in forgetting every reason of their synthesis. If we take a clock to pieces, we discover in it nothing but springs, wheels, pivots, levers etc. When we have explained the mechanism which ultimately causes the revolutions of the hands on the dial, shall we say that the clock was not made to keep time? The intelligence that designed it is not in the clock itself which now obeys its own laws. Yet in reality we have an adaptation of means to an end. Thus the unconscious finality in the world leads to the conclusion that there must be an intelligent cause of the world. The whole preceding doctrine of natural teleology approaches the concept of the Divine Providence in the following words (Summa Theol., I, Q. ciii, a., ad 3um): “The natural necessity inherent in things that are determined to one effect is impressed on them by the Divine power which directs them to their end, just as the necessity which directs the arrow to the target is impressed on it by the archer, and does not come from the arrow itself. There is this difference, however, that what creatures receive from God is their nature, whereas the direction imparted by man to natural things beyond what is natural to them is a kind of violence. Hence, as the forced necessity of the arrow shows a cause directed intended by the archer, so the natural determination of creatures is a sign of the government of Divine Providence”.

C. A. DUBRAY.

Telepathy (τελεπαθεία, far, and ἀπαθής, to experience), a term introduced by F. W. H. Myers in 1882 to denote “the ability of one mind to impress or to be impressed by another mind otherwise than through the recognized channels of sense” (Gurney, “Phantasms of the Living”, I, 9); or: “the communication of impressions of any kind from one mind to another independently of the recognized channels of sense” (Myers, “Human Personality”, I, xxxii). I. The term telepathy is sometimes used, in conformity with its derivation, to mean the direct communication between minds at a great distance. Such terms as thought-transference, mind-reading, or mental suggestion would then apply to the direct communication between minds in the same room or at a small distance. Generally, however, at least in English, telepathy connotes only the exclusion of the recognized channels of sensation, irrespective of distance. I. Telepathy. It is the usual signs by which ideas are manifested—speech, writing, gestures, muscular contraction, facial expression, etc.—may be dispensed with, and that minds are able to communicate, if not directly and immediately, at any rate through some medium which is distinct from the ordinary medium of sense-perception. Thus understood, telepathy includes two classes of facts,
A. The first class consists of intentional communications, when a person (the agent) by the concentration of his mind on some object makes an effort to transfer an idea to another person (the perciept) who may or may not be aware of the attempt, and who may or may not make an effort to receive the communication. The experiments, made sometimes on unwilling subjects generally on hypnotized, include the transference of tastes, sounds, visual images, pain etc.; the guessing of numbers, cards, colours, diagrams etc., thought of by the agent; the execution or inhibition of movements in compliance with the agent’s will; the production of heat or cold by command mentally given; and other similar transfers of thought. In a few successful instances the agent has been able to produce apparitions of himself or even of a third person to the perciept in another room or house. In these experiments the main difficulty is to make sure that the perciept in no way uses his senses, which are in a state of hyperesthesia or extraordinary acuteness, and that the correct guesses cannot be accounted for by similar habits, suggestions, and associations in both the agent and the perciept. Exhibitions of so-called messages from beyond are generally the result of either mental collusion, or by muscle-reading when there is contact between the agent and the perciept, or by the interpretation of sensory indications consciously or unconsciously given.

B. The other class of facts consists of spontaneous communications in which, as far as we can know, the agent has no intention of manifesting himself to the perciept. Herein are included especially the intimation of the danger, illness, distress, or death of some person, generally a friend or relative, and the apparition of the phantasm of such a person, especially at the death. The degree of probability and exactness of these monstries varies indefinitely. Sometimes they consist in a merely physical occurrence coincident with the death, such as noise, the fall of some object, of a picture, etc. Sometimes ill-defined and inexplicable feelings of restlessness and uneasiness are experienced, or the sudden idea of what is happening flashes across the mind. Sometimes finally, either in the waking state or in dreams, apparitions are seen, and even entire scenes witnessed in all their details. The main difficulty in these cases is to determine whether they present mere coincidences due to subjective factors, such as habit, association of memory, expectation etc., or a real causality.

II. Two problems are to be solved regarding telepathy: A. Is the existence of telepathy a fact demonstrated? B. If it is, what is its explanation?

A. Is the fact of telepathy established? In the past thirty or forty years, this fact has been studied critically. A large number of facts have been collected, especially by the Society for Psychological Research, founded in 1882, and have been published in “Phantasms of the Living,” the “Proceedings” of the society, and many other works. In France, the “Annales des Sciences Psychiques” also record numerous cases. At present the literature on the subject is very extensive. After considering the cumulative evidence for the existence of telepathy, there cannot fail to remain in the mind at least a general impression that chance does not account for the number of apparent coincidences, which could be expected according to chance-probability. In the “Census of Hallucinations”, after due allowance for possible causes of error, whereas ordinary chance coincidence would give 1:19,000 as the proportion of the coincidences of apparitions with the facts of the coincidences greater than would be expected. In experiments, the proportion of successful attempts varies greatly, yet, in general, it is far above that which chance-coincidence would lead us to expect. Nevertheless, the fact of telepathy is not yet accepted universally as strictly demonstrated. There are so many difficulties to meet, so many causes of error to avoid, and so many obstacles to overcome, that results obtained so far are not looked upon by all as sufficient to prove a scientific certainty. In hypnotized subjects, include the transference of tastes, sounds, visual images, pain etc.; the guessing of numbers, cards, colours, diagrams etc., thought of by the agent; the execution or inhibition of movements in compliance with the agent’s will; the production of heat or cold by command mentally given; and other similar transfers of thought. In a few successful instances the agent has been able to produce apparitions of himself or even of a third person to the perciept in another room or house. In these experiments the main difficulty is to make sure that the perciept in no way uses his senses, which are in a state of hyperesthesia or extraordinary acuteness, and that the correct guesses cannot be accounted for by similar habits, suggestions, and associations in both the agent and the perciept. Exhibitions of so-called messages from beyond are generally the result of either mental collusion, or by muscle-reading when there is contact between the agent and the perciept, or by the interpretation of sensory indications consciously or unconsciously given.

B. The other class of facts consists of spontaneous communications in which, as far as we can know, the agent has no intention of manifesting himself to the perciept. Herein are included especially the intimation of the danger, illness, distress, or death of some person, generally a friend or relative, and the apparition of the phantasm of such a person, especially at the death. The degree of probability and exactness of these monstries varies indefinitely. Sometimes they consist in a merely physical occurrence coincident with the death, such as noise, the fall of some object, of a picture, etc. Sometimes ill-defined and inexplicable feelings of restlessness and uneasiness are experienced, or the sudden idea of what is happening flashes across the mind. Telesio, Bernardino, Italian humanist and philosopher, b. of a noble family at Cosenza, near Naples, 1508; d. there, 1588. He studied successively at Milan, Rome, and Padua. In Southern Italy there was a revolt against Aristotelianism which had already begun. At Padua Telesio first came to be recognized as a leader of the anti-Aristotelians. After residing several years in Rome, where he enjoyed the patronage of Paul IV, Telesio returned to Naples, and later founded an academy at Cosenza.

The principal work is entitled "De rerum natura juxta propriam principiam," the first part of which was published at Rome, 1556, and the second in Naples, 1587. He was a radical opponent both of the method and of the content of Aristotelian philosophy.

He considered that the scholastic followers of Aristotle relied too much on reason and too little on the senses. The "reasoners," he believed, were over-confident of their power to reach the secrets of nature by syllogistic methods. With conscious humility, therefore, he determined to trust to his senses alone, and, beginning "in the dust," he strove to reach the highest pinnacle of natural truth. This exclusion of reason from the task and the consequent exaltation of sense above every other faculty of the mind resulted naturally in the sensistic doctrine that all knowledge is feeling (sensus) or sensation, and in the materialistic doctrine that the soul itself is material. In the content of his philosophy he opposed the Aristotelian doctrine of matter and form, substituting for it the doctrine that everything is composed of matter and force, the two principal forces being heat and cold. Heat is centralized in the sun, and cold in the earth. As the Platonist Patrizzi pointed out, there is an inherent contradiction in Telesio's system. For, if we are to rely on the senses and not on reason, since the senses do not reveal the existence of matter except as modified by force, the central doctrinal principle is in contradiction with the most important methodological tenet. This point was brought out in the discussions between the advocates of Aristotle and the followers of Telesio in the sixteenth century. Among the most ardent disciples of Telesio were Campanella and Giordano Bruno.

William Turner.

Telesphorus, Saint, Pope (about 125-136). He was the seventh Roman bishop in succession from the Apostles, and, according to the testimony of St. Irenæus (Adv. heres., I, iii, 3), suffered a glorious martyrdom. Eusebius (Hist. eccl., IV, vii, xiv) places the beginning of his pontificate in the twelfth year of Hadrian's reign (128-129), his death in the first year of the reign of Antoninus Pius (138-149). These statements, however, should be compared with Lightfoot, "The Apostolic Fathers," p. 52 sq., section on "Early Roman Successions," and Har-}

Tell el-Amarna Tablets, The, are a collection of some 350 clay tablets found in 1887 amid the ruins of the ancient Egyptian city of Akhetaton (modern Tell el-Amarna). They include information about the personal lives and activities of the Egyptians and thebes. 200 of them are now in Berlin, 82 in the British Museum, 50 in Cairo, 22 in Oxford; only a few are private property. They are written in the Babylonian language and cuneiform characters and
date from the fifteenth century B.C. They consist mostly of letters and State records sent to Kings Amohenpet III and Amohenpet IV of Egypt, by rulers of Western Asia (Babylonia, Assyria, Amurru (Northern Syria) and Canaan (Palestine). All these documents throw considerable light on the conditions of Western Asia from about 1500 to 1300 B.C.; they contain most precious information concerning the history, geography, and language of the preexilic and postexilic contemporaries of the Hebrews in Palestine, and, in many cases, illustrate and confirm what we already know from the Old Testament.

The best work on the Tell-el-Amarna tablets (transcription, German translation, and commentary) is that of Knudtzon's El Amarna-Tafeln in Hinrichs’ Vorderasiatische Bibliothek, II (Leipzig, 1897-99). The Berlin and Cairo tablets were edited by Abel and Winckler, Der Thronaufstand von El Amarna (1898-99), and those in the British Museum by Besold, Tell el-Amarna Tablets in the B.M. (London, 1892). For all tablets known in 1896 see also: Winckler, Die Thronaufstand von Tell el-Amarna (transcription, German translation, and commentary); Schrader, Kindschatzchen der Bibliothek (Berlin, 1896); English translation by Metcalf (New York and New York, 1896); Conder, The Tell-el-Amarna Tablets (2nd ed., London, 1894); Niebuhr, Tell el-Amarna, 2 vols. (Copenhagen, 1895-96); Lassus, Die Thronaufstand von El Amarna (London, 1898); Isthm., A Hist. of Ancient Egypt, II (4th ed., London, 1904); Jeremias, Das Alte Testament im Lichte des Alten Orients, 3 vols. (Leipzig, 1890-93). Die littau der Babylonier, u. Assyrier (Leipzig, 1907); Droz, Les Pays-Biblique au temps d'El Amarna in Revue Biblique (1896-97).

A. A. VASCHALDE.

Téllez, Gabriel, Spanish priest and poet, better known by his pseudonym of Tirso de Molina, b. at Madrid, c. 1571; d. at Soria, Aragón, 21 March, 1645. He was the son of his early years, educated at Alcalá de Henares. The exact date of his ordination to the priesthood is not known, but the earliest notice of him in that connexion is in 1610 when he is mentioned by Andrés de Claromonte y Corroy in his "Letanía Moral", as Padre Fray Gabriel Téllez of the Order of Nuestra Senora de la Merced. He appears to have devoted the last years of his life to the affairs of his order and occupied responsible offices in it. In 1619 he was superior of a convent at Trujillo in Extremadura; in 1620, and for several years following, he lived in the monastery of the order in Madrid; and became prior of the monastery of Soria, where he died three years later. It has been stated that he adopted his nom de plume on account of his Holy orders, but this theory is apparently disproved by the fact that both names appeared on the same title-page.

Tirso's first printed volume, "Los Cigarrales de Toledo," appeared in Madrid in 1624 and Barcelona, 1631. The name is taken from cigarro, a Toledan word meaning a country house. The work is patterned after Boccaccio's "Decameron" and is a collection of tales and poems and three comedies, supposed to be recited and played by a company of ladies and gentlemen who meet at a cigarro for the purpose of diversion. A second collection, entitled "Deleitar aprovechando," appeared in Madrid in 1635, and contains essays, autos sacramentales, and three religious tales. As a dramatic writer, Tirso was very prolific. He is credited with having written four hundred plays, but the number is not exactly probable. Throughout his life his comedies were published in five parts, the first in Seville, 1627, the third in Tortosa, 1634, the second and fourth in Madrid, 1635, and the last in Madrid, 1653. These contain fifty-nine plays. The play which has given Tirso his fame is his "Burlador de Sevilla" de Sigüenza. The earliest record of possessing his life his comedies were published in five parts, the first in Seville, 1627, the second in Tortosa, 1634, the third and fourth in Madrid, 1635, and the last in Madrid, 1653. These contain fifty-nine plays. The play which has given Tirso his fame is his "Burlador de Sevilla" (1621). He is his most celebrated in his comedies and his secular novellas. He excels in wit, originality of dialogue, and ingenuity of plot.

VENTURA Fuentes.

Tellier, Michel Le, b. 19 April, 1603; d. at Paris, 30 Oct., 1685. He was commissioned by Cardinal Mazarin to organize the royal army, and having helped to appease the troubles of the Fronde, he left to his son Louis a most epoch-making secret of war. After his appointment as chancellor by Louis XIV in 1667 he had a decisive share in the revocation of the Edict of Nantes, which he signed, 2 Oct., 1685, a few days before his death. Before expiring he sang the canticle of Simeon "Nunc dimittis". He shared Louis XIV's illusion that there were almost no Protestants left in France, and that the act suppressing the liberty of Protestant worship was no more than the public recognition of an accursed fact, the disappearance of Protestantism. His eldest son, Michel Le Tellier, Marquis de Louvois (b. at Paris, 18 Jan., 1641; d. 16 July, 1691), noted for the remarkable expedition with which he organized the armies for the wars of Louis XIV, was partly responsible for this false idea, for he led the king to believe that the dragoons, military expedition which Louvois sent into Protestant villages, had finally overcome all resistance. The youngest son of Michel Le Tellier was Charles-Maurice Le Tellier. Michel Le Tellier's funeral oration was delivered by Bossuet and Féchetier.

GEORGES GAYAU.

Telmessus, titular see in Lycia, suffragan of Myra. Telmessus (or incorrectly Telmessia) was a flourishing city west of Lycia, on a bay of the same name (also called Glaucus sinus). It was famed for its school of diviners, consulted among others by Crossus, prior to declaring war against Cyrus, and by Alexander, when he came to the town after the siege of Halicarnassus. It must not be confounded with a city of the same name in Caria. Telmessus was also called Anastasiopolis in honour of the emperors of that name. Its ruins are located at Makri (1500 inhabitants, half of them Greek), the capital of a chora in the vilayet of Smyrna, and situated upon a rather important harbour. The acropolis is still in existence surrounded by walls erected by the Knights of Rhodes and the Genoese. The ruins include the remains of a theatre and a curious tomb cut in the rock. Makri derives its name from the Macra of the ancients, the Isla Longa of the medieval Italians, which lay at the entrance to the gulf. Le Quien (Oriens Christ., I, 971) mentions two bishops of Telmessus: Hilary (370) and Zenodotus, at the Council of Chalcedon (451). The latter is called "Bishop of the Metropolis of Telmessus and the Isle of Macra". The "Notitiae episcopatum" mentions Telmessus among the suf-
fragments of Myra until the tenth century, when it is no longer called Macra; in 1316 mention is made of the See of "Macra and Lybysium". Lybysium or Levi is about four miles south-west of Makri, and has 3000 inhabitants, nearly all Greeks.

S. Pétrides.

Te Lucis Ante Terminum, the hymn at Compline in the Roman Breviary. The authorship of St. Ambrose, for which Pictet contends, is not admitted by the Benedictine editors or by Biraghi (see Ambrosian Hymnography). The hymn is found in a hymnary in Irish script (described by Blume in his "Curseus", etc.) of the eighth or early ninth century; but the classical prosody of its two stanzas (solita in the third line of the original text is the only exception) suggests a much earlier origin. In this hymn it is assigned, together with the hymn "Christe qui lux es et dies", to Compline. An earlier arrangement (as shown by the Rule of St. Cæsarius of Arles, c. 502) coupled with the "Christe qui lux" the hymn "Christe precum adnue", and assigned both to the "twelfth hour" of the day for alternate recitation throughout the year. The later introduction of the "Te lucis" suggests a later origin, although in its situation the hymn is not the Othian. The authorship of St. Ambrose. The two hymns "Te lucis" and "Christe qui lux" did not maintain everywhere the same relative position; the latter was used in winter, the former in summer and on festivals; while many cathedrals and monasteries replaced the "Te lucis" by the "Christe qui lux" from the first Sunday of Lent to Passion Sunday or Holy Thursday—a custom followed by the Dominicans. The old Breviary of the Carthusians used the "Christe qui lux" throughout the year. The Roman Breviary assigns the "Te lucis" daily throughout the year, except from Holy Thursday (Te Lucis Ante Terminum, p. 2) to the Friday after Easter, inclusively. Merati, in his notes on Gavantus's Thesaurus, says that it has always held, without variation, this place in the Roman Church. As it is sung daily, the Vatican Antiphonary (now passing through the press) gives it many settings for the various feasts and rite (e.g. the nine melodies, pp. 117-121, 131, 174, 356, 366).

H. T. Henry.

Temiskaming, Vicariate Apostolic of, suffragan of Ottawa, Canada, is bounded on the north by Hudson Bay and the Great Whale River; on the south by the height of land, or wasterbed, except in the Temiskaming district, where the southern boundary is 47° N. lat.; on the east by 72° W. long.; and on the west by 91° W. long. It was erected on 22 May 1868, by dividing the Diocese of Pembroke. Father de Bellefeuille, S.S., and Father Dupuy, of Montreal, first preached the Gospel here in 1836. Annual visits were made to the Indians of the district, missions being held at the Hudson Bay Company's trading stations. The Oblates of Mary Immaculate were given charge in 1843. Father Laverloché was the first of these zealous missionaries. They established a residence at Fort Temiskaming in 1863, but removed to Ville Marie in 1866. Lumbering succeeded the fur trade and was followed by agriculture, the fertile shores of Lake Temiskaming rapidly attracting settlers. Railway construction with the discovery of silver and gold (1893), advanced the Ontario section. The vicariate is about 20,000, including some 5000 Indians. Haileybury, Ontario, is the residence of the first vicar Apostolic, the Right Rev. Elie-Anicet Latulippe. There are 17 parishes, 20 missions, and many stations, served by 21 secular priests, 4 missionaries of the Sacred Heart (who have under their care some 2000 of Mary Immaculate). The Marist Brothers, the Sisters of the Assumption (novitiate at Haileybury), the Grey Nuns of the Cross, the Sisters of the Sacred Heart, the Sisters of Providence, and the Sisters of the Holy Family conduct four boarding-schools, two hospitals, and one industrial school and refuge for Indians, besides several parochial schools. The Rt. Rev. Elie-Anicet Latulippe, D.D., was born at St. Anicet, Province of Quebec, 3 Aug., 1859. Ordained on 30 May, 1885, he was successively curate at St. Henri, Montreal, chaplain at the convents of the Grey Sisters and the Sisters of Mercy, and pastor at St. Anne's, Lachine, rector of Pembroke Cathedral, and pasteur de la nation.

He was named Bishop of Catennas and first Vicar-Apostolic of Temiskaming on 1 Oct., 1908, and consecrated on 30 Nov., 1908.

John R. O'Gorman.

Temnus, a titular see in Asia, a suffragan of Ephesus. Temnus was a little town of Eolia, near the River Hermus, which is shown on its coins. Situated on an elevation it commanded the territories of Cyme, Phocas, and Smyrna. Under Augustus it was already on the decline; under Tiberius it was destroyed by an earthquake; and in the time of Pliny it was no longer inhabited. It was however rebuilt, and became one of the suffragans of Ephesus. Le Quien (Oriens Christi., I, 707), mentions three bishops: Eustathius, who lived in 451; Theopas, present at the Council of Nice (787); Ignatius, at Constantinople (899). This see is not mentioned in the "Notitiae Episcopatuum". Ramsay (Asia Minor, 108) thought the Diocese of Temnus identical with that of Archangelus, which from the tenth to the thirteenth century has "Notitiae Episcopatuum" assigned to it. In 1413 the Turks seized the fortress of Archangelus, which they called Kassandra, i.e., small rock; this fortress was situated on the plains of Menemenus, now known as Menemen. Doubtless, Temnus and Menemen are the same. The latter is now the chief place in the villayet of Smyrna, with 9000 inhabitants, of whom 2000 are Greeks, 500 Armenians, the remainder Musulmans. However, Texier (Asie Mineure, 227) identifies Temnus with the village of Guzel Hissar, to the north of Menemen.

S. Pétrides.

Tempel, Wilhelm (Ernest Leberecht), German astronomer, b. 4 December, 1821, at Neustettendorf near Lobau, Silesia; d. 16 March, 1889, in Arcetri near Florence. Having lost his mother in early infancy, he was placed under a schoolmaster from his ninth to his fourteenth year, and employed as sexton, beadle, gardener, and collector of fees on occasions of New Year, of baptisms, and marriages. He learned to read and write, and about his twentieth year, went to Copenhagen with letters of recommendation to a distant relative Lehmann, the father of the Danish statesmen and journalist, Orla Lehmann. During a three-years' stay he was a welcome and frequent guest with a number of artists among whom Reinhold carved his bust, and the painter Bünsen drew his portrait. His German poems to friends and benefactors show a complete mastery of k's native
tempeL 480

TONGUE. He became enthusiastic over the literature and national songs of the Danes, e.g., "King René’s Daughter". These three years in Denmark were, as he used to say, his academic career. With a desire to know peoples and countries from experience, he went to Christiania, but soon turned his path to the land of the fine arts. About 1850 he settled in Venice as lithographer. The Palace of the Doge seems to have attracted his artistic tastes, for he became intimately acquainted with the family of the Porter Gambin, whose daughter Maria became his wife, embracing at the same time the Catholic faith. His wife testified that Tempel had never been satisfied with his former religion and purposely chose a Catholic companion in life. The marriage proved very happy and successful, though not blessed with children. Contact with cultured people in Venice awakened in him a taste for astronomy. From his earnings he bought a 4-inch (Steinheil) comet-seeker, and in 1859 made two discoveries, one of a comet (designated 1859 I), on 2 April, and another of the Merope-Nebula in the Pleiades, on 19 October. The new talent for discoveries matured in him the plan of embracing the astronomical career. In his enthusiasm he moved to Paris, but found that lack of scientific training precluded entrance to the Imperial Observatory. Greatly disappointed by Leverrier, the director, he moved with his wife to Marseilles in 1860, where he was accepted by Benjamin Valz as assistant astronomer.

Tempel began his career in Marseilles with the discoveries of a comet (1860 IV) on 22 October, and of two minor planets on 4 and 8 March, 1861, all with his own 4-inch comet-seeker, on the terrace of the observatory. The position however lasted only half a year, owing partly, it would seem, to continued strained relations with Leverrier. He settled down once more as lithographer without, however, giving rest to his comet-seeker. From window or garden he discovered, during ten years, no less than thirteen comets and four minor planets, more than half of them new. From Marseilles he began publishing his observations in the "Astronomische Nachrichten". In France, their success caused cordial and intellectual intercourse, and a literary attempt of his in "Les Mondes", in May, 1863, on the question of the variability of nebulae, was severely criticised by Leverrier. In the same year (1863) he paid a two-months’ visit to his native country, spending most of the time at the observatory at Liépzig. Just two years before, in 1861, a former astronomer of Liépzig, d’Arrest, had built a new observatory at Copenhagen. Unfortunately for Tempel, d’Arrest was the very one who criticised his publication on the Merope-Nebula as exaggerated, although the controversy ended in justifying Tempel’s assertion, that nebulae must be observed with low magnifying powers. Tempel’s effort, in 1870, to get a position under d’Arrest was fruitless.

In January, 1871, the Provisional Government ordered the Germans out of Marseilles. In spite of his experiences in France, Tempel sympathised with the unfortunate country during the war. Arrived at Milan he found in Schiaparelli the man who acquainted him with the famous observatory of Varese, where he received his 16-inch refractor and served as assistant for a considerable time. At the end of 1871, he was appointed director of the observatory and assistant to the director at Padua, a position he retained until his death in 1880.

Schiaparelli’s attention to Tempel is well known. He offered him the position of assistant to the observatory of Padua, where he remained until his death.

On examination the object-glasses proved a title
defective in colour correction but excellent in definition; hence less adapted for planets, but perfectly suitable for comets, asteroids, and nebulae, the very programme of Tempel. Nebulæ, however, became now his main field. In Arcetri he picked up only one major comet, called "Tempel III," that is, with the last equatorial proved very slow and laborious. To find and to identify the stars, the observer had to descend from the ladder, use the comet-seeker on the terrace and make triangulations on the small charts at hand, all without electric light. And yet, after four years of work, Tempel presented to the Royal Academy of the Lincei a collected volume of, and five more of, his own discoveries. Tempel was awarded the Nebula, which secured him the royal prize given every six years for the best astronomical work in Italy. The Academy even offered to publish the drawings, but the proofs of the lithographs did not satisfy the author. The designs are the more valuable as they contain many stars, measured with a double ring-micrometer. Tempel discovered many new nebulae, observed a number that had been neglected since Herschell's time, wrote a mass of careful notes that are not yet published, occasionally correcting errors. Extracts of his observations are found in the "Astr. Not." (pp. 93–113) and drawings of the nebula were published in the "Astr. Nachr.", vol. LVIII (1862), and in the Memoirs of the R. Bohemian Society of 1885 (reviewed in the Vierteljahrschrift, XVII). Tempel was elected foreign associate of the Royal Astronomical Society of England in 1885, together with Gyllén, Pickering, Tisserand, and Tisserand (Monthly Notices, XLI, 377). In 1886 he was honoured with a letter from King Humbert, handed to him by the Adjutant General, in recognition of his astronomical drawings. In the intercourse with scientific men, the lack of academic training betrayed itself occasionally, and Tempel himself regarded all his life that he had not learnt Latin. Diffusiveness of style and unceremonial assertions provoked contradiction. A controversy with Dreyer, the astronomer of Birr Castle, about the reality of spiral forms in many of Lord Rosse's drawings of nebulae, may be found in "The Observatory" (vols. I–II, 1878). The existence of a faint nebula drawn by Tempel (near H. I 55 Pegasi) was denied by Keeler (Astron. J. XI, 1900).

Temperance's intercourse with old friends in Copenhagen remained cordial to his end. He received them or friends recommended by them, like brothers, and always regretted that his health did not allow him to revisit Copenhagen. His letters to them breathe a deeply religious spirit. He glories in his honesty from childhood, regrets complaining about injuries received, speaks of the blessings of Providence, of friendship beyond death, gives thanks and praises to God, promises prayers to friends and benefactors, and looks confidently towards eternity. Expressions like these made his Protestant friend say in the "Dagbladet": "During the many years' sojourn in Italy his mind, which was subject to depressions, had found peace by entering the Catholic Church". The same assured the writer of this memoir that, on a visit to Arcetri, he had found Tempel very happy in his religious convictions. His dearest company was that of his friend, who visited him regularly. A Franciscan from the Convent of Quarcacci was his confessor, and the Carthusians of the Certosa were his intimate. In the fall of 1886 Tempel was attacked by a liver complaint and, in the beginning of 1887, by partial paralysis. Unable to observe, he put his notes in order for publication. During his illness he received the sacraments repeatedly. The parish priest of S. Leonardo (now Canon Emilio Nunziati) testifies that Tempel was a thoroughly civil man and died a saintly death, having made his mind clear to the last. Tempel was hardly sixty-eight years old. He is buried near the tomb of Donati, in the cemetery of S. Felice a Elma, a suburb of Florence. He left neither debts nor property, and his widow was provided for by what is called in Italy a "paceco di sali e tabacchi", this again, as it seems, through Schiaparelli. More than 186 drawings of comets and stars, of nebulae, and notes, are now the property of the university and deposited in the Tribune of Galileo (via Romana). A list of them is in the "Astron. Nachr.", CII (1882), and in the "Bohemian Memoir" (1885).

J. G. HAGEN.
have a good deal to say in the case, but in turn will have its propriety determined by modesty. Other virtues are enumerated by St. Thomas as subordinate to temperance in the management of some passion. It ought to be noted, however, that in its primary and generally understood sense temperance is concerned with what is difficult for a man, not in so far as he is a rational being precisely, but rather in so far as he is an animal. The restraint which enables him to avoid excess in the use of food and drink and of the venereal pleasures that go with the propagation of the race. That is why abstinence and chastity may be reckoned the chief and ordinary phases of this virtue. All that has been said receives additional force if we suppose that the self-control commanded by temperance is measured only by the rule of reason but by the revealed law of God as well. It is called a cardinal virtue because the moderation required for every righteous habit is in the practice of temperance a specially trying and profoundly legitimate quality of life: prudence; then justice, fortitude, and, finally, temperance.

Temperance Movements.—Europe. Reasons for a temperance movement exist to a greater or lesser degree in all the countries of Europe, although the kind and amount of alcoholic beverages consumed vary greatly in the different lands. In former days the greatest amount of drunkenness was to be found in Russia and Sweden, while now the latter country is the most temperate of all. On the other hand, conditions at present are very bad in France and Belgium, largely because these are almost the only lands where absinthe is habitually drunk. Unfortunately, it is in just these countries that there are but few signs of an energetic temperance movement, for in them wine and beer are still called "hygienic drinks." A strong opposition to the use of alcoholic liquors exists in Germany, the United States, Canada, and the United Kingdom, and for the last ten years, in the Netherlands and Germany. It is only of late that the southern countries of Europe have begun to take part in the temperance movement, and of these Italy is the most active.

A. Consumption of Alcohol.—Statistics as to the consumption of intoxicating liquors should be used with great caution, especially when different countries are compared. The amount of alcohol in various liquors, and even in the same liquor in different countries, varies greatly. The most reliable international statistics concerning alcoholic beverages are probably those repeatedly issued since 1827 by the British Board of Trade. These statistics were taken by the Imperial Bureau of Statistics at Berlin in 1906 as the basis for the excellent papers on the alcohol question that appeared in the "Reichsarbeitblatt." According to them, the average amount of alcohol in distilled liquors may be taken as 50 per cent; in wine in Germany and Switzerland, 10 per cent; in wine in Italy, France, Belgium, and Holland, 12 per cent; in Great Britain, 15 per cent; the average amount of alcohol in beer may be taken as 4 per cent (in Great Britain, 6 per cent). The alcoholic beverages most generally used are distilled spirits, beer, and wine. The drinking of absinthe, its prohibition by popular vote in Switzerland in 1908, is limited to France and Belgium, where the prohibition is to a large degree evaded. Distilled spirits is the principal alcoholic beverage in the following countries: Russia, where it is 93 per cent of all the alcoholic beverages consumed; the three Scandinavian countries, 65-69 per cent; Austria-Hungary, 59 per cent. The largest proportion of beer is drunk in Great Britain (76 per cent of all alcoholic beverages consumed), and Belgium (64 per cent). Wine is the alcoholic beverage most used in the following countries: Switzerland, 58 per cent of all alcoholic beverages; France, 75 per cent; Italy, 95 per cent. In Germany, besides a small consumption of wine, an almost equal amount of beer and spirits is consumed (beer, 42 per cent; spirits, 44 per cent). The figures are, of course, quite different if the question is as to the amount of liquor actually drunk. The amount depends in the first place on whether moderate drinking is the daily habit in a country, or whether alcoholic beverages are drunk only occasionally, even though immoderately; and, secondly, whether beverages containing a large amount of alcohol are most used, or the consumption is of weaker ones, but in larger quantities. This is the reason why the beer-drinking countries rank first when the inquiry is how much alcoholic drink is consumed per capita of population, while, on the other hand, the amount of spirits consumed in the oil and brandy are consumed take the lead if the question is as to the amount of alcohol consumed. In the former respect, Belgium stands first with a consumption of nearly 54.22 gallons per capita of population, 49.52 gallons being beer; third, Great Britain and Switzerland, each about 33.01 gallons; Germany, 30.66 gallons; Italy and France, each 28.30 to 30.66 gallons; Denmark, 25.94 gallons. In the other countries the consumption is less than 25 gallons per capita, e. g. Norway, 4 gallons; Holland and Russia, each about 2.50 gallons. On the other hand, the countries where the largest quantity of alcohol is drunk are: France, 4 gallons per capita, and Italy, 3.7 gallons. The countries showing the lowest figures are: Holland, .94 gallon; Russia, .61 gallon; Norway, .51 gallon. Germany and Austria are in the middle with about 2.24 gallons. If, finally, the individual beverages are considered, the largest consumption of distilled spirits is in Denmark, 3.3 gallons per capita, and Austria-Hungary, 2.39 gallons; the largest consumption of beer is in Bavaria and Belgium, where it is more than 50 gallons per capita; the consumption of wine is largest in Italy, 27.50 gallons, and France, 26.55 gallons. The United States, Germany, 58,062,028.3 gallons of distilled spirits, 1,757,075,471.69 gallons of beer, 87,264,150.94 gallons of wine, for which nearly $150,000,000 ($714,500,000) is paid annually, a sum nearly three times as large as the cost of the German army and navy. The annual expenditures in Alcoholic Beverages is about $1,04,166,000 ($500,000,000). B. Development of the Temperance Movement.—Two main periods are to be distinguished. The first, which began about 1830, was fairly general, but substantially affected only the British Isles and the Germanic countries. The second began in 1850 in Great Britain; after a decade it extended to Scandinavia, and after thirty years to Germany. It was, however, only at the close of the century that it attained its great importance, by gradually obtaining a foothold in all civilized countries. In both the immediate stimulus came from the United States of North America. The chief distinction between the earlier and later movements is generally expressed thus: that that former laid the emphasis on temperance, the latter on total abstinence. But this hardly reaches the root of the matter. Apart from the fact that even in the earlier period, there has been a marked increase in temperance sentiment, beginning in England (from 1832), refraining from spirituous beverages was at that time practically equivalent to total abstinence, as other intoxicating drinks were almost unknown, or at least their injurious qualities were much underrated. Beer was then strongly recommended (even in popular songs) as a "most de-
licentious drink"; thus the brewing industry was encouraged. It was thought that poisonous substances existed only in distilled spirits, consequently nothing was said of combating alcohol, but always distilled spirits. pirate beer, or that movement is better characterised by calling it the era of naïve enthusiasm, supported especially by religious ideas. Drunkenness was regarded chiefly as a vice to be overcome by strong religious sentiments. Clergymen were the principal leaders of the movement, and this led to his work to their best attainment.

The new movement is more passionate; its fundamental ideas are largely hygienic and social. The nature of alcoholic beverages has been more thoroughly investigated and the danger of habitual moderate drinking, which merely avoids intoxication, has been recognized. Intemperance is no longer generally regarded as a matter of individual morality, but as a menace to the public health (because of its effects on the offspring) and as a danger to national welfare (inasmuch as it promotes criminality and immorality, while lessening mental and economic productivity). The movement is more powerful. In 1830, the press of 10,000 sociologists and government officials; its final aim is rather to do away with the drinking of alcohol either by national prohibition or by local option. Still, of late, the religious side of the movement has shown renewed vigour, especially in rescue work for drunkards; and a number of religious organizations, especially among the Catholics of Germany and Holland. It is entirely in keeping with the social character of the movement that the effort is made to influence children and young people also (as in the "Bands of Hope") and that even the schools are called on to cooperate by means of special instruction.

The first traces of an organized temperance movement in Europe are found in the union formed at Växjö, Sweden, in 1819, by a number of pupils at a gymnasium under the guidance of Per Wiesegren (1800-77), who afterwards became famous as the father of the Swedish temperance agitation. The members of the union pledged themselves to abstain from all harmful spirituous beverages. However, impulses from America ("American Temperance Society", 1826) first led to the foundation of regular societies—almost immediately in Ireland (New Ross, 1829; Galway, 1830; Cork, 1831; "Catalitic" Temperance Movement, 1829; the "Scottish Temperance Society", a central organization, founded in 1831, soon had 300 branches); England (Bradford, 1839; the end of 1830, 30 local societies; the "British and Foreign Temperance Society", 1831); Sweden (Stockholm, 1839; the Swedish Temperance Alliance, 1840), with 100,000 members by 1845. The movement spread most rapidly in Ireland, where from 1834 Father Mathew (q.v.), probably the greatest preacher of temperance of all times, laboured with extraordinary success; by 1844 he had secured nearly 5,500,000 adherents. In Dublin alone 150,000 took the pledge from him; later he went to England, gaining 60,000 in London, then to Scotland and America. In 1855 the "Irish Temperance League", now the most important abstinence organization in Ireland, was founded. As in Sweden, the first movement in Norway and Germany was also an independent one, but it did not attain in either country much importance until it came into contact with the American and English movements. In Norway, Kjell Andersen established throughout the country numerous societies which, in 1845, he united into a central organization, the "Dens norske verenig med brøndvin inder"; an organization that received at once considerable financial aid from the State.

The campaign was opened in Germany about 1850 by a number of medical treatises, especially those of Hufeland (Die Branntheitvereinigung), and also the circular addressed by King Frederick William III of Prussia to the Protestant consistory urging them to exhort the people to abstain from spirits. The first societies were established at Hamburg in 1830 and at Düsseldorf in 1832, through English influence. About 1835 Frederick William III made the Agriculture Government for information concerning the temperance movement. In answer to this request Robert Baird, author of the epoch-making "History of the Temperance Societies in the United States", was sent to Europe in 1836. At Berlin Baird gave the French version of his "History" which was translated immediately into German, and 30,000 copies distributed. The movement was now carried on with great zeal, mainly by the different Churches. The chief workers among the Catholics were: Father Seling (1792-1860) in the Diocese of Osnabrück; the Archpriest Fitzke and Father Schaffranck in Silesia; the Jesuits, especially Hillebrandt in Westphalia; Father Ketterer and other Jesuits in Ermland; much influence was also exerted by the writings of the popular author Alban Stolz. Father Mathew's work was taken as the model of the movement, but an effort was made to base it on the temperance laws of the confederations; these still exist in the east of Germany. The work was carried on among Protestants by Pastor Böttcher of Hanover (also active as a writer) and by Freiherr von Seld, who covered much territory lecturing on temperance. The result of these labours was that when the Empires were re-established (Hamburg, 1843) there were already over 450 temperance societies in Northern Germany, and 1702 when the second congress was held (Berlin, 1845). At the same date the total number of abstainers in Germany was stated to be 1,650,000, of whom over 250,000 were in Upper Silesia. This was the culminating point of the movement, which rapidly declined after the Revolution of 1848. Besides the countries already mentioned, the early movement attained prominence only in Holland and Denmark, although the American influence was felt in other countries also. In 1842 the "Nederlandsche Vereeniging tot abschaffing van sterken drank" was formed at Leyden; its membership rose to over 20,000 and then declined. Baird spent 1840 in Denmark; 40 societies were quickly formed there, and in 1845, were united into a national association with its own secretariats. In 1850, a "Conference of Temperance Societies" was founded, in 1857, had 100,000 members by 1845. The movement spread most rapidly in Ireland, where from 1834 Father Mathew (q.v.), probably the greatest preacher of temperance of all times, laboured with extraordinary success; by 1844 he had secured nearly 5,500,000 adherents. In Dublin alone 150,000 took the pledge from him; later he went to England, gaining 60,000 in London, then to Scotland and America. In 1855 the "Irish Temperance League", now the most important abstinence organization in Ireland, was founded. As in Sweden, the first movement in Norway and Germany was also an independent one, but it did not attain in either country much importance until it came into contact with the American and English movements. In Norway, Kjell Andersen established throughout the country numerous societies which, in 1845, he united into a central organization, the "Dens norske verenig med brøndvin inder"; an organization that received at once considerable financial aid from the State.

The campaign was opened in Germany about 1850 by a number of medical treatises, especially those of Hufeland (Die Branntheitvereinigung), and also the circular addressed by King Frederick William III of
the same year (1887) the first lodge was established in Switzerland. It is only within the last ten years that grand lodges have been established in Holland and Austria.

Organizations of the different social classes and both sexes have become of great importance in the new movement. The first of these societies was the "British Medical Temperance Association" formed by the English physicians in 1876. Special organizations for clergymen, teachers, railway men, and workmen have been established, and are striving with increasing success to form international associations. Unfortunately, the Social Democrats have in many instances used the movement as a means for carrying on their own agitation, and in this way have gained the sympathy of many who would otherwise hold aloof from them. This statement, however, has little application to Germany. Women take an increasingly great part in the work of temperance. The "Woman's Christian Temperance Union", established in the United States in 1873, became a world-wide association in 1883, and then affiliated many national associations (some very strong). Owing to these energetic efforts the number of total abstainers has increased greatly in most countries; in some they form from 8 to 12 percent of the entire population, as: United Kingdom, about 5,000,000 (including 3,200,000 children); Sweden, 500,000; Norway, 240,000 (including 65,000 children); Denmark, 240,000; Germany, over 320,000 (including 85,000 children); Switzerland, 75,000 (including 26,000 children); Finland and Holland, each 30,000; and Iceland, 5000. The total number in Europe may be safely estimated at over 6,500,000.

C. Present Status of the Temperance Movement.

Under this head will be considered: the international organizations, which, with one exception, are total abstinence societies; the larger associations of the individual countries; the Catholic movement, which is of chief interest here; finally, the most important congresses, in which in a certain manner the associations show their concentrated strength and the success of the movement.

(1) International Organizations.—The largest organization is still that of the "Independent Order of Good Templars", which has 18 grand lodges in Europe; of these 6 are in Great Britain, 2 in Germany, 1 each in Ireland, Scotland, Denmark, Norway, Sweden, Holland, and Switzerland, and Russia. There are also some district lodges in France and Russia. The total number of lodges on the Continent is 4661 with 257,638 members, and 1855 lodges for the young with 123,634 members. In Great Britain there are 2266 lodges with 92,725 members and 1350 lodges for the young with 109,220 members. A strong competitor of this order in Switzerland is the "Neutral Independent Order of Good Templars", established in 1906 by Professor Forel, because he considered the large order laid too much stress on religious elements. The Swiss grand lodge of the new order consists of 3500 members of both sexes, mostly German, 2100 members. A large number of the Dutch, Belgian, French, and Hungarian lodges have also joined the Neutral Order. On account of the law in Austria regarding associations a national association in ten local branches has been formed under the special title "Nephalia". The organization next in size is the "Blue Cross" (headquarters at Geneva), which contains about 1550 branches and 60,000 members, including a large number of reformed drunkards (9000 in Germany). Divided as to the different countries the number of societies is as follows: Switzerland, 186; Denmark, 36; the organization here is called "Det blaa Kors"; France, 65; there are also several scattered societies in Belgium, Russia, and Hungary. Affiliated to the "Blue Cross" is an association for youth called the "Band of Hope for German Switzerland" (Deutsch-schweizerische Hoffnungsgenossenschaft). A society small in membership but important on account of the circulation of its publications is the "International Anti-Alcoholic Association" (Int. Alkoholegefährdeten) with national organizations in Switzerland which was established with this since 1907 is the "International Bureau for Combating Alcoholism" (Int. Bureau zur Bekämpfung des Alkoholismus), Lausanne, conducted by Dr. Hercod, which possesses a large bureau of information.

Notwithstanding their international organizations, two associations in the "Order of Rechabites" and the "Blue Ribbon", are essentially English societies. The "Rechabites" form a life insurance society with 300,000 members, and have a few branches in Germany and Denmark; the "Blue Ribbon" has about 1,000,000, of whom less than a tenth are in Denmark, Norway, and Sweden. The international organization of women, the "Woman's Christian Temperance Union", is strongest in English-speaking countries. Among its numerous branches on the Continent, those of Germany and Switzerland are prominent for their activity, especially in the establishment of small home-bases. International organizations of different social classes the "International Society of Physicians" is, owing to the view now taken of alcohol the most important. This society includes the German-speaking countries, Scandinavia, Russia, and Belgium. The "International Anti-Alcoholic Association" (Int. Antialkoholische Gesellschaft) (founded in 1904 by de Terra) has branches in Germany, Austria, Switzerland, and Belgium. The "International Association against the Abuse of Spirituous Beverages" (Verein gegen Missbrauch geist. Getränke); this was established in 1883 and has 27,000 members who take no personal pledge. The society carries on its work by periodicals, pamphlets (of which over a million were circulated in 1908), charts, exhibitions, etc. Among the total abstinence societies are the "Blue Cross Societies of the Evangelical Church" (Deutsche Bund evangelisch-kirchlicher Blaukreuzvereine), with 8500 members; several societies that have separated from the "Independent Order of Good Templars"; and abstinence societies for various classes of society, as workmen, school-children, teachers, post-office officials, lawyers, philologists etc; the societies for lawyers and philologists are confined to German territory. In defence of their common interest nearly all the German total abstinence societies have joined the "General German Union for Combating Alcoholism" (Allgemeiner deutscher Bund gegen die Bekämpfung des Alkoholismus) of Hamburg, which is a large bureau of information, a section for testing beverages free from alcohol, a bureau for lectures, etc. Germany has altogether sixty large anti-alcoholic organizations.

The movement against alcohol is weak in Austria, probably because the Government puts great difficulties in the way of international organizations. The large associations, about thirty in number, have nearly all sprung up within the last few years. The temperance societies (Oest. Verein gegen Trunksucht and similar provincial societies in Vorarlberg, the German Tyrol in and Tyrol) have a considerable importance. The leading abstinence society is undoubtedly the Polish "Eleuteriya", with 5300 members in 20 branches. The "Central Union of Austrian Anti-Alcoholic Societies" (Entödtungsverband)
TEMPERANCE

858

Theat. Alkoholgegensereverne), in Vienna, serves as a common headquarters for most of these societies. Besides the Neutral Independent Order of Good Templars, Hungary possesses a fairly important absolute temperance movement in the form of the "Alliance for Absolute Temperance" (Unio de Lausanne; the temperance societies, the "Society of St. Gall against the Abuse of Spirituous Liquors" (St. Gallischeverein gegen den Missbrauch geistiger Getränke), with 14,000 members, and the "Patriotic League of Switzerland against Alcoholism" (Ligue patriote suisse contre l'alcoolisme). The temperance societies have complete control; the active participation of pupils in schools and children is especially worthy of attention. The "Swiss Abstinence Secretariat" at Lausanne is the headquarters for the society. In Holland there is still considerable rivalry between the Catholic and the Protestant temperance societies. The organizations of the latter are large, particularly the "People's Union" (Volksbund), which has over 20,000 members. Most of the societies are connected with the different Churches; the Protestant ones, five in number, have since 1907 been united in the "People's Union of the Christian Anti-Alcoholic Societies of Holland." (Niederländischer Volksbund der christlichen Antialkoholvereine.)

Hitherto the associations in Belgium and France have been almost exclusively temperance societies; in both countries a temperance movement for school-children play an important part. The "Fremde Nazis Union gegen Alkoholismus" (Ligue sat. française contre l'alcoolisme) has nearly 100,000 members in 1730 branches, of which many are for children. Belgium also has a similar "Patriotic League" and 120,000 children in more than 5000 temperance societies organized during the last thirty years through the efforts of school inspector Roubin. Only the beginnings of a temperance movement are to be found in Italy. In 1907 various local organizations united in the "Italian Anti-Alcohol Federation" (Federazione Antialcolistica Italiana), which allows daily half a litre (a small bottle of wine at most). The temperance movements are closely connected with the farmers' and Social Democrat parties. Still less organization is there in Spain, where the first associations are just beginning to be formed. Portugal is without organization. Total abstinence prevails in the Scandinavian kingdoms, Iceland, and Finland, although home-brewed beer appears to be still permitted. The Russian temperance movement, "Det Norske Totalafholdsselskab," has 135,000 members. In Sweden, besides the very strong "Independent Order of Good Templars", there are the Social-Democratic "Verdandordern" and many total abstinence societies for different classes, as physicians, students, teachers, merchants, soldiers, clergy, nurses etc., as well as a society for giving instruction in abstinence. A central abstinence bureau exists in both countries. The largest abstinence society in Denmark is the "Danmarks Afholdsforening" (about 60,000 members). Many total abstinence societies have branches in many other countries. As far as known, they have been the chief champions of the cause. About 1885 the Catholic movement began in Belgium. Under the leadership of Abbé Lemmens there now exists a federation consisting of nine large associations with about 600 local branches and 50,000-60,000 members, who, as a body, represent temperance, not total abstinence. The most important of these associations are the "Sint-Janabnoot" (society for temperance among young people founded by Canon Senden), the "Onthoudersbond van West-Flanderen" and the "Société belge de Tempérance." The main organization in Germany is the "Alliance of the Cross" (Kreuzbund), a society of Catholic abstainers, with headquarters at Kassel, and in other places. This organization was established in 1899 by Father Neumann as a temperance society; in 1904 a separate section for total abstainers was formed, and since 1909 the entire organization has been a total abstinence society, with sections for women (Frauenbund); people (Johannes- bund), and for children (Schützengelbund). Altogether the association has a membership of 12,000 adults and 60,000 children. Unfortunately, the children's society has divided, about half of its members joining the Catholic Temperance Society of the Cross. The "Deutsch-Schweizerischer Jugendbund" has over 60 branches with 10,500 members; a similar union (Rèsel) for French Switzerland has 22 branches and 1200 members. Nearly all the members of the society previously mentioned, "St. Galller Besirks- vereina gegen Missbrauch geistiger Getränke", are Catholics. In Holland Dr. Arieni and Dr. Banning established in 1895 the "Kruisverbond", which has 50,000 members; both the Dutch and the Belgian associations for women (Mariaaverenigingen), which have about 30,000 members, admit temperance and total abstinence advocates. Instead of children's societies, associations have been formed of parents who promise not to give their children (and hence also to any alcoholic beverage) any alcoholic beverage other than water (the "St. Anna vereenigingen") (membership 25,000). These societies are arranged according to dioceses and since 1907 their central organization has been the "Sobrietas" with headquarters at Maastricht. Since 1901 Austria also has had its "Catholic Alliance of the Cross" and "Schützengelbund" as far as known, the membership has not reached 1000. Hungary has a Catholic temperance society with 10,000 members. The French Catholics have the "White Cross" society (Croix blanche). Some beginnings of international organizations should, finally, be mentioned: the "Abstinence Society for Priests" (500 members) in Germany, Austria-Hungary, Switzerland, and Holland; the "Catholic Academic Abstinence Union" with about 100 members in Germany, Austria, and Switzerland. The "International Catholic Association", opposed to moderate drinking of spirituous liquors, is, so far as known, not in existence. It has also been made a branch of the Order of the Benedictines founded by Father Hager, the members of which are both total abstainers and vegetarians; the mother-house is at Innsbruck.

(4) Congresses.—The great international conferences...
against alcoholism meet regularly every two years; the sessions, excepting that held in 1909 in London, have always been held on the Continent. According to official statistics thirteen congresses have been held (1912). The congresses have met twice at The Hague, and once at Paris, Brussels, Antwerp, Christiania, Stockholm, Bremen, Vienna, Budapest, Zürich, Basle, London. At first the advocates of temperance exercised most influence; in 1887 at Zürich and in 1903 at Bremen sharp disputes arose between this party and the total abstainers, who now control the meetings of the congresses. Since 1909 the Holy See has been repeatedly represented. Full reports of the sessions of the congresses are published. For about ten years a German total abstinence congress has been held on an average every two years, the seventh meeting being at Augsburg in 1910; similar congresses have been held for Scandinavia and Finland for the same length of time at the same intervals.

The eighth Swiss abstinence congress was held at Lausanne in 1910; at its sessions local option was urged. In other countries the holding of national conferences began at still later dates: the first Austrian congress against alcohol was held at Vienna in 1908; the Russian at St. Petersburg in 1910; the first Italian at Milan in 1910; the first French total abstinence congress at Grenoble in 1910. A French congress of the opponents of the use of alcohol (held in 1903) was not of much importance. The Catholics of Holland and Belgium have so far had two national congresses. Among the special congresses held by the members of a single organization, those of the "Good Templars" are noteworthy. In some countries, particularly Germany and Switzerland, there are societies which hold educational courses of a scientific character for the study of alcoholism.

(5) Successes of the Temperance Movement.—The main success is the increased understanding, everywhere apparent, of its claims. Civil rulers repeatedly emphasize in their public utterances the great importance of strict temperance, while churchmen of high rank are either total abstainers or else warm friends of the movement, in whose interest they have issued many pastoral letters. As regards legislative action the advance of the movement is slower. Complete prohibition exists in Iceland. In Finland it has been repeatedly demanded from the provincial diet, and a similar demand has been made once in Sweden. In these two countries the majority of the deputy who are total abstainers grows continually larger (in Sweden they form one-half of the house), the Governments cannot permanently withstand the pressure. In Sweden the ministry in 1911 appointed a special commission to take the preparatory steps. Prohibition of spirits for the country district is general in Sweden, Norway, and Finland, and a local option law for the cities, which is to a great extent enforced. An energetic struggle is now being carried on in Holland, Switzerland, and Germany for a local option law. In criminal jurisprudence the Penal Code is now widely winning support, and in two small German states have adopted it, and it is elsewhere in use. Russia and Switzerland have introduced a government monopoly of spirits, but this has not been of any particular use to the temperance movement, except that in Switzerland one-tenth of the profits (alcohol tithe) must be applied to the work against alcoholism. Many countries voluntarily give such aid, as: Sweden, about 200,000 kronen ($54,000) in 1910–1911; Norway about 17,000 kronen ($4590); Holland, 20,000 florins ($8000), etc. A number of countries have introduced laws requiring the instruction in temperance of the primary schools, notably Belgium, Switzerland, (where there is a special course for male and female teachers), Norway, and France. Especially great has been the effect of the temperance movement on the reform of taverns. The celebrated Gothenburg system is largely used in Scandinavia and Finland. In this system the taverns are entrusted by the Government or commune to special societies (Samlag), who only receive a limited gain while the profits go to the State or commune for public purposes. The profits have amounted in twenty years to 83,000,000 kronen ($224,410,000). The tavern is carried on by a government official appointed for the purpose. The "Independent Order of Good Templars" opposes the system because it gives the communes too great an interest in the sale of alcohol. The German Society for the Reform of Taverns (Deutsche Verein für Gasthuarerform) employs the following method: the inn or tavern established by the commune or by a society is given a manager with a fixed salary, who has in addition a commission on the sale of food and non-alcoholic beverages. The profits from the sale of alcoholic liquors are never to be in stock. There are many temperance taverns in Switzerland and Sweden, and some in Germany, Hungary, and Holland. Reference should, lastly, be made to the very satisfactory increase of provision for the cure of drunkards. Over 40 institutions (six Catholic) where treatment is given besides numerous homes for drunkards belonging to cities and societies. Several cities have appointed official nurses to take care of drunkards; about half of the patients become permanent abstainers. In Switzerland there are about ten such institutions, one being Catholic. These two countries are far in advance of the others in the efforts to cure drunkenness.

The bibliography of the temperance question is enormous. Nearly 15,000 publications in Europe and the United States are listed by ARDRESS, William. "German and English Literature über Alkohol und Alkoholismus" (1905). The bibliography of the subject is given by the bibliographical journal Bistum und Welt (since 1881) and Die Gesammten Soziale Welt (since 1908). International temperance periodicals are (see below). The most important systematic work is probably HELMICH, Die Alkoholfrage aus einem theologischen Standpunkt. The work has an excellent introduction. The original work was translated from Finnish into German in 1903. The most historical work is BERGMAN, Nyålders historia (1900); well illustrated, also issued in a much altered German translation by KAUST (1907). The most important statistical work is that issued by the British Board of Trade mentioned at the beginning of this article, in connection with which see HOFFE, Die Tatsachen über den Alkohol. Year-books concerning the temperance movement in various countries are published by WARMING, for Germany and Austria-Hungary; HERCO, for Switzerland; NIELSEN, for Denmark; DOUGHER, for Norway; etc. Numerous periodicals are published in Denmark and Sweden, about 25; etc. The most important of these periodicals are: the Hungarian (Kereskedelmi- és Traktenkien (Budapest); Die Alkoholfrage (Berlin), issued in German, French, and English; Mässigkeitsblätter (Berlin); Minor (Stockholm); De Weggewijzer (Amsterdam); Alkoholcorp (Amsterdam); L'Alchémie (Lausanne); Folkloretten (Copenhagen); Le bien social (Brussels); Les annales antitoxiques (Paris). Catholic periodicals are: Volksglas und Der Morgen, for Germany; Volkswal and La Ligue de la Croix, for Switzerland; Kruisfochter, for Austria; Sobrietats und Heimathschriften, for Holland. See also for movement in Belgium: MALHERBE and LEMME, Les Sociétés de tempére (Brussels, 1900); WABER, Het Nederland (Brussels, 1901); VERKLUIS, Manuel social (Louvain, 1904); in France: DERN, Manuel de tempérance; BERGERET, L'alcoolisme et ses moyens de le combattre; SAVOUR, Les traitements de la sainte abstinence; in Switzerland: FOREL, La boisson dans nos maisons; BROD, Die Erblindung, etc., including Alkohol, Alkoholismus u. Abstinenz; Alkohol u. Volks- u. Welt, etc.; in the northern lands: BIRKLAND, Drydrinksen (Stock- holm, 1890); PETTERSON, En studie av Götalands vegetetet; HALVEMANN, Det norske Totalhaldstesekolab; JÖRGENSSON, Åhlads- nasen historia i Danemark.

WILHELM LIEBE.

GREAT BRITAIN AND IRELAND.—In Great Britain and Ireland the State regulates the liquor traffic by imposing duties on the manufacture and importation of spirituous drink and by confining its sale to those who pay for the privilege and fulfill other conditions. The duty does not place, time, or other restrictions on the sale, but the State must pay more for their liquor than its intrinsic value and must observe certain legal limits in the circumstances of their drinking. Thus the State aims by the one act at maintaining public order and
promoting social welfare and also at raising revenue from the quasi-monopoly it creates. These two purposes are not always in harmony, which explains to some extent why State interference from the beginning to this day has often failed of success. A full history of liquor legislation and its results would occupy volumes; here there is space only for a brief statement of the chief Acts affecting the British Isles as a whole.

It is significant that up to the Reformation there occurs no civil legislation against drunkenness, although it was prevalent enough in Catholic times. The crop of laws against intemperance began to spring up in the reign of George III, but cannot more be attributed to the higher morality of the new religion than can that monarch's grammar schools to his zeal for education, or Queen Elizabeth's workhouses to her compassion for the poor. All these phenomena point to the passing away of an influence hitherto found sufficient to promote social welfare by moral means. Laws concerning liquor were, indeed, enacted from early times, but their main object was to prevent fraud on the part of the sellers. Scotch legislation, for instance, was busy in the reign of David I (1124-53) regulating the brewing and selling of ale. In England, in 1205, prices were fixed by law. Intemperance under at least the fifteenth century and subsequent enactments tending to encourage the wine trade with the English possessions in France. With the overthrow of the ancient Church and the destruction of her restraining influence, the spread of intemperance became very marked, as is attested by contemporary writers, and the State began to interfere in the interests of public welfare. An English Act was passed in 1695, empowering justices of the peace to suppress at discretion "common alehouses", as centres of disorder. The licensing system was introduced in 1651, by an Act which made the consent of the justices necessary for the establishment of ale-houses. The Irish Parliament in 1556 prohibited the manufacture of aqua vitae except by certain specified classes. At the beginning of the seventeenth century laws were passed in England to prevent inns from becoming public-houses in the modern sense. In 1634 the licensing system was extended to Ireland. The close of this century brought a new element into the question. Hitherto only fermented liquors were commonly drunk in England, for, owing to high duties, the price of imported spirits put them beyond the reach of the poorer classes. But the Government, out of hostility to France, prohibited the importation of foreign spirits and removed the restrictions on home manufacture, with alarming results to public morality. In spite of the retail trade being put under the licensing system in 1700, by 1724 the passion for gin-drinking had spread "with the rapidity and violence of an epidemic" (Lecky, "English History", I, iii), and in vain was the famous "Gin Act" passed in 1736, making the licence practically prohibitive. Illicit distilling and smuggling spread enormously, and high licences had to be repealed in 1742. Although gradually the State resumed control, still "the fatal passion for drink was at once and irreversibly planted in the nation" (Lecky, op. cit.). From 1751 dates a series of laws dealing more stringently with the conduct of the drink traffic, and in 1755 the licensing system was introduced into Scotland.

Another generation of the making of a Parliamentary inquiry into illicit spirit-dealing, to simplify and consolidate the various licensing laws for England and Scotland, and, in 1833, for Ireland, and these acts form the basis of the existing law. But experimental legislation still continued. In order to encounter some observation of spirits by British industry, and to break up the growing system of "tied houses", an Act was passed in 1830 giving practically free trade in beer. A fortnight after the Act was passed, Sydney Smith wrote: "The New Beer Bill has begun its operations. Everybody is drunk. Those who are not singing are sprawling. The Sovereign People is in a beastly state." The Act failed miserably of its purpose. In less than three months 24,000 licences were taken out. The result of the Act was not to reduce the sale of spirits and the consumption of spirits steadily rose. In 1869 the beerhouses were again brought under the licensing system. Another well-meant but unsuccessful effort to alter popular taste was the establishment (1869-70) of "off" grocers' licences, by which the pressure of the "on" trade was taken off the beerhouses from beer-drinking in public-houses to the use of light wines and spirits at home. Much intermediate and subsequent legislation was concerned with the conditions of holding licences, particularly with the hours of closing. The Forbes-Mackenzie Act of 1853 closed the public-houses of Scotland on Sundays except to travellers, and the measure was extended to Ireland (except five chief towns) in 1878, and to Wales in 1881, with very noticeable results in the decrease of drunkenness. In England the hours of Sunday opening have been restricted to seven. In 1873 a licensing Act prohibited the sale of spirits to persons resident within four miles of the County Bench for new licences, and deprived that Bench of the power of granting licences in opposition to local refusal. Other measures for the protection of children were passed, culminating in the Act of 1868 which forbids children under fourteen access to public bars. For the last forty years under the influence of State regulations the number of licensed houses has steadily decreased. Shadwell shows that the number of "on" licences per 10,000 persons in England and Wales was forty-nine in 1871, thirty-one in 1901, twenty-six in 1909. In Scotland the figure was 17,715 public-houses in 1829; 5,000 in 1890; less than half the number in 1909 with more than double the population there were 6845 only or 14.03 per 10,000. The decrease in numbers has obtained in Ireland also, but a greater decrease in population has counteracted the relative diminution. With a smaller population than Scotland there are in Ireland more than three times as many licensed houses—22,591 in all. The Act of 1904 has tended to accelerate the decrease of licences by admitting the principle of compensation and giving licence holders for the first time a legal claim to renewal unless forfeited by misconduct. In the case of renewal the support of the local community in drink for private gain this is considered a step backwards, a view which is strengthened by the notable increase of "clubs" since the passing of the Act. Finally, one marked effect of the Finance Act of 1910, so far as it concerns the Temperance Movement, was to reduce the consumption of spirits by ten millions of gallons; against this must be set an increased consumption of fermented liquors and presumably of illicitly distilled spirits. In the history of State activities for the promotion of temperance must be included the action of the various education departments in making temperance teaching an integral part of the elementary code. A temperance syllabus was made compulsory by the Irish Commissioners in 1906. The English department issued its syllabus for England and Wales in 1909, and a similar syllabus was drawn up for Scotland in 1910.

Apart from generation of the making of a Parliamentary inquiry into illicit spirit-dealing, to simplify and consolidate the various licensing laws for England and Scotland, and, in 1833, for Ireland, and these acts form the basis of the existing law. But experimental legislation still continued. In order to encounter some observation of spirits by British industry, and to break up the growing system of "tied houses", an Act was passed in 1830 giving practically free trade in beer. A fortnight after the Act was passed, Sydney Smith wrote: "The New Beer Bill has begun its operations. Everybody is drunk. Those who are not singing are sprawling. The Sovereign People is in a beastly state." The Act failed miserably of its purpose. In less than three months 24,000 licences were taken out. The result of the Act was not to reduce the sale of spirits and the consumption of spirits steadily rose. In 1869 the beerhouses were again brought under the licensing system. Another well-meant but unsuccessful effort to alter popular taste was the establishment (1869-70) of "off" grocers' licences, by which the pressure of the "on" trade was taken off the beerhouses from beer-drinking in public-houses to the use of light wines and spirits at home. Much intermediate and subsequent legislation was concerned with the conditions of holding licences, particularly with the hours of closing. The Forbes-Mackenzie Act of 1853 closed the public-houses of Scotland on Sundays except to travellers, and the measure was extended to Ireland (except five chief towns) in 1878, and to Wales in 1881, with very noticeable results in the decrease of drunkenness. For the last forty years under the influence of State regulations the number of licensed houses has steadily decreased. Shadwell shows that the number of "on" licences per 10,000 persons in England and Wales was forty-nine in 1871, thirty-one in 1901, twenty-six in 1909. In Scotland the figure was 17,715 public-houses in 1829; 5,000 in 1890; less than half the number in 1890 with more than double the population there were 6845 only or 14.03 per 10,000. The decrease in numbers has obtained in Ireland also, but a greater decrease in population has counteracted the relative diminution. With a smaller population than Scotland there are in Ireland more than three times as many licensed houses—22,591 in all. The Act of 1904 has tended to accelerate the decrease of licences by admitting the principle of compensation and giving licence holders for the first time a legal claim to renewal unless forfeited by misconduct. In the case of renewal the support of the local community in drink for private gain this is considered a step backwards, a view which is strengthened by the notable increase of "clubs" since the passing of the Act. Finally, one marked effect of the Finance Act of 1910, so far as it concerns the Temperance Movement, was to reduce the consumption of spirits by ten millions of gallons; against this must be set an increased consumption of fermented liquors and presumably of illicitly distilled spirits. In the history of State activities for the promotion of temperance must be included the action of the various education departments in making temperance teaching an integral part of the elementary code. A temperance syllabus was made compulsory by the Irish Commissioners in 1906. The English department issued its syllabus for England and Wales in 1909, and a similar syllabus was drawn up for Scotland in 1910.
temperance. Were all its citizens sufficiently self-controlled the State would have no claim to interfere, but in its own interests it has to supply by external processes a consumption which it has created. This difficulty, then, is so to legislate that the weak may be protected without the freedom of the temperate being unduly infringed. The most obvious thing to do was to lessen temptation by lessening the number of licensed houses. But this policy involves evils of its own. The giving of licences creates a quasi-monopoly, and monopolies legally secured have a tendency to breed fraud of every sort. The drink-seller tends to become a publican in the old sense. He pays a heavy sum in excise and licence for the privilege of trading in liquor, and he must recoup himself from that price, on the one hand, by the evils of smuggling or illicit production, and, on the other, of adulterated liquor, of inducements to drink to excess, of "tied houses" in the hands of producers. The heavy taxation, induced both by considerations of revenue and of social welfare, crushes out free competition and brings the trade into a few hands, and thus within the state is begotten a powerful trust, the interests of which are purely financial and not necessarily in harmony with those of the commonwealth. If legislation opposed to those interests has not behind it, as a permanent formal for the moral sense of the larger and outer part of the community, it becomes inept and defeats itself. Hence true reform in the matter of the drink traffic depends ultimately on rightly educated public opinion.

Until the end of the eighteenth century the medical profession did little to dispel the ancient tradition about the health-giving qualities of strong drink, to which the name given to the distilled essence of fermented liquors, aqua vitae, and the word "spirit," itself remain as witnesses. And in default of the Church, persecuted and gagged by the civil law, there was none amongst the sects to preach temperance as a principle of society. Isolated physicians like Dr. George Cheyne (1671-1743) had pointed out the dangers of spirit-drinking; Dr. Trotter of Edinburgh and Dr. Rush of Philadelphia both published papers to the same effect in 1778. But it was in the United States that the first concerted efforts were made to educate public opinion in this matter. In tracing the history of these voluntary associations which aimed at temperance reform primarily by persuading the individual, it will be convenient to deal with the non-Catholic bodies separately; historically they were the first in the field, and, arising in communities prior to the reformation, they are numerically much more numerous. As will be pointed out, though alike in aim, they sometimes differ in method from Catholic organizations. We cannot pretend to give more than a few salient features of so enduring and widespread a movement.

Influenced by the formation at Boston in 1826 of the Society for the Promotion of Temperance Dr. John Edgar, of Belfast, a Presbyterian, founded on the same lines the Ulster Temperance Society in 1829, and the Rev. G. W. Kerr, a Quaker, a similar society at New Ross. Later in that same year the Glasgow and West of Scotland Society was started by John Dunlop. The next year an English society was formed by Henry Forbes in Bradford. All these and many others which sprang up throughout the British Isles originated in the desire to suppress the spirit-drinking which had become so prevalent, and hence the need of laws to give the moral sense of the larger and outer part of the community, and to set forth the physical effects of excessive indulgence, at creating such a weight of opinion as to influence the legislature. The juvenile societies, called "Bands of Hope," so marked a feature to-day of Protestant propaganda, were started in 1847 and ordered by field-preachers of the Free Church, and the United Kingdom Alliance, which had for express object "the total and immediate legislative suppression of the traffic in intoxicating liquors as beverages" and which is still the most active of modern organizations, came into being in Manchester in 1853.

We need not trace in greater detail the development during the next half-century of these various societies in the British Isles, a development which, as far as numbers are concerned, is of imposing extent. A recent Presbyterian movement, inaugurated in 1909 in the north of Ireland by the Rev. R. J. Patterson and called "Catch-My-Fal," may be mentioned as having met with much success both there and in England. As for other societies, the Alliance Handbook (and as regards Ireland and Scotland its enumeration is by no means exhaustive) reckons 18 temperance bodies which are legislative and general, 17 which are sectional (Army, Women, etc.), 13 which have differing objects, 70 "General," 14 which are for orders of themselves, 10 confined to women, 8 juvenile societies, 62 county and 17 town societies—in all 327. These various associations, of course, produce a large amount of Temperance literature, whether in book form or as newspapers and tracts. This vigorous polemic, as is natural, has called forth
similar measures of defence on the part of the trade. The Alliance Annual enumerates 10 main associations of those engaged in the drink traffic and estimates the local societies throughout the United Kingdom at about 60,000. All of these ground the same fundamental legal one and, under proper conditions (which they profess their readiness to observe), even necessary for social well-being, the sellers of drink are justified in resisting attacks which deny the soundness of those grounds. No Catholic temperance society will be heartened by the drink traffic on such unsound foundations.

As an organization existing to teach and make feasible man's duty of self-control, the Catholic Church is the first and the greatest of temperance societies. She teaches, and has always taught, that all are bound to abstain from sin, and that abstention itself is a duty. The Church herself, of course, does not clothe herself in the enmity to the spirit of alcohol to be coped with by her ordinary discipline in her preaching of self-denial, her administration of the Sacrament of Penance, her institution of penitential seasons, and her canonical legislation. All these moral influences were swept away at the Reformation and nothing effective set in their place. Hundreds of years of the same centuries are largely attributable to the destruction of Catholicism as a social force. Even after Emancipation 1829, the effects of the Penal Laws still continued, and it is not till 1838 that we find mention in Great Britain of a purely Catholic temperance association. In fact, we are not till 1848, the year of the foundation at Skibbereen in Kerry a temperance organization presumably Catholic, but it seems to have been rather of the nature of a benefit society with a temperance resolution amongst its rules. At Chelsea, in 1833, the Rev. T. Sisk started a Catholic Total Abstinence Society, and in 1840 we find mention of a South London Catholic Temperance Association which was addressed by Daniel O'Connell. Moreover in the same year a Metropolitan Catholic Association was instituted through the exertions of Mr. John Giles, a Quaker. But these little local efforts failed completely into the gigantic work accomplished (at the providential instigation of another Quaker, William Martin) by the greatest temperance apostle the world has ever seen, Father Theobald Mathew. As a result of his advocacy in the years 1838 to 1846 it is computed that Ireland, not a population of over eight million, counted from three to four million total abstainers, and the annual consumption of spirits, which from 1835 to 1839 averaged 11,595,536 gallons, sank in 1842 to 5,290,650 gallons. The want of permanence that marked this great movement was in the latter part of the Thirty years' famine, but also in no slight degree to the fact that it won scant support amongst the upper and middle classes and even from the clergy themselves. Its inspiration, however, is alive and growing in strength to-day, not only in the land of its origin, but in Great Britain as well. For Great Britain in 1843 came under the spell of Father Mathew's zeal and eloquence, and many Catholic associations were formed in the towns he visited in England and Scotland as parts of the parochial organization.

After the general reaction that preceded and followed the year of Revolution (1848) there is record of four local organization plants at Dublin, St. Patrick's Total Abstinence Society, founded in Dundalk in 1850, still flourishes. In 1858 a Catholic Temperance Hall was opened in Spitalfields by the Rev. Dr. Spratt of Dublin, one of Father Mathew's most zealous coadjutors; in 1858, we are told, a new Roman Catholic Total Abstinence Society was founded in London, where also in 1863 there is record of a meeting of the Roman Catholic Teetotal Union. But not until 1869 when Archbishop D'Alton held a synod, and a general interest in the temperance question, was anything attempted on a larger scale. The United Kingdom Alliance of Manchester and the late Mgr. Nugent of Liverpool put facts and figures before him with the result that both in Liverpool and in London in 1873 a Catholic organization was formed called the Council of the Cross which, under those zealous leaders, accomplished a vast deal for temperance in Great Britain. Branches of this organization were set up in many parishes abroad as well as in England and Scotland, and under the eyes of its founders it became a great social force. In 1869 Dr. Delany of Cork promoted a temperance revival in his diocese, and the bishops, by their joint pastoral in 1875, gave a great stimulus to the movement. In that year was instituted in Dublin the Confraternity of the Sacred Heart of Jesus and in Salford the Diocesan Crusade of a Bishop, both attempts to curb the Cardinal sin of the Crusade, or Catholic Association for the Suppression of Drunkenness, inaugurated by Dr. Richardson of London, and various lesser associations date from the same period. Another remarkable revival in Catholic advocacy of total abstinence in the British Isles began towards the end of last century. Father James Nugent and eight of his priests, working for the cause. As a temperance reformer, Father F. C. Hays, a nephew of Father Nugent, has won a like renown. In 1896 he founded his Catholic Temperance Crusade, which aims to prevent, rather than reclaim from, intemperance, and includes members who are total abstinence of the lowest order, and, so to speak, the resolution till the age of twenty-one years, and associates who lead a strictly temperate life. There is no central governing body, but the crusade readily co-operates with all other temperance endeavours, aiming at establishing some sort of organization in every parish and, by means of lectures and literature, at spreading a healthy public opinion on the matter. The promoter of the crusade has travelled and worked extensively in its interests, and the influence of his zeal is felt in the whole English-speaking world. The League of the Cross, under the care of Canon Macdowall, one of the original Manning's most energetic lieutenants, is renewing its youth in England and Scotland.

A Father Mathew Union, the membership of which is confined to the clergy, was founded in London in 1908. But it is in Ireland, where poverty and deep population make the ravages of drink most apparent, that the most strenuous efforts are being made to combat it. In 1898 there was formed in Dublin by Father James Cullen, S.J., the Pioneer Total Abstinence League of the Sacred Heart which numbers to-day 180,000 members and 127 centres. It is the only religious order in the ranks of the younger clergy. It was the first temperance association to insist on a two-years' probation as a test of purpose and a guarantee of stability; it was enriched by Pius X with many indulgences in 1905. In that year, moreover, the Irish Hierarchy called upon the Catholic clergy to join the religious brethren of Father Mathew to take up again his work. This they have done with much of his success. Recently under their stimulating zeal one-fourth of the whole population of Limerick took the pledge. Still more recent is the formation by the bishops of the western province of St. Patrick's League of the West, an association with a network of temperance societies and to stamp out drunkenness by the most carefully devised methods. Other less heroic devices, like the Anti-Treating League, aim at counteracting one of the
most frequent sources of demoralization. Such vigorous and sustained efforts have had a marked effect in reducing total abstinence. The total amount of drinkings, which were 98,401 in 1899, have fallen each year to 68,748 in 1909, and the expenditure on drink, though still appallingly large (£13,310,469), considering the needs and poverty of the country, is now more than a million less than it was ten years ago. And though the "Black Bill" of the United Kingdom, which was £170,499,817 in 1902, has now decreased to £155,162,455, owing to some extent to the growth of a more enlightened public opinion, there is yet abundant need of temperance propaganda before the population of the British Isles learns as a whole to abandon drinking. In 1879, the issue that is degrading to the individual and very injurious to the State.

IN THE UNITED STATES AND CANADA.—United States.

The first temperance movement in the United States was due to a reaction against intemperance, which threatened to make the Americans a nation of drunkards. The culminating period of intemperance was the seventy-five years between 1750 and 1825. Nearly everyone drank intoxicating liquor. It was the family beverage. It was the prevailing mark of hospitality. It was regarded as a discourtesy, even a insult, to refuse it. At all functions, public and private, social and commercial, sacred and solemn, intoxicating beverages were used. Not only was liquor regarded as indispensable on such occasions, but the erroneous belief prevailed that no hard work could be accomplished without the stimulating glass. Labourers and mechanics were provided with their quotidian libation at a fixed hour of the day, that summoned them regularly at eleven and four o'clock. The farmer stipulated with his help when he hired them for harvesting that they were to receive a certain amount of 'spirits', which was generally whisky or New England rum. Strong liquors were supposed to have medicinal qualities, and their supposition was not questioned until the fatal effects of drinking habits were evident in the multitude who went down to drunkards' graves. Intemperance was widespread, increasing day by day, till it reached its climax at the close of the Revolutionary War. Congress furnished the Colonial troops with liquors to strengthen them in the hardships of war. The soldiers returned to their homes and added to the wave of drunkenness that rose high and spread far and wide. It was commonly stated at the end of the Revolution that the United States consumed more liquor per capita than any other nation. It was generally admitted that no man could be found who had not been drunk on some occasion. The outcome of this universal intemperance was a reaction in favour of temperance.

The first pronounced effort at reform was inaugurated by Dr. Benjamin Rush of Philadelphia, a member of the Continental Congress, one of the signers of the Declaration of Independence. In 1785 he issued a pamphlet entitled "Inquiry into the effects of ardent spirits on the human body and mind", which was widely read in America and England. No organized movement resulted from it, but it affected public opinion strongly and laid the foundation of subsequent temperance work. The reform inaugurated by Dr. Rush did not advocate total abstinence, but for any such remedial measure. The first step toward it was the abolition of the custom of affording liquor to employees. Then moderation in the use of distilled liquors was encouraged; this developed into abstinence from this class of liquors, and the moderate use of wine, beer, and cider. Finally, after a half-century of effort in regulating the use of liquor, it was demonstrated that the plan of moderation had proved a failure, and that the only practical remedy was total abstinence.

The first temperance organization was formed by two hundred farmers at Litchfield, Connecticut, in 1789. The members merely pledged themselves not to give liquor to their farm hands. This action met with bitter opposition from the workmen, who persecuted the members of the new society and heaped every indignity upon them. Such was the prejudice in favour of strong drink that this very moderate temperance movement was considered drastic and revolutionary. The first society of pledged abstainers was formed in April, 1808, at Moreau, Saratoga County, New York. Forty-seven members pledged themselves to abstain from distilled spirits and wine, and to bring in public dinners, under penalty of a fine of twenty-five cents, and fifty cents for actual intoxication. Other societies were established which prohibited not the use but the temperate use of intoxicating liquors. One of these societies was organized in a tavern, at the bar, which the officers treated the others. Members were fined twenty-five and fifty cents for drunkenness, and a by-law of one society required members who had become drunk to treat all the other members.

The vice of drunkenness called for a more adequate effort than the mere advocacy of moderation. On 13 February, 1826, "The American Temperance Society" was established at Boston. This opened a new era, and paved the way to total abstinence. The new society advocated total abstinence, but, from considerations of prudence, it was not enforced. The purpose of the society was to mould public sentiment and to reform the habits and customs of the community. Gradually men began to see that drunkenness was to be combated by attacking the drinking habit. Ten years later, in 1836, the second national temperance convention held at Saratoga declared for total abstinence from distilled and fermented liquors.

"The Dorchester Improved Temperance Society," commenting on the work of this period, says: "In the year 1835 more than eight thousand societies had been formed, with more than one million five hundred thousand members, every state except one being organized. More than four thousand distilleries had been stopped, and eight thousand merchants had ceased to sell ardent spirits. More than twelve hundred vessels in which it is not used sailed from our ports." The year 1840 gave birth to the Washingtonian Temperance Society, a total abstinence organization, which began at Baltimore with six members, and grew to six hundred thousand in time, two-thirds of this large society fell away. Other societies lost members and men who regarded teetotalism as the sovereign remedy of intemperance turned their attention from the drinker and the drunkard to the dealer in liquor, whose livelihood depended on the drinker, and inaugurated the liquor Prohibition reform, which eventually took the shape of prohibition. Neal Dow of Maine became the leader of the new agitation, and after persistent and unwearying effort succeeded in 1851 in securing the passage of an absolute prohibitory law commonly known as the "Maine Law." In subsequent years prohibition of the liquor traffic became a law in Maine.
sota, Rhode Island, Massachusetts, Vermont, Michigan, Connecticut, New York, New Hampshire, Delaware, Nebraska, Indiana, Wisconsin, South Dakota, Illinois, Alaska, North Dakota, Oklahoma, Alabama, Georgia, Kansas, Mississippi, North Carolina, Tennessee. In time the law was repealed in all except the eight latter and Maine (1 Jan., 1911).

Among the early prominent advocates of temperance and prohibition, and the names of moral suasion are Rev. Lyman Beecher and Dr. Nathaniel Hewitt of Connecticut, Edward C. Delevan, Dr. Clark, and Gerrit Smith of New York, Rev. Thomas P. Hunt of Pennsylvania, Bishop Charles P. McIllravey of Ohio, John B. Gough, Rev. Justin Edwards of Massachusetts, and others. Of them Dr. Lincoln Bacon, a Civil War principal whom the organizations that advocated temperance were the Washingtonian Movement, 1840, Rechabites, 1841, Sons of Temperance, 1842, Cadets of Temperance, Templars of Honour and Temperance, 1845, Good Templars, 1851. The first national temperance convention was held at Philadelphia in May, 1833. Twenty-one states were represented, with four hundred delegates. By vote of Congress and approval of President Jackson the sale of spirits to the Indians was prohibited in 1834.

On 5 Nov., 1832, General Lewis Cass, secretary of war, issued a proclamation prohibiting the introduction of liquor into any garrison, fort, or camp in the United States. The secretary of the navy offered a money substitute for the grog ration.

An era in temperance work was inaugurated in the United States on 2 July, 1849, which marked the advent of Father Theobald Mathew, the Irish apostle of temperance. He was received at New York with tremendous enthusiasm. Mayor Woodhull and the city council gave him a public reception. At Washington he was entertained by President Taylor, and was admitted to a seat within the bar of the Senate and on the floor of the House, a distinction granted only once previously to a foreigner—General Lafayette. On this occasion, Henry Clay said: "It is but a merited tribute of respect to a man who has achieved a great social revolution—a revolution in which no blood has been shed, a revolution which has involved no desolation, which has caused no bitter tears of widows and orphans to flow, a revolution which has been achieved without violence, and a greater one, perhaps, than has ever been accomplished by any benefactor of mankind." Father Mathew spent two years and a half in the United States and, though in feeble health, travelled 37,000 miles, visiting, administering the pledge in over 300 of the principal cities and towns to more than 500,000 persons.

Several Catholic total abstinence societies were organized during Father Mathew's visit, but their influence was exerted only in the restricted sphere in which they originated. Not until 1871, when the societies of Connecticut formed a state union, out of which a national union grew, at a convention held at Baltimore on 22 February, 1872. One hundred and seventy-seven societies, comprising 26,481 members, represented Connecticut Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Georgia, Illinois, Ohio, Minnesota, and the District of Columbia. A constitution was adopted, an address was issued to the Catholics of America, and the union was named "The Catholic Total Abstinence Union of America". In the address to the Catholic body, the aim of the convention is expressed thus: "Our motto is moral suasion. With prohibitory laws, restrictive license systems, and special legislation we have nothing whatever to do. There is blended with our proposed plan of organization the attractive feature of mutual relief. Thus Temperance and Benevolence go hand in hand."

Moral suasion was favoured by some, legislative action by others, and a combination of both by a third class. It was finally determined to work on both classes of moral suasion, as the belief prevailed that neither prohibitory nor restrictive laws availed unless supported by public opinion. The mind of the convention concerning the suppression and restriction of the liquor traffic was expressed in the following resolution: "Resolved, That this convention, the representatives of men not deeming the duty of the Christian to be discharged in the introduction of prohibited liquor, and will gladly hail such legislation whenever the proper authorities may grant it." The convention advocated the organization of subordinate unions of the different states or dioceses in affiliation with the national union. State unions were established in Alabama, California, Connecticut, Illinois, Indiana, Louisiana, Missouri, New Jersey, Ohio, Pennsylvania, Wisconsin, also in Canada. Diocesan unions were formed in Albany, Baltimore, Boston, Brooklyn, Buffalo, Dubuque, Duluth, Erie, Louisville, New York, Philadelphia, Pittsburgh, Providence, Scranton, Syracuse, Springfield, St. Paul, Syracuse, Wheeling, Wilmington, and Winooski.

Annual conventions of the national union were held in different cities of the East and Middle West. Archbishops, bishops, and a host of priests attended the conventions, took active interest in the work of the Union, and propagated its principles in their respective dioceses. The Apostolic delegate, the Most Rev. Diomedes Falconio, attended the forty-first convention at Scranton, Pennsylvania, in August, 1911, and gave unmistakable evidence of his interest in the work, in his address to the delegates, and in an eloquent discourse at the public meeting, of which the following is an extract: "General principles, you here find in your presence a great body of men who, with manly courage and the true Christian spirit, have bound themselves together for the great cause of temperance. Follow their example, for the cause of temperance means the cause of Christian perfection, and the cause of reforming humanity. Should you, however, not find it convenient to join their ranks, at least help their cause by your prayers and your constant co-operation. Gentlemen of the Total Abstinence Union, we admire your spirit of self-abnegation in professing the great virtue of abstinence, and are deeply touched and encouraging it both by words and example. Your associations are of paramount importance for the spiritual and temporal welfare of our people, and are, consequently, of great service to religion and to society.

At the convention of the national union held at Indianapolis, 28 August, 1878, a memorial was forwarded to Pope Leo XIII, who in reply addressed a papal Brief to the members of the union, of which the following is an extract: "Especially pleasing to us is that noble determination of yours to oppose and uproot the baneful vice of drunkenness, and keep far from yourselves and those united with you all incentive to it, for, in the words of the wise man, 'It goeth in pleasantly but in the end it will bite like a snake, and will spread abroad poison like a basilisk.' A papal Brief was addressed by Pope Pius IX to the Rt. Rev. J. F. Thrall, bishop of the diocese of the resident of the national union, on 10 July, 1906. The pontiff commended the work of the union in these terms: "Following the example of our predecessors, and especially the latest among them, to whom there seemed to be no greater enemy of the teachings and commands of Christ than the abuse of strong drink we heartily approve the work of the union, and
congratulate all in this commendable assemblage, because they are our associates and helpers in persuading men to practise one of the principal Christian virtues.

The union is composed of men, women, and juvenile societies, and the Priests' Total Abstinence League, and numbers in all over 90,000 members.

The women's societies were admitted in 1878 as honorary members, and in 1880 as active members; in 1885, women delegates were first invited, and the women's societies having previously been represented by men; three years later Miss S. A. Moore of Philadelphia was elected third vice-president.

The union issues a monthly publication "The C. T. A. U. Advocate". In 1911 the union was represented for the first time at the (Thirteenth) International Catholic Congress held at The Hague, Holland. It has also joined the Catholic International Society against Alcoholism founded in 1907 by Father Neumann of Mündt, Prussia.

In 1873 "The Women's Crusade" started in Hillsboro, Ohio. The members appealed directly to the citizenry of their cities to close all the saloons in the towns in which they were organized. The movement spread from Ohio, through the North Central States, to Iowa, Missouri, Kansas, California, Oregon, and eastward to the Atlantic coast. In Ohio the saloons in two hundred and fifty towns were closed by the crusade. To the westward of Ohio, the work of the movement was the organization of a total abstinence society called the Women's Christian Temperance Union, which was established at Cleveland on 18 Nov., 1874, at a national convention of one hundred and thirty-five delegates from about a dozen states. In 1880 six departments were instituted—organization, preventive, educational, evangelistic, social, and legal. At the head of each department was a superintendent. Under each department were sub-departments, in charge of superintendents, the total number of departments and superintendents being thirty-eight. Juvenile societies were formed in the various local unions, and through the efforts of the women's scientific temperance instruction was introduced in the schools. In 1910, 22,000,000 children received instruction in the benevolent effects of temperance.

Canada.—In the beginning of the nineteenth century, the sale of intoxicating liquor was scarcely restricted by law in Canada and many of its saloons were universal. Intemperance developed and spread to such an extent that a reaction set in, and called forth active opposition. A meeting was held at Brockville, Ontario, in the autumn of 1828, and the first pledged Temperance Society in Canada was formed. It was not a total abstinence society. Moderation was inculcated in this, and other societies established throughout the country until 1839, when the total abstinence pledge succeeded the old moderation pledge, as was the case in the United States. Moderation had proved a failure, and total abstinence was adopted as the best remedy against the drink evil. A moderate, not immediately made against intemperance, societies were organized as "open temperance societies", with no bond of union till 1847, when the Sons of Temperance established a branch in Canada. An executive council governed local societies and systematized their work. An aid to thorough organization was afforded in 1854 by the Independent Order of Good Templars, who admitted women to membership. In 1874 the Women's Christian Temperance Union instituted a union in Canada, and by systematic work gave a strong impulsion to temperance reform. The Canada Temperance Union came into existence in 1863, and, after various modifications in name and regulations, was established in 1877 by the Dominion Alliance for the Total Suppression of the Liquor Traffic. The Alliance worked with vigour in securing legislation for the restriction of the liquor traffic, and was actively engaged in the enforcement of excise laws, throughout most of the provinces of Canada. Since 1870, nearly every Canadian Parliament has been thronged with the enactments of legislation prohibitive or restrictive of the liquor traffic. Repeated petitions made to Parliament for total prohibition urged the enactment of the Canada Temperance Act of 1878, commonly called the "Scott Act", authorizing counties and cities to prohibit the sale of liquor. The popular vote was overwhelming in favor of prohibition, but disputes as to its constitutionality and controversy concerning responsibility of enforcement by federal or provincial authorities rendered it ineffectual.

The Church of England Temperance Society, established in 1858, became the most active in the temperance movement. In latter years the success of the Protestant societies has been in the way of local option or "banish the bar" campaign. In the rural districts of Ontario this work is popular, and has been effective. The Catholic Church grappled with the drink evil from the earliest days of the colony of New France. For many years her adherents have been most active in propagating temperance principles through the League of the Cross, the Catholic Total Abstinence Union, and other societies scattered throughout Canada. Since 1900 the Diocese of Peterborough has taken the lead in temperance work. In the episcopal city there is a society of 1200 men. Archbishop Bruchesi of Montreal has taken active interest in the work, and has developed a strong total abstinence sentiment.

Knights of Father Mathew.—The Knights of Father Mathew, a total abstinence and semi-military body, was instituted at St. Louis, Mo., on 26 April, 1872. A life-insurance feature was adopted on 18 July, 1881, having been authorized by a charter empowering the society to include life insurance among its aims and objects, and to form branches of the order, called "councils," in all the States of Missouri. As the work and benefits of the society became known, invitations to establish councils beyond Missouri were received. At present (1911) it has councils in Missouri, Illinois, Iowa, and Kansas. There are two classes of membership: active and honorary. To be eligible to active membership, it is necessary to be a practical Catholic, to pass a physical examination, and to be not less than sixteen nor more than seventy years of age. For honorary membership, it is sufficient to be a practical Catholic. The Society has been active in promoting temperance and frugality, and has expended over eight hundred thousand dollars in benefits for the families of its deceased members. Councils of the order are permitted to organize branches of Catholic women, to be designated as "Ladies' Auxiliaries of the Knights of Father Mathew," and to be governed by laws in harmony with the by-laws of the parent organization. The 'Ladies Auxiliaries have been instrumental in upbuilding the male organization, in promoting temperance among boys and girls, and have been active in charitable work among the poor. The Knights of Father Mathew and the Ladies' Auxiliaries of
The Knights of Father Mathew were affiliated with the Catholic Total Abstinence Union of America in 1895, and have been among its most energetic members in advancing the work of the national union.

Templars, Knights, The.—The Knights Templars were the earliest founders of the military orders, and are the type on which the others are modelled. They are marked in history (1) by their humble beginning, (2) by their marvellous growth, and (3) by their tragic end.

(1) Immediately after the deliverance of Jerusalem, the Crusaders, considering their vow fulfilled, returned in a body to their homes. The defence of this precarious conquest, surrounded as it was by Mohammedan neighbours, remained. In 1118, during the reign of Baldwin II., Hugues de Payens, a knight of Champagne, and eight companions bound themselves by solemn vow, under the protection of the Patriarch of Jerusalem, to defend the Christian kingdom. Baldwin accepted their services and assigned them a portion of his palace, adjoining the temple of the city; hence their title “pauvres chevaliers du temple” (Poor Knights of the Temple). Poor indeed they were reduced to, as long as they were only nine, they were hardly prepared to render important services, unless it were as escorts to the pilgrims on their way from Jerusalem to the banks of the Jordan, then frequented as a place of devotion. The Templars had as yet neither distinctive habits, the solemn Rite of the Order, the increasing wealth of the bank, the accurate record of the income of the Order, nor the position of the Order among the nobility of Christendom. Baldwin appointed good, zealous men to this service; they were also instructed to appropriate the income to the empire, and letters of the Order were sent to the Pope. Hugues de Payens, the first grand master, was followed by Hugues de Payen (1125), at which time he assisted at and in which the Order was reformed by the Cistercians. They accepted not only the three perpetual vows, besides the crusader’s vow, but also the austere rules concerning the chapel, the refectory, and the dormitory. They also adopted the white habit of the Cistercians, adding to it a red cross. Notwithstanding the austerity of the monastic rule, recruits flocked to the Order, which henceforth comprised the following four ranks of brethren: the knights, equipped like the heavy cavalry of the Middle Ages; the sergeants, who formed the light cavalry; and two ranks of non-fighting men: the farmers, entrusted with the administration of temporals; and the chaplains, who alone were vested with sacerdotal orders, to minister to the spiritual needs of the order.

(2) The Order owed its rapid growth in popularity to the fact that it combined the two great passions of the Middle Ages, religious fervour and martial prowess. Even before the Templars had proved their worth, the case, the Order was of course constituting a secret society, successful and immensely wealthy. The Order was at once a religious institution and a military organisation, and was consequently subject to the control of the Church, which was responsible for its spiritual welfare. The Order was divided into two main divisions, the military and the religious. The military division was responsible for the defence of the Order’s possessions, while the religious division was responsible for the spiritual welfare of the members of the Order. The Order was highly respected, and was considered to be a model of chivalry and piety.

The Templars had commanderies in every state. In France they formed no less than eleven bailiwicks, subdivided into more than forty-two commanderies; in Palestine it was for the most part with sword in hand that the Templars extended their possessions at the expense of the Mohammedans. Their castles are still famous owing to the innumerable ruins which remain: Safed, built in 1140; Karak of the desert (1143); and, most important of all, Castle Pilgrim, built in 1217 to command a strategic defile on the sea-coast.

In these castles, which were both monasteries and cavalry barracks, the life of the Templars was full of contrasts. A contemporary describes the Templars as “in turn lions of war and lambs at the hearth; rough knights on the battlefield, pious monks in the church; formidable to the enemies of Christ, gentleness itself towards His friends.” Jacques de Vitry. Having renounced all the pleasures of life, they lived with a proud indigence; they were the first to attack, the last to retreat, always docile to the voice of their leader, the discipline of the monk being added to the discipline of the soldier. As an army they were never very numerous. A contemporary says that there were never more than two hundred knights in the zenith of their prosperity; he does not give the number of sergeants, who were more numerous. But it was a picked body of men who, by their noble example, inspired the remainder of the Christian forces. They were thus the terror of the Mohammedans. In their journals, the Templars wrote: “I found a victor vented his fury, the more so as they were forbidden to offer a ransom. When taken prisoner, they scornfully refused the freedom offered them on condition of apostasy. At the siege of Safed (1264), at which ninety Templars met death, eighty others were taken prisoners, and, refusing to deny Christ, died martyrs to the Faith. This fidelity cost them dear. It has been computed that in less than two centuries almost 20,000 Templars, knights and sergeants, perished in war.

These frequent hecatombs rendered it difficult for the Order to increase in numbers, and also brought about a decadence of the true crusading spirit. As the Order was compelled to make immediate use of the recruits, the article of the original rule in Latin which required a probationary period fell into desuetude. Even excommunicated men, who, as was the case with many crusaders, wished to expiate their sins, were admitted. All that was required of a new member was a blind obedience, as imperative in the soldier as in the monk. He had to declare himself forever “serv et esclave de la maison” (French text of the rule). To prove his sincerity, he was immediately invested with all the duties and responsibilities of a Templar, of which nothing has ever been discovered, although it gave rise to the most extraordinary accusations. The great wealth of the Order may also have contributed to a certain laxity in morals, but the most serious charge against it was its insupportable pride and love of power. At the apogee of its prosperity, it was said to possess 9000 estates. With its accumulated revenues it had amassed great wealth, which was deposited in its temples at Paris and London. Numerous princes and private individuals had banded there their personal property, because of the uprightness and probity of the institution. It has been said that the treasure was kept in the Temple. Quite independent, except from the distant authority of the pope, and possessing power equal to that of the leading temporal sovereigns, the Order soon assumed the right to direct the weak and irresolute government of the
Kingdom of Jerusalem, a feudal kingdom transmissible through women and exposed to all the disadvantages of minorities, regencies, and domestic disorders, the Templars were set apart by the Order of Hospitallers, which had in its turn become military, and was at first the imitator and later the rival of the Templars. This ill-timed interference of the orders in the government of Jerusalem only multiplied the intestine dissensions, and this at a time when the formidable power of Saladin threatened the very existence of the Latin Kingdom. While the Templars sacrificed themselves with their customary bravery in this final struggle, they were, nevertheless, partly responsible for the downfall of Jerusalem.

The tenacity with which religious rivalry between the military orders, there was a very simple remedy at hand, namely their amalgamation. This was officially proposed by St. Louis at the Council of Lyons (1274). It was proposed anew in 1293 by Pope Nicholas IV, who called a general consultation on this point of the Christian states. This idea is canvassed by all the publicists of that time, who demand either a fusion of the existing orders or the creation of a third order to supplant them. Never in fact had the question of the crusaders been more eagerly taken up than after their failure. As the grandson of St. Louis, Philip the Fair could not remain indifferent to proposals for a crusade. As the most powerful prince of his time, the direction of the movement belonged to him. To assume this direction, all he demanded was the necessary supplies of men and especially of money. Such is the genesis of his campaign for the suppression of the Templars. It has been attributed wholly to his well-known cupidity. Even on this supposition he needed a pretext, for he could not, without sacrilege, lay hands on possessions that formed part of the ecclesiastical domain. To justify such a course the sanction of the Church was necessary, and this the king could obtain only by maintaining the sacred purpose for which the possessions were destined. Admitting that he was sufficiently powerful to encroach upon the property of the Templars in France, he still needed the concurrence of the Church to secure control of their possessions in the other countries of Christendom. Such was the wily negotiations of this self-willed and cunning sovereign, and of his still more treacherous counsellors, with Clement V, a French pope of weak character and easily deceived. The rumour that there had been a prearrangement between the king and the pope for the dispossession of the Templars, which allowed Philip to make the prosecution of the Templars as heretics a question of orthodoxy, afforded him the opportunity which he desired to invoke the action of the Holy See.

(3) In the trial of the Templars two phases must be distinguished: the royal commission and the papal commission. Philip the Fair made a preliminary inquiry, and, on the strength of so-called revelations of a few unworthy and degraded members, secret orders were sent throughout France to arrest all the Templars on the same day (13 October, 1307), and to submit them to a most rigorous examination. The king did this, it was made to appear, at the request of the ecclesiastical inquisitors, but in reality without their co-operation. In this inquiry torture, the use of which was authorized by the cruel procedure of the age in the case of crimes committed without witches, was skillfully employed. Out of regard to the lack of evidence, the accused could be convicted only through their own confession and, to extort this confession, the use of torture was considered necessary and legitimate. There was one feature in the organization of the order which gave rise to suspicion, namely the secrecy with which the rites of initiation were conducted. The secrecy is explained by the fact that the receptions always took place in a chapter, and the chapters, owing to the delicate and grave questions discussed, were, and needed to be, in secret. The reception in the midst of secrecy entailed exclusion from the order. The secrecy of these initiations, however, had two grave disadvantages. As these receptions could take place wherever there was a commandery, they were carried on without publicity and were free from all surveillance or control from the higher authorities, the tests being entrusted to the discretion of subalterns who were often rough and uncultivated. Under such conditions, it is not to be wondered at that abuses crept in. One need only recall what took place almost daily at the time in the brotherhoods of artisans, the initiation of new members being too often made the pretext for a parody more or less sacrilegious of baptism or of the Mass. The second disadvantage of this secrecy was, that it gave an opportunity to the enemies of the Templars, and they were numerous, to infer from this mystery every conceivable malicious supposition and base on it the most monstrous imputations. The Templars were accused of spitting upon the Cross, of denying Christ, of permitting sodomy, of worshiping an idol, all in the most impenetrable secrecy. Such were the Middle Ages, when prejudice was so vehement that, to destroy an adversary, men did not recoil from inventing the most incredible. This will suffice to recall the similar, but even more ridiculous than ignominious accusations brought against Pope Boniface VIII by the same Philip the Fair. Most of the accused declared themselves guilty of these secret crimes after being subjected to such ferocious torture that many of them succumbed. Some made similar confessions without the use of torture, it is true, but through fear of it; the threat had been sufficient. Such was the case with the grand master himself, Jacques de Molay, who acknowledged later that he had lied to save his life. Carried on without the sanction of the pope, who had the military orders under his immediate jurisdiction, this investigation was radically corrupt both as to its intent and as to its procedure. Not only did Clement V enter an energetic protest, but he annulled the entire trial and suspended the powers of the bishops and their inquisitors. Failing that, he was the public prosecutor, the accused was the prisoner, and remained the irrevocable basis of the entire subsequent proceedings. Philip the Fair took advantage of the discovery to have bestowed upon himself the University of Paris the title of Champion and Defender of the Faith, and also to stir up enmity against the recent crime of the Templars. Moreover, he succeeded in having the confessions of the accused confirmed in presence of the pope by seventy-two Templars, who had been specially chosen and coached beforehand. In view of this investigation at Poitiers (June, 1308), the pope, until then sceptical, at last became convinced and opened a new commission, the procedure of which he himself directed. He reserved the cause of the order to the papal commission, leaving individuals to be tried by the diocesan commissions to whom he restored their powers.

The second phase of the process was the papal inquiry, which was not restricted to France, but extended to all the Christian countries of Europe, and even to the Orient. In most of the other countries — Portugal, Spain, Germany, Cyprus — the Templars were found innocent; in Italy, even in the principal districts, the decision was unanimous. But in France the episcopal inquisitions, resuming their activities, took the facts as established at the trial, and confined themselves to reconciling the repentant guilty members, imposing various canonical penances extending even to perpetual imprisonment. Only those who persisted in heresy were to be turned over to the
the difficulty of discovering the truth from a mass of confessional and contradictory evidence, and the jurisdiction in activity simultaneously in all parts of Christendom from Great Britain to Cyprus, is not yet ended. It is still passionately discussed by historians who have divided into two camps, for and against the order. To mention only the principal ones: the following find the order guilty: Dupuy (1854), Hammer (1820), Wilkins (1815), Monnier (1841), Liseleur (1872), Pruts (1888), and Rastoul (1905); the following find it innocent: Father Lejeune (1789), Raynouard (1813), Havemann (1846), Ladovac (1880), Schottmüller (1887), Gmelin (1893), Lea (1888), Fincke (1898). Without taking any side in this discussion, it is not the purpose of this paper to say that the latest documents brought to light, particularly those which Fincke has recently extracted from the archives of the Kingdom of Aragon, tell more and more strongly in favour of the order.

In chronological order, the most important works are: Dupuy, Hist. de l'ordre militaire des templiers (Paris, 1864); Lejeune, Hist. critique et apologetique de l'ordre des Templiers (2 vols., Paris, 1789); Wilkins, General History of the Templars (2nd ed., Paris, 1800); Pruts, Entwicklung und Untersuchung des Tempel-ordens (Berlin, 1888); Grattan, Schuldt, und Verbrechen des Tempelordens (Stuttgart, 1883); Fincke, Papsttum und Universitat des Tempelordens (2 vols., Münster, 1907). Documents: Le règle du temple (Paris, 1886); Des usages du temple (Paris, 1895); Violette, Les inter rogatrices de Jacques de Molay (Paris, 1910). See also Clement V.

**Charles Moeller.**

**Temple.**—The Latin form, _temple_, from which the English _temple_ is derived, originally signified an uncovered area marked off by boundaries; especially a space marked off by the augurs to be excepted from all profane uses. Among the Romans the precincts of a temple were always quadrangular in ground plan; hence the so-called temple of Vesta, one of the most famous sanctuaries of Rome, being circular in plan, was not strictly a temple, but only an _aedes sacra_, or sacred building, was so called because it stood within the boundaries of a temple-enclosure. The boundary lines could not lawfully be interrupted except at one point, which was to serve as an entrance. To mark these boundaries no walls were needed; a formula spoken by the augurs was sufficient, and from this ceremony came the phrase _aedes locum, literally_ "to proclaim a place," hence, to define and dedicate.

It is certain that the Indo-Germanic peoples originally had no buildings for the worship of their gods, but worshipped the gods upon mountains, as Herodotus expressly says of the Persians, or believed the supernatural beings were present in grottoes and trees. Consequently among the ancient Germans the conception of a grove was identified with that of a temple. Among the Greeks, also, the worship of trees seems to be indicated by the word for temple, _aedes_, which, according to some authorities, signified originally "tree-enclosure." It is certain that the Greeks believed that at Dodona they heard the voice of the gods foretelling the future from the rustling of the sacred oaks. In the Homeric age, the temple as a space set apart and containing an altar, which was perhaps shaded by a group of trees, was more commonly found than the temple built by man. If actual temples are mentioned in Homer, as at Troy and the fabulous city of the Phaeacians, the circumstance is probably attributable to Oriental influence. The pagan Germans were never able to bring themselves to give up their original worship of the gods in groves of sacred trees. In many such districts, the practice continued under the influence of the East. Still the German peoples were hardly entirely without temples, any more than the Scandinavians, although these temples could only have been of wood. The beginnings of stone temples among the Germans probably go back to the first Christian centuries and are attributable to the influence of the neighbours of the Gauls.

When new temples were built precints already const
dedicated to the divinity were preferably chosen. It was also customary to select the highest spot in a city, the acropolis, as the general preference at that time for high, open spaces. Further the kind of divinity had also influence on the choice of the spot: thus Zeus preferred the heights, Mars the market-places, Apollo the grove, the Promachus, the temple of the castle, the gates of the city, the plain. If the temple could not be erected on an open space dedicated to the divinity, it was customary to surround the temple by an enclosed precinct, whereby it was separated from all that was profane. Still other buildings were frequently beside this enclosure, as the homes of the priests, or the stalls for the sacrificial animals. Vessels containing water were placed at the entrance; from these, those entering sprinkled themselves in order to be purified from all guilt, as nothing impure was permitted to enter the precincts.

As a rule, Greek temples faced the east. The point towards which a Roman temple faced varied, according to the theory of H. Nissen, who investigated a large number of these temples in respect to this matter. He claimed that the position of the front depended upon the attitude of the sun on the feast day of the god. Now this varied from the assumption that the Greeks and Romans regarded the gods as the manifestation of the world-pervading spirit, and as such subordinated them to the original symbol of the world-spirit, the sun. Consequently, according to his theory, the temples were so placed that on the day settled by the calendar as a birthday and feast day of the god the rays of the rising sun fell along the axis of the temple and thus also on his statue. This theory suffers, however, from the fatal uncertainty as to the date the day of dedication fell on. Moreover, the instances in which of late it has been possible to determine the formerly unknown position of a temple of known period by the sun, to test the correctness of this hypothesis, have proved unfavourable to it [Nissen, "Templum" (Berlin, 1899)]. At the same time, however, it remains as a fact that the orientation of the temple was universally customary, just as it was later in the case of the Christian church.

Among the Romans when the building of the temple was completed it was dedicated to the divinity by the public authorities or by a person specially delegated for this office, while the priests only pronounced the formula without personally completing the sacred actions. This division adhered permanently to the soil which was released by it from all other religious obligations and was withdrawn from profane use. The anniversary of the dedication was celebrated annually by a sacrifice.

Among the equipments of the temple were a massive altar, sacrificial tables, movable hearths for fire, sacrificial utensils, and other objects, which were dedicated at the same time as the temple. They formed a temple property that could not be sold. However, in times of necessity, especially of war, these treasures were as often melted down as were the gold church utensils of the medieval era or of later periods. The doorkeeper, who permitted visitors to enter the temple at stated times, also guarded the treasures.

The massive altar, mentioned above, did not stand in the temple but before it. Either it was built upon a high stone platform, and thus united architecturally with the temple, or it stood in the portico. There was, as a rule, only one sacrificial table in the temple and only one altar in front of it.

The cells of the temple contained the most important object, the statue of the divinity, which stood on a pedestal against the rear wall opposite the entrance. In the days of wood and later it was cast from bronze or made of marble. Besides the statue of the god to whom the temple was dedicated, statues of other gods were at times placed in the temple, partly as ornaments, partly because of their connexion with the principal god.

Taking their use as the basis of classification three kinds of temples may be distinguished: temples for worship, for use in connexion with the oracles, or festival games, and to be found in Asia Minor. The temple for worship was small and its cella contained only the statue of the god that was the object of veneration; it served religious uses exclusively. This temple frequently had connected with it the temple for the festival games which served for the solemn crowning of the victor in the national competitive contests, and as the place for keeping the apparatus for the festivals. The temples of the mysteries were used by the initiated for the celebration of the secret cults, and differed from the others, so far as the scanty remains permit a judgment, both in extent and form. Such temples were to be found, for instance, at Eleusis and at Samothrace. As has just been said, the temple contained only the statue of the god; it existed not so much for men as for the gods. It was exclusively the house of the god to whom it was dedicated. Still the god was pleased when at the national festivals men appeared in his sanctuary with prayers and incense, and thus these days became religious as well as national festivals.

Again, because the objects placed in the temple were more secure, it served as a treasury both for the State and for private persons. From 438 b. c. the public treasure of Athens was kept in the Parthenon. Naturally the temple also contained the votive offerings presented to the gods, as statues, lamps, wreaths, rings, and bracelets. A list of these objects was annually compiled, and once in four years it was engraved in marble; some fragments of such marbles are still in existence. Sometimes, too, the temple contained the mint.

Besides material things men also found security and protection in the temple against threatening danger. Every temple was an ἄσυλον, that is, it was inviolable, and none ventured to drive a malefactor away from the altar unless such a one wished to draw down the wrath of the gods upon himself. All temples did not grant the same protection; only certain temples had the privilege of unconditional security. Still there were ways of making the right of asylum ineffective, as was shown in the case of the Spartan Pausanias. During the reign of Tiberius the great number of asylums in Asia Minor was a subject of complaint.

As to the form and manner of construction of the temple, we must in the first place not imagine that the Greeks and Romans at all times built for their gods those magnificent structures that even to-day all men of taste admire. The earliest sanctuaries of the gods were cave-temples, if grottoes and crypts deserve this name at all. Even in a later age the worship of Mithras was preferably celebrated in grottoes. Related to the natural cave-temples are the artificial rock-temples, of which magnificent examples are still in San Francisco. A third form, found especially in Assyria, Mexico, and Peru, may be called tower, or pyramidial temples, because the actual sanctuary is placed on a truncated pyramid. The fourth, finally, is the classical form of the Greeks and Romans. It is a development of the analogous, or ruler's house, which was again only a large hall with a portico. This portico was formed by the projecting side-walls of the hall and was ornamented in front with two columns.

Having thus briefly considered the subject as a whole, we will now examine somewhat more closely the kinds of temple used by various civilized nations. This is all the more necessary in order to guard against identifying the temple of the Greeks with that of other...
TEMPLE

peoples. The discussion, however, must be brief, because temples, both pagan and Christian, have always been the highest achievements of architecture and have therefore been treated incidentally in other articles. The oldest architectural remains are those of the Meso-American pre-history, and the structure of the great temples of the sixteenth to the twentieth dynasties (about 1530-1150 B.C.). Of special importance are the ruins of temples at Thebes or the present villages of Luxor and Karnak. The Egyptian temple is not an organic structure complete in itself; instead of unity there are the following distinct parts: dromos, enclosing wall, pylons, peristyle, hypostyle, and sekos. The temple of the Egyptians therefore consisted of a large complex of buildings and the temple precincts, the whole surrounded by a massive wall, and reached by a broad avenue (dromos) bordered by figures of sphinxes and rams. Between the temples of Luxor and Karnak this avenue for processions was nearly a mile and a quarter in length and more than 75 feet wide. In the enclosing wall, which at Karnak was about 32 feet wide, there were several gigantic gateways called pylons, flanked by tower-like buildings. The later Christian painter depicted within which was a lake. On certain days the statue of the god was rowed round this lake in a golden bark. A second pylon led into the peristyle, or protakos, a quadrangular open space containing covered halls with columns; a third pylon led into the hypostyle, or peripteros, a circular space with columns. The sekos was called “the hall of manifestation”, and only “the enlightened” were permitted to enter it, the lower classes of the population might come only as far as the peristyle. On the farther side of the hypostyle there were still other large halls which led ultimately to the actual sanctuary, in which the divinity was represented by a statue or some symbol; only the king or his representative, the high priest, could enter the sekos. Beyond this sanctuary were other large halls and chambers for keeping the apparatus for the festivals. A peculiarity of this extended series of sacred buildings is that the greater the distance from the entrance the narrower and lower the structure, so that the sekos is only a small dark chamber.

The huge size and rich equipment of Egyptian temples is explained by the fact that they were monuments of the piety of the ruler, royal houses of perpetuity where the king could enter the sanctuary. For this reason the paintings and reliefs on a sunken background (circularlymphic), with which the temple walls were richly ornamented, presented in the most varied forms the homage and worship paid to the ruler. The ruler also showed the depth of his piety by the magnificent festivals which were connected with the temple.

The architecture of the temple was in harmony with the obscure, mysterious, and sensual religious conceptions of the Egyptians. The temple was an inorganic conglomeration of structures fitted the one into the other, so that only those who were acquainted with its size and magnificence. It is hardly necessary to say that no rigid system prevailed in the plan of either the Egyptian temples or those to be mentioned further on, and that there were small temples as well as large.

The Chaldean temples differed essentially from those of the Egyptians; if in the latter the chief extent was horizontal, in the former it was vertical. The large temples of the Chaldeans were constructed so as to form a series of terraces or steps or something like a pile of rectangular prisms, decreasing in size from base to top. According to Herodotus, the temple of Bel at Babylon was built in this way. A terrace was measured at the base two stadia (1214 feet) each way. On this broad base the tower-like structure rose in seven stories which were topped by the actual sanctuary. The upper stories were reached by means of an exterior stairway or by an inclined roadway. Halfway up the ascent was a chamber where those who were mounting could sit down and rest. This peculiar form of architecture was certainly influenced by astrology which had so authoritative a position in the East. The Indian temples were built on terraces which were found in Mexico and Peru, as, for instance, at Tehuacan and Santiago Guatusque.

The Indian temples are principally, grottoes or caves. They are generally constructed in one or two forms: either hewn out of the rock and remaining connected with the main mass, or, cut away from the surrounding mass of rock so as to stand alone. To the first class belong largely the Buddhist temples (chatya), while the latter form is preferred by the Brahmins. The more developed ground-plan of the Buddhist chatya resembles in some points the plan of the Egyptian temple. It is drawn in the form of a square or a rectangle, its length much greater than its width, and has a kind of apse opposite the entrance. The inner space is divided into several naves by pillars which follow the line of the apse. In the apse is the dagoba, a circular mound like a grave, terminating at the top in a hemisphere (stupa). The peristyle was called “the hall of manifestation”, and only “the enlightened” were permitted to enter it, the lower classes of the population might come only as far as the peristyle. On the farther side of the hypostyle there were still other large halls which led ultimately to the actual sanctuary, in which the divinity was represented by a statue or some symbol; only the king or his representative, the high priest, could enter the sekos. Beyond this sanctuary were other large halls and chambers for keeping the apparatus for the festivals. A peculiarity of this extended series of sacred buildings is that the greater the distance from the entrance the narrower and lower the structure, so that the sekos is only a small dark chamber.

The typical Greek temple stood alone on a broad foundation platform, built on all sides in terraces, which was called the crepidoma. The temple consisted, generally, first, of the naos, or cella, which was a rectangular enclosed space for holding the statue of the god; second, of the pronaos, a portico or vestibule in front of the cella in which it was connected by a door, while to the front it had rows of columns with open spaces between them, the pediment behind the cella and corresponding to the pronaos. Large buildings contained two further structures, the opisthodomos, a chamber between the cella and the osiculum, and fifth, the peristyle, a covered walk with a syssem of columns surrounding the temple, and open on the outer side. These last-mentioned parts of the temple were probably added in the seventh century B.C.

The name of the Greek temple varied with its ground-plan. The simplest form was called the temple with andre (templeum in anse), and signifies pillars which form the terminates of walls. The two side-walls of the cella extend a little beyond the transverse wall, and these ends of the side-walls are finished with anseia, then these give the name to the entire structure. Two columns generally stand in the space between the two anseia. The sense of symmetry led to the beine construction at the rear without there being any change in the name. If the portico were formed merely by a row of columns without the aid of walls it was called a prostyle temple; if the same construction were also placed at the

XIV.—32
rear of the building it was amphiprostyle. The actual creation of the Greek mind was the peristyle, in which the entire temple was surrounded by a row of columns, which carried the diagonal beams of the roof. A second, inner row of columns was generally arranged at the front and back of the building. If the columns were replaced by engaged columns on the walls of the cela, the temple was a pseudo-peripteral temple. A temple was called a diperos if it was surrounded by a double colonnade, and the diperos when the inner row of columns was not used. A circle of columns with a roof over them, but without a cela, formed a monopteral temple. A third method of designating or distinguishing the temples is by the number of columns in front, thus temples are called tetraestyle, hexastyle, octastyle, that is having five, six, or eight columns.

Up to the seventh century B.C. the method of building was very simple: the walls of the cellae were made of unburnt brick resting on a stone base, the columns were of wood, for originally the Greek temple in its essential parts was not built of stone. In the buildings of better construction the walls were ornamented with terra-cotta tiles, and the columns were covered with precious metals. The earliest temples were built in the Doric style; this was followed from the sixth century by the Ionic style that came from Asia Minor, and later by the Corinthian style. One stone, the pediment, formed the roof entrance.

If in the Doric temple the impression made was that of massiveness, the Ionic temple conveyed a sense of agreeable lightness and grace. The effect produced by the Greek temple was not that of gigantic size, as in the Egyptian, or of colossal mass as in the Assyrian; it arose from the harmonious relation between all its members, by the spiritualizing of the styles of architecture and the ornamentation, as well as by the careful execution of all parts, even those least seen. Thus it became a model for all succeeding centuries, which always return to it after they have tried for a time new architectural designs of their own. The Romans were the first to adopt the plan of the Greek temple, but they impressed their national character upon it in several ways: the foundation platform was frequently omitted or was replaced by a podium without any steps except those leading to the entrance; the framework fixed by the head of the porch was in the increasing the number of columns. The finely balanced harmony of the Greeks was sacrificed to ostentatious display of material and the huge size of the structure. The round temple is peculiar to the Romans, who greatly developed it. Among the temple-like structures of the Romans, one of the most important masterpieces of Roman architecture, the Pantheon, as well as several small, graceful structures like that at Tivoli.

However important a Greek or Roman temple may be architecturally, still it is essentially nothing more than a beautiful and stately private house, a dwelling-place of the divinity, not a house of prayer and a place for the people to offer sacrifice. In this is made evident the marked difference between the temple and the Christian church. From the beginning the Christian church was intended to hold all those who believed and its interior was divided into sanctuary and nave for the clergy and the laity. It contained in itself the fruitful seed which enabled it in the course of centuries to develop, even architecturally, far beyond the classical temple. In the latter, excepting in the prostyle temple, the front had hardly any distinctive characteristic, in the peripteral, amphiprostyle and pseudo-peripteral temples alike. On the other hand, the façades of many Christian churches are works of the finest finish and highest architectural value. Although the temple contained several chambers within, yet this fact exercised no actual influence on its external construction, while in the Christian church, either of the Romanesque or of the Gothic style, the inner arrangement is easily recognized from the external construction. It is a striking fact, and one that is, perhaps, not to be explained entirely, of the ancient Christians for the places of heathen worship, that from the beginning the model chosen for the Christian church was not the classic temple, but the basilica, which, as the court and place of exchange, was intended to hold large numbers of people.

Beda Kleinschmidt.

Liturgy of the Temple.—The three great national festivals of the Jews—the Passover, Pentecost, and the Feast of Tabernacles—were the occasion of special liturgical service of the temple (Ex., xxvii, 14; xxviii, 11; Deut., xxvi, 13; xxvii, 3). All the feasts could be celebrated by local observance. Not so the three national feasts. All males were supposed to appear at Jerusalem on these occasions: "in the place which the Lord thy God shall choose, that his name may dwell there" (Deut., xvi, 6). It was during the Passover, while the lambs for the Pasch were dressed, that the Levites in the temple chanted the Hallel (Ex., xiii–xviii; Vulg., xi–xii). These same Psalms were repeated during the paschal meal—the first two after the second cup, the remainder after the fourth cup. The ordinary temple liturgy is not clear to us. Scant and obscure details are preserved in the Sacred Text. The people entered the Temple to receive instruction from the Prophet and to join them in prayer (Is., i, 12–15). The Deuteronomistic custom was that the Torah should be read to the people in the temple at the Feast of the Tabernacles (Deut., xxxi, 10–13). After the Exile, Esdras brought back this custom (II Esd., viii, 5–8). And yet, not even the reading of Torah was the chief purpose of the Temple; it was essentially a "house of prayer for all nations" (Is., xvi, 7); prayer to Jahweh was its chief purpose. It was in the Temple of Silo that Anna prayed for a man child (I Kings, i, 11). In the first Temple of Jerusalem, Solomon said his inspiring prayer for Israel (III Kings, viii, 23–53). Apart from the Psalms, set forms of prayer were rare. In such set forms, the priest offered the first-fruits and tithes before the altar of the Temple (Deut., xxvi, 5–10); and the high-priest laid the sins of Israel on the head of the scapegoat (Lev., xvi). And yet, not even the reading of Torah was the chief purpose of the Temple. The Psalms of Asaph and of the sons of Korah (see Psalms) at one time made up a liturgical collection for temple service. The sons of Asaph were among the temple levites (I Par., xxv, 1). The sons of Korah were also a leitovical family of temple singers (II Par., xx, 19). In fact, there can be no doubt but the Psalms are evidence of a gradual development of a liturgical hymnal for temple service.

Certain elements of synagogue liturgy (see Synagogue) probably have their origin in temple service. The "Shema" (Deut., vi, 4–9), together with the Ten Commandments and several benedictions, were recited by the priest at the morning sacrifice (Talmid, v). Josephus (Ant. Jud., IV, vii, 13) dates this synagogue practice from the time of Moses.

Temple, Sisters of the.—The Sisters of the Temple (whose full title is Sisters of the Finding of
TEMPLE

JESUS IN THE TEMPLE) are a pre-Reformation foundation. They were established in London for educational purposes at the time of the Crusades by a decree which had come to us. They were driven out into exile at the Reformation. In 1860 Cardinal Wiseman, with the generous help of the Abbé Roulin, re-established them in the Archdiocese of Westminster, whence they moved to Clifton. But it was not until a house was opened at Vernon, Normandy, that they began once more to flourish; from Vernon they have opened six houses in France and Belgium, and now number 170 sisters. They have a home for invalid priests at Clifton, and the chief work of the sisters now is nursing among all classes and conditions of men.

They are also as the fourth house of the Jesuits in England and France, from the blue habit they wear.

DATING: Discours pour le cinquantenaire des Sœurs de Jésus au Temple (1910).

FRANCESCA M. STEELE.

TEMPLE OF JERUSALEM.—The word "temple" is derived from the Latin templum, signifying an uncovered place affording a view of the surrounding region; in a narrower sense it signifies a place sacred to the Divinity, a sanctuary. In the Bible the sanctuary of Jerusalem bears the Hebrew name of Beth Yehodeth (house of Jehovah). The sacred edifice consisted of the temple proper, a middle room called the kodesh (the house or temple), and gōdes (the holy), and the other dōbr (that which is the oracle), or gōdeth haggodoshim (the holy of Holies). The New Testament speaks of it as elaios, "the house", vaphi, Latin cella, "the most holy place of the temple", and ἱερόν, "the whole of the sacred enclosure". The Temple which Solomon erected to the Lord about 906 a. c. was destroyed by Nabuchodonosor in 586 b. c. After the return from captivity Zorobabel raised it again from its ruins (537 b. c.), but in such modest conditions that the ancients who had seen the former Temple wept. In the eighteenth year of his reign, which corresponds to 19 b. c., King Herod destroyed the Temple of Zorobabel to replace it by another which would equal, if not surpass in splendour, that of Solomon.

Many writers admit three temples materially different. Now as the Prophet Aggeus (Vulg., ii, 10) says of that of Zorobabel, "Great shall be the glory of this last house more than of the first", because of the coming of the Messiaus (v, 8-9), they claim that this prophecy was not fulfilled because Christ never entered the second Temple. Others assert that Zorobabel's work was not completely destroyed but gradually, a larger and much richer temple (Josephus, Ant. Jud., ed. Dindorf, XV, xi, 2), and they consequently admit only two materially different temples. The whole difficulty disappears if we choose the Septuagint in preference to the Vulgate. The Prophet has already asked: "Who is left among you that saw this house in its first glory?" (ii, 4). According to the Septuagint he afterwards says: "The last glory of this house shall be greater than its first glory." To the Prophet, therefore, there was but one and the same house of Jehovah from Solomon to the time of Messiaus, built always in the same place and according to the same plan, that of the Tabernacle. We may therefore admit three different temples and this article will describe: I. that of Solomon; II. that of Zorobabel; III. that of Herod.

1. TEMPLE OF SOLOMON. HISTORY.—Through a motive of pride David had commanded the numbering of his people, in punishment of which God declared that he had enlarged his house by a promise given to his father Jacob. When Solomon saw near the threshing-floor of Ornan (Areuna) the Jebusite an angel about to strike the people of the city, whereupon David humbled himself before the Lord, Who forgave him and stayed the plague. The king hastened to purchase the property of the Jebusite for fifty sicles of silver and built an altar on the threshing-floor, upon which he offered holocausts and peace-offerings (II Kings, xxiv). This hill, which is the site of Mount Moria (see Par., iv), and of Cæsarea, was therefrom destined to be the site of the Temple of Jehovah, for which David had already amassed great treasures, but the building of which was reserved to Solomon. As hitherto the Hebrews had not cultivated the arts, Solomon addressed himself to Hiram, King of Tyre in Phœnixia, to obtain builders, skilful workers in stone, brass, and the cedar and cypress wood of Lebanon. After seven and a half years of toil the king was able to dedicate solemnly the Temple of the true God. Near the sacred precincts he afterwards built large buildings, among which the Bible makes special mention of the palace of the king, that of the queen, Phœbe, as the name of the south, the forest, the porch of the throne, and that of pillars.

SITE.—Mount Moria, which stretches from north to south, is a long spur, or promontory, connected at the north with Mount Bezetah and bounded on the east and west by two deep valleys which are joined at their southern extremity (see JERUSALEM, VIII, 360 d). Between its two steep declivities the crest of the hill afforded but narrow space for buildings, and to secure an adequate site for the Temple, the courts, and royal palace a platform was formed by raising sustaining walls of carefully-hewn beautiful stones measuring fourteen and a half cubits. In form it was square. According to Jewish tradition the Temple stood on the highest point of Mount Moria, while the royal quarters were built south of its enclosure and on a lower level. It is generally admitted that the "sacred rock" in the centre of the Mosque of Omar (see JERUSALEM, VIII, 360 d) formed the foundation of the altar of holocausts in the Temple of Jerusalem. On this hill, according to an ancient tradition, Abraham made ready to sacrifice his son Isaac; here, near the threshing-floor of Ornan, the exterminating angel restored his heart to its seaboard; and on this threshold the Ark, which according to custom was situated at the highest point, David erected an altar to the Lord. If this prominent rock was constantly spared at the various rebuildings of the platform it must have been because of its associations. Moreover, it corresponds to the east required by Ezekiel (xxvii). It will be the altar of holocausts. It is a limestone rock, uneven and irregular, fifty-eight feet long, by forty-five wide, and standing three or four feet above the ground. Furthermore, in its upper almost level surface there is a hole whereby it is believed the blood of the water of expiation was conducted by the priests to the Chasm of Codron which was carried off by a subterranean conduit to the valley of Codron. The Mishna (Yoma, I, 1) asserts that under the altar of holocausts there was a canal of this kind. This point admitted, the "sacred rock" will serve as a mark to discover the exact site of the house of Jehovah, because the latter opened to the east opposite the altar of holocausts and consequently west of the court of the priests which contained the altar.

SOURCES.—The chief sources of information concerning the plan, construction, and adornment of the Temple are, first III Kings, vi, vii; then the parallel account in II Par., iii, iv, which tends to magnify the dimensions immeasurably. The Prophet Ezekiel described the Temple in the light of a heavenly vision, and though his description is symbolic it agrees in its essential features with that of the Book of Kings; to all appearances he describes the Lord's house as he saw it while he performed his priestly duties. The information that the Middle Ages derived from the Mishna inspires less confidence; it seems rather based on the Temple of Herod than on that of Solomon. Indeed we possess but a brief description of the first Temple and the technical terms used by the Bible are not always readily intelligible in modern times; hence there is great diversity of opinion among writers.
who have attempted to reconstruct the Temple of Solomon in its architectural details.

**Architecture and Measurement.**—Solomon reproduced in solid materials and double proportions the Tabernacle which Moses had built in the desert (West, p. 38). The plan of the Temple was therefore outlined (Ex., xxvi, xxxvi). With regard to the style adopted by the Phcenician architects we know simply that at that period the architecture of all Semitic peoples was very similar to that of the Egyptians. In Egypt there were two measures of length; the smaller cubit formed of the breadth of six hands or (III Kings, vi, 34) fingers and equal to 1 ft. 5¾ inches; the large or royal cubit, which was a handbreadth (three inches) longer. The lesser cubit of six hands, or twenty-four fingers, existed in the eastern empire, but it was somewhat longer, being equal to 1 ft. 7½ inches. The large or royal cubit was likewise longer, being equal to 1 ft. 9¾ inches. Now judging from the excavations made at Taanath and Megiddo in Palestine the royal Babylonian cubit, introduced by the long Chaldean domination, was the one in use at that time (Ben- zinger, 'Hebr. Archäologie', 190). It is probable that only the small cubit was in use at the time of the Babylonian Captivity, hence the sacred writer (II Par., iii, 3) gives the dimensions of the Temple by the 'first measure', or ancient cubit, and Ezeechiel (xl, 5; xiii, 13) adds to each cubit a handbreadth (the ancient palmus minor, one-sixth of the small cubit) in order to obtain the length given in the Book of Kings. The Babylonian cubit therefore was the mersion pessima (Ezech., xiii, 13) used in the construction of the Temple of Solomon.

The Temple; the Holy of Holies.—The house of God was of rectangular shape, sixty cubits long from east to west by twenty cubits wide and thirty high (III Kings, vi, 2; II Par., vii, 6). These were the interior dimensions which did not include the thickness of the walls, as shown by numerous texts. This space was divided into two chambers of unequal size. The first, the ḫarkal, or Holy of Holy, is the actual place of the Ark (see plan, fig. 1) was forty cubits long by twenty wide. It was entered at the eastern end by a square gate (III Kings, vi, 30), ten cubits in breadth (Ezech., xii, 2). The framework was of wild-olive wood, furnished with two doors of cypress wood. Each door was subdivided vertically into two leaves which folded by means of hinges (III Kings, vi, 33, 34). On the other side of the compartments there was a gate of olive-wood (III Kings, vi, 31) with an opening of six cubits through a partition wall two cubits in thickness (Ezech., xii, 3-4). It opened into the ḫaral, or Holy of Holies (2), a chamber measuring twenty cubits every way.

The two doors of wild-olive wood in the gate opened towards the east and stood always open to allow the passage of fresh air and the smoke of incense to enter the interior, but a veil of byssus in violet, purple, and scarlet, embroidered with cherubim, always concealed the Holy of Holies (II Par., iii, 14), which was entered only by the high-priest once a year. On the two gates of porch stood two of tree of cherubim, palm-trees, and blossoming flowers to be carved and overlaid with gold (III Kings, vi, 22, 35). The walls of ḫaral and ḫarkal were lined with boards of cedar adorned with colouts and flowers carved in relief and profusely overlaid with gold. Within the ḫaral even the floor was covered with plates of fine gold and the front was covered with chains of the same metal (III Kings, vi, 15).

Secondary Chambers.—The whole building, including the Holy of Holies which formed the chief part, was thirty cubits high. Now as the interior of the ḫaral was only twenty cubits high there must have been seven stories above the one where the Holy Place is not indicated in the Bible, but there is mention of "cenacles", or upper chambers (II Par., iii, 9); hence the Holy Place must have been of the same height as the ḫaral and like it have had above it a chamber ten cubits high. The same text informs us that these "upper chambers" were richly adorned like those below and there is little doubt that the Tabernacle was preserved in the large upper chamber (III Kings, vii, 4; Par., v, 5), and in the lower one relics and remembrances of the life in the desert. In front of the ḫarkal was the vestibule or porch (3) ḥhdm, Greek porch, of the same length as the Temple but only ten cubits deep (III Kings, vi, 3); it was a kind of stately tower, recalling the pylons of the Egyptian temples and like them having a large gateway without doors. II Parapemonon (iii, 4) states that its height was one hundred and twenty cubits. But a porch six times higher than it was long would be so out of proportion that many exegetes are inclined to reduce this figure to sixty cubits, the height of the porch of the Temple of Zorobabel. According to Ezechiel the walls were six cubits thick. Along the three other sides of the sanctuary rose a building divided into three stories (III Kings, vi, 5-8), each story having thirty chambers [Ezech., xii, 6; Ant. Jud., VIII, iii, 2]. (4) The house of Jehovah was so sacred that the beams of cedar which supported the ceilings of the side chambers were not suffered to be fastened to the plate (III Kings, vii, 31). There the walls of the Temple, hence in the walls of the Holy Place and the Holy of Holies there were three recesses in which rested the ends of the joists. Thus the under chambers were five cubits in breadth, those of the first floor six cubits, and those of the second seven. Each story was five cubits high. The entrance was by a door (5) which opened to the south (III Kings, vi, 6-8); Ezechiel (xl, II) mentions another (6) on the north, which would be very natural. Ascent from one floor to another was made by means of a winding-stair (7), and it is very probable that the upper chambers, or cenacles, were reached by way of one of the stories of the porch. In these low-ceiled and narrow cells were preserved the archives, the public treasure, the accessories of worship, and the sacred vestments (cf. III Kings, vii, 4; Par., v, 5). In this manner the Holy Place and the Holy of Holies were completely surrounded by imposing structures.

Roofs and Windows.—The Temple was covered with a roofing formed of beams and planks of cedar (III Kings, vi, 9). Any broad surface which rests on a framework instead of on arches of mason-work is unstable and cannot prevent the rain leaking through; hence it is our opinion that the roofs of Solomon's Temple were sloped. The height of the Holy Place is not indicated in the Bible, but there is mention of "cenacles", or upper chambers (II Par., iii, 9); hence the Holy Place must have been of the same height as the ḫaral and like it have had above it a chamber ten cubits high. The same text informs us that these "upper chambers" were richly adorned like those below and there is little doubt that the Tabernacle was preserved in the large upper chamber (III Kings, vii, 4; Par., v, 5), and in the lower one relics and remembrances of the life in the desert. In front of the ḫarkal was the vestibule or porch (3) ḥhdm, Greek porch, of the same length as the Temple but only ten cubits deep (III Kings, vi, 3); it was a kind of stately tower, recalling the pylons of the Egyptian temples and like them having a large gateway without doors. II Parapemonon (iii, 4) states that its height was one hundred and twenty cubits. But a porch six times higher than it was long would be so out of proportion that many exegetes are inclined to reduce this figure to sixty cubits, the height of the porch of the Temple of Zorobabel. According to Ezechiel the walls were six cubits thick. Along the three other sides of the sanctuary rose a building divided into three stories (III Kings, vi, 5-8), each story having thirty chambers [Ezech., xii, 6; Ant. Jud., VIII, iii, 2]. (4) The house of Jehovah was so sacred that the beams of cedar which supported the ceilings of the side chambers were not suffered to be fastened to the plate (III Kings, vii, 31). There the walls of the Temple, hence in the walls of the Holy Place and the Holy of Holies there were three recesses in which rested the ends of the joists. Thus the under chambers were five cubits in breadth, those of the first floor six cubits, and those of the second seven. Each story was five cubits high. The entrance was by a door (5) which opened to the south (III Kings, vi, 6-8); Ezechiel (xl, II) mentions another (6) on the north, which would be very natural. Ascent from one floor to another was made by means of a winding-stair (7), and it is very probable that the upper chambers, or cenacles, were reached by way of one of the stories of the porch. In these low-ceiled and narrow cells were preserved the archives, the public treasure, the accessories of worship, and the sacred vestments (cf. III Kings, vii, 4; Par., v, 5). In this manner the Holy Place and the Holy of Holies were completely surrounded by imposing structures.
adjacent building, as also the porch, were furnished with windows having fixed gratings of wood, of which mention is made in the text (III Kings, vi, 4). The walls of the ḫedāl had similar openings at the north and south, at least in the lower portion; but the position of these windows was scarcely obscured by the admission of light into the large cubits, which, for the most part, was lighted night and day by numerous lamps. The windows were intended rather to permit the circulation of fresh air and the escape of incense-smoke through the side chambers. The Holy of Holies seems to have had no windows and was always enveloped in darkness (Jer., xxxvi, 1 sq.).

Bronze Pillars.—It should be borne in mind that the entire building was constructed of the beautiful red and white limestone of the country, which could be polished like marble. We cannot believe that such a sumptuous monument was built on the earth without any foundations. Moreover Ezekiel tells us (xli, 8) that it rested on a foundation six cubits high, which formed all about it a border five cubits broad (8). The porch was reached by a stairway of ten steps [Ezech., xI, 49, (9), which in ancient times were always rather high. At the top of the stairway was a kind of balustrade, and at the top of the balustrade on each side was a sort of platform. The whole structure was based on a foot-square space (Ezech., vi, 15). The pillars were hollow, but the metal was four fingers in thickness (Jer., lii, 21). The capitals which surmounted them were five cubits high, and their tops were fashioned in the shape of lilies. They were richly adorned with network, garlands, pomegranates, foliage, etc., but despite the details furnished by the Bible (III Kings, vii, 18-19; II Par., iii, 13-17), it is very difficult to reconstruct them in their true form. The pillar which stood at the right of the porch door (10) was called Jacob, "the one who established, and that on the hill of strength" (1 Kings, ii, 39). There is no mention in the text of base or pedestal, but some sort of a base would not have been out of place. Despite their squat shape these magnificent pillars recall the obelisks before the pylons of the Egyptian temples.

Furniture.—In the ḫedāl before the gate of the ḫedāl stood the altar of incense, a rectangular square chest of cedar wood, each side measuring a cubit wide and two cubits high. The wood was completely covered with plates of gold (III Kings, vi, 20, 22; vii, 48; I Par., xvi, 18; II Par., iv, 19). At the north side stood the table of gold on which the bread loaves were placed (II Par., iv, 19). At the north side stood the table of gold on which the bread loaves were placed (III Kings, vii, 48, speaks of only one golden table for these sacred loaves, while I Par., xxviii, 16, and II Par., iv, 19, mention several, but the text has been mutilated by the copyst, for elsewhere [II Par., xii, 11, and xxii, 18] there is likewise mention of only one. The ten tables of II Par., iv, 8, were of the kind held the candlesticks. On each side of the south and north courts stood five candlesticks of pure gold adorned with flowers which held gold oil-lamps, probably seven in number. The snuffers, bowls, knives, morsars, cups, censers, and other vessels were likewise all of pure gold (III Kings, vi, 20, 22; vii, 48; I Par., xvi, 18, and II Par., iv, 8-9; 21-22). The Ark of the Covenant made by Moses in the Desert, with its staves, stood in the ḫedār (III Kings, vii, 8). It contained a golden vessel holding manna, the rod of Aaron, and the two tables of the Law (Heb., ix, 4). At the ends of the Ark with wings of gold plate was placed two cherubim, one carved from wild-olive wood and covered with gold. The inner wings met above the mercy-seat or cover of the Ark and the outer wings touched the walls (see Ark).

Court of the Priests.—On the north, south, and west sides of the building was a court about twenty cubits wide which extended in front of the house a distance of one hundred cubits each way (Ezech., xl, 47). This was the "inner court" (III Kings, vi, 36), called also the "court of the priests" (II Par., iv, 9), because they alone entered it, laymen being admitted only in exceptional circumstances (cf. IV Kings, xii, 12; Jer., xxxvi, 1 sq., and xxxvi, 10). It was surrounded by a wall of three rows of polished stones and one row of boulders of cedar (III Kings, vi, 36), probably placed edgewise in the form of a cordon. The court was paved with stone slabs (II Par., vii, 3) and was entered by three doorways on the north, south, and east sides (Jer., xxxviii, 14; li, 24; Ezech., xl, 28, 32, 35), the last-named was called the "king's gate" (I Par., ix, 15). In this court opposite the porch gate at a distance of two cubits stood the brazen altar of holocausts (III Kings, viii, 64), which was twenty cubits in length and breadth and ten cubits high (II Par., iv, 1). The ascent to it was made by an incline facing the east. According to Ezech., xlii, 13 sq., the altar consisted of a square base measuring twenty cubits on the sides and one cubit high, with a trench around the border; on the base stood a large section eighteen cubits sideways and two high, above which was a second section sixteen cubits sideways and four high. Lastly came the harel, "mountain of God", measuring fourteen cubits on the sides and two cubits high. The top of the altar of sacrifice was covered with a sort of mantling, the "hearth of God", having at each corner a horn of one cubit high, and of a section one cubit high surmounted by a crown.

Between the Temple and the altar, but somewhat towards the south, was the famous "sea of molten brass" a vessel "round all about", the height of its five cubits and the diameter ten cubits. The outer brim which was a handbreadth (four fingers) in thickness was adorned with coloelyths. It contained 2000 bates (III Kings, vii, 23-26). Without capacity must have been doubled by the copyst, for a bate equals 380 litres; but the exterior diameter of the vessel instead of allowing a capacity of 72,800 litres barely 36,000.) The brazen sea rested upon twelve oxen, likewise of brass, which stood in four groups facing the four cardinal points. This magnificent vessel was used by the priests for washing their hands and feet at the hours of sacrifice. Along each of the right and left wings of the Temple were arranged five movable brazen vessels. On four wheels a cubit and a half in diameter stood a base four cubits in width and length and three high; the ledges were decorated with figures of oxen, lions, and cherubim. On this vehicle was fixed a cylinder a cubit and a half in diameter and a cubit high, on which was placed a laver four cubits in diameter and shaped like an elongated dish. Four shoulders fastened at the four corners of the base supported the laver (III Kings, vii, 27-39). These movable lavers each having a capacity of forty bates, were chiefly used for washing the flesh of the victims. There has recently been discovered at Larnaca in Cyprus a Phoenician vessel in brass which corresponds in the smallest details to that described in the Bible (see Benzing, op. cit., 218, 221).

Outer Court.—The inner court (III Kings, vi, 36), also called the "upper court" (Jer., xxxvi, 10), implies the existence of an outer courts. The inner court of the priests (II Par., iv, 49) supposes another for laymen. There is mention of still another in the time of Josaphat (II Par., xx, 5), but we have very little interesting information concerning these courts, which must have been completed and adorned by the Pentateuchal authors of the Deuteronomistic History. Joatham "built the highest gate of the house of the Lord" (IV Kings, xv, 35), which refers to a new gate, probably north of a court. On the other hand Achaia replaced the altar of holocausts by another, the model of which he had seen at Damascus. He also removed twelve brazen oxen ten on the one side and ten on the other; these were ten movable lavers and changed the gate of the Sabath and the outer entrance for the king (IV Kings, xvi, 10-18). Ezechias emptied the treasury of the
TEMPLE

Temple and took away the plates of gold and silver with which he himself had covered the doors and the lintels, and gave them to purchase peace from Senacherib. (IV Kings, xxii, 19.) It is familiar to us as the Temple of Jehovah by the worship of idols (IV Kings, xxi, 4). At last the monument of Solomon, in ancient times more celebrated for its splendour than its size, was reduced to ashes by the Nabuchodonosor in 586.

II. TEMPLE OF ZOROABER.—In 537 Sassabazar, appointed Governor of Jerusalem by Cyrus, King of Persia, and Zorobabel, a descendant of King Joachim, returned from captivity with a vast number of Jews and armed with authority to rebuild the Temple of Jerusalem. In the seventh month after their return the altar of holocausts of unhewn stones was set up on the foundations of the former one. In the second month of the second year they laid the first stone of the new Temple. But the work was impeded and even suspended through the hostility and plots of the Samaritans in the Tarshish who had not finished rebuilding the Temple of Ahab, 516 (I Esd., iii, 6). The Temple of Zorobabel was sixty cubits broad and the same in height (I Esd., vi, 3), these being the interior dimensions. Josephus tells us (Ant. Jud., xvi, 1) that this was really its height, for Herod reminded the people that the height of the second sacred temple was sixty cubits less than that of the first, making the Temple of Solomon one hundred and twenty cubits high, according to II Par., iii, 1. It is difficult to say whether the breadth of sixty cubits ascribed by the decree of Cyrus to the Temple was in round numbers, or whether the figures indicate the smaller cubit then in use, but it matters little, for if the breadth were really sixty royal cubits it would mean only that the side chambers had been enlarged five cubits on each side. The Holy Place and the Holy of Holies in Zorobabel’s Temple retained the dimensions they had in Solomon’s, and they remained the same in the third Temple.

We know from Esdras (i, 12) and from Aggeus (i, 3) that the Temple of Zorobabel was much inferior to that of Solomon. The poverty of the new Temple consisted chiefly in the scarcity of its furnishing. The Ark of the Covenant had not been recovered and the chandelier was empty, but as it was not the serious thing, “God on earth the entrance was once more screened with a costly veil. In the Holy Place stood a new altar of incense and a table for the loaves of proposition, but there was only one seven-branched candlestick. Treasures once more accumulated, and the entire furnishing was again in gold or covered with plates of gold, including the pillars. In 168 B.C. precious metals adorning the Temple aroused the covetousness of Antiochus Epiphanes, who “took away the golden altar, and the candlestick of light, and all the vessels thereof, and the table of proposition, and the pouring vessels, and the vials, and the little mortars of gold, and the veil, and the crowns, and the golden ornament that was before the temple, and he broke them all in pieces” (I Mach., i, 23). Judas Machabeus hastened to provide the house of God with new furnishings. The table of proposition escaped the destruction of the Temple by Titus and with the other sacred utensils figured in the extraordinary triumphal procession at Rome (Bell. Jud., VII, v, 4–6). The inner court had the same circumference as that in the first Temple (I Esd., vi, 4), and according to Hecataeus, as quoted by Josephus, the altar of holocausts had the same dimensions as that of Solomon.

The Mishna (Middoth, III, vi) mentions a movable vehicle on wheels. Josephus (Ant. Jud., xi, iv, 7) relates that Zorobabel had erected several porches or vestibules within the precincts of the temple and in 1 Mach., iv, 38, 57, there is mention of chambers built in the inner court.

During the heroic wars of the Machabees with the Syrians the Temple had to undergo many vicissitudes. The walls with their large towers built by Judas Machabeus in the third Temple (2 Mach., vii, 40) were destroyed by Antiochus Eupator (I Mach., vi, 62), but Jonathan and Simon soon rebuilt them (Ant. Jud., XIII, v, 11). In 63 b.c. Pompey, after taking the city, laid siege to the Temple, in order to break the last resistance of the Jews (Ant. Jud., XIV, iv, 4), and nine years later the procurator Crassus despoiled it of its riches (Ant. Jud., XV, vii). Finally Herod, made King of the Jews by the Senate, was obliged to take the city by storm and to besiege the fortress of the Temple (Ant. Jud., XVI, xvi, 2 sq).

III. TEMPLE OF HEROD. History.—Herod undertook the restoration of the Temple in its original splendour and traditional arrangements. The buildings were demolished one after another according as the materials for the new structures were available. A host of priests became masons and carpenters and themselves took charge of tearing down and rebuilding. The task was little finished even when, in eighteen months. Nearly 10,000 workmen were employed on the other buildings. After eight years’ labour (10 b.c.) the new edifice was opened for service. But this monument, which in its vast proportions and magnificence rivalled the most beautiful buildings of antiquity and far surpassed even that of Solomon, was completed only in a. d. 62 or 64 (Cf. John, ii, 20), at that time 18,000 workmen were still employed (Ant. Jud., XX, ix, 7). For Herod doubled the artificial platform which held the Temple of Zorobabel, enlarging the sacred precincts to the south and especially to the north where the galleries reached as far as the rock of Baris and the Antonia (Ant. Jud., XV, xi, 3; Bell. Jud., I, xxi, 1; V, v, 2). The Temple with its courts, galleries, and porches occupied the whole of the present site of the haram esh sherif, which measures 1070 feet on the north, 730 on the east, 920 on the south, 730 on the west. The Temple of Herod consisted of two courts, an inner and an outer one. The former included all the buildings of the Temple properly so called and was divided into: (1) The Court of the Priests, which contained the house of God and the Temple (2) The Court of the Gentiles, (3) The Court of the Women. All the space between the inner court and the outer wall of the platform was called the Court of the Gentiles, because non-Jews were permitted to enter it. The following are the arrangements of the Temple according to Josephus (Ant. Jud., XV, xi; Bell. Jud., V, vii, other sources being indicated in the course of the descriptions).

Priests’ Court and House of God.—The Court of the Priests formed a rectangle one hundred and eighty-seven cubits from east to west and one hundred and thirty-seven cubits from north to south ([Middoth, II, 6 (fig. 3)]). To the west stood the house of Jehovah and to the east the altar of holocausts. The sanctuary was reached by a stairway of twelve steps (2), which terminated in a majestic porch one hundred cubits high and the same in breadth (3). A door without leaves twenty cubits wide and forty high led into a vestibule eleven cubits wide. According to the Mishna these figures in the colonnades of the triumphal procession at Rome (Bell. Jud., VII, v, 4–6). The inner court had the same circumference as that in the first Temple (I Esd., vi, 4), and according to Hecataeus, as quoted by Josephus, the altar of holocausts had the same dimensions as that of Solomon.
TEMPLE

TEMPLE

triumphal arches then so common in the East. Upon
the immense trellis, or grille, stretched a golden vine,
of which the grapes, according to Josephus, were of
the height of a man. He adds that it extended
twenty-five cubits from north to south and that its
top was seventy cubits from the ground. Tacitus
(Ann., V, v) also speaks of this vine. Above it
Herod placed a colossal golden eagle, the Roman
eagle, which greatly displeased the Jews (Ant. Jud.,
XVII, vi, 2-4). The Mekāl (4) and the dēbr retained
their ancient dimensions in length and breadth, but
their height was increased to sixty cubits. A door-
way ten cubits wide and twenty high gave access to
the Holy Place. The door leaves were of carved
wood covered with leaves of gold, and the door was
further embellished with a magnificent curtain of
Babylonian-dyed linen. The richly-decorated cham-
ber contained the altar of perfumes before the en-
trance to the dēbr, north of the table of proposition
and south of the seven-branch candlestick. It was
not so well lighted or aired as that of Solomon.
The priests entered the court to offer incense in the
night and morning, to trim the lamps, and change
the leaves of proposition on the Sabbath-day. It
was near the altar of incense that the angel appeared
to Zacharias (Luke, i, 11).

The entrance to the dēbr had no doors, but, as for-
merly, was shielded by a costly curtain. According
to the Mishna (Yoma, V, i) no partition wall separated
the hakdal from the dēbr, the latter being formed by
two veils hung the distance of a cubit from each other;
but Josephus distinguished between the two chambers
giving the dimensions of each. Furthermore he
speaks only of one veil "at the entrance" of the dēbr,
which must signify a doorway. Moreover, the ab-
sence of a partition would have necessitated a curtain
sixty cubits long by twenty broad, which would never
have sealed hermetically the Holy of Holies. The
statement of the rabbis on this point is open to sus-
picion. They could not have been ignorant that ac-
cording to the Mishna (Mek., xxvii, 61; Mark, xv, 38;
Luke, xxiii, 45), when Christ died on the cross the veil
of the temple was rent in two from top to bottom.
The dēbr was empty. Only the high-priest entered
it once a year. Above the dēbr and the hakdal was
a story forty cubits high, so the entire building was the
same height as the porch. On the north, south, and
west sides was a building divided into three stories
each twenty cubits high. The ground floor and the
first floor each had thirteen chambers six cubits wide
and the top floor and the roof. A stairway (7) opened
northward from the vestibule on a winding- stair three
chambers in diameter and located in the corner formed
by the wall of the house and the projection of the
porch. The two walls which formed the cage of the
stairway were five cubits thick. In the opposite cor-
ner to the south was another stairway (8) which re-
tained the outflow of water. The total width of the
house, including the side chambers, was fifty-four
and near the porch seventy cubits, and its total
length, including the porch, was one hundred and six
cubits, allowing six cubits thickness for the walls.
The base was ten cubits larger than the dimensions
given above.

Twenty-two cubits east of the house stood the altar
of holocausts, constructed of unhewn stone (8). The
rabbin speak of a three-tiered altar, ten cubits high
and thirty-two cubits along the sides of the base, and
twenty-four in the centre (Maimonides, "Beth Haberzah",
II, 16). The figures of Josephus, fifty
cubits on the sides by fifteen high, are obviously in-
correct. North of the altar (9) four rows of rings
were fastened in the ground and were used while slay-
ing the animals. Next came eight marble tables for
cutting up and washing the flesh of the victims, and
fourth were eight pillars with book shelves for books
and playing the animals (Middoth III, 5-5; v, ii; Tal-
mud, Shek, VI, 4). Laymen were admitted to this
court only when they offered sacrifice, for they had to
place their hands on the head of the victims. The
four sides of the court were surrounded by a parapet of
stones a foot and a half high.

Court of Israel.—Five steps led down from the
court of the priests to the court of Israel, which sur-
rounded the former on three sides (10). At the north
and south it was forty cubits wide and on the east
only eleven cubits. A gallery ten cubits wide (11),
supported by splendid marble columns, went round
this court, probably on the west side also, and afforded
a shelter from the sun and rain. Men only were ad-
mitted here and only the king was permitted to be
seated.

East of this court opposite the house of God (12)
rose a superb gateway, the most beautiful of all, which
according to Josephus and the Mishna (Middoth, I,
4) was the gift of Nicanor, a wealthy Alexandrian
Jew. This was the ḥepe ḥepala, the porta speciosa
(Acts, iii, 2), where St. Peter healed the man crip-
pled from birth. It was fifty cubits high and forty wide.
The flanking gates of Corinthian brass, carved and covered
with plates of gold and silver, were so heavy that
twenty men were required to move it. Josephus adds
that among the signs premonitory of the destruction of
the Temple this gate opened of itself at midnight
about the year 30 n. c. (Bell. Jud., VI, v, 3).

Court of the Women.—From the Gate of Nicanor a
semicircular stairway (13) of fifteen steps led down to
the women's court (14), surrounded by a gallery on the
north, east, and south. Here the women were ad-
mitted and places were reserved for them on the north
and south, but the men also frequented this court and
usually crossed it when they went to the Temple.
There were benches there, for it was permitted to sit
(cf. Mark, xii, 41). Along the sides probably near the
Gate of Nicanor were thirteen boxes, an inscrip-
tion indicating the special purpose of each: oil, wood,
priestly vestments, doves, etc. There Christ saw the
woman taken in adultery and the woman caught in
adultery (Luke, xx, 1). At the four corners were four hy-
thral chambers, forty cubits square (15). According
to the Talmud the north-west chamber was where the
unclean and lepers, who had been healed, bathed and
were declared clean by the priests. In the north-east
chamber the priests sorted the wood; in the south-

FIG. 2. PLAN OF THE TEMPLE OF HEROD

(1) Court of the priests; (2) Stairway of the Temples; (3) Rooms and vestibule; (4) the Holy Place; (5) The Holy of Holies; (6) Side chambers; (7) Entrance to the winding stairway; (8) Altar of holocausts; (9) Altar of sacrifice; (10) Court of Israel; (11) Gallery; (12) Beautiful Gate; (13) Stairway of fifteen steps; (14) Court of the women; (15) Hypostyle hall; (16) Gate; (17) Hall; (18) Hall; (19) Stairway of fourteen steps; (20) Court of the gentiles.
west oil and wine were preserved in vats; in the south-east those who had fulfilled the vow of Nazarites shaved their heads (cf. Num., vi, 13 sqq.; Acts, xviii., 18). In these chambers it was also permitted to wash the feet. According to Middoth, II, 5, there were also in this court four chambers in which certain women were lodged.

Gates and Chambers.—Three sides of the inner court were surrounded by buildings forty cubits broad, separated by nine gates in the shape of towers (169). Two on the north and four on the south, of which only two opened into the women's court, with the eastern gate. These gateways or rather sumptuous porches were 40 cubits in height, breadth, and length. A large bar divided the entrance into two bays each ten cubits broad and twenty high with wooden leaves covered with gold and silver. The vault of which was thirty cubits square and its six arches were supported by two pillars twelve cubits in circumference. At the sides of the court of Israel five steps led to the gateway whose vestibule was likewise provided with ten steps or an incline. There are still three gates within the Temple court, the Golden Gate, the double gate, and the triple gate, constructed according to the same plan. Between these gates was a series of chambers devoted to various uses (17). West of the second southern gate was the tishaq pani, hall of the Sanhedrin (Middoth, II, 5, with a chamber, for the instruction of the people, and in the court of the women was the γασρομανία, hall of the treasury (Ant. Jud., XIX, vi, 1). This vast edifice rested on a foundation with a projection of ten cubits forming a deambulatory (18), which was reached by a stairway of twelve or fourteen steps. This was the heil; it was surrounded by a strong post called seder and in front of which the gates stood pillars with inscriptions in Greek and Latin notifying visitors that every non-Jew was forbidden under pain of death to approach nearer the Temple. Some years ago one of the pillars with a Greek inscription was found in the vicinity of the haram esh sharif.

Outer Court.—The remainder of the vast platform formed the outer court of the gentiles. It was paved with large slabs and surrounded on all sides by a double gallery formed of two rows of columns twenty-five cubits high. That overlooking the valley of Cedron was called "Gate of Solomon" (cf. I Par., ix, 18). Here stood also the Herod, and from it dates its origin from Solomon, himself. He relates that in A.D. 62 or 64 the 18,000 workmen still employed on the adornment of the Temple began to lack work and requested that they might demolish the Gate of Solomon; but this, although ancient, was so revered and beloved that Herod was so great that King Agrippa II decided to preserve it and to employ the workmen in paving the city streets (Ant. Jud., XX, ix, 7). Whether it dates from the kings of Juda or only from Zorobabel it is sufficient to afford an idea of the magnificence of the first two temples of Jerusalem. At the corners of these galleries were chambers (pastophoria) for the guards. From the side towards the city the entrance to the sanctuary was made through several gates of surpassing beauty, four on the west of the esplanade, two on the south, one on the east, and one on the north. On a lower terrace in the centre Herod erected a royal basilica, a sumptuous building divided into three naves by four rows of forty-one Corinthian columns. Each column was more than five feet in diameter. At the north of the esplanade he built two vast courts surrounded by gates which extended to the rock of Paris. These courts communicated with the Antonia only by two stairways (cf. Acts, xxii, 35).

BARNABAS MEISTERMANN.

TEMPORAL POWER. — See Pope, The; States of the Church.

TEMPTATION (Lat. tentare, to try or test) is here taken to be an incitement to sin whether by persuasion or by the offer of some good or pleasure. It may be merely external, as was the case of Christ's encounter in the desert after the forty days' fast; or it may be internal as well, insomuch as there is a real assault upon a person's will power. It arises sometimes from an overpowering propensity to evil in the heart, sometimes from sin by choice.

Temptation sometimes is directly chargeable to the intervention of the Devil, who can furnish the imagination with its sinful subject-matter and stir up the lower powers of the soul. Not infrequently both causes are at work. Temptation is not in itself sin. No matter how vivid the unholy image may be, no matter how strong the inclination to transgress the law, no matter how vehement the sensation of unlawful satisfaction, as long as there is no consent of the will, there is no sin. The very essence of sin in any grade is that it should be a deliberate act of the human will. Attack is not synonymous with surrender. This, while obvious enough, is important especially for those who are trying to serve God sedulously and yet find themselves beset on all sides by temptations. They are apt to take the fierceness and repetition of the onset as proof that they have fallen. A wise spiritual guide will point out the error of this conclusion and thus administer comfort and courage to those harassed souls.

Temptations are to be combated by the avoidance, where possible, of the occasions that give rise to them, by recourse to prayer, and by fostering within one's spirit of humble dependence on God, an attitude of unbounded confidence in God. The resistance which a Christian is bound to offer need not always be direct. Sometimes, particularly when there is question of reiterated evil interior suggestions, it may be useful to employ an indirect method, that is, to simply ignore them and quietly divert the attention into another channel. Temptations as such can never be intended by God. They are permitted by Him to give us an opportunity of practising virtue and self-mastery and acquiring merit. The fact of temptation, no matter how large it looms in a person's life, is itself an indication that a person is not of God's choosing. Indeed those whom God calls to special heights of sanctity are just those who may expect to have to wrestle bravely with temptations more numerous and fearsome than fall to the lot of the average mortal.

JOSEPH F. DELANY.

TEMPTATION OF CHRIST.—In the Catholic translation of Holy Writ, the word "temptation" is used in various senses, the principal of which are the following: (1) the act of testing or trying (Deut., iv, 34; Tob., ii, 12; Luke, xxii, 28; etc.); (2) enticement to evil (Matt., xxvi, 41; I Cor., x, 13, etc.); (3) the state of being tempted (Matt., vi, 13; Luke, iv, 13, etc.); (4) that which tempts or entices to evil (James, i, 12; Jas., ii, 9; etc.); (5) the essences of evil (Deut., vi, 16; etc.). Taken in an unfavourable sense as denoting enticement to evil, temptation cannot be referred directly to God or to Christ, so that when we read in Gen., xxii, 1, for instance, "God tempted Abraham", and in John, vi, 6, "Hoc autem diebat tentandum eum", it is obvious to all of us that "to test" here means "to try him [Philip]", the expressions must be taken in the sense of testing, trying. According to St. James (i, 12 sqq.), the natural source of man's temptations is concupiscence, or that proneness to evil which is the result of the fall of Adam, and which remains in
human nature after baptismal regeneration, and even though the soul is in the state of sanctifying grace (cf. Rom., viii, 1). Concupiscence becomes sinful only when freely yielded to; when resisted with God’s help, it is an temptation to sin. Temptation, and trusting petition for God’s help to enable us to overcome temptation when His Fatherly Providence allows us to experience the allurements of evil. Prayer and watchfulness are the chief weapons against temptation (Mark, xiv, 38; etc.). God does not allow man to be tempted beyond his strength (I Cor., x, 13).

Like Adam, Christ, the second Adam, endured temptation only from without, inasmuch as His human nature was free from all concupiscence; but unlike Adam, He withstood the assaults of the Tempter on all points, thereby affording His mystical members a perfect model of resistance to their spiritual enemy, and a permanent source of victorious help (Heb., iv, 15–16). In our first three Gospels (Matt., iv, 1–11; Mark, i, 12–13; Luke, iv, 1–13), the narrative of Christ’s temptation is placed in immediate connexion with His baptism on the one hand, and with the beginning of His public ministry on the other. The reason of this is clear. The Synoptists naturally regard the baptism of Christ as the external designation of Jesus from above for His Messianic work to be pursued under the guidance of the Holy Spirit bestowed upon Him on this occasion; and they no less naturally regard Christ’s sojourn in the desert where He was tempted, as His own immediate preparation for that great work under the guidance of the same Holy Spirit. As our first three Gospels agree concerning the time to which they assign the temptation of Christ, so they are at one in ascribing the same general place to its occurrence, viz. “the desert” whereby they no doubt mean the Wilderness of Judea, where Jesus would indeed be, as St. Mark says: “with beasts”. From St. Mark (i, 13)—with whom compare St. Luke iv, 2—we learn that Jesus Christ was tempted during the forty days which He spent in the desert, “Harmony of the Gospels”, ii, xvi), so that the three onsets given in detail by St. Matthew and St. Luke are apparently the three final assaults of Satan against Christ. The first of these assaults is directly connected in both St. Matthew and St. Luke with the prolonged fast of Jesus in the desert. The Tempter suggested to Jesus that He should use His miraculous power to relieve His hunger, by changing into bread the loaf-like flints of the desert. The two other assaults are given in a different order, St. Matthew adhering probably to the order of time, and St. Luke to that of place. The spot pointed out by tradition as the summit from where Satan offered to Jesus dominion over the earth is “the Quarantania”, a limestone peak on the road from Jerusalem to Jericho. As regards the Temple’s pinnacle from which the Tempter bade Jesus cast Himself down, it was not the top of the House of Yahveh, but probably the roof of Solomon’s portico from which, at a later date, St. James was actually hurled to the pavement below (Euseb., “Hist. eccl.”, iv, xii).

According to St. Luke (iv, 13), after having subjected Christ to all kinds of temptations,—the Messiahic import of which is undeniable,—Satan withdrew, according to the prophecy that he followed Christ’s prolonged fast in the desert. The latter conflict thus alluded to is no other than that of Christ’s Passion (cf. Luke, xxii, 53; John, xvi, 30). The ministry of angels to Jesus, in connexion with His temptation, is mentioned in Mark, i, 13. Satan’s exact manner of appearance to Jesus is not stated by the Evangelists. Despite the difficulties urged, chiefly by non-Catholic scholars, against the historical character of the three temptations of Jesus, as narrated by St. Matthew and St. Luke, it is plain that these sacred writers intended to describe an actual and visible approach of Satan, to chronicle an actual shifting of places, etc., and that the traditional view, which maintains the objective nature of Christ’s temptations, is the only one meeting all the requirements of the Gospel narrative.

FRANCIS E. GIGOT.

Tecin, Pierre-Guerin de, French statesman and cardinal, b. at Grenoble, 22 August, 1660; d. at Lyons, 2 March, 1768. After studying with the Oratorians at Grenoble he entered the Sorbonne, where he became prior in 1702, and obtained the degree in 1703. He was then appointed Vicar-General of Sens and, in 1721, accompanied Cardinal de Rohan to Rome as his confessior, to support the candidacy of Cardinal Conti (Innocent XIII.), from whom he had obtained a promise to bestow the purple on the unworthy French minister Dubois. He remained at Rome as French chargé d’affaires until Benedict XIII., with whom he was very influential, consecrated him Archbishop of Embrun (26 June, 1724). With the selfish motive of paving his way to higher ecclesiastical honours, he was overzealous in the persecution of the Jansenists, and, at the provincial synod which he held at Embrun from 16 August to 28 September, 1727, he suspended Bishop Jean Soan en Senez, a prelate eighty years of age, who had appealed against the Bull “Unigenitus”. On 22 February, 1739, Tecin was created cardinal, of the title of Sts. Nereus and Achilleus. He remained at Rome as French ambassadour until 1742, when he took possession of the archiepiscopal See of Lyons, to which he had succeeded on 10 November, 1740. King Louis XV appointed him minister of state in September, 1742. After the death of the Prime Minister Fleury, to whom he owed much of his political advancement, his influence began to decrease. The death of his protégé sister, Madame Tecin, on 4 October, 1749, removed the greatest spur of his political ambition, and in 1752 he retired to his See of Lyons.

For the complete Acts of the Provincial Synod of Embrun, see Manni, Collectio amplissima, continued by Martin and Petit, XXXVII (Paris, 1903), 693, 588.

MICHAEL OTT.
Tenebres is the name given to the service of Matins and Lauds belonging to the last three days of Holy Week. This service, as the "Ceremoniale episcoporum" expressly directs, is to be anticipated and it should be sung shortly after Compline "about the twenty-first hour", i.e., about three p.m. on the eve of the Sunday on which it begins. Immediately before Easter", says Benedict XIV (Institut., 24), "Lauds follow immediately on Matins, which in this occasion terminate with the close of day, in order to signify the setting of the Sun of Justice and the darkness of the Jewish people who knew not our Lord and condemned him to the gibbet. Originally, Matins on these days, like Matins at all other seasons of the year, were sung shortly after midnight, and consequently if the lights were extinguished the darkness was complete. That this putting out of lights dates from the fifth century, so far at least as regards the night Office, is highly probable. Both in the first Ordo Romanus and in the Ordo of St. Amand published by Duchesne a great point is made of the gradual extinction of the lights during the Friday Matins; though it would seem that in this earliest period the Matins and Lauds of the Thursday were sung together with the church lit by a single candle (ecclesiae omni lumine decoratur). On Friday the candles and lamps were gradually extinguished during the three Nocturns, while on Saturday the church was in darkness from beginning to end, save that a single candle was kept near the lectern to read by. All this suggests, as Kutschker has remarked, that the Office of these three days was treated as a sort of funeral service, or dirge, commemorating the death of Jesus Christ. It is natural also that, since Christ by convention was regarded as having lain three days and three nights in the tomb, these obsequies should have come in the end to be celebrated on each of the three separate occasions with the same demonstrations of mourning. There can be no reasonable doubt that it was from the extinguishing of lights that the service came to be known as Tenebres, though the name itself seems to have arisen somewhat later. The liturgist de Vert has suggested an utilitarian explanation of the putting out of the candles one by one, contending that the gradual approach of the dawn rendered the same number of lights unnecessary, and that the number was consequent diminished as the service drew to a close. This view seems sufficiently refuted by the fact that this method was adopted by the first Ordo Romanus on the Friday only. On the Saturday we are explicitly told that the lights were not lit. Moreover, as pointed out under Holy Week (VII, 437), the tone of the whole Office, which seems hardly to have varied in any respect from that now heard in our churches, is most noticeably mournful—the lessons taken from the Lamentations of Jeremiah, the omission of the Gloria Patri, of the Te Deum, and of blessings etc., all suggest a service cognate to the Vigilae Mortuorum, just as the brilliant illumination of the Easter eve spoke of triumph and of joy, so the darkness of the preceding night's services seems to have been designedly chased to mark the Church's desolation. In any case it is to be noticed that the Office of these three days has been treated by liturgical reformers throughout the ages with scrupulous respect. The lessons from Jeremiah in the first Nocturn, from the Commentaries of St. Ambrose, and from the Psalms, which belong to the Epistles of St. Paul in the third remain now as when we first heard of them in the eighth century.

The Benedictine Order, who normally have their own arrangement of psalms and nocturns, differing from the Roman, on these three days conform to the other services, which belongs. On these three hours from midnight to the previous afternoon, when no real darkness can be secured, seems to have been prompted by the desire to render these sublime Offices more accessible to clergy and laity. Already in the thirteenth century it seems probable that at Rome Tenebres began at four or five o'clock on the Wednesday (see Ord. Rom., xiv, 82, and Ord. Rom., xv, 62). Despite the general uniformity of this service throughout the Western Church, there was also a certain variety in the details, and especially in the number of candles which stood in the Tenebres hearse, and in some accretions which, especially in the Sarum Use, marked the termination of the service. With regard to the candles Durandus speaks of as many as seventy-two being used in some churches and as few as nine or seven in others. In England the Sarum Ordinal prescribed twenty-four, and this was the general number in this country, variously explained as symbolizing the twenty-four hours of the day, or the twelve Apostles with the twelve Prophets. A twenty-fifth candle was allowed to remain lighted and hidden, as is done at the present day, behind the altar, when all the others had been gradually extinguished. At present, the rubrics of the "Ceremoniale," etc., prescribe the use of fifteen candles. The noise made at the end of Tenebres undoubtedly had its origin in the signal given by the master of ceremonies to the return of the clergy to their chairs; and the number of the earlier Ceremoniales and Ordines are explicit on the point. But at a later date others lent their aid in making this knocking. For example, Marcellus writes: "The prayer being ended the master of ceremonies begins to beat with his hand upon the altar step or upon some bench, and all in the altar to some extent make a noise and clatter." This was afterwards symbolically interpreted to represent the convulsion of nature which followed the death of Jesus Christ.

HERBERT THURSTON.

Tenedos, a titular see, suffragan of Rhodes in the Cyclades. The island, called in Turkish Bogas-Azadesi, has an area of 16 square miles and 5000 inhabitants, of whom 3000 are Greek schismatics. It is a casa of the sanjak of Lemnos in the vilayet of Rhodes. It seems to have been called by various names, such as Leucophoria, Calyphora, Phrynus, and Phronsus. The name of Tenedos is derived from Tenedos, one of the heroes of the Trojan War. In connexion Homer and Virgil make frequent mention of the island, which must have been used by the Greeks as a station for their fleet. Captured by the Persians, who used it as a naval station, it afterwards became the ally and tributary of Athens, to which it was faithful during the Peloponnesian War. It was destroyed by an earthquake of Bythnija in 358 B.C. Subject to Alexander and his successors, though retaining its internal organization, it fell into the power of the Romans in 129 B.C., and was ravaged by Verres. In 73 B.C. Lucullus destroyed a part of the fleet of Mithridates for the Justinian built there large stone houses to contain the grain brought from Alexandria (Procopius, "De aedificiis", V, 1). The Venetians captured it in 1377; Mohammed II wrested it from them in 1566, though but for a short time. Canaris burned it in 1526 and, according to (Italian chris., I, 947-50) mentions the bishops: Diodorus, at Sardica in 344; Anastasius, a partisan of Necturus; Florentius in 451; Joseph in 1356. In September, 1369, Harmacus, Bishop of Berea Potamia, was transferred to the metropolitan See of Tenedos (De Antioc. Arch. at Murcia, "Gesta patriarchi instantinopolitanen", 1, 511). At first a suffragan of Cyprus and then of Mytilene, at least from the tenth century (Gelzer. "Ungedruckte ... Texte der
Notitiae episcopatum", 559; "Georgii Cyprii Descriptio orbis romani", 83). Tenedos was raised to the rank of a metropolitan see shortly after the death of Andronicus III in 1341 (Gelzer, op. cit., 601; 608). In 1342 it had already become such (Miklosich and Müller, op. cit., i, 230). In October, 1365, the metropolitan see was again vested with 14 houses of women: Dominicans, 1; Franciscans, 1; Conceptionists, 1; Assumptionists, 1; Teaching Sisters of St. Dominic, 2; Servants of Mary, 3; Franciscan Hospital Sisters, 1; Sisters of Charity, 3; Little Sisters of the Poor, 1. A Catholic daily, "Gaceta de Tenerife", and the official bulletin, "Boletín oficial del obispo de Tenerife", are published in the diocese. Among the notable personalities who are natives of this island may be mentioned the Ven. José Ancheta, apostle of Brazil, and Ven. Pedro Bethancourt, founder of the Bethlemites, a hospital order of Latin America. It has also given two martyrs to the Church, Fray Luis de Aguirre, Augustinian, in quequia, Granada, and the Jesuit, Pedro Parrado de León, in Japan, three archbishops, and ten bishops, six to America and four to Europe. Among the notable buildings may be mentioned the cathedral rebuilt by the present bishop, the parochial churches of La Concepción de Laguna, and those of Santa Cruz, Orotava, and Realejo-Baja, Garachico and Icod on the Island of Tenerife, and Salvador on the Island of Palma, all containing art works of merit. The pulpit of the cathedral, carved in marble, and that of La Concepción, a wood carving, bear comparison with those of the churches of Brussels.

José Rodríguez Moure.

Teniers, David, the name of two eminent Flemish landscape painters; the elder, b. at Antwerp in 1682; d. there in 1649; the younger, b. at Antwerp in 1610; d. at Brussels in 1694. Of these two men, the younger was by far the greater, eclipsing in skill the work of his elder brother. Teniers the elder was the son of a mercer, Julian Teniers, and was brought up and trained by his elder brother. He entered for a while the school of Rubens, later on visited Italy, and studied under El Greco in Rome. He returned to his own country in 1606 and spent the rest of his life at Antwerp, painting landscapes, pictures, illustrations from rural sports, and some classical and historical scenes. His son, David Teniers the younger, was one of four brothers, David, Julian, Theodore, and Abraham, and he in his turn had a son and a grandson named David. Nothing whatever is known of the person who taught the younger Teniers; in all probability he was brought up in his father's studio, although it has been stated by some writers that he worked under Rubens, or under Brouwer. He
TENNESSEE

508

TENNESSEE

was on terms of intimate acquaintance with Rubens, but we hear nothing of this acquaintance until 1637, when he married Anne, the daughter of Brueghel, the pupil of Rubens, and the great painter came to the wedding. The girl was not yet seventeen when she bore Teniers five children and died in 1656. Six months later, Teniers married Isabel, the daughter of an eminent person whom he was secretary to the Council of Brabant.

Teniers is said to have received a fortune with each wife, and to have made a great deal more from the sale of his pictures. It is certain that he had ample means, was able to purchase a château, to live in good circumstances, and eventually to obtain admission to the ranks of the nobility after he had ceased to exercise his profession for gain. The statement of his appeal to be received as a member of an old family, the description of his coat of arms are still in existence. He was patronized by the Governor of the Netherlands, the Archduke William, and by his successor Don Juan of Austria. Philip IV and Christina of Sweden were also amongst the eminent persons who gave him commissions for pictures. He was a man of the greatest industry, and his delightful little works, perhaps numbering nearly eight hundred in all, are to be found all over Europe. As a rule, they are scenes from peasant life, painted in beautiful colour schemes and dexterously handled. They can be studied especially in the galleries of Dresden, Glasgow, the National Gallery in London, the Louvre, the Prado, the Imperial Gallery at Vienna, and the Hermitage at St. Petersburg. Of these galleries the Louvre has the greatest number, possessing nearly forty examples of the work of this skilful painter. Alone amongst the members of his family, he appears to have been a practical Catholic.

GEORGE CHARLES WILLIAMSON

TENNESSEE.—The State of Tennessee lies between 35° and 36° 30' N. lat., and 81° 37' and 90° 25' W. long. Its greatest length from east to west is 432 miles, and its extreme width 109 miles; its total area is 43,022 square miles. It touches eight states, but the greatest number is touched by the boundaries of any other state in the Union except Missouri. It is unequalled in the number and excellence of its navigable rivers. The Mississippi River washes its western boundary and the placid Tennessee and beautiful Cumberland, with sources in other states, furnish cheap water transportation for the varied products of the soil and of the mines.

I. PHYSICAL CHARACTERISTICS.—The state has eight great natural divisions: the Appalachian chain of mountains, called the Unakas, rises on its eastern borders, the highest peaks of which attain an elevation of more than 6000 feet above the sea. Joining these mountains on the west and in between them and the Cumberland table-land is the valley of east Tennessee, which was traversed by the Indian trails running in almost unbroken lines from north-east to south-west. Next in order comes the Cumberland table-land, an elevated plateau, which rises 2000 feet above the sea. The soil of this division is sandy, thin and unproductive, and of but little agricultural importance. Beneath it, however, are buried vast treasures of coal and iron, and its area is 5100 square miles. Rising against the western edge of the Cumberland table-land and extending to the Tennessee control of this basin is high, productive of all crops suitable to the altitude, and it has been well named "The Garden of Tennessee." Its area is 5450 square miles and it has an average depression of 300 feet below the highlands. The next natural division is the western valley, or the Valley of Tennessee. This is a comparatively narrow valley with spurs from the highlands running in toward it and sometimes down to the margin of the Tennessee River. The soil is fertile, but marshy spots covered with cypress occur in places along the river. The average width of this valley is ten or twelve miles and the length the breadth of the state. It has an area of 1200 square miles and an elevation of 350 feet above the sea. The plateau or slope of west Tennessee is the seventh natural division and peculiar in having but few rocks, differing in this particular from all the divisions above mentioned. It is a great plain, sloping gradually toward the Mississippi River and lying widely in the character of the Ohio. Furrowed with river valleys, this division extends for a distance of 84 miles, when it abruptly terminates in the greater plain, the bottoms of the Mississippi. The soil of this division is light and very fertile. The bottoms of the Mississippi for more than half the natural division of the state and constitute a low, fertile, alluvial plain teeming with a luxurious vegetable life that is almost tropical.

These eight natural divisions have been reduced to three civil divisions: (1) east Tennessee comprises all the territory from the Nottoway River northward to the centre of the Cumberland table-land; (2) middle Tennessee extends from the dividing line on the Cumberland table-land to the Tennessee River; (3) west Tennessee extends from the Tennessee River to the Mississippi River. The climate is mild, resulting from latitude and elevation interwoven with moderate varieties of soil, position and slope, and chains of mountain ranges, so that the characteristic climate of every state in the Union may be found in it. In the spring and autumn the climate is unsurpassed. The summer and winter seasons are short. The mean annual temperature is about 57 in the valley of east Tennessee, 58 in middle Tennessee, and 59 in west Tennessee.

II. HISTORY.—The first expedition of white men into the country included within the limits of the present State of Tennessee was that of Hernando De Soto in the year 1540. Accounts given of De Soto's marches by his followers have led to the belief that he entered Tennessee near its eastern boundary and advanced across almost its entire width, reaching the Mississippi River at a point now occupied by the city of Memphis. At the time of this expedition Tennessee was unoccupied except by the Cherokees, who inhabited that part bordering on the Tennessee River; the Chickasaws, the upper Cumberland; Shawnees, the lower Cumberland; and the Chickasaws used and claimed the territory between the Tennessee and Mississippi Rivers, now west Tennessee. The rich section of middle Tennessee was the hunting-ground and was not used by them for any other purpose. In 1673 Father Marquette and Joliet descended the Mississippi River and made maps of the country, especially noting Chickasaw Bluffs, on which Memphis is now situated. In 1682 La Salle made his famous voyage
down the Mississippi, claiming the territory for France, and named it Louisiana. He stopped at Chickasaw Bluffs and constructed a cabin and fort which he named "Prud 'homme", made a treaty with the Indians, and established trading-posts. Other French trading-posts were soon thereafter established by the Indians themselves. The cession of the land to the United States in 1803, the post of M. Charleville, the French trader who built the first store at Salt Lick on the Cumberland, where Nashville now stands, and the English, in the meantime, were colonizing the country from the Atlantic seaboard westward, and in 1766 completed the first Tennessee town. The first English settlements were made within its limits.

In 1772 the Watauga settlement established a free and independent Government with the first written Constitution adopted in America. This Government continued until the beginning of the Revolution in 1775, preserving its independence of all other Governments, including that of North Carolina, its mother colony, until the beginning of the conflict with Great Britain, when the Watauga and Nolichucky settlements of Tennessee formed themselves into the Washington District. In 1776 these settlements were annexed to the State of North Carolina and the county of Washington was formed. In 1777 another band of adventurers sprang from Watauga, led by James Robertson, known as "The Father of Tennessee", reached the present site of Nashville. The settlement was then called Nashboro. Captain Demonbreun, a Frenchman, had, however, established a post at the same place in 1775. In 1780 another band of colonists reached Nashville by way of the Cumberland and Tennessee Rivers, and in the same year a public meeting or convention was held in Nashville, which adopted articles of agreement for the common defense and general welfare, the control of this Government being vested in the Governor and State, and a council of notables, consisting of ten. This settlement was engaged in almost constant warfare with the Indians. In 1780 an army of Tennessee colonists was organized for service against the British. These colonists, having been isolated from the colony of North Carolina by the mountains, were up to this year so constantly engaged in resisting the attacks of the Indians, it was impossible to render much, if any, assistance directly against the British. However, after the defeat of the Revolutionary army by General Clinton in North Carolina, an army of Tennessee colonists, led by John Sevier and Shelby, a series of punitive expeditions advanced into North Carolina and after several successful engagements with detachments of the British army met and annihilated King's Mountain, an army of British veterans under command of the distinguished British officer, Colonel Ferguson. The skill and gallantry of the officers and the valor of the men of Tennessee in this battle marked it as one of the glorious events of the state's history.

In 1785 the territory including the State of Tennessee was ceded by North Carolina to the United States. Some dissatisfaction having arisen between the Tennessee colonists and North Carolina, in August, 1784, a convention composed of delegates from several of the counties petitioned Congress to accept the cession of North Carolina and permit the inhabitants of the territory to form a government to be admitted into the Union as an independent State. A convention of the inhabitants was held at Jonesboro, but adjourned without taking any decisive action. Another convention was held in the same place in November, 1785, and a provisional Constitution was put into operation. The new state was called Franklin, the Land of the Free, and John Sevier was organized as "Franklin", when or by whom cannot be accurately determined. North Carolina continued to legislate and execute her laws within the jurisdic-

tion of Franklin, and a compromise was ineffectually attempted. Pending these negotiations and the operations of the contending Governments, control of the State of Franklin was generally recognized, peace was maintained among the colonists under the laws of Franklin, and a continuous Indian warfare carried on. The cession of the territory to the United States was finally consummated by the Senate of Congress, 2 April, 1790, and the country was governed as a territory for six years, during which the Indian wars were constant and bloody. In 1813 news reached Nashville of the outbreak of the Indians in Alabama and several massacres by them of the whites, particularly at the settlement of Fort Mims near Mobile. A public meeting was held, resulting in a request to General Andrew Jackson to take command of an army of volunteers called by the Legislature of the State of Tennessee and enrolled in service after a few days. Although Jackson was then convalescing from wounds he had received in a fray with the Bentons, within nine days he took command of the volunteer army and proceeded against the Indians. After several encounters they were signally defeated and their power utterly and permanently broken at Enotachopco and Tohopeka on 24 and 27 January, 1813. It was the creation of this army that gave Tennessee the name of "The Volunteer State".

On 8 Jan., 1815, Jackson with an army consisting largely of Tennesseans fought the battle of New Orleans. The main attack of the British, who were commanded by Sir Edward Pakingham, one of the ablest of Wellington's lieutenants and composed of veterans seasoned by the Napoleonic wars, was defeated by the Tennessee riflemen under Generals Carroll and Coffee. With the adoption of the Constitution of 1834 Tennessee entered upon a new epoch in her history and then became an important factor in national politics. Jackson was elected President of the United States in 1828 and re-elected in 1832. James K. Polk was elected president in 1844. Tennesseans figured prominently in the Mexican War of 1847, 30,000 volunteers tendering their services upon the call of Governor Brown. On 9 Feb., 1861, an election was held upon the question of holding a convention to determine whether or not Tennessee should secede from the Union of States. The State refused to succede by a vote of 24,794 favouring secession to 88,903 in favour of the Union. After the proclamation of President Lincoln on 15 April calling for 75,000 troops and the States being divided into the ports of the seceded states in a state of blockade and all vessels acting under the seceded states guilty of piracy. This announcement of the purpose of the Federal Government to resort to coercion produced a revolution of sentiment in Tennessee. The Legislature, convened in extra session 25 April, passed an ordinance of secession and submitted it to popular vote in an election to be held 8 June, 1861. The ordinance was ratified by a vote of 104,913 in its favour to 47,238 against it.

Meantime an intense Union sentiment developed extensively in east Tennessee. The leading statesmen of that section, Andrew Johnson, afterwards President of the United States, Wm. G. Brownlow, Thomas A. R. Nelson, and Horace Maynard, espoused the cause of the Union. A convention was held on 17 June, 1861, at Greenville, to consider the formation of a new state of east Tennessee, and this convention, or such adjoining counties of middle Tennessee as might vote to be included. The new state was never formed, but many east Tennesseans joined the Federal army. Many of the bloodiest battles of the Civil War were fought within the borders of Tennessee: Fort Henry, Fort Donelson, Shiloh, Stones River, Nashville, Franklin; the battles of Chickamauga was fought largely on the Georgia border and for the possession of Tennessee. On 15 Feb., 1862,
In consequence of the fall of Fort Donelson, the Legislature adjourned to Memphis. On 22 Feb., 1862, Gen. Grant issued an order suspending civil government and declaring the state an aggregate lawless rebel state. President Lincoln appointed Andrew Johnson, Brigadier-General and Military Governor of Tennessee. In 1865 the Constitution of the state was amended so as to abolish slavery, and also to prohibit the General Assembly from making laws recognizing the right of property in man. On 4 March, 1865, Governor Johnson was inaugurated as Vice-President of the United States, and on 5 April following, Wm. G. Brownlow was inaugurated governor.

Following the return of the Confederate soldiers the Legislature passed a number of enactments which were strongly opposed by the conservative wing of the Union, which led to sentiments of animosity more bitter than the feelings engendered by war. One of these laws practically disfranchised all persons except those who had always been unconditional Union men.

Tennessee was readmitted to the Union, 23 July, 1866, Andrew Johnson, then President of the United States, signing the bill. Tennessee was the only one of the seceding states to abolish slavery by its own act. From the beginning of the slavery agitation there was a strong abolition party in Tennessee. In 1820, The Emancipator, the first abolition journal in the United States, was published by Elijah Boudinot at Jonesboro. The Ku Klux Klan was organized in Pulaski, middle Tennessee, in the summer of 1866, and was originally intended for the amusement of a band of young men who had returned from the Confederate army. It afterwards spread throughout the South, becoming a strongly partisan organization operated for the protection of Confederate sympathizers against the evils and dangers of the period. In 1869 the Confederate element regained control of the State, and on 10 June, 1870, another constitutional convention was held. The Constitution there adopted was ratified by the people, 26 March, 1871, and is still in force.

III. POPULATION.—The population of the state under the federal census of 1900 was 2,020,616: 1,021,224 males and 999,392 females; of whom 2,002,870 were native born: 1,010,793 males and 992,077 females. The coloured population, including mulattoes, Chinese, and others, was 480,430: 238,522 males and 241,908 females. In 1910 the population was 2,184,789, an increase of 8.1 per cent.

IV. RESOURCES.—The resources of Tennessee are abundant, rich, and varied. In the eastern and a large portion of the middle division, there are practically inexhaustible beds, principally coal, iron, copper, lead, and zinc. Oil and natural gas is found in some sections. There are over 200 varieties of marble found in Tennessee. In middle Tennessee grass and grain are abundant and the stock-breeding interests in this section are famous. Here phosphate rock in great volume and richness is found. In west Tennessee fruits and grain are extensively produced.

The principal products of this section are cotton and corn. The timber interests of the state are large and extensive, numerous forests in various sections of the state (poplar, oak, gum, hickory, and other varieties of timber) being untouched. The chief agricultural products are cotton, wheat, hay, corn, forage, and tobacco. The value of these products, according to the census of 1900, was $70,745,242. Animal products such as dairy, poultry, eggs, honey, and wool amount to $3,114,144. The leading manufactures are flour and gist mills, producing annually, according to the census of 1900, products valued at $21,708,929: lumber and timber, $18,127,-784; tobacco, snuff, cigars, etc., $3,010,602. These with other manufactures make an annual production valued at $108,144,565. The productions of the

mines were: coal, $5,399,721; phosphate rock, $1,308,872; iron, $1,123,527; marble, $518,556; limestone and dolomites, $482,033; all others, $927,932, aggregate $8,192,332.

V. EDUCATION.—With a scholastic population of 771,-734, of which 587,088 are white and 184,646 coloured, there are enrolled in the public schools of Tennessee, 411,910 white and 100,248 coloured pupils. There are over 200 universities, colleges, and private training schools in the state. The universities are among those leading in the South, notably: Vanderbilt University, University of Nashville, and Peabody Normal College at Nashville; University of the South at Sewanee; University of Tennessee at Knoxville; Cumberland University at Lebanon; Fisk, Roger Williams, and Wartburg Universities, and University Medical College at Nashville, the last four being devoted to the higher education of negroes. For Catholic education, diocese and population see Nashville, Diocese of.

VI. RELIGION AND RELIGIOUS REGULATIONS.—The present Constitution of the State of Tennessee declares that "all men have a natural and indefeasible right to worship Almighty God according to the dictates of their own conscience; that no man can of right be compelled to attend, erect or support any place of worship or maintain any minister against his consent; that no human authority can, in any case whatever, control or interfere with the rights of conscience; and that no person or society shall ever be compelled to any religious establishment or mode of worship. That no political or religious test, other than an oath to support the Constitution of the United States and of this state, shall ever be required as a qualification to any office or public trust in this state." Christmas Day and Good Friday are legal holidays. Doing or exercising on Sunday any of the common avocations of life, acts of real necessity or charity excepted, is forbidden. The mere violation of this law is not indictable, but a succession of such acts, if done so openly as to attract public observation, is indictable as a nuisance. It is forbidden by law to swear profanely or curse in the hearing of any justice of the peace or to use profane or blasphemous language in public places; any person executing any public duty, convicted of profanely swearing or cursing, must forfeit and pay one dollar for each oath or curse.

There is no provision in law for the dictation of prayer in the Legislature, but the rules of each branch usually provide for the appointment of a chaplain by the respective speakers. There is no statute in this state modifying the rule at common law requiring a clergyman to disclose communications made in confessions. The question has been decided in other states that there is probable that when the question is presented the courts of the state will follow the rule generally adopted by the courts of other states on this subject, which is, that all communications in the nature of confessions or applications for spiritual guidance, made to a priest or clergyman as such, in confidence and in the course of the discipline required by the church of which the clergyman is a member, are privileged.

According to the census bulletin of 1906, the church membership of all denominations was 697,576: total Protestant bodies, 677,947; Baptist, Southern and National conventions, 253,141; Free Baptists, 1,840; Free Will Baptists, 3,093; Duck River, etc. (Baptist Church of Christ), 4,099; Primitive Baptists, 10,204; coloured Primitive Baptists, 3,285; Congregationalists, 2,426; Disciples of Christ, 14,504; Churches of Christ, 4,648; Unitarians, 3,061; Methodist Episcopal, 1,678; Methodist Episcopal Church South, 140,308; African Methodists, 50,662; Presbyterian Church in U. S. A., 6,786; Cumberland Presbyterians, 42,484; Presbyterian Church in U. S., 21,590; Coloured Cumberland Presbyterians, 6,644; Presbyterian,
A nuncupative or verbal will is a verbal declaration made by one in his last sickness as to the disposition of his property after death, made with the intention and purpose to dispose of such property, and where the testate excess does not exceed the amount of $50 paid to the pres- 14252 tence and presence of at least two disinterested persons. Lands can be devised only by a written will attested to by witnesses, the subscription of the witnesses being made in the testator's presence; or by holographic will, a paper written entirely by the testator, the writing to be proved by at least three credible witnesses, every part of such writing to be in the testator's hand. Personality may be disposed of by a paper containing a disposition of property to take ef- fect after death, although neither written nor signed by the testator, if such paper can be shown to be the will of the testator and is complete in itself as to its provisions. No particular form is required.

E. Cemeteries. — All managers and trustees of any cemetery have full power to adopt and use all rules and regulations necessary for the good government, order, and discipline of the cemetery under their charge and keeping, not in conflict with any law of the state. No one may encroach upon or watchmen on their grounds as they deem expedient. Such watchmen, and also all of their superintendents, gardeners, agents, and gate-keepers stationed on said grounds, may take the oath required by law of constables, exercise and possess all the powers of police excepting the giving of certificates within one hundred yards of said cemetery grounds.

F. Pensions. — The State has a pension system under which pensions are allowed to disabled soldiers, Federal and Confederate, that enlisted from the State of Tennessee in Tennessee regiments or were citizens of this state at the time of their enlistment in regiments of other states. They must be residents of Tennessee, or former citizens of other states who enlisted in some regiment and who have been citizens of this state for one year. The character of the appli- 5307 cents as soldiers must have been free from dishonour, and it must appear that they are not already entitled to pension under the laws of the Federal Government or of any other state, and that it are not already in possession of a competency, the object of the law being to provide for the indigent and disabled. A pension is withheld from any pensioner who may habi- tually use intoxicating liquors in any dishonourable manner. Pensions are also granted to widows whose husbands were killed or died while in active service in the Civil War, and to the widows of deceased soldiers who were married to such soldiers prior to the year 1870, if such widows are of good moral character and in indigent circumstances. The number on the pension rolls for 1910 was 7899, of which 5307 were veterans and 2530 widows. The annual appropriation for this purpose is $475,000.

G. Excises. — By Acts of 1899 the sale of any intoxicating liquor, including wine, ale, and beer, within four miles of any public schools is made, and the excise laws provide for the sale of any public liquor on any public school is kept, whether the school be then in session or not, is prohibited. At the same session an Act was passed prohibiting the manufacture of such liquors in the state. These measures virtually prohibit the sale or manufacture of liquor anywhere in the state; and all such public liquor. The state penitentiary is at Nashville. A branch prison is located at Brushy Mountain, east Tennessee, where the State owns extensive coal mines, in which a large number of pris- oners are worked. The operation of these mines has been very profitable to the State. At the main prison the number of men who are held on account of the conviction of conjugal rights or a dissolution of the marriage. This dissolution of a marriage shall not in any wise affect the legitimacy of the children of same.

D. Wills may be verbal or written, but a verbal will is valid only as far as relates to personal property.
IX. Charities.—A. Associations.—Any association of individuals for the support of public worship, to build churches, and for the maintenance of all missionary undertakings may be incorporated. All property belonging to any such association, scientific, literary, or educational institution is exempt from taxation, except such part thereof as is used in secular business to compete with a like business which pays taxes to the State. Where rents and profits are used exclusively for religious or charitable purposes, including church parsonages not exceeding $500 in value, and in cases where buildings are used partially for the purposes named and other portions rented out or otherwise used, the assessor shall, in making assessment, apportion the same and assess that portion for taxation which is under this section taxable. All property belonging as such in the other Egyptian cities, which is caused many quarrels, notably with Ombo. Little is known of Christianity in that place, as only the names of two ancient bishops are given: Pachymius, companion of Mellece at the beginning of the fourth century; and Serapion, or Aprion, contemporary and companion of the monk St. Pachomius, who had in his diocese his celebrated convent of Taunus and Denderah, a town of 6000 inhabitants in the district of Qeneh. The temple of Hathor is still to be seen, built on the foundation of another, yet more ancient, which was in existence during the reign of Cheops unce. In the fourth dynasty, and in which was found the celebrated zodiac now in Paris; there are also the temples of Mamisi and of Isis, of the Roman-Ptolemaic epoch.

S. VAILÉE.

Tenure, Ecclesiastical.—I. In the feudal system an ecclesiastical fief followed all the laws laid down for temporal fiefs. The suzerain, e. g. bishop, abbot, or other possessor, granted an estate in perpetuity to a person, who thereby became his vassal. As such, the grantee at his enfeoffment did homage to his overlord, took an oath of fealty, and made offering of the prescribed money or other object, by reason of which he held his fief. These requirements had to be repeated as often as there was a change in the person of the suzerain or vassal. These fiefs were granted by churcbmen to princes, barons, knights, and others, who thereupon assumed the obligation of protecting the church and domains of the overlord. This system of feudal tenure was not always restricted to lands, as church revenues and tithes were often farmed out to secular persons as a species of ecclesiastical fief. Strictly speaking, however, a fief was usually defined as inmmove property whose usufruct perpetually conceded to another under the obligation of fealty and personal homage. A fief was not ecclesiastical simply because its overlord was a churchman; it was requisite also that the domain granted should be church property.

Thos. J. Tyne.

Tenney, William Jewett, author, editor, b. at Newport, Rhode Island, 1814; d. at Newark, New Jersey, 30 Sept., 1883. Graduating from Yale in 1837, he studied medicine, but abandoned it for the law and, on being admitted to the bar, opened an office in New York. He then tried journalism on the editorial staff of the "Journal of Commerce," and contributed editorially to the "Evening Post," during 1841-43 and 1847-48. In 1853 he entered the service of D. Appleton and Co., publishers, as editor, and, in addition to a large amount of literary and critical work, began for them, in 1861, the compilation of the "Annual Cyclopedi," which he continued till his death. He indexed T. H. Benton's "Abridgment of the Debates of Congress" and wrote a "Military and Naval History of the Rebellion in the U. S." (1865), and a "Grammatical Analysis" (1886). During a long residence at Elisabeth, N. J., he held several local public offices incluading that of collector of the port during President Buchanan's administration. He became a convert to the Catholic Faith and married, as his second wife, Sarah, daughter of Orestes H. Brownson (q. v.). Tenney, Cyclopedia of American Biography, 1850, v. 1; LAMB, Biog. Dict. of U. S. (Boston, 1903); Freeman's Journal (New York), files.

Thomas F. Meehan.

Tentyras (TENTYRA), seat of a titular suffragan see of Ptolemais in Thebaid Secunda. The city was the capital of the nome according to Amélineau, the real name being Nikentori or Nintonti, which signifies willow wood or willow earth. Others give the derivation from the goddess Hathor, or Aphrodite, who was specially worshiped there. The crocodile is recognized as the deity of the city and was also venerated as such in the other Egyptian cities, which caused many quarrels, notably with Ombo. Little is known of Christianity in that place, as only the names of two ancient bishops are given: Pachymius, companion of Mellece at the beginning of the fourth century; and Serapion, or Aprion, contemporary and companion of the monk St. Pachomius, who had in his diocese his celebrated convent of Taunus and Denderah, a town of 6000 inhabitants in the district of Qeneh. S. Vailéé.
by secular princes over elections to ecclesiastical dignities led to the bitter strife over investitures. These passive siefs were conferred by the suzerain investing the newly-elected churchman with crozier and ring at the time of his making homage, but the employment of these symbols of investiture was allowed by the way to exorbitant claims on the part of the secular overlords (see INVESTITURES, CONFLICT OF). Among papal siefs were included not merely landed estates, however vast, but also dukiches, principalities, and even kingdoms. When the pope enfeoffed a prince, the last duty due to himal was to his liege lord, and acknowledged his vassalage by an annual tribute. Pius V (29 Mar., 1567) decreed that, in future, siefs belonging strictly to the Patrimony of St. Peter should be incorporated with the Pontifical States whenever the vassalage lapsed, and that no new enfeoffment take place. John, King of England, declared that he held his realm as a sief from the pope in 1213, and James II, King of Aragon, accepted the same relation for Sardinia and Corsica in 1295. The most famous papal sief was the Kingdom of Naples and Sicily, springing from investitures of 1059 and 1262. Modern conditions in Italy have made compulsory any continuance of such feudal relations.

III. As to the tenure by which church lands are now held by legal titles before the civil law, see PROPERTY, ECCLESIASTICAL; and TRUSTEES SYSTEM.

IV. For the perpetual tenure by incumbents of ecclesiastical dignities, see BREARS, Bibliographia Canonica, III (Rome, 1886), s. v. Feudum; MARCATI, Institutiones Canonica, II (Rome, 1757).

W. H. W. FANNING.

TEOS, titular see, suffragan of Ephesus in Asia Minor. A city of Caria, situated on a peninsula opposite Samos, it was an asylum for the Greeks, likewise for the Minyae of Orchomenos; then came colonies from Ionia, Asia Minor, and Greece, finally the population of Asia Minor came Grecian. This very prosperous city was one of the first attacked by the Persians; the inhabitants fled into Thrace and founded Abdera, during the reign of Cyrus. Those who remained in Teos allied themselves with the Athenians. Later they revolted, going over to the Spartan rule, but were afterwards reconquered by the Athenians. The walls, recently discovered, 3 3/4 miles in circumference, date from this time, as do also the greater part of the monuments which made it one of the most beautiful cities of Ionia. Teos was celebrated for its wine and, therefore, famous as a rival of Bacchus. It is the home of the poet Anacreon. Here too was the home of a body of bacchanaclian artists who furnished actors for the theatres of Asia and the Archipelago. It was the beginning of the ancient theatre. In order to further commerce and the pursuit of the fine arts, Teos, after having saved the fleet of the Roman pretor Regulus from Antiochus, King of Syria, secured for its territory in 193 B.C. from Rome and a great number of Grecian cities the right of perpetual asylum, this privilege being largely due to the temple of Bacchus. During the Christian era almost nothing is known of this city. It figures in all the timelines as a suffragan of Ephesus, but in the fifteenth century no mention is made of it. Teos is believed to have been destroyed by an earthquake. Among its bishops Le Quien (Orients christianus, I, 727) mentions: Maximus at the Council of Nice; Gennadius at Chalcedon, 451; finally St. Sinua is said to have lived about the twelfth century, and whose feast days are 2 Feb. and 14 July, at Torcelli near Venice. To-day Teos is known as Sighedjik, near Sirvi-Hissar; it is a nahi of the sanjak of Smyrna; its ruins have furnished a great many inscriptions.

S. VAILHE.

TEPEC, DIACROPE OF (TEPECENSE).—Diocese of the Mexican Republic, suffragan of the Archdiocese of Guadalajara. Its limits are those of the district of the same name, that is, 10,951 sq. m., besides a few parishes situated in the western part of Jalisco. It has a population of 171,837 inhabitants (Census of 1910). The principal city which is also the residence of the bishop and the political head is Tepec, 3146 ft. above sea level, and has 18,405 inhabitants. All this territory was discovered and devastated and the natives cruelly treated by the famous Nuno de Guzman in 1530. It is said that during the conquest, many plots and even attempts at insurrection were made, not only by the allied Indians but also by the Spanish themselves. To check this evil, some were hanged and others were put in prison; many were tortured to obtain confessions as to the instigators of these conspiracies, the object of which in most cases was to return to Mexico. These cruelties caused such despair among the Indians who carried the supplies of the expedition that a great many committed suicide by hanging themselves in groups of ten. The Tepec had already established themselves, and cities such as Tepic, Compostela, S. Blas, Acaponeta, etc. had already been founded when religious services were established. These soon developed and thrived after the foundation of the Bishopric of Guadalajara in 1548.

The mountainous region of the wonderful provinces of Nayarit, inhabited by barbarous and ferocious tribes of Indians, were still remaining refractory to civilization and Christianity. In 1668 the Franciscan Fathers J. Caballero and Juan B. Ramirez attempted, but in vain, to penetrate these mountains. The venerable Father Margil of the convent of Zacatecas also tried to reach these regions in 1711, but he was forced to retreat without satisfaction. Nayarit, which belonged to the Bishopric of Durango since its creation in 1650, remained so until the Bishop of Durango gave the mission of civilizing this wild country to Father Tomas de Solchaga, S.J., professor of moral theology at the college at Durango; he was successful in penetrating the country to the heart of the mountains and there began to sow fruitful seeds in 1716. When the Marquis of Valero was Viceroy of New Spain he received the help of Philip V an order to subdue the Indians of that territory and make them swear allegiance to the Spanish monarch; after many bloody battles and with many difficulties and hardships, he succeeded, with the help of his brave captains in taking possession of the famous Mesa del Totonac. At his request the Father Provincial of the Society of Jesus of New Spain sent several missionaries to convert the newly-conquered Indians. They soon established flourishing missions which, when the Jesuits were expelled by the Decree of Charles III, included the following missions: Santa Rita, Santa Teresa, Isatien, Jesus Maria, Santa Natividad, Guanamota, and Rosario. After the expulsion of the Jesuits the parish priest of Bolaños on several occasions visited the reductions. The Franciscan Fathers took charge of the missions until the year 1807, when the Fathers of the College of Nuestra Senora de Zacatecas returned and remained until the mother-house at Zacatecas was abolished.

In 1891 Leo XIII created the Diocese of Tepic which became suffragan of the Archdiocese of Guadalajara; it was completed with several parishes situated in the present State of Jalisco. The bishopric has a seminary and 72 Catholic schools, 24 Catholic colleges with about 3,000 alumni. The present bishop is the Rt. Rev. Andrew Segura, who was consecrated, 16 Sept., 1906. There are 3 Protestant churches.
**TEPLE**

A Premonstratensian abbey in the western part of Bohemia, included in the Archdiocese of Prague; it was founded in 1193 by the blessed martyr Hronmata, a Bohemian nobleman (d. 1217). The first monks came from the Abbey of Strahov in Prague. Teplé escaped any damage in the Hussite War, probably on account of the military spirit of its Abbot, Ráčko of Riesenberg (1411-44), who was aided by his relatives. It suffered, however, all the more during the era of the Reformation. Luther's doctrine soon found adherents among the subjects of the abbacy. In 1525 there was a rebellion against the abbott and peace was not restored until the ring-leaders of the revolt were executed. In the following years a number of the monks left the order and married. Monastic discipline was restored by Abbot Johann Kurz (1555-59), who also established a theological school. But his successor, Johann Meyerkönig (1559-85), had a struggle with insubordination in the monastery. With the aid of the archbishop he was able to improve the monastery and the school. He brought back most of his subjects to the Catholic Church by compulsion, after gentle treatment had failed. The reform was continued by Matthias Ebersbach (1585-96). Andreas Ebersbach (1596-1629) was a zealous reformer of the abbey and raised it to such a height that it was called the "nursery of pastoral work". Parochial work and higher education are still important features of the life of the abbey. The abbey has the pastoral care of twenty-four parishes that are all in the western part of Bohemia, a section which is almost entirely German. A twenty-fifth parish is being formed. The abbey has a theological school of the order with a two-years' course and three professors. Since 1809 it has had charge of the German gymnasia at Pilzen where there are fourteen canons. It also owns the celebrated cure of Marienbad. It supports hospitals at Teplé and Marienbad. The members of the abbey include 84 priests, 13 clerics, and 2 novices. The present monastery building was erected by Abbot Raimund Wilpert II (1688-1724); the library was built by Abbot Gilbert Huber (since 1690). The Romanesque church, with additions in the style of the transition to the Gothic, is one of the oldest churches of Bohemia.

**KLEMENS LÖFFLER.**

**TERAMO, DIOCESE OF,** in southern Italy. In the past the city was injured by earthquakes. It is situated at the confluence of the Tordino and the Vessola in a very fertile district, and was formerly noted for its manufacture of delf, ore is found in the vicinity. The city is a market and gem-mining center in style; the churches are being like a fortress wall in which a Gothic gate had been constructed; it contains, however, several works of art, among them the tomb of Bishop Nicola Arcioni (1317). The Churches of S. Domenico and of S. Francesco are also worth visiting. In ancient days it was called Interamnia and was the seat of government of the Precurtii, a Samnite people; in 315 B.C. a Roman colony, Interamnia Precuritana, was settled there; from them is derived the name of the entire region, Abruzzi, a name already adopted in the sixth century. Among the ruins of the Roman period are an ancient theatre, and an aqueduct. After the Longobard invasion it became a gastaldo, depending on the Duke of Spoleto; under the Franks it was the seat of a count. In the beginning of 1108 it was annexed by the Normans; in 1155 Count Loretello rebelled against King Roger and destroyed the city, soon rebuilt through the efforts of Bishop Guido (1122), for which he and his successors were granted the investiture of the principality. Probably at this time arose the custom of the bishops of Teramo of pontificating on the altar. Hardly had the town risen again when it began a series of quarrels with Ascoli, which more than once threatened to become sanguinary. Teramo resisted till the end of 1270 during the Angevin invasion. A little later the bishops abandoned their temporal sovereignty and an angel captain was installed. In the beginning of the sixteenth century the Melatino, di Janni, and Acquaviva began to struggle for possession of the town. In 1416 it was sacked by Lordino, a Frenchman, exasperated by being deprived of the title of high constable of the kingdom; during the pillage the treasures of the cathedral, including a precious silver altar frontal, disappeared.

The city which at that time contained 70,000 inhabitants began to decay. From 1438 till 1443 it belonged to the principality which Francesco Sforza had formed in the Marches. Alfonso made it the capital of the Abruzzi, and in 1459 Gioia Acquaviva was made Duke of Teramo, against the will of the citizens. The following year it was taken by Piccinino for René of Anjou; in 1461 it was retaken by Matteo di Capua. In 1519 Andrea Acquaviva assumed anew the lordship of Teramo and besieged the town; but he was driven out to resign. About 1600 Gregory the Great, the Abruzzian church having been long without a bishop, the election of Opponutus was procured; hence the origin of the see dates back to the fifth century at least, and the bishop's title was taken not from the town but from the district. It may be even more ancient. Among its other predecessors were: St. Berardus (1115), descended from the family of the Contes de Marsi; Matteo di Balato (1251), captured during the inroads of the Ascolani and liberated through the intervention of Innocent IV; Blessed Antonio Fatati (1450), counsellor of King Alfonso I; Gian Ant. Campano (1463), a littérateur and poet; Giacomo Silveri-Piccolomini (1553), distinguished at the Council of Trent; Leonardo Cassiani (1693), who improved the state of the clergy; Michele Millella (1869), incorporated by the new government in 1861. In 1818 the Diocese of Ortona, which is now only an episcopal see, was separated from T. and the See of Teramo. The latter is immediately subject to the Holy See and contains 121 parishes, 220 secular and 13 regular priests, 3 houses of religious and 1 of monks, 2 institutes for boys and 4 for girls.

**U. BENIGNI.**

**TERCE.**—The origin of Terce, like that of Sext and None, to which it bears a close relationship, dates back to Apostolic times. As has already been stated (see None) according to an ancient custom of the Romans and Greeks, the day and the night respectively were divided into four parts of about three hours each. The second division of the day hours was that of Terce from nine o'clock until midday. These divisions of the day were also in vogue among the Jews at the time of Christ. In the New Testament we find mention of the sixth hour in Matt., xx, 5; xxvii, 45; Mark, xv, 33; John, xix, 14; of the ninth hour, in Matt., xxvii, 46; Mark, xv, 34; Acts, x, 3 and 30. (See None.) The hour of Terce is mentioned in the following passages: the householder hires labourers at the third hour, Matt., xx, 3; Jesus is crucified at the third hour, Mark, xv, 25; the Holy Ghost descends upon the Apostles on the day of Pentecost, Acts, ii, 15. Some of these texts prove that these three hours were, in preference to others, chosen for prayer by the Christians, and probably also by the Jews, from whom the Christians appear to have borrowed the custom. We find frequent mention
the Fathers of the Church and the ecclesiastical writers of the third century of Terce, Sext, and None as hours for daily prayers. For example, Tertullian, Clement of Alexandria, and the Canons of Hippolytus (see Clement, "Stromat.", VII, vii, in P. G., LX, 455-456) may prescribe morning, evening, and midnight prayer, and that there is no prescribed time for prayer, but adds: "As regards the time, there should be no lax observation of certain hours—I mean, of those common hours which have long marked the divisions of the day, the third, the sixth, and the ninth—and which we may observe. In Scripture, however, there are other times than the rest." (De Orat., XXXIII, xxv, in P. L., I, 1191-1193).

Clement and Tertullian in these passages refer only to private prayer at these three hours. The Canons of Hippolytus also speak of these three hours as suitable for private prayer. However, on the days called "days of station", that is to say Wednesday and Friday, which were set apart as especially consecrated to prayer, and Sunday, these hours were recited in public (Canon, xx, xxvi). St. Cyprian remarked that these three hours had been observed in the Old Testament, and that Christians should also observe them (Cyprian, Ep. ad Carsov., I, 118). In the fourth century the custom of praying at these hours became more frequent, and even obligatory, at least for monks (see the texts of the Apostolic Constitutions, of St. Ephrem, of St. Basil, of the author of "De Virginitate" quoted in Bäumer-Birou, "Histoire du biennaire", 1911, 1, 198). The exact meaning to be given to the term indicating as to what were the elements of the prayer of Terce, Sext, or None before the fourth century. Doubtless, like all prayers at that time, they were composed of psalms, canticles, hymns, and litanies. It is from the fourth century onwards that we can gather the most precise ideas as to the composition of the hour of Terce. In the fourth century, as we have said, the custom of prayer at Terce spread, and tended to become obligatory, at least for monks. There is no mention in the "Peregrinatio ad Loca Sancata" of an office of Terce on ordinary days. Some authors have misunderstood the text here, but there is no mention of a meeting at this hour, except on Sunday and during Lent (see Cabrol, "Étude sur la Peregrinatio Silvium", Paris, 1895, p. 46, 46). The hour of Terce is also mentioned in St. Jerome, "Ep. ad Laetam." in P. L., XXII, 873, Ad Eustoch., in P. L., XXII, 420; in the "Liber Pontificalis", St. Cyril of Jerusalem, "Catholicanes", VIII, 1889, p. 16; in Cassian, "De instit. ecclon.", P. L., LXIX, 112, 126, etc.

At this period it is composed of the same elements as the hours of Sext and None; the distribution is the same, and it is clear that the three "little hours" were composed at the same time and that they have the same origin. The psalms of Terce are different from those of the other two hours. There were also certain varieties of composition. Thus, in certain countries, three psalms were assigned to Terce, six to Sext, nine to None, in virtue of the symbolism.

The three hours are also celebrated in various liturgies. In the Greek Church Terce is composed of two parts, each made up of psalms (two for the first, three for the second), with invitational, troparia, and final prayer. (See Neale and Littledale, "Commentary on the Psalms", I, p. 34.) In the Benedictine Rite, Terce comprises, on work days, the Gradual Psalms, 119, 120, and 121, with a capitulum verse, Kyrie, Pater, and prayer. On Sundays and Mondays the Gradual Psalms are replaced by three oontories (i.e., three sections of eight verses each) of Psalm cxviii. In the Mozarabic Rite, three oontories of Ps. cxviii are also recited, the composition otherwise being very similar; but in the recitals of three psalms at Terce, as at the other two "little hours" of the day, is founded on a universal and very ancient tradition. Divergencies on this point are only exceptional. The practice of the Roman Liturgy, which at first sight appears to be somewhat different, may be traced to this tradition also. In this rite a part of Ps. cxviii is recited at Terce as well as at the other "little hours", the psalm being divided into three double oontories. After the new Psalter arranged in 1911-12, the psalms are recited on Sunday, Ps. xcviii, daily; on Monday, Ps. xcviii (two divisions); on Tuesday, Ps. xcviii (three divisions); on Wednesday, Ps. cxxii (two divisions); on Thursday, Ps. cxxiii (three divisions); on Friday, Ps. cxxiii (two divisions); on Saturday, Ps. cxviii (three divisions). The number three is therefore preserved in each case: the hymn "Sancte Spiritus" recalls the descent of the Holy Ghost upon the Apostles. The other elements are the same as for Sext and None.

The Fathers of the Church and the liturgists of the Middle Ages considered the hour of Terce as corresponding to the hour of Christ's condemnation to death. They also often point out on this occasion the mysteries of the number three, which in ecclesiastical symbolism is a sacred number (see Bona, loc. cit.). What gives to its especial dignity, however, is its association with the Descent of the Holy Ghost upon the Apostles (Acts, ii, 15). In several liturgies, and particularly in the Roman, this connexion is brought to mind by one or other of the formules. Again, this is the reason why, from the earliest times, the hour of Terce was chosen for the celebration of the Mass. In the Mass also, this hour is called in liturgical language hora accessus or hora sancta (see Durandus, "De rit. eccles.", c. viii).

F. CABROL.

Terentuthis, titular see, suffragan of Antinoë in Thebais Prima. Le Quien (Oriens christ., II, 611) mentions two of its bishops: Arsininthus in 404; Eulogius at the Council of Ephesus in 431. The monks sometimes sought refuge there during invasions of the barbarian Maziks (Cotelier, "Ecclesiae graecae monumenta", I, 393). John Moschus went there at the beginning of the seventh century (Pratum spirituale, LIV, CXIV). There is frequently mentioned in the history of this town in Christian Coptic literature. The present village of Tarranah in the province of Behera replaces Terentuthis, the ruins of which lie about a mile and a quarter to the west. It has 1330 inhabitants. About nine and a quarter miles distant are the Lakes of Nitria and Sothis, near which were the lauras of these saints. Georgios Cypriote, Descriptio orb. rom., ed. Geiser, 125; Amel authenticated, La phote de l’Egypte à l’époque Copte (Paris, 1903), 493.

V. VAILHÉ.

Teresa of Jesus, Saint (Teresa SANCHEZ DECEPA DAVALY A AHUMADA), b. at Avila, Old Castle, 28 March, 1515; d. at Alba de Tormes, 4 Oct., 1582. The third child of Don Alonso Sanchez de Cepeda by his second wife, Doña Beatriz Davaly a Ahumada, who died when the saint was in her fourteenth year. Teresa was brought up by her saintly father, a lover of serious books, and a tender and pious mother. After her death and the marriage of her eldest sister, Teresa was sent for her education to the Augustinian nuns at Avila, but owing to illness she left at the end of eighteen months, and for some years remained with her father and occasionally with other relatives, notably a niece who made her a companion in her studies. St. Jerome, which determined her to adopt the religious life, not so much through any attraction towards it, as through a desire of choosing the safest course. Unable to obtain her father's consent she left his house unknown to him on 2 Nov., 1535, to enter the
Carmelite Convent of the Incarnation at Avila, which then counted 140 nuns. The wrench from her family caused her a pain which she ever afterwards compared to that of death. However, her father at once yielded and Teresa took the habit.

After her profession in the following year she became very suddenly ill, and underwent a prolonged cure and such unskilful medical treatment that she was reduced to a most pitiful state, and even after partial recovery through the intercession of St. Joseph, her health remained permanently impaired. During these years of suffering she began the practice of mental prayer. In her Discourse to some worldly-minded relatives, frequent visitors at the convent, rendered her unworthy of the graces God bestowed on her in prayer, discontinued it, until she came under the influence, first of the Dominicans, and afterwards of the Jesuits. Meanwhile God had begun to visit her with “intelligent visions and locutions”, that is manifestations in which the exterior senses were in no way affected, the things seen and the words heard being directly impressed upon her mind, and giving her wonderful strength in trials, reprimanding her for unfaithfulness, and consoling her in trials, enabling her to reconcile such graces with her shortcomings, which her delicate conscience represented as grievous faults, she had recourse not only to the most spiritual confessors she could find, but also to some saintly laymen, who, never suspecting that the account she gave them of her sins was greatly exaggerated, believed these manifestations to be the work of the evil spirit. The more she endeavoured to resist them the more powerfully did God work in her soul. The whole city of Avila was troubled by the reports of the visions of this nun. It was reserved to St. Francis Borja and St. Peter of Alcantara, and afterwards to a number of Dominicans (particularly Pedro de la Fuente, and Domingo Bañez), Jesuits, and other religious and secular priests, to discern the work of God and to guide her on a safe road.

The account of her spiritual life contained in the “Life written by herself” (completed in 1565, an earlier version being lost), in the “Relations” and in the “Interior Castle”, forms one of the most remarkable spiritual biographies with which only the “Confessions of St. Augustine” can bear comparison. To this period belong also such extraordinary manifestations as the piercing or transverberation of her heart, the destruction, and the re-creation of the vision of the place destined for her in hell in case she should have been unfaithful to grace, determined her to seek a more perfect life. After many troubles and much opposition St. Teresa founded the convent of Discalced Carmelites Nuns of the Primitive Rule of St. Joseph at Avila (24 Aug., 1562), and after six months obtained permission to take up her residence there. Four years later she received the visit of the General of the Carmelites, John-Baptist Rubeo (Rossi), who not only approved of what she had done but granted leave for the foundation of other convents of friars as well. In rapid succession she established her nuns at Medina del Campo (1567), Malagón and Valladolid (1568), Toledo and Pastrana (1569), Salamanca (1570), Alba de Tormes (1571), Segovia (1574), Vaws and Seville (1575), and Caravaca (1576). In the “Book of Foundations” she tells the story of these convents, nearly all of which were established in spite of violent opposition but with manifest assistance from above. Everywhere she found souls generous enough to embrace the austerities of the primitive rule of Carmel. Having made the acquaintance of Antonio de Heredia, prior of Medina, and St. John of the Cross, the Carmelites, she desired reform among the friars (28 Nov., 1568), the first convents being those of Duruelo (1568), Pastrana (1569), Mancera, and Alcalá de Henares (1570). A new epoch began with the entrance into religion of Jerome Gratian, inasmuch as this remarkable man was almost immediately entrusted by the nuncio with the authority of visitor Apostolic of the Carmelite friars and nuns of the old observance in Andalusia, and as such considered himself entitled to overrule all previous prohibitions and restrictions insisted upon by the general and the general chapter. In 1576, when no opposition could be met, and the arrival of his successor a fearful storm burst over St. Teresa and her work, lasting four years and threatening to annihilate the nascent reform. The incidents of this persecution are best described in her letters. The storm at length passed, and the provincial visitor, with the consent of Philip II, was approved and canonically established on 22 June, 1580. St. Teresa, old and broken in health, made further foundations at Villanueva de la Jara and Palencia (1580), Soria (1581), Granada (through her assistant the Venerable Anne of Jesus), and at Burgos (1582). She left this latter place at the end of July, and, stopping at Palencia, Valladolid, and Medina del Campo, reached Alba de Tormes in September, suffering intensely. Soon she took to her bed and passed away on 4 Oct., 1582, the following day, owing to the reform of the calendar, being reckoned as 15 Oct., the feast of the Conception of Mary. She was buried on the 18th, but later on reconvoyed to Alba, where it is still preserved incorrupt. Her heart, too, showing the marks of the Transverberation, is exposed there to the veneration of the faithful. She was beatified in 1614, and canonized in 1622 by Gregory XV, the feast being fixed on 15 October. St. Teresa’s position among writers on mystical theology is unique. In all her writings on this subject she deals with her personal experiences, which have a deep insight and analytical gifts enabled her to explain clearly. The Thomistic substratum may be traced from her correspondence with many of whom belonged to the Dominican Order. She herself had no pretension to found a school in the accepted sense of the term, and there is no vestige in her writings of any influence of the Areopagite, the Patristic, or the Scholastic Mystical schools, as represented, among others, by the German Dominican Mystics. She is intensely personal, her system going exactly as far as her experiences, but not a step further. A word must be added on the orthography of her name. It has of late become the fashion to write her name Teresa or Teressia, without "h", not only in English and Italian, but also in French, German, and Latin, which ought to preserve the etymological spelling. As it is derived from a Greek name, Tharassa, the saintly wife of St. Paulinus of Nola, it should be written Teresia in German and Latin, and Thérèse in French.

The bibliography of St. Teresa is exceedingly lengthy. Unfortunately, even the Compendio Bibliographico Theatini (Innsbruck, 1902) is far too incomplete and inaccurate to be of much use. Here we can only deal with her own writings. The autobiographical work written by herself and the Book of Foundations have been published in photo-lithography by Don Vicente de la Cueva (Madrid, 1872). The “Letters” were published at Seville (1882), the Way of Perfection (MS. of the Escorial) and the Visitation of Conventes by Don Francisco de Rojas y Sarmiento (Madrid, 1883), with a transcript of the MS. of the Way of Perfection preserved at Valladolid. Of the remaining works, the Relations, the Exclamations, the Consequences, the Compositions, the Meditations, and the poems (about thirty-six of these being considered genuine autographs, or only somewhat altered, and about forty others of the controversial class). The Seven Meditations on the Lord’s Prayer are not authentic. The most recent English translations are by Lewis: Life and Revelations, ed. Zimmerman (4 vols., London, 1831), and the Visitation and Constitutions (London, 1871, a new edition being now in the press). The Interior Castle, Exclamations, and Meditations were translated by the Rev. Father H. H. Stanbrook, ed. Zimmerman; the two former, London, 1906, a selection being now in the press. The Consequences of Divine Love, The Maxims and the poems, by the same translators and editor, are also in the press. Pending the publication of a complete edition of her works, it cannot do better than refer the reader to the Lettres de Sainte Thérèse, par le P. Grégoire de St. Joseph (3 vols., 2nd ed., 1906). Mention must be made of the new French translation of the works of the saint (with numerous documents and prius justificos-
The cure of Sister St. Martha of St. Joseph, a Carmelitine lay sister of Vans, of tuberculosis and an abscess in the right leg, 1 Dec., 1897; (4) The cure of Sister St. Michel, a Franciscan of Montmorrillon, 9 Apr., 1898. Five second class cures are the consequence of the Benediction of Stanbrook, Worcestershire.

John B. Wainwright.

Terri (Bonville), Anthony, English theologian, b. at Canford, Dorsetshire, in 1623; d. at Liége, 11 Oct., 1676. His mother was a Catholic but his father was estranged from the Church. In consequence the young Anthony was reared in heresy until his fifteenth year, when he was converted and left England, taking the alias Terri. He studied for about three years at the English College of St. Omer and then began his studies for the priesthood at the English College, Rome, where he was ordained on 16 March, 1647. Two months later he entered the Jesuit novitiate at San Andrea. After his noviciate he was successively penitentiary at Loreto, professor of philosophy at Florence, professor of philosophy and scholastic theology at Parma, director of theological studies and of philosophy and mathematics at the English College, Liége, and for three years rector of the same college where he died with a reputation for "extraordinary piety, talent, learning, and prudence." He wrote "Conclusiones philosophicae" (Parma, 1657), "Problema mathematico-philosophico de termino et virium animalium" (Parma, 1660), "Fundamentum totius theologiae moralis, seu tractatus de conscientia probabilis" (Liége, 1668), and "Regula morum" which was published shortly after his death (Liége, 1677). His reputation as a moral theologian was established by these last two works. Therefore, "In the fundamental he ably defended the doctrine of probabilism, and in the "Regula morum" refuted the objections brought against his first work by the Dominican Concilia, the Jesuit Elisabete, and other exponents of the Rigorist School. Amort speaks of him as "eruditissimum et probabilissimorum adversarius.""}

Follet, Records of the English Province S. J., III (London, 1878), 240; Sommenvoigt, Do. de la Comp. de Jesus, VII (Brus- sels, 1806); Hurter, Nomenclator, II (Rome, 1891), 278. Edward C. Phillips.

Termessus, a titular see, suffragan of Perge in Pamphylia Secunda. This is one of the most ancient cities of the Pisidians, inhabited by the Solymi, whose name was preserved for several centuries in Mount Solyma, known to-day as Gudêr-Dagh, and was referred to by Homer, HVI, 184, and Strabo, XI11, 330. A warlike city, Termessus maintained its independence even under the dominion of the Persians, and refused to receive Alexander the Great, who dared not besiege it (Arius, I, 27). Under the suc- cessor of Alexander, Termessus preserved its autonomy and, in 189 B.C., formed an alliance with the Roman consul Cn. Marius, who confirmed it; under the Emperor Domitian it still enjoyed this alliance. Subsequently the city was incorporated with the Province of Pisidia and later with that of Pamphylia. From the ruins of the monuments which remain, it is evident that this was one of the richest and the most celebrated cities of Minor Asia. According to the 4th century B.C., it had been colonized by the Hellenic race. Among its bishops we note: Eucreius present at the Council of Nicea in 325; Timothy at Ephesus in 431; Sabinianus in 448; and Auctius in 458. Timothy and Sabinianus bear the double title of Bishop of Termessus and Bishop of Pamphylia. R. R. (Rer. Rom., 18), has taken for granted that these two names refer to one and the same city, but in the year 458 we find at the same period Auctius, Bishop of Termessus, and Innocentius, Bishop of Eudocias; moreover, in the Ecclesi of Pseudo-Ephianios, towards 640 (Get-
zer, "Ungedruckte... Texte der Notitiae episcopatuum", 541), in the Notitiae of Leon le Sage and of Constantine Porphyrogenetus ("Georgii Cyprii Descrip. Orbis Romani", ed. Gelzer, 74), these two archdioceses are absolutely distinct in the tenth century. It is not known when the Diocese of Terrassa or the city disappeared. The ruins of the city situated on the left bank of the river Besora, known as Terrassa and now called Adalia and the vilayet of Koniah, figure among the richest monuments of antiquity in Asia Minor.

S. Valézé.

Termoli, Diocese of (Termellarum), on the Italian coast of the Adriatic, having a small harbour near the mouth of the Petragione. In ancient days it was called Buca; in 1567 it was put to fire and sword by the Turks. Termoli contains a fine Gothic cathedral. It is first mentioned as a diocese in 946, when the Bishop was a ministerial of the episcopal see, who was to withdraw by order of Agapitus II; the earliest known legitimate bishop was Secio (969). Among his successors were: Jacopo Cini, O.P. (1379), author of a commentary on the "Sentences"; Domencio Girada (1381), a learned Servite theologian; Pedraco Merzio (1016), the reformer of Alvernia. In 1814 the diocese was united with Guardia Alferia, a small town near Cerrato, which had its first bishop in 1075 and its last in 1775. Termoli is suffragan of Benevento, and contains 19 parishes, 54 secular priests, and 1 convent of nuns.

Cappelletti, Le chiese d’Italia, XIX.

U. Benigni.

Ternan, Saint, Bishop of the Picts, flourished in the sixth century. Much obscurity attaches to his history, and it is difficult to reconcile his chronology as given by various writers. Some say that he was consecrated by St. Palladius in 440, others that he was a monk of Culross in Fife, one of the monasteries founded by St. Serf, or Seren, the tutor of St. Kentigern. The Picts were not converted till about 570, by the zeal of St. Columba. St. Kentigern died in 603, and St. Serf of Culross died in 583 (feast 1 July). It is safe to assert that St. Ternan was a contemporary of St. Serf. In the "Aberdeen Martyrology" there is a St. Ternan, Bishop Matthew of Elgin, "venerabilis episcopus in Scotland", to St. Ternan", which was "enshrinied in a metal case or cumdach (book shrine), covered with silver and gold, after the Irish fashion." St. Ternan is commemorated on 12 June. He must not be confounded with St. Trumwine.

Skeat, Celtic Scotland (3 vols., Edinburgh, 1879-80); Moran, Irish Saints in Great Britain (Rome, 1905); Biddle, Eccl. Hist. of Ireland, 3, Bellar (London, 1807); Spenser, Early Christian Art in Ireland (Dublin, 1911).

W. II. Chattan-Flood.

Terni. See Narni and Terni, Diocese of.

Tarracina, Sessa, and Piperno, Diocese of (Tarracinesis, Setinensis et Privernensis), in the Province of Rome. The city of Tarracina is near the estuary of the Amaseno, on a promontory (the old town), and beside the Via Appia (the new town, founded by Pius VI). The harbour, one of the safest in the Papal State, is frequented mostly by coasting-vessels engaged in exporting grain from the Pontine marshes, and wine, oil, and vegetables from the Lepinian hills; hunting in the neighbouring woods and the fishing industry are also carried on with profit by the inhabitants. There are ruins of the temple of Rome and Augustus, at the place occupied by the Papal palace of St. Caesarus, containing the pillars of the temple and an ambo with mosaics. On one of the prominentes are ruins of the great temple of Venus; also traces of the fortifications and of the palace of Theodorius. Tarracina, called by the Romans Terracina, the ancient Auxur, was a Latin city, and was subject to Rome under the kings. Later it was captured by the Volscians, who, in 406 b.c., ceded it to the Romans. Hannibal, after capturing Capua, failed to take it. Under Antoninus Pius the harbour was enlarged. It was included in Pepin's donation to the Holy See, but about 780 was captured by the Byzantines, who, however, were expelled by Charlemagne. The Saracens landed there on several occasions during the ninth century. Later it was a fief of the Frangipani, but Gregory I. included it among the places which were always to be immediately subject to the Holy See. In 1798, the French commander having been slain during a revolt, the city was sacked. According to tradition, the first Bishop of Terracina was St. Epaphroditus. The most ancient Christian record of the city is that of the martyrdom of St. Julianus, priest, and St. Caesarus, deacon, who were cast into the sea under Trajan; in the third century St. Quattus (bishop?) suffered. The first bishop whose date is known with certainty is Sabinus (313). Among his successors were: an African priest, St. Silvianus, a martyr, during the Visigothic period; St. Petrus (490), during whose episcopate the Jews were persecuted so severely in Terracina that St. Gregory the Great had to intervene; under Agnellus, former Bishop of Fundi, which city had been destroyed, the two dioceses were united; the last three letters only of the name of another Bishop of Terracina, ... ves, are preserved in an inscription (Corpus. Inscr. Lat. X, 1, 4640); other bishops were: Joannes (969), who made the vow that the inhabitants of the city should offer each year 6,000 cells to the monastery of Monte Cassino; Ambrosius (1060), a Benedictine and ecclesiastic; Formerus; Gregorius (1106), and St. Michaelis, named Collumna Ecclesiae. About this time, if not earlier, the sees of Piperno (Pirvernnum) and Sezze (Setia), situated on the side of the Lepinian hills, were united to Terracina. The earliest of the seven known bishops of Piperno is Bonifacius (769). There is moreover an ancient Christian cemetery at Piperno. The first mention of a Bishop of Sezze is that of Stephenus (1036); in the time of Polidius (1046), St. Liguaneus founded the Monastery of St. Cecilia near Sezze; among the others was Lando, who in 1178, under the name of Innocent III, usurped the papal tiara. The union of the three sees was confirmed by Hildebrand, XIII (1217) during the episcopate of Simon. Among his successors were: the Franciscan Fra Giovanni (1362), who consecrated the cathedral; Zacaria Moro (1510), present at the Fifth Lateran Council; Ottaviano Rovera (1545), nuncio in Switzerland and Spain; Bernardo M. Conti (1710), brother of Inquisitor XIII, cardina. In 1722 Benedict XIII restored the See of Piperno and Sezze, declaring them united aequo principalitate. Bishop Francesco Antonio Mondelli (1805) was exiled in 1809, for refusing to take the oath of loyalty to Napoleon. The famous Cistercian Abbey of Fossanova is within the territory of this see. The diocese, which is immediately subject to the Holy See, contains 22 parishes, 45,000 inhabitants, 94 secular and 15 regular priests, 3 religious houses for men, 10 for nuns, 1 institute for boys and 3 for girls.

U. Benigni.

Tarragona, Andrés, French preacher, b. at Lyons in 1669; d. at Paris, 25 April, 1723. He was the eldest son of a councillor of the Lyons presidal (court of justice). Entering the Congregation of the
Oratory he devoted himself to preaching, and winning high reputation was called to fill important pulpits. He preached the Lenten sermons of 1717 before Louis XIV, next at the Court of Lorraine, and later twice in the Church of St. Charles. His parents did not entirely approve of his choice, especially his health and end to his death. His eloquent diction, which was marked by nobility and simplicity of thought, by forcefulness and absence of artificiality. His good judgment led him to avoid the extravagance of expression and clever twaddle of speech, but he was sometimes cold, perhaps as a result of his Jansenistic proclivities. About fifty of his discourses, mostly delivered as Lenten lectures, are preserved, and were published at Paris (4 vols., 1726, 1736).

Gavarsan, of the family of the preceding, b. at Lyons, Oct. 1860; d. at Paris, 2 Jan., 1752. He was also a member of the Oratory, teaching humanities and afterwards, his oratorical gifts were revealed at Troyes, 1711, on delivering the funeral oration of the Dauphin, son of Louis XIV; but he did not devote himself to the pulpit till after his brother's death, when he fulfilled several engagements which the latter had made. Soon his reputation increased beyond that of André. For five years he preached at Paris, and finally delivered a Lenten course in the Church of Notre Dame. More stubborn even than his brother, he, in a letter to a friend, that he would not be quarreled with as the bull "Unicorns"; he even published anonymously twelve "Lettres sur la justice chrétienne" (Paris, 1733), in which, to support the Jansenists whom the bishops deprived of the sacraments, he endeavoured to prove the inutility of sacramental confession. This work was condemned by the faculty of theology at Paris (1 Sept., 1734), and by the Archbishops of Sens and Embrun, as containing erroneous, schismatical and heretical assertions. Terrasse had to leave the Oratory and abandon preaching. He withdrew to the Diocese of Auxerre where the bishop, M. de Caylus, a well-known Jansenist, confided to him the care of Treigni. But he was soon arrested (Oct., 1735) by the order of the king for his Jansenistic activities, and was confined during nine years either at Vincennes or with the Minims of Argenteuil. A belated retraction, the authenticity or sincerity of which has never been established, was published in the last years of the life of the heathen. He was eventually permitted to retire with his family when he died. As a preacher his chief characteristics are simplicity and clearness, but at times he carries the subdivision of his matter to excess; his style is somewhat dry and lacks vigour. Like his brother he holds a high place among the orators of the French rank. A volume of his discourses appeared at Utrecht in 1733, but the first real edition was at Paris in 1744 (4 vols.). The sermons of the two brothers were reprinted by Migne in his "Collection des orateurs sacrés", XXXIX (Paris, 1865).

Antoine Dégert.

Terrestrial Paradise (טֵרָסָל, הָפְרָדָס, Pardes). The name popularly given in Christian tradition to the scriptural Garden of Eden, the home of our first parents (Gen., ii). The word paradise is probably of Persian origin and signified originally a royal park or pleasure ground. The term does not occur in the original Hebrew. It is first used in the Greek writers prior to the time of Xenophon. In the Old Testament it is found only in the later Hebrew writings in the form פַּרְדֵּס (Parádes), having been borrowed doubtless from the Persian. An instructive illustration of the origin and primary meaning of the term appears in II Esdras (ii, 8) where "Asaph the keeper of the king's forest" (דַּעַף, huppèdes) is the custodian of the royal park of the Persian ruler. The association of the term with the abode of our first parents does not date from the time of the Hebrews, but goes back to the Greek period. The word was transferred to the Garden of Eden described in the second chapter of Genesis. It is likewise used in divers other passages of Scripture with the sense that God generally has "garden", especially if the idea of wondrous beauty is to be conveyed. Thus in Gen., xii, 10, the "country about the Jordan" is described as a "paradise of the Lord" (rendering followed by the Vulgate). Cf. Numbers, xxiv, 6 (Greek) where the reference is to the "country of Israel, also Isaia, i, 30; Essechiell, xxxi, 8, 9, etc. Those interested in speculation as to the probable location of the Scriptural Garden of Eden, the primeval home of mankind, are referred to the scholarly work of Friedrich Delitzsch, "Wo lag das Paradies" (Berlin, 1881). Two crowns are placed upon the head of the word paradise appears with a new and more enlaced meaning. In the development of Jewish eschatology which marks the post-Exilic epoch the word paradise or "Garden of God", hitherto mainly associated with the original dwelling-place of our first parents, is transferred to signify the future abode of the righteous and enjoyment which will be had by the righteous after death. The term occurs only three times in the New Testament, though the idea which it represents is frequently expressed in other terms, v. g. 'Abraham's bosom' (Luke, xvi, 22). The significance of the term is so remarkably few meanings can be determined only from the context and by reference to the eschatological notions current among the Jews of that period. These views are gathered chiefly from the Rabbinical literature, the works of Josephus, and from the apocryphal writings, notably the Book of Enoch, the Book of Jubilees, the Apocalypse of Baruch, etc. An inspection of these sources reveals a great confusion of ideas and many contradictions regarding the future paradise as also concerning the original Garden of Eden and the condition of our first parents. The scanty references to Sheol which embody the vague eschatological notions of the Hebrews. He who attempts to elaborate theories worked out with detailed descriptions and speculations often of a most fanciful character. As a sample of these may be noted the one found in the Talmudic tractate S. Yalkut Schim., Bereisheim, 200. According to this description the entrance to paradise is made through two gates of rubies beside which stand sixty myriads of holy angels with countenances radiant with heavenly splendour. When a righteous man enters, the vestures of death are removed from him; he is clad in eight robes of the clouds of glory; two serpents float upon his head, one of pearls and precious stones, the other of gold; eight myrtles are placed in his hands and he is welcomed with great applause, etc. Some of the Rabbinical authorities appear to identify the paradise of the future with the primeval Garden of Eden which is supposed to be still in existence and located somewhere in the far-distant East. According to some it was an earthly abode, sometimes said to have been created before the rest of the world (IV Esdras iii, 7, cf. viii, 52); others make it an adjunct of the subterranean Sheol, while still others places it in the air. At this period the Jews conceived of paradise different degrees of blessedness. Seven ranks or orders of the righteous were said to exist within it, and definitions were given both of those to whom these different positions belong and of the glories pertaining to each ("Baba bathra", 75 a,
quoted by Salmond, Hastings, "Dict. of the Bible", s. v. "Paradise"). The uncertainty and confusion of the discussion concerning paradise explain the paucity of reference to it in the New Testament. The first mention of the word occurs in Luke, xxiii, 43, where Jesus on the cross says to the penitent thief: "Amen I say to thee, this day thou shalt be with me in paradise". According to the prevailing interpretation of Catholic theologians and commentators, paradise in this instance is used as a synonym for the heaven of the blessed to which the thief would accompany the Saviour, together with the souls of the righteous of the Old Law who were awaiting the coming of the Redeemer. In II Corinthians (xii, 4) St. Paul describing one of his ecstasies tells us that he was "caught up to the third heaven". Here the term seems to indicate plainly the heavenly state or abode of the blessed, implying possibly a glimpse of the beatific vision. The reference cannot be to any form of terrestrial paradise, especially when we consider the parallel expression in verse 2, where relating a similar experience he says he was "caught up to the third heaven". The third and last mention of paradise in the New Testament occurs in the Apocalypse (iv, 7), where St. John, receiving in vision a Divine message for the "angel of the church of Ephesus", hears these words: "When he brought me to the chambers of vision, which are in the midst of the throne and of the beast and of the elders, I saw seven golden candlesticks; and in the midst of the seven candlesticks one like as unto the Son of man, standing in the midst of the candlesticks; unto him that loved us and washed us from our sins in his own blood. I am he that is speaking who is in the midst of the candlesticks; I know all things, what thou doest. Lo! I come quickly. Blessed is he that keepeth the words of the prophecy of this book." The passage makes this clear. In this passage the word is plain used to designate the heavenly kingdom, though the imagery is borrowed from the description of the primeval Garden of Eden in the Book of Genesis. According to Catholic theology based on the Biblical account, the original condition of our first parents was one of perfect innocence and integrity. By the latter is meant that they were endowed with many prerogatives which, while pertaining to the natural order, were not due to human nature as such—hence they are sometimes termed pre-natural. Paradise among these was a high degree of infused knowledge, bodily immortality and freedom from pain, and immunity from evil impulses or inclinations. In other words, the lower or animal nature in man was perfectly subjected to the control of reason and the will. Besides this, our first parents were also endowed with sanctifying grace by which they were elevated to the supernatural order. But all these gratuitous endowments were forfeited through the disobedience of Adam "in whom all have sinned", and who was "a figure of Him who was to come" (Rom., v) and restore fallen man to earthy, but not to a heavenly paradise.

According to Josephus (Ant. Jud., i, i, 3), the Nile is one of the four great rivers of paradise (Gen., ii, 10 sqq.). This view, which has been adopted by many commentators, is based chiefly on the connection described between Gehon, one of the yet unidentified rivers, and the land of Cush, which, at least in later times, was identified with Ethiopia or modern Abyssinia (cf. Vulgate, Gen., ii, 13). Modern scholars, however, are inclined to regard this African Cush as simply a colony settled by tribes migrating from an original Asiatic province of the same name, located by Fried. Delitzsch (op. cit., 71) in Babylonia, and by Hommel ("Ancient Hebrew Tradition", 314 sqq.) in Central Arabia.

James F. Driscoll

Tertullian (Quintus Septimius Florens Tertullianus, ecclesiastical writer in the second and third centuries, b. probably about 160 at Carthage, being the son of a centurion in the proconsular service. He was evidently by profession an advocate in the law-courts, and he shows a close acquaintance with the procedure and term of Roman law, though it is doubtful whether he is to be identified with that Tertullian who is cited in the Papias. He knew Greek as well as Latin, and wrote works in Greek which have not come down to us. A pagan until middle life, he had shared the pagan prejudices against Christianity, and had indulged like others in shameful pleasures. His conversion was not later than the year 197, and may have been earlier. He embraced the Faith with all the ardor of his impetuous nature. He became a priest, no doubt of the Church of Carthage. Mongues, followed by d'Alès, considers that his earlier writings were composed while he was still a layman, and if this is accurate, he taught about 200. His extant writings range in date from the apologetics of 197 to the attack on a bishop who is probably Pope Callistus (after 218). It was after the year 206 that he joined the Montanist sect, and he seems to have definitively separated from the Church about 211 (Harnack) or 213 (Moncel)."
writing more virulently against the Church than even against heathen and persecutors, he separated from the Montanists and founded a sect of his own. The remnant of the Tertullianists was reconciled to the Church by St. Augustine. A number of his works are developed as the basis of the way of special part of belief or discipline. According to St. Jerome he lived to extreme old age.

The year 197 saw the publication of a short address by Tertullian, "To the Martyrs", and of his great apologetic works, the "Ad nationes" and the "Apologiae". The former has been considered a finished sketch for the latter; but it is the second work that has a different purpose, though a great deal of the same matter occurs in both, the same arguments being disposed in the same manner, with the same examples and even the same phrases. The appeal to the nations suffers from its transmission in a single codex, in which omissions of a word or several words or whole lines are to be deplored. Tertullian's style is difficult enough without such super-added causes of obscurity. But the text of the "Ad nationes" must have been always rougher than that of the "Apologiae", which is a more careful as well as a more popular work, and could take vengeanc...
with this title. With his usual eloquence he enlarges on the idea that common speech bids us use expressions such as "God grant", or "If God will", "God bless", "a bless", "May God repay". The soul testifies also to devils, to just vengeance, and to its own immortality.

Two or three years later (about 200) Tertullian assaulted heresy in a treatise even more brilliant, which, unlike the "Apologicals", is not for his own day only but for all time. It is called "Liber de prescriptione hereticorum". Precisely as with the text of the Law there must be the right balance between the text and the act of justice, so Tertullian requires the same. The book is not a dissertation on the dogma of the Trinity or the immortality of the soul. Tertullian parodies a line of Cicero's. The heretics argue out of scripture; but, first, we are forbidden to consort with a heretic after one rebuke has been delivered confidently, disputatively, piously, on the one side and indignation on the other, while the listener goes away more puzzled than he came. The real question is, "To whom do the Faith belong? Whose are the scriptures? By whom, through whom, when and to whom has been handed down the discipline by which we are Christians?" The answer is plain: Christ sent His apostles, who founded churches in each city, from which the others have borrowed the tradition of the Faith and the seed of doctrine and daily borrow in order to become churches; so that they also are Apostolic in that they are the offspring of the Apostolic churches. All are that one Church which the Apostles founded, so long as peace and communion are observed, that is, if no schisms or divisions are inserted, if all declare the same faith. "What can be said about the Church in Rome? Who were the first bishops? Whose is the See of Peter?" This question is answered in the following way: "Christ sent His apostles, who founded churches in each city, from which the others have borrowed the tradition of the Faith and the seed of doctrine and daily borrow in order to become churches; so that they also are Apostolic in that they are the offspring of the Apostolic churches. All are that one Church which the Apostles founded, so long as peace and communion are observed, that is, if no schisms or divisions are inserted, if all declare the same faith. "What can be said about the Church in Rome? Who were the first bishops? Whose is the See of Peter?"

Paul was crowned with an end like the Baptist's, where John was plunged into fiery oil without hurt! The Roman Rule of Faith is summarized, no doubt from the old Roman Creed, the same as our present creed but for a few articles. It is, however, a different Creed from that of the last; much the same summary was given in chapter xiii, and is found also in "De virginibus velandis" (chapter i). Tertullian evidently avoids giving the exact words, which would be taught only to catechumens shortly before baptism. The whole luminous argument is not found in St. Irenæus's third book, but its forceful exposition is not more Tertullian's own than its exhaustive and compelling logic. Never did he show himself less violent and less obscure. The appeal to the Apostolic churches was unanswerable in his day; the rest of his argument use fall into an antecedent proof that they cannot deserve a hearing. Here, he begins, must not astonish us, for they were prophesied. Heretics urge the text, "Seek and ye shall find", but this was not said to Christians; we have a rule of faith to be accepted without question. "Let curiosity give place to faith and vain glory make way for salvation", so Tertullian parodies a line of Cicero's. The heretics argue out of scripture; but, first, we are forbidden to consort with a heretic after one rebuke has been delivered confidently, disputatively, piously, on the one side and indignation on the other, while the listener goes away more puzzled than he came. The real question is, "To whom does the Faith belong? Whose are the scriptures? By whom, through whom, when and to whom has been handed down the discipline by which we are Christians?" The answer is plain: Christ sent His apostles, who founded churches in each city, from which the others have borrowed the tradition of the Faith and the seed of doctrine and daily borrow in order to become churches; so that they also are Apostolic in that they are the offspring of the Apostolic churches. All are that one Church which the Apostles founded, so long as peace and communion are observed, that is, if no schisms or divisions are inserted, if all declare the same faith. "What can be said about the Church in Rome? Who were the first bishops? Whose is the See of Peter?"

A series of short works addressed to catechumens belong also to Tertullian's Catholic days, and fall between 200 and 206. "De spectaculis" explains and probably exaggerates the impossibility for a Christian to attend any heathen shows, even races or theatrical performances, without either wounding his faith by participation in idolatry or arousing his passions. "De idolatria" is by some placed at a later date, but it is anyhow closely connected with the former. It explains that the making of idols is forbidden, and similarly astrology, selling of incense, etc. The Christian cannot be a soldier. To the question, "How am I then to live?", Tertullian replies that faith fears not famine; for the Faith we must give up our life, how much more our living! "De baptismo" is an instruction on the necessity of baptism and on its effects; it is directed at a female teacher of error belonging to the sect of Gaius (perhaps the Anti-Montanist). We learn that baptism was conferred regularly by the bishop, but with his consent could be administered by priests, deacons, or even laymen. The proper times were Easter and Pentecost. Preparation was made by fasting, vigils, and prayers. Confirmation was conferred immediately after the baptism and laying on of hands. "De paenitentia" will be mentioned later. "De oratione" contains an exposition of the Lord's Prayer, "Tutus evangelii brevium" is an instruction on the nature and office of the Gospel, "De cultu feminarum" is an instruction on the conduct of women belonging to the sect of Gaius (perhaps the Anti-Montanist). We learn that baptism was conferred regularly by the bishop, but with his consent could be administered by priests, deacons, or even laymen. The proper times were Easter and Pentecost. be really those of the Paraclete, and he characteristically exaggerated their import. We find him henceforth lapsing into rigorism, and condemning absolutely second marriage and forgiveness of certain sins, such as those of the "De corona." It had been excessive in its severity; now he positively revels in harshness. Harnack and d’Aleès look upon “De Virginibus velandis” as the first work of this time, though it has been placed later by Moneaux and others on account of its irritated tone. We learn that Carthage, as opposed to Rome, was disposed to accept that virgins should be veiled; Tertullian and the pro-Montanist party stood for the affirmative. The book had been preceded by a Greek writing on the same subject. Tertullian declares that the Rule of Faith is unchangeable, but discipline is progressive. He quotes a saying of a martyr who had refused to marry: "Da aula, non aulae," or about 206. Shortly afterwards Tertullian published his largest extant work, five books against Marcion. A first draft had been written much earlier; a second recension had been published, when yet unfinished, without the writer’s consent; the first book of the final edition was finished in the fifteenth year of Severus, 207. The last book may be a few years later. This controversy is most important for our knowledge of Marcion’s doctrine. The refutation of it out of his own New Testament, which consisted of St. Luke’s Gospel and St. Paul’s Epistles, enables us to reconstruct much of the doctrine of the Montanists. It is not seen in Zahn’s, “Geschichte des N. T. Kanons,” II, 455-524. A work against the Valentinians followed. It is mainly based on the first book of St. Irenæus.

In 209 the little book “De pallio” appeared. Tertullian had excited remark by adopting the Greek pallium, the imposed dress of philosophers, and he defends his conduct in a witty pamphlet. A long book, “De anima,” gives Tertullian’s psychology. He well describes the unity of the soul; he teaches that it is spiritual, but immateriality in the fullest sense he admits for nothing that exists, even God is corpus. Two works are against the docetism of the Gnostics, “De carne Christi” and “De resurrectione carnis.” Here he emphasizes the reality of Christ’s Body and His virgin-birth, and teaches a corporeal resurrection. But he seems to deny the virginity of Mary, the Mother of Christ, in part, though he affirms it and promises those who are unwilling to accept it an exhortation to avoid second marriage, which is equivalent to fornication. This work, “De exhortatione castitatis,” implies that the writer is not yet separated from the Church. The same excessive rigor appears in the “De corona,” in which Tertullian defects the tendency of it to make a would-be episcopus episcoporum and pontifex maximus merely attest its peremptory character. The identification of this Decree with the far wider relaxation of discipline with which Hippolytus reproaches Callistus is uncertain.

The argument of Tertullian must be considered in some detail, since his witness to the ancient system of penance is of first-rate importance. As a Catholic, he addressed “De penitentia” to catechumens as an exhortation to repentance previous to baptism. Besides that sacrament he mentions, with an expression of unwillingness, a “last hope,” a second plank of salvation, after which there is an extreme remedy of exomologesis, confession, involving a long penance in sackcloth and ashes for the remission of post-baptismal sin. In the “De pudicitia” the Montanist now declared that there is no forgiveness for the gravest sins, precisely those for which exomologesis is said by later ecclesiastics, such as Funk and Turmel among Catholics, that Tertullian did not really change his view on this point between the writing of the two treatises. It is pointed out that in “De penitentia” there is no mention of the restoration of the penitent to communion; he is to do penance, but with no hope of pardon in this life; no sacrament is administered, and the satisfaction is lifelong. This view is impossible. Tertullian declares in “De pudic.” that he has changed his mind and expects to be taunted for his inconsistency. He implies that he used to hold such a relaxation, as the time he is attacking, to be lawful. At any rate in the “De pudic.” he parallels baptism with exomologesis, and supposes that the latter has the same effect as the former, obviously the forgiveness of sin in this life. Communion is never mentioned, since catechumens are addressed; but if exomologesis did not eventually restore all Christian privileges, there was no reason to suppose that the child of it should act as an encouragement to sin, for a lifelong penance would hardly be a reassuring prospect. No length is mentioned, evidently because the duration depended on the nature of the sin and the judgment of the bishop; had death been the term, this would have been
emphatically expressed. Finally, and this is conclusive, it could not be insisted on that no second penance was ever allowed, if all penance was lifelong.

For the full understanding of Tertullian's doctrine we must know a division of sins into three classes. There are first the terrible crimes of idolastrv, blasphemy, homicide, adultery, fornication, false witness, fraud (Adv. Marc., IV, ix; in "De pud.," he substitutes apostasy for false witness and adds unnatural vice). As a Montanist he calls these irremissible. Between these and sins which are there mentioned or media (De pud., i), less grave but yet serious sins, which he enumerates in "De pud.," xix: "Sins of daily committal, to which we are all subject; to whom indeed does it not occur to be angry without cause and after the sun has set, or to give a blow, or easily to curse, or to commit a sin without shame or necessity? How much we are tempted in business, in duties, in trade, in food, in sight, in hearing! So that, if there were no forgiveness for such things, none could be saved. Therefore there will be forgiveness for these sins by the prayer of Christ the Father" (De pud., xix).

Another list (De pud., vii) represents the sins which may constitute a loss of sheep, as distinguished from one that is dead: "The faithful is lost if he attend the chariot races, or gladiatorial combats, or the unclean theatre, or athletic shows, or playing, or feasts on some sacred meats, or if he has given an anointing, in any way serves idolatry, or has lapsed without consideration into some denial or blasphemy." For these sins there is forgiveness, though the sinner has strayed from the flock. How is forgiveness obtained? We learn this only incidentally from the words: 'That kind of penitence which is subservient to faith, which can either obtain forgiveness from the bishop for lesser sins, or from God only for those which are irremissible." (ib., xviii). Thus Tertullian admits the power of the bishop for all but "irremissible" sins. The abscission which he still acknowledges for frequent sins was obviously not limited to a single occasion, but must have been frequently repeated. It is not even referred to in "De psm.," which deals only with baptism and public penance for the gravest sins. Again, in "De pud.," Tertullian repudiates his own earlier teaching that the keys were left by Christ through Peter (Scorpions, De pud., xix) that the gift was to Peter personally, and cannot be claimed by the Church of the Psychici.

The spiritual have the right to forgive, but the Paraclete said: "The Church has the power to forgive sins, but I will not do so, lest they sin afresh." The system of the Church of Carthage in Tertullian's time was probably exactly this: those who committed grievous sins confessed them to the bishop, and he absolved them after due penance enjoined and performed, unless the case was in his judgment so grave that public penance was obligatory. This public penance was only allowed once; it was for protracted periods, even sometimes until the hour of death, but at the end of it forgiveness and restoration were promised. The term was frequently shortened at the prayer of martyrs.

Of the lost works of Tertullian the most important was the defence of the Montanist manner of prophecy, "De ecclesia," in six books, with a seventh book against Apollonius. To the peculiarities of Tertullian's views which have already been explained must be added some further remarks. He did not care for philosophy: the philosophers are the "patriarchs of the heresies." His notion that all things, pure spirits and even God must have bodies, is answered for by his ignorance of philosophical terminology. Yet of the human soul he actually says that it was seen in a vision as tender, light, and of the colour of air! All our souls were contained in Adam, and are transmitted to us with the taint of original sin upon them,—an ingenious if gross form of traductionism. His Trinitarian teaching is inconsistent, being an amalgamation of the Roman doctrine with that of St. Justin Martyr. Tertullian has the true formula for the Holy Trinity: Father, Son, Holy Ghost. In this Christology Tertullian has had no Greek influence, and is purely Roman. Like most Latin Fathers he speaks not of two Natures but of two Substances in one Person, united without confusion, and distinct in their operations. Thus he condemns by anticipation the Nestorians, Monophysites, and Monothelites heresies. But he seems to teach that Mary, the Mother of Christ, had other children. Yet he makes her the second Eve, who by her obedience effaced the disobedience of the first Eve.

Tertullian's doctrine of the Holy Eucharist has been much discussed, especially the words: "Acceptum panem et distributum discipulis corpus sumum illum fecit, hoc est corpus meum dicendo, id est, figura corporis mei." A consideration of the context shows only one interpretation to be possible. Tertullian is proving that Our Lord Himself explained bread in Jer., xii, 19 ("mitiath et tov ephse") to refer to His Body, when He said, "This is My Body," that is, that bread was the symbol of His Body. Nothing can be elicited either for or against the Real Presence; for Tertullian does not explain whether the bread is the symbol of the Body present or absent. The context suggests the former meaning. Another passage is: "Panem, quia pinam corpus sumum representat.

This might mean "Bread which stands for His Body," or "Presents, makes present." D'Aléa has calculated that the sense of presentation to the imagination occurs seven times in Tertullian, and the similar moral presentation by picture, etc. occurs twenty times, whereas the sense of physical presentation occurs thirty-three times. In the treatise in question against Marcion the physical sense alone is found, and fourteen times. A more direct assertion of the real presence is Corpus ejus in pane censetur (De orat., vi).

As to the grace given, he has some beautiful expressions such as: "Hancque potestatem perpetuatem postulamus in Christo et individuatem a corpore ejus" (In petitioning for daily bread, we ask for perpetuity in Christ, and indivisibility from His body.—Ibid.). A famous passage on the Sacraments of Baptism, Unction, Confirmation, Orders, and the Eucharist runs: "Christus dictus est: 'Caro ungitur ut anima consecratur; caro signatur ut et anima munatur; caro manus impositione admuratur ut et anima spiritu illuminetur; caro corpore et sanguine Christi veectur ut et anima deo saginatur.' (The flesh is washed, in order that the soul may be cleansed; the flesh is anointed, that the soul may be consecrated; the flesh is signed, with the cross, that the soul, too, may be fortified; the flesh is shadowed with the imposition of hands, that the soul also may be illuminated by the Spirit; the flesh feeds on the body and blood of Christ, that the soul also may be fed. The hand of Christ places it,' which He testifies to the practice of daily communion, and the preserving of the Holy Eucharist by private persons for this purpose. What will a heathen husband think of that which is taken by his Christian wife before all other food? "If he knows that is Bread,
will he not believe that it is simply what it is called?" This implies not merely the Real Presence, but transubstantiation. The station days were Wednesday and Friday; on what other days besides Holy Mass was it not kept? Some thought Holy Communion would break their fast on Station days; Tertullian explains: "When you have received and reserved the Body of the Lord, you will have assisted at the Sacrifice and have accomplished the duty of fasting as well." (De oratione, xix.) Tertullian’s list of the Stations in his Confession tradition, not in Scripture (De cor., iii) is famous: the baptismal renunciations and feeding with milk and honey, fasting Communion, offerings for the dead (Masses) on their anniversaries, no fasting or kneeling on the Lord’s Day and between Easter and Pentecost, anxiety for the Eucharist, the denial of any amount of the Holy Eucharist, the Sign of the Cross made continually during the day.

Tertullian’s canon of the Old Testament included the deutero-canonical books, since he quotes most of them. He also cites the Book of Enoch as inspired, and therefore, who rejected it were wrong. He seems also to recognize IV Esdras, and the Sibyl, though he admits that there are many sibylline forgeries. In the New Testament he knows the Four Gospels, Acts, Epistles of St. Paul, I Peter (Ad Ponticos), I John, Jude, Apocalypse. He does not know James and Hebrew, but he does not tell us he does not know II, III John. He attributes Hebrews to St. Barnabas. He rejects the "Pastor" of Hermas and says that many councils of the Psychici had also rejected it. Tertullian was learned, but careless in his historical statements. He quotes Varro and a medical writer, Soranus of Ephesus, and was evidently well read in pagan literature. He cites the Epistle of Clement, to the Corinthians, as we find it in Papias. It seems therefore that he was not as ignorant as we have been led to believe by some of the innovations of the healing Communion in Realmenal, and especially Baden-Durheim, Gesch. der altchristl. Lit., II (Freiburg, 1903).

JOHN CHAPMAN.

Teruel, Diocese of (Turbolensis), suffragan of Saragossa, comprises the civil province of the same name, excepting the town of Bechi (Castellón). It is believed by some that Teruel and the ancient Turba are the same. Turba was the city whose disputes with the Saguntines gave Hannibal an excuse for attacking Saguntum and beginning the Second Punic War. According to the Acts of the Apostles it appears that Turba was not situated on the site of the present city of Teruel, but at its boundary line. Teruel was founded in 1176 by Sancho Sánchez Muños and Blasco Garcia Marcella. It formed a separate community and was governed by the Fuero de Sepulveda until 1596, when the inhabitants were abjured before the King of Aragon, in order to obtain the Government of Aragon. Jaime I received its support in the conquest of Valencia, and the standards of Teruel were the first to wave in the gateway of Serranos. In 1271 it joined in the war against Castile, invaded Huete and Cuenca, and sided with Pedro IV in his war against the "Unidos," the union of the kings visited the city in 1348 and conferred upon it the title of euzeta (exempt). Gregory XIII at the earnest solicitations of Philip II created the diocese in 1577. The first bishop, Juan Pérez de Arteda, was elected but not consecrated; the first bishop installed was Juan de Baeza, 1603. The bishoprics of Bautista, Justín, Millán, and Fruños is. The bishopric of Bautista, Justín, Millán, and Fruños is.

The churches of Teruel are contemporary with its foundation, as the founders built nine churches, one, Santa María de Media Villa, in the centre, and the remaining eight in a circle following the circuit of the walls. The central church was made a collegiate church in 1423 and named the cathedral in 1577. It was originally built of brick and rubble-work, but since the restoration in the seventeenth century it has lost its primitive character. The Doric choir stalls were the gift of Martín Ferrer, Bishop of Teruel, and later of Tarazona.

Louis X and Isabella took the oath in the cathedral, and received the freedom of the city. The founding of the Inquisition in 1484 produced serious changes because the converts were numerous and powerful. The inquisitor, Juan de Solivellis, was forced to leave. Property to the amount of 133,000 ducats was confiscated and turned over to the city. The Churches of San Martín and El Salvador are remarkable for their Arabic towers. The first, Moorish in style, was built in the twelfth century. Pierre de Bedel, builder of the Arcos de Teruel (Aquaduct) and of the Mina de Darnes, repeated its foundations in 1549 and 1551. The collegiate Church of El Salvador, Moorish style of the thirteenth century, was reinforced in the nineteenth century by brick additions. In the Church of San Pedro rest the bodies of the famous "lovers of Teruel," Diego Martínez de Marcella and Isabel de Segura. The seminary, dedicated to St. Toribio de Mogrovejo, was founded by the bishop Francisco José Rodríguez Chico, who after the expulsion of the Jesuits in 1769 was granted the use of their magnificent college by Charles III. During the wars of independence and the civil wars that followed, the building was taken over for military quarters and afterwards for the use of the bishops. It was re-established in 1849 by Don Antonio Leno y Cuevas, who gave his own palace for the purpose. The Jesuit college has since been restored to the order. The episcopal palace is in no way remarkable except...
perhaps for its courtyard, which has a well-proportioned Ionic colonnade. The Casa del Capítulo, where the ecclesiastical chapter used to assemble, has an altar dedicated to the Immaculate Conception and to St. Ermengilda.

Among the distinguished citizens of Teruel must be mentioned Jerónimo Ripalda, S.J.; the jurisconsult Gaspar de Castelló; Miguel Jerónimo de Castelló, judge of the courts of Aragon, 1665; Fray Juan Cebrían de Perales, Bishop of Albarracín, and Juan Martínez Salazar, Viceroy of Aragon, founder of the Act of Emancipation.

RAMÓN RUIZ AMADO.

**Test Act. See Oaths, English Post-Reformation.**

**Testament, The Old.**—I. Name.—The word "testament", Hebrew berith, Greek διαθήκη, primarily signifies the covenant which God entered into first with Abraham, then with the people of Israel. The Pauline passage into the "Mount Sinai", the one concluded on Mount Sinai should give way. Accordingly Christ at the Last Supper speaks of the blood of the new testament. The Apostle St. Paul declares himself (II Cor., iii, 6) a minister "of the new testament", and calls (iii, 14) the covenant even into the "Mount Sinai" the "old testament". The Greek expression διαθήκη is employed in the Septuagint for the Hebrew "berith". The later interpreters Aquila and Symmachus substituted for διαθήκη the more common συνθήκη, which probably agreed more with their literary taste. The Latin term is "foedus" and often "testamentum", a word corresponding more exactly to the Greek.

As regards Christian times, the expression at an early period came to signify the whole of God's Revelation as exhibited in the history of the Israelites, and because this old covenant was incorporated into the canonical books, it was an easy step to make the term signify the canonical Scriptures. Even the text referred to above (II Cor., iii, 14) points to that. So, the Scriptures are called "books of the Old Testament" by Melito of Sardis and Clement of Alexandria (καὶ ναυσίδ βιβλία; καὶ τὰ ναυσίδ διαθήκην βιβλία). It is not clear what authors "Old Testament" and "Scriptures" mean in this passage, though, if the term were in use by the time the tradition was complete, although in his writings signs of the gradual fixing of the expression may be still traced. For he repeatedly speaks of the "so-called" Old Testament, when meaning the Scriptures. With the Western writers this use of the term in the most ancient period cannot yet be proved. To the lawyer Tertullian the Sacred Books are, above all, documents and sources of argument, and he therefore frequently calls them "vetus et novum instrumentum". Cyprian once mentions the "scripture veteres et novae". Subsequently the Greek use of the term becomes established among the Latins as well, and through them it has been made common property of the Christian world. In this meaning, as signifying the Canonical Scriptures of the Old Testament, the expression "Old Testament" will be used in what follows.

II. History of the Text.—The canon of the Old Testament, its manuscripts, editions and ancient versions are treated in the articles Bible; Canon of the Holy Scriptures; Codex Alexandrinus, etc.; Hebrew Bible; Massorah; Manuscripts of the Bible; Versions of the Bible; Versions of the Qor. Questions concerning the origin and contents of the single books are proposed and answered in articles on the respective books. This article is confined to the general introduction on the text of the Old Testament written in Hebrew; for the few books originally composed in Greek (Wisdom; II Maccabees) and those of which the Semitic original has been lost (Judith; Tobit; Sirach, i.e. Ecclesi); I Maccabees) call for no special notice.

A. Text of the Manuscripts and Masoretes.—The sure starting-point for a correct estimation of the text of the Old Testament is the evidence obtained from the MSS. In this connexion, the first thing to observe is that however distant the oldest MSS. are—the earliest are of the ninth century A. D.—from the time when the books were composed, there is a uniform and homogeneous tradition concerning the text. The fact is all the more striking, as the history of the New Testament is quite different. We have New Testament MSS. written not much more than 600 years after the composition of the books, and in them we find numerous differences, though but few of them are important. The textual variants in the MSS. of the Old Testament are limited to quite insignificant differences of vowels and more rarely of consonants. Even when we take into account the discrepancies between the Eastern, or Syrian, or Palestinian, or Palestinian consonants, the essential differences are found. The proof for the agreement between the MSS. was established by B. Kennicott after comparing more than 600 MSS. ("Vetus Testamentum Hebraicum cum variis lectionibus", Oxford, 1776, 1780). De Rossi has added considerably to this already rich material ("Vetus Testamenti veteris Veteris Testamenti", Parma, 1784—88). It is obvious that this striking uniformity cannot be due to chance; it is unique in the history of text-tradition, and all the more remarkable as the imperfect Hebrew system of writing could not but occasion many and various errors and slips. Besides many peculiarities in the method of writing show themselves uniformly everywhere. False readings are retained in the same manner, so that the text is clearly the result of artificial equalization.

The question now arises: How far back can we trace this care in handing down the text to posterity? Philo, many authorities on the Talmud, and later Jewish rabbis and savants of the sixteenth and seventeenth century favoured the opinion that the Hebrew text, as it is now read in our MSS., was written down from the outset and bequeathed to us uncorrupted. The works of Elias Ben Chayyim, Caro and others have shown this view to be untenable; and later investigations have established the history of the text in its essential features. The uniformity of the MSS. is ultimately the outcome of the labours of the Massoretes, which were not concluded till after the writing of the oldest MSS. The work of the Massoretes chiefly consisted in the faithful preservation of the transmitted text. This they accomplished by maintaining accurate statistics on the entire state of the Sacred Books. Verses, words, letters were counted; lists were compiled of like words and of forms of words with full and defective spelling, in order to detect any mistakes that occurred.

The invention of the signs for vowels and accents—about the seventh century—facilitated a faithful preservation of the text. Incorrect separation and connexion of syllables and words was henceforth all but excluded.

Textual criticism was employed by the Massoretes very moderately, and even the little they did, shows that as much as possible they left untouched all that had been handed down. If a reading proved untenable, they did not correct the text itself, but were satisfied with noting the proper reading on the margin as "Qere" (read), in opposition to "Rekhêth" (written). Such corrections were of various kinds. They were first of all corrections of real mistakes, whether of letters or of entire words. A letter or a word in the text had, according to the note on the
margin, either to be changed, or inserted, or omitted by the reader. Such were the so-called “Targum Sophertim”, corrections of the scribes. The second group of corrections consisted in changing an ambiguous word,—of such eighteen are recorded in the Masorah. In the Talmud no mention has as yet been made of them. But its compilers were aware of the “emendation”, or change of the consonants of the second. *Waw*, which had been made in several places in opposition to the Septuagint and the Samaritan Versions. When later the Massoretes speak only of four or five instances, we must say with Ginsburg that these cases are merely recorded as typical. Cases are not rare when consideration for religious or moral feeling has driven the scribes to substitute a euphonious by a misnomer for an ill-sounding word. The vowels of the expression to be read are attached to the written word of the text, whilst the consonants are noted on the margin. Well known is the ever-recurring “Qere” instead of vyh; it seems to date back to the time before Christ, and probably even the first Greek interpreters were acquainted with it.

The fact that the Massoretes did not dare insert the changes described in the Sacred Text itself shows that the letter was already fixed. Other peculiarities point to the same reverence for tradition. We repeatedly find the so-called “Miqra” mentioned even in the “Mishna”. The counting of the letters also probably belongs to the older period. Records serving for textual criticism are extant from the same time. In its essentials the work is completed with the post-Talmudic treatise “Sophern”. This treatise, which gives a careful introduction to the meaning of the Sacred Text, is one of the most conclusive proofs of the scrupulosity with which at the time of its origin (not before the seventh century) the text was generally treated.

B. Older Witnesses.—The condition of the text previous to the age of the Massoretes is guaranteed by the “Talmud” with its notes on text-criticism, and by innumerable quotations, which are, however, frequently drawn only from memory. Another help are the “Targums”, or free Aramaic versions of the Sacred Books, composed from the last centuries B.C. to the fifth a.p. But the state of the text is chiefly evidenced by the MSS of the Old Testament, which, of the fourth and the beginning of the fifth centuries. He followed the Hebrew original, and his occasional remarks on how a word was spelt or read enable us to arrive at a sure judgment on the text of the fourth century. As was to be expected from the statements of the Talmud, the correct reading of the MSS tallies almost in every respect with the original of St. Jerome. There appear greater discrepancies in vocalization, which is not to be wondered at, for at that time the marking of the vowels was not known. Thus the reading is necessarily often ambiguous, as the saint expressly states. His comment on Is., xxviii, 11, shows that this statement is not only to be taken as a learned note, but that thereby the interpretation might often be influenced practically. When St. Jerome occasionally speaks of vowels, he means the quiescent or vowel letters. Nevertheless, the opinion that in the fourth century the pronunciation was a single monosyllabic would be erroneous. For the saint knew how, in a definite case, an ambiguous word was to be vocalized; he appealed to the custom of the Jews standing in opposition to the interpretation of the Septuagint. A fixed pronunciation had already resulted from the practice, in vogue for centuries, of reading the Holy Writ publically in the synagogue. There might be doubt in particular cases, but, on the whole, even the vowel-text was secured.

The letters in which the MSS, of that time were written are the “square characters”, as appears from St. Jerome’s remarks. This writing distinguished the final forms of the well-known five letters (Prologus galaeatus), and probably supposed the separation of a few existing of a few places, as is shown in our Masoretic Text. Sometimes the Vulgate alone seems to have preserved the correct separation in opposition to the Massoretes and the Greek Version.

The loss of Origen’s hexapla is very much to be regretted. This work in its first two columns would have handed down to us both the consonant-text and the vocalization, harmless, of our MSS of the second are left. They show that the pronunciation, especially of the proper names, in the third century digresses not infrequently with the one used later. The alphabet at the time of Origen was the same as that of a century and a half afterwards. As regards the consonants there is little change, and the text shows no essential transformation.

We are led still further back by the Greek versions originating in the second century. The most valuable is Aquila’s, as it was based upon the Hebrew text, and rendered it to the letter, with the greatest fidelity, thus permitting us to trace back (a. e. Num., x, 35-36). In Is., ix, 6, there is a final Mem within the word. A Waw is interrupted or letters are made bigger, whilst others are placed higher up—the so-called suspended letters. Not a few of these oddities are already recorded in the Talmud, and therefore must be of great age. Letters with points are mentioned even in the “Mishna”. The counting of the letters also probably belongs to the older period. Records serving for textual criticism are extant from the same time. In its essentials the work is completed with the post-Talmudic treatise “Sophern”. This treatise, which gives a careful introduction to the meaning of the Sacred Text, is one of the most conclusive proofs of the scrupulosity with which at the time of its origin (not before the seventh century) the text was generally treated.
have been overlooked, attain to such undisputed authority? This could have happened only if it had much greater weight than the others, for instance, it being a temple scroll; this would imply further that there existed official texts and copies, and so the uniformity goes further back. On the supposition that it were but a private scroll, preserved merely by chance, it is not possible to explain how the obvious mistakes were taken. Why, for instance, should all copies have a closed Qoph, or a letter casually made larger, or a final Mem within a word? Such improbabilities arise necessarily from the hypothesis of a single archetype. Is it not much more likely that the supposed mistakes are really not erroneous, but have some critical significance? Further, the supposition of such a tradition has already been given. Thus the inverted Nun points to the uncertainty of the respective passages in Prov., xvi, 28, for instance, the small Nun, as Blau rightly conjectures, might owe its origin to a textual emendation suggested by the feeling prevalent later on. The larger letters served perhaps to mark the middle of a book. Possibly something similar may have given rise to the other peculiarities for which we cannot at present account. As long as there exists the possibility of a probable explanation, we should not make chance responsible for the condition of our text, which does not deny that there have been many at work. But the complete agreement was certainly brought about gradually. The older the witnesses, the more they differ, even though the recension remains the same. And yet it might have been expected, the more ancient they were the more uniform they should become.

Besides, if one codex had been the source of all the rest, it cannot be explained why trifling oddities were everywhere taken over faithfully, whilst the consonant-text was less cared for. If, again, in later times the differences were maintained by the Western and the masoretic schools, it is still more to be supposed that they did not possess the necessarily decisive authority.

The present text on the contrary seems to have resulted from the critical labours of the scribes from the first century B.C. to the second century A.D. Considering the reading of the Bible in the synagogue and the statements of Josephus (Contra Apionem, I, viii) and of Philo (Eusebius, "Prep. evang.", VIII, 304) on the treatment of the Scriptures, we may rightly suppose that greater changes of the text did not occur at that time. Even the words of Jesus in Matt., v, 18, about the jot and tittle not passing away, seem to point to a change in the very letter; and the unconditional authority of the Scrip- ture presupposes a high opinion of the letter of Holy Writ.

How the work of the scribes was carried out in detail, we cannot ascertain. Some statements of Jewish tradition suggest that they were satisfied with superficial investigation and criticism. Which, however, is all that could have been expected at a time when serious textual criticism was not even thought of. When difficulties arose, it is said that the witnesses were counted and the question decided according to numerical majority. However simple and imperfect this method was, under the circumstances an objective account of the actual state of the question was much more valuable than a series of hypotheses the claims of which we could not now examine. Nor is there any reason for supposing, with some early Christian writers, conscious changes or falsifications of the text. But the usual, justified inferences from the Jewish custom of the Jews and Christians about the text of the Scriptures were one of the reasons why the former hastened the work of unifying and fixing the text.

The MSS. of that period probably showed little difference from those of the subsequent epoch. The consonant-text was written in a more ancient form of the square characters; the so-called final letters presumably came into use then. The Nash Papyrus (the Ten Commandments) would give some information if it were only the second century B.C. to the second century A.D. The question cannot be decided, as our knowledge of Hebrew writing from the first to the second century is quite imperfect. The papyrus is written in well-developed square characters, exhibits division of words throughout, and always uses the final letters. As in the Talmud, the method of the relatively late distinction of the double forms of the five letters is still alive, their application in Holy Writ cannot be dated back too far. Even the Massorah contains a number of phrases having final letters which are divided differently in the text and on the margin, and must, therefore, be regarded as the result of a posterior distinction. The text was not as yet in use. From the Nabataean and Palmyran inscriptions we learn that at the time of Christ the distinction already existed, but it does not follow that the same usage prevailed in the land west of the Jordan and, in particular, in the Sacred Books. The Palmyran inscriptions of the first to the third century apply the final form of only one letter, viz., Nun, whilst the Nabataean go beyond the Hebrew and use, though not consistently, double forms also for Aleph and He. The time when the Jewish copyists began to distinguish the double forms must therefore be before the fourth century, as the "final letters" does not seem very appropriate in considering the historical development. It is not the final forms then invented, but rather the others, that seem to be the product of a new writing. For, with the single exception of Mem, the so-called final forms are those of the old characters as exhibited partly at least even in the oldest inscriptions, or at any rate in use in the Aramaic papyri of the fifth century a.C.

C. The Bible Text before Christ.—As regards the preceding centuries, we are relatively well informed. In place of the missing MSS. we have the ancient Greek version of the Old Testament, the so-called Septuagint, or Alexandrian, Version. The Pentateuch was translated in the first half of the third century, but it cannot be determined in what order and at what intervals the other books followed. Yet in the case of the majority of the books the work was probably completed about the middle of the second century a.C. Of primary importance for us is the question of the state of the text at the time of the translation. As the version is not the work of one man—not even the Pentateuch had only one translator—not the work of one period, but is extended over more than a hundred years and by the same generation. The same holds good of its Greek original. Since the Old Testament Scriptures had, at the time of the translation, existed for about a thousand years, whilst others had just been composed. Considering this historical development, we must, in judging the texts, not simply oppose the whole of the M.T. (Masoretic Text) on the one hand to the Septuagint on the other. Results of any practical value can be obtained only by a separate study of the different books of Holy Scripture.

The oldest, the Pentateuch, presents considerable differences from the M.T. only in Ex., xxxvi-x, and in Num. Greater divergences appear in Sam, Jer, Job, Prov., and Daniel. The M.T. of the Books of Samuel has suffered in many places. The Greek Version often serves to correct it, though not always. In Jeremiah text-tradition is very unsettled. In the Greek Version not less than 2700 words of the M.T., more than an eighth of them, are different from the M.T., and to M.T. are inconsiderable. Some of the parts wanting in Sept. may be later additions, whilst others belong to the original text. The transpositions of the Greek text seem to be secondary. Still the order of the M.T. is not objectionable either, and sometimes Sept. is right in opposition to M.T. On the whole, the text of Sept. seems to be preferable to
the M. T. In Job the textual problem is quite similar. The Greek text is considerably shorter than the M. T. The Greek rendering of Proverbs diverges still more from the Hebrew. Lastly, the Greek Eccesiasticus, a text written by another hand, is altogether different from the Hebrew recension lastly found. These facts prove that during the third-second century B.C. texts were circulated which manifest traces of careless treatment. But it must be remembered that translators, sometimes, may have treated the text carelessly, and that even our Greek Version has not come down to us in its original form. It is hard to determine how far we may recognize the official text of the period in the present form of the Greek text. The legend of the solemn mission to Jerusalem and the deputation of the translators to Egypt probably came in as historical. On the other hand it is arbitrary to assume that the original of the Greek Version represents a corrupted text every time it differs from M. T. We have to distinguish various forms of the text, whether we call them recensions or not.

For a judgment on the Sept., and its original, the knowledge of the Hebrew writing then in vogue is indispensable. In the case of the Minor Prophets attempts have been made by Voellers to discover the characters employed. The Books of Samuel have been investigated by Wellhausen and Driver; Jeremiah by K. Kenrick; Ezekiel by Cornells. Full certainty as to the characters of the Hebrew scrolls of the third-second century B.C. has not as yet been obtained. According to Jewish tradition, Eedrus brought over the new (Assyrian) writing which returning from the Exile, in which script the Sacred Books were thereafter transmitted. A sudden change is improbable. It is not possible that the writing of the fourth century was quite similar to that of the Pahypapyrus or of the first-century inscriptions. The Aramaic writing of the fifth century shows an unmistakable tendency towards the latter forms, yet many letters are still closely related to the ancient alphabet: as Beth, Caph, Mem, Samach, Ayin, Taad. How did this change take place? Did it pass through the Samaritan alphabet, which clearly betrays its connexion with the Phoenician? We know the Samaritan letters only after the time of Christ. The oldest inscription, perhaps, is the Pithi, 224 B.C., another, that of Nablus, to the sixth. But this writing is undoubtedly decorative, displaying care and art, and offers, therefore, no sure basis for a decision. Still there was presumably a time in which the Sacred Scriptures were written in an ancient form of the Samaritan characters which are closely related with the older Habonim.

Others suggest the Palmyran alphabet. Some letters, indeed, agree with the square characters: but Gimel, Het, Peh, Taad, and Qoph differ so much that a direct relation is inadmissible. In short, considering the local nature of this artificial writing, it is hardly credible that it exerted a wider influence towards the west. The Hebrew square characters come nearer to the Nabatean, the sphere of which is more extended and is immediately adjacent to Palestine.

As the change of the alphabet probably took place step by step, we must reckon with transition writings, the form and relation of which can perhaps be approximately determined by comparison. The Greek Version offers excellent material; its very mistakes are an inestimable help to us. For the errors in reading or writing, occasionally, or already supposed, by the original, will often find their reason and explanation in such a manner that of the change one may repeatedly read erroneously is a clue as to the form of the alphabet of the original. For the well-known possibilities in the square writing of confounding Daleth with Reh, Yodh with Waw, Beth with Caph do not exist in the same way in the transition writings. The interchanging of Het and Het, of Yodh and Wau, so easy with the new characters, is scarcely conceivable with the old ones; and the mistake of Beth for Caph is altogether excluded. Aleph and Tau, the other hand, are, in the other hand, are, in the original text, to hand characters, and may be explained by the Paralipomenon, in itself recent and translated into Greek long after the Pentateuch, Waw and Tau, Yodh and Heth, Caph and Reh have been mistaken for each other. This can be accounted for only if an older form of writing were employed. Hence we are compelled to suppose that the old alphabet, or a transition form like it, was in use up to the second or first century B.C. From Christ's words about the jot (Matt., v., 18) it has been concluded that Yodh must have been regarded as the smallest letter; this holds good with the square characters. We know otherwise that, at the time of Christ, the new writing was not yet but developed; at least the inscriptions of the Benê Chêrî and of many ossuaries sufficiently testify to this. But in these inscriptions Zayin and Wau are as small as or even smaller than Yodh.

In addition to the form of the characters, orthography is of importance. The unprinted or non-textual text can be made essentially clearer by writing "plume", i.e. by using the so-called quiescent letters (matres lectionis). This means was often absent in the original of the Sept. In the text of the Minor Prophets Aleph seems not to have been written as a vowel-letter by the textus rectus or the M. T. and the M. T. diverge, according as they suppose the Aleph or not. If the vowel-letter was written, only one interpretation was possible. The same applies to the use of Wau and Yodh. Their omission occasions mistakes on the one or other side. The liberty prevailing in this regard is expressly testified even for a much later period. But it is going too far to consider the omission of the vowel-letters as the rule commonly observed. The oldest inscriptions (Mesha, Siloah) and the whole history of Semitic writing prove that this practical device was known.

In particular cases the possibility of connecting or separating the letters differently must be considered as another source of divergent interpretations. Whether the division of the words was expressed in the ancient MSS. or not cannot be shown by direct testimonies. The Mesha and Siloah inscriptions and some of the oldest Aramaic inscriptions contain this division. The later monuments do not abide by this usage; but mark the division here and there by a little interval. This custom is universal in the Aramaic papryi from the fifth century downwards. The Hebrew fragments make no exception, and the Syriac writing applied this word-division in the earlier MSS. in preference to the conjecture that word-division was used in the old scrolls is not to be rejected at the outset. Still the intervals must have been so small that word connexions easily came about. Instances are not wanting, and both the Massorah and the Greek Version testify to that. Thus Gen., xli, 19-20, is correctly divided in the Greek and in the Vetus Latina, whilst the M. T. erroneously carries the Mem, that belongs to the end of verse 19, over to the following word "Asher". The passage, moreover, is poetical and a new stanza begins with verse 20. Hence in the archetype of our M. T., the stichic writing, known perhaps at an earlier period and used in the later MSS., was not applied.

The mistakes occurring in consequence of interchanging of letters, of wrong vocalization or connexion, show how text-corruption originated, and thus suggest ways of repairing the damaged passages. Other errors which always occur in the handier parts of MSS. such as glosses, and erroneously, distant received by copyists, transposition or addition of glosses, transposition, even of entire columns, must also be taken into consideration whilst estimating the text of the Sacred Books. In books or passages of poetical nature, metre, alphabetical order of verses and stanzas, and their structure, supply a means of
Textual emendation, which ought nevertheless, to be used with great prudence, especially where the MSS. seem disarranged.

But, however, beware of comparing the Sept. as a unit with the Massorah. In textual criticism we must distinguish between the questions: What is the relation of the Greek Version of the Scriptures in general to the Hebrew? and, How far in a particular case may one text be corrected by the other? The Sept. may on the whole differ considerably from the M. T., and yet be made clear up an obscure passage in the Hebrew, while the reverse happens just as frequently. Apart from the Sept. there is but little to assist us. The Samaritan Text throws light on the Pentateuch, at least up to the fourth century, perhaps up to the time before Esdras. Yet until the critical edition, announced a couple of years ago, appears it must remain an open question whether the Samaritan Text was not influenced by the Sept. at a later period. Regarding shorter passages, the parallel texts allow of comparison. The deviations observed in them show that changes have taken place, which, while not necessarily disastrous, yet prevent us from making the M. T. agree entirely with the Sept. until we are favoured by some unexpected discoveries. However, all these discrepancies do not alter the Sacred Texts so far as to affect in any way the religious content of the Old Testament.

TESTAMENT. The New.—I. Name; II. Description; III. Origin; IV. Transmission of the Text; V. Contention of the Doctrine.

I. NAME.—Testament comes from testamentum, the word by which the Latin ecclesiastical writers translated the Greek δοθέων. With the profane authors this latter term means always, one passage of Aristophanes perhaps excepted, the legal disposition a man makes of his property when he dies. It is used as early as the Alexandrian translators of the Scripture, known as the Septuagint, employed the word as the equivalent of the Hebrew berith, which means a pact, an alliance, more especially the alliance of Yahweh with Israel. In St. Paul (1 Cor. xi, 25) Jesus Christ uses the word, not as meaning the alliance established by Himself between God and the world, and this is called "new" as opposed to that of which Moses was the mediator. Later on, the name of testament was given to the collection of sacred texts containing the history and the doctrine of the two alliances; here again and for the same reason we meet the distinction between the Old and the New Testaments. In this meaning the expression Old Testament is found for the first time in Melito of Sardis, toward the year 170. There are reasons for thinking that at that date the corresponding word "testamentum" was already in use amongst the Latins. In any case it was common in the time of Tertullian.

II. DISCOURSE.—The New Testament, as usually received in the Christian Churches, is made up of twenty-seven different books attributed to eight different authors, six of whom are numbered among the Apostles (Matthew, John, Paul, James, Peter, Jude) and two among their immediate disciples (Mark, Luke). If we consider only the contents and the literary form of these writings they may be divided into historical books (Gospels and Acts), didactic books (Epistles), a prophetic book (Apocalypse). Before the name of New Testament had come into use the writers of the latter half of the second century used to say 'Gospel and Apostolic writings' or simply 'the Gospel and the Apostles.' We can perhaps imagine the Apostle St. Paul. The Gospels are subdivided into two groups, those which are commonly called synoptic (Matthew, Mark, Luke), because their narratives are parallel, and the fourth Gospel (that of St. John), which to a certain extent completes the first three and penetrates everywhere the mind of Jesus Christ. The Acts of the Apostles, as is sufficiently indicated by the title, relates the preaching and the labours of the Apostles. It narrates the foundation of the Churches of Palestine and Syria only; in it mention is made of Peter, John, James, Paul, and Barnabas; afterwards, the author devotes sixteen chapters out of the twenty-eight to the missions of St. Paul to the Greco-Romans. There are thirteen Epistles of St. Paul, and perhaps fourteen, if, with the Council of Trent, we consider him the author of the Epistle to the Hebrews. They are, with the exception of this last-mentioned, addressed to particular Churches (Rom.; I, II Cor.; Gal.; Ephes.; Phil.; Coloss.; I, II Thess.) or to individuals (I, II Tim.; Tit.; Philem.). The seven Epistles that follow (James; I, II Peter; I, II, III John; Jude) are called "Catholic," because most of them are addressed to the faithful in general. The New Testament has been translated into the Churches of Asia Minor (Epheus. Smyrne, Pergamus, Thyatira, Sardis, Philadelphia, Laodicea) resembles in some ways a collective letter. It contains a vision which St. John had at Patmos concerning the interior state of the above-mentioned communities, the struggle of the Church with Rome, and the final destiny of the New Jerusalem.

III. ORIGIN.—The New Testament was not written all at once. The books that compose it appeared one after another in the space of fifty years, i.e. in the second half of the first century. Written in different and distant countries and addressed to particular Churches, they took some time to spread throughout the whole of Christendom, and a much longer time to become accepted. The unification of the canon was not accomplished without much controversy (see CANON OF THE HOLY SCRIPTURES). Still it can be said that from the third century, or perhaps earlier, the existence of all the books that to-day form our New Testament was everywhere known, although they were not all universally admitted, at least as certainly canonical. However, uniformity existed in the West from the fourth century. The East had to await the seventh century to see an end to all doubts on the subject. In early times the questions of canonization and authenticity were not discussed separately and independently of each other, the latter being readily brought forward as a reason for the former; but in the fourth century, the canonicity was held, but in the fourth century, St. Jerome, on account of ecclesiastical prescription and,
by the very fact, the authenticity of the contested books became of minor importance. We have to come down to the sixteenth century to hear the question repeated, whether the Epistle to the Hebrews was written by St. Paul, or to the Epistles called Catholic, whether these are written by the Apostles whose names they bear. Some Humanists, as Erasmus and Cardinal Cajetan, revived the objections mentioned by St. Jerome, and which are based on the style of these writings. To this Luther added the inadmissibility of the doctrine, as regards the Epistle of St. James. However, the latter, alone of the writings of the New Testament, which the Council of Trent was to define in 1546.

It was reserved to modern times, especially to our own days, to dispute and deny the truth of the opinion received from the ancients concerning the origin of the books of the New Testament. This doubt and the negation regarding the authors had their primary cause in the religious incredulity of the eighteenth century. These testimonies to the truth of a religion no longer believed were inconvenient, if it was true that they had seen and heard what they related. Life was needed to find in the work and the words indications of a later origin. The conclusions of the Tübingen school, which brought down to the second century the compositions of all the New Testament except four Epistles of St. Paul (Rom.; Gal.; I, II Cor.), was very common thirty or forty years ago, in so-called circles (e.g., Y. H. Lemaitre, dogmatic theologian, I, 771-7). When the crisis of militant incredulity had passed, the problem of the New Testament began to be examined more calmly, and especially more methodically. From the critical studies of the past half century we may draw the following conclusion, which is now in its general outlines admitted by all: It was a mistake to have attributed the origin of Christian literature to a later date; these texts, on the whole, date back to the second half of the first century; consequently they are the work of a generation that counted a good number of direct witnesses of the life of Jesus Christ. From stage to stage, from Strauss to Renan, from Renan to Reuss, Weissacker, Holtmann, Jülicher, Weiss, and from these to Zahn, Harnack, criticism has just retraced its steps over the distance it had so inconsiderately covered under the guidance of Christian Baur. To-day it is admitted that the New Testament was written by the Apostles and their associates before the year 70. The Acts can hardly be said to be later; Harnack even thinks they were composed nearer to the year 60 than to the year 70. The Epistles of St. Paul remain beyond all dispute, except those to the Ephesians and to the Hebrews, and the pastoral Epistles, about which doubts still exist. In like manner there are many who contest the Catholic Epistles; but even if the Second Epistle of Peter is delayed till towards the year 120 or 130, the Epistle of St. James is put by several at the very beginning of Christian literature, between the years 40 and 50, the earliest Epistles of St. Paul about 52.

At present the brunt of the battle rages around the writings called Johannine (the fourth Gospel, the three Epistles of John, and the Apocalypse). Were these texts written by the Apostle John, son of Zebedee, or by John the presbyter of Ephesus whom Papias mentions? There is nothing to oblige us to endorse the conclusions of radical criticisms on this subject. On the contrary, the strong testimony of tradition attributes these writings to the Apostle St. John, nor is it weakened at all by internal criteria, provided we do not lose sight of the character of the fourth Gospel described by Clement of Alexandria (cristilel), which is accompanied with the three others, which he styled "corporal". Theologically, we must take into consideration the recent ecclesiastical documents (Decree "Lamentabili"), prop. 17, 18, and the answer of the Roman Commission for Biblical Questions, 29 May, 1907). These decisions uphold the Johannine and Apostolic origin of the fourth Gospel. Whatever may be the issue of these controversies, a Catholic will be, and that in virtue of his principles, in exceptionably favourable circumstances for accepting the just conclusions of criticism. It is to be expected that the Second and Third Peter belongs to a kind of literature then common, namely the pseuodograph, its canonicity will not on that account be compromised. Inspiration and authenticity are distinct and even separable, when no dogmatic question is involved in the union. The question of the origin of the New Testament includes yet another literary problem, concerning the Gospels especially. Are these writings independent of one another? If one of the Evangelists did utilize the work of his predecessors how are we to suppose it happened? Was it Matthew who used Mark or vice versa? After thirty years of constant study, the question has been answered only by conjectures. Amongst these must be included the documentary theory itself, even in the form in which it is now commonly admitted, that of the "two sources". The starting-point of this theory, namely the priority of Mark, is due to a passage of Luke, although it has become a dogma in criticism for many, cannot be said to be more than a hypothesis. However, after discarding this may be, it is none the less true. None of the proposed solutions has been approved by all scholars who are really competent in the matter, because, amongst other things, the time of Paul and concerning some of the difficulties, leave almost as many unanswered. If we then must content with hypothesis, we ought at least to prefer the most satisfactory. The analysis of the text seems to agree fairly well with the hypothesis of two sources—Mark and Q. (i.e., Quelle the non-Greek document), but a conservative critic will adopt it only in so far as it is not incompatible with such data of tradition concerning the origin of the Gospels as are certain or worthy of respect.

These data may be resumed as follows: (a) The Gospels are really the work of those to whom they have been always attributed, although this attribution may perhaps be explained by a more or less mediate authorship. Thus, the Apostle St. Matthew, having written in Aramaic, did not himself put into Greek the canonical Gospel which has come down to us under his name. However, the author of this Gospel necessarily supposes that between the original Aramaic and the Greek text there is, at least, a substantial conformity. The original text of St. Matthew is certainly prior to the ruin of Jerusalem; there are even reasons for dating it earlier than the Epistles of St. Paul and consequently about the year 50. We know nothing definite of the date of its being rendered into Greek. (b) Everything seems to indicate the date of the composition of St. Mark about the time of St. Peter's death, consequently between 60 and 70. (c) St. Luke is expressly that he was putting "in hard order" the Gospel. What then of the date of his own work? About the year 70. It is to be remembered that we must not expect from the ancients the precision of our modern chronology. (d) The Johannine writings belong to the end of the first century, from the year 90 to 100 (approximately); except perhaps the Apocalypse, which some modern critics date from about the end of the reign of Nero, A.D. 68 (see Gospel and Gospels).

IV. TRANSMISSION OF THE TEXT.—No book of ancient times has come down to us exactly as it left the hands of its author—all have been in some way altered. The materials of writing were not yet used when the first book was spread before the invention of printing (1440), the little care of the copyists, correctors, and glossators for the text, so different from the desire of accuracy exhibited to-day, explain sufficiently the diver-
gences we find between various MSS. of the same work. To these causes may be added, in regard to the Scriptures, a natural difference (controversies. To exempt the sacred writings from ordinary conditions a very special providence would have been necessary, and it has not been the will of the God to exercise this providence. More than 150,000 different readings have been found in the older witness of the New Testament—why? It is a proof that Scriptures are not the only, nor the principal, means of revelation. In the concrete order of the present economy God had only to prevent any such alteration of the sacred texts as would put the Church in the moral necessity of announcing with certainty as the word of God what in reality (not only they, but) everyone, from the start, that the substantial tenor of the sacred text has not been altered, notwithstanding the uncertainty which hangs over some more or less long and more or less important historical or dogmatically passages. Moreover—and this is very important—these alterations are not irremediable; we can at least very often, by studying the variants of the texts, eliminate the defective reading and thus re-establish the primitive text. This is the object of textual criticism.

A Brief History of the Textual Criticism.—The ancient were aware of the variant readings in the text and in the editions of the Holy Scriptures. Jerome, and St. Augustine particularly insisted on this state of things. In every age and in diverse places efforts were made to remedy the evil; in Africa, in the time of St. Cyprian (250); in the East by means of the works of Origen (200-54); then by those of Lucian at Antioch and Hesychius at Alexandria, in the beginning of the fourth century. Later on (383) St. Jerome revised the Latin version with the aid of what he considered to be the best copies of the Greek texts. Between 400 and 450 Rabbbula of Edessa did the same thing for the Syriac version. In the thirteenth century the universities of the Dominicans and the Franciscans undertook to correct the Latin text. In the fifteenth century printing lessened, although it did not completely suppress, the diversity of readings, because it spread the same type of text, viz., that which the Hellenists of the Renaissance got from the Byzantines, who, in their turn, had copied from the West, Germany, and France, after the capture of Constantinople. This text, after having been revised by Erasmus, Robert Estienne, and Théodore de Bèze, finally, in 1633, became the Textus Receptus or Received Text, which was to bear the name of the "received text". It remained the official text of the New Testament up to the eighteenth century. The British and Foreign Bible Society continued to spread it until 1904. All the official Protestant versions were based on this text of Byzantine origin up to the revision of the Authorized Version of the Anglican Church, which took place in 1881.

The Catholics on their side followed the official edition of the Latin Vulgate (which is in substance the revised version of St. Jerome), published in 1592 by order of Clement VIII, and called on that account the Clementine Bible. Thus it can be said that, during two centuries at least, the New Testament was read in the West in two different forms. Which of the two was the more exact? According as the ancient MSS. of the text were discovered and edited, the critics remarked and noted the differences these MSS. presented, and also the divergences between them and the commonly received Greek text as well as the Latin Vulgate. The work of comparing the new MSS. became urgent was begun, and for almost two centuries has been conducted with diligence and method by many scholars, amongst whom the following deserve a special mention: Mill (1707), Bentley (1720), Bengel (1734), Wetstein (1751), Semler (1785), Griesbach (1774), Hug (1809), Scholz (1830), both Catholics, Lachmann (1842), Tregelles (1887), Tischendorf (1889), Westcott and Hort, Abbé Marcolini (1835), and at present B. Weiss, H. Von Soden, R. C. Gregory.

B. Resources of Textual Criticism.—Never was it as easy as it is in our own days to see, consult, and control the most ancient documents concerning the New Testament. Gathered from almost everywhere they may be found in the great libraries of big cities: Rome, Paris, London, Saint Petersburg, Cambridge, etc., where they can be visited and consulted by everyone. These documents are the MSS. of the Greek text, the old versions and the works of ecclesiastical or other writers who have cited the New Testament. This resource of documents, daily increasing in number, has been called the documentary evidence. Moreover, the use of the codices of the text and versions they have been classified and denominated by means of letters of the Hebrew, Greek, and Latin alphabets. Von Soden recently introduced another notation, which essentially consists in the distribution of all the MSS. into three groups designated respectively by the three Greek letters δ, ε, and η (i.e., διακεφαλ, the MSS. containing the Gospels and something else also, ε, the εγγύη, the MSS. containing the Acts and the Epistles). In each series the MSS. are numbered according to their age.

(1) Manuscripts of the Text.—More than 4000 have been already catalogued and partly studied, only the minority of which contain the whole New Testament. Twenty of these texts are prior to the eighth century, a dozen are of the sixth century, five of the fifth century, and two of the fourth. On account of the number and antiquity of these documents the text of the New Testament is better established than that of our Greek and Latin classics, except Virgil, which, from a critical point of view, is almost in the same conditions. The most celebrated of these manuscripts are: 1 Vaticanus, δ 1, Rome, fourth century; 2 Sinaiticus, δ 2, Saint Petersburg, fourth century; 3 Ephraemus rescriptus, δ 3, Paris, fifth century; 4 Alexandrinus, δ 4, London, fifth century; 5 Cantabriensis (or Codex Bezae) δ 5, Cambridge, sixth century; 6 Clmomonatus, δ 6, Mount Athos, sixth century; 7 Sinaiticus, ε 55, Bâle, eighth century. To these copies of the text on parchment a dozen fragments on papyrus, recently found in Egypt, most of which go back to the fourth century, one even to the third century, must be added.

(2) Ancient Versions.—Several are derived from original texts prior to the most famous of the seven ancient versions of the Bible, the Septuagint. These versions are, following the order of their age, Latin, Syriac, Egyptian, Armenian, Ethiopic, Gothic, and Georgiand. The first three, especially the Latin and the Syriac, are of the greatest importance. (1) Latin version.—Up to about the end of the fourth century, it was diffused in the West (Proconsular Africa, Rome, Northern Italy, and especially at Milan, in Gaul, and in Spain) in slightly different forms. The best known of these is that of St. Augustine called the "Itala", the sources of which go as far back as the second century. In 383 St. Jerome revised the Latin text after the Greek MSS. of the best of which did not differ much from the text represented by the Vaticanus and the Sinaiticus. It was this revision, altered here and there by readings from the primitive Latin version and a few other more recent, that prevailed in the west from the sixth century until the name of the Latin Vulgate and criticism. (2) Three primitive types are represented by the Diatessaron of Tatian (second cent.), the palimpsest of Sinai, called the Lewis codex from the name of the lady who founded it (third cent., perhaps from the end of the second), and the Codex of Oureton (third cent.). The Syriac Version of this primitive epoch that still survives contains only the
Goepels. Later, in the fifth century, it was revised after the Greek text. The most widespread of these revisions, which became almost the official version, is called the Peshito (Peshitto, simple, vulgate); the others are called Philoxenian (sixth cent.), Heracleian (seventh cent.), and Apollinaris (eighth cent.). A greater interest is attached to the version of Upper Egypt, called the Sahidic, or Theban, which is a work of the third century, perhaps even of the second. Unfortunately it is only incompletely known as yet.

These ancient versions will be considered, in so far as possible, and firm witnesses of the Greek text of the first three centuries only when we have critical editions of them; for they themselves are represented by copies that differ from one another. The work has been undertaken and is already fairly advanced. The primitive Latin version had been already reconstituted by the Benedictines ("Scriptae Sacrae in versiones antiques seu Vetus Italiae", Reims, 1743, 3 vols.); the work has been taken up again and completed in the English collection "Old-Latin Biblical Texts" (1883-1911), still in course of publication. The critical edition of the Latin Vulgate published at Oxford by Dr. Neale, Wordsworth, and Westcott, from 1889 to 1905, gives the Gospels and the Acts. In 1907 the Benedictines received from Pius X the commission to prepare a critical edition of the Latin Bible of St. Jerome (Old and New Testament). The "Diatessaron" of Tatian is known to us by the Arabic version edited in 1888 by Mgr. Clausses, and by the Armenian version of a commentary of St. Barheun (which is founded on the Syriac of Tatian) translated into Latin, in 1876, by the Mechitarists Auchar and Moesinger. The recent publications of H. Von Soden have contributed to make the work of Tatian better known. Mrs. A. S. Lewis has just published a comparative edition of the Syriac palimpsest of Sinai (1910); this had already been done by F. C. Burkitt for the Cureton codex, in 1904. There exists also a critical edition of the Peshito by G. H. Gwilliam (1901). As regards the Egyptian versions of the Gospels, the recent edition of G. Horn (1901-1911, 5 vols.) may finally get the better of all the others; the Coptic and Sahidic. The English translation, that accompanies them, is meant for a wider circle of readers.

(3) Citations of Ecclesiastical Authors.—The text of the whole New Testament could be reconstructed by putting together all the citations found in the Fathers. It would be particularly easy for the Gospels and the important Epistles of St. Paul. From a purely critical point of view, the text of the Fathers of the first three centuries is particularly important, especially Irenaeus, Justin, Origen, Clement of Alexander, Eusebius, Cyril of Alexandria, Chrysostom, Jerome, and Augustine. Here again a preliminary step must be taken by the critic. Before pronouncing that a Father read and quoted the New Testament in this or that way, we must first be sure that the text as in its present form had not been harmonized with the reading commonly received at the time and in the country where the Father’s works were edited (in print or in MSS.). The recent editions of Berlin for the Greek Fathers and of Vienna for the Latin Fathers, and especially the monographs on the citations of the New Testament in the Latin versions (Oxford, and now for Historical Theology, 1905), in St. Justin (Bouset, 1891), in Tertullian (Ronsch, 1871), in Clement of Alexandria (Barnard, 1899), in St. Cyprian (von Soden, 1909), in Origen (Hautech, 1909), in St. Ephraem (Burkett, 1901), in Marcion (Zahn, 1890), are a valuable help in this work.

C. Method followed.—(1) The different readings attested for the same word were first noted, then they were classed according to their causes; involuntary (the ancient manuscripts); voluntary (the ancient manuscripts at least continuous; voluntary variants, harmonizing of the texts, exegesis, dogmatical controversies, liturgical adaptations. This however was only an accumulation of matter for critical discussion. (2) At first, the process employed was that called individual examination. This consists in examining each case by itself, and it nearly always had as result that the reading found in most documents was considered the right one. In a few cases only the greater antiquity of certain readings prevailed over numerical superiority. Yet one witness might be right rather than a hundred others, who often depend on common sources. Even the oldest text we have, if not itself the original, may be corrupt, or derived from an unfaithful reproduction. To avoid as far as possible these occasions of error, critics were not long before giving preference to the quality rather than to the quantity of the documents. The guarantee of fidelity of a copy was known by some rule of the intermediate ones connecting it with the original, that is by its genealogy. The genealogical process was brought into vogue especially by two great Cambridge scholars, Westcott and Hort. By dividing the texts, versions, and Patristic citations into families, they arrived at the following conclusions:

(a) The documents of the New Testament are grouped in three families that may be called Alexandrian, Syrian, and Western. None of these is entirely free from alterations. (i) The text called Western, best represented by D, is the most altered although it was widely spread in the second and third centuries, not only in the West (primitive Latin Version, St. Ireneus, St. Hippolitus, Tertullian, St. Cyprian), but also in the East (primitive Syrian Version, Tatian, and even Clement of Alexandria). However, we find in it a certain number of original readings which it alone has preserved. (ii) The Alexandrian text is the best, this was the received text in Egypt and, to a certain extent, in Palestine. It is to be found, but adulterated, in C (at least as regards the Gospels). It is more pure in the Boharic Version and in St. Cyril of Alexandria. The current Alexandrian text however is composite. It also depends from an older and better preserved text which we have almost pure in B and N. It is this text that Westcott and Hort call neutral, because it has been kept, not absolutely, but much more than all the others, free from the deforming influences which have systematically created the different types of text. The neutral text which is superior to all the others, although not perfect, is attested by Origen. Before him we have no positive testimony, but historical analogies and especially the data of internal criticism show that it must be primitive. (iii) Between the Western text and that of Alexandria there is the text on Ephraem which was that used at Antioch in Cappadocia and at Constantinople in the time of St. John Chrysostom. It is the result of a methodical "confluence" of the Western text with that received in Egypt and Palestine towards the middle of the third century. The Syrian text must have been edited between the years 250 and 350. This type has no value for the reconstruction of the original text, as all the readings which are peculiar to it are simply alterations. As regards the Gospels, the Syrian text is found in A and E, F, G, H, K, and also in most of the Peshitto MSS., the same is the case with most of the Latin MSS.

(b) The Latin Vulgate cannot be classed in any of these groups. It evidently depends on an eclectic
text. St. Jerome revised a western text with a neutral text and another not yet determined. The whole was contaminated, before or after him, by the Syrian text. What is certain is that his revision brought the Latin version perceptibly nearer to the neutral text, the resultant of the translation which was compiled without any really scientific method, it should be put completely aside. It differs in nearly 8000 places from the text found in the Vaticanus, which is the best text known.

(c) We must not confound a received text with the traditional text. A received text is a determined type of text used in some particular place, but never current in the whole Church. The traditional text is that which has in its favour the constant testimony of the entire Christian tradition. Considering the substance of the text, it can be said that every Church has the traditional text, for no Church was ever deprived of the substance of the Scripture (in as far as it preserved the integrity of the Canon); but, as regards textual criticism of which the object is to recover the ₯respectus verbo of the original, there is no text now existing which can be rightly called traditional in the original text to be considered definitive, and that is what the editions called critical have been trying to effect for the last century.

(d) After more than a century's work are there still many doubtful readings? According to Westcott and Hort seven-eighths of the text, that is 7000 verses out of about 30,000, are said to be established. Still more, critical discussions can even now solve most of the contested cases, so that no serious doubts exist except concerning about onesthieth of the contents of the New Testament. Perhaps even the number of passages of which the authenticity has not yet had a sufficient critical test, if not twelve, at least as regards substantial alterations. We must not forget, however, that the Cambridge critics do not include in this calculation certain longer passages considered by them as not authentic, namely the end of St. Mark (xvi, 9-20) and the episode of the adulteress (John, viii, 1-11).

(3) These conclusions of the editors of the Cambridge text have in general been accepted by the majority of scholars. Those who have written since them, for the past thirty years, B. Weiss, R. Von Soden, R. C. Gregory, have indeed proposed different conclusions, but even they scarcely differ in their conclusions. Only in two points do they differ from Westcott and Hort. These latter have according to them given too much importance to the text of the Vaticanus and not enough to the text called Western. As regards the last-mentioned, recent discoveries have made it better known and show that it is not to be overmuch depreciated.

D. Results.—(1) The critical editions of the New Testament resulting from a personal study of the sources, which have appeared during the past fifty years are those of Const. Tischendorf, "Novum Testamentum zum codex Sinaiticus et Vaticanus" (1844-1872), with the Prolegomena to Tischendorf's eighth edition of C. R. Gregory, 1894; that of S. P. Tregelles, "The Greek New Testament, with the Latin version of Jerome from the cod. Amiatinus" (1857-1872), and an appendix of Dr. Hort. (1879); that of B. F. Westcott and F. J. A. Hort, "The New Testament in the original Greek" (1881), with a volume of introduction edited by Hort; that of B. Weiss, "Das neue Testament" (1892-9), and a more recent edition (1902-5). H. Von Soden has published only the valuable introduction to the edition of the text, which is being prepared for the last twelve years under the title "Die Schriften des neuen Testaments in ihrer ältesten erreichbaren Textgestalt hergestellt auf Grund ihrer Textgeschichte" (1902-10). C. R. Gregory also has announced that he is preparing a new critical edition (cf. Vorschläge für eine kritische Ausgabe des griechischen neuen Testaments, 1911).

(2) From the materials thus collected manuals have been edited. The best known to students are the following: R. F. Weymouth, whose work aims at being the resultant of the whole, the text which was compiled without any really scientific method, it should be put completely aside. It differs in nearly 8000 places from the text found in the Vaticanus, which is the best text known.

The author usually sides with the majority. O. de Gebhart (1895) follows Tischendorf; E. Nestle (1898) (Greco-Latin) keeps in his text the reading accepted by both Tischendorf and Westcott-Hort (this ordinarily means the accord of B with N). If they do not agree, the editor generally follows Weymouth and Weiss. Since the year 1904 the British and Foreign Bible Society have substituted the text of Nestle for the received text, which it had used from the time of its establishment. Besides these Protestant texts there are three Greco-Latin editions of manuals of Catholic origin: F. Brandscheid (1893); Hetsenauer (1896); E. Bodin, who published an anonymous edition (Paris, 1911). Between the Protestant and Catholic editions there is a double difference. The latter keep in their text the sections of which the authenticity is contested (Mark xvi, 9-20; Luke xxi, 5-28; John v, 4; 3 John, 1-11) as well as the variant readings approved by the Vatican text. All translations of "the writings of Jesus Christ" have been composed from the Gospels. The history of the Apostles, as narrated by Renan, Farrar, Fouard, Weissacker, and Le Camus, is based on the Acts and the Epistles. The "Theologies of the New Testament", of which so many have been written during the nineteenth century, are a proof that we can with canonical texts build up a compact and fairly complete doctrinal system. But what is the worth of these narratives and synthesizes? In what measure do they bring us into contact with the actual facts? It is the question of the historical value of the New Testament which to-day preoccupies higher criticism.

V. CONTENTS OF THE NEW TESTAMENT. HISTORY AND DOCTRINE.—The New Testament is the principal and almost the only source of the early history of the Christian Church. All traditions of "the writings of Jesus Christ" have been composed from the Gospels. The history of the Apostles, as narrated by Renan, Farrar, Fouard, Weissacker, and Le Camus, is based on the Acts and the Epistles. The "Theologies of the New Testament", of which so many have been written during the nineteenth century, are a proof that we can with canonical texts build up a compact and fairly complete doctrinal system. But what is the worth of these narratives and synthesizes? In what measure do they bring us into contact with the actual facts? It is the question of the historical value of the New Testament which to-day preoccupies higher criticism.

A. History.—Everybody agrees that the first three Gospels reflect the beliefs regarding Jesus Christ and his work current among Christians during the last quarter of the first century, that is to say at a distance of forty or fifty years from the events. New recent historians were not on a higher position than the biographers of the Caesars (Suetonius and Tacitus) were not in a better position to get exact information. All are forced to admit, moreover, that in the Epistles of St. Paul we come into immediate contact with the mind of the most influential propagator of Christianity, and that a quarter of a century after the Ascension. The faith of the Apostle represents the form of Christian thought most victorious and most widespread in the Greco-Roman world. The writings of St. John introduce us to the troubles of the Churches after the fall of the Synagogue and the triumph of Christianity. His Gospel expresses, to the say the least, the Christian attitude of that period towards Christ. The Acts inform us, at all events, what was thought in Syria and Palestine towards the year 65 of the foundation of the Church; they lay before us a traveller's diary which allows us to follow St. Paul from day to day during the ten best years of his missions.

Must our knowledge stop here? Do the earliest monuments of Christian literature belong to the class of writings called "memoirs", and reveal only the opinions and the judgments of their authors? Not a single critic (meaning those who are esteemed as such) has yet ventured to underrate thus the historical value of the New Testament as a whole. The ancients did not even raise the question, so
evident did it seem to them that these texts narrated faithfully the history of early Christianity. What aroused the distrust of modern critics was the fancied discovery that these writings although sincere were none the less biased. Composed, as was said, by believers and for believers, in favor of the Faith, they aim much more at rendering credible the life and teaching of Jesus than at simply relating what He did and preached. And then they say these texts contain irreconcilable contradictions which testify to uncertainty and variety in the tradition taken up by them at different stages of its development.

(1) It is agreed that the authors of the New Testament were sincere. Were they deceived? If so the writing of truthful history should, apparently, be given up altogether. They were near the events: all eye-witnesses or depending immediately on eye-witnesses. In their view the first condition to be allowed to "testify" on Gospel history was to have seen the Lord, especially the risen Lord (Acts, i, 21–22; I Cor., ix, 11; xi, 23; I John, i, 1–4; Luke, i, 1–4). These witnesses guarantee matters easy to observe and at the same time impervious to their ensnaring impressions. The latter must have controlled assertions claiming to impose an obligation of faith and attended with considerable practical consequences; all the more so as this control was easy, since the matters were in question that had taken place in public and not "in a corner and says (I Peter, ii, 16; cf. ii, 13–14). Besides, what reasonable hope was there to get books accepted which contained an altered form of the tradition familiar from the teaching of the Churches for more than thirty years, and cherished with all the affection that was born to Jesus Christ in person? In this sentiment we must seek the final reason for the tenacity of ecclesiastical traditions. Finally, these texts control each other mutually. Written in different circumstances, with varying precautions, why do they agree in substance? For history only knows one Christ and one Gospel; and this history is based on the New Testament. Objective reality alone accounts for this agreement.

It is true that these same texts present a multitude of differences in details, but the variety and uncertainty to which that may give rise does not weaken the stability of the whole from a historical point of view. That it is impossible to eliminate the inspiration and inerrancy of the Holy Scriptures, see INSPIRATION OF THE BIBLE. The causes of these apparent contradictions have been long since pointed out: viz., fragmentary narratives of the same events abruptly put side by side; different perspectives of the same object according as one takes a front or a side view; different expressions to mean the same thing; adaptation, not alteration, of the subject-matter according to the circumstances a feature brought into relief; documents or traditions not agreeing on all points, and which nevertheless the sacred writer has related, without claiming to guarantee them in every particular, the question of their divergence. These are not subtleties or subterfuges invented to excuse as far as possible our Evangelists. Similar observations would be made about profane authors if there was anything to be gained by doing so. Try, for example, to harmonize Tacitus with himself in "History", V, iv, and V, ix. But Herodotus, Polybius, Tacitus, Livy did not narrate the history of a God come on earth to make men submit their whole life to His word. It is under the influence of naturalistic prejudice that some people easily, and as it were a priori, are opposed to the testimony of the Biblical authors. They do not recognize that St. Luke is a more exact historian than Flavius Josephus? It is true that the authors of the New Testament were all Christians, but to be truthful must we be indifferent towards the facts we relate? Love does not necessarily make us blind or untruthful, on the contrary it can allow us to penetrate more deeply into the knowledge of our subjects. In any case, hate exposes the historian to a greater danger of partiality; and it is possible to be without love or hate towards Christ. If a writer has been influenced by the spirit of Christ, let us not impose on him a spirit of untruth or unreason.

(2) These being the conditions, if the New Testament has hanged on to us a counterfeit of history, the falsification must have come about at an early date, and be assignable neither to the insincerity nor the incompetence of its authors. It is the early Christian tradition on which their faith depended that becomes suspected in its vital sources, as if it had been formed under influences of religious instincts, which irrevocably doomed it to be mythical, legendary, or, again, idealistic, as the symbolists put it. What it transmitted to us was not so much the historical figures of Christ (in the modern acceptation of the term) as His prophetic image. The Jesus of the New Testament had become such as He might or ought to have been imagined to be by one who saw in Him the Messiah. It is, doubtless, from the saying of Isaiahs, "Behold a virgin shall conceive", that the belief in the superhuman conception springs to their minds. It is not the Holy Spirit in His procedure which has become theologically formulated in the narratives of St. Matthew and St. Luke. Such is the explanation current amongst unbelievers of to-day, and amongst an ever-increasing number of liberal Protestants. It is notoriously that of Harnack.

There is, moreover or not, a way of explaining the formation of Gospel tradition which has been put forward principally to account for the supernatural element with which the New Testament is permeated: the objectivity of this element is refused recognition for reasons of a philosophical order, anterior to any criticism of the text. The starting-point of this explanation is a purely speculative prejudice. To the objection that the position of Strauss became untenable the day that critics began to admit that the New Testament was a work of the first century, and therefore a witness closely following on the events, Harnack answers that twenty years or even less suffice for the formation of legends. As regards the abstract possibility of the formation of a legend that may be, but it still remains to be proved that it is possible that a legend should be formed, still more, that it should win acceptance, in the same concrete conditions as the Gospel narrative. Who can say what cryptic, not very profound, principle is forcing their way into the mighty current that bore the canonical writings to all the Churches, and got them accepted? Why were the oldest known to us not composed till at least a century after the events?

Furthermore, if the Gospel narrative is really an exegetical creation based on the Old Testament prophecies, how are we to explain its being what it is? There is no reference in it to texts of which the Mesianic nature is patent and accepted by the Jewish schools. It is strange that the "legend" of the Magi should be said to have come from the East at the summons of a star to adore the infant Jesus should have left aside completely the prophecies of Jacob (Nu., xxvii) and Micah (vii, 12) and the prophecies of Isaiah (ix, 6–8). On the other hand, texts are appealed to of which the Mesianism is not obvious, and which do not seem to have been commonly interpreted (then, at least) by the Jews in the same way as by the Christians. This is exactly the case with St. Matthew, ii, 15, 18, 23, and perhaps i, 23. The Evangelists represent Jesus as the popular preacher, par excellence, the orator of the crowd in town and country; they show Him to us in a white shirt and in their mouth words more singing still addressed to the Pharisees. According to St. John (vii, 25, 57; viii, 44). He "cried out in the Temple and in the Temple in his physiognomy be readily explained by Isaiahs, xlii, 2, who had foretold of the servant of Yahweh: "He shall not cry nor have respect to person, neither shall his voice be heard abroad"? Again,
"The wolf shall dwell with the lamb . . . . and the sucking child shall play on the hole of the asp" (Isa. ix. 6–8) would have afforded material for a charming idyl, but the Evangelists have left that realism to the apocrypha and to the Millennials. With a forecast of the exigencies of the Christian apocalypse, inspired the first generation of Christians with the fundamental doctrine of the transitory character of the Law; and, above all, with the prediction of the destruction of Jerusalem and its Temple? Once one admits the initial step in this theory, he is logistically led to leave nothing, or nothing of the significance of the Gospel narrative, not even the crucifixion of Jesus, nor His death as such. Solomon Reinach actually pretends that the Passion story is merely a commentary on Psalm xxvi, while Arthur Drews denies the very existence of Jesus Christ.

Another factor which contributed to the alleged distortion of the Gospel story was the necessity imposed on primitive Christianity of altering, if it were to last, the conception of the Kingdom of God preached by Jesus in person. On His lips, it is said, the Gospel was merely a cry of "Saint qui peut" addressed to the world which he believed to be in need. Such a cry is the usual expression of the first Christian generation. But soon it was perceived that they had to do with a world which was to last, and the teaching of the Master had to be adapted to the new condition of things. This adaptation was not achieved without much violence, done, unconsciously, it is true, to historical reality, for the need was felt of deriving from the Gospel all the ecclesiastical institutions of a more recent date. Such is the eschatological explanation propagated particularly by J. Weiss, Schweitzer, Loisy; and favourably received by Pragmatists. It is true that it was only later that the disciples understood the significance of certain words and acts of the Master. But to try and explain all the Gospel story as the retrospect of the second Christian generation is like trying to balance a pyramid on its apex. Indeed the hypothesis, in its general application, implies a state of mind hard to reconcile with the calmness and sincerity which is readily admitted in the Evangelists and St. Paul. As for the starting-point of the theory, namely, that Christ was the dupe of an illusion about the imminent destruction of the world, it has no foundation in the text, even for one who regards Christ as a mere man, except by distinguishing the theory of the Master from that of the others (and of the theory itself), those that are traced back to Jesus, and those that have been attributed to Him afterwards. This is what is called a vicious circle. Finally, it is false that the second Christian generation was prepossessed by the idea of tracing, per fas et nefas, everything—institutions and doctrines—back to Jesus in person. The first generation itself decided more than once questions of the highest importance by referring not to Jesus but to the Holy Spirit and to the authority of the Apostles. This was especially the case with the Apostolic conference at Jerusalem (Acts v. 29), which decided to be decided by the observances the Gospel was to take the place of the Law. St. Paul distinguishes expressly the doctrines or the institutions that he promulgates in virtue of his Apostolic authority, from the teachings that tradition traced back to Christ (I Cor. vii. 39. 25).

Again it is to be presumed that if Christian tradition had been formed under the alleged influence, and that, with such historical freedom, there would remain less apparent contradictions. The trouble taken by apologists to harmonize the texts of the New Testament is well known. If the appellation "Son of God" points out to the reader of the Greek text, Jesus Christ, why has it not simply replaced that of "Son of Man."? The survival in the Gospels of this latter expression, close by in the same texts with its equivalent (which alone showed clearly the actual faith of the Church), could only be an encumbrance; nay more, it remained as a telltal indication of the change that came—afterwards. It will be said perhaps that the evolution of popular beliefs, coming about instinctively and little by little, has nothing to do with it. The Prophets of the Old Testament have none of this. The New Testament has no coherency. Granted, but it must not be forgotten that, on the whole, the literature of the New Testament is a thoughtful, reasoned, and even apologetic work. Our adversaries can all the less deny it this character, as, according to them, the authors of the New Testament are "tempesti ille Nazoraeus," that is to say, inclined more than is right to give a bias to things so as to make them acceptable.

B. Doctrines. They are: (1) specifically Christian; or (2) not specifically Christian.

(1) Christianity being the normal continuation of Judaism, the New Testament must needs inherit from the Old Testament a certain number of religious doctrines concerning God, His worship the original destinies of the world, and especially of men, the moral law, spirits, etc. Although these beliefs are not specifically Christian, the New Testament develops and perfects them. (a) The attributes of God, particularly His spirituality, His immortality, His goodness, and above all His fatherhood are insisted on more fully.

(b) The moral law is restored to its primitive perfection in what regards the unity and perpetuity of marriage, respect for God's name, forgiveness of injuries, and in general the duty towards one's neighbours; the guilt of the simple desire of a thing forbidden by the Law is clearly set forth; external works (prayer, almsgiving, fasting, sacrifice) really derive their worth from the dispositions of the heart that accompany them. The Mosaic law is purified from the temporal and material elements with which it had become entangled, and the retribution of the world to come and the resurrection of the body are specified more clearly.

(2) Other doctrines, specifically Christian, are not added on to Judaism to develop, but rather to supersede it. In reality, between the New and Old Testaments there is a direct, but not revolutionary succession as a superficial observer might be inclined to believe; just as in living beings, the imperfect state of yesterday must give way before the perfection of to-day although the one has normally prepared the other. If the mystery of the Trinity and the spiritual character of the Kingdom are devoid of the peculiarities of the Old Testament were of itself insufficient to establish the doctrine of the New Testament on this subject; and still more because, at the time of Jesus, the opinions current among the Jews went decidedly in the opposite direction.

(a) The Divine life common to the Three Persons (Father, Son and Holy Ghost) in the Unity of one and the same Nature is the mystery of the Trinity, obscurely typified or outlined in the Old Testament.
(b) The Messiah promised by the Prophets has come in the person of Jesus of Nazareth, who was not only a man powerful in word and work, but the true God Himself, the Word made man, born of a virgin, crucified under Pontius Pilate, but risen from the dead and now exalted to the right hand of His Father. (c) It was by an ignominious death on the Cross, and not by power and glory, that Jesus Christ redeemed the world from sin, death, and the anger of God; He is the Redeemer of all men (Gentiles as well as Jews) and He unites them to Himself all without distinction. (d) The Mosaic Law (rites and political theocracy) having been given only to the Jewish people, and that for a time and a place, the faith in Jesus Christ superseded it. To these practices powerless in themselves Christ substitutes rites really sanctifying, especially baptism, eucharist, and penance. However the new economy is to such a degree a religion in spirit and truth, that,
absolutely speaking, man can be saved, in the absence of all exterior means, by submitting himself fully to God by the faith and love of the Redeemer.

(a) Before Christ's coming, men had been treated by the law as if they were in a position to be saved by their own efforts, but with the Gospel begins a law of love and liberty written first of all in the heart; this law does not consist merely in the letter which forbids, commands, or condemns; it is also, and chiefly, an interior grace which disposes the heart to do the will of God. (b) The Kingdom of God preached by Jesus Christ, though it exists already visibly in the Church, will not be perfected until the end of the world (of which no one knows the day or the hour), when He will come Himself in power and majesty to render to each one according to his works. In the meantime, the Church assisted by the Holy Spirit, governed by the Apostles and their successors under the authority of Peter, teaches and propagates the Gospel even to the ends of the earth. (c) Love of our neighbour is raised to the height of the love of God, because the Gospel makes us see God and Christ in all men since the heart of each man is pure and good. When necessary, this love must be carried as far as the sacrifice of self. Such is Christ's commandment.

(h) Natural morality in the Gospel is raised to a higher sphere by the counsels of perfection (poverty and chastity), which may be summed up as the positive aspect of the peculiar form of life, which, in so far as they hinder our being completely given up to the service of God. (i) Eternal life, which shall not be fully realized until after the resurrection of the body, consists in the possession of God, seen face to face, and of Jesus Christ.

They are the fundamental points of Christian dogma, as expressly taught in the New Testament. They are not found collected together in any of the Canonical books, but were written throughout a period extending from the middle of the first century to the beginning of the second; and, consequently, the history of the way in which they were expressed at different times can be reconstructed. These texts never could, and were never meant to, dispense with the oral tradition which preceded them. Without this perpetual commentary they would not always have been understood and frequently would have been heedless.

Testaments of the Twelve Patriarchs. See APOCRYPHA, subtitle II.

Testament Benevolentis, an Apostolic Letter of Leo XIII addressed to Cardinal Gibbons, 22 January, 1899. It opens by explaining its title, remarking that just as His Holiness had given frequent proofs of his affection for the people as well as for the Church in the United States, by praising their spirit and their progress, so now the same affection prompts him to point out certain things which should be avoided or corrected, in order to set at rest controversies that were injurious to peace. Referring to the preface of the French translation of the "Life of Isaac Hecker", as the occasion of these controversies, he then proceeds to examine in each case on the manner of leading a Christian life. The basis of these opinions is that, to make converts, the Church should adapt herself to our advanced civilization and relax her ancient rigour as regards not only the rule of life but also the deposit of faith, and should pass over those matters that depend on the will of private individuals but on the judgment of the Church. What makes the new opinions more dangerous is the pretext of those who follow them that in matters of faith and of Christian life each one should be free to follow his own bent in the same way that in the spirit of this life, in so far as they hinder our being completely given up to the service of God. (i) Eternal life, which shall not be fully realized until after the resurrection of the body, consists in the possession of God, seen face to face, and of Jesus Christ.

(i) Eternal life, which shall not be fully realized until after the resurrection of the body, consists in the possession of God, seen face to face, and of Jesus Christ.
latter as more suitable for our day. There can be no really passive virtue. All virtue implies power and action, and every virtue is suitable at all times. Christ, meek and humble of heart or obdurate unto death, is a model in every age, and the men who have imitated him in the exercise of the vows have been peculiarly helpful to religion and the State. Fourthly, the vows taken in religious orders must not be considered as narrowing the limits of true liberty, or as of little use for human society or for Christian perfection. This view is not in accord with the usage and doctrine of the Church. In those nations of the consuls, in addition to those of the commandments, is not a sign of weak-mindedness, nor unprofitable, nor hurtful, nor injurious to liberty; rather it is a way to the fuller liberty by which Christ has set us free. The history of the Church, particularly in the United States, is a testimony to the alacrity and success with which the religious orders work everywhere, by preaching, teaching, and by good example. Whether in active ministration, or in contemplative seclusion, they all merit well of human society, and their prayer propitiates the majesty of God. And the partiality that doth to their vices the vespers and magnify their manner of life above that of the religious orders. Finally, as for methods of dealing with those who are not Catholics, it is not prudent to neglect any method which has proved useful in the past. Should the proper authority approve of other methods of preaching, not in the church, but in any private or proper place, or by amicable conferences rather than by disputations, let this be done, provided that the men devoted to this task be men of tried knowledge and virtue.

The Letter concludes with a brief exhortation for unity and the spirit that would tend towards developing a national Church. The term Americanism is approved as applying to the characteristic qualities which reflect honour on the American people, or to the conditions of their commonwealths, and to the laws and customs prevailing in them; but as applied to the opinions above enumerated it would be repudiated and condemned by the Bishops of America. "If by that name be designated the characteristic qualities which reflect honour on the people of America, just as other nations have what is special to them; or, if it implies the condition of your country, the laws and customs prevailing in them, there is no reason why we should deem that it ought to be discarded. But if it is to be used not only to signify, but even to commend the above doctrines, there can be no doubt that our venerable brethren, the bishops of America, would be the first to repudiate and condemn it, as being especially unjust to them and to the entire nation as well. For it raises the suspicion that there are some among you who conceive and desire a Church in America different from that which is in the rest of the world."

This Letter put an end to a bitter controversy which had been agitated for nearly ten years, particularly in the Catholic press. In expressing their adherence to the Holy See and their unqualified acceptance of the teachings set forth in the Letter, the bishops of the United States made it clear that whatever departures from the same might have occurred in this country they had not been either widespread or systematic as they had been made to appear by the interpretation put upon the "Life of Father Hecker" in the preface to the French translation. (See Hecker, Isaac Thomas.)

Conde B. Allen.
famous oath, promptly, on the first day of the court, and the charge was, that he acted as a priest and minister of the Catholic religious persuasion without having first taken, subscribed, and filed the oath of loyalty. He was arrested a few days afterwards, and brought into court in the custody of the sheriff on the 8th. When asked to say whether he was guilty or not, he denied the charge; to which the presiding officer replied, "You are convicted in default of payment of a fine of $500, committed to jail, and placed in confinement with three persons of the most degraded type, charged with felonies. On 15 September, he gave bond, being directed to do so by Archbishop Kenrick, who caused an appeal to be taken to the Supreme Court of Missouri. That court had been, a few months before, reorganized by military force, and its bench filled with men committed to upholding the oath. Father Cummings' appeal was promptly denied in the following month of October, and then his case was appealed to the Supreme Court of the United States. Pending his appeal, he was allowed to attend religious functions, and was released on bail; amongst others, the saintly Bishop Hogan, of the diocese of Kansas City, Missouri, yet living at the age of 82 years, then a priest at Chillicothe in Livingston County. He made the oath as odious as possible by accompanying the arresting officer to the court house, dressed in soutane, surplice, stole, and biretta, carrying in his right hand a crucifix, and in his left a large Bible. He took a change of venue, gave bond, and was finally discharged by the effect of the decision in the Cummings case. In an address to some of his parishioners, referring to his appeal and the demand in Father Cumming's case, he said, there has been, ever from the days of Herod, the enemy of Christ. The question, now pending, is not one merely of loyalty or disloyalty, past, present, or prospective. The issue is, whether the Church shall be free or not to exercise her natural and inherent right of calling in her ministers, her minister whom she pleases: or whether, yielding to the dictation of the civil power, she shall admit those only, who, according to its judgment, are fit for the office."

In Cape Girardeau County, the fanatics did not stop with priests, but indicted eight Sisters of Loreto for committing the same crimes. Augustin Wittenberg were arrested by the sheriff, but the others could not be found, and probably fled from their persecutors.

When the case of Father Cummings was heard in the Supreme Court of the United States in March, 1866, there appeared for him, David Dudley Field, Reverdy Johnson, and Montgomery Blair, all three lawyers of national reputation. Notwithstanding the sanctity of the principles involved, the Supreme Court, on 14 January, 1867, by only one majority declared the oath void, and thus relieved the priests and nuns of Missouri from further persecution. The effect of the decision in Father Cummings' case is best summarized by Justice Miller in his dissenting opinion in ex parte A. H. Garland (4 Wall 333) where he says of it: "In this case, the Constitution of the State of Missouri, the fundamental law of that state, adopted by their popular vote, declares that no priest of any church or denomination, unless he is provided for by law, be he what he will, by his own oath, that he has borne a true allegiance to his government. This court now holds this constitutional provision void on the ground that the Federal Constitution forbids it". Father Cummings' health was seriously injured by his brutal treatment, and a few years afterwards he lost his mind, and died a martyr to the cause of civil and religious liberty.

WILLIAM T. JOHNSON.

TETZEL, Johann, first public antagonist of Luther, b. at Pirna in Meissen, 1455; d. at Leipzig, 11 Aug., 1519. He began his studies at Leipzig during the latter part of 1472, but returned, it is said, to the university of Ingolstadt, where he obtained his doctorate of civil law in 1478. He became the leader of the Dominican order, and was created in 1487, being the sixth in a class of fifty-six. Not long after he entered the Dominican Order, whether at Pirna or Leipzig, cannot be established. Dissatisfaction and friction having arisen in the Leipzig community, he went to Rome in 1497 to secure permission from the Pope to carry his grievances to the Papal court, to the end of obtaining a redress. As a result of a recall of this permission, it seems to have carried his point. A few years later we find him as prior of the monastery of Glogau, which belonged to the Polish province. At the request of the Polish provincial John Advocati, he was appointed inquisitor for Poland by the master-general, Cajetan. At this time he also received permission to take the necessary steps to have himself promoted to the doctorate of theology. His relations with the Leipzig convent must in the meantime have been friendly again, for not only did we find him preaching a number of times in the Dominican church at Leipzig, but also in conversations with the Polish province he was appointed inquisitor of the Saxony province. The activity of his life and publicity of his office made him a well-known figure. In 1503 he made his first appearance as a preacher of indulgences, when the Teutonic Order of Knights in Livonia obtained permission from Alexander VI to have a jubilee indulgence for three years preached in the ecclesiastical provinces of Magdeburg, Bremen, and Riga. After the lapse of three years Julius II (22 Nov., 1506) granted a new indulgence for three additional years in the provinces of Marche, Mains, and Trier. At the end of 1509 he was appointed indulgence commissary at Strasburg, and from here in 1510 he went to Nuremberg, Wurzburg, and Bamberg. From July, 1510, to April, 1516, all traces of him were lost. It was his appearance as an indulgence preacher in 1516, to aid the construction of St. Peter's at Rome (see Brunelleschi, XII, 441) that thrust him into an undue prominence, invested him with an exaggerated importance, and branded him with an unmerited odium that only the most painstaking critical research is now slowly lifting. It was while preaching at Jutzborg, a small town outside of Saxony, not far from Magdeburg, that the indulgence (not allowed to be preached), that Luther in one of his most violent philippics in 1541 relates "many people of Wittenberg flocked after indulgences to Jutzborg" (Wider Hans Worst in "Sammtl. W.", XXVI, 50-53), and then after much hesitation nailed the ninety-five theses on indulgences on the castle church door at Wittenberg, 31 Oct., 1517. That this preaching of the indulgences was not the primary and immediate cause that precipitated the promulgation of Luther's ninety-five theses may be inferred not only from his subsequent course but also from the fact that the "Annalen" of Jutzborg (Hochstius, "Vita Joannis Tetzeli""); Wittenberg, 1717, 53 sq. prove that Tetzlpreach there as early as 10 April; that Luther in his letter to Archbishop Albrecht (Oct. 31, 1517) admits that he entertained the thought for a long time to have indulgence against abuses (Enders, "Dr. Marquardt", 1855, 5), that Tetzl for several weeks had already been in the district of Brandenburg (Paulus, "Johann Tetzl!", Mains, 1899, 47).

The theses dispute between Luther and Tetzl is handled so circumstantially in a preceding volume of the "Carmina Evang." Edition of 1885 that need not repeat it here. The publication of Luther's "Sermon on Indulgences and Grace" was replied to
by Tetzl’s “Vorleung”, issued in April, 1518 (Lea, in “A History of Auricular Confession and Indulgences”, III, 395, erroneously makes it Vorleunung), in which the scholastically-trained theologian, though not theologically mistaken with keen penetration, not a mere academic tournament, but a far-reaching and momentous battle of principles, involving the very fundamentals of the Christian religion and the authority of the Church. He lays bare with extraordinary precision the unfortunate consequences that would follow, must it be (his “Vorleung”), Tetzl announces that he would presently publish “a few other principles and positions”. These are the second series of theses, fifty in number, with Tetzl as author, and published in May, 1518. In these, indulgences are but lightly touched upon, the burden of the argument being shifted to the Church. Tetzl as yet was only a bachelor of theology. In the course of 1518 he was promoted to the doctorate, whether by the master-general or the University of Frankfort is not known. Luther’s agitation having frustrated further efforts to popularize the granted indulgence of eight years, Tetzl, by then a frail, broken in spirit and health, retired to his monastery at Leipzig in 1518. Here in the middle of January, 1519, he had to face the bitter reproaches and unjust imputations of Carl von Melitz. At this time that Luther magnanimously penned a letter in which he tries to console him by declaring that indulgences are not of his (Tetzl’s) creation, but that the child had an entirely different father.”

Tetzl died soon after, received an honourable burial, and was interred before the high altar of the Dominican church at Leipzig.

History presents few characters that have suffered more senseless misrepresentation, even bald caricature, than Tetzl. “Even while he lived stories which contained an element of legend gathered around his name, until at last, in the minds of the uncritical Protestant historians, he became typical indulgence-monster, upon whom all the wrong and innocence might be heaped” (Beard, “Martin Luther”, London, 1889, 210). For a critical scholarly study which shows him in a proper perspective, he had to await the researches of our own time, mainly at the hands of Dr. Nicholas Paulus, who is closely followed in this article. In the first place, his teaching regarding the indulgences for the dead, he declared that the forgiveness of sins was sold for money regardless of contrition or that absolution for sins to be committed in the future could be purchased is baseless. An indulgence, he writes, can be applied only “to the pains of sin which are confessed and for which there is contrition”. “No one”, he furthermore adds, “secures an indulgence unless he have true contrition”. The confessional letters (confessionalia) could of course be obtained for a mere pecuniary consideration without demanding contrition. But such document did not secure an indulgence. It was simply a permit to select a proper confessor, who only after a confite confession would absolve from sin and reserved cases, and who possessed at the same time facilities to impart the plenary indulgence (Paulus, “Johann Tetzl”, 103). As much cannot be said about his teaching regarding indulgences for the dead. The couplet attributed to him:

As soon as the gold in the casket rings
The rescued soul to heaven springs,

like that attributed to Luther,

Who loves not wine and wife and song
Remains a fool his life long;

though verbally spurious, can in both instances be in substance unfallingly traced to the writings of their respective authors. By Tetzl they are substantially acknowledged in his Frankfort theses. Here he accepted the mere school opinion of a few obscure writers, which overstepped the contents of papal indulgence Bulls. This opinion found no recognition but actual condemnation at the hands of authoritative writers, and was rejected in explicit terms by Cardinal Cajetan as late as 1512. By then Tetzl, who had himself open to just censure and reproach. To conclude a plenary indulgence for the dead on the mere gift of money, without contrition on the part of the giver, was as repugnant to the teaching of the Church, as it violated every principle of elementary justice. “Preachers act in 1512 as in theBilly by Carlyle, “Cardinal Cajetan, “so long as they teach the doctrine of Christ and the Church; but if they teach, guided by their own minds and arbitrariness of will, things of which they are ignorant, they cannot pass as representatives of the Church; it need not be wondered at that they are not (pres; ‘Johann Tetzl’, 165). It was this deviation from the correct teaching of the Church and the obtrusive and disgraceful injection of the treasury chest, that led to abuses and scandals reprobated by such contemporaries as Cochlaus, Emser, and Duke George (Paulus, op. cit., 117–18). “Grave abuses are; the abuse of preachers, the manner of offering and publishing the indulgence aroused many scandals: above all, Tetzl is in no way to be exonerated” (Janssen-Pastor, “Geschichte des deutschen Völkers”, 18th ed., Freiburg, II, 84).

If Tetzl was guilty of unwarranted theological violence, if, in his headlong indulgence was so culpably imprudent, his moral character, the butt of numerous burlesque and foul libel, has been vindicated to the extent of leaving it untaunted by any grave moral dereliction. These would hardly be worth alluding to, did not some of them have Milititz as the source. But Milititz has been described as he no longer carries his historical weight. “All efforts” (Michau, Michael, a Protestant, “to produce Milititz as a reliable witness will prove futile” (Münch. Allg. Zeit., 18 April, 1901). “The circulated reports of Milititz about Tetzl deserve in themselves no credence”, writes another Protestant author (ibid., 14 March, 1910). “The Ratisbon adulterous charge, with its penalty of drowning, detailed by Luther, Mathesius, Seidlan and almost every Protestant Reformation historian, has been proved so preposterous, that Briesg (Theodor) claims “it is high time . . . that it vanish from all history” (Thol. Liturg., 86). Dibelius of Dresden says: “Among the false and monstrous ascribed to Tetzl by his enemies, that of immorality cannot stand” (Lecture on “Tetzl’s Leben u. Lehre” in “Dresdner Journal”, 20 March, 1903). “Paulus”, in the words of Berger (A.), “has so effectually refuted the notorious adulterous anecdote, that no one will ever revive it.” (Historie Vierterhalbst. f. Gesch., 1902, p. 256). The charge made by Luther in his seventy-fifth thesis, that Tetzl had preached impiously concerning the Blessed Virgin, and repeated in Luther’s letter to Archbishop Albrecht (Enders, I, 115) and in most “scandalous terms in his pamphlet ‘Under Hans Worst after not only purely written Oscar it indignantly denied by Tetzl (13 Dec., 1518), declared false by an official resolution of the entire city magistracy of Halle (12 Dec., 1517), where it was claimed the utterance was made, but has now been successively proved a clumsy fabrication (Paulus, op. cit., 16–16). The charge of embezzling the indulgence funds is also legendary. The precautions adopted to safeguard the alms were of a character that precluded all chance of misappropriation. The chest to receive the money always had two or three locks, the keys of which were in the custody of different persons, and no representative of the inquisitor of Pugger. It could never be opened save in the presence of a notary. The ecclesiastical injunction was that the faithful had to deposit their contributions in person. To give it to the confessor or indulgence subcommissary invalidated the indulgence (Paulus, op. cit., 76–77). The Tetzel
zel indulgence chests exhibited at Jüterbog and other German towns, are counterfeit, according to the Protestant writer Körner (Tetzels Leben, 73). The latest Catholic biographer of Luther, Grissar, writes: "To ascribe to the unhappy monk the 'cause' of the entire apostasy that set in since 1517 is an un- true legend," he adds. Freiburg, 1911, 1, 252.

H. G. GAMS.

Teschira, a titular see in Libyan Pentapolis. Teschira, Tēqṣira, neuter plural, was a city on the coast of Cyrenaica, 200 stadia west of Ptolemais. It was celebrated for its worship of Cybele, in whose honour annual festivals were held. During the reign of the Ptolemies it was called Arsinoe; at a later period it became a Roman colony, and was garrisoned by Justinian. The ruins are called Tokra (vilyat of Benghazi). Two of its bishops are known, Secundus and the Coetus, in the 4th century, and at that of Ephesus in 431 (Le Quen, "Orients christ.", II, 623). The see is mentioned in Parthey (Notitia episcopatum, I) about 840.

S. PEIRÉS.

Teutonic Order, a medieval military order modelled on the Hospitallers of St. John, which changed its residence as often as the latter. These residences, marking as many stages in its development, were: (1) Accon (Acre), its cradle in Palestine (1190-1309); (2) Marienburg, Prussia, the centre of its temporal domination as a military principality (1309-1525); (3) Mengentheim in Franconia, which inherited its diminished possessions after the loss of Prussia (1525-1805); (4) finally, Vienna in Austria, where the order has gathered the remains of its revenues and survives as a purely hospital order. A Protestant branch likewise subsists in Holland.

(1) There was already a Teutonic hospital for pilgrims from Germany in the Latin Kingdom of Jerusalem, with a church dedicated to the Blessed Virgin, who is still the patroness of the order and after whom the name Mariani is sometimes given to its mãstors. It was established under the jurisdiction of the Grand Master of St. John, was broken up at the conquest of Jerusalem by Saladin (1187). During the Third Crusade German pilgrims from Bremen and Lübeck with the Duke of Holstein established a temporary hospital under the besieged walls of Acre; this was a large tent, constructed from the sails of their ships, in which the sick of their country were received (1190). After the capture of Acre this hospital was permanently established in the city with the co-operation of Frederick of Suabia, leader of the German crusade, and at the same time religious knights were attached to it for the defence of pilgrims. The Order of Teutonic Knights was founded and took its place beside the other two orders of Jerusalem, the Hospitallers and the Templars. As early as 1192 they were endowed by Celestine III with the same privileges as the Order of St. John, which they had acquired under the power of the Temple, from which they borrowed their military organization. Innocent III in 1205 granted them the use of the white habit with a black cross. The emperors of the House of Suabia heaped favours upon them. Moreover, they took sides with Frederick, to whom he had promised with the pope and in opposition to the other two military orders. During the Fourth Crusade, when the gates of Jerusalem were for the last time opened to Christians, under the command of this emperor, the Teutonic Knights were able to take possession of their first house, St. Mary of the Germans (1229). But it was not for long and before the end of the century they left Palestine, which had again fallen under the yoke of Islam (1291).

(2) A new career was already open to their warlike and religious zeal, in Eastern Europe, against the pagans of Prussia. This coast of the Baltic, difficult of access, had hitherto resisted the efforts of the missionaries, many of whom had laid down their lives. To avenge these Christian crusades were preached; a military order founded with this object, the Sword-bearers (see Military Orders, Teut.), had not been very successful, when a Polish duke, Conrad of Masovia, determined to ask the assistance of the Teutonic Knights, offering them in return the territory of Culin with whatever they could wrest from the infidels. Herman of Salza, then the Grand Master of the order, was authorized to make this change by Honorius III and the Emperor Frederick II, who, moreover, raised him to the rank of Prince of the Empire (1229). The knight Hermann Balk, appointed Provincial of Prussia, with twenty-eight of his brother knights and a whole army of crusaders from Germany began this struggle which lasted twenty-five years and was followed by colonization. Owing to the privileges assured to German colonists, new towns arose on all sides and eventually Germanized a country of which the natives belonged to the Letto-Slavic race. Thenceforth the history of this military principality is identified with that of Prussia (q. v.). In 1300 the fifteenth Grand Master, Sigfried of Feuchtwangen, transferred his residence from Venice, where at that time the knights had their chief house, to the Castle of Marienburg, which they made a formidable fortress.

The number of knights never exceeded a thousand, but the whole country was organized in a military manner, and with the constant arrival of new crusaders the order was able to hold its own among its neighbours, especially the inhabitants of Lithuania, who were of the same race as the natives of Prussia and, like them, pagans. In the battle of Rudau (1307) the Lithuanians were driven back, and they were not to return some years later, with their grand duke, Jagiellon, who embraced Christianity when he married the heiress of the Kingdom of Poland (1386). With this event, which put an end to paganism in that section of Europe, the Teutonic Knights lost their raison d'être. Thenceforth their history consists of incessant conflicts with the kings of Poland. Jagiellon concluded with them the Peace of Tannenberg (1410), which cost them 600 knights and ruined their finances, in order to repair which the order was obliged to have recourse to exactions, which aroused the native nobility and the towns and the Poles with an opportunity to interfere against the order. A fresh war cost the order half its territory and the remaining half was only held under the suzerainty of the King of Poland (Treaty
of Thorn (1466). The loss of Marienburg caused the transfer of the Grand Master’s residence to Königsberg, which is still the capital of Prussia properly so-called. To maintain itself against the kings of Poland the order had to rely on Germany and to confide the charters of Grand Master to German princes. But the second of these, Albert of Brandenburg (1511), abused his position to secularize Prussia, at the same time embracing Lutheranism (1525). He made Prussia an hereditary fief of his house under the suzerainty of the Crown of Poland.

(3) Nevertheless, the dignitaries of the order in Germany faithfully preserved its possessions, and having broken with the apostate chose a new Grand Master, Walter of Cronenberg, who fixed his residence at Mengentheim in Franconia (1528). After the loss of Prussia the order still retained in Germany twelve bailiwicks, which they lost one by one. The secession of Utrecht (1580) meant the loss of the bailiwick of that name in the Low Countries. Louis XIV secularized his possessions in France. The Treaty of Lunéville (1801) took away its possessions on the left bank of the Rhine and in 1809 Napoleon abandoned its possessions on the right bank to his allies of the Confederation of the Rhine. The Teutonics retained only the bailiwick in the Tyrol and that in the Austrian States.

Thus the order became purely Austrian, under the supreme authority of the Emperor of Austria, who reserves the dignity of Grand Master for an archduke of his house. Since 1894 it has been held by Archduke Eugene. There are at present 20 professed knights who are bound to celibacy while they enjoy a benefice of the order, and 30 knights of honour who are not bound to this observance, but who must furnish an annual fee of 1500 florins and an annual contribution of 100 florins. Moreover, their admission exacts a nobility of sixteen quarterings. The revenues of the order are now devoted to religious works; it has charge of 50 parishes, 17 schools, and 9 hospitals, for which object it supports 2 congregations of priests and 4 of sisters. Moreover, it performs ambulance service in time of war; it pays the cost of the ambulance, while lay Marians are engaged as ambulance bearers. Thus, after various vicissitudes the Teutonic Knights are restored to their original character of hospitaliers. Besides this Catholic branch, the order has a Protestant branch in the ancient bailiwick of Utrecht, the possessions of which have been preserved for the benefit of the nobility of the country. The members, who are chosen by the chapter of knights, must give proof of four quarterings of nobility and profess the Calvinistic religion, but are dispensed from celibacy. William I took possession of Holland in 1811 he suppressed the institution, but as early as 1816 the first King of the Low Countries, William I of Orange, re-established it, declaring himself its protector. The present order comprises 10 commanders, Jonkkeeren, and aspirants (expectanten), who pay an entrance fee of 320 florins and have the right to wear in their buttonhole a small cross of the order.

CH. MOELLER.

TeWdridg (Thedoric), a Welsh saint, son of King Teithfallt of Morganwg or Southern Wales, flourished probably in the sixth century. He was a liberal benefactor of the church of Llandaff. He resigned the government to his son Meurig and devoted himself to religion and contemplation at Tintern in Monmouthshire. When, however, the Saxons crossed the Severn and pressed hard upon Meurig, TeWdridg left his solitude and gained a brilliant victory at the head of his old troops, but was killed in the main battle. A church was erected over the grave of the royal martyr; it was called Martyr TeWdridg and now Mawrthen at the junction of the Rivers Wye and Severn. The day of his death is 3 January; the year is uncertain, the dates 610, 577, 527, or even 470 being given.

KLEMENS LÖFFLER.

TeWkesbury, John. See Tunsted, Simon.

TeWkesbury Abbey, Gloucestershire, England, derives its name from Theoc, a hermit of early times, to whose memory a monastery was dedicated by the Duke of Mercia in the eighth century. In 980 it became a cell of the Benedictine Priory of Cranborne, in Dorsetshire; but having grown in wealth and importance under the Norman Conquest, and being richly endowed by FitzHamon (a cousin of the Conqueror) it became an independent abbey in 1103. Gerald was the first abbot, and the magnificent church—the largest in England, after Westminster—of the churches not now used as cathedrals—was completed and consecrated in 1123. FitzHamon, with his son-in-law Robert, Earl of Gloucester, was regarded as its second founder; and their descendants, the De Clare, Despencers, and Beauchamps, remained closely associated with it almost until its dissolution. The tombs of many of them are still to be seen in the church. The Annals of TeWkesbury from the Conquest (1066) until 1263 are extant, and contain valuable notes on the national history, but little of interest about the abbey itself. During the thirteenth and succeeding centuries TeWkesbury was constantly receiving new endowments in lands and money, and became one of the wealthiest of English monasteries, its income at the Dissolution being set down at £1600 (equal to more than ten times that amount in modern money). The great battle of TeWkesbury on 4 May, 1471, between Yorkist and Lancastrian, was fought in the very precincts of the abbey; and many of those who fell, including Henry VI’s only son, were buried in the church.

Sixty-eight years later the last abbot, John Wake- man, surrendered the abbey to Henry VII. Wake- man himself was handsomely punished, and in 1541 became first bishop of the newly-erected See of Gloucester. The abbot’s house was preserved intact; most of the remaining monastic buildings were destroyed as “superfluous”; but the magnificent church
was subsequently sold by the king to the parishioners of Tewkesbury, and was thus saved from destruction. It measures 317 feet long by 122 acres across the transept, and the massive central tower is 132 feet high. The pillars and triforium of the nave and the lower part of the choir are of the original Norman work, and the splendid groined roof, replacing the original Norman ceiling, and apsidal choir with chevet of surrounding chapels (closely resembling Westminster Abbey), date from the fourteenth and fifteenth centuries. The choir windows contain some fine old stained glass. The whole church underwent restoration and reconstruction under Sir Gilbert Scott (1875-79), and four years later the restoration committee was set up to repurchase what remained of the monastic buildings.

D. O. HUNTER-BLAIR.

TEXAS, STATE OF.—The name, Texas, is probably derived from Téjas, the name of a friendly tribe of Indians met within the territory by the early Spanish explorers.

GEOGRAPHY AND PHYSICAL CHARACTERISTICS.—The state is bounded on the north by Oklahoma, on the west by New Mexico and Mexico, on the south by Mexico, and on the east by the Gulf of Mexico, and the Gulf of Mexico, Louisiana, and Arkansas. It lies between 29° 15' and 36° 46' N. lat., and 93° 30' and 106° 30' W. long. It embraces 263,896 sq. miles, of which 3498 sq. miles are water.

Four great natural provinces, running in general direction from south to north, are formed by geological development. The first of these, called the Gulf Prairie, is the coastal plain, consisting of Coast Prairies, a Tertiary area, and Black Prairies. Extending back from the Gulf Coast for thirty to fifty miles, an outcrop of underlying clays gives a flat, almost treeless tract running along the whole length of the coast and known as the Coast Prairie. Different climatic conditions with respect to rainfall vary the products of different parts of this region. The eastern and northern part, where the rainfall reaches from forty to fifty inches annually, is suitable for rice culture, which is localized there; in the central portion along the coast where the rainfall is less, sugar-cane, fruit, and "truck" are extensively cultivated. While the southern part, with rainfall only 20 to 28 inches annually, cotton culture and "cattle raising on the range" are the chief industries. Irrigation, however, in this south-western region makes the cultivation of sugar-cane and sorghum as well as cotton of some promise. Favourable underground conditions make this Coast Prairie the location of important oil-fields. Further to the interior the Coast Prairie is succeeded by Tertiary deposits giving a generally sandy condition to the soil. This Tertiary area also is divided by climatic conditions. The south-western and western part, the "Rio Grande Plains," which have a rainfall, produces only a dwarfed and shrubby natural vegetation and is hence called the "Chaparral Country"; the humid part, however, north and north-east, called the East Texas timber belt, grows both the short and long-leaf pine. Lumbering is here the important industry. In the northern part of this region more fertile soil affords the great fruit and "truck" products; cotton and tobacco are also grown. In one part of the west of this Tertiary region cotton and tobacco, and in some cases brick and tile, are produced. Clay and lignite are extensively worked. Further inland and north of the Colorado River in this Coastal Plain are the Black and Grand Prairies, the most important agricultural region of Texas. Black waxy calcareous clay soil, for the most part underlaid by prolific and water-bearing formations, makes this region the great cotton and wheat-baring section, while oats, wheat, alfalfa, and sorghum are also extensively grown. Wherever the climate becomes arid cattle raising increases as an industry. The Central Basin is the second great natural province. This region, situated in north-west and central-west Texas, was once covered with crenetaceous materials, but now is denuded by the head waters of the Red, Brazos, and Colorado Rivers. Its southern extremity, the "Llano Country", as it is called, has a granite foundation, much quarried, and deposits of hematite and magnetite occur here plentifully. On the eastern side the soils are a clayey, sandy loam, and include sands, loams, black and light-colored clays, producing, in the heavier soils, cotton, wheat, oats, sorghum, maize, and in the lighter, cotton, maize, fruit, and garden products. The western portion contains notably fertile soils, yielding abundant crops of karif-corn, maize, cotton, wheat, oats, peaches, and alfalfa. Deposits of salt, clay, and gypsum occur in this area. The third natural province of Texas is the Plateau Province, having three great divisions: the Llano Estacado, Staked or Palisaded Plains, which extend beyond the limits of the state, and the Edwards Plateau. The Llano Estacado, a plateau 2500 to 4000 feet in elevation, derives its name from being itself an extensive uplifted mesa, surrounded, except on the Edward's Plateau side, by "breaks", cliffs, or walls, which, as palisades, have to be climbed before the plateau is attained. The plateau is treeless, grass-covered prairies; the soils are fine, sandy loams, and the annual rainfall only from fifteen to twenty inches. Formerly this region was devoted entirely to cattle, but now alfalfa, barley, broom-corn, maize, cotton, wheat, and fruts are being successfully cultivated. The water is made abundantly by wells at a depth of 100 to 60 feet. Attempts to utilize these for irrigation on a small scale are now being made. On the Edward's Plateau the upland prairies are mainly given over to cattle, sheep, and goats; in the cañon valleys, however, are alluvial plains in which cotton, corn, maize, wheat, and oats are a success. On the Stockton Plateau the formation resembles that of Edward's, but the rainfall being less, averaging only fifteen inches annually, it is used almost entirely for cattle.

The fourth province is that of the Trans-Pecos Mountains, with rainfall ranging from 5000 to 9500 feet. Here the chief wealth is in the minerals, consisting of silver, copper, and lead of good grade and some gold, tin, zinc, and quicksilver. Local conditions have, however, retarded the mining development, and silver and quicksilver are the only ores worked on a commercial basis. The annual rainfall on these mountains is as low as ten to fifteen inches, but irrigation of the valley lands is practised by means of impounded storm-water, and alfalfa and kraif-corn are commonly grown. The chief industry of the section is the care of cattle. Over such an extensive territory there is not a single railroad, and in the east there are numerous small streams flowing south and east into the Gulf of Mexico, in the Trans-Pecos region there are practically no streams at all that reach the sea. In the arid regions the drainage
channels flow only for a short time after rainfall. On the west and southwest boundary the Rio Grande runs for 1200 miles. The Pecos River crosses the western portion of the state, from north to south, without a tributary. It has a broad plain where it enters the state, but descends into an inaccessible cañon as it approaches the Rio Grande. The Canadian River crosses the extreme north of the state from west to east merely as a small stream on a wide bed of wet sand. The Red, Brazos, and Colorado rivers and their numerous tributaries rise in the Llano Estacado and flow south and east to the Gulf. Their valleys broaden as they approach the coast and in many cases they are wide enough to be classed as rivers. Many of them originate from artesian springs at the foot of the escarpments, called Balcones, at the south of Edward's Plateau. The annual rainfall in Texas varies from 40 to 50 inches in the east—it is 60 at Texarkana—to 10 in the west. Moreover, the evaporation in the west is excessive as compared with that in the east; hence the eastern part of the state is humid, the west arid. The Gulf breeze cools the air in the summer, and brings rains to the north and east in winter and spring. The northern limit of the Mexican rainy season, with its water from the Pacific, freshet in summer and autumn, reaches the Trans-Pecos Province and along the Rio Grande. The cold winds called "Northers", blowing from the northwest or from the Rocky Mountains, sweep at times over the whole state. A considerable difference, 20" in average temperature between various places in the state, is observable.

Population and Resources.—The population of Texas as given by the thirteenth decennial census is 3,896,542. This causes the state to rank fifth in population in the Union. In 1850, when Texas was first enumerated in the United States census, the inhabited area was 671,585 acres of tillable land. At present the number of farms is given by the census (1910) as 418,377, with an average of 262 acres to the farm. Over 1,000,000 acres are now (1912) under irrigation, representing an investment of $17,000,000 for irrigating plants. Several large irrigating enterprises are being inaugurated that will greatly increase the acreage under irrigation. The value of farm produce and the state (lands, buildings, implements, and machinery) was $1,879,246,000 in 1910. In 1911 the acreage for some staple crops is given officially as follows: cotton, 10,868,000; corn, 9,240,000; wheat, 1,240,957; potatoes, 60,000; rice, 725,000; tobacco, 600.

The following figures, culled from the offices of the State and Federal Commissioners of Agriculture, show the values of some Texas crops for the year 1910: cotton and cotton seed, $265,955,944; corn, $114,206,000; wheat, $18,404,000; oats, $11,443,000; barley, $10,350,000; rye, $47,000; rice, $5,942,000; emmet and spell, $3,000; kaibler and milo-maize, $3,900,000; peanuts, $1,343,000; other grasses and seeds, $750,000; potatoes, $3,366,000; sweet-potatoes and yams, $2,600,000; hay and forage, $13,900,000; tobacco, $105,000; sugar-cane, $4,360,000; broom corn, $4,000; truck, $30,000,000: total value, $41,723,000.

The United States Government Bulletin, showing the number of bales of cotton ginned to 20 March, 1912, gives Texas 4,437,876 bales as against 3,172,488 for the entire season in 1910. The table given above names only the principal crops and products. The Texas Ranchers' Association says that the value of the Texas hay crop, including local consumption and inter-state shipments—the census does not give such local shipments—at $180,000,000. Altogether, the estimate of Texas farm and garden products, not including livestock, gives a market valuation of $650,000,000 annually. As Texas leads in the production of cotton so also in range cattle, pecans, figs, watermelons, bees, and honey.

Livestock.—The livestock statistics given below are taken from a report of the Commissioner of Agriculture of the State of Texas and from the U. S. Census (1910). The figures give the value of animals in the state:

- Milch cows, $33,542,000; other cattle, $109,104,000; horses, $97,199,000; mules, $49,498,000; sheep, $15,300,000; goats, $2,000,000; pigs, $7,002,000; poultry, $4,806,653; total value, $349,066,525; number of colonies of bees 238,107; value, $675,000. The wool product given by the Federal Census, 1910, for the then current year is valued at $2,202,342. Conservative estimates of the dairying industry in Texas state 4,000,000 lbs. as the output from the creameries in 1910. Official reports of the Fish and Oyster Commission for the year ending 1 August, 1911, relative to the fish and oyster catch in Texas waters, give: oysters, 110,550 barrels; fish, 3,231,191 lbs. Many thousands of pounds of fish are also taken by the fishermen who do not come under the License Act, and whose catch is not recorded. The timber and lumber industry from the last report is valued for its output at $1,150,000.

Minerals.—The following figures are taken from a statement made by the director of the Bureau of Economic Geology and Technology of the University of Texas. They have been compared with figures from the United States Geological Survey for 1909 and show the increase or decrease that may be expected from one year to another though the general sums may differ but comparatively little. All salt, $9,312,592, excluding pottery, $2,744,845; coal, $2,977,858; fuller's earth, $8,682; granite, $1,897,000; iron ore, $34,000; lignite, $763,107; lime, $226,592; limestone, $477,239; mineral waters, $128,549; petroleum, $6,005,735; pottery, $112,604; quicksilver, $151,413; salt, $272,568; sandstone, $40,471; sand and gravel, $317,225; stone, $205,374; stone, crushed, $306,868; tin, $2,586; cement, gypsum, natural gas and sand, lime-brick, estimated $500,000; total, $16,597,367.

Manufactures.—The value of the manufactured products of Texas as shown for 1909 (U. S. Census) is $237,806,000; the capital export value is $210,876,000; and the raw material used being valued at $175,179,000. The industries given do not include any whose products are less than $500 a year and likewise exclude steam laundries. The total wealth of the state as shown by the report compiled by the State Comptroller's Department for 1911 is valued at $2,515,632,745. The capital and surplus of Texas banks amounts to $113,055,617, while the deposits, 1 June, 1911, amounted to $206,664,471, these figures being taken from the Texas Bank Directory (1911), excluding a number of private banks not rendering a report.

Means of Communication.—Texas has 140,000 miles of public highways, 35,000 miles of which are graded and are classed as improved highways. Besides these last many thousand miles are naturally of such good formation as to be passable at all seasons of the year and do not require much expenditure, but many thousand miles more attention in places, but are not included in the class "improved highways." The total railroad mileage of the state is 16,192.34 miles. These figures are derived from the report compiled by the comptroller's department of the state. The Port of Galveston is the only port of Texas. The federal foreign trade of the Galveston customs district for the fiscal year ending 30 June, 1911, was $225,155,912.
of this the exports were in value $220,491,365. The coast-wise commerce of the port is estimated at $200,000,000. Fort Arthur, the port next in importance to Galveston, had on 30 June, 1911, foreign exports for the year to the value of $23,981,681; the value of the imports was $173,815. The domestic commerce of this port is said to be in excess of the foreign. The towns of Beaumont and Orange will soon share with Fort Arthur in the commercial benefits of deep water, all three being connected by the Sabine Neches Canal, now about to be deepened to 25 feet. Houston also is to share with Galveston by the completion of the ship-channel which connects the city with Galveston Bay. The securing of deep water at Aransas Pass will make Harbor Island another deep-water port. Velasco at the mouth of the Brazos River, and Point Isabel at the mouth of the Rio Grande, will yet be important ports for deep-sea commerce, although only beginnings are now in evidence. The project of the Federal Government to form an inland water-way from the west coast of Florida to the Rio Grande, skirting the Gulf Coast, through the protected bays where possible, has been already begun in one section in Texas, between the Brazos River and Matagorda Bay, through the mainland. Other channels are being maintained in various places while some of the rivers are utilized for navigation and projects for rendering them more navigable are being prosecuted. The value of Texas shipping, steamships, and sailing vessels given by the comptroller's department is $2,290,850.

Educational System.—The public educational system of Texas includes, under State control, the University of Texas at Austin, and its medical department at Galveston; the Agricultural and Mechanical College at College Station; four normal schools respectively at Huntsville, San Marcos, Denton, and Canyon; the College of Industrial Arts (for women) at Denton; the normal and industrial school for coloured youths at Prairie View, and the high schools and common schools in the various independent and common school districts of the State. The intention expressed in the Constitution of the Republic of Texas of establishing a university, and the later endowment granted by the Congress to give it effect (1839), never attained fruition. In 1869 the new Constitution of the State again directed the establishment of a university and in accordance with this mandate the Legislature (1871) refunded a prior endowment of $100,000 and added thereto 1,000,000 acres of land. In 1881 the main university was located at Austin and the medical department at Galveston. The main university was opened in 1883 with an enrollment of 221 students. Not until 1891 did the medical department receive its first students. The enrollment of the university from its lands is about $170,000 yearly; the legislative appropriation for 1912 is $268,545, in 1913 it will be $400,000. The institution has 48 professors, 43 instructors, 10 tutors, 10 fellows, 94 student assistants; the present enrolment in the main university at Austin is 1777; in the medical department, Galveston, 288.

The Agricultural and Mechanical College was opened in 1876 with Federal aid. Its present enrolment is 1126. The Legislative appropriation for its maintenance and that of other colleges is shown below.

The school property in independent school districts, including cities and towns, is valued at $16,692,942, and in common school districts at $6,644,096. Enrolled in the scholastic census of the independent districts are 396,300 children, in the common school districts are 623,106; in all 991,490 between the ages of 7 and 17, the scholastic age fixed by law. The total available fund for the current year from all sources for the instruction of these children is $13,351,121.

Political History.—Early in the sixteenth century Spanish explorers along the Gulf Coast and in the interior of the territory had gained a knowledge of Texas, among the first being Alonso Alvarez de Pineda. Alvar Nuñez, better known as Cascabe de Vaca, unmistakably investigated the Gulf shore from Florida to Mexico before 1530, and then traversed Texas from the coast probably near Galveston to a point in the vicinity of El Paso. There is evidence to show that Coronado, in his memorable northern expedition from Mexico, 1540, travelled near San Elizario and entered the pueblo of the Tigas, afterwards called Yela, where a church was built. A church still exists on what is said to be the site of that built under the eye of Coronado. Spain's knowledge of this country, however, had no result towards its occupation before the landing of La Salle in 1835. Robert Cavalier de La Salle, who had sailed down the Mississippi to New Orleans in 1682, was returning from France in 1685 prepared to found a colony on the banks of the "Father of Waters" and hold the great river for France; because of an error in his estimate of the latitude of its mouth he passed the mighty stream, and sweeping along the Gulf Coast landed in Matagorda Bay in Texas, which he named the Bay of St. Bernard. In this neighbourhood he attempted to found a colony and called the place Fort St. Louis. From it he made expeditions to discover the position of his confère de Tonti, who had been left in charge of a colony near the mouth of the Illinois River. On one of these La Salle was slain by one of his own followers, many of his nephew, Duhaut. His faithful friend and companion, Father Anastase Douay, buried in Texas soil the body of this intrepid and enterprising explorer.
The colony was soon scattered and destroyed by sickness and the Indians. When news of the French attempt reached Mexico, Don Antonio de León was sent by the Count of Monclova, Viceroy of Mexico (1866), to scour the country and drive out the French. De León visited the ruins of Fort St. Louis and made some little explorations on his way. Later, in 1690 and 1691, some attempts were made to occupy the "Neche River," as the Spanish called it. Twenty-three years later (1714), Cadillac, Governor of Louisiana, sent Hucherau St-Denis into Texas territory to establish trade with Mexico. St-Denis, adventurous and enterprising, met with remarkable success, and the trail known as the old San Antonio mission road, now called the Grande de chemin, flourished through which commerce flowed between the nations. Other movements of the French evoked counter actions from the Spanish. It may be remarked that the appellation Texas probably arose from La Harpe's dating a letter from the territory of "Las Tejas," although some ascribe the bestowal of the name to de León. The French trade enterprises stimulated Spain to inaugurate in 1715 an extended presidio and mission plan to hold the country and to civilize and Christianize the Indians. Many tribes of these inhabited the broad prairies; some, wild and untamable; others, sedentary, gathered in villages, and were in the process of civilization. Some of these pueblos are still traceable and the ancient town of the Tejas Indians once occupied the site of the present town of Mound Prairie. The Spanish missionary effort spoken of more particularly in another part of this article covers the period from 1715 to 1794. Other efforts were made by the French to utilize this land, claimed because of La Salle's discovery and settlement, and various struggles between both countries were finally settled by the cession to Spain of Louisiana in 1762. Previous to this in 1728, however, Spanish settlers from the Caney Islands supplemented by others from Mexico were introduced at great expense, and Texas was made a separate province. The civilized population, half or more European, however, grew very slowly (3000 in 1714 and in 1805 only 7000).

From the latter part of the eighteenth century through the second half of the nineteenth century (1797), to provide horses for the army in Louisiana from the wild herds roaming the prairies of Texas, attracted the attention of United States citizens to Texas. When, after the purchase of Louisiana, the excitement of the consequent dispute between the United States and Spain had been allayed in 1805-06 and Captain Zebulon M. Pike had made his famous expedition and returned his glowing report, and when Burr's attempt at empire came to naught, this interest was still more stimulated. Hence, the efforts of Mexico to gain independence beginning in 1810 gave rise to filibustering movements into Texas, whose eastern boundary was determined on the purchase of Florida in 1819. These were followed by attempts to colonize, so that when in 1821 Mexico had achieved independence Stephen F. Austin and other empresarios, as they were named, received grants of lands for colonies and introduced many families from the United States into Texas. Great land privileges were given these early settlers, but some restrictions were also involved in their tenure, one being that they profess the Catholic Faith. In practice, however, this was interpreted in a very nominal way. Real Catholics also entered from the States and from Europe at this period. Catholic colonies even were founded, e.g. Irish settlements near Refugio and San Patricio on the Nueces River (1832). President Bustamante's decree of 1830 prohibiting further entrance of colonists from the United States and delay in separating Texas politically from Coahuila—they had been united in 1824—had other sources of discontent, brought about a successful revolution in 1836. On 16 November, 1836, a constitution was adopted for the Republic of Texas and signed on the seventeenth. Its independent existence lasted until 1845, when it was annexed to the United States.

The Territory embraced besides its present area what now forms parts of New Mexico, of Oklahoma, of Kansas, of Colorado, and even of Wyoming. The boundary was outside its present limits, and the United States in 1850 for $10,000,000. The magnificent public domain possessed by the Texas Government as a republic and retained by her as a State gave ample opportunity for colonizing schemes, and hence grants of land were made to promoters of colonies, some of which were largely Catholic. Henry Castro, consul general for Texas at Paris, obtained large grants from the Republic in 1842, and introduced five hundred families from France a few years later. Castroville on the Medina River was thus founded. Similarly New Braunsfeld was settled by Prince de Solms, who brought to Texas Alsatian families a year or so earlier. By this liberality in granting lands Texas invited settlers, using also the same means to encourage the building of railroads within her borders. The war with Mexico in 1846 concerning the Texas boundary cemented the union of the young State to her older sister nation, but this union was rudely broken. The Secession movement of 1851 carried Texas away from the Federal Government. Texas furnished not a few distinguished generals and over 90,000 soldiers to the "Lost Cause" and at Brownsville, Brassco Santiago, within its borders was fought the last skirmish of the war between the States, on 13 April, 1865, between a party of Confederates and a detachment from the division of General Banks. After the vicissitudes of Reconstruction the State Constitution at present in force was adopted (1876), and under its provisions has emerged the present state of legitimate enterprise. In population and wealth, the State has made rapid strides. The nations of the world have poured in, and continue to pour healthy, industrious agriculturists into her territory. Her development has only begun and her untold possibilities promise comfort and wealth to those who put to this eighteenth-century foundation the marks of the nineteenth.

CATHOLIC HISTORY AND PROGRESS.—The history of the Catholic Church in Texas begins practically with the landing of La Salle in February, 1685. With him was a missionary force of seven priests, four Recollects, and three Sulpicians, who ministered to the spiritual wants of the French colony at Fort St. Louis while it lasted. On its destruction by the Indians in 1687 some of these doubtless perished with their flock, the others made their way to the French settlements further north. Don Alonso de Leon, Governor of Coahuila, was accompanied in his expedition from Monterey to the site of La Salle's settlement in 1689 by Fray Damian Martinez or Martannet from the Franciscan Apostolic college of Santa Cruz at Queretaro. Two of these colleges were established in Mexico, one at Queretaro in the seventeenth century, the other later (1706), at Zacatecas. From these centers missionary activity spread, and Fray Damian, began among the Indians of Texas. In 1690 Leon again returned to the ruins of Fort St. Louis. This time Father Damian with four other Franciscans again accompanied him and established the mission of San Francisco de los Tejas in eastern Texas among the Tejas Indians on the Trinity River. On 16 May, 1691, Domingo de Teran, successor of
Leon as Governor of the Province of Coahuila, with the intent of occupying and settling Texas, set out from Monclova with “officers, civil and military”, bringing with them soldiers, labourers, and artisans, together with domestic animals and seeds for farming. Within the year they went nine Franciscan fathers, Francisco Hidalgo, Nicolas Recio, Miguel Estelles, Pedro Fortuny, Pedro Garcia, Ildefonso Monge, Jose Saldivas, Antonio Miranda, and Juan de Garayuschea. These priests attended the settlements founded during the expedition on the Red River, the Neches, and the Colorado; but during the first six years there were but nine abandoned missions for the Indians and baptizing many thousands of them.

Although, in consequence of the rebellion of the Indians against the military and religious discipline of the presidios and missions (1693), King Philip II of Spain authorized the abandonment of these posts, until such time as circumstances should offer more hope of success", it is certain that the devoted missionaries did all that was possible to attend to the religious needs of such of their converts as remained faithful. Indeed we know that during the period from 1693 to 1714 the Spanish missionaries, when forced to withdraw, took with them to San Antonio their faithful Indians and were brought back to these missions by Don Domingo Ramon in 1714. In 1703 the Mission San Francisco de Solano was founded on the Rio Grande by Franciscans from Queretaro; afterwards this mission was moved in 1708 or 1709 to the interior of Texas and called San Ildefonso; again in 1710 or later (1713) it was moved to the Rio Grande and called San Jose. This mission was moved by Father Antonio Margil de Jesus to San Antonio de Bexar and he founded San Pedro Springs under the name of San Antonio de Valero about 1718; in 1732 it was moved to the military plaza in San Antonio, and in 1744 to the site it now occupies, where it was named the “Alamo”. About 1783 the mission became a parish church, and on 2 January, 1793, the Bishop of Monterey directed the records to be handed over to the curate of San Antonio de Bexar. The expedition of St. Denis in 1714 led the Duke of Linares, Viceroy of Mexico, to favour a widespread mission movement in Texas, and from that date the founding of these religious institutions went on with great spirit. Father Margil, referred to above, whose virtues were declared heroic by Pope Gregory XVI, founded the missions of Guadalupe among the Nacogdoches, Dolores among the Aes, and San Miguel among the Adaes Indians, also the mission of Nuestra Senora del Pilar de los Adaes. The founding of other missions in the northern part of the territory is also ascribed to the holy priest. In June, 1718, during the war between Spain and France, the missionaries and their faithful flocks were again forced to retire to San Antonio, but after the cessation of hostilities these missions were re-established and the French settlers in Louisiana, as well as the Indians, profited by them. The mission of Nuestra Senora del Pilar of Los Adaes being only about twenty miles from Natchitoches.

Father Margil was also the founder of other missions; among them one of the most beautiful in the neighbourhood of the city of San Antonio, the Mission San Jose, founded 1720. Even in decay this mission arouses the most intense interest, its artistic carvings and sculpture exciting wonder. In the same neighbourhood is the mission of La Purissima Concepcion, dating back to 3 March, 1731, of which the first stone of its church was laid by Father Bargarro and Captain Perez of the San Antonio garrison. At the same time and near the same site were built the missions San Juan Capistrano and San Francisco de la Espada, but the original missions of all these titles were founded in 1718 on the San Marcos River. Other missions were founded in various parts of the territory of Texas up to 1791. Among these may be mentioned Espiritu Santo, founded first in 1722 near Fort St. Louis; La Bahia, also founded in 1722 at Fort St. Louis, and with its neighbourhood transferred later to Goliad; Rosario, on Mission River, the last foundation of the kind, in 1791. San Saba Mission, on the San Saba River, in what is now Menard County, was founded in 1734 by a company of priests from Santa Fe, among the Indios Bravos (Wild Indians)—the Apaches and Comanches, for the humane reason of the priests that it was better to civilize than to kill them. This mission gave great encouragement to the zealous workers until the reopening of the San Saba silver mines, Las Almagras, a project which resulted in the demoralization of the Indians. During a war between the Comanches and Apaches in 1758, the former, seizing the opportunity when the small Spanish garrison was absent, fell upon the mission and destroyed all, both pastors and flock. Even the small guard of soldiers did not escape. Tradition informs us that no one was spared. The news of the massacre. The remains of the missions still to be seen, in a greater or less degree of preservation or ruin, give ample testimony to the labours of the Franciscans among the Indians, and demonstrate what could have been achieved if the work of God had not been interfered with. Sufficient has been said about the California Missions to indicate the method of the missionaries with the Indians, the nature of their buildings and enclosures, and the routine of their work for the spiritual betterment and civilization of the Indians.

When the movement before referred to, of colonizing the Province of Texas with settlers from Canary Islands and other Spanish dependencies, was put into effect (1728), the first colony was founded in San Antonio and the colonists were fairly well established in 1731. They had built their dwellings around the “Plaza of the Constitution”, or present Main Plaza (called by these colonists the plaza of the sea-girl home they had left, “Plaza des las Islas”), and given their city the name San Fernando. Content for a short time with a small chapel of their own, which, together with the mission church of San Antonio de Valero in the adjoining and pre-existing settlement, temporarily satisfied their religious needs, they founded in 1744 and dedicated in 1749 the church of San Fernando, part of which is still used as the sanctuary of the cathedral of San Fernando, the cathed-
The spiritual jurisdiction of the Diocese of Guadalajara extended over Texas until the erection, in Mexico, of the Diocese of Nuevo León, now Monterey, under the title of Dolores. In 1777, and Texas formed part of Texas territory. The Franciscan missions were immediately under a president of missions. One of these at this date (1777), by an Indult of Pope Clement XIV, was empowered to administer confirmation in all parts of Texas. Don Pedro de Nava, commandant-general of Chihuahua, whose jurisdiction included part of Texas, issued a decree in 1794 by which the temporalities of all the missions of his two provinces were placed in the hands of the civil authorities. It also directed the division of their lands in severally among the inhabitants of these establishments. In Texas, however, the process of secularization took place slowly. In 1813 the missions in some parts of Texas were still flourishing when the Spanish Cortes secularized all the missions in Texas. Not until 1823 did the last of the missions at San Antonio become extinct, when the Government of Mexico put into execution the decree of the Cortes. The mission remained with its keepers, Quereles and Zeno. These with the various reports sent from time to time, during the century and a quarter of missionary activity, would be a most interesting field for the historian, while furnishing unbounded paths for the poet.

The expedition of 1728 proved too expensive to be repeated and so the population of European extraction remained small, as we have seen. Later, however (1805), when the boundary dispute with the United States seemed likely to assume a warlike aspect, besides troops to occupy military posts Spain hurried hundreds of families of settlers to take possession of the country. These were of course provided with priests and in 1805-1806 we find Don Primo Feliciano Marin, Bishop of Nuevo León, making a visitation in the province, setting church affairs in order, and making a circumstantial report of the spiritual condition of the people.

Father Zebulon M. Pike visited Texas on his famous expedition (1805-06), he remarked the holy lives and rectitude of the priests he had met, their blessed influence upon their flocks, and the general happiness and morality of the people. The European population of course remained small (7000 in 1860), and the revolutionary period beginning in 1810 and lasting fully a decade lowered the general standard both of morals and religion. After settlements from the United States began to be made (1820), we find in the correspondence of the settlers occasional mention of priests still serving some of the old mission churches in the town. It was not until 1837 that the last of the mission lands were distributed among the individual Indios reducidos, who formerly had possessed them in common. Diocesan priests took the places of the Franciscan friars as they departed, when the population required it. The archives of the mission went with their keepers, Quereles and Zeno. These with the various reports sent from time to time, during the century and a quarter of missionary activity, would be a most interesting field for the historian, while furnishing unbounded paths for the poet.

The Texas Revolution there is mention of the intervention of priests between the contending parties, to arrange for the burial of the dead after a battle or otherwise provide for human needs, corporal as well as spiritual. The first priests were in Texas: Father J. M. Odin and Father John Timon, of the Congregation of the Mission, from their seminary at the Barrens, Perry County, Missouri, in the Diocese of St. Louis, had visited in Texas territory previous to its independence, and continued to visit there with the priests of their Congregation. In June, 1838, Archbishop Blanc of New Orleans wrote to Bishop Rosati (q. v.) of St. Louis and to Father John Timon, then visitor of the Congregation of the Mission in the United States, declaring that it was the wish of the Holy See that a trustworthy letter be sent fully a report of the condition of religion in Texas and to report to Rome. The Bishop of New Orleans wished Father Timon to undertake this work. Father Timon accordingly went to Texas, landing at Galveston in December, 1838, accompanied by M. L'Eberia. On the feast of the Holy Innocents the visit was celebrated in Galveston, what was probably the first Mass ever said in the city. Many ministrations to Catholics were required of him, both there and in Houston, then the capital of the Republic, whether he went on 31 December, where he preached in the hall of Congress in the presence of many legislators. 9 January, 1839, when he returned to Galveston, a committee whom he was appointed to provide ways and means for acquiring a lot whereon to build a church, met him and reported favourably. On his visit through the country he had found the care of religion in anything but a good state, although there were quite a few Catholics. He made an official report of his findings to Bishop Blanc who forwarded it to Rome. Although Father Timon had previously refused to be made Coadjutor Bishop of St. Louis with the right of succession (7 September, 1839), he was prevailed upon to accept the honour of Prefect Apostolic of Texas with power to administer confirmation (12 April, 1840). He immediately dispatched Mgr Odin (q. v.) to Texas as vice-prefect and Father Douterlanguage as assistant, and a little later obtained for the vice-prefect the power of conferring the Sacrament of Confirmation. On 5 December, 1840, Father Timon reached Galveston for the second time. He at once undertook to organize the Catholic people to build a church there and provide means to support a priest, displaying the same energy at Houston. Pushing on to Austin, now the capital, he presented letters from Cardinal Franconi of Propaganda, addressed to President Mirabeau G. Lamar, which were well received by the legislators as well as by the government of the independence of the Republic. The Texas executive, Vice-President David G. Burnet, acting for President Lamar, then absent, was greatly pleased to receive these letters. On 23 December, 1840, the first Mass was celebrated in Austin. Mgr Odin was well received by the officials of the government and by the people. He preached in the capital more than once, and in conversation with acting-President Burnet and a few prominent members of Congress created a very favourable estimate of the Catholic Church. With the diplomatic aid of M. de Saligny, minister from France to the Republic of Texas, Mgr Odin's bill for the restoration of church property was spontaneously endorsed by the legislators to whom it was first read in private, was then introduced to Congress, and passed. Thus by Act of Congress were restored to the Chief Pastor of the Catholic Church in the Republic of Texas, the lands of San Fernando, the 'Alamo' (San Antonio de Valero), La Purisima Concepcion, San Jose, San Juan Capistrano, San Francisco de la Espada, Goliad, Victoria and Refugio, with their lots, the latter not to exceed fifteen acres. Returning to Galveston Father Timon
administered confirmation (18 Jan., 1841), to Margaret De Lacy whom he had converted and baptized on the 15th of the same month. The entry in the "Diocesan Records" of Galveston Diocese certifying to this sacred function may be said, together with the baptismal record beginning 7 December, 1840, to mark the beginning of the history of the Diocese of Galveston (q. v.).

The Prefecture Apostolic of Texas was made a vicariate apostolic in 1842 by the Bull of Pope Gregory XVI, published 10 July, 1841. Rt. Rev. Jean-Marie Odin, previously vice-prefect Apostolic, was consecrated Bishop of Claudiopolis and made vicar Apostolic. Bishop Odin, too, had previously refused to be made Coadjutor Bishop of Detroit (May, 1841).

In fact Texas was irregularly blessed at that time in having four dioceses who were quickly deemed worthy of important bishoprics, the houses of his order in Texas and throughout the United States until 1847 when he was made Bishop of Buffalo. Rev. John J. Lynch, C.M., one of the companions of Bishop Odin on his coming to Galveston (29 May, 1841), was made president of St. Mary's College, Bar- rens, Missouri, in 1848, after a service of some years in Texas founded Niagara University (Our Lady of Angels, Niagara Falls, N. Y.) in 1856; and was consecrated Bishop of Echinas and Coadjutor of Toronto in 1859. In 1860 he succeeded to the See of Toronto and became its first archbishop and Metropolitan of Ontario in 1870. In 1844 the settlement of New Braunfels, Comal County, was founded and in 1845 Candleville. The colonists were mainly Catholic Abalians. Other Catholic immigrants, Poles, Germans, Bohemians, Italians, and others, have since continually come into the State. The State of Texas, with the exception of El Paso County, which was subject to the Vicariate of Arizona, was erected into a diocese in 1847 with Bishop Odin as bishop. There were then thirteen priests, including the bishop, in this vast territory. Of these at least six were of the Congregation of the Mission. In 1849 three Oblates of Mary Immaculate were brought from Canada by Bishop Odin and two of these were sent to Fort Brown, Brownsville, on the Rio Grande. In spite of the privations and hardships of the Rio Grande Mission, and even their temporary withdrawal, enforced by lack of means, the Oblate Fathers have exercised their zeal in the State of Texas. Schools, colleges, and churches have arisen where they had trodden on the cactus and chaparral, and to-day these devoted missionaries have flourishing institutions in every ecclesiastical division of the great State. The very existence of religion among the Mexicans along the Rio Grande is largely due to the mighty labours of this Congregation.

Religious orders of nuns (1848) and of teaching brothers (1853) began their fruitful labours. All the activities of a fully developed diocese assumed shape under the guiding hand of Bishop Odin and were prosecuted with all possible vigour and success.

On Archbishop Odin's retirement he was succeeded in the See of Galveston in 1862 by Rt. Rev. Chaudo Marie Dubuis, D.D. In 1872 we find the immense territory of the diocese organized into the four districts of Galveston, San Antonio, Brownsville, and Laredo, a vice-chancellor being appointed for each district. This organization prepared the way for the ecclesiastical division (1874) of the State of Texas, El Paso County excepted as before. All east of the Colorado River remained the Diocese of Galveston, while out of the territory west and south of this river and within the limits of the State were erected the Diocese of San Antonio (q. v.), reaching from the Colorado to the Nueces River, and the Vicariate Apostolic of Brownsville (q. v.), now (1912) the Diocese of Corpus Christi, westward to the Rio Grande. A second division of the Diocese of Galveston was made in 1880 at the request of Bishop Odin and the Diocese of Dallas (q. v.) was formed out of its portions. In 1891 El Paso County hitherto belonging to the Vicariate Apostolic of Arizona was attached to the Diocese of Dallas. Thus within the State and embracing all of its territory are the four Dioceses of Galveston, San Antonio, Dallas, and Corpus Christi. The population of the Diocese of Galveston is given (1912) as 70,000 whites, 65,000 blacks, 1200 Mexican, 3800 St. Mary's University, Galveston, is conducted by the Jesuit fathers. St. Mary's Seminary at La Porte is now being managed by diocesan priests, under the presidency of Rev. J. M. Kirwin, of the Oblates of Mary Immaculate, and with charge of parish work in Harris County. Father also serves a church in Galveston, where the Basilians conduct. Among the Orders of Nuns formerly recorded may be named the Sisters of the Incarnate Word and Blessed Sacrament who have charge of an academy and parochial schools, also in Houston. Under the title except that the Redemptorist Order of St. Gerard Majella has taken charge of the parish church in a church in the city of San Antonio, named the Sisters of the Incarnate Word and Blessed Sacrament who have charge of an academy and parochial schools, also in Houston. The population of the Diocese of Dallas (1912) includes about 40,000 Caucasians; 22,000 Mexicans, and 250 negroes. The present bishop of the see is Rt. Rev. Joseph Patrick Lynch, D.D., b. 16 November, 1872, at St. Joseph, Mich. When appointed to the see (after the sudden death of Bishop Dunne at Green Bay, Wis., 5 August, 1899) Bishop Lynch was administrator of the diocese and rector of St. Edward's Church in the city of Dallas. His consecration took place 12 July, 1911. Besides the orders of nuns mentioned in the article on the Diocese the following should be noted: the Sisters of the Good Shepherd (Ottawa, Canada), conducting a house in Dallas with
forty-eight penitents; the Sisters of the Holy Ghost (San Antonio, Texas), devoted to the coloured race. The Josephite Fathers also have charge of the coloured people. The Vincentians conduct the University of Dallas, which has an enrolment of 206 students. The Catholic population shows rapid increase in the immigrant groups, chiefly from the northern States, of settlers, European in origin, and the work of organizing new parishes goes on quickly here as in the other dioceses. The new Diocese of Corpus Christi is a vacant see at the present writing (1912). It has 15 churches with resident priests and many others with chaplains. Thirty-three priests, sixteen secular and seventeen Oblates, serve the Catholic population, which is over 81,917, chiefly Mexicans. Probably between three and four thousand are Cauca- sians. The Oblates have their novitiate for the province of the south-west, which includes Mexico, in this diocese. A new building for the novitiate is now in course of construction at La Lomita on the Rio Grande near the town of Mission. The Marist Brothers conduct St. Joseph's College for boys at Brownsville. The following orders of nuns are engaged in their various works in the diocese: the Ursuline Convent at Austin, the Convent of the Holy Cross at Round Rock; Sister's School at Laredo; the Sisters of Mercy, the Mercy Hospital, Laredo, and schools in various towns in the diocese; the Sisters of the Holy Ghost, Academy of Our Lady of Guadalupe, Laredo; the Sisters of Divine Providence, St. Mary's Academy, Beeville; the Sisters of the Incarnate Word, convent and academy, Brownsville; the Sisters of the Incarnate Word and Blessed Sacrament, schools at Corpus Christi, Rio Grande City, and Roma; Sisters of Charity of the Incarnate Word, Spohn Sanitarium, Corpus Christi; the Hermans of Sagrado Corazón de Jesús, an orphanage at Laredo. The number of pupils attending the academies and parochial schools in the diocese is over 1200.

**Distinguished Catholics.** In the organization of the Texas revolutionary Government of 1836 the loyalty, patriotism, and talents of Lorenzo de Zavala were deemed of such high order as to qualify him for the office of Vice-President of the Republic. A man of culture, a statesman, and a soldier, de Zavala was above all an ardent Catholic. He was born 3 Oct., 1788, and died 15 Nov., 1836. Colonel Francisco Ruiz, another distinguished Catholic and patriot, exerted himself to achieve Mexican independence, he died in the United States September 29, 1822. After his return to Texas he united with those struggling in their turn for Texas freedom and later independence. He was elected as a delegate to the convention held at Washington on the Brazos, and his name appears among the signers of the Texas Declaration of Independence, 2 March, 1836. As a representative of his native Texas to the Mexican Congress, 1833, as a delegate to the Revolutionary Convention of Texas and signer of the Declaration of Texas Independence, as an upholder of the rights of the Texas Government, member of the Congress of the Republic (1838), and Senator of the Federal Congress, 1845, Jose Antonio Navarro commended himself to the gratitude of his fellow-countrymen and edified them by his loyalty to his Catholic Faith. Lieutenant-General Cabell of the Army of the Confederacy, who died in the Diocese of Dallas, 17 February, 1873, was convert to Catholicism.

**Population According to Religious Beliefs.** In numbers, the Catholic population ranks third of all the religious denominations in the State. The Census Bureau's figures (1906) give Baptist bodies in the State, 401,720 communicants; Disciples of Christ 77,277; generally for Baptists, 577,457; Mussul- bytarians, 62,950; Protestant Episcopalians, 14,446; Catholics, 308,556; Jewish congregation, 11,676. The figures given more recently by Catholic diocesan au-

thorities show 311,667, and doubtless since the increase in the number of children communicans a larger showing may well be claimed. Altogether, of the population of Texas about 25 per cent is Protestant, about 9 per cent Catholic; all other religions, less than 1 per cent, leaving about 65 per cent having no definite religious belief.

**Legislation.**—The Constitution of Texas in its "Bill of Rights" (Act 1, Sec. 4) prohibits a religious test as a qualification for holding office or a public trust, or the exclusion of any one from office on account of religious sentiments, "provided he acknowledge the existence of a Supreme Being." Sec. 5 prohibits disqualification to give evidence in any court on account of religious opinions or of the want of religious belief, "but all oaths or affirmations shall be administered in the mode most binding upon the conscience." Sec. 6 enunciates the right of freedom of worship, prohibits compulsion to worship or to support or attend places of worship, or preference before the law of any religious society or mode of worship. Sec. 7 prohibits the appropriation of state money or property for the benefit of any sect or religious society, theological or religious seminary. For the first time in the history of the State, the Constitution of the State prohibit, under penalty, disturbing public worship also labour on Sunday or compelling to labour thereon. Hunting within one-half mile of a church or schoolhouse, horse-racing, and the sale of goods are also prohibited on Sunday. Cursing, swearing, and indecent language are punishable by statute as breaches of the peace. Under the Constitution each Legislative Chamber determines the rules of its own proceedings. Hence a chaplain for each chamber is usually elected and the sessions are opened with prayer. Christmas Day and all days appointed by the president of the United States by the Governor of the State as fasting or thanksgiving days are the only holidays of a religious nature in addition to Sunday sanctioned by law. Should the occasion ever arise wherein the integrity of the seal of confession should be in question before a Texas court there is little doubt that the constitutional guarantee of religious liberty would protect it, although no statutory provision covers the hypothesis.

The general law of incorporation obtains in the case of churches. Among the first-named purposes enumerated in the statute under which corporations are formed are the "support of public worship, the support of charity and public education, and the promotion of religious, charitable, educational, or missionary undertaking." Any religious society may become a body corporate and any church or association failing to organize under the provisions of the statute cannot sue as a corporation or hold real estate. Schools and churches, cemeteries, public charity, and endowment funds or institutions of learning not used for profit and all buildings used by persons or associations of persons for school purposes are exempt from taxation. Clergymen, all ministers of the Gospel, engaged in the active discharge of their ministerial duties, are exempt from jury service. No compulsory military service is required of any one under Texas law.

Marriage is regarded as a civil contract, a common law marriage; all licensed or ordained ministers of religion are among the officers in whose presence the marriage ceremony may be legally performed. For a legal marriage the consent of the parties is necessary for a marriage to be valid. A marriage by contract, mutual consent, mutual wills expressed in the prescribed manner. A licence must be obtained from the county clerk of the county. The age at which marriage may be contracted is for males 16, for females 14. The consent of the parents of the parties is unnecessary. A licence by the county clerk until, for males, 21 years of age, for females, 18. Marriage may be annulled because of certain legal impediments. A marriage between one
of the Caucasian and one of the negro race is illegal and forbidden under penalty. Marriages are prohibited between persons related in certain degrees of kindred: A man with his mother, his father's sister or half-sister; his mother's sister or half-sister; his daughter, his father's daughter; his mother's daughter. The daughter of his half-brother or half-sister; the daughter of his son or daughter; his father's widow; his son's widow; his deceased wife's daughter; or the daughter of his deceased wife's son or daughter. Similarly for a woman with male relatives of equal degree.

The grounds of divorce may practically be classed under four heads: (1) excesses in, or outrageous treatment from one of the parties, such that living together is insupportable; (2) adultery by one party; (3) abandonment of one party for three years; (4) conviction of felony and confinement in State prison of one of the parties. The district court has jurisdiction in cases of divorce and petitions are granted only upon full and satisfactory evidence, and upon verdict of a jury, if a jury be demanded; if not, upon judgment of the court, affirming material facts alleged in the petition. Evidence of collusion between the parties being known, or where both parties are equally guilty, no divorce is granted. Divorced persons may legally re-marry. The custody of the children by the marriage is granted by the court to either party as may appear suitable. The court also makes such division of property and estate as seems just.

The system of public education is non-sectarian in the meaning of the law. "The reading of the Bible without comment, the recitation of the Lord's Prayer and the singing of songs" of a generally religious character have been judged by the courts as legitimate exercises in the public schools. By a decision, however, of the State department of education, the wearing of a distinctive religious garb or religious symbols by the teacher constitutes the school sectarian. No law, however, covers this contingency. No compulsory education law has been passed by the Legislature though some slight agitation to that end has been made. The State Constitution and consequent legislation provide for lunatic asylums, an institute for the blind, for the deaf and dumb, for orphans and confederate veterans, and the widows of confederate veterans. For the care of orphans, the aged, and other infirm, private charity also exerts itself, in the lead of which is the Catholic Church.

Besides the regulation of the sale of liquor by licence, penalties more or less severe are attached by statute to selling intoxicating liquor to certain persons: wild Indians, minors, habitual drunkards; to the sale of intoxicants at certain times: Sundays, days of election; or in certain places: places of religious worship devoted to education purposes; to permitting in places, licensed for the sale of liquor, certain stated pastimes and persons: gaming, dancing, minors, etc. Local option may be voted in any county or legal subdivision thereof, and penalties are attached to selling or giving liquor in such places.

The sale of tobacco to minors is also regulated by law.

The Legislature makes an annual appropriation for a chaplain of the penitentiary, but any clergyman may, with the consent of the superintendent, visit the inmates at seasonable times, and even preach, though then the teaching must be non-sectarian. Any inmate also may have such religious ministrations as he desires. The same rules govern religious ministrations in the house of correction and the reformatory.

The provisions of the Constitution with respect to religion would most probably protect bequests for Masses for the repose of the testator's soul especially if the bequests were made to a named person. The law highly favours bequests made for charitable purposes. General provisions are made for the incorporation of cemetery associations, this being authorized with but little different conditions from the general law. Severe penalties are attached to the desecration of graves.

John F. O'Shea.

THABOR, MOUNT.—The name of Mount Thabor, "תָּבָר", is rendered in the Septuagint as Ἱσσαφόρ, and in Jeremiah and Osee as Ἰσσαφὸς. It is under this last form (Itabirion or Athisimon) that the mount figures in the historical works of the ancients. The Arabs call it Jebel et Tur (mountain of mountains), a name which they give likewise to Mounts Garizim, Sinai, and Olivet. Mount Thabor is distinguished among the sanctuaries of Palestine by its picturesque site, its graceful outline, the remarkable vegetation which covers its sides of calcareous rock, and the splendour of the view from its summit. Nearly isolated on all sides and almost hemispherical in shape it rises in a peak 1550 feet above the Plain of Esdraelon, which it bounds on the north and east, about five miles south-east of Nazareth. It attains a height of 1843 feet above the level of the Mediterranean and of 2540 feet above that of the Lake of Tiberias. Josephus (Bell. Jud., IV, i, 8) gives it a height of thirty stadia, or 18,201 feet, but he doubtless made use of the figure Δ (four stadia or 2427 feet), which the copyist must have replaced by a (thirty). The summit forms an oblong plateau about 3000 feet long, from north-west to south-east, by 1000 wide. The eye is immediately attracted to the north-east by the gigantic masses of Great Hermon, then to the Valley of Jordan and the table-land, and the mountain chains of Hauran, Basan, and Galaad. To the south are Nain and Endor at the foot of Jebel Dahy and Mount Moreh (Judges, vii, 1), wrongly identified by Eusebius and St. Jerome with Little Hermon (Ps. xlii, 7); somewhat farther off is seen Mount Gelboe and the enigmatic Mediterranean stretches as far as Mount Carmel and innumerable Biblical and historical localities stir thoughts of the past.
Mount Thabor is the object of poetical comparisons on the part of the Psalmist (Ps. lxxviii, 13), the Prophet Jeremias (xiv, 18), and the Prophet Osee (v, 1). The beautiful mountain also played an important part in history. There the Prophetess Deborah secretly assembled 10,000 Israelites under the command of Barak, who subsequently swept down upon the army of Sisara and put it to flight at the torrent of Cisron (Judges, iv, v). Later the Medians and Amalecites slew there the brothers of Gedeon and other Israelites who had sought refuge there from the enemy (Judges, vi, 2, vii, 18, 19). At the division of the Promised Land, Thabor formed the boundary between Issachar and Zabulon (Jos., xix, 22). Within the tribe of Zabulon, but near Dabereth, a city of Issachar, the Book of Jone (xix, 12) mentions the city of Ceseleththabor, in Hebrew Chisloth-Thabor, which means "slope or side of Thabor". I Par. (vi, 77) also speaks of a city of Zabulon called simply Thabor and assigned to the Levites descended from Merari. This is an abbreviated form of the name of the same city, and is probably the same as that as Dabour figures among the Galilean cities conquered by Rameesee II, according to the "Papyrus Anastasi" (I. xxiv, 2). Polybius (Hist., V, lxx, 8) relates that Antiochus the Great captured by stratagem the city of Atabyrion in Galilee. History makes no further mention of this city, not even in connexion with the bloody battles fought at the foot of Mount Thabor in 53 a. c. between Alexander, the son of Aristobulus, and Gabinius, the lieutenant of Pompey ("Ant. Jud.", XIV, vi, 3; "Bell. Jud.", I, viii, 7). Eusebius alone again refers to it in the words "Dahira . . . a village of the Jews on Mount Thabor" (ed. Lietzmann, 78). Daberebeth (Jos., xix, 12; xxi, 28) is indisputably the modern village of Daburiyeh, at the foot of Mount Thabor towards the west.

A ten minutes' ascent northward from Nasareth brings one to the ruins of a Hebrew place called by the natives Khirbet Daboura (ruins of Daboura) and also Abu Amoud (father of columns). This is the site of the Biblical Ceseleth Thabor, of the Daboura of the Egyptians, and the Atabyron of the Greeks. It commanded the road of caravans and armies. During the revolt of the Jews against the Romans, Josephus surrounded "the plateau of Thabor" with a wall of circumvallation twenty-six stadia or about two miles in circumference, which task was accomplished in forty days. This formed a kind of entrenched camp where the rebels, pursued from all directions, sought refuge in order to organize their last stand. Vespasian, with Placidus, marched against them with a force of 600 horsemen, enticed them into the plain by stratagem, and completely defeated them ("Vita", 37; "Bell. Jud.", II, iv, xx, 6; i, 8). In the fourth century of our era Mount Thabor, which was acknowledged as the scene of Christ's Transfiguration, became a place of pilgrimage and was surmounted by a basilica and several churches and chapels. In 1101 the Benedictine monks rebuilt the sacred edifices and erected a fortified abbey, where they withstood seve-
Thaddeus, Saint. See Jude, Epistle of Saint.

Thebais (Thaïs, or Thaisia), a titular see in Egypt. It was a very early see, having been founded by the apostle St. Andrew. The name of the city is derived from the Greek word "thebas", meaning "of the Pharaohs". It was a center of Christian activity from the 3rd century onwards. The city was destroyed by the Persians in 251 AD. The see was restored in the 5th century and remained important until the 7th century.

Thagas (Tagaste), a titular see in Numidia, mentioned in the "Tabula Peutingeriana", which calls it Thagora, and by the "Itinerarium Antoninum". It was fortified and fortified by Justinian in 529 AD. It is now a small village in the province of Constantine. It has ruins of baths, a church, and the fortress of Justinian, and a number of inscriptions have been discovered. Thagora was a birthplace of St. Crispin, martyr, are Theveste (now Tebbessa) under Diocletian, and his feast is observed on 5 December. It was also the scene of the martyrdoms of St. Julius and St. Potamianus, who were likewise commemorated in the Roman Martyrology on the same day. The first two figures in the Hieronymian Martyrology and the Calendar of Carthage. Three bishops of Thagora are known: Xanhippunos in 401, mentioned in a letter of St. Augustine; Restitutus, present at the Council of Carthage; and Timothoex, exiled by Honorius in 484.

Thalberg, Sigismond, musical composer and pianist, b. at Geneva, 1812; d. at Posilipo, Italy, 27 April, 1871. The precise date of his birth is a matter of dispute. He was a natural son of Prince Moritz Dietrichstein, and at an early age was brought by him to Vienna. While yet a boy, at the Polytechnic Institute of the Austrian capital, Thalberg formed a friendship with the young Duke of Reichstadt (popularly known as L'Aiglon), who so fired his imagination with the vision of military glory that he was upon the point of entering that career. From this step he was saved by the early discovery of his musical genius, and taught by Mittag, a Viennese bas- sonist. Devoting himself in good earnest to music, of which he had acquired some knowledge from Mittag, he studied theory under Sechert and piano-

Thaddæus, Saint. See JUDE, EPISTLE OF SAINT.

Thamas, a titular see in Africa Byzacena. It is mentioned in numerous ancient geographical documents. It was a maritime city of Byzacium in Provincia, situated at the mouth of a river (now Wady Tine) which emptied into the Syrtis Minor. Its ruins (Henshur Tine) are somewhat north of Ounou, formerly Junca, Tunis. The city was crowned by a hill surrounded by an acropolis, its walls attained a length of about two Roman miles and it had a large cemetery. The name Thamas has numerous variations in Greek and Latin writers, but is borne out by epigraphy. The Latin coins of the city show that its native name was Tainat. Under Hadrian or Antoninus it became a colony which was called "Coloniaelia Augusta Mercurialis Thamitana". Six of its bishops are known, Eutocius at the Council of Carthage (256); Latonius, at the Council of Carthage (411), where he had as rival the Donatist Securus, and at a Council of Thelepte; Pergerius, a former deacon of St. Augustine; Paschasius, exiled by Huneric in 495; Persius with the title of martyr, and Felix, who in 641 signed the letter from the provincial council to the emperor against the Monothelites. A council was held at Thamas at the beginning of the fourth century, three of its canons being extant (Mansi, Amplissima Conciliorum, 1840, 440).

Thalberg, Sigismond, musical composer and pianist, b. at Geneva, 1812; d. at Posilipo, Italy, 27 April, 1871. The precise date of his birth is a matter of dispute. He was a natural son of Prince Moritz Dietrichstein, and at an early age was brought by him to Vienna. While yet a boy, at the Polytechnic Institute of the Austrian capital, Thalberg formed a friendship with the young Duke of Reichstadt (popularly known as L'Aiglon), who so fired his imagination with the vision of military glory that he was upon the point of entering that career. From this step he was saved by the early discovery of his musical genius, and taught by Mittag, a Viennese bassoonist. Devoting himself in good earnest to music, of which he had acquired some knowledge from Mittag, he studied theory under Sechert and piano-

peans, and of a mixed community of 42,600 inhabitants, Department of Constantine, Algeria. Souk-Ahras, its modern representative, is built on a small, peaked plateau, and is well served by railways. It is a very important agricultural centre, its industries consisting of vineyards, cattle-breeding, vast forests, and mining. It is also a religious centre, with a cathedral and various Christian monuments that have been found.

S. PÉTRIDES.

Thagora (Tagora), titular see in Numidia, mentioned by the "Tabula Peutingeriana", which calls it Thaora, and by the "Itinerarium Antoninum"; Justinian fortified it. It is now the village of Taoura, near Ain Guettar, about thirteen miles south-east of Souk Ahras (ancient Thagaste), Department of Constantine, Algeria. It has ruins of baths, a church, and the fortress of Justinian, and a number of inscriptions have been discovered. Thagora was the birthplace of St. Crispin, martyred at Theveste (now Tebessa) under Diocletian, and his feast is observed on 5 December. It was also the scene of the martyrdoms of St. Julianus and St. Potamianus, who were likewise commemorated in the Roman Martyrology on the same day. The first two figures in the Hieronymian Martyrology and the Calendar of Carthage. Three bishops of Thagora are known: Xanhippunos in 401, mentioned in a letter of St. Augustine; Restitutus, present at the Council of Carthage; Timothoex, exiled by Honorius in 484.

THANKSGIVING

forte technic under Hummel. At the age of fourteen he had already made his first public appearance as a pupil of the sacrifice of the laws and nation's utmost wealth. Thalberg four years later (1830) he began touring Europe, was received with enthusiasm by the virtuosi of the day, and was eventually (1834) appointed court chambermusician by the emperor. During the next quarter of a century, a period in which the development of the pianoforte made enormous advances, Thalberg's fame was unrivalled save for his great contemporary, Frans Liszt. His concerts and recitals drew crowds, not only in all the capitals of Europe, including London, but also in Brazil and in the United States (1857). The world of musical criticism was for a time divided between the two groups of Thalberg's admirers and those of Liszt. To Liszt, nevertheless, is due perhaps the most decisive encomium of Thalberg as a pianist: "Thalberg is the only artist who can play the violin on the piano". In 1843 he married the widow of Boucher, the painter, a daughter of the famous operatic basso, Lablache.

Thalberg's chief contribution to the advancement of musical art seems to have been as an exponent of possibilities in pianoforte technic which had been unsuspected before his time. He not only possessed the mastery of touch in a transcendent degree and earnestly strove to all by the use of the pedal, but actually discovered a method of making two hands produce the triple effect of melody, accompaniment, and bass on one keyboard—a resource exploted by many composers after him. His compositions, a score in number, include two operas, "Florinda" and "Christina di Suelli", both important only as demonstrating his unfitness for this field of art. He composed successfully only for the instrument of which he was an unqualified master, his best-known works being the fantasias on operatic and other popular melodies. Bulletin of Music and Musicians (London, 1903-11); Thalberg and Vieuxtemps Grand Concert Book (pamphlet preserved in the British Museum, London).

E. MACPHERSON

THALHOFER, VALENTIN, German theologian, b. at Unterrutho, near Ulm, 21 January, 1825; d. at the same place, 17 September, 1891. He took his gymnasial studies and philosophy at Dillingen, and then from 1845 studied theology at the University of Munich. In 1848 he received the degree of Doctor of Theology and was ordained priest. After this he was prefect at the seminary for priests at Dillingen (1850-63), professor of exegesis at the lyceum of Dillingen (1854-60), assistant for the seminary for priests, the Georgium, at Munich, and professor of pastoral theology at the University of Munich. In 1877 he was made cathedral dean and professor of liturgy at Eichstatt, and in 1899 became the cathedral provost there. He was an able and highly respected teacher, a man of noble character, a zealous confessor, pulpit orator, and catechist, and was a fruitful writer, thorough and intellectual in his work. His labors at the Georgium, for which he was highly praised, greatly benefited the institution. His first publication was a prize essay at Munich on the bloodless sacrifice of the Mosaic worship (1848). In 1855 he wrote in the report of the Dillingen lyceum for that year, a dissertation on the doctrine of sacrifice contained in the Epistle to the Hebrews. In the same year he began a successful opposition to the pseudo-mysticism and Irvingism which were spreading in Swabia at that time. His chief work was the "Beitrag zur Geschichte des Aftermysticismus und insbesondere des Irvingianismus im Bistum Augsburg" (1857). His excellent commentary on the Psalms was very popular (first published in 1857; 7th ed., 1904). In 1880-83 he edited the official publication of the Augsburg Diocese and brought it to greater prosperity. Among the literary work done during his residence at Munich should be mentioned his editing of a "Library of the Fathers" in eighty volumes (1869-88); a work of ecumenical and administrative importance, and the editing of the "Lehrbuch der bibliischen Hermeneutik" of his deceased friend Franz Xavier Reichmeyr (1874). At Eichstatt he was commissioned by the bishop to revise the "Rituale Romanum Eystettense" and in addition issued a smaller ritual for the use of the diocese (1858-59). He then began his chief work, a large "Hausbuch der Liturgik", which rests on a thorough study of the original authorities and is still indispensable. Of the special liturgies, he published himself in 1890 the "Liturgie des heiligen Messopfer", and from the papers of the deceased Andreas Schmid he added to it in 1893 the "Liturgie des heiligen Stundengebetes", the "Liturgie der Sakramente und Sakramentalien", and the doctrine of the church year.

Adalbert Ebner began a revised edition of this work, but unfortunately no more has been published than the first section of the first volume (1894). Schmid also edited from Thalhofer's literary remains "Die heilige Messa und das Priestertum der katholischen Kirche in 25 Predigten dargestellt" (1893). In addition to these larger works Thalhofer also wrote excellent articles for theological reviews and for the "Kirchenlexikon" of Freiburg.

Klemens Löfller.

THANGMAR (THANKMAR), historian, b. about the middle of the tenth century; d. probably at Hildesheim after 1022. His first appearance in history is as the head of the cathedral school at Hildesheim; as a later date he became dean of the cathedral, and being at the same time notary and librarian his position was a very important one. Thangmar was distinguished both as a scholar and a statesman; he taught Bishops Bernward of Hildesheim, Meinwerk of Paderborn, and Benno of Meissen, as well as the Emperor Henry II. He exercised great influence over Bernward of Hildesheim, and a large part of the affairs under episcopal control were directed by him. In 1000 he accompanied Bernward to Rome, and was sent several times to the imperial court as the representative of the bishop to settle important matters, being highly esteemed by Emperor Otto III. After Bernward's death in 1022 he wrote an account of the active and varied life of the bishop, a biography for which he had already gathered the material and of which he had probably written the first ten chapters during the years 1008-13. He had been an eye-witness of many of the events he relates and had taken an active part in all important measures. As he says himself, Bernward trusted him as a child does its father. Consequently his "Vita Bernwardi" is one of the finest biographical productions of the Middle Ages, and is also one of the most valuable authorities for an important period of German history. He displays much affection for the dead bishop, and has written a plain and simple narrative, un rhetorical and truthful. It is only in the account of the dispute between the Archbishops of Hildesheim and Mainz as to the right of jurisdiction over Gandersheim that Thangmar appears at times to be a partisan of Bernward. The best edition is that in the "Mon. Germ. Hist. Script.

FRIEDRICH SCHLAGER.

THANKSGIVING before and after Meals.—The word grace, which, as applied to prayer over food,
always in pre-Elizabethan English took the plural form *graces*, means nothing but thanksgiving. (Cf. the Latin *gratiarum actio* and the Italian *grazie*, "thanks.") Although the expression of gratitude to God was never voluntary, the church always to satisfy the most primary of human needs is an idea which is by no means exclusively Christian (see Deut., viii; Ex., xxvii, 12; Livy, XXXIX, xiii; Athenaeus, iv, 27), still in the Christian dispensation, following the personal example of our Saviour (John, vi, 25 and 27), the obligation of the thanksgiving should and does reflexly have been emphasized from the very beginning. Thus, under conditions which altogether exclude the idea of a Eucharistic celebration, we are told of St. Paul (Acts, xxvii, 35) that "taking bread he gave thanks to God in the sight of them all and when he had broken it he said," (L T R V M), "Serve it to us," and "I Cor., x, 30). Passing over the "Didache", in which the formula of prayer over food may be connected with the Eucharist or the Agape, we find (c. a. d. 123) the apologist Aristides declaring of his fellow Christians that "over their food and over their drink they render and thanksgiving" (Camb. Texts and Studies, i, 49). Similarly Tertullian, "We do not recline at a banquet before prayer be first tasted—en in manner prayer puts an end to the feast" (De orat., xxv). In nearly all the Fathers similar passages may be found. In particular the Christian poet Prudentius, at the beginning of the fourth century, has set of hymns to grace, "Clement" and "Pastor cibum" in which occur such verses as the following (Cath. Hymn., III, Ante cib., ii, 10 sq.):—

"Without Thy presence, nought, O Lord, is sweet, No pleasure to our lips can aught supply. Whether 'tis bread or cup, we drink the cup, Till Grace divine and Faith shall sanctify."

Many anecdotes also might be cited from such early writers as Gregory of Tours and Bede, clearly attesting the prevalence of the practice of saying grace. Bede, for example, when he wishes to tell us that Oswald and Bishop Aidan were about to begin dinner, remarks that "they were on the point of stretching out their hands to bless the bread" (Hist. Eccl., III, vi). The Welsh legal codes, ascribed to the ninth and tenth centuries, when speaking of the king's three indispensable attendants, name first "his priest to say Mass and bless his meat and drink", while the function of the other two is also to say grace (Haddan and Stubbs, i, 231 and 235). William of Malmesbury (Gest. pont., iv, 140) refers to St. Wulstan's blessings at table as if they perpetuated some custom that was peculiarly English; but that the Normans were no strangers to such a practice is curiously proved by a scene in the Bayeux tapestry, where we look on Bishop Odo at Bayeux as he stands up before the table at the banquet, while the inscription beside him tells us: "Et hic episcopus cibum et potum benedicat."

In the religious orders, naturally the custom of grace was much insisted upon. A special section is assigned to it in c. xliii of the Rule of St. Benedict, and this was much amplified in later expositions. The early monastic rules in fact generally required that each dish brought to table should be separately blessed before it was set before the community. In the "Ancren Riwele" (c. a. d. 1200), which preserves perhaps the earliest instance of the word "graces" in an English treatise, the grace is described as said standing, and, since it included the "Misereere", it must have been pretty long. The souls of the faithful are also prayed for in the thanksgiving after meat. Great importance was also given to grace by children. It is commonly a prominent feature in the Books of Curteyse and other medieval works for the instruction of the young. Moreover most educational foundations, like the English public schools and the colleges at the universities, had special forms of grace prescribed for them, often metrical in part, some of which are maintained to the present day. The grace officially provided by the Church is contained in the "Brevisarium Romanum" under the heading "Benedictio". Before and after eating, varies slightly from that assigned for dinner, and during the octaves of certain greater festivals special verses are substituted for those in ordinary use. Grace begins with the acclamation "Benedictio", which is spoken by the officiant and repeated by the congregation and it is common to say the grace before and after meals" commonly found in the catechisms for children and used by the laity consists substantially of a translation of two items in the longer Latin grace, the blessing spoken before the meal and the thanksgiving afterwards.

As for this longer Latin grace contained in the Breviary, Abbot Cabrol says, with reason that the whole series of formule with their appropriate citations from the Psalms, particularly Ps. xxxii, possess a very high antiquity. In point of fact a great part of the existing forms can be traced back to the ninth century. See for example Richard de Mansel, "De ins. cleric.", ii, x. The benediction, "Bless us, O Lord, and these Thy gifts", etc., which is retained in our short grace, is to be found in the "Gelasian Sacramentary", which is considerably earlier. Moreover, without precise verbal coincidence, it may be said that our longer grace is a development of the language of the very earliest existing form of the kind referred to us. This is contained in a treatise diously ascribed to St. Athanasius, but certainly of early date and, probably at least, the work of a contemporary. It is upon this treatise that G. von der Goltz largely bases his theory of the development of grace for meals out of the primitive Eucharist (Goltz, "Tischgebeten und Abendmahlsgebeten", pp. 33 sq.). This work (De virginitate) is remarkable for the circumstance that the writer recommends as a prayer before an ordinary meal precisely that form of words which we find in the "Didache", in connexion seemingly with a Eucharistic celebration. We also find in this fourth-century document the versicle, "O merciful and compassionate God has given food to them that fear Him", and in the existing Breviary grace we have:—

"The Lord merciful and compassionate, has perpetuated the memory of His wonders. He has given food to them that fear Him."

Another very early grace may be found in the "Apostolic Constitutions", VII, xiv.

The fullest details however are given in the excellent little monograph of H. L. Dixon, Saying Grace (London, 1903), which contains many documents printed entire. But see also: VON DER GOLTZ, Tischgebeten und Abendmahlsgebeten (Leipzig, 1905), one of the series Texte u. Untersuchungen, and KELLER in Archæological Journal, XXI, 347-365.

**HERBERT THURSTON.**

Thanksgiving Day.—A civil holiday observed annually in the United States of America on the last Thursday in November. The president issues a proclamation calling on the citizens, all Federal officials, and others subject to Federal authority to observe the day as one of national thanksgiving and prayer. The governors of states concur in the president's proclamation and also recommend the citizens to observe the holiday, and all public business is suspended. The custom of the feast of Thanksgiving was established by the governor Bradford of the Plymouth colony appointed a day for public praise and prayer after the first harvest, and the practice spread throughout the other New England colonies. The first national observance was when President Washington, at the request of
Congress, recommended Thursday, 26 November, 1789, to the people of the United States "as a day of public thanksgiving and prayer to be observed by acknowledging with grateful hearts the many and signal favours of Almighty God". This proclamation exhorted the people to "be seized with a yearning to pardon our national and other transgressions, to promote the knowledge of the truth, to curb our pride, and to temper unto all mankind such a degree of temporal prosperity as He alone knows to be best". It was the first observation of the day on the date that present custom holds it. In 1817 Thanksgiving Day was first officially noticed in New York State, and by 1822 he had appointed twenty-eight cities and two territories. In 1863 President Lincoln made his first proclamation, naming the last Thursday in November as a day of national observance, which day President Johnson also selected in 1867 and President Grant in 1870. Since then there has been no change, the last Thursday in November being named in each year's proclamation. Catholic recognition of the day by special religious features has only been of comparatively recent date and not as yet (1911) of official general custom. Historians of the day attempt to trace the origin of Governor Bradford's idea (1621) back to the old Hebrew Feast of the Tabernacles and through the ages to the ancient Greek Harvest Feast, Thesmophoria, the Roman Cerialia, and the English Harvest Home. In the Dominion of Canada the governor-general by proclamation sets aside the last Monday in October as a legal holiday for the purpose of acknowledging God's providence and expressing the nation's dependence on His bounty.

THOMAS F. MEEHAN.

Thapsus, a titular see in Byzacena Africa. It was a Phoenician market on the coast of Byzacium in Africa Propria, established near a salt lake on a point of land eight or ten stadia from the Island of Lopadussa, confronting it, between Leptis Minor and Sullectum, and had both military and trading ports. In 46 B.C. it was the scene of the defeat by Caesar of the generals of Pompey and King Juba. He exacted of the vanquished a payment of 50,000 sestercii. Thapsus then became a Roman colony. Vigiliius, the only known bishop of the assembly convoked at Carthage in 484 by King Hanno. The city was destroyed by the Vandals in 474, with his colleagues. He is the author of several controversial works against the Arians and the Eutychians (see Vigiliius). The ruins of Thapsus are located at Ras Dimas, near Bekalta in Tunisia. They consist of the remains of a mole, a fortress, an amphitheatre, and large cisterns; in the neighbourhood there is a Punic necropolis.

S. PÉTRIDÉS.

Thasos, a titular see in Macedonia, suffragan of Thessalonica. The island of Thasos was anciently known under many names, such as Aria, Æthra, and, on account of its gold mines, Chrysos. Its first known inhabitants were the Phoenicians, whom the Greeks supplanted. The latter extended the prosperity of the island, which had a powerful navy and founded many colonies—Parium, Datos (afterwards Philippi), and others. After having repulsed, in 494 B.C., an attack by Histiaeus of Miletus, Thasos surrendered in 482 B.C. to Xerxes, who took its navy and exhausted the island. After the Persian war, Thasos joined the Confederation of Delos, but, having quarrelled with Athens, was defeated by sea and by land, and, completely ruined by its rival, became its tributary in 465 B.C. Polybius, the celebrated painter, a native of Thasos, then followed the Athenians. The island passed from the dominion of Athens to that of Sparta, then again to that of Athens, and at last became a Macedonian possession. The Romans gave it back its independence in 137 B.C., but from 25 B.C. to 14 A.D. and finally in 397 A.D. the Empire and included in the Province of the Islands. Le Quen (Oriens christianus, II, 87) mentions only one bishop, Honoratus, who was present at Chaledon in 451. Alexander, in the eighth century, is known by an inscription (Echos d'Orient, IV, 93). At least as early as the tenth century, Thasos includes the district of Mitylene (Gelzer, "Ungedruckte...Texte der Notitiae Episcopatuum", 559); under Manuel Palaeologus (1319-1425) it was raised to the rank of an autocephalous archbishopric (Gelzer, op. cit., 613). The relics of the holy martyrs Mark, Sotericus, and Valentia, venerated on 24 October, were brought thither. The Patriarch St. Nicephorus lived as an exile there under Leo the Armenian.

The Venetians took Thasos in 1204, and it was given to the Dandolo family; the Greeks afterwards recaptured it, and it was then occupied by the princes of Epirus and finally confirmed by the Sultan Mohammed II, in 1462. In 1841 the Sultan Mahmoud II granted its revenues to Mehemet Ali, Khedive of Egypt, who introduced a garrison of Egyptians into the island; but the Turks reoccupied it in 1908, and Egypt now (1911) receives only the revenues, according to the terms of the treaty of 1841. The island constitutes a cada belonging upon the sanjak of Drama and the vilayet of Salonica. It is fertile and well timbered, and has an area of 100 square miles and a population of 18,000, all Greek schismatics.

LACROIX, Les de la Grèce (Paris, 1863), 372-3; F. HELMICH, Diemalink Thasos (Marburg, 1887). |

S. VAILLÉ.

Thauamaci, a titular see in Thessaly, suffragan of Larissa, commanding the defile of Ccele at the entrance to the Thessalonian plain. Vainly besieged in 198 B.C. by Philip, it was taken in 191 by the consul Publius Silanus Gaius and the Roman general L. Aemilius Paulus. The Greeks call it to-day Domokos; it is the chief town of the demes of Thaumakoi, and a well-fortified place; it has 1600 inhabitants, and is beautifully situated on a rock crowned by a medieval fortress, west of which are some old walls. During the last Greco-Turkish War (1897), it was the theatre of a fierce conflict with the victorious Greek army. We do not know if Thauamaci was a bishopric whilst Thessaly owned allegiance to the pope; in any case, when Illyricum, in 732, was withdrawn from the pope's jurisdiction by the emperors of Constantinople, this city became a suffragan of Larissa. In 1852, during the annexation of Thessaly to Greece, the diocese was annexed to the autocephalous Church of the Kingdom of Greece. After a while the diocese was suppressed by the new organization of this Church (1899). Le Quen, "Oriens christianus", II, 127, names only three bishops of Thauamaci from the sixteenth to the eighteenth centuries; it would be easy to augment this list. After the Frankish conquest in the thirteenth century, Thauamaci became a Latin bishopric, and four of its titularies are mentioned: Gualo, 1208: Marcus Morellus, about 1334; John, d. 1366; and another John, a Franciscan monk, who replaced him. Le Quen, Oriens christianus, III, 981, 1123; EUEL, Hierarchia catholica media aevi, I, 233.

S. PÉTRIDÉS.

Thayer, John, missionary, convert, first native of New England ordained to the priesthood, b. at Bos-
ton, Mass., 1755; d. in Limerick, Ireland, 5 February, 1815. His family were among the early Puritan settlers of New England and all during his career he manifested much of their stern unbounding character. Educated at Yale, he became minister and as such served during the Revolutionary War as chaplain of a company organized for the defense of Boston and of which John Hancock was commander. After the war he wandered over Europe and was in Rome when the beggar-saint Benedict Joseph Labre at Viterbo died. He vailed to dispute some of the miracles wrought through Blessed Labre's intercession resulted in Thayer's conversion to the Faith, 25 May, 1783. His own account of this conversion, one of the first of prominent New England Protestants, was printed in 1787 and reissued in several editions in the United States, in London, and in Ireland. It was also translated into French and Spanish, and created a great controversial sensation at the time. Ambitious to convert his non-Catholic fellow-countrymen, he then took a theological course under the Sulpicians in Paris where he was ordained priest in 1789. He returned to the United States the following year and was put in charge of the newly organized Catholic congregation in Boston but soon failed as a pastor because of his erratic and contentious temper. He left Boston in 1790, and ministered for a very short time at Alexandria, Virginia, whence he went to Kentucky as a missionary. Here he remained four years, his labors not prospering for his lack of policy and his impropriety of temper. His wandering inclinations carried him across the ocean again in 1803 and he finally settled down in Limerick, Ireland, where he died, locally esteemed as a priest of edifying piety and ascetic life. The remainder of his small private fortune, with some gifts he had collected, he left by will to found a convent in Boston. Inspired by this wish the three daughters of a merchant named James Ryan, with whom he lived in Limerick, emigrated to Boston (1819) and there founded the Ursuline Community, whose convent, Mount Benedict, near Bunker Hill, Charles-town, was burned and sacked by an anti-Catholic mob on the night of 11 August, 1834.

Theatines (CLERICS REGULAR), a religious order of men, founded by Gaetano dei Conti di Tienne, Paolo Consiglieri, Bonifacio da Colle, and Giovanni Pietro Carafa, afterwards Pope Paul IV. Carafa was Bishop of Chieti (Theate), a city of the Abruzzi in Southern Italy, from which the congregation adopted its specific name to distinguish it from other congregations (Jesuits, Barnabites, Somaschis, Caraccioli, etc.) many of which also took the name of the Cross, which he adopted as its emblem, and the foundation took place on the feast of the Finding of the Holy Cross, 3 May, 1524. It was approved on 24 June, 1524, by Clement VII in the Brief "Exponi Nobis." On 14 Sept., feast of the Exaltation of the Holy Cross, St. Gaetano and his companions made solemn profession before the papal altar of St. Peter's, Rome, in the presence of Mgr. Giovanni Battista Bonziano, Bishop of Caserta, special papal delegate. The chief object of the order was to recall the clergy to an edifying life and the laity to the practice of virtues. St. Gaetano and his companions zealously endeavoured to combat the errors of Martin Luther, which, having gained a foothold in Switzerland, Germany, England, and France, then threatened Italy. They founded oratories (among them the celebrated Divino Amore) and hospitals, devoted themselves to preaching the Gospel, and reforming lax morals. Through their good example clergy and laity were induced to better living. Notwithstanding the severe rule of life and strict vow of poverty, the congregation rapidly developed, and soon numbered among its members illustrious names of the Italian aristocracy (Vezzosi, "Iliustri scrittori Teatini", Rome, 1780). They founded many beautiful churches, among them that of S. Andrea della Valle at Rome, given by Pope Martin V to Francesco di colomini D'Aragona, Duke of Amalfi. This church is the masterpiece of Carlo Maderno, and contains several paintings by Domenichino. The Theatines were invited to Turin, Genoa, Venice, Milan, Padua, Piacenza, Parma, Modena, Florence, Naples, Dalmazia, Messina, Lecce, etc., by the authorities of these places. They also attained great development in foreign countries. In France, through the efforts of Cardinal Mazarin, they built the Church of St. Anne la Royale opposite the Louvre in 1644. In Spain, under Philip II, the Theatine Cardinal Paolo Burali d'Arezzo, afterwards beatified, filled various important functions at the court. In Portugal John IV, in 1645, gave the Theatines a splendid house and college for the education of noble youth. In England, under Henry VIII, Goldwell, Bishop of St. Asaph, entered the order of Theatines (see Goldwell, THOMAS). The Theatines were the first to found papal missions in foreign lands, as in: Goleonda, Ava, Peru, Mingrelia, the Islands of Sunda, Borneo, Sumatra, the history of which was written by the Theatine Bartolomeo Ferro (Misioni Teatine nelle Indie Orientali); Georgia, Arabia, Armenia, in which latter country Father Galano, author of the history of the Armenian Church, negotiated and concluded the reconciliation and union of that Church with the Roman Catholic; Persia and in many other places, as is shown by Theatine manuscripts dating from 1530 till the end of the eighteenth century. In the nineteenth century the order began to decline, and in 1860, through the well-known suppression of religious orders, it was reduced to a shadow of its former greatness. In accordance with the spirit of its rule, it had never acquired possessions and is the only order which feels the consequences of the law of suppression. After the French decrees of 1861 the order was dissolved and the last surviving representative of its ancient traditions, restored the Church of S. Andrea della Valle to its former splendour, by his care and zeal aided by the munificence of Comm. Filippo Giove Romano. The Theatines maintain a flourishing mission at Durango in Colorado, U. S. A. Pius X, in a Motu Proprio of 15 December, 1909, declared the feast day of the ancient Congregation of the Regular Theatine Clergy with the youthful Spanish Congregation of the Holy Family at Barcelona. Besides the two saints, Gaetano, invoked for the intercession of Providence, and Andrea Avellino, against sudden death, the order erected its patron, the Virgin (Giovanni Pietro Carafa), 250 bishops, archbishops, and papal legates, and the cardinals: Blessed Giovanni Marini, Blessed Paolo Burali d'Arezzo, Blessed Giuseppe Maria Tomaselli, Giovanni Bernardino Scotti, Francesco and Domenico Pignatelli, Giuseppe Capez-Zurlo, Francesco Maria Banditi, and Ferdinando Pignattelli, the last named created cardinal by Gregory XVI. Father Anton Francesco Vezzosi (whom Clement XIII wished to make cardinal, but chose instead Fr. Ganganelli of the Conventuals who succeeded him in the papacy as Clement XIV) treats of the illustrious men of the order in his work "L'elenco dei scrittori della storica regolari detti Teatini", Rome, 1780. The last famous Theatine was the philosopher, littérateur, and great sacred orator, Father Gioacchino Ventura dei baroni di Raulica, a Sicilian. He
preached and wrote in both Italian and French. His most celebrated work is his funeral oration on the death of Daniel O'Connell. He was the friend of the most illustrious men of his day, among them the Abbé de Lamennais whom he sought to save for the Catholic Church at Versailles in 1860. 

Theatine Nuns, a religious congregation of women—oblates and hermitesses—existing in Naples and Sicily, founded under the name of Sisters of the Immaculate Conception of the Virgin Mary, by Ven-erable Ursula Benincasa. This illustrious woman, who, according to Father Paolo Portelli (Theatine Church of Palermo, 1666, XII, p. 657), united in herself the spirit of Gertrude, of Catherine of Siena, of Brigid, and of Paula, was born at Naples, 7 August, 1547. Her parents were Girolamo Benincasa and Vincenza Genuina. Her family came originally from Siena, in Tuscany, and had given to the arts, to the sciences, and to the Church both men and women of great distinction. Venerable Ursula herself displayed great talent; while still a young girl, she comprehended the most reconcile meanings of Latin books and of the Holy Scriptures. Her inclination to the monastic life was announced in the very earliest years of her life. Many of her biographies (that of Maggio; Flaminio da Latera, “Compendio della storia degli ordini regolari” s. v. “Theatine dell’Immacolata Concezione”; Bonnai in “Catalogo delle Vergini dedicate a Dio”) state that when ten years old she attempted to take the habit of St. Mary of Cerusciolame, which flourished at Naples under the rule of St. Clare, and after various pilgrimages and trials she founded the Congregation of the Theatine Oblate Sisters. Her sisters, among them Christina who became the first superioress, and some of her nieces formed the community. Little by little, other pious women joined them, to the number of sixty. 

The date of this formation is fixed by some as 1581, according to others (including so weighty an authority as Padre Bonnai, S. J.) as 1583. The latter date is the better substantiated, for in 1581 Ven. Ursula merely determined the spot on which she intended a church to be erected; it was in fact built near Castel S. Elmo, with the help of the Spanish priest Gregorio Navarro, Abbot of Francavilla, whom she had told of a vision in which the Blessed Virgin had commanded her to build a church in honour of the Most Holy Conception of Mary. At this period, having created monasteries of St. Clare, she was zealous, and the loftiness of her teaching, and having attracted enthusiastic admiration and envenomed calumny, she was accused of being possessed by a devil and was therefore summoned to Rome. Baronzio and Tarugi Oratorians and illustrious cardinals, received her and to her the audience of Gregory XIII at Frascati, 3 May, 1582. By the pope’s authority she was placed under the spiritual direction of St. Philip Neri, who subjected her to the most severe trials; he was constantly astonished by her piety and humility. In 1583 the foundation proper took place, under the protection of the Blessed Virgin. St. Joseph, St. Michael the Archangel, and St. Peter. 

The rules of the Congregation of the Oblates are those of the active life of St. Martha, with simple vows. They include recitation of the Office of the Blessed Virgin and the Divine Office daily; one hour of prayer in common at morning, besides the recitation of the Veni Creator and the De Profundis at None; one hour of adoration before the Blessed Sacrament, exposed in the church every Friday, with singing of appropriate hymns. In addition to the ordinary fasts prescribed by the Church, the Oblates observe the vigils of the feasts of Corpus Christi, the Purification, and the Immaculate Conception, and they are exhorted to wear the hairshirt on Fridays. The daily recitation of one-third of the Rosary is also prescribed. They are recommended to labour with their hands, to practise the common life, poverty, and the other virtues. The habit is that of the Theatine clerics: a white tunic under a black garment with wide sleeves and girdle of wool; on the head a white veil without wimple, the place of which is supplied by a white kerchief. 

The Theatine Hermits (Romite Teatine) were founded in 1617. As Venerable Ursula wished to completely withdraw from the world she took thirty-three years in memory of the thirty-three years of Christ upon earth, and retired to a hermitage. The rules of the Hermits are much like those of the Oblates as regards works of piety; but the former religious follow the contemplative life of St. Magdalen. In addition to their solemn vows, their constitution imposes on them great austerities. They are bound to perpetual abstinence from flesh meat except in case of illness, to fast on the vigils of the Blessed Virgin and with still greater rigour on the vigils of the Immaculate Conception, the Ascension, and Corpus Christi. They also fast every Saturday on the last day of every month, and observe the ordinary fasts of the church. They are bound to keep the Blessed Sacrament exposed for five hours every Friday, with continual adoration by five religious, and to practise penance regularly. The age of reception to the hermitage is twenty, and the novitiate lasts two years. On taking the profession of a religious professions, a religious may converse with her nearest relatives for one day, but must not expect to see them again. Their enclosure is of the strictest, and they hold no communication with anyone except those charged with supplying them food, which is given to them through a turnstile. Their habit is of white cloth with a black girdle, light blue scapular and mantle, black veil and wimple like other nuns (Bonnai, op. cit.). The building of the Hermitage was begun on 10 June, 1633, and completed in 1667. The rules of the Hermits and those of the Oblates were approved by Gregory XVI in 1823. 

The Theatine Sisters, more particularly the Oblates, were under the government and spiritual direction of the Fathers of the Naples Oratory, by the request of the Abbot Navarro mentioned above, until 1633. In this year the Theatine Order, under the pressing and insistent solicitation of important personages, was given them by Pope Urban VIII. On 8 June, 1688, they were placed in charge, under the generalship of Padre Matteo Santomagno, who was the depository of Ven. Ursula’s last wishes and desires. Oblates and Hermitesses practised fervent and incessant prayer to avert from mankind the terrible chastisements which Ven. Ursula, by Divine Providence, foresaw in her copy. The life of the Oblates is active, that of the Hermits contemplative. These institutes—like many others which have not lived in touch with the world through schools, hospitals, and the like—continued to live and prosper while the days were less evil. Now, and their numbers were never known, they wonder as victims expiating with prayer the sins of humanity; but through the spoliation of monasteries they have now almost disappeared and are reduced to a shadow of their former greatness. Venerable Ursula’s rule and the pious practice of the Blue Scapular, which she introduced, are still observed.

Paolo Giustiniani (Rome, 1729); CANCELLIERI, Compendio delle storie delle monache (Rome, 1818); HEBERT, Dictionnaire des ordres religieux, III.
Theatre, The.—Considering the tone of what is preserved to us of the works of the Greek tragedians and even of the comedies of Plautus and Terence, it seems at first difficult to understand the uncompromising attitude adopted towards the theatre by Christian writers of the early centuries. But the fact remains that by the Fathers of both East and West all forms of the drama were banned indiscriminately. For the severest reprobation. We can only infer that the plays and mimes most popular under the Empire were as a rule grossly indecent and poisonous to virtue. The surviving plays of Aristophanes would alone suffice to show how inconceivably lax public opinion was, even at the most cultivated periods of paganism, while, the infamia which marked the legal status of an actor at Rome is significant of the degradation involved in such a profession. Under the Empire tragedies and even the better class of comedies were not much represented in public. They were regarded rather as literature, and at best read aloud in a select circle of friends. The most popular form of play was the minium, and, as Diomedes, a rhetorician of the fifth century, implies, the notion of indecency might be said to form the basis of its very definition. (Minium est factorum et dictorium turpium cum lascivia imitatio: cf. Ovid, "Tristia," IV, 497, and Valerius Maximus, ii, 6 and 7, etc.) Further, there is a good deal of evidence that in the third and fourth centuries the parody of Christian rites formed a regular feature of the mime. Probably the Christian (4 χριστιανὸς κωμῳδομεῖος) was almost as familiar an object of ridicule as these representations as is the pantaloon in a modern pantomime (Greg. Nazianz., "Orat." II, 84; P. G., XXXV, 489). There are Acts of the martyrs, no doubt more or less legendary, in which is described the conversion of an actor brought to know the truth by the very rite of baptism, which he simulated on the stage. Porphyrius (4 Nov.) and Genesius (25 Aug.) are thus commemorated, while the story of St. Pelagius (8 Oct.), however apocryphal it may be, presents the actor's profession in even darker colours (see Delehaye, "Légendes hagiographiques"). But even accepting these facts, the violence of the language in which the Fathers condemn all scenic representations is remarkable. Tertullian in his treatise "De Spectaculis" strikes the key-note and, as Chambers observes, "his vivid African rhetoric is an unfair sample of a catena of outspoken comment which extends across the third century from Tatian to Lactantius" ("Mediev. Stage", I, ii). For Chrysostom and nearly all his contemporaries the theatre is the temple of the Evil One, and all who frequent the theatre thereby acknowledg him as their master (P. G., LVI, 263; LVII, 71, 426; LVIII, 120, 188, etc.). Even Julian the Apostate forbade access to the theatre to the newly pagan priesthood he was anxious to create. Almost alone amongst the Fathers, St. Augustin ("De Doctr. Delit." ii, 8) seems to make some distinction between the gross indecency of the mimes and the classical drama of an earlier age, approving the study of the latter for educational purposes. It is not entirely clear from the "Confessions" of the same writer (iii, 2) whether the performance of serious tragedies was still maintained in his youth.

Vile and degrading as were the more popular forms of scenic representation under the Empire, the proleteriat were so wedded to them that even the Christian emperors dared not altogether suppress such amusements. Still something was done. By the Theodosian Code (XV, 5), omnis theatralum atque circensium volupias (all diversions in the theatre and circus) were prohibited on Sundays, festivals, and some days of special sanctity. Disabilities of various kinds, including restrictions as to dress, were imposed upon actresses, etc., but on the whole the laws of caste were set aside and it was now made possible for an actoress, upon becoming a Christian, to quit the stage and still lead a decent way of life, to acquire a status of respectability. At an even earlier date some of the Christian councils had dealt with the subject. At Elvira in Spain, about A.D. 302, it was decided that actors might be baptized, but only on condition of their giving up that way of life. At Arles in 314 the priscipici and capiteores (actors and charioteers in the games) were declared excommunicate. Somewhat later the Synod of Laodicea directed that the clergy who were present at wedding festivities or banquets ought not to remain for the plays that might be performed afterwards. At Hippo in 393 it was forbidden that the sons of bishops or of ecclesiastics should be present at plays or give them. With regard to authors it was decided that, if they wished to become Christians, their baptism need not be postponed indefinitely. In 401 a Council of Carthage decided that plays ought not to take place on Sundays and feasts, and culminated against actors being decoyed back to their old way of life (but cf. Cod. Theod. XV, vi, 13). Finally, the Council in Trullo in 692, for those that recognized it, condemned plays altogether, threatening degradation against all clerics and excommunication against the laity who assisted at the performances (Hefele-Leclercq, "Conciles," I, 236, 283, 1032; II, 87, 89, 120, 471; III, 566, 569). The tone of all this legislation is milder than the language used by individual Fathers, but it is quite clear that the actor's profession was looked upon as that of a public sinner and most of the early bishops would have agreed with St. Cyprian (Ep., ii) that it was preferable to maintain such a man out of this way of the Church rather than allow him to continue in his calling.

With the debased drama of the Roman Empire the theatre of Shakespeare, Calderon, Moliere, and Schiller has no direct connexion. The isolated mimi
voice was assigned to each, much as in the Gospel of the Passion when read in Holy Week, and this at once supplied the elements of a promising Christmas drama (see Sepet, "Prophètes du Christ", 10).

We may probably, with Mr. Chambers, distinguish three stages in the evolution of a French trio of dialogues, i.e. the development of these dramatic dialogues, aided as they were by impersonation and gesture, within the Church ceremonial itself; (2) the transitional stage, i.e. these Latin plays were translated into the vernacular or interpolated with vernacular passages, while different incidents were expanded to form one representation and other new elements were added, until the whole cycle of the matter treated extended from the Creation to the Judgment; (3) the final stage in which the plays were completely secularized. They fell into the hands of the guilds, some plays being assigned to one guild and others to another, while there were constant changes in the dialogue and rearrangement of incidents to suit new conditions; but the cyclic form was firmly adhered to. On the other hand, these stages in the evolution of the drama were not of course sharply defined and they merged into one as a result.

The reader must refer to the articles MIRACLE PLAYS AND MYSTERIES and MORALITIES, but it should be noted that an important influence in the process of secularization was supplied by the Latin plays, partly scholastic exercises and partly diversions, which the cathedral and monastic schools acquired in the habit of performing, more particularly at the Christmas and Easter seasons. It is easy to see how readily such representations addressed to a young or miscellaneous audience might come to be interpolated by passages in the mother tongue, particularly those of a more humorous character. Moreover, it was natural to extend the scope of such diversions and we have evidence that in the twelfth century, in France, England, and Germany, dramatic compositions were represented dealing with such subjects as the life of St. Nicholas, the martyrdom of St. Catherine, the resurrection of Lazarus, the parable of the virgins, or a ludus prophetarum ornatissimus, which included Gideon and the Philistines, David and Herod. But the further transference of such representations to the guilds must have taken place early, for it is generally agreed that the play of "Adam", written in Anglo-Norman French of the twelfth century, was probably not represented by a guild but by the general public (see Grass, "Das Adamsspiel", 1907). In Germany, however, the religious plays seem to have remained almost entirely in the hands of the students, though in Italy the main impulse came from the laudes confraternities, the survivors of the Flagellant movement, who met together in their own chapel and sang laudi (canticles) in honour of the Blessed Virgin, which gradually assumed a dramatic form and grew into rappresentazioni sacre. A play in the Roman dialect of the fourteenth century, edited by Vattasso (Studi e Testi, no. 4), exuberantly bears the title lauda (loc. cit., p. 4). But in England, Spain and Poland not excepted, a new drama seems to have arisen which sprang into existence in dependence on the Church. Only by slow degrees did the subjects of such plays in the vernacular lose touch with any religious purpose. An entirely new source of inspiration came into play contemporaneously with the rise of the English drama, the influence was especially felt as early as the fourteenth century, with the revival of the study of the tragedies of Seneca and, what was more important, with the composition of original Latin tragedies upon themes supplied by medieval history. From these it was but a step to the incorporation of some of the scenes of a sacred drama into the final both of the rappresentazioni sacre, which were the final development of the religious drama, and also of classical models may be clearly discerned. But it
THEBAID. — The valley of the Nile, under Roman domination, was divided into four provinces: Lower and Upper Egypt, Lower and Upper Thebaid. The last two comprised the upper part of the valley. During the fourth and fifth centuries it was the chosen land of the monks by whose ascetic form they impressed on the monastic system greatly influenced the East and the West. Their monasteries may be divided into several groups. The best known is the Pachomian group, founded and legislated for by St. Pachomius. They formed a real religious order with Tabenna as a mother-house and its superior as their general. Besides Tabenna there were Pebo, Scheneset, Akhmin, Esneh, Monchosis, Thebaid, Tesnin, Hermopolis, and Armoutum. Saint Pachomius governed this group till his death (340), and was succeeded by Abbot Omarisius, and then by Abbot Theodosius. The last twenty years of the crisis was passed by Pachomius's sister, following the same rule as the men. The life of the holy founder and the rule he drew up reveal the interior organization of these monasteries and the congregation. It has all the essential characteristics of cenobitic religious life. Years of poverty, chastity, and obedience, a dress distinct from that of secular persons, lengthy psalmody, manual work, and penitential exercises. The monks lived in huts scattered in groups. The groups were enclosed by a wall and formed the monastery. The superior general had absolute authority over each of his monks, and over the entire assembly of all the religious twice a year. Bgl founded at Atripe a group distinct from that of Tabenna. We know of it from the life of his successor Schonoud. The monks even increased the austenities prescribed by St. Pachomius and could be admitted to his demotical, or cenobitic, life. Schonoud died about 452 at the age of 118. His reform had only a mediocre success.

The eremitical life was introduced into the Lower Thebaid by St. Anthony. Born in 251, he embraced the ascetic life at the age of twenty; then impelled by a divine solitude he retired into a cave, and over the next twenty years of complete isolation the fame of his sanctity drew around him disciples who imitated his mode of life. Like him they were hermits though remaining under his authority. Their solitude was relative. Those more advanced in years had one or more disciples, whom they instructed in the paths of perfection. Others had doctrians and neighbours. They visited one another. Grotoes or huts like those of the felahane served them as cells. The rules called by St. Anthony's name are not his composition; but his biography, compiled by his admirer and friend St. Athanasius in 365, preserves the memory of his virtues and his teaching. The author wished to illustrate what the life of a monk should be. It influenced the development of eastern and western monachism very considerably. Many of the Egyptian monks of that period were more or less directly connected with the school of St. Anthony, for instance the monks of Esneh, Isidore, Hermogenes, Dorotheus, who looked upon as the founders of the group of Nitria. The group of Scete derives its origin from the same school. They were numerous fervent centres of a partly cenobitical, partly eremitical life. The "Historia Lausianica" of Palladius gives us the details of the ordinary life of the Nitria monks; the "Apophthegmata patrum" and the "Vita patrum" tell us
those of the Soete. In the wilderness along the two banks of the Nile there were many monks, living some alone, some in groups. Others dwelt in populated regions, some even in the towns. The monks disappeared with the fall of the Byzantine domination in the countries and the success of the Saracen invaders.

Nothing remains of Tabenna. The two monasteries of St. Anthony and of Nitria by their name and location recall those ancient days. The rules observed there are entirely different from those of the fourth and fifth centuries.

Barrett, The Living Coptic Churches of Egypt (Oxford, 1884); Iadem, The Louvian History of Palladius (2 vols., Cambridge, 1884, 1904); Amin, Headquarters, state of Saint Paulette and of the at the Church of St. Anthony in the mountains of the Nechis; Ladeau, Etude sur le monastère pokh - which was at that time a fortified. Young Thébaud studied at first in the preparatory seminary at Nantes, and then entered the grand séminaire and was ordained to the secular priesthood at the usual age. After three years of parochial work in his native city, he entered the Society of Jesus in Italy, on 27 Nov., 1835, whence he returned to France in 1837 to pursue a course of scientific studies at the Sorbonne under Ampère and other distinguished professors. He landed in the United States on 18 Dec., 1838, and was called to the chair of chemistry at St. Mary's College, Kentucky, where he became rector in 1846. Before the end of that year however the Jesuits left Kentucky to take charge of St. John's College, Fordham, New York, which had been transferred to them by Archbishop Hughes. Father Thébaud was the first Jesuit President of St. John's, a position which he held from 1846 to 1851 and again from 1860 to 1863. In the interval he taught the sciences during 1851-60, under Father Faure, and the following eight years he was the pastor of St. Joseph's Church at Troy. To this charge he returned after his second rectoryship at Fordham and filled the position from 1863-69, and again from 1873-74. The intervening years we find him at first in Montreal and then at St. Joseph's Church, Hudson City, New Jersey. After spending another year at Fordham, he was assigned to St. Francis Xavier's parish, New York, where he passed the rest of his days.

Father Thébaud, who always had a strong literary bent, wrote a series of books on religious and historical subjects and published, besides numerous articles in the "Catholic World" and the "Catholic Quarterly Review" two novels, "Louisa Kirkbridge, A Tale of New York" (1879), and "Twitt Twats, An Allegorical Story of Birds" (1881). His more important works are: "The Irish Race in the Past and in the Present" (1873), "This is Gentile World" (1875), "The Church and the Moral World" (1881). From 1875 to his death, he also prepared his reminiscences in three volumes. Of these the United States Catholic Historical Society published volume III (1904), giving an account of his American experiences, and volume I (1911), containing the recollections of his life in France. The subject was a man of energy, even in old age, an untrini student, and well-informed scholar. Withal he was a most agreeable companion, witty and full of life, and universally beloved by his friends and his pupils.

Thebes (Thèbes), a metropolitan titular see of Achaia Secunda. The city was founded by the Phoenician Cadmus in the sixteenth century B.C., afterwards made illustrious by the legends of Laius, Oedipus, and of Antigone, the rivalry of Eteocles and Polynices, and the undertaking of the Theban king Agamemnon of Argos. After the taking of Troy, Thbes became the capital of Boeotia, but did not succeed in imposing its hegemony, for Athens supported certain towns in their opposition. Thesbes allied itself to the Persians against the Greeks, but was conquered with them and submitted to Sparta, until its two generals Pelopidas and Epaminondas restored it to the first rank. The death of the latter before Mantinea in 363 B.C., opened a new series of misfortunes for the city. Conquered by Philip of Macedon, in 338 B.C., it revolted two years after and drew on itself the vengeance of Alexander. He sacked all the inhabitants and destroyed all the houses save that of the poet Pindar. Rebuilt in 316 B.C., by Cassander, it was taken and retaken again. In the second century B.C., the acropolis alone was inhabited. In the Middle Ages the city was repopulated by the silk industry. In 1040 the Bulgarians took Achaia Secunda, six years after the Normans sacked it. In 1205 it was taken by Boniface III of Montferrat and assigned with Athens to Othon de la Roche; by marriage it passed later to the lords of Saint-Omer; one of them, Nicholas II, constructed the Frankish château of the Cadam and it was destroyed in 1311 by the Catalans. In 1364 the Turks took it in behalf of Frederick III of Sicily and later on their own account, but its neighbour, Livadia, soon supplanted it.

The first known bishop, Cleonicus, was at Nicea in 325 (Gelzer, "Patrum nicenorum nomina," I, 414; Le Quien (Oriens Christ., II, 207-11) quotes ten other titulars, among them: Julius at Sardica in 344; Anysius at Epheus in 431; Archimius in 458; Marcinus in 867. At first a suffragan, Thesbes was an autocephalous archbishopric at the beginning of the tenth century and until 970 (Gelzer, "Ungedruckte Texte der Hierarchia"), which was destroyed in 1311 by the Catalans. In 1364 the Turks took it in behalf of Frederick III of Sicily and later on their own account, but its neighbour, Livadia, soon supplanted it. Since 1210 it has had a Latin metropolis which became by degrees a titular. Eubel (Hierarchia catholica medii aevi, I, 608; II, 274; III, 201) mentions a number of bishops. During the Frankish occupation, the Franciscans had a custody named Thebe.

S. Vallet.

Thebes (Thèbes), titular see of Theba Secunda, suffragan of Ptolemais, and the seat of a Coptic Catholic diocese. Thebes was the No-Ammon of the Jews, the Nout-Ammon of the Egyptians (City or Kingdom of Amon), the Nia of the Assyrians, and the Diodorus of the Greeks, which is the exact translation of Nout-Ammon. The Egyptians also called Amon or Pi-Atet, which after the conquest of Egypt by the Greeks, it was called Amon, Axiose, and Thebes, whence, with the article Ta before the feminine name Aset, is derived Ta-Apet, or Tape, as it is called.
by the modern Copts, the θεός of the Greeks. Thebes is mentioned three times in the Bible under the name of No-Amon in the Hebrew text, which the Vulgate each time renders incorrectly by Alexandria. Nahum (iii. 8) mentions it as a city of Babel or Assurbaanapal, King of Nineve, over Tanutamen, King of Egypt, as we now know from the cylinders of that sovereign (G. Smith, "History of Assurbaanapal", 52-56). It is thought that Jeremia (xvi. 25) and Ezekiel (xxx. 14-16) allude to the two campaigns of Nabuchodonosor against Thebes, which took place in 533 and 588 B.C.

Originally a mere borough, Thebes grew by degrees, and as early as the twelfth dynasty its sovereigns dominated Egypt. Thenceforth also its god Amon-Ra, to whom the pharaohs had erected numerous monuments, became the foremost of the gods. Hailed for a time by the invasion of the Hyksos, the growth of Thebes continued under the pharaohs of the eighteenth and especially those of the nineteenth dynasty, who extended their dominion to the sources of the Euphrates. When the sovereigns of Thebes had become degenerate they were replaced by the priests of the god Ammon, who constituted themselves the twenty-first dynasty. They disappeared in turn and the capital of Egypt was then transferred to the Delta. The city began to fall away, especially after the Assyrian armies had captured and devastated it in 663 and 664 B.C. and 525 B.C. and 343 B.C. However, as long as there were Egyptian sovereigns, even under the Ptolemies, work was done at the temple of Karnak, which was only abandoned under the Roman domination. Thebes then became a place of pilgrimage and sight-seeing. Christians established their churches in the temples, monks and laymen dwelt everywhere, preferably in the ancient tombs. The great earthquake of 27 B.C. caused some damage, but that which ruined the temples of Karnak must have occurred two or three centuries later.

A see was established at Thebes at an early date. Ammonius of Diopis, who assisted at the Council of Nicaea in 325, unless he was Bishop of Diopis Polya (Harnack, "Mission und Ausbreitung des Christentums", II); Maletius was a partisan of Arius, according to Philippotrius and Nicetas Choniates ("Heresus orthodoxo sedet", V, 7); Hero apostatized under Julius the Apostate, according to Philostorgius (Hist. eccl., VII, 13); Stephen was Catholic metropolitan at the time of Photius, and Kalta was Jacobite metropolitan in 1086 (Le Quen, "Oriens christ.", II, 611). The Coptic diocese, created in 1855, has 15,000 Catholics, besides about 25,000 Copts, and about 3,000,000 Musulmans. There are 31 Coptic priests, 35 churches, besides 6 which belong to the Franciscans, 18 stations, 25 primary schools with about 500 pupils, 4 convents of Franciscans, 3 of Brothers of the Christian Schools, and 1 of native Siets. The seminary which is used by the three Coptic Catholic dioceses has 17 students and is situated at Tahtah, the residence of the Bishop of Thebes.

The ruins of Thebes are among the most beautiful in the world. The city was situated on both banks of the Nile, which is more than two miles wide at this point. On the right bank was the temple of Luxor, built by King Amonoth I and Ramses II, the great temple of Amon, and the great hypostyle hall of Karnak, the work of the pharaohs Ramses I, Seti I, and Ramses II, and which is 337 feet broad by 169 feet deep. A veritable forest of 134 colossal columns, built to support the roof, which has not its like in the world. The temples of Luxor and Karnak were joined by an alley nearly two miles long by about 3¼ miles wide, bordered by rams or crocophalous sphinxes. On the left side is Quournah, which begins the line of temples of which the Ramesseum is almost in the centre and Medinet-Habou at the southern extremity. A line drawn around all these monuments either from the right or the left bank describes a circuit of nearly 8½ miles. It is probable, however, that these figures included not only the extent of the city, but also the entire territory of the commune.

Lauren in Diet. de la Bible, s. v., No-Amon: Beyer forra, Guide d'Egypte (Paris, 1900). Both these authors give a detailed bibliography.

S. VAILLÉ.

Thecla (Thecla), Saint, Benedictine Abbess of Kitzingen and Ochsenfurt; date of birth unknown; d. at Kitzingen about 790 or later. St. Boniface, Apostle of Germany, kept up a constant intimate correspondence once with the community of Wimbborne, Dorset, and from the abbess, Tetta, in 748-49, he obtained monastic colonies for Germany. Among these nuns one of the most illustrious for sanctity and learning was Thecla, a relative of St. Lioba, whom she accompanied from Wimborne and under whose rule she lived for a time at the monastery of St. Zumpe, at Trier. It is probable that she was appointed abbess of the newly founded abbey at Ochsenfurt. Later, on the death of St. Adelheid, or Hadelonga, the foundress and first Abbess of Kitzingen on the Main, she was called to rule that abbey while still retaining the government of Ochsenfurt. The Roman as well as the English and Benedictine Martyrology commemorate her on 15 October; others on 27 or 28 September. The name Thecla does not appear on the list of the abbesses of Kitzingen, but it is generally thought that she is designated as Heilga, or 'the saint'; unless we admit this, the list must be considered interpolated. Among Boniface's letters is one addressed to Lioba, Thecla, and Cynehilde, as the heads of separate religious communities. Its tone reveals how far the nuns had entered as intelligent fellow-labourers into his apostolate. St. Boniface seems to have had a threefold purpose in conferring on these Anglo-Saxon nuns as his auxiliaries: to propagate the full observance of the Benedictine Rule by new foundations; to introduce it into already founded monasteries, and to restore its observance in others; and finally to bring their gentle influence to bear on the fierce Teuton women, both by example and by the education imparted to their children. The ruined Chapel of St. Thecla, on an islet in the Seine, may have been dedicated to her, as Walstod, a Saxon bishop, was set over that part at this time. Some have tried to prove St. Thecla one of the nuns of Barking to whom St. Aldhelm dedicated his "Treatise on Virginity", but as this treatise was written before and as St. Lioba went to Germany about 748-49, it is evident that her disciple who survived her was not this nun of Barking.

Ochsenfurt gradually declined, most probably owing to its proximity to Kitzingen. There is no record of its having any other abbess after St. Thecla. Kitzingen was used for secular purposes by the mar- graves of Brandenburg, to whom it had been mortgaged from 1440 to 1629, when it was redeemed by Philip Adolphus, Bishop of Würzburg, and restored by John Godfrey of Gutenberg as a school for the Ursulines. In 1803 the institute of the Ursulines was established, and to-day they conduct the hands of Protestants and serves as their parish church. The tombs of St. Thecla and St. Adelheid in this church were profaned in the Peasants' War, 1525; a fanatic of Kitzingen used the heads to play at skittles; when the church was rebuilt (1895), the venerable bodies
were covered with rubbish. The monastery con-
tains a Catholic and a Protestant school for girls, a
Protestant school for boys, apartments for some
teachers, and the district court. The abbess's house
is private property.

*Acts SS.* Dec. VIII: K Lib, The English Correspondence of St. Boniface (London, 1911); ANON., *Life of St. Lioba* (London); Hoep, *St. Boniface and the Conversion of Germany* (London, 1877); 

Krcmar, *Patriarch* (Prague). A Chinese stone table is found on this island, above the catacomb where the body of the saint rested. St. Thela must be regarded as a Roman martyr. Arrmellini believes that he has found the cemetery of St. Thela (cf. Marucchi, "Les catacombes romaines", Rome, 1903, p. 91 sqq.). V. The Martyrology of St. Jerome mentions under 31 May (69), in con-
exion with two martyrs buried on the Via Aurelia, a
group of martyrs named Tertulla, Lupus, Justa, and
Thela. It is very possible that besides the St.
Thela buried on the Via Ostiensis another Roman
female martyr bearing the same name was buried on
the Via Aurelia. Still we have no further account of
this group of martyrs, and just as little of a number of
Roman martyrs, among whom the name of a Thela
also occurs, that are given under 26 March in the
present Roman Martyrology.

VI. In the "Martyrologium Hieronymi" (58, 7), the long list of the names of African martyrs is given under the dates of 10 May, 13 and 14 June, and each time a Thela is mentioned. Nothing fur-
ther is known of this saint. In the legend of the
twelve brothers and martyrs, Donatus, etc. (cf. Acta SS., Sept., I, 138-41), the parents of the brothers are called Boniface and Thela, and these two are also
given in the present Roman Martyrology as martyrs under 30 August. Apart from the purely legendary
Acts just mentioned nothing is known of them. VII.
In the "Acts of St. Hermagoras", which are equally
legendary (Baronius, "Martyr. Romanum eum notis
Baroni", Venice, 1609, p. 494) St. Thela of Aquileia
is mentioned together with several other martyrs
who are only known through this legend. Their feast
is observed on 3 September.

G. P. Kirsch.

Theft is the secret taking of another's property
against the reasonable will of that other. It is to be
noted that the word secret is not employed to exclude
the idea of the owner's presence and advertisement
whilst the theft is being committed. It is used merely
to signify that the crime has been perpetrated without
being seen, or, to use the common phrase, "without
keeping the or using the custody of what belongs to
another against his will, is to be considered theft.
This would happen, for instance, where one unwarrantably
refused to restore what had been entrusted to him as
a pledge or loan or only for safe-keeping. Likewise
where one would manage to ride on the railway without
paying any fare. For the notion of theft, the un-
willfulness of the owner to part with what is rightly
his, is essential. If he be content, or if under some circumstances he can legitimately be presumed
to be satisfied with what is done although perhaps
deprecated in the manner of its doing, there is no theft
properly so called. Moreover his unwillingness must
be reasonable, not simply insensible close-fistedness. He
is not justified in declining always and without regard
to conditions to assent to the alienation of what be-
longs to him merely because it is his. Thus one in
order of death, or in need of extreme necessity, may lawfully take from
another as much as is required to meet his present dis-
tress even though the possessor's opposition be en-
tirely clear. Neither, therefore, would he be bound to
restoration if his fortunes subsequently were not
ruined, supposing that what had been stolen was
worth something. The reason is that individual
ownership of the goods of this world, though ac-
According to the natural law, yields to the stronger and more sacred right conferred by natural law upon every man to avail himself of such things as are necessary for his own preservation. St. Thomas (II-II, Q. lxi, a. 7) declares that in such straits what is taken becomes the property of the dispossessed, for it is very own, and so cannot be said to be stolen. This doctrine is sometimes expressed by saying that at such a time all things become common, and thus one reduced to such utter destitution only exercises his right.

The sin of theft is of itself grievous, because it violates the great virtues of justice and charity. St. Paul (I Cor., vi, 10) enumerates it as one of the transgressions which bars the offender from the kingdom of heaven. Still, as happens with regard to other iniquities, its guilt may often be venial. This is particularly true when the value of what is filched is inconsiderable, or as the theologians say, is not grave matter. The determination of what is grave matter, whose taking, namely, is prohibited under pain of mortal sin, is beset with great difficulties and has offered room for widespread difference of opinion. It is agreed, however, that a distinction is to be drawn between a relatively and absolutely grave matter. The grievousness of theft seems to depend on the way in which the purposes which make the respecting of property rights obligatory are set at naught. These ends are, first, the preservation of peace and harmony among individuals, and then the guaranteeing of the security of human society, as well as the providing an incentive for each one to pursue an industrious career. A man who steals may bid defiance to either or both of these ends. So far as the first is concerned it is obvious that the unjust appropriation of goods to such a value as to destroy this concord and furnish reasonable ground for great sorrow to the owner must be reputed a mortal sin. That amount is clearly not a constant quantity. It will vary according to the circumstances of the person injured as well as of place and time in which commodities may be more or less valuable. It will even take account of the special relationship which perchance the theft holds to the one he has defrauded, as when children steal from their parents. The sum so ascertained is termed the relatively grave matter. Thus the theft of an amount equal to a day's wages from an ordinary artisan would unquestionably be a mortal sin. The same thing must be said of the taking of an insignificant sum from a beggar. Theologians teach that this method of establishing the grievousness of theft cannot be employed indefinitely and exclusively. There is an absolute sum which it is always a mortal sin to take even from the wealthiest person or corporation. Were this not so the very fabric of human society would be imperilled, the stimulus to labour and enterprise extinguished, and the axe laid to the root of that confidence which must accompany human intercourse.

In the attempt to compute this sum in money theologians are not at one; nor is this surprising. In the first place, we have to reckon with the most important factor, that is with the purchasing power of money which is not the same everywhere nor at all times. Writers on economics tell us that for the last hundred years or so this value has decreased from thirty to forty per cent. Of course, the less the value of money at any given time or in any region the more it would be required to constitute a mortal sin of theft, always, however, within the limits of the principle already laid down. Comparisons instituted between the United States and Europe in the matter of wages prevailing and cost of living, seem to point unmistakably to the conclusion that money has less purchasing power there than here. Hence the reputable moralists assign as absolutely grave matter, six dollars for Italy, eight for Belgium, and from seven to ten for England, it will not be deemed excessive to fix the amount for this country as ranging from ten to fifteen dollars. One of the greatest of modern theologians, Palmieri, writing in Europe, proposes his willingness to stand sponsor for the opinion which makes the sum twenty dollars. He gives as his reason the fact that this amount is only slightly lessened under pain of mortal sin. The contrary doctrine was condemned by Innocent XI. The reason, of course, is that the damage wrought is serious. This coalescence may be brought about by the specific intention of the thief in his petty stealing to ultimately arrive at a conspicuous amount. When several persons join forces to steal from another and the loss incurred is notable, then each one contracts the guilt of grievous sin, even though his own contribution to the wrong-doing has been but small. One who hoards the proceeds of his petty thefts is chargeable with mortal sin when the sum accumulated is grave. Even when he has ill-gotten goods as fast as they were acquired, his thefts will still be held to coalesce unless there has been a considerable interval of time between them.

**Joseph F. Delany.**

*Thegan (Degan) of Treves,* chronicler, d. about 850. Very little is known of his life; all that is certain is that he was assistant Bishop of Trier and was a warm friend of Walafrid Strabo. These facts are learned from some letters and verses still in existence. It cannot be positively determined whether he is identical with Theganbert, provost of the Monastery of St. Cassius at Bonn, who placed the relics of Sts. Chrysanthus and Daria in the church at Münstereifel. He wrote a history of Louis the Pious, "Vita Ludovicii imperatoris," an unsatisfactory narrative written in the form of seaunt annals. It begins with St. Arnulf of Metz, describes the vicissitudes of the brothers of Louis, and gives a more detailed account of Louis' reign during the years 814–835. The later narrative is probably by another author. Strabo wrote an introduction to the chronicle. The narrative is very abridged, as the merit of the life of Louis, of his actions of Lothair and of a number of bishops, especially of Bishop Ebo of Reims, are severely criticised. The best edition of this work is that of Pertz in the "Mon. Germ. Hist.: Scriptores", II, 555–604. It was also published in F. L., CVI, 405–428, and translated into German by Jaemund (Berlin, 1850) and by Wattenbach (Leipzig, 1889).

**Patricius Schlager.**

*Theiner, Augustin, theologian and historian, b. at Breslau, 11 April, 1804; d. at Civitavecchia, 8 Aug., 1874. He was the son of a shoemaker. As a boy he was a pupil at the gymnasia of St. Mathias at Breslau, and of St. Paul, and in the same town, together with his brother Anthony he wrote, "Einführung der erwanztenuen Ehelosigkeit bei den Geistlichen" (1828). At the advice of this brother he abandoned theology and turned his attention to law, which he studied at Breslau and Halle, and in 1829 he obtained a degree in law at the latter university. He then received a scholarship from the government, which enabled him to make researches in Belgium, England, and France as to the sources of canon law. He finally went to Rome, where he settled per-
Themiscyra, a titular see, suffragan of Amaea in the Hellepont. There was a town of this name near the mouth of the Thermodon, the modern Thermethai, mentioned by Herodotus (IV, 66) and by most classical authors. Seyclay calls it a Greek town while Ptolemy (IV, 44) makes it an Amazonian foundation. Mythology made this region the native land of these warrior-women.

After Mithridates withdrew his troops from Cyprus, Themiscyra was besieged by Lucillus and was courageously defended by the inhabitants. The town must have been destroyed on this occasion, for Ptolemy Mela or Strabo mentions it, while the latter treats extensively the country of Themiscyra, which he makes the subject of great eulogy. It is, however, mentioned by Ptolemy (V, vi, 3). It is not found in the "Notitiis episcopatum" nor in the "Oriens christianus" of Le Quien. It was situated near the present Thermé on the Black Sea, in the sanjak of Samsun and the vilayet of Trebizond. The country is one of the richest and most beautiful in the world.

S. VAILLÉ.

Themisonium, a titular see in Phrygia Pacatiana, suffragan of Laodicea. Themisonium was a city of Phrygia, but not near the limits of Pisidia, so that at one time it was said to be in that province. The inhabitants relate that during an invasion of the Gauls, warned by a dream which they attributed to the gods, Hercules, Apollo, and Hermes, they took refuge with their wives and children in a grotto or cave thirty stadia from their city, and placed at the entrance for protection the statues of the three divinities. The coins of the city bear the head of the god, Lyubasos Sosion. It might be identified with the village of Kara Eyyuk Yali, vilayet of Smyrna.

Le Quien (Oriens christianus, I, 813) mentions the name of only one bishop of Themisonium, but he really belongs to Temenothyne. On the other hand (ibid., 821), there was a see at Thomaspolis, with two bishops: Zosimus, who lived in 451, and John, present at the Council of Constantinople, 869. These two sees are certainly one and the same: Thomaspolis, mentioned in the "Notitiis episcopatum" from the tenth to the thirteenth century, is no other than Themisonium. If the earlier "Notitiis episcopatum" says nothing of this, it is because the see was united with Agathe Come, of whose bishops there is no notice, and which disappeared from the later "Notitiis". To the two bishops mentioned above we may add Magnus, present at the Council of Seleucia, 359.

S. PÉTRIDES.

Thénard, Louis-Jacques, Baron, chemist, b. at Loupiotière, near Nogent-sur-Seine, Aube, France, on May 1777; d. at Paris, 21 June, 1857. In 1855 his native village obtained the right to add his name, so the place is now known as Loupiotière-Thénard. When quite young he went to Paris, and sought permission to work at chemistry with Vasqueul in his master. It was only by the intercession of the sisters of the Convent of the ex-reformist that he was allowed to see Vasqueul like him being very poor. He was unable to pay the small regular fee of twenty francs a month. After three years' work, when he undertook to lecture, his provincial accent and appearance told against him, and he made the most earnest efforts to overcome the defects. He was ordered to save enough to go to the theatre and hear the actors. His first original memoir was published in 1799, and for half a century he continued to pour

S. VAILLÉ.

Théisme. See God.

Thelepte, a titular see in Byzacene. From an inscription we learn that it was a colony. An important network of Roman roads here branches out, joining the city to Cilium and Theveste, on the north; to Gafsa and Gabes, on the south. In the sixth century Thelepte became the residence of the military governor of Byzacene. Procopius (De Edificiis, VI, 6) says that the city was fortified by Justinian. We have the names of several bishops: Julianus, present at the Council of Carthage in 256; Donatianus, who attended the second Council of Carthage in 411; Alexander, said to have held a council in his episcopal city in 418, but this is uncertain (Tilmont, "Mémoires pour servir à l'hist. eccl.", X, 790–3). Thelepte was the native place of St. Fulgentius, Bishop of Ruspe. We have also the names of other bishops: Frumentius, exile from 459 to 464, who became Bishop of Carthage Stephen, present at the Council of Byzacene, 641. The ruins of Thelepte may be seen at Medinet el-Kedima, in Tunisia, a little to the north of Gafsa. The Byzantine citadel, in utter ruins, occupies the centre of the city. There are also the remains of baths, a basilica and of ten caves recently discovered, one of which had five naves.

S. VAILLÉ.
out a flood of contributions to the science of chemistry. In a single month at the request of the Minister of the Interior he invented Thénard blue, a pigment for the use of the great Sèvres factory. The base of this was cobalt. He was intimately associated in his scientific work with Gay-Lussac for many years. In 1813 he published his "Treatise on Chemistry," which for twenty-five years had a great vogue, as he declared that nearly all Europe learned chemistry from Thénard. After many honours he was elected to a seat in the Academy of Sciences. He at once set off for his home to receive the congratulations of his aged mother. He had found a copy of "The Imitation of Christ" in large print, that his mother could read without glasses. This he took with him, and he used to say that the finding of this book with its large type was one of his great discoveries. His work covered so great a range that there is no room here to tell of it. Dichromide of hydrogen was one of his best-known discoveries; he worked on the electrolysis of the oxides at the same time as Sir Humphry Davy, discovered boron, and came near antedating Davy in the isolation of chlorine. Most of his family died before him and his last years were filled with sadness. He was made a baron by Charles X in 1825 and served in the legislature.

T. O'Connor Sloane.

Théobald, Archbishop of Canterbury; d. 18 April, 1161. He was a Norman by descent and became a Benedictine monk at Bec late in the eleventh or early in the twelfth century. In 1127 he was made prior, and abbot in 1137. On 28 Dec, 1138, he was elected archbishop and was consecrated on 8 January following. He went to Rome for his pallium and took part in the second Lateran Council. He proved a wise and capable prelate, devout in his private life, charitable, and a lover of learning. During the civil war he adhered to King Stephen, whom he crowned, though for a time he was at the Empress Matilda's court, and always worked for the Angevin succession.

In his household he collected many young men of ability, including his successor St. Thomas of Canterbury, and he encouraged the formation of scholars and state men of a new type. He was the first to introduce English civil law into England, and founded a law school at Canterbury, inducing the famous jurist Roger Vacarius to come and lecture there. This introduction of Roman law had important effects on the fortunes of the common law of England, and incidentally led to the establishment of the Inns of Court to maintain the national body of law against the newly introduced code. Theobald suffered many difficulties owing to the appointment of his suffragan bishop, Henry of Winchester, as legate. Among these was the appointment of St. William of York as archbishop of that see, which Theobald felt bound to oppose. Celestine II did not reappoint Henry of Winchester as legate and finally in 1150, or possibly before, Theobald was named legate by Blessed Eugene III, probably on the recommendation of St. Bernard (Ep. 238).

When the pope summoned the English bishops to a council at Reims, the king forbade them to go. Upon Theobald defied the king and went. Though he saved the king from excommunication, his property was confiscated and he was banished. The pope then put England under interdict, which was disregarded except in Canterbury, and finally the king and archbishop were reconciled in 1148. In 1149 he held a legatine council in London. In the following year, acting on papal authority, he refused to crown Eustace, the king's son, and was again compelled to seek flight. While in Normandy he reconquered Henry II, and during the rest of his life, though not without anxiety for
the future of the Church, he maintained good relations with the Court, especially with his former disciple Thomas, who had now become chancellor. He expressed to John of Salisbury his hope that Thomas would succeed him in the pontificate; he had continual trouble with the monks of Christchurch, but in every instance his action was justly considered. He was buried in Canterbury Cathedral, where eighteen years afterwards his body was found incorrupt.

EDWIN BURTON.

Theocracì, a form of civil government in which God himself is recognized as the head. The laws of the commonwealth are the commandments of God, and they are promulgated and expounded by the accredited representatives of the invisible Deity, real or supposed—generally a priesthood. Thus in a theocracy civic duties and functions form a part of religious observances. In the absence of the Church or at least the supremacy of the latter over the State. The earliest recorded use of the term “theocracy” is found in Josephus, who apparently coins it in explaining to Gentile readers the organization of the Jewish commonwealth of his time. Contrasting this with other forms of government—monarchies, oligarchies, and republics—he adds: “Our legislator [Moses] had no regard to any of these forms, but he ordained our government to be what by a strained expression, may be termed a theocracy [θεοκρατία], by ascribing the power and authority to God, and by persuading all the people to have a regard to him as the author of all good things” (Against Apion, book II, 16). In this connexion Josephus enters into a long and rather rambling discussion of the topic, but the entire passage is instructive.

The extent to which the ideals of the Mosaic theocracy were realized in the history of the Chosen People is a matter of controversy. Many eminent scholars are inclined to restrict its sway almost exclusively to the post-exilic period, when unquestionably the hierocratic rule and the ordinances of the Priestly Code were more fully carried into effect than in any of the preceding epochs. Be that as it may, and waiving critical discussion of the Old Testament writings with which the solution of the question is intimately connected, attention may be called to the fact that a belief in the theocratic rulership of nations and tribes is, in form more least characteristic of the common body of Semitic religious ideas. The various deities were considered as having a territorial jurisdiction, fighting for their respective peoples and defending the lands in which they dwelt. This is amply proved by the extant historic and religious records of the Babylonians, and the same idea finds occasional expression in the Old Testament itself (see, for instance, Judges, xi, 23 sq.; I Kings, xxvi, 19; Ruth, i, 15, 16, etc.). In a passage of the Book of Judges, Gideon is represented as refusing to accept the kingship offered to him by the people after his victory over the Midianites, in terms implying that the establishment of a permanent monarchy would involve disloyalty to the rule of Yahweh. “I will not rule over you, neither shall my son rule over you, but the Lord shall rule over you” (Judges, vii, 23).

More explicit and stronger expression is given to the same view in the First Book of Kings in connexion with the appeal of the people to the aged prophet Samuel to constitute a king over them after the example of the other nations: “But the thing is not pleasing to Samuel and to the Lord Himself, who commands the prophet to accede to the wishes of the people that they may be punished for their rejection of His kingship. “And the Lord said to Samuel: Hearken to the voice of the people in all that they say to thee. For they have not rejected me, that I should not reign over them” (I Kings, viii, 7). Again in chap. xii, Samuel, in his final discourse to the people, reproaches them in similar words: “you said to me: Nay, but a king shall reign over us: whereas the Lord your God was your king and before thee. And at the call of the prophet the Lord sends thunder and rain as a sign of His displeasure, “and you shall know and see that you yourselves have done a great evil in the sight of the Lord, in desiring a king over you”.

The bearing of these passages on the historic institution of the theocracy varies in the estimation of different scholars according to the date assigned by them to the sources to which the passages belong. Wellhausen and his school, chiefly on a priori grounds, consider them as retouches of the post-exilic period, but it is far more probable that they form a part of much older tradition and that the idea of a theocratic rule in the Lord’s kingship over the Chosen People existed prior to the establishment of the earthly monarchy. At the same time, there is no sufficient warrant for assuming on the authority of these texts that the theocratic rule in Israel came to an end with the inauguration of the monarchy, as is plain from the relation of the Lord’s covenant with King David and his descendants (II Kings, vii, 1-17). According to the terms of this covenant the earthly monarch remains under the control of the heavenly king, and is constituted His vicegerent and representative. And this direct dependence of the king on the Lord for wisdom and guidance is assumed throughout the historical records of the Hebrew monarchy. The supreme test of the worthiness of any king to occupy his exalted position is his fidelity to the Lord and His revealed law. The historical books, and still more the writings of the prophets, voice the constant belief that God exercised a special and exclusive overrule over His people Israel by blessings, punishments, and deliverances. In the post-exilic period the hierocratic rule became the dominant feature of the Jewish theocracy, and, in spite of its limitations and perversions, it prepared, according to the designs of a wise Providence, the way for the New Dispensation and the Kingdom of Heaven so often mentioned in the Gospels.

Vigouroux, Dictionnaire de la Bible, s. v.

JAMES F. DRISOOLL.

Theodard, Saint. Archbishop of Narbonne, b. at Montauban about 840; d. at the same place 1 May, 893. He seems to have belonged to a noble and wealthy family and to have studied with great zeal both ecclesiastical and secular learning in his youth. He gave proof of his education and skill when he was a subdeacon at a synod at Toulouse that was called upon to settle a dispute between the Jews of the place and Bishop Bernhard. In this way the presiding officer of the synod, Archbishop Sigebod of Narbonne (873-885), came to have so high an opinion of Theodard that he made him his archdeacon. In this position Theodard distinguished himself by faultless morals, meekness, piety, and charity, and was ever open to the humble, the lame, a father to the poor, and the comforter of the oppressed”. After Sigebod’s death (885) Theodard was elected his successor, consecrated on 15 August, 885, and in 886 went to Rome to obtain the pallium from Stephen VI.
Theodicy maintained with energy the rights of his see and its suffragans, repaired the damages that these dioceses had suffered from the incursions of the Saracens, restored the cathedral, and upped its revenues and the treasures of his church for the release of captive Christians. At a later date he was able to replace the bishops of Astorga and Zamora. He died when he had lived in the Benedicite Abbey of St. Martin and was buried there. The abbey bore his name from 845. It was later plundered by the Huguenote; since then all the relics of St. Theodard, excepting a small remnant, have disappeared.

KLEMMEN LÖFFLER.

Theodicy.—Etymologically considered, theodicy (θεοδικεία) signifies the justification of God. The term was introduced into philosophy by Leibniz (q. v.), who, in 1710, published a work entitled: "Essais de Théodicée sur la bonté de Dieu, la liberté de son gouvernement, et l’origine du mal". The purpose was to show that the evil in the world does not conflict with the goodness of God, that, indeed, notwithstanding its many evils, the world is the best of all possible worlds (see Optimism). The problem of evil (see Evil) has from earliest times engrossed the attention of philosophers. The well-known sceptic Pierre Bayle had denied in his "Dictionnaire historique et critique" the goodness and omnipotence of God on account of the sufferings experienced in this earthly life. The "Théodicée" of Leibniz was directed mainly against Bayle. Imitating the example of Leibniz, other philosophers now called their treatises on the problem of evil "theodicies". After a thorough treatment of the question the proofs both of the existence and of the attributes of God cannot be disregarded, our entire knowledge of God was gradually brought within the domain of theodicy. Thus theodicy came to be synonymous with natural theology (theologia naturalis), that is, the department of metaphysics which presents the positive proofs for the existence and attributes of God and solves the opposing difficulties. Theodicy, therefore, might be defined as the science which treats of God through the exercise of reason alone. It is a science because it systematically arranges the content of our knowledge about God and demonstrates, in the strict sense of the word, each of its propositions. But it appeals to nature as its only source of proof, whereas theology sets forth our knowledge of God as drawn from the sources of supernatural revelation.

The first and most important task of theodicy is to prove the existence of God. It is of course presupposed that the suprasensible can be known and that the limits of experience pure and immediate can be transcended. The justification of this assumption must be furnished by other branches of philosophy, e. g. theoretics and metaphysics. The natural demonstrability of God’s existence was always accepted by the majority of theists. Hume and Kant were the first to awaken in the minds of would-be theists serious doubt on this point. Not that these philosophers presented any solid reason against the long-tested arguments for the existence of God, but because in their systems a scientific proof of the existence of a supernatural being is impossible. New ways of establishing theism were now sought. The Scotch School led by Thomas Reid taught that the fact of the existence of God is accepted by us without knowledge of reasons but simply by a natural faculty.

That God exists, this school said, is one of the chief metaphysical principles that we accept not because they are evident in themselves or because they can be proved, but because common sense obliges us to accept them. In Germany the School of Jacobi taught that our reason is able to perceive the suprasensible. Jacobi distinguished three faculties: sense, reason, and understanding. Just as sense has immediate perception of the material so has reason immediate perception of the immaterial, while the understanding brings these perceptions to our consciousness and then works upon them ("Geschichte der neueren Philosophie", II, 82 sqq.). God’s existence, then, cannot be proved—Jacobi, like Kant, rejected the absolute value of the principle of causality—it must be felt by the mind. In his "Emile", Jean-Jacques Rousseau asserted that when one understands the understanding properly, then the existence of God it encounters nothing but contradictions; the impulses of our hearts, however, are of more value than the understanding, and these proclaim clearly to us the truths of natural religion, e. g., the existence of God, the immortality of the soul, etc. The same theory was advocated in Germany by Friedrich Schleiermacher (d. 1834), who assumed an inner religious sense by means of which we feel religious truths. According to Schleiermacher, religion consists solely in this inner perception, dogmatic doctrines are unessential (Stöckl, loc. cit., 190 sqq.). Nearly all Protestant theologians who have hitherto, in a more or less extreme way, have come into atheism follow in Schleiermacher’s footsteps. They generally teach that the existence of God cannot be demonstrated; certainty as to this truth is only furnished us by inner experience, feeling, and perception.

As is well known the Modernists also deny the demonstrability of the existence of God. According to them we can only know something of God by means of the vital impression, that is, under favourable circumstances the need of the Divine dormant in our subconscioussness becomes conscious and arouses that conscious feeling or experience in which God reveals himself to us (see Modernism). In condemnation of this view the oath against Modernism formulated by Pius X says: "Deum..., naturali ratione luminæ per ea quæ facta sunt, hoc est per visibilia creationis opera, tanquam causam per effectus cætor cognosci adeoque demonstrati etiam posse, profiteri", i. e., I declare that by the natural light of reason, God can be certainly known and therefore His existence demonstrated through the things that are made, i. e., through the visible works of creation, as the cause is known through its effects.

There is, however, another class of philosophers who assert that the proofs for the existence of God present indeed a fairly large probability but no absolute certainty. A number of obscure points, they say, always remain. In order to overcome these difficulties there is necessary either an act of the will, a religious experience, or the discernment of the misery of the world without God, so that finally the heart makes the decision. This view is maintained, among others, by the noted English statesman Arthur Balfour in his widely read book "The Foundations of Belief" (1895). The opinions set forth in this work were adopted by none other than Rev. M. de Périn, the editor of the "Revue des deux Mondes". Many orthodox Protestants express themselves in the same manner, as, for instance, Dr. E. Dennert, President of the Kepler Society, in his work "Ich Gott tott" (Stuttgart, 1908). It must undoubtedly be concluded that for the perception of religious truths the mental attitude and temper are of importance. As the questions here under consideration are those that penetrate deeply into practical life and their solution is not directly evident, the will is thus able to hold fast to the opposing difficulties and prevent the understanding from attaining to quiet, objective reflection and this is not a matter of the understanding cannot eliminate every reasonable doubt as to the existence of God, or that a subjective inclination of the heart is a guarantee of the truth,
even though there is no evidence that it is based on objective facts. This latter view would open the door wide to religious extravagance. It is not, therefore, an excess of intellectualism to demand that the truths which serve as the rational basis of faith also be clearly and clearly proved.

Even in earlier times there were those who denied that the existence of God could be proved absolutely by the understanding alone, and took refuge in Revelation. In his "Summa contra Gentiles" (I, c. xii), St. Thomas refers to such reasons. At a later date, this opinion was championed by the Nominalists, William of Occam and Gabriel Biel, as well as by the Reformers; the Jansenists demanded the special aid of grace. In the nineteenth century the Traditionalists (see TRADITIONALISM) asserted that only when some vestiges of the original revelation reached man could he deduce with certainty the existence of God. Dr. J. Kuhn, formerly professor at Tübingen, declares that the clear recognition of the existence of God requires a pure soul unainted by sin. Ontologism (q. v.), went to the other extreme and asserted the immediate cognition of God. St. Anselm offered an argument (the proof of the existence of God) which, however, has been always and rightly rejected by the majority of Catholic philosophers, notwithstanding the modifications by which Duns Scotus, Leibniz, and Descartes sought to save it (cf. Dr. Otto Paschen, "Der ontologische Gottesbeweis in der Scholastik", Archiv für die Geschichte der Philosophie [1902]; and M. Espinosa, "Gottesbeweis und seine Geschichte", Bonn, 1905). In regard to the various a posteriori proofs for the existence of God, see the article GOD. A dispute has arisen of late as to whether there are a number of proofs of the existence of God or whether all are not merely parts of one and the same proof (cf. Dr. C. Huber, "Gottesbeweis oder Gottesbeweise?", Stuttgart, 1888).

It is certain that we always reach God as the cause, the last ground of all existence, and thus constantly follow as a guide the principle of sufficient reason. But the starting-point of the individual proofs varies. St. Thomas calls them aptly (Summ. theol. I, Q. ii, a. 3) "viae, i.e., roads to the apprehension of God which all open on the same highway.

After demonstrating the existence of God, theology investigates the question as to His nature and attributes. The latter are in part absolute (quaeo saeclum) and in part relative (qua character) and include the infinity, unity, immutability, omnipresence, and eternity; to the second class the knowledge, volition, and action of God. The action of God includes the creation, maintenance, and government of the world; the co-operation of God with the activity of the creature, and the working of miracles. The understanding demands for us abundant knowledge concerning God, although it allows us but faint glimpses of His essential greatness and beauty. For one thing should not be forgotten, namely, that all our cognition of God is incomplete and analogous, that is, is formed from mere image. What we have derived from creation and the world, so to speak, is but a shadow. Hence it is that God remains a mystery to us, as, for instance, how God's immutability harmonizes with His freedom, and how He knows the future. But the inadequacy of our knowledge does not justify the assertion of the Agnostic that God is unknowable and that consequently any attempt such as theology makes to reason about His attributes and their relations to Him is foredoomed to failure (see AGNOSTICISM).

An historical survey of the development of the proofs from Plato to Leibniz for the existence of God may be found in the works of Schweitzer, Miehle, and others. M. Moeller, "Die Existenz von Gott" (London and Edinburgh, 1906); Mote, The Existence of God (London and Edinburgh, 1906); the articles "Gott" and "Religion," in the Encyclopedia of the Philosophy of Theism (London, 1884); Plant, Antithetische Theories (2nd ed., London and Edinburgh, 1894); Honein, Institutiones Theodoroideae (Freiburg, 1883); Hugli, Die Theodicee (Valenciennes, 1878); M. CONSTANTIN KEMPFF.

Theodore I, Pope, from 642 to 649; the date of his birth is unknown. He was a Greek of Jerusalem and the son of a bishop, Theodore. His election as pope was promptly confirmed by the Exarch of Ravenna, perhaps because he was a Greek, and he was consecrated 24 Nov., 642. Engaged in a long pontificate in the struggle against Monothelitism, he at once wrote to the Byzantine Emperor Constans II to inform him that he could not recognize Paul as Patriarch of Constantinople, because the deposition of his predecessor (Pyrrhus) had not been canonical. He then urged Constans II to depose Paul. He also wrote to Paul and to the bishops who had consecrated him, to impress upon them the importance of securing the legal deposition of Pyrrhus, if the accession of Paul was to be recognized. If Theodore's vigorous action produced no result at Constantinople, it elsewhere excited strong opposition to Monothelitism. The Bishops of Cyprus, Palestine, and Africa expressed their loyal submission to his teaching in very striking language. Even the deposed patriarch Pyrrhus recanted his heresy before Theodore (645), but soon relapsed into his old errors, and was excommunicated by the pope (648). Meanwhile, urged by the bishops of Africa, Theodore made another effort to reclaim Paul, but only succeeded in drawing from him an express declaration of his belief in the doctrine of one Will in our Lord. This brought upon him sentence of excommunication and deposition. To this Paul replied barbarously ill-treating the papal aportesricari (or nuncio) at Constantinople. He also prevailed upon Constans to issue a new decree known as the Type (Typus). This document ordered the Ecclesi to be taken down, and enjoined that in future there was to be no more discussion on the doctrine of two Will or Operations. The Type was promptly condemned "by the whole West" in general, and specifically by Theodore's successor (St. Martin I), but it is not certain whether Theodore lived long enough to anathemize it. This energetic pontiff, who was good to the poor of Rome, and a benefactor of its churches, was buried in St. Peter's, 14 May, 649.

HORACE K. MANN.

Theodore II, Pope, son of Photius. His pontificate lasted only twenty days; neither the date of his birth nor his accession to the papacy is known; it is probable that he was pope during December 897. He reinstated in synod the clerics who had been degraded by Stephen (VI) VII, ordered the burning of the acts of the congregation which they had forged and, formally recognized the validity of the orders conferred by Pope Formosus. He caused the body of the last-named pope, which had been thrown into the Tiber and cast ashore by a flood, to be reburied in St.
THEODORE

571

THEODORE

Peter's. By his contemporary Frodard he is said to have been beloved by the clergy, to have himself loved and promoted peace, and to have been temperate, and chaste, and charitable to the poor.

HORACE K. MANN.

Theodore, seventh Archbishop of Canterbury, b. at Tarsus in Cilicia about 602; d. at Canterbury 19 September, 690; was a monk (probably of the Basilian Order), but not yet in Holy orders, living at Rome in 667, when Pope Vitalian chose him for the See of Canterbury in place of Wighard, who had died before consecration. After receiving orders, Theodore was ordained Bishop of Relles, on 26 March, 670, and set out for England, but did not reach Canterbury until May, 669. The new primate found the English Church still suffering from the jealousies and bitterness engendered by the long Paschal controversy, only lately settled, and sadly lacking in order and organization. The diocesan character, commensurate with the divisions of the various kingdoms, were of unwieldy size, and many of them were vacant. Theodore, says Bede, at once "visited all the island, wherever the tribes of the Angles inhabited", and was everywhere received with respect and welcome. In the face of vacant bishoprics he regularized the position of St. Chad, who had not been duly consecrated, corrected all that was faulty, instituted the teaching of music and of sacred and secular learning throughout the country, and had the distinction of being, as Bede specially mentions, "the first archbishop whom all the English Church obeyed." In 673 he convoked at Hertford the first synod of the whole province, an assembly of great importance as the forerunner and prototype of future English witenagemotes and parliaments. Going later to the court of the King of Northumbria, who country was entirely under the jurisdiction of St. Wilfrid, he divided it into four dioceses against the will of Wilfrid, who appealed to Pope Agatho. The pope's decision did not acquit Theodore of arbitrary and irregular action, although his plan for the subdivision of the Northumbrian diocese was carried out. For the see of Jarrow Theodore himself consecrated St. Cuthbert in 685, and in the following year he was fully reconciled to Wilfrid, who was restored to his See of York. Thus, before his death, which occurred five years later, Theodore saw the diocesan system of the English Church fully organized under his primate and political authority.Stubbs emphatically states that it was "one of the most important work in the Church of England*, and Theodore not only in developing a single united ecclesiastical body out of the heterogeneous Churches of the several English kingdoms, but in thus realizing a national unity which was not to be attained in secular matters for nearly three centuries.

Apart from the epoch-making character of his twenty-one years' episcopate, Theodore was a man of commanding personality: inclined to be systematic, but possessed of great ideas, remarkable powers of administration, and intellectual gifts of a high order, carefully cultivated. Practically his only literary remains are the collected decisions in disciplinary matters, well known as "The Penitential of Theodore," which was published complete by Wasserschleben in 1851, and seven editions of it have been printed during the past sixty years. Theodore was buried in St. Augustine's Monastery, Canterbury, and his epitaph, of which only a part has been preserved, contains eight verses, being inscribed upon his tomb.

D. O. HUNTER-BLAIR.

Theodore, Bishop of Mopoeustia in Cilicia and ecclesiastical writer, b. at Antioch about 350 (thus also known as Theodore of Antioch), of wealthy and prominent parents; d. 428. Acc. to Syrian sources Theodore was the cousin of the somewhat younger Nestorius (Nestle, op. cit. in bibliography); Polychromius, afterwards Bishop of Apamea, was a brother of Theodore. The clever and highly gifted youth received the education in classical literature usual to his station and studied philosophy and rhetoric in the school of the renowned pagan orator Libanius. He here became acquainted with his early friends, St. John Chrysostom and Maximus, later Bishop of Seleucia (perhaps as fellow-student). Following the example of Chrysostom (Sozomen, "Hist. eccl.", VI, iii), Theodore renounced a monastic career when about thirty years of age, devoted himself to the ascetic life in the school of Diodorus (later Bishop of Tarsus) and Carisius, situated near Antiochia. His youthful and too tempestuous zeal soon grew cold, and, owing chiefly to the memory of Hermone whom he intended to take as wife, he resolved to enter the monastery. (Sozomen, "Hist. eccl.", VIII, 2; Hesychius Hiero., "Hist. eccl." in Mansi, "Concil.", IX, 248). Chrysostom's grief at this step of his friend was so great that he addressed him two letters or treatises ("Ad Theodorum lapsum" in P. G., XLVII, 277 sqq.) to recall him to his early resolution. A little later Theodore did return to the "divine philosophy" of the ascetic monastic life. He quickly acquired a great acquaintance with the Holy Scriptures. Impetuous and restless of character, he had already, when scarcely twenty years old (at eighteen according to Leontius, "Adv. Incoerupicolas", viii, in P. G., LXXXVI, 1364), applied himself to theological compositions. His first work was the commentary on the Psalms, in which his extreme exegetical tendencies in the sense of an almost exclusively grammatico-historical and realistic explanation of the text is already manifest (see below Theodore's Hermeneutics). Between 383 and 396 he was ordained priest (as Chrysostom writes) and governed the church of Mopoeustia together with Chrysostom) by his early teacher (now bishop) Flavian. Theodore soon displayed a very keen interest in the theologico-political discussions of the time, writing and preaching against the Origenists, Arians, Eunomians, Apollinarists, magicians, Julian the Apostate, etc. His keen and versatile literary activity, and the name of "Polyhistor" (Sozomen, op. cit., VIII, ii). Theodore apparently left Antioch before 392 to join his old teacher Diodorus, who was then Bishop of Tarsus (Hesychius Hier., op. cit., in Mansi, IX, 248). Probably through the influence of Diodorus he was named Bishop of Mopoeustia in 394, in which capacity he was to labour thirty-six years. In 394 he attended the Synod of Constantinople, and during its progress preached before the Emperor Theodosius the Great. During the confusion concerning Chrysostom, Theodore remained faithful to his early friend (cf. Chrysostom, "Ep. cxii", in P. G., LI, 668; Latin translation in Facundus, loc. cit., VII, 7). Later (about 421) he received hospitably Julian of Eclanum and other Pelagians, and doubtless allowed himself to be further influenced by their dogmatic errors. However, he later associated himself with the condemnation of Pelagius and his leader against the Cilicians (Marius Merc. in P. L., XLVIII, 1044). He died in 428, the year in which Nestorius succeeded to the episcopal See of Constantinople. During his lifetime Theodore was always regarded as orthodox.
and as a prominent ecclesiastical author, and was even consulted by distant bishops on theological questions.

II. Writings.—The most complete list of the writings of Theodore is given by Ebeling (d. 1318; see Assemani, Bibl. orient., III, 30–36). Accordingly, the following is an attempt to give a Syriac translation. A. Ecclesiastical Commentaries: (a) On the Old Testament: (1) On Genesis, 3 books (Greek fragments in the Niphnourgsacene, Leipzig, 1772; Syrian in Sachau, 1–21); (2) On the Psalms, 5 books (Greek fragments in P. G., LXVI, 648; Latin translation discovered by Mai in P. G., LXVI, 124–832); (3) on the First and Second Books of Kings, 1 book (lost); (4) on Job, 2 books, dedicated to St. Cyril of Alexandria (only four fragments preserved in P. G., loc. cit., 697 sq.); (5) on the Ecclesiastes, 1 book (lost); (7) to the four Great Prophets, 4 books (lost). Assemani adds “Questiones et Responsiones in Sacra Scripturam”; the fragments mentioned by the Fifth Ecumenical Council (Mani, IX, 225) on the Canonicity of the Apocrypha are perhaps taken from a letter. (b) On the Canon of the Gospel: (1) On the Gospels, 1 book (fragments in P. G., LXVI, 705 sqq.); (2) On Luke, 1 book (fragments, ibid., 716 sqq.); (3) On John, 1 book (fragments, ibid., 728; Syrian, discovered and edited by Chabot, Paris, 1887); (4) on the Acts, 1 book (fragments in P. G., LXVI, 785 sq.); (5) On the Epistles of St. Paul (Greek fragments in P. G., LXVI, 156–986; the Epistles to the Galatians, Colossians, Thessalonians, Philemon, Latin edition by H. B. Swete, Cambridge, 1888–92). B. Opuscula: (1) “De sacramentis”, 1 book (lost); (2) “De fide”, 1 book (“Liber ad bapitizatos”, according to Facundus, op. cit., IX, 3; fragments in Swete, I, 233–277); (3) “De sacerdotio”, 1 book (lost); (4) “De Spiritu Sancto”, 2 books, against the Macedonians (lost); (5) “De Incarnatione”, 15 books (cf. Facundus, IX, 3; Gennadius, 11; written at Antioch about 382–92 against the Apollinarians and Eunomians; Greek fragment in P. G., LXVI, 989 sqq., and Swete, II, 290–312); (6) “Contra Euonymum”, 2 books (one fragment in Facundus, IX, 3); (7) “Contra diventes: peccatum nature inesse”, 2 books (cf. Photius, “Bibl.”, 177); (8) “Contra magi cam artem”, 2 books (cf. Photius, 81); (9) “Ad monachos”, 1 book (lost); (10) “De obscured locutione”, 1 book (cf. Photius, 81); (11) “De probatim”, 2 books (lost); (12) “Contra allegoristas”, 5 books (cf. Facundus, III, 6: “De allegoria et historias”); (13) “De Assemente et Assumpto”, 1 book (lost); (14) “De legis latione”, 1 book (lost). Many unidentified fragments are perhaps taken from lost works. The fifteen books on “De mystis aut quae mysticus” by Assemani (III, 1, 563), are probably identical with the “Codex mysticus” cited by Facundus (III, 2). Concerning the “Symbolum fidei” (Facundus, III, 2; Leontius, P. G., LXXVII, 1367), cf. Fritzsche in F. G., LXVI, 75 sq. Leontius Byzant. (“Advers. Iconon.”, xx, in P. G., LXXVII, 1968) adduce the reference to the so-called Nestorian Liturgy, that Theodore had also introduced a new liturgy. C. Letters: These were collected in one volume which is now lost.

III. Theodore’s Doctrine.—A Hermeneutics and Canon. As regards the Old Testament, Theodore seems to have been influenced by St. John Damascene in the idea of inspiration and his canon. He rejected as uncanonical the Book of Job, the Canonicity of the Apocrypha, the Book of Enoch, and the deutero-canonical books. From the New Testament he excised the Catholic Epistles (except I Peter and I John) and the Apocalypse. (Facundus, loc. cit., IX, 3; G., LXXXVI, 1365–68). In his explanation of the Holy Writ Theodore employs primarily the prevailing historical and grammatical method of the Antiochene school. Of all the Psalms he recognized only ii, viii, xiv, and xix as containing direct prophetic reference to the Messiah; the Canicile of Canicile was pronounced by him a vulgar nuptial poem. B. Anthropology and Doctrine of Justification. Theodore’s doctrine concerning the law indicates his grave misgivings, even if we reject the accusations of Lactantius (loc. cit., 20–37) as exaggerated. According to Theodore, the sin of Adam rendered himself and mankind subject to death, because he was then mutable. But that which was the consequence of sin in the case of Adam, he held to be the inmost man in all men in some manner or other, and especially in man personally. The object of the Redemption was to transfer mankind from this condition of mutability and mortality to the state of immutability and immortality. This happened first in the case of Christ, fundamentally by the union with the Logos, to a greater extent at His baptism, and completely at His Resurrection. In mankind this change is effected by union with Christ. The union begins in baptism, through which (1) all (personal) sins are remitted, (2) the grace of Christ is granted, which leads us to immutability (impassibility) and immortality. At the death of the soul of Christ, the union is terminated. That these ideas show a certain resemblance to the fundamental thoughts of Pelagianism is not to be denied; whether, however, Theodore influenced Pelagius and Celestius (according to Marius Mercator, through the medium of the Syrian Rufinus; P. L., XLVIII, 110), or whether these influences in Theodore are so strong that the doctrine of Christology is very difficult to determine.

C. Christology.—Theodore’s Christology exercised a more direct influence on the doctrine of his (medieate) disciple Nestorius (q. v.). The contemporary polemics against Arianism and Apollinarianism led the Antiochenes (Diodorus, Theodore, and Nestorius) to emphasize energetically the perfect Divinity and the unimpaired Humanity of Christ, and to separate as sharply as possible the two natures. Thus, in a sermon which he delivered at Antioch (perhaps the first as bishop), Theodore vehemently attacked the use of the term beostrous, long employed in ecclesiastical terminology, because Mary was strictly speaking aπερωτικος, and only indirectly beostrous. It was only by recalling his words and correcting himself that Theodore could appease the excitement resulting from this view (see John of Antioch, “Epist. ad Theodore. in imperio,” in “Patrologia graeca,” X, 2; P. L., LXXXVII, 771). It cannot be denied that the Antiochene separation of the nature must result in an improper weakening of the union in Christ. Like John of Antioch, Theodore expressly declares that he wished to uphold the unity of person in Christ; perhaps they recognized some distinction between nature and person, but did not know exactly what was the distinguishing factor, and therefore used faulty paraphrases and comparisons, and spoke of the two natures in a way which, taken strictly, presupposed two persons. Thus, according to Theodore, the human nature of Christ was not only sympathetic, but also really tenable, since even if Christ’s actual freedom from sin would be the result of His physical union with God, not a merit of His free will. The union of the human and Divine nature happens not κατ’ οἰκονομίαν αὐτούν, but κατ’ εὐγενείαν, but κατ’ οἰκονομίαν (at will), and indeed a οἰκονομία κατ’ ἐνσώματος, and therefore more. The two natures form a unity, “like man and wife” or “body and soul”. Consequently, according to Theodore, the communicatio idiomatum, fundamentally speaking, is also lawful.

IV. The Condemnation of the Doctrine of Theodore.—While during his lifetime (apart from the episode at Antioch) Theodore was regarded as orthodox (cf. Theodoret, “Hist. eccl.”, V, xxxiii; John of Antioch, in Facundus, II, 2), a loud outcry was
Theodore of Amasea. Saint, named Tyro (Tiro), because he was a young recruit, but because for a time he belonged to the Cohors Tyronum (Nilles, Kal. man., I, 105), called of Amasea from the place where he suffered martyrdom, and Euchaita from the place, Euchais, to which his body had been carried, and where he was held in such veneration that the city was frequently spoken of as Theodoropolis. His martyrdom seems to have taken place 17 Feb., 306, under the Emperors Galerius Maximian and Maximin, for on this day the Menology gives his feast. The Greeks and Athanasian Fathers have him also on the first Saturday of Lent, while the Roman Martyrology records him on 9 Nov. In the twelfth century his body was transferred to Brindisi, and he is there honoured as patron; his head is enshrined at Gaeta. There are churches bearing his name at Constantinople, Jesus, Damascene, at Athens, and also at the ancient church of Venice, of which he is titular, is said to have been built by Nurses. At the foot of the Palatine in Rome is a very old church, circular in shape and dedicated to St. Theodore, whom the Roman people call S. Toto, which was made a collegiate church by Felix IV. The people showed their confidence in his saint by bringing their sick children to his temple. His martyrdom is represented in the choir of the cathedral of Chartres by thirty-eight glass paintings of the thirteenth century (Migne, "Dict. iconogr.", 590). He is invoked against storms. Emblems: temple, torch, crocodile, pyre, crown of thorns.

St. Gregory of Nyssa spoke highly of him in his treatise on the feast and gave several data concerning his life and martyrdom (P. G., XLVI, 741, and Ruinart, 505). The oldest text of the "Martirium S. Theodori Tironis" was published by Delahaye in "Les legendes grecques des saints militaires", p. 227, but it is contained in the "Martyrium Hieronimi". For the "Martyrium Hieronimi" see X, 333. St. Theodore is said to have been born in the East (Syria or Armenia are mentioned by some writers). He enlisted in the army and was sent with his cohort to winter quarters in Pontus. When the edict against the Christians was issued by the emperors, he was brought before the Court at Amasea and asked to offer sacrifice to the gods. Theodore, however, denied their existence and made a noble profession of his belief in the Divinity of Jesus Christ. The judges, pretending pity for his youth, gave him time for reflection. He died after being burning the Temple of Cybele. He was again taken prisoner, and after many cruel torments he was burned at the stake.

FRANCIS MERSHMAN.

Theodore of Cessus, a fifteenth-century Greek Humanist and translator of Aristotle, b. at Thessalonica early in the fifteenth century; d. in Southern Italy in 1478. In 1429 he went to Italy, where he made his home, like many other learned Greeks who did not wish to submit to the rule of the Turks at Constantinople. He taught Greek at Siena, Ferrara, and Rome. Having turned Latin from Victorino da Feltre, he devoted himself to the translation of Aristotle’s works into that language. He was received with favour at the Court of Nicholas V, and, although a pronounced Aristotelian, remained on terms of friendship with Cardinal Bessarion. Through the good offices of the cardinal he obtained a small benefice at Arezzo. His chief service to the cause of Neoplatonic philosophy consisted in his translations, which were superior both in point of accuracy and in that of style to the versions in use before his time. He devoted particular attention to the translation and exposition of Aristotle’s works on natural science. In the campaign waged by Pletton (Umbriaco) against Aristotelianism he contributed his share to the defence of the Stagirite. His influence on the humanistic movement was considerable, owing to the success with which he taught Greek language and literature at the various seats of learning in Italy. At Ferrara he founded an academy to diffuse the influence of the Platonian academy founded by Pletton at Florence.

WILLIAM TUNER.
Theodore of Studium, SAINT, a zealous champion of the veneration of images and the last great representative of the unity and independence of the Church in the East. As a child, he joined the Monastery of Mopseustes near the promontory Akrita on 11 November, 826. He belonged to a very distinguished family and like his two brothers, one of whom, Joseph, became Archbishop of Thessalonica, was highly educated. In 781 Theodore entered the monastery of Saccadion on the Alexine, and in 796, Joseph thus near Constantinople, where his uncle Plato was abbot. In 787 or 788 Theodore was ordained priest and in 794 succeeded his uncle. He insisted upon the exact observance of the monastic rules. During the Adullterine heresy dispute (see NICOPHORUS, SAINT), concerning the divorce and remarriage of the Emperor Leo V, he was banished by Constantine VI to Thessalonica, but returned in triumph after the emperor’s overthrow. In 799 he left Saccadion, which was threatened by the Arabs, and took charge of the monastery of the Studium at Constantinople. He gave the Studium an excellent organization which was taken as a model by the entire Byzantine monastic world, and still exists on Mount Athos and in Russian monasticism. He supplemented the somewhat theoretical rules of St. Basil by specific regulations concerning enclosure, poverty, discipline, study, religious services, fasting, and manual labor. When the Adullterine heresy broke out again in 809 he was exiled a second time as the head of the strictly orthodox church party, but was recalled in 811. The administration of the iconoclastic Emperor Leo V brought new and more severe trials. Theodore courageously denied the emperor’s right to interfere in ecclesiastical affairs. He was consequently treated with great cruelty, exiled, and his monastery filled with iconoclastic monks. Theodore lived at Metopa in Bithynia from 814, then at Bonita from 819, and finally at Smyrna. Even in banishment he was the central point of the opposition to Cesaropapism and Iconoclasm. Michael II (820-829) permitted the exiles to return, but did not annul the laws of his predecessor. Thus Theodore saw himself compelled to continue the struggle. He did not return to the Studium, and died without having attained his ideals. In the Roman Martyrology his feast is placed on 12 November; in the Greek martyrologies of 14th century Theodore is also listed.

Theodore was a man of practical bent and never wrote any theological works, except a dogmatic treatise on the veneration of images. Many of his works are still unprinted or exist in Old Slavonic and Russian translations. Besides several polemics against the iconoclasts, special attention is given to the “Catechesis magna”, and the “Catechesis parva” with their sonorous sermons and orations. His writings on monastic life are: the iambic verses on the monastic offices, his will addressed to the monks, the “Canones”, and the “Paters monasteriales”, the regulations for the monastery and for the church services. His hymns and epigrams show fiery feeling and a high spirit. He is one of the first of hymn-writers in productivity, in a peculiarly creative technique, and in elegance of language. 550 letters testify to his ascetical and ecclesiastico-political activity. 

KLEMMER LÖFFLER.

Theodore, Bishop of Cyrus and theologian, b. at Antioch in Syria about 393; d. about 457. He says himself that his birth was an answer to the prayers of the monk Macarianus (“Hist. reli.”, IX; Epist. Ixxxi). On account of a vow made by his mother he was dedicated from birth to the service of God and was brought up and educated by the monks Macarianus and Peter. At a very early age he was ordained lector. In theology he studied chiefly the writings of Diodorus of Tarus, St. John Chrysostom, and Theodore of Mopsuestia. In philosophy and literature he understood Syria as well as Greek, but was not acquainted with either Hebrew or Latin. When he was twenty-three years old and both parents were dead, he divided his fortune among the poor (Epist. exilii; P. G., LXXXIII, 1316) and became a monk in the monastery not far from Apamea, where he lived for seven years, devoting himself to prayer and study. Much against his will about 423 he was made Bishop of Cyrus. His diocese included nearly 500 parishes and was suffragan of Hierapolis. A large number of monasteries and churches were under him, he had six deacons to assist him. Besides his main church, he also was bishop of Tharsus, and he had six churches there. Theodore also exerted himself for the material welfare of the inhabitants of his diocese. Without accepting donations (Epist. Ixxxi) he was able to build many churches, bridges, porticos, aqueducts, etc. (Epist. Ixxi, lxxviii, cxxviii).

Towards the end of 430 Theodore became involved in the Nestorian controversy. In conjunction with John of Antioch he begged Nestorius not to reject the expression θεοκρατος as heretical (Mansi, IV, 1067). Yet he held firmly with the other Antiochenes to Nestorius and to the last refused to recognize that Nestorius taught the doctrine of two persons in Christ. Until the Council of Chalcedon in 451 he was the literary champion of the Antiochene party. In 430 he published his Αναστροφή (Confrontation) of the Anathemas of Cyril to which the latter replied with an Apology (P. G., LXXVI, 392 sqq.). At the Council of Ephesus (431) Theodore sided with John of Antioch against Nestorius, and present the anathema of Cyril and the anathema against him. He was also a member of the delegation of “Orientalis”, which was to lay the cause of Nestorius before the emperor but was not admitted to the imperial presence a second time (Hefele-Leclercq, “Hist. des Conc.”, II, i). The exchange of letters between Theodore and Antioch, at both of which Cyril was then again deposed and anathematized. Theodore after his return to Cyrus continued to oppose Cyril by speech and writing. The symbol (Credo) that formed the basis of the reconciliation (c. 439) of John of Antioch and others with Cyril was apparently drawn up by Theodore (P. G., LXXXIV, 209 sqq.), who, however, did not enter into the agreement himself because he was not willing to condemn Nestorius as Cyril demanded. It was not until about 435 that Theodore seems to have become reconciled with John of Antioc, without, however, being obliged to agree to the condemnation of Nestorius (Synod. cxxvii and clix; Epist. cxxviii). The dispute with Cyril broke out again when in 437 the latter called Diodorus of Tarus and Theodore of Mopsuestia the real originators of the Nestorian heresy. Theodore entered the lists on their defence. The bishop’s polemics were carried on is shown both by the letter and the speech of Theodore when he learned of the death in 444 of the Patriarch of Alexandria (Epist. cxxviii).

The episcopate of Diodorus, the successor of Cyril, was a period of much trouble for Theodore. Diodo-
Theodosius, by the mediation of Eutyches and the influential Chrysaphius, obtained an imperial edict which forbade Theodoret to leave his diocese (Epist. lxxix, lxxxii). In addition Theodoret was accused of Nestorianism by the Patriarch Flavian in return Dousorus obtained an imperial decree in 449 whereby Theodoret was forbidden to believe or say anything to the contrary of Epiphanius (Robber Council of Ephesus). At the third session of this synod Theodoret was deposed by the efforts of Dousorus and ordered by the emperor to re-enter his former monastery near Apamea. Better times, however, came before long. Theodoret appealed to Pope Leo who declared his deposition invalid, and, as the Emperor Theodosius II died the following year (450), he was allowed to re-enter his diocese. In the next year, notwithstanding the violent opposition of the Alexandria party, Theodoret was admitted as a regular member to the sessions of the Council of Chalcedon but refused to vote. At (26 Oct., 451), he was admitted to full membership after he had agreed to the anathema against Nestorius; probably he meant this agreement only in the sense: in case Nestorius had really taught the heresy imputed to him (Mansi, VII, 190). It is not certain whether Theodoret spent the last years of his life in Syria or in Egypt, where he had formerly lived. There still exists a letter written by Pope Leo in the period after the Council of Chalcedon in which he encourages Theodoret to co-operate without wavering in the victory of Chalcedon (P. G., LXXXIII, 1319 sqq.). The writings of Theodoret against Cyril of Alexandria were anathematized during the troubles that arose in connexion with the war of the Three Chapters.

**Writings.**—A. *Ezechel.—* Theodoret wrote brief treatises in the form of questions and answers on special passages of the Oecateuch, four Books of Kings, and two Books of Paralipomenon (P. G., LXXX, 75–858). He wrote commentaries over the whole books on: the Psalms (P. G., LXXX, 857–1998, and LXXXIV, 19–32), written before 433 (Epist. lxxi); Canticles (P. G., LXXXI, 27–214); the Greater Prophets, Daniel and Esdræchiel before 436; Isaiah before 436 and 472; the Epistles of St. Paul, written before 448 (P. G., LXXXII, 35–872). B. *Apologetic.—* The Greek arcafection for the virtues of the Greeks, twelve books, written before 437, "the last and probably also the most complete of the numerous apologies which Greek antiquity has produced" (Barthelmeiser, "Pato1Logy", 3rd ed., 1910, p. 327). "De divina Providentia", ten sermons, probably his best work, in which he proves the administration of Divine Providence over the moral, and social systems of the world. C. *Dogmatico-Polemical.—* "Re fugito duodecim Anathematum", against St. Cyril; it has been preserved in Cyril's answer (P. G., LXXXVI, 392 sqq.; Latin by Marius Mercator, P. L., XLVIII, 972 sqq.; "De Sancta et vivificae Trinitate" (P. G., LXXXV, 1137–90); and "De Inanitate Domini" (ib., 1419–78); these two last mentioned treatises have been proved by A. Ehhrad to have been written by Theodoret (see bibliography). "Eranistes seu Pymorphos" (P. G., LXXXIII, 27–336), written in 448 in the form of three dialogues between two heathen philosophers (Theodoret and a Eutyches); these dialogues sought to prove that the Divinity of Christ is (a) unchangeable, (b) unmixed with humanity, (c) incapable of suffering. In the fourth book the first three are briefly summed up in syllogisms. "Hereticarum fabularum compendium" in five books (ib., 336–556); the first four contain a brief summary of heresies up to the time of Theodoret, and the last book contrasts them with Catholic faith and morals; in answer to the attacks he wrote his most important polemical work, called "Eranistes". Theodoret was also considered the prime mover of the condemnation of Eutyches by the Patriarch Flavian. In return Dousorus obtained an imperial decree in 449 whereby Theodoret was forbidden to believe or say anything to the contrary of Epiphanius (Robber Council of Ephesus). At the third session of this synod Theodoret was deposed by the efforts of Dousorus and ordered by the emperor to re-enter his former monastery near Apamea. Better times, however, came before long. Theodoret appealed to Pope Leo who declared his deposition invalid, and, as the Emperor Theodosius II died the following year (450), he was allowed to re-enter his diocese. In the next year, notwithstanding the violent opposition of the Alexandria party, Theodoret was admitted as a regular member to the sessions of the Council of Chalcedon but refused to vote. At (26 Oct., 451), he was admitted to full membership after he had agreed to the anathema against Nestorius; probably he meant this agreement only in the sense: in case Nestorius had really taught the heresy imputed to him (Mansi, VII, 190). It is not certain whether Theodoret spent the last years of his life in Syria or in Egypt, where he had formerly lived. There still exists a letter written by Pope Leo in the period after the Council of Chalcedon in which he encourages Theodoret to co-operate without wavering in the victory of Chalcedon (P. G., LXXXIII, 1319 sqq.). The writings of Theodoret against Cyril of Alexandria were anathematized during the troubles that arose in connexion with the war of the Three Chapters.

**Doctrines.**—In Hermeneutics Theodoret followed the principles of the Antiochene school, but avoided the bias of Theodoret of Mopsuestia. In his Christology also he followed the terminology of Diodorus and Theodoret, and saw in the teaching of Cyril a revival of Apollinarism. He would never acknowledge that the teaching of Nestorius presupposed the acceptance of two persons in Christ or, as Cyril believed, necessarily led to it.

**CHRYSSIS. BAUR.**

Theodoric, Antipope. See PASchal II, POPE.

Theodoric (Thierry) of Chartres, a Platonist philosopher of the twelfth century, b. in France at the beginning of the twelfth century; d. at Chartres about 1150. It is probable that he studied at Chartres under his brother Bernard, at least, we know that in 1121 he was head of the school of Chartres. Later, he seems to have gone to Paris and to have taught there, his disciples later preserved part of the teaching of the 'Lettres de Théodoric de Chartres' (Vienna, 1894; Ehrhard, Die Kirchenlehrer von der Moposuestia und der vorhers Gesellen, Halle, 1950). The 'Lettres de Théodoric de Chartres' at the time he was teaching once more at Chartres. He wrote a work on the seven liberal arts entitled "Epistemon", a treatise "De Sex Dierum Operibus", and a commentary on "De Inventiones Rhetoricae ad Herennium". The first still exists in M.S. at Chartres, the others were published 1854 and 1890. Theodoric was an ardent lover of the Classics, the study of which he defended against the sect of Obsequentists known as "Cornificans". He was also interested in the natural sciences, as is indicated by the fact that he was the
THEODORIC

recipient of a Latin translation of the "Planisphere" of Polioemy made by Herman the Dalmatian. In philosophy he adopted the Platonic explanation of reality and the universality of the theory of universals. He was influenced also by neo-Pythagorean principles. Nevertheless, he did not, as was formerly contended, go the length of professing explicit pantheism; he did not identify Divinity with reality. He did, indeed, maintain that Divinity is a form of essence (forma essendi) but as Bäumker has shown (Archiv f. Gesch. der Phil., X, 138) we are to understand this phrase in a platonistic sense. For, while it necessarily implies the existence of a Divine something in all things, it does not imply the identity of the essence of the God with the individual essence of things. In his exposition of the first chapters of Genesis (De Sex Dierum Operibus) he attempts to reconcile the Mosaic account of creation with the Platonistic explanation of the origin of the universe.

William Turner.

THEODORIC THE GREAT, King of the Ostrogoths, b. A. D. 454 (?); d. 28 Aug., 526. He was an illegitimate son of Theodoric, of the royal Ostrogothic family of Amali. When eight years old Theodoric was brought as a hostage to the Court of Constantinople. Here he learned to comprehend the education given by ancient civilization. At eighteen he was allowed to return home and became the leader of a great horde of his countrymen, whose increasing numbers drove them to seek new lands. As King of the Ostrogoths he was sometimes an ally, sometimes an enemy, of the emperors. The inconsistencies of his policy may probably be explained by his having as rival another Theodoric, called Strabo (squint-eyed), who was able to influence the Court of Constantinople against him. When Strabo died in 481, Theodoric the Great received from the Emperor Zeno the titles of patricius and magister militum, and in 484 was appointed consul.

Theodoric was now compelled to set out with his own people to conquer new territory. The course to be pursued was suggested by the Emperor Zeno. The Ostrogoths were to expel the usurper Odoacer, and thus the emperor thought to be rid of dangerous neighbours. In 488 Theodoric started on the march with his own people and a large number of Rugians. In 489 he defeated Odoacer on the Nonza, later at Verona, and in 490 on the Adige. He then besieged and took Ravenna and forced him to surrender in 493. Theodoric promised Odoacer both life and freedom, but murdered him at a banquet fearing perhaps that he might revolt again.

Theodoric's mastery of Italy being thus established, he at once showed his appreciation of the ancient culture and political organization of the Empire, claiming to be its vicegerent and restorer in Western Europe. His efforts in this capacity were faithfully seconded by his minister Cassiodorus. Proud of his Gothic nationality, Theodoric, unlike the earlier barbarian emperors, believed it possible to reconcile Roman and Germanic interests. His people were set to him equal to the Romans in antiquity of descent and military renown, and he realized that his power rested solely on Gothic prowess. Apparently his kingdom was a continuation of the Roman Empire; in reality his policy was in direct and fundamental contradiction to the Roman conception, by which all national individuality was to be lost in the State as a whole. This theory of government which sought to suppress nationalities was opposed by Theodoric: he had a profound respect for national independence, and had repeatedly taken up arms to maintain it.

Among his many schemes was a great project to combine in one harmonious system, around the shores of the Mediterranean, all the conflicting barbarian nations, and for this reason he repeatedly aided the Frankish king Clovis against the Alamanni and Visigoths. He based his authority to carry out this wide policy not on his office as vicegerent of the Eastern Emperor, but, as he said, on the leges gentium. The precise degree of his dependence on the Byzantine Empire is not known: he certainly recognized its suzerainty and desired to maintain friendly relations with Constantinople. Still, the "Variae" of Cassiodorus, a collection of documents of the reign of Theodoric, shows that he firmly believed the Western Empire to be continued in his person. The many intermarriages between his family and the royal families of

STREET IN RAVENNA, showing the PALACE OF THEODORIC

other Germanic kingdoms were undoubtedly intended to prepare the way for the predominance of his dynasty in the West. Yet his supremacy was a divided one: to the Goths he was the king; to the Romans the patrician. Both nations were ruled by their own laws. The Edictum Theodoricorum of 512 was intended to introduce some degree of uniformity into the criminal law. All Theodoric's decrees, including this code, were in their language very conciliatory towards the Romans: the Roman population was to consider Gothic supremacy the guarantee of its security and prosperity.

In reality Theodoric's reign appeared to bring once more a Golden Age to the sorely-tried peninsula. Experts in well-boring were brought from Africa to help restore the cultivation of the waterless country where the woods had been cut down; and swamps were drained. Books of magic and the theatre were forbidden, edicts were issued for the protection of ancient monuments. Roman literature once more flourished in Italy: its most brilliant representative was Boethius, who was able to combine the lofty ideals of Christianity with the dignity of the ancient philosophy. While tolerating the Catholic Church, Theodoric considered himself the protector of Arianism; accordingly he sought to intervene diplomatically in favour of the Arians who were being persecuted by Justinian I. Nevertheless he allowed complete freedom to the Catholic Church, at least so far as dogma was concerned, though he considered himself entitled to appoint a pope, or to set as arbitrator in the schism between Symmachus and Laurentius, and in general to bring any ecclesiastic to judgment. This same king who had come to Italy as the emperor's representative should not, at the end of his reign, have used such barbarous cruelty in suppressing that Roman national revolt against Gothic rule in which the opposition of the Roman Church to Arianism led the pope, Constantine, and the educated laity to
THEODORIC'S TOMB, RAVENNA, SIXTH CENTURY
The Senate in its judicial capacity was ordered to try those implicated in this conspiracy, and Boethius and his aged father-in-law, the Senator Symmachus, were condemned to death. Theoderic succumbed to the effects of the bitter conviction that his exiled political opponents had failed, usually at private times, to support his health declined. He was buried in the truly regal tomb at Ravenna. At a later date excessive zeal prompted the disinterment of the Arian king, but he continues to live in a wonderful legend, which assumes many forms, as the warrior king of the heroic age. The Roman court was shocked at the severity of the sentence of the Arian king, which they called Theoderic, riding through the air with his wild followers.

Theodorus and Theophanes (called Grapiti, "written upon", γραπτοι), Saints: Theodorus, b. about 775; d. about 842—43; Theophanes, b. about 775; d. 845. These champions of the veneration of the emperor during those two Iconoclasts. In the controversy in the East were brothers and natives of Jerusalem. Both entered the monastery of St. Sabas, near Jerusalem, which, at that time was under the guidance of Michael, later syneculus of the Patriarch of Jerusalem. The brothers had an excellent training and were pious, strict ascetics. About 812 they entered a monastery at Constantinople, where in opposition to the Emperor Leo V (813—20) they energetically defended the veneration of images, and consequently were exiled. Under the succeeding emperor, Michael II (820—25), they were brought into the monastery of Sosthenes on the Bosporus. Michael's successor, the tyrannical and Iconoclast Theophilos (829—42), exiled them again, but recalled them in 836 to the capital, had them scourged several times, and had twelve lines of verse cut into their skin (hence the nickname "written upon"). They were once more sent into exile, where Theodorus died, while Theophanes lived to see the close of the Iconoclastic controversy in 842 during the reign of the Empress Theodora. In this same year he was raised to the Archdiocese of Nicæa and administered it until his death. The church then had a large number of religious among them one on his dead brother, but they have not yet been published (cf. Christ and Parnakas, "Anthología greca carminum christianorum", Leipzig, 1781). The brothers are venerated as saints.

In the Greek Church the feast of Theophanes is observed on 11 October, that of Theodorus on 27 December. In the Roman Church the feasts of both are celebrated on 27 December (cf. Nilles, "Kalendarium manuale utriusque Ecclesiae", I, 300, 368 sq.).

J. P. KIRSCH.

Theodorus Lector, a lector attached to the Church of St. Sophia of Constantinople in the early part of the sixth century. At the request of a friend he compiled in four books his "Historia Tripartita," an epitome of the historians Socrates, Sozomen, and Theodoret, made up of excerpts from them. An impression of this work exists in MS. but it has never been published; Valesius used it, attaching perhaps too much importance to the readings he found in it, in his edition of the above-named historians.

Theodorus also composed a history in two books which carried the narrative of the "Hist. Trip." from the death of Theodosius II up to the times of Justin I. This work is unfortunately lost, but two long series of excerpts are preserved usually known as the works of Theodorus).

Priscus in "Realentenecy, f. Proct. theol.", s. v.; quotations also are found in the writings of St. John of Damascus and the Acts of the Seventh General Council. Theodorus's view of the sanctity of our information concerning the period it treats rather than to its merits. It is full of marvelous stories. The only indications of the time when Theodorus lived are the date at which his history ended and his speaking of the "holy memory" of Theodorus—he would have done this after the "Three Chapters" controversy.

Theodoro, op. cit.; PRUSCHEN, op. cit. (Leipzig, 1907); NOBEL in Tübingen Theol. Quart. (1861), 569 sq.; SAIIRABIN, De Theod. Lecta, Theophania principis fons in Comment. philol. Jerome, XXIV, 183 sq.; BARNBRENNER-SHANNON, Patrology (St. Louis, 1908), 552. The fragments of the History were published by VALERIUS CONTACCIASIS in P. G., LXXX, 1128. For a list of the "holy memory" to be found in the writings of NICERAS and CRISTOPHORYLE of NICERAS, see DRIKAMP in Hist. Jahrb., XXIV, 553 sq.

F. J. BACCUS.

Theodosiopolis, a titular metropolitan see of Thracia Prima. In the beginning the city was called Apros, or preferably Aproi; later in its history it became known as the Colonia Claudia Aprensis (Ptolemy, "Geographia", vol. III, cap. xi, p. 7). In the fourth century, according to Ammianus Marcellinus (XXVII, 12), it was the principal city of the country south of Heraclea. The official name of Theodosiopolis, which was given to the city by either Theodosius I, or Theodosius II, was rarely used; it was commonly called Aproi. At first suffragan episcopal see of Heraclea in the European province, Aproi had already in 640 been elevated to an autocephalous archiepiscopal see (Gelzer, "Ungedruckte . . . Texte der Notitiae episcopatum", 535), which title it still retained in 1170. However in 1179, Romanus signs himself as Metropolitan of Aproi, and the "Notitia episcopatum" of Manuel I, Comnenus, which dates about this same epoch, refers to the see as a metropolitan see (Gelzer, op. cit., 587). This see must have disappeared at the end of the fourteenth century, or in the beginning of the fifteenth century, for in the "Notitiae" subsequent to 1453 no mention of it is to be found. Le Quien, "Oriens christianus", I, 1125, makes special mention of eleven bishops belonging to this see, among whom are Basileas in 458; Andreas in 536; John in 787; Sabbas in 878, and in 1351, Gabriel, the last one known. From 1204, as long as the city remained in the hands of the Crusaders, Aproi was a Roman archidiocese; in 1224 it was already a titular archbishopric (Eulab., "Hierarchia catholica, medii avi", I, 94; II, 101). Under the Franks, who called it Naples, Aproi belonged to Theodosius Bra- nas, the Greek, who had married Agnes, sister of King Philip Augustus. The Bulgarians took the city and destroyed it in 1205; later it fell anew under the sway of the Franks and later of the Greeks (Villehardouin, "Le Livre du Roi de France en Italie", 168, 390—91, 403, 413—15, 564). The exact situation of Aproi is not known; Tomaschek, "Zur Kunde der Haemus-Halbinsel", 52, identifies it with Kestredje on the Podja-Dere, south of Hafreboli in the sanjak of Rodosto.

S. VAILLÉ.

Theodosiopolis. See EREZERD, DIOSPHOS OF.

Theodosius I (FLAVIUS THEODOSIUS), Roman Emperor, b. in Spain, about 346; d. at Milan, 17 January,
Theodosius was one of the sovereigns by universal consent called Great. He stamped out the last vestiges of paganism, put an end to the Arian heresy in his empire, and declared the whole of Christianity the state religion. He established the bishops, and a famous example of penitence for a crime, and reigned as a just and mighty Catholic emperor. His father, the Comes Theodosius, was a distinguished general; both he and the mother Thermantia were Catholics at a time when Arianism was at its strongest. Theodosius then distinguished himself in the army, was made Dux of Moesia, defeated the Sarmatians (Ambianius Marcellinus, XXIX, 8; and then, when an intrigue brought about the disgrace and execution of his father (376) he retired to his own property in Spain. But his reputation was not forgotten. The Emperor Gratian (375-383) after the death of Valens (378) took Theodosius from private life and made him his fellow-emperor (Augustus) for the East (19 Jan., 379). He was already married to Eudia Flaccilla, by whom he had two sons, Arcadius and Honorius (his future successors) and a daughter Pulcheria. As Augustus he carried on the Gothic war vigorously and successfully. During the year 380 he was able to conclude a victorious peace with the Goths; on 24 November he held his triumph at Constantinople. Meanwhile he had also repressed the Vandals and Hunns. Early in the same year a severe sickness at Thessalonica made him seek baptism, and he was baptized by the Catholic Bishop Eunomius of Constantinople. Theodosius, Anna. (H. E., V, 6) says that since Theodosius “was a Christian from his parents and professed the faith of the Mo- hoosiius” he first assured himself that the bishop was not an Arian (cf. Sozomen; “H. E.”, VII, 4). A great part of the emperor’s activity was now spent in establishing the Catholic faith and representing Arianism. In February, 380, he and Gratian published the famous edict that all their subjects should profess the faith of the Bishops of Rome and Alexandria (Cod. Theod., XVI, 1, 2; Sozomen, VII, 4). The conventicles of the heretics were not to be called churches.

As soon as he came to Constantinople Theodosius began expelling the Arians, who had hitherto been in possession. The Arian bishop, Demophilus, left the city (Socr., V, 7; Soz., VII, 5), St. Gregory of Nazian- zus undertook the administration of the diocese. In 383 he prefect had a number of eastern and western churches in the city and to expel those who served them. The same severe measures were ordered throughout Theodosius’s dominions, not only against Arians, but also in the case of Manichæans and all other heretics. However Sozomen says that the emperor had not carried them out, for he did not wish to punish, but only to frighten his subjects, that they might think as he did about Divine things. And he praised those who were converted of their own accord (H. E., VII, 12). In 381 the Second General Council was held at Constantinople under his auspices (Socr., V, 8; Soz., VII, 7). In 383 he attempted a conference at his capital between Catholics and Arians, with a view to a reconciliation; but no result was obtained (Socr., V, 10; Soz., VII, 12). In the same year Gratian was murdered at Lyons (25 Aug.) and Clemens Maximus usurped the imperial title in the West (383-388). Theodosius acknowledged the usurper on condition that he would allow Gratian’s brother, Valentinian II, to reign in Italy. In 387 Maximus broke the contract and expelled Valentinian, who fled to Theodosius. Theodosius brought him back with an army, and defeated and executed Maximus at Antioch. Valentinian II now reigned in the West till 392. It was also in 387 that Theodosius showed such tolerance in the affair of the statues at Antioch (see John Chrysostom).

During all his reign Theodosius took severe measures against the surviving remnants of paganism. In 388 a prefect was sent about Egypt, Syria, and Asia Minor for the purpose of destroying temples and breaking up pagan associations; it was then that the excavations at Selene aquila (see Eusebius, V, 16). Libanius wrote a “Lamentation” about the destruction of the statues of the gods (epl τῶν λατρευτῶν, ed. R. Foerster, Bibl. Script. Gr. et Rom. Teubner). In 391 Theodosius refused to allow the Altar of Victory to be restored in the Roman Senate (cf. Gibbon, “Decline and Fall,” xxv, 15). The senators and people were to be punished as lesa majestas (Cod. Theod., XVI, X, 10-12). In short his laws put an end finally to the old cult, at any rate as far as open and public use is concerned. One of its last acts was a despairing appeal to the sword, which offers again the dramatic situation of a field of battle on which the re- gion of Europe seemed to depend. Argobast, the Frankish tutor of Valentinian II, at least indirectly caused his ward’s death (Hodgkin, “Italy and her Invaders,” I, 690) and set up a rhetorician, Eugenius, in his stead (15 May, 392). Theodosius hastened to Italy to avenge this crime. Eugenius, although nominally a Christian, tried to unite the remnants of Arianism in his defence. He set up pagan altars again (including that of Victory at Rome), his soldiers marched under the standard of Hercules invictus. But near Aquileia on 6 Sept., 394, once more the Christian Labarum triumphed over the banner of the ancient gods. Theodosius took over the care of the Roman Empire for the western. The Roman world was never again united. Theodosius stands out as the destroyer of heresy and paganism, as the last sovereign of the undivided empire. A coin representing him holding the Labarum with the inscription, Restitutor Reipublicae, expresses perfectly his title as the restorer of the ancient Roman Empire.

Adrian Fortescue.
and the conventual houses. The unfortunate Sondern- bund war had broken the power and confidence of the Catholics, and the victorious Radical party forced upon the country a constitutional league pledged to the destruction of Catholic interests. In consequence of his zealous defence of the Church, Father Theodosius was twice imprisoned at Aiazzo, and in the same year he returned, and brought his experience to bear on plans for the welfare of the Church and people. First he founded the Institution of the Franciscan Sisters of the Holy Cross. In the Capuchin church at Altorf on 16 Oct., 1844, the first three sisters received their vows. Thirdly, he founded St. Francis. Their constitutions enjoined upon them to make themselves all to all in order to win souls to Christ and to do nothing which might repel any from their mode of life. From this foundation grew the congregation of teaching sisters, with their mother-house at Memingen, which has now about 1200 members. Later on Father Theodosius founded the congregation of Sisters of Mercy at Ingenbohl, which numbers 5251 sisters in 878 institutions. These congregations have been approved by the Holy See. Both are actively engaged in educational works; they have foundries, orphanages, orphanages for poor schools, boarding-schools for girls, and seminaries for teachers. Both have in their homes for girls a patronage, as the French call it, for servant girls, factory workers, shop assistants, and others. The Sisters of Mercy have, besides, homes for the poor and sick, and undertake private nursing.

In the meantime Father Theodosius was himself busy as a schoolmaster. He superintended the people’s schools (Volkschulen), which are attended by others besides the poor. He promoted continuation schools and was in favour of technical instruction for apprentices and workers. He founded anew the Collège, Maria-Hilf zu Sempach, where there are now more than 400 pupils. It comprises a gymnasium, lyceum, and an industrial school with technical and mercantile departments.

To stir up anew Catholic life he engaged in popular missions and retreats for priests. To provide for the needs of Catholics in Protestant parts of Switzerland he founded the home missions for which he provided a special fund. The institution of the annual conference of the Swiss bishops was largely due to his efforts. To bring Swiss Catholics together, to strengthen Catholic feeling, and to organize social work, he founded the Swiss Society for Social Work. For the good of the poor Father Theodosius worked harder than for all else; it was in connexion with this that he more fully expounded his Christian social ideas. He was very keen upon the care and inspection of the helpless and dependent, such as boarded-out children, apprentices, neglected children, and discharged prisoners. With regard to the labour question Father Theodosius expressed himself very fully in his speech at Frankfort in 1863. In demanding the Christianizing of industry, trade unions, and workmen’s credit banks, he said: “Formerly monasteries were turned into factories. God might be worshipped, but the profits must be shared with the workers.” Factories were established to carry out this idea, but they failed, owing to a lack of business capacity in the founders. At Ingenbohl Father Theodosius founded a printing and book-binding establishment and a society for the diffusion of books. Quotations, the “Legends of the Saints” in four volumes. His spirit was well expressed in the saying of St. Augustine which on the eve of his death he wrote in the notebook of a teacher: “In necessariis unitas, in dubiis libertas, in omnibus caritas.” A favourite maxim of his was: “Whatever is the need of the time, is God’s Will.”

Theodotus Version. See Versions of the Bible.

Theodotus of Ancyra. Saint, martyr. On 18 Mar. the Roman Martyrology says: “At Ancyra, in Galatia, the martyr Saint Theodotus and the virginy Theusa, his aunt, Alexandra, Claudia, Faina, Euphrosia, Matrona, and Julitta.” etc. They are mentioned in all the menologies, and Theodotus has a special feast on 7 June (Nillés, “Kal. man.” I, 162, 150, 180). The name is a misspelling of Theodotus. He fled from Antioch because of troubles: torches and the sword. According to the Acts (Acta SS., May, IV, 147) Theodotus was a married man who kept an inn at Ancyra, the capital of Galatia. He is described as a man very zealous in the performance of his Christian duties, endowed with many virtues, especially charity towards his neighbour. He brought sinners to repentance and strengthened many in their faith during the persecution which Theocorus, the governor of the province, was carrying on, about 303, in accordance with the edict of Diocletian. The name of a certain Victor is mentioned as one who grew weak in his profession of Christianity, and received much encouragement from Theodotus.

The governor ordered that all provisions exposed for sale should first be offered to the idols. Theodotus laid in stores of goods and his house became a refuge for the Christians, a hospital for the sick, and a place for Divine worship. At Maleo, about five miles from Ancyra he sought out the body of the saint, the martyr, Valens, and gave it Christian burial. Returning to Ancyra he found the Christians in great trouble. The seven virgins mentioned above had been called before the judges and made a valiant profession of their faith; they were then scourged to death, and debauched, but preserved their purity. The town was in such a terrible state that they offered cruel torments and were cast into the sea with stones attached to their bodies. Theodotus succeeded in rescuing the bodies and honourably burying them. In consequence he was arrested, and after many sufferings was killed by the sword; his body was miraculously brought to Maleo and there entombed by the priest Fronto. A chapel was built over the grave, and the saint was held in great veneration. The legend is told by Nilus who claims to have been an eye-witness to a great part of what he describes. Ruinart (page, 372) places it among his “Acta sinceré et sepulcro.” For the text the standard edition is G. F. Schneemelcher, Acta in “Studi e Testi!” (Rome, 1901). He considered them trustworthy, but later changed his opinion. Delehaye (Anal. Boll., XXII, 320, and XXIII, 478) says: “The kernel of the legend is a tale narrated by Herodotus, while the existence of the hero of the narrative is not vouched for by any historic document.” BUTLER, Lives of the Saints; Diet. of Christ. Biog., IV, 580; Bœm., Quattuoracrischift. XVIII, 258; Der Katholik (1885), 598; LECLERCQ, Les Martyrs, II, VII (Paris, 1903); CLAVIERS, Bes. Bibl., I, 4429.

Theodulf (Theodulfus, Theodulph), Bishop of Orléans, a writer skilled in poetic forms and a learned theologian, b. in Spain about 760; d. at Angers, France, 18 Dec., 821. By descent a Goth, he became before 794 a member of the court of Charlemagne, where he was, next to Alcuin, the most distinguished and learned person. Charlemagne granted him the Abbey of Orval (about 768), endowed with a whole district of Orléans, and was made a cardinal-abbot. He laboured successfully in his diocese as a reformer both of the clergy and people, as is shown by his two Capitularies, one of which has forty-six chapters; he also encouraged schools. In 795 he was sent, with Bishop Leidrad of Lyons, as a royal messenger (missus domini) to the Pope at Rome. In his poem, “Versus contra judaeos,” in which he complains of the severity of Frankish law and addresses earnest warnings to the judges, he
gives an account of his experiences while on this mission. As a writer on theology he took part in the dispute over the term *Fideiqa* (the procession of the Holy Ghost from the Son as well as from the Father) and defended this doctrine at the request of Charlemagne in the treatise, "De spiritu sancto". He also wrote at the wish of the emperor, "De ordine baptismatis". He was not only the author of a commentary on the gospel of John, but he is further, apparently, the author of an exposition of the Holy Mass and of the Creed. As regards language and metre he occupies the first place among the poets of the Carolingian era and distinguished himself by spirit and skill; particularly interesting are the poems he wrote in the form of (oeconomiae), an animated picture of the life at court. His hymn for Palm Sunday, "Gloria, laus, et honor" (Anacolutha hymnica, L, 160 sq.), came into liturgical use. He is also known as a patron and lover of art. He was still in favour at the beginning of the reign of Louis the Pious, but later, being accused of sharing in the conspiracy of King Bernard of Italy, was consequently deposed in 816 and exiled to Angers.

KLEMENS LÖFFLER.

**Theological Virtues.** See Faith; Hope; Love; Virtue.

**Theology.**—The subject will be treated under the several heads of: I. Dogmatic (with its parts, Chris- tology and Soteriology); II. Moral; III. Pastoral; IV. Ascetical; V. Mystical.

I. **Doggmatic Theology.**—Dogmatic theology is that part of theology which treats of the theoretical truths of faith concerning God and His works (*dogmata fidei*), whereas moral theology has for its subject-matter the practical truths of morality (*dogmata vitae)*. Both of these, as theoretical foundations of theology, is called the "general dogmatic theology", and dogmatic theology proper being distinguished from it as "special dogmatic theology". However, according to present-day usage, apologetics is no longer treated as part of dogmatic theology but has passed to the field of the natural science, being generally regarded as the introduction to and foundation of dogmatic theology. The present article shall deal first with those questions which are *fundamental* to dogmatic theology and then briefly review its historical development due to the advances and indefatigable industry with which the theologians of every civilized country and of every century have cultivated and promoted this science.

A. **Fundamental Questions.**—(1.) Definition and Nature of Dogmatic Theology.—To define dogmatic theology, it will be best to start from the general notion of theology. Considered etymologically, theology (Gr. *theologia*, i.e. τελος λόγος) is essentially the science treating of God, subjectively, the scientific knowledge of God and Divine things. If defined as the science concerning God (*doctrina de Deo*), the name of theology applies as well to the philosophical knowledge of God, which is cast into scientific form in natural theology or theology. How- ever, unless theology is free from errors, it cannot lay claim to the name of theology. For this reason, pagan mythology and pagan doctrines about the gods, must at once be set aside as false theology. Theology of heretics and pagans, so far as it contains grave errors which are included in it, if it would aim to attain a perfect sense we call theology that science of God and Divine things which, objectively, is based on supernatural revelation, and subjectively, is viewed in the light of Christian faith. Theology thus broadens out into Christian doctrine (*doctrina fidei*) and embraces not only the particular doctrines of God's existence, essence, and trine personality, but all the truths revealed by God. The Patristic era did not as a rule, take theology in this wide sense. For the earlier Fathers, strictly limiting the term theology to doctrine about God, distinguished it from the doctrine of His external activity, especially from the Incarnation and Redemption, which they included under the name of the "Divine economy". Now, if this distinction is not only of the Greek, but also of the Latin school of theology, then its ultimate end likewise must be God; that is to say, it must teach, effect, and promote union with God through religion. Consequently, it lies in the very essence of theology to be the doctrine not only of God and of faith, but also of religion. It is this triple function which gave rise to the old Latin school: *Theologia Deum doctet, a Deo doctetur, ad Deum ductit* (Theology teaches of God, is taught by God, and leads to God).

However, neither supernatural theology in general nor dogmatic theology in particular is sufficiently specified by its material object or its end, since natural theology also treats of God and Divine things and shows that union with God is a religious duty. What essentially distinguishes the two sciences is the so-called formal principle or formal object. Supernatural theology considers God and Divine things solely in the supernatural object, while theology, both revelation and internal faith, analyzes them scientifically, proves them and penetrates as far as possible into their meaning. From this it follows that theology comprehends all those and only those doctrines which are to be found in the sources of faith, namely Scripture and Tradition, and which the infallible Church proposes to us. Now, among these revealed truths there are many which reason, by its own natural power, can discover, comprehend, and demonstrate, especially those that pertain to natural theology and ethics. These truths, however accessible to unaided reason, are not to be called dogmatic theology, at least not as simultaneously and supernaturally revealed and accepted on the ground of God's infallible authority. The act of faith being nothing else than the unconditional surrender of human reason to the sovereign authority of the self-revealing God, it is plain that Catholic theology is not an independent science, but an independent science, being generally regarded as the introduction to and foundation of dogmatic theology. The present article shall deal first with those questions which are *fundamental* to dogmatic theology and then briefly review its historical development due to the advances and indefatigable industry with which the theologians of every civilized country and of every century have cultivated and promoted this science.

These truths, however accessible to unaided reason, are not to be called dogmatic theology, at least not as simultaneously and supernaturally revealed and accepted on the ground of God's infallible authority. The act of faith being nothing else than the unconditional surrender of human reason to the sovereign authority of the self-revealing God, it is plain that Catholic theology is not an independent science, but an independent science, being generally regarded as the introduction to and foundation of dogmatic theology. The present article shall deal first with those questions which are *fundamental* to dogmatic theology and then briefly review its historical development due to the advances and indefatigable industry with which the theologians of every civilized country and of every century have cultivated and promoted this science.
(2) Dogmatic Theology as a Science.—Considering that theology depends essentially on the Church, a serious difficulty arises at once. How, one may ask, can theology claim to be a science in the genuine sense of the word? Is the outcome of theological investigation settled in advance by an authority that attributes to itself infallibility and will brook no contradiction, if the line of march is, as it were, clearly mapped out and strictly prescribed, how can there be any question of true science or of scientific freedom? Are not the dogmatic professors supposed to hold an infallible dogma, after all mere dialectical play, sham science, reasoning made to order? Prejudices against Catholic theology, prevalent in the world at large, is beginning to bear fruit; in many countries the theological faculties, still existing in the state universities, are looked upon as a nuisance, considered worthless, and the demand is being made to relegate them to the episcopal seminaries, where they can no longer injure the intellectual freedom of the people. The downright unfairness of this attitude is obvious when one considers that the universities sprang up and developed in the shadow of the Church and of Catholic theology; and that, moreover, the exaggeration of scientific freedom may prove fatal to the profane sciences as well. Unless it presuppose certain truths, which can no more be demonstrated than many mysteries of faith, science can achieve nothing; and unless it restricts itself to the pursuit of empirical knowledge, its freedom will degenerate into lawless and arbitrary anarchy. As the logician starts from notions, the jurist from legal texts, the historian from facts, the chemist from material substances as things which demand no proof in his case, so the theologian receives his material from the hands of the Church and demands that according to the rules which the scientist applies in his own branch.

The view, moreover, that scientific research is absolutely free and independent of all authority is fanciful and distorted. To the freedom of science, the authority of the individual conscience, and of human society as well, sets an impassable limit. Even the civil power would have to exercise its authority in the form of punishment if a university professor, presuming on the freedom of scientific thought and research, should teach openly that burglary, murder, adultery, revolution, and anarchy are preferable. We may concede that the Catholic theologian, being subject to ecclesiastical authority, is more closely bound than the professor of the secular sciences. Yet the difference is one of degree only, inasmuch as every science and every investigator is bound by the moral and religious duty of subjecting its hypotheses to a test of internal coherence, and of conforming to the unanimous interpretation of the Fathers, the hermeneutical principles of the Church, and the directions of the Holy See. In this character as historian, the theologian must not lay aside his belief in the supernatural origin of Christianity and in the Divine institution of the Church; for he is expected to give an objective account of tradition, of the history of dogma, and of patrology. For, just as the Bible, being the Word of God, was written under the immediate inspiration of the Holy Ghost, so Tradition was, and is, guided in a special manner by God, Who preserves it from being distorted, mutilated, or falsified.

Consequently, he who from the outset declares the Bible to be an ordinary book, miracles and prophecies impossible and old-fashioned, the Church a great institution for deadening thought, the Fathers of the Church pious prattlers, is quite incapable, even from a purely scientific standpoint, of understanding God's innumerable dispensations to mankind. From this we may conclude how uneccelesiastical and at the same time how unscientific are those historians who prefer to explain the works of the Fathers without due regard for ecclesiastical tradition, which was the mental environment in which they lived and worked. For it is only when we discover the living link which bound them to the Apostolic Tradition of which they are witnesses, that we shall understand their writings and establish the heterodoxy of some passages, as for instance, the Origenistic apocalistasis in the writings.

(3) Methods of Dogmatic Theology.—Whereas other sciences, as, for instance, theology, begin with proving the existence of God, it lies beyond the scope of theology to discover dogmatic truth. The subject-matter with which the student of theology is to deal is offered to him in the deposit of faith and, reduced to its briefest form, is to be found in the Catechism. If the theologian is content with deriving the dogmas from the sources of faith and with explaining them, he is occupied with "positive" theology. Guided by the authority of the Church, he calls history and criticism to his aid in finding Scripture and Tradition the genuine, unalloyed truth. If to this positive element is joined a polemic tendency, we have "controversial" theology, which was carried to its highest perfection in the seventeenth century by Cardinal Bellarmine. Positive theology must prove its theses by conclusive arguments drawn from Scripture and Tradition; hence it is closely related to exegesis and history. As exegete, the theologian must first of all accept the inspiration of the Bible as the Word of God. But even when elucidating its meaning, he must be guided by the unanimous interpretation of the Fathers, the hermeneutical principles of the Church, and the directions of the Holy See. In this character as historian, the theologian must not lay aside his belief in the supernatural origin of Christianity and in the Divine institution of the Church, if he is to give an objective account of tradition, of the history of dogma, and of patrology. For, just as the Bible, being the Word of God, is written under the immediate inspiration of the Holy Ghost, so Tradition was, and is, guided in a special manner by God, Who preserves it from being distorted, mutilated, or falsified.

Consequently, he who from the outset declares the Bible to be an ordinary book, miracles and prophecies impossible and old-fashioned, the Church a great institution for deadening thought, the Fathers of the Church pious prattlers, is quite incapable, even from a purely scientific standpoint, of understanding God's innumerable dispensations to mankind. From this we may conclude how uneccelesiastical and at the same time how unscientific are those historians who prefer to explain the works of the Fathers without due regard for ecclesiastical tradition, which was the mental environment in which they lived and worked. For it is only when we discover the living link which bound them to the Apostolic Tradition of which they are witnesses, that we shall understand their writings and establish the heterodoxy of some passages, as for instance, the Origenistic apocalistasis in the writings.
of Gregory of Nyssa. When Pius X, by his Motu Proprio of 1 Sept., 1910, solemnly obliged all priests to adhere to these principles, he did more than recall to our minds the time-hallowed rules of Christian faith; he freed history and criticism from those baneful encroachments which impeded the growth of true science.

When the dogmatic material with the help of the historical method has been derived from its sources, and the theologian has fulfilled his task of clarification, philosophical appreciation, the speculative examination and elucidation of the material brought to light. This is the purpose of the "scholastic" method, from which "scholastic theology" takes its name.

The scope of the scholastic method is fourfold: (a) completely the doctrine of dogma and to analyze it by methods of dialectics; (b) to establish a logical connexion between the various dogmas and to unite them in a well-knit system; (c) to derive new truths, called "theological conclusions", from the premises by syllogistic reasoning; (d) to find reasons, analogies, congruous arguments for the dogmas, but above all to show that the mysteries of faith, though beyond the reach of reason, are not contrary to its laws, but can be made acceptable to our intellect. It is evident that the ultimate purpose of these philosophical speculations cannot be to resolve dogma finally into mere natural truths, or to strip the mystery of dogmatics of its inner substance, but to show the truths of faith, to provide for them a philosophical basis, to bring them nearer to the human mind. Faith must ever remain the solid rock-bottom on which reason builds up, and faith in its turn strives after understanding (fides quærans intellectum). Hence the famous axiom of St. Anselm of Canterbury: Credo ut intelligam. However highly one may esteem the results of positive theology, one thing is certain: the scientific character of dogmatic theology does not rest so much on the exactness of its exegetical and historical proofs as on the philosophical grasp of the essence of dogma. But in aftertimes the theologian cannot look for aid to modern philosophy with its endless confusion, but to the glorious past of his own science. What else are the modern systems of philosophy, sceptical criticism, Positivism, Pantheism, Monism, etc., than ancient errors cast into modern dress? Righly does the interior theology of Catholic theologians point to the only true and eternal philosophy of common sense, which was established by Divine Providence in the Socratic School, carried to its highest perfection by Plato and Aristotle, purified from the minuter traces of error by the Scholastics of the thirteenth century.

This is the Aristotelian-scholastic philosophy, which has gained an ever stronger foothold in ecclesiastical institutions of learning. Guided by sound pedagogical principles, Popes Leo XIII and Pius X officially prescribed this philosophy as a preparation for the study of theology, and recommended it as a model method for the speculative treatment of dogma. While in his famous Encyclical "Pascendi" of 8 Sept., 1907, Pius X praises positive theology and frankly recognizes its necessity, yet he sounds a note of warning not to become so absorbed in it as to neglect scholastic theology, which alone can impart a scientific grasp of dogma. These papal rescripts were probably inspired by the sad experience that any other than Scholastic philosophy, instead of elucidating and clarifying, only falsifies and destroys dogma, as is clearly shown by the history of Nominalism and the philosophy of Idealism, Individualism, Gnosticism, and Modernism. The development of Protestant theology, which, entering into close union with modern philosophy, swayed to and fro between the extremes of faith and unfaith and did not even recoil from Pantheism, is a warning example for the Catholic theologian. This does not mean that Catholic theology has received no stimulus whatever from modern philosophy since the days of Kant (d. 1804). As a matter of fact, the critical tendency has done more than recall to our minds the time-hallowed rules of Christian faith; it freed history and criticism from those baneful encroachments which impeded the growth of true science.

Another method of arriving at the truths of faith is mysticism, which appeals rather to the heart and the feelings than to the intellect, and sensibly imparts a knowledge of Divine things through pious meditation. As long as mysticism keeps in touch with scholasticism and does not exclude the intellect completely, it is entitled to existence for the simple reason that faith lays hold on the whole man, and penetrates his thoughts, desires, and sentiments. The greatest mystics, as Hugh of St. Victor, Bernard of Clairvaux and the earlier Franciscan and Dominican Scholastics. A heart that has preserved the faith and simplicity of its childhood, takes delight even now in the writings of Henry Suso (d. 1365). But whenever mysticism emancipates itself from the guidance of reason and makes light of the doctrinal authority of the Church, it readily falls a prey to Pantheism and pseudo-mysticism, which are the bane of all true religion. Meister Eckhart, whose propositions were condemned by Pope John XXII in 1329, is a warning example. There is little in the present trend of thought that would be favourable to mysticism. The scepticism which has crept over the minds of our generation, the uncontrolled greed for wealth, the feverish haste in commercial enterprises, even the dulling habit of reading the daily papers—all these are only too apt to disturb the serene atmosphere of Divine contemplation, and play havoc with the inner life of man. We cannot allow our age which alone the tender flower of mystical piety can blossom. Modernism claims to possess in its immediate and immanent sense of God a congenial soil for the growth of mysticism; this soil, however, does not receive its waters from the unfedid fountain-head of supernatural piety, but from the eaves of Protestant pseudo-mysticism, which are tainted, either confessedly or secretly, by Pantheism.

(4) Relation of Dogmatic Theology to other Disciplines.—At first, it was a thing altogether unknown to have different theological branches as independent sciences. Dogmatic theology was the only discipline, and comprised apologetics, dogmatic and moral theology, and canon law. This internal unity was also marked externally by the comprehensive name of science of faith (scientia fidei), or sacred science (scientia sacra). First to assert its independence was the canon law, which, together with dogmatic theology, was the chief study in the medieval universities. But since the underlying principles of canon law, as the Divine constitution of the Church, the hierarchy, the power of ordinations, etc., were at the same time doctrines of faith to be proved in dogmatic theology, it was little; hence there was little there with and dependence on the principal science would be broken. Far longer did the union between dogmatic and moral theology endure. They were treated in the medieval "Books of Sentences" and theological "Summae" as one science. It was not until the seventeenth century, and then only for practical reasons, that moral theology was separated
from the main body of Catholic dogma. Nor did this division degenerate into a formal separation of two strictly co-ordinated disciplines. Moral theology has always been conscious that the revealed laws of moral action and prudence articles as the three theological virtues, which are part of the dogmatic doctrine on justification. Hence the superior rank of dogmatic theology, which is not only the centre around which the other disciplines are grouped, but also the main source from which they both flow out. But the necessity of a further division of labour as well as the example of non-Catholic methods led to the independent development of other disciplines: apologetics, exegesis, church history.

The relation existing between apologetics, or fundamental theology as it has been called of late, and dogmatic theology is not that of a general to a particular science; it is rather the relation of the vestibule to the temple or of the foundation to its superstructure. For both the method and the purpose of demonstration differ totally in the two branches. Whereas apologetics, intent upon laying the foundation of Christian history or theological and philosophical arguments, dogmatic theology on the other hand makes use of Scripture and Tradition to prove the Divine character of the different dogmas. Doubt could only exist as to whether the discussion of the sources of faith, the rule of faith, the infallibility, fidelity, and authority of the Church or of the theological or of dogmatic theology. While a dogmatic treatment of these important questions has its advantages, yet from the practical standpoint and for reasons peculiar to the subject, they should be separated from dogmatic theology and referred to apologetics. The reason is that the historical denominational differences demand a more thorough apologetic treatment of these problems; and again, the subject-matter itself contains nothing else than the preliminary and fundamental questions of dogmatic theology properly so called. A branch of the greatest importance, ever since the Reformation, is exegesis with its allied disciplines, because that science establishes the meaning of the texts necessary for the Scriptural argument. As the Biblical sciences necessarily suppose the dogma of the inspiration of the Bible and the Divine institution of the Church, which is the real owner and authoritative interpreter of the Bible, it is manifest that exegesis, though enjoying full liberty in all other respects, must never lose its connexion with dogmatic theology. Not even church history, though using the same critical methods as profane history, is altogether independent of dogmatic theology. As its object is to set forth the history of God's kingdom upon earth, it cannot repudiate or slight either the Divinity of Christ or the Divine foundation of the Church without forfeiting its claim to be regarded as a theological science. The same applies to the historical revelation as to dogmas, of councils, of heresies, patrology, symbolism, and Christian archaeology. Pastoral theology, which embraces liturgy, homiletics, and catechetics, proceeded from, and bears close relationship to, moral theology; its dependence on dogmatic theology needs, therefore, no further proof.

The relation between dogmatic theology and philosophy deserves special attention. To begin with, even when they treat the same subject, as God and the soul, there is a fundamental difference between the two sciences. For, as was said above, the foundation of philosophy is essentially different. But this fundamental difference must not be exaggerated to the point of asserting, with the Renaissance philosophers and the Modernists, that something false in philosophy may be true in theology; and vice versa. The theory of the "twofold truth" in theology and history, which is only a variant of the same false principle, is therefore expressly abjured in the anti-Modernist oath. But no less fatal would be the other extreme of identifying theology with philosophy, as was always done by the Scholastics, later by Scotus Erigena (d. about 877), Raymond Lullius (d. 1315), Pico della Mirandola (d. 1463), and by the modern Rationalists. To counteract this bold scheme, the Vatican Council (Sess. III, cap. iv) solemnly declared that the two sciences differ essentially not only in their dogmatic principle (faith, reason) and their object (dogma, rational truth), but also in their motive (Divine authority, evidence) and their ultimate end (beatific vision, natural knowledge of God). But what is the precise relation between these sciences? The origin and dignity of revealed theology forbid us to assign to philosophy a superior or even a co-ordinate rank. Already Aristotle and Philo of Alexandria, in determining the relation of philosophy to that part of metaphysics which is directly concerned with God, pronounced philosophy to be the "handmaid" of natural theology. When philosophy came into conflict with reason, Catholic dogmatic theology more emphasized and was finally crystallized in the principle: Philosophia est ancilla theologiae. But neither the Church nor the theologians who insisted on this axiom, ever intended thereby to encroach on the freedom, independence, and dignity of philosophy, but to curtail its liberty, to limit its dominion within the limits of a mere slave of theology. Their mutual relations are far more honourable. Philosophy may be conceived as a queen, philosophy as a noble lady of the court who performs for her mistress the most worthy and valuable services, and without whose assistance the queen would be left in a very helpless and embarrassing position. That the Church, in examining the various systems, should select the philosophy which harmonized with her own revealed doctrine and proved itself to be the only true philosophy by acknowledging a personal God, the immortality of the soul, and the moral law, was so natural and obvious that it required no apology. Such a philosophy, however, existed among the pagans of old, and was carried to an eminent degree of perfection by Aristotle.

(5) Division and Content of Dogmatic Theology.

Not only for non-Catholics, but also for Catholic theologians it may be useful to take a brief survey of the questions and problems generally discussed in dogmatic theology.

(a) God (De Deus uno et trino).—As God is the central idea around which all theology turns, dogmatic theology must begin with the doctrine of God, essentially one, Whose existence, essence, and attributes are to be investigated. While the arguments, strictly so called, for the existence of God are given in philosophy or in apologetics, dogmatic theology insists upon the revealed doctrine that God may be known from creation by reason alone, that is, without revelation at all, and of a general character, as such. From this it follows at once that Atheism must be branded as heresy and that Agnosticism may not plead mitigating circumstances. Nor can Traditionalism and Ontologism be reconciled with the dogma of the natural knowableness of God. For if, as the Traditionalists assert, the consciousnesses of God's existence, found in all races and ages, is due solely to the oral tradition of our forefathers and ultimately to the revelation granted in Paradise, the knowledge of God derived from the visible creation is at once discounted. The same must be said of the Ontologists, who fancy that our mind enjoys a special intuitive vision of God's existence. If the consciousness of His existence, Likewise, to assume with Descartes an inborn idea of God (idea Dei innata) is out of the question; consequently, the knowableness of God by mere reason, means in the last analysis
that His existence can be demonstrated, as the anti-
Modernist oath prescribed by Pius X expressly
affirms. But this method of arriving at a knowledge
of God is toilsome; for it must proceed by way of
direct categorization, and the human mind is
in higher excellence (eminenter) whatever perfections
are found in creatures; nor does the light of revela-
tion and of faith elevate our knowledge to an essen-
tially higher plane. Hence all our knowledge of
God on this earth implies painful deficiencies which
will not be filled except by the highest of attributes
The metaphysical essence of God is generally said
to be self-existence, which means, however, the ful-
ness of being (Gr. abvroudd), and not merely the nega-
tion of origin (ens a se—ens non ab alio). The so-
called positive security of Prof. Schell, meaning that
God is knowable except by the intellectual attribute
promisingly rejected as the Pantheistic confusion of
ens a se with the impersonal ens universale.
The relation existing between God’s essence and His
attributes may not be called a real distinction (theo-

erical, Realism, Gilbert de La Porrée), nor yet a purely
logical distinction of the mind (Nominalism). Inter-
mediary between these two views is the formal distinc-
tion of the Scotists. But the virtual distinction of the Thomists deserves prefer-
ence in every regard, because it alone does not jeop-
ardize the simplicity of the Divine Being. If self-
existence is the fundamental attribute of God, both
both the foundation and the source of the others, from it as as from their root. The first class includes
infinity, simplicity, substantiality, omnipotence,
immutability, eternity, and immensity; to the second
category belong omniscience and the Divine will.
Besides, many theologians distinguish from both
two categories the so-called attributes of per-
veracity, fidelity, wisdom, sanctity, bounty, beauty,
mercy, and justice. Monotheism is best treated in
connexion with God’s simplicity and unity. The most
difficult problems are those which concern
God’s knowledge, especially His foreknowledge of
future actions. For it is here that both Thomists
and Molinists throw out their anchors to gain a
secure hold for their respective systems of grace, the
former for their praeceptio physica, the latter for their
scientia media. In treating of the Divine will, theo-

goloists insist on God’s freedom in His external activity, and
and, among the problems that we must solve,
that God can intend sin neither as an end nor as a
means to an end, but merely permits it for reasons
both holy and wise. While some theologians use
this chapter to treat of God’s salvific will and the
allied questions of predestination and reprobation,
others refer these subjects to the chapter on grace.

Being the corner-stone of the Christian religion,
the doctrine of the Trinity is thoroughly and extensively
discussed, all the more because the Liberal theology of
the Protestants has relapsed into the ancient error
of the Antitrinitarians. The dogma of God’s three-
fold personality, the so-called attributes of the Old
Testament, can be conclusively proved from the
New Testament and Tradition. The combat which
the Fathers waged against Monarchianism, Sabellianism,
and Subordinationism (Arius, Macedonius)
aids considerably in shedding light on the mystery.
Great importance attaches to the loge-doctrine of
St. John; but as to its relation to the logeo of the
Stoic Neoplatonists, the Jewish Philonians, and
the early Fathers, many points are still in an unsettled
condition. The reason why there are three Persons
is the twofold procession immanent in the Godhead:
the procession of the Son from the Father (præЗа;
and the procession of the Holy Ghost from both
the Father and the Son by spiration. In view of the
Greek schism, the dogmatic justification of the addi-
tion of the Filioque in the Creed must be scientifically
established. A philosophical understanding of the
dogma of the Trinity was attempted by the Fathers,
especially by St. Augustine. The most important
result was the cognition that the Divine generation
must be conceived as a spiritual procession from the
will, and the Divine spiration from love. Active and
passive generation, together with active and passive spiration,
lead to the doctrine of the four reactions, of which,
however, only three constitute persons, to wit, active
and passive generation (Father, Son), and passive
spiratio (Holy Ghost). The remaining property of spiratio
does not result in a distinct (fourth) person,
and because it is one and the same common function
of the Father and the Son. The philosophy of this
mystery includes also the doctrine of the Divine
properties, notions, appropriations, and missions.
Finally, with be done by the circummersion, which
summarizes the whole theology of the Trinity, the
treatment of this dogma is brought to a fitting con-
closure.

(b) Creation (De Deo creante).—The first act of
God’s external activity is creation. The theologian
investigates both the activity itself and the work
produced. With regard to the former, the
centres in creation out of nothing, around which, as
the circumference of a circle, are grouped
a number of secondary truths: God’s plan of the
universe, the relation between the Trinity and creation,
the freedom of the Creator, the creation in time, the
impossibility of determining the moment of creation
with respect to any creature. These momentous truths not
only perfect and purify the theistic idea of God,
but also give the death-blow to heretical Dualism
(God, matter) and to the Protean variations of Pan-
theism. As the beginning of the world supposes
creation out of nothing, so also Doomsday. Antithesis
and Divine conservation, which is nothing less than a
continued creation. However, God’s creative activity
is not thereby exhausted. It enters into every
action of the creature, whether necessary or free.
What is the nature of God’s universal co-operation
with free, rational beings? On this question Tho-
mists and Molinists differ widely. The former regard
the Divine activity as a previous, the latter as a
simultaneous, concursus. According to Molinism, it
is only by conceiving the concursus as simultaneous
that true freedom in the creature can be secured.
By the label of the concursus man is maintained, the fact of sin notwithstanding.
The crowning achievement of God’s creative activity is
His providence and universal government, which
aims at the realization of the ultimate end of the
universe, God’s glory through His creatures.

The work produced by creation is divided into
three kingdoms, rising in tiers one above another:
world; man; angel. To this triad correspond dog-
matic cosmology, anthropology, angelology. In
discussing the first of these, the theologian must be satisfied
with general outlines, e. g. of the Creator’s
creativity and the function of the Logos. In
the micron is more thoroughly treated, because man, the
microcosm, is the centre of creation. Revelation tells us
many things about man’s nature, his origin and the
unity of the human race, the spirituality and immor-
tality of the soul, the relation of soul and body, the
origin of individual souls. Above all, it tells us of
supernatural grace with which man was adorned and
which was intended to be a permanent possession
of the human race. The discussion of man’s original
state must be preceded by a theory of the supen-
natural order without which the nature of original sin
would not be correctly defined. For an impos-
Ineffable repudiation of the supernatural state, is one of the
most important chapters. Its existence must
be carefully proved from the sources of faith; its
nature, the mode of its transmission, its effects,
must be subjected to a thorough discussion. The fate of
the angels run in many respects parallel to that of mankind: the angels also were endowed with both sanctifying grace and high natural excellences; some of them rose in rebellion against God, and were thrust into hell as demons. While the devil and his angels are the human corruption of spiritual angels, they have been appointed to exercise the office of guardians over mankind.

(c) Redemption (De Deo Redemptori).—As the fall of man was followed by redemption, so the chapter on creation is immediately followed by that on redemption. The three main headings of this Christology, Soteriology, Mariology, must ever remain in closest connexion. [For the first of these three (Christology) see I. a. below, immediately following subsection B. History.]

(i) Soteriology.—Soteriology is the doctrine of the work of the Redeemer. As in Christology the leading idea is the Hypostatic Union, so here the main idea is the natural mediatorship of Christ. After having disposed of the preliminary questions concerning the possibility, opportuneness, and necessity of redemption, as well as of those regarding the predestination of Christ, the next subject to occupy our attention is the whole plan of salvation, the climax of which is the vicarious satisfaction of Christ on the cross, and is crowned by His descent into limbo and His ascension into heaven. From a speculative standpoint, a thorough and comprehensive theory of satisfaction remains still a pious desideratum, though particularly have been set out by the days of Anselm down to the present time. It will be necessary to blend into one whole the hidden elements of truth contained in the old patriarchic theory of ransom, the juridical conception of St. Anselm, and the ethical theory of atonement. The Redeemer's activity as Mediator stands out most prominently in His triple office of high priest, prophet, and king, which is continued, after the ascension of Christ, in the priesthood and the teaching and pastoral office of the Church. The central position is occupied by the high-priesthood of Christ, which manifests the death on the cross as the true sacrifice of propitiation, and proves the Redeemer to be a true priest.

(ii) Mariology, or the doctrine of the Mother of God, cannot be separated either from the person or from the work of the Redeemer and therefore has the deepest connexion with both Christology and Soteriology. The doctrine of the Divine Maternity, since this is at once the source of Mary's unspeakable dignity and of her surpassing fulness of grace. Just as the Hypostatic Union of the Divinity and humanity of Christ stands or falls with the truth of the Divine Maternity, so too is this same maternity the foundation of all special privileges which were accorded to Mary on account of Christ's dignity. These singular privileges are four: her Immaculate Conception, personal freedom from sin, perpetual virginity, and her bodily Assumption into heaven. For the three former we have doctrinal decisions of the Church, which are true. However, still the Assumption has not yet been solemnly declared an article of faith, nevertheless the Church has practically demonstrated such to be her belief by celebrating from the earliest times the feast of Assumption of the Mother of God. Two more privileges are connected with Mary's dignity: her special mediatorship between the Redeemer and the redeemed and her exclusive right to hyperdulia. Of course, it is clear that the mediatorship of Mary is entirely subordinate to that of Her Divine Son and derives its whole efficacy and power therefrom. In order better to understand the value and importance of Mary's peculiar mediatorship, it will be well to consider, by way of contrast, the dulia paid to the saints and, again, the doctrine concerning the veneration paid to relics and images. For the most part, dogmatic theologians prefer to treat these latter subjects under eschatology, together with the Communion of Saints.

(iii) Grace (De gratia).—The Christian idea of grace is based entirely upon the supernatural order. Human dignity is manifested between actual and sanctifying grace, according as there is question of a supernatural activity or merely the state of sanctification. But the crucial point in the whole doctrine of grace lies in the justification of the sinner, because, after all, the aim and object of actual grace is either to lay the foundation for the grace of justification or to preserve the grace of justification in the soul that already possesses it. The three qualities of actual grace are of the utmost importance: its necessity, its gratuitousness, and its universality. Although on the one hand we must avoid the exaggeration of the Reformers, and of the followers of Bautus and Jansenius, who denied the capability of unaided nature altogether in moral action, yet, on the other hand, theologians agree that fallen man is quite incapable, without the help of God's grace, of either fulfilling the whole natural law or of resisting all strong temptations. But even if grace is thus absolutely necessary for each and every salutary act, since all such acts bear a causal relation towards the supernatural end of man. The heretical doctrines of Pelagianism and Semi-pelagianism are refuted by the Church's doctrinal decisions based upon Holy Scripture and Tradition. On the other hand, the supernatural character of grace in the second quality: gratuitousness. So entirely gratuitous is grace that no natural merit, no positive capability or preparation for it on the part of nature, nor even any purely natural petition, is able to move God to give us actual grace. The universality of grace is, therefore, another characteristic of grace, the universality of God's salvific will, which, in regard to adults, simply means His antecedent will to distribute sufficient grace to each and every person, whether he be already justified or in the state of sin, whether he be Christian or heathen, believer or infidel. But the salvific will, in as far as it is consequent and deals out just retribution, is no longer universal, but particular, for the reason that only those who persevere in justice, enter heaven, whereas the wicked are condemned to hell. The question of the predestination of the blessed and the reprobation of the damned is admittedly one of the critical difficulties in which theology has to deal, and its solution is wrapped in impenetrable mystery. The same may be said of the relation existing between grace and the liberty of the human will. It would be cutting the Gordian knot rather than loosening it, were one to deny the efficacy of grace, as did Pelagianism, or, again, following the error of Jansenism, deny the liberty of the will. The difficulty is rather in determining just how the acknowledged efficacy of grace is to be reconciled with human freedom. For centuries Thomists and Molinists, Augustinians and Congregusists have been toiling to elucidate the past. And while the system of grace known as the doctrine of the two graces, or grace and free will, was not entirely satisfactory, it did at least make a serious attempt to harmonize the principles of Thomism and Molinism, which it has served to but double the difficulties instead of eliminating them.

The second part of the doctrine on grace has to do with sanctifying grace, which produces the state of habitual holiness and justice. Preparatory to receiving this grace, the soul undergoes a certain preliminary process, which is begun by theological faith, the "beginning, root and foundation of all justification", and is completed and perfected by other supernatural dispositions, such as conversion, love, and the other graces. The right use of faith as a mere fiducial faith is quite as much at variance with revelation as is the sola fides doctrine. Catholics also differ from Protestants in explaining
the essence of justification itself. While Catholic dogma declares that justification consists in a true blotting-out of sin and in an interior sanctification of the soul, the Protestant doctrine, adopted in place of the former, has reduced it to a mere external cloaking of sins which still remain, and a mere imputation to the sinner of God’s or Christ’s justice. According to Catholic teaching, the forgiveness of sin and the sanctification of the soul are both moments of one and the same act of justification. The blotting-out of original and mortal sin is accomplished by the very fact of the infusion of sanctifying grace. Although we may, to a certain extent, understand the nature of grace in itself, and may define it philosophically as a permanent quality of the soul, an infused habit, an accidental and analogical participation of the Divine nature, yet its true nature may be more easily understood from a consideration of its so-called formal effects produced in the soul. These are: sanctity, purity, beauty, friendship with God, adopted sonship. Sanctifying grace is accompanied by additional gifts, viz., the three theological virtues, the infused moral virtues, the seven gifts of the Holy Ghost, and the personal indwelling of the Holy Ghost in the soul of the justified. This latter it is that crowns and completes the whole process of justification. We must also mention three qualities special to justification or sanctifying grace: 1st, its certainty, its immutability, and its permanence, the reality and constancy of its being. All of them are diametrically opposed to the Protestant conception, which asserts the absolute certainty of justification, its complete equality, and the impossibility of its being lost. Finally, the fruits of justification are treated. These ripen under the beneficent influence of sanctifying grace, which enables man to acquire merit through his good works, that is to say, supernatural merit for heaven. The doctrine on grace is concluded with the proof of the existence, the conditions, and the objects of merit.

(v) Sacraments (De sacramento).—This section is divided into two parts: the treatise on the sacraments in general and that on the sacraments in particular. After having defined exactly what is meant by the Christian sacraments, and what is meant by the sacrament of nature and the Jewish rite of circumcision as it prevailed in pre-Christian times, the author proceeds to the important statement of the seven sacraments as instituted by Christ. The essence of a sacrament requires three things: an outward, visible sign, i.e. the matter and form of the sacrament; interior grace; and institution by Christ. In the difficult problem as to whether Christ himself directly instituted, its matter and form, or whether it was specifically or only generically, the solution must be sought through dogmatic and historical investigations. Special importance attaches to the causality of the sacraments, and an efficacy ex opere operato is attributed to them. Theologians dispute as to the nature of this causality, i.e. whether it is physical or merely moral. In the case of each sacrament, regard must be had to two persons, the recipient and the minister. The objective efficacy of a sacrament is wholly independent of the personal sanctity or the individual faith of the minister. The only requisite is that he who confers the sacrament intend to do what the Church does. As regards the recipient of a sacrament, a distinction must be made between valid and worthy reception; the conditions differ with the various sacraments. But since the free will is required for validity, it is evident that no one can be forcibly made to receive a sacrament.

Furthermore, as regards the sacraments in particular, the conclusions reached with reference to the sacraments in general of course hold good. Thus, in the case of the first two sacraments, baptism and confirmation, we must prove in detail the existence of the three requisites mentioned above, as well as the disposition of both the minister and the recipient. The question whether their reception is absolutely necessary or only of precept must also be examined. The effects of the transubstantiation of the Eucharistic elements and last as long as the accidents of bread and wine remain incorrupt. The doings of the total sacrifice of the real presence of Christ under the appearances of bread and wine. His presence is effective means of the Eucharist is such, and it is not mere ceremony that rivals that of the Holy Trinity and of the Holy Eucharist. It presents us with a truth utterly at variance with the testimony of our senses, asking us, as it does, to assimilate the consideration of the Eucharistic species of Christ, a sort of spiritual existence, unconfined by place, yet of a human body, and, again, the simultaneous presence of Christ in many different places. The sacramental character of the Eucharist is established by the presence of the three essential elements. The outward sign consists in the Eucharistic forms of bread and wine; the matter and form of it is its institution by Christ is guaranteed both by the promise of Christ and by the words of institution at the Last Supper.

Finally, the interior effects of grace are produced by the worthy reception of the Eucharist. As Christ is wholly present in each species, the reception of the Eucharist under one species is sufficient to obtain fully all the fruits of the sacrament. Hence the chalice need not be communicated to the laity, though at times the Church has so allowed it to be, but not in any sense as though such were necessary. Not everyone is capable of pronouncing the words of consecration with sacramental effect, but only duly ordained bishops and priests; for to them alone did Christ communicate the power of transubstantiation in the Holy Sacrifice of the Mass. A distinct phase of the Eucharist is its sacrificial character. This is proved not only from the oldest Fathers and the liturgical practice of the early Christian Church, from its source in the ancient Jewish sacrifices, and from the Gospel narrative of the Last Supper.

To find the physical essence of the Sacrifice of the Mass, we must consider its essential dependence on, and relation to, the bloody sacrifice of the Cross; for the Mass is a commemoration of the latter, its institution, its sacramental, and even its sacrificial character. In an intrinsically relative character of the sacrifice of the Mass does not in the least destroy or lessen the universality and oneness of the sacrifice on the Cross, but rather presupposes it; likewise the intrinsic propriety of the Mass is shown precisely in this, that it neither effects nor claims to effect anything else than the application of the fruits of the sacrifice of the Cross to the individual, and this in a sacrificial manner. The essence of the sacrificial character is generally thought to consist neither in the Offertory nor in the Communion of the celebrant, but in the double consecration. Widely divergent are the views of the theologians as to the metaphysical essence of the sacrifice of the Mass, that is to say, as to the question how far the idea of a real sacrifice is verified in the double consecration. A concurrence of opinion on this point is all the more difficult owing to the fact that the very idea of sacrifice is one of obscurity. As regards the causality of the sacrifice of the Mass, it has all the effects of a true sacrifice: adoration, thanksgiving, impetration, atonement. Most of its effects are ex opere operato, while some depend on the co-operation of the participants.
power to forgive sins, a power clearly indicated in the Bible in the words with which Christ instituted this sacrament (John, xx, 23). Moreover, this power is abundantly attested both by the patristic belief in the Church's power of the Keys and by the history of the ancient penitential system. As at the time of Martin of Tours, Novatianism's constant motive was the vindicating the universality of this power, so nowadays it is a matter of defending its absolute necessity and its judicial form against the attacks of Protestantism. These three qualities manifest at the same time the intrinsic nature and the essence of the Sacrament of Penance. Indeed, the motive of the utility of this power to forgive sins means that all sins without exception, supposing, of course, contrition for the same, can be remitted in this sacrament. Owing to its absolute necessity and its judicial form, however, the sacrament really becomes a tribunal of penance in which the penitent is at once plaintiff, defendant, and witness, while the priest acts as judge. The matter of the sacrament consists in the three acts of the penitent: contrition, confession, and satisfaction, while the priestly absolution is its form. To act as judge in the Sacrament of Penance, the confessor needs not only merely ordinary ecclesiastical jurisdiction, which may be restricted more or less by the ecclesiastical superiors. As the validity of this sacrament, unlike that of the others, depends essentially on the worthiness of its reception, great attention must be paid to the acts of the penitent. Most important of all is contrition with the purpose of amendment, containing, as it does, the virtue of penance. The opinion, held by many of the early Scholastics, that perfect contrition is required for the validity of the absolution, is quite irreconcilable with the ex ope operato efficacy of the sacrament; for sorrow, springing from the love of God, is the most fitting means means of itself to free the sinner from all guilt, quite antecedent to, and apart from, the sacrament, though not indeed without a certain relation to it. According to the mind of the Council of Trent, imperfect contrition (attrition), even when actuated by the fear of hell, is sufficient for the validity of the sacrament, though we should, of course, strive to call in nobler motives. Therefore the addition of a formal corrius initialis to attrition, as the Contritionists of to-day demand for the validity of absolution, is superfluous, at least so far as validity is concerned. Perfect contrition, which is the second act of the penitent manifests the interior sorrow and the readiness to do penance by a visible, outward sign, the matter of the sacrament. Since the Reformers rejected the Sacrament of Penance, great care must be bestowed upon the Biblical and patristic proof of its existence and its necessity. The required satisfaction, the third act of the penitent, is fulfilled in the penances (prayers, fasting, alms) which, according to the present custom of the Church, are imposed by the confessor immediately before the absolution. The actual fulfilment of such penances is not essential to the validity of the sacrament, but is merely an augments rather: it is a means of the Church's extra-sacramental remission of punishment due to sin 'is called indulgence. This power of granting indulgences, both for the living and the dead, is included in the power of the Keys committed to the Church by Christ. This may be considered as the complement of the Sacrament of Penance, inasmuch as it can take the place of the latter in case sacramental confession is impossible to one who is unconscious and dangerously ill.

While the five sacraments of which we have treated so far have been instituted for the welfare of the individual, the last two, Holy Orders and Matrimony, aim rather at the well-being of human society in general. The Sacrament of Holy Orders is composed of various grades, of which those of bishop, priest, and deacon are certainly of a sacramental nature, whereas that of subdeacon and the four minor orders are most probably due to ecclesiastical institution. The decision depends on whether or not the presentation of the instruments is essential for the validity of ordination. In case of the bishop, the latter obtains the ordination in the case of the consecration of a bishop, priest, or deacon, the conclusion is drawn that only the three hierarchical grades or orders confer ex ope operato the sacramental grace, the sacramental character, and the corresponding powers. The ordinary minister of all orders, even those of a non-sacramental character, is the bishop. But the pope may delegate an ordinary priest to ordain a subdeacon, lector, exorcist, acolyte, or ostiarius. Beginning with the subdiaconate, which was not raised to the rank of major order until the Middle Ages, celibacy and the consecration of the one absorbed the entire body.

Three disciplines treat the Sacrament of Matrimony: dogmatic theology, moral theology, and canon law. Dogmatic theology leads the way, and proves from the sources of faith not merely the sacramental nature of Christian marriage, but also its essential unity and indissolubility. The hierarchy of matrimonially consummated marriage between Christians the marriage bond is absolutely indissoluble; but where there is question of a consummated marriage between pagans the bond may be dissolved if one of the parties is converted to the Faith, and if the other parties are willing to operate a separation and the bond be fulfilled. The bond of a non-consummated marriage between Christians may be dissolved in two cases: when one of the parties concerned makes the solemn profession of religious vows, or when the pope, for weighty reasons, dissolves such a marriage. Finally, the grounds of the Church's power to establish diriment impediments are discussed and thoroughly proved.

(v) Eschatology (De novissimis).—The final treatise of dogmatic theology has to do with the four last things. According as we consider either the individual or mankind in general, there is a distinct consummation of all things. For the individual the last things are death and the particular judgment, to which corresponds, as his final state and condition, either heaven or hell. The consumption of the human race on doomsday will be preceded by certain indications of the impending disaster, right after which will occur the resurrection of the dead and the general judgment. As for the opinion that there will be a glorious reign of Christ upon earth for a thousand years prior to the final end of all things, suffice it to remark that there is not the slightest foundation for it in revelation, and even a bare form of Chiliasm must be rejected as untenable.

B. History of Dogmatic Theology.—The imposing edifice of Catholic theology has been reared not 
by individual nations and men, but rather by the 
combined efforts of all nations and the theologians 
of every century. Nothing could be more at variance 
with the essential character of theology than an 
endeavor to set one up if the stamp of nationalism; 
like the Catholic Church itself, theology must ever 
be international. In the history of dogmatic theology, 
as in the history of the Church, three periods 
may be distinguished: (1) the patristic; (2) the 
middle; (3) the modern. 

1. The Patristic Period (about A. D. 100-500).— 
The Great Fathers of the Church and the ecclesiastical 
writers of the first 800 years rendered important 
services by their positive demonstration and their 
supercilious treatment of dogmatic truth. It is 
The Fathers who are honoured by the Church as her 
princes and who are called under them, in the sense of 
propagation, sanctity of life, and fulness of wisdom, 
virtues which are not always to be found in those 
who are known simply as ecclesiastical writers. Ter- 
tullian (b. about 160), who died a Montanist, and 
Origen (d. 254), who showed a marked leaning towards 
Montanism, both also in their speculations and 
even some of the Fathers, e.g. St. Cyprian (d. 258) 
and St. Gregory of Nyssa, went astray on individual 
points; the former in regard to the baptism of heretics, 
the latter in the matter of apocatastasis. It was 
not so much in the catechetical schools of Alexandria, 
Antioch, and Edessa as in the struggle with the 
great heresies of the age that patristic theology 
developed. This serves to explain the character of 
the patristic literature, which is apologetical and 
polemical. It was indeed the great controversy against 
the Manichæans and the Montanists, and the apologetic wisdom on every page; for the roots of theology 
are in the Bible, especially in the Gospels and in 
the Epistles of St. Paul. Although it was not the intention 
of the Fathers to give a methodical and systematic 
treatise of theology, nevertheless, so thoroughly did they handle the great dogmas from the 
positive, speculative, and apologetic standpoint 
that they laid the permanent foundations for the 
centuries to follow. Quite justly does Möhler call 
attention to the fact that all modes of treatment 
may be found in the writings of the Apostle Fathers: 
the apologetic style is represented by the letter of 
Diognetus and the letters of St. Ignatius; the 
dogmatic in pseudo-Barnabas; the moral, in the Pastor 
of Hermas; canon law, in the letter of St. Clement of 
Rome; church history, in the Acts of the martyrdom 
of Polycarp and Ignatius. Owing to the unexpected 
second edition of the gospels, a new and rich 
stylistic, in the Didache; the catechetical, in the 
"Proof of the Apostolic Preaching" by St. Irenæus. 

Although the different epochs of the patristic age 
overlap each other, it may be said in general 
that the apologetic style predominated in the first 
epoch up to the end of the 2nd century; the Gnostic; 
the second epoch, that is to say up to the time of Charle- 
magne, dogmatic literature prevailed. We can here 
only trace in the most general outlines this theological 
activity, leaving to patrology the discussion of the 
literary details. 

When the Christian writers entered the lists against 
pagan Polytheism and idolatry it was very large: 
Justin, Athenagoras, Tatian, Theophilus of Antioch, 
Hermias, Tertullian, Clement of Alexandria, Origen, 
Cyprian, Minucius Felix, Commodianus, Arnobius, 
Epiphanius, Cyprianus, Cyril of Alexandria, Nilus, 
Theodore, Orosius, and Augustine. The most eminent writers in the struggle 
against Judaism were: Justin, Tertullian, 
Hippolytus, Cyprian, Athanasius, Gregory of Nyssa, 
Epiphanius, Cyprianus, Cyril of Alexandria, 
Augustine. The attacks of the Fathers were not, 
of course, aimed at the Israelitic religion of the Old 
Testament, which was a revealed religion, but at 
the obstinacy of those Jews who, clinging to the dead 
letter of the Law, refused to recognize the prophetic 
sign of the Old Testament. 

But far greater profit resulted from conflict with 
the heresies of the first eight centuries. As the flint, 
when it is struck by the steel, gives off luminous 
sparks, so did dogma, in its clash with heretical 
teaching, shed a new and wonderfully brilliant light. As 
the errors were legion, it was natural that in the 
course of the centuries all the principal dogmas were, 
one by one, treated in monographs which established 
their truth and provided them with a philosophical 
base. The struggle of the Fathers against Gnostic 
cism, Manichæism, and Priscillianism served not only 
to make plain the mystery of God, the problem of 
creation, the problem of evil; it moreover secured the true 
principles of faith and the Church's authority against 
eretical aberrations. In the mighty struggle against 
Monarchianism, Sabellianism, and Arianism an op-
portunity was afforded to the Fathers and the eccumenical councils to establish the true meaning of the dogma of the Trinity, to secure it on all sides and to draw out, by speculation, its genuine import. When the following denominations and heresies were stormed out, the use of theological and philosophical criticism purified the doctrine of God and our knowledge of Him, both earthly and heavenly. Of world-wide interest were the Christological disputes, which, beginning with the rise of Apollinarism, reached their climax in Nestorianism, and, by way of resolution, were revived once more in Adoptionism. In this long and bitter strife, the doctrine of Christ's person, of the Incarnation, and Redemption, and in connexion here-with, Mariology also, was placed on a sure and permanent foundation, from which the Church has never varied a hair's breath in later ages. The following may be mentioned as the Eastern Champions in this scientific dispute on the Trinity and Christology: the great Alexandria, Clement, Origen, and Didymus the Blind; the heroic Athanasius and the three Cappadocians (Basil, Gregory of Nazianzus, and Gregory of Nyssa); Cyril of Alexandria and Leontius of Byzantium. It was Maximus the Confessor and Damascene. In the West the leaders were: Tertullian, Cyprian, Hilary of Poitiers, Ambrose, Augustine, Jerome, Fulgentius of Ruspe, and the two popes, Leo I and Gregory I. As the contest with Pelagianism and Semi-pelagianism purified the dogmas of grace and free will, so also the controversy over original sin and the condition of our first parents in Paradise, so in like manner the contests with the Donatists brought out more clearly and strongly the doctrine of the sacraments (baptism), the hierarchical constitution of the Church, her mystagogy, or teaching authority, her infallibility, and her infallible mode of interpreting its sacred books. In all these struggles it was Augustine who ever led with indomitable courage, and next to him came Optatian of Mileve and a long line of devoted disciples. The last contest was decided by the Second Council of Nicaea (787): it was in this struggle that, under the leadership of St. John Damascene, the communion of saints, the invocation of the saints, the veneration of relics and holy images were placed on a scientific basis.

It may be seen from this brief outline that the dogmatic teachings of the Fathers are a collection of monographs rather than a systematic exposition. But in the West, as the more popular and less imported means of material for erecting the system afterwards. In the case of some of them there are evident signs of an attempt to synthesize dogmas into a complete and organic whole. Irenæus (Adv. haer., III–V) shows traces of this tendency; the well-known trilogy of Clement of Alexandria (d. 217) marks an advance in the same direction; but the most successful effort in Christian antiquity to systematize the principal dogmas of faith was made by Origen in his work "De principiis", which is unfortunately disfigured by serious errors. His work against Celsus, on the other hand, is the classic of apologetics and of lasting value. Gregory of Nyssa (d. 394), skilled in matters philosophical and of much the same bent of mind as Origen, endeavoured in his "Large Catechetical Treatise" (λόγος κατηχητικὸς, λόγος) to correlate in a broad synthetic view the fundamental dogmas of the Trinity, the Incarnation, and the Sacraments. In the same manner, though somewhat fragmentarily, Hilary (d. 366) developed in his valuable work "De Trinitate" the principal truths of Christianity. The catechetical instructions of St. Cyril of Jerusalem (d. 386), especially his five mystagogical treatises on the Apostles' Creed and the three Sacraments of Baptism, Confirmation, and Holy Eucharist, contain an almost complete dogmatic treatise. St. Epiphanius (d. 496), in his two works "Anacurate" and "Panarion", aimed at a complete dogmatic treatise, and St. Ambrose (d. 397) in his chief works: "De fide", "De Spiritu S.", "De incarnacione", "De mysteriis", "De penitentia", treated the main points of dogmas masterfully and in classic Latinity, though without any attempt at a systematic development of the doctrine. In the East, St. Cyril of Alexandria (d. 444) is even to-day a model for dogmatic theologians. Though all the writings of St. Augustine (d. 430) are an inexhaustible mine, yet he has written one or two works, as the "De fide et symbolo" and the "Enchiridion", which may justify his title "the most comprehensive of the Western theologians, and moral theology. Unsurpassed is his speculative work "De Trinitate". His disciple Fulgentius of Ruspe (d. 533) wrote an extensive and thorough confession of faith under the title, "De fide et symbolo," a veritable treasure for the theologians of his day.

Towards the end of the Patristic Age Isidore of Seville (d. 636) in the West and John Damascene (b. ab. 700) in the East paved the way for a systematic treatment of dogmatic theology. Following closely the teachings of St. Augustine and St. Gregory the Great, St. Isidore proposed to collect all the writings of the earlier fathers and so to give them the precious inheritance to posterity. The results of this undertaking were the "Libri III sententiarum seu de summo bono". Tadus of Saragossa (650) had the same end in view in his "Libri V sententiarum". The work of St. John Damascene (d. after 754) was arranged with systematic success and consecutively, so as to gather the teachings and views of the Greek Fathers, but by reducing them to a systematic whole he deserves to be called the first and the only scholastic among the Greeks. His main work, which is divided into three parts, is entitled: "Fontes scientiae". It is an admirable work, not merely of theology, but of philosophy and Church history as well. The third or theological part, known as "Expositio fidei orthodoxae" (fathers ta υπαρκτοτης πλουτος), is an excellent combination of positive and scholastic theology, and aims at thoroughness both in establishing and in elucidating the truth. Greek theology has never gone beyond St. John Damascene, a standstill caused principally by the Photian schism (869). The only Greek prior to him who had produced a complete system of theology was Pseudo-Dionysius the Areopagite, in the fifth century; but he was not so much a theologian as a poet and visionary. He stands in the East century on, than in the West. Although he openly went into the genuine Catholic system - neo-Platonic thoughts and phrases, nevertheless he enjoyed an unparalleled reputation among the greatest Scholastics of the Middle Ages because he was supposed to have been a disciple of the Apostles. For all that, Scholasticism did not take its guidance from St. John Damascene or Pseudo-Dionysius, but from St. Augustine, the greatest of the Fathers. Augustinian thought runs like a golden thread through the whole progress of Western philosophy and theology. It was Augustinianism that gave the Church a foundation for the right path, and from whom all schools sought direction. Even the heretics tried to bolster up their errors with the strength of his reputation. To-day greatness is recognized and appreciated more and more, as specialized research goes more deeply into his works and brings to view his genius. As Scheeben remarks, "It would be easy to compile from his writings a rich system of dogmatic theology. We cannot help admiring the skill with which he ever kept God, as the beginning and end of all things, in the central position, even where he was compelled to depart from earlier opinions which had found a way out of it, and God, the English-speaking world may well be proud of the Venerable Bede (d. 735), a contemporary of St. John Damascene. Owing to his unusually solid education in theology, his extensive knowledge of the Bible and of the Fathers of the Church, he is the link which
joins the patristic with the medieval history of theology.

(2) Middle Ages (800–1500).—The beginnings of scholasticism may be traced back to the days of Charlemagne (d. 814). Thence it progressed in ever-quicken ing development to the time of Anselm of Canterbury, Bernard of Clairvaux, and Peter the Lombard, and onward to its full growth in the Middle Ages (first epoch, 800–1200). The most brilliant period of scholasticism, however, seems to have been the second one (1200–1300), and with it are connected the names of Alexander of Hales, Albertus Magnus, Bonaventure, Thomas Aquinas, and Duns Scotus. From the beginning of the fourteenth century, owing to the predominance of Nominalism and to the sad condition of the Church, Scholasticism began to decline (third epoch, 1300–1500).

(a) First Epoch: Beginning and Progress of Scholasticism (800–1200).—In the first half of this epoch, up to the time of St. Anselm of Canterbury, the theologians were more concerned with preserving than with developing the treasures stored up in the writings of the Fathers. The sacred science was cultivated nowhere with greater industry than in the cathedral and monastic schools, founded and fostered by Charlemagne. The earliest signs of a new thought appeared in the ninth century during the discussions relative to the Last Supper (Paschatus Radbertus, Ratramnus, etc.). But these speculations were not to a greater depth in the second Eucharistic controversy against Berengarius of Tours (d. 1088), (Lanfranc, Guittmond, Alger, Hugh of Langres, etc.). Unfortunately, the only systematic theologian of this time, Scotus Erigena (d. after 870), was an avowed Pantheist, so that the name of "Father of Scholasticism" which some would give him, is wholly unmerited. But the one who fully deserves this title is St. Anselm of Canterbury (d. 1109). For he was the first to bring a sharp logic to bear upon the principal dogmas of Christianity, the first to unfold and explain their meaning in every detail, and to draw up a scientific plan for the stately edifice of dogmatic theology.

Taking the substance of his doctrine from Augustine, St. Anselm, as a philosopher, was not so much a disciple of Aristotle as of Plato, in whose masterly dialogues he had been thoroughly schooled. Another pupil of the Church was St. Bernard (d. 1153), the "Father of Mysticism." Though for the most part the author of ascetic works with a mystical tendency, he used the weapons of scientific theology against Abelard's Rationalism and the exaggerated Realism of Gilbert de La Porre. It is upon the doctrine of Anselm and Bernard that the theology of succeeding generations took their stand, and it was their spirit which lived in the theological efforts of the University of Paris. Less prominent, yet noteworthy, are: Ruprecht of Deutz, William of Thierry, Gaufridus, and others.

The first attempts at a theological system may be seen in the so-called "Books of Sentences," collections and interpretations of quotations from the Fathers, more especially of St. Augustine. One of the earliest of these books is the "Summa sententiarum" of Hugh of St. Victor (1141). His works are characterized throughout by a close adherence to St. Augustine and, according to the verdict of Scheeben, may even yet serve as guides for beginners in the theology of St. Augustine. Less praise is due to the similar work of Robert Pulleyn (d. 1146), who is careless in arranging the matter and confuses the various questions of which he treats. Peter the Lombard, called the "Magister Sententiarum" (d. 1164), on the other hand, stands far above them all. What Gratian had done for canon law the Lombard did for dogmatic and moral theology. With uniring industry he sifted and explained and paraphrased the patristic lore in his "Libri IV sententiarum," and the arrangement which he adopted was, in spite of the lacunes, so excellent that up to the sixteenth century his work was the standard text-book of theology. The work itself began as early as the thirteenth century, and there was no theologian of note in the Middle Ages who did not write a commentary on the Sentences of the Lombard. Hundreds of these commentaries are still existing, unprinted, beneath the dust of the monasteries. No other treatises on theology had such a powerful influence on the development of scholastic theology.

Neither the analogous work of his disciple, Peter of Poitiers (d. 1205), nor the important "Summa aurea" of William of Aüerre (d. after 1230) superseded the Lombard's "Sentences." Along with the "Sentences," William of Aüerre (d. 1248), who died as Archbishop of Paris, deserved special mention. Though preferring the free, unscholastic method of an earlier age, he yet shows himself at once an original philosopher and a profound theologian. Inasmuch as in his numerous monographs on the Trinity, the Incarnation, the Sacraments, etc., he endeavored to answer the anti-Christian attacks of the Arabian exponents of Aristotelianism, he is, as it were, the connecting link between this age and the most brilliant epoch of the thirteenth century.

(b) Second Epoch: Scholasticism at its Zenith (1200–1300).—This period of Scholasticism was marked not only by the appearance of the "Theological Summae," but also by the building of the great Gothic cathedrals, which bear a sort of affinity to the lofty structures of Scholasticism. (Cf. Emil Michael, S. J., "Geschichte des deutschen Volkes vom 13. Jahrhundert bis zum Ausgang des Mittelalters", V, Freiburg, 1911, 15 sq.) Another characteristic feature was the fact that in the thirteenth century the champions of Scholasticism were to be found in the great religious orders of the Franciscans and Dominicans, beside whom worked the Augustinians, Carmelites, and Servites. This brilliant period is ushered in by two master-mins: the one a Franciscan, Alexander of Hales (d. about 1245), the other a Dominican, Albert the Great (d. 1280). The "Summa theologica" of Alexander of Hales, the largest and most comprehensive work of its kind, is equal to the "Sentences" of Peter Lombard and is often qualified as the "Aristotelian Bible," though flavoured with Platonism. The arrangement of the subjects treated reminds one of the method in vogue to-day. An intellectual giant not merely in matters philosophical and theological, but in the natural sciences as well, was Albert the Great. It was he who made the first attempt at a complete and consistent philosophy of Aristotle in its true form and to place it at the service of Catholic theology—an undertaking of far-reaching consequences. The logic of Aristotle had indeed been rendered into Latin by Boethius and had been used in the schools since the end of the sixth century; but the physics and metaphysics of the Stagirite were unknown to the Western world only through the Arabian philosophers of the thirteenth century, and then in such a way that Aristotle's doctrine seemed to clash with the Christian religion. This fact explains why his works were prohibited by the Pope in 1210, and again by a Bull of Gregory IX in 1231. But after the Scholastics, led by Albert the Great, had gone over the faulty Latin translation once more, had reconstructed the genuine doctrine of Aristotle and recognized the fundamental soundness of his principles, they no longer hesitated to take, with the approval of their superior, Aristotle as their guide in the speculative study of dogmas.

Two other representatives of the great orders are the gigantic figures of Bonaventure (d. 1274) and of Thomas Aquinas (d. 1274), who mark the highest development of Scholastic theology. St. Bonaventure...
THEOLOGY

THEOLOGY

ature, the “Seraphic Doctor”, clearly follows in the footsteps of Alexander of Hales, his fellow-religious and predecessor, but surpasses him in depth of mysticism and spirituality. Unlike other Scholastics of this period, he did not write a theological “Summa”, but amply made up for it by his “Commentary on the Sentences”, as well as by his famous “Breviloquium”, a “casket of pearls”, which, brief as a compendium, is nothing less than a condensed Summa. Alexander’s disciples, Robert of Baskings, John of Marigny, John of Basingstoke, Robert Kilwardby, John Pecham, Roger Bacon, Duns Scotus, Occam. Kuno Fischer is right when he says: “When travelling along the great highway of history, we may traverse the whole of the middle ages down to Bacon of Verulam without leaving England for a moment” (“Francis Bacon”, Heidel, 1904, p. 4).

This peculiar English spirit was embodied in the famous Duns Scotus (1266–1308). While in point of ability he belongs to the golden age of scholasticism, yet his bold and virulent criticism of the Thomistic system was to a great extent responsible for its decline. Scotus cannot be linked with the old Franciscan school; he is rather the founder of the new Scotistic School, which deviated from the theology of Alexander of Hales and Bonaventure not so much in matters of faith and morals as in the speculative treatment of dogma. Greater still is the fundamental difference between the philosophy of Thomas Aquinas. St. Thomas likens the system of theology and philosophy to the animal organism, in which the vivifying soul permeates all the members, holds them together, and shapes them into perfect unity. In Scotus’s own words, on the other hand, the order of things is rather symbolized by the plant, the root shooting forth branches and twigs which have an innate tendency to grow away from the stem. This fundamental difference also sheds light on the peculiarities of Scotus’s system as opposed to Thomism: his formalism in the doctrine of God and the Trinity, his loose conception of the Hypostatic Union, his relaxation of the bonds uniting the sacraments with the humanity of Christ, his explanation of transubstantiation as an adductive substitution, his emphasis on the supremacy of the will, and so on. Though it cannot be denied that he preserved theological studies from the slippered development, he even won a victory over Thomism by its doctrine concerning the Immaculate Conception, it is nevertheless evident that the essential service it rendered to Catholic theology in the long run was to bring out, by the clash of arguments, the enduring solidity of the Thomist structure. No one can fail to admire in St. Thomas the perspicacity of thought and the lucidity of diction, as contrasted with the abstruse and mystifying conceptions of his critic. In later centuries not a few Franciscans of a calmer judgment, among them Constantine Sarmanus (1599) and John of Rada (1643), endeavored to reconcile the doctrinal differences of the two masters.

(c) Third Epoch: Gradual Decline of Scholasticism (1500–1550).—The death of Duns Scotus (d. 1308) marks the close of the golden era of the Scholastic system. What the following period accomplished in constructive work consisted chiefly in preserving, reproducing, and digesting the results of former ages. But simultaneously with this commendable labour we encounter elements of disintegration, due partly to the Fraticelli’s wrong conception of mysticism, partly to the distressing conflict between Church and State (Philip the Fair, Louis of Bavaria, the Exile at Avignon). Apart from the fanatical enthusiasts who were leaning towards heresy, the development and rapid spread of Nominalism must be ascribed to two pupils of Duns Scotus: the Frenchman Peter
Aurelius (d. 1321) and the Englishman William Oc Cam (d. 1347). In union with Marsilius of Padua and John of Jandun, Ocam used Nominalism for the avowed purpose of undermining the unity of the Church. In this atmosphere flourished regalism, and the papacy was declared to be the supreme authority for the right of kings. The papacy in the person of Boniface VIII reached its climax in the false principle: "Concilium supra Papam," which was preached from the house-tops up to the time of the Councils of Constance and Basle. It is only fair to state that it was the pressing needs of the times more than anything else which led some to think, as Pierre d'Ailly (d. 1420) and Gerson (d. 1429), to embrace a doctrine which they abandoned as soon as the papal schism was healed. To understand the origin of the errors of Wyclif, Huss, and Luther, the history of Nominalism must be studied. For what Luther knew as Scholasticism was only the degenerated form which Nominalism presents. Even the more prominent Nominalists of the close of the Middle Ages, as the general of the Augustinians, Gregory of Rimini (d. 1359), and Gabriel Biel (d. 1495), who has been called the "last Scholastic," did not escape the fortune of falling into grievous errors. Nominalist subtleties, coupled with an inordinate Augustinian enthusiasm, made Gregory of Rimini the precursor of Bajanzian and Jansenism. Gabriel Biel, though ranking among the better Nominalists and combining solidity of doctrine with a spirit of loyalty to the Church, yet exerted a baneful influence on his contemporaries, both by his unduly enthusiastic praise of Ocam and by the manner in which he commented on Ocam's writings.

The order which suffered least damage from Nominalism was that of St. Dominic. For, with the possible exception of Durand of St. Poucain (d. 1332) and Holkot (d. 1439), its members were as a rule loyal to their great fellow-religious St. Thomas. Most prominent among them during the first half of the fourteenth century were: Hervaeus de Nedellic (d. 1323), a valiant opponent of Scotus; John of Paris (d. 1306); Peter of Paule (d. 1342); and especially Raynuerius of Fisa (d. 1345), who wrote an alphabetical summary of the doctrine of St. Thomas which even to-day is useful. A prominent figure in the fifteenth century is St. Antonine of Florence (d. 1459), distinguished by his industry as a compiler and by his versatility as an author; by his "Summa Theologiae," a most excellent handbook of theology. A powerful champion of Thomism was John Capreolus (d. 1444), the "Prince of Thomists" (princeps Thomistarum); using the very words of St. Thomas, he refuted, in his adamanite "Clypeus Thomistarum," the adversaries of Thomism in a masterly and convincing manner. It was only in the early part of the sixteenth century that commentaries on the "Summa Theologica" of St. Thomas began to appear, among the first to undertake this work being Cardinal Cajetan of Vio (d. 1537) and Konrad Kollin (d. 1538). The philosophical "Summa" found a masterly commentator in Francis of Ferrara (d. 1528).

Far less united than the Dominicans were the Franciscans, who partly favoured Nominalism, partly adhered to pure Scotism. Among the latter the following are worthy of note: Francis Mayronis (d. 1297); John of Colonia; Peter of Aquila (d. about 1376); and John of Orléans (little Scotus); Nicolaus de Orbells (ca. 1460); and above all Licetetus (d. 1520), the famous commentator of Scotus. William of Vorriolong (about 1400), Stephen Bruler (d. 1485), and Nicholas of Nise (1509) belong to a third class which is characterized by the tendency to cleave to its contact with St. Bonaventure. A similar want of harmony and unity is discernible in the schools of the other orders. While the Augustinians James of Viterbo (d. 1308) and Thomas of Strasburg (d. 1357) attached themselves to Egidius of Rome, thereby approaching closer to St. Thomas, Gregory of Rimini, mentioned above, championed an undisguised Nominalism. Alphonsus Vargas of Toledo (d. 1586), on the other hand, was drawn by his own genius into the orbit of Scotism, and among the Carmelites, also, divergencies of doctrine appeared. Gerard of Bologna (d. 1317) was a staunch Thomist, while his brother in religion John Baco nthorp (d. 1346) delighted in trifling controversies against the Thomists. Drifting now with Nominalism, now with Scotism, his genius gazed in徒废 without success, to found a new school in his order. Generally speaking, however, the later Carmelites were enthusiastic followers of St. Thomas.

The Order of the Carthusians produced in the fifteenth century a prominent and many-sided theologian in the person of Dionysius Ryckel (d. 1471), surnamed "the Carthusian," a descendant of the Leevis family, who set up his chair in Roermund (Holland). From his pen we possess valuable commentaries on Holy Writ, Pseudo-Dionysius, Peter the Lombard, and St. Thomas. He was equally conversant with mysticism and scholasticism. Owing to his great gifts for criticism, he formed a brilliant constellation which shed undying lustre on the German theology of the Middle Ages.

Leaving the monasteries and turning our attention to the secular clergy, we encounter men who, in spite of many defects, are not without merit in dogmatic theology. The first to deserve mention is the Englishman Thomas Bradwardine (d. 1340), the foremost mathematician of his day and Archbishop of Canterbury. His work "De causa Dei contra Pelagianos" evinces a mathematical mind and an unwo any depth of thought. Unfortunately it is marred by an unbecoming, sordid rigorism, and this, to such an extent that the Calvinistic Anglicans of a later century published it in defence of their own teachings. The Irish Bishop Richard Radulphus of Armagh (d. 1300), in his controversy with the Armenians, also fell into dogmatic inaccuracies, which paved the way for the errors of Wyclif. We may note in passing that the learned Carmelite Thomas Netter (d. 1430), surnamed Waldensie, must be regarded as the ablest controversialist against the Wycliffites and Husites. The great Cardinal Nicholas of Cusa (d. 1404) stands out prominently as an innovator of a new and post-medieval dogmatic theology; but his doctrine is in many respects open to criticism. A thorough treatise on the Church written by John Torquemada (d. 1468), and a similar work by St. John Capistran (d. 1456). A marvel of learning, and already acknowledged as such by his contemporaries, was Alphonse Tostatus (d. 1454), the equal of Nicholas of Lyra (d. 1341) in Scriptural learning. He merits a place in the history of dogmatic theology, inasmuch as he interspersed his excellent commentaries on the Scriptures with dogmatic treatises, and in his work "Quinque dudexa" gave to the world a fine treatise on Christology and Mariology.

As was to be expected, mysticism went astray in this period and degenerated into sham pietism. A striking example of this is the anonymous "German Theology," edited by Martin Luther. This work must, however, not be confounded with the "German" of the preface to Berthold of Chiemsee (d. 1543), which, directed against the Reformers, is imbued with the genuine spirit of the Catholic Church.

(3) Modern Times (1600-1900)—As during the Patristic Period the rise of heresies was the occasion of the development of dogmatic theology in the Church, so the manifold errors of the Renaissance and of the Reformation brought about a more accurate definition of important articles of faith. Along
other lines also both these movements produced good effects. While in the period of the Renaissance the revival of classical studies gave new vigour to exegesis and patrology, the Reformation stimulated the study of Church. But the Catholic Church, especially in Spain (Salamanca, Alcalá, Cóimbra) and in the Netherlands (Louvain), to put forth an enthusiastic activity in intellectual research. Spain, which had fallen behind during the Middle Ages, now came boldly to the front. The Sorbonne of Paris remained in its lust; it was only towards the end of the sixteenth century. Among the religious orders the newly-founded Society of Jesus probably contributed most to the revival and growth of theology. Scheeben distinguishes five epochs in this period.

(a) First Epoch: Preparation (1500–1570).—It was 1500 when John Eck (d. 1543), who had risen from the depths into which it had fallen. The rise of the Reformation (1517) had inflicted serious wounds on the Church, and the defection of so many priests deprived her of the natural resources on which the study of theology necessarily depends. Nevertheless the list of the loyal contains many brilliant names, and the controversial works of those times include more than one valuable monograph. It was but natural that the whole literature of this period should bear an apologetical and controversial character and should deal with those subjects which had been most bitterly disputed in the Church. The study of faith, the Church, grace, the sacraments, especially the holy Eucharist. Numerous defenders of the faith arose in the very country which had given birth to the Reformations: John Eck (d. 1543), Coelieus (d. 1552), Stathylus (d. 1564), James of Hoogstraat (d. 1527), John Gratian (d. 1559), Albertus Pighius (d. 1542), Cardinal Hosius (d. 1579), Martin Cromer (d. 1559), and Peter Canisius (d. 1597). The last-named gave to the Catholics not only his world-renowned catechism, but also a most authentic Mariology. With pride and enthusiasm we look upon England, where the two noble martyrs John Fisher, Bishop of Rochester (d. 1535), and Thomas More (d. 1535) championed the cause of the Catholic faith with their pen, where Cardinal Pole (d. 1568), Stephen Gardiner (d. 1555), and Cardinal William Allen (d. 1594), men who combined refinement with a solid education, placed their learning at the service of the Church, where also, in the same epoch, Saunders wrote one of the best treatises on the Church. In Belgium the professors of the University of Louvain opened new paths for the study of theology; foremost among them were: Ruardus Tapper (d. 1559), John Driedo (d. 1536), Judocus Ravesteyn (d. 1500), John Hessels (d. 1560), John Molanus (d. 1585), and Garetius (d. 1571). To the last-named we owe an excellent treatise on the Eucharist. In France James Merlin, Christopher Chefontaines (d. 1595), and Gilbert Genebrard (d. 1597) rendered great services to dogmatic theology. Sylvester Piarus (d. 1523), Pardies (d. 1553), and Cardinal Seripandus are the boast of Italy. But, above all other countries, Spain is distinguished by a veritable galaxy of brilliant names: Alphonius of Castro (d. 1558), Michael de Medina (d. 1579), Peter de Soto (d. 1563). Some of their works have remained classics up to our own times, as "De natura et gratia" (Venice, 1547) of Dominic Soto; "De iustificatione libri XV" (Venice, 1546) of Andrew Vega; "De locis theologiciis" (Salamanca, 1563) of Melchior Cano.

(b) Second Epoch: Late Scholasticism at its Height (1570–1648).—In the preceding epoch the sessions of the Council of Trent (1545–1563) had exerted a beneficial influence on the character and extent of dogmatic literature. After the close of the council there sprung up everywhere a new life and a marvellous activity in theology which recalls the best days of the Patriarch Era and of Scholasticism but surpasses both by the wealth and variety of its literary productions. We are not here concerned with the industry displayed in Biblical and exegetical research. But the Catholic theology, especially in Spain (Salamanca, Alcalá, Cóimbra) and in the Netherlands (Louvain), put forth an enthusiastic activity in intellectual research. Spain, which had fallen behind during the Middle Ages, now came boldly to the front. The Sorbonne of Paris remained in its lust; it was only towards the end of the sixteenth century. Among the religious orders the newly-founded Society of Jesus probably contributed most to the revival and growth of theology. Scheeben distinguishes five epochs in this period.

(i) Controversial theology was carried to the highest perfection by Cardinal Bellarmine (d. 1621). There is no other theologian who has defended almost the whole of Catholic dogma against the attacks of the Reformers with such clearness and convincing force. Other theologians remarkable for their masteryful defence of the Catholic Faith were the Spanish Jesuit Gregory of Valencia (d. 1630) and James Greuter (d. 1625), who taught at Toulouse. To the Englishman Thomas Stapleton (d. 1598) we owe a work, unsurpassed even in our days, on the material and formal principle of Protestantism. Cardinal du Perron (d. 1618) of France successfully entered the arena against James I of England and Philip Morny, and wrote a splendid monograph on the Holy Eucharist. The eloquent pope-protector Bonaventure (d. 1627) wielded his pen in refuting Protestantism from the standpoint of history. The "Prescriptions Catholicae", a voluminous work of the Italian Gravina (7 vols., Naples, 1619–39), possesses enduring value. The last-named was found in Germany, in the person of the well-known "Manichee controvarium". In Holland the defense of religion was carried on by the two learned brothers Adrian (d. 1669) and Peter de Waalburg (d. 1675), both auxiliary bishops of Cologne and both contro- vercialists, who easily ranked among the best. Even the distant East was represented in the two Greek converts, Peter Arcadius (d. 1640) and Leo Allatius (d. 1669).

(ii) The development of positive theology went hand in hand with the progress of research into the Patriarch Era and into the history of dogma. These studies were especially cultivated in France and Belgium. A number of scholars, thoroughly versed in history, published in excellent monographs the results of their investigations into the history of particular dogmas. Morinus (d. 1659) made the Sacrament of Penance the subject of special study; H. Hubert (d. 1696) did the same with the Fathers on grace; Hallier (d. 1659), the Sacrament of Holy orders; Garnier (d. 1681), Pelagianism; Dechamps (d. 1701), Jansenism; Tricassius (d. 1681), St. Augustine's doctrine on grace. Unfortunately, among the highly gifted representatives of this line, though not deviated more or less seriously from the unchangeable teachings of the Catholic Church, as Baus, Jansenius the Younger, Launo, de Marca, Dupin, and others. Though Nicole and Arnauld were Jansenists, they held the fundamental work on the Eucharist, "Perpetuo de la foi" (Paris, 1689–74), has not yet lost its value. But there are two men, the Jesuit Petavius (d. 1647) and the Oratorian Louis Thomasamain (d. 1695), who by their epoch-making works: "Dogmata theologicae", placed positive theology on a new basis without disregarding the speculative element. In this epoch the religious orders fostered scholastic theology and brought it to perfection that the golden era of the thirteenth century seemed to have once more returned. It was no mere chance that St. Thomas and St. Bonaventure were just then proclaimed Doctors of the Church, the last of the two being Sixtus V. By these papa acts the two greatest luminaries of the past were proposed to the theologians as models to be zealously imitated. Thomism, guarded and cherished by the Dominicans, proved anew its full vitality. At the head of the Thomistic
movement was Bañez (d. 1604), the first and greatest opponent of the Jesuit Molina (d. 1600). He wrote a valuable commentary on the theological Summa of St. Thomas, which combines with a similar work by Bartholomew Medina (d. 1581), forms a harmonious whole. Under the leadership of Bañez a group of scholarly Dominicans took up the defense of the Thomistic doctrine on grace: Alvarez (d. 1635), de Lemos (d. 1629), Ledesma (d. 1616), Mora (d. 1706), Seguius (d. 1675), and other authors. The summa of St. Thomas (d. 1644), Xanier Mariales (d. 1660), Gouzin (d. 1681), Goudin (d. 1695), Contenson (d. 1674), and others. However, the most scholarly, profound, and comprehensive work of the Thomistic school did not come from the Dominicans, but from the Chartreul of Salaman. It is the invaluable "Cursus Salamanticensis" (Salamanca, 1631-1712) in 15 folios, a magnificent commentary on the "Summa" of St. Thomas. The names of the authors of this immortal work have unfortunately not been handed down to posterity. Outside the Dominican Order, also, Thomism had many luminous and learned spokesmen: Alphonse Curiel (d. 1609), Francis Zumel (d. 1607), John Putanes (d. 1623), and the Irishman Augustine Gibbon (d. 1676), who laboured in Spain and at Erfurt in Germany. The Catholic universities were active in the interest of Thomism. At Louvain Wauquiez (d. 1613) wrote a monograph in the "Liber Sententiarum" of Peter Lombard, which was permeated with the spirit of St. Thomas, while his colleagues Wiggers and Francis Sylvius (d. 1649) explained the theological "Summa" of the master himself. In the Sorbonne Thomism was worthily represented by men like Gammache (d. 1625), Andrew Duval (d. 1637), and especially by the ingenious Nicholas Yambert (d. 1624). The University of Salzburg also furnished an able work in the "Theologia scholastica" of Augustine Reding, who held the chair of theology in that university from 1645 to 1653, and died as Abbot of Einsiedeln in 1692.

The Franciscans of this epoch in no wise abandoned their doctrinal opposition to the school of St. Thomas, but steadily continued publishing commentaries on Peter the Lombard, which throughout breathe the Knöchel spirit. The Franciscans who promoted the theological activity of their order, as Mauritius Hibernicus (d. 1603), Anthony Hickay (Hiquesius, d. 1641), Hugh Cavellus, and John Ponce (Pontius, d. 1660). The following Italians and Belgians also deserve to be mentioned: Elias Rovellas (abbot of Pavia, d. 1647), Philip Facbi (d. 1630), Bosch (d. 1684), and Cardinal Brancus de laura (d. 1693). Scholastic manuals for use in schools were published about 1680 by Cardinal Sarnatus and by William Herinccy, this latter acting under the direction of the Franciscans. The Capuchins, on the other hand, adhered to St. Bonaventure, as e.g., Peter Trigos (d. 1593), Joseph Zamora (d. 1649), Gaudenius of Brescia (d. 1672), Marcus a Baudunio (d. 1673), and others.

But there can be no question that Scholastic theology owes most of its classical works to the Society of Jesus, which substantially adhered to the "Summa" of St. Thomas, yet at the same time made use of a certain eclectic freedom which seemed to be warranted by the circumstances of the times. Molina (d. 1600) was the first Jesuit to write a commentary on the theological "Summa" of St. Thomas. He was followed by Cardin, Tomass (d. 1596), and by Cardin, Velesia (d. 1603), molina, who became a distinguished controversialist. A brilliant group in the Society of Jesus are the Spaniards Francis Suaces, Gabriel Vasquez, and Didacus Ruiz. Suaces (d. 1617), the most prominent among them, is also the foremost theologian that the Society of Jesus has produced. His renown is due not only to the fertility and the wealth of his literary productions, but also to his "clearness, moderation, depth, and profound and comprehensive" work. This is the title of "Doctor eximius" which Benedict XIV gave him. In his colleague Gabriel Vasquez (d. 1604) Suares found a critic both subtle and severe, who combined positive knowledge with depth of speculation. Didacus Ruiz (d. 1632) wrote masterly works on God and the Trinity, subjects which were thoroughly treated by Dr. Tillemont (d. 1608). Harrabal (d. 1608), Ferdinand Bastida (d. 1609), Valentine Herice, and others are names which we will forever be linked with the history of Molinism. During the succeeding period James Granado (d. 1632), John Prepositus (d. 1634), Caspar Hurado (d. 1646), and Anthony Pereira (d. 1694) won fame by their commentaries on St. Thomas. But, while devoting themselves to scientific research, the Jesuits never forgot the need of instruction. Excellent, often voluminous, manuals were written by Arriaga (d. 1667), Martin Esperia (d. 1670), Francis Amicus of the Benedictines (d. 1625), Adam Tanner (d. 1632), and finally by Sylvester Maurus (d. 1687), who is not only remarkable for clearness, but also distinguished as a philosopher. Hand in hand with this more general and comprehensive literature went on the teaching of the Jesuits on certain dogmatic questions. Entering the lists against Baius and his followers, Martinez de Ripalda (d. 1648) wrote the best work on the supernatural order. To Leonard Lessius (d. 1623) we owe some beautiful treatises on God and His attributes. Egidius Goninck (d. 1632) made the Trinity, the Incarnation, and the sacraments the subject of special studies. Cardinal John de Lugo (d. 1660), noted for his mental acumen and highly esteemed as a moralist, wrote on the virtue of faith and the Sacraments of Penance and the Eucharist. Claude Tiphanus (d. 1641) is the author of a classical monograph on the notions of personality and hypostasis. Cardinal Pallavicini (d. 1667), known as the historiographer of the Council of Trent, won repute as a dogmatic theologian by several of his writings.

(c) Third Epoch: Further Activity and Gradual Decline of Scholasticism (1660-1760)—While the creative and constructive work of the previous epoch still continued, though with languishing vitality, and ushered in a second spring of dogmatic literature, other currents of thought set in which gradually prepared the way for the decline of Catholic theology. The Scholastics were sapping the strength of the sacred science. There was scarcely a country or nation that was not infected with the false spirit of the age. Italy alone remained immune and preserved its ancient purity and orthodoxy in matters theological. One has expected that, if anywhere at all, theology would be more securely sheltered within the schools of the old religious orders. Yet even some of these succumbed to the evil influences of the times, losing little by little their pristine firmness and vigour. Nevertheless, it is to them that almost all the theological literature of this period and the revival of Scholasticism are due. A product of the Thomistic school, widely used and well adapted to the needs of the time, was the standard work of the Dominican Billuart (d. 1757), which with exceptional skill and taste explains and defends the Thomistic system in scholastic form. The doctrine of God as a single person (omnipresence, pre-necessity, etc.) proved a distinguished controversialist. A brilliant group in the Society of Jesus are the Spaniards Francis Suaces, Gabriel Vasquez, and Didacus Ruiz. Suaces (d. 1617), the most prominent among them, is also the foremost theologian of the Society of Jesus.
